When the Greek painter painted a twig so that a bird tried to alight on it, he assumed that the bird reasoned from analogy, thus: "All other objects which I have seen which looked like that were twigs upon which I could alight: therefore, this is." So, according to a bird's experience, everything that he can see through he can fly through. Hence, if you let him out in a room with glass windows, he flies directly against the panes three or four times only. By that time, perhaps in half an hour, he learns fully that that is a new object which he can see through, but cannot fly through. You may then take him into any number of new rooms, but he will not again during his whole life fly at the windows unaware of the glass. His flying against them the first time, therefore, was not due to defect of sight, but to the fact that he had not learned to philosophize or reason about window-panes. But now, without any change in his sight, he says mentally: "I flew against a glass pane once, thinking that, because I could see through it, I could fly through it, and it knocked me down. Here is a new glass pane which I have never tried at all, and I will not; for I know it will knock me down like the other." This is reasoning from analogy, or from observation and experiment. It is the beginning of science. The mental conclusion at which the bird has arrived, as the result of his observation and experiment, is that all window glass can be seen through, but not flown through. This is a generalization. It is a grouping of many facts under one law. A bird will learn more quickly the nature of a window than of a mirror, because it is easier for him to think of looking through a hard substance at something really beyond it than to think of looking into it to see the reflection of that which is in front of it. This is true also of a savage or a child.

Among the Birds.

When the oriole observes that she is not the only weaver in nature, but that around human habitations she can pick up bits of cloth, netting, lace, thread, or invisible hair-nets, as fine and strong as any she can weave out of grass or hair, that discovery is in its character science; *i.e.*, an extension of knowledge by means of observation,—not human science, but bird science. When the oriole uses these bits of netting of human manufacture as substitutes for her own weaving, she performs a labor-saving experiment; and when she generalizes by saying, All man-wove fibres are just as good for nest-building as bird-wove fibres, testing them in her own way to avoid getting rotten materials, that is a philosophic theory. And, when she acquires a habit of locating near human habitations in order to get these aids more easily, that is practical philosophy, or science applied to use.

Among the Insects.

It has long been known that, while certain species of ants keep some animals for their milk and others for their honey and others as servants for their work and others as pets for their beauty and others to fight, one species maintains and feeds with great care, and even guards so that he could not get away, an ugly black beetle, which neither yields milk, honey, beauty, work, nor military services. Lubbock thought these beetles might perhaps be gods whom the ants worshipped religiously, or, at least, if not gods, they were clergymen, the difference between the two not being essential. Probably, however, the ant perceives that every larger animal starts back and exhibits fright at this odious beetle. If so, the ant keeps him as a sort of devil, on the philosophic theory that there are people who need a devil to frighten them.

Both science and philosophy as processes begin in animals. Possibly also superstition, or the tendency to conceive of some phenomena as natural and others as supernatural, begins in animals; but this I will not discuss.

From Sensation to "Spirit" Inferences.

The savage bares his heated brows to the cool breeze, as the lion does. This is mere sensation. Then, he infers that the same something which fans his brows, waves in the grass, rustles in and bends the trees, ripples the water into waves. This is induction, or drawing in under one head of new phenomena. It is the detection of one force in many phenomena. It is philosophy. Then, he discovers that his wife, or companion, can, by waving a palm-leaf before him, produce the breeze in miniature. If a person produces the little breeze with a fan, who or what produces the great breeze, the gust, or ghost, that comes no one knows whence and goes no one knows whither? In all languages, the words which signify an invisible person or spirit, when reduced to their root idea, become either breath or wind, shadow or shade, or dream. Spirit itself, in English, means "a breathing"; ghost, "a wind." In poetry, the word "shade" reveals its root idea, as also does the word "vision." When the savage thinks, therefore, "Who is it that fans me, but does not appear to me?" he thinks of an invisible person, and says, "A breath, a spirit, a ghost."

Nature and the Supernatural.

At this early point in the development of reason, men divide into Spiritualists and Materialists, the former asserting, "I have seen, felt, heard, or interviewed this invisible spirit of air," the latter saying, "We have seen nothing, and we do not believe that you have."

Then, the human mind diverges, and flows in unlike channels. There are those who see, or think they see, a spirit at every turn, literally. There are the poets who, to please the imagination, coin fanciful pictures of the spirits that rule the streams, woods, caves, and seas, but do not believe in the verity of these coinages. There are philosophers who believe that the over-brooding presence of all-pervading spirit is neo-

Digitized by Google

essary to explain the phenomena of matter, and there arise others who conceive that the diversified phenomena of matter have been mistaken for immaterial existences. The former assign to all suppositions of spirit existence a material origin. The latter assign to all the movements of matter a spiritual origin. The former "bank" upon time, space, matter, force, motion, and phenomena as tangible, and discard metaphysics. The latter "bank" upon consciousness, thought, mind, individual and universal, as real, and distrust physics, in its æsthetic and philosophic influence, if not in its essential verity. The former believe therefore in man, and that man has constructed all spirits and all the gods. The latter believe in a God or gods, and that this or these have created nature and man. This is the first great conflict in philosophy. Does matter give rise to thought, or is soul anterior to and independent of matter? Does man create all his gods, or does one God create all men?

An Exotic Industry.

I think every theologian and spiritualist will admit that the god-making and spirit-making business has always been a thriving industry in foreign countries. Of course, none of it has ever been done among us. The faculty of God-making, which is so prolific an art, when it turns out a Jove (Yov) who overthrows Saturn, has nothing whatever to do with the actual fact of history that Jehovah (Yovah) overthrew Satan. The former legend may have dwelt for centuries among the Ionian, Pelasgian, and other ante-Greek races that lined the Mediterranean, so that it would only have to travel fifty miles over the Judean hills to reach the early Jews in time for that revelation of which we are the inheritors. There may be an essential identity of names and of incidents between the false religion which the Greeks had to impart and the basis of the divine revelation which the Jews received. This identity assumes clearer shape when we become satisfied, with Goldziher and Steinthal, that all of alleged Jewish history from Adam to Saul is myth and romance. Yet, in spite of these evidences that the monotheism of the Jews was but an offshoot from the polytheism of the Greeks, there is room for

The Hegelian Theory:

That the absolute, all-pervading spirit had been struggling to express himself through the Greek mind, but, failing to do so perfectly, told the Greeks certain fictions about Jove having conquered Saturn, etc.; but, when this all-pervading spirit, ever struggling to express its inner self to mankind, got across the hills of Judea among the Jews, he struggled out of that mere ability to compose fictions which he had been practising on the Greeks, and managed to get off to the Jews the exact truth of the whole business. There is room, I say, in philosophy for this theory of theism, which is the essence of Hegel's theories of art and of history, that the Absolute One struggled quite in vain among the Hindus, Chinese, Egyptians, pagans of all sorts and Greeks, to express himself, to tell the truth concerning his own nature, but kept weaving Munchausen stories, but yet approximating more and more nearly to the ability to say something true, until he struck Judea; and there, perhaps from being better acquainted with the Jewish language than with any other, he got his story straight, and told it in accordance with the facts. The chief drawback to this theory is that it makes the Absolute One responsible for all false religions as well as true, and the author of all the lies of every kind that were ever told for any religious purpose.

A Struggling Absolute.

Moreover, if the Absolute struggled for the mastery over matter so long and triumphed so imperfectly as Hegel represents him to have done in Hindu art and theology, in Egyptian *ditto* and in Greek *ditto*, what assurance can mere philosophy, apart from dogma, afford us that the Absolute did not continue his uneven struggle to express himself with like ill success to the Jews and Christians, and was not able to tell anything true to them, but that the final triumph of the Absolute to express himself to and in man began with the actual Copernicus instead of with the hypothetical Moses, and continued through Galileo, Kepler, Newton, Harvey, Priestley, and the other prophets of the scientific epoch? The root idea of Hegel therefore, that nature and history are simply the Absolute, or God, struggling to emancipate himself from and express himself through matter may as easily be employed to overthrow the Christian in behalf of the scientific dispensation as to overthrow the Pagan in behalf of the Christian. Moreover, any philosophy which pivots on an absolute and unconditioned One who is the energizing source of all action destroys the moral character of God, and hence strikes down all theology in pantheism by making this Absolute One the source of all evil as well as good. Hence, no system of theology which divides the universe and assigns only part of its phenomena to Deity, as every such system must in order to save a moral character to its Deity, can be predicated even on a philosophy which pivots on soul or spirit as being anterior to or the originator of matter. Any such system of theology must rest on dogma, which in turn must be either intuition, inspiration, or imposition, as each mind is able to decide for itself.

Evolution of Deity as an Idea.

When the spirit or theistic idea is traced upon mere historic evidence, it unfolds somewhat as follows. So long as the savage thinks of the wind as a force proceeding from an unseen spirit who fans him, and is conscious that in so thinking his own imagination is the creator of the spirit, and he does not believe in the actual existence of the spirit, that is myth or poetry.

It is the effort of the human mind to think of the forces of nature as persons. When he pictures this fairy goddess or spirit in a drawing, painting, sculpture, or verse, this is fine art. When he or his posterity cease to regard this fairy or demon as a creature of human fancy, but come to believe in it as a veritable person, this is religion. If he calls it by the same name and describes it as you do, it is true religion. If he describes or names it differently from you, it is idolatry to you, while your religion is idolatry to him. If he proceeds to evoke the aid of the unseen person to produce the wind when it is wanted, that is worship. If he slaughters a sheep or kid to induce the spirit to produce the wind, that is sacrifice. If he establishes a contemplative class of men who eat the sheep and commune with the spirit so as to make a profession and business of procuring the wind when wanted, that is an organized priesthood. If, after the priest has eaten the sheep, the spirit is pleased and sends the wind, that is atonement. If many deities are assumed, one for the earth, another for the air, another for the sea, the wind, the sun, rain, etc., this is polytheism. If a particular race selects one of these deities, as the Jews selected Yov of the Phœnicians and El of the Chaldees, and consolidated them into one person, this is monotheism. If the priests of this monotheistic God, as recorded in the twenty-second chapter of II. Kings, while repairing the temple and counting the silver, accidentally stumble upon a book which none of the other priests of the nation have ever seen or heard of, called the "Book of the Law of the Lord according to Moses," this is a revelation from God. If all the priests who would contradict the statements in this book are killed off by order of King Josiah, the book will thenceforth become history, because it will be an uncontradicted narration of fact. If the "Book of the Law of the Lord according to Moses" does not dovetail in with the mere human histories of the Egyptians and other races, but treats Egypt and Ethiopia, Persia, and Babylon to events of which they never heard, then the human in history must yield to the divine. If it appears not to have been known to Daniel, Ezekiel, or any of the older Jewish prophets, what matters that, as long as it is known to us? It is in this way that the truth of history is manufactured, so as to make God its central figure.

The belief that by the diligent study of a book, whose truth was first verified by the slaughter of all the priests who were not concerned in its concoction, every one can arrive at an accurate standard of duty, is religious ethics. The belief that one is actually living according to such a standard is salvation. If there arise among the chosen people a prophet who, having in some manner become acquainted, probably through the mysteries of Eleusis, with the secret myth or story of Hades or Hell, and stripping it of that poetic and mythical character which prevented it from being harmful as taught to the Greeks, thunders it to the world as a pretended truth and a scourge of terror, this prophet, though utterly void of the least rudiments of learning or of any critical power of determining truth from falsehood, will henceforth be a God. This is the historical route by which we come to our Christ Jesus.

Theology coming out of the Egg.

To show how naturally the infantile mind shapes its own theologies out of the materials furnished it by a crude and imperfect science, let me recall an incident. Years ago, I sat reading by a warm winter's fire in a room in which the only other person was a little child of six years, who was looking out of the window upon the sparkling snow and up into the bluest of blue skies where white clouds were chasing each other across the azure. I was in deep study. So was she; and weaving her little fancies, as they formed, into those queer little jets of song-spray which adults, who write songs for children, seldom succeed in imitating. Some of her inspirations were quite too crystalline, dewy, and transcendental for my comprehension. One of them, however, came within my reach. Its tune I cannot give. Its words were,—

> "Where the sky is white, the snow comes down;
> Where the sky is blue, the rain comes down;
> When I come to die, to the clouds I'll go,
> And the reindeer will draw me over the snow."

Here were philosophy, poetry, and religion making themselves out of the materials furnished to the child by what she had observed and heard of nature, —*i.e.*, out of science. Looking up, I remarked,—

"How do you know all that?"

"I don't know it," she replied. "I make it up."

"You haven't but one verse," said I: "would you like to have me make up some other verses for you?" To my extreme wonder, she replied, with great simplicity, "You can't." "Why can't I?" "Because," said she, "you know, I can make things up, because I don't know how they are. But you can't make them up without telling a story, because you know how they really are."

Here, we see a child of six recognizing the fact that the moral right to compose religious myths ends as science advances.

The Fallacy of Theism.

Every religious myth, and indeed every religious assumption or dogma, is an attempt to explain nature in advance of knowledge by attributing its mysterious facts to a Person, when we do not and cannot observe any such person. For a Person that is a Universal Force cannot be the subject of observation. If you find a cabin in the woods, you know that a human hand has been there. But if the man who built the cabin could also have created the trees, the ground, the air, the sun, and the stars, then we could not detect his presence at all, because, being universal, we cannot distinguish that which he creates from that which was never created. Cabin or no cabin, tree or no tree, star or no star, it would have been so, if he made it; and equally so, if he made it not. Hence, a universal creation can leave no track of its creator.

The Generalizer and the Critic.

While philosophy brands as myths or mere hypotheses all explanations which involve agencies whose existence cannot be observed, it is equally at war with a science that does not seek to explain, to generalize, to find the One in the many. Its process, and I am not sure that it is not endless, consists of: first, observation, or the collection of facts; second, generalization, or hypothesis, the attempt to state the law or principle of these facts; third, criticism, or the statement by the specialist of additional facts not groupable within the law; and, fourth, the reconstruction by philosophy of its theory, to take in the additional facts. Copernicus evinced the genius of a generalizer, when he perceived that more of the phenomena of the heavens could be explained by placing the sun in the centre than by placing the earth in the centre. Tycho Brahe, the specialist, rejected Copernicus' generalization, but went on observing the moon's orbit with the vigor of a sleuth-hound, meanwhile keeping astronomy practical by predicting human destinies from the stars. Kepler, almost before observing at all, conceived that some law of harmony controlled the spheres. After seventeen years of fruitless generalization, he struck upon the three wonderful laws of stellar harmony associated with his name. Thus, the specialist and the generalizer antagonize, yet aid each other. The specialist, or critic, tears down only in part, in the name of a broader science, what the generalizer seeks to construct. But philosophy, like the coral reef, ever rises slowly from the ocean of error into a more fit abode for man.

For *The Index*.

FUNERAL SERVICES

Of the late Samuel L. Hill, of Florence, Mass., in Cosmian Hall, Dec. 20, 1882.

The resident speaker, Wm. H. Spencer, opened the service with the reading of the following selections:—

"The memorial of virtue is immortal,
Because it is known with God and with men.
When it is present, mankind take example of it,
And when it is gone they desire it.
It weareth a crown, and triumpheth forever;
Having gotten the victory, striving for undefiled rewards."

"The righteous shall be in everlasting remembrance;
Yea, blessed is the memory of the just!
Their bodies are buried in peace,
But their name liveth forevermore.
The people will tell of their wisdom,
And the congregation will show forth their praise."

The following verses from the song book used in the Sunday-school of the society, which were among the especial favorites of the deceased, were then sung by the choir:—

Dare and Do.

"Dare to think, though others frown;
Dare in words your thoughts express;
Dare to rise, though oft cast down;
And dare the wronged and scorned to bless.

"Dare from custom to depart;
Dare the priceless pearl possess;
Dare to wear it next your heart,
And dare, when others curse, to bless.

"Dare forsake what you deem wrong;
Dare to walk in wisdom's way;
Dare to give when gifts belong,
And dare Truth's precepts to obey.

"Do what conscience says is right;
Do what reason says is best;
Do with all your mind and might,
And do your duty and be blest."

Address of William H. Spencer.

A solemn stillness, as of Sabbath eve, has settled o'er our village. What does it mean? The water-wheels are still, the clang of the hammer is not heard. The shuttle is at rest this mid-week day. What does it mean? Through the streets, I see men and women and little children, from the east and the west, the north and the south, wending their way to this hall, as the pious Jews of old went up to Jerusalem. This vast concourse of people before me,—representatives of all our churches, the Catholic and Protestant sitting side by side, representatives of the various industries of our village,—what does it mean? It is no ordinary occasion that calls us together. Happy the village that is privileged to do honor to such a son! Priceless the memory that deserves and commands such a splendid tribute of respect and gratitude as the presence of this great congregation avouches. But six days ago, the word came flashing over the wires, "Father died at half-past seven to-night, passing away quietly." "Father died!" No, oh, no! such fathers never die. "Passing away!" Never, never was he so present in our midst as at this hour. See where he dwells! His hand, his hand of flesh, indeed, lies folded there in the coffin; but there is a hand that is invisible, and yet I can see it, stretching out, and running like a stratum of granite underneath almost every industry of this beautiful village. Such men never pass away, except in form. The spirit of their influence is immortal. Yea, the very name of our village rises up before me, and reminds me that it was his hand that baptized us "Florence" in the dewy morning of our prosperity. How much we as a village owe to this man! Can we ever forget it? But it is not to his sagacity, perseverance, courage, industry, deliberation, method, promptness, not to any, strictly speaking, *business* qualities he possessed, that we pay our homage to-day. It is not because he started a poor boy, and conquered his way to a worthy financial success, that we gather here to honor his dust. No! He might have possessed the faculty which sweeps millions into its grasp, and yet not a lip be opened in his praise. But here was a man whose heart matched his head; a man at the touch of whose right hand things turned into gold, and then at the touch of his left the gold was transformed into the most splendid charities. It is for this, the good deeds of the departed, that the hundreds of his fellow-townsmen pay him the tribute of their love and reverence.

Philanthropist!—a friend of man,—that is the word which best expresses the ruling spirit of this man. It was born with him, inherited with his Quaker blood. It was early manifest in his life.

Five-and-forty years ago, when the Great Apostle of Liberty in America, Wm. Lloyd Garrison, sat in his little attic in Boston, his heart all aflame with indignation at the wrongs of the slave,—crying, like John the Baptist in the wilderness, "Repent ye, repent ye! prepare ye the way of the Lord," and "Break the bonds of the oppressor, and let the oppressed go free!" and America turned a deaf ear to the prophet, and even the conscience of the Church was asleep,—there was one young man down in Connecticut, then a member of the Baptist Church, a beloved and honored deacon of the Church, whose ear was *not* deaf to Garrison's cry of, "Let my people go, let my people go!" His whole soul was stirred at the thought of the awful crime of slavery; and he appealed to his brethren to open the door of the sanctuary to the pioneer advocates of emancipation, and to take sides with the weak, the oppressed, the down-trodden. But they refused to do so. He then left the Church, never to return, resolved to belong to no church that had not room enough for "Christ and the slave too." And his spirit of philanthropy, after his exodus from Egypt, went with him, like a pillar of cloud by day and fire by night, leading him on in all his after life. The same spirit of brotherly love and sympathy which made him the friend of the enslaved black man made him the friend of the poor struggling and toil-burdened white man. It was largely this spirit which led him with others, forty years ago, to organize here what is commonly known as "The Community," but the corporate name of which was "The Northampton Association of Education and Industry." It was this spirit which led him continually to devise ways and means to help the laboring man to a home and an education, where temperance, economy, and love might gather around the cheery family hearth. Never have I met a man who gathered the poor and needy into the arms of a more generous sympathy! From the day that he first heard the cry of the Southern bondman for help to the day, last summer, when he sent up for my perusal a paper advocating a larger measure of industrial education in our public schools, the spirit of philanthropy has perpetually brooded over him, inspiring him with a sense of obligation to those less fortunate than himself, and making him to cry out, "What can I do to best serve my brother man!" Look at his princely benefactions in this village, standing here, silent but eloquent witnesses to this noble spirit within him.

He early saw man's need of salvation,—salvation from ignorance and vice; and he clearly saw that his savior from these must be *education*,—the education of the *whole man*, head and heart and hand. His faith in the redeeming power of education is shown by his works. I marvel at the fertility of conception and resource of this man. One would think it enough for one head to found the various material industries in our village; but to add to these his active labors in the cause of education,—is it any wonder that the flame of his life-lamp burnt rapidly down to the flickering point?*

When our public schools needed a superintendent, who was it that urged the establishing of the office? and, when the town was unwilling to vote an adequate compensation for such an officer, who was it that rejoiced for the opportunity to put his hands into his own pocket, and furnish half the salary? When an unwise and mischievous spirit of economy had cut down the school appropriations below the requirement, and necessity was about to close the door to the school-house, who was it that stepped in and kept it open at his own expense? Who was it, long ago, that started evening schools for the benefit of those who could not attend the day schools? Who was it, more than any other, that laid the foundations of our village library? The young men and maidens who flock, at the sound of the bell, into yonder school-house,—how many of them have ever so much as heard that, from foundation to turret, that structure was the gift to the town by this man? The little children who are gathered in by watchful care, and go riding in their bright new sleigh to the kindergarten every morning, as merry and happy as spring birds,—ah! little do they know of the generous hand that has fed them so bountifully! Nay, little did hundreds of our citizens know of the extent and munificence of this man's benefactions, until our industrious reporter lately recounted them in the press.* But who can enumerate his *private* charities! How many within the sound of my voice could tell me o the numberless places where he has bestowed his largesses with his right hand, and kept it forever a secret from his left? Were it not for his modesty, he might have said with Job of old:—

"I delivered the poor when they cried,
And the fatherless who had none to help him.
The blessing of him that was ready to perish came upon me,
And I caused the heart of the widow to sing for joy." . . .

That surely he did. And more than this he was. There is a philanthropy that is generous with stolen wealth. There are those who will rob with one hand and give with the other. In this man, it seems to me, generosity was wedded to justice, charity was in partnership with honesty. Again, like Job, he might truly have said: "Never shall my lips speak falsehood, nor my tongue utter deceit. . . . To my last breath will I assert my integrity." Integrity!—the adamantine virtue. A man who has this is rock-ribbed as the eternal hills, and cannot be moved one inch from his basic principles. Thus it was with this man. Think not, my friends, that I am indulging in fulsome eulogy. That were to wrong the dead as well as the living. I but let facts speak, and they are more eloquent than any tongue to him who knows them. He had faults, no doubt; but, be they what they may have been, this I know,—that he had most magnificent virtues. And let us celebrate them. Is earth so rich in such men that we can afford to let them slip out of our sight and memory, unhonored and unsung? Let our boys see how, out of poverty and obscurity, a man may rise on the ladder of industry, thrift, temperance, and perseverance,—a perseverance that knows no such thing as failure,—rise to the topmost round of the ladder of financial success. Let our business men see how kindness to their employés, *humanity to man*, should be written in the bond of the laboring man, and how contracts should be measured more and more by the Golden Rule. Let our men of wealth learn a lesson from such lives as this,—to use their means in the public service, nor to wait until it is too late. Let them realize that by and by there will come an hour when friends, with hushed footsteps and shadowed faces, are gathering around one whose hand lies stretched out powerless longer to give and bless, though it held millions. Then, oh, then, as the mists are silently settling down over the scenes of this world, I think nothing can make that pillow quite so soft and sweet as the precious remembrance that you have done what you could to better the condition of your brother man. Know

"That to be saved is only this,—
Salvation from our selfishness."

Pity the man whose memory is only perpetuated by a marble shaft! The remorseless "tooth of time" gnaws out the record. I see a future generation peering through the long grass in vain to decipher the half-effaced inscription. But a monument like this man's, built up in the hearts of a grateful people,—nothing can obliterate that. So long as the name of Florence shall live, the name of Samuel L. Hill shall live. The future historian shall tell of his noble deeds, and the generations to come shall rise up to call him blessed.

I rejoice that this man has lived, rejoice in the name of *man*. When I see such virtues as he illustrated springing up in the soil of our common humanity, my heart throbs with a higher hope for the human race. It assures us that this mother Nature of ours has royal blood in her veins, and that the little school-boy I meet may be one of the kings of men, and the little girl, one of the queens, to match him in the grand things they shall yet do for the world. I warn you, think not meanly of what you may be and do, young man and young woman. What man has done, man may do, and more! Look up, struggle up, and rest not till you have climbed to the zenith of your possibility. I rejoice, then, in the name of our common humanity, for the manliness that was lived out in this life. Again I rejoice,—rejoice in the name of our beautiful, enterprising, prosperous, and happy village. His benefactions have lent a lustre to the fair name of Florence. What we are is largely due to what he made us. Let us keep the

* Mr. Hill was one of the founders of the Florence Sewing Machine Co., of the Brush Factory, of the first mercantile house in the place, of the cotton manufactory, and may almost be regarded as the father of the Nonotuck silk business in Florence.

* His public benefactions in the village amount to about $100,000.

Digitized by Google

name untarnished. Let us bequeath it to our children, freighted with still richer legacies.

Again, and lastly, I rejoice,—rejoice in the name of the Free Congregational Society of Florence. I feel that in a special sense he was ours. He was one of the founders of this free society. He ever continued its steadfast friend and one of its most liberal patrons. For years—I know not, indeed, but from the very beginning of its existence—the society honored itself by annually electing him its president; and he died in that harness. This great Cosmian Hall rests largely on his contribution of time and toil and money. That noble gospel of freedom, fellowship, character in religion, an excerpt from the original "articles of agreement" engraved on the marble tablet over the entrance to this hall, breathes the spirit of his faith. These words which he helped to pen, and which he cordially subscribed nearly twenty years ago, seem sacred now that he is gone: "Respecting in each other, and in all, the right of intellect and conscience to be free, and holding it to be the duty of every one to keep his mind and heart at all times open to receive the truth and follow *its guidance*, we set up no theological condition of membership, and neither demand nor expect uniformity of doctrinal belief, asking only unity of purpose to seek and accept the right and true, and an honest aim and effort to make these the rule of life. And, recognizing the brotherhood of the human race and the equality of human rights, we make no distinction as to the conditions and rights of membership in this society on account of sex or color or nationality."

It is superfluous to assure you that he never regretted leaving the Church in his early years, nor the founding of this society in his later. The last word which he ever wrote, that has appeared in print, was written in reply to a sermon published less than a year ago in one of our local papers,—a sermon which seemed to him to reflect upon the intelligence and virtue of the mechanic class,—shows where he stood up to the last. Permit me to quote a few lines from it. Says he: "While in the 'fold,' I know not but that I desired the welfare and salvation of my fellow-beings as sincerely as my brethren, though perhaps not so well manifested; and, since I came out, I have been conscious of an *increasing* interest in the same direction. And I now desire to bear testimony, in these last declining days of a long life, that I have ever experienced uninterrupted enjoyment in contemplating the course I have pursued since coming out of the 'fold' into a free and independent position, and whether in health or sickness *never for a moment have I regretted the change.*"

That such a faith as his is good to *live* by, let his life for the last forty years testify. That such a faith as his is good to *die* by, let these, almost his dying words, testify. He believed that he who serves humanity most serves his God best. If this goodly universe has not her Best in reserve for such as he hereafter, then she were unworthy of such sons; and that we dare not believe of her.

"When God made the earth, it shook to and fro till he put mountains on it to keep it firm. Then, the angels asked, 'O God, is there anything in thy creation stronger than these mountains?' and God replied, 'Iron is stronger than the mountains, for it breaks them.' 'And is there anything in thy creation stronger than iron?' 'Yes, fire is stronger than iron; for it melts it.' 'Is there anything stronger than fire?' 'Yes, water; for it quenches fire.' 'Is there anything stronger than water?' 'Yes, wind; for it puts water in motion.' 'O our sustainer, is there anything in thy creation stronger than wind?' 'Yes, a good man giving alms: if he give with his right hand and conceal it from his left, he overcomes all things. . . . A man's true wealth hereafter is the good he has done in this world to his fellow-men. When he dies, people will ask, What property has he left behind him? But the angels will ask, What good deeds hast thou sent before thee?'"

What will be, *must* be, his answer? If modesty should seal his lips, as I imagine it might, let them read the answer in the grateful heart of Florence to-day.

Address of Elizabeth Powell Bond.*

It is difficult to lay aside in a single hour the habit of long years. For years, one benefaction after another has fallen upon our village, not less silently than fall the sunshine and the dew; and it has been our habit to accept them in silence, lest an expression of gratitude should be an intrusion upon the utter self-forgetfulness of our benefactor.

In breaking this long-accustomed silence, my lips seek the purest, simplest words in which to bear testimony to the beneficence of this ripened life. To speak words of eulogy would be to "paint the lily, and to gild refined gold." The life has been lived before all our eyes: its fruits, by which we know it, are all about us, portraying, as no words can, the principles by which it has been governed, of steadfast purpose, of incorruptible integrity, of perfect unselfishness. As is known to you all, every important business interest of our village has been founded or fostered or assisted by his wealth or his energy or his wise counsel. But his interest ended not with the business prosperity of the community, indeed, it only began there, as a means of securing what he felt to be the highest end of life,—true education and its certain results in pure morality and in justice between man and man. How complete was the circle of his beneficent work! He wrought upon the surface of our village life, in that he founded industries, and assisted to the establishment of homesteads, and fostered the public schools, and generously sustained this society for free inquiry; but his wise beneficence reached its consummation when he touched the hidden springs of our future, in our little children. We love to remember it of Jesus, that he took the little children into his arms and blessed them. This benefactor took the little children into his fostering care,—not merely the favored children of comfortable homes and wise parents, but his provision reaches to the byways and hedges, and gathers in most tenderly the little ones whose lives are overshadowed by the ignorance or incompetence of their parents. With his customary prudence, he first opened his own parlors for experimental work in this direction; and, meeting with an encouraging response, he provided for the continuance of the work in the admirable kindergarten building on Pine Street. When the spacious, sunny rooms were ready for use, he caused a printed circular to be sent to the parents of young children, inviting all to avail themselves of the kindergarten privileges, with the payment at the end of each term of such a sum as each was able or disposed to give. No one knows what his neighbor gives, so each is left absolutely free to contribute in proportion to his means. It is according to the wish of the founder, as it is in harmony with the spirit of kindergarten training, that the conventional differences in society should not be regarded; and this charming assembly of little ones is truly a congregation of peers. Who can estimate the far-reaching results of this kindergarten work! It is true, it is not reasonable to expect that a part of each day spent in the kindergarten can uproot all the implanted evil tendencies of unhappy birth, or undo all the mischief of unwholesome home influence; but it is rational to expect that every child who shares its benefits will receive into his soul some seed of truthfulness and justice and honor. No monument of stone built to the memory of our friend could be so enduring as this beautiful work, no testimony of our gratitude can be so sincere or so acceptable as the faithful attendance upon the kindergarten of all the little children of our village.

One thought that has been borne in upon my mind most strongly is of the inspiration of this life to the young men of our community. The greater part of seventy years has been passed in hard work, in devotion to a fixed purpose of business success, in consecration to the philanthropic works that concern all the race,—the freedom of the slave, the elevation of woman, the check of intemperance, the promotion of freedom in religious thought.

In the light of such a life, how unworthy and insignificant seem the lesser aims of self-indulgence and self-aggrandizement that are the besetting temptations of our young men! In the light of such a career, what a privilege it seems to have been born into this world, to have a share in its hard work and its splendid victories, to have a fellowship with the souls whose strength and purity seem the imprint of a divine hand!

No fear of future punishment nor hope of future reward has had aught to do with the life whose lesson we ponder to-day. Sufficient unto this soul has been the steady prompting of the voice within, the serene faith that the universe is ordered in wisdom.

May the sweet sorrow of this vacant place in the beloved family circle be comforted by the memories of the past, by the tender reverence and deep gratitude of all our hearts toward him whose benefactions have touched each one of our lives.

It is not given us to demonstrate whether this triumphant life has passed into a dreamless and unending sleep, or whether new and greater victories wait for the soul set free from its limitations of flesh. For one, I believe that this human father who never mocked his children with delusive hopes, who loved the right, who served the truth, is the type and in the image of a heavenly Father, who hath clothed him with immortality, and hath called him to the unending service of truth and to the immortal joys of love.

After the address of Mrs. Bond, the following letter was read:—

Dear Friends,—Owing to a severe cold, I am unable to join in to-day's public manifestations of universal and profound grief at the death of that truly great and good man, Samuel L. Hill. The people of Florence need no words of eulogy for their devoted friend. They cannot walk the streets of their beautiful village without being everywhere reminded of Mr. Hill's beneficent deeds. An intimate acquaintance of forty years with this noble man has impressed me with the conviction that he was one of the most unselfish and generous of mankind. He delighted in doing good; and some of the institutions which he has endowed will be far reaching beyond our conceptions in their beneficent influences on the welfare of his fellow-men, who will have great occasion to rejoice that such a magnanimous soul was permitted to bless the earth with his presence, and give to the world assurance of a man. SETH HUNT.

SPRINGFIELD, MASS., Dec. 20, 1882.

Address of Mrs. Anna Garlin Spencer.*

We meet here to-day, one family, in a common love, a common grief, a common gratitude. Yet would we not forget that family within the family, that circle within the circle, the nearest beloved of him who has passed from sight. The son and daughters, the grandchildren, the kindred of nearer or more remote degree, the aged friends whose footsteps have so many years kept pace with his,—these mourn not alone the public benefactor, but the heart's dearest: to them, and for them, I humbly speak.

It were idle to make pretence that, because there are many things to give us sacred joy and gratitude to-day, therefore this loss is easy to bear. It is hard. Death is not less awful that it comes to all in turn, not less strange and terrible that it is inevitable. And, if we are spared the sharp pang that comes when an untimely frost destroys the young just entering upon life's duties, we mourn not the less to bid farewell to the aged and revered. For, the longer we keep our loved ones with us, the more dear and precious they become. And if we may cherish a noble pride in one whose voice is stilled, if we may feel that all who knew our beloved one grieve for a wise counsellor and a generous helper, not the less—nay, rather the more—must we feel the loss. For, by so much as he won the world's deep regard, he grew the dearer to those who knew him best. Yes, we must accept the grief as a burden heavy and hard to bear.

But, in the spirit of him whose memorial we speak to-day, we would bear that burden as a rich experience, to be consecrated to noble, and not to selfish, uses. There are many in sound of my voice who have reason to bless with gratitude the memory of him who has gone, for helpful deeds done silently, all record forbidden. Let these, and the little circle next the departed one, make their sorrow to-day, and in the future time, when they miss so sorely the loved presence, a holy place of service such as he gave.

In the city of London, in a spot long ago a centre of wealth and comfort, but for many years given over to the abodes of squalor and misery and sin, there was, until recently, a high-walled enclosure, a church-yard burial-place. The church, which once stood in its centre, had long since crumbled to the ground. The dust of all those whose memory lingered in the heart of any living being had been removed to other consecrated ground, and nature had long since mingled with her common earth all trace of those of forgotten generations whom no one claimed. For years, the once sacred place stood thus, useless, and deserted even by the dead. And then business, ever ready to take all space to itself, claimed the old burial-place. Let the relic of the past make way for the activity of the present, it cried. And many said, Yes, it shall be so. But, amid the clamor, one voice was heard, the voice of Benevolence, pleading that other living uses

*Mrs. Bond, sister of Aaron Powell and widow of the late Henry Bond, was formerly resident minister of the society.

*Substantially as spoken.

Digitized by Google

than those of commerce and manufacture be given right in the old "God's acre." Throw down the walls! cried this voice, and let the children of poverty and sickness, the children who have never seen the clear shining of the sun or the beauty of tree or flower, come in and make this their play-ground. Let mothers who have nothing of joy to give their children bring them here to receive nature's gifts of air and freedom. Over the entrance to this walled spot was once written by the mysterious hand of death, "Sacred to the Memory of the Past." Let love now write there, "Sacred to the Good of the Present." And it was as Benevolence desired. And, now, the happy children play where once the dead were laid away with weeping; and there, where human love knew loss, they learn the lesson of its gifts and tenderness.

O friends, as the years go by, larger and larger space in our lives must be set apart in memory of the beloved dead. Few of us all, however young, but heap within our hearts some mound of grief. To one, it is the child that love could keep so little while; to another, it is the youth, just blossoming in life's rich promise, who left a desolate home; to another, it is the husband or wife who had grown a part of the very self, but is torn away to leave a bleeding heart; to another, it is the revered father or mother, dearest of all. To us all comes the wail of death, as universal as the cry of the new-born that ushers all into life's mystery. And the burial-places of our lives are besieged by selfishness. The trivial cares, the sordid labors of life, would have entrance even there, and drive out the memory of those that were once with us; or grief would hug its sorrow, and isolate the bereaved from all the world of loving helpfulness. But, dear friends, in his name whose life we celebrate to-day, I beg you, yield not these sacred places, consecrated by the presence of the dead, to the selfishness either of the material life that presses us so closely or the sorrow that cares not for the sorrows of others. When time has a little softened our grief and we have strength to conquer our weaker selves, let the still shut places where we buried precious hopes be opened again, but not to the common things of life. Once consecrated to the memory of the past, let them be now like the old burial-place in London consecrated to the good of the present,—peculiarly sacred still, not to us alone, but to the needy, the ignorant, the suffering of our kind.

Then let our tears for the dead water the plants of love and pity for the living. And in our hearts, so chastened and enriched, will spring also flowers of hope and trust in the future union with our loved and lost, I must believe. The immortality on this earth is assured beyond dispute by the endless sequence and consequence of acts. Each day's life is a link in the chain of influences whose beginning and end we do not see. But love begs always that the immortal deeds may not outlive the conscious doer. And I, too, as one before me has confessed,—I too, hold deeply in my heart the hope that love prophesies truly, and shall yet claim and know its own.

Let us, then, make our sorrows serve the world; and let us make our own lives so true and pure and helpful that we shall not shame the noble dead we mourn, but deserve an immortality with them.

The choir then sang three verses of Longfellow's "Psalm of Life." Mrs. Spencer dismissed the congregation with the following sentiment:—

May this hour of tender sorrow teach us as no other could do what are the real, the deathless things, in human life: the truth, whose only language is sincerity; the right, which, faithfully followed day by day, binds us to the Divine Good; the love, which, kindled at the hearth-fire of home, goes out to all the world to lose its life of selfish desire, to find a truer self in the better life of all! And may the peace of trust, which passeth understanding, be and abide with us all!

WE are a company of ignorant beings, feeling our way through mists and darkness, learning only by incessantly repeated blunders, obtaining a glimmering of truth by falling into every conceivable error, dimly discerning light enough for our daily needs, but hopelessly differing whenever we attempt to describe the ultimate origin or end of our paths; and yet, when one of us ventures to declare that we don't know the map of the universe as well as the map of our infinitesimal finish, he is hooted, reviled, perhaps told that he will be damned to all eternity for his faithlessness.—*Leslie Stephen.*

CORRESPONDENCE.

DID NOT JESUS TEACH ORTHODOXY?

Editors of The Index:—

The last *Christian Register*, in replying to Dr. Withrow of Park Street Church, asserts that "the evangelical belief"—the creed which that distinguished clergyman upholds—implies that "a vast majority of the human race are victims of eternal woe." The *Register* quotes the American Board of Commissioners of Foreign Missions; an American missionary in China; Hunel, an orthodox preacher of great celebrity fifty years ago; Canon Farrar; Chrysostom; Cornelius à Lapide, Du Moulin, Professors of History at Oxford; St. Ambrose, St. Augustine, and St. Gregory. And, if these eminent authorities may fairly represent the "evangelical belief," it makes good its assertion. But why beat about the bush in this way? Why not go at once to head-quarters, and settle the matter upon prime authority?

The very question was, in his lifetime, submitted to Jesus Christ, and he gave an explicit answer. "*Are there few that be saved?*" asked one of him; and he replied, "Wide is the gate, and broad is the way, that leadeth to destruction, and *many there be which go in thereat:* because strait is the gate, and narrow is the way, which leadeth unto life; and *few there be that find it.*"

After sixty years of controversy upon the point whether the Bible touches the liberal or the orthodox creed, a distinguished preacher and scholar of the former faith comes forward, and admits that it teaches the latter. Now we have arrived at the point of candor and are in the mood of making concessions, why not make all the concessions we shall ultimately be obliged to make? Why not say at once not only that the Bible is an orthodox book, but that Jesus was an orthodox teacher? Can any candid student of his recorded words doubt that he was? In what phraseology and on what occasion did he ever contradict this statement of a restricted and limited salvation?

The *Register* sneers at a well-known "hymn of Dr. Watts, still sung in Park Street Church to the *doleful* tune of *Windham*":—

"Broad is the road that leads to death,
And thousands walk together there;
But wisdom shows a narrow path
With here and there a traveller."

It was certainly a marvellous exhibition of the artistic skill of that sweet lyrist of evangelicism, that he could render in rhyme and rhythm the words of Jesus, with so little violence to their sense or form. "Windham," though in minor key, bears along a plaintive melody in its sad refrain. The dolefulness is rather in the subject than in the tune. What would you have? One would not sing a merry jig over the eternal damnation of the great majority of his race.

The only reason the *Register* gives for rejecting the doctrine supported by such weighty authority is that it is "abhorrent" to it. It finds the doctrine of damnation disagreeable. If God and the soul, and heaven and hell and eternal life, are creations of our imagination, it were certainly self-tormenting folly to imagine anything that would wound our sensibilities. Let us imagine a good-natured God, a blissful soul, a comfortable and enduring heaven, and eliminate hell and death from our thoughts. But, if all these are verities, we must take them as they are, not as we would prefer to have them. We are compelled to believe in many things (in a world whose ordering is just as much in the hands of God as any other domain of the universe) that are very abhorrent to us. Common and repeated as they are, we have never come to find them at all agreeable. Old age is abhorrent to us; so is death; so is the pain by which we make our entrance into and our exit from life; so is the ancient and modern cruelty, by which one order of sentient creatures perpetuates its own life a little while by the painful death of other orders; so are the savagery and suffering, by which our race has climbed from bestial conditions to human satisfactions, human sympathy, and human intelligence, whose attainment is the history of our civilization. If a man is to cancel from his belief every thing that is abhorrent to him, he would have to cancel the facts of his personal experience, and of the career of his race in the world.

The truth is that Unitarianism, sliding down from the airy heights of a docile faith, has stuck mid way upon a narrow ledge in the precipice of doubt,—a *Point No-Point*,—to which by tooth and nail it can cling no longer. It must be hoisted up to the grim heights of the naked and austere beliefs it has abandoned, or plunge fearlessly down, till its feet strike the *terra firma* of rationalism. In the evolution of creeds, part of the Liberal Church will timidly cry out to the orthodox, "*Give us a rope!*" but the bravest and the best will fearlessly sound the depths of thinking till they stand upon solid ground. T.

"WHAT CONSTITUTES AN AGNOSTIC?"

Editors of The Index:—

Meeting George Jacob Holyoake in the office of *The Index* on his first visit to Boston, and being introduced to him, in our conversation I put the question to him, "What constitutes an Agnostic?" He hesitated, and returned the question. My reply was, "One who neither affirms nor denies anything." Friend George replied, "That is the best answer I ever heard to that question." Hence, you can easily apprehend my surprise on seeing a ten-column article in *The Index* on "The Creeds of Agnosticism," Agnosticism being defined as that doctrine which, professing ignorance, neither asserts nor denies; in theology, the doctrine that the existence of a personal Deity can neither be asserted nor denied, proved nor disproved, opposed alike to dogmatic theism and dogmatic scepticism. To talk about the creed or creeds, in other words, the beliefs and disbeliefs of one, or of those who neither believe nor disbelieve, affirm nor deny anything, seems little short of the acme of absurdity.

LEANDER WETHERELL.

THE DEITY OF CHRIST.

Editors of The Index:—

"Is it not almost time," asks the *Christian Register*, "to leave off quoting Napoleon in proof of the Deity of Christ?" The philosopher Mendelssohn—forefather of Felix Mendelssohn, the eminent composer and the sincere friend of Lessing—was asked by a clergyman, "Great philosopher as you are, why are you not a Christian?" Mendelssohn answered, "The Jewish people give no credit to the son, if the father lives eternally." His meaning is plain, when it is remembered that in Germany the Jew money-lenders take care not to advance money to sons whose fathers live and hold the capital in hand.

BOOK NOTICES.

OUR LIBERAL MOVEMENT IN THEOLOGY. A closing course of lectures given in the Harvard Divinity School. By Joseph Henry Allen. Boston: Roberts Brothers. Price $1.25.

This book has been lying too long upon our table unnoticed, but it has not been unread. And the reading of it has caused us to wonder and regret even more than before that its author, who has been Lecturer on Ecclesiastical History in the Harvard Divinity School for several years, should not have been permanently appointed to the professorship in that department. The young man who has lately received the appointment may have a good equipment of book-learning for the office; but many years must pass over his head, we imagine, before he will be wise enough to write such lectures as these. They have not only the wisdom of book knowledge, but that which comes through experience and a well-trained judgment. It is not strange that the students who heard them should have asked Mr. Allen, as the "Prefatory Note" shows, to have put this, his closing work for them, into more permanent form.

The subjects of the lectures will attest their breadth of interest as well as the appropriateness of the general title given to them. They are: I. Antecedents; II. New England Unitarianism; III. Channing; IV. Fifteen Years of Controversy; V. Theodore Parker; VI. A Scientific Theology; VII. The Religion of Humanity; VIII. The Gospel of Liberalism. Each of the lectures has an interest peculiarly its own. The first five, which have chiefly to do with the Unitarian movement and its controversies, are not only excellent statements, calmly judicial in their tone and entirely free from the spirit of partisanship, but they receive additional value as well as a pleasant coloring and warmth from the vein of personal reminiscence that runs through them. But it is in the last three lectures, which treat the religious problems of the present hour, and treat them to the core, that the intellectual strength of the book especially appears.

Digitized by Google

Mr. Allen is not only a calmly poised thinker, but he is a clear and thorough thinker. He does not ignore the hard parts of the modern religious problems nor try not to see any possible disagreeable alternatives that may present themselves. Whatever question thought may raise, even though it may imperil fondly cherished beliefs, he is ready to face it with thought, and does not try, as do some modern writers on kindred themes, to ward off or conceal the danger by extemporizing a barricade of rhetorical sentiment. Few writers, coming to the same topics from the religious side, have planted themselves more squarely and confidently on the ground of science. Speaking of the creeds of Protestantism, he says: "As I honestly think—though here I do not undertake to dogmatize—the ecclesiastical root out of which they all grow alike is withered, and will put forth no more new growth. At any rate, the order of thought with which we have most to do is absolutely detached from that root, and is growing in other soil. The intellectual foundation which we have to assume is laid not in theology, but in science." He faces the possibility that the two great convictions of past religious faith, belief in a divine Personality and belief in the immortality of the soul, may erelong pass into an eclipse, but, if this shall happen, considers that the experience will be a needed discipline for divesting those beliefs of unworthy and harmful forms of conception.

In the lecture on Scientific Theology, there is an interesting discussion on the use and meaning of the Christian name. He would himself retain the name simply because of the fact "that we are Christian by habit or inheritance, unless we deliberately choose to renounce that name in favor of some other." He would not, however, have the name asserted or retained any farther than it strictly represents the fact; but he thinks that, "on the side of associated religious action," it does represent the fact in the freest Christian organizations. Speaking for himself, he says: "As distinctly as I realize any fact in human history, I realize in acting with such an organization that the great Christian movement has not spent its force, but that in some very important departments of thought, still more in some of the most vital and practical spheres of motive and emotion, its current still bears me along." This, up to a certain point, is doubtless true. But we wish Mr. Allen had carried his illustration a little further,—to the point where those who have been borne along on the current of the Christian stream and those who have been borne along on the stream of some other religion meet on the broad sea of common beliefs and aims,—and then told us whether he would see any appropriateness or usefulness in their still retaining the names that designated their separate streams. Rivers, when they reach the ocean, drop their names as rivers. So, as it seems to us, must it be with the religions, when they have once escaped the channels of provincial and ethnic theologies and the separating barriers of mutually excluding claims to supernatural authority, and mingled their waters in the common ocean of natural human experience.

MR. ISAACS. A Tale of Modern India. By F. Marion Crawford. New York: Macmillan & Co. Price $1.00.

This work by a new American novelist is attracting considerable attention in literary circles from its being a new departure in the line of romance, treated in an able manner, and yet, save for its frequent touches of mysticism, being entirely possible and lifelike in detail. The three principal *dramatis personæ* are: first, the narrator, an American born and educated in Italy, a journalist by profession and a Catholic in religion; Mr. Isaacs, the hero, whose real name is Abdul-Hafiz-ben-Isák, a handsome, cultured diamond merchant, a Persian by birth, of the Mohammedan faith, and the husband of three wives; and the heroine, Miss Westonhaugh, a beautiful English girl and a Protestant. About these people, meeting temporarily in a fashionable health resort in the Himalayas, cluster all sorts of the queer but recognizable characters, developed by the religious and intellectual interregnum existing at the present time. These discuss in the pages of this volume many of the old beliefs, superstitions, and new isms to which such a state of things has given rise. It will be seen that with such a *mise en scène*, controlled by a thinker who possesses a vigorous, clear style, who has for a background all the wonders of the Orient, with a tiger-hunt and other romantic accessories brought vividly before the reader, the book cannot fail of being interesting. One fails, however, to grow so interested in the love story which forms the thread of all these philosophical dissertations as the narrator apparently does. Dressed up in whatever felicitous form of statement, there is something decidedly repulsive to our moral sense in the idea of a man with three wives coolly deciding to discard them all, because he has fallen in love with a pretty English girl who will not consent to make a fourth in his harem, and whom we feel sure, in spite of Mr. Crawford's predilections, would probably tire of his new passion in a short time, and go back to his former state of polygamous happiness. And it is this feeling of repugnance to the ideas of Mr. Isaacs which makes us rather glad, on the whole, of the rather sad *dénouement*. The writer seems to have been a close student, if not a partial believer, in the mysticisms of both East and West, and leaves us at the last in a state of bewilderment as to his real religious status.

MAGNHILD. By Björnstjerne Björnson. Translated from the Norse by Rasmus B. Anderson. Boston: Houghton, Mifflin & Co. Price $1.00.

This volume, which, while adding another to the series of novels in which the Norwegian poet has depicted in his own unique style and with remarkable accuracy the various every-day aspects of home life in Norway, is viewed in another aspect,—as "a story with a moral," somewhat hazy in treatment and unfinished in plot. "It marks," says the translator, "a new epoch in Björnson's career as a writer of fiction"; though, he frankly continues, "it is but justice to say that Mr. Björnson himself looks upon this as one of his less finished works." One grows doubtful, as he reads, whether Mr. Björnson intends this story as a protest against marriage or as a sort of championship of woman's rights and deprecation of some of her wrongs. A writer in a late number of the *Atlantic Monthly* fancies Björnson has written the work as a sort of allegory of Norway's political condition. Our opinion is that the moral meant to be enforced by the story is contained in a paragraph which occurs at the close of the tenth chapter, which we here quote: "There are many whose lives are ruined by the loss of love, or by sacrificing every thing to love. With some of them, perhaps, it could not have been otherwise (people are so different, circumstances excuse so much); but those whose existences I have seen thus blighted could unconditionally have gained the mastery over self, and in the effort acquired a new power. Encouraged, however, by a class of literature and art whose short-sightedness proceeds from a maimed will, they neglected all attempts at gaining strength." The book is printed and bound in handsome shape, as is usual with most of the books issued by this firm.

STORIES OF DISCOVERY. Told by Discoverers. By Edward Everett Hale. Boston: Roberts Brothers. Price $1.00.

In the preface to this interesting volume, Mr. Hale explains its purpose, which is to interest the younger class of readers in the kind of literature which will increase their stock of useful knowledge, while at the same time it interests and entertains their always restless imaginative faculties. When in 1879, at a Convention of Librarians held in this city, he said this could be done, he "was met, courteously, with the statement that, if I thought this thing ought to be done, I had better do it myself, a statement frequently, and perhaps fairly, made to people who offer advice." The result of which is the excellent series of which this volume makes the fourth, those preceding being entitled respectively *Stories of War*, *Stories of the Sea*, *Stories of Adventure*. In all of these, Mr. Hale gives the narrative at first hand or as nearly so as he can, while connecting each "story" by the thread of an original story of the thirst for such knowledge displayed by a party of agreeable young people. The stories of discoveries in this volume consist of the first voyage of Columbus, Da Gama's discovery of the East Indies, Magellan's discoveries, the voyages of Sir Francis Drake, the discoveries of the Atlantic Coast, Pacific Ocean, the North-west Passage, the source of the Nile, the mouth of the Niger, West of the Mississippi, and the Antarctic Continent.

THE *Journal of Speculative Philosophy* for July comes to hand several months late. The leading article, "Philosophy in its Relation to its History," is from the pen of Dr. Shadworth Hodgson, President of the Aristotelian Society in London. A short article, giving the beginning of a treatise of the celebrated Polish philosopher, "Trentowski on the Sources and Faculties of Cognition," is translated by Prof. Podbielski. John Dewey writes on "The Pantheism of Spinoza." Prof. Soldan continues his translation of "Hegel on the Absolute Religion." May Wright Sewall writes on "The Idea of the Home." Dr. Alex. Wilder edits "The Chaldean Oracles." Meeds Tuthill finishes in this number his essay on "Use, Beauty, and Reason," and Mrs. Caroline Eliot Lackland analyzes the character of Goethe's "Mephistopheles." The notes and discussions contain matters of interest to all thinkers. The publishers are D. Appleton & Co., New York; and Prof. William T. Harris is editor.

THE *Sanitarian* appears in an enlarged and entirely new form in its first number of the year, a form that is decidedly inviting, and an improvement in every way. Among the contents of this January number are: "National Legislation and Attempts at Legislation on Quarantine," by Prof. J. L. Cabell; "National and State Sanitation," by Henry I. Bowditch; "Sanitary Requirements of New York," by Dr. J. C. Peters; "Soldiers' Shoes," by Dr. Ziegler; "Emigrant Inspection Service," by Dr. William Smith; and "House Drainage."

PERSONAL ITEMS.

THE *Athenæum* announces that Mr. Leslie Stephen will withdraw from the editorial conduct of the *Cornhill Magazine*, in order to edit a *Dictionary of National Biography*, undertaken by Smith, Elder & Co.

MRS. MARIA MOTT DAVIS, daughter of Lucretia Mott, who has been the wife of Mr. Edward M. Davis over forty-six years, experienced her first attack of illness severe enough to confine her to her bed a few days since on her return from a fatiguing Western trip. She is now convalescent. A remarkable health record.

B. F. UNDERWOOD finished his engagements in Iowa last week by a course of lectures at West Liberty. He spoke last Sunday at Indianapolis; and, after a course of lectures this week at Canal Dover, Ohio, he will return East for a few days before lecturing at Doylestown and Linesville, Pa., East Saginaw, Mich., Chicago, and other places where engagements will take him.

MISS MARY THOMAS, daughter of one of the Trustees of the Johns Hopkins University, has just taken the degree of Ph.D., *summa cum laude*, at the University of Zürich—a distinction rarely attained by male graduates. Miss Thomas is a graduate of Cornell, and studied three years at Leipzig. She took her examinations at Zürich, because the University of Leipzig does not grant degrees to women. Her subject was philology, a particularly difficult one in Germany.

M. LENORMANT has visited twenty-four towns and cities of the Basilicata and Calabria, in more than half of which no archæologist had preceded him. He has collected more than two hundred Latin and thirty Greek inscriptions that have never been published. He has observed a remarkable resemblance between the geometric decorations of the Apulian and of the Cypriote pottery, and also has found relics of a primitive Italic black pottery once made all over the south of the peninsula.

PRINCE KRAPOTKINE, who was arrested at Thenon, France, last week, charged by the French government with seeking to overthrow social order in that government, belongs to one of Russia's oldest families. The Prince is only thirty-nine years of age, but has, since he was seventeen years old, been a socialist and on the side of the people. He was a very earnest student in the natural sciences, so that great things were hoped of him by his family, as he seemed engrossed in his studies. But, as early as 1877, he was arrested for his revolutionary opinions by the Russian government; but he escaped at that time, and settled in Geneva, Switzerland, where he wrote powerful articles for revolutionary papers. These radical opinions brought persecution upon him, and he retired to Thenon in Savoy, where, still giving expression to his unpopular opinions, he was recently arrested by the French government, and with many other malcontents will be tried early this month.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe. I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to
JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

Mr. CHARLES WATTS'S

LIST OF SUBJECTS FOR

AMERICAN LECTURES.

1. Secularism: its Nature and Position.
2. Is Man necessarily a Religious Being?
3. Morality: its Nature and Development.
4. Christianity: its Origin and Growth.
5. Behold how Men make Gods!
6. The Fallacies of Christian Theology.
7. Civilization: its Aids and its Obstacles.
8. The Wonders and Difficulties of the Bible.
9. Martyrdom: Secular and Christian.
10. The Modern Defence of Christianity.
11. A Secular View of the Doctrine of a Soul and a Future Life.
12. Philosophy and Theology: Which?
13. Christ: his Life and Death.
14. The New Testament Uncertain in its History and Unreliable in its Statements.
15. The Triumph of the Nineteenth Century.
16. Atheism and the Horrors of the French Revolution.
17. Miracles no Proof of the Divine Origin of Christianity.
18. Bible Characters.
19. Fanaticism: its Cause and Cure.
20. Education: True and False.
21. Atheism and Theism: a Contrast.
22. Monarchy and Republicanism.
23. The Oath Question and the British Parliament.
24. Ireland: Past, Present, and Future.

Mr. Watts can be addressed at the office of THE INDEX.

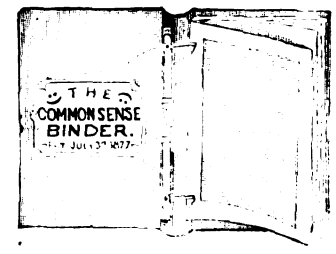
THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire accordance with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25 "	. . .	8c.	" "
" 26 " 51 "	. . .	6c.	" "
" 52 "	. . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any *one* can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

Thoughts on the Death of Jennie Cramer

is the title of an address by FREDERIC A. HINCKLEY, neatly printed by Geo. H. Ellis, and for sale by the author and at this office.

CURRENT TOPICS.

ONE hundred and thirty-two separate and distinct languages are spoken within the limits of the great British Empire of India.

CASTELAR, the Spanish orator, has broken with Sagasta and the "dynastic" democrats, and declares himself a republican pure and simple, and announces his intention to carry on a republican propaganda from the platform, from the university chair, and with his pen.

THE Burlington *Hawkeye* refers to the great size of the Chicago papers of January 1st, and adds that, "when you have read one page, you are convinced that those edges of the world sticking outside of Chicago had better hurry up and get annexed, if they want to be heard of in '83."

THE Pope continues to complain of his harsh treatment by the Italian Government. Addressing the College of Cardinals a few days ago, he said that "the consideration which formerly was shown to the Holy See, and which was dictated by political prudence and reasons of State, has now been put aside."

THE Court of Queen's Bench at Toronto has unanimously decided that the laws of the Province of Ontario place no restriction on the carrying of passengers by land or water on Sunday, thus overruling an old decision made thirty years ago, in which the plying of ferry boats on the Lord's day was pronounced illegal.

MRS. SARAH B. COOPER, a relative of Col. Ingersoll, and an energetic Sunday-school teacher of the highest character, who some time ago, it will be remembered, was turned out of the Orthodox Church to which she belonged in San Francisco, because of various liberal utterances, but found refuge, with her whole Sunday-school class, in another Church less strict in its renderings of the letter of the law, is now, in conjunction with that class, doing excellent service for humanity in that city. "During the past year, the class has raised almost $3,500; and it carries on three charity kindergartens, and has organized two others, five in all. These schools have taken over three hundred little neglected children from the streets, and are teaching them all that is good. The class was never so large and interesting as now."

SAYS the New York *Evening Post:* "Registrar of Vital Statistics, Nagle, has made an interesting table of the age attained by the 37,924 persons who died last year in New York. It shows that the total of those who died under five years of age was 17,520. Of these, 9,867 did not reach one year, 1,882 fell short of two years, 1,297 of three, and 888 of four. After that, the mortality is stated by quinquennial periods, as follows: Five years, 1,635; ten years, 505; fifteen years, 759; twenty years, 1,555; twenty-five years, 1,751; thirty years, 1,696; thirty-five years, 1,916; forty years, 1,687; forty-five years, 1,588; fifty years, 1,500; fifty-five years, 1,193; sixty years, 1,262; sixty-five years, 959; seventy years, 905; seventy-five years, 655; eighty years, 523; eighty-five years, 207; ninety years, 61; ninety-five years, 34; one hundred years and over, 13.

REV. DR. SUYDAM'S church in Jersey City has taken a new departure in shortening the sermons and giving more time to music, which includes classical compositions of high merit such as Gounod's "Redemption," Händel's "Messiah," Rossini's works, and those of other famous writers of oratorios. "The effect is wonderful," says an exchange, "in bringing the congregation up from one which filled only a few pews to that which now packs the large auditorium on Sunday evenings. The new method is worthy of examination and adoption by many of the pastors who are looking for improvements in the art and science of making people come to church. A service of this kind can be made far more attractive than the stiff sort, which consists of three doleful hymns, a wearisome prayer, and a poorly read chapter or two of the Bible, according to the mode prevalent in many of the churches."

SENATOR HOAR acted honorably in speaking and voting in accordance with his convictions in the case of Fitz-John Porter; but it was not in the spirit of disinterested justice and the loftiest morality that he said in his speech: "It is not an easy thing for a Republican, a partisan, a man whose life has been given to the advocacy and the support of the doctrines of this party, to incur the disapprobation and the condemnation of his political friends, who sit about him on a great question of State; but I thank God that, after hesitation and doing my best to discover what my duty requires, he has given me the grace to perform it." If he were doing but a simple act of justice to a man who had been wronged, mere partisan feeling should not have had such weight and influence with him that only "grace from God" enabled him to perform his duty. A man of the highest moral type is always ready to do justice to one who has been wrongly accused, regardless of "the disapprobation and the condemnation of his political friends."

MR. JUSTICE STEPHEN, in London, recently sentenced a ruffian who had robbed a lady in a public highway, and knocked her down to prevent her giving chase, to fifteen years penal servitude and to receive thirty lashes. The judge said that such outrages had become common of late, and to the prisoner he made the following judicial remark: "You are not only a rogue and a thief, but a cruel brute; and, since you knocked this woman down and inflicted grievous bodily suffering and pain upon her, I shall give you a severe taste of what bodily harm means." The London *Daily Telegraph*, commenting on this and other similarly severe sentences for robbery accompanied by violence, says: "The punishment is just of the sort which these cowards most dread, and it is quite as efficacious now as when it checked the practice of garroting. A sharp medicine, such as this, is the kindest and most merciful treatment that the disease can really receive." But, with the truly radical reformer, the *conditions* that produce this disease are the subject of prime importance; for, until they are changed, "the disease" is sure to exhibit itself in one form or another, in spite of the severest penalties.

DR. R. HEBER NEWTON recently delivered in New York a discourse on the Bible, one of the most pronounced in rational thought ever given by a regularly ordained clergyman of the Protestant Episcopal denomination. "I have utttered the conviction," he said in this discourse, "which many of you have held in secret with misgivings and self-reproaches, and have shown you many reasons why the old could no longer be held by men of open minds." He would expurgate the Bible, as though it were not a "book let down from the skies, of which God can be called the author," and, says the New York *Sun*, "deals with the Biblical authors throughout, those of the New Testament as well as the Old, in a way that must have left the people of his church in utter doubt respecting every part of the creed laid down in the Protestant Episcopal standards. Even the imprecation at the end of the Apocalypse against the man who shall 'take away from the words of the book,' is spoken of as an 'impotent threat'; and he cries out, 'Heed it not.' It is surprising that such a sermon as this of the Rev. Dr. Newton could be preached from the pulpit in which he stood. Had it been delivered by any of the loose pulpiteers of the day like Beecher, it would not have deserved a moment's notice. But the Rev. Dr. Newton is one of the lights of the great orthodox denomination which has fixed standards of faith, he is subject to the authorities of his Church, he is under the jurisdiction of an episcopate which is responsible for the orthodoxy of its rectors, and he holds his place upon conditions which give the highest weight to his words." We hope to find space in *The Index* soon for this remarkable discourse or copious extracts from it.

SCIENCE AND THE RELIGIOUS SENSE.

Religion is man's threefold expression—through feeling, thought, and deed—of his relation to the universe and its life-powers. This definition of religion we have more than once stated in *The Index* as one which seems to us best to accord with the facts of history and a rational philosophy of them. The "life-powers" of the universe may be conceived as embodied in some ruling personal intelligence or intelligences, or simply in the form of impersonal vital forces; but man's relation to them, and through them to the universe as a whole is a solid fact of human existence in whatever way they may be regarded. And that man should have some sense of this fact—a sense enlarged, elevated, and refined as he advances in enlightenment—is as natural as that he should sense anything in his relations to his surroundings; and how he is ever to get away from this sense, as long as he retains his nature as man, it is difficult to comprehend. In some way expressive of his general sense of his relation to the vital powers of the universe will he continue to feel, to think, and to act. The beliefs and institutions which the religious faculty of man has produced may be variously transformed, and many of them may vanish; but how the faculty itself is ever to disappear, as long as man remains finite and continues to have the intelligence to see that he is vitally related to a universe which he acknowledges to be infinite, it is impossible to conceive.

Liberalism is apt to assume that religion necessarily implies a definite belief in a personal Deity or Deities. But it is not essential to religious feeling or to religious action that the secret motor and life of the universe should be represented under the conception of a mighty universal sovereign seated on a throne at the centre of things nor of a divided personal sovereignty ruling the different parts: it is only necessary that the fact of man's vital relation to the universe in some form should be felt and acknowledged as a source of obligation upon conduct. The religion which, it is estimated, has swept into its circuit one-third of the whole human race, Buddhism, did not have in its origin, nor ever in its purest teachings, any conception of a personal Deity. It has even been characterized as an atheistic religion. Yet it had a very distinct idea of a unity of vital energy and purpose in the universe, though their source and essential nature might be beyond man's power to comprehend; and a very practical idea, also, of man being able, by a reflective, true, and pure life, to put himself into a condition of reconciliation and peace therewith. And no religion ever began or spread with a nobler moral enthusiasm or a loftier self-consecration and devotion. There are, too, many people to-day who cannot conscientiously profess belief in any Deity beyond the active forces and laws which they see manifest in the universe itself. All beyond, they call the unknowable, the inscrutable. Yet they necessarily conceive of something there that is unknowable, unfathomable, and of human relations to it. And in that conception is the kernel fact of all religion.

And this is a fact which science must recognize, and does recognize. Those who suppose that science is going to abolish all conception of the existence of any power within and behind phenomena mistake the purport of science. Science undoubtedly has abolished, and will continue to abolish, many crude, ignorant, superstitious, anthropomorphic notions of the infinite and inscrutable power manifested in phenomena; but it discloses no tendency nor capacity to abolish or deny the power itself, nor man's relation thereto. Science approaches too close to the great secret, and is too habitually bent on traversing its ways and revealing its hiding-places to deny its existence. Rather does it spread before our enlightened vision a world of new wonders, to stir within us fresh emotions of admiration and reverence. It seems to take us ever nearer and nearer to the creative method and power, yet leaves the final mystery still locked; while vistas are opened into space and time, and unfolding processes of life so august and vast that, in comparison with them, all the old chronologies and plans of creation and conceptions of the universe sink into childish prattlings. Science is the destroyer of superstition; but, by its constant challenge to man's imagination and to his intellect to make profounder search, it is the feeder of rational religion, both on the side of emotion and thought.

Science, too, is promoting the interests of religion on the side of conduct. It is revealing to us a basis of morality inwrought into man's consciousness as the product of the very forces that have given him his being and developed and preserved the life of the universe itself. It declares the law of right to be one with the law of life, as life unfolds by gradations into higher and richer forms. And so science summons man more thoroughly to learn and intelligently and voluntarily to co-operate with this law of progressive and ascending life. In its investigations also in sociology,—that comparatively new department of knowledge,—science is bringing new views of the solidarity of mankind and of the meaning of human brotherhood. It shows the human race to be joined together in origin and experience and destiny by ties which cannot be severed. Nations and classes and individuals are members of one organism, of one body. The health of the whole, morally, mentally, physically, depends on the health of the parts. Hence, new responsibilities are laid upon human beings for one another's condition and welfare, and new ways opened for philanthropic activity. Science, therefore, instructs religion on the active side more and more to emphasize morality and philanthropy, and to measure all its institutions and aims by their success in promoting worthier living.

WM. J. POTTER.

"THOMASING."

There are curious old customs, surviving from an immemorial past, that come out of their caves on Saint Thomas Day, and are visible in various rural districts of Europe. They are called "Thomasing." Although, in the New Testament, the doubts of Thomas are shown to have been respected,—his demand for proof of the resurrection being met in a dramatic way most likely to have an effect upon the world,—and although Saint Augustine recognized that to doubt was the *métier* of Thomas when he said, "He doubted that we might not doubt,"—yet, when the Church came to put forward miracles of its own, the example of this sceptical disciple was found inconvenient; and he was slighted. No churches were dedicated to him; his sanctity being transferred to Saint Thomas à Becket, after whom the Saint Thomas churches are named, even to the "S. Tommaso degl' Inglesi" in Rome; and he was assigned the shortest day in the year. The reason why Saint Thomas Day was fixed at the winter solstice was that it was a kind of doubting day, halting, as it were, between the setting of one solar year and the rising of another. But this was the Yule Day of our "pagan" ancestors,—the end of the old year, when they sacrificed the bird of morn for a good New Year Day as omen of a lucky year, and observed many other rites and ceremonies in honor of their deities. Christianity killed all these deities, but could not lay their ghosts; and these fastened themselves—such is the irony of superstition—upon the incredulous disciple. Personally, indeed, Thomas was also a ghost. His Aramaic name is simply translated in the Greek Didymus (twin), on which was built a saga of double-mindedness, or wavering, when it became important to declare to sceptical Greeks and Romans that among the witnesses to the risen Christ had been a sceptic of their own kind,—a man as hard to convince as the scholiast Didymus of the Augustan age, who, according to Seneca, wrote four thousand books.

But Thomas is having his revenge. Those ghosts of heathen deities and rites at any rate preserve some of the sentiment and character of the religion of nature they originally represented; and Thomas, as a myth, represented the spirit of inquiry after facts, which gradually converts natural superstitions into natural science. "Thomasing" has had a significant development. In certain remote regions of Germany, a maiden sprinkles linseed on her head, and says, "I sow my seed in Saint Thomas' name, in Saint Thomas' garden will I await my bridegroom," believing that she will see her future husband in a dream the same night. In other regions, when church-bells are ringing for matins or vespers, a youth takes up three chips, and the next bell that sounds will report the direction in which, after burning the chips, he must seek his fortune. If he be far from his beloved, he takes a mirror and lighted candle out into the air on Saint Thomas night, and, as the clock strikes twelve, believes he will see on the mirror just what his beloved is doing. On Saint Thomas eve, the rural Germans listen at the back of their big stoves to hear small voices within it, foretelling bad luck by tones of prayer or good luck by their piping. Or a youth lights a consecrated candle, sets it on a prayer-book, in order that at midnight the maidens of his acquaintance may pass by him, the last of the shadowy procession being the one he is to marry. Meanwhile, if any of these maidens speaks in her home, she will die, her spirit being absent. This touch looks as if added by wise parents to keep their daughters from sitting up late for midnight incantations. A favorite Thomasing custom in South Germany is to get a sackful of straw, and say to it, "Straw-sack, I beg you, Saint Thomas, I pray you, to show me my bridegroom" (or bride). There are three noticeable characteristics in these German customs: they generally mingle natural things, as seeds, straw, with Christian symbols, as candles, prayer-books; they are practised by people in doubt about their love-affairs; and they look for discoveries in dreams, or occasionally in visions. In most parts of Germany, the only survival of Thomasing is the belief that all dreams dreamed on Saint Thomas night will come true. Coming now westward, as far as Belgium, we find Thomasing represented by a custom of school-boys, who make little paper cocks and burn them before the school doors. This sacrificial act may be regarded as a type of what most sacrifices have become on European altars, a childlike substitution of something worthless for something real. On the other hand, the Belgian children, also servants, try to beguile the master of the house into a room and lock him in, or out of doors and lock him out, until he promises a substantial Thomas-gift. Any amount of prevarication is permissible to secure this end. So, where the gods get paper poultry, the children get something real. Coming now to England, we find Thomasing become equivalent to "a-gooding," both words being used. There are still faint traces (unless effaced by the new school-system) of this custom of peasants, who went about offering holly or flowers to squires or farmers, in order to receive gifts in return. In War-

Digitized by Google

wickshire, they call it "going a-corning," since each petitioner carried a bag for the farmers to fill with corn. This is a survival of the straw-sack to which the German peasant used to pray along with Saint Thomas. It would seem that, after a time, the Northern peasant began to grow sceptical as the saint, and wished for some benefits that he might handle. So the offerings became somewhat more real (turning from candle-light, paper, and runic words to evergreen and flowers), the prayers directed to more palpable patron-saints, and the sack emptied of symbolical straw that it might be filled with grain. As the agricultural laborer became less a serf, he left off this custom; and it remained as the exclusive custom of his successors in serfdom,—women. When women also were raised a little, the custom fell to the roughs, and has ended, or is ending, in a practical joke.

Whatever other living and real form the Christian disciple may handle, in this Northern world he is sure to handle, or be handled by, the forces and realities of nature. In the struggle for existence, the straw-sack of superstitions is steadily sifted; and only those survive which have some grain in them. In my boyhood, I heard a story of some red Indians who were visited by missionaries. One of these Indians held on to his Great Spirit until one day when he saw a more yielding comrade returning from the Mission House, with Christmas gifts of bacon and herrings. After a little consultation with that brother, the before unregenerate Indian hastened to the missionaries and broke out with the words,—"Jesus Christ! Holy Ghost! God Almighty!" Then, seeing the stupefaction of the missionaries, he shouted: "Damn it all, don't you know what that means? It means bacon and herrings!" That aboriginal style of Thomasing does not appear to me very different from the more decorous method going on in Christendom. The whole world, in a sense controlled by Christianity, is now Thomasing around the Dives-barns and tables of Christianity, and asking for some substantial evidence of a risen Christ, in the shape of charities, better dinners, or other advantages. Saint Thomas is in order again. Some will not believe unless they can retain the old order in which they are comfortable, and others unless they can overthrow the old order in which they are uncomfortable. Christianity must mean to one his conservatism, to the other his radicalism. On Saint Thomas Day, the Pilgrims set foot on Plymouth Rock, because Christianity meant to them a Church without a Bishop. And, on this Saint Thomas Day, the High Church from which the Pilgrims fled hears with joy that one of its docilè darlings is made Archbishop of Canterbury. Antiphones between Plymouth Rock and the Archiepiscopal Palace are not inharmonious on Saint Thomas Day, when the world is asking, not what is true, but what can prove itself to the senses to be alive, and on earth, and able to fill a believer's empty sack with corn. Happily there are sacks and sacks: some of them may seem of a transcendental kind, but these also are real, and after they have become empty cannot be satisfactorily filled with threshed straw for any great length of time. There are other hungers than that for bread which nowadays go about a Thomasing, and ask for unmistakable proofs. The lovers of the absolute truth will have to accept the conditions as much as their predecessors. They will have to associate as much real human service with their new views as anybody can connect with the name of Christianity. Science has done this, and Christianity acknowledges it—even by its fear—an equal. It is not necessary that every truth should show that its aim or its effect is to put money into the pocket of a man or a nation or even to secure a moral advantage; but it is necessary that every truth, whatever its negations, should be associated with believing men and women, whose characters and services shall be as the print of nails and the wounded side which make the stigmata of living saviours, before which the human heart has never failed to bend the knee with simplest love and trust.

MONCURE D. CONWAY.

FRANCE ON THE WANE.

In the lapse of a single generation, France has declined from the position of foremost nation in the group of great European powers to that of the least important member of the group. And the end is not yet. In the process of European development, what may be called "Latin civilization" has had its day and run its course. There was a time when Italy was in the van of modern civilization. Then, the hegemony passed to Spain. After the decline and downfall of Spanish domination in both hemispheres, France came to the front as the foremost Latin nation and the leader of European civilization. Meantime, Great Britain and Germany, the two great representative powers of what may be called Germanic civilization, were slowly but surely attaining to a world-control, which now casts into utter eclipse Latin Europe. The civilization of to-day, or modern civilization, is Germanic. Latin Europe remains to this hour half Roman and antique. The Latin group of nations have never succeeded in thoroughly modernizing themselves. As long as France was in the ascendency, the Roman Catholic Church—which is as much an anachronism now as would be the religion of Jupiter—held up her head, and maintained her mediæval arrogance. Because, while a percentage of the French nation is ultra liberal and ultra republican, there is a vast fraction of it which remains loyal to the past, and, above all, to Romanism. But Sedan completed the work of Waterloo, and finally relegated France and the Latin Church and Latin civilization to the rear, where it is destined to remain, declining more and more to final extinction. In the near future, to judge from present indications, the different communities of the English-speaking world in both hemispheres will form a sort of world-encircling confederacy, more and more absorbing, and gathering under their protection and occupying the entire globe outside of Continental Europe.

In this hemisphere, the mostly effete Spanish-American republics are likely to be injected with new life and modern ideas sooner or later by English-speaking North America. With the establishment of an international railroad system, the process of social reconstruction on a modern basis of the Spanish-American republics will commence, and proceed over all obstacles to final consummation, because the entire globe is bound to be sooner or later the seat of a *modern* civilization.

Superstition, barbarism, savagery, and imperfect, rudimentary civilizations are bound to be supplanted by a civilization of light, knowledge, science, freedom, and a cosmopolitan humaneness.

B. W. BALL.

NOTES FROM THE FIELD.

The question is sometimes asked, In what parts of the country do you find the decay of theology and the prevalence of Liberalism the most marked? The question does not admit of so easy and definite an answer as some imagine. In regard to the strength of religious beliefs, like that of conceptions generally, during periods of rapid change, appearances are deceptive, and one is extremely liable to be misled by superficial indications. Old systems continue to receive support and exercise a powerful influence, through established forms and customs, even when faith in them among the more intelligent has nearly disappeared; while new conceptions, in a thousand subtle ways, work themselves into the popular mind before there is any general distinct acknowledgment of their truth. In old communities especially, religious scepticism and disbelief are reticent and quiet. In new settlements, where there is a tendency to break away from old traditions, where there is more flexibility, and generally, too, where there is more courage and independence, the decay of religious creeds and the progress of advanced thought are more readily seen, because expression is more free, pronounced, and demonstrative.

It is certain that, throughout the Eastern, Middle, and Western States generally, religious disbelief is diffused among all classes. The attitude of the people toward Christianity is something like that of the Romans toward Paganism in the first century of the present era. The large membership and wealth of the Churches even, far from denoting Christian faith and zeal, are but indications of their worldliness, of their readiness to conform to the demands of the time, to make religion a secondary matter, and give prominence to music, social attractions, and such other features as suit the taste of an unbelieving generation. A large element of the foreign population retains its religious faith. In some communities in New England and the Middle States, the creeds are, chiefly from lack of intellectual activity, still scarcely questioned; and in the Southern States, except in the large centres of population, the old-fashioned theology is still preached, modified some, but not greatly, by the spirit of the age; but it is evident, wherever education has made the greatest progress and where there is the most thought, Liberalism has gained the greatest ascendency.

We are of the opinion that liberal thought is not only more pronounced, but more general and more thoroughly assimilated in the West than in the East. The *average* audiences that assemble to hear liberal lectures are in the West of a higher intellectual grade, and they more readily understand and appreciate the scientific and philosophic thought of the day than the average audiences of the East. This is due in part, probably, to the fact that much of the intellectual vigor, courage, and enterprise of the East have sought new fields of activity and conquest in the West. By the laws of heredity, these qualities are transmitted here, as the conservatism left behind is transmitted in the East. And the conditions of the new settlements are favorable to the growth of independent liberal thought, while it is somewhat restrained by the conditions of older and less flexible communities. The cautious, temporizing liberal from the East, when he has lived a few years in the West and discovered that the frank expression of his views will not injure his business, feels greater freedom to speak his honest thoughts.

The *average* intelligence of the foreign element in the West is above that in the East. The poorest and least progressive element of foreigners, when they land at Castle Garden, look for homes in the factory towns of the East. The better class push West. The Germans constitute our best foreign element, and of them a large proportion are free thinkers. They come West.

We could not help noticing a dozen years ago the readiness of Western audiences to hear lectures on Evolution and Darwinism, when to Eastern liberal audiences these subjects seemed abstruse and dry, and when the thought of Voltaire and Paine elicited the heartiest applause. Thinkers and scholars in the East who are quite willing to give their assent to Darwinism now were as silent as the grave in regard to the subject then. Societies

Digitized by Google

were formed in the West to study the philosophy of Spencer, before any such societies were formed in the East. In Denver, Kansas City, Dubuque, and Minneapolis, we were specially requested to lecture on Evolution, when the subjects preferred in New England cities were "The Services of Thomas Paine" and "The Four Gospels Examined." One fact that helps to explain this is that the great prevalence of Liberalism in the West made it safe for professional men, teachers, merchants, etc., not only to attend, but to take part in arranging for liberal lectures, when the pronounced interest in subjects pertaining to Liberalism in the East was confined to a class quite as honest, but less influential in society. But where in the United States is the liberal element the strongest? In our opinion, Kansas has the largest number of Liberals in proportion to the population of any State in the Union. Illinois and Iowa rank next. In Northern and Central Illinois, free thought shows itself in a thousand ways. In Southern Illinois, it is weak and crude. The region of country in Ohio which extends from Salem to Massillon is one of the most liberal districts in America. In the Willamette Valley, the best part of Oregon, we found the most liberal region on the Pacific Coast. Minnesota is a liberal State, as is also Michigan. Nebraska is not entitled to rank with Iowa, although Lincoln is one of the most liberal cities in America. But, in all these regions in which the decay of theology is the most manifest, no tendency is evinced among Liberals to unite in organizations. The disposition seems to be to work with all existing organizations for every worthy reform.

Since we sent the last "Notes," we have been speaking in Iowa. On the 28th of December, the Iowans celebrated the thirty-sixth anniversary of the admission of their State into the Union. The development of Iowa is wouderful, and its future is full of promise. It has important natural advantages, and the achievements of its people are such as they have a right to feel proud of. The population of the State is now nearly two millions. Its area is fifty-five thousand square miles, about the same as that of Illinois and greater than that of England and Wales combined. The two greatest rivers in North America form the eastern and western boundaries of the State. It has six thousand miles of railroad track, including three trunk lines crossing it east and west, and ranks the fifth State in the Union in railroad mileage. In 1880, it produced two hundred and thirty million bushels of corn and forty million bushels of wheat. Its manufacturing industries are increasing in number and importance. Its public school system is good. It has twelve thousand school-houses and five hundred thousand children are being educated in them. Six hundred newspapers are published in the State. The percentage of illiteracy is small. The people are intelligent, industrious, enterprising, and progressive; and they can look forward with confidence that the achievements of the generation which has passed are but an earnest of yet greater achievements in the future.

Iowa is one of the most thoroughly Republican States in the Union. But its press seems to us unfairly partisan.

An Iowa journal says, evidently with truth, that in many of the cities and towns of the State, Davenport, Council Bluffs, Burlington, Keokuk, Mt. Pleasant, and others, papers which support the administration are "loaded down with post-office positions and salaries," that the places of trust are not filled on the principle of merit or fitness or with the expectation that their duties will be performed by the incumbents, but that the appointments are made with the knowledge that the official duties will be performed by deputies, while the salaries will go to the editors and papers as a recompense for work done for the party, and a subsidy from the public treasury for their continued support. The lack of independence and the truckling spirit manifested by some of the journals whose proprietors or editors hold federal offices are alone sufficient to suggest that newspapers from which the public receives its news and to a certain extent its opinions should be free from pecuniary obligations to Congressmen and place-givers. Men tied hand and foot by the cords of patronage, and with their mouths padlocked by fear of losing their offices if they point out abuses and denounce wrongs, are not fit representatives of the press, the source of the people's information in regard to political and governmental matters.

B. F. UNDERWOOD.

A SURVIVAL OF RELIGIOUS INTOLERANCE.

Judge Briggs, in the Common Pleas Court in Pennsylvania, lately delivered an opinion which suggests the need of a little legislation in that State in the interests of equal rights and religious liberty. Robert Becker, a witness, had said that, while he believed in a supreme power that would punish false swearing here, he did not believe in a personal God or in God as commonly understood by the people. His testimony having been received, its admission was made the ground for a motion for a new trial. No other objection was urged against the witness. According to the reports which have appeared in the papers, Judge Briggs said, "Something more is required to render one competent as a witness, than a belief in a supreme power simply as a power or principle, which may be the resistless natural laws as exhibited by the motion and operation of the elements, and to violate which will surely bring punishment here to the transgressor. The belief required by our laws is a belief in the existence of an omniscient being, who will impose divine punishment for perjury either in this world or in the next. If the belief be short of this, it falls under the ban of legal condemnation." After citing several authorities to sustain his ruling, Judge Briggs continued: "It hence follows that the faith of a witness should be a religious belief of some kind in the existence of an omniscient being who will reward and punish either here or hereafter for good and evil doings, —a belief in a power as exhibited by the force of nature and calling it supreme, and yet to ignore that that power is the handiwork of the omniscient and omnipotent God is totally insufficient to meet the law's requirements. Nor is any advance gained by asserting that he who violates the law of nature will be punished, for admittedly such punishment will follow with unerring certainty. While the witness, Becker, said he believed in a supreme power that would punish him here for false swearing, he would not say that he believed that power was divine; and he totally denied the personality of God and of God as generally understood by the people. With such a belief, how can he be said to be in fear of divine punishment for testifying falsely? His belief being defective in this respect, it falls short of one of the legal requirements, which is indispensable to entitle him to be examined as a witness in the courts of this State. It follows that I erred in receiving his testimony, and that a new trial should be ordered." Think of the multitude of men and women, many of them eminent in science, literature, and philanthropic work, whose testimony by this ruling would be inadmissible in the courts of the State of Pennsylvania. Yet this judicial ruling is made in the American Republic in the last quarter of the nineteenth century! Protection from such bigotry and intolerance, so far as they would impose disabilities upon citizens on account of their religious views, should be guaranteed and enforced by the authority of the government of the United States.

B. F. U.

EDITORIAL NOTES.

VENEZUELA will celebrate the one hundredth anniversary of Bolivar's birthday, July 24, next. A statue of Washington will be unveiled at Caracas, and a railroad opened between Caracas and Laguayra.

GEORGE WILLIAM CURTIS said recently, "I presume no student of history will deny that what the great baronial power was in mediæval civilization, and what the great slaveholding oligarchy was in our politics, the vast consolidation of capital will be in the future of this country."

WE must not hereafter think of Spain as a country in which there is no progressive movement, for very recently the first female doctor has taken her degree in Madrid, in spite of considerable opposition on the part of male students; and another lady is now studying there for the same profession.

ACCORDING to a calculation of Prof. Frisby of the Naval Observatory at Washington, the great comet that shone so brilliantly in the eastern sky last summer is probably identical with the one seen 391 B.C. and 363 A.D. Its orbit is a lengthened ellipse; and, according to this calculation, its nearest distance to the sun is only about seven hundred thousand miles, while its orbit extends outward at the farthest point ninety times the sun's distance from the earth. Its time of revolution is believed to be 798 years.

IT is stated that early marriages are nowhere so common as in the prosperous manufacturing districts of Lancashire, Eng. Boys and girls not out of their teens, earning good wages and prematurely developed by the absence of home life, get married, generally Saturday night to avoid loss of working time, parade the town a few hours in cheap finery of glaring colors, or perhaps visit one of the watering places; and the next Monday morning the newly married couple, in the most unpoetic and unromantic manner, return to their place in the mills.

ONE of the editorial corps of the *Congregationalist* recently attended a funeral conducted by a Unitarian minister, and comments on the funeral discourse in this fashion: "By skilful engineering, that gentleman managed to get through a half-hour without mention, even *pro forma* in the benediction, not only of the work, but of the very name of Jesus. A pagan gentleman from any remote part of the world might have sat through it without so much as being led to any remote conjecture that a Saviour ever came into this world. The spiritual temperature naturally was that of an ill-ventilated ice-house."

A WRITER states that there are two hundred and thirty-seven chances of being murdered in Rome to one in England, or that in the former country there is one murder to 750 inhabitants, while in the latter there is but one to 178,000. But, in the days of Henry VI., there were more murders in England than in any country on the continent, and from one point of view it was thought to be rather creditable to the country; for Chancellor Fortescue explains the seeming virtue of other people, especially the French, by accusing them of "cowardise and lack of harte and corage to do so terryble an acte." According to this, the Italians must now be very courageous and the English veritable poltroons.

Digitized by Google

WE find the following in the *Presbyterian*, which is ever on the alert to defend and define the old Orthodoxy against the encroachments, attacks, and new renderings of the more liberal Orthodoxy: "Cornell University, in New York, was certainly not founded for the promotion of Evangelical Christianity. But enough of faith was left among the trustees to require a resignation of a professor, because his teachings gave to the University a 'reputation of positive irreligion.' The *Alliance*, of Chicago, tells the story with much indignation, and adds that President White, who remains, is much more 'radical' than the professor who was dismissed. We do not know much of this matter; and all that we need to say is, that there are still left colleges where the faith of Christ is taught and the Word of God honored, and that parents would do well to find where they are."

RATHER a curious lot of figures is brought together by Dr. Gill, of the Illinois Penitentiary, showing the death rate in the principal State prisons of the country. The most astonishing variations are shown. Thus, among New York prisons, while at Sing Sing the yearly deaths from one thousand inmates number a trifle less than seven, at Auburn it is twelve, and at Clinton over twenty. The lowest rate is three in Wisconsin, and the highest seventy-seven in Mississippi. The shameful practice of letting convicts to work in mines and upon railroads causes frightful death rates in several Southern States; but the New Hampshire figure is forty-eight, for what reason does not appear. The rate in Massachusetts is fifteen, in Maine fifteen, in Vermont twenty-five, and in Connecticut fifteen. Pennsylvania has six in the west and fourteen in the east district. And the rate is generelly very low in the States of the North-west.

COREA, "the Hermit Nation," must be a wonderful land, since it develops kings capable of making such public confession of sin as the present king of that country is said recently to have made: "I have been for seventeen years at the head of the nation," he says, "although I was wanting in ability. My administration has been a failure, and abuses have arisen in the government through my fault. I repent, but it is too late. Since I occupied the throne, I have made many improvements in roads and other things, and both rich and poor have had to suffer under the burden. This is my sin. I have often altered the currency, and sacrificed the interests of the people. This is my sin. I have acted against religious doctrines. I have wasted the revenue. This is my sin. Bribery has been carried on publicly. The complaints of the victimized have not reached my ear. This is my sin. The taxes have been embezzled, and the business of the people ruined. This is my sin. I am ashamed to come before the people again. I will purify my mind, and repent my former misdoings."

THE Unitarian *Year Book* for 1883 has a new feature. To the usual lists of societies and ministers is added a supplementary list of ministers who are pastors of societies known as Unitarian, but who do not consider themselves, or are not considered by the compilers, good enough Unitarians to be put in the regular list of Unitarian ministers. This appears to have been done to meet the criticism of those who have objected that the regular list has in late years been constructed on too narrow a basis, and has not been a correct directory. But we doubt if the result will satisfy the objectors. It makes the regular list more sectarian than ever. It was reported before the *Year Book* appeared that the question whether a minister called himself "Christian" or not was not to be raised in making up the regular list. But this report seems to have been an error. We do not understand that there has been any rescinding of the vote passed by the Unitarian Association, by which the *Year Book* list of "Unitarian ministers" was made to mean "Christian" ministers. Yet to see some names in the list under that caption rather surprises us.

THE editor of the Indianapolis *Journal*, after describing "the incubator" which he examined at a chicken show, indulges in the following reflections: "It is quite a marvellous invention. It saves, in the first place, much time and trouble to the hen, leaving her free to devote herself entirely to the production of eggs. With eggs at thirty cents a dozen, no public-spirited hen can fail to see the advantage of the invention. Looking at this steam stepmother, one naturally wonders whether this method of getting on in life will not finally result in changing the nature of the chicks. Brought by wholesale into a life where there is no clucking, cooing mother to cuddle them under her wings, what will be the final result upon their characters? Orphans turned loose into a wire nursery, with hot water pipes to their backs instead of the maternal wishbone, their development must be abnormal. If the full-grown specimens on exhibition were raised by hand, it must be said that the development is abnormally large as to physical results. Whether a hen is morally benefited through a training and environment which impels her to lay eggs 365 days in the year and to refuse to 'set' is a question to be determined."

THE *Christian Union* makes the following sensible remarks in regard to the refusal of the Mayor of New York to grant a license for the performance of the "Passion Play" in that city: "Good people will draw a sigh of relief, and congratulate themselves that the community is to be spared this travesty on the drama and this profanation of religion. But good people will be mistaken. There is really no law to prevent this performance, and habitual readers of the *Christian Union* will not accuse us of sympathizing with the perpetrators of this proposed infliction, when we say there ought not to be any such law. In former times, other communities protected themselves from evil literature by a censorship of the press. The protection roved futile ; the censorship was abandoned; and now, in all free countries, the people are left to protect themselves by refusing to patronize bad literature, or by prosecution of publishers of that which is clearly against good morals. And the press has steadily improved in quality in this air of freedom.... The days of censorship of all kinds, whether of press or drama, are past. The remedy for such a proposed insult to the intelligence, taste, and moral sentiments of the American people as this attempted representation of the Passion of Jesus Christ by amateur actors threatens to be, is a public sentiment which will leave it without an audience."

"OXONIENSIS," the able London correspondent of the *Catholic Review*, referring to the burial of Darwin in Westminster Abbey, writes:—

It would seem that the Catholic priests have now the best of it. If a man who was *not* a Christian ought to receive Christian honors on the ground only that he was a clever man of science, the inference must be obvious that not religion, but science, constitutes a man's claim to be thought a Christian. Such an estimate may have the merit of being Broad Church, but it hardly commends itself either to the logician or to the Christian. If science *minus* faith makes a Christian, what is a man who has only faith *minus* science? He has evidently not that gift, that special grace of "true religion," which is required for Christian honors, Christian monuments. It is time that the excellent dons of Westminster Abbey issued some new catechism of their religion. *Q.* What is a Christian? *A.* A scientific man. *Q.* What is the greatest impediment to true religion? *A.* Not having studied the natural sciences. *Q.* What entitles a man to be buried in Westminster Abbey? *A.* Not believing that there has ever been a revelation. *Q.* What distinguishes an Anglican bishop from a Catholic bishop? *A.* A Catholic bishop says that the rites of Christian burial should be given only to those who have believed in Christ; but an Anglican bishop says that the rites of Christian burial should be given equally to those who have believed in science. *Q.* Is, then, the Christian faith and natural science one and the same thing? *A.* No: a man who has faith and no science is a mere nobody, and it does not matter where or how he is buried; but a man who has science and no faith is a true believer, and ought to be buried in Westminster Abbey.

MR. JAMES MACALISTER concluded an address at a recent meeting of the Wisconsin Humane Society as follows: "I think that, in their eagerness for the intellectual culture of the masses, the American people have shown a tendency to forget that the great concern of every human being is right living. Knowledge is not to be undervalued, but it is mainly as a means to the attainment of moral qualities that it is important to men. The aim and end of all science, of all philosophy, is morality. I believe I am right in claiming that more attention should be paid in the public schools to training the young in the principles and practice of moral duties, even at the cost of sacrificing some of the culture in other directions. I would not be understood as saying that the standard of conduct in the schools is low; but it represents too accurately the spirit and practices which prevail in society at large. There is not enough regard paid to the humanities of life, those social refinements which make up so much of its happiness; there is not enough reverence for the claims which justice, right, truth, make upon each individual; there is not enough faith in the power of love to conquer and destroy the hatred and wrong that still live in the world. When these things become an actual, measurable part of the child's school training, we may hope to see their fruits abound more fully in the life of that larger society into which he is to grow. Need I say that no one can be moral without being humane; and that to do right and to love one another are the two poles on which revolve the order, the peace, the happiness of mankind."

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index*.

THE SPIRIT REALM.

Nach jenen stillen, ernsten Geisterreich.—GOETHE.

1.

After long years of life, a mystic yearning,
Such as the mighty Goethe felt of yore,
Within our heart of hearts at times is burning
For vanished faces which return no more.

2.

Beyond this being's ceaseless, sad mutations
In stillness lies the solemn spirit-land;
There evermore arrive Earth's generations,
And footing find upon a changeless strand.

3.

So deems the heart, and so have deemed the ages,—
To final peace and permanence we're bound.
This petty, mortal life, which frets and rages,
Is by majestic silence girt around. B. W. BALL.

Jan. 1, 1883.

"ALL things have something more than barren use:
There is a scent upon the brier,
A tremulous splendor in the autumn dews,
Cold morns are fringed with fire.

"The clodded earth goes up in sweet-breathed flowers,
In music dies poor human speech;
And into beauty blow these hearts of ours,
When love is born in each."—*Alexander Smith.*

The Index.

BOSTON, JAN. 18, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

CONFLICTS OF PHILOSOPHY.

A Lecture delivered before the Philosophical Society of Chicago, Oct. 14, 1882.

BY VAN BUREN DENSLOW, LL.D.,
PRESIDENT OF THE SOCIETY.

Part II.—Philosophy as related to its own Limitations.

If we turn from theism and from theories based on the subtantiality of spirit as incapable of scientific verification to matter and force, we find that our new starting-points are intelligible only to those who have not sought to comprehend them. This by no means reduces them to the level of the factors which rule in theological speculation. In regard to matter and force, it remains that we can easily observe them, when it has been proven that we cannot at all comprehend them. But the ultimate conceptions of theology—namely, God and spirit, as substances outside of matter and force—can neither be comprehended nor observed.

Prof. Du Bois-Reymond, in a recent address on the limits of natural science, declared the seven insoluble riddles of modern thought to be: 1. The nature of matter and of force; 2. The origin (and, he might have added, the reality) of motion or change; 3. The origin of life; 4. The design of nature; 5. The source of consciousness; 6. The origin of language; 7. The freedom of the will.

This, however, is by no means so logical a statement of the limitations upon our power of thinking as that given by Herbert Spencer in the third chapter of his *First Principles*, in which he proves that it is beyond the power of the mind to think of space, time, matter, motion, or force in the outer world, or of consciousness or personality in the world of mind. These, he says, are

Ultimate Scientific Ideas.

The moment we attempt to think of them, we find we cannot frame any self-consistent statement of our thought. Each embraces a complete suicidal self-contradiction when treated metaphysically, and must therefore be assumed, after the habit known as common sense, without being understood.

This conflict between metaphysics and common sense is one of great importance, and lies at the threshold of all philosophy; for, if Mr. Spencer be right, then the whole metaphysical method stands impeached at the outset as misleading and barren, at least as far as it works alone and away from Physical Science. For these very ideas which Spencer consigns to the limbo of the unthinkable constitute the stock in trade of metaphysics. On these, Plato, Kant, and Hegel have largely built. With Spencer stand Locke, Bentham, Mill, Combe, Auguste Comte, and most scientific atheists, pantheists, and agnostics. And with Plato, Kant, and Hegel, as far as their attitude of belief in the utility of metaphysics is concerned, stand Sir William Hamilton and the great mass of theists. Hamilton denies that there is any conflict between common sense and metaphysics. Probably, this belief is inherent in every one who respects metaphysics. The very first point to be solved in philosophy is whether we will accept the metaphysical method, a method which I define to be the pursuit of truth by an attempted introspection or looking into the supposed nature of the machine with which we think, and by a "turning over of our notions."

Conflict between Positivism and Metaphysics.

The last is the term by which Hegel defines philosophy itself: but, unfortunately, it is a definition that begs the whole question between the metaphysical class of philosophers and the positivist or scientific class. All of these define philosophy as the generalization of the observed facts of science, and allege that true philosophy, in the sense in which Copernicus, Galileo, Kepler, Newton, Comte, and Spencer are philosophers, not only is not helped by metaphysics, but it discards the metaphysical method, and contemplates the metaphysical field of thought only to close it up as unprofitable. Kant says, in opening his own work, that Plato "made no real progress in all his efforts, because he abandoned the world of sense, impatient of the limits it sets upon thought, and rose on ideal wings into the void space of pure intellect, where no progress was possible for want of a resisting medium." He was trying to fly in a vacuum. But the Experiential or Positive School virtually charge that throughout the *Critique of the Pure Reason* Kant was only flying in that same vacuum. Kant's dogmatic tone shows that he had no doubt that he had reduced metaphysics to a state of certainty as definite as mathematics, though his politic and would-be modest phrase disclaims success. And yet his very first position—that time and space, in which all things exist, do not themselves exist, except subjectively in our thoughts—is one in which scarcely a subsequent metaphysician has agreed with him; for they say if time and space exist only in our thought, and if all other entities in the universe exist only in time and in space, as they certainly do, then the whole universe has no objective existence, and is indebted for its appearance of existing to the fact that we deign to think of it. Therefore, when we go to sleep, the universe absolutely ceases to exist. All this absurdity is irresistibly inferrable from the very first inference of the metaphysician who was going to place metaphysics on a scientific basis.

But perhaps Mr. Spencer's position that time and space cannot be thought of may seem to some as untenable as Kant s position that time and space exist only in thought. Let us see, then, what progress thought can make in comprehending

Time and Space.

Time, we say, means duration, or the condition by means of which things exist successively; and space means extension, or the condition by means of which things coexist simultaneously. Truly. But duration of what, extension of what? In order that duration may exist, there must be something to endure, or else we must be able to think of duration as a quality of nothing. And, in order that extension may exist, there must be something to extend, or else we must be able to think of extension as a quality of nothing. If we think duration and extension to be qualities possessed by the things which fill the universe, then, if there were nothing in the universe, there could be neither duration nor extension; *i.e.*, neither time nor space. But this mode of thinking makes the existence of things to be the conditions without which time and space could not exist: whereas, according to our definition of time and space, things themselves can only exist in time and in space; and, therefore, time and space are the conditions without which things could not exist. Hence, time and space are not qualities of things. They also are not things; for we define time as the condition precedent to the existence of things in succession,—*i.e.*, we cannot think of one thing following another, unless both are in time. Therefore, time, being the condition upon which things exist successively, is not itself a thing. And space, being a condition to the existence of things simultaneously, cannot itself be a thing. For that which conditions another entity cannot be that entity, any more than a cause can be its own effect, or than a father can be his own son. Besides, if space were a thing, instead of being the extension which things occupy, then you could have a thing not in space; for to say that space is in space would be absurd. And, again, if space were a thing, then, as all things are in space, it would follow that there were never less than two things in the same place at the same time; namely, the space and the thing that occupies it, which is a double absurdity,—once, because no two things can occupy the same place at the same time; and once, because it drives us back to the assumption that space is in space, which contradicts our definition of space as being the place things occupy, and not a thing in itself. So of time. If time be a thing in itself, then it must exist in some order in relation to succession with other things,—*i.e.*, either before, simultaneously with, or after any other one thing that exists; for we have defined time as the condition wherein, or by means of which, all things that do exist maintain an order of succession. But nothing can precede time nor follow it. Like the road over which the procession passes, it cannot get up and join in the procession. Time will not come into any relation of succession, because it is the condition upon which we think of things in their succession; and that which conditions a thing cannot be that which it conditions. Hence, time is not a thing. But we have already proved that space is not a thing. Hence, there are two kinds of nothing; namely, spatial nothing and durational nothing, which is again absurd. For there can be no distinctions or qualities to nothing.

Try it Again.

Space is something, because it is that which contains all things. Since it contains, it therefore acts; and whatever acts or performs a function must have an existence. Very well. Whatever exists must have qualities by which we become sensible of its existence. What quality, then, has space by which we know of its existence? Suppose we say it has extension. But extension is space itself. The two are but different words having one meaning. We will say it contains. Is that an attribute of space? If so, take away that which it contains. Then, the space is still there, but it doesn't contain. Hence, containing is not the attribute. Well, we say it has a capacity for containing. Try that. We restore the object that fills it,—the space occupied by this ball for instance. Now, it contains again; but, though the space is still there, it has lost its capacity for containing. For, as space is filled, its capacity to contain becomes exhausted. Therefore, capacity for containing is not a continual attribute of space: it is only an attribute of empty space, not of space *per se*. So we return again, and say, Space is its own sole quality, extension. Very well. This ball has the same extension as the space it occupies. Extension, therefore, is a quality of things; but, if it be a quality of things, it cannot be a condition to the existence of things. For nothing can be at once the effect of a thing and its condition, or that without which it could not be. But, if space do not condition the existence of things' then there may be things that exist without any space to exist in,—*i.e.*, nowhere, which is again absurd. Hence, space has no attributes by which to make itself known to us. But that which cannot make itself known to us cannot exist. Hence, metaphysics says space does not exist. But common sense says space only fails to exist when considered metaphysically; *i.e.*, it fails to exist in thought, or to be expressible in terms of thought, because it is not itself thought,—just as length fails to be expressible in terms of weight, or color in terms of value. Just as we cannot say how much a mile weighs or how much yellow is worth, so we cannot express space in terms of thought, because space does not think. To be able to think truly what space is would be to contain space in its essence in our thought. But space will no more be comprehended in thought than color can be contained in length.

And Still Again.

Take the case of time again. Time, if it exists, is either past, present, or future. The past portion of time does not exist, because it has ceased to be. The future does not exist, because it has not begun to be. The present is a mere line of division between the future and the past; and, as a line can have no width,

Digitized by Google

so the present can have no duration. It is a mere moving line of distinction between future and past; hence, not having duration, it is not time. Hence, metaphysically, time does not exist.

This is the metaphysics of it only. The common sense of it is that time is a simple concept, part of the original raw material whose existence the mind must assume without analysis, being, like the sixty-seven simple substances in chemistry, incapable of comprehension, but necessary to be apprehended. Spencer says: "It results, therefore, that space and time are wholly incomprehensible. The immediate knowledge which we think we have of them proves, when examined, to be total ignorance."

Failure of Metaphysical Methods.

I would say, when examined by the metaphysical method only, it proves to be ignorance, just as life, when searched for with the dissecting knife, reveals only death,—not because there was no life there, but because the knife destroys the life for which it seeks. But when we look for life with our own life, with the outstretched hand, the genial word, the act of co-operation or recognition, there is life not only in every flower and bird and leaf, but possibly in every pebble. So, in our experience, to see time and space, we have only to think back and to look around. They are the two plainest facts in the world to every person who doesn't know anything at all. To understand them completely, it is only requisite to be a fool. But, to become incapable of understanding them, you must, by spending several years upon metaphysics, rise in this profession to the high point where you cannot remember the teachings of common sense; and, when you can aver and prove that neither time nor space exist except in thought, you will be a metaphysician of the order of Kant. If you conclude that they cannot be thought of at all, and that all thought begins by assuming certain unthinkable ideas, you will agree with Spencer. If you believe that time and space both are and are not, and that the fact that they are and the fact that they are not is one and the same fact, you will agree with Hegel. If you believe that the result impeaches the metaphysical method, and proves that the metaphysical method is, at least in relation to space and time, to be subordinated to the experiential,—*i.e.*, that we "can reason but from what we know," *i.e.*, again, from what we observe or suffer or perceive,—then you agree with Auguste Comte. If you believe that this apparent conflict between common sense and metaphysics is not inherent or final, but that a philosophy can be predicated which shall accord with every instinct of common sense, yet shall carry the mind up into the highest reaches of human speculation, keeping your feet all the time on firm ground, while with the wings of your thought you cleave the highest heaven,—if you are a bird of that kind,—and that it is one of the highest functions of common sense to recognize the thinking power as something that works in a conditioned sphere, terminating in the contradictory poles of the infinite at one end and the absolute at the other,—if you think you know what that means, and that that is true science and not poetic cloudland, then you are with Sir William Hamilton.

Further Applications of the Metaphysical Method.

Let us see, then, if we can think without self-contradiction of matter, force, and action or motion. Aristotle thought that matter consists of two phases: namely, essence or substance, which is the thing in itself, and attributes or qualities, which are the messengers which make the thing known to our senses. This notion was held so long that it became an underlying assumption in all speech concerning matter. But the difficulty is that, when we strip matter or substance successively of the several qualities by which we know it,—namely, form, size, weight, hardness, color, fragrance, flavor, density,—and then look underneath them for the wearer of all this mere apparel, he is not there. We know matter only by its qualities; yet none of these qualities is the thing in itself, as Democritus was the first to show twenty-five hundred years ago. Hence, its essence, the mysterious supposed something in which these qualities inhere, is wholly unknown to us. Upon this basis, Lotze and his pupil, Prof. Bowne, of Boston, in his recent work on metaphysics, deny the Aristotelian doctrine that there is to matter any essence or substance in which its qualities inhere, "as pins stick into a cushion"; and this brings them to a new definition of matter,—namely, that matter is that which acts, that what we call its qualities are its action, and that, apart from this action, matter has no existence for our thought. For instance, the fact that it resists the attempt of other matter to occupy the same place with it at the same time we call the quality of hardness, or impenetrability; the fact that it attracts and is attracted by the earth we call its weight; the act of its supposed atoms in cohering together in the degree they do, and yet in standing apart in the degree they do, we calls its atomic structure, or density; the act of light in being reflected from its surface we calls its color; if it be fruit, its act of sending sensations of taste to the brain, we call its flavor. And so all its attributes become acts or manifestations of force. But, alas! when we have got so far, we find that, instead of defining matter according to our preconceived notion as passive substance, we have thought it out of existence, and have substituted in its place force or motion.

Can we think of Action, Force, or Motion?

It must be then that force or motion is a more tractable idea, and one more capable of being detained by thought than matter is. What, then, is force? Take the force of cohesion in a bar of steel. The only way we can think of it is to think of it as the act of an atom. We imagine the piece of steel to be composed of atoms, each as much smaller than a mite's eye as an apple is smaller than the entire globe. These atoms are all alike, all units of substance, have the same weight and size, but are too small to have a shape of any kind; but, if they have a shape, they are round. Inasmuch as all matter is compressible, it is necessary to think of all these little fellows as lying like fine shot in a canister with spaces between, since the universal compressibility of all matter requires that the atoms, even in a bar of steel, shall say to each other, "Keep your distance." This being so, cohesion means that these little fellows, without arms, or hooks, or brads, or sticking material of any kind, hold on to each other with such force, both for the purpose of preventing any greater separation and to prevent any greater compression, that a steam trip-hammer that will displace them in the smallest perceptible degree costs in some instances a million dollars to construct, and descends with a force of a thousand tons. This cohesive force, bear in mind, is not a force which the atom can exert within its own dimensions: it must be exerted over its neighbor. It is a force acting outside itself, like the force a policeman exerts over his prisoner. In cohesion, it exerts this force over its nearest neighbor; but, in gravitation, it exerts a like attractive force upon every other atom in the most distant world. Now, the mind is so constructed that no thinker has ever been able to think, or ever will be, how an atom can act outside itself upon another atom, either at small or at remote distances. But this mode of action is the essence of all force. Hence, no man can think of force. Hence, Lotze and Bowne, in defining matter as that which acts or exerts force, have only escaped out of one unthinkable idea into another just as unthinkable.

Newton's View of Atoms.

To show you that our attempted definitions of matter are not mere idols of straw set up to be knocked down, but are the best the human mind has been able to conceive, let me quote to you the Aristotelian conception of matter, as stated by Sir Isaac Newton. He says: "It seems probable to me that God in the beginning formed matter in solid, massy, hard, impenetrable, movable particles of such sizes and figures, and with such other properties and in such proportion to space, as most conduced to the end for which he formed them, and that these primitive particles being solids are incomparably harder than any porous bodies compounded of them, even so very hard as never to wear or break in pieces; no ordinary power being able to divide what God himself made one in the first creation."

Graham's Atom in Motion causes Volume.

Judge Stallo quotes Mr. Thomas Graham as holding that all the atoms in every mass, no matter how solid it may be,—as, for instance, a bar of steel,—are in perpetual motion, bounding and rebounding against each other, as nearly all physicists suppose the atoms in every gas to be. Mr. Graham says: "Let us imagine one kind of substance only to exist, ponderable matter; and, further, that matter is divisible into ultimate atoms, uniform in size and weight. We shall then have one substance and a common atom. With the atom at rest, the uniformity of matter would be perfect. But the atom possesses always more or less motion, due, it must be assumed, to a primordial impulse. This motion gives rise to volume. The more rapid the movement, the greater the space occupied by the atom, somewhat as the orbit of a planet widens with the degree of projectile velocity. Matter is thus made to differ only in being lighter or denser matter. The specific motion of an atom being inalienable, light matter is no longer convertible into heavy matter. In short, matter of different density forms different (simple) substances,—different inconvertible elements, as they have been considered."

Mr. Graham negatives our primary idea of matter, namely, that it is not motion, by attributing its most familiar and inseparable attribute, namely, relative density, to the relative rapidity of the motions of its atoms, and thus robs its atoms of the qualities of inertia and passivity, with which in the definition of matter they are endowed, and virtually tells us that we know matter only as motion. This would be like answering the question, "Why does the stone move through the air?" by saying, "Because it is a bird." Graham virtually asks, "Why do different masses of inert, dead matter differ in density?" and answers by saying, "Because there is no such thing as dead inert matter: every atom moves, and all matter lives." Thus, as the attribute of cohesion brought us by the metaphysical route to the conclusion that all matter is force, so, by the same route, the attribute of density also returns to the conclusion that we know matter only as motion, which again is as contradictory to common sense as it is irresistibly inferable in metaphysics.

Spencer on the Limits of Thought.

Mr. Spencer therefore says concerning matter: "Matter then, in its ultimate nature, is as absolutely incomprehensible as space and time. Frame what suppositions we may, we find, on tracing out their implications, that they leave us nothing but a choice between opposite absurdities"; and, concerning motion, he says: "Neither when considered in connection with space, nor when considered in connection with matter, nor when considered in connection with rest, do we find that motion is truly cognizable. All efforts to understand its essential nature do but bring us to alternative impossibilities of thought." The same is his conclusion concerning force and consciousness. The impossibility of knowing things in themselves, or *noumena*, and the fact that the limits of the human intellect confine it to uses and appearances, or *phenomena*, were familiar topics to the Greeks. Hence, their name for an appearance has become the common English name for an observed fact. Spencer says of the philosopher, "In all directions his investigations eventually bring him face to face with an insoluble enigma; and he evermore clearly perceives it to be an insoluble enigma. He learns at once the greatness and the littleness of the human intellect, its power in dealing with all that comes within the range of experience, its impotence in dealing with all that transcends experience. He realizes with a special vividness the utter incomprehensibleness of the simplest fact considered in itself. He more than any other *truly knows that in its ultimate essence nothing can be known.*"

Pumping Inspiration into Genesis.

Here therefore, in the midst of the Garden of Philosophy, is the tree of whose fruit we may not eat, the tree of the knowledge of things as they are, or of things in their essential nature. Of the fruit of the tree of life—*i.e.*, of the uses of things experientially—we may eat. Slight perversions of the meaning of all revelations are necessary to bring them into harmony with either science or philosophy. But, by putting into Genesis a meaning its author never dreamed of, we can find in it a rude and crude prophecy of the limits on human knowledge as they beset the most advanced philosophy. We can know the uses of things; *i.e.*, how to live in and by them. But we cannot know them in their essential nature. The difference between Philosophy and Genesis in this respect was that in Genesis it is represented that mankind might overstep the prescribed limitations on the knowable. In Philosophy, it is affirmed that the law is self-enforcing, and that human thought has never had the power to violate it.

MAXIMS AND MEDITATIONS.

BY J. WM. LLOYD.

The wisest man is he who knows best how to be happy himself, and how to make others happy also.

The best man is he who can keep step to the wisest man's music.

Do not condemn a thing because the world condemns it, because it is new, or because it seems to combat your own preconceived theories or opinions. Examine it for yourself, honestly and fearlessly, without malice or prejudices; and, if you find it true, virtuous, and worthy of imitation, then believe and accept it. If, on the contrary, it should prove to be false, doubtful, or impure, then reject it, no matter how much it may be applauded by those around you.

Religion is the theory and practice of perfection.

Our memories should be like sun-dials, recording only the sunny hours and bright moments of existence.

The true infidel is the man who is voluntarily unfaithful to his ideals.

An ideal is like a mountain peak, seen afar off by a traveller in the desert: the nearer he comes to it, and the more clearly he perceives it, the higher and longer and wider it becomes; and it ridges itself with rocks, and waves with trees and laughs with brooks, until, instead of being a mere point on the horizon, it proves a world of fertility, strength, and beauty. So all good things grow nobler and finer as we approach them; but evil things are mirages that grow smaller and meaner.

In the poetry of life, "she" always rhymes with "he."

In all religion, in all philosophy, I find only this worthy,—to do good, enjoy the present, and trust the future.

The hunter is often surprised, in his mountain rambles, to stumble upon some dimpled and crystal spring, half-hidden among storm-torn trees and jagged rocks; and, in many a stern and iron-bound nature, there lurks a fountain of purity and kindliness, where the peace of heaven is reflected, where the bright sun shines upon purling waters, sweet with joy and refreshing.

Self-sacrifice is the cream that rises on the milk-pans of human kindness; and martyrs, heroes, and reformers are rolls of butter, churned therefrom by the dashing of human woes.

Even as the sparkling water of the ever-flowing fountain quickly washes out and away the poison of any drug that may be thrown into it, so the sweetness of the right mind quickly purifies itself from the envenoming influence of the obscenity, wrath, and wrong by which it is daily contaminated.

Woe to that oyster whose shell is too hard for his growth.

Eternal warfare is the price of peace; eternal labor, the price of rest.

We are like shell-fish, washed and surrounded by the oceans of eternity, clinging to and crawling about in the sands of time, and making sundry queer marks and patterns thereon. Perchance, when those sands have petrified into the rocky foundations of future ages, some of these marks may remain: our fossilized lives even may give pleasure and instruction to the *savans* of the future.

If we sin, it is against ourselves and our fellow-creatures: we cannot sin against God.

We often long to go back to the small pants and jacket of childhood; but, when we try them on, we find we have lost the fit.

A frank and simple and hearty speech, a ready smile, a quiet dignity that is free from pride, and a modesty that is devoid of humility, an air of politeness that cannot be analyzed away, a good-natured adaptation to life's inequalities, and a persistent but unostentatious adherence to principle,—these are badges of noblemen.

What can't be endured must be cured.

Poverty is a lean mare, but she raises some sleek colts.

HE is good that does good to others. If he suffers for the good he does, he is better still; and, if he suffers from them to whom he did good, he has arrived to that height of goodness that nothing but an increase of his suffering can add to it: if it proves his death, his virtue is at its summit,—it is heroism complete.—*Bruyère.*

CORRESPONDENCE.

CAPITAL AND LABOR.

GALETTA, ONT., Dec. 26, 1882.

Editors of The Index:—

It is matter of common remark that a good cause sometimes suffers more from injudicious friends than from open enemies. This is especially true of free thought. In the war which it has waged against superstition and the false beliefs and practices of the past, the strange vagaries and crude and groundless notions of some of its advocates have done immense harm, have closed the ears of many doubters and inquirers, and given strength to the arguments of the enemy. How much obloquy and contempt have been brought upon free thought by forced alliances with free love, with Spiritualism, with quack physiological nostrums of one kind and another; but greater harm than from any of these sources has come from false ideas on economic questions, such as the relations of capital and labor, currency and banking, conditions of the working classes and the like. A recent writer in *The Index* has launched out a prodigious tirade against business men, meaning especially the employers of labor, comparing them to the corrupt politicians, charging them with being the cause of the corruption in politics, with being "contemptuous of moralities and ready, pen in hand, to strike 'heart' from the qualities of the human brotherhood," and charging the present wage system with being the cause of prostitution among women and with making men sneaks and thieves. What will the thousands of employers of labor on this continent, who, by their ingenuity and skill and capital, provide industrial employment and a comfortable living to hundreds of thousands of men and women, think of this? Sometimes these men succeed and grow rich, sometimes they fail and lose all; but, meanwhile, their workers have had their wages, and bear no share of the loss. What would these theorists who deny that the law of supply and demand applies to labor put in its place? How do they propose to appraise the varying qualities of workmen? If they would have the profits over and above interest on capital and cost of management divided among the workers, what about the losses, and who is to decide what the cost of management should be? These people seem not to be aware that the agriculturist with his crops is exactly on the same footing as the workingman with his labor. Last year, the farmer expended the same amount on his wheat fields that he did this year, the same ploughing, sowing, and harvesting. Yet he is compelled to sell his grain for thirty per cent. less than last year. Who is to reimburse him for this loss? What capitalist has he a claim upon? The principal, if not the whole cost of his wheat, is in the labor he has put in it; and he stands exactly on the same footing as the workingman, who demands that his wages shall be high, whether there have been gains or losses in the business. This matter may be verified by any one who chooses to visit a city market. He will find the profits of the market gardener and farmer—literally their wages—varying from day to day in proportion to supply and demand. When an article is abundant the price comes down, when it is scarce the price rises, while the labor put into the production of these articles remains the same. No one ever heard of any of the railers against political economy going into the market, and addressing a farmer who has on hand a quantity, say, of butter, the price of which has fallen on account of a full market: "My good friend, you must not be the victim of this bogus law of supply and demand. Your wife has expended the same amount of labor as heretofore on this butter. I will pay you the price you have been accustomed to."

To speak of the conception of trade as "the old robber conception, enforced by money and the threat of want," is language, to say the least, extravagant. No reflecting person will so describe the marvellous system of exchange of commodities by which the necessaries and the luxuries of life are brought within the reach of the remotest hamlet, and the productions of far distant lands brought across the ocean to cheer the hearts of the poorest in the land. Equally untrue and inapplicable is such language to the relations of the employer and the employed. In the vast majority of cases, this relationship is mutually beneficial, and very frequently accompanied by feelings of friendliness and co-operation. A very large number of the present employers of labor were originally workingmen, who by industry and economy accumulated capital, the possession of which, aided by skill and character, enables them now to provide employment for their fellows. And, even among the largest capitalist employers, it is no uncommon occurrence for them to keep their works going at a loss, for the sake of their workers, hoping often against hope for the return of better times and the resumption of profitable business. These men, in the simplicity of their hearts, never for a moment imagine that the wage system makes women prostitutes and men sneaks and thieves. They, on the contrary, think that one of the best checks to prostitution and theft is employment for idle hands.

The transformation of the savage man into the civilized, which takes place in the social state, is a slow process, and, notwithstanding all our progress, is still far from complete. Power of application has to be developed. The ability to sacrifice immediate gratification for future reward has to be gained. Industry, self-denial, forethought,—these are the qualities which distinguish civilized from savage man; and they have to be acquired by painful expression of consequences. And, as misery must more or less result from incongruity between constitution and conditions, the unhappiness must be borne as best it can. The process of adaptation to the social state must be undergone, and the sufferings have to be endured. No statute of the legislator, no rectifying scheme of the humane who weep with compassion over human suffering, and, least of all, no communist panaceas can stand in the place of this adaptation, or mitigate the sufferings by which it is accompanied. In the mean time, it is pleasant to think that large numbers of the working classes have emerged and do every day emerge from the condition of life where daily labor is exchanged for daily sustenance. It is reasonable to think that this process will go on in an increasing ratio, and that, when the time comes—as come it will—when men are universally intelligent, industrious, and honest, the wage system will give place to something better, but not till then. J. G. WHYTE.

LIBERALISM IN RELIGION.

Editors of The Index:—

The progress of Liberalism in Religion seems to me one of the most wonderful things of this wonderful age. I am not yet sixty; and yet within my day has appeared, had its day, and vanished almost out of sight the era of "revivals" and "conversions." Whatever these manifestations seemed to be, they were really built upon the theory of the miraculous interposition of God. The Almighty was to the Churches of those days a sort of superintendent of religious "awakenings," omnipresently going around from village to village gathering into the fold all sinners. Now, the refined and cultivated, it would seem, have everywhere banished hell (which was and is the corner-stone of Orthodoxy) from their belief, not because it is not taught in the Bible (for it is taught there), but from an innate sense of its inconsistency with any possibly sensible idea of God. They have everywhere consigned to the province of mythology the myths of Moses or of whomsoever was the author of the Book of Genesis. And all classes are looking on with astonishment as they see the once sacred book treated like any other classic, subjected to criticism, historical and verbal. What, they say, "have we been listening to words of 'inspiration,' we and our ancestors, for three hundred years, that were not genuine? And have our clergy all this time been too ignorant or not truthful enough to tell us of it? What then becomes of the 'inspiration'? Did God intend to furnish us with his word, and has he failed? or is the Bible like any other book, a book?"

The custodians of Orthodoxy for the long period that elapsed from Paul, its true author, to Leo XIII., and the last Ecumenical Council of the Methodist Church, have not been fools; and they have surrounded their narrow and artificial religion with defences of many kinds. Any man of little sense can see that Jesus did not claim miraculous power as a personal gift and evidence of his mission. He claimed it only as an evidence of faith, that any man might possess, and by the exercise of which he might "remove a mountain." So the Church has always claimed the power of miracles, and claims it yet. The Protestants do not claim it. The truth is Protestantism is unfledged Rationalism.

So with the infallibility of the Church and of the Pope as its head. Is the meaning of the Bible some-

Digitized by Google

times confused and contradictory, as might be expected from the number of its authors? The infallible Church is its legitimate and indeed promised interpreter. Protestantism ignores or denies this power, and it has split into possibly a thousand sects. The Church of Rome, claiming the promise that "on this Peter I will found my Church," assumes the prerogatives of power and authority. "Thus saith the Church," is a commission behind which no one is allowed to look. But Protestantism, clothing herself only with what she calls truth and reason, increases like the diatoms by bifurcation, each half after separation claiming all the prestige of the original whole. I say again that "Protestantism is nothing else but nascent Rationalism." Who, that has been brought up in families belonging to Presbyterian or other orthodox churches, has not known from childhood rationalists in the Church? Their Rationalism might not have extended very far, their horizon might have been limited; but it was there, and it was the seed of wider rationalism, scepticism if you please, in their children, which spreads out in ever-widening circles with each succeeding generation.

The time is not very far distant when there will be again in Christendom but one Christian Church. Protestantism, which will then mean Rationalism, having disclaimed inspiration, supernaturalism, and authority, having organized itself into creedless associations for the cultivation of ethics, and the encouragement of morality and neighborhood sociality, will look back upon its Luthers and Knoxes as the unwitting planters of free thought and free speech.

JOHN G. WEBB.

THE SUNDAY EVENING ASSOCIATION IN LONDON.

Editors of The Index:—

On Saturday, December 16, the second annual meeting of this association was held at the Laugham Hotel, the newly elected President, Mr. G. I. Romanes, F.R.S., in the chair. The annual report was read by Mr. Edward Marsh Simpson, one of the honorary secretaries; and Mr. Godfrey Stafford, Treasurer, read the balance-sheet. These having been adopted, the President delivered his address.

Mr. Romanes, in the course of his remarks, said there were three great questions which the philosophy of the present day was trying to answer: namely, What can we know? What ought we to do? What may we hope for? Fortunately, most persons were fairly unanimous on the first two questions; but, with regard to the third, the mental activity of the present day only seemed to leave the matter in greater perplexity than ever. He would at once admit that while religion, by which he meant creed, was a thing apart from conduct or morals, nevertheless there were circumstances in which the two blended or overlapped, and in this category he placed the observance of the Sabbath. Amid all the controversy which this question excited there was one thing on which we had all agreed; namely, that Sunday must always be a day of rest. Indeed, a deep debt of gratitude was due to those creeds which had given us the Sunday. Proceeding to criticise the words of the Commandment which enjoins abstention from servile labor on the seventh day, Mr. Romanes maintained that the true interpretation of the text pointed more to rest than the performance of any religious ceremony. He quite admitted, however, that Sunday should be a day of prayers, though he strongly maintained that the views of the strict Sabbatarian were not warranted by anything found in Scripture. In conclusion, Mr. Romanes said: "I think that all reasonably minded persons must agree that it is only those who belong to the straightest sect of the Pharisees who can find anything to condemn in the aims and the methods of the Sunday Evening Association. Therefore, I heartily hope this, the third year of its existence, may prove as useful as the first and second have been, and that it may long survive to bestow on others the benefits which it has already bestowed on us."

At the close of the address, which was listened to with much interest, the meeting proceeded to the election of officers for the year, including Mr. Mark Judge, Chairman of Committee; Mr. Godfrey Shaen, Treasurer; and Mr. I. I. Marshall and Mr. I. Godfrey Stafford, Honorary Secretaries. The committee intimated that arrangements were being made for a series of Sunday evening meetings at the Workingmen's College in Gt. Ormond Street, commencing January 14.

MARK H. JUDGE.

LONDON, ENG.

ETERNAL DAMNATION.

Editors of the Index:—

This agitation in orthodox circles concerning eternal damnation and future probation is certainly pleasing to liberal minds, as it shows that the human is getting the better of the animal in man, and demonstrates that the idea of a brotherhood of man is gaining ground. It is truly gratifying when such a radical orthodox exponent as the Rev. J. L. Withrow, D.D., comes to the front in defence of Orthodoxy from the imputation of having always believed and taught that the greater part of us poor mortals are doomed to everlasting punishment, or that the few would be saved, and the many lost. That idea was early instilled into my mind, and was encouraged and strengthened by all the preaching and Sunday-school teaching from my childhood up to the time I commenced to think for myself. And isn't this the experience of every one who has been brought up under orthodox training? It speaks well for the liberal pulpit and press, and shows that their efforts in the cause of humanity have not been in vain, when orthodox preachers begin to go back on their record, as they are now doing in denying that they have *thought* as bad as they have taught. It speaks well, also, for those liberal-minded orthodox divines who, having the courage of their convictions, come out boldly and say, Brethren, we have gone too far in this direction. God is not quite so bad as we have been representing him. The idea is beginning to penetrate through the brains of theologians that *perhaps* God is not any meaner or more cruel than they themselves would be under similar circumstances; and, when a man gets that idea once planted in his brain, it is wonderful how quickly it will germinate and grow. There seems to be a stream of warm, fructifying influences flowing up from the heart, which at once meet the roots of the idea, causing it to grow and spread into the broad tree of humanity, which soon brings forth its glorious fruits,—hope, love, and charity. But, to return, wouldn't it have seemed more honest in Dr. Withrow if, instead of denying that the doctrine of eternal damnation for the non-elect had ever been in the orthodox creed, he had come out fairly, and "acknowledged the corn" by saying that idea *had* been held in the past, but was now entertained only by the few, or said nothing? His position now seems very equivocal, for he must acknowledge ignorance of his own creed or stand as a dissembler. The Boston *Herald* of Saturday morning, 6th inst., editorially gives a very lucid explanation of the controversy between the editor of the *Christian Register* and Dr. Withrow, and says Dr. Withrow has been discounted and beaten out of his position, "horse, foot, and dragoons," by Rev. S. J. Barrows.

The time may not be far distant when Prof. Park will deny that *he* ever decried future probation for fear that "the blessedness of the saints would be insecure." Isn't it the *heartfelt* wish of all civilized humanity that the future of mankind may be *better* than the present? And why may not the wish be father to the thought that God wishes so too, and means it shall be?

W. H. S.

WEST SOMERVILLE, Jan. 6, 1883.

LIBERAL RELIGION IN LONG ISLAND, N.Y.

Editors of The Index:—

During the past three years, by request of Mr. Isaac W. Ketcham, the writer has conducted, albeit in imperfect fashion, rationalistic meetings at the residence of that gentleman, in Jericho, Queens County, L.I. Our series of meetings have usually commenced the first of June, and ended the last of October. They have been held fortnightly, on Sunday afternoons. Mr. Ketcham is one of the most prominent business men in the section where he resides, a most estimable gentleman, and withal a subscriber to *The Index*. Our meetings have been well attended, and the interest manifested has been deep and abiding. The prevailing religious sentiment of the place is that of the Hicksite Friends; and Orthodoxy there is at a decided discount, thus rendering it a comparatively easy matter for a rationalist to obtain a hearing. The most gratifying thing of all is the assurance that, together with the mental agitation in the community resulting from our fortnightly gatherings, their moral influence has been of an uplifting and ennobling character. The writer has tried to be fair in all his statements concerning the Christian religion, and has endeavored to keep an eye single to the advancement of our common cause.

Yours very respectfully, W. C. BOWEN.

BROOKLYN, N.Y., Nov. 27, 1882.

MISCELLANEOUS.

HOW TO HELP THE POOR.—One of our liberal writers makes the following timely appeal in behalf of the poor and in behalf of the Associated Charities work for them: "The winter which has set in so early with severe cold and snow promises to be a hard one for the poor from the scarcity of work and the high price of the most common articles of food and fuel. While our hearts have gone out in festive kindness during the holiday season, we should be sure that our sympathy does not fail in the sterner needs of every-day life. The tramp and the beggar in the street appeal to our sensibilities and shock our taste, and we are too apt to satisfy our feelings and relieve our nerves by giving them a few coins or some old clothing, which are quite insufficient to relieve their wants, if they are real sufferers, but quite enough to encourage them in idle habits of begging, or to furnish them with the desired dram, if they are worthless impostors. How, then, can we be sure that we have done our duty by the poor and unfortunate who have fallen out in the race of life from circumstances beyond their own control? Setting aside the great social questions of the origin and prevention of poverty for the time, we can only meet the present need by steady, persistent care of the poor, which will not only relieve the hunger of to-day, but help them into a position where the bread of to-morrow is secure. In the busy hurry of life, we cannot always stop to investigate cases and carry out a wise system of help; but we can at least make ourselves acquainted with the institutions of charity already existing, see what they are doing, and give them the hearty support which will enable them to do *our work* efficiently. For is it not the work of all of us to care for our brothers, and see that none of these little ones of society are lost?

"The Board of Associated Charities are striving to do this very work as an organized body. They endeavor to become acquainted with all those families and individuals who are liable on any sudden emergency to fall into the pauper class, and by help at the right time and of the right kind to enable them to regain their independence and self-supporting character. In doing so, they do not deprive this class of any other charitable help; but they use all the agencies which are already in existence, only trying to put them into mutual relation, so that they shall supplement each other instead of duplicating each other's work. The help of the Overseers of the Poor, of the Provident Association, of the North End Mission, of the various hospitals and homes in the city, is eagerly sought and gratefully accepted for such cases as they can meet; while the visitor can fill up by individual advice and assistance any gaps which are left by these institutions. Here, then, is an agency which every one, however hurried, can employ to relieve the poor and to satisfy his own benevolent feelings without doing violence to his sense of justice and social science. Let any one place in the hands of this board the money which he would be willing to give to chance beggars in the course of the year, and then refer all such cases to the central office in Chardon Street, and he may sleep with a clear conscience, knowing that he has done his part to prevent any one in the city from severe suffering by cold and hunger. At the same time, the magic word 'Chardon Street' at once silences the importunate beggar and sends a chill to the heart of the impudent impostor. Do not accept the negative duty of giving no money without investigation without at the same time taking the positive step of strengthening those organizations which should make beggary needless and impossible."

WHAT is blasphemy? To contradict a priest, to have a mind of your own? Whosoever takes a step in advance is a blasphemer. Blasphemy is what a last year's leaf says to this year's bud. To deny that Mohammed is the prophet of God is not blasphemy in New York. It is in Constantinople. It is a question, then, largely of geography. It depends on where you are. The missionary who laughs at a modern God is a blasphemer. In a Catholic country, whoever says Mary is not the mother of God is a blasphemer. In a Protestant country, to say she is the mother of God is blasphemy. Everything has been blasphemy. My

Digitized by Google

doctrine is this: he is a blasphemer who refuses to tell his honest thought, who is not true to himself, who enslaves his fellow-man, who charges that God was once in favor of slavery. If there is any God, that man is a blasphemer. They're afraid we'll injure God. How? Are infinite goodness and mercy to become livid with wrath, because a finite being expresses an opinion? I cannot help the infinite. That man only is the good man who helps his fellow-man. I know men who would do anything for God, who doesn't need it, but nothing for men, who do need it. Why should God be so particular about my believing his book? It's no more his work than the stars or gravitation. Yet I may declare that the earth is flat, and he'll not damn me for that; but, if I make a mistake about that book, I'm gone. I can blaspheme the multiplication-table, and deny the power of the wedge, —in fact, the less I know, the better my chance will be. I say that this book is not inspired, and there is no infinitely good God who will damn one human soul at the judgment. If I am mistaken, I will own up. I am here: I do not know where I came from nor where I am going,—I'll be honest about it. I am on a ship, am not on speaking terms with the Captain; but I propose to have a happy voyage, and the best way is to do what you can toward making your fellow-passengers happy. If we run into a good port, I'll be as happy an angel as you'll meet that day. Blasphemy is the cry of a defeated priest, the black flag of theology: it shows where argument stops and slander and persecution begin.—*Ingersoll.*

EVERY six months, a notice is circulated in the female penitentiaries of France, calling upon all women who feel inclined to go out to New Caledonia and be married to make an application to that effect through the Governor. The matrimonial candidates must be young and exempt from physical infirmities. Girls under long sentences readily catch at this method of escaping from prison life. The only moral qualification requisite is to have behaved well at least two years in the penitentiary. The selected candidates have to sign engagements promising to marry convicts and to settle in New Caledonia for the remainder of their lives. On these conditions, the government transports them, gives them an outfit, and a ticket of leave when they land at Noumea. The marriages are arranged for them by the Governor of the colony, who has a selection of well-behaved convicts ready for them to choose from; and each girl may consult her own fancy within certain limits, for the proportion of marriageable men to women is about three to one. It has frequently happened that pretty girls have been wooed by warders, free settlers, or time-expired soldiers and sailors, instead of by convicts. In such cases, the Governor can only assent to a marriage on condition that the female convict's free lover shall place himself in the position of a ticket-of-leave man, and undertake never to leave the colony. The married couple get huts and free grants of land, and all they can draw from it by their own labor becomes theirs. During five years, they are subjected to the obligation of reporting themselves weekly at the district police-office; and they are forbidden to enter public houses, and must not be found out of doors at night. This probationary period being satisfactorily passed, they get their full freedom, but subject always to the condition of remaining in the colony. To this rule, the law has forbidden that any exception shall be made. On no account whatever must convicts who have accepted grants of land and contracted "administrative marriages," as they are called, ever return to France.

THE attack upon supernaturalism is becoming more and more bitter,—supernaturalism in the Bible, in its prophecies and miracles, in the person of Jesus Christ, and in his resurrection from the dead. The "broad Church" is every day gathering some new, conspicuous name into its ranks. It is indeed a "broad Church"; for it embraces, with those who simply yield to the modern destructive criticism upon the Old and New Testaments, the vicarious character of the atonement, and the eternal element in final retribution, those who accept the evolution theory without hesitation or limitation, as does Mr. Beecher in the August *North American*, and those who divest the Bible of all special inspiration, refuse to accept its supernatural statements, and find God only in nature, in law, and in science, in an unseen force above us tending to righteousness, as does Mr. Arnold, and as, in his last book, *Natural Religion*, Prof. Seeley (author of *Ecce Homo*) very definitely teaches. This evidently is the tendency of the "broad Church." Few that still hold upon the Christian name have reached the outer limit. The majority linger at the threshold, reluctant to cut themselves entirely loose from the sacred traditions of the past. They shrink back at first from the chilling and impersonal faith that is proffered in exchange for the fervent and filial trust of the fathers. But there is no halting-place on this inclined plane. While a few who fear to seem illiberal, and are eager to hail any symbol of progress, may still hold upon the horns of the altar and be saved from the extreme plunge, the great body which becomes loosened from conservative truth will simply slide down hill to the bottom of the precipice, and find itself without a Bible, without a God, and in an utter eclipse of faith.—*Zion's Herald.*

A GERMAN pamphlet by E. Schläger, reprinted from Schmëitzner's *Internationale Monatsschrift*, speaks thus of the moral and religious meaning of Wagner's "Parsifal": "As the 'Nibelungen Trilogy' gave us negations in exhibiting the vanity, sin, and misery of seeking worldly riches and honors, so 'Parsifal' gives us positive truth in showing us the development of new and eternal life. 'Parsifal' is the new heaven and new earth destined to follow that passing away of the old Norse mythology which is prophesied in the 'Twilight of the Gods.' Thus, 'Parsifal' has been called the continuation of 'Siegfried,' in order to express the secret connection between the two masterpieces. In fact, 'Parsifal' is Germany developed with the aid of Christianity out of Northern heathenism, Germany first to reveal the highest meaning of Christianity and embody it in art. But Wagner rises high above dogmatic and fossilized Christianity, not only giving free play to the sentiments which produced this religion, but giving it new meaning in reference to present problems, as he had already done for the heathen mythology. Especially suited for this is the legend of the Holy Grail, whose knights are the forerunners of the millennial reign of Christ, and the deadly enemies of worldliness, which is personified in Klingsor. The attempt to make a tragedy of the life of Jesus always has and always must fail, because the character of a mere sufferer is not sufficiently dramatic. But the mighty working of 'Parsifal' on the hearers is largely due to the likeness of the hero, especially in the second act, with Jesus. The whole opera is penetrated with the spirit which brings down heaven upon earth. This shows itself especially in the lament for the swan and in the central idea of Knowledge given through Sympathy."

LIVE THOUGHTS.

HE whose first emotion on the view of an excellent production is to undervalue it will never have one of his own to show.—*Aiken.*

ONE true friend adds more to our happiness than a thousand enemies to our unhappiness.—*Marie Eschenbach.*

TO THINGS which you bear with impatience you should accustom yourself; and, by habit, you will bear them well.—*Seneca.*

AS THE tired man looks forward to the insensibility of sleep, so the philosopher, weary of the world, should look forward to the tranquility of extinction. —*J. W. Draper.*

"O BAL!" spake Vishnu, "take thy choice,—
With five men wise
To live in hell, or with five fools
In paradise."
"Then give me hell, for heaven is but
Where wisdom dwells;
And folly would of heaven make
A dozen hells!"
—*Rachel Pomeroy, from the Hindu.*

SLANDER is the solace of malignity.—*Joubert.*

FALSEHOOD may have its hour, but it has no future. —*Pressensé.*

THE proper way to check slander is to despise it: attempt to overtake and refute it, and it will outrun you.—*George Eliot.*

DID we ever see a man in anguish stand as if carved out of solid rock, mastering himself? Or one that, bearing a hopeless daily trial, remains silent, and never tells the world what cankers his peace? That is strength. He who, with many powers of indignation in him, can be provoked and yet restrain himself and forgive, is the strong man and the spiritual hero. So let not the bearers of false witness and the unblushing distributors of gross insults imagine that the objects of their assaults are weak, because they are silent. It is for that very reason that they are strong. Silence is a wonderful power in human affairs.—*Banner of Light.*

IS IT at all surprising that the number of those who hold the opinions of the Church in light esteem should so rapidly increase? How can that be received as a trustworthy guide in the invisible, which falls into so many errors in the visible? How can that give confidence in the moral, the spiritual, which has so signally failed in the physical? It is not possible to dispose of these conflicting facts as "empty shadows," "vain devices," "errors wearing the deceitful appearance of truth," as the Church stigmatizes them. On the contrary, they are stern witnesses, bearing emphatic and unimpeachable testimony against the ecclesiastical claim to infallibility, and fastening a conviction of ignorance and blindness upon her.—*Draper.*

BOOK NOTICES.

POEMS by Ernest Warburton Shurtleff. With an introduction by Hezekiah Butterworth. Boston: A. Williams & Co.

From the "introduction," we learn that these poems were written by the author while he was "between seventeen and twenty years of age," and "their collection in permanent form had been advised by the editors of the publications in which they have appeared." The title "Poems" is very modest. The youthful writer has considerable poetic versatility, his rhymes are musical, and here and there, as in "The Hymn of the Deep" and "The Shadow Boatman," there are evidences of vigorous thought as well as of verse-making facility. But, on the whole, the poems give plain assurance of the author's age, and will find their most appreciative audience among those of that age, while they give promise of better work from the same writer in the future. The writer of the introduction more than hints that in Mr. Shurtleff we have a new pastoral poet; but we fail to find in him such tokens of kinship with nature as we find in—to make an equal comparison—the poetry of the child poets of the Berkshire hills, Dora and Elaine Goodale, whose poems on nature bring us face to face with the objects described, and which we feel sure these girls have seen, loved, and studied.

ANYHOW STORIES: Moral and Otherwise. By Mrs. W. K. Clifford. With illustrations by Dorothy Tennant. London: Macmillan & Co.

This series of improbable stories, accompanied by "morals," is very entertaining indeed. It is beautifully bound, clearly printed, charmingly illustrated, and written in a free and easy style calculated to win the hearts of all good children.

THE *Art Amateur* for January contains an abundance of good things. First is a notice of the reopening of the Metropolitan Museum, which is discriminating, if a little severe. "Montezuma" gives some lively notes of other exhibitions. The biographical sketch is of Walter Shirlaw, a clever and spirited painter of rural subjects. We are rather tired of the talk of critics about the "duty of somebody to buy certain pictures." It is the duty of the public to judge pictures fairly and charitably; but they are not bound to buy them, unless they want them. Goethe makes it one of the traits of the dilettanti that they buy pictures for the sake of the artist, to encourage struggling genius, etc. Encourage art by learning to understand and appreciate what is good, and so stimulate the artist to do his best, and remuneration and success will follow.

Miniature painting, which has been almost driven out of the field first by crayon portraiture and then by the photograph, is again attracting attention; and we have in this number an interesting illustrated article on Cosway, the celebrated English miniature painter, with some instructions to those wishing to attempt this pleasing style of art. The illustrations are varied and spirited, being taken mostly from Walter Shirlaw's charcoal drawings.

Decorative art is not neglected, articles on tapestry, pottery, ornamented piano-fortes, etc., giving many suggestive hints, and patterns being furnished for embroidery, plaques, etc.

Digitized by Google

THE January number of *Babyland* is a "thing of beauty"; and the group of six sweet, happy-looking babies which adorns its beautifully, illuminated cover ought to make it also a joy forever, to say nothing of the pretty verses, stories, and pictures inside. *Our Little Men and Women*, a magazine for children a few years older, is from the same publishers, D. Lothrop & Co., 32 Franklin Street; and "it goes without saying" that any magazine from these unrivalled caterers to the intellectual and æsthetic needs of young people is all that can be desired in that line. *Babyland* is fifty cents, and *Our Little Men and Women* one dollar per year. No better Christmas present could be made to the inmates of the nursery than these monthlies.

"WIDE-AWAKE" for January keeps up its reputation as a first-class magazine for young people. Among the contributors to this number, we notice such well-known names as E. E. Hale, Marion Harland, Mrs. Abby M. Diaz, Fred A. Ober, Charles Kingsley, Margaret Sydney, Benjamin Vaughn Abbott, and Ernest Ingersoll. The many illustrations are of the usual type of excellence characteristic of this best of juvenile monthlies.

THE February number of the *North American Review* is to contain an article on "The Experiment of Universal Suffrage," by Prof. Alexander Winchell; a discussion of "The Revision of Creeds," by clergymen representing six evangelical denominations; a paper entitled "The Decay of Protestantism," by Bishop McQuaid; and a defence of the Standard Oil monopoly, by Senator Camden.

"OUR LITTLE ONES" for January is a holiday number, and part of its appetizing list of contents consists of "Santa Claus' Letter," an excellent lesson for quarrelsome children, "A Ragged Christmas Feast," "Santa Claus at the South," "The New Year," and "A Christmas Carol" set to music. These and the other delightful though unholiday stories are illustrated by beautiful pictures. Russell Publishing Co.

THE *Herald of Health* for January, 1883, is an excellent number. Among its list of contents, we note the following: "Herbert Spencer's Views on Overworked Americans," "Marriage in Germany and America," "Health of the Brain," "The Influence of Food on Civilization," "Funerals as Disease Breeders," "Health of American Women," and "Weight of Men and Women."

RECEIVED: *Wilford's Microcosm* (monthly), Hall & Co., 23 Park Row, New York; *Proceedings of the Davenport Academy of Natural Sciences*, Davenport, Iowa; *The Vaccination Enquirer*, London, Eng.; *Bulletin of National Association of Wool Manufacturers* (quarterly), 95 Milk Street, Boston.

PERSONAL ITEMS.

C. D. B. MILLS will lecture in Cleveland, Ohio, January 23, 26, 28, and 30.

LOUIS BLANC was very diminutive in stature, a fact about which he was extremely sensitive.

GEORGE W. CHILDS of the Philadelphia *Ledger* is reported to have given $6,000 in money as Christmas presents to his employés this year.

THE Chinese minister, who lives quite simply at Washington, devotes, it is said, $100,000 a year to the support of the poor in the province of Hon-Nan.

AN exchange declares that "the most highly remunerated and successful" author of the nineteenth century, taking into account the amount of work accomplished, was certainly George Eliot.

NEAL DOW stumbled and fell on the sidewalk the other day, and was not particularly pleased to be picked up by a man who didn't know him, with the exclamation, "I wish there was not a drop of liquor in the world."

B. F. UNDERWOOD will give an address at Linesville, Pa., January 29, on the one hundred and forty-sixth anniversary of the birthday of Thomas Paine. Mr. J. E. Remsburg of Kansas and other speakers will also address the meeting.

CLARK MILLS, the sculptor of the Jackson and Washington equestrian monuments at Washington, died last week, at the age of sixty-seven. He was a man of great force of character and of marked individuality. He was a radical free thinker.

A COLOSSAL statue of George Stephenson and another of James Watt, both after models by Prof. Keil, are now being completed in the studio of the eminent German sculptor, Herr Bock, and are intended for the new Polytechnic at Charlottenburg, near Berlin.

JOHN STERLING, the friend of Carlyle, whose name has fresh interest from its association with that of Caroline Fox in her *Pleasant Memories of Old Friends*, is the author of some of the most interesting letters in the forthcoming volume of Emerson's correspondence.

MR. JAMES K. APPLEBEE will commence a series of lectures next Sunday morning at the Parker Memorial Hall on "Virtue for Every-day Use." The course will include discourses on "Boy's Virtue," "Girl's Virtue," "Wife's Virtue," "Husband's Virtue," "Mother's Virtue," and "Father's Virtue."

THE death of Gambetta has been followed by that of Gen. Chanzy, who beyond any other man had the confidence of the French nation as a military strategist. Had France been involved in war at any time after 1871, Gen. Chanzy was the soldier who would have been called upon to take the chief command of her army.

MISS LOUISE ALCOTT, author of *Little Women*, etc., is described by W. A. Croffut as being "tall, strong, and reposeful" in physique. "Her projecting square brow and broad chin give her face that appearance of flatness which intellectual people so often have. It has a touch of pink in it, made more striking by the wealth of hair and eyes as black as coal."

DR. S. B. BRITTAN died January 4. He was one of the first to become identified with modern Spiritualism, was one of the editors of the Spiritual *Telegraph* a quarter of a century ago, and for a while editor of the *Banner of Light*. He was a polished writer and the author of several works, but they are not marked by originality or great strength of thought. His influence among Spiritualists has been of late years less than it was in the early history of their movement, which is not less true of many of their ablest representatives.

THE most distinguished literary men in Great Britain, says the *Tribune*, are on the liberal side in politics. The list includes Froude, Kinglake, Lecky, Freeman, Herbert Spencer, Trollope, Browning, Matthew Arnold, Oliphant, Leslie Stephen, Trevelyan, Hayward, Jowett, Reeve, Hughes, Rawlinson, Layard, Ferguson, Spottiswoode (P. R. S.), Lubbock, Owen, Tyndall, Huxley, Grove, Henry Smith, Goldwin Smith, Gavan Duffy, Grant Duff, Cartwright, Bain, Tulloch, Torrens, F. Harrison, Harcourt, Brodrick, Lord E. Fitzmaurice, Lowe (Lord Sherbrooke), Lord Dufferin, Lord Houghton, the Duke of Argyll, Gladstone.

ACHMET VEFIK PACHA, the most cultured man in Turkey, who occupied the post of grand vizier to the sultan for two days in the early part of the present month, has the finest private library in the East. Books in almost a dozen languages crowd its walls, all of which can be read by their owner. Once, writes a correspondent in Constantinople, as I was remarking the pleasure I felt at seeing the works of so many English and American authors on his shelves, he said, "Do you want to see the book I prize most of them all?" Then, he showed a worn copy of Longfellow's poems. "No other living man," said he, "in my opinion, has given such poetry to the world in English as the Boston Longfellow."

AMONG the deaths of last week was announced that of Lot M. Morrill, of Maine, three years governor of his native State, and for nearly sixteen years one of her representatives in the United States Senate. Mr. Morrill was a man of sterling integrity and hard-headed Yankee common sense, and did his country good service in trying times. He was one of the earliest advocates of the rights of suffrage being extended to the colored people after the war, and in his place in the Senate was always found on the side of maintaining the public faith and restoring its currency to a healthy basis. For nearly a year, Mr. Morrill acted as Secretary of the Treasury, and upon his retirement from that office he was appointed Collector of Customs at Portland, Me.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning*.

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, *of Oregon,* writes: "The INVESTIGATOR comes regularly, and no paper is *more thoroughly* read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

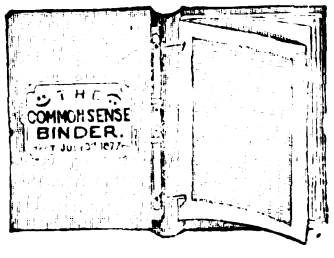
R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

Thoughts on the Death of Jennie Cramer

is the title of an address by FREDERIC A. HINCKLEY, neatly printed by Geo. H. Ellis, and for sale by the author and at this office. Price 5 cts., or $4.00 per hundred.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25 "	. . .	8c.	" "
" 26 " 51 "	. . .	6c.	" "
" 52 "	. . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

Works of B. F. Underwood.

Essays and Lectures. Embracing "The Influence of Christianity on Civilization"; "Christianity and Materialism"; "What Liberalism offers in the Place of Christianity"; "Scientific Spiritualism: its Meaning and Tendency"; "Woman: her Past and Present, her Rights and Wrongs"; "Paine, the Political and Religious Reformer"; "Materialism and Crime;" "Will the Coming Man worship God?" 300 pp. Cloth. $1.00.

The Letters of Junius. An essay on the authorship of these remarkable compositions, with letters to Mr. Underwood, never before published, from jurists, statesmen, and scholars, showing a concurrent conviction that Junius was Sir Philip Francis. 10 cts.

Religious Revivals, their Causes and Consequences. 10 cts.

Burgess-Underwood Debate. A four days' debate between Prof. Burgess, President of the North-western Christian University, Indianapolis, and B. F. Underwood. 188 pp. Paper, 50 cts.; cloth, 80 cts

CURRENT TOPICS.

MAX HEAVENRICH, Esq., a Hebrew, and son-in-law of the late Rabbi Lilienthal, has been unanimously elected President of the Unitarian Society at East Saginaw, Mich.

BISHOP IRELAND, of Minnesota, in a recent lecture in Chicago, said that ninety-five per cent. of the crimes committed in Ireland are directly due to whiskey-drinking. He declared that, if people would only let whiskey alone, the country would be rid of the curse of landlordism within five years.

A DESPATCH says, "All the Liberal newspapers of Berlin express indignation at a Conservative motion made in the Reichstag, giving to Christians the right to demand either that the judge before whom they may have to take an oath shall be a Christian, or that they shall be sworn by a Christian minister."

THE practice of cremating in place of burying the dead does not seem to recommend itself very highly to the German mind. It is four years since a crematory was established in Gotha, and only one hundred bodies have been burned in it during that period. There were sixteen cremations the first year, seventeen the second, thirty-four the third, and thirty-two the fourth. Of these, seventy-five were men and twenty-five women.

THE Czar of Russia has broken up the Medical College for Women at St. Petersburg, which was founded by his father, the late Czar. It has done much good in furnishing capable nurses for the army hospitals, and in raising generally the standard of education among women. It was a favorite institution with the Russian people, who contributed liberally to its support. No cause is assigned for this action of the Czar, save the unprogressive spirit which makes him averse to all reforms.

THE Twelfth Annual Meeting of the Massachusetts Woman's Suffrage Association was held at the Meionaon, Tremont Temple, on Monday and Tuesday of last week, finishing with a supper and "sociable" on Wednesday evening. The meetings were all well attended in spite of inclement weather, and cheering reports of progress were made. The principal speakers were Lucy Stone, H. B. Blackwell, Col. Albert Clarke of the Boston *Times*, Julia Ward Howe, Mrs. E. D. Cheney, Miss Mary F. Eastman, and Rev. Mr. Bashford.

REV. GEORGE F. PENTECOST, the noted evangelist, says in the *Independent* that the conversion of sinners is becoming a lost art: "The fact is sad and stubborn that, in the great cities, of churches where the talent, wealth, culture, leisure, and opportunity to do revival work abound, there the number of conversions is in an inverse ratio to the facilities." For the reason probably that faith in what is commonly called "the conversion of sinners," as a means of real and permanent reform, "is in an inverse ratio" to "the talent, wealth, culture" of a church or community.

IN the Queen's Bench division of the High Court of Justice, on the 11th inst., Mr. Justice Field "gave judgment against Mr. Charles Bradlaugh in his action against Mr. Henry D. Erskine, Deputy Sergeant-at-arms of the House of Commons, for an assault on the occasion of Mr. Bradlaugh attempting to enter the House of Commons and take his seat as member for Northampton Borough, after a resolution had been passed prohibiting him from so doing. Mr. Justice Field cited precedents, showing the power of the House to control its own proceedings."

ONE of the elevating moral results of the recent enforcement in New York of the Sunday penal code was finely shown in the arrest by a police officer of a poverty-stricken old woman who had endeavored to gain a few pennies by the sale of a few cents' worth of taffy on Sunday. The judge, before whom she was brought, not being entirely destitute of common sense and humanity, exercised judiciously the discretionary power vested in him by the law, and ruled that taffy, "if sold before nine o'clock" on Sunday morning, was one of the necessities of existence; and, as the poor old creature professed ignorance of the time of day, he discharged her.

BISHOP MCQUAID, in an article in the February number of the *North American Review* on "The Decay of Protestantism," says: "Private interpretation of the Scriptures, without note or comment, without guide or limit, became the cardinal tenet of Protestantism, its very essence. By it, Protestantism was to live or die. In leaving the Catholic Church, it carried along many of the old points of doctrinal belief and some of the familiar and cherished religious observances. But, when it thus left the Catholic communion, it was much like a mariner going out to sea in a ship without a rudder, who, when the storm arises, casts out one bit of cargo after another, in the vain hope of saving the sea-tossed and bounding vessel. Protestantism went out to sea without Christ's appointed pilot, and has been discharging cargo ever since to escape shipwreck. Now that there is little left to throw overboard, above all contention and wrangling the cry of distress is heard that danger is imminent and disaster inevitable. In all its multitudinous forms, Protestantism is decaying, is dying."

WHAT thoughtful, intelligent person can read without regret and dismay the following, which we copy from a recent issue of one of the most cultured dailies of our "cultured Boston"? "Although the services conducted by Rev. E. P. Hammond have lasted less than a week, the results among the children, no less than among the adults, are considered by those organizing the revival to be satisfactory. Dr. Gordon, pastor of the Clarendon Street Baptist Church, after what he considers rigid and sifting examination of the youngest of the converts, has avowed his belief in the genuineness of the conversions. The services go on afternoon and evening." Understanding as we do the methods by which these "converts" are made,—the appeals to the always too vivid imagination of childhood, the visions conjured up of the "fiery lake," the omnipresent and active Satan, the sufferings of the crucified Saviour, the mystery of death, and kindred terrors,—it seems almost impossible to think that there are hundreds of parents who will allow their little ones to pass through such an ordeal, under the impression that their God, whom they profess to *love*, requires it from these impressionable and ignorant young creatures, and that responsible papers, representing the intellectualism of the age, publish such statements without a word of rebuke or deprecation.

FROM "Topics of the Times," in the February *Century*, we extract the following: "The peculiarity of the modern method of robbery is the employment, by the robbers, of the State as their enforced agent and accomplice. Sometimes, but not often, they organize their clients and retainers into armed bands and seize the coveted booty, combining to have the State confirm possession. But the force on which they prefer to rely is the quiet and resistless force of the laws and the courts. By artfully contrived legal schemes, they constrain courts to do their bidding. The judges may be unwilling instruments, yet they are bound to sanction, impartially, the working of legal processes. But what shall we say when weak or corrupt judges hasten to legalize schemes by which great corporations are wrecked or rehabilitated as suits the purposes of the conspirators? . . . Our legislators have failed to see, or for private and corrupt reasons have winked at the fact, that the laws which were made to fit old-fashioned ideas of honor and morality, instead of protecting the public, are the strength and the protection of dishonest men. The old code of commercial honor is lost sight of in the complex transactions of stock-jobbers, who remain out of sight while their work is being done by conscienceless factors; by lawyers skilled in discovering loop-holes in the law and in juggling with the law; by lobbies with money at the doors of legislatures; by paper shares and paper promises to pay; by cipher messages and spies, and by abusing the facilities of stock exchanges."

THE NEW ORTHODOXY.

What is to be the coming orthodox creed is a question that continues to furnish abundant material for discussion in the religious press, and many of the secular newspapers try their hand also at a solution. The particular point, concerning which there have been the most words,—the possibility of another probation after death for any portion of mankind before they are finally consigned to eternal torments,—is evidently only a minor issue in the great debate which is coming, which, indeed, is already in progress. The old Calvinistic and Augustinian creed is really attacked all along the line. The character of the Bible, how and when the book was composed, what the nature of the inspiration behind it, and how far and on what grounds it is to be regarded as authority, is especially in debate. This part of the discussion is doubtless, to a considerable extent, one of the consequences of the publication of the Revised New Testament. Many people who had been pinning their faith upon the Bible, even though all the articles of their faith did not quite satisfy their reason and conscience, have probably had their eyes opened by this revision of their once infallible standard, to at least a glimpse of the fact that they have been believing under an illusion; and not a few of them have been attempting a little revision of their own. The breadth of the assault made upon the Calvinistic system is well shown by a recent editorial article in the *Christian Union*, in reply to an inquirer who asked what were the leading differences between the new and the old theology. The editor, after saying that the question "cannot be answered in a paragraph," that "the old theology can be defined, because it is formed," while "the new theology cannot be defined, because it is forming," affirms that certain "contrasts" may be indicated, and proceeds to state them as follows:—

> The old theology regarded God as ruling nature from without, the new as controlling it from within; the old regarded God as governing man from without, the new as dwelling in him; the old regarded miracles as a violation of nature's laws, the new as a variation in the divine habit; the old regarded inspiration as a dictation to men, the new as a divine influence in man; the old thought it wholly exceptional, the new thinks it only an exceptional form of a universal phenomenon; the old feared God as a King, the new reverences him as a Father; the old regarded punishment as stripes inflicted by God on man, the new as death wrought by sin in man; the old thought of it as future, the new is conscious of it as present; the old feared punishment more, the new dreads sin more; the old believed in a theory of the atonement, the new has faith in the forgiveness of sins; the old emphasized the supposed effect of Christ's death on God, the new its manifest effect on man; the old governed men by law, penalty, fear, the new by faith, hope, love; the old offered carefully formulated definitions of God,—the Father, the Son, the Holy Spirit,—the new reverences him as transcending all definition; the old had confidence in theology, the new has faith in religion; the old is a creed, the new is a life; the old is clear cut and cold, the new is nebulous and warm.

The *Christian Union* warns its readers, however, that this statement must be read with some precaution; that antitheses are misleading, if taken too literally; and that it must not be forgotten that "the old theology" was once "new"; and that it, too, was then, when in the hands of its great masters, "nebulous and warm," "fresh and, therefore, vital," "a life more than a creed." There is, doubtless, some truth in this reason for such precaution. Yet we think the *Christian Union* urges it needlessly far. We cannot believe, for instance, that Calvin, though he may have been as "warm," was ever so "nebulous" as Dr. Newman Smyth. The old theology was "clear-cut," even when it was the "fresh" and the "new." And it is more than doubtful whether the present new theology will ever become so "clear-cut" as the old. It certainly will not so long as it attempts to keep so much of the old basis for its new structures.

But it must be admitted that a great change is being wrought in the creed of at least a large section of Orthodox Christendom. And a great point is gained, when the change is candidly confessed and openly advocated, as it is in such journals as the *Christian Union* and the *Independent*. The advanced Orthodoxy of to-day, as represented in the extract above quoted, is, indeed, farther away from the old Calvinism than was the Unitarianism of fifty years ago.

On one important point, however, even the most advanced Orthodoxy appears as yet to have made little movement. The doctrine of the Deity of Jesus seems to be still assumed and closely hugged. At least, on this doctrine there is as yet great reserve of utterance. Henry Ward Beecher quite rivals Col. Ingersoll in denunciation of the absurdities and cruelties contained in the old orthodox creed and in the Bible itself. Yet Mr. Beecher still declares, as he did many years ago, that Christ is to him essentially God,—that the conceptions of God as Infinite Father and Holy Spirit are to him so dim and shadowy that he would practically be without any faith in God, were it not for his belief in the perfect divine incarnation in Jesus. Rev. Heber Newton, at the close of one of his remarkable discourses, just delivered, on the Bible,—discourses alike remarkable for the incisive radicalism with which they cut under all the old theories of infallible inspiration and authority, and for the broad, uncompromising, and scholarly rationalism with which they treat the Bible throughout, Old Testament and New,—appears to state his belief in Christ as the perfect ideal man, alike divine and human, and the final consummation of the long process of evolution through which Deity was seeking to incarnate himself in humanity.

Now, neither of these nor any kindred writers seem to see that, when they have once adopted the scientific method in the study and interpretation of the Bible, they have no longer any standard left for determining whether Jesus fulfilled the perfect ideal of humanity or not, save their own finite conception of what a perfect man would be. By the scientific method of Biblical criticism, there can be no assumption, no presupposition, concerning Jesus' character as a special incarnation of Divinity. He must be judged by the record only, and by a record that is admitted to be faulty; and whatever measure of excellence may be attributed to him must necessarily be arrived at by comparing him with other examples of human character, and all of them together with some standard of excellence, necessarily finite and fallible, existing in the human mind. How, by this process, the belief can ever be consistently reached, that Jesus was a perfect manifestation of the divine man, the head of the human race, and an ideal sufficing humanity for all time to come, is difficult to see. The belief comes, in fact, not by faithful, logical adherence to the steps of the scientific method which is professedly adopted, but by a metaphysical leap to a presupposed conclusion. The new Orthodoxy must boldly advance to this problem of the Deity of Jesus before it can make much headway toward rewriting the church creed.

WM. J. POTTER.

THE New York *Witness* says, "It cannot be denied that, whatever may be the reason, the interest connected with the week of prayer has steadily and greatly diminished."

PROTESTANTISM AND ROMANISM.

Protestantism did its work long ago. It broke the power and spell of Romanism. The reason that the Reformation stopped short, where it did, is not far to seek, and ought not to have been beyond the ken of the superficial and rhetorical Macaulay. The fact was that the common people of the countries of Latin and Levantine Europe were too illiterate and ignorant, and had been too deeply ingrained and imbued with an inveterate and invincible paganism, to be capable of a religious reformation, regeneration, and rejuvenation. They were bomb-proof, as it were, against any rational innovation on their ten-thousand-year-old superstitious habits of mind. Therefore, they remained, and remain to this day, in the slough and ruts of supernaturalism and idolatry. Whereas the people of Northern and Western Europe, of Northern Germany, of England, Wales, and Scotland, and North Ireland, the people of Holland and the Scandinavian countries, and the best part of the people of Switzerland and France, became Protestants or Huguenots, as the French Protestants called themselves. Into the majority of the above people, the old Roman pagan civilization had not entered. All the above nationalities and descriptions of European people could read and write as a rule, or were speedily taught to do so under the reformed religion. They could exercise their reasoning faculties. They were capable of self-control and of a sturdy, individual morality, and of exercising the right of their private judgments. The civilization of to-day, with its popular intelligence, with its science, freedom, and tolerance, is the work of the Protestant populations of Northern Europe. The United States, the foremost country of the modern world, was a colonization and creation of various forms of Protestantism. This being so, Protestantism is entitled to the lasting respect of mankind, as at the time of its origin and advent as a historic factor the longest stride that had hitherto been taken in mental, moral, social, and political progress. But, as a religious faith and half-and-half mysticism, Protestantism is weak. It undertakes to be both rational and mystical, enlightened and superstitious, rational, and orthodox: therefore, as a religion pure and simple, and as a faith, it is neither one thing nor another. It halts half-way in its exercise of reason. It saw at the start that Rome was pagan, that the Rome of the Popes was as pagan as the Rome of the Cæsars,—in fact, that the Popes were mere ecclesiastical Cæsars. It saw that Christianity was an Oriental and not a Greek or Roman *ism*, that it was a movement from below, a ground swell of the popular heart and soul, a struggle of oppressed average humanity, which had been contemptuously denounced by ethnic philosophy and treated by pagan civilization as an irrational multitude fit for no higher social position than that of slavery to the higher grades of human beings. Protestantism transformed the priest from a celibate, magician, enchanter, and *soi-disant* divinely authorized church official, superior to his congregation in sanctity and power, into a minister and spiritual teacher and married man, if he chose to be, standing on the same social, mental, and moral plane with his congregation, and wielding influence over them to the extent of his intellectual ability and moral purity, and no farther. So far, so good. Protestantism in its best phase was a rational, democratic movement, a revolt against priestcraft and kingcraft in the interest of popular rights and average character. But when, under the lead of the Calvins and others, it undertook to crystallize itself into a religion of dogmas and articles of faith,—in other words, to become an overbearing and intolerant Orthodoxy,—when it undertook to substitute in

Digitized by Google

place of a personal spiritual autocrat a Biblical standard of infallibility, and when it was willing to retain a certain percentage of the miraculisms and supernaturalisms of the old blind faith against which it protested and from which it seceded, it prepared itself to be, and put itself *en route* to being, ultimately almost as offensive to the spirit of progress and tolerance and to the cultivation of rational knowledge and the growth of social and political freedom as the old Roman Church itself, which delights to be found sticking in the mud and ordure of the past up to its chin. Modern democracy and science are the outcomes of Protestantism carried to its logical conclusion. For genuine Protestantism could not halt short of free government in the political order, and of free thought and the right of the individual to form his own opinions and beliefs on all subjects whatever, and to act and live in accordance with such beliefs and opinions, in the moral order. It is needless to say that current free thought and science are cases of *genuine* Protestantism or protest against the stupidity, blind faith, and fanaticism and persecution on account of opinion of the past. Romanism does not profess to be anything but a faith and credulity, a mysticism, a despotic priestism and spiritual despotism and supernaturalism. It denies the right of private judgment to the individual and the right of self-government to the majority. The populations which have always been Roman Catholic from generation to generation are primitive, quaint, unmodern, and illiterate, mentally and physically undeveloped; that is, the lower orders and great mass of such populations. The crimes of brutality and outrages on the person, which this sort of population commits savor of the savagery of the anthropoid ape. Such a population has little individuality, but is made up of what may be called nouns of multitude, who look alike, believe alike, and act alike. Unless the populations of inveterate Roman Catholic countries make haste to modernize themselves, they are destined to revert to utter unimportance and barbarism. For Edmond Scherer, in an article published two years ago in the *Contemporary Review* on "The French Republic and the Catholic Church," well says: "The weight of an unsolved question lies on those European States which three centuries ago shut themselves up against spiritual emancipation. They have to break off in their turn with theocracy, to disengage themselves from the trammels of a dead tradition. The nineteenth century will complete the work of the sixteenth, and the nations which are found unable to accomplish that revolution will fall into the rear of civilization."

B. W. BALL.

GEORGE'S DOCTRINE OF WAGES.

The London *Times*, in the course of an extended notice of Henry George's *Progress and Poverty*, remarks that it contains "some criticism of economic doctrines which future writers on political economy must either refute or accept." One of these doctrines is that wages are paid out of capital, that they are hence limited by the amount of capital, and that the rate of wages is a simple mathematical resultant, obtained by dividing that part of capital known as the wages-fund by the number of laborers employed. The moral pointed to the laborers is, Either help to produce more capital or limit your numbers,—in no other way can you raise your wages. George's view, on the other hand, is that wages are paid out of the product of labor, that capital, instead of suffering any loss (to be compensated at some future time), simply changes its form; namely, from that of ready money to that of a valuable product. The farmer paying his hands, or the manufacturer his employés, thereby recognizes an equivalent of value which has come to him from their labor, if only in the form of ploughed fields or of raw material that has undergone but a slight transformation. Wages are simply a trade, an exchange; and the capitalist loses no more by giving them than the laborer by giving the work. The limit of wages is thus not the sum of money in the possession of the capitalist, but the productiveness of the laborer's work. Labor is not really dependent on capital, but on the value of what it produces.

It should be said before proceeding further that Mr. George leaves out of his consideration unproductive labor. Those who attack his view would be spared some trouble, if they would observe a foot-note, of two or three lines, on one of his early pages (p. 20) to this effect. Wages paid to the unproductive laborer (that is, the result of whose labor turns out to have little or no value in the market) are or may be a dead loss to the capitalist. And it may be said that a true doctrine of wages should cover such cases, which are by no means rare in the industrial world. Wages, in these cases, are certainly paid out of capital, and out of nothing else: the product has no value. But, in turn, it may be asked, can a single theory cover two opposite classes of facts? Must not the logic of one class be different from that of the other? However this may be, Mr. George actually considers only one class; and the question with regard to his view must be, not—What is a supposed universal law holding in the whole economical realm? but—Is his the true explanation of one set of phenomena in that realm? It may be added that the production, exchange, and distribution of *wealth*, being ordinarily regarded as the subject-matter of political economy, the query might even be started, whether the consideration of labor that does not produce wealth make a part of political economy? The man who dug holes in the ground and then filled them up would hardly make a subject for political economy; nor would he, if he hired himself to a capitalist and received wages for his useless work. Prof. Jevons, the member of the English school of economy who has made the most recent and significant contributions to the subject, regarded utility as the fundamental conception of political economy. If so, how can useless objects (or objects in so far as they are useless), or the production of them, fall within its province? A general science of industrial society, into which some are now seeking to extend political economy, would be a different matter; though, even here, the meaning of "industry" would need to be determined, and whether mere labor which results in no useful product *is* properly industry.

But taking George's doctrine with the limitations which he himself sets to it, and without seeking to determine to what extent he has been anticipated by writers like Thornton and Walker, both of whom have criticised the old doctrine,* what shall we say of it? Without assuming to speak as a professional economist, I venture the opinion that George has brought out the real nature of wages more clearly than any other writer on the subject. That is, in all productive industry, wages are really an exchange, and no more an advance out of capital than the purchases by capital of machinery or raw material, or indeed the purchases which any of us common folk, whether called capitalists or not, are continually making. If I buy good railway or government bonds, or if I go into a shop and purchase a hat or a pair of shoes, I spend my money indeed; but I do not part with my capital. I simply change its form. The bonds or the hat or shoes are just as valuable to me as the money,—yes, more valuable, else I would not buy them. Does the manufacturer in paying wages do any less? Does he not indeed value the product of the week's or month's labor more than the money he pays out? If not, why does he pay it? Money he does advance; but capital simply changes form, and indeed from less to more valuable form.

But George, in his honest zeal for the presentation of this fact, forgets or rather opposes the equal though comparatively secondary truth of the ordinary economic doctrine. His view has not an antagonistic, but a complementary relation to the orthodox view. It will not be difficult to bring this out. There may have been primitive conditions,—and there may be now, here and there,—in which labor wins an immediate return of subsistence. Fish may be caught or animals be killed or herbs be gathered; and, in such conditions, the position of George would have literal truth, that labor is sustained not by capital (the results of past labor), but by its own immediate exertions. But to the extent to which agriculture or manufacturing industry is pursued, labor is dependent to greater or less extent on the results of past labor; that is, on capital. If the farmer should depend entirely on the returns from his present labor, he would starve before those returns came in. For ploughed fields, though better than unploughed fields, are not yet means of subsistence. Weeks and months are necessary for the corn and grain to grow and ripen. Just so the labor of factory hands of one season of the year is dependent on the saved fruits of agricultural industry of the preceding season; that is, on capital. For, whatever wider references capital has, it at last means this,—saved means of subsistence, applicable to the support of labor. Only in one set of circumstances would George's doctrine, that labor is maintained out of its own product, have truth; namely, if corn and wheat could be produced at any time, as a piece of cotton cloth can,—that is, if there were no seasons.* Then, we should, to this extent at least, be lifted above dependence on the labor of the past. But it is useless to argue from what might be, if not merely the order of society, but that of *nature* itself were different from what it is. And here we see the meaning of what Dr. Henry Carter Adams has somewhere called one of the principal functions of capital; namely, to overcome the element of *time* in production.† Capital bridges the chasm between the past and present, and makes it of no account: it is the past brought into the present.

George's criticisms on the current doctrine thus lose their point: they rest upon a failure to distinguish the different conditions in the midst of which labor is performed. In all other than primitive conditions, capital (that is, saved means of subsistence) does limit labor or industry. Capital must be accumulated before labor is employed: every increase or decrease of capital means the possibility of additional or lessened employment to industry. For no more labor can exist than can be supported, and the means of support are not creatable at pleasure; nor, *pace* George's criticisms on Malthusian.

* W. T. Thornton, *On Labor*: Francis A. Walker, *The Wages Question*.

* George tries to show that the production of means of subsistence goes on contemporaneously with that of other products (p. 66). But he ignores entirely the fact of seasons, and the dependence not only of man, but of animals (in part) on the product of the past season. He speaks of the "luxurious idlers" subsisting on new-laid eggs, butter churned a few days before, and milk given by the cow the morning it is consumed. But, in the winter season, how would it be if the hens had no feed or the cows no bran or hay, which are simply what was saved from the summer or fall harvesting? And do "the vegetables fresh from the garden and the fruit from the orchard" come at any time of the year? As George asserts it, it is not true that the daily labor of the community "supplies the community with its daily bread." As a rule, in our present conditions, the labor of yesterday is just as necessary as that of to-day. George even treats the making of jack-knives as parallel with the production of wheat. But all that he can justly assert is equivalent, not contemporaneous production.

† On this, also, Prof. W. G. Sumner lays stress in an article on "Wages," in *Princeton Review*, November, 1882.

Digitized by Google

ism, can they be increased in their seasons in proportion to the increased labor expended to get them. The fundamental truth in Malthusianism, that of diminishing returns from land, is not touched by all that George has so truly and eloquently said of the viciousness of the practical inferences often deduced therefrom. But George's view of Malthus deserves separate treatment.

And now let me show that the current doctrine and George's doctrine as to wages are not incompatible. The two, briefly stated, are: The laborer earns, really produces, his own wages; and, on the other hand, he is dependent on capital. That wages are an exchange is the reconciling idea. The wages are capital which has simply changed hands. The wages mean at least—however much more I need not now say—so much means of subsistence. The laborer has not produced the latter, but he has produced an equivalent value: so that, in one sense, he may be said to have produced the subsistence itself. But it is equally true that, without this subsistence already in existence, no exchange whatever could take place; and the whole difficulty is seen to lie in endeavoring to express two facts, or two sides of a single fact, in one proposition. *Dolus latet in generalibus.* If we are not on our guard, we may in this way be continually led astray,—a fact which receives continual illustration in controversial writing. That labor produces its own wages is true; but, if accompanied with a denial that labor is dependent on capital, it is not true. Equally untrue is the one-sided dependence of labor on capital, which the orthodox view is never tired of asserting.

But why does not labor get a larger return of the means of subsistence than it does? Beyond the total means of subsistence saved from any season, labor cannot be supported. But what determines the particular amount within these limits which goes to labor? The answer must be different, according as the means of subsistence are free of access to any one or become private property. The latter is the fact in all civilized societies. While not a natural or necessary, but a legal fact, it is none the less influential. Individuals *own* the means of subsistence: hence, they have the advantage in making any exchange with those who do not. Men must live; and they will take any, no matter how scanty, means of life rather than none. The capitalist can thus dictate his terms to labor. And thus there is a double dependence of labor on capital, as industrial society is now constituted,—not only the necessary dependence on the saved means of subsistence, as already explained, but on the capital*ist* who owns these means of subsistence, and whose own will and interests may determine him in the disposal of them.* The cause for the almost universally low wages of labor is not that the capitalist *can* not give more, but that he *will* not. The ordinary business language in reference to the impossibility of paying higher wages always means *consistently with a certain rate of profit;* but this rate of profit is not a necessity, but a demand, and rests on nothing and nobody, save those who make it. To talk of the law of wages being as invariable as the laws of the universe (*cf.* New York *Tribune*, Aug. 11, 1882) is sophistry, if it is not worse. This is not saying that private property in the means of subsistence, should be abolished,—though I do not see how George's scheme of abolishing private property in land serves to check the power of the capitalist in the direction mentioned even to the slightest degree,—but simply that we should trace low wages to their real sources. If an ethical view of wealth could gain currency and acceptance,—I mean as opposed to the view, which political economy has so largely countenanced, of the unlimited rights of individual interest,—a better condition of labor might come about without any changes in the legal system of private property. And I believe it will be either this, or State socialism, or revolution, sooner or later in this "free" country as truly as any other. For freedom, if not guaranteed by the State or by the consciences of the strong, becomes in time but the freedom of the strong and the corresponding slavery of the weak.

There is still another element in the problem, which the old doctrine did not, at least sufficiently, take into account, and this without involving any departure from the ground of individual self-interest. The notion of a definite wage-fund—that is, so much circulating capital set apart for the payment of wages—is now generally abandoned. To say that the amount of the wage-fund determines the rate of wages is tautological; for the wage-fund *is* so much of capital as is devoted to the payment of wages. But this is a variable quantity. What determines it? It cannot, of course, go beyond the entire amount of capital in existence; but its variation inside this boundary is, to my mind, determined by the amount of profit expected from the product of the labor for which wages are paid. When the farmer expects high prices for his crop, he can afford to—and will, if his hands insist—pay them more than ordinary wages. If he has not money of his own, he will borrow it rather than lose the extraordinary profits which the payment of the wages will enable him to win. This is the occasion and the justification for credit; and only when there is an undue extension of credit—that is, beyond the sum total of actual wealth in a community or country—is there any wrong or occasion for alarm in connection with it. So, when profits are expected to fall, wages fall (sooner or later), unless employers are actuated by other motives than those of self-interest. In a word, that wages are determined by the wages fund is true, but meaningless (*nichtsagend*): wages are determined, within the limits already indicated, by anticipated profit. Prof. Cairnes, in conceding the truth of the latter part of this statement, virtually assigned to the "wages-fund" doctrine purely formal value, though he still maintained it. Recently, Hon. Carroll D. Wright has maintained the connection of wages with profits, giving informal adhesion to the doctrine that "wages are paid out of the product of present industry, and not out of the saved results of the industry of the past" (*Princeton Review*, July, 1882). On the other hand, Prof. W. G. Sumner maintains the orthodox view in all its sharpness in the November number of the same Review, calling "the notion that wages can ever be paid out of product the most ridiculous notion which has ever been introduced into political economy." It is the denial of the dependence of labor upon capital that excites his economic ire, and justly. But if George's (and Mr. Wright's) view were stated in this way, "Wages are paid out of the product of present industry, said product being *exchanged* with the saved results of the industry of the past," Prof. Sumner might see the real significance of what he opposes, and in any case give us criticism instead of declamation. The present product and capital from the past are both necessary. And, though in literal truth labor creates only its own immediate product, yet, if this is equivalent to the saved results of past industry, labor may be said to create the latter in the same sense in which it may be said to create any commodity (whether making now or to be made in the future) with which its own product will exchange. And this side of the truth, though it be by no means the whole, George deserves peculiar honor for bringing out with such clearness and force. If his critics were intent to learn his positive services, such as this for example, they would help themselves and the cause of economic science far more than by seeking merely for his faults, and demanding from him what no one has yet given to the world,—a perfectly balanced treatment of economic questions. A book better fitted to awaken interest and stimulate inquiry on these questions has not yet been prepared by an American author. W. M. SALTER.

*George makes the rather arbitrary definition of capital as means of subsistence, "only so long as they remain in the possession of those who propose not to consume, but to exchange them for other commodities" (p. 64). A truer view would make capital cover whatever means of subsistence are saved, and at the same time are destined not to unproductive but to productive consumption. The difficulty of exactly determining the amount of such capital is nothing against the conception itself: whatever is saved and not consumed, and saved for productive purposes, is capital, no matter by whom or for whom. What the laborer saves with the idea of being able to live and work, when otherwise he could not, is as much capital, though to be entirely expended on himself, as that portion of the manufacturer's profits which he saves with the idea of expending it in the support of others. But, even accepting George's definition, what I have said above remains true. As matter of fact, the means of subsistence are to a comparatively insignificant extent in the hands of the laboring class at the present time, nor have the laborers free access to them. They must bargain for the means of subsistence, and are, within limits, at the mercy of those who possess them. George says the laborers generally furnish their own breakfasts, before going to work. Were he of another spirit, I should suspect him of trifling or irony in making such a statement. For why is it then that they do not have the sort of breakfasts they would like? And, what is more, could they have any breakfasts at all, if portions of the last season's crop had not been saved, instead of being wasted or consumed?

A BATCH OF ASSUMPTIONS.

Among the communications printed in *The Index* this week are two letters from Mr. R. Brinkerhoff, a prominent citizen of Mansfield, Ohio, a gentleman who no doubt meant well in writing these letters, and who is probably entirely sincere in the expression of his views and feelings respecting this journal. But Mr. Brinkerhoff, we regret to be compelled to say, mistakes unsupported assumption for axiomatic truth, dogmatism for demonstration, assertion for argument, spiritual pride for spiritual discernment, and exuberance of zeal for certainty that he is right and that they who differ from him are wrong. Since, however, he represents a stage of thought, a religious condition and an attitude toward independent liberal thinkers common among those orthodox Christians in whom traditional beliefs have been but little weakened by that thought and spirit of the age which have profoundly modified the views of men like Prof. Robertson Smith and Dr. R. Heber Newton, it is thought to be worth while to print Mr. Brinkerhoff's two letters, and to indicate some of the main assumptions and fallacies which they contain.

1st Assumption: That *The Index* "seeks to take away from men a faith which presents the only working hypothesis, affording a satisfactory solution of the world's phenomena, spiritual and material," when in fact this journal encourages the study of all systems of thought, and aims in a broad and catholic spirit to present the truth as it appears to scholars and thinkers, from every point of view. Comprehensively stated, the object of *The Index* is, to quote the language of Mr. Abbot by whom the journal was founded: "To increase general intelligence with respect to religion; to foster a nobler spirit and quicken a higher purpose, both in society and in the individual; to substitute knowledge for ignorance, right for wrong, truth for superstition, freedom for slavery, character for creed, catholicity for bigotry, love for hate, humanitarianism for sectarianism, devotion to universal ends for absorption in selfish schemes."

2d Assumption: That "with Jesus a reality [as a Divine being] and his teachings true, the world's phenomena become intelligible,"—a statement from which we wholly dissent, since the notion that Jesus was a superhuman and divine being, far from solving any of the mysteries of nature, is an offence and an insult to untrammelled and enlight-

Digitized by Google

ened reason. This is said without questioning the reality of Jesus as a human being, or the excellence of many of the precepts ascribed to him, the same in substance that were taught centuries before he was born.

3d Assumption, by implication: That the hope of a future life and belief in intelligence in the government of the world depend upon acceptance of Christianity as a revealed religion, when it is well known that both doctrines were believed by millions anterior to the time of Christ and even of the alleged date of the earliest portions of the Old Testament.

4th Assumption: That, without these beliefs, "life becomes the most direful of possessions,"—a statement which is disproved by the fact that multitudes of men and women, including some of the noblest and the best, have lived, and are living to-day, "without these beliefs" in the enjoyment of as much happiness as commonly falls to the lot of human creatures.

5th Assumption: That the doctrines that "we have a Father in heaven, who is also Lord of the universe, and that we, through Christ, may become the heirs of the Infinite," must, "whether true or false," make men better and "our sojourn here much more tolerable than it otherwise would be," and, if so, it is wrong to take from men "so comforting a faith." We do not seek to take from anybody his faith; but we ask all to examine the grounds of their faith, believing with Mackay that "true faith is belief in things probable," and that we should use reason and common sense in matters of religion as freely as in the other concerns of life. The same experience which teaches us that Truth is the friend of man teaches us that Error, even though her illusions are sometimes agreeable and hard to give up, is the foe of human happiness, and should therefore be exposed. Every superstition in its time—the fetichism of the savage and the mythology of the Greeks, not less than the religious beliefs of the devotees of Romanism and Calvinism (which are no part of Christianity, according to our correspondent), and of the hundred and more conflicting sects of Protestants—has been a "comforting" faith to millions. Must these superstitions be encouraged and perpetuated, therefore, through all the higher stages of intellectual and moral development? It may be well here to remind our correspondent that the more "comforting" doctrines of Christianity are but parts of a system which teaches that a portion, probably the larger portion of the race, will suffer indescribable torture forever, which must make its adherents *miserable* just in proportion as they believe it and possess sympathy and benevolence,—qualities that must exalt human nature.

If the claims of the Christian theology are true, they will stand the test of the closest scrutiny and the fullest discussion; and, unless he disbelieve this, our correspondent should regard favorably a journal whose columns are open to the freest consideration of these subjects.

6th Assumption: That the editors of this journal are not honest, or at least their honesty is very doubtful, although our correspondent shows his kindness in saying he "would like to believe" us honest. With his narrow views, he makes moral precepts, the general element of all systems of thought, dependent upon Christianity, and moral qualities corresponding with these precepts dependent upon belief in Christ as a divine being. Of honesty apart from belief in Christ, he seems to have no idea. It is doubtful whether he would admit that Confucius, Sakya Muni, Socrates, Wm. Lloyd Garrison, Theodore Parker, John Stuart Mill, Littré, Harriet Martineau, Lydia Maria Child, Darwin, and Emerson were "honest." Were he logical, he certainly could not from his point of view believe them honest, however much he "would like to believe" them so. This religion teaches that they, with millions of others who have rejected the gospel, are tormented day and night where "the worm dieth not, and the fire is not quenched"; while multitudes who lacked the intellectual vigor to examine and the courage to doubt the creed in which they were indoctrinated, but who had the selfishness to avail themselves of the scheme by which without investigation, or personal merit, they could as they believed overcome the effects of both ignorance and vice, are among the saints of heaven, rejoicing in their escape from "the wrath and curse of God."

7th Assumption: That this journal is tearing down without anything better to put in the place of what it destroys, when it assails error only that it may substitute for it the truth which the adherents of error have denied or ignored, and when it is contributing by its criticisms and by its affirmative teachings to that modification of creeds and institutions which is continually making them conform more and more to the increasing liberal thought of the age. If Mr. Brinkerhoff imagines that we aim to destroy the entire system of Christianity as one would tear down a building, and to "put in its place" at once another structure, composed wholly of new material, he misunderstands the position and object of *The Index*.

8th Assumption: That our disbelief in the supernaturalism of Christianity makes us "as one afflicted with the most deadly of diseases." Assuming the rôle of a physician, he says: "I suggest a cure, and one that I know to be infallible." This "cure," "prescribed," he says, "by the great Physician," would require us to take for granted theological doctrines which, after mature reflection, we have been compelled to reject, and to act as though we believed in that in which we do not believe. Since with physicians, who claim to have infallible remedies for "the most deadly of diseases," performance is usually smallest where the promise is the most confident, and since the progress of medical science during the past few hundred years makes the skill of anybody who goes back eighteen centuries for his remedial agents and methods of cure extremely doubtful, we have no confidence in Mr. Brinkerhoff's "cure," and should be compelled to decline it, were we, as he imagines, afflicted with "the most deadly of diseases."

9th Assumption: That to us, and all others like us, "argument is useless"; that we are "blind as a bat," while he, by implication, can appreciate an argument, and can see clearly, being blest with spiritual vision.

10th Assumption: That out of Christianity has "grown all that is best in the world's history,"—a statement that is palpably absurd, when we consider the poetry, the philosophy, the history, the art and sculpture, the jurisprudence, the moral systems, the governments, and the achievements of pre-Christian ages; when we consider that the greatness of this age—in its scientific discoveries, mechanical inventions, and industrial interests—has been reached by departing from many of the teachings of Christianity rather than by embodying them into the life of nations; and, when we consider further that intellectual and moral progress throughout Christendom has been greatest where decline of belief in the Christian theology has been the most marked, as in England, Germany, France, and the United States, and in this period when, as Froude says in substance, the Gospels are more generally discredited or doubted than in any other period since the time of Constantine.

11th Assumption: That the light of civilization is due to the Bible, because "you may belt the globe to-day, and you will find darkness deepens as Bibles disappear." Just as though it were not quite as true that "darkness deepens" as the works of Shakspere disappear, and, indeed, as the works of recent authors like Darwin and Emerson disappear, or as useful inventions, like the sewing-machine, disappear!

12th Assumption: That we "and others of the Free Religious Association" "seek to destroy the Bible," when no member of that organization would destroy so much as a chapter or even a verse of that venerable volume. It is a part of the legacy which the present has received from the past; and, notwithstanding the errors and absurdities and even indecencies which it contains, its antiquity, its many excellences, the knowledge it gives us of the past, its history, the authority with which it has been invested, and the influence which it, like the Koran, has exerted for good and for evil on the lives of millions who have believed it divine, will continue to make it a book of great interest when it shall have been stripped of an authority which, in our opinion, does not belong to it, and assigned to its proper place in the literature of the world.

13th Assumption: That the moral law, or knowledge of it, depends upon Moses, and that we are working to "weaken its authority," when the moral law was enjoined in precept, enforced by legislation, and observed by individuals and nations thousands of years before the alleged date of Moses and the "Commandments," which contain no statement of the moral law that was not known to earlier ages.

14th Assumption: That the mission of *The Index* and of the Free Religious Association is, without qualification, to weaken and destroy "the teachings and the philosophy of Jesus of Nazareth, the crucified Jew," when in the teachings and philosophy of Jesus is much that all sane men accept, since it is a part of the wisdom which has grown out of the accumulated experiences of the race, and is sanctioned and affirmed by the highest reason, whether expressed in the language of Socrates, Hillel, Jesus, Epictetus, Mill, or George Eliot. But whatever is erroneous in the teachings of Jesus, no claims made in his behalf shall deter us from opposing. And how, except by sceptical, critical study and the freest and fullest discussion of the teachings of Jesus, can we rightly estimate their value or distinguish between what he really taught and what has been falsely attributed to him, and what is true and good and what is erroneous, ascetic, impracticable, or otherwise objectionable?

B. F. UNDERWOOD.

EDITORIAL NOTES.

THE Supreme Court of Iowa has decided that the amendment to the constitution of that State, prohibiting the sale of intoxicating liquors, is invalid, because certain words in the amendment as it passed the first legislature were omitted when it passed the second legislature.

WE have had on hand several weeks, vainly trying to make room for, a timely and excellent discourse by John W. Chadwick on "Orthodoxy and the Bible," suggested by Dr. Ellis' address at the Boston Unitarian Club. But the controversy is not one of transient interest. It is likely to go on for some time yet, and only good can come of it. The discourse is in type, and will appear next week.

A REV. MR. DICKINSON, in a recent "fellowship meeting" held in Springfield, Mass., declared his conviction that "there should be a feeling in the Church that those who believe in Christ will be saved and those who do not will surely be damned.

Digitized by Google

Do we realize this in these days of isms and infidelity? We haven't time to be quite so gay and joyous when so many are going down to death, for whose salvation we should work unceasingly."

THE Paine Memorial Corporation will observe the one hundred and forty-sixth anniversary of the birthday of Thomas Paine next Sunday evening in Paine Hall, when Mr. James Parton, the popular author, will deliver an address on "The Immorality of Religious Capitals." Admittance free. On the afternoon of the 29th there will be a Liberal Conference, and in the evening a grand ball, tickets to which will be $1.00.

ONE of our city papers, which makes a specialty of railroad news, reports among other items that "several well-known clergymen living along the line of the Boston & Providence Railroad have petitioned for a Sunday evening train out of Boston as far as Dedham. The directors have decided to put on such a train. It will commence to run on the 21st, and will leave Boston at 10 P.M. for Dedham *via* West Roxbury." *Tempora mutantur, et nos mutamur in illis.*

THE *Christian Union* says of the first lecture given by Joseph Cook, after his return to this city: "It was light, and mainly a repetition of the thoughts and even of the phrases of the lecture delivered already in San Francisco, Chicago, and New York. It is not creditable to the discernment of his audience that his now thrice-repeated sneer at Prof. Fiske as 'the echo of a charlatan' should have been received with applause. Prof. Fiske's philosophy of life and history is certainly partial, and we think superficial; but he is not an echo. Herbert Spencer does not see all of life, nor even, to our thought, the profoundest part of life; but he is certainly not a charlatan."

OUR Christian contemporary, *Unity*, not only rejects "Moses and the prophets" as authority, but evidently feels under no obligation to assent to a proposition sustained by no better proof than that Christ believed it. This we infer from the following, which we find among its editorial notes: "'Did Christ believe that Moses wrote the Pentateuch?' is the latest theological conundrum propounded by the 'wise men of the East.' Prof. Francis Bowen led the negative, Dr. Crosby the affirmative, before a recent meeting of the Biblical Exegesis Society. When this is settled, we propose as the next one: 'What if he did? Would that prove that Moses did write the Pentateuch?'"

WE clip this hit at modern preachers from the Boston *Journal*: "To 'An Inquiring and Anxious Theologue,' who desires our advice as to how he may attain his ambition and become a popular preacher, we would observe in the first place that he has come to the right quarter for counsel. The old-fashioned clergyman was the product of the seminaries and of theological training, but the popular preacher is made by the newspapers; and an editor can give an aspirant points which are overlooked by the theological professors. The formula for making a popular preacher involves these ingredients,—one-third voice and personal 'presence,' one-third sensational selection of topics, and one-third heresy. The proportion of ingredients varies somewhat in special cases, a little extra allowance of heresy, for example, serving to offset trifling deficiencies in personal appearance; but, in general, the properties should be blended about as we have indicated."

SAYS Herbert Spencer in the *Contemporary Review*: "Those who draw the obvious corollaries from the doctrine of evolution, those who believe that the process of modification upon modification which has brought life to its present height must raise it still higher, will anticipate that the 'last infirmity of noble minds' will, in the distant future, slowly decrease. As the sphere for achievement becomes smaller, the desire for applause will lose that predominance which it now has. A better ideal of life may simultaneously come to prevail. When there is fully recognized the truth that moral beauty is higher than intellectual power, when the wish to be admired is in large measure replaced by the wish to be loved, that strife for distinction which the present phase of civilization shows will be greatly moderated. Along with other benefits may then come a rational proportioning of work and relaxation, and the relative claims of to-day and to-morrow may be properly balanced."

WE are pleased to copy from our Unitarian neighbor, the *Christian Register*, the following paragraph, in which is laid down a rule that is observed by *The Index* under all circumstances, whatever the pecuniary sacrifice required: "But, if publishers cannot be held responsible for the truthfulness of all advertisements which they publish, they ought to be held responsible for the form in which they are presented to the public. If advertisers can prepare an advertisement so skilfully that it shall seem to be an editorial article, and its insertion is permitted, the publisher becomes a party to the deception. The editor of the *Recorder* warns his readers against advertisements 'given in such a form as to make the impression on the mind of the reader that the editor had selected and indorsed them,' and adds, 'Advertisements in the latter form always impress us with the idea that the author is a deceiver.' But the remedy in such a case is very clear, and it is in every publisher's power to apply it. *Let such deceptive advertisements be kept out of the paper.* Such a rule can only be enforced at the sacrifice of considerable money, as the *Register* well knows by experience. But, in a paper published for moral and religious ends, money must sometimes be sacrificed for the sake of principle; and, if such papers do not set the example, it cannot be expected that those published merely for commercial consideration will do any better.

COL. T. W. HIGGINSON, in an article in the *Woman's Journal*, taking exception to the passage relating to woman's suffrage in the message of our new Governor, observes that Gov. Butler based woman's suffrage "upon an assumption which shows him to have paid as little detailed attention to the woman suffrage movement as to the condition of State education, the State militia, or the State charities,—namely, that we who advocate this movement generally base our arguments on the assumption that 'the majority of women of the Commonwealth desire to vote.' Not at all. The ground taken is that those who do desire it should vote, whether they be a majority or minority. On this, he bases the proposal that all women over twenty-one should vote Yes or No through the post-office. It is almost impossible to believe that Gov. Butler, in making this proposal, is anything but the 'funny man' which the Boston *Herald* delights to call him. No check which could possibly be devised would make such a ballot anything but a farce. A dozen mischievous young men, as droll as Gov. Butler, could forge and post in a day ballots of 'No' in sufficient number to turn the scale in any such election; nor could any jury of those schoolmasters whom Gov. Butler despises determine by the handwriting which were the real and which the counterfeit, still less detect who was guilty of the trick. It would have even less safeguard than Gov. Butler would throw around the voting of men, and that is saying a great deal; and, after the vote was taken, it would have settled nothing. A public vote of women, under proper safeguards, we have long sought; but an unchecked post-office vote, such as Gov. Butler urges, would have no more value than a game of jack-straws."

FREE TRADE versus Protective Tariff was recently debated at Cleveland, Ohio, before an audience of four thousand people, as one of a series of popular entertainments given by the Bureau of Education. Prof. Van Buren Denslow, of Chicago, opened the debate, advocating protection. He controverted the maxim that that government is best which governs least, and claimed that each duty upon foreign production is in the unavoidable strife of nation against nation, the buttress of an industry. No nation, he said, was insane enough to admit all articles free. England, claimed as a free-trade country, lays as much in duties in proportion to population as the United States, and only admits free articles not competing with English industries. She charges 1550 per cent. duty on American tobacco. The verdict of history and statesmanship is almost universal in favor of protection. All transportation is the medium of bringing together farmers and manufacturers. If we send ships to England, it is to meet manufacturers; and, if they send ships here, they send them to meet farmers. Under the protection of a tariff, manufacturers of woollens and kindred goods have thriven, until America has become the cheapest market for them in the world. Prof. W. G. Sumner of Yale College replied, favoring free trade. He said in substance: The American people need only their energy, industrial virtues, and opportunity, in order to prosper. Protection is to prevent importation. Free trade means hostility to protection, which compels the consumer to pay taxes to his fellow-citizen. National and State taxes are proper, but taxes which do not go to the government are obnoxious and oppressive. Absolute free trade and abolition of custom-houses would do more to solve civil service and other national problems than anything else. Ohio has free trade with Kentucky, and nobody claims that either State is injured. Why not with Canada and the whole world? If trade should be free from Maine to Texas, why not between Maine and New Brunswick? An industry is not an end, it is simply a means of producing wealth. What kind of industry is that which has to be supported? What apology for one which does not pay? The more it doesn't pay, the worse it is. Manufacturers who lobby at Washington for a protective tariff ask for a tax on other people to prevent loss to themselves. It is nonsense to say they do so that wages can be raised. If people get big wages, they produce and earn them. Free trade increases in the ratio of comfort and means to the effort put forth. Protection works the other way. The only things which make wealth are industry and economy. Stealing from one another deteriorates property and demoralizes the community, and the whole system of protection is a delusion. Prof. Denslow closed in a ten minutes' speech. The vast audience clamored vigorously some minutes for the debate to continue, but the management adhered to the rule of closing the entertainment at a given hour.

THE principal of Lassell Seminary, for girls, at Auburndale, Mass., has taken a step forward in the right direction in engaging for the benefit of his pupils a competent lecturer to give a course of lectures on the Principles of Common Law.

The Index.

BOSTON, JAN. 25, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

POETRY.

For *The Index.*

THE PROBLEM OF LIFE.

BY "OLD BIRCH."

When vital forces yearn,
We're forced to life,
To rise, and fall, and learn;
A ceaseless strife.

All life, in endless stream,
Forever flows,
And sendeth back no gleam
Of where it goes.

The phantom end eludes,
While Sphinxes new,
From out vast solitudes
Are reaching through.

Machines that live, and feed,
And self repair,
Should never onward lead
To death's despair.

What senseless power will brood
Construction fine,
And build with care the food
Of death and time?

The force of growth and waste
Could we adjust,
No pulsing life need haste
To end in dust.

Is there no rest in death,
No way to kill?
No out for life with breath,
When bones lie still?

O fated, fearful gift,
To live and think!
Oh, might the burden lift,
Ere down we sink.

Do thoughts like candles burn,—
A chemic play,
To feed on life, and turn
To smoke away?

Against the bars of fate,
O restless soul,
Your wings must beat and wait
While ages roll.

The river ever flows
Around the hill,
So life forever goes
Beyond our will.

No storms will ever beat,
No surges roll,
Where Lethe's waters meet
The dying soul.

CONFLICTS OF PHILOSOPHY.

A Lecture delivered before the Philosophical Society of Chicago, Oct. 14, 1882.

BY VAN BUREN DENSLOW, LL.D.,
PRESIDENT OF THE SOCIETY.

(*Conclusion.*)

Part III.—The Ultimate Tendencies of Philosophy in its Relations to Physics.

Human thought is thus in ultimate and hopeless conflict with itself both as to the origin and nature of all things. It remains to consider whether these ultimate conflicts in thought are the necessary result of the constitution of the universe itself and the expression of its opposing elements. Is the universe a system of flux and reflux of antagonistic forces, of involution and evolution of growth and decay, of coming into being and of passing into non-being,—a perpetual change, in which nothing is created, nothing is destroyed, nothing endures, and nothing is wasted?

The theory of the universe being an unstable equilibrium sustained in perpetuity by a perpetual flux and reflux, which has no waste or diminution in its complete sufficiency, has been mythically expressed in many religions, and has always attracted the philosophic mind. Such a theory requires that there shall be two opposite, equal, irresistible, universal antagonistic forces, each of which shall, when in action, grow out of the other, and yet produce the other in a system of endless vibrations, pulses, or outflow and inflow, flux and reflux. I propose to present a few suggestions looking toward a theory that these two antagonistic forces may be found in gravitation and light, including in the term light the three alleged elements of the sun's ray; namely, the color rays, heat, and actinic force. The limitations which beset every human effort to apprehend the constitution, nature, or cause of both these forces is a little more dense than our ignorance of anything else in nature. Newton measured the dynamic force of gravitation, and showed that every body falling of its own weight toward the sun, which failed to fall into it and thereby lose its separate existence, would move around it in an elliptical orbit, of which the sun would be one of the foci, and at such a rate that the radius vector would describe equal areas in equal times. He identified gravity with what upon the earth's surface we call weight, and proved it to be a universal force, sufficient for every act of planetary and stellar motion.

Newton's Disclaimer concerning Gravitation.

As to its cause, however, he says (*Principia*, Definition VIII.), "The reason of these properties of gravity I have not as yet been able to deduce, and I frame no hypothesis." Again, in his third letter to Bentley, he said: "It is inconceivable that inanimate brute matter should, without the mediation of something else which is not material, operate upon and affect other matter without mutual contact, as it must do, if gravitation, in the sense of Epicurus, be essential and inherent in it. And this is the reason why I desired you would not ascribe innate gravity to me. That gravity should be innate, inherent, and essential to matter, so that one body may act upon another at a distance, through a vacuum, without the mediation of anything else by and through which their action may be conveyed from one to another, is to me so great an absurdity that I believe no man, who has in philosophical matters a competent faculty of thinking, can ever fall into it. Gravity must be caused by an agent acting constantly according to certain laws; but, whether this agent be material or immaterial, I have left to the consideration of my readers."

Antithetic Relations of Gravitation and Light.

Newton further (in his *Optics*, 4th ed., p. 325) suggests the following query as to whether gravitation might not be connected as to its origin with light. Speaking of the supposed luminiferous ether, he says: "Is not this medium much rarer within the dense bodies of the sun, stars, planets, and comets, than in the empty celestial spaces between them? And, in passing from them to great distances, doth it not grow denser and denser perpetually, and thereby cause the gravity of those great bodies toward one another, and of their parts toward the bodies, every body endeavoring to go from the denser parts of the medium toward the rarer?"

This passage is obscure; but it shows that Newton was searching in light for the antithesis and complement of gravitation, something that would make gravitation the return flow of all the force of which light is the outflow. What it is currently supposed Newton discovered—*i.e.*, the cause of gravity—is just that concerning which he disclaims having even so much as a theory. Newton also did not believe in any luminiferous ether as a means of explaining the phenomena of light; but, if there were such an ether, he thought inquiry should be made whether this same medium, which by its vibration produced light, did not by its pressure produce gravitation.

Mr. J. S. Mill adduces gravitation as an instance of an idea which was formerly thought unthinkable; namely, of a body acting attractively upon a distant body, or pulling it without intervening agency, as having become by habit readily thinkable. Still, when we sit down deliberately to think of a body drawing and pulling another through an absolute vacuum and without physical agencies, it seems to me evident that the reason it becomes part of our common sense to think it is because we fail to think of it.

The Wave Theory of Light.

Turning from gravitation to light, I must be permitted to say that, notwithstanding the refinements of mathematical calculation indulged in by Fresnel and Young, and indorsed as coming very near to a demonstration by so high an authority in physics as Prof. Tyndall, it seems to me that the wave theory of light is false and impossible, and in conflict with the most axiomatic principles of natural philosophy.

The wave theory of light assumes that light is the vibration of a luminiferous ether which is not itself the subject of observation or detection, but whose elasticity is so absolutely infinite that the light which comes back by reflection from the most distant planet travels at precisely the same rate as the light which comes to us from the nearest sun or the most distant fixed star. Its elasticity therefore is absolutely infinite for the purposes of the direct transmission of the ray to an infinite distance and for its retransmission back by reflection at the same rate of speed. But how contrary is it to the very quality of infinite elasticity thus assumed in this medium that, the instant an opaque body intervenes to arrest the continued impact of the original luminous body, the medium stops vibrating so instantaneously that a ray of darkness is transmitted through this medium as rapidly as the ray of light. Here are two complete antagonisms,—infinite elasticity in the transmission of the ray while the impact of the luminous body is not intercepted, infinite stolidity in refusing to vibrate again when the impact of the luminous body is intercepted. The elasticity of a violin string is very finite indeed, but it will continue to vibrate nearly a minute after the impact of the bow is withdrawn. The waves of the ocean travel to parts where the winds which raised them have not been felt. But the infinitely elastic undulatory medium whose vibrations constitute the light exhibits the stolidity of rock the instant the exciting cause is intercepted. This is like emission, or the Newtonian theory; but it is utterly unlike vibration.

Its Conflict with Natural Philosophy.

But, again, the wave theory of light assumes that the luminiferous ether is of so subtle a character that the planets move through it, at the two prodigious rates of velocity which characterize their double motion on their axes and around the sun, absolutely without impact or resistance. The opaque matter of the planet is so perfectly transparent to the luminiferous ether that the latter is undisturbed by the motion of the planet through it. For any disturbance of the ether would of course bend the ray of light, thus distorting the forms of all objects. This implies an infinite incapacity of resistance, or of action or reaction between the luminiferous ether on the one hand and the planets and all opaque substances on the other. But, in natural philosophy, capacities and incapacities of resistance must be mutual. If the luminiferous ether can oppose no resistance to opaque substances, then opaque substances can oppose no resistance to the ether; and, if none to substance, then they can oppose none to that movement in its substance,—vibration. It would be perfectly immaterial to a planet, whose texture is insensible to the

Digitized by Google

existence of a luminiferous ether, whether that ether vibrates or not. If an open gate lets the air through absolutely without resistance, it must let through the sounds that vibrate in the air. Or, to put it roughly, if a gate is open to a pig, it cannot well stop his digestion, his grunt, the circulation of his blood, or any other mere vibration in his system. Is it thinkable, therefore, that opaque bodies oppose no resistance whatever to the luminiferous ether, but absolutely stop, divert, and change its vibrations? Does not such a notion present too great a conflict with the principles of natural philosophy to be accepted as an explanation of anything? It is an explanation which does not explain.

Theories which do not explain are Impediments to Progress.

Descartes' theory of vortices in an imponderable fluid producing the motions of planets operated as an impediment to science. Why retain an imponderable fluid to explain light, and reject it to explain gravitation? Why not as readily admit that the nature of light is unknown as that the nature of gravitation is unknown. The objections to the wave theory have all the force of a cannon-ball moving one thousand yards per second. From every point in this room there comes to every eye in this room, and to every other conceivable point in which there could be an eye, a ray of light, which like a fine wire diverges neither to the right nor to the left, but runs as much from your eye to the object as from the object to your eye. Between every two conceivable points, therefore, light is passing in opposite directions without collision; and, at every conceivable point in its progress, it is being crossed by an infinite number of lines from every conceivable point toward every other. The early thought of the ancients was that sight was accomplished by an influence which went forth from the eye to the object. Among all these myriad rays there is no crossing or interference. This is not like undulation, and Fresnel's laborious interference theory concerning light is utterly puerile and inadequate to bring the fine phenomena of light within speaking distance of the rude and clumsy concept of undulation. Mr. Hunt, in his "Researches on Light," declares that the growing opinion of the most eminent physicists of Europe is that the phenomena of light are *sui generis*, and must ever remain utterly heterogeneous to either motion or sound.

Connections between Light and Gravitation.

Light and gravitation therefore are in their nature equally evasive of research. They are irreducible to matter or to any motion of matter. Light, as far as we know, is everywhere superinduced originally in the sun and other self-luminous bodies by a combustion which results from pressure, which in turn results from gravitation. Light operates outwardly from a central luminous point to infinite distance, its intensity diminishing in the ratio of the square of the distance. Whether the volume of light also is in proportion to mass or luminous surface does not seem to have been clearly shown. Gravitation operates at infinite distances toward common centres, its force being directly as the attracting mass and inversely as the square of the distance. The dynamic law, or law of the rate of increase of light and gravitation, is essentially and may be exactly the same, but working in opposite directions. All the matter in the universe bears evidence of having passed at some time through the fire which pressure, induced by gravitation, has produced. All the matter of the rocks was first igneous, and all known solids have been smelted. What is called the chemical constitution of matter, or the attractions and repulsions which give to atoms their present chemical adjustment and properties, seem to be involved in and to have been fixed by this smelting process, since any disturbance of the amount of latent heat stored in the atom disturbs its chemical constitution, or resolves it into a new form. It is easy therefore to trace light in its threefold nature as luminosity, heat, and chemical energy to gravitation as its dynamic antecedent.

What Remains to be Shown.

To establish the doctrine of flux and reflux in nature in a manner to indicate that the system of nature is eternal, it would be necessary to show that gravitation is itself an effect of light, or an obverse side of the same fact. So far, all efforts to even conceive of any interrelation of this kind between the two, though the topic has had much attention at the hands of a few European physicists, have failed.

Siemens' Solar Theories.

Prof. Siemens' efforts are not in this line. He attempts to prove that the gravitative attraction is constantly drawing back to its mass for combustion particles or clouds of compounded gases, which are floating loosely in space, and which go back charged with certain quantities of fixed light and heat, which these gases are capable of catching and absorbing from the sun's radiation. This is a sort of effort to replenish the solar fires and delay their exhaustion. To establish the permanent equilibrium, which in the mere matter of planetary motion seems to characterize nature, it must be shown that all that goes on into space in the sun's rays is returned to the sun by gravitation. Until this shall be shown, we seem to be living in a universe which is in process of exhaustion like our own lives.

Death is the Triumph of Gravity over Levity or Light!

We die, as an oak falls, when we surrender to gravitation, the ascendency of which over our powers of life in an imperfect degree, is disease, in an absolute degree is death. The consummation of gravity is the grave. Dust to dust. Life in its lowest form is the mere emancipation of matter from the power of gravitation by the opposing power of the sun's ray. Whatever feels it, rises. The plant pushes its way upward and outward from gravitation and toward the light. We call its life organization. All organization and organic chemistry begins with the sunlight as its efficient agent, the masculine force in nature.

The Birth of Consciousness.

Pretty soon there are organized beings in whose structure the sunlight produces not merely the phenomenon of resistance to gravitation, but that of consciousness, and consciousness even in a worm or a moving shell-fish develops memory; for these low structures all have habits, and habit being the constant recurrence to like places and acts, implies a faculty of recognizing the places and acts of an earlier period, which is memory. Along with consciousness, which at first may be perhaps associated only with temperature, soon comes sight. Then, behind every eye, the optic nerve begins to spread out into a storehouse for mental images. The brain begins to grow. The sun's ray in the act of entering the eye becomes sensation. Had it entered a leaf, it would have become latent in an atom of fixed carbon, from which centuries afterward it could be evolved as light and heat. The identical rays of light and heat that now shoot across this room came from the sun, entered the leaf, and passed into the coal ages ago. Entering the eye even of a mole or rat, it becomes fixed in a picture called sensation, which may be restored again and again in combination with other similar pictures in a degree of diversity depending on the extent and quality of the brain. Each act of thought is accompanied by an expenditure of phosphorus, which is the subtlest of all light-bearing substances. All perception, memory, comparison, judgment, and reason are the restoration of these sun-painted pictures. The word "imagination," from *imago*, a picture, contains the root idea of all thought; namely, restoring pictures. All thought is light of another kind, but expressible only in terms of light. All love or passion is heat of another kind, but expressible only in terms of warmth.

Analogies between Light and Mental Action.

When phenomena have been so fused in our thought by testing, solving, and smelting them as it were in our minds that they become reduced to hard facts, to crystallized knowledge, we say that is a solid foundation on which to walk; and we then proceed to tread them under foot as commonplace for the rest of our lives. For the mind, being uplooking and aspiring, always treads under foot the known and solid, that it may breathe an air that is invisible and wrestle with the infinitudes above that are exalting to the consciousness. Here, as everywhere, the material world perfectly typifies the interior, or thought world. Physically, we live by breathing an air that we cannot see, and by feeding upon a thousand forms of fruit and flesh, from each of which we suck the imprisoned sunshine, the pent-up power of life, which comes to us by many routes, but each route ending at last in the sun's ray and carrying us out into the vast void of the unapproachable.

All Life originates in Light.

It is the primal fact of the material world that the solid earth on which we walk is not food for anything that lives. It is dead first, last, and all the time, in and of itself. But the sun's ray in all the lowest forms of life is the inspiring influence. In its first faint efforts, it is absolutely undetectable. Its infusoria in the sea are indistinguishable from the water. Its fungi on the land are dust and motes in the sunbeam. But, everywhere, only that which lives can feed life. So it is in thoughts. We tread upon facts which we know, but we breathe for our higher life only the fancies which we imagine. We walk upon what we know, but we live in what we desire to know. What we have learned supports our feet, but what we do not know and cannot know is the breath of our lungs and the light of our eyes. Treading always under our feet the solid facts, in every pebble of which there are a hundred mysteries, we reach outward and upward toward the unknown and unknowable for the unspeakable powers in which we find exaltation and new life. What we know supports us. It is our science. What we do not know exalts us. It is our religion.

What light is essentially before it enters the retina of the eye, what heat is before it enters our frames through our various forms of diet, what actinic or chemical energy was as it came from the sun,—that same thing are they all, when they have become converted into thought. This is why all forms of mental action are expressible in terms of sunlight, and in no other.

Mind Language is Sun Language.

If a man has a new thought for us, we say he is bright, he shines. If he is full of thought, we say he glows, or he is glorious. If he gets earnest in its expression, we say "he warms." If he grows eloquent, we say he speaks "thoughts that breathe in words that burn." If his thoughts are of a character which cause him to demand that we act with him, we say he is "red hot." If he moves upon us so that we act and think with him, we say "we were all wrought up to a white heat." This is not an accident of our English tongue. In all languages, the words to express wisdom are borrowed from those which mean light, and the words which express love and all passions are borrowed from those which mean heat. As the sun's ray dissolves into light, heat, and actinic force, so every form of mental action does the same. We perceive: that is light. We feel or will: that is heat. And we originate,—*i.e.*, we develop an individuality differing from that of any other in the world: that is actinic force. These three comprehend all there is of soul, and all three are variations of the sun's ray. In pure science, we first observe or learn a fact: that is light. We then test or melt that we have learned by mixing it up in the furnace of the mind with other things which we previously know: that is heat, scrutiny, disintegration, destruction, conversion, or assimilation. Then, we turn out our own thought concerning the same thing: that is individuality, invention, origination, genius, differentiation, actinic force. In rhetoric, argument represents light; passionate and fiery eloquence represents heat. And the divine power of thinking what man never thought before,—call it inspiration, originality, or what you will,—it is that which writes books, develops science, constructs new machines, founds empires, wins battles, reveals religions, and pushes on the march of human progress into new fields: this is the actinic ray, the creative force. In society, these three elements blend variously, but are not lost. The bar gets most of the intellectual element, or true white light. The pulpit gets most of the emotional element, too much to be trusted with any other function than persuasion. But there is a class of men subtler than the lawyers, and more beloved than the preachers, whose business it is to reveal new truth,—Copernicus, Galileo, Kepler, Newton, Watts, Fulton, Franklin, and one who will address you in this course this winter, Prof. Gray, the inventor of the telephone,—these are the men who mine for new truth, who probe mysteries, who work out and on into the shadow of the unknown and unknowable. Knowledge, worship, and discovery may be said to have made up all there is of man.

What is True Worship?

True worship is that attitude of the human mind in which it advances to the edge of what is known, and there makes proclamation of mystery. It appropriately lies between knowledge on the one side and discovery on the other; for there is nothing that more tends to discovery than the recognition of mystery. Religion is the analysis of light, or knowledge,—not as

Digitized by Google

it comes from the sun, but as it is seen when a small quantity of it is passed through a pinhole into a dark chamber, and is there thrown upon the spectrum. It is an interesting and pretty experiment, and works in the estimation of many an accurate decomposition of the sun's ray for our analysis. As thus dissolved, we perceive that the divine flood consists of heat, color, and actinic energy. The heat we recognize. The actinic energy we recognize. But, instead of pure white light, we have nothing but a pretty display of red, orange, yellow, green, blue, indigo, and violet. We wonder how the white ray can produce these beautiful colors. But we protest that this is not the light that lights up the world. But they who hold the prism say, It is, truly; for, look you, we have only to take a small jet of this light as it comes from the sun, and pass it through our prism and throw the result upon a screen, and, lo! there we see exactly the composition of the light that lights up the world. Theology decomposes God into power, wisdom, goodness, sacrifice, sanctification, redemption, and glory, as this prism decomposes light into red, orange, yellow, green, blue, indigo, violet. But, replies Philosophy, the light that comes from the sun is white. It has not these colors, but only the power of creating them when passed through the prism of a priest's mind. And so the philosopher places just below the God-revealing theological prism the God-concealing prism of science. The religious analysis of the nature of divine light is reversed. The colors disappear. There is nothing left upon the screen but the same little glow of light that entered the orifice. This is what Philosophy does with all attempts to analyze Universal Truth by catching a beam of it through a pinhole, and decomposing it by means of a creed. It so adjusts its own prism as to restore the purity of the Primal Ray.

When Philosophy is asked whether an infinite universe could not be produced by a personal being, if he had power enough, wisdom enough, and goodness enough, Philosophy answers, Power, wisdom, and goodness are as much products of the universe as clay, sand, and marl.

Making a Universe out of its Products.

Can the thing produced turn around and create its creator? Can the finest silk that the loom weaves create the loom? Every ray of light that shines into an insect's eye deposits its effect in its brain as sensation, which is the germ of wisdom. All the rest is growth. Every atom of oxygen it breathes becomes in it a germ of power. The rest is growth. And, as to goodness, every person or thing is good to us whose will or uses bend to ours. It is a mere element of subserviency, an attempt to win the cards of life by a trick. All words in all languages signifying knowledge have originally signified seeing or light. All words of wisdom, joy, and life, brilliancy, glory, delight, indicate the origin of the thing they express. All words of love, passion, religion in its affectionate scope, originate in words of heat or burning. Inspiration, genius, origination, invention, the transforming power of a new individuality, is the actinic ray. These are the whole of soul; and they are but subdivisions of the sun's ray allied to consciousness, which is also an incident of the sun's action

I see, therefore, in the sunlight not something which power, wisdom, and goodness could have created, but a perpetual outflow of that which is capable of becoming power, wisdom, and goodness as it goes. It changes power, wisdom, goodness, energy, intelligence, and love all into products of the loom, not authors of it. The loom itself, the universe, is infinite and uncreated. It creates all things,—gods, angels, men, and devils, if there be any,—all powers. And, in my judgment, the highest of all the conflicts of philosophy is to defend the dignity and integrity of the universe against the puerile charge of having been created by any of the gods or men whom it has from time to time caused to exist either in fact or in fiction.

IN moral precepts be brief: what is quickly said, the mind readily receives and faithfully retains. All that is superfluous runs over from the mind, as from a full vessel.—*Horace.*

IT is not instruction, but provocation, that I can receive from another soul. What he announces I must find true in me, or wholly reject; and on his word or as his second, be he who he may, I can accept nothing.—*Emerson.*

For *The Index.*

THEODORE PARKER'S INTEREST IN THE ELEVATION OF WOMAN.

Record of an Old Meeting, not before published.

Explanatory.

The death of Theodore Parker occurred on the 10th of May, 1860. On the first day of June following, on the Friday of Anniversary Week, the women of Boston held a very remarkable meeting, afterward characterized as "Mrs. Dall's Drawing-room Convention." Mainly on account of the relation borne by Mr. Parker to the women prominent in the call, this drew together a body of women far superior in intellect and social position to those who had been accustomed to answer to such a signal. After it was over, it was felt that the occasion could hardly have been improved; and those who had heard Mrs. Cheney's beautiful letter and Mrs. Dall's address desired to have them in permanent shape. Mrs. Dall had no manuscript, but some one in the audience had taken some notes, which she retouched; and Mr. Richard J. Hinton undertook to print the whole proceedings. Six months passed, and nothing had been done. It was found that Mr. Hinton's business relations were entangled; and the printed pamphlet, in consequence, never came. The documents were supposed to be lost.

Recently, however, the following draft of the proceedings in relation to Theodore Parker has been found among the private papers of one of the committee. It is more than we ever expected to rescue, and it is sent to *The Index* chiefly for the sake of preserving Mrs. Cheney's fine letter. C. H. D.

WASHINGTON, January, 1883.

BOSTON, MASS., July 1, 1860.

The women of Boston held their usual anniversary, to report the condition and progress of their cause, at the Melodeon, on Friday, June 1. The death of Theodore Parker had just been announced. There were two sessions. In the afternoon, Mrs. Severance, the presiding officer, opened the meeting by reading an address, which concluded in the following words:

"I shall detain you only to offer, in advance of all other action, the tribute which springs spontaneously from all our hearts to-day, to him, the tender, large-hearted brother, the loyal teacher, the unmatched American scholar, whose grave beneath the Italian sod shall make that soil more sacred to us, and the millions who mourn him, than all its classic treasures,—to him who brought the wealth of his rare scholarship, his eminent abilities, and his great soul into the cause of woman's elevation. In the fulness of our gratitude and grief, as women, we thank God, on his behalf, that we can say so truly,—

> 'Happy he
> With such a [wife and] mother! Faith in womankind
> Beats with his blood, and trust in all things high
> Comes easy to him.'

But I hasten to give you, better than any words of mine, those of one longer privileged with his personal friendship, worthy of it by character and culture, who revives our recollections of his services to the cause, and of that sweet, loving side of his nature which poured its constant sunlight upon "all who sought or needed or knew him."

Mrs. Severance then proceeded to read the following letter from Mrs. Ednah D. Cheney: —

"Entirely unused to addressing an audience, I should not dare trust myself to speak of Theodore Parker, with my heart full of the grief which the news of his death has occasioned. Yet it is most fitting that his great services should be warmly recognized, and I offer you a few reminiscences.

"Mr. Parker considered the elevation of woman in political, social, and intellectual life to be a cause second in importance to none of those which received his support. In the religious society founded under his guidance, she was, without hesitation, recognized as an equal and co-laborer in every department. She voted at all meetings. She was placed on the most important committees, and Lucretia Mott and Antoinette Brown were welcomed to his pulpit. Mr. Parker often said that a body of intelligent and highly educated women would do more for the advancement of true culture in our country than any other agency; and it was a constant aim with him to do something toward educating and guiding the minds of the women of his parish. Many a woman was indebted to his constant help in study, to his gentle sympathy and wise counsel amid the perplexities of her life. Who can forget the afternoon conversations held at his house for the women of his parish, or the untiring zeal and masterly ability with which he conducted them? No timid girl could stammer so confusedly but he welcomed her thought, set it in the clear light of his own vast intelligence, showed her its relation to all other subjects, and returned her, for her rough diamond, a well-cut gem. His keen satire was never used to check the painful, diffident speech of one less gifted or ready than himself.

"He had, nevertheless, a most chivalric love of grace and beauty in woman. A cold, hard woman seemed to him a monstrosity. He believed woman to be equal to, not identical with, man, and that her peculiar spiritual faculties were as important in their place as her physical life is necessary in the great plan of creation. He often relied on the fine intuitions of his wife's delicate nature informing his opinions of men in whose hands he wished to place important trusts, and he was wont to say that it never misled him. He respected the whole nature and life of woman. His profound reverence for the marriage relation made it a keen pain to him to pronounce the nuptial benediction in what seemed to him an untrue union. Yet who that received the holy chrism from his lips did not feel his solemn tones sounding through the whole future?

"'Mother' was the most sacred of all words to him. His own mother was his guide, teacher, and never-failing source of sympathy and strength. In a warm debate before a legislative committee, on the abolition of capital punishment, the venerable Dr. Beecher to whom Mr. Parker had just paid a well-deserved compliment said:—

"'Mr. Parker did not get his doctrine of anti-capital punishment from me.'

"'No,' replied Mr. Parker, 'I got them from a higher and better teacher, my mother!'

"A Calvinistic clergyman then retorted, 'Mr. Parker did not get his notions about the Bible from his mother, for I have heard that she was a good and pious woman.'

"'Yes,' replied Mr. Parker, with quivering lip, 'my mother was a good and pious woman; and she taught me to love God, not to worship the Bible.'

"I will not dwell longer on what is so familiar to you all, but I must speak to one other point. Not only did he recognize the life of woman in humanity, but, finding a revelation of God in every work of his hands, he could not but express this thought in some recognition of the Divine Maternity. Carrying out the great thought of Jesus, he loved to speak of God, not merely as our Father, but our Mother; and, in this expression, he conveyed all the childlike, tender confidence in God's love, which was the great source of his strength in life, as well as of his calm peace in the prospect of death.

"In conclusion, I offer you the following resolution:

"*Resolved*, That the women of Boston cannot meet in council to-day without laying a wreath of immortal honor on the grave of Theodore Parker."

It having been intimated that the resolution would be acted upon at the next session, the usual business of the meeting proceeded.

The evening session was opened by Mrs. Dall, who concluded her report of the progress of the cause by speaking of the laws, the literature, and the losses of the woman's movement during the past year.

In speaking of its losses, her heart failed her. It was not likely that any future year could deprive them of any seven persons so remarkable for social standing, personal culture, and commanding influence as the seven from whom they had parted during the past twelve months. She shrank from the effort of commemorating such a loss since, with one exception, these individuals were her personal friends, and by their loss she was especially bereaved. She went on to speak of Charles F. Hovey, the impartial friend of freethought, the open-handed merchant of Summer Street; of the Frau von Heidenreisch, who had left behind her a reputation second to that of no man in her medical specialty; of Eliza Lee Follen and Lady Byron, united in her memory, because themselves united in the tenderest bond of personal friendship; of Mrs. Jameson, so highly distinguished by the purity of her life, the worth of her artistic criticism, and the eminence of her literary position; of the late John W. Browne, of whom Emerson had said that

Digitized by Google

"he was the best conversationist in America," a man tender and true, of wonderful inspirations and delicate scruples. Many, the speaker said, would miss his untiring efforts in the "woman's cause," and *she not least* of all.

Before speaking of him whose loss lay heaviest on their hearts, the speaker paused. She did not envy the woman who, standing on that platform, at that hour, could be silent in regard to Theodore Parker.

Yet, from one who had known him from early childhood, every word must fall like a personal confession. After the eloquent public tribute of yesterday, what was left for her to say? Humble, indeed, must be her words of commemoration. Long years ago, she had read an ancient fable, which told how, when the king of the forest died, all the birds and beasts brought costly memorials to crown and deck his grave. The leopard laid down his spotted skin, and the peacock his plumes. The humming-bird parted with its jewelled ruff, and the porcupine with its quiver of darts. When all were gone, a little mole crept from beneath the freshly laid sod, and longed, in its blindness, to show some honor also: so it brought an acorn from its private hoard, and dropped it unwitting into the hollows of the turf. Then, the rain fell and the sun shone, as the seasons wore on, till at last a lofty oak sheltered with royal and fittest shade the spot where the monarch lay. So might it happen to the woman's tribute so gratefully offered to-day.

James Freeman Clarke has said that, as long as he lived, he should wear the purple pressure of Theodore Parker's lips upon his cheek like a royal badge, as some men wore on their breasts the scarlet ribbon of the Legion of Honor. She had been glad to hear him say it; for every one who had known Theodore Parker carried some milk-white witness to the depth of his tenderness and consideration.

Mr. Garrison had said yesterday that Mr. Parker had come slowly into the woman's cause, thinking the question, at first, one which could be dismissed with a smile. But, if so, there was in his respect for individual rights a broad and safe foundation for his advocacy. At an age when most men would have dismissed her contemptuously to the nursery or the play-room, the speaker had corresponded with him on theological matters; and now, as she glanced over the faded papers, she found that he had always written with the fulness and respect that he would have shown to a man of his own years.

Mrs. Dall related several anecdotes of him, which testified to his tenderness and love of justice. The witness he had borne to the noble liberality of the proprietors of the Boston Athenæum was dwelt upon. He said the library had been a college to him, and rebuked, almost with sternness, an attempt made in his presence to depreciate its value.

She related also, with much feeling, a touching tribute paid to his wife, when, with eyes overflowing, he had said, "You will not wonder that she has been the light of *my* eyes for twenty-five years."

The speaker checked herself on account of the private and personal nature of her reminiscences. One of his last acts, on the eve of sailing from New York, had been to send her a written expression of his sympathy in the woman's movement. When the news of his death floated to her on the wings of the morning, Mrs. Dall did not hear where his friends had laid him. But, wherever it might be, there she felt that the turf would be green, the breezes soft; there, the birds would sing their songs of happy faith; there, the flowers would ceaselessly wreathe the fragrant immortal garlands that every season would renew. Then came the news that he was laid just outside the Piuti Gate at Florence. The speaker could scarce refrain from thinking that, had he rested beneath the sparkling bosom of the Adriatic, where the sweet water-lily, which

"Stole the innermost secret of the sky,"

might have bloomed and floated above his breast, the endless play of the waves, now tossed in summer beauty, now lifted by passing storm, might have emblemed fitly that conflict of human opinion amid which he had lived, and which had worn and hurried him to his grave.

In conclusion, Mrs. Dall moved the resolution offered in Mrs. Cheney's letter:—

***Resolved*, That the women of Boston cannot meet in council to-day without laying a wreath of immortal honor upon the grave of Theodore Parker.**

During Mrs. Dall's address, many of her audience had melted into tears; and now, in accordance with an intimation previously given, the large assembly arose, and testified their acceptance of the resolution by standing silently.

As they stood, and evidently responding to their feelings, the speaker added, and in a voice of much emotion: "He is not so far from us but he knows what we are doing. Let us pledge ourselves to honor him, not merely by this sacred silence and position, but by permeating our whole lives, as he did, with the sacred fires of truth and love."

CORRESPONDENCE.

FROM A DEFENDER OF THE FAITH.

Editors of The Index:—

A sample copy of the current number of *The Index* is received. It is one of several which have come to hand in recent years. It certainly shows persistence in seeking readers, and I presume I am but one of many thousands treated in the same manner; and I am curious to know what can be the real motive which prompts so much industry and expense. To me, it seems diabolical to seek to take away from men a faith which presents the only working hypothesis, affording a satisfactory solution of the world's phenomena, spiritual and material.

With Jesus a reality and his teachings true, the world's phenomena become intelligible; for life here is simply a training school in which we are fitted for a larger life which lies beyond. With a future life eliminated from our hopes, and all intelligence abrogated from the government of the universe, human life becomes the most direful of possessions.

We, as Christians, believe that we have a Father in heaven, who is also Lord of the universe, and that we through Christ may become the heirs of the infinite.

Now, it would seem self-evident that this belief cannot make men worse, and must in reality make them better, and, whether true or false, must sweeten the ills of life, and make our sojourn here much more tolerable than it otherwise would be; and, if so, it is equally evident that you do a wrong in seeking to take away from us so comforting a faith. If this be so, I am forced to the conclusion that, in sending me *The Index*, you are not a friend, but an enemy. Why you should be my enemy I cannot tell. I have never done you wrong; and if I know myself, and I think I do, I would not reciprocate in kind, but on the contrary would do you good, if I knew how and you would afford me an opportunity. As a Christian, I would do good to every one upon the earth, and to none more cheerfully than to my enemies. To weaken my faith in the Divine Nazarene is to do me the greatest injury I can conceive of; and the greatest good you could do me, and for which I would be most grateful, would be to strengthen that faith.

As an honest journalist, you ought to give reasons which, in some degree at least, would palliate the apparent malevolence of your action. If you have good motives, please let me know what they are, so that I shall not shrink from your presence as I now do. I would like to believe that you are at least honest; but, even granting that you are honest, what right have you to tear down, unless you have something better to put in its place?

I would like to say more, but I am a very busy man, and I presume anything I could say would be wasted; but, still, I am very sorry to see so much ability thrown away in a bad cause, and I have therefore taken the liberty to ask why it is that you seek my harm and the harm of others of like faith. Now, we, on the contrary, seek to do you good instead of evil. You reject Christianity, and deny the Divinity of its Founder; and, therefore, I feel sorry for you as one afflicted with the most deadly of diseases, and would like to help you. Let me suggest a cure, and one that I know to be infallible. The recipe is short, and was prescribed by the great Physician for those who were afflicted with your disorder in his day. "The Jews marvelled, saying, How knoweth this man letters, having never learned? Jesus answered them, said, My doctrine is not mine, but his that sent me. If any man will do his will [or shall seek to do his will, as the revision has it more correctly], he shall know of the doctrine, whether it be of God, or whether I speak of myself."

To take this prescription will do you no harm, and I am very sure will do you good. Try it, and you may charge to my account any evil resulting therefrom.

To you and to all others like you, argument is useless. To the King of Siam, the statement of the Dutch traveller, that in his country the waters of its rivers became so hard and strong that an elephant could walk over in safety, was preposterous. The only way to convince him was ocular demonstration. So, with men like you, ocular demonstration is the only proper proof, and that kind of proof is what we offer you.

The Apostle Paul understood this fact perfectly, when he said: "The natural man receiveth not the things of the Spirit of God, for they are foolishness unto him; neither can he know them, because they are spiritually discerned. But he that is spiritual judgeth all things."

My dear fellow-traveller, you are blind,—blind as a bat; but, if you can realize that fact, and really desire to see, I have shown you how.

Very truly, R. BRINKERHOFF.

MANSFIELD, OHIO.

B. F. Underwood, Esq.,—Your postal of the 31st ult. does not answer my questions. *How* you came to send *me* a copy of *The Index* is a matter of no moment. Of course, I understand that you do not know me, and have no personal enmity to me; and, when I said you were my enemy, I made myself the type of a class. What I mean is that you are the enemy of Christianity, and that the organization you represent would not exist except to oppose Christianity. The "Free Religious Society" is not a stranger to me, and I have known *The Index* since it was a scant-leaved folio in Toledo, and I am well aware that this society includes some of the ablest intellects in the nation; but what I have always been curious to know is the *real* reason for its activity. When you ask me to accord to you the privilege "*to diffuse* rational thought," you do not enlighten me in the least. Of course, I accord to you equal privilege with myself in matters of opinion; but, when you manifest such vast activity and such aggressive enmity to the Christian system, I inquire, *Cui bono? cui bono?*

Christianity is a fact,—a noble fact,—out of which has grown all that is best in the world's history. You may belt the globe to-day; and you will find, without exception, that darkness deepens as Bibles disappear. In the presence of this fact, I wonder why intelligent men like you and others of the Free Religious Association should seek to destroy the Bible. Among the mistakes of Moses, the moral law certainly is not one; and, unless you can substitute something better, it must be wrong to weaken its authority.

Christianity is not Romanism or Calvinism or any other *ism*. It is simply the teachings and the philosophy of Jesus of Nazareth, the crucified Jew. To weaken these teachings and to destroy this philosophy is the mission of the society represented by *The Index*, and I inquire, *Cui bono?*

I think I have a right to make this inquiry; and I think you ought, in justice to yourself, to make a reasonable answer to the public you address, and in the columns of *The Index*.

Personally, I am not afraid of *The Index*, and I read it with admiration of its ability; but, to those not rooted and grounded in the faith of the gospel, it may do serious mischief, and therefore I would like to see it meet the fate of Saul of Tarsus on his way to Damascus. Very truly, R. BRINKERHOFF.

MANSFIELD, OHIO.

That I am not an ecclesiastic or rival journalist or a publisher of the "Revision," I would refer you to some near neighbors of yours who know me,—*e.g.*, Frank B. Sanborn, W. S. Spaulding, or Gov. Long, and especially to the first-named. R. B.

BOOK NOTICES.

AUTOBIOGRAPHY OF MRS. FLETCHER. With letters and other family memorials. Edited by the survivor of her family. Boston: Roberts Brothers. 1883.

The editor of Mrs. Fletcher's Autobiography has taken a little too much for granted. She has assumed that her mother is a famous person. But neither her name nor that of Archibald Fletcher, advocate, her husband, appears in the biographical dictionaries. Therefore, some little outline of her life, prefacing her somewhat desultory and incoherent reminiscences, written after she had reached her seventieth year, would not have been amiss. She was born Jan.

Digitized by Google

15, 1770, and died February, 1858. She was a person of much intelligence and of the finest character. Her companionships were high and pure, her friends were of the noblest in the walks of literature and reform that England had to show. She lived in the Lake District; and her Autobiography has many references to her relations with Wordsworth, Arnold, Southey, Mrs. Barbauld, Lucy Aikin, Joanna Bailey, and other famous people of her generation. But there is little in her reminiscences that throws any new light upon their characters. Of Sir Walter also, she could say, *vidi tantum*; of Crabbe also, and Mazzini. She was an ardent politician, interested in our own anti-slavery conflict very deeply. One does not wonder that she was so much respected and beloved, but the reason for publishing her autobiography does not appear. The best thing in the volume is a picture of her face at the age of eighty. It is a marvel of nobility. Her picture at the age of fifteen is given on the opposite page, and the identity of the face in the two pictures is remarkable.

THE *Popular Science Monthly* for February contains several articles of practical interest as well as of marked ability. The first paper, by Prof. E. W. Gilliam, considers the increase of the negroes in this country, and favors colonization to avert great social disturbances in the future. Alexander Bain's Rectorial Address to the students of Aberdeen University, on "The University Ideal," delivered Nov. 15, 1882, is of interest to all who are concerned about the higher education. "Curiosities of Superstition," by Dr. Felix L. Oswald, is fresh and pungent. R. W. Boodle, in "Natural Religion, a Study in the Growth of Scientific Morality," sketches the progress of scientific and liberal thought on the religious side since 1850. From this article, the following extracts are given: "It is unequivocally recognized by most writers of eminence that Christianity can no longer look to its supernatural elements for support,—nay, more, that the excellence of some parts of its morality cannot even receive credence for their inferential elements; at least, they have to be definitely discarded as a necessary part of faith, if Christianity intends to bid for the allegiance of the intellectual portion of mankind. It is therefore ridiculously wide of the truth to boast, as the clerical mind is inclined to do, that Christianity has weathered the storm, that she will pass into the twentieth century unaltered in essentials. This is fully recognized by the author of 'Natural Religion.' 'The Church,' he writes, 'has now entered upon that phase when minds of the higher order are seldom found to receive its ancient dogmas with complete conviction, when they do not altogether belong to it, even when they most admire it and most appreciate the service it has rendered to mankind. It has reached this rather advanced stage of decline, and has left quite behind it the first stage, when individual disbelievers were indeed numerous enough: but still minds disposed to religion, even when they were minds of the highest order, were troubled with no scepticism that they could not overcome.' The fact is, that the Church does not pretend to be the interpreter of human society, to open to us the vista of the future, or to give us guidance upon matters of contemporary importance. 'We know,' writes our author, 'for the most part it is occupied with quite other topics. To most of its utterances, the world listens in half-contemptuous silence, feeling that it is useless to controvert the proposition laid down, and that no results would follow from admitting them. The propositions are *archaic*: they show that the Church once understood its function, and discharged it efficiently.'" "Social Forces in American Life," by Herbert Spencer, written as a kind of sequel to his speech at the New York dinner, is a brief paper; but it develops his views more clearly than was possible in the exigencies of a festive occasion. The number contains other interesting articles, among which is a biography of Milne-Edward, the celebrated naturalist, with a portrait. The leading editorial on "Machine Education," which touches on recent developments in regard to public school management in New York, is timely and well worth reading.

THE *North American Review* for February opens with a symposium, in which Revs. Henry C. Potter, Howard Crosby, J. B. Thomas, J. O. Peck, G. T. Krotel, and T. W. Chambers give their views on the question of the "Revision of Creeds." These men do not represent even the advanced "orthodox" thought of the day, and their statements show that they lag behind the age in regard to the subject which they treat. One quotation from Rev. Dr. Chambers is sufficient: "My opinion is that the ignorant washerwoman who is a Christian knows that the Bible is the Word of God, because, as we state it theologically, the Holy Ghost bears witness to her in and by the truth, and satisfies her own mind; and that is independent of anything outside." Prof. Alexander Winchell has an article on "The Experiment of Universal Suffrage," in which he inquires into the conditions of stable popular government, which, he argues, are not to be attained under our existing political system, when the force of superior numbers practically neutralizes the influence of the best portion of the people, whose right to control the government is grounded in the very nature of things. Bishop McQuaid writes of "The Decay of Protestantism," and in support of his thesis quotes from Protestant writers: "Nothing," this writer observes, "has developed scepticism in the laity more effectually than the ministers' quickness in giving up a doctrinal point at the demand of secularists, on the plea of science. The theories of the scientific school have more weight than the Bible, church creeds, or theological teachings. The belief loaned to a congregation one Sunday may be taken back the next. Science, in many of its false assumptions, domineers over theology. In a word, the laity have learned from their ministers to hold few or no dogmatic truths. Constant changes, vexatious uncertainties, doubts, negations, have led multitudes into the ranks of cultured Agnostics and polished Atheists." "The Political Situation" is the joint title of two articles, one by Hon. Horatio Seymour and the other by Hon. George S. Boutwell, who give their views upon the causes of the recent defeats of the Republican party. The other articles are "Physical Education in College," by Dr. D. A. Sargent, and "The Standard Oil Company," by Senator Camden, of West Virginia.

PROMINENT among the many attractions of the "midwinter" number of the *Century Magazine*, we note a very spirited portrait of George William Curtis, engraved by Cole, with a sketch of his life written by S. S. Conant; the beginning of a new story, entitled "A Woman's Reason," by W. D. Howells; the continuation of Frank Cushing's "Adventures in Zuñi"; and the consideration, by Emma Lazarus, of "The Jewish Problem." The most profusely illustrated articles are "American Etchers," by Mrs. Schuyler Van Rensselaer; "Artists' Models in New York," by Charlotte Adams; Cable's "Creoles in the American Revolution"; and Cushing's "Zuñi." Mary Hallock Foote's mining romance, "The Led-Horse Claim," continues in interest, and will be concluded in the March number. "Through One Administration" is nearing its conclusion. Frank H. Stockton has a completed short story. There are poems from E. C. Stedman, R. H. Stoddard, Joaquin Miller, Philip Bourke Marston, and other well-known poets. There is a sketch of Frederick Locker, the author of *London Lyrics*, by J. Brander Matthews, with portrait and illustrations. The various other contents of this number are up to the usual high standard of the magazine. The readers of *The Index* will be interested in a letter in the "Communications" department, concerning "Judicial Oaths and Affirmations," from B. P. Moore.

THE *Unitarian Review* for January opens with "The Study of Church History," an Inaugural Address by Ephraim Emerton, Ph.D., Professor of Ecclesiastical History in Harvard University. The principal articles that follow are "American Civilization," by Isabel Francis Bellows; "The Bible," by Rev. C. A. Bartol; "Ellis' Life of Dr. Chapin," by Rev. E. A. Horton; "Martyrdom of Servetus," by Rev. T. L. Eliot. Mrs. Martha P. Lowe contributes "Things at Home and Abroad." "Editors' Note-Book" embraces a number of current topics. "Review of Current Literature" completes the contents.

THE *Revue de Belgique* for December contains an account of the European settlers on the Congo, a plea for the abolition of the property qualification in Belgium, a novelette, an interesting article on comets, a psychological essay, and an essay striving to prove that Shakspere wrote "As You Like It" in order to put down primogeniture. Such attempts of critics to pass off their own views as those of some noted author are very common, unfortunately.

WE have received from Hiram Sibley & Co., of Rochester, N.Y., a handsome seed catalogue of one hundred and fifty-six pages, including several pages of life-like illustrations of vegetables and flowers in natural colors. The catalogue will be sent free to any one upon application to the above firm.

PERSONAL ITEMS.

SENATOR BEN WADE used to say that religion without hell was pork without salt.

B. F. UNDERWOOD lectures the coming week in Pennsylvania—at Linesville, January 29, 30, and 31; at Doylestown, February 2.

JAMES K. APPLEBEE will speak next Sunday morning at the Parker Memorial on "Thomas Paine, the Prophet-Hero of the Revolution."

GEN. SHERMAN denounces as an intentional falsehood the statement in a New York newspaper that he has been received into the Roman Catholic Church.

LEOPOLD SESSLER, of Milwaukee, and his family, consisting of a wife and three children, have renounced Judaism, and are about to connect themselves with the Roman Catholic Church.

THE pastor of the Unitarian church at Medfield, Mass., Rev. J. N. Pardee, is to give a course of lectures for the Busy Bee Society on the following subjects: "Materialism: its Strength and Weakness," "Matter and Mind," "Theism," "The Basis of Morals."

MRS. RALPH WALDO EMERSON wishing at one time to have the children christened, Mr. Emerson said he would not object, whenever a minister could be found to christen the children who was as good as they were. Mr. Emerson was a good deal more of a philosopher than some people imagined.

MISS LOUISE ALCOTT writes to the *Woman's Journal* in regard to the condition of her father, Bronson Alcott: "While he has improved in some ways, there is no prospect of entire restoration to health. His great vigor will doubtless sustain him for a longer time than most men of his age; but at eighty-three, and after three attacks, it is not probable that he will recover."

THE personal appearance of the late Leon Gambetta was thus described: "He is very erect, carries his head in a dignified and firm manner, has a large but well-shaped mouth, beautiful hands, grayish hair, and the left eye bright and full of fire. All his facial characteristics betoken a man of the South. He is of medium height, has a large trunk, broad chest, and moves clumsily. He tends to obeseness, but strives energetically to check this tendency by exercise."

EDWARD A. FREEMAN, in an article in *Longman's Magazine*, says: "I fancy, too, that I sank a good deal in the opinions of some of my questioners when I had to tell them that I knew nothing about Mr. Oscar Wilde, whose name was then to be seen in large letters on the walls, as his photographs, in various attitudes, were to be seen in the windows of Washington and at several other places. It was too true that I had never heard of Mr. Wilde till I took up his poems in the house of a gentleman in Massachusetts."

ANTHONY TROLLOPE was in his later years a short, thick-set old man, with a round, red face and snowy hair, a quick, nervous manner, and a somewhat dogmatical way of expressing his opinions, particularly of the United States, which he thought he knew thoroughly by reason of his frequent visits here. His manner is described as having been very gracious with women; while his fund of anecdotes regarding Thackeray, Dickens, George Eliot, Macaulay, and many other writers, made him widely popular among men.

THE Boston *Transcript* says: "Rev. Joseph Cook has been around the globe. Emptying his treasures before his Tremont Temple audience, Monday, it could not be found that he had picked up anything new abroad. It was the same familiar lot. There was our old friend 'environment,' and our intimate acquaintances 'axiomatic theology' and 'natural supernaturalism,' together with a job lot of German names and picturesque dogmatism, but nothing new. Hold! there was one thing, to wit, the 'coronal eye,' which is accorded to the people of Great Britain. And a fine thing a 'coronal eye' must be,—that is, to a bald-headed man; but even he must doff his hat to utilize this new optical feature."

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning*.

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a *negative* decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

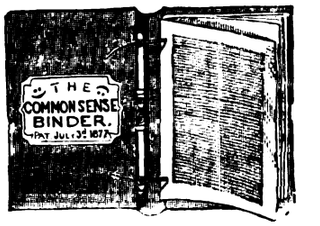
R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

Thoughts on the Death of Jennie Cramer

is the title of an address by FREDERIC A. HINCKLEY, neatly printed by Geo. H. Ellis, and for sale by the author and at this office. Price 5 cts., or $4.00 per hundred.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,		. . .	10c. per line.
" 13 " 25	"	. . .	8c. " "
" 26 " 51	"	. . .	6c. " "
" 52	"	. . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

Works of B. F. Underwood.

Essays and Lectures. Embracing "The Influence of Christianity on Civilization"; "Christianity and Materialism"; "What Liberalism offers in the Place of Christianity"; "Scientific Spiritualism: its Meaning and Tendency"; "Woman: her Past and Present, her Rights and Wrongs"; "Paine, the Political and Religious Reformer"; "Materialism and Crime;" "Will the Coming Man worship God?" 300 pp. Cloth. $1.00.

The Letters of Junius. An essay on the authorship of these remarkable compositions, with letters to Mr. Underwood, never before published, from jurists, statesmen, and scholars, showing a concurrent conviction that Junius was Sir Philip Francis. 10 cts.

Religious Revivals, their Causes and Consequences. 10 cts.

Burgess-Underwood Debate. A four days' debate between Prof. Burgess, President of the North-western Christian University, Indianapolis, and B. F. Underwood. 188 pp. Paper, 50 cts.; cloth, 80 cts.

Underwood-Marples Debate. A four nights' debate in Canada between B. F. Underwood and Rev. John Marples, Presbyterian, of Toronto. Paper, 35 cts.; cloth, 60 cts.

Jefferson, *the free-thinking philosopher and statesman* His religious views presented from his own writings, with his own testimony and the statements of John Adams, William Wirt, Daniel Webster, Edward Everett, Caleb Cushing, and Robert C. Winthrop, in regard to the authorship of the Declaration of Independence. 10 cts.

Radicalism and Conservatism. 5 cts.

CURRENT TOPICS.

THE one hundred and forty-sixth anniversary of the birthday of Thomas Paine was celebrated on the 29th in several cities and towns in the Eastern, Middle, and Western States.

SAYS the Boston *Herald:* "Treasurer Gilfillan has told all about marking clipped and worn coin with distinguishing marks, but fails to allude to the pious fraud under which the light-weight dollars are marked, 'In God we trust.'"

TALMAGE says: "I tell you plainly if the musk-rat was your father and the opossum your mother and the kangaroo your great aunt and the toads and the snapping turtles your illustrious predecessors, my father was God." Thoroughly reverent and devout worshippers have a right to resent this declaration, as a reflection on God.

THAT the spirit of Puritanism, for which Connecticut was once so renowned, still survives in that State, is evidenced by the following unique missive sent to Gov. Waller, soon after his inauguration, by a citizen of Granby, Conn.: Your Sunday-law utterance is unchristian and heaven-defying. Your liquor utterance is unworthy of a Governor of Connecticut and a mortification to all the best citizens of the State. A Governor of this State should always say, 'Remember the Sabbath day to keep it holy,' both the dark as well as the light part (one-seventh of each week). Yours with mortification."

IF other State chaplains follow the example set by Rev. Mr. Miller in his prayer before the assembly at Trenton, N.J., "the Lord" will stand a chance to get somewhat acquainted with the eccentricities of American politics. Mr. Miller prayed that "members should not ask themselves, 'How shall I line the nest of some editor, and so make myself subject of editorial squibs dripping with honey?' nor 'How shall I curry favor with bosses?' also that no member might be forced to explain to his constituency when he returned home how, having come to Trenton poor, he went back rich on a salary of $500."

THE *Independent* seems to grow restive in view of the topics selected by the Evangelical Alliance for "the week of prayer," to which allusion was recently made in these columns, and "kicks against the pricks" in the following fashion: "Will some one tell us what constitutes the Evangelical Alliance in this country? Who is he? By what right does he, or it, select the topics for the Week of Prayer? Are the topics made up abroad, and by whom? and adapted here to the American market, and by whom? Do more than one man, or three men, at the most, conduct the business—we had almost said the fussiness—of this organization?"

BRIERRE DE BOISMONT gives the following analysis of 676 cases of suicide: 278 bade adieu to parents, friends, and the world; 105 gave directions as to funeral and burial; 45 asked pardon for their suicide; 43 evinced solicitude for parents or children; 36 had confidence in divine forgiveness; 38 expressed regret at leaving world, friends, etc.; 22 avowed belief in a future state; 18 died in houses of ill-fame; 30 expiated faults or asked forgiveness; 11 desired the prayers of the Church; 11 prayed friends to shed tears to their memory; 11 ascribed their death to useless motives; 9 expressed horror at their own death; 19 wished their death concealed for sake of family.

TWO RECENT cases, cited by the daily press, show how indiscriminately people sign, without reading, any and every petition or paper offered to them. The first is the case of a mayor in a French town who "signed and sealed" a report which stated that "we have no case of hydrophobia or madness to report, unless it be that of the mayor and corporation, who are idiots and raving madmen." The other was a petition to the State Legislature, gotten up to show how careless people were in this matter, and asked that the most popular pastor of an American town be *hung* in the public square of the town on a certain date. This was signed by hundreds of citizens without reading, among others by the pastor's son-in-law.

A WRITER in the *Christian Union* thus refers to the work of Prof. Adler's Society for Ethical Culture: "The practical work of the society is threefold. It comprises an 'ethical school,' a 'workingmen's school and free kindergarten,' and a 'district nursing' department. The first is the Sunday-school of the society. It meets on Sunday afternoon at the society house. The duties of life are taught in two groups, (one) those which regard self, and (two) those which regard others. The histories of the great religions of the world are reviewed, and the central idea of each is emphasized. The course is concluded for adults by a lecture upon the philosophy of religion. In teaching very young children, biography is used to illustrate the duties of life. The workingmen's school and free kindergarten was organized in January, 1878, with one teacher and eight pupils. It now has two hundred and fifty pupils, ranging between the years of three and nine, a principal and eight assistants. The children are all from poor families, and the instruction is free; clothing and food being also supplied where they are needed. The school now has four classes; and a new class is to be added every year until the number reaches eight, when the course will be complete. The district nursing department has been in operation since the spring of 1879. The society employs two nurses,—Miss Benedict and Mrs. Dilts,—who work under the direction of the dispensary physicians at the Demilt and New York Dispensaries. The scene of their labors is in that odorous and pestilential district of Mott and Baxter Streets, and along the East River. The nurse obtains from the physicians every morning a list of patients, and makes her round of visits. She labors entirely outside of the hospitals."

SOME of our Catholic exchanges appear to be much pleased whenever they can glean from the newspapers an incident in the life of any person in France whose name has been connected with liberal principles which reflects upon his character, and are quick to adduce it as evidence of the need of theological faith to keep men in the path of moral rectitude. *The Index* never did and never will defend, apologize for, nor attempt to cover up the misconduct of anybody, however intimately his name may be associated with Liberalism; but we wish to remind our exchanges that instances of human weakness and folly, in the Church or outside of it, are no valid evidence for or against any doctrine or principle, except they can be shown to result legitimately from it. We are not accustomed, therefore, to allude to the moral delinquencies of theologians as any proof that their teachings are false. But they should be reminded that, in assailing the character of free thinkers, they employ an argument which can be used against themselves with terrible effect by any one who chooses to retaliate, although this is a kind of warfare, whether it be offensive or defensive, for which we have no taste. When the Catholic Church was in the ascendency in France, the French government hushed up offences of lascivious priests and monks. But now, when a clerical teacher is caught in the perpetration of an offence against nature or of lewdness toward his pupils, he is hauled, like any ordinary offender, before the tribunals of law, and his guilt exposed and punished. And this, says a French writer, constitutes the last grievance of the Church against the Republic. The Republic has no tenderness for the sores of Catholicism; and, even if it had, it would be unable to conceal them. The liberty which the press enjoys in France leaves no means of protecting any man against publicity. The consequence is that French newspapers are now daily chronicling and French tribunals daily punishing a number of deeds exceedingly damaging to the good fame of the clergy. We certainly have no disposition to refer to these facts every week, and to insist that they are the natural result of Catholic teachings. It is not likely that human perfection will be attained for many ages under any system of religion or philosophy.

IS GOODNESS ONLY A TRICK?

In Mr. Van Buren Denslow's very interesting, brilliant, ingenious, and thought-stimulating essay on "The Conflicts of Philosophy," which has appeared in the last three numbers of *The Index*, there were two or three points against which, as we read, we were disposed to put a question-mark; but there was one point against which we should have had to put not only a big question-mark, but a series of exclamation-marks, to indicate the measure and force of our dissent. We refer to the definition of goodness, which was made near the end of the essay in this wise: "As to goodness, every person or thing is good to us whose will or uses bend to ours. It is a mere element of subserviency, an attempt to win the cards of life by a trick."

Mr. Denslow probably holds the utilitarian theory of ethics. But, if he had designed to travesty that theory and bring it under contempt, he could hardly have chosen more effectual terms than he has used in these sentences. We do not remember to have heard any enemy of the theory perpetrate a sharper satire upon it than this. If this statement indicates Mr. Denslow's entire ethical philosophy, he does not appear to think that utilitarian action ever emerges into genuine unselfish beneficence. Morality, in his view, is always an effort to secure some advantage to one's self. And the figure he uses to illustrate his definition represents morality, or goodness, as anything but admirable, —makes it, in fact, ignoble and repulsive. "To win the cards of life by a trick" suggests an act either of mystifying illusion or of downright dishonest cheating. And to play such a trick for fun can hardly be to an earnest and honorable ambition a more attractive object than to play it with full purpose of winning by deceit. At the best, Mr. Denslow's view of goodness seems to place it little higher than the trick of behavior which a bright dog has learned to perform, in order to secure a bone from his master. A moral philosophy which thus stigmatizes itself betrays the existence of a fatal moral scepticism at its heart. It has a disease which saps the forces of its own life, and renders it impotent to produce any high moral achievements.

Now, for our part, we do not accept the utilitarian view of morality. If we did, we should resent Mr. Denslow's representation of it in the sentences quoted. We believe that at the root of morality there are certain intellectual perceptions of relation between man and man which are not explainable by any motives of self-advantage. Justice, for instance, has its foundation in the perception that another person has the same natural rights to life, liberty, property, which one claims for one's self. And this is a perception that dawned very early in the development of the human race, however slow the race has been to follow it in conduct. So there are numerous sympathies binding individuals together in acts of mutual helpfulness classed under the general name *goodness*, which spring from a similar perception of others' rights and needs quite as much as one's own; and these sympathies become impulses of action, without the actors thinking of any benefit that may accrue to themselves therefrom. Such reversion of benefit to the actors may result; and yet this may not be at all the impulse of their action, nor even thought of, until some reflective intellect comes, which, looking over the whole process with the causes and consequences, tries to make a philosophy of it. The principle of utility has had very much to do with the development of moral ideas in their practical application, because utility in the large sense, considered as that which is for the good of the world as a whole, as that which harmonizes with and promotes the progressive and ascending life of the universe itself, runs current with the moral law. But this is a very different interpretation of the principle of utility from that which represents it as always judging an act from its subserviency to one's own special will and uses.

Yet, even if it were to be admitted that morality had its origin in an instinct of self-protection and self-preservation, and even though it must be admitted, as in our opinion it necessarily must, that ecclesiastical theology has to large extent directly cultivated the idea that all works of goodness are to be performed with the selfish utilitarian motive of saving one's own soul,—that is, of making everything serve one's own advantage,— nevertheless, humanity, especially wherever it has had opportunity for a natural and healthy moral development, has got nobly beyond the childish view which sees in goodness a means of securing sweetmeats, and beyond the barbarian view which regards morality as part of a scheme for getting possession of the spoils of life by an easier process than fighting for them.

In reading the accounts of the heart-rending catastrophes which have recently occurred by fire and flood and storm, why do our hearts thrill with admiration at the story of any acts of heroism in them where persons, forgetful of their own possessions and safety even, have thought only of saving others from the dire distress? Is it because we congratulate these persons on their sharpness in seeing and seizing the happy opportunity of securing the praise of the newspapers and purchasing higher seats in heaven? Our admiration, on the contrary, would be very sensibly diminished, if we thought that any motive impelled them except a self-forgetful sympathy for others' great pain. When an engineer, to save his train from destruction, seizes the reversing lever and keeps his hands clinched to the iron until he is battered or scalded to death, do we imagine that any motive impels him at that moment but the sublimest motive of all,— that of just standing to his duty, let come what will to self? When Florence Nightingale went to the Crimea to bind up the wounds of England's soldiers, did she do it just to make their wounds serve her fame and happiness? Can any one take the recently published letters of Lydia Maria Child, and read there the story of a woman's heart overflowing with active sympathy for all wronged and suffering human beings,—her own wants cut down to the narrowest limits and supplied with the most rigid economy, in order that she might have more to bestow on the wants of others,—can any one read this biography of self-denying philanthropy, and have the slightest suspicion of a thought that it was all a shrewd contrivance to give herself more pleasure? Was Garrison's lifelong devotion to the slave only a trick for self-aggrandizement in this world or another? Was Harriet Martineau, who believed in no future life, in devising and executing plans during her last years for promoting the welfare of her village neighbors, only plotting thereby an increase of her own enjoyment for the little time she was to remain on earth? And are the thousands of people of unfamed names, who, in obscure homes and private places, may be found every day living dutiful and kindly and self-denying lives, after all, only deluding themselves and cheating their neighbors with the semblance of disinterested care for others' well-being, while all the time they are in reality selfishly scrambling after some personal advantage and taking a secret pleasure in using others' woes and wants to help themselves on?

It is our belief that the world-forces have evolved not only a moral ideal in human consciousness, but a moral attainment in human life, very much worthier and nobler than what is implied in Mr. Denslow's disparaging statement of the nature of goodness. Whatever elements of self-interest may have mingled with the primitive germination of the moral sense, and however well grounded may be the proposition that the highest welfare of all carries with it the highest welfare of each, we believe it undeniable that morality, in its highest development, embraces numerous forms of action from motives of genuine disinterestedness.

Nor is this conclusion inconsistent with the utilitarian theory of ethics, as that theory may be, and frequently is, interpreted by its advocates. And, on reflection, we incline to think that, in using the figure of the trick of cards, Mr. Denslow really said more than he meant to say; that (to revert to his own suggestive paragraph on the evolution of mental action by the rays of the sun) he became over-*warm* in his argument, the heat-rays mastering both the light-rays and the actinic force, so that he missed the "true white light" of intellectual judgment, and fell into the fault, which he charges not unjustly against the pulpit, of excessive emotion. And we the more incline to this view because the context would naturally lead us to expect a much more moderate statement. If he had followed the parallel of what he had just said concerning the development of wisdom and power in the human race, he would have said something like this: The germ of goodness is in the natural instinct of self-preservation: all the rest is growth, through the action of environment and social experience. Philosophically, we should not think that statement complete; but, if he had said only that, we should have felt no necessity of writing this article.

WM. J. POTTER.

STRULDBRUGS.

When Gulliver went to Luggnagg, his attention was arrested by a class of Luggnaggians called "Struldbrugs." A Struldbrug is a man who never dies. His babyhood carries the badge of fleshly immortality in the form of a dark blotch on the brow.

There was born in Luggnagg not more than ten Struldbrugs in a century.

Struldbrugs and mortals lived on terms of good fellowship till the immortal attained the age of eighty. At that age, immortality went into a pen, and the immortal lived on at the public expense. His property was confiscated and his freedom abridged. Lemuel Gulliver, being an Englishman and venerating the rights of property, was shocked. He complained to the Luggnaggians, who answered in such a vein as this: —

"Immortality to the few entails a burden on the many. Unless we tethered our Struldbrugs, they would be our ruin. For what is the passion of age? It is acquisition. What portion of Luggnagg do you suppose would satisfy a centenarian Struldbrug? And, if the Struldbrug is what you call 'a financier,' how much of Luggnagg would he acquire in a hundred years? What would be the wealth of such a Struldbrug at five hundred? He might own the whole of Luggnagg, and all mortal Luggnaggians might be reduced to a state of serfdom. The whole world would fall into the hands of a few Struldbrugs. We stand on the defensive, and we stand for humanity against immortality of avarice. Where nature goes wrong we must correct her. What she should kill we will curb."

This was Luggnaggian statesmanship. It was wise and just. Gulliver does not tell us when the treatment of Struldbrugs came to be the vital question in Luggnaggian politics, or what evils were suffered before the cure was found. Struldbrugery is the vital question in our politics.

While Luggnagg produced only six Struldbrugs a century, the century of our life has produced

Digitized by Google

scores. The species are distinct. The American type is known under such names as "Standard Oil Company," "Western Union," "Mutual Union," "New York Central," "Erie," "Union Pacific," "Central Pacific," "Denver and Rio Grande." Corporations have no souls to die or damn. They are Struldbrugs. We have not tethered them, and we are victimized. Every man on the face of the globe who burns a gallon of kerosene pays two cents more than the just value, that Rockafeller may put another million in his pocket. This is not all. A few weeks ago, I read in a Philadelphia paper a list of the defalcations and suicides caused in Pennsylvania by one clutch of the hand of this vast monopoly called the "Standard Oil Company." In the black list appeared the names of three who had lost their reason.

American Struldbrugery is exceedingly complex. Take that Struldbrug called the Denver and Rio Grande Railroad. Within its ribs is another and another and another,—the "Colorado Construction Company," the "Coal and Iron Company," etc. It is a cunningly devised enginery for the destruction of a State. The directors of the Railroad Company are the Construction Company, and this is the Coal and Iron Company. They conclude to build a branch road, say from Canyon City to Silver Cliff. Is it needed? Will it pay anything to you who own stock in the Denver and Rio Grande? These are matters of the least concern. The directors locate the terminus, not at Silver Cliff, but two miles away, on land which they had purchased at a trifling cost. They will kill the old town and make a town of their own, realizing large profits on the sale of land. [In this case, they failed.] They contract with the Construction Company, an alias of themselves, and agree to pay for the building of the road, say $40,000 a mile. I have it from the lips of the chief engineer that the actual cost was less than two-thirds of the sum paid. This little, illegitimate Struldbrug will make three hundred thousand dollars. I complain to you, a stockholder of the Denver and Rio Grande, that ten cents a mile is too much to pay on your narrow gauge road. You tell me that the fare cannot be too high, since the dividends are low. Simple Luggnaggian!

The Denver and Rio Grande holds every enterprise in the State at its mercy. And how fares it with mortal Luggnaggians? The gods are shutting them out of their garden. As a sojourner in this mountain Luggnagg, I wished to examine Glen Eyrie and the Garden of the Gods.

Here, an ancient river debouched into an ancient sea. And here, on the shore, prowled colossal dinosaurs, reptiles prophetic of birds. And here, where to-day

> "The bytour bumblith in the mire,"

waded the hesperornis, a bird with heirlooms from the reptile *vesper-ornis*, bird of the mesozoic evening,

> "Last in the train of night,
> If rather it belong not to the dawn."

Here, the chemistries of heat, of water, and of air, have wrought strange metamorphism on the rocks, and tinged them with every hue in the gamut of color. And here, whatever sculpturing Nature could do with rivers, with waves, with wind and sand,—the first graver she ever had,—here that sculpturing is most gigantic and most fantastic.

This is Glen Eyrie and the Garden of the Gods. Many forces have acted through countless ages—for what? For the eyes of one Struldbrug! When I wished to enter Glen Eyrie and read these ancient scriptures, I found them under lock and key of the president of the Denver and Rio Grande Railroad.

See that voracious Struldbrug, the Central Pacific. The brat came into the world with the dark blotch on its brow, badge in Luggnagg of the new-born Struldbrug. The legislation which brought it forth is a lie. Congress declared that a certain station called Arcade is at the foot of the Sierras. This one legislative lie gave to four men about four hundred thousand dollars. We made the road, gave it to four men, and gave them land enough for an empire on each side of it. Within a hundred years, this Struldbrug may have wealth enough to buy one of the minor kingdoms of Europe. Already, it virtually owns California. The surplus earnings of the State flow into the coffers of this and three other Struldbrugs. The other day, I read in my morning paper this item: "The president of the Central Pacific Railroad is making arrangements to buy the village of Blank. It is his intention to import two hundred German families to settle in this village and till his lands." Import two hundred families! The title of my paper should have been "Through Struldbrugery to Slavery."

See a picture on the Atlantic slope,—Hudson River and New York Central, an old Struldbrug with the blotch of youth forever dark on its brow. Who does not remember the buying of senates, the watering of stocks, the swearing to falsehoods, by which it has come about that Vanderbilt has a hundred million dollars? If affairs go on for the next hundred years as they have for the past fifty, the journals of 1983 may contain an item like this: "Vanderbilt, the fifth in line from Cornelius (after whom, as antiquarians tell us, a certain Starr King called sharks the Vanderbilts of the deep), is about to complete the purchase of Massachusetts. He intends to convert all the houses into tenement-houses and to import the Irish nation to fill them and to operate his mills and railroads."

In the name of humanity, Burke indicted the despoiler of India. I indict the despoilers of humanity. No man can honestly get or innocently keep one-tenth of a hundred million dollars. When you read that such a man's fortune is estimated at twenty, forty, or sixty millions, what do you say? "From this gilded poverty will come nothing. No man with twenty millions ever added to the world's real wealth one immortal work or thought. Colossal wealth imposes colossal cares. They tether the mind to ledgers and bank vaults."

Bunyan, in his "Sighs from Hell, or Groans of a Damned Soul," makes the wail break from the lips of Dives. Of the hell or the heaven dreamed by the divine cobbler we know nothing, but we do know that on

> "This bank and shoal of time"

the groans are on the lips of Lazarus. And Lazarus is always at the gates of Dives. And the more superfluity is in the palace of Dives, the more squalor is in the hovel of Lazarus. From "Nob Hill" in San Francisco, I went to Mission Bay. I had seen palaces surpassing anything which royalty has built in Europe, and now I saw poverty more galling than anything which caste has imposed in Asia. I saw five hundred men, many of them intelligent and worthy, standing to the knees in foul, mal-odorous mud, and shovelling all day long for wages which would barely cover the body and keep within it a living soul. Words spoken to me that day over a coarse, cold dinner which a well-fed dog would have spurned I cannot forget, as long as misery pleads in the ear of justice; "I am an American, and something from my earnings has gone to the building of the Pacific Railroad. And now the men to whom we gave it have charged a hundred and thirty dollars to bring me from New York, and given fifteen dollars of this to the Pacific Mail Company as a bribe to put their rate up to a hundred dollars. They steal fifteen dollars from me right out, and now they pay me one dollar a day for delving in this foul mud; and delve I must, or die."

I know that the world is poor. I know that nature's only gift to man is air for the lungs and water for the lips. And I know that, to wrest from reluctant nature the props of life, man must toil. But this, too, I know: I know that to each toiler of Massachusetts there should be left, at the end of each day, after covering and feeding the body, a surplus of more than *three cents*.

Three cents! Three cents a day (see Report of Massachusetts Labor Bureau) to each toiler, a surplus of three cents a day for the savings bank. What, then, is a savings bank?

A friend went to the Provident Savings Bank of Boston, on the 2d day of January, to watch the toilers as they came to make deposit of their savings; that is, of the potential comforts they had robbed from themselves. They came by scores. The day was cold, and a woman well on in years stood there without cloak or shawl or stockings. Her bare feet were seen through her tattered shoes. She came with $50 to put away against a day of need!

One thing in the life of Comte has always impressed me deeply. This great and good man observed a sacrament. It was a supper, but not the Lord's Supper. Every day, he took a crust of bread and cup of water. "I take this," he said, "in memory of the millions who have nothing but a crust and a cup." Let it be *our* religion of humanity to strive for the abolition alike of poverty and of colossal wealth. W. D. GUNNING.

SCHOOLS OF POETRY.

I am an English æsthetic maiden, minus the sunflower, peacock's feathers, and melancholy; and, in conversations, I have frequently expressed thoughts on artistic and poetic matters similar to those of your contributor in "Schools of Poetry," in *The Index* of Sept. 7, 1882. Before reading that article, I had not the confidence in my opinions to put them on paper; but, after reading, I cannot any longer keep them as invisible thought without visible expression. I feared that a fault lay in my too practical sympathetic nature; that, in fact, it was not refined to the quality of superfine, or, in other words, strung to such a high pitch of intellectual etherealism as to be able to appreciate and respond to the transcendental poets. It may be that my first misgivings were the true, and I certainly must admit that I am so mentally and morally limited that, after reading the poetry of the latest school, there comes a feeling little short of loathing, a crying out for more spiritual purity and love; more purity and *more* passion; more life,—life that accomplishes and does not dream; more soul that surmounts everything. Instead of the spirit of poetry, they give us refined animalisms, so intricate and sensuous in detail and color as to become sensual. We feel that their painters dare not depict what the imagination experiences while reading the outcome of their morbid imaginings that are morally unhealthy. You see before you words; but, to appreciate and enjoy the conceptions they convey, you must throw your whole heart and soul into the reading, and drink in, by great effort, the sense through your imagination. You have, in fact, to depict on *your* imagination precisely what the poet intends by his words.

Now, I submit that any words that are over-sensuous hurt the mind; for it becomes over-balanced in that particular direction, the case always in all overwrought departments of the human system. Religious, sentimental, passionate, passive, vulgar,

Digitized by Google

refined, they all tend to insanity, if overwrought into the imagination. The object and use of all art and poetry is surely to refine. But why not let it rest there; for, when refinement is attained, art has accomplished its end. To think we can go beyond this point with impunity is wrong. The modern school of poets think they can. Can they? From the sublime to the ridiculous is but a step. We have had this saying exemplified in modern poetry and art. There is such a lack of sympathy and vitality and reality in the verse that we are indeed weary of the repetitions of cold phrases and adjectives that mean almost nought, and lead up to something still less. These men "do indeed sing for the fastidious, the over-cultured," who have too much leisure and too little activity of body or brain, and so must needs dive into the obscure, phrase-hidden thought in the over-finished, over-elaborated verse of the æsthetic school. They do indeed sing for this class. The real brain-worker cannot appreciate its insipidity and lack of inspiration and brain-force. You would never live a better life after reading their poetry, or be provoked to better action after seeing their embodiment of poetry in a picture, whether the picture be on the mind's eye or canvas. MARGARET E. TIREBUCK.

LEEDS, ENGLAND.

EVOLUTION.

A Letter to Mr. D. A. Wasson.

My dear Sir,—Some weeks ago, you addressed me, through *The Index*, a series of letters on Evolution, in which you defined to some extent your own position in regard to this subject, and at the same time expressed dissent from certain theories which seemed to you unsupported, illogical, and absurd. Your letters were thoughtful and suggestive; and they were written in a generous spirit, and in a tone at once firm and respectful toward those whose views you criticised. The editors of this journal were glad to be able to present to their readers so complete and able a statement on a subject of profound importance to the best thinkers, and of current interest to intelligent readers generally, from an accomplished writer whose matured thought and sympathy with the progressive spirit and liberal tendencies of the age command for whatever he writes on philosophical subjects a consideration as great, at least, as is accorded to any other living representative of the New England Transcendental School of Philosophy.

The occasion of your letters was probably an article from my pen, in which a quotation was given from Mr. O. B. Frothingham, representing the late Mr. Weiss, yourself, and Col. Higginson as the last prominent representatives of the philosophy outlined in his *History of Transcendentalism in New England*, and to which extract were added a few words expressing doubt whether Col. Higginson was an evolutionist, but stating that you were, and that you therefore accepted so much of the experiential philosophy as was involved in a belief in evolution. This article had the good effect to elicit from Col. Higginson a frank statement that he had accepted the theory of evolution years ago; and that, while he did not indorse the doctrines of Spencer, in those of Darwin he fully believed.

You avow yourself an evolutionist, and add: "I had said as much to you, and should have said it in *The Index* in order to correct some misapprehensions had I found occasion to do so, without coming forward for that express purpose. You have spoken for me, and I am glad of it." After stating that, while you believe in evolution, you cannot accept "as sufficient any philosophical explanation of the fact hitherto offered," that you are "holding out for more adequate explanations," that you "suspect that the case is not much otherwise with Col. Higginson, little as he may be satisfied with the system and methods of Mr. Spencer," you proceed to define your position for the benefit of those readers of *The Index* "with whom the fact of evolution and Mr. Spencer's explanation of it are one and the same, and no more to be separated than the fact of gravitation and the law of gravitation as discovered by Newton."

I do not think that any person whose opinion on this subject is of the least value, however strongly convinced by the evidence which has been accumulating the past few years that evolution is a fact, claims or believes that the *explanation* of the fact as given by Darwin, Spencer, or any other writer, is "sufficient" or in all respects satisfactory. Truths are being discovered and principles disclosed every year which acquaint us with some new aspect of the subject, and, while removing objections that have hitherto been urged, and confirming the theory of evolution, present us for solution new problems, adding to the complexity of the phenomena with which we have to deal, and showing that the *theory* itself, not less than the objects to which it relates, is in a process of evolution. All intelligent believers in evolution, whether they agree with or differ from Spencer in some of his views, are, with yourself, "holding out for more adequate explanations." True, there is a large and constantly increasing number who find in the writings of Herbert Spencer what they regard as a more profound and comprehensive view of evolution than is presented by any other thinker. He has certainly adduced strong proofs in favor of evolution, and contributed to put the theory upon an impregnable foundation. He has made most brilliant discoveries in the field of biological and psychological science. He has, too, worked out the conception of evolution, extending its application to all classes of phenomena, formulating the processes of nature in a comprehensive and systematic manner.

But I am not aware that any of Mr. Spencer's most ardent admirers even have ever claimed or intimated that he originated the theory of evolution, or that, to be an evolutionist, one must accept all his theories and speculations. "Evolution," you correctly observe, "means continuity in the process of nature or of the known universe." This conception, you say, "was that of the new school of thought in New England, commonly known as the Transcendental School before Herbert Spencer was heard of." You might have added that evolution was enunciated and defended by the author of the *Vestiges of Creation* (Robert Chambers) in 1844, by Lamarck in 1801, by Dr. Erasmus Darwin in England, Geoffroy Saint-Hilaire in France, and Goethe in Germany in the latter part of the eighteenth century; with less definiteness by Giordano Bruno and Benedict Spinoza in the sixteenth and seventeenth centuries; and, among more ancient writers, by Lucretius, the author of the most philosophical poem of classical antiquity, by Empedocles of Agrigent in Sicily, by Heraclitus of Ephesus, and by even Anaximander, the Ionian philosopher, who, twenty-five centuries ago, anticipated the fundamental conception of the natural development of the world as maintained by Kant and Laplace, and of the evolution of living creatures as maintained by Lamarck and Darwin. In view of these facts, it was hardly necessary for you to show that the conception of evolution was not first given to the world by Mr. Spencer.

It seems proper here to state that until recently belief in evolution was confined to a comparatively few, and was furiously denounced by the clergy, ignored or ridiculed by the press, and treated with supercilious contempt by the *littérateurs* of Europe and this country. That there were noble exceptions is not denied. During this time, Darwin and Spencer both, in their own chosen provinces of investigation, were making those splendid discoveries and those great generalizations which have done so much to overcome the influence of prejudice and preconception, and contributed so largely to the present wide acceptance of evolution. When the theory was passing through what Prof. Youmans calls its "stage of execration," to both Darwin and Spencer was accorded whatever odium was attached to the theory; but, "when the infamy is to be changed to honor, by a kind of perverse consistency of injustice there turns out to be a good deal less alacrity in making the revised award." How many of the representatives of the New England Transcendental School, twenty or even a dozen years ago, came out bravely in support of Darwin, when he and his views were treated with burlesque and abuse? It is safe to say that, while a few of them assented to development in a general way, they had no definite ideas on the subject, ignored the scientific method, and did less perhaps to call attention to the subject than some of those robust opponents like Agassiz, who vigorously opposed Darwinism and by encouraging discussion helped to exhibit the weakness of their own position and to strengthen that which they assailed.

Since your letters are devoted largely to an attempt to expose the weakness of what you evidently regard as the main conceptions of Spencer's philosophy, it will be well, before examining your own position, to inquire whether Spencer's philosophy is the crude and crass materialism which you imagine it to be. This point will receive consideration next week. An earlier reply to your letters would have been made but for other demands on my time the past few weeks, which could not be disregarded. Respectfully yours,

B. F. UNDERWOOD.

EDITORIAL NOTES.

A WRITER in the Boston *Advertiser* says that the difference in regard to probation between Dr. Dorner and Joseph Cook is that one suggests "probation after death" and the other "probation after breath."

THE Earl of Derby, in a recent speech on Free Trade before the Cobden Club, said: "There is nothing more certain than this,—that the great preventive of war is trade. Religion has not served to check wars."

MR. WILLIAM SLOANE KENNEDY has completed and will soon publish through S. E. Cassino, of Boston, a work entitled *Oliver Wendell Holmes, Poet, Littérateur, and Scientist.* It is not a biography in the strict sense, but is a treasury of information concerning the life, works, and social environment of the poet, and furnishes as well a critical study of his various writings. It will contain also an extensive bibliography.

SEND two three-cent postage stamps to this office for "Evolution and Religion," by John Fiske. This is Prof. Fiske's address at the Herbert Spencer banquet in New York, printed in tract form by the Free Religious Association. It is a very succinct and comprehensive statement of the subject. It will be furnished in packages of ten for thirty-five cents, and of one hundred for two dollars and fifty cents. It should be distributed widely.

MRS. IMOGENE C. FALES, of New York, who is somewhat known to the readers of *The Index*

Digitized by Google

through her thoughtful contributions to this paper, gave an address, on Tuesday eve, the 25th inst., before the New England Woman's Club at its rooms, 5 Park Street, on "Co-operation and Progress," in the course of which she made the statement that "in 1833 there was in New York State one pauper to every one hundred and twenty-three active self-supporting citizens. Now there is one pauper to every eighteen citizens. The accumulation and concentration of wealth keep pace with this growth of poverty, there being now in New York alone over three hundred men worth over $5,000,000, whereas thirty years ago there were but few persons owning that sum in the whole United States. This, the lecturer maintained, was caused by an imperfect system of distribution, excess of energy in one direction, deficiency in another, disease in both."

MR. EDWIN D. MEAD has recently given a course of four lectures upon successive Sunday evenings in the Church of the Unity, Cleveland, Ohio, upon "America in the American Poets." The four poets treated of were Longfellow, Whittier, Lowell, and Emerson. The object of Mr. Mead in these lectures is "to show what each has done with American subjects and for American life and thought. The point is to strengthen by them a finer historical feeling among us and a more ideal view of our post and our problem." Word comes from Cleveland in high commendation of these lectures, both for lyceums and as parlor lectures. Mr. Mead has already been invited to give them elsewhere, and clubs and literary associations may be sure of choice entertainment in securing Mr. Mead for one or more evenings.

LAST Sunday, Talmage, at the Brooklyn Tabernacle, preached a violent sermon against "Mending the Bible," in which he said: "'It cannot be possible,' say some of these pulpit evolutionists whose brains have been addled by too long brooding of Herbert Spencer and Darwin,—'It cannot be possible that you believe there was a garden of Eden?' Yes, just as much as I believe that there were roses in my garden last season. 'It cannot be possible that you think the sun and moon stood still?' Yes: if I were strong enough to make the sun and moon, I could myself easily make them stand still, or, by refraction, give that appearance. 'You don't believe that the whale swallowed Jonah?' Yes: if I were strong enough to make a whale, I could arrange safe ingress for any false prophet, leaving it to evolution to eject him. 'Do you believe that Samson slew one thousand men with the jaw-bone of an ass?' Yes; and he who assails the Bible wields the same weapon. 'Do you believe that the water was turned into wine?' Yes; and that the wine now is turned into water with logwood and strychnine. There is nothing in the Bible staggers me."

R. W. BOODLE writes in the *Popular Science Monthly* for February: "The rise of the evolution school was heralded in 1845 by Robert Chambers' *Vestiges of the Natural History of Creation*, an expansion of the Lamarckian theories of natural development. But the writings by which what we now mean by evolution were popularized fall within the present period. The *Origin of Species* apppeared in 1859, Spencer's *First Principles* in 1862, Huxley's *Evidence as to Man's Place in Nature* in 1863, and *The Descent of Man* in 1871. With this school, also, we may class Max Müller's *Lectures on the Science of Language*, which appeared in 1861, as tending to widen the conception of evolution. Of the effects of this new view of life upon religious thought, it is not too much to say that, if it cut the ground from under the intuitionalist theory of right and wrong and of the origin of conscience, to the sceptic, in regard to supernaturalism, it gave a prospect and a future glorious with hope. To many minds, the ascent of man serves a more glorious conception than his fall. The door was opened for a pantheistic view of the universe; and this tendency was enhanced by the influence of Ruskin, who was already writing in 1850. George Eliot who was exercising a distinct influence upon the age by popularizing the ethical side of positivism, and showing men that it gives a workaday theory of life, began to publish in the year 1858."

M. D. CONWAY, in a letter to the Cincinnati *Commercial*, in regard to the Franklin Collection recently purchased in London by our Government, very sensibly remarks: "As I have already intimated, this collection calls for a new Life of Franklin. When that is done, and when an honest biography of Thomas Paine is written, without any suppressions in the interest of Washington or any other divinity, the world will know that America has reached its era of intellectual independence. At present, our Revolutionary ancestors are almost as much conventionalized as Jack the Giant Killer and Blue Beard. Washington is our beatified saintly dragon-slayer, Franklin our penny-wise philosopher, Paine our scoffing Satan, and so on. Is it not time that the cherry-tree phase of our national biography should be outgrown? Can we not bear to have the plain facts told about our canonized ferocious Puritan Pilgrims, and about our devils, such as "Tom" Paine and George III.? Some good work is being done by our veteran Bancroft, by Parkman, Higginson, Fiske, and Tyler; but it is still not quite critically bold enough, when it touches conventionalized idols. A republic must have no idols, ancestral or other, and needs the man with the touchstone

> 'Of heirloom jewels prized so much
> Were many changed to chips and clods,
> And even statues of the gods
> Crumbled beneath his touch.'"

THE *Independent*, commenting on the recent decision of Judge Briggs of the Common Pleas Court of Philadelphia, says: "We do not believe in religious tests of any kind in connection with the functions of civil government, and hence would not disqualify an atheist to give evidence before a court and jury. The constitutions of most of the States that have been adopted within the last forty years exclude all such tests. That of Oregon, for example, expressly says, 'No person shall be rendered incompetent as a witness or juror in consequence of his opinions on matters of religion, nor be questioned in any court of justice touching his religious belief to affect the weight of his testimony.' One's general reputation for truth and veracity is a fair test in determining the degree of his credibility; but what he believes in respect to religion is not such an inquiry relative to his capacity and status considered simply as a citizen, whether for the purpose of holding office or giving evidence. To make it such is to discriminate between citizens on religious grounds, and, on these grounds, to impose disabilities, and virtually insist upon some sort of religious faith as one of the conditions of full and complete citizenship; and this, in our judgment, is not only unjust, but also contrary to the general principles upon which government is organized in this country. It is a species of State religion, and to this we are opposed in every form in which it can be presented."

WHEN every Christian sect under heaven is beating the devil's tune out of the Bible and plain people are everywhere giving it up as a book for the guidance of life, because they are becoming intelligent enough to know that their teachers have held one view of it, and taught another, if some men in the Christian ministry in this country did not have the manliness to come forward and stand up for the Bible in terms which can be understood and are true to the results of the broadest scholarship, where in the world would we be, and in what age would men be living? The time has come when a thousand Jewish and Christian cobwebs and glosses are being removed from the Bible; and the sooner they are removed, the better. Hitherto, much of this work has been done among liberal Christians and free religionists; but all the while the intelligence of the Christian Church has been awakened and instructed on these subjects, and some of the results of broad and thorough scholarship, vastly changing our estimate of the Bible, but in no wise destroying it, have become the common property of all open-minded Christians.... It were better for Dr. Newton to be ten times the heretic he has been assumed to be than that the particle of the leaven that is giving to the world a new Bible, as new as it is old and as old as it is new,—the real Bible,—should be kept from the minds and hearts of the men and women who make the bright world what it is.—*Boston Herald.*

POETRY.

For *The Index.*

A PRIEST OF NATURE.

He was a priest of Nature, Brahmin mild
'Mid spicy groves, 'neath skies benignant dwelling;
A mystic meaning, pleasure undefiled
For him from Night and Day were ever welling.

The verdurous, foodful Earth with forests, streams
He loved, with flowery leas and skies eternal;
Her interplay of lunar, solar beams,
And all her aspects nightly and diurnal.

His spirit revelled in her thousand charms,
Her mountains' grandeur and her valleys' quiet;
Her scents breeze-blown could medicine his harms,
Her hues and odors were his fancy's diet.

Carlyle versified by B. W. BALL.

WORK ON.

PART ONE.

Work on! though drear may be thy road.
Work on! through all Deception's guiles.
Work on! pass by Envy's leering face.
Work on! in noble lines thy life to trace.
Work on! through Hatred's thorny briars.
Work on! break through the clouds of liars.
Work on! and shun the ways that lead to ruin.
Work on! to clutch the vase of poet's perfume.
Work on! to grasp the thought that leads to fame.
Work on! to lead the blind, the lame, the halt.
Work on! to shut in Beauty's rim thy every fault.
Work on! to make thy character repeat thy principles.
Work on! though Prejudice or Superstition howl or frown.

PART TWO.

Work on! for Constancy will gain at last.
Work on! the flowers will gladden all the past.
Work on! unseen fingers will show forth wreaths.
Work on! angels will sing thy victory in song.
Work on! the selfish will rush to see thee conqueror.
Work on! historians will enshrine thee in their splendid diction.
Work on! the preacher will cite all thy deeds.
Work on! thy life in story some future "Optic" will be sure to tell.
Work on! the "generous public" will toast thee at a dinner or a supper.
Work on! for love will kiss thee with a rose's blush.
Work on! thy mother's eyes will weep thee priceless satisfaction.
Work on! and sister will clasp thee as one of heaven's noblest born.
Work on! and, friends, how happy will they be to name their own.
Work on! for God's dear spirit never leaves us in the dark.

The Index.

BOSTON, FEB. 1, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

ORTHODOXY AND THE BIBLE.

A Discourse preached in Brooklyn, Dec. 10, 1882.

BY JOHN W. CHADWICK.

The subject of my discourse this morning was suggested by a discussion which has been carried on of late in the columns of the *Christian Register* and in other journals with a good deal of animation,—a discussion started by an essay given by Dr. George E. Ellis before a certain Unitarian Club which meets in Boston once a month at the Hotel Vendôme. Dr. Ellis was a classmate of Theodore Parker in the Cambridge Theological School. For many years, he was a diligent contributor to the *Examiner* and *Register;* an editor also of the former for a time. He wrote a history of the Unitarian controversy while he was still minister of the Unitarian Society in Charlestown, Mass. Since his retirement from the regular duties of the ministry, he has devoted himself mainly to historical studies, with some admirable results. But like the tallow-chandler who had retired from business, but who nevertheless "liked to go in on the melting day," Dr. Ellis has generally been on hand when the discussion of any theological or denominational matter has waxed particularly hot. Up to the time of his retirement from the ministry, he was regarded as one of the most conservative of the elder clergy. But freedom from parochial responsibility has frequently been known to have a strangely softening influence upon men's theological rigidity, and the experience of Dr. Ellis has been no exception to the rule. His later utterances on theological questions have been remarkable for their rationality, their keen perception of the demands of scientific truth upon religious thought.

The title given by Dr. Ellis to his recent essay does not, I think, convey an adequate idea of its character and scope. It was "The Position of the Liberal Body as affected by the Rupture in the Orthodox Body of Congregationalists." A better title would, I think, have been "The Position of Congregational Orthodoxy as affected by a Rational Understanding of the Hebrew and Christian Scriptures." The controversy relative to Dr. Newman Smyth and the Andover professorship was not, he rightfully insists, a matter of some texts of the New Testament interpreted more or less rigidly. There are, he says, "deeper and far more serious bearings and elements of the controversy," for the recognition of which an uncounted multitude of intelligent, serious, religious, and Christian people are impatiently waiting. "The deeper and ultimate question," he assures us, "concerns the validity of the grounds and reasons of the popular estimate of the Scriptures." And again, "I can conceive of no more earnest and cogent appeal which all Christendom with the urgency of fit and favoring occasion may make to Christian divines, scholars, and professors, with all the apparatus for theological instruction, than this: Reconsider to the very bottom, divested of all professional proclivities and partialities, the estimate that you put upon the Bible as a whole and in its parts." "That the sanctities of that book," he says, "may be retained, the assumptions and superstitions associated with it must be surrendered." It is Dr. Ellis's contention that the new Orthodoxy cannot maintain itself against the old without surrendering the traditional doctrine of the Bible on which so far it has appeared to stand. (My own impression is that it could still less maintain itself upon the basis of a thoroughly rational conception of the Bible. It would have to go on a great deal further than it has already come. On the score of logical consistency, less can be said for Dr. Smyth or Mr. Beecher than for Prof. Park.) And Dr. Ellis's contention further is that Liberal Unitarianism or Unitarianism of any sort cannot maintain itself as against Orthodoxy without affirming that the Bible can be accounted for within the resources of humanity, and denying to it special divine authority in any and in every part.

The astonishing thing in Dr. Ellis's essay is that he should think the Unitarian body much in need of such an admonition. It is proof that he is not aware of what has been going on in Unitarian conferences and churches while he has been so busily engaged and to such excellent purpose in studying up the Indians and Quakers and the Witches. "Reconsider," he says, "to the very bottom, divested of all professional proclivities and partialities, the estimate that you put upon the Bible as a whole and in its parts." The demand is pointless, so far as Unitarianism is concerned. The thing demanded has been already done. The subject has been discussed in scores of books and pamphlets, in hundreds of articles, in magazines and journals, in thousands of sermons, and with infinite care and patience in the teachings of our Sunday-schools. There has been something almost startling in the rate of our advance. A dozen years ago, it might be said of the Unitarian denomination, as a whole, that it occupied the untenable ground from which Dr. Ellis now warns it off. A dozen years ago, the average disposition was to make a Scriptural defence of Unitarian doctrine. To-day, the truth is precisely as Mr. Barrows, the accomplished editor of the *Christian Register*, has stated it: "Unitarianism has a new basis of operations. It has abandoned the Biblical defence, and taken higher and more comprehensive ground." To be unaware of this, it would seem as if Dr. Ellis must have been sleeping a kind of Rip Van Winkle sleep. Repeating Mr. Barrows's words, he asks, "Would Dr. Peabody consent to this?" Possibly not. But it would be about as pertinent to ask, Would Andrew Jackson consent to the civil-service doctrine: "The tools to those who can handle them, and as long as they handle them well?" Dr. Ellis is a man who loves his joke, and it may be that he is joking here. Certain it is that Dr. Peabody, so venerable and good, does not represent by any means the average Unitarian opinion of to-day. He represents its most conservative extreme. What are the proofs of Mr. Barrows's affirmation, "Unitarianism has abandoned the Biblical defence, and taken higher and more comprehensive ground"? I find them in such an essay on the Bible as that read to the National Conference two years ago by Rev. E. H. Hall, an essay of which some one said, "It would have been more interesting, if we hadn't all agreed with it." It was hardly an exaggeration; and yet this essay was absolutely destructive of the traditional opinion of the Bible, as a supernatural and specially authoritative book. I find other proofs yet more convincing in the fact that the Unitarian Sunday School Society has published this very fall two manuals of instruction, one by Mr. Hall and the other by Prof. Toy; both of them entirely rational and scientific in their treatment of the Bible. Proofs stronger than these would be impossible. Long after grown people have arrived at truth, they generally persuade themselves that any lie is good enough for little children. When, therefore, a Sunday School Society puts into manuals of Sunday-school instruction views of the Bible wholly subversive of its traditional standing, it is safe to predicate of the denomination represented that "it has abandoned the Biblical defence, and taken higher and more comprehensive ground."

However this may be, it has not any special bearing on the as yet unnoticed part of Dr. Ellis's essay, the part which has stirred up the liveliest commotion. This part was merely incidental; and it is greatly to be feared that the ado which it has caused will very considerably, if not entirely, obscure the main significance of Dr. Ellis's remarks. It was as follows: "Fifty years of study, thought, and reading, given largely to the Bible and to the literature which peculiarly relates to it, brought me to this conclusion: that the book—taken with the especial divine character claimed for it, and so extensively assigned to it as inspired and infallible as a whole, and in all its contents—is an orthodox book. The vast majority of its readers, following its letter, its obvious sense, its natural meaning, and yielding to the impression which some of its emphatic texts make upon them, find in it Orthodoxy. Only that kind of ingenious, special, discriminative, and, in candor I must add, forced treatment which it received from us liberals can make the book teach anything but Orthodoxy." In such wise was compounded the projectile which Dr. Ellis lightly tossed into the theological arena, and which, exploding there, has caused infinite satisfaction to the orthodox party, but, to a goodly number of the Unitarian shepherds and their sheep, no little consternation and disgust. A dozen of the older Unitarian ministers have published over their names a counter declaration, expressive of their strong dissent from Dr. Ellis's position, and of their conviction "that the Scriptures, fairly interpreted, no matter with what view of their inspiration, . . . do not teach the doctrine of the Trinity, nor the distinctive tenets of Calvinism, as set forth in what is called the orthodox creed." To this counter declaration, Dr. Ellis has responded in an article which is not remarkable for that "lucidity" for which Matthew Arnold has recently been pleading. The gist of it appears to be that, if we allow Orthodoxy to put itself into the Bible to any extent, when it proceeds to take itself out to the same extent, we must not be surprised. His original statement was that "only a kind of ingenious, special, discriminative, and forced interpretation can make the book teach anything but Orthodoxy." In his second article, he says: "I have tried to recognize the fact that, if we allow the character and estimate which Orthodoxy assigns to the letter of Scripture, we must admit that it finds *some warrant for its system.*" And this warrant, we are assured, "does not cover all its doctrines as Scriptural," nor prevent the Scripturalness of certain doctrines held by Unitarians. Statements so preternaturally mild as these would never have provoked a counter declaration. They differ from his original statements, not exactly as white from black, but as white from an invisible green.

In the mean time, his original statement has gone widely forth, and the orthodox ranks in general have received it with a shout of exultation. They have suddenly discovered that Dr. Ellis is the most distinguished scholar in the Unitarian body. "And he says the Bible is an orthodox book; he says the Bible is an orthodox book; only a forced interpretation, he says, can make it anything but orthodox!" The general purport of the essay is entirely missed, or wilfully disregarded. This point of dazzling radiance makes the surrounding area as black as night. "He says the Bible is an orthodox book!" But all are not so wilfully or inevitably obtuse. The *Presbyterian* is not blinded by Dr. Ellis's "remarkable concession" to the general drift of his remarks. It says: "The plenary inspiration of the Bible is evidently the fort which is to be held. If we cannot hold that, all is lost. . . . The absolute and supreme authority of the Word of God is the only ground on which the faith we teach can be safely rested." Can it be safely rested there? It is a whale's back in the sea. Struck by the Ithuriel spear of scientific thought, the wallowing monster will go hurtling down into unfathomable depths, bearing along with it the hopes and schemes of those who have mistaken it for a substantial island which no sea could overwhelm.

Whether the Bible is or is not an orthodox book is not a particularly vital, nor by any means a final, question from our point of view; but it is an interesting one for various reasons. Dr. Ellis's original affirmation was "that the book, *taken with the especial divine quality and character claimed for it and so extensively assigned to it as inspired and infallible as a whole and in all its contents*, is an orthodox book." This is very much like saying that, if we accept the

Digitized by Google

Ptolemaic astronomy, we must allow the earth to be the centre of the solar system. But let us ask if it is true that, even with this high and dry conception of the Bible, it could be made to teach nothing but Orthodoxy, without forced interpretations. The question has at least an historical interest. For this high and dry conception of the Bible was the conception of the early Unitarians. Judge Story wrote in 1824, "Their belief is as complete of the divine authority of the Scriptures as that of any other class of Christians." The voice of Channing was almost alone in the assertion that reason is the final arbiter of truth.* Henry Ware, Jr., spoke for the great majority, when he said that, when there was any conflict between reason and conscience and the Bible, we must "follow the written Word." It is Dr. Ellis' opinion that these early Unitarians were worsted in the famous Unitarian Controversy. "Scripture exegesis, logic, argument," he says, "were clearly on the side of the orthodox contestants." It is a very sweeping statement, and a much too sweeping one, if I am not mistaken. It may not discredit the good faith, but it certainly does discredit the critical sagacity of the Unitarian contestants. For they were thoroughly convinced that the Bible was upon their side. Doubtless, they had their share of forced interpretations. But it was not a greater share than that of their opponents. The necessity for forced interpretations came on neither side so much from the desire for victory as from the inconsistencies and contradictions of a book which could not be inconsistent or contradictory and at the same time infallible.

But were the Unitarians worsted, so long as they and their opponents were upon the common ground of Biblical infallibility? Remember that the points in dispute were almost exclusively the Trinity, the Deity of Christ, total depravity, and the vicarious atonement. In looking over a bibliography of that famous controversy, it seemed to me that about nine books and pamphlets out of every ten were on the Trinity or the Deity of Christ. And, at these points of the line of battle, I am persuaded that the Unitarians were victorious. Andrews Norton's *Statement of Reasons* was the final charge (in 1833), and it carried everything before it. Even an infallible Bible must be interpreted according to certain general principles,—particulars by the general scope, and the more obscure by the less. Now, the general scope of the New Testament was certainly not favorable to the Trinity nor to the Deity of Christ; and, if certain obscure passages were so, the least obscure conveyed a very different impression. For either party to the conflict, there were certain quite unmanageable texts. But the upshot of the matter is that neither the word "Trinity" nor the thing is contained in the New Testament, and that the Christ of Paul and even the Christ of the Fourth Gospel is a little short of absolute Deity. The Arianism of Channing, which conceived of Christ as a being only a little less than God, was as near as possible to a just reflection of the New Testament doctrine. As near as possible, I say; for there were conflicting elements, which could be brought into complete accord by no honest system of interpretation whatsoever.

As regards the depravity of human nature, "Scripture exegesis, logic, argument," were not so clearly on the orthodox side as Dr. Ellis has affirmed. Plenty of texts there were upon their side, and plenty more upon the other. Allowing all an equal inspiration, there semed to be no rule except the rule of thumb for getting at the mean result; and the application of this rule was much more favorable to the Unitarian than to the orthodox side. The difficulty was greater for the Unitarians when they came to the atonement. Metaphor and hyperbole may be affirmed of human writings, but hardly of a theography, a writing coming straight from God's own hands. The Unitarian argument frequently implied a more rational estimate of the New Testament than either Unitarians or Orthodox explicitly allowed. The Orthodox were right in their presumption that God would not, in making a revelation of the most solemn matters, use words that seemed to mean more than they did. They gave to every tropical expression a scientific value. Their estimate of the Bible, which they held in common with their opponents, justified them in doing this and gave them an uncertain victory, more certain than the Liberals could fairly claim. Again, the orthodox party had some very ugly texts upon its side in the Election-Reprobation battle,—"He will have mercy upon whom he will have mercy, and whom he will he hardeneth." But the doctrine, as held by Paul, was not "a statute of limitation," but "an edict of comprehension" as different as possible from the Calvinistic doctrine. Here also, then, the victory of the orthodox party was uncertain, if the eagles did not evidently perch upon the Unitarian banners.

*Sermon on "Self-denial."

The Unitarian controversy of fifty years ago involved many other elements than these which we have now considered; but these were the most important, and the general outcome of our investigation is that the liberal contestants were far from being worsted. They were not worsted at the points of principal attack,—the Trinity and the Deity of Christ, and at other points,—human depravity, the atonement, election, and reprobation,—if there was little room to boast on either side, there was certainly as much upon the liberal side as on the other. The elements which we have now considered are no more exhaustive of the present controversy between Orthodoxy and Liberalism than of the controversy of fifty years ago; but there are elements in the present controversy which were not present in the times of Wood and Ware. When Dr. Ellis says that "Orthodoxy cannot readjust its creed without readjusting its estimate of the Scriptures," I imagine he is thinking almost exclusively of a particular doctrine,—that of an everlasting hell for unbelievers. This doctrine was not in dispute between the Unitarians and Orthodox of fifty years ago. Murray and Ballou, the Universalists, had done valiant battle for a loving God and an inclusive heaven. But the early Unitarians did not wish to be confounded with the Universalists. They were generally careful to make it appear that an everlasting hell of some sort met with their warm approval. At any rate, there was little or no contention on this point between them and their orthodox opponents. But the controversy which is at present going on within the orthodox body is not concerned so much with anything else as with the doctrine of eternal punishment. And it is true that Orthodoxy cannot readjust its creed upon this subject till it readjusts its estimate of the Scriptures. If these are plenarily inspired, an everlasting hell for unbelieving, sinful men is an established fact. Not that every text chimes to this music, but that the most significant texts in their most obvious interpretation mean exactly this. Their meaning can possibly be refined away by learned discussions as to the meaning of *aionios* and *gehenna;* but, as they stand, interpreted as we would interpret any other book, and, still more, interpreted as we should interpret an infallible revelation, their meaning is quite unmistakable. Says Prof. Park: "It is essential to the doctrine of retribution that it should be held with an intensity of conception which shall justify the use of the Biblical emblems of the future punishment of sin." And, indeed, it is so, if the Bible is "the Word of God"; and it is also essential that we should ascribe to such punishment endless duration, and make it plain that there is no mending of our chances after we get beyond the limits of this world. If Orthodoxy were synonymous with everlasting hell, I should agree with Dr. Ellis, that "only a forced treatment of the Bible can make it teach anything but Orthodoxy." The Universalism of Paul is evident; but it is like a skiff upon the rapids of Niagara in the great sweep of the New Testament's more general bearing.

But the infallible Bible is itself one of the most important articles of the orthodox creed. This was not a disputed article in the Unitarian controversy of fifty years ago. It was accepted by the Unitarians and the Orthodox with equal heartiness. To-day, it furnishes the differentiating question between Liberal and Orthodox,—and the Liberal are in hundreds of cases ministers in nominally orthodox pulpits, members of nominally orthodox churches. "Orthodoxy," says Dr. Ellis, "cannot readjust its creed till it readjusts its estimate of the Scriptures." But, in readjusting its estimate of the Scriptures, it is readjusting its creed in one particular, and this one of the most important. And, in readjusting it, it is not making it any less Biblical. For the Bible itself is not an orthodox book in regard to its own infallibility. Not to make the book teach anything but Orthodoxy, in the phrase of Dr. Ellis, but to make it teach Orthodoxy, is, when it comes to this, the difficult, the impossible thing. Certainly, it would seem that an infallible Bible should come to us avowing its infallibility either as a whole or in its separate parts. The Bible comes to us neither avowing nor suggesting its infallibility or its supernaturalness as a whole or in its separate parts. It comes to us explicitly and implicitly as a human book, liable to such errors as were incidental to the human mind in a period of general ignorance and superstition. Here is an immense deduction from the truth of Dr. Ellis's declaration that the Bible is an orthodox book.

And how is it in regard to this matter of the so-called "Christian Sabbath," concerning which we have unusual reasons to be thoughtful at the present time? Why, here again, not to make the Bible anything but orthodox, but to make it orthodox by any honorable device, is the difficult, the impossible thing. The only Christian Sabbath in the Bible is the Jewish Sabbath observed by Jewish Christians, not on Sunday, but on Saturday, from the observance of which the Apostle Paul discharged his Gentile followers. This Christian Sabbath died out in the course of two or three centuries with Jewish Christianity. It had nothing to do with the Christian Sunday, which was observed side by side with it for two centuries. This was a joyous day from the beginning, a working day till 538 A.D., a day of pleasure equally with a day of worship till the English Puritans got hold of it. Who does not know that Knox found Calvin playing nine-pins Sunday afternoon, and doubtless took a hand? The so-called Christian Sabbath is rightly called the Puritan Sunday. It is an essential part of Orthodoxy, but it has not an inch of standing-room in the New Testament. The saying of Jesus, "The Sabbath was made for man, not man for the Sabbath," has done excellent service against the Puritan Sunday; but the service has been quite illogical. Of Sunday, as a day of religious observance, Jesus had no knowledge whatsoever; and any argument from the Jewish Sabbath of which he was speaking to the Christian Sunday lacks the connecting link of their historical identity.

It would appear then that the grand result is much more in keeping with Dr. Ellis's second statement than with his first: "If we allow the character and estimate which Orthodoxy assigns to the letter of Scripture, we must admit that it finds there *some warrant for its system.*" This was his second statement, and to this we can assent. His original statement was that the Bible "is an orthodox book. It yields the orthodox creed. . . . Only that kind of ingenious, special, . . . forced treatment it has received from Liberals can make it teach anything but Orthodoxy." To this statement, we cannot assent. The Bible, even when regarded as infallible as a whole and in all its contents, does not yield the orthodox creed. It does not yield the Trinity. It does not yield the Deity of Christ. It does not yield its own infallibility. It does not yield "the Christian Sabbath,"—the Puritan Sunday. It does not yield the depravity of human nature, or election and reprobation, or even vicarious atonement, in a perfectly definite and satisfactory manner. It yields these things to those who take what suits their purpose and shut their eyes to all the rest, as it yields something different to those who seek for something different and shut *their* eyes to all *they* do not want. But if the Bible does not yield the orthodox creed, as it does not by any means, it is still true that Orthodoxy "finds there some warrant for its system,"—some, but not much; the most for that which it has least desire to keep,—the doctrine of an everlasting hell. For Dr. Ellis's statement, "The liberal contestants were worsted" in the Unitarian controversy, we are obliged to substitute something like this: The result of the controversy was a drawn battle; but the liberal contestants withdrew in much better order and condition than their opponents, much of whose theological baggage they effectually destroyed.

But it is high time for us to move the previous question, the question to which Dr. Ellis's essay was in the main addressed, and to which his paragraph about the Orthodoxy of the Bible was purely incidental. This previous question is, And what if the Bible is an orthodox book, what if it does yield the orthodox creed, so long as it is regarded as infallible as a whole and in all its parts? seeing that it can be no longer so regarded in a straightforward, simple sense, by any decently instructed person.

President Eliot, in a brief address which followed Dr. Ellis's, said this, with many other memorable things: "The main difficulty with the clerical profession to-day is that few men of business or of science think that ministers are perfectly candid." Are the clergy laboring under an unjust suspicion?

Digitized by Google

Was never one more just. If the men of business and of science were better acquainted with the conditions of the Bible problem, they would know that hundreds and thousands of ministers are not candid. For such are the conditions of this problem that it is impossible for any decently instructed man to-day honestly to maintain the infallibility of the Bible as a whole or in any of its separate parts, and not merely its infallibility, but in any proper sense its special inspiration. All that we know about the origin of its constituent parts, which is but little, and all that we do not know, which is infinitely more, conspire to shame the immorality that dares ascribe a supernatural origin to its collective mass. When or where or by whom the books of the Bible were written, we are, in the majority of cases, wholly ignorant. To ascribe to these a supernatural origin and divine authority is manifestly outrageous, the more evidently so as we can trace the process by which these writings from being at first regarded as purely human came to be thought divine, and know how little wisdom was involved in it, and how little conscience, too. And, as for those books of the Bible of whose origin and authorship we are less ignorant, there is nothing that we know that breeds the faintest odor of suspicion in an intelligent and thoughtful mind that they are not purely human, and, as human, fallible, imperfect, and provisional. The amount of knowledge that these things are so is out of all proportion to the amount of open avowal. "Perhaps there never was a volume," says the editor of the *Christian Register*, "which, notwithstanding its moral purport, has been read with more intellectual dishonesty than the Bible. . . . Every form of mental jugglery and mental gymnastic has been resorted to in studying the book." But it may well be doubted whether at any time in all its history the Bible has been the innocent occasion—may we not say the victim?—of so much dishonesty as at the present time. How not to say it, this is the problem of the hour. Knowing that the Bible is not infallible, is not supernatural, is not "the Word of God," is in no special sense a revelation,—how to keep up the appearance of infallibility, the supernatural, and so on, how to own up and not seem to own up, how to surrender everything and not seem to surrender anything,—these are the labors and anxieties that are engaging the enthusiasm and devotion of many Christian teachers at the present time. Yes, we *may* say The Bible is the victim of these methods. Take it for what it is, and it abounds in high and gracious sentiments, in grand and noble thoughts, in pure and holy life, that should endear it to all earnest men for countless generations. But the insane desire to maintain for it a fictitious value is destructive of men's natural reverence and admiration.

Little enough occasion have the Orthodox for their happy twittering over the concession made by Dr. Ellis,—namely, that the Bible as traditionally estimated and interpreted is an orthodox book,—seeing that both the estimate and the interpretation have been ground to powder by the mills of scientific thought. The hour cometh and now is, when, for the intelligent and well-instructed man, a doctrine is as little to be accepted, be it the doctrine of the Trinity, of the atonement, of an everlasting hell, because it is in the Bible as because it is in the Vedas or the Avesta or the Buddist Tripitka or the Mohammedan Qurán. Not that the tendency of our fuller knowledge is to assign an equal value to these Scriptures with the Bible, but only that it is to assign such a value to the Bible that no statement it contains of fact or doctrine can be specially commended to our belief because the Bible contains it. Indeed, such were the circumstances under which the Bible came into existence that the presumption is against the truth of its contents in most particulars, and certainly we are under no constraint to accept one word that it contains which is not harmonious with reason, common sense, and moral principle.

Let us rejoice together that these things are so. Let us demand that those who know these things and say them not shall speak out boldly, that their trumpet shall give no uncertain sound. Think what an amount of intellectual force which has for centuries been braiding ropes of sand, trying to reconcile things that cannot be reconciled, will be liberated by this act of spiritual emancipation! No more fruitless endeavors to get Darwinism out of Genesis, or some pleasant meaning out of the tremendous phrases of he New Testament concerning the unquenchable fire! How sad all this has been, but how inevitable too! Now, God be praised that we are living in the dawn of better things!

THOMAS PAINE.

From an Address by B. F. Underwood.

The man who had defied the British monarch, and called upon the feeble colonies of America to rise in rebellion against the mightiest government on earth, was not to be deterred from giving to the world any opinions that he thought would make mankind better and happier. He could face the prejudice, bigotry, and hatred of the multitude in exposing their superstitions as courageously as he had attacked the pretensions of kings and asserted the sovereignty of the people. With a disinterestedness never surpassed and rarely equalled, he bequeathed as his last gift to the world his thoughts on religion, knowing that his motives would be impugned and his name covered with reproach by the millions from whom he had received such signal honors for his great and acknowledged services in the cause of political freedom.

Paine's fidelity to himself and his continued devotion to humanity cost him his good name. From the time the *Age of Reason* appeared, the author became an object of aversion, hatred, and slander. His great services in the cause of popular government were ignored or disparaged, or, if admitted, the purity of his motives was denied. Most of the old companions, from fear of losing their own popularity, forsook him. Unfounded falsehoods were circulated respecting him. The clergy painted him as a hideous monster. And when death came, and the grave had received him, his memory was insulted, and he was represented to the multitude as a depraved wretch who, dying,

"Left behind
A name linked to no virtue, but a thousand crimes."

And because he wrote the *Age of Reason*, giving to mankind his honest thoughts on religion, the Christian world is still unwilling to do him justice, to give him even his meed of praise as a Revolutionary and pre-Revolutionary writer. His name is rarely mentioned in our Fourth of July addresses. The books used in our schools for exercises in reading and declamation, which contain extracts from the addresses and writings of the other prominent actors in the Revolutionary drama, have no paragraphs from Paine, although *Common Sense*, the *Crisis*, and *Rights of Man* abound in beautiful, brilliant passages, inculcating lessons of loftiest patriotism. His portrait was not long ago denied a place among those of his compatriots that adorn the walls of Independence Hall in Philadelphia, the very city in which he wrote his *Common Sense*, the work which "led the people," as Samuel Adams says, "to call loudly for independence." Our orthodox literature still uses its influence to conceal the merits and blacken the character of Paine. Thousands of tracts are in circulation, intended for the ignorant and credulous, that repeat the stale falsehoods about his life and death. The orthodox clergy, to diminish the influence of his works, still disparage and vilify him; while the great mass of Christians are yet accustomed to regard him as a blasphemous scoffer, a vulgar, profane writer, and a moral monster, whose life was one continued career of drunkenness and debauchery, and whose death was one of unutterable terror, made so by the remorse which filled his guilty soul and a glimpse of the fate he saw awaiting him beyond the grave. . . .

It was the power, directness, and irresistible logic with which Paine attacked revelation that caused the influence of his work to be dreaded and himself to be so bitterly assailed. He examined the Bible with the same fearless spirit with which he had examined the English Constitution; and he exposed its errors and absurdities, and refuted its claims to a superhuman origin, in the same clear, concise, and forcible style that had proved so effective in his attacks on monarchical government and the pretensions of kings. He took the arguments which had been confined chiefly to the learned, which had been used by those who, like Collins and Bolingbroke, had written for the educated class, and made them, by the simplicity of his language and the clearness of his illustrations, easily understood by the common reader. Writers more learned had preceded him in the same field, but none who possessed the same happy faculty of engaging the attention, exciting the interest, and convincing the understanding of all classes alike.

Paine had studied the Bible carefully, and was familiar with every part of it, let the clergy say what they will. He produced a work which contains arguments that are among the strongest that can be brought against the divine origin and authority of the Bible. Modern research and modern scholarship have added arguments to those which he employed: the scientific discoveries of the past fifty years have put into the hands of the free thinker new weapons with which Paine was unacquainted; but it may be safely said that the reasons he adduced against revelation are among those which to-day are regarded as the strongest that can be urged from the theistic stand-point. It is to me surprising that a work written nearly a century ago, and by one whose mind was so busily and earnestly engaged in other fields of labor, should be so free from errors, have so few inconclusive arguments, and so little to which free thinkers to-day can take exception.

It is true that Paine lacked a university education, and was acquainted with neither Hebrew nor Greek; but he wrote for the many and not for the few, and appealed to the understanding rather than to the learning of his readers. He founded his arguments on common sense, which is confined to no language, and not on philological interpretations, concerning which but a few are competent to form an opinion. He could not have written a work better adapted to the effect intended, had he been familiar with all the languages of antiquity.

Several attempts were made to answer the *Age of Reason*, but they were so unsatisfactory to the friends of Christianity that their circulation was discouraged. I have seen two of these old works, one written by a clergyman of Newport, R.I., and the other by a clergyman who lived in the State of New Jersey. They are learned and theological, prosy and prolix. I should think they would have the effect, if read, that Benjamin Franklin tells us resulted from the perusal by him of certain works against "infidelity," which, by acquainting him with the arguments of the authors referred to, confirmed him in his position as a Deist. Of all the answers to Paine, the only one known to this generation is Watson's *Apology*. That is not regarded as a very valuable work for circulation. An orthodox Christian would hardly be willing to have Paine's *Age of Reason* and Watson's *Apology* bound in one volume, and generally read. Liberal publishers have circulated them in this manner.

As a *writer*, Thomas Paine undoubtedly deserves to rank among the ablest in our language. We are familiar with the saying of a witty Frenchman, "The object of language is to *conceal* our thoughts."

Paine was ignorant of the art of writing so as to *conceal* his real thoughts. Every sentence from his pen was stamped with his intense individuality, and luminous with the light of his own mind. Aristotle says, "He who would be a teacher must think as wise people do, but speak as the common people do." The thoughts of Paine were those of a sagacious and profound mind. He gave these thoughts to the world in a style peculiarly his own, so plain and lucid, so terse and vigorous, that a child can grasp his meaning, while there are but few men who can pursue his works without profit. In the simplicity of his style, as Jefferson remarks, he resembles Franklin; but his style is more nervous and vigorous than that of the great philosopher. There is truth in the statement of Croly, the author of the *Life of George the Fourth* who says, "Paine, like a young Spartan warrior, went into the field stripped to the last thread of prudent, conventional disguise, and thus not only fixed the gaze of men upon his intrepid singularity, but exhibited the vigor of his faculties in full play." He uses but few embellishments, but he never lacks for a happy illustration with which to convey the full force of his thought. All his works abound in passages full of compact thoughts beautifully and elegantly expressed. There are few, if any, writers whose works contain more noble, generous sentiments. He used wit and sarcasm freely; but to his credit it must be said he never used these weapons against any person or principle, unless he thought they were opposed to the interest of the people. Some who have paid a high tribute to Paine as a political writer have condemned him for the use of irony and sarcasm in the *Age of Reason*. But it should be remembered that *Common Sense* and *Rights of Man* are works in which these weapons are as freely used as in his religious writings; and, since he believed the dogmas of Christianity to be as false and pernicious as the preten-

Digitized by Google

sions of kings and the principles of monarchy, he cannot be censured consistently for ridiculing the story of Jonah and the whale, when the sarcasms he hurled against the titled nobility of England are unqualifiedly indorsed.

Paine's views on the subject of religion were mild, compared with the radical views of the majority of those who honor his memory and celebrate his birthday. "I believe," he wrote, "in one God and no more, and hope for happiness beyond this life. And I believe that religious duties consist in doing justice, loving mercy, and endeavoring to make our fellow-creatures happy."

One object he had in giving the *Age of Reason* to the world—the first part of it—was to fix in the French mind, then agitated by revolution and in hostility to the corrupt religious system which had robbed and enslaved the people, a firm belief in a Supreme Creator of infinite power and perfection. He regarded this belief as necessary to a correct system of morality. Paine's "Address to the Theophilanthropists" is a defence of the existence of a God; and the arguments therein employed are as conclusive, probably, as any that can be used.

To-day, thousands who, owing to their early education, feel uneasy when the name of Thomas Paine is mentioned, and who are considered and call themselves Christians, hold opinions substantially the same as those expressed in the *Age of Reason*. They have outgrown the errors which Paine assailed, while they are yet influenced in their unjust estimate of his character and writings by the misrepresentations and slanders which his criticisms called forth, and which have been preserved and handed down to these times.

Paine was a self-made man. He most emphatically achieved greatness. He inherited no ancestral name, and could claim neither wealth nor distinction by birthright. He was not suddenly pushed into a position of honor, nor was a reputation made for him by his friends. He started in life with no other resources than a clear head and a brave heart. With these, he carved out his own fortune. He organized victory out of his own subjective forces.

The son of a Thetford stay-maker, born poor in a land of titled nobility, he rose by his own efforts to distinction; helped establish the freest and most magnificent republic that ever existed; wrote his name in large letters in two of the first nations of Europe; associated his name permanently with the progress of republican principles, and found time besides to perform a work in the cause of free thought of incalculable value, for which free thinkers in every land whose shores are washed by the Atlantic have celebrated the day that gave him birth and recalled the story of his life. . . . The world will yet do him justice. "History," to use the words of a Review, "issues no sentences that history may not reverse. Time fights the battles of truth,—an unimpassioned and unwearied ally. Every hour there are new evidences brought forward, mysteries unravelled, and reputations restored." Men will wonder in the future at the ingratitude that has been shown Paine, and will respect and honor him for his worth the more because so great a wrong has been done him.

THE PHILOSOPHY OF EMERSON.

Extract from a Paper on Emerson read before a Social Club in this Vicinity, in 1881.

Emerson is a persistent optimist. He has not a drop of pessimistic blood in his veins. He preaches everywhere, and at all times, the doctrine of sunshine and hope. All his utterances are overflowing with joy and gladness,—"I am the lover of uncontained and immortal beauty,"—and says with Browning, "How good is our life here, mere living!" He begins his famous "Senior Class Address," that performance which caused such a rattling of the dry bones of theology among the divinity professors, with this strain of delight: "In this refulgent summer, it has been a luxury to draw the breath of life. The grass grows, the buds burst, the meadow is spotted with fire and gold in the tint of flowers. The air is full of birds, and sweet with the breath of the pine, the balm of Gilead, and the new hay. The mystery of nature was never displayed more happily. The corn and the wine have been freely dealt to all creatures, and the never-broken silence with which the old bounty goes forward has not yielded yet one word of explanation." His little book *Nature* is overrunning with this abounding joy. "Almost I fear to think how glad I am." This was uttered not after he had made a lucky strike in "San Pedro" or "Atchison and Topeka," but when, "crossing a bare common, in snow puddles, at twilight, under a clouded sky, without having in his thoughts any occurrence of special good fortune," under these negative conditions it was that he had "enjoyed a perfect exhilaration."

"I have seen the spectacle of morning from the hilltop over against my house, from daybreak to sunrise, with emotions which an angel might share. The long, slender bars of cloud float like fishes in the sea of crimson light. From the earth as a shore, I look out into that silent sea. I seem to partake its rapid transformations: the active enchantment reaches my dust, and I dilate and conspire with the morning wind. Give me health and a day, and I will make the pomp of emperors ridiculous." Not only is his optimism thus forcibly emphasized, but he denounces its opposite, pessimism: "A Schopenhauer with logic and learning and wit, teaching that this is the worst of all possible worlds, and inferring that sleep is better than waking, and death than sleep,—all the talent in the world cannot save him from being odious; a low hopeless spirit puts out the eyes; a philosophy which sees only the worst, believes neither in virtue nor in genius, dispirits us: the sky shuts down before us. Don't hang a dismal picture on the wall, and do not daub with sables and gloom in your conversation. Don't be a cynic and disconsolate preacher."

As his first work was entitled *Nature*, so this has been the key-word, as it were, of his whole long life. He has iterated and reiterated it early and late, throughout all his writings. If a concordance were made of his works, one would find this word "nature" occurring about as often as the word "love" occurs in Shakspere's Concordance. This word with him takes on an anthropomorphic quality, and becomes in his treatment of it almost an individual, with human virtues and frailties, and hence the flavor of pantheism in many passages in his writings, as where he says, "Matter is a phenomenon, not a substance," "That nothing is of us, or our works, that all is of God." Rev. J. B. Manning devoted a lecture to Emerson,—one of a course on Pantheism,—in which he ranks him as a disciple of Spinoza. But this did not disturb Emerson: he has never replied to any criticisms, but always preserved an absolute and Sphinx-like silence, as to any unfavorable remarks from whatever quarter they may have come. When asked if some of his writings did not betray a pantheistic tendency, the only reply was, "Well, Pantheism is a grand word." "The happiest man," he says, "is he who learns from nature the lesson of worship." "The ardors of piety agree at last with the coldest scepticism." The evangelical world has rather looked askance on this Western luminary, not knowing exactly how to compute its orbit. The Rev. George Gilfillan brands him as a sceptic, and charges him with having personally and by name insulted the Lord Jesus Christ. His telescope was not achromatic, and his verdict is worthless. Emerson's philosophy of life is set in the minor key. He hates ostentation, pretension, publicity, display. He tells us to seek the shade, and find wisdom in neglect; to be content with a little light, so it be our own.

> "Nor mount nor dive, all good things keep
> The midway of the eternal deep."

He prefers his slippers and old coat and homelike comforts to fashionable outfits and modern exactions.

All this is in the spirit of Agur's prayer, "Give me neither poverty nor riches." He accepts with his whole heart the philosophy of Carlyle's "Night Moth," "common joys and vulgar fate." Another characteristic is his lifting the curtain from the common and ordinary, and showing the divinities sitting masked within our cottage walls, and that "the gods come in low disguises." Emerson exhibits a noble simplicity in his intercourse with others. He greets the child or the poor illiterate workman with the same deference and consideration that he would observe toward the Earl of Beaconsfield or the Prince of Wales. His daily conversation and table-talk is as rich and fruitful as are his finished writings. He is original, kind, cordial, hospitable in his daily intercourse with others, and does not reserve those humanities for print exclusively. Emerson anticipated Darwin. Evolution and the survival of the fittest is to be found in his writings. In geology, he is one with Lyell; and he thus illustrates the transmutation of the material into the spiritual: "The bread man eats is first strength, and animal spirits; it becomes, in higher laboratories, imagery and thought; and, in still higher results, courage and endurance."

Lest you may think me too laudatory in my estimate of Emerson, I will admit that he has his limitations and shortcomings. In his essay on Books, I think him extravagant in his praise of such authors as Plotinus, Porphyry, Synesius, and Jamblichus, whom he warmly recommends as authorities for young men to study. Life is too short to devote much of it to these old sages. The *Sunday Herald* is really much more to our purpose in this nineteenth century. This going back to those old Greeks for mental pabulum is like travelling in their old war-chariots,—more classical perhaps, but very uncomfortable. I prefer a Pullman or the smoking-car. His recommending those ancient authors in preference to the modern is strangely in contradiction to his customary advice, for he strenuously insists on our living in the *here* and the *now*: "Do not foolishly ask of the inscrutable, obliterated past what it cannot tell, but ask it of the enveloping *now*." I am sorry to say that Emerson is not a Malthusian. He denounces Malthus, and utters this nonsense, that "population increases in the ratio of morality." What has morality to do with the fecundity of the Irish potatoe-eater or the Oriental rice-gorger? Elsewhere, he seems to reverse this judgment; for he says: "The worst of charity is, that the lives you are asked to preserve are not worth preserving. Masses! the calamity is the masses. I do not wish any mass at all, but honest men only, lovely, sweet, accomplished women only, and no shovel-handed, narrow-brained, gin-drinking stockingers or lazzaroni. If government knew how, I should like to see it *check*, not multiply the population."

Old father Malthus would jump with delight at these sentiments, kiss him on both cheeks, slap him on his back, and say, Give us your hand, old boy. You are on the high road to my arithmetical and geometrical progression, and you will soon arrive to my three checks, moral restraint, vice, and misery. But I feel it is presumptuous to sit in judgment on Emerson, to point out any shortcomings, which, after all, are but spots on the sun of his transcendent brightness.

> "Even the source and fount of day
> Is dashed with wandering isles of night,"

and one may certainly overlook in Emerson a few of these "wandering isles."

A thousand years from now or ten thousand, Boston will be remembered not for its historical record,—the destruction of British tea in its harbor, the State Street massacre, nor for its Frog Pond, nor the Great Organ, nor the Chestnut Street Club, nor Joe Cook's Monday lectures,—but for having been the birthplace of Ralph Waldo Emerson.

CORRESPONDENCE.

STATE AND CHURCH AND THE PREACHERS.

Editors of The Index:—

I have waited patiently for some one other than myself to note the sermon upon Church and State matters delivered by Dr. Tiffany in Philadelphia, at the opening of the Bi-Centennial season. Aside from my own brief record in another quarter, the event has seemingly been forgotten with the host of less-deserving occurrences of the hour. Yet the words are worthy of resuscitation. The public forgetfulness may in its humor indicate the small importance of an event that well impressed my individual mind, and I would be the last to deny this; but it may happen—and this may be one of those chances—that treasures well worth saving escape us amid the rubbish of a day, and that after-burrowing in the discarded material may bring its good reward. As no one else seems disposed to credit Tiffany, I shall make due statement for him. In orthodox circles, small praise rises to his effort. The orthodox sentiment was more apt to speak for separation of Church and State before its creed became strong and fashionable. The inclination still sits on men's lips, but has small place in their hearts. Consequently, radicals more naturally than conservatives catch at the significance of such a discourse as Dr. Tiffany's.

I have no suspicion that the intellectual side of the preacher's deliverance was powerful. I remark, chiefly, *health*. Above all, in such an atmosphere as a modern clergyman breathes, a frequent entrance of ruddy blood is necessary. No matter for *furore*, nor for the trembling of conventional lips. Give the body

Digitized by Google

pure air. For such as it is, reanimate the poor soul. Every witness of a vitiated creed pours out such hopes in its behalf. As long as errors must remain in influence, let their purpose be the best that error possibly can subserve.

As strong words where weak words are common, Dr. Tiffany's sermon carried weighty testimony. At a time when so many of his profession assume the reactionary or the neutral (*i.e.*, the sneaking) side of the question, this eloquent voice rises high in the midst of the old school with its admonition that somebody not very far from the speaker in other points of creed has failed to read history to its deeper promptings.

Dr. Tiffany spoke with the warmth and passion of an earnest man. His survey of old times was free of all offensive pietism, and full of all essential impartiality. It rang in my ears as an inspiration of Christian radicalism. Abbot could on few points have broken better ground. The training of an out-and-out secularist seems to lead the way to liberal ideas, while the breeding of a clergyman in this century seems to turn its back upon the finer tendencies of the time. Perhaps that is the reason why a word not significant from a radical becomes a sign to the hungering world, when a conservative utters it. If I had consented to bar out an incidental extravaganza upon Jesus on the speaker's part, I could easily have imagined myself a listener to a secularist exorcism; and even though I was a reflecting auditor, and safe from vain imaginings, my feelings were mixed of surprise, admiration, and congratulation. I looked upon the silked and satined audience as in a degree necessary converts to the ideas. To the extent that each was provoked to thinking, each was provoked to adoption.

The preacher's main positions were in line with those of the radical agitation. He saw and pointed out the evils attendant upon former unions of Church and State, indicated their reason and inevitability, and declared strikingly, with a great deal of force and point, and as if to give the idea—the shadow, somewhat, of a fear—the central weight of his position, that, if God and the Bible can be put in the Constitution by a vote, they can be taken out by a vote. Thus, little of the legitimate argument of the secularist remains unaccepted by this clergyman. The ultimate stand, it is to be seen, was not taken, though it was not negatived. Only by indirection can his remarks have been construed into anything like compromise. I looked for an avowal of belief, not alone in separation for the sake of Christian and theistic liberty, but for the broadest forms, as it might be, of agnostic or atheistic sentiment. This I did not hear; nor, it is fair to say, did I hear it denied. The most liberal concession usual from Orthodoxy is of liberty to worship God as you choose. Little is conceded to him who has no wish to worship God at all. The preacher, I had hoped, would break from the common stand here, as on other phases; but he failed to do so. It is possible that, even with his bold speech, the end of his thought has not yet found utterance.

That Dr. Tiffany added to his previous statements the assumption that Christianity is able to sustain itself minus governmental support, and that this is a Christian nation all the more positively because not constitutionally designated as such seems natural, and, in consistency, urged upon him. His religious affiliations would not have accepted less. To have failed in the avowal would have shown a failure to think in consonance with the imperative creed of the Church. No one suspects him of such a coming-out. Warrant alone we have to this extent: that here is a man who, though thoroughly orthodox, is not so orthodox as not to take some good part in the liberal thoughts of the age. It has been frequently noticed that he prefers a practical sermon upon a live subject to dogmatic studies on worn topics. That he falls in with this way, and sometimes locks horns with an older, decaying Christian thought, does not identify him with any but the more liberal shades of the orthodox belief. I welcome him not as a heretic, but as a healthful conservative. We may believe possibly that, with him, Methodism once again shows a capacity to rise above the designs of the more ritualistic persuasions. It is to be left to Presbyterianism and Episcopalianism to furnish the reform party's chief motive, such as it may be.

The future will show one thing,—that much now deemed the function of the State will be taken from the State, as not in its province; and much now the monopoly, for instance, of corporations, will be made subject to governmental management. Among the former surrenders will come first all meddlesomeness—to the most indirect—in what concerns conscience. Not a small portion of this once stupendous tyranny has already disappeared. The rest must go the path of the ghost that fathered it.

HORACE L. TRAUBEL.

THE CREEDS OF AGNOSTICISM.

Editors of The Index:—

As far as time permits, I would be very brief in reply. I would simply ask Mr. W. to point out the passage in which I define Agnosticism in any such way as he would have it,—*i.e.*, "Agnosticism being defined as that doctrine which, professing ignorance, neither asserts nor denies." That primer-like definition, at present so much in vogue among Agnostics, which asserts that "the Agnostic is one who neither affirms nor denies anything," has little to commend itself, except its general simplicity. Again, I am averse to explain my own arguments, preferring they should explain themselves. I would state, however, for the sake of Mr. W., that one thing I tried to show in the article was that Agnosticism had not been consistent,—that is to say, there is a subtle blending of pantheistic and materialistic opinions that has become incorporated almost unwittingly into Agnosticism. When that master Agnostic, Herbert Spencer, defines explicitly a religious creed, and, after a most elaborate argument, comes to the conclusion that the Power which the universe manifests to us is utterly inscrutable, I fail to see wherein Spencer or my own absurdity consists. Mr. Wetherell has the high privilege, if he pleases, of holding otherwise.

V.

A QUERY: BIGAMY AND POLYGAMY.

Editors of The Index:—

Mr. Fiske's admirable speech on evolution and religion has been published as a tract by the Free Religious Association; and I hope it will be widely circulated, for it contains the central truth on this subject expressed in the most concise and clear language.

One sentence in it, however, suggests an inquiry in regard to the use of the word "bigamy," which seems to me important. He says, "The Turk, who sees no wrong in bigamy, would shrink from the sin of eating pork." While there may be etymological authority for using bigamy in this sense, does it give a correct impression? Does not the common use of the term "bigamy" imply a second marriage made in defiance of the law of the State prohibiting such marriages, and generally having also the element of concealment in it, the second wife being unconscious of the existence of the first or the reverse?

Should not polygamy have been the word used by Mr. Fiske? We entirely agree with the condemnation of polygamy as a social system, on every ground of morals; but is there not an ethical discussion between a polygamist, who acts openly in conformity with the law of his State and his church, and the bigamist, who secretly defies both?

I have seen this confusion of terms in other writings, and a clear definition may be of practical importance.

E. D. C.

BOOK NOTICES.

GEORGE RIPLEY. By Octavius Brooks Frothingham. Steel portrait. Boston: Houghton, Mifflin & Co. 1882. Price $1.25.

The lives of men of letters and of statesmen are parts of the veritable scripture through which humanity reveals all that we can know of divinity. When thinkers shall get rid of slavery to traditionally sacred relics of the Hebrew and Christian origins, wisely scan all such records of the past according to their worth, and go forward from the sadly defective beginnings along all the lines of good literature and all the paths of great doing and rare experience, they will find far more and far richer scripture than can be made by taking our Bible as exceptionally inspired and divine. Christendom is not one-tenth so rich, nor is Christianity one-tenth so large in history and so strong in the world, as would have been the case, if religious study had looked widely beyond the old sacred books into the great book of advancing humanity for revelations of truth. Happily, the old idea and the old way are passing away; and, in proportion as men love truth and are loyal to noble ideals, they employ the liberty of open vision, and count no page of the record of humanity common or unclean. For half a century, freedom and culture, in America especially, have been preparing the way of this broad humanity in religion, and nowhere more conspicuously than on that side of New England religion occupied by Unitarianism, and in that quarter of Unitarianism from which open gates have led out of Church and creed into literature and humane work of every sort. There have been preachers at these open gates, as well as leaders of thought and study, who could not stay in the pulpit,—Parker and Frothingham, as well as Ripley and Emerson. One of these preachers has given us a life of one of these leaders who exchanged the pulpit for humane work and for literature, and made his chief name as a man of letters. O. B. Frothingham, who knows every step of the advanced freedom and culture of our time, has written for the series of "American Men of Letters" the *Life of George Ripley*, who was, from now fifty years since, second to no other, not even Emerson, in large and clear intelligence of the free essentials of rational religion. It need not be said that Mr. Frothingham has executed his task with a touch equally sure and delicate. Art and taste, as well as biography, are his debtors for the fine quality of the story which he has given of the varied life and experience of Mr. Ripley. It is a story to be read of all thoughtful people with tender interest. It is a fragment of real scripture. The early public life of Mr. Ripley as a Unitarian minister is recovered in a very interesting sketch, to which no one could have done better justice than Mr. Frothingham, himself the son of a Boston Unitarian minister, and initiated from the first in letters and art, in piety and pure devotion, and in every walk of humane culture. Mr. Ripley started with the palmy days of Unitarianism. He was ordained Nov. 8, 1826, and remained in the pulpit until March 28, 1841, when he altogether ceased to be a minister. "To the end of his days," however, says Mr. Frothingham, "Mr. Ripley looked back on it with tender interest. At Brook Farm, he enjoyed the singing of the familiar hymn-tunes of the old service. In New York, it was his habit, until infirmity prevented, to attend religious worship. He clung to sacred associations, deplored the tendency to make religious observances secular by substituting halls for meeting-houses and lectures for sermons, and held in high esteem the earnest prophets of the soul."

As a member of Mr. Frothingham's society in New York, Mr. Ripley kept the faith more than his pastor did. The latter says: "He was in no sense or degree a materialist; and, though connecting himself with an independent society of a decidedly radical school, he held fast his faith in beliefs which his minister dismissed. His appeal was still to consciousness of the soul. Of doctrines he had little to say, being content to see them change and pass away; but the substance of spiritual conviction he retained to the last."

Mr. Ripley followed Dr. Channing on that side of his mind which led him to say, "We believe that the human mind is akin to that intellectual energy which gave birth to nature, and, consequently, that it contains within itself the seminal and prolific principles from which nature sprung." In a sermon of 1834, says Mr. Frothingham, Mr. Ripley "contended that the history of man is a religious history; that religious truths always have existed; that 'the religious ideas set forth by Christ, as they had been displayed before in other forms, still exert an efficient influence on the soul of man'; and that, in their essential form, they will never cease to influence human souls."

We must send our readers to the book itself for the story of a life which represents, as few others can, the healthy advance of our time and the broad expansion which culture has taken under the best influences of the modern spirit.

PHYLLIS BROWNE. By Flora L. Shaw, author of *Castle Blair* and *Hector*. Boston: Roberts Brothers.

The author's name will recommend this book sufficiently to those who are acquainted with *Castle Blair* and *Hector*. In interest and charm, it does not fall below the average quality of those charming books, for, if it is not quite up to the mark of *Castle Blair*, it is a little above that of *Hector*. It is more directly addressed to the juvenile mind than the last-named story. It shows, however, the same power which that and *Castle Blair* evinced of creating ideal forms of boyhood and girlhood that are full of interest and fascination. We have here goodness without goodiness.

Digitized by Google

We have the virtues of truth and courage and obedience inculcated without wordy declamation. Some of the situations in the book are more sensational than we could wish, but the general tone and spirit are all that any reasonable child or parent could desire.

FIRST ANNUAL REPORT OF THE TRUSTEES OF THE PERKINS INSTITUTION OF MASSACHUSETTS for the year ending 1882.

This is a pamphlet of 137 pages, containing the annual report of the trustees upon the affairs of the institution above named, together with an account of the celebration of the semi-centennial anniversary prepared by the committee in charge of the arrangements of the festival, and other documents relating to the progress and conduct of the establishment. We are pleased to observe by this report that the school has maintained its usual high standard of usefulness during the year, and that its prosperity is undiminished.

THE *Catholic World* for February is quite up to its usual high standard of ability. Rev. A. F. Hewit writes on "The Eschatology of Origen," whose character, he says, notwithstanding all suspicions regarding him, "has been rehabilitated in such a way that he must now and ever hereafter be ranked among the orthodox Fathers of the Church." "The School Grievance and its Remedy," by Rev. Walter Elliott, presents the objections of Catholics to our public schools. The writer says: "If some citizens wish to maintain schools exclusively secular, let the State help them. If other citizens wish to have denominational schools, let the State help them also; and let the State aid in every case be in proportion to the numbers benefited and the success obtained in such instruction as the State judges necessary to form good citizens." The other articles are "Ancient Art and Modern Thought," by Rev. H. J. Heuser; "Among our Diplomats," by John MacCarthy; "Daylight at Last," by Christine Faber; "Sir Thomas More and his Times," by S. Hubert Burke; "The Anti-Catholic Spirit of Certain Writers," by Eugene L. Didier; "Out of the West, III.," by Henrietta M. K. Brownell; "A London Literary Pilgrimage," by A. J. Faust, Ph.D. Among the book notices is one from which the following sentences, referring to the Herbert Spencer banquet, are taken: "Since the Word has been made flesh, it requires no little audacity to write and to publish in a Christian community, in the year of our Lord 1882, that God is the 'Unknowable.' And, in a Christian society, to feast this man and to assemble men of note, many of whom profess to be Christians,—to do this thing is the sublimity of audacity." "Thank Heaven there is not a name of even a nominal Catholic appended to this graceless banquet, where professed Christians were misled, by a badly misunderstood courtesy to their guests, to the shameless betrayal of Christianity."

THE *Atlantic Monthly* for January devotes twenty-six pages to the second part of Longfellow's posthumous poem, "Michael Angelo." It contains also the concluding part of Hawthorne's "Ancestral Footstep"; Prof. E. R. Sill criticises "Herbert Spencer's Theory of Education"; G. E. Woodberry in an essay reviews the genius and character of "Walter Savage Landor"; Marie Louise Henry discourses on "The Morality of Thackeray and George Eliot," finding in the works of both a tone of sadness and discouragement; Richard Grant White gives his reasons for thinking that Shakspere's ideal Rosalind has never been truthfully represented by any of the modern "Stage Rosalinds"; Henry L. Nelson relates interestingly "Some Truths about the Civil Service"; S. E. Turner tells "The Story of Joseph Lesurques," a tragic story of mistaken identity; Bradford Torrey shows that he has made excellent use of his eyes when "With the Birds on Boston Common"; H. H. gives us some of the impressions received while at "Puget Sound"; "Lityerses and the Reapers" is the title of a fine poem by Edith M. Thomas; there are short poems by S. M. Spaulding and E. F. Durkee. The books reviewed at length are *Dr. Rimmer*, Linton's *History of Wood Engraving*, *George Sand's Letters*, M. de Bacourt's *Souvenirs*, and *Selections from the Poetry of Robert Herrick*.

THE February number of *Our Little Ones* is bright and charming as usual, and its illustrations are even above the usual high standard. Among these, "A Stormy Day," "Where," "How much longer must I wait?" and "Coasting" are the most beautiful.

PERSONAL ITEMS.

THE Rev. R. Heber Newton's seven sermons on "Right and Wrong Uses of the Bible" will be published in Lovell's Library.

GABRIELLE GREELEY, daughter of Horace Greeley, has recently given a building site to the Episcopal Church at Chappaqua, N.Y.

CROWN PRINCE FREDERICK WILLIAM of Germany has given ten thousand marks for distribution among the poor on his silver wedding day.

GEORGE DARWIN, son of the late Charles R. Darwin, has been elected Professor of Astronomy and Experimental Philosophy in Cambridge University.

BARON VON FLOTOW, the composer of many popular operas, chief among which are "Stradella" and "Martha," died last week at Wiesbaden, aged about seventy.

DR. GEORGE MULLER BEARD, the well-known physician, died at New York yesterday, aged forty-four. He was a native of Montville, Conn., and a graduate of Yale. He wrote many medical works.

MRS. MARY HALLOCK FOOTE, the story writer, author of the "Led-Horse Claim," now being published in the *Century*, is the wife of Mr. Arthur Foote, a mining engineer. Mr. Foote is a brother of Senator Hawley's wife.

PRINCE CHARLES of Prussia, who died last week at the advanced age of eighty-three, was an inveterate smoker, having been in the habit during the last sixty years of his life of smoking from twenty to twenty-four strong Havana cigars daily.

THE one hundred and seventy-seventh anniversary of the birthday of Benjamin Franklin, on the 17th inst., was observed in a number of the public schools throughout Pennsylvania, by the children committing to memory some of the sayings of "Poor Richard."

THE one hundred and twenty-fourth anniversary of the birthday of the Scotch poet, Robert Burns, was celebrated by the Boston Caledonian Club at Odd Fellows' Hall in this city on Thursday evening, the 25th inst., by appropriate musical and literary ceremonies, concluding with a supper and dance.

THE London *Times* of January 11 reports that Mr. Henry M. Stanley has reached his scene of activity on the Congo, with three thousand tons of goods. The stories circulated some time ago, of his serious illness in Paris and his sojourn at Nice and in Spain, were apparently a ruse to conceal his actual movements.

SAYS the Springfield *Republican* of the editor of *Harper's* "Drawer": "Mr. Curtis to be a faithful journalist has sacrificed the pride of writing books; but he has chosen the better part for his kind and his country, and is much more a part of the history of his time than a score of bright novels would have made him. Some time, moreover, we look to see a selection of those Easy Chair meditations, which rank him with Addison as a stylist and above him as a critic of the world."

GUSTAVE DORE, the distinguished painter and designer whose fame is world-wide, died at Paris, France, a few days ago. He was an Alsatian, was born at Strasburg, and was over fifty years of age. His first eminent work was his illustrations of *The Wandering Jew*, in 1851. Of these illustrations, the Boston *Herald* remarks: "They foreshadowed and established his peculiar, striking vein, long known as the Doresque. They are so strange, so weird, so antic, and so suggestive withal, that they stimulate the imagination and cling to the memory."

THE *Herald* says: "M. Duval, to whom the delicate work of investigating the brain of M. Gambetta has been intrusted, reports that its weight is considerably below that of the average brain weight of an ordinary man who is a member of a civilized community. In other words, the brain of the great French statesman weighs no more than the brain of a South Sea islander. It will be seen that this discovery seriously conflicts with the notion that cerebral bulk increases in exact ratio with intellectual development. It is said of M. Gambetta's brain that it is finely formed and differentiated, and the conclusion may be drawn that intelligence depends much more upon structure than upon mass."

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

HANNAH E. STEVENSON, 32 Mt. Vernon St., Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Three Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

Two Years.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

One Year.

MINOT J. SAVAGE, Boston, Mass.
WILLIAM C. GANNETT, St. Paul, Minn.
CAROLINE M. SEVERANCE, Boston, Mass.

The office of the Association is at 3 TREMONT PLACE, BOSTON (directly in the rear of the Tremont House), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

3 Tremont Place, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

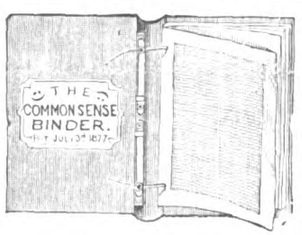
Appleton St., Boston, Mass.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,
706 Broadway, New York.

For sale at INDEX Office, 3 Tremont Place, Boston.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "doubtful" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	"	8c.	" "
" 26 " 51	"	6c.	" "
" 52	"	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

Works of B. F. Underwood.

Essays and Lectures. Embracing "The Influence of Christianity on Civilization"; "Christianity and Materialism"; "What Liberalism offers in the Place of Christianity"; "Scientific Spiritualism: its Meaning and Tendency"; "Woman: her Past and Present, her Rights and Wrongs"; "Paine, the Political and Religious Reformer"; "Materialism and Crime;" "Will the Coming Man worship God?" 300 pp. Cloth. $1.00.

The Letters of Junius. An essay on the authorship of these remarkable compositions, with letters to Mr. Underwood, never before published, from jurists, statesmen, and scholars, showing a concurrent conviction that Junius was Sir Philip Francis. 10 cts.

Religious Revivals, their Causes and Consequences. 10 cts.

Burgess-Underwood Debate. A four days' debate between Prof. Burgess, President of the North-western Christian University, Indianapolis, and B. F. Underwood. 188 pp. Paper, 50 cts.; cloth, 80 cts.

Underwood-Marples Debate. A four nights' debate in Canada between B. F. Underwood and Rev. John Marples, Presbyterian, of Toronto. Paper, 35 cts.; cloth, 60 cts.

Jefferson, *the free-thinking philosopher and statesman.* His religious views presented from his own writings, with his own testimony and the statements of John Adams, William Wirt, Daniel Webster, Edward Everett, Caleb Cushing, and Robert C. Winthrop, in regard to the authorship of the Declaration of Independence. 10 cts.

Radicalism and Conservatism. 5 cts.

CURRENT TOPICS.

CANADA is of late becoming the Mecca of emigrants. In 1882, more than one hundred thousand new-comers, exclusive of the Chinese, settled in Canada's two provinces.

AN exchange says: "The amenities existing between religious sects had notable illustration at the burial of the unrecognized victims of the Milwaukee fire. Of these, twenty-three bodies were awarded to the Protestants and twenty to the Catholics; and nobody will ever know how many Protestants received absolution or how many Catholics were deprived of the same."

THE first annual meeting of the National Woman's Suffrage Association of Massachusetts will be held at the Meionaon in this city on the 14th and 15th inst. Miss Phebe Couzins of St. Louis, Mrs. Shattuck, and Mrs. Harriette Robinson are already engaged as speakers for the occasion; while negotiations are in progress to secure several other distinguished and eloquent advocates of the cause to give addresses, whose names will be duly announced.

PROF. ALEX. BAIN, in a recent address given on the occasion of the presentation by a number of his friends of his portrait to the University of Aberdeen, Scotland, made the following remark, which is worthy of note by all earnest students: "I took from the men of physical science the notion of being precise and clear in speculation generally, and from the men of movement the desire to be practical, to find some application to human welfare in all my studies."

A DR. P. W. EMENS had engaged a church in Almond, Alleghany County, N.Y., for a course of lectures on physiology. The pastor of the church became angry at what he considered the desecration of the church, and directed the trustees to exclude Dr. Emens from it, which they did by barricading the doors, with men armed with revolvers to guard them. Another place of meeting had to be obtained, and thus the doctor's lectures were gratuitously advertised.

THAT one extreme of opinion often accompanies the opposite is shown by the many cases of religious fanaticism occurring in this age of doubt and denial, the latest of many such cases being that of a mother, Mrs. Zimbrick, of Milwaukee, Wis., who last week, under the influence of religious excitement, killed her three little children, calmly stating that she "had read to sacrifice the children in the good book." She afterward attempted to hang herself, but was discovered in time and cut down.

THE Norfolk Jubilee Singers were arrested last Sunday evening, at New Haven, Conn., for singing in violation of a statute of 1786, which prohibits concerts, theatrical entertainments, etc., on the Sabbath, under a penalty of not less than twenty-five dollars. The performance was for the benefit of a Methodist Sunday-school in that city. The arrest has aroused considerable indignation against the city attorney, who caused the arrest to be made. The law had long been regarded as obsolete.

MR. ANDREW JACKSON DAVIS has been for the past four years the regular speaker of the Harmonial Association of New York city, which holds its meetings at Steck Hall. He recently gave a course of interesting, original lectures before his society on "Our Relations to the Spiritual Universe," considering the subject in the following order: "The Unconscious," "The Cosmical," "The Intellectual," "The Ethical," "The Spiritual," and "The Personal." These lectures have, it is said, given great satisfaction to his audiences. Mrs. Mary F. Davis, his talented and estimable wife, reads at these meetings appropriate selections from various writers in a very acceptable manner.

THE *Pall Mall Gazette* says: "It was the high priest of Nishi-hong-wan-ji who was selected by the reforming Japanese Government of 1868 to proceed to London, and to report on the influence of the Christian religion on public morals in England. It was the intention of the Japanese Government that, if the report were favorable, Christianity should be introduced throughout the country. But, after the high priest—a most enlightened and spiritually-minded man of very liberal views—had spent eighteen months in London, he reported to his government that Christianity was far more powerless than either Shinto or Buddhism in preventing crime, particularly drunkenness; and it was therefore resolved to make no change in the public religion of Japan."

THE *Catholic Review* says the Israelites' gratitude to the Catholic Church for "past favors" is not conspicuous, and adds: "Scarcely a movement against the Catholic Church has taken place in Europe which does not count Jews among its fiercest leaders. Indeed, the anti-Catholic press in the Old World would appear to be almost entirely in the hands of Jews; and there does not pass a day but it hurls the most infamous calumnies against the Church and her servants, and excites the ignorant masses against the clergy. The papers belonging to the Jews in Paris, Vienna, Berlin, and Rome, take the lead in the antichristian warfare. The vile *Lanterne* of Paris is controlled by them, every member on the editorial staff of the *New Free Press* of Vienna and the *Tageblatt* of Berlin is a Jew, and the same might almost be said of the *Libertà* of Rome."

AT a recent trial in Germany, a document was brought into court which ought to delight the hearts of all earnest pleaders for women's rights, as showing that those rights were recognized by at least one chivalrous lover in 1605, over two centuries and a half ago. It was the marriage deed given by the Catholic Count de Sulz to the Protestant Countess of Hanau, whom he was about to marry, and was couched in the following terms: "I, Rudolph, Count of Sulz, hereby promise on my honor as a nobleman—or may the Devil take me—that I will allow my future wife to remain in her religion, nor will I offer her any inducement in the slightest to abandon it. I have at home two Bibles. If that is not enough for her, I will get her two more. Let her read in them bravely and industriously. Moreover, it is her body, not her soul, I take. I shall remain in my religion in which I have been brought up from my youth. I know that I am on the right road. If she won't go to heaven, let her go to hell. Signed, Rudolph, Count of Sulz."

THE protestations of innocence made on the scaffold by some of the men convicted of murder in Ireland, when the evidence was so strong as to leave no doubt as to their guilt, has been a subject of considerable comment and some controversy in England. The *Nation* says: "The controversy has caused the disinterment of a little religious manual, entitled *What Every Christian must Know and Do*, widely sold in Ireland at the price of one cent, and bearing the late Cardinal Cullen's confirmation, which is believed by some to throw some light on the matter. Whether it does or not, it offers Catholic theologians an opportunity of making an explanation of some kind. It says that, when absolution is given by the priest, 'your sins are forgiven, the pains of hell taken away, and your soul made bright and beautiful like an angel of God, and the kingdom of heaven is yours.' This, of course, suggests the theory that the murderer on the scaffold may in good faith, after absolution, declare himself 'innocent as the child unborn.' The definition of murder in the manual points in the same direction. It describes murder as '*unjustly* taking away another's life,'—not, be it observed, unlawfully,—and a foot-note on this adds, 'It is not a sin to desire some temporal misfortune to another to make him cease to give scandal, or be converted, or not persecute the good.' It is easy to see how readily in the mind of an excited peasant this definition and elucidation might be made to cover obnoxious landlords, agents, bailiffs, and even policemen and judges."

FOSSIL THEOLOGY.

In the discussion that is going on about the new Orthodoxy, the reformation of creeds, the progress of thought in the churches, etc., it should not be forgotten that the old Orthodoxy still remains strongly intrenched in a large part of Christendom. Not to speak of the Catholic Church, it is probably safe to say that not half of the church-going people who are Protestants are accustomed to hear any other theology from their preachers but that which was in vogue fifty and a hundred ears ago. The pulpits which have not yet been reached by the new views may not, generally, be those to whose teachings the most enlightened church-goers are wont to listen; but we must not delude ourselves with the belief that they have not a large following and a wide influence. Nor is the line that separates between the old views and the new by any means always identical with that between ignorance and culture. There are still many men who, in a certain way (though it may be in a narrow way), are learned, who devote their learning and all their energies to upholding all the essential points of the Augustinian and Calvinistic theology. No one whose duties lead to any acquaintance with the current publications of the evangelical sects—considering especially the local and sectarian religious newspapers that go among the people rather than the more pretentious reviews and magazines—can fail to be impressed with the strong hold which evangelical Orthodoxy, of the old type, still has upon Christendom; nor, if such person be liberal in his own views, can he fail, also, to be impressed with the fact that Liberalism has yet a good deal of critical and aggressive work to do before it can be safely and honorably discharged from its mission.

Here, for instance, is the *Sunday School Times*, a paper of very large circulation, devoted to the interests of evangelical Sunday-schools, and intended particularly for their teachers and superintendents,—a teacher, therefore, of the teachers. It has great pecuniary resources, and is thus able to enlist the aid of some of the most distinguished writers of the evangelical persuasions. And this is what one of its regular contributors, a "Doctor of Divinity," in summing up the practical applications of a Scripture text which gives the "lesson for the day," says, in a late number: "There is no other way of salvation except through the name of Christ Jesus.... We see the ground of apprehension there may be concerning very many persons, amiable in life, correct in moral habit, lovely in disposition, true to all outward duties of religious routine: if they are not 'in Christ,' they will be lost." Another writer, on the same theme in the same issue of the same paper, says: "Among all the many false religions, and among all the vast multitude of false gods, there is no name of a Saviour,—of one who absolutely saves sinners who come to him in trust.... Jesus Christ stands alone in the universe of God as a Saviour of sinners,—as the Saviour by whom we *must* be saved, unless we consent to remain lost forever." Another Doctor of Divinity and theological professor, writing in the same paper of the New Testament Book of Acts, says, "It has fairly stood every test, and may well be regarded as the book of history (of all times) which has been proven most exact." And this, notwithstanding the fact that the book gives a quite different account of Paul's life and missionary work from what Paul gives of himself in his own Epistles.

Then there is Talmage, preaching to as many people in Brooklyn as Beecher, and drawing large audiences of admiring and apparently believing disciples wherever he goes to lecture. And Talmage said, only Sunday before last, that there is nothing in the Bible that staggers him. He accepts "the entire book from lid to lid." He swallows whole the story of Jonah and the whale, as easily as he believes the whale was made to swallow Jonah. And, as to the miracle of the sun and moon standing still, these are his own words: "Yes, I believe it possible that the sun and moon stood still. If I were strong enough to make the sun and moon, I could, myself, easily make them stand still, or, by refraction, give that appearance." (This suggestion, that the miracle might be the effect of refraction, is not at all in keeping with the rest of the discourse, nor up to the usual rigidity of Talmage's Orthodoxy. It is, in fact, the subtle spirit of *rationalism* which, in some weak moment, has even infected Talmage, it would seem. It is the beginning of the dangerous process by which, in time, all the miracles are converted into natural processes, and reasoned away. We doubt not, on revising the newspaper report of his sermon, Mr. Talmage will promptly strike out this clause and stand squarely on the Bible text, which gives not the slightest hint about refraction, but says, with downright simple plainness, "The sun stood still *in the midst* of heaven, and hasted not to go down *about a whole day.*") Talmage even goes so far as to say that he "never knew a man or woman greatly distinguished for goodness or for self-sacrifice that wanted the Scriptures altered." And with pride—a pride we can but think somewhat too ostentatious for humble Christian piety—he bids his congregation to gaze upon him, as he stands there before them, "a fossil of the centuries dug up from the tertiary formations, fallen off the shelf of a curiosity cabinet; a man in the latter part of the nineteenth century believing in a whole Bible."

But a still more antiquated specimen of theological teaching may be seen in an article that lately appeared in the *Advocate of Bible Holiness* by Rev. Daniel Steele, D.D., on the question, "Did Christ's Blood decay?" This question is treated as if it were one of most profound and serious moment. Dr. Steele, a man really learned theologically and naturally able, wishes to make and maintain his solemn protest against any such statement as that "the blood of Christ dried and decayed on the ground." He thinks, on the contrary, that Christ's blood that was shed on the cross has "always remained blood, ever fresh and pure from corruption"; that it was "carried into the heavenly sanctuary by Jesus, the great High Priest, after his resurrection,"—not, however, in his veins, as if it had returned thither, and as Catholics teach, but as blood shed and apart from himself; that having thus carried his own shed blood (in what way is not explained) into heaven, Jesus presented it an offering to God, where it stills remains "material blood" in the presence of God, fresh and pure as if just shed, and "the eternal reason for administering pardon to the penitent believer." And these propositions Dr. Steele elaborates into a lengthy article, supporting them by an exhaustive argument from Scriptural exegesis, by references to old Christian writers of eminent authority, and by a chain of logical reasoning which, if his premises be conceded, is ingenious and strong. But what must his premises be, that they should urge a man of sanity and of mental ability and moral earnestness to spend his time and talents over such a question as this! The motive that actuates him springs from his belief in the ancient dogma of the atonement,—a belief which is a most baneful survival from a barbarous and bloody age. In summing up the practical advantages of his view, he states the foremost of them thus: "It makes the atonement a vivid, present reality, eternally fresh and efficacious, as if the blood of the Divine Victim were still flowing before the eyes of all moral intelligences."

While such antiquated religious conceptions as these we have here exhibited, culled from one week's journalistic exchanges, have dominion over more than half of even Protestant Christendom, the new Orthodoxy, however rapidly it may seem in certain quarters to be advancing, has, it is evident, a vast field for conflict and conquest before it. These conceptions we have, in fact, misnamed in the heading of our article as "Fossil Theology." If they were fossils, it would be comparatively easy to shelve them; but, unfortunately, they are still altogether too much alive, and are using up the sustenance that should go to truer and better growths. There is therefore ample room and mission for rational Liberalism. And, if the auspices are brightening before it, that should not be a sign for disbanding its forces, but rather for their more united, intelligent, and courageous advance.

WM. J. POTTER.

CROOKED UPRIGHTNESS.

A very intelligent and discriminating writer, Mr. William M. Salter, has lately spoken of a lack of straightforwardness, of intellectual scrupulousness and honesty, among men reputed good and pious, as a marked characteristic of our time. Among the evidence proving this point, he thinks, is the habit of such men to take for granted enormous conclusions built on the slenderest premises, and to put interpretations on doctrines not in accordance with their natural meaning. It seems to me that a good illustration of both these habits is found in the Boston association called the "Christian Temperance Union."

The members of this association belong chiefly, if not exclusively, to the theological class called orthodox. About their good intentions, about their earnestness, and about their piety, there can be no question. They are full of zeal, energy, and activity. They mean to do right, and they heartily desire to set the community right in regard to temperance. Nevertheless, some of the assumptions which lie at the basis of their doctrine and action are not only unfounded, but include direct and manifold self contradiction.

They are combined for the advocacy and diffusion of temperance; but they mean by that word something materially different from what the dictionary teaches and from what the Bible teaches. They call their doctrine *Christian* temperance, though it is contradicted by both their accepted standards of Christian doctrine, the language of the Bible, and the example of him whom they call "The Lord Jesus Christ."

They call the Bible a divinely inspired and infallible rule, both of faith and practice; yet they denounce as sinful what that Bible permits or enjoins in the passages following:—

Proverbs xxxi., 6, 7: "Give strong drink unto him that is ready to perish, and wine unto those that be of heavy hearts. Let him drink, and forget his poverty, and remember his misery no more."

In Amos ix., 14, Jehovah is represented as saying, "I will bring again the captivity of my people of Israel, and they shall build the waste cities, and inhabit them; and they shall plant vineyards, and drink the wine thereof."

The Psalmist, civ., 14, 15, praises Jehovah because "he causeth the grass to grow for the cattle, and herb for the service of man, that he may bring forth food out of the earth, and wine that maketh glad the heart of man."

In very many passages of the Old Testament, Jehovah is represented as promising abundance of corn and wine as rewards of obedience to his chosen people. In the New Testament, Paul says,

Digitized by Google

Colossians ii., 16 (as if he had foreseen what restrictions were to be laid upon Christians by the "Christian Temperance Union"), Let no man, therefore, judge you in meat or in drink.

And Paul's Lord and Master, sending out seventy proselyting disciples to travel without money in a country where wine was as common a drink at meals as cider used to be in New England, says to them, Luke x., 7, 8: "In the same house remain, eating and drinking such things as they give; for the laborer is worthy of his hire. Go not from house to house. And into whatsoever city ye enter, and they receive you, eat such things as are set before you."

But there is still stronger evidence of the inconsistency and the self-contradictory position of the "Christian Temperance Union."

These people call themselves "Christian," because they accept Jesus as their rightful ruler, calling him "our Lord Jesus Christ." They recognize it as a duty not only to obey his precepts, but to follow his example, as far as it is imitable. Yet, in carrying out their theory of temperance, they go plumply against what their infallibly inspired Gospels show to have been his habitual practice. What they enjoin and practise as "temperance" is opposition to the manufacture, sale, and use (as a drink) of fermented liquors. What the Gospels declare him to have done is to have used wine habitually as a drink himself, to have directed his disciples to use it, and on one occasion to have manufactured a considerable quantity of it for the use of a mixed multitude on a festive occasion. Since Jesus did not fall in with the ascetic habits of John the Baptist, some who disliked him called him "a gluttonous man and a wine-bibber." Both these reproaches, no doubt, were calumnious; yet the basis of truth under them undoubtedly is that Jesus used at his meals, as John did not, the common food and the common drink of those at whose tables he dined and supped. As we have seen above, he directed his seventy travelling disciples to do the same. He also drank wine, and directed his apostles to drink it, at the last supper he ever took with them; and the wine which he is said to have made at the feast in Cana was of the sort recognized as best by the experienced wine-drinker who distributed it.

No community whatever, no association whatever, now conforms itself either to the injunctions or the example of Jesus. In direct proportion to the increase in number of those who call themselves Christians has been the increase of those who make a point of calling Jesus "Lord, Lord," while they do not the things that he enjoined. The name "Christian" has become a creditable name, and Mr. "Worldly-Wiseman" and his family have long since found it profitable to rank themselves under it. The "Christian Temperance Union," indeed, belongs to a very different family, but it violates the rule of its Master as much when it "opens its meetings with prayer" as the other family does when it frequents balls and theatres. If, however, the name "Christian" means conformity to either the precepts or example of Jesus of Nazareth, no more signal specimen of self-contradiction can be found than the coupling of that name with the theory of temperance held and taught by that association.

C. K. W.

THE *Christian Statesman*, of Philadelphia, mentions the celebration of the birthday of Thomas Paine after this fashion: "The birthday of Thomas Paine was celebrated last Sabbath in this city by several infidel clubs with various blasphemous exercises."

MR. COOK'S "TU QUOQUE."

Joseph Cook is reported to have said in his first lecture in Boston since his return from Asia: "Mr. John Fiske calls me a charlatan for not believing in Spencer. I will not call him a charlatan. He is the echo of a charlatan." And, as a sort of forerunner to this, we heard from Chicago that "twenty-seven John Fiskes"—we think that was the number—didn't amount to one somebody else, —Hermann Lotze, perhaps.

Now, we are of those who think that this sort of thing in our high places is mischievous, melancholy, and—if we may be pardoned—disgraceful; and perhaps none of us will be any the worse for talking about it a little.

We say high places; for we are of those who award a really high place to Mr. Cook's services in this country in these last half dozen years. There may very well be too much of the Walt Whitman dialect about him, and Boston may have to pay extra for this late trip to the Himalayas and the Ganges; but, as Lessing says, a man is scarcely more responsible for his style than for his nose, and we do not know that Mr. Cook has ever advertised as a teacher of rhetoric. He is certainly sincere; and his critics will do well to say no more about his style, but attend to his matter. That matter has been, to our thinking, predominantly and strongly on the side of good and true causes, —the cause of a pure society, of an honest politics, of a broad missionary outlook upon the world, of an idealistic philosophy as opposed to all materialistic theories, and of free and thorough-going study of the burning questions of science and theology as opposed to the timid, protective, Kew-Garden system common in most of the religious schools a dozen years ago and in many of them yet. No one could be absent from New England during the four years of Mr. Cook's work in Boston, without returning to find a shifting to vastly larger and worthier subjects of controversy in the orthodox churches, and men everywhere freely reading and discussing books before tabooed. And no one could fail to perceive how important an agent Mr. Cook had been in these hopeful changes. He is a virile mind; and he opened windows, let in air, shook up the dry bones, wore no gloves, made straight for his points with no snuffling, and told his brethren very plainly that just so much of their doctrine, and no more, would continue to hold its own through this present revolution as could pass muster at the bar of reason,—in one word, that far back of the Old Testament is that *Oldest Testament*, the reason of man, the human mind, which has God in it.

This was certainly very much indeed; and this has made Mr. Cook, with all his rhetorical outbursts upon Andover Hill and Jonathan Edwards, a really efficient worker for the larger faith, a pioneer of much better things in what at one time seemed a rather unpromising and sterile territory. Be all this said very heartily. Mr. Cook's faults have been those of a too impetuous partisanship, of lack of proportion, discrimination, and thoroughness. He has very often, as it seems to us, made the worse appear the better reason, he has blunderbussed at men of straw, he has confused and confounded issues, made it appear often that a stalwart answer to one thing disposed of something much more and very different, made it appear that a spiritual philosophy stood or fell with a particular theological theory, and constantly identified—often in very bungling, misleading, and mischievous manner—things that in no wise go together. Above all, he has undertaken to cover too much ground, and, attempting to speak as a specialist in fields where he has quickly shown himself to trained men as only a layman, has often been forced to make declamation do the work which can only be done well by detailed and thorough knowledge. Thus, it cannot be denied that, along with all his truly beneficent work of *Aufklärung*, ventilation and popularizing of good German books, he has encouraged, in very considerable sections, some very vicious habits of cramming, of snap-judgment, of easy leaping at results, of arrogance often, some complacency and high-and-mightiness, an assumption of the philosophic diction, and much cheap mouthing of great names, —encouraged, in a word, "quackery, egotism, and unwarrantable pretensions," the dictionary's definition of *charlatanry*.

This superficial treatment of many difficult and delicate biological questions with the tone and pretensions of the specialist provoked Mr. Fiske—a special student of biology, naturally jealous for the interests of his science, and keenly alive to the dangers of mistakes in a province now so important—to call Mr. Cook hastily and, as it seems to us, unwisely a *charlatan*. But it was no mere matter of calling names with Mr. Fiske. He claimed to speak by the card, and backed up his charges of pretension and incompetence by a bill of particulars filling many pages of the *North American Review*. Mr. Cook, of course, has the right to show that Mr. Fiske was wrong in his criticisms; but, if he does not or cannot show this, then, whatever names it may be wise or unwise to use, he is at least responsible for having spoken very dogmatically on very serious matters with very inadequate knowledge. And certainly it is no answer to Mr. Fiske to tell him cavalierly that *he is another*.

What Mr. Fiske finds true of Mr. Cook's book on Biology other men find true of other books. The writer, who knows nothing of biology as compared with Mr. Fiske, and very little as compared even with Mr. Cook, does chance to have studied Transcendentalism, along with two or three things else, for a great part of his life, and knows that Mr. Cook's book on Transcendentalism (he hopes that he will not himself be accused of "unwarrantable pretension" in making himself Mr. Cook's judge) is open to the same criticism which Mr. Fiske has passed on the Biology,—an assertion which he would also be quite willing to support by a bill of particulars, were there any occasion for it. And we have heard some married men—presumably specialists—laugh a little at some things in his book on Marriage, which it has been thought he wrote a little hurriedly. But marriage is not a specialty of our own, and we do not know.

When Mr. Cook says that he will not call Mr. Fiske a charlatan, but the echo of a charlatan, it is his picturesque and mollifying way of telling him that he is less and poorer than a charlatan. But what ground or provocation has he for such a charge, save the fact that Mr. Fiske has called him a charlatan? Certainly, none at all; and this is no ground. And this habit of calling names, in circles which make any claims whatever to be scientific, is so vulgar, so vicious, and so baneful, and, moreover, brings so much discredit upon America in the thoughtful circles of England and Germany, that it seems to us that all who have the interests of a sincere and impartial scholarship here at heart are bound to protest against it, and always demand the reason why. We are afraid that it is a peculiarly American habit. It is not an English habit. A considerable familiarity with the lecture-rooms of "ultra-orthodox Leipzig" never revealed it to us as a German habit; and we are very sure that Mr. Cook never learned it of Prof. Lotze, or of Tholuck at Halle-on-the-Saale. It is native American, and a habit which we are willing to see die very rapidly; though, if Mr. Cook chooses to tell

Digitized by Google

Mr. Fiske that his article was a bad one, and proceeds to show him why, we are sure that anything he may say will be read with very great respect and interest.

Mr. Cook says three things: that Mr. Fiske calls him a charlatan for not believing in Herbert Spencer, that Mr. Fiske is the echo of Spencer, and that Spencer is a charlatan. But Mr. Fiske did not call him a charlatan *for not believing in Spencer* or for any question of belief or opinion whatever, but simply and solely for alleged *misquotation, misleading quotation, and misstatement of fact.* Mr. Cook should know perfectly well, and know that everybody else knows, that it would be quite impossible for a thinker like Mr. Fiske to call any man a charlatan merely on account of differences in creed, and that he doubtless numbers in the circle of his familiar and honored friends as many Kantians and Hegelians as Spencerians,—men of every philosophy under the sun.

In calling Mr. Fiske an echo, if Mr. Cook means that he is a disciple in some sort and owes much to his masters, he is simply saying what is true of every man who amounts to much. None of us gives much to men without getting much from other men. We are all echoes, and the biggest part of all our lives belongs in quotation marks. Mr. Cook himself is no exception to this, is himself a very considerable bundle of quotations; and it would be very easy to name two or three men whom he is much more given to echoing than Mr. Fiske is to echoing Spencer or anybody else. But if Mr. Cook means, in calling Mr. Fiske an echo, that he is not an independent thinker, not a fresh, original mind, a broad and accomplished scholar, an open, catholic, and many-sided man, he says what is conspicuously, absurdly, and most mischievously untrue, and, in the mere satisfaction of personal grievance, does wrong to every interest of genuine science and culture in America. Dr. Stanley Hall has pointed out to us with unusual force, in his recent article in the *Princeton Review*, some of the dangerous tendencies in our intellectual life, which are producing men of large general intelligence and small genuine culture, of wide diffused activity and little power of concentrated movement; methods which seek simply or primarily the acquisition of facts, producing many smart men but very few able ones, and giving us a type of character, altogether too frequent in this country, helpless in the presence of those deeper problems which demand heroic patience of investigation and long and silent waiting for great results. He shows the danger of the royal roads to learning by declaring that to teach only results, which are often simple, without the methods by which they are obtained, which are often hard, to develop the sense of possession without the strain of activity, is to add an enervating luxury to life. Smattering is really dissipation of energy: only concentrated and prolonged efforts in one direction really train the mind, because only they train the will beneath it. Dr. Hall thinks that the greatest intellectual difference between men lies in power of honest and sustained work, and that the best minds distrust quick methods and short cuts, and trust only to thorough-going, self-devoted work; and the man who waits over a new idea, silently and patiently, till all sides have been seen and all authorities consulted, is the man who, in farmer's phrase, "boils his words till he can give his hearers sugar, and not sap."

Mr. Fiske has been one of the few American scholars in this time who have been a standing rebuke to this superficialness and haste, this real *charlatanry*, and have faithfully exemplified the method and the spirit which Dr. Hall desiderates. He has conspicuously shown in every field which he has entered the thoroughness, the patience, the moderation, the tolerance, the fairness, the geniality, the modesty, the simplicity, the ever-youthful curiosity, and the self-sacrificing zeal of the genuine man of science; and he has brought credit to the American name in the circles of European thinkers. His contributions to the science of evolution have earned from Darwin, from Huxley, and Tyndall and Tylor and Lubbock,—but perhaps all these are charlatans, too, to Mr. Cook,—the most emphatic and flattering recognition; while his profound and enthusiastic studies of the Anglo-Saxon race and of American history have not only had the warmest commendation of all the great English historical scholars, but have placed every one of us in his debt. When, therefore, a man of this character is selected to be dubbed *the echo of a charlatan* and the twenty-seventh part of a genuine thinker, some of us feel that the eternal fitness of things is violated a little, and feel bound to call a halt, and ask the reason why.

But even this might be allowed to pass, and we might say, "Mr. Fiske called Mr. Cook a charlatan, and now Mr. Cook calls him the echo of a charlatan, and we hope they both feel the better for it,"—if this were all. But this is not all. Mr. Fiske is not simply a charlatan: he is the echo of a charlatan. It is not, after all, a mere satisfaction of personal grievance; but Mr. Cook seizes the occasion to stamp as *charlatanry* the whole philosophy with which Mr. Fiske is identified. The doctrine of evolution is charlatanry, and Herbert Spencer is a charlatan.

Herbert Spencer, fortunately, needs no defenders, —least of all from among such as the writer. And the writer is no lover of the Spencerian metaphysics, but a Kantian,—a Kantian, moreover, who lays main stress upon the *Practical Reason* and upon the synthetic principle which was the point of departure for Fichte,—and therefore an earnest opposer of the Spencerian metaphysics. But think of Mr. Spencer's *First Principles* as we may, and find whatever fault we may with his psychology and his ethics,—and to the writer they seem to ignore most cardinal and urgent factors,—it still remains true that his contributions to both psychology and ethics are invaluable; while no man of our time has given us profounder or more useful political and social studies, and his services in the formulation and illustration of the law of evolution, the one great philosophical principle of this age, have been nothing less than revolutionizing and epoch-making. The great principle against which Mr. Cook is tilting, when he says—falsely, as we claim—that in Germany Spencer is no longer regarded as anything more than a crescent moon in its last quarter, is precisely that thing in his philosophy which abides and grows and will shed everlasting lustre on his name; while what will die is precisely that "law of the conditioned," which for the sake of having a metaphysic, which he had no need of, he borrowed bodily from Sir William Hamilton, whose book is the text for what shabby philosophy is taught in almost all the orthodox colleges of America, and from Dean Mansel, who was appointed to expound his philosophy in the Bampton Lectures, that highest stamp of Orthodoxy in England. Every word that is urged so glibly against Mr. Spencer's "Unknowable" applies with equal force to almost every orthodox minister in the land; for almost every one, as far as the writer's experience goes, declares or assumes that the Trinity, or any conception of God whatever, is not the deliverance of clear knowledge or reason, but the object of faith.

Mr. Spencer has carried on his colossal work, through a whole lifetime, with a severity, devotion, and singleness such as have never been seen, save in the great masters of science, Descartes, Newton, Faraday, Agassiz, Darwin; and he has conducted himself in the innumerable controversies, which it was impossible that the propounder of so much that was so new and so bold should escape, in a manner which has been the admiration, almost the despair, of every one with a mind of quality fine enough to recognize a truly excellent spirit. When a thinker of this eminence and these great virtues, one who may well be proposed as a model to a time so full of hurry and tinsel and trash as ours, is boldly and deliberately called a charlatan, then certainly every decent and necessary distinction among men is obliterated, and nothing that has worth is safe or sacred.

We do not believe, indeed, that any other scholar of standing in America would be guilty of calling Herbert Spencer a charlatan. Englishmen will not for a moment accept this word of Mr. Cook's as in the slightest degree representative. The true feeling of American scholars toward Mr. Spencer was shown in the remarkable gathering of men in New York, to say farewell to him, on the eve of his return to England,—a gathering of men of every creed, and in which nothing that is sincere and lofty in American life was unrepresented. "We recognize in the breadth of your knowledge," said Mr. Evarts, than whom we have no greater man of affairs, "such knowledge as is useful to your race, a greater comprehension than any living man has presented to our generation. You have brought to the analysis and distribution of this vast knowledge a more penetrating intelligence and a more thorough insight than any living man has brought even to the minor topics of his special knowledge. Whatever the claims or the debates may be about your system, we must all agree that it is practical, that it is benevolent, that it is serious and that it is reverent, that it aims at the highest results in virtue." Mr. Beecher, the most influential certainly of American preachers, said that there was no man living to whom he owed more than to Mr. Spencer. And Prof. Sumner, perhaps our own greatest sociologist, said: "The philosophy of evolution is sure to embrace all the interests of man on this earth. It will be one of its crowning triumphs to bring light and order into the social problems which are of universal bearing on mankind. We look upon Mr. Spencer's work in sociology as a grand step in the history of science. He is breaking the path for us, and we stand eager to follow him." This is the true voice of American science and scholarship, as concerns Mr. Spencer; and when, beside this, any American ventures to call Mr. Spencer a charlatan, we trust that every Englishman will know it, as it is universally recognized at home, as the merest buncombe.

Mr. Cook alleges that the reason why Mr. Fiske called him a charlatan was because he did not believe in Mr. Fiske's philosophy. We have shown that this is utterly untrue, not the reason at all. But it is true that the reason why Mr. Cook calls Mr. Spencer a charlatan is simply because Mr. Spencer does not believe in Mr. Cook's philosophy, or, if there be another reason, it is not apparent to the naked eye, and we humbly beg for a bill of particulars. And this is no reason, and much worse than no reason; and it is because the *Tu quoque* system is so fatal to all good results in controversy, especially if the controversy borders anywhere upon what pertains to religion, that we are willing, even at the risk of causing offence, to speak a word that may give Mr. Cook occasion to demonstrate that he was not venting spite or talking buncombe, and to show his genuine grounds for counting Mr. Spencer a charlatan and Mr. Fiske the echo of a charlatan. With Lessing, Kant, and Goethe and the great Germans, with Carlyle and Emerson and almost all of the really great thinkers of our time,

Digitized by Google

we reject the doctrine of miracles, and believe in the universal reign of law; but it would never occur to us to call Mr. Cook a charlatan for adhering to the old miraculous theory, although unsupported by any really great authority since the dawn of the scientific era. When Mr. Cook was delivering his last lectures in Boston, previous to his departure for Europe, we ventured to say, in the newspapers, that the things he was saying of Zöllner and the medium, Slade, at Leipzig, were rash and harmful. Now, he tells us that he has seen Zöllner since he left Boston, and heard much of the man who deceived him; and who deceived himself, through Zöllner, he should have added, for it cannot be denied that Mr. Cook's discussion of the Leipzig phenomena was that of a credulous man, and was so regarded by the Spiritualists themselves, who got many crumbs of encouragement from it. But, had they been given much more encouragement than they were, we should not have called Mr. Cook a charlatan, but only so much the rasher and more mistaken.

We hope that Mr. Cook saw many much wiser men than Prof. Zöllner in Germany. That he saw the wisest men of Germany, or those who fairly reflect the prevailing intellectual tendencies, we have as yet no evidence; while there is some evidence that he imagines that the professors of Hebrew antiquities may still be visited as authorities on great religious currents, as was true in a measure fifty years ago. He tells us that nine out of ten of the most scholarly physiologists abroad are theists. We sincerely wish that this were true; but that it is true, using theism in Mr. Cook's sense or in our own, we do not believe, although we do believe that nine out of ten physiologists and psychologists now clearly perceive the inadequacy, in their science, of the materialistic hypothesis. But Mr. Cook says, further, in connection with his *coup* to Spencer, that "the battle has been fought in Germany, and the victory is on the side of Christian scholarship," and that "the supernatural origin of Christianity is now established on the best historical evidence." *What* battle is Mr. Cook talking about, and what does he mean in this place by "Christian scholarship"? If he means to say that there is any return on the part of the German philosophers and scientific men to the Christology of fifty or a hundred years ago or to the old miraculous theory of religion, we have simply to say that our own latest advices from Leipzig and Berlin, which are not often more than a fortnight old, are very different from his. We should not call him a charlatan for promulgating such views of the predominant tendencies in German philosophic thought; but we should certainly like a list of the "epoch-making" books of this new tendency, and we think we may safely give assurance that, when Mr. Cook's bill of particulars in this field comes, it will get most careful auditing, and be given abundant opportunity to substantiate itself.

We shall be pardoned for adding, by way of returning to the matter of calling names, that a generation of religious thinkers is rapidly rising in America, that is very impatient of the sort of theological discussion that has been common here during the last year. It would be easy to name half a dozen of these younger men, who, thinking that they see a vast deal of "unwarrantable pretension" in the current American theology, will be apt to speak about it pretty often in the next half dozen years, in a tongue easy to be understood by the people; and we think that, somehow or other, they will manage to make themselves heard. The servants of no party and insisting upon equal justice to all, they will be apt to make the trifling and dodging, the misrepresentation, ambiguousness, and fog, which we have been seeing so much of lately, pretty difficult; they will compel some very categorical issues, and they will try to clear the air. They are men who love "sweet reasonableness," and whom it would be hard to provoke from their chosen method of direct argument and unvarnished statement of fact; but they are men with a vast amount of Americanism in them, and therefore, doubtless, with a native talent for calling names, which, sufficiently provoked and cultivated, might well produce something very magnificent in that line. Is it worth while that the talent should be developed? It is something for the older men, who are setting the tone, to consider. Shall it be syllogism or *Tu quoque?* What would Mr. Cook himself advise?

EDWIN D. MEAD.

REFORM, PURE AND CONVENTIONAL.

Immediately after the fall elections, in which the civil service reform issue had performed a notable part, and after Congress had met, the Pendleton bill was unexpectedly voted upon, and approved by a genuine hurrah. There was some astonishment expressed, and most people recognized the laughableness of the result. The sincere friends of the measure would doubtless have been better pleased, had the bill met with opposition and succeeded in spite of it, or had it been fought and defeated. There was a suspicious unanimity in so sudden a conversion. Politicians who before election openly opposed or acted in perverse contrariness to all the principles of the measure were, on this remarkable day, its good friends and defenders. There would have been better promise of enforcement, had the reform been achieved over sincere opposition rather than insincere co-operation. The mere passage of an act is slight promise of its going into effect. Some apparent victories are practical defeats; and men often grasp at a treasure, and find the shell crush in their hands, and that another has possession of the substance.

In all new moves, the people form the intermediate element. The prophets are at the top of the scale, the formalists at the bottom. There is a time when the function of the former seems to be to prophesy and the function of the latter to deride; while the people, standing between, applaud convention and look askance at propositions of advancement. The political and priestly classes watch the masses as a dog keeps measure of the varying moods of his master. In new developments of Church and State, those who are crowned and mitred mingle with and are one with the people, and then are pure. Later in the life of the idea, when fashion takes the place of honesty, the ruling individuals stand aloof, and by doing so do not embrace an improvement, but suffer a decadence, and then are impure. The populace, in the mean time, remains honest, and grows in capacity, in consequence of which the day comes when it is prepared to acknowledge the justice of the old and long-denied claim. The dog instantly changes with the master, the sincerities and the insincerities are mixed once more; and the philosopher, still passing on beyond the average man, brings human nature again to repeat the old and bitter experiment. Through these transitions, the politician and the priest sustain their constant character. The people stand for convention exhibited in honesty, while the dog is mere obsequiousness embodied in formalism less the generous and hopeful qualities of the owner. The formalistic priest is the late-stager. He enters in on the tide of riches. The work is done, and the great workers have gone ahead. This, therefore, is the period in which apathy enthrones mediocrity and calculation.

What is true in politics is true in theology. History, story, the facts of every day, point it out. Any record picked up at random—Gibbon, Macaulay, Bancroft—will give many and curious instances. Darwin dies, and the Church claims to be abreast of him; claims, indeed, to include him, and covers his soul with its flowers and pæans. The theory may at its first proposition have been rejected and scorned, but that lessens not at all the indorsement accorded when once it becomes strong in the thought of men. The morality that of old was the target of our contempt we make to-day an inclusion in our religion. What was outlawed as foe to our virtues we claim later, in the time of its at last undeniable nobility, as the child of those virtues, and not possible to have been without them. We have passed over night, and the morning hails the king. That our philosophies may be small we are loath to admit. They must include everything or nothing. No man is good but by virtue of our goodness. Who would be king must have us crown him. Buddha was majestic simply, as this tide runs, because he was *Christianly*,—not, in simpler lines, because he was Buddha and Eastern. This is a natural but a disappearing mode of thought. Truth now comes to us in its own habiliments, and not in those with which we may choose to clothe it. We salute it, though it was others gave it a name.

HORACE L. TRAUBEL.

EVOLUTION.

A Second Letter to Mr. D. A. Wasson.

My dear Sir,—Although the language of Herbert Spencer is rarely vague, and no thinker need be in doubt as to what he teaches, the exposition of his philosophy includes the consideration of every class of phenomena, his data are multifarious, many of the problems with which he deals are extremely complex, and portions of his writings are necessarily abstruse. It is not strange, therefore, that there is much popular misconception in regard to his views, and a very inadequate appreciation of the value of his work among those who formed their philosophic opinions before he became known as a thinker, and who, from lack of time or inclination, have never acquainted themselves with his contributions to thought. But, more and more, his works are being read, and the greatness of his services recognized. By giving in this letter a comprehensive statement, however imperfect, of Spencer's essential doctrines, I may contribute in some small degree to a correct understanding of his views, and a just estimate of his intellectual achievements.

1. According to Spencer, Matter, Motion, and Force, Space and Time are forms which an unknowable Reality assumes in consciousness. Matter and motion he reduces to manifestations of force, and space and time to cohesions—one of coexistence, the other of succession—in the manifestations of force. Force, then, remains the primary datum; but that we know only as states of consciousness,—in other words, as the changes in us produced by an unknowable Reality, of which our conceptions of matter and motion are symbols. That which appears to be, outside of consciousness, as matter and force, is the same as that which appears in consciousness as feeling and thought. In Spencer's own language: "A Power of which the nature remains forever inconceivable, and to which no limits in time or space can be imagined, works in us certain effects. These effects have certain likenesses of kind, the most general of which we class together under the name of Matter and Force; and between these effects there are likenesses of connection, the most constant of which we class as laws of the highest certainty."

Digitized by Google

Although the indisputable principle of the relativity of knowledge necessitates the postulation of a Reality that determines our sensations, that Reality cannot be identified with matter which we know only as a phenomenal manifestation or, psychologically speaking, only as coexistent states of consciousness; nor can it be identified with mind, for that we know only as a series of states of consciousness. "I cannot think of a single series of states of consciousness as causing even the relatively small groups of action going on over the earth's surface.... How, then, is it possible for me to conceive an 'originating mind,' which I must represent to myself as a single series of states of consciousness, working the infinitely multiplied sets of changes simultaneously going on in worlds too numerous to count, dispersed throughout a space that baffles imagination." "If, to account for this infinitude of changes everywhere going on, 'mind' must be conceived as there under the guise of simple dynamics, then the reply is that, to be so conceived, mind must be divested of all attributes by which it is distinguished, and that, when thus divested of its distinguishing attributes, the conception disappears, the word 'mind' stands for a blank."

Knowing is classifying. The Absolute Existence, that which persists through all phenomena, we cannot know, because there is nothing in experience with which we can classify it. "By strict necessity, explanation brings us face to face with the inexplicable. We have to admit a datum that cannot be explained." All the claims of theologians and metaphysicians respecting the absolute nature of the Power which appears to us under the forms of matter and motion, and subjectively as feeling and thought, are without the least philosophical basis.

2. The field of science and philosophy is in the phenomenal world. It is the function of philosophy to give to knowledge a unity that shall comprehend the fundamental truths of all the sciences, as the general definitions and propositions of each science include all the diversified phenomena of its recognized province. The sciences deal with different orders of phenomena, and their formulæ are those which express the changes and relations of these orders respectively. Philosophy is a synthesis of all these sciences into a universal system.

3. Force is persistent, and is revealed to us under two opposite modes, attraction and expansion,—in the ceaseless redistribution of matter and motion which extends throughout the universe, involving, on the one hand, the integration of matter and dissipation of motion, and, on the other, a disintegration of matter and absorption of motion.

4. Where the integration of matter and the dissipation of motion predominate, there is evolution. Where there is a predominant disintegration of matter and absorption of motion, there is dissolution. In that portion of the universe observable by us attraction predominates now, as seen in the integration of matter and the evolution of forms. In other regions, expansion may exceed attraction, dissolution may predominate over evolution. In ages inconceivably remote, the elements of our system, now undergoing evolution, were, doubtless, subject to the opposite process. Every condition grows out of pre-existent conditions.

5. Of beginning there is no indication. As Spencer said, in a reply to a critic, "The affirmation of universal evolution is, in itself, the negation of an 'absolute commencement' of anything. Construed in terms of evolution, every kind of being is conceived as a product of modifications, wrought by insensible gradations on a pre-existing kind of being; and this holds as fully of the supposed 'commencement of organic life' as of all subsequent development of organic life."

6. When the formation of an aggregate proceeds uncomplicated by secondary processes, as in the crystallization of carbon into a diamond, evolution is simple.

7. When, in the process of evolution, there are secondary rearrangements of matter, and where there is sufficient retained motion to admit of redistribution among the parts of the body, as in the growth of an animal, is exemplified not only the integration of matter and the dissipation of motion, the primary law of evolution, but also an increase of heterogeneity, and which—when accompanied with increasing coherence, definiteness, and mutual dependence of parts, and the subordination of the various parts to the movements of the whole structure—constitute progress. Thus, we have evolution as a double process, a movement toward unity as well as diversity.

8. In the process of evolution, increase of heterogeneity results from "the multiplication of effects"; for, "in the actions and reactions of force and matter, an unlikeness in either of the factors necessitates an unlikeness in the effects." All parts of a body cannot be conditioned precisely alike with reference to the environment, since the parts must be subject to unlike forces or to unequal intensities of the same force. The more heterogeneous a body becomes, the more rapid the multiplication of effects. Every event which involves a decomposition of force into several forces produces greater complication and increased heterogeneity; and, when this process of differentiation combines with the process of integration to make the change from the homogeneous to the heterogeneous at the same time from the indefinite to the definite, we have compound evolution.

9. The field of this compound evolution is among bodies of a density intermediate between gases, wherein the molecular movement is too rapid to admit of structural formations, and solids in which the amount of retained motion is too small to admit of the rearrangement of the molecules. Spencer observes that "a large amount of secondary redistribution is possible only where there is a great quantity of contained motion; and, on the other hand, these redistributions can have prominence only when the contained motion has become small, opposing conditions which seem to negative any large amount of secondary redistribution." It is in organic bodies "that these apparently contradictory conditions are reconciled"; for their peculiarity consists in the concentration of matter in a high degree with a far larger amount of molecular motion than is found in other bodies of the same degree of concentration, as Spencer has clearly demonstrated.

10. All living forms have been evolved in accordance with the above-mentioned laws. The most complex animals are the product of modifications wrought on pre-existing animals. The evolution of species goes on, not in ascending lineal series, but by continual divergence and redivergence. Complexity of life and intelligence is correlated with complexity of structure. The highest form of intelligence, the human, has been reached by modifications wrought through ages upon pre-existing intelligences.

11. The mental faculties of man, not less than his brain and nervous system, are the product of innumerable modifications in the evolution of the highest creatures from the lowest.

Experience, registered in the nervous system, produces structural changes and mental modifications. "Instinct is inherited habit." The aptitudes and intuitions of the human mind are the product of accumulated human experience, transmitted and organized in the race. Even the "*a priori* forms of thought" have been slowly acquired. Whatever in the mind transcends the experience of the individual is nevertheless the product of ancestral experiences.

12. Not only is it true that our highest conceptions of morality have been evolved in accordance with laws above mentioned, but even the *moral sense* has in like manner been formed by accumulated and multiplied experiences, registered in the slowly evolving organism and transmitted as an intuition, as sensitive, in some persons, to a moral wrong as the tactile sense is to the sting of a bee. The ultimate basis of morality is the source of all phenomena, "an Inscrutable Power," as John Fiske well says, "of which the properties of matter and motion, necessitating the process of evolution, with pain and wrong as its concomitants, are the phenomenal manifestations."

"No physiologist," says Dr. Carpenter, "can deem it improbable that the intuitions which we recognize in our own mental constitution have been acquired by a process of gradual development in the race corresponding to that which we trace by observation in the individual.... The doctrine that the intellectual and moral intuitions of any one generation are the embodiments in its mental constitution of the experiences of the race was first explicitly put forth by Mr. Herbert Spencer, in whose philosophical treatises it will be found most ably developed." "With a prescient insight into the future, which has probably few parallels," says the *Westminster Review*, "Mr. Spencer founded his psychology on the hypothesis of development. To all but a few deep-thinking observers there can have seemed few signs in 1855 that that hotly disputed theory was ever likely to be in the ascendant. The exposition of none of the organic sciences that we know of had yet been based on it, and its application to mind was undreamt of."

13. The religious sentiment, equally with the moral sense, has been evolved through psychical conditions represented by all the stages of life below man. The object of the religious sentiment is the Unknowable, and its basis is man's relation thereto. The essential truth of religion is involved in the recognition of an absolute Reality upon which all phenomena depend, while its fundamental error begins with investing this Reality with anthropomorphic qualities.

14. All conceptions and systems, philosophical, social, ethical, and religious, language, government, commerce, poetry, art, science, philosophy, and industrial pursuits, all human activities, equally with vegetal and animal forms, planets and solar and stellar systems, have been evolved from a homogeneous, indefinite, and incoherent condition to a heterogeneous, definite, and coherent state.

Such is the merest abstract, and a very imperfect one, of the doctrines of evolution as maintained by Herbert Spencer. They are neither "materialistic" nor "spiritualistic," nor are they "mechanical," as that word is commonly understood. They are not mere assumptions. They have been reasoned out, in all their details, laboriously and according to the most rigid logical methods. It is not, in my opinion, too much to say with Prof. Youmans that "the same ethical canons of research ... which gave to Copernicus the glory of the heliocentric astronomy, to Newton that of the law of gravitation, to Harvey that of the circulation of the blood, to Priestley that of the discovery of oxygen, to Dr. Young that of the undulatory theory of light, and to Darwin that of natural selection, will also give to Herbert Spencer the honor of having first elucidated and established the law of universal evolution."

If my summary of Spencer's doctrines of evolu-

Digitized by Google

tion is correct, it is evident that but little of the criticism in your letters to me has force or even relevancy, if directed against his philosophy. Your own views on the subject of evolution will be the subject of another letter.

Respectfully yours, B. F. UNDERWOOD.

THE UNITARIAN "YEAR-BOOK" LISTS OF MINISTERS.

With regard to an editorial note in *The Index* of January 18 concerning the Unitarian *Year-Book* lists of ministers, one whose name is on the regular list writes to us as follows:—

If, as you state, the Unitarian Association has some rule by which "the *Year-Book* list of 'Unitarian ministers'" is only to mean "Christian" ministers, why does it persist in publishing names of persons who are well known not to be Christians in any dogmatic sense?

The existence of such a rule ought to make it unnecessary for one who is simply a rationalist to send a request asking that his name should not appear in that list. Not knowing that there is such a rule, or, if I ever knew it, having forgotten it, I did think it necessary to send a request that my name should not appear in the regular list for a different reason. My reason for sending such a request was that, notwithstanding all explanations, yet as some persons might suppose that those whose names are in the list uphold the dogmatic statements in the Constitution of the Conference, for the sake of consistency I did not wish my name to appear. Unfortunately, my letter was too late; and I was informed that the *Year-Book* was in the hands of the printer. The reply of the Secretary was very courteous and fair, and suggests a different principle of action on the part of the Association from what is mentioned in your "Notes." As his letter to me was an official reply to a formal communication from me to the Association, it will be no breach of courtesy to refer to one sentence in it. After stating that the American Unitarian Association holds that the list in the *Year-Book* is a list of Unitarian ministers, he adds, "But it deliberately leaves the decision of what constitutes a Unitarian minister to each man's judgment and conscience, and then accepts that decision." My name, I suppose, appears in the list (although I have not seen the book); but, because of the facts stated above, I do not feel that any blame rests on myself except for overlooking a notice in the *Register* and delaying too long the sending of my request.

At the annual meeting of the American Unitarian Association, held May 25, 1874, after a long discussion and the consideration of various resolutions covering the subject, the following resolution was adopted by a large majority:—

"*Resolved*, That, inasmuch as the term 'Unitarian,' as used in the title of this Association and its publications, has always been held to carry a distinctively Christian meaning, our Unitarian ministers being held and regarded by us as public teachers of the Christian religion; and as the action of the Assistant Secretary, sustained by the Executive Committee, in omitting from the catalogue the name of a minister who says he is no longer a Christian, has been in harmony with this common usage of the term among us, therefore the action be now and hereby is approved and ratified."

This was a clear and decisive settlement of the question which had then been raised as to what the phrase "Unitarian ministers," which headed the *Year-Book* list, signified. But, most likely, our correspondent never knew of it. We do not see that any blame can attach to him, if his name has appeared and still appears in a list where he now feels it does not belong. What we would like to know, however, is whether this vote, passed by the Unitarian Association in 1874, has ever been rescinded. The Secretary's reply to his letter that the Association "deliberately leaves the decision of what constitutes a Unitarian minister to each man's judgment and conscience, and then accepts that decision," does not appear consistent with the resolution then adopted. Was the recent action taken by the Association's Directors with regard to the *Year-Book's* list of ministers intended to repeal that resolution? W. J. P.

EDITORIAL NOTES.

D. LOTHROP & Co., the people's publishers, add to their list this week a popular Life of John G. Whittier, the people's poet, by W. Sloane Kennedy.

WE hope that none of our readers will fail to read the admirable article we give this week from the pen of Mr. E. D. Mead on "Mr. Cook's '*Tu Quoque*.'"

THE London *Inquirer*, "while far from censuring" clergymen who, by mental reservation, remain with the Established Church after they have outgrown the Athanasian Creed, says, "But, at the same time, we reserve our admiration for the men who at all sacrifices secede from the Church of their fathers, when, after painful thought and inquiry, they have renounced the cardinal points of its theology, and go forth into the wilderness, henceforward standing alone or allying themselves with the little group of congregations which maintain a gallant stand for perfect religious freedom amid all kind of social and political disadvantages."

THE *Alliance* of Chicago has dropped out of existence as a paper with the complete withdrawal of ex-Rev. George C. Miln from the rôle of editor into that of actor; and the *Radical Review* has taken its place, with George and Emma Schumm as publishers and editors. We wish this new free-thought journal all success, which it will be sure to achieve, if it carries out the programme it announces in its first number. It will aim "to make independent thinkers of men and women," to "plead for absolute free thought and its realization in life," to "aid in the elaboration of truth and its vitalization among the masses," the "discussion of religious, political, and economical questions from the stand-point of modern scientific philosophy," and "fearlessly attack abuses in Church and State."

A WRITER in the *Presbyterian* warns its readers against reading the novel *John Inglesant*, which it declares to be "a book of unquestioned literary merit; yet the writer is an Agnostic, and the hero of the story is but a peg on which to hang his philosophical views." This writer further declares: "To many superficial readers, the venom in *John Inglesant* is not apparent; for it is not a poison issuing from a sharp, cutting fang, but a skilfully introduced miasma, sapping more slowly the constitution and health, and therefore *all the more dangerous*. Its patronizing air toward evangelical Christianity, conceding that it has much that is (Platonically) true, is offensive to the last degree. It is only equalled by the Boston philosopher who dared speak of the Lord Jesus Christ as the 'modest young man of Galilee.'"

THE *Investigator*, commenting on Mr. Wetherell's communication in a recent number of *The Index*, entitled "What constitutes an Agnostic?" says of the term "Agnosticism": "It is modest and unpretending, and in its application to God it neither affirms nor denies anything in regard to such a supposed Being. It simply and quietly says that it knows nothing about him. Who does *know?* Can the Christian know anything more of an incomprehensible God than the Agnostic? Probably not. Yet the former *assumes* to have more knowledge, and the difference between them seems to be that between learned presumption and honest scepticism. . . . But, though he (the Agnostic) may not have any belief in a God, he may have a belief in a great many other things, and so be able to form a creed or philosophy in accordance with that belief. It no more follows that an Agnostic has no belief because he cannot acknowledge a God than it follows that we do not have belief because we reject Christianity and are an Infidel. The Agnostic is merely silent in regard to the unknowable, and we regard that as proof of his wisdom." We commend this paragraph to the considerate attention of our esteemed contemporary the Milwaukee *Freidenker*.

THE following is a translation of a letter written to Dr. E. B. Aveling, of London, by Prof. Haeckel, in regard to the suppression of Charles Darwin's letter to a student at Jena:—

JENA, Oct. 8, 1882.

My dear Sir,—In the first place, let me ask you to receive my heartiest thanks for your kindly communication on the memorable letter of Charles Darwin (June 5, 1879) that I made public on September 18th of this year, at the Eisenach meeting of German naturalists and physicians. It is self-evident that I communicated this letter *with the express permission of Nicholai, Baron Mengden, who received it*, and who, according to German law, is *sole* owner of the letter.

The information that I owe to you, that the English press has, almost without exception, suppressed this letter, has filled my German friends and myself with sincere pity and regret; for we recognize in that fact a rigid system of the deepest hypocrisy, social and religious, is still in free England strong enough to prevent even the simple publication of a document pregnant with meaning. We in Germany are happy in daring to speak out the truth freely, happy in that we have liberated ourselves from the bonds of mediæval prejudice. Many letters are telling me that, in the publication of that letter, I have rendered service both to the *truth* and to the great English philosopher whose whole life was devoted to the furthering of truth. Leaving it to you to make what use you please of these lines, I remain, with the deepest esteem,

Yours very truly,

PROF. ERNST HAECKEL.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index*.

THE EVOLUTION OF HARMONY.

I saw the world from chaos come
Slowly resolving into form:
The elements were fierce in strife,
Force fought with force and life with life,—
A grand creative power was rife.
The voices of the dark were dumb:
A wondrous light from darkness grew,
And music from the silence drew.

I saw the busy, wond'ring boy,
A lover of the aged world:
For him, in flowers of the field
A wordless mystery lay concealed;
To him, a vision was revealed
Of endless, waiting joy.
The vision grew into the real,
And Truth created the ideal.

I saw the Poet in the wood,
While thronging thoughts moved through his soul:
With reverent heart, he saw unfold
The mystery of the ages old.
In speech, the secret was untold;
In thought, the light was good.
He struggled with the silence,—swayed
By dreams,—"For music, this was made!"

Up through the stirring silence grew
The harmony of the pulsing sound:
It shook his soul, it shaped his speech,—
The waiting ages he should reach,—
The waiting multitudes should teach
The secret that he knew.
In burning words, the thought was laid
Revealed,—"For music, this was made!"

SARA W. SMITH.

The Index.

BOSTON, FEB. 8, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

Evolution, Objective and Subjective.

BY WM. I. GILL.

III.

SCIENTIFIC PHILOSOPHY.

A boulder has just been rolled onto my track, and I must halt a little while to blast it. All over the world, men are seeking a rational escape from the toils of solipsism. The British quarterly review, *Mind*, for October, 1882, has two articles seeking this result. One of these is too abstract and obscure to need much refutation. The other is clear and able, well suffused with the spirit of modern physical science, and its learning is quite imposing. Its first title is "Scientific Philosophy," which it expounds under the designation of "Relationism," which is the ancient and mediæval realism improved, which refutes nominalism, now dominant, and its alleged consequent, idealism, and makes philosophy scientific by confounding it with science. As this coincides with a strong tendency of the age an with a style of thinking prevalent always, it is likely to find adherents among a class of desultory psychologists who are ardent theorizers. It therefore demands attention.

Relation of Nominalism to Modern Subjectivism.

The first step in the process by which this is accomplished is to show that modern psychological subjectivism is only a more subtle and comprehensive form of the old nominalism, and is therefore the child of mediæval scholasticism. This is certainly fresh enough to be interesting. Whether it is true, we will proceed to inquire.

A genus comprises such, and only such, qualities as are common to all the individuals of the genus. If the genus is an objective reality, and therefore a single individual, it cannot be of any particular color, form, odor, weight, taste, or subjective states peculiar to any one; for, then, it would exclude every other, and every individual would be a genus, which is contrary to the hypothesis. And it is a contradiction in terms to say that it objectively exists and yet is void of all particular and distinct quality, as that were to be void of all quality. Hence, real genera and species are an impossibility. They are only mental and verbal expedients and symbolical designations for scientific convenience. Such are, in brief, the doctrine and proof of nominalism.

This does not, as alleged, logically involve idealism, nor the invention of noumena as the unknown real in distinction from phenomena as subjective states, nor the denial of relations or the knowledge of relations; and it leaves entirely untouched the whole question of egoism and altruism. It is therefore utterly erroneous to assert that all our modern psychological subjectivism is derived from the acceptance of nominalism. Modern philosophy holds to nominalism, because it is a logical necessity from the very notion of a genus and an individual, because thus only can it escape self-contradiction. Not one of its adherents has ever in any wise connected it with his subjective psychology. Surely, if there were a vital and universal connection between nominalism and subjectivism, some, if not all, of the great subjectivists would have seen and announced it and drawn additional support from it, which none of them has ever done, so far as I am aware.

The irrelevance of nominalism as either reason or cause for psychological subjectivism is further seen from the fact that it is held by those who are not purely subjectivists. Bishop Berkeley is of this class. Though he held to a species of idealism, it is a serious historical error to number him among pure psychological subjectivists. He had in his composition exceedingly little of subjectivism. In his theory, the objective and the *non-ego* were conspicuous and paramount. With him, everything sensible was objective and *non-ego*, and no objectivism, it would seem, could go beyond that; though I believe that of Berkeley did, by making even our reflective mental processes to be non-egoistic objects. Yet he was one of the most ardent and iconoclastic of nominalists. Berkeley reminds us of what the most cursory student of philosophy should understand, that there is an objective as well as a subjective idealism, and that the former, which had its most conspicuous development in India, is far the older of the two, and still survives in the East as well as in the followers of Berkeley in the West, of whom in England some command a respectable hearing. This double form of idealism is of itself a disproof of the alleged idealistic influence of nominalism, especially as the objective idealism of India was matured before nominalism was formulated or before the intellect of Greece had entered on its highest course. All the prominent Scotch philosophers — Reid, Stewart, Brown, Hamilton — were objectivists more or less; and all were decided nominalists or conceptualists, which are logically one, as the names must have some meaning.

On the other hand, there is also a class of realists which is not only idealistic, but, in the main, objectively idealistic. One of the most pronounced of these is the amiable and eloquent author of *Recherche de la Vérité*. In this work, Malebranche makes a distinction between sentiments and ideas. Sentiments, he says, are egoistic, modes of mind, and that the ideas are not, but primary necessary forms which cannot exist in us nor subsist of themselves, and therefore must exist in God. In God, we see them. And this species of idealism he connects with the old realism. Besides these ideas and sentiments, he holds that there is an unknown world whose unknown action is made the occasion of God's presenting these ideas to us in their order, whence follow those sentiments, or mental modifications, in the order in which they occur. In these views, Malebranche is followed by Fénelon, Bossuet, and even by the great Leibnitz.

Further, and finally on this point, there is a long line of antagonism between an allied realism and subjective idealism (total or partial) on the one side, and an allied nominalism and objective sensism on the other side. Plato was the Greek originator of the realism of generals, and he is sympathetic with the Eleatic sceptics, or idealists. He treats the sensible world with much contempt; and, because of the evanescence and instability of its forms, he almost denies it existence. The Academics, who claimed him as their master, were realists, and yet very sceptical concerning the sensible world, and tended to the reduction of its forms to subjective states or impressions, as Hume did, who called himself an Academic, though he was a broader sceptic than they, as they, like good realists, held to the stability and supersensible origin of the higher intellectual world. Aristotle and his adherents took a different and rather antagonizing position on both these points; and the two parties fought a languid battle till in the Middle Ages (through Porphyry) the question took no a new form, and Aristotle's own disciples were divided into hostile camps, and for some four centuries the fiercest of all intellectual contests raged throughout Europe. The realists were always the orthodox and the high and *a priori* metaphysicians, who made much of the inner consciousness and little of sense; while the nominalists were just the opposite. Hence, M. Cousin, who is one of the best informed historians on this subject, says that the contest was virtually a contest between sensism and idealism, nominalism being the sensist party and realism the idealistic party. He tells us that Duns Scotus was for that age a great student of the material world, and held to an immediate knowledge of it as *non-ego*, and that Occam inherited his views and tastes.*

M. Cousin is himself a striking illustration of the point I am endeavoring to make, that nominalism is not the father of modern subjectivism. Cousin is a strenuous realist; and from this he forges weapons against sensism, and maintains that by none of the senses can we transcend the *ego*, and that the knowledge of the *non-ego* is attainable only through the medium of a principle of causality which can be explained and vindicated only on the theory of realism, just such a realism as this which affirms that universals cannot subsist of themselves, but in connection with all the individuals, finite and infinite.

Substitution of Relations for Universals.

The theory in question is not, as its author supposes, inconsistent with nominalism. It expressly identifies relations with universals, and then substitutes the former term for the latter, and then proceeds to show the serviceableness and objective character of relations as therefore reals and universals (pp. 476–478). This is all erroneous,—an unconscious intellectual jugglery. Relations and universals are not the same. Relations of external objects are objective, inhere in objects as members of a group, and are the special and variable modes of the members of said groups; and *because they are variable, indefinitely, they are not universals. Some relations always exist, but not the same relations. The real and active objective relations are therefore not universal.* Indeed, they are not at all the expression of genera and species, and have no manner of connection with the question of nominalism and realism on that subject; and so the existence of these relations is nothing against nominalism. Nominalism admits and assimilates them with so much ease and comfort as not to know that it has any digestion. As a nominalist, I accept them as indubitably true. Thus, nominalism is the maelstrom which swallows up the great new theory of relationism, instead of being logically extinguished by it.

Subjective Relations.

We must here call attention to an important fact, which has been overlooked, that there are subjective as well as objective realities and relations. There are logical relations, very many: relations innumerable in the field of abstract or pure mathematics in all its many branches; relations between all the sensations, between other feelings, and all the moral conceptions, and between all these classes. These relations of the subjective world involve an infinity of possible detail and modification. Now, these relations are certainly not "reals" in the sense of external and non-egoistic, which is the kind of real and universal we are discussing. They are real facts, and real relations as subjective states, and nothing more. Neither are these relations universals. We can classify them; but the result is only so many classes of particular experiences, which are so much alike in each class that they are put together, and so separated as a class from others because of their relative unlikeness. Myriads of sensations related to each other are brought under five different classes or senses; but there is no general sensation which combines or concentrates or represents or constitutes the generic class sensation, or the specific class of each sense and including all special experiences of that sense. Relations we have in abundance, but no general or universal reals; and relations cannot be substituted for universals, as if they were the same.

Identity and Difference of Method in Science and Philosophy.

A striking contrast is drawn between the successful method of science and the barren method of philosophy, as the latter is represented by Kant's metaphysics. Science, it is said, teaches that cognition conforms to things, not things to cognition, and metaphysics just the opposite. But this is an inadequate representation of modern philosophy. When Kant speaks of making the objects conform to cognition, he confessedly designs to speak under the limitations of science and in conformity with the method of sci-

* See his *History of Modern Philosophy*, vol. ii., Lect. ix.

Digitized by Google

ence; and he mentions a great scientific fact and name in illustration of his object, Copernicus and his procedure. It was experience, the experience of sensible disharmony and mental confliction, which led Copernicus to transfer his theoretic stand-point of observation from our planet to the sun. In like manner, it was a corresponding disharmony of experience, outer and inner, which led Kant to change conversely his theoretic stand-point. Copernicus endeavored (successfully) to give a theoretical unity to the known facts or objects of the material universe by supposing that we revolve around the sun and not the sun around us. Kant endeavored to furnish a theoretical unity to the known facts or objects of the psychological world, inner and outer, by supposing that our faculty of cognition shapes the outer world instead of being shaped by it. This is inadequate and partially erroneous, but it is not contrary to the method of science. It does not ignore or depreciate sensible objects or experience, any more than Copernicus did. Kant is wrong in his whole system, nearly,—wrong in his method of deducing the categories and in the result on the list of categories, wrong in his assertion of the need or the existence of synthetical propositions *a priori*, wrong in his doctrine of *a priori* regulative principles as of only subjective authority, wrong in his doctrine of a supersensible material world, wrong in his doctrine of incognizable noumena numerically different from phenomena; but he is not opposed on the point in question to the accepted method of science. He commences with experience and even with sensible experience, and then analyzes it and determines its contents and their relations to each other by what he supposes to be the most rigorous scientific method. Further, when rightly understood, the antithetic phrases, "conformity of cognition to objects" and "the conformity of objects to cognition," are not opposites, but equivalents. Phenomena are the same, whether we speak from the Ptolemaic or the Copernican stand-point; and they are the same, whether we speak from the subjective or objective stand-point. If cognition is in conformity with objects, objects are in conformity with cognition. Still, it is an unfortunate formula which was here adopted by Kant, though not more unfortunate than its older counterpart, whence by the law of antithesis he derived his. For objects do not wholly shape cognition, any more than cognition wholly shapes objects. They are inseparable, and together they form an active causal and cognized unity. There is always an interaction in which action and reaction are equal between the organism and its environment; and there is strictly no object before cognition, and no cognition before there is an object. They necessarily originate together. They invariably conform to each other, therefore; and the distinction between the antithetic phrases used by Kant should never have been made, except to observe their logical and experiential unity.

Hence, I accept as entirely true Mr. Abbot's description of the process and method of cognition according to the theory of scientific philosophy,—"that knowledge is a dynamic correlation of object and subject, and has two ultimate origins, the cosmos and the mind; that these origins unite, inseparably yet distinguishably in experience, *i.e.*, the perpetual action of the cosmos on the mind, plus the perpetual reaction of the mind on the cosmos and on itself as affected by it; . . . that experience has both an objective and subjective side, and that these two sides are mutually dependent and equally necessary": only I add, by way of further analysis and explanation, that the kosmos, or the objective world, is the mind just as much as that which he so designates. The interaction here described is between the kosmos and the organism, and these are two great classes of the complex modes of "the mind." All motion, action, and interaction are changes in the modes of the mind.

This exposition discloses the false basis of most of the objections to idealism. They all assume that the *ego* is confined to the organism, within which therefore our knowledge is confined, if it is confined within the *ego*. Hence, they may speak with just but irrelevant contempt of the limitation of our "capacity to realize only what is contained within the narrow shell of our physical organism, and all the universe outside relegated to the realms of the unknown and uncognizable." All that universe is as much *ego* as the organism itself, and just as much known. While subject and object are equally necessary to consciousness and equally known in consciousness, the object is always as much *ego* as the subject, *two phases of the one reality*. It is entirely true that all cognition is relative, and involves two terms whose reciprocal action constitute the relation, and it is therefore irrational to confine cognition to one of these terms; and I do not do that. I extend it to all such terms, but I affirm that they are all and always *ego*. So neither do I affirm "a subject without an object." That is absurd, as it implies "a thinker without a thought"; but I affirm that the thought and the sensible object are both and equally *ego*. I do not deny extension to the *ego*. I give to it all knowable extension, and duration too. Such is one *ultimate logical result* of our modern psychological analysis, from which there is no longer any dissentient worth the name. Let not philosophers or scientists disparage their own record by starting back in alarm from a statement which is new only in its greater logical thoroughness and completeness.

Scope of Science and Philosophy.

Science seeks laws and lexical connections. Individual phenomena are sought only as exemplifying law. But, for this purpose, individuals are necessary. In them only, laws exist. Law has no separate entity; and it not only exists in individuals, but it is the individuals, and not a genus, except as it subjectively exists in us as an abstract or tropical conception. Hereupon, we are told that subjectivism, by limiting our knowledge to one individual *ego*, renders science impossible, because science implies a multiplicity of objects acting in conformity to general laws (p. 487). This is erroneous. It discloses an unfortunate incomprehension of subjectivism, which admits and includes just the same, and the same number of, objects and laws, as objectivism. It includes all the sensible and knowable universe (and much more), and objectivism never claimed more than that for the sphere of science. If there is but one individual known, that individual includes all the universe of the objectivist, with all its multitudinous phenomena and changes; and these, in all their relations, subjectivism is quite as competent to investigate as objectivism, for subjectivism includes all objects, all phenomena, all mutations, their causes and connections and logical implications. While it identifies relations with objects, it identifies objects with the *ego*, which is more than subject; and thus it absorbs relationism as a very little thing in its vast and measureless womb of a boundless universe.

Philosophy is scientific in its basis and procedure; but it is not science, and it is more than scientific in its comprehensiveness and in the results it seeks, whether it attains them or not. It is utterly erroneous to suppose that the great problem of the age is "how to identify science and philosophy." That is a problem only for those who have no proper conception of philosophy and who desire only that philosophy shall voluntarily abdicate existence, and bequeath to science its name. Philosophy seeks the ultimate analysis and resynthesis in a logical unity of all experiences and conceptions, all phenomena inner and outer, the ultimate actual and logical relation of substance and quality or attribute and cause,—cause as the intrinsic force of phenomena as well as lexical antecedents, and ultimately explanatory of such phenomena, and also of illexical phenomena, if any such are found. To this great object, all the sciences are ancillary; and all scientific methods and results are respected and utilized by philosophy. Philosophy stands at the supreme and ultimate centre of the universe, of which she is the light and glory; and, from every part, she seizes all scientific lights, and blends and combines them into one glowing orb of pure white illumination, which discloses the intellectual harmony of all worlds and all their parts, their high significance, their origin and destiny, and the necessary methods of working out that destiny. The humblest forces contribute to the greatest results; and, therefore, I labor for the promotion of this great end.

CORRESPONDENCE.

CHRISTIAN ABUSE.

Editors of The Index :—

There is still existing an old style of argument, which consists in calling names. It is used by those who cannot give rational support to their position. They have many precedents for such procedure. There is a legal maxim to be applied where there is no case for the defendant,—"abuse the plaintiff's attorney." The Jews said to Jesus, "Thou hast a devil"; and Festus said to Paul, "Thou art beside thyself, much learning doth make thee mad." It is a most convenient style of argument, because the possession of brains or knowledge is not necessary for its employment. It is a favorite method in religious controversy. Demonism and insanity are favorite epithets for the disproof of what cannot be met with the weapons of reason or of common sense.

One who, after many years of thoughtful, prayerful study of the Bible and of the doctrines based upon it, was led to embrace the rationalistic views now held by numbers of the best living, highest thinking, and most serviceable members of society, was assailed by volumes of correspondence, of which the following are a few specimens:—

"Permit me to remind you that you are *not alone* in your disbelief of God, the ever blessed, Infinite One; but you share fellowship with the *brute* creation (who also disbelieve), with the added difference that the brutes do not BOAST of their shame."

"Don't bring any more suffering upon the children of God around you. For Zion's sake, hold your peace!"

"It is worse than death."

"Your birthday is a day of sorrow and prayer for you. The customary good wishes seem as much out of place as when sudden death has entered a dwelling."

."Dark days will enter a God-forsaken home."

"I would have spoken to you, but Satan said: 'No, no! you will only hinder him from returning. He is a cinder,—burned out.' But I will rather think of you as of a once fair stretch of Western prairie upland over which the fire has passed, and we see, instead of waving grass and spring flowers and clumps of trees where the birds make their nests, blackness and desolation, gaunt, bare branches, where once was verdure and pleasant shade."

"You have entered upon the arena of a general conflict which will be ended by one of two weapons, the sword of the Spirit or God's permit to the angel,—'Thrust in thy sword.'"

"It is refreshing to receive a letter from you into which the ghastly skeleton does not intrude."

"I hope light will soon dawn upon your dark and clouded mind."

"The prospect has the appearance of a beautiful garden filled with all manner of pleasant fruits, but changed by a wind from the desert into a scene of desolation. My good wishes for you are that our merciful Father will speedily bring you back into his family, . . . out of *darkness* into marvellous light."

"Thus far, the effect of reading your new views seems to make right-minded people cling the closer to the Bible. • Dr. B. says he understands the chain of false reasoning you have wound about yourself."

"I supposed by this time you had given up your *false* notions."

"My first thought was, '*He is insane*'; and I sincerely hope to hear that this great change is the result of insanity."

"I see nothing but a hopeless, eternal separation before us."

"Had God in his righteous dealings seen fit to take you out of the world, I should have had the happy prospect of a joyous meeting hereafter; but now what remains except a fearful looking for of judgment and fiery indignation?

"If, during so many years, your mind has been going through the incipient stages of what has now become open rebellion against the Almighty, is it any wonder that the Omniscient One should have acted as he has done in regard to your children,—to you in faithfulness, with the chastening hand of a loving Father for the purpose of turning your thoughts to himself, and to them in infinite mercy, taking them in their unsullied purity from the care of those whom he foresaw would be unfaithful to the trust?

"Either you are under a fearful delusion, consequent upon being possessed of Satan, or your words are the vagaries of an unbalanced intellect.

"What has wrought such a fearful change except the poisoning of your mind by the venom injected by the great adversary through the means of infidel books, and he now rejoices with hellish delight.

"Through some miserable speculations of infidel scientists, Satan has succeeded in getting you entangled in his net.

"It seems a mockery to wish you the usual compliments of the season."

"When you are *restored* to a *right state of mind*, how surprised you will be that you could ever have held such a belief!"

The request that noted works of science should be read brings the refusal "to read books which have proved the ruin of countless souls. Would a ship-master sail over and among rocks, which were laid down in the charts, merely for the purpose of trying whether they were there or not? When one can see the wrecks of souls lying about in all directions, I regard it as entirely unnecessary to make any experiments on my own account, having only one soul to lose."

A Sunday paper containing valuable information and one article of special interest was sent to a family by mail. They put the paper in the fire, and wrote to have another paper sent, that had copied this article in a week-day issue, as they were unable to read it in the Sunday paper.

If any further proof were needed of the falsity and injurious effects of the Calvinistic theology, it would be supplied by such utterances. A tree is known by its fruit; and such uncharitable, illiberal, intolerant assumptions never came from the tree of truth.

How pitiful it seems to a man who has escaped from a dungeon, to see the prisoners who are still in bondage howling and lamenting over his wickedness and misfortune in breaking his chains and escaping from the tyranny of tradition to the realm of natural law! Lecky well characterizes such persons in the following paragraph: "On theological questions, unfaltering belief being taught as the first of duties, and all doubt being usually stigmatized as criminal or damnable, a state of mind is formed to which we find no parallel in other fields. Many men and most women, though completely ignorant of the very rudiments of Biblical criticism, historical research, or scientific discoveries, though they have never read a single page or understood a single proposition of the writings of those whom they condemn, and have absolutely no rational knowledge either of the arguments by which their faith is defended or of those by which it is impugned, will nevertheless adjudicate upon every polemical question, denounce, hate, pity, or pray for the conversion of all who dissent from what they have been taught to assume as a matter beyond the faintest possibility of doubt, that the opinions they have received without inquiry must be true, and that the opinions which others have arrived at by inquiry must be false, and make it a main object of their lives to assail what they call heresy in every way in their power, except by examining the grounds on which it rests."

A FREE THINKER'S BURIAL.

Editors of The Index:—

The members of the Montreal Pioneer Free-thought Club accompanied, on the 11th inst., to their last resting-place the remains of a French Canadian lady, Madame Surgeon. The burial, a civil one, created a most extraordinary commotion among those of her countrymen who became acquainted with that hitherto unheard of fact. Born and brought up a Roman Catholic, of a nationality known as the most loyal and sincere, perhaps, of the adherents of the Church,—a nationality which yet rigorously maintains and preserves the customs and language as well as the ignorance and superstition of the sixteenth century, when the first French settlers under Jacques Cartier landed on the banks of the St. Lawrence,—she displayed in the later days of her short life a quiet heroism worthy to be recorded, testifying, as her whole life had done, to a noble womanhood. Together with her husband, a merchant tailor, she had of late years, through thoughtful reading, gradually drifted away from the superstitions of her childhood and race into the open sea of intellectual liberty, where both delighted to roam. With amazement, they looked back on the days of their ignorance, when the use of their reason seemed to them the most horrid of crimes; and, exulting in their newly found freedom, they regarded with compassion their friends and neighbors who yet bend their neck in abject slavery to that dread tyrant, Rome.

But, unfortunately, Madame Surgeon found herself in the relentless grasp of an incurable disease; and slowly were her strength and her life ebbing away, while the fortitude of her intellect, the serenity of her mind, seemed to grow stronger and brighter. In vain did priests and nuns apply for the privilege of delivering her soul to the torments of purgatory, there to burn and to quiver till it might be sufficiently purified to be admitted to the circle of the select, which process is styled "the consolation of the Church." In vain did the relatives rage and threaten the patiently suffering husband with a vengeance which only fanaticism could inspire. True to herself, true to her husband, true to her convictions, she passed away in silent sleep, not a sigh, not a murmur escaped that noble, feebly beating heart. Of her neighbors, none dared to enter that "dreadful" house. They passed it with shy and furtive glances, wondering why an offended God did not wreak vengeance more swiftly, vengeance most terrible. With astonishment and amazement, they witnessed the long procession of highly respectable citizens who quietly walked behind the plain and simple hearse. There were in that procession men with white beards and faltering steps, men who had come to express respect for the heroine whose remains they were accompanying, and their sympathy with the hero whose head was bowed down with grief at the severe loss he had sustained.

At the grave, the following most impressive address was delivered by Mr. Martin, the honorary President of the Montreal Pioneer Free-thought Club.

The Address.

"*Dear Friends,*—The solemnity of the last sad scene in the brief history of a fellow-mortal invests us here, and presses heavily upon our hearts. No philosophy, no science, no religion, can change the darkness of the tomb into light. Believer and unbeliever are alike powerless to escape from the gloom that follows the extinguishment of a life beloved. It falls upon the desolate heart as night falls upon the earth when the last glimmer of sunset has departed.

"Our deceased sister, around whose remains we are gathered to express our sorrow and our sympathy, was an affectionate wife and loving mother, a type of character which constitutes the fairest flower in the garland of woman's excellence. Not in the midst of crowds, in the noisy world of conflicting passions and ambitions, were her virtues seen to bloom, but in the quiet seclusion of her own home, in the daily presence of her devoted husband and innocent children.

"Tried as she was for a protracted period in the relentless grasp of a fatal disease, she showed at all times a spirit of patient endurance, and maintained in later years, to the last gleam of life's poor taper, a severity of intellectual fortitude which adds lustre to her sex.

"She is gone; but her example remains,—an example worthy of perpetual remembrance. She entered the dark valley and shadow of death with unfaltering step: no spectral terrors came between her waning vision and the rest for which she sighed.

"Sweet be thy sleep as thy memory, thou who art released from the ills of life! These flowers that rest upon thy bosom fitly symbolize the grace and beauty that were thine; and the flowers that shall spring from thy consecrated dust will breathe of thee, and prophesy of the golden age to come, when knowledge shall have overcome error and the resurrection of humanity, redeemed from the thraldom of intolerant centuries, shall make for happier generations a new heaven and a new earth.

"Would that the words spoken here in testimony of thy virtues could carry some degree of consolation to the aching heart of him who mourns the loss of his beloved companion. May the recollection of her firmness and faithfulness shown in the extremity of trial, and the thought of her pure and blameless life, be to him a sustaining power which no evil can destroy nor take from him.

"And here we part with thee, thou who hast given such rare proof of a noble womanhood. We leave thee to the sanctity of that rest which is better than the turmoil of life, to the beatitude of a dreamless slumber, to the immortality that is inseparable from all that is good and true and beautiful in humanity."

With this simple yet impressive ceremony, we took leave of all that remained of a true and noble woman.

F. B.

MONTREAL, Jan. 20, 1883.

NO TWO original minds can take the same steps and in the same path. As the face of Aspasia was unlike that of Zenobia and unlike that of Beatrice, and as all these were not the kind of beauty now seen in the homes of America, so each book that comes into the world from an individualized soul will have its peculiar likeness, and will be beautiful or wise in some of its pages.—*David Swing.*

BOOK NOTICES.

BIBLE MYTHS, AND THEIR PARALLELS IN OTHER RELIGIONS: Being a comparison of the Old and New Testament Myths and Miracles, with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous Illustrations. New York: J. W. Bouton, 706 Broadway. 1883.

This work aims to show that the miraculous stories in the Old and New Testaments, have too many parallels in the various forms of paganism to be fairly considered exceptionally divine. This proposition is proved by an abundance of evidence, taken from standard English and French authorities, stated with praiseworthy clearness, and illustrated with striking woodcuts. The first eleven chapters go over the prominent points of the Old Testament stories one by one, and show the parallels in many other religions to the accounts of Adam, Noah, Moses, Samson, Jonah, etc. This part of the work tells incidentally how the first five books of the Bible arose out of three documents, one of which is older than the Babylonish captivity. Twenty chapters are then devoted to a similar comparison of the New Testament myths and ceremonies to those of Zoroastrianism, Buddhism, and other Oriental religions. A whole chapter is given to "Christ Chrishna and Christ Jesus," a case in which the similarity of all the names is certainly remarkable, though the question of priority is not so easily settled as would be judged from the work before us. The arguments from the resemblance of the story of the Buddha to the Gospels, also considered in a special chapter, is much stronger, because, in the first place, there is no doubt that what is most like Christianity in the life and teachings of the Light of Asia was written down several centuries before the birth of Jesus; and, second, because there is some reason to believe that the Buddhist scriptures were known in Palestine and Asia Minor before the New Testament was written. On pages 422–424, which might well have been incorporated with the chapter just referred to, it is stated, on the authority of Dean Mansel and other scholars of undoubted Orthodoxy, that Buddhism prepared the way for Christianity. To the facts there enumerated may be added the important one that, long before the birth of Jesus, the peculiar doctrines of his Hindu forerunner prevailed in Bactria, while it was under Grecian rule. What more likely than that Jews who knew Greek were thus taught that veneration for poverty and non-resistance so characteristic of the Gospels and so alien from the Old Testament? Among the most interesting of the closing chapters are those entitled "The Worship of the Virgin Mary," "Christian Symbols," "The Birthday of Christ Jesus," "The Trinity," and "Why Christianity Prospered." The whole book is written in an earnest, thoughtful, and—in the best sense—liberal spirit. Of course, where so much information is given, there must almost inevitably be some inaccuracies. The statements, for instance, about the peculiar tenet of the Docetists, the orthodox view of two natures in Christ, and the position of Calvin in regard to the eucharist, might easily be made more correct, though this would not add much to the general value of the work.

We are glad to see that the enterprising publisher of this work, J. W. Bouton, 706 Broadway, New York, is about to reprint that remarkably interesting and scholarly one, *Evenings with the Sceptics*, beyond question the best history of the subject as far as the sixteenth century.

THE HISTORY OF THE RELIGION OF ISRAEL: An Old Testament Primer. By Crawford H. Toy, Professor of Hebrew Languages and Literature in Harvard University. Boston: Unitarian Sunday School Society. 1882.

Prof. Crawford H. Toy's Sunday-school text-book on *The History of the Religion of Israel* applies the results of modern criticism to the Old Testament in a fairly thorough way, with the result of altogether destroying the idea of the Bible which the Jewish scribes devised and put into vogue, and which the Jewish disciples of Christ, along with Paul, mistakenly retained, although their Master had himself set it wholly aside. Perhaps no more could have been done to advantage within the limits and for the purposes of a brief text-book; but a far more important service would have been rendered, if Prof. Toy had brought out such facts as the following: 1. The Hebrews at first thought that their god was present

Digitized by Google

with them in a little chest or ark, then they assigned his presence to their holy city and temple, and finally found it in their sacred writings, the third form of the same error. 2. The scribes were first and chiefly book or Biblical men, and their one great work was the creation of the Bible idea, the entirely false idea that their sacred writings were of supernatural origin and perfection. Under other religions, the same idea appeared: it is everywhere one of the errors of heathenism. 3. The germ of the Hebrew sacred writings was produced under Josiah, amid circumstances of superstition and fiction. 4. The prophets whose work was purest and best held the priestly claim of sacred written law to be a device opposed to true religion. 5. Christ openly set aside the Biblical idea; he spoke not as the Biblical men; he remarked on comprehensive error in Hebrew Biblical teaching; he reduced the good of that teaching to very simple general truths; and he evidently had no expectation of either continuance of the old writings as Bible, or any making of new ones into a second form of Bible; and it was a great and lamentable mistake when Christian scribes restored and extended the Jewish Biblical idea.

SILK AND THE SILK WORM: a Complete Work of Instruction on Silk Culture. By Nellie Lincoln Rossiter. 2832 Goldbeck Street, Philadelphia. Paper covers. Price 25 cts.

The author of this work, which is written in a clear and straightforward manner, writes us that she is "a girl of sixteen," who has adopted silk culture as a means of support, having been engaged in it professionally since 1880, has received from the Pennsylvania State Agricultural Society the highest premium, and a special premium for cocoons and silk raised by herself. Of her fine silk collection, she says, valuable additions have been made to it by the courtesy of the superintendent of the Nonotuck Silk Company of Florence, Mass. She is anxious that other girls and women should try this industry, hence her enterprising book.

A DOUBTING HEART. By Annie Keary, author of *Castle Daly*. London: Macmillan & Co. Price $1.

This book, of over six hundred pages, is a pleasantly told story of the love adventures and domestic lives of a number of people, none of whom have anything distinctively remarkable in their characters or in the incidents related of them. The moral tone of the book is good, its style is very readable; and, though we find ourselves at its conclusion in a state of doubt as to which of its many heroes and heroines the "doubting heart," of which it treats, belongs, we can commend it as a pleasant companion for a leisure hour.

WE have only space to mention a few of what we consider the best among the many good things which *Wide Awake* for February offers to its large constituency of readers, young and old. E. E. Hale talks about "Mexican Affairs"; "Our Business Boys," by Rev. F. E. Clarke, promises to be very interesting to all ambitious boys; "Through a Microscope," with five illustrations, is instructive and pleasant reading; "The John Spicer Lectures" of Mrs. Diaz grow in unique interest; "Granny" is a charming Irish story, told by Kate Upson Clark; and "The Apothecary's Valentine," by H. B. B. W., is a tenderly pathetic story; Jane Austen is the author treated of in this number; "Marion Harland" (Mrs. Terhune) gives her third paper on "Cookery for Beginners"; and among the poems is Robert Browning's "How they brought the Good News'; the song set to music by Prof. J. K. Paine, "Beneath the Starry Arch," is by Harriet Martineau; Felix L. Oswald writes of "A Brazilian Forest." The illustrations as usual are numerous and beautiful.

"ST. NICHOLAS" for February offers among its multiform attactions an article from Joaquin Miller, entitled "In the Land of Clouds"; a poem by Celia Thaxter; the continuation of "The Story of Viteau," by Frank R. Stockton; a play, "Puck's Pranks," by Mary Cowden Clarke; a delightful description of a "New Winter Sport," from the pen of Hjalmar H. Boyesen; "The Tinkham Brothers' Tide-Mill," J. T. Trowbridge's serial, deepens in interest. The advent of St. Valentine's Day is heralded in both prose and verse, while the many beautiful illustrations add point and pathos to the reading matter.

PERSONAL ITEMS.

THE German Emperor has raised Dr. Hermann Helmholtz, the eminent German philosopher, to the rank of a noble.

MRS. ELIZABETH A. BEARD, widow of the late Dr. George M. Beard, died of pneumonia at the Grand Hotel, New York, on Wednesday.

THE *Midwinter* (February) *Century*, containing the first chapters of Mr. Howells' new novel, "A Woman's Reason," is out of print; and a new edition is on the press.

MR. J. G. CRAWFORD, the vice-president of the Sunday Lecture Society of London, has applied for a site on the Thames embankment, that he may place there at his own expense a statue of Robert Burns. This will cost Mr. Crawford £2,000.

EX-GOVERNOR ST. JOHN of Kansas is to have a reception February 22, in Boston, in the mammoth building of the Massachusetts Mechanics' Association, on Huntington Avenue, day and evening. The Governors of all the New England States are expected, and there will be a grand children's entertainment in the afternoon.

REV. J. W. F. BARNES, chaplain of the Massachusetts State Prison for about two years past, tendered his resignation to Gov. Long last October; but it has not been accepted. He has met both Gov. Long and Gov. Butler by appointment, and conferred with them relative to the matter, but neither seemed willing to allow him to leave the institution. The salary of the prison chaplain is $2,000 a year.

MRS. EMMA B. DREXEL, wife of Francis A. Drexel, of Philadelphia, who died last week, was noted for her extensive philanthropy. She paid the rent of more than one hundred and fifty families, and distributed among the poor over $20,000 a year. She employed a woman to institute inquiry into the merits of each applicant, and once a week dispensed groceries, clothing, and money to the poor, who gathered every Tuesday in the rear of her residence.

MRS. SHATTUCK pays this deserved compliment in the *Transcript* to an occasional contributor to *The Index*: "The best addresses of the (Washington Woman's Suffrage) Convention were those of Miss Phebe Couzins on 'Woman without a Country,' and Mme. Clara Neymann on 'Republican Principles.' Mme. Neymann is a spirited little German lady with a full rich voice, and a feeling of patriotism that it is to be hoped more American women will some day possess."

MRS. LUCY STONE tells the following characteristic anecdote concerning the poet Whittier and Lydia Maria Child: "One day, he sat still, thinking, silent. Mrs. Claflin, who was with him, waited for him to speak. Finally, with grave, earnest face and uplifted eyes, he said: 'Did thee see it? There is a change. Surely there is a change. Did thee not see that Lydia has altered her bonnet?' The 'Lydia' was Mrs. Child, and you can fancy how we laughed at the poet's keen detection of a change in 'Lydia's' bonnet!"

MRS. AUGUSTUS HEMENWAY has promised $5,000 to the permanent fund of the Women's Educational and Industrial Union, believing that one of the greatest needs of the city is just such a place for women. Other subscriptions received lately amount to $1,430. To this should be added the $5,000 given two years ago to the Union by Mrs. John W. James. The trustees of the Union are Mrs. Kate Gannett Wells, 155 Boylston Street; Mrs. E. G. Gay, 385 Beacon Street; Mrs. A. Hemenway, 40 Mt. Vernon Street; Mrs. J. W. James, 119 Boylston Street; Mrs. Grace A. Oliver, 124 Boylston Street; Mrs. G. H. Norman, 343 Beacon Street; Mrs. Thomas E. Proctor, 327 Beacon Street,—to any of whom subscriptions can be sent.

THE *Agnostic* quotes what the junior editor of this journal recently wrote about Dr. B. Michener, who died at Adel, Iowa, a few years ago, and adds: "Mr. Underwood pays a tribute to the memory of a grandly noble but unassuming old gentleman, whose teachings, example, and influence in leading humanity out of the fogs of superstition into the clear light of liberal truth, has caused thousands of his fellow-creatures to venerate and love him. The publisher of this paper thinks of Dr. Michener as his individual 'saviour,' from whom we learned more lessons of liberal truth at the time we most needed them than from any other source; and we cannot refrain from republishing Mr. Underwood's just tribute to this brave and noble benefactor of the human race."

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,
706 Broadway, New York.

For sale at INDEX Office, 3 Tremont Place, Boston.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

Works of B. F. Underwood.

Essays and Lectures. Embracing "The Influence of Christianity on Civilization"; "Christianity and Materialism"; "What Liberalism offers in the Place of Christianity"; "Scientific Spiritualism: its Meaning and Tendency"; "Woman: her Past and Present, her Rights and Wrongs"; "Paine, the Political and Religious Reformer"; "Materialism and Crime;" "Will the Coming Man worship God?" 300 pp. Cloth. $1.00.

The Letters of Junius. An essay on the authorship of these remarkable compositions, with letters to Mr. Underwood, never before published, from jurists, statesmen, and scholars, showing a concurrent conviction that Junius was Sir Philip Francis. 10 cts.

Religious Revivals, their Causes and Consequences. 10 cts.

Burgess-Underwood Debate. A four days' debate between Prof. Burgess, President of the North-western Christian University, Indianapolis, and B. F. Underwood. 188 pp. Paper, 50 cts.; cloth, 80 cts.

Underwood-Marples Debate. A four nights' debate in Canada between B. F. Underwood and Rev. John Marples, Presbyterian, of Toronto. Paper, 35 cts.; cloth, 60 cts.

Jefferson, *the free-thinking philosopher and statesman.* His religious views presented from his own writings, with his own testimony and the statements of John Adams, William Wirt, Daniel Webster, Edward Everett, Caleb Cushing, and Robert C. Winthrop, in regard to the authorship of the Declaration of Independence. 10 cts.

Radicalism and Conservatism. 5 cts.

CURRENT TOPICS.

A HERBERT SPENCER CLUB has been formed at Providence, R.I.

THE London *News* says that the ministry will probably introduce in the Commons a bill legalizing an affirmation by members who desire to affirm instead of taking the usual parliamentary oath.

THE New York State Medical Society, at a recent meeting at Albany, by a vote of one hundred and five to ninety-nine, approved the new code of ethics by which allopathic physicians are allowed to consult with any legally qualified practitioner. So close a vote indicates, however, a strong feeling among the conservative members of the profession against the change.

THE number of public houses in Copenhagen is to be reduced in the interests of temperance from thirteen hundred and fifty to three hundred. Fascinating bar-maids are not to be permitted to serve liquor. Landlords are forbidden to sell drinks to any person under eighteen years of age or to any one under the influence of liquor. A drunken person shall be conveyed to his own dwelling in a cab or covered carriage at the expense of the landlord in whose house he took the last glass. Prohibitionists in this country will do well to make a note of the Danish system.

A CINCINNATI physician has been sent to the work-house for thirty days for cruelty to his family. The particular offence for which he was arraigned was not an isolated one; and the judge in sentencing him said it seemed strange that a man of his intelligence and standing in the community, who often had been noted in that very court as one of the most persevering witnesses against those who were cruel to animals, should be brought there for cruelty to women. This reminds us of an incident related of Robespierre. A lady, pleading with him for the life of her husband, in her excitement stepped upon his favorite dog, when his countenance, which had remained unmoved by her distress, suddenly changed; and he exclaimed in horrified accents, "Good God, madam, have you no feelings!"

HON. HENRY C. ROBINSON, of Hartford, Conn., recently gave a lecture in New Haven, in favor of co-operation, in which he said that he had lately visited a small factory in Connecticut, whose owner boasted that he had the preceding year "made" $72,000. Going through the mill, he found bobbins tended by children from eight to twelve years old, with faces colorless and without expression, working ten hours a day, with twenty minutes out for dinner, for *fifteen cents per day*. Is it strange that Mr. Robinson asks for co-operation or anything else by which it may be possible to put these little ones at school, and enable their fathers to support them decently? Such injustice to the workingman as is implied in Mr. Robinson's statement, if continued, must result in the most disastrous consequences to society.

LAST Monday, Joseph Cook said, as reported: "In death, the good may see those who have gone before them, and the evil may see those they have injured. After this mysterious outlook into the beyond, the body sometimes retains the power of speech. Therefore, probation does not end before death. I do not affirm that the soul leaves the body when the eye glazes or after the breath leaves it. I only will say that I do not know that the soul leaves the body when the breath does. I do not know. Nobody knows. I have consulted several physicians, and I find that they are not agreed as to the time when the soul leaves the body. Breathing does not usually cease until after the eyes glaze, and there is time for the soul to make decision after the eyes brighten and before they glaze. It is rational to believe that he who passes through death unrepentant will never repent, and this makes it probable that death does end probation." Here we have offered, as probable truth mere assumption and twaddle. Mr. Cook dogmatizes in regard to subjects of which he knows nothing whatever, and makes himself a fit subject for ridicule not only among free thinkers, but among all intelligent, earnest, and courageous seekers after truth.

THE London *Ironmonger* thinks that the French are in advance of all other nations in the settlement of labor grievances. The French statutes provide for permanent courts known as *Conseils des Prudhommes*, of which there are now one hundred and thirty-two in France. To them, both employers and employed can appeal on any question affecting wages, or other questions which may arise between the two classes. According to figures furnished for 1880, they adjudicated during that year 39,429 cases. It appears that out of every one hundred cases brought for investigation, fifty-nine relate to wages, thirteen to dismissals, ten to misbehavior, five to disputes about apprenticeship, and thirteen to various other causes. There is a general court to which cases may be taken on appeal, and it is a noteworthy fact that about three-fifths of the number taken to this higher court are amicably settled. Whether a system similar in character to that of France could be made to work well in this country is uncertain; but it is very evident that we need in the United States some plan of settling disputes between capital and labor, and the subject, being one of great importance, should receive the attention of our best men.

IN the sixth lecture of his course on "The Sun and Stars," in the Lowell Institute, last week, Prof. Langley said in substance: When we see a rose leaf, we say that we see a color in the leaf; but we do not see a color. What appears to be the beautiful red in the rose is really the sensation in the eye. There are no experiences of color apart from the seeing eye, and that finds its fountain in the sun. The limit of the ear in detecting the musical note is about 40,000 vibrations to the second. Above that number, the human ear is not fine enough to discern the musical note, only the dull thud of the hammer sound being heard. So it is with light. Of the rays shown, there are 60,000 to the inch; and, as light travels, there come to the eye 706,000,000,000,000 light waves in a single second. There are light waves which fail to operate upon the eye, precisely as the highest notes" fail to operate upon the ear. From these facts given by Prof. Langley, it is evident that luminousness depends not less for its existence upon ethereal vibrations or waves than upon retinal sensibility, and that the popular belief that the universe itself is radiant with light is without foundation. Where there is no ear, there is no sound: where there is no eye, there is no light.

WE have received from the office of the *Woman's Journal* a circular letter, signed by Lucy Stone, Julia Ward Howe, Ednah D. Cheney, Sarah Shaw Russell, Mary F. Eastman, Mary C. Ames, Abby W. May, and Elizabeth Stuart Phelps, asking us to call the attention of our readers to the subject of municipal suffrage for women, which is now being earnestly urged upon the State Legislature for immediate action. This we do very willingly, as it is an essential part of *The Index* platform to work for improvement in social welfare; and we consider the elevation and advancement of women as among the most direct means toward such improvement. In regard to this particular measure, we agree with the talented ladies whose signatures are attached to this letter that "it is simply fair play that women who pay their share of the town taxes and who have the same interest in the good of the town or city that men have should be equally entitled with men to a legal vote on these questions of common interest." The circular further states that "this right has been granted to and exercised by English women for many years," and "it was secured to Scotch women last year." It will be a little out of character with republican America's pretensions to extra progressiveness, if her citizens allow her matrons and maids to plead in vain for a privilege already accorded to the women under a monarchical government.

WHO ARE "UNITARIAN MINISTERS"?

The question having been raised as to what is the significance of the new action taken by the Directors of the American Unitarian Association in regard to the list of ministers in its *Year-Book*, the correspondence which we print below between the Secretary of that Association and the senior editor of *The Index* may be of interest to some of our readers, and serve to throw a little light upon the matter, though not all that is desirable. When we received the letter which we published last week, showing, as it seemed to us, a misapprehension of the subject, simply because the writer had naturally had no opportunity to learn its history, we asked the assent of Mr. Reynolds, the Secretary, to the publication of this correspondence in the interest of a clearer understanding of the case. This assent he readily gave, provided it should be understood that his personal letter, being addressed, as he said, to one "familiar with all the circumstances and history of the case," intimates rather than fully states his opinions. It should be further understood that the first letter was a printed circular that was sent to all persons who have stated charge of societies registered in the *Year-Book* "List of Societies," but whose names are not included in its list of ministers. This circular came in due course to the present writer as one who for a number of years had been in this somewhat nondescript position. Without longer preface, we give the correspondence:—

ROOMS OF THE AMERICAN UNITARIAN ASSOCIATION,
7 TREMONT PLACE, BOSTON, MASS.,
Dec. 1, 1882.

Dear Sir,—At the November meeting of the Board of Directors of the American Unitarian Association, it was voted that the Secretary be authorized to publish the *Year-Book* for 1883.

It was also voted that, in order to make the *Year Book* a more complete directory, in addition to the regular list of Unitarian ministers, a supplementary list should be printed, containing the names of persons who are pastors of Unitarian parishes, or stated supplies, but whose names are not on the usual list.

It was further provided that the Secretary should communicate with those pastors whose names are not on the usual list, that they may notify him whether they wish to have their names entered on that list.

This circular is sent in compliance with the above action; and, should you desire your name so entered, will you be kind enough to notify me at your earliest convenience? Yours truly,

GRINDALL REYNOLDS, *Sec'y A. U. A.*

NEW BEDFORD, Dec. 12, 1882.

Rev. Grindall Reynolds, Secretary of the American Unitarian Association:

Dear Sir,—I am in receipt of your printed circular concerning some revision of the list of ministers published in the Unitarian *Year-Book*, and asking me, as one whose name is "not on the usual list," whether I desire to have it entered there.

Nine years ago, my name was removed from that list by the compilers of the *Year-Book*, because I did not call myself a Christian. Your predecessor then interpreted the phrase "Unitarian ministers," in the heading of the list, to mean "ministers of Unitarian Christianity." This action excluding my name, and for the reason given, was indorsed by vote of the annual meeting of the Unitarian Association in 1874. So far as I am concerned, the conditions are the same now as they were then. I still hold that the term "Christian," in any proper religious usage, denotes discipleship to "Christ" in such special sense as not correctly to define my religious position. Whether the conditions are the same on the side of the *Year-Book*, I do not know. Your letter, though indicating some change of method, does not state on what new basis, if any, the list is now to be constructed.

Under the circumstances, therefore, it seems to me that it is rather for the compilers of the *Year-Book* to say whether they desire to restore my name to the list as that of a non-Christian, thereby distinctly changing the interpretation of the list, than to ask me whether I desire to have my name inserted in it.

Yours sincerely,

WM. J. POTTER.

ROOMS OF THE AMERICAN UNITARIAN ASSOCIATION,
7 TREMONT PLACE, BOSTON, MASS.,
Dec. 15, 1882.

REV. W. J. POTTER:

Dear Sir,—I have received your note in which you allude to the basis upon which the *Year-Book* is now constructed. My position in regard to that *Year-Book* is a perfectly plain one. Personally, I believe that the Unitarian body, both by its history and its organic growth, stands on a broad and generous but still Christian basis. Such being my conviction, I cannot be expected to take any step by which I admit that the body is non-Christian. But the purpose of our Board was to leave the individual to settle for himself whether he does or does not belong in the Unitarian ranks. You are familiar with the historical position of the body, its constitutions, its votes past and present, and with the tendency of its thought and feeling; you know also, as no one else can, your own convictions, tone of mind, and real wishes. You must pardon me, if I esteem it to be my simple duty to leave it entirely with you to say whether you are in sufficient sympathy with the Unitarian body and enough interested in its methods of spiritual activity to desire to have your name entered upon its list of ministers. Very truly,

GRINDALL REYNOLDS, *Sec'y of the A. U. A.*

To this correspondence, we wish now to append a few remarks.

To the last letter of Mr. Reynolds, no reply appeared to be needed; and none was sent. We had stated our position, and were content so to leave it. The responsibility, in our case at least, seemed to belong to the authorized compilers of the *Year-Book*, since they had originally taken the responsibility of removing our name from the regular list; and their action in so doing had been specifically indorsed by the Unitarian Association. On this account, we were at first even disposed to leave the printed circular unnoticed, which explains the delay in our answer. But when we learned that some persons interpreted the action of the Directors to mean that all those whom recognized Unitarian societies chose and appointed as their regular ministers were to be included in the *Year-Book* list of ministers, without any reference to their theological views (the *Christian Register* at first so explained the meaning of the Directors' vote), we thought it but just to ascertain whether such a liberal rule had been adopted. Hence our letter to Secretary Reynolds.

The Secretary's reply, it is evident, does not support this liberal interpretation of the Directors' action. Indeed, his statement of the purport of their action left upon our mind the painful impression that its chief characteristics were want of clearness and want of candor. He makes it sufficiently clear that his own personal view is in accord with that of his predecessor, Secretary Shippen, and of the Board of Directors and of the Unitarian Association, at the time when it was distinctly declared and voted that the term "Unitarian" connotes "Christian," and that the name of a non-Christian was rightly excluded from the list of Unitarian ministers. And this is a position that is frank, open, and above board. It limited liberty, but it met the issue squarely. It seemed, it is true, to pare down the term "Christian" to extreme tenuity of substance; but, nevertheless, it did unmistakably and decisively say that one must pronounce over himself, in some sense, that word as a shibboleth for admission into the Unitarian ranks. It had, therefore, the great merits of candor and definiteness. But it looks as if the present Directors were willing to sacrifice these merits for the sake of an appearance of greater liberality, which, after all, is only an illusive appearance. We sympathize with their desire to broaden the fellowship of the list; but we cannot respect their action in seeming to ignore the fact that any doctrinal fence has ever been placed across it, and in leading others to believe that none is there. Their action is an evasive compromise. It is the old attempt, which Unitarianism has so many times tried, to face both ways at once,—toward liberty and toward authority. They have not ventured squarely to reopen the old issue by expressly rescinding the vote which defined the term "Unitarian," or by recommending the rescinding of it; but their action has the appearance, so far as made public, of being designed with the hope that radical Unitarians would not see or remember that there is any such vote on record.

We do not, by any means, charge that there was this definite purpose to deceive. But deception will none the less be the result. The young recruit coming into the Unitarian ministry with radical proclivities, and disposed to regard Unitarianism—as on one side it may well be regarded—as an intellectual religious movement opening out from Christianity into universal religion, will be pointed to this action of the present Directors allowing him to define the word "Unitarian" for himself; and thus he is enticed into the roll of Unitarian ministers. After his name is there, he hears some of his conservative brethren claiming some day that all "Unitarians" are necessarily "Christians." To vindicate his own integrity, he refers to this action of the Directors; but they spring upon him this unrepealed vote of the Unitarian Association itself, by which it was determined that "Unitarian ministers," in the heading of the *Year-Book* list, should mean "ministers of Unitarian Christianity." And, then, he can but feel that he has been entrapped into a false position.

And this is no merely hypothetical case. The letter which we published last week was from one who is comparatively young in the Unitarian ministry. He knew nothing of there ever having been any such vote defining the name "Unitarian"; and the Secretary's cordial letter seemed to put it so wholly into his hands to define the term for himself that, though thinking that his name for other reasons might not belong in the list of Unitarian ministers, he was led to believe that his not calling himself a "Christian" would be no obstacle to its remaining there. On the other hand, a letter from the Secretary to us, making a similar explanation of the Directors' purpose, produced in our mind an entirely different opinion, simply because we knew the history of the subject. If we had replied to Mr. Reynolds' second letter, we should have first, perhaps, incidentally reminded him that to admit non-Christians to fellowship would not necessarily make the Unitarian body non-Christian, as he seems to assume in the statement of his personal conviction. But then, and chiefly, we should have been obliged to say—following the lead of his own suggestion—that we *are* "familiar with the constitutions and votes" of the Unitarian body, and especially with one vote passed by the Unitarian Association expressly defining the *Year-Book* list of "Unitarian ministers" as "Christian ministers"; and that, so long as that vote stands unrepealed, our name would have no right in the list, nor could we wish it there. Now, we would respectfully submit to the Directors of the Unitarian Association whether the interests of religious sincerity and intellectual integrity do not require that they should explain the meaning of their recent action in terms so explicit that two such diametrically opposite judgments of its effect should be impossible; whether fair dealing does not demand —especially with regard to the young men coming

Digitized by Google

into the Unitarian ministry—that, if they are told to decide for themselves whether or not they belong in the Unitarian ranks, they should also be pointed to the special historical votes that condition the problem; whether, indeed, any such liberty of definition is genuinely given until the previous question—supposed to have been settled by the vote of the Unitarian Association in 1874—as to what constitutes a Unitarian minister has been reopened, and that vote has been repealed. In fine, do not clearness and candor alike summon the Directors to state plainly whether they meant by their votes with regard to the *Year-Book* last December to repeal or not to repeal the resolution adopted by the Unitarian Association in 1874?

That resolution we printed last week, but we wish to repeat it in connection with this fuller presentation of the subject. It was adopted at the annual meeting of the Association by a large vote, in a full attendance, and after a long discussion. Any persons who may be desirous to see a more complete report of the matter will find one in *The Index* of June 4, 1874, and in the *Christian Register* of similar date. In *The Index* of January 1 and January 8, 1874, may also be found the full correspondence which led to and grew out of the removal of our name from the *Year-Book* list of Unitarian ministers. We state this for the benefit of the curious, not from any personal interest, but because of the principle involved. Our only aim then, as now, was to secure, if possible, a statement, in the interest of clear thinking and sincere action, by which Unitarianism should either plant itself squarely on liberty or else candidly confess its limit. It chose the latter. It was an open, honest choice, and we made no protest nor complaint against its effect upon us personally. The choice was finally embodied in the resolution above referred to, which was as follows:—

Resolved, That, inasmuch as the term "Unitarian," as used in the title of this Association and its publications, has always been held to carry a distinctively Christian meaning, our Unitarian ministers being held and regarded by us as public teachers of the Christian religion; and as the action of the Assistant Secretary, sustained by the Executive Committee, in omitting from the catalogue the name of a minister who says he is no longer a Christian, has been in harmony with this common usage of the term among us, therefore the action be now and hereby is approved and ratified.

Are we right in supposing this resolution still in force, or has it been rescinded by the action of the Directors? Will the Dirctors face that question? In the interest of clear thinking and sincere doing, again we appeal for a plain Yes or No.

WM. J. POTTER.

STRULDBRUGS.

II.

When Gulliver heard in the Kingdom of Luggnagg of the class of immortals called Struldbrugs, he said to the Luggnaggians: "How happy the people! How happy the rulers! You can sit at the feet of a sage a thousand years old, and learn all wisdom needful for the conduct of life." Gulliver expressed a wish to see and talk with an oracular Struldbrug. The Luggnaggians took him to a pen in which they had confined half a dozen of the ripest of the species. He looked, then turned away, and wished to borrow one or two to show through England to cure the English people of the fear of death.

I have borrowed a few Struldbrugs for *The Index*. I have borrowed a brace from the Jews.

"And all the days of Enoch were three hundred and sixty and five years. And Enoch walked with God, and he was not." The old gentleman attained to a fair degree of Struldbrugery. The only lesson I ever knew to be gleaned from his life was by a negro preacher during the walking mania: "Enoch walked wid God *free hunderd yeas!* Dar's a walkin' match for you. Talk about physical ondurince arter dat!"

The great Struldbrug of divine antiquity was Methuselah. How on the sacred page will glow the wisdom garnered through a life of nine hundred and sixty-nine years! Here it is,—the entire record. "Methuselah begat Lamech. And Methuselah lived, . . . and begat sons and daughters. And all the days of Methuselah were nine hundred sixty and nine years." That is all.

In California, I saw a great Sequoia called Methuselah. Methuselah the tree was a greater Struldbrug than Methuselah the man. It was a goodly tree when Alexander set out on the conquest of Asia. What events it might have recorded! I interrogated its great bole. Searching the rings of growth inward, I saw that about five hundred years ago a fire had burned into the bark and a squirrel had made her nest in the pit. I saw that now and then, through the past two thousand years, grizzly bears had scratched the tree with their claws. Here and there, a gnarled and twisted growth recorded the beating of a storm. Three thousand years,—and that was all the record.

As I went through the tree, so I would go through the man. Let us pass in through the ringed years of memory, as we passed in through the rings of growth. A hundred years,—no record. Two hundred, three hundred,—an event was scratched into the memory, as the bear scratched the tree, perhaps a scar left by the claw of a tiger. Six hundred years,—the birth of a child hardly dents the rind of memory (sons and daughters, but their names have faded out). Seven hundred and eighty-two years,—the record is clearer, a child and its *name* are recorded.

And this is all. Methuselah the man bided the flow of the centuries as passive almost as Methuselah the tree, and gathered into his memory hardly more of the passing years than the tree gathered into its rings of growth. Methuselah at forty had seen all there was of nature or life for him, and the addenda of nine hundred and twenty-nine years might have been written as a repeating decimal. Repetition is nature's badge of inferiority. She makes the centipede a mere repetition of segments. She makes man, too, a repetition of segments; but she differentiates them, fusing some into a pelvic girdle, and others into a brain-case. Methuselah was a long-drawn centipede.

I have borrowed a Struldbrug from the Greeks. Not less pitiable than Methuselah was Tithonus. This gentleman prayed to the gods that he might be a Struldbrug. The gods granted the prayer, and Tithonus lived on and on, till he became an object of pity even to the gods. Being a Struldbrug, they could not kill him. They changed him into a grasshopper!

A wiser man than Tithonus I saw in New Hampshire. He was seventy-five years old, and he was afraid that he was a Struldbrug. He had suddenly lost his eyes; and, when I expressed sympathy, he checked me. "Stop!" he said. "No more of that. I'm not an object of sympathy, because I'm blind. *I've lived in New Hampshire seventy-five years, and God knows I've seen enough!*"

The Luggnaggians detected a Struldbrug by the dark blotch on the brow. I have found another badge. It is mental rigidity.

Guided by this badge, I have borrowed a few Struldbrugs from France for special use in *The Index*. The French species are in the Academy. A few years ago, a gentleman was exhibiting and explaining to this learned body the phonograph. He talked, he sang, and the instrument gave back with metallic twang his speech and song. One of the Struldbrugs rose, hot with indignation, and moved "*the immediate expulsion of this trickster and ventriloquist!*" Do we wonder now that Darwin had such tardy and partial recognition from these Struldbrugs? Do we wonder that Taine's *History of English Literature* was condemned?

Bright was the Tithonic chirp in the meadows of Greece, but sad is the chirp in the halls of an academy. Not a withered, wizened, weasoned Tithonus is such an object for the interposition of a synod of gods as a leader in the world of thought when rigidity overtakes him, and he becomes obstructive. Plato, Aristotle, Pliny, Copernicus, Leibnitz, Cuvier,—suppose they had been Struldbrugs? Plato would still think that his philosophy held the world of mind, as the Struldbrugs called the Concord School of Philosophy say that it does. Aristotle would still be maintaining the tripartite structure of the mammalian heart. Pliny would not believe in any part of the world which he had not mapped. Copernicus would not accept the Copernican system beyond the inchoate stage in which he left it. Leibnitz would still be hurling anathemas against universal gravitation as destructive of religion. Cuvier would still be rummaging Egyptian tombs for evidence of the fixity of species. Lardner would be demonstrating the impossibility of crossing the Atlantic by steam, and Joseph Buckingham would still be showing in the Boston press how "wild," how "impossible," how "idiotic" the scheme of building a railroad from Boston to Albany!

What if, in the hereafter, the mind should reach its limit of unfoldment, and grow rigid and metallic with age? "The laws above are sisters to the laws below." The modes of life in the afterworld, as conceived by the current theology, have all the conditions of Struldbrugery. I have thought of borrowing a Struldbrug from this theology, and two or three from the literature of Spiritualism, to cure men of inordinate yearning for immortality. A sermon lies before me, in which the preacher raises the question, "What shall we do with eternity?" For himself, he proposes to pass the first thousand years gazing on the nail-wounds of his redeemer. He will spend the next thousand in contemplating the thorn-wounds on his brow. What a Struldbrug this preacher will be at the age of three thousand!

In a realm where all is dogma or doubt, I will not dogmatize; and I cannot doubt that, if the death which awaits us here is transition to another stage of life, a succession of deaths will await us in the hereafter. The mind at the age of a hundred would bend under the weight of memory alone. I cannot doubt that,

> "As old mythologies relate,
> Some draught of Lethe may await
> The slipping through from state to state."

W. D. GUNNING.

PHYSICS AS AN EXPLANATION OF THE NATURE OF THINGS.

We remember with what reverential feelings we began the study of physics. It seemed to us as a novice like the ultimate science, the science that was to lay down those fundamental facts and principles out of which all other truths should flow by a simple process of evolution. Man had struggled so long to explain nature through the principles in his own head, and had landed himself in such a list of inextricable contradictions, that at last he

Digitized by Google

had resolved to take a new method, and let Nature explain herself. That was a new and fascinating thought, that Nature should explain herself. What more beautiful conception than that of Nature as a story-book full of the grandest pictures and sublimest truths! Man had only to throw open the leaves and scan the pages. And we listened with deep emotion as an Agassiz in America, a Darwin in England, a Helmholtz in Germany, have been attempting to read these pages aloud to us. We looked to physics as the foundation. We dreamed of the time when out of these few principles the sciences should unroll themselves like the leaves of a book, to the time when with these principles we could move from mechanical to chemical phenomena, from chemical to vital, from vital to psychical phenomena, without a gap at any point. And the scientists have read us many wonderful things out of this book. One of them has seen the whole structure of the universe built out of indivisible atoms and their forces. But, when he talks about indivisible atoms occupying an infinitely divisible space, we conclude that he is contradicting himself, and that he is therefore not reading correctly. Another one tells us how the universe could have been constructed not out of atoms, but rather out of points of force which do not occupy space. That reminds us of Hegel, who tells about nothing becoming something, and something becoming nothing, and both uniting to give a general everything. We don't quite understand that, and we doubt whether they understand it themselves. We look back at the previous phases through which scientific thought has passed, and we see a like lot of confusing and disagreeing interpretations of the ultimate principles of Nature. And so the boasted harmony of scientific thought, as set over against the contradictory wranglings of metaphysics, assumes a very questionable aspect..

The fact is that scientists have forgotten that they themselves form a part of that Book of Nature they are reading. And they do not simply constitute one of its pages, but they belong to the whole of it: they never read a line of it without themselves being woven deeply into its context. In the reaction from metaphysical speculation, they set out with almost complete neglect of the study of consciousness; and many of the scientists of the present day do not seem to be familiar with some of the simplest psychical laws. A little study of those laws might have saved them from a great deal of embarrassment in the contradictions in which they have involved themselves. They would possibly not have set up for a science what was not a science at all, and they would not have proposed to themselves problems which as scientists they were not constrained to solve.

One could have expected a great deal from the movement which began with Immanuel Kant about a century ago. He had come to realize that, if we assume the dualism between soul and nature, there would be both action and reaction in the influence that external nature would have upon us, that the soul was not like a sheet of white paper upon which Nature wrote her own life, but rather that the soul had something to do in reacting upon and reconstructing the material presented. This view is now accepted even by materialists, who allow to the brain some active power in receiving its impressions. And so Kant went analytically to work to take the whole soul to pieces, so as to discover what the mind really gave to the sum total, and also what the external world could give. He constructed thus a magnificent scheme, laying out a set of forms, then a set of categories or laws, and lastly a uniting power of apperception, all of which the impressions from the external world had to go through, before they could become thought,—that is, soul-life. There, of course, he reasoned correctly that external nature would become modified in passing through these forms, and therefore could not be recognized as her original self. But there was one fact he did not reason out, a fact on which the whole system of Kant must founder, *the fact that the forms themselves would also be modified*, and they also would not appear as their original selves; that it thus seems an absolute impossibility to decide just what the mind, and just what external nature, has to do in producing what we call soul-life.

To make the meaning plainer, let us take an example from Nature herself. Those who have read the *Logic* of John Stuart Mill will remember the stress he lays upon the distinction between the mechanical and chemical composition of causes. In mechanical nature, if two forces act to produce a result, the result will be simply a sum of the two forces; and it is quite easy to decide how much is due to each one of them. When, however, two chemical elements combine, we have a result altogether different from either of the original elements. The qualities of each seem to have become annihilated in the compound, and the chemist can gather from the new substance no idea what the qualities of the components may have been. In this case there is no resemblance whatever between the effect and the cause. Now, let us, for example, make a rather singular supposition. Take it for granted that, just at the moment when oxygen and hydrogen unite to make a drop of water, a little consciousness could step in there, and assume as it were all the new characteristics and phases as belonging to itself. The consciousness would then begin to wonder where all its qualities came from. Perhaps, it could at least conceive that it was compounded of two original somethings, though even that much knowledge would be doubtfully possible. Then, it would begin to attribute this quality of water to hydrogen, and that one to oxygen, and so it would build up a scheme almost as good as that of Immanuel Kant's. But we all realize how absurd it would be, because we see that these new qualities do not apply to either one of the original elements.

Now, it is just as probable that the soul-life, or the life of thought, if it be a resulting composition from qualities of the soul and from qualities of the external world,—it is just as probable that the composition should have taken place on the chemical plan as on the mechanical plan. It is just as likely that, when the soul and nature came in contact with one another, and acted and reacted upon one another,—it is just as likely that they gave forth a product altogether different from either; and this product we call soul life, or the life of consciousness. And, if such be the case, it is not possible, and never will be possible, to decide what the soul is, what the world is, and what each independently possesses. In fact, we cannot even assert with absolute conviction that the soul and nature are two distinct things, and that the soul-life is also affected by something outside of itself. We may believe such to be the case as strongly as we please. Even David Hume, the greatest metaphysician England has ever produced, was constrained to acknowledge that Berkeley's idealism could not be refuted, though he was not willing to believe it.

The discussions about the relations of the soul to the outside world recall quite vividly the old discussions among some of the Greek philosophers as to what was the original substance or state. We will call these men, rather, scientists: they would be called so at the present day. They admitted at least three general sorts of stuff,—earth, water, and air, or the solid, the liquid, and the gaseous. Some of them asserted four, and added fire. The great problem was to decide which was the original substance or state. One defended strenuously that it was earth, or the solid state; another, water, or the liquid; another, air, or the gaseous state. They all combated bravely, and all with about equal success. They saw the three states passing from one into another in an unceasing change; and, as far as man could judge, any one of them was just as likely to have been the original as another. Just so it is with the states of consciousness. They are moving up and down and passing into one another in an unending ebb and flow. Whence they come, to what they belong, and whither they go, we cannot say. Only the consciousness that could have existed before the beginning of things can decide what was the original substance or state: only the consciousness that could see without eyes and hear without ears, that could have begun its activity through its own self when nature was yet in slumber,—only that consciousness could decide what it was and in what relation it stood to the world outside of itself.

And that leads us to the only supposition under which one can defend the distinction between soul and nature, and at the same time claim for the soul certain original forms and laws known as belonging only to itself. If the soul came into activity with these forms and laws and intuitions *before* it had been moved upon by the outside world, then the theory of Kant, or that of the intuitionalists generally, could be conceived as defensible. But even the intuitionalists do not admit that such is the case, that these forms and categories could have come into play before they had been acted upon by external nature. If the soul and this external nature at the same instant come together, act and react upon one another, and produce that result which we call the soul-life, then it is too late to analyze. The composition has taken place, and will go on increasing in complexity until at last,—if it *is* a composition, if there is really a dualism there,—until at last it suffers a shock, and it is resolved into its original elements. And not until that has taken place can we come to any absolute knowledge as to the actual nature of things.

The readers of this paper may be familiar with a noted lecture delivered in Leipzig a few years ago, by Du Bois-Reymond, on the Limitations of Knowledge. The lecture created a great excitement in Germany, and the battle raged fiercely for a while. He had said that, on any physical basis, consciousness had never been explained, and never could be explained. The defendants of religion exulted, they thought they had won a champion. Haeckel took up the battle in behalf of his Monism and his Anthropology. The combatants grew numerous and violent. At the same time, the statement was a refreshing one as coming from a scientist. Had a metaphysician made the statement, it would have attracted little notice. Many scientists have a thorough distrust of any one who has dabbled much in philosophy. It had been rather exasperating to Philosophy, when she had at last drawn in her pretensions, to see her sister, Science, claiming to do what she had failed in doing. But now, at length, Science was confessing limitations and acknowledging that nature was not ultimately explainable. Du Bois-Reymond made the same statement we have been contending for, though by different grounds. He had said that the natural causes exhausted themselves in producing the brain. There was no cause left to produce consciousness. For example, if we could, with powerful instruments, examine a brain while it was still alive, we should see all the physical causes active and producing their results in the

Digitized by Google

brain: we could follow them all, and never lose sight of them. We should see them passing, one kind of cause into another kind, each doing its full work. We should, in fact, see *all* that they did. And yet all we should see would be the brain as a machine: the consciousness of the man we should not see, and it would remain unaccounted for.

Du Bois-Reymond, however, does not really go far enough. He does not stop to think that in reality he is not studying that man's actual brain at all. Scientists, somehow, cannot rid themselves of the impression that they are studying actual nature, even though theoretically they may admit they are not doing so. They would laugh at the man who really believed that the sun and the heavens revolved about the earth; and yet actual nature is probably even less like the so-called nature they are studying, than is their theory of the heavens like that of the untutored savage. Even Du Bois-Reymond admits that the senses do not actually deliver us real qualities of things: that, if we could bring the nerve of hearing around to catch the sight impressions, we might then get sensations of hearing. So that, in studying nature, we should remember that we are using sensations that we do not understand to explain other sensations that we also do not understand. In the case of this brain, we should be studying a presentation or state in our own consciousness. Whether we have this presentation from an external source, or whether it grew up with our consciousness as a part of its own nature, is a metaphysical question that we leave undiscussed. But, as we study it, it is a part of our consciousness. All we know of nature is what we have in our consciousness, what we get in consciousness constitutes our sum total of knowledge. We can thus compare these states, see their relations to one another, and observe how they pass into one another. But to attempt to show that one phase can be a basis out of which to develop the whole, to attempt to construct the whole consciousness out of one set of its states, would be like a mechanic who should attempt to construct a whole machine out of one of its qualities. Consciousness is a whole of many classes of states. It is a growth out of we know not what. We know not when nor where it began, nor whence the sources of its activity. And the physicist who seizes at one class of states that have relation to space, and attempts to develop the whole out of his theory of atoms; the psychologist who seizes at another class, and attempts to explain the whole through his theory of intuitions,—both of them display a wanton presumption that results in nothing. Both contend strongly, and get themselves in inextricable difficulties. Either one of them may be right, probably both of them are wrong. If it be that we as individual consciousnesses could exist all as states in one great Consciousness, that great Consciousness could possibly understand what we are and in what relation we stand to nature, even as we seem to understand our own states at least in their relations to one another. But that great Consciousness would, perhaps, be also a growth: it, too, would need to exist in another still greater; and so an ultimate explanation is not to be had. It is wiser that Philosophy should join in acknowledging the limitations on which they stand, and to be content to say with Du Bois-Reymond, "We do not know, we shall not know,"—"Ignoramus, ignorabimus."

W. L. SHELDON.

THIS learned I from the shadow of a tree,
That to and fro did sway upon a wall,—
Our shadow selves, our influence, may fall
Where we can never be.—*A. E. Hamilton.*

THE ASSOCIATED CHARITIES.

According to the third annual report, 1882, of the Board of Associated Charities in Boston, 691 visitors have been actively engaged in visiting families during the year, and yet they say the number should be doubled; for there have been visited only 1,594 families, while there are 8,000 families, or more than five times that number, who need attention. Besides this body of workers, 131 different societies are working in co-operation with them. This list includes a great variety of institutions and some churches; but of course there are many more institutions and churches doing charitable work independently, or only occasionally co-operating with this society.

Does it not seem as if this were a sufficient force, acting with the help of the law and a strong police, to insure that the charitable work of the city should be thoroughly done, and crime should be gradually diminished and done away with? The Board give as the result of their work 2,473 instances where substantial results can be found. They also believe that one half of the families may, by wise help, become self-supporting, and a blessing instead of a curse to the society in which they live; while only eleven per cent. really needed and deserved continuous relief.

Among the many important topics presented is that of health and cleanliness. "Public sentiment in Boston needs to insist on a far higher standard of decency and health in the homes of the poor. . . . Multitudes of the poorest homes are poisoned with filth, broken drains, entering tides, and accumulated refuse. . . . The Board of Health is doing good work. Let public sentiment strongly support them in insisting on a far higher standard for the lowest homes." We must not forget that the poison engendered in the lowest homes may enter the highest, and the community has as much right to protect itself against it as against small-pox or burglary.

Again, the report touches on one of the greatest of moral questions in saying, "Drunkenness is the chief cause of the misery and crime of the poor!" Now, we would not lessen by one iota the efforts to abolish drunkenness or the sense of its evils; but we have sometimes thought there was danger of treating it as a primary cause, when it is first an effect and then a secondary cause of the evil we all deplore. Drunkenness is the almost constant accompaniment of crime and misery with us, and its nature is to reproduce itself and the very evils from which it springs. But do not crime and poverty and misery exist where drunkenness is almost unknown? Spain and Italy have by no means the proportion of drunkenness which exists in England, Holland, Sweden, America. But have they not their full proportion of degradation, misery, and crime? We are ready to try the most rigorous measures of repression of traffic and of use; but have we fully studied the results of prohibition on a large scale in Buddhist and Mohammedan countries, where the religious law absolutely prohibits the use of intoxicating drinks? In working against drunkenness, we ought never to forget that it is not only a cause of evil in itself, but a symptom of deeper causes below.

The Associated Charities are perhaps doing their greatest work in checking the indiscriminate giving of alms, by keeping a central place where applicants may be sent with the certainty that their real wants will be provided for. We feel that this work of the investigation of the causes of poverty and its true methods of relief is one to which Free Religionists are especially called, because they can work in it unhampered by many old prejudices which trammel the action of many noble and benevolent souls, who are still held in sectarian limitations.

KANT AND HIS SUCCESSORS.

Prof. Watson, whose little work on Schelling's *Transcendental Idealism* is noticed among the book reviews in this number of *The Index*, claims that Schelling forms the transition from Kant to Hegel, that Hegel is the legitimate successor of Kant, and that Hegel's philosophy is the *ne plus ultra* of intellectualism. With all due respect for the opinions of Prof. Watson, we do not think that either Schelling or Hegel should be regarded as in the line of philosophical succession from Kant, that Kant would have recognized either of them as expounders of his philosophy, or that either of them advanced beyond or improved upon his thought.

Kant maintained the relativity of knowledge, and showed with masterly ability that, since there is necessarily a co-operation of object and subject in every act of cognition, the pure object, except as modified by the subject, can never be known. Consequently, it can be known only under the condition of sense and understanding, only as an appearance, only as a phenomenon. As Lewes observes, "The great outcome of the *Kritik* was a demonstration of the vanity of ontological speculation." In his introduction to the *Kritik*, Kant says, "Let us therefore content ourselves with our own kingdom, instead of crossing perilous seas in search of kingdoms inaccessible to man." But while Kant was the precursor of the modern philosophy of relativity, by what Lewes well calls an "initial misconception" in his attempt to isolate the subjective from the objective the element in act of cognition, he opened the way for Fichte, Schelling, and Hegel, with all their speculative fancies. The inconsistency is now well understood. Kant tried to hold positions that contradict each other. "The whole drift of his polemic against the ontologist," says Lewes, "was to show that knowledge was limited, relative, and could not extend beyond the sphere of possible experience; but, while thus cutting the ground from under the ontologist, he was also anxious to cut the ground from the sensationalists and sceptics, and therefore tried to prove that the mind brought with it an *a priori* fund of knowledge."

The moment Kant admitted that there is other than experiential knowledge, and claimed that there is an *a priori* element in all thought which can be studied separately, he took a position utterly inconsistent with his demonstration of the relativity of knowledge. And it was this *inconsistency* that formed the main point of contact between the philosophy of Kant and the different system of German idealism. This inconsistency was, as has been well said, the back door through which entered ontology, when it had been barred out at the main entrance. "Through this inlet," says Fiske, "entered Fichte, Schelling, and Hegel, with their swarm of mediæval conceptions, to perturb the onward course of philosophy." Had Kant been acquainted with a psychology based upon evolution, he would have seen that the so-called transcendental element of the mind, although independent of the experience of the individual, is derived from accumulated ancestral experience. In showing this, Herbert Spencer, with unsurpassed originality of thought, has reconciled the sensational and transcendental systems of philosophy, and, while strengthening the main position of Kant, has shown the weakness of those very admissions upon which have been constructed the speculative systems of Schelling and Hegel. The principal portion of Kant's philosophy, with the additions that have been made to it by his real

Digitized by Google

successors,— those who have kept in his main line of thought, but have added to his philosophy all that is required to make it accord with the facts of mental evolution,— rests upon an impregnable foundation; but all who feel the necessity of the earth as a standing place, while they look up to the heavens above them, will distrust the philosophy of Fichte, Schelling, Hegel, and all other idealists, who, by denying objective reality, would leave us without either the earth or the heavens.

B. F. UNDERWOOD.

EDITORIAL NOTES.

A FINE edition of Thucydides will presently be ready at D. Lothrop & Co.'s. The translation is by Dr. Jowett, Master of Balliol and Greek Professor at Oxford; and it has an introduction by Rev. Dr. Peabody, of Harvard College.

THE first of a series of articles from the pen of the brilliant writer, Dr. Felix L. Oswald, will appear in *The Index* next week. "A Third Letter to Mr. Wasson," omitted this week to make room for contributors, will be printed in our next number.

A DESPATCH says that Paine's *Age of Reason* and Voltaire's *Philosophy*, ordered from a publisher in the United States, have been seized by the collector of customs at Montreal. This ignorant collector would not, of course, think of seizing Spencer's *First Principles*, Huxley's *Lay Sermons, or even* Haeckel's *History of Creation*, although Paine in comparison with these writers was orthodox.

THE *Pall Mall Gazette* says that instances of man's cruelty to the lower orders in the animal kingdom are common in the fish-mongers' shops of London. It mentions that codfish are imported alive in salt water tanks, not so much to insure a supply of fresh fish as to give epicures a chance to serve their tables with crimped cod, to prepare which incisions reaching to the bone are made while the fish is alive and writhing under the knife.

THE Society for Ethical Culture of Chicago announce a course of lectures, as follows: Sunday, February 11, Prof. Felix Adler, subject "The Need of an Ethical Movement"; Friday, March 9, Rev. M. J. Savage, subject "Natural *versus* Conventual Ethics"; Sunday, March 25, B. F. Underwood, subject "The Scientific View of Ethics"; Sunday, April 15, W. M. Salter, subject "The Mission of Ethical Societies"; Sunday, May 13, Prof. Francis Parker, subject "Moral Training in Public Schools"; Sunday, June 10, Prof. Felix Adler, subject "The Science of Morality."

IN the San Francisco *Wasp*, the reasons "Why a Roman was not Elected" are given as follows: —

Coriolanus, noble Roman,
Wouldn't give the voters taffy;
Wouldn't tell 'em they were brilliant;
Wouldn't tell 'em they were valiant;
Wouldn't kiss the Roman babies;
Said he'd see their dads in hades
Ere he'd buss the dirty youngsters
Of a horde of swelling bungsters;
Said no office he would fawn for;
No, his toga he'd first pawn for
What he needed; no, he wouldn't
Give 'em taffy: no, he shouldn't.
Thus it was the noble Roman,
Fearless, peerless Coriolanus,
Just as might have been expected,
Never came to be elected.

MANY times the past few years, M. Renan has received from some person the following sentence: "Si pourant il y avait un enfer!" ("Yet if there should be a hell!") M. Renan appreciates the solicitude for his soul evinced by his unknown friend. "But hell," he says, "is a supposition very inconsistent with what we know of divine goodness. Moreover, if there be one, I can conscientiously affirm that I have not deserved it. A small amount of purgatory would perhaps be fair; and I would run the chance of that, as paradise would come next, and pious souls, I hope, would obtain indulgences to shorten my stay in purgatory. The infinite goodness that I have experienced in this world inspires me with the conviction that at least an equal goodness pervades eternity, and in that I put my trust."

A CORRESPONDENT of the Boston *Transcript* grumbles in the following manner at having to pay for other people's religion: "In an interesting article in your columns of January 5, on 'The National Schools of England,' I find these words: 'America blossoms with voluntary churches, and everybody is contented. Nobody pays for anybody else's religion.' If the latter sentence were true, I think everybody would be contented; but, as long as church property is exempted from taxation, it is not true. And I know a good many non-religious but very patriotic and excellent people who are thus made to pay for other people's religion, who are not contented. I have the charity to believe that Deacon Smoothface would think it mean to ask me to pay two or three dollars a year for his religion. Is it less mean for the whole Church to do it?"

THE *Presbyterian* referring to Prof. Gunning's article in *The Index* on "By-Ways of Science in Colorado" says: "Prof. Gunning, whose name was made familiar to the readers of the *Presbyterian* some years ago by certain lectures delivered at Westchester, Pa., had departed from view, and his name had almost vanished from our memory, when it was recalled by an article written apparently after a quest for a silver mine in Colorado. He speaks as if misfortune had wrought in him a melancholy mood, and, in his 'farewell,' forgets his high scientific formulas in the vernacular of the mines: 'Farewell now to Colorado. Poor, miserable men are torturing thy mountains for silver wherewith to measure the fruitful labors of other men. A better civilization will leave thee to thy coneys and quails, and on her retreating flag will write a travesty of this Pitkin motto:—

"In silver they trusted,
In Colorado they busted."'"

Our Presbyterian friends will probably be glad to be informed that Prof. Gunning has sunk into no "melancholy," nor abandoned science for unsuccessful mining speculations. He was in Colorado in his professional capacity.

THE *Catholic Review* has, it thinks, discovered "the origin of Congregationalism," and "where, of course, our independent friends would desire above all things to find it,—that is, in the Bible." It finds an account of the primitive Congregationalists in the sixteenth chapter of Numbers, which contains the history of Core, Dathan, and Abiram, or, as King James' version has it, Korah, Dathan, and Abiram. "But now what was the result of this solemn protest of the leading men of the holy congregation?" asks our pious contemporary. Here is the answer: "The anger of the Lord was kindled against them. He called upon the faithful people to separate themselves from those men and their followers. The glory of the Lord descended upon the tabernacle. Suddenly, the earth broke asunder under their feet, and opening her mouth swallowed them up with their tents and all their substance; and the account says, 'They went down alive into hell, the ground closing over them, and they perished from among the peoples.' That certainly was not an encouraging result for the cause of primitive Congregationalism." Now will our neighbor, the *Congregationalist*, favor the world with its opinion as to the origin of the Roman Catholic Church?

"A SOMEWHAT widely known newspaper man west of the Missouri River" writes to the *Religio-Philosophical Journal*, asking the editor if he cannot prevail upon Col. Ingersoll to attend a "séance." "We can," he adds, "make him acknowledge the truth, or brand him as a coward. You could by that one stroke convert thousands of his followers." To this, the editor of the journal replies: "Col. Ingersoll has, if we are not mistaken, already had some experience with mediums. It is not at all likely that his mind is any more open to the reception of the truths of Spiritualism than are those of many of the theological dignitaries whom he assails. His work is pre-eminently one of negation. He tells only what has been told a thousand times before in more polished, philosophical, and logical ways; but his stalwart utterances, oratorical powers, and good luck have enabled him to make a bigger dent in the public mind and put more money in his pocket than has any other man. If our esteemed correspondent can successfully assist in convincing Col. Ingersoll that he can fill the largest halls and theatres in the country with people at a dollar a head to listen to his affirmative exposition of the truths of Spiritualism, its facts and philosophy, we will agree, on our part, to convince the great orator of the verity of spirit communion." It is our conviction that the audiences of Col. Ingersoll, should he lecture in defence of Spiritualism, would be quite as large as those he now addresses. It is the personal qualities of the man and the orator, not his views, which attract large audiences.

POETRY.

For *The Index*.

VICTORY.*

At last, upon the heights of victory flew
His banner battle-torn;
On the scaled mountain-tops, his sandals grew,
Resplendent with the red of morn.
Hyperion-like, he stood,
Emerged from steep ascent, where glued in blood
His torn feet oft had clung,
As up from crag to crag he sprung.

Triumphant over pain and tears
And struggle long of weary years,
He stood and gazed o'er all the scene below,
Far-stretching, solemn, radiant with auroral glow,
While upward-swelling Memnon-music thrilled his ears.

ELECTION DAY.

BY "OLD BIRCH."

To-day, we meet in equal right,
Each voter of our land,
To judge the law, and in our might
Like kings to give command.

In days of yore, the prophet wrote
The law the books reveal,
And never asked the people's vote,
To sanction or repeal.

"Thus saith the Lord," and word divine
Was high authority;
But highest law, we now define,
"Thus saith majority."

The rights of man by ballot turned
'Gainst rights of things divine,
The holy law is often spurned,
When voting men combine.

The common law of all mankind
Is written deep within:
The ten commands we there may find,
Condemning all our sin.

CRAFTSBURY, Vt.

* A passage of Carlyle freely versified.

The Index.

BOSTON. FEB. 15, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For The Index.

ABOUT BOOKS.

An Essay read at the Opening of the Library of the Pioneer Free-thought Club, Montreal, Sunday evening, Nov. 12, 1882.

BY GEORGE ILES.

In 1880, the Pioneer Free-thought Club was established for purposes sufficiently indicated by its title; and, to-day, we meet together to the formation of a small library which the generosity of members and friends of the Club has placed at its disposal. The purchases are not yet all received, but are so largely so as to warrant no further delay in a formal opening of the collection to the Club. Those who hereafter may attend the meetings of the Club will have access not only to books of mark in general science and literature, but also to works of a radical and ultra-radical character usually difficult to be obtained, and yet precisely of the kind in request by such a membership as that which meets here week after week.

On this inaugural afternoon, your President has been kind enough to invite me to make a few remarks about the contents of your shelves; and firstly, then, as to such of your books as are of a pronounced free-thought character. Most of you have placed yourselves outside the fences of dogma and all assumed finalities, treating many questions as open which most of our neighbors regard quite as settled as the multiplication table; and your committee have had no other principle of selection and exclusion in this field of literature than the simple one of accepting every work treating an important radical question, provided the treatment be able and sincere. No book intentionally coarse or indecent sullies your shelves, but works can be found there discussing the crying evils of our time in plain English, and proposing remedies, how far desirable may be debated, in equally plain English. The bases on which morals and the institutions of the family and property rest you will find in your library investigated by the ablest thinkers of our time, with the result of producing in the mind of any candid reader an appreciation of the value in the main of the moral systems and the laws and customs relating to family and property handed down to us from the past, which appreciation, though tempered by the desire for all practicable reform, will have more intelligence and vital warmth than the mechanical acceptance of ready-made opinions which is the paralysis of so many human brains.

Your library contains as able criticisms of Christianity as are to be found, and it has been thought only fair to provide the ablest expositions and defences of it. So that Paine, Holyoake, and Greg are accompanied by Butler, Paley, and Dawson; and if any members of the Club should form convictions which we as free thinkers admit *may* be true, and so desire to enter the ranks of Catholicity or Protestantism, there are opportunities afforded to them here in the shape of powerful pleas by leaders in the great bodies named. Any one curious to know the distinctive features of any of the great movements intended to supplant Christianity may read the works describing and advocating views as diverse as Positivism and Secularism, Materialism and Spiritualism. The aim of your committee has been to select the ablest advocates of these schools, such as state their positions most clearly and concisely, that the constructive thought of our time may be represented no less worthily than the critical and iconoclastic. Your shelves also bear books of a distinctively reform type,—works on woman's rights, the total abstinence doctrine, and heredity as declaring the duties of parents in bringing children into the world, on physiology as prescribing the rules which as animals we must obey to be healthy and happy, and, lastly, works critical of our governmental methods and suggesting reform in our plans of representation and in our civil service.

Thus much for such part of your books as may be specially radical and critical. Taking up the subject of the proper use of books and referring to the general contents of your shelves, I beg leave to make a few remarks about reading. We have on record the opinions of great authors, themselves great readers, on this topic. They join in one advice. Let us read what we like. Tastes, as a rule, determine what the make of our minds specially fits us to remember and to use; for attention is the handmaid of memory, and there can be no attention without lively interest. Some readers are attracted to biography and history, others to science and discussion, others again employ books as a means of recreation, and seldom read anything but novels or travels.

In marking out a course of reading, the tastes, it may be observed, should not solely be our guides: there ought to be a variety and balance in our reading, to refresh our powers and develop such sides of our nature as might otherwise suffer from entire neglect. Many a boy who would never of himself have risen above the selection of cheap novels has had the delight in better things aroused within him by the timely direction of his attention to good books by parent or other friend. And, at all times of life, men and women conscientiously desirous of reading the best books feel under obligations to any one who may speak to them of works of value of which they did not know.

Reading is always productive of best results, when it is systematic, when it has an aim, a reasonable aim, which may be reached in such circumstances of leisure as the reader finds himself in. When forming a plan, it is well to remember the three main classes into which books may be divided: firstly, those which improve the mind as an instrument of thought; secondly, those which store the mind with facts and principles; and, thirdly, that class of literature which mainly consists of poetry, narrative, and the *belles-lettres*.

Now, although our modern printing-presses roll from their cylinders very many thousands of new books every year, yet so few of these have the originality, the power, and importance which go to make up books of mark, that no one with moderate leisure need despair of enjoying the cream of contemporary English literature. As Goethe said, "There are many echoes in the world, and but few voices," so that it behooves readers of limited leisure to see carefully to it that they read only the best books. A special class, reviewers, are employed to tell us whether a new book has value or not; and it would be unwise indeed to handle the chaff of the numerous publications issued with titles of promise, when we have a competent staff of critics to point us to where the grains of wheat lie winnowed out.

Returning to the brief classification made of books, and beginning with such as are intended to improve the mind as a thinking instrument, the most competent judges on the matter tell us that the best books on Logic are those by Mill and Bain; on the Principles of Science, that by Jevons; and on Evidence, as a brief compend, that by Stephens,—as a full treatise, that by Taylor. Of these works, I think that by Jevons the most valuable. He details with great power the methods of observation, experiment, and generalizing which have made science what it is. He tells us of the legitimate spheres of analogy and hypothesis, and shows by striking illustrations the high value of the trained imagination to the scientific worker. Jevons argues, from the infinity of natural phenomena and the limits of our powers, that our knowledge in science can never rise beyond high probability, what are called the uniformities of nature he cannot regard as absolutely established or capable of such establishment, and on this high ground he would combat all the children of dogma who, with but most fragmentary knowledge of this infinite universe, are provided with completely wrought out theories of its origin and destiny. Jevons has endeavored to marry mathematics and logic, and the first chapters of his work on that account do not interest the general reader. The ingenious author has illustrated the mechanical side of inference by inventing a logical machine, which, when charged with the symbols corresponding to premises, indicates the deductions, after manipulation of its keys.

The works on Logic by Mill and Bain give systematic accounts of our reasoning faculties and of their processes, whereby they digest from facts the vital truths they contain, they warn us of bias, illusion, and fallacy, and of that leaping the discrepant gaps of evidence, and of verbally forcing a fact to mean more than it truly does, which are the bane of some of the writers who believe themselves to be in the very vanguard of science. Besides these works on formal logic, the art of reasoning, the faculty of good judgment and the dignity of fairness are taught us by all the best scientific books of our time, for example is better than precept; and, just as one learns grammar incidentally in reading any carefully written book, so one learns to be logical and candid not so much from those who lay down logic and candor with the formality of a schoolmaster as from those true kings of men who embody them in their writings, and without ever naming them glow in every line with their spirit. The highest phases of ability are usually unconscious in performance, and we always find that a small banner of truth which does not hide the man who holds it up; and this brings me to the second division of literature marked off this afternoon,—namely, to the books of fact. The most striking scientific book of this age is Darwin's *Origin of Species*, striking because of its showing law to hold where mystery and miracle had held feebly disputed sway, striking because of the patience and laborious research it displays and the fairness and justice with which difficulties are stated and such of the arguments as are comparatively weak set forward only as such. Surely, any course of reading for information should include this book. Of similar interest is the *Descent of Man* by the same author, wherein the evidences of the evolution of our race are stated with the clearness and patent love of truth which characterized all the varied work of the greatest naturalist of this age. And here, since man is ever to himself of supreme interest, let me speak of Huxley's *Physiology* and Ribot's *Heredity*, works which tell us of our frames and functions and of the requirements for worthy transmission and the responsibilities of it. Conscience may impel us to duty, but only science can tell us what our duty is. Of heredity, we should know all that is established as science; for why should one ignorantly take the chance of bringing into life human beings with organic ailments or morbid mental tendencies? When men and women realize how their vices are punished in their children, and how disease and wickedness inexorably reproduce their kind, the breeding of children may receive some of the attention now confined to the propagation of horses and cattle.

Man physical suggests man mental, and an account of the powers of the human mind cannot be more acceptably presented than in Carpenter's *Mental Physiology* and Spencer's *Psychology*. These works explain the connection between bodily states and mental conditions, and trace the genesis of our faculties through individual experiences accumulated and organized in the line of our race until such powers as those of Milton or Newton become possible among mankind.

From the science of man as man, we may properly pass to some good description of man's dwelling-place, nowhere better rendered than in the brilliant pages of Lyell's *Geology*, where the history of our planet, in its progress from chaos to order according to laws now plainly obeyed around us, is told in a fascinating manner. And the remarkable effects produced by human agency in transforming the face of the earth have been ably set forth by the late Prof. Marsh, of Burlington, Vt., who recently died at his post as American Minister to Italy.

Digitized by Google

If we are curious to know something of the life which shares our planet with us, we cannot do better than read Gray's *Botany* and Morse's *Zoölogy*,—works at the head of their respective departments of scientific literature. The description of the peculiarities of plants, fishes, insects, birds, and beasts, and an account of their adaptation to the circumstances of food supply, of prey, of soil and climate where we now find them, is a study of absorbing interest. No less so is the tracing of relationships between the forms of organized life which now people the world and those extinct species whose remains geological exploration discovers,—species which, through inelasticity of constitution, could not adapt themselves to suddenly changed surroundings, and so were obliged to dwindle in numbers until the last specimens ceased to maintain a struggle too severe for them. A knowledge of this particular world inevitably leads to a desire for knowledge about the other worlds which circle the sun with us, and the bright stars which throng the midnight skies. The best author here, I think, is Lockyer. He has most clearly told the story of astronomy, and best stated the principles by which the complicated motions of the orbs which swim in space around us have been reduced to calculation,—calculations so exact as to enable accurate predictions to be made for years in advance, not only of eclipses and transits, but of meteoric showers and of the wayward recurrences of our cometary visitors. Lockyer gives a very beautiful explanation of the spectroscope, the wonderful instrument which has established the kinship of suns separated by whole celestial diameters, and has shown it highly probable that all the members of our solar system have from time to time been flung out from a great central mass to condense into independent spheres of diverse fortune. The spectroscope shows not only what suns are made of, but the rate and direction of their movement with respect to the earth; and, in a variety of ingenious ways, the prism and its spectrum have been catechised to tell the composition and consistency of the heavenly bodies, and to aid the observers of eclipses, transits, and the fleeting meteors which, from whence we know not, stream across our sky.

You may have noticed, as I have been speaking, how much support modern astronomy gives to the theory of evolution; and that brings me to mention the systematic works which advance the theory and connect the natural sciences together, and interpret them by means of it. Of such works, the best are unquestionably those of Herbert Spencer. He has wrought into a system the evidences of evolution with masterly skill, and shown the greater meaning nature has, when looked at from the point of view of development, of the genesis of all things from the simplest conceivable conditions through natural agencies, such as we can see to-day in operation around us. For those who have not the time to read Spencer's works as a system, I would recommend, as furnishing the key of all his other volumes, that entitled *Illustrations of Universal Progress*. The essay in that book on "Progress, its Law and Cause," sums up briefly the main argument for evolution. Spencer's system has been presented very admirably by Mr. John Fiske, of Harvard, in two volumes entitled *Cosmic Philosophy*. The original additions are of value, and the style is more popular than Mr. Spencer's. Before taking leave of Mr. Spencer, let me name his books on education, the *Data of Ethics* and the *Study of Sociology*, as works every member of this Club should read. His *Descriptive Sociology* is a compilation of great interest. It contains in a series of eight volumes the chief facts known in the histories of the English and French nations, and some of the Asiatic races and savage tribes. The facts relate to government, arts, customs, and manners, and only incidentally to the regal state, the wars and intrigues which used so largely to fill the canvases of historians. The *Descriptive Sociology* (of which a set can be seen in the McGill Library), from its extent, cost, and the little interest felt in it by the public, has entailed a large pecuniary loss upon its author. Yet it surely marks an epoch in the literature of social science, and points to the time when history shall be chiefly sifted for such facts as enable us to understand the best conditions for the progress of our race in national well-being and international morality; when we shall be more interested in the condition of the average workman or peasant, and his place in the scale of character and knowledge, than in an account of the divorces or debauches of his monarch; when we shall be more concerned in inquiring into the causes that lead up to a Shakspere than in the pageants, squabbles, and murders of his queen. Then, such a work as Spencer's *Descriptive Sociology* may be appreciated as it deserves, and perhaps serve as a model for some of the historians of that future time. Among histories, the best ancient ones are those of Pliny, Herodotus, and Xenophon, to be read, of course, with the matchless Lives of Plutarch. Of histories written by Englishmen, Gibbon's *Decline and Fall of the Roman Empire* stands first; while, of historians of England, Knight and Green are accredited as the best. Carlyle, in the beginning of his *Life of Frederick the Great*, gives a masterly account of the rise of Prussia,—that power which, within a century, has come from the fourth rank to a foremost place in Europe. Among histories of France, critics give the preference to that of Thiers.

Social science, as far as its wide and difficult field has been cultivated at all, has chiefly borne fruit in political economy,—a study attendant with high interest from its elucidations of the laws of trade, its treatment of the population and wages questions, and of the methods of taxation and the proper sphere of government. Political economy, for all that it has a vast literature to itself, has not yet reached such dignity as a science as that its main propositions have passed from the realm of debate to that of universal acceptance. Free trade and protection still divide nations; and two schools, the socialistic and the individualistic, maintain the contrary tenets that government control should be paramount in society, education, and business, and that the sphere of government should be as much restricted as may consist with the maintenance of order and the enforcing of contracts. The unsatisfactory state of political economy as a science may be due to the complexity of the phenomena it seeks to formulate, and to the disturbing forces introduced into its problems by the sentiments, affections, and ignorance of men. For mankind are impelled by other motives than self-interest, by feelings national and religious, and by their domestic instincts; and, granting self-interest to be strong, how few men have the foresight, reason, energy, and self-control to work for true self-interest! In this connection, let me name Fawcett's *Political Economy for Beginners*, Mill's great treatise, and the volumes of Walker, Cairnes, and Bastiat for such readers as wish to go pretty fully into the subject.

So much for such reading as may be intended to improve the mind as a thinking instrument, and give it something to think about. A large department of literature remains to be noticed, and that very briefly. It is the field of letters in which imagination enters,—poetry, fiction, and purely literary essays. All these minister chiefly to pleasure, and only incidentally to use. A sonnet of Milton or Wordsworth exalts the feelings, and stirs up depths of our nature unaffected by the presentation of bare fact or the appeals of logic; and in the enjoyment of poetry and imaginative literature lies the main relief which hard workers find in books. Poets of the highest qualities of inspiration suggest thoughts which men of science afterward work out in things. Emerson is the prophet of evolution, as Darwin is its chief demonstrator and Spencer its philosopher. He said forty years ago, in his essay on "Nature": "A little heat—that is, a little motion—is all that differences the bald, dazzling white and deadly cold poles of the earth from the prolific tropical climates. All changes pass without violence, by reason of the two cardinal conditions of boundless space and boundless time. Geology has initiated us into the secularity of nature, and taught us to disuse our dame-school measures, and exchange our Mosaic and Ptolemaic schemes for her large style. We knew nothing rightly, for want of perspective. Now, we learn what patient periods must round themselves before the rock is formed, then before the rock is broken and the first lichen race has disintegrated the thinnest external plate into soil, and opened the door for the remote Flora, Fauna, Ceres, and Pomona to come in. How far off yet is the trilobite! how far the quadruped! how inconceivably remote is man! All duly arrive, and then race after race of men. It is a long way from granite to the oyster; farther yet to Plato and the preaching of the immortality of the soul. Yet all must come, as surely as the first atom has two sides."

I think no class of books is more important to be read and reread by men of a practical and sceptical turn than poetry; and, with singers of such power and various music as our literature contains, surely every man may find at least one in the great choir to delight and interest him,—Shakspere for universality, Milton for sublimity and stirring independence, Pope and Tennyson for philosophic insight and subtle treatment of the problems of modern thought, Byron and Shelley for passion and denunciation of the hypocrisies and bigotries of our time, Emerson and Bryant for lovers of nature, Scott for description and animated narrative. The great essayists, too, are a relief and refreshment after the perusal of weighty books,—Bacon, as annotated by Whately; Emerson, so rich in aphorism; Macaulay, the master of clearness and picturesqueness; and old Carlyle, with his masterpiece on Burns and his diatribes on modern tendencies, prejudiced, spiteful, and abounding with grim humor, furnishing us not food so much as admirable correctives for any undue confidence we may have in nineteenth-century progress. Every great imagination—Homer, Cervantes, Shakspere—has given the world texts which apply to the newest events with as much aptness as to the occurrences in the original writings. We are told by the great Spanish romancer how Don Quixote once placed upon his head what he declared to be an invincible helmet. Full of faith in his declaration, he laid the helmet on the sward, and brought his Toledo blade down upon it with disastrous effect. Much chagrined, he repaired the cloven headpiece, and placed it on his head once more. Very soon, the old spirit of brag repossessed him, and he resumed all his former declarations as to the resisting qualities of his head-gear; but he was careful not to place it upon the sward again. How all this becomes a parable, when we see the crude ideas of savage times current in an age of civilization, lauded as absolute verities notwithstanding great damage from encounters with astronomy, geology, and natural history!

Mythologies, amid all their extravagances, have symbolized great truths. The Muses nine had for their mother Mnemosyne, the Goddess of Memory, signifying that more important even than the gathering of the materials of science and art is the retainment of them. And what is Nemesis, the Avenger, but that retribution which, burning at the core of all moral systems, is proved by universal experience to be the reaping of what is sown, the whirlwind from the wind, and inexorable pain from all breach of discipline? When the ancients placed the Fates above all gods and goddesses, did they not perceive the causation, the uniform law, which makes all future action, mundane and universal, but the fulfilment of a prevision which we can imagine an omniscient mind to entertain? Embodiments of the same idea vitalize the thought of Saint Paul, Saint Augustine, and Calvin, and their hard-headed following. In the modern struggle for existence, with its merciless competition and vast unscrupulousness, men would be the better for more commonly reading the noble poems and essays of our language. Who can rise from Bacon's writings without having his horizon widened? The great masters of expressed thought lift the reader up as religious people are lifted up by exercises of praise and prayer and the appeals of the pulpit; and mark how your Montreal beggar, reckoning on the softening influences of Sabbath ministries, goes his rounds the first thing Monday morning, and is seen no more for a week. There is little backbiting in households familiar with Shakspere, and scandal has little interest for men admitted to the society of the strongest-brained and warmest-hearted of their race,—the authors of our best books. Biography is an interesting part of the section of literature we are considering. Good biography incites emulation, marks the pitfalls of humanity, and gives an insight into the methods of men of genius, which is always interesting, and often delightful. The best books of this kind easily accessible are Boswell's *Life of Johnson*, Ackermann's *Conversations with Goethe*, Carlyle's *Life of Schiller*, and Lockhart's *Life of Sir Walter Scott*. Supremely to be named always in this department are Plutarch's Lives, which have served for ages as the model of graceful and noble delineation of human character.

Novel-writing has risen to its perfection in our times. The genius which in the Elizabethan period wrote dramas in the Victorian age has written novels, and the novelists of to-day have held up as clear and true a mirror to nature as ever did their compeers of the sixteenth century. The best fiction abounds with essential truth. No one can read George Eliot's novels or Hawthorne's romances without acknowledging

Digitized by Google

their faithfulness in delineating character and analyzing motive; and so truly did Scott in *Ivanhoe* paint the canvas of the Norman conquest that Thierry, whom the romance incited to be the historian of the event, declares the work of the Wizard of the North to be essentially true and in harmony with the results of formal research. In the intelligent use of the literature of recreation, quite as much good may be done the mind as in the direct endeavor after mental improvement. Play and sport exercise the limbs of childhood with better results than the set and measured movements of the gymnasium; and the cultivated imagination, besides conferring refined pleasures on its possessor, may aid in the highest scientific work. Goethe's spendidly trained imagination reached out to the truths of modern morphology; and the mind which produced *Faust* first saw the skull to be but an enlarged vertebra, and the parts of a flower—calyx corolla, stamens, and pistils—to be but variations of the fundamental leaf.

Having thus briefly adverted to books which improve the mind as an instrument, store it with facts and refresh it by the scope of imagination and the play of fancy, it may be fitting to speak of the time-honored methods universally recommended to us as the best to fasten upon the mind what is read. These are chiefly the reading in quiet, without interruption, connectedly, with a purpose, with the habit of using notes not only for condensed transcription, but for the suggestions reading makes to us, and of reviewing the contents of a book when we have come to its end. Choice should be made only of great books, disregarding all mere dilutions, commentaries, and made-up volumes. The works one reads take a better hold of the mind when we make them topics of conversation among friends who may be interested in them.

No human faculty is more commonly overrated than memory. Let us take up a book of mark which we read a year or two ago, and with such an impression of it remaining that we may deem a reperusal unnecessary, and let us read it again, and we shall find how much of it will be new. A good note-book conveniently recalls at any time the main features of interest in a book, and saves the time needed for a rereading. It is a good plan, when reading up a subject, to take up two or more authors who have treated it rather than to give repeated attention to a single one. Such is the benefit of a new stand-point that even an inferior writer occupying it will give us some views worth having. Editors will tell you how much they value articles from occasional contributors who look at things with unprofessional eyes; and I think we lose much in the fact that many important groups of people are voiceless in the world of letters, and that the complaints of working men and women, of Irish tenants, of abused wives and children, and of many who feel themselves unjustly worsted in the battle of life,—all suffer through the inevitable loss of interpretation, when they indirectly speak through literary sources.

The change which is taking place in the form of literature, making it more and more serial year by year, leads me to make a suggestion, which your committee may pass upon as desirable to be carried out or otherwise. The weekly and monthly journals, reviews, and magazines now receive as contributions very much matter of a class which a few years ago would have appeared as books. This tendency has a disadvantage, growing out of the evanescence of the serial form and the vast breadth of modern literary production. Essays and reviews of value become difficult of access very soon after their appearance; and, through the constant renewal of the stream of good things published, articles of profound merit and interest do not attract the attention and leave the impression they should. In some cases, articles of this stamp are reprinted in book form; but, in the great majority of instances they are not reprinted, through their writers working a vein which, though golden, is restricted. Four years ago, Parkman wrote in the *North American Review* on the Failure of Universal Suffrage. About the same time, in the same review, appeared Boucicault's article on the Decline of the Modern Drama. In the *Fortnightly Review*,—during 1877, I think,—Leslie Stephen wrote "An Agnostic's Apology." These, and others of similar high value, if accessible in a library like this, would be read constantly and with profit. My suggestion is that your Library Committee, as far as their own reading of serial literature may go, and with such recommendations as the members generally may give them, supplement the serials subscribed for by purchasing such recent and current magazines as contain notable articles, and from time to time have them suitably bound, the titles of the articles they were bought for being indexed and included in the catalogue, a similar indexing being made of the most noteworthy articles in the magazines subscribed for.

While I am about it, I will take the liberty of making another suggestion, less likely than its predecessor to be adopted by your committee, but one perhaps worthy of consideration by the members of the Club. It is simply the keeping a scrap-book for newspaper clippings. I should like to have within the lids of mine the letter to the *Witness* three or four years ago, signed by your President, which was so able and striking in its free-thought positions as to lead to its writer's acquaintance being sought by the gentleman whose bequest to the Club forms the nucleus of your library fund. From time to time there appears in the press a brilliant fugitive poem, which, if not scissored and pasted, may never more be seen, and remain, like Pharaoh's dream, an impression without contents. How little known is Mr. Lyell's fine poem, the "Hindu Sceptic," which appeared as a reprint in *The Index* ten years ago! It is a brief, vivid summary of the Agnostic position. Among American poems of remarkable power are Wasson's "All's Well" and Ryan's "Song of the Mystic," but only when some good American anthology is compiled will they be known as they should be. In detaining curious phases of opinion, able and original argument, significant facts, and the fine flashes of the fugitive muse, a well-selected scrap-book is a treasure indeed.

Although newspapers contain so much that is good and interesting and even necessary to be known, yet their preparation is too rapid to be other than superficial and faulty. No daily journal can give sustained treatment of great questions. Sensation and amusement are demanded by its readers, and solid thought is felt to be out of place in an ephemeral paper which a week after date can scarcely be found except on the official file at the publisher's office. Whosoever wishes to read to purpose must resolutely curtail the time given to newspapers, and read chiefly summaries and headings, for your exhaustive reader of newspapers suffers from a restlessness of thought, which forbids the attempt at mastering any really important subject, and his attention, demoralized by distractions here and there, refuses to apply itself sincerely to any worthy purpose.

The same remarks apply to weekly and monthly publications, which must be eschewed by any reader economical of time, except in so far as they treat subjects he is studying.

Among the friends whom I honor in this city is a man who had but scant education in early life; but he had the courage to say, "I will be well informed." He had no unusual aids in the struggle of life; yet, duly regarding the demands of domestic, business and public duties, he has by systematic reading and study made himself master of three languages, and stored his mind richly with history and literature generally, and become possessed of an admirable style in both literary composition and conversation. No one in his circle of friends is more valued as an authority than he on the subjects he has made his own; and all this has been done with no more effort than many of us could make, if we chose. The means of information were never before in the world's history as accessible as now, and all that we require to avail ourselves of our good fortune is to cultivate interesting aims with the same system and persistence which our ordinary daily business demands of us.

TO STEAL into heaven by the modern method of sticking, ostrich-like, your head into fallacies on earth, equally as by the ancient and by all conceivable methods, is forever forbidden.—*Carlyle.*

SOCRATES and Confucius, Plato, Cicero, and Zoroaster agree unanimously in what constitutes clear understanding and just morals. In spite of their various differences, they have all labored to one point, on which our whole species rests. As the wanderer enjoys no greater delight than when he everywhere discovers, even unexpectedly, the traces of a thinking, feeling mind like his own, so are we delighted when, in the history of our species, the echo of all the ages and nations reverberates nothing but truth and benevolence to man.—*Herder.*

DARWIN AND EMERSON.

BY ROWLAND CONNOR.

[From a memorial discourse read at East Saginaw, Mich., January 7.]

Charles Robert Darwin's name stands first
Upon our list of last year's dead, stands first
In almost every quality which makes
Men lovable as well as great, stands first
Because of comprehensiveness of mind,
Because of power to grasp a multitude
Of facts, and hold them firm before his gaze,
Until, through all their seeming difference,
He saw a golden thread of kinship run,
And knew that life, all multiform as now
It seems, from ancient, primal germ has been
Evolved. Shrink we no longer from the thought
That we are kindred—far removed, indeed—
To all those lower forms which breathed and fed
And fought and died, and by their ceaseless strife
A firmer and a firmer hold did win
On life, until at last a conscious man
Was born; who rapidly away from all
His poorer relatives did run, until
In proud disdain upon them all he looked,
And loud denied his humble origin.
"I am heaven born," he cried, "made by the gods
To keep them company." And great indeed
Has been the scorn of Darwin's principle.
Loud has theology challenged its claims,
And hurled the old taunts—"heretic," "sinner,"
"Infidel"—upon men who could not swear
That all the world was peopled by that pair
Of flabby innocents that Hebrew tale
In Eden put six thousand years ago.
In spite of all abuse and senseless fear,
In spite of prejudice and human pride,
In spite of sentiment, in spite of all
Mistaken claims for revelation made,
All learned men are now agreed that thus,
As Darwin tells, did man to earth first come.
How foolish was our prejudice, indeed!
For all of man's hopes rest on lowly birth
And upward climb. The Eden of our wish
Must be before, not back. When this we learn,
And all its import fully understand,
We turn the tables on the old-time faith,
And cry aloud with joy, "I'd rather from
An ape grow up than from an angel be
Let down!"

But Darwin was not great alone
In store of knowledge that made others seem
But pygmies by his side, not great alone
In comprehensive grasp, but great in toil,
In patient waiting for the truth he sought,
In grateful recognition of the rights
Of other men, in modest estimate
Of all he did himself; so that of him
Another great man, writing, said, "He is
The one whom all to science given admire
And love." Admire and love! When words like these
Are spoke of one who never lifted sword,
Who never sat on throne or judge's bench,
Who was not noble by the breath of prince,
Or empty title bore, but only lived
A private, quiet citizen, then are
We sure that this old world is marching on,
Is better than it was, that nobleness
Inherent in the man can make its mark
To-day. And, spite of all that's bad and low,—
The brute which man as yet has not outgrown,—
The promise of to-morrow's rainbow bright,
All hail the coming dawn!

Our Emerson
Is not unworthy to be mentioned next;
For in an earlier day, when form and phrase
Had bound all minds in this our Western world,
He broke the bonds of custom's making loose,
And bravely told what truth his own eyes saw.
He was a prophet in that day, and spoke
So clear and loud that some were shocked, and some
Did cry with pain of old-time idols broke;
But all do give him credit now as one
Who helped inspire our younger men to be
To their own souls true, and not give any
Heed to what was simply old, as though age
Can make a lie the truth. To Emerson,
We owe a debt of gratitude that in
The years to come will be more fully seen
Than now is possible.

CORRESPONDENCE.

THE LIBERAL CHURCH.

W. J. POTTER, Esq.:

Dear Sir,—Let me thank you for your very interesting and suggestive replies to my request for more light on Liberal Church matters, which have been carefully read and considered. Your goodness has made me bold enough again to ask the use of the columns of *The Index*, not only for the purpose of hearing more from yourself, but to draw out the experience and maturer thoughts of others. Without wishing even to seem to imply dissatisfaction with your kindness or the excellency of your remarks, I think you will agree with me in believing that the case in all its completeness and importance has not yet been presented.

I am aware that the word "Church" is the red flag which rouses the rage of free thinkers. I confess myself not wholly a stranger to the feeling. So much mental slavery and degradation of manhood, so much of every thing repugnant to freemen, has been the result and purpose of ecclesiastical rule, that Voltaire's watchword, *Ecrasez l'Infâme*, seems the duty of every honest, enlightened soul. Nevertheless, as you have ably demonstrated, Churchism is an important factor in our present civilization, inherited from the past, called into existence by human needs and by the same means preserved.

The late Thomas Girard, in his reply here to Col. Ingersoll, reached his loftiest eloquence, moving his admirers to enthusiasm and tears, in his description of all that would be necessary before Christianity could be effaced from the memory of man or cease to influence him. A Celsus or a Julian could have been as eloquent and true regarding the religions which Christianity displaced; for, though buried fourteen hundred years, we have not yet escaped their influence. I do not believe that Churchism can be crushed. It seems to me that all effort in that direction is energy wasted. It is the dominant bigotry and ecclesiastical meanness which have found refuge and support in the Church which need opposition and exposition. As social beings, we need Church organization for mental improvement and religious culture.

Religion! another red flag in the infidel field. Like the Church, it will not be crushed. The efforts of the rationalists in that direction are very much like the efforts of so-called religionists in another, when they attempt to crush the exuberant spirits of youth, decrying everything as sinful which gives pleasure, and carrying on a crusade against art, music, and the drama, a crusade against human nature.

What do I mean by religion? I perceive a force in nature moving everything onward. In biology there is a gradual uprising from one form of life to another, as if an ideal existed in nature from which life flows, and to which it ascends, finding its finest illustration in man, whose aspirations are reaching forward to attain and find rest in the perfection of this ideal.

This instinct in man, this principle manifested in every form of evolution, which is pressing all things forward, is what I mean by religion.

Churches should be academies where the education of man's religious nature is the specialty of every member, where everything which retards progress will meet with special attention, and active, intelligent measures be continually brought to bear on its removal. This catholic Church will be altruistic, and with the Founder of Christianity will preach unselfishness as the only saviour of man; and Messiahs will be proclaiming a gospel to the poor, healing the broken-hearted, preaching deliverance, and spreading light and liberty everywhere. It is not necessary that a Church should be a museum for the preservation of antiquated forms of faith, creeds, bibles, and rituals, coats of mail, bows, arrows, shields, etc., the armor of our forefathers. Neither should their ideals be ours, unless it be the ideal before us which neither they nor we have attained.

I believe there never has been an age in which man's religious nature was more in earnest, more devoted to principle, more determined to be all and have all that the charter of his manhood demands. Yet this wakefulness, this independence, this sincerity and determination have been strangely named anti-religion, and christened Infidelity. Man in all this has simply been obeying the helm of religion. Unhappily, the work of the modern movement has been destructive, clearing away the forests and underbrush for better work; but, after so long labor, have we not clearances enough on which to build, plough, sow, and reap? Construction is now as necessary as destruction was and is. Furthermore, is it not about time that we met our brethren in the Churches half-way, making reasonable concessions and providing a way of escape for them? We know there are a vast number in the Churches who wince under the yoke placed upon their shoulders, and have outgrown the harness in which they are made to work, but who feel they need more than mere mental liberty, whose emotions need a field in which to work and a spirituality in which to grow. We of the radical school have possibly neglected a branch of our nature in which they may help us, while we may lend a helping hand in our peculiar way, and both be the better for it. Let us not be too harsh on their psalmody and prayers, which they may need, if they be useless: in a liberal church, they would soon be disused or modified to meet the demands of growth.

I will not now attempt to exhaust the subject, and I am sincerely glad to find movements of this character in so many places. Friends who have mailed me papers, constitutions, etc., will please accept my thanks. Notably among these, I am happy to mention that of the Unity Church of St. Paul.

Just as I had written the above, *The Index* of January 18 came to hand, in which I find that you have anticipated many of my thoughts, and given a more extended and clearer definition of religion. This placing religion within man, correlative with external things, prevents it ever being used in the interest of priestcraft, or to any other purpose than human advancement. Yours for catholicity and liberality,

J. W. MACKIE.

OAKLAND, CAL., Jan. 26, 1883.

ANOTHER LETTER FROM MR. BRINKERHOFF.

B. F. UNDERWOOD, Esq.:

Dear Sir,—I have received *The Index* of January 25, in which are published my letters of inquiry and your reply. That my single interrogatory should receive attention to the extent of a solid page of editorial, in such an able and crowded journal as *The Index*, is exceedingly complimentary to me, and you will please accept my best acknowledgments; but yet I am compelled to say (and I trust you will pardon me for so saying) you do not answer my question. (1)

You head my letters as "Correspondence from a Defender of the Faith," which is a mistake on your part. I did not appear in that attitude at all. You sent me a sample copy of *The Index*, which is the recognized organ of an association whose mission it is to destroy that system of philosophy and religion known as "Christianity," and of which I am an insignificant member, and without the least claim to recognition as an official exponent, defender, or representative. In my innocence, it seemed strange that so much ability, activity, and zeal should be exerted to weaken the influence of *Him* "who spake as never man spake" before or since, and whose moral teachings and example are acknowledged almost universally, even by those who deny their divinity, as the highest, the purest, the most ennobling known to man. In my curiosity, I inquired, *Cui bono?* With this explanation, my two letters could be reduced to a single word,—Why? Instead of fourteen assumptions, my letters in their object and intent were an interrogation-point (?),—nothing more, and nothing less.

To this interrogatory, you have not replied. Your response, on the contrary, is a condensation of the arguments against Christianity current in the sceptical literature of the world; and, I am compelled to say, it is quite able and very creditable in its arrangement, but there is nothing new. (2) To these arguments and assumptions (for of the latter you certainly have far more than you have ascribed to me), I make no reply. They have been answered a thousand times and in a thousand ways, far better than I could do it; but I would not attempt it, even were I a Bacon in argument or a Beecher in eloquence, and for the simple reason that I do not believe that scepticism can be cured in that way. "Verily, verily," said the great Teacher, in his most emphatic manner of utterance, "I say unto you, Except a man be born again, he cannot see the kingdom of God."

To talk to a blind man of the beauties of nature or the glories of art cannot convey to him a definite idea. His eyes must first be opened.

Argument to a deaf man in regard to the superiority of music to architecture is simply preposterous until his ears are unstopped. In short, there is such a thing as a spiritual sense, which is as definite and certain in its operations as the sense of sight or hearing. If you ask me to demonstrate this, I am prepared to do so upon precisely the same evidence that you demonstrate that a rose has color or odor, or that a musical instrument produces sounds; namely, by consciousness and human testimony. Nay, more, I offer to do it upon your own consciousness. (3) You reply, in your remarks upon what you call my "8th Assumption," "This cure would require us to take for granted theological doctrines which, after mature reflection, we have been compelled to reject, and to act as though we believed in that in which we do not believe." Not at all. All I ask of you is to believe in a personal God, and then in sincerity and truth *seek* to do "his will, and ye shall *know* of the doctrine, whether it be of God, or whether I speak of myself." (4)

You say, "How can these things be?" So said the learned rabbi and legislator, Nicodemus; but the Master replied: "Marvel not that I said unto thee, Ye must be born again. The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh and whither it goeth: so is every one that is born of the Spirit. Art thou a master of Israel, and knowest not these things?"

This, my dear sir, is all I have asked. Nothing more, and nothing less. If you believe in a personal God, there is nothing in your present attitude or past experience that will stultify you in the least in complying. Do this, and thou shalt see and believe and live. "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you."

To the truth of this, I tender the testimony of all true Christians in this and in every other age. When I say every true Christian, I do not mean professors merely, or the adherents of this or that particular creed or system of theology. All creeds and formulated systems of theology are man-made, and not God-made, and all, doubtless, are more or less erroneous; but, among the adherents of all these, true Christians can be found. "By their fruits shall ye know them." It is true I belong to one of the so-called sects, but, in my affiliations, I have long since, I trust, outgrown the boundaries or restrictions of any particular creed; and, personally, I have ceased to consider creed confessions as a test of Christianity. "The word of God is not bound." Whosoever—of any creed, of any name, or race, or condition upon the earth—confesses that Jesus is "the Christ, the Son of the living God," and looks to him as his Saviour and Master, and *seeks* to mould and guide his life by this divine example, although he may not be perfect in life and conduct, and may often stumble and fall, yet he is a Christian, he is my brother. "Believe me," said Jesus, "the hour cometh, when ye shall neither in this mountain, nor yet at Jerusalem, worship the Father. But the hour cometh, *and now is*, when the true worshippers shall worship the Father in spirit and in truth."

Of course, to an atheist, a pantheist, or an agnostic, the test I propose is not applicable; for, if a man does not believe in a personal God, he cannot seek to do his will. But, to all others, I tender it in all sincerity; and I am ready to stand or fall by its results.

Very truly, R. BRINKERHOFF.

MANSFIELD, OHIO.

[(1) The question was plainly answered in the statement of the aim and object of this journal, in our desire to extend the circulation of which we evidently made no mistake in sending to Mr. Brinkerhoff a sample copy, for he has since very sensibly subscribed for *The Index*.

(2) Our article made no attempt to "present arguments against Christianity." Its only object was to point out the fallacy of numerous erroneous assumptions, which are regarded by multitudes as truisms, and which Mr. Brinkerhoff had repeated in a very positive and dogmatic manner.

(3) That there is a spiritual sense which is active in those who accept Christianity and dead or dormant in those who do not is another of Mr. Brinkerhoff's wild assumptions.

(4) We do not believe in a personal God; but while we recognize the intelligence and worth of multitudes who do so believe, we do not think much of a system that substitutes for argument and proof exhortation and promises. Mr. Brinkerhoff's letter is composed chiefly of mere "meetin' talk," and does not call for reply or comment.—ED.]

"SANCTIFIED SCHOLARSHIP."

Editors of The Index:—

It is curious, not to say more truly what it is, to note the manner and tone in which the *Evangelist* speaks of Prof. Briggs' article in the January number of the *Presbyterian Review*, on the Old Testament controversy. I do not call attention to it because of any admissions or any value in the opinions either of Prof. Briggs or the *Evangelist*, though the editor appears to think the discussion on Prof. Briggs' part a most novel and wonderful performance, and particularly to be commended and imitated, *because it comes within evangelical party lines.*

But I cannot help noting, with mingled feelings of indignation and contempt, the particularly narrow and arrogant manner in which a great journal, representative of a great sect, seeks to hedge in and appropriate to party use a pretence of scholarship. I think it deserves the reprobation of every liberal-minded scholar and friend of truth.

That a great journal like the *Evangelist* should, in this late day and amid all the light which eminent heterodox scholars and those who started out as orthodox have thrown upon the study of the Pentateuch, set up a denominational bias, a predetermined opinion, as a commendable and requisite qualification of inquiry, is to me simply astonishing. Read his own words: "It is entirely lawful for Christian scholars to discuss, so long as they stand with Prof. Briggs on evangelical ground, as to the supernatural quality of the record; and, which we venture to add, *nothing but what has been termed 'sanctified scholarship' is competent to settle.*" In other words, unless discussion ends where it begins, in a foregone conclusion, it is neither "lawful" nor "sanctified." Will the day ever come when such narrowness and egoism will be eliminated from respectable evangelical journalism?

BOOK NOTICES.

SCHELLING'S TRANSCENDENTAL IDEALISM. A Critical Exposition. By John Watson, LL.D., F.R.S.C., Professor of Mental and Moral Philosophy, Queen's University, Kingston, Canada. Chicago: S. C. Griggs & Co. 1882. Price $1.25.

This is the second volume of "German Philosophical Classics for English Readers." It presents, with precision and elegance, the speculations of Schelling, the different phases of his philosophical development, and the relation of his system to other forms of German idealism, especially that of Hegel. "The phases of Schelling's philosophy," our author says, "may be regarded as three: first, the period of storm and stress, in which, in harmony with Fichte's earlier philosophy, he refused to admit the reality of any Supreme Being other than the moral order of the world, as revealed to the individual in the idea of a moral perfection to which man can only approximate, and in the struggle toward which his life consists; secondly, the stage at which man and nature are regarded as two coördinate manifestations of a single activity that is revealed in each with fulness and perfection; and, lastly, the crowning stage, in which an attempt is made to prove the personality of God, while preserving the freedom and the moral responsibility of man." These phases represent "the change of one who cannot stand still, because he is the continual recipient of fresh light which he cannot avoid communicating to others." But Prof. Watson thinks Schelling's philosophy was in a large measure a failure, although interesting as the record of the intellectual development of a gifted mind, forming the transition from Kant to Hegel, in whom, if "the pure light of philosophy does not shine, it may safely be said that it has not yet shone upon the earth." Schelling's conclusions, arrived at in the last stage of his thinking, were reached, it is affirmed, "not by any rational and well-ordered method, but simply accepted on the guarantee of a flash of poetic insight." "In the last phases of his speculation, Schelling labors, with sinking spirits and only under the guidance of stray flashes of light, to establish the self-conscious personality of God." He could not give up belief in the universe as the abode of spirit; and, in attempting to coördinate nature and spirit, he swerved from the narrow path of ethical idealism, and assumed a close relation to Kant by falling back on uncritical intuition. Prof. Watson thinks the "best fruit of the study of Schelling is the hold it enables us to have over the infinitely richer and fuller system of his successor, Hegel."

The author of this volume passes judgment on the points of difference between metaphysical systems without reserve, and sometimes with as much confidence as though his speculations had all the certainty of demonstrated truth. The work is valuable, at least as showing what kind of theories and assumptions have been put forward in the name of philosophy.

THE SCIENTIFIC EVIDENCES OF ORGANIC EVOLUTION. By George J. Romanes, M.A., LL.D., F.R.S., Zoölogical Secretary of the Linnean Society. London: Macmillan & Co. 1883. Price 50 cts.

This is a little work of eighty-eight pages, which presents an epitome of the Darwinian theory with the proofs that sustain it, with which Darwin himself was so well pleased that he urged the author to publish it in a form which might admit of its being widely read. It is a sort of digest of the *Origin of Species*, and probably the best that has yet appeared. The language is clear, vigorous, and strong. The principles of natural selection, the struggle for life, etc., are stated so plainly that a child can understand them; and the main arguments from classification, morphology of structure, geology, geological distribution, embryology, and from certain general considerations, are marshalled with the skill of a masterhand. The author quotes approvingly the following sentence from Huxley in the Encyclopædia Britannica: "On the evidence of palæontology, the evolution of many existing forms of animal life from their predecessors is no longer an hypothesis, but an historical fact: it is only the nature of the physiological factors to which that evolution is due which is still open to discussion." Mr. Romanes is of the opinion that "natural theologians can no longer adhere to the arguments of such writers as Paley, Bell, and Chalmers without deliberately violating the only logical principle which separates science from fetichism." But, while he holds that Mr. Darwin's theory is in direct contradiction to the common theory of design or system of teleology, he thinks the Darwinian theory has no point of logical contact with the theory that behind all secondary causes there is "a primary cause of a mental kind." "Whether or not," he says, "there is an *ultimate* cause of a psychical kind pervading all nature, a *causa causarum*, which is the final *raison d'être* of the cosmos, this is another question, which, as I have said, I take to present no point of logical contact with Mr. Darwin's theory, or, I may add, with any of the methods and results of natural science." In this epitome of the evidence in favor of organic evolution, Mr. Romanes aims to show only that its facts "necessarily fall into the same logical category, with reference to any question of design, as that of all or any other series of facts in the physical universe."

PEARLS OF THE FAITH; OR, ISLAM'S ROSARY. Being the ninety-nine beautiful names of Allah. By Edwin Arnold, author of *The Light of Asia*, etc. Boston: Roberts Brothers. 1883. Price $1.00.

This book of poems, though a slighter work than *The Light of Asia*, aims to do for the Mohammedan faith what that well-known and popular poem did for Buddhism. Speaking as if in the person of an earnest but enlightened liberal Mussulman, Mr. Arnold would represent the religion of Islam in its highest and most spiritual aspects to the adherents of other faiths. In the preface, as explanatory of the title and purpose of the book, he says: "It is a custom of many Muslims to employ in their devotions a three-stringed chaplet, each string containing thirty-three beads, and each bead representing one of the 'ninety-nine beautiful names of Allah.' . . . The Koran bids them 'celebrate Allah with an abundant celebration'; and on certain occasions the Faithful pass these ninety-nine beads of the rosary through their fingers, repeating with each 'Name of God' an ejaculation of praise and worship. . . . In the following verses, I have enumerated these 'ninety-nine beautiful names,' and appended to each some illustrative legend, tradition, record, or comment, drawn from diverse Oriental sources, occasionally paraphrasing (as closely as possible) from the text of the Koran itself." Mr. Arnold has thus made the religion speak for itself, he being only a sympathetic interpreter. The versification, though not equal throughout, is in the main good, and has the proper Oriental flavor.

PERSONAL ITEMS.

MR. CHARLES WATTS, of England, a prominent liberal lecturer, will speak at Paine Hall, this city, next Sunday afternoon and evening.

IN a letter to the New York *Times*, it is stated that Thomas Paine's monument at New Rochelle has been regularly washed of the stains of eggs that have seen better days by an elder in the Presbyterian church of the town.

MR. DWIGHT M. SABIN, who succeeds Mr. Windom as United States Senator from Minnesota, is a native of Connecticut, and worth several million dollars. It is astonishing the way the money-bags are being piled into the Senate Chamber.

THE estate of the late Rev. Dr. Mercer of Newport, which soon after his death was estimated at $200,000, is now found to amount to over $1,000,000. He had been taxed for $10,000, and great surprise is manifested at the revelation.

JOHN RICHARD GREEN, the author of the *Short History of the English People*, lies at the point of death, in England. He is one of the ablest followers of Macaulay's third chapter,—where the idea was first in modern history proclaimed that the human advance was the true object of the historian. The literary world will be considerably poorer for his death.

THE School of Political Science in New York City has suffered a serious loss in the death of Clifford R. Bateman, lecturer on Administrative Law. Mr. Bateman was the son of President Bateman, of Knox College, Illinois, graduated at Amherst College in 1876, at the Columbia College Law School in 1878, and studied afterward in Berlin, Heidelberg, and Paris. He was in his twenty-ninth year.

IT is said that the trustees of the Metropolitan Temple in San Francisco have decided to close it, and give its pastor, Rev. Dr. Kalloch, a year's vacation, without pay, in consequence of his action in letting it for a Sunday evening sparring match, which was attended by a crowd of hoodlums, for whom the regular organist played sacred music before the sparring began. Thus closes in obscurity, says an exchange, the career of a man whose vices lifted him into prominence, and who combined in the most offensive way the religious charlatan and the pot-house politician.

THE New York *Baptist Weekly* last week characterized Senator Ingalls' speech, on the occasion of the memorial services of the late Senator Hill, as "heathen talk in Congress." The editor concluded his article by saying, in substance, that Ingalls was an infidel and a heathen. To this, Mr. Ingalls replied: "If you are a Christian, I prefer to be a heathen. If your religion prompts or permits you, without provocation, to libel those with whose views upon the great problems of human destiny you do not agree, I prefer to be an infidel. But I am neither the one nor the other. I have had some doubts hitherto whether eternal punishment was consistent with infinite love; but I am quite sure that, if there is no hell for such bigoted slanderers and malignant liars as you, there ought to be."

W. A. CROFFUT, in the Cincinnati *Commercial Gazette*, writes as follows in regard to the death of the late Dr. George M. Beard, the neurologist: "I was in to see him on Monday. He smiled as he took my hand, and said: 'Behold a prostrate philosopher! I am a dying man. Don't mind what the doctors say: I know better than they. I shall never write or speak any more. But it is just as well. I have probably done my best work.' In his beliefs, he was an agnostic; that is, he held that we could know nothing concerning God or a future world. 'It is waste of time talking or thinking about these things,' he said. Within an hour of his death, he said: 'I wish I could put on record, for the benefit of science, the thoughts and experiences of a dying man. It would be a help to physiological investigation.' Then he called Dr. Dana to his bedside, handed him his last proofs from the press, and said: 'Doctor, you are familiar with my work: I shall be indebted to you, if you will finish that last chapter, and put it to press when I am dead. Henry,' he said to the errand-boy, 'run to the office and get my check-book.' When it was brought, he called for a pen and ink, and signed a check in blank. 'Draw some money to-day,' he said to Mrs. Beard: 'you will need considerable soon.' Scarcely an hour later, he asked the boy to lay a cloth over his face, and, when it was done, calmly said, 'Good-by,' and died."

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,

CURRENT TOPICS.

OF 4,410 burials occurring in the city of Paris, during the month of November, 1,207 took place without any religious ceremonies whatever.

THE Springfield *Republican* prophetically remarks: "Fast day has been fixed for Thursday, April 5, and the Governor's proclamation is in the hands of the printers. It is perfectly safe to wager that Gov. Butler will not quote a hymn." The *Republican* seemingly forgets in how pious a frame of mind the Governor's election found him.

THE courts of Australia have a very delicate question offered for their solution. A wealthy gentleman and good Catholic left by will $7,000 to be expended in masses for his soul while in purgatory; and, now, the executor of his will refuses to pay the money to the church authorities until they prove by legal process that any such place as purgatory exists. The decision of the courts will be anxiously awaited.

THE first Chinese paper published in this country was started in New York recently by Wong Chin Foo. He issued fifty thousand copies of the first number, and the demand was equal to the supply. He has already received a year's subscription for the paper, which is called the *Chinese American*, from Prof. A. Raux of the Lyceum in Alençon, France, and expects to secure a large number of subscribers from his native country.

SAYS *True Religion*: "Mexico, country of revolutions, is now having a revolution indeed, a complete overturning of old methods and of old ideas too, in the way of labor and commerce. And the railroad is what is doing it. By the way, the railroad is the great missionary of modern times. It will civilize, and that in the near future, China and Africa. The railroad and the telegraph will make the earth one people sooner than any gospel that can be preached."

THERE must be "something rotten," not "in Denmark," but in the good old Bay State, when her penal institutions are in such bad condition that there is incipient revolt among the inmates of her State prison, and her "reform school" for juvenile offenders is in such a state that a judge in this city recently refused to send there two wayward lads brought up before him for burglary, because he "did not deem it wise to send such boys as the prisoners to the institution at Westboro, which is already overcrowded."

THE Prussian Government, having discovered many instances of the illegal assumption of baronial titles among the younger branches of titled families, has ordered these cases to be investigated, and the fraudulent titles to be taken away on the 1st of April. There's the disadvantage of living under a "despotic government." Here, in free America, anybody is at liberty to take whatever title he chooses, from "professor," "captain," or "esquire," to "general," "honorable," or "count," without government interference.

A METHODIST minister of Birmingham, Ala., is slow in being converted to the principles of "civil rights," even in religious matters. He has been recently conducting a "revival" in his church; and, several negroes having the temerity to enroll themselves among his "converts," he published a notice to the effect that "my church is for white persons exclusively, and colored people are not invited or expected to attend." Moreover, the Atlanta *Methodist Advocate* defends the exclusive parson, and declares that "the conferences in the South need at least twenty more like him."

THE New York *Herald* comments as follows upon the unfortunate Arizona mining scheme, in which it has just transpired that the New York Methodist ministers were so deeply interested: "We doubt if the Methodist Book Concern has among its assorted lot of choice little Sunday-school stories anything that works up into quite such a nice and beautiful moral tale as that which we publish in another column under the head of 'A Methodist Mine.' It is the story of a naughty, naughty man, who wanted to endow the East Tennessee Wesleyan University with a couple of hundred thousand dollars, and, not having the exact change with him, gave a band of confiding ministers stacks of stock in a silver mine and got them to market it. The mine and the ministers were apparently worked for all they were worth. The ore eventually was found to be exceedingly valuable for railroad ballast, and it is somewhat apparent that Methodist ministers here and there will not be averse to offering discounts off for cash on prospective donation parties. This is very sad indeed; but we trust that the moral is not too painfully apparent to the clerical miners,—that ministers of the gospel who depart from their sacred calling to indulge in worldly speculations are apt to come to grief, whether the mine has been salted or not."

DR. SAMUEL KNEELAND, in a recent lecture in the Lowell Institute course on "The Chinese at Home and Abroad," said in substance that the conservatism of the Chinese prevents their progress being as rapid as that of the Japanese. Shrewd and energetic, they are gradually assuming the mastery of the Pacific, on land and sea, from Honolulu to Manilla. In his contest with the Malay, the Chinaman is eminently superior. In the strife between the European and the Mongolian, the latter, the lecturer averred, would eventually obtain the supremacy in the Pacific trade. The China Merchant Company of Canton has already many vessels on the Pacific, and the Chinese are fast learning the details of the steam carrying traffic. They own an almost inexhaustible supply of coal, brought by canal from the interior. Already, they have bearded the Pacific mail lion in his den. As the Chinaman is by nature a trader, he will surely appropriate to himself the profits of the small business. In the Philippine Islands, the Spanish government has a great difficulty in them to deal with. To avoid the heavy poll tax imposed by the Spaniards, a number of Chinese were induced to become agriculturists; but the experiment was a vain one. Massacre does not terrify them, banishment does not diminish their numbers.

THE first annual meeting of the National Woman Suffrage Association of Massachusetts, held in the Meionaon on Wednesday evening and Thursday afternoon and evening of last week, was in every way a very enjoyable affair; and, if the crowds of interested and earnest-looking people who attended its sessions be taken as any evidence of increased popular sympathy for the movement, its hour of ultimate triumph is not very far away. Mrs. H. R. Shattuck, the President of the Association, explained in an able address "The Origin and Work of our Association," and in a later speech showed the untenable position of, and gave some excellent advice to, "Our Lady Opponents." Mrs. H. H. Robinson's address on "The Opportunity of the Democratic Party" showed a thorough acquaintance with our national politics. Miss Phœbe W. Couzins, of St. Louis, spoke "wisely, wittily, and well" at every session, on the last evening holding an audience that filled every foot of standing-room in the hall spell-bound for more than an hour; Miss Huldah Loud, of Rockland, Mass., gave a short but admirable and earnest address; and Mrs. Rogers, of Troy, read an essay replete with good sense, which gave evidence of broad and liberal thought on the part of the essayist. All the speeches, long or short, were pertinent, dignified, and earnest. Among those who thus spoke were Miss Hannie M. Todd and Miss E. M. Clarry. Not the least effective among the speakers at each session was Miss Roach, in her realistic personification of "Josiah Allen's wife." Some excellent music was offered; and there was congregational singing of Mrs. Robinson's Suffrage Song, composed for the occasion.

JOSEPH COOK'S LOGIC.

Logic was never Joseph Cook's forte. His fondness for stringing together positive statements, definitely numbered and connected by a frequent "hence" or a "therefore," has given him the reputation in many quarters of being a strong reasoner. The term he has specially affected for his peculiar method of presenting his views is "axiomatic theology." Another phrase by which he likes to designate his theological beliefs in general is "scientific supernaturalism." And these constant references to "the scientific method" and to fundamental axioms have helped to strengthen the opinion among his admiring followers that he is an acute and precise logician. But it requires no very close reading of his lectures to see that in his numerical lists of accepted propositions there are not only many commonplace truths which no one would think of disputing, but also bare assertions of his own opinions without any substantiating proofs whatever. His journey around the world does not appear to have increased his logical power. If anything, he is more purely dogmatic than before. The main difference seems to be that he has added largely to his *répertoire* of "authorities" for the special opinions he advocates,—the first and foremost scholars being, as his audiences are always informed, on his side. The investigators, scientific or theological, who do not happen to justify his views, are dismissed as having little weight in "the most advanced circles of serious and educated men." For has not Mr. Cook "interviewed" all these circles abroad, and brought back their latest opinions?

As a specimen of Mr. Cook's strength of assertion and weakness of fact and argument, we would refer to the Monday Lecture printed, after his own revision, in the *Independent* of January 25. This was the lecture of which the "Prelude" discussed the question whether death ends probation. And this Prelude was so remarkable in some particulars, and has been so much talked about, that the Lecture itself has been quite forgotten. Indeed, the Prelude was considerably longer than the Lecture, and contained a good deal more of thought. That it was not, however, very strong in logic has been abundantly remarked,—especially in the contrast between its emphatic opening, "Give me no guess for a dying pillow," followed by an argument against the belief in probation after death as resting only on a "guess," and the emphasis afterward placed on the efficacy not merely of "death-bed repentance," but, we may even say, of *coffin* repentance for insuring salvation. For Mr. Cook's theory of the vivid awakening of conscience in the moment of death to a new moral choice that may then wholly change the personal condition for the future life, and that the moment of death may not really come until some time after the breath has left the body, is as purely a "guess" as theologian ever put forth. And practically, if this were to be preached and become embodied in popular belief, it would be quite as demoralizing, certainly, as would the belief in after-death probation, which Mr. Cook thinks so dangerous. People who find it difficult to put away their evil passions and adopt an amended life would be inclined to say, Let us wait for the great awakening of the better impulses which death will bring!

But we were more struck with the defectiveness of Mr. Cook's logic—we had almost written the word "dishonesty" instead of "defectiveness"—in the Lecture that followed this remarkable Prelude, particularly in the part headed "The Downfall of the Mythical Theory." In his numerical list of declarations on this topic, we find this amazing statement: "The mythical theory of Strauss, the legendary theory of Renan, the tendency theory of Baur,—all of them applications of a theory of development to the explanation of the origin of the New Testament literature,—are thoroughly confuted and shown to be now utterly untenable by serious and educated men." And, at the close of the Lecture, this statement, as far as concerns Strauss, reappears in still more dogmatic shape, and in the fanciful dress characteristic of Mr. Cook's rhetoric, thus: "There is not enough left of Strauss' mythical theory to make a fig-leaf large enough to cover the shame of historic scepticism." This triumphant conclusion of the Lecture was greeted, according to the report, with "loud laughter and applause." Mr. Cook doubtless, by the very assurance of his assertions, seemed to the larger part of his audience—though not, probably, to its more scholarly portion—to have maintained his thesis, and wholly proved, not only that Strauss was left nowhere, but that the authenticity of "the gospel history," including "the reality of the Christian miracles," is substantiated by, to quote his own words, "indisputably contemporaneous evidence, and the sneer of the infidels is overwhelmed."

And here are the steps of this overwhelming argument. Compared with the ponderous volumes which learned critics have written upon the question, it is like the advertisements we sometimes see of learning a foreign language in six lessons. Mr. Cook does not enter into the question of the composition of the Gospels. That would bring him at once upon disputed territory, and his short method would not work. He begins accordingly with a fact "admitted by Baur, Renan, Strauss, and all really learned infidels" that there are four of Paul's Epistles which are of undisputed genuineness; namely, Galatians, First and Second Corinthians, and Romans. In the next place, he asserts that these four undisputed Epistles "prove," not only that numerous Christian societies had been established at the time Paul wrote them, and not only that the doctrines taught by Paul and received by these societies are substantially the same as the Christian creed of to-day, but also—and observe the long stride here—"that in these societies there was agreement in the reception of the doctrines of our present Gospels as of Divine authority, and *of the history recorded in the Gospels as attested by the most irresistible and overwhelming contemporary evidence.*" The last part of this step is such an astonishing leap, and yet is so all-important to the argument, that we have put it in italics. In the third place, he attacks the question, When did Paul write these undisputed letters? He might have answered the question within certain admitted dates without any discussion. But here was a chance for a picturesque description drawn from the ruins of Rome, which would impress his audience as if the real evidence he was seeking was written in ineffaceable records of stone. And so he goes through the Colosseum, which was begun in 72 and built in part by captured Jews, and through the Arch of Titus, upon which are representations of utensils taken from the temple at Jerusalem when the city was captured by Titus in the year 70, and to the death of Nero in 68 (at this point, he exclaims, "Solid, unmistakable verities, these stones and these dates!") and thence back to the fact which "everybody admits, that Paul died in the reign of this despot." And now what is the momentous conclusion that comes at the end of this circuitous and picturesque historic journey among such "unmistakable" guide-posts? Why, this: "Paul certainly died under Nero, and, therefore, before 68. When did Paul write his Epistles? *Before he died!*" This happy exit from the Colosseum and the Arch of Titus and the solid verities of stones and dates was also greeted with "laughter and applause."

But the argument, of course, does not stop here. Having established the important point that Paul wrote these four Epistles before he died, Mr. Cook boldly proceeds to show that he must have written them several years before he died, and finally places them between the years 54 and 60,—simply, after all, agreeing herein with "Baur, Renan, Strauss, and all really learned infidels." And now comes the clincher. Mr. Cook here takes up what he calls, by one of his happy strokes of rhetoric, "a pair of chronological shears." The upper blade of these shears stands, he says, at the year 34,—the year when Jesus was crucified; and the lower blade stands at 54, the year when Paul wrote to the Galatians. We see now what is coming, and there is no escape from it. The sneering infidel is to be caught in those shears. "Thirty-four, fifty-four," ominously exclaims Mr. Cook. "Twenty years only between these blades! There is not time in twenty years for myths and legends to grow up and be mistaken for history." But Mr. Cook is not content to stop even here. By some sleight of hand and an arithmetical puzzle, which we do not yet quite comprehend, but in which Paul's three years in Arabia and the fourteen years between his two visits to Jerusalem get added together and their sum subtracted from the twenty years, our axiomatic theologian brings down those remorseless blades until they are only three years apart! No wonder, if all this be so, that Strauss' mythical theory should be cut down to a very diminutive and ineffective fig-leaf!

But what, after all, has Mr. Cook accomplished by this imposing parade of figures and dates and Roman ruins and verities in stones, and carefully numerated propositions? What was his purpose in it all? To make his hearers believe that Paul, in these four Epistles whose genuineness is undoubted, is an indisputable, overwhelming, contemporaneous witness to "the history recorded in the Gospels," including its narratives of miracles. But if any of his hearers, who responded with gleeful laughter and applause to his own triumphant statement of his belief that he had accomplished this purpose, having reached the calm seclusion of their homes, had taken their New Testaments to refresh their memories of these letters of Paul, they would have found—what? They would have found Paul expressly and even proudly disclaiming that he had received the gospel by any outward evidence or teaching, or known Jesus except through an inward revelation. They would have found him teaching the new religion as a *doctrine*, and not at all as a history of events "recorded in the Gospels." They would have found him proclaiming belief in the crucifixion and resurrection of Jesus as the central pivot of the new faith, but giving an account of the resurrection appearances in a manner much more consistent with the theory that they were spiritual or of the nature of a vision than that they were material. They would have found him speaking of miracles only in the vaguest way, as "signs and wonders" such as were generally believed to be in the power of religious prophets (and even of false prophets), but they would not have found him referring to a single special miracle alleged ever to have been performed by Jesus. In fine, from the beginning to the end of these four Epistles of Paul, these readers would have been struck with the exceeding scantness of any references to anything that Jesus personally did or said. In them all there is in fact but one solitary personal reference of this nature,—the reference to the last supper of Jesus with his disciples; and this differs from the corresponding accounts in the Gospels in a way to leave it inferable that they

Digitized by Google

both came from a common tradition, and not that Paul had the gospel record before him. Indeed, there is not the slightest proof in Paul's Epistles that he knew anything of the gospel records. And "the history recorded in the Gospels" has but the slenderest support, if it must depend upon his testimony. Even his abundant corroboration of the fact that Jesus was *believed* to have reappeared alive after the crucifixion does not corroborate the gospel narratives of the resurrection.

We can well believe, therefore, that some of the more reflective of Mr. Cook's hearers, when thus calmly looking up the proofs of his argument in Paul himself, might be led to doubt whether those wonderful chronological shears had made such havoc with Strauss' mythical theory as the ardent Monday lecturer had imagined. A very natural question that might occur to them would be this: If Paul, whose four undisputed letters are among the oldest, if not themselves the very oldest, of the New Testament writings, and who wrote so near to the time of "the history recorded in the Gospels," and on matters directly concerned with that "history," yet says nothing of the strange events as there related, is it not probable that the stories of these marvels had not then taken such definite shape, but grew up afterward? In brief, does not Paul's testimony, however irresistible, indisputable, and contemporaneous it may be, weigh more for the mythical theory than against it? We venture to say that the really competent evangelical scholars, whom Mr. Cook is fond of quoting as authorities in Biblical criticism, are in the habit of regarding Paul's silence concerning the momentous sayings and doings of Jesus recorded in the Gospels as one of the greatest difficulties to be surmounted in substantiating their entire historical authenticity, and that these same Biblical scholars would look with astonishment on Mr. Cook's short process of overwhelming the sceptic with Paul as a witness.

That Strauss' mythical theory is not now advocated in its absolute entirety may be readily enough admitted; but this is not because it has been pushed aside by any new proofs of the old orthodox view of the New Testament, but because it has been in part displaced by other theories equally opposed to the old orthodox view and equally radical,—theories, too, which do not require so long a time for legends and myths to form as did Strauss' system of interpretation. That the mythical theory of Strauss, the legendary theory of Renan, the tendency theory of Baur, or the general theory of development as explaining the origin of the New Testament literature, have, as Mr. Cook maintains, each and all been thoroughly confuted and shown to be utterly untenable, are statements that are contradicted by every important book in Biblical criticism that is now issued from the printing-press, whichever side it may take on the question of the Bible's historical authenticity. These theories are all active and vital elements to-day in solving the problem of the origin and authority of the New Testament writings, and no thorough scholar on the subject thinks of ignoring them as confuted. Perhaps Mr. Cook will allow that Dr. E. A. Abbott of England, author of the treatise on the Gospels in the Encyclopædia Britannica, is entitled to a place in his circle of "serious and educated men." He is at least no Unitarian or infidel heretic, but an orthodox scholar, and one of the first rank. Yet he is one who applies the development theory to the New Testament literature. And this is what he says near the close of his exhaustive article: "Tradition, documents, theological tendencies, literary modifications, misunderstanding of metaphorical parable, misunderstanding of eucharistic language, misunderstanding of spiritual language,—all these causes will be found to have produced the present synoptic result."

WM. J. POTTER.

THE SECRET OF THE EAST;
OR,
The Origin of the Christian Religion and the Significance of its Rise and Decline.

Introduction.

"Who has unlocked the gates of the morning?"—*Sadi.*

The wisest man of all nations and times warns the seeker after truth against the influence of what he calls the "idols (or illusions) of the tribe";* that is, the traditional prejudices of his nation, family, or sect, or, in other words, against the bias of confounding hearsays with the results of our own investigations. To him who could divest himself of that bias, the history of civilization during the last twenty centuries would present itself in the succession of the following prominent phenomena: —

I.

The development of a great cosmopolitan empire. The military rigor of a belligerent commonwealth, gradually relaxing under the influence of prosperity and international commerce. Political absolutism, co-existent with an almost unlimited personal, social, and intellectual freedom. A flourishing state of husbandry. Industrial progress in the direction of architectural and agricultural improvements. An optimistic religion, founded on a symbolic nature-worship, and supplemented, or partly supplanted, by three rival systems of naturalistic philosophy. Universal tolerance of all tolerant religions. An excellent system of physical education. Flourishing schools of philosophy, natural science, jurisprudence, rhetoric, and medicine. Liberal patronage of the fine arts. Unparalleled material prosperity, flourishing cities, active commerce, excellent roads. Love of health and recognition of its social importance, free aqueducts, free baths and gymnasia. The optimism of the popular religion manifested in the general worship of joy, cheerful festivals, inspiring athletic games and field sports, though in the larger cities the want of better diversions leading to the brutal excesses of the gladiatorial combats. Æsthetic culture evinced in the love of scenic and artistic beauty, poetry and music.

Summary: Nature-worship, agriculture, industrial and scientific progress, commercial activity. Wealth, luxury, and their concomitant vices, offset by a naturalistic philosophy, and the love of athletic sports, physical education and health-promoting institutions. Intellectual and æsthetic culture, tolerance, material prosperity, and the successful pursuit of earthly happiness.

II.

A general eclipse of common sense and science. A wide-spread epidemic of anti-naturalism, miracle-worship, and self-torture. Rapid decline of industry. The neglect of rational agriculture turning thousands of fertile fields into deserts. Systematic suppression of political, personal, and intellectual liberty. Religious terrorism, culminating in man hunts and wholesale massacres. General ignorance, brutal abasement of the lower classes. Squalid misery of domestic life, general indifference to the beauties of nature and the blessings of health. A thousand years' interregnum of science, Faith usurping the throne of Reason, every branch of human knowledge withered by the poison of supernaturalism, literary activity limited to the production of homilies and miracle-legends, education devoted to the suppression of all natural instincts and the substitution of submissive belief for the love of truth and free inquiry. Decadence of the fine arts, natural science merged in a deluge of superstition.

Summary: Darkness, misery, and slavery.

III.

The dawn of a new day. Reason awakening from her long slumber. A spirit of free inquiry arraigning its votaries against the authority of tradition. Gradual emancipation of common sense. The success of a dogmatic insurrection followed by an unprecedented revival of intellectual activity, superstitions and abuses succumbing to the successive triumphs of science. Social reconstruction, the recognition of human rights, a general reform of juristic, administrative, and municipal institutions, education redeemed from the tyranny of anti-naturalism. Development of new sciences, new arts, and new branches of literature. The increase of general prosperity furthered by the progress of natural science, industry, and rational agriculture, but retarded by the influence of mediæval reactions and lingering prejudices. Material advantages counteracted by hereditary vices, the purpose of free institutions partly defeated by traditional superstitions and hereditary moral cowardice.

Summary: Traditional prejudices obstructing the propaganda of a rationalistic reform, the after-effects of moral and physical poisons resisting the healing agencies of Nature. But, on the whole, progress in the direction of light, freedom, and happiness.

The most important problem in the history of civilization is now the question: Whence this great sunburst of knowledge? What magic has broken the spell of the dreadful night? How has the sunshine of our life been restored? Is it the dawn of a new day, or the end of an unnatural eclipse?

The most frequent answer to these inquiries is the theory which ascribes the blessings of modern civilization to the influence of the system of dogmas and traditions known as the *Christian Religion*. The doctrine of the New Testament, we are told, is the leaven of the moral universe, the reforming agency that has redeemed the world from vice and barbarism. Only Christian nations have entered the path of progress. Virtue, humanity, and true peace can prosper only in the shadow of the cross. In the night of the Middle Ages, the Bible was our beacon; and, as the cloud-pillar of a heavenly guide, it will lead our further progress.

But, in examining the claims of these theorists, the impartial inquirer cannot overlook the following objections: 1. That the rise of the Christian faith coincides with the sunset of the great South-European civilization; 2. That the zenith of its power coincides with the midnight of mediæval barbarism; 3. That the decline of its influence coincides with the sunrise of a North-European civilization; 4. That all the principal victories of Freedom and Science have been achieved in spite of the Church, in spite of her utmost efforts to thwart or diminish their triumph, that only in consequence of the futility of these efforts the heresies of one age have become the truisms of the next, so that Christianity has always marched in the rear of civilization; 5. That the exponents of the Christian dogmas persist in their hostility to the progress of a reform which they recognize only by condescending to share the fruits of its former victories; 6. That the worst enemies of political and intellectual liberty were firm believers in the dogmas of the New Testament, while the direct or indirect repudiation of those dogmas has been the fundamental tenet of nearly every great thinker, scholar, or statesman, till the degree of *Protestantism* has become the chief test of intellectual sanity; 7. That, among the contemporary nations of the Christian world, the most sceptical are the most

* *Novum Organon*, lib. i., cap. 3.

Digitized by Google

civilized, while the most orthodox are the most backward in freedom, industry, and general intelligence.

But, on the other hand, if the creed of the Middle Ages was a pernicious superstition, how could its exponents succeed in fastening their yoke upon so many noble and manly nations? How were they able to suppress the healthier instincts of the human race, and perpetuate their power for nearly sixteen centuries? By what baneful magic could the worst enemies of human happiness maintain themselves upon the throne of religion and morality?

The solution of the enigma has long been a half-open secret, and, but for the clouds in the east, should long have ceased to be a secret at all. One by one, the covering veils have since been lifted, till even the blind could have recognized the palpable facts; but though palpable, and often glaringly visible, they have never yet become audible. Their discoverers have been silenced with fire and poison, with threats and bribes. Their promulgation has been deprecated in the name of piety, in the name of prudence, in the name of social welfare, in the name of morality; nay, in the name of heaven and in the name of heaven's God. In the course of the last eighteen hundred years, that God has been appealed to under many strange pretexts. Let us for once invoke his aid in the name of Truth.

FELIX L. OSWALD.

THE NEW EVANGELISTS.

There is to-day a momentary cry of "Halt!" coming from those who in the past have led the van in denouncing superstition and battling for freethought and free speech. The halt is called by reason of these leaders finding out that their hostile attitude is in a measure needless; that there has been for some time a growing demoralization in the enemy's ranks; and that there is no need of any demand on their part of "surrender," since the siege is virtually at an end, because of the disaffection, not of the rank and file, but of the leaders of the opposing army. The hardest fighting of the free-thought party is over. Already there has been partial surrender, and to-day there remains only to decide on the terms of capitulation.

The most active teachers of Liberalism to-day are not all regarded as outcasts or renegades from religion. Preachers of nearly every shade of religious profession are boldly declaring their change of view in regard to creeds and dogmas, hitherto considered unassailable, and, though many of these have been denounced as traitors to their denominational principles, nevertheless their work as teachers goes bravely on, and, when ousted from the old, they build newer churches just outside of their church lines, which they christen by the old names, and organize on the bases of advanced phases of their outgrown faiths. Such teachers are men like Thomas of the Methodists, Swing of the Presbyterians, Beecher of the Congregationalists, Heber Newton of the Episcopalians, Ellis of the Unitarians, and Père Hyacinthe of the Catholic Church. These brilliant leaders in the religious ranks have, as is well known, ceded already to an aggressive Liberalism many of the more defenceless outposts of their various creeds. The Churches are, in fact, all honey-combed with heresy. Doubt is as frequently an occupant of the pulpit as of the pews; indeed, more frequently, for it is the preacher who, by right of his office, is expected to be ever the defender of that faith of which he professes to be the exponent. And, being thus put on the defence, he is apt through investigation to discover how slight his grounds of defence are, and so the more honest or least stupid are shocked into honest confession of their own doubt.

But it is not alone within the Churches that these new teachers of Liberalism are found. The whole Christian world is permeated with the leaven of religious inquiry. Foremost among our new evangelists are the men of science, the practical discoverers of facts in nature,—facts which remorselessly give the lie to theological theories of the universe, and which oblige us to admit their coherent and unassailable evidence, however sorely against our prejudices. Such practical experimenters in science as Darwin, Haeckel, Tyndall, Huxley, Lyell, Virchow, Helmholtz, Lubbock, and Proctor, such systematic thinkers as Comte, Spencer, Mill, Bain, Lewes, are among the most convincing of our new evangelists, as also are the historians of to-day, who write in the spirit of free inquiry, such as Buckle, Lecky, Draper, Froude, Green, Justin McCarthy, and many others; so, too, with the more limited historians, called biographers, who dare at last tell the whole truth in regard to people hitherto needlessly maligned because of their unpopular theological views,—nay, more, the real theological opinions of popular heroes can at last be freely confessed by their biographers.

A Life of Voltaire written, even twenty-five years ago, in the spirit in which Parton wrote his recent great work, would have fallen dead from the press, and consigned its author to a literary limbo. In poetry, too, the new evangelists speak with no uncertain sound; nor are the poetic evangelists to-day, as in the days of Shelley, driven to despair by contempt or social ostracism. Emerson's most heterodox utterances find a cordial and public response in thousands of hearts. Edwin Arnold's *Light of Asia* is a popular poem. George Eliot's "Oh, may I join the Choir Invisible," is copied into nearly all our periodical literature, repeated in public with unction, and greeted with applause. Stoddard's "Search after God" voices the feelings of hundreds, and is one of the choicest excerpts hid in private scrap-books. Even Walt Whitman's "barbaric yawp" is held dear by his admirers, mainly because of his free and earnest protest against hypocrisy, sham, and superstition. In politics, professions of orthodox belief, heretofore used as a means of gaining the votes of the dear people, are no longer considered so necessary a part of the politician's "ways and means"; and this is even less the case in other countries than in our own, pledged as it is to "religious liberty."

In England, for instance, there is a large element of avowed scepticism among the members of Parliament; and Charles Bradlaugh, an avowed atheist, has been elected over and over again, in spite of the fact that so far the rules of the House, made at an earlier stage of religious growth, have debarred him from occupying his rightful seat. In France, Gambetta, an agnostic who never flinched from open avowal of his religious scepticism, was the acknowledged leader of statesmanship in a country nominally Catholic, with Paul Bert, a man of great scientific attainments, but a pronounced free thinker, as his chosen friend and counsellor. The public speakers of this country, among whom Col. Ingersoll stands the acknowledged head in oratory and in bold and defiant expression, to-day unmolestedly declare their sentiments, however radical their religious views; and their audiences never grow smaller by reason of the freedom of these utterances, when couched in the calm language of reason and justice.

The daily press, which rarely leads, but only clearly reflects the passing mood of the masses, has also joined the evangelists of the new faith of reason; and, in pursuance of their new mission, many of the most popular papers report now only the most radical and the most grimly orthodox sermons, recognizing the fact that the people care only to know the two opposite extremes of religious belief; and the newspaper most prompt to report any new departure in the religious world is apt to be the newspaper with the largest daily circulation.

Our magazines discuss more leisurely, and with more dignity, the grave religious questions of the hour. Our reviews are mainly devoted to discussing religious issues. Our new evangelists are making religion, more than ever before in the history of the world, the leading topic in literature. Even the romance writers weave religious discussion into both warp and woof of their stories; and it does not hurt, as once it would, the sale of their works for novelists to be known as agnostics like George Eliot, a deist like George Sand, or a liberal thinker like Justin McCarthy or Wilkie Collins. Novels like *John Inglesant*, Mrs. Lynn Linton's *Under which Lord*, Elizabeth Stuart Phelps' *Gates Ajar*, and Mrs. Stowe's *Old Town Folks* are eagerly sought by story readers; while books like *Essays and Reviews*, *Ecce Homo*, *Natural Religion*, Draper's *Conflict between Science and Religion*, and the essays and sermons of Parker, Emerson, and Frothingham, are found in the library of every person having the slightest pretensions to literary tastes. Even the remarkable attendance on the lectures of Joseph Cook, with his pseudo-science and pseudo-religion; the popularity in England of the crude and vulgar methods of the "Salvation Army"; the overcrowded houses which in both countries greet in the labors of Moody and Sankey, a survival of eighteenth century revivalism; and the crowds which every Sunday fill to overflowing the Brooklyn Tabernacle to drink in the wild words and witness the wilder antics of a religious mountebank like Talmage,—are unmistakable indications of the religious ferment set at work by all these new evangelists of reason and science.

Only in the blindest faith is there any escape from the demands made upon common sense by these preachers of the new gospel; and thitherward rush the unthinking multitude, frightened by the flood of new light let in upon their unaccustomed senses. But, even within these sanctuaries of ignorance and credulity, the voices of the new evangelists are sure at last to be heard.

SARA A. UNDERWOOD.

THE DELETERIOUS INFLUENCE OF QUAKERISM ON PHILADELPHIA LIFE.

Nowhere shall one's faith in the social potency of the purely ideal and imaginative intellectual endowments receive a greater shock than in the City of Brotherly Love, the city of gourmands, Falstaffian burghers, Gradgrinds, Podsnaps, and Quakers,—that great Babylon, which contains more comfort to the square mile than any other city on earth; that splendid and gigantic piece of materialism, scarcely irradiated by a single gleam of that finer light within light, which is termed "genius."

Take an entire half of the population of Boston, with its demoniacally keen intellectualism, and pit it against the commercial Philistinism of Philadelphia, it would melt away like snow in the sea, and leave no mark behind. Against the stubborn granite of that gross practicality, assaulting genius falls back shattered into merest spray. Heine is known to have cherished all his life a lively dislike for the merchant population of Hamburg. What would he have said to Philadelphia? The city has never produced, I believe, a single imaginative genius. The atmosphere would asphyxiate such a person. Poe tried to live there for a while, but gave it up in disgust.

The city is well known to have a noble record in the matter of the development of the useful me-

Digitized by Google

chanical arts and practical sciences; and during the last quarter of the eighteenth and the first of the nineteenth centuries the place was for a time, as everybody knows, the centre of the literary life of America. But observe that all her great men —her Carys and her Franklins, her Bartrams and Rittenhouses—have been practical geniuses. She has never produced a single great literatus, and probably never will. The one dominant, over-mastering idea of the entire population is to get wealth. Life is all below the diaphragm. The statue of Plutus ought to be on every street corner in company with that of Heliogabalus. The only criterion of social worth is money, the possessors of which are worshipped with disgraceful obsequiousness and fawning. The newspapers have no individual character, and the few literary weeklies of any ability are chiefly supported by New England or extra-Philadelphian brains.

One gigantic library lies almost entirely idle; and the other popular libraries are filled with a distressing huddle of books, read in a desultory way by clerks and apoplectic old gentlemen who have retired from business. Not long ago, the editor of *Potter's American Monthly* published a translation from the French of Edward Everett Hale's "Man without a Country," with a note stating that the author was unknown. A great philanthropist of the city, after showing his visitors his pictures and furniture, uniformly presents each with a copy of his "Life." In Philadelphia, Orthodoxy has, of course, waxed fat and kicked. Nearly the whole population goes to church,—"sad, hasty, unwaked somnambules,"— Christian pessimism and ignorance holding undivided sway in unfurnished intellects.

It is a community of skilled specialists in the practical arts, happy and comfortable, but dominated by no unitary intellectual or ideal life.

The Causes.

A year's residence in the city convinced me that these are climate, Ben Franklinism, and Quakerism, the latter the chief cause of all. The air is soft and moist, and the heat in summer intense and oppressive: the city is partly Southern in characteristics. But climate alone will not explain Philadelphia. The spirit of commercial materialism, the unideality, the immobility, the *vis inertiae* of the place, are partly due to the penny-wise precepts of Franklin, and partly to the repressive and chilling influences of Quakerism. I have never heard this latter influence assigned as the chief cause of the peculiar deficiencies in the mental life of the city, but I believe it to be such. The debt of America to the Quakers is large. The student of the origins of our liberties discovers that we owe very much to them in the matter of freedom of conscience. Their doctrines of love, pure spirituality, universal equality of privileges, conquest of self, etc., are grand. But their repressing and cramping of some of the best qualities of human nature and the most active forces of social life, their dislike of the beautiful arts, their commercial selfishness, and their blind and bigoted conservatism are not grand. Those who know how sensitive the popular mind is, how mobile, how easily carried in this direction or that, or how readily influenced by a few dominant minds,—a coterie, a powerful faction,—will not wonder that a whole community like Philadelphia has been brought to the complexion of Quakerism.

Up to a comparatively recent period, Quakerism held the controlling interest in the wealth and active industries of the city. And to-day it is a synonyme for solid commercial worth and honesty. By its capital, its influence, and its historical prestige, the old sect is still dominant and fecund. But, all along, its politics have been conservative; and its tame passivity, its asceticism, its repressiveness, its narrowness, and its ultra-utilitarianism have operated to stifle out of the mind almost all ideal aspiration, almost all reaching out for the beautiful, for rich, varied, and glowing life, indulgence of the imagination, and love of art for art's sake. You may construct magnificent engines and bridges, you may study medicine, you may work your hands to the bone to provide food for the belly and clothing for the back, and freedom and moral worth for the mind, but into the higher ideal realm of life you shall not enter at all. Beware of beautiful pictures; beware of noble statues; beware of the sweet fire of music and the dance; avoid any intense activity whatever; be passive, silent, calm, phlegmatic; present a frowning front to any innovation, especially in religion; turn a deaf ear to all progressive and brilliant minds,—in short, see to it that your existence is as tame, colorless, and monotonous as you can possibly make it; for only thus can you enter the kingdom of heaven. Is it any wonder that the fire of genius could never burn amid these cold and spectral snow-banks? Quakerism is the wet blanket of Philadelphia. It is an absurd anachronism. It cumbers the ground. And the city will never wipe out the disgrace of its gross materiality until it stabs to the heart its Poor-Richard philosophy, its worship of Mammon, and its subservient idolatry of its tutelary genius, —the repressive and palsying spirit of commercial Quakerism.

I should dislike to have it thought that anything that I have said should seem to indicate ignorance on my part of the intense and pure spirituality (*non*-materialistic) of many isolated Quakers, especially women. There are beautiful feminine lives among them,—wondrously beautiful for sweet charity and exquisite benignity and tranquillity of soul. But, as a whole, the influence of the sect is such as I have described. The men are often hard, worldly, selfish. The sect has, in other words, become fossilized. The accidental or ancillary portions of the creed and customs have choked out the principle of the Inner Light, or pure spirituality; and only the objectionable features abide. The sect itself is small and feeble in numbers. Only its past influence still remains, and gives, as I believe, its complexion to the Quaker City.

If I have overstated or misunderstood that influence, I shall rejoice to be set right; for I have always entertained a love for the tranquillity and purity and peace-loving tenets of the Friends, and have been sorry of late to be obliged to find such serious defects in their doctrines and life viewed as an historical force. W. S. KENNEDY.

EVOLUTION.

A Third Letter to Mr. D. A. Wasson.

My dear Sir,—In your second letter to me, you say "that evolution has been conceived of in two opposite ways, on the one hand as purely spiritual in principle, and on the other as purely physical. According to the former conception, the production is from within outward; spirit brings forth, if not abstract matter, yet the forms and motions of material things, and the line of continuity is not in the outward representation, but in the conceiving and self-active genius of nature. According to the latter, the production is from without inward; matter brings forth spirit, not as a substantial entity, but as a functional effect merely; and the line of continuity lies in the law by virtue of which physical force is susceptible neither of creation nor destruction, neither of increase nor diminution." You add that, according to your view, "there is truth in both these conceptions and the whole truth in neither; that each is false in so far as it is exclusive, and each true in so far as it affirms a particular order of continuity; and that the antithesis may be expected to disappear in a higher synthesis." You find your analogy in the formation and growth of language, which, you observe, "has two sides, a bodily and a mental or spiritual." In language, you think, we have a type of universal evolution, which "has its physical or external side, and has also, as I must think, its spiritual or inwardly productive side."

To these two general conceptions, as stated by you, may be added a third, or, at least, another way of expressing the essential truth of the two conceptions you have outlined. Evolution may be thought of as a process in the phenomenal world, consisting in certain changes equally in what we call the "subjective" and the "objective," the "inner" and the "outer" world, and which changes, we know, only as conscious states, coexistent or sequent, indicating something that produces the changes, but interpretable only in feeling and thought, which may be no more like the Reality than is what we conceive as matter and motion. The conception that "spirit" brings forth "matter, or "the forms and motions of material things," is quite as unprovable as that "matter brings forth spirit, not as a substantial entity, but as a functional effect merely." The words "matter" and "spirit" are mere symbolical representations. One we call physical, the other psychical. Neither can be proved to be the "function" of the other. Both mind and matter are manifestations of force, and equally dependent upon the source of all phenomena, the Unknowable, which is no mere "power without effect," "a power that does nothing but hide itself," since it is the supreme source of all phenomena, physical and mental, from the motion of a feather in the air to the revolution of planets and suns, and from the sensation of a worm to the genius of a Shakspere.

It is affirmed to be not simply unknown or "unfathomable," but *unknowable*, since there are in every cognition two coefficients which cannot be separated or studied apart in consciousness, under the forms of which only can we think, and in the terms of which only can we interpret the manifestation of the Reality; that is, the substance of which all phenomena are but the shadow.

In language, we have a special evolution, which no doubt affords us "a type of evolution in general." It exemplifies clearly the law of change from the homogeneous to the heterogeneous. We find "missing links" in language as we do in structural forms and in mental forms; but who doubts that the continuity is equally a fact in the world of mind and the world of matter, that in all organic evolution the changes in feeling and thought have occurred in correlation with changes in material form? When you say that "language has two sides, a bodily and a mental, or spiritual,"— the written or printed characters and their subjective meanings,—you express a fact which does not imply two ultimate realties, nor one ultimate reality that is either spiritual or material in its nature, but two aspects of a phenomenon, one side of which is subjective the other objective. In the evolution of thought, certain conceptions have obtained, which have found expression in objective signs; and both in the evolution of thought and its mode of expression there have been continual modification with continuity in the process. But when you fix upon the language of civilized man, which presupposes intelligent beings living together and dependent upon one another, and refer to the thought of the man as the spiritual side, and his acquired and invented modes of expression as the material side of language, and offer these two aspects of the highest expressions of con-

Digitized by Google

sciousness—itself a peculiar mode of being, restricted and apparently transitory—as typical of universal evolution, you present a conception which is somewhat ingenious, but at the same time, it seems to me, rather fanciful.

The Trinitarian might say that in language he finds analogy for the doctrine of the Trinity, thus: Language may be considered as a faculty, as a body of mental signs, and as the expression of feeling and thought. Here, we have three in one. So in God there is trinity and yet essential unity. This might satisfy a Trinitarian brother whose belief was already strong, but it would not satisfy the Unitarian.

In the evolution of language, we have that which depends upon the evolution of intelligence. But evolution means of any individual, species, genus, type, or system, change, in which increasing complexity and coherence and co-ordination of parts are prominent features. Organism and environment, ages of unrecorded experience through brute life and savagery, as well as through the shorter periods of human history and tradition, are implied by the intelligence of civilized man. That intelligence, and a mode of its expression among individual intelligences, can afford any appropriate analogy even to suggest a dualism in nature, is not apparent. The distinctions between the "within" and the "without," the "subjective" and the "objective," the "spiritual side" and the "material side," have only a relative meaning, suited to us with our organically imposed limitations; but why predicate them of being unconditioned by our thoughts, unmodified and uncolored by our consciousness?

To assume that consciousness is an exception to all other phenomena and an eternal cause or condition, and to erect its incurable limitations into the conditions of pure being, is not in my opinion warranted by sound philosophy. And the word "evolution" has meaning for me only in reference to the phenomenal world. That the ultimate source of phenomena—the unknown Reality—is itself subject to changes, involving its formation, growth, maturity, decay, and dissolution, is improbable. Evolution, to have a scientific basis, must have a continuity in the knowable world; and it is in this region only that we can become acquainted with its processes.

In your third letter, you say, "I cannot conceive that a nebular gas should, from its mere phenomenal properties as a gravitating gas, produce the genius of a Shakspere, the conscience of a Socrates, the thinking mind, the active soul of humanity." But suppose one should try to conceive that a Socrates and a Shakspere were evolved, like other men, in accordance with natural law, from savages; that the evolution proceeded by continual modifications toward higher conditions; that the savages were evolved from ape-like creatures, and they from lower forms of life which came from still lower forms, through bird, reptile, and fish, through even structureless forms of life, mere specks of living, jelly-like substance; that these were perhaps evolved from forms in which it would have been impossible for us, could we have seen them, to discover evidences of life; and that these lowest conceivable creatures were evolved through modification upon modification from what we are accustomed to regard as non-living matter, which represented, nevertheless, all the forces necessary to produce manifestations of life; that this matter, millions of years earlier, was part of a fiery globe; and that this fiery globe was once a portion of a mass, in a nebulous or gaseous state. Does this seem to you impossible? Nay, can you withhold your assent from some such conception consistently with the acceptance of any intelligible theory of evolution?

And if you believe that the higher forms have been evolved from lower ones, and the lowest ones from the forces represented by the nebula, can you doubt that with the modification of structure has gone on modification of intelligence from the worm up to man, and that correlation of mind and structure has been maintained throughout, and that all this has occurred just as naturally as the atoms of sodium, a metal, uniting with those of chlorine, a suffocating gas, produce the substance we call salt.

It is not necessary to maintain that the intelligence of man, or the life of the fish even, is a "function" of matter; but only that it is correlated with structural forms or material combinations, and that the development of one order of phenomena has corresponded with that of the other.

Nor is it necessary to maintain that the nebula is the *cause* of these biological phenomena.

The nebula is matter in a certain condition; and matter itself is but a symbolic conception of an Unknowable, or, as you call it, the "Unfathomable," the ultimate source of *all* phenomena.

Permit me here to express the opinion that it is impossible to reconcile with the facts of mental evolution the leading doctrine of the New England Transcendentalists, which indeed was substantially the same as that of former schools of Transcendentalism. Of New England Transcendentalists, Theodore Parker has been called "the Paul of the movement,—its doctrinal interpreter, its systematic theologian, its most ardent missionary." "Transcendentalism," he says, "is distinguished by its chief metaphysical doctrine that there is in the intellect (or consciousness) something that never was in the senses,—to wit, the intellect (or consciousness) itself; that man has faculties which transcend the senses; faculties which give him ideas and intuitions that transcend sensational experience; ideas whose origin is not from sensation, nor their proof from sensation. This is the Transcendental school." Now, if it be true that the mind of man, as well as his body, has been evolved, the former from the sensations and the latter from the structures of the lowest forms of organic life, it is an unavoidable conclusion that there are no "ideas and intuitions that transcend sensational experience." Any different conclusion would be utterly irreconcilable with man's genetic descent from lower animals. *A priori* "ideas and intuitions" are as inconsistent with evolution as are structural forms underived from pre-existing forms. In considering this fact, it is not strange that Transcendentalists have an aversion to the philosophy of Herbert Spencer, or that, in their efforts to defend their position, they ignore that province of thought in which have been made those profound and brilliant discoveries which show that instinct and intuition, and whatever is *a priori* in the individual, have their explanation in ancestral experiences organized in the race, in structural modifications and constitutional tendencies, aptitudes, and predispositions. It is not strange that George Ripley was so disgusted with Spencer's *Principles of Psychology* a quarter of a century ago that he "declared that he should like to throw it at the author's head." As the *Westminster Review* says, "Mr. Spencer was ahead of his generation, and paid the penalty of his prescience in twenty years of neglect. But now the wheel is coming round." Spencer was treated nearly as shabbily by the Sensationalists as by the Transcendentalists. But it is gratifying to know that the great thinker, John Stuart Mill, before his death, was, as Dr. Carpenter states, and shows by an extract from a letter, "tending toward the acceptance" of "the doctrine that the intellectual and moral intuitions of any one generation are the embodiments in its mental constitution of the experiences of the race," which "was first explicitly put forth by Mr. Herbert Spencer."

Nor am I surprised that an able disciple of the Transcendental school in the *Christian Register* lately, in reply to his own question, "What is Essential Transcendentalism?" answered, "Not the philosophy of Emerson and Parker and the New England reformers alone, not alone the philosophy of Kant and Fichte and Schelling and Hegel, but that belief in the supremacy and immanence of living reason, that belief in mind as the first principle and ground of the universe, which has not only been behind every great religion, but has been the cardinal feature with every really great philosopher from Plato's and Aristotle's time to ours." When we remember that Transcendentalism as expounded by Parker excluded Bacon, Locke, Paine, Voltaire, Robespierre, Hume, Jonathan Edwards, and Priestley, we cannot help noticing that evolution is proceeding rapidly along the line of the Transcendental philosophy. It has been equally conspicuous along the line of the Sensational school of thought. The truth of each, fused into a synthesis, forms a conception that meets the requirements of evolution.

Very respectfully yours,

B. F. UNDERWOOD.

EDITORIAL NOTES.

THE Free Religious Association will hold a Convention in New Haven, Conn., March 6 and 7, and in Albany, N.Y., March 8 and 9. Full particulars next week.

A FINE feature of *Wide Awake* this year is the use in each number of some strong and choice piece of verse from the English poets, each illustrated by an artist of repute. Hovenden's drawing for Kingsley's "Three Fishers" in the January number attracted much attention; and Sandham's illustration of Browning's "How the Good News was Brought" in the February number is equally fine.

THE *Sower*, the new Unitarian paper of Philadelphia, Pa., says of "shoddy piety": "We tolerate a great deal of nonsense, because it pretends to be religious, or has a pious twang to it. Much of the talk, even about sacred things, is of the same stuff that dreams are made of, and comes to no better result. It befools the speaker, and the sincerest and hungriest hearer finds in it no nourishment for his spirit, no practical guidance, admonition, or comfort, no mental or moral enlargement. Let us have done with cant and rant and all spurious solemnity."

A UNITARIAN minister writes to the *Congregationalist*, protesting against the statement "that 'agnostic materialism' has some of its most subtle, efficient, and dangerous advocates among the Unitarian ministry." With "a wide and intimate knowledge of the body," he does not know of *one* who "is even suspected of this crudity." If the *Congregationalist* had said that Agnosticism has its advocates among the Unitarian ministry, its statement would have been one against which no protest could fairly have been made. The *Congregationalist's* heading to the statement, "No Unitarians Agnostics," is, to our knowledge, incorrect.

IN a recent lecture before his society at East Saginaw, Rowland Connor said: "The life of Jesus was really so unlike any life that can be lived at the present day that its practical influence as an example is of very little value. The theo-

Digitized by Google

logical Christ of the Churches is a creature of after development, having little or no positive connection with the historical Jesus, although invested with his name. The ideal Jesus of the Churches (a distinct conception from that of the theological Christ) is also to a great extent independent of the historical person. The ideal Jesus really changes with the progress of civilization, and, as an embodiment of the purest aspirations, is the real secret of the fascination which the name of Jesus still exercises over so many millions. As the real or historical Jesus is more clearly comprehended, the name will gradually cease to be used to express our noblest ideals; for we will recognize the truth that these ideals did not originate in Galilee, but are born out of the heart and mind of humanity."

MRS. HARRIETTE ROBINSON SHATTUCK, in a recent letter in the *Transcript* descriptive of a late visit to Washington, D.C., as a delegate to the Woman's Suffrage Convention held there, has this to say of Felix Adler: "A fitting prelude to the Woman Suffrage Convention was the lecture of Felix Adler in New York on the 'Co-relation of the Sexes.' Indeed, the trend of all things of to-day seems to be toward the solution of this woman question. Almost everybody is considering it, and expressing an opinion about it in one way or another. Among many other noble words about women and their 'equality in value' with men, Mr. Adler said that woman should in all things be the partner and not the subordinate of man, and that, in all ages and communities where it had been the custom to keep women apart from men, the men had invariably become degraded and immoral. 'I wish to be understood,' he said, 'as one who pleads the woman's cause.' Hearing one of Adler's Sunday lectures on any theme is an event in one's life; and it is no wonder that the large Chickering Hall is crowded every Sunday with an enthusiastic audience, whose attention from beginning to end is such that hardly a movement is made or a long breath drawn. The distinctive feature of his discourses is their high *ideal* morality; and, whether the listener misses the religious element or not, he must go away a better human being than he came, with his intellect quickened and his moral sense clear of at least a few of its cobwebs."

LIVE THOUGHTS.

TO ASK for nothing but results, to decline the labor of verification, to be satisfied with a ready-made stock of established positive arguments as proof, and to decry the doubter and negative reasoner as a common enemy,—this is a proceeding sufficiently common in ancient as well as in modern times. But it is, nevertheless, an abnegation of the dignity and even of the functions of speculative philosophy.—*Grote.*

THE truth shall make you wise,
Though simple you may be;
But, ere her light can greet your eyes,
She first must make you free.

The truth shall make you bold,
All fearful though you be;
But, if she find your courage cold,
She first must make you free.

The truth shall make you glad,
Though deep your griefs may be:
To pour her joys upon the sad,
She first must make them free.

The truth shall make you great,
How small soe'er you be:
To raise you to her high estate,
She first must make you free.

Thus, wisdom, courage, strength, and grace
The gifts of truth shall be,
If gazing on her glorious face
Hath made your spirits free.

—*Maria Weston Chapman.*

The Index.

BOSTON, FEB. 22, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

POETRY.

For *The Index.*

REVERIES.

Mournfully, mournfully, winter winds blow;
Far o'er the prairies wild, white lies the snow;
Time on his mighty wings
Life's sweetest memories brings;
Each round the heart still clings,
Whispering low.

High in the shoreless vast, through the bleak heaven,
Rush the dark som re clouds by the winds driven;
Wild birds on pinions strong,
As they pass sweeping on,
Tell of the summ r gone,
Winter's long even.

Loudly, triumphantly, 'cross the wide sea,—
Borne on the winged winds, wafted to me,—
Rises the wild refrain
High over hill and plain
"Tyrants can but be slain,
Man must be free!"

Nay, rather kindly judge those in that land
Who, 'neath the monarch's heel, cursed by his hand,
Crying for vengeance now,
Sound high the awful vow
That they will never bow
To his command.

Out of the balmy South, where 'neath the sun
Deeds by the traitor's hand dark have been done,
Comes now the welcome word,—
Oh, had our Lincoln he rd,
How would his heart have stirred,—
Let us be one!

Forgive thee! yes, freely, once more to our breast
We wait to receive thee, in confidence rest;
Come with us, we will be,
Weeping by Elberon's sea,
Friends, undivided, free,
One ever blest.

Swiftly but silently, life ebbs away;
Each fleeting mon ent adds to its brief day;
Still let our hearts be brave,
Still let us seek to save
Those who beneath the wave
Sink in dismay.

Through Superstition's night, borne by the brave,
May Truth's all-guiding light flash o'er the wave!
May it to others be,
Out on life's shoreless sea,
What it has been to me,—
Hope for the slave!

MONT E. COLLINS.

Disregarding fear and favors, such a one may succor kings.—*Edwin Arnold.*

For *The Index.*

Misconceptions of the Christian Clergy and Churches concerning Jesus.

BY C. K. WHIPPLE.

The Christian clergy teach, and therefore the members of their churches accept as certainly true, many things respecting Jesus of Nazareth which have no sufficient foundation, and some of which are contradicted by their own standards of doctrine,—the Old and New Testaments. It is taught and believed, for instance:—

1. That Jesus was the Messiah of Hebrew prophecy.

In behalf of this doctrine, it may be urged with a certain plausibility that it was the doctrine of Paul and the original apostles, and that Jesus himself, toward the close of his career, is represented as claiming it.

In reply to this, it may first be said that Paul, whose talents and labors probably did more to diffuse this doctrine than those of all the other apostles combined, had never seen Jesus except in vision or dream; that the original twelve, according to the testimony of the Gospels, failed to understand either the words or the acts or the real purpose of Jesus through his whole ministry; and that Jesus himself long resisted the importunity of disciples and others urging him to assume the title of Messiah, and consented to do it only when it seemed impossible otherwise to gain a hearing for the truths he had to tell them; and that he guarded this concession by declaring kingship, in his view, to be pre-eminence in service and helpfulness.

But, even admitting that, during the latter part of his ministry, Jesus did take the *title* of Messiah, or Christ, in this restricted manner, it is certain that he never took the *position* of Messiah, as the prophets Isaiah and Jeremiah described it, and as the whole Jewish people understood it; namely, kingship *by ruling*, not by serving merely.

2. It is taught and believed that Jesus was "the son of David" (or descended from David), while at the same time he was begotten by the Holy Ghost, having no human father. Both these self-contradictory statements are assumed as true in Bible commentaries, and in orthodox sermons, tracts, and Sunday-school literature.

3. It is taught and believed that Jesus appointed water-baptism as a permanent ordinance for Christians.

All through the New Testament, *baptism with the Holy Ghost* is spoken of as something peculiar and distinctive in the work wrought and ordained by Jesus. In all four of the Gospels, John the Baptist is represented as saying, in contrast to his own baptism with water, that Jesus would baptize with the Holy Ghost. In regard to water baptism, the Gospel according to John declares that Jesus did not practise it; and Paul, writing to the Corinthians, says plainly that his commission was not to baptize, but to preach. It seems, therefore, a fair conclusion that, in the passages (only two) where Jesus is represented as enjoining baptism, he meant baptism with the Holy Ghost, and not with water.

4. It is taught and believed that Jesus appointed a periodical supper of bread and wine as a permanent ordinance for Christians.

In the four gospel narratives—our only authorities in regard to the words and deeds of Jesus—there is not a word to show that he intended or expected a repetition of that mutual partaking of bread and wine which took place at the Paschal Supper. Those who wish to see an exhaustive statement of the argument on this point are referred to the sermon preached upon it by Ralph Waldo Emerson, at the close of his brief ministry in the Unitarian Church. This sermon is printed in full at the close of Octavius B. Frothingham's book entitled *Transcendentalism.*

5. It is taught and believed that Jesus desires and requires the observance of Sunday as a Christian Sabbath.

Of this, too, it is sufficient to say that not a particle of evidence is found for it in any one of the four Gospels: all their testimony is adverse to the theory in question. Full evidence and arguments against that theory may be seen in the writings of Rev. Dr. Whately, Archbishop of Dublin; Rev. Dr. Hessey, in the course of Bampton Lectures entitled "Sunday"; and the tract called "The Sabbath," by Henry Grew, late an evangelical minister of Philadelphia.

Digitized by Google

6. It is taught and believed that Jesus desires and requires what is *now* practised as public worship; also the observances, periodical or other, called "prayer-meetings."

On the contrary, the testimony of the Gospels is that Jesus censured the form of public prayer existing among the Jews of his time, and not only appointed no other, but strictly enjoined that prayer should be private.

7. It is taught and believed that the injunction of Jesus, "Swear not at all," was intended only to forbid what we call "profane swearing," and not the judicial, commercial, and legislative oaths now common among Christians.

On the contrary, the connection of that passage shows that it was intended mainly, if not exclusively, to forbid oaths of the latter class. Nothing can be plainer than that Jesus intended his disciples to say Yes or No, instead of taking an oath.

8. It is taught and believed that the teaching of Jesus (as reported) was always wise.

The practice of indiscriminate almsgiving, so widely prevalent in Roman Catholic countries, and so plainly pernicious there, is simple obedience to one of the plainest and most frequent injunctions of Jesus. Modern science has shown that this practice injures both giver and receiver, both the individual and the community; and this injury is shown so clearly that in Protestant countries—where reason, however discountenanced in religious theory, is partially admitted as a factor in religious practice—indiscriminate almsgiving has not only ceased, but it is opposed by Christians on principle, and (rightly) argued against as injurious to the public welfare.

Again, the doctrine of Jesus enjoining unresisting submission to evil-doers, whether official oppressors or individual malefactors, has operated, wherever practised, as a premium on oppression. In France, before the revolution of 1789, the Christian Church helped one of the worst governments that ever existed to rob, oppress, and degrade the great mass of the people, and enjoined unresisting submission upon these latter in the name of Christianity. In the Southern United States,—not only then, but for seventy years afterward,—the Christian clergy taught that God had ordained negro slavery, and quoted Bible texts to prove it. Obedience to the precept of Jesus, "Resist not evil," would have prevented all those acts of forcible intervention for deliverance of the oppressed, which are now claimed as the noblest achievements of civilization. In fact, civilization, to accomplish these things, has had to withstand not only the chief oppressors, but the Christian Church, which championed them. In the overthrow of slavery, and in that act of our venerated forefathers which dispossessed the British power here, the better portion of American Christians have shown that they recognized as wise and right a course the very opposite of that which Jesus enjoined. And yet, while pursuing this opposite course, both in applying resistance to unjust violence and in declining the indiscriminate giving of alms, these same Christians persist in maintaining that the teaching of Jesus was always wise.

9. It is taught and believed that the teaching of Jesus (as reported) is *sufficient* as a permanent rule of life for mankind.

On the other hand, civilization and science have taught us that men possess certain rights as citizens, and are bound to the performance of certain duties as citizens, of neither of which one word was uttered by Jesus. Christians, the wisest and the best, vindicate these rights and enjoin these duties, and yet refuse to surrender their theological theory that the teaching of Jesus is sufficient as a rule of duty.

Again, all Protestant moralists insist on self-support by industry as a duty, regardless of the fact that Jesus expressly discountenanced forethought and effort in regard to food, clothing, and shelter, saying to his disciples that God might be expected to provide those things for them, *just as he did for the lilies*, without care or labor on their part. Christians now condemn systematic neglect to provide for one's own wants; that is, they condemn just what Jesus enjoined, even while holding to the theory that his teaching was a full and a sufficient compendium of human duty.

Again, in regard to marriage. That state is commended, honored, and freely put in practice by Christians, though the language of Jesus concerning it is discouraging rather than encouraging, and though his example is adverse to it. Yet they continue to marry, and continue to call Jesus "our great Exemplar." One or the other must be an error.

10. It is taught and believed that the assertions of Jesus were always correct, and that his predictions always came true.

In the Gospels, he is said to have asserted that Moses wrote of him that reference was made to him in the Psalms and in the Prophets, and that an Old Testament prophecy declared that he should be killed, and should rise again from the dead on the third day. We have the books of the Old Testament precisely as they existed in the days of Jesus; and examination shows that no such passage as the last above-mentioned exists there, that nothing in the writings attributed to Moses refers to Jesus, and that there is not the slightest reason to interpret any passage of Hebrew psalmist or prophet as intended to refer to him.

Again, as to mistakes in the predictions of Jesus. He is said to have declared that he should remain buried three days and three nights; but the gospel narratives represent him as risen after lying in the tomb two nights and one day, from Friday evening to very early Sunday morning.

Again, he is there represented as declaring that, within the lifetime of those who heard him, "all the tribes of the earth" should see him coming in the clouds of heaven with power and great glory, to rule the earth and execute a final judgment upon all mankind. No such thing happened within the time appointed, though the recorded words of Paul and other New Testament writers show that they confidently expected it. Neither has any such thing happened since. If the gospel narratives have correctly reported Jesus, he was in error respecting this "second coming."

11. It is taught and believed that, in referring to Old Testament doctrines and precepts, Jesus always represented them as divinely inspired and authoritative. It is true that some of his reported sayings seem to bear this meaning; but it is equally true that others of his sayings unquestionably take the opposite ground, showing that Jesus used just such freedom in criticising Hebrew scripture as Colenso, Renan, and Kuenen have done in our own time. For instance:—

Moses taught that the use of certain articles of food made a man "unclean." Jesus expressly contradicted this, saying, *Not* that which goeth into the mouth, but that which cometh out of the mouth, defileth a man.

Again, Jesus flatly contradicted the Mosaic precept, An eye for an eye, and a tooth for a tooth. Here, his teaching goes far beyond the abrogation of worn-out customs. He treats the Mosaic doctrine of retaliation as absolutely false doctrine. He puts down one system, and sets up another totally opposite; and he plainly wished his disciples to understand that the law of eye for eye and tooth for tooth *never had been* a divine ordinance.

Again, Jesus interfered to prevent that which Moses had expressly commanded, the slaying of the adulterous woman.

Again, Jesus not only criticises and contradicts Moses, but he uses the same freedom with that code of ten commandments which is sometimes unadvisedly called "the moral law." I have referred above to his discountenance of Sabbatical observance; but, in commenting on the third commandment of the decalogue, he takes still more radical ground. That precept forbade *breaking* an oath taken to the Lord, but Jesus forbids *taking* one. Moses says, in the third commandment, When you swear, keep your oath. Jesus says, Swear not at all! And he not only forbids what the decalogue permitted, but gives a reason for his precept, which shows that in his view oaths were *always* wrong, and thus that the permission to use them could *never* have come from God.

12. It is taught and believed that the death of Jesus was the most important part of his earthly career; indeed, that he came, or was sent, into this world mainly for the purpose of undergoing a sacrificial death; that he "gave himself a sacrifice," and was born expressly for the purpose of being sacrificed.

It would be hard to find a string of assumptions more utterly groundless and irrational than the above; yet these are the very foundation of the system popularly recognized as Christian, both among Catholics and Protestants. The life of a good man is of course more significant and important than his death. The precepts and example of a teacher preëminent in wisdom and righteousness are of course more effective in the promotion of human welfare than the particular manner in which his career comes to an end. And, as to giving himself a sacrifice, Jesus did not commit suicide, or voluntarily throw away his life. He did not wish or seek to die, but took the risk of being killed for doing his duty, as tens of thousands of others have done before and since. The object of his coming or being sent into this world was to do his duty, and he seems to have done it faithfully and zealously; and he died, not from desire or purpose to die, but because those in authority chose to kill him.

13. It is taught and believed that the death of Jesus, and the manner of it, accomplished some definite object *for us*.

This, again, is an utterly groundless and irrational assumption. The *life* of Jesus, and the wisdom to be gathered from the imperfect record of his teachings, are the most precious portion of history. The man who was wise enough to see, and bold enough to teach, in opposition to the priests, the scriptures, and the popular belief of the nation in which he was born, that no holy place, no holy day, no rites or ceremonies, and no priestly mediation were needful for the worship of God, but that what God required instead of these (not in addition to them) was the persistent effort to be good and to do good,—this man is worthy of the highest veneration of the whole human race. The man who, in an age shackled by traditional superstitions, could teach his disciples that "*the truth shall make you free*," deserves honor from every lover of truth, whether religionist or scientist. But it is the life and the teaching of this man, not his death, which give him this eminence, and entitle him to this high consideration.

14. It is taught and believed that the testimony in the Gospels is satisfactory and sufficient evidence that the body of Jesus arose, and walked, and partook of food, after having been left dead in the tomb, and that that same body finally ascended into the air in the sight of men.

Those who assume these things as true overlook several points of great importance.

They neglect to notice that statements of matters commonly deemed impossible, and at any rate intensely improbable, require not only the highest quality, but the greatest amount, of evidence to substantiate them.

They neglect to notice that the discrepancies of evidence existing in this case would cause several of the witnesses to be discredited in a modern court of justice.

They neglect to notice that modern critical investigation of the original sources of the four Gospels, by scholars of the first rank in France, Germany, Holland, and Great Britain, makes it probable that not one of them was written by an apostle or by any contemporary of Jesus; and, therefore, that many of the unlikely things there stated are probably due to the gradual unconscious modification of tradition among a people not only credulous, but prone to belief in miracle, during the half-century following the death of Jesus. If these Gospels, instead of being penned by eye-witnesses, instead of being penned by anybody within fifty years of the period they undertake to describe, are really only records of tradition respecting the sayings and doings of Jesus, that fact should have its weight, and a good deal of weight, in our estimate of the probability of particular statements.

If further research shall confirm the probabilities now indicated by modern criticism, and prove that our four Gospels were written at a period much later than has heretofore been supposed, and by persons having no personal knowledge of Jesus, this result, among others, will come from such proof; namely, that some of the mistakes attributed to Jesus in these books may be referred much more probably to the natural variation and enlargement of tradition concerning him in the long period that elapsed before that tradition was written down. If what Jesus said and did was often misapprehended even by the apostles, as all the Gospels plainly declare, their oral reports of his sayings and doings would naturally grow still more inaccurate by passing from mouth to mouth during the many years preceding the record of them. Moreover, as wonders usually grow by repetition, and as the idea of miracle was accepted in those days as actual both by Jewish Christians and Gentile Christians, it is by no means strange that such wonder

Digitized by Google

workings entered largely into our records of Palestinian history.

We may feel perfectly confident that the best of the sayings attributed to Jesus were really uttered by him, since there is no reason to suppose that any other man then and there living was competent to originate them. The erroneous and superstitious ideas which find expression in the Gospels are such as naturally belonged to that nation and that period; and they were so firmly fixed in the minds of the disciples of Jesus that some of these notions stuck fast there even after the death of the great teacher, in spite of all the explanations by which he had sought to counteract them. Thus, one of the disciples sadly said, after the crucifixion, "We trusted that it had been he which should have redeemed Israel," just as they had asked, before his death, "Lord, wilt thou at this time restore again the kingdom to Israel?" In fact, most of the disciples continued for scores of years to be half Jewish and half Christian; and no wonder, since, after the Gentiles began to be gathered in, "the apostles and elders, with the whole church," wrote to them from Jerusalem that they must "abstain from meats offered to idols, and from blood, and from things strangled." When, years after this time, the Gospels were written, many items of Jewish error naturally found place in them; and, as I have said, more or fewer of these may have been erroneously attributed to Jesus.

CORRESPONDENCE.

ON THE NATURE OF "GOODNESS."

Editors of The Index:—

Mr. Potter, in his article entitled "Is Goodness only a Trick?" indicates throughout that he looks at the whole subject of morality and virtue from what I would call the religio-emotional stand-point, and according to a system of interpretation merely Christian, and therefore, as I hold, unphilosophical and fundamentally erroneous. While he has discarded the Christian theology and demonology, he retains the Christian notions concerning morals, as Mr. Herbert Spencer has also done. I am gratified that a few lines in my essay have served as a red rag to bring the horns of Mr. Potter's interposition as a defender of the ethical remnant of the Christian system. He has charged down upon me in as valiant style as an intrepid bull ever charged upon a locomotive. Those who have witnessed the disaster which ensues to a locomotive, when assailed in this manner, will appreciate the deep discouragement I feel under Mr. Potter's dire assault.

My view of ethics is that there is no more, but infinitely less, advantage to mankind from altruistic than from egoistic conduct; that no more, but infinitely less, beneficence results to the world from love to one's neighbor than from love to one's self. I regard benevolence as the casual efflorescence of a plant, of which business, industry, production, accumulation, and "wealth-getting" are the root, stalk, stem, and branches. Human life is like an account in bank: no more checks against it in favor of others can be honored than the means for honoring have been got by depositing the profits obtained from business done with others. The outgo depends on the income. The altruism is the incident to the egoism. Our ability to serve our neighbor depends on the extent, judiciousness, and wisdom with which we have first induced mankind to serve us; *i.e.*, in which we have become organized employers and promoters of production.

In this respect, the Christian system of ethics, as propounded by Jesus, is infinitely silly; and the Christian Church, for eighteen hundred years, have followed in the wake of his silliness, insomuch that even some agnostic philosophers have not force enough to get out of the rut. Jesus teaches us to check out upon our bank account, in behalf of every cut-throat, vagabond, or mendicant that asks us. But how we shall keep our bank account in a condition to honor our check he does not teach. To him that demands our coat, we are to give our cloak also; but whence we are to get either coat or cloak he omits to say. One might suppose, for aught that Jesus seems to know or care about it, that both coats and cloaks grew wild upon the bushes. Evidently, if they do not, if he wished to make his system of ethics complete, he should have begun at the beginning; namely, with production, accumulation, and egoism. How could the Good Samaritan have relieved the Jew, if he had not first, by toil, industry, business, and "egoism," made himself the owner of the ass upon which he seated the Jew, of the wine and oil which he applied to his wounds, and of the money with which he paid his reckoning at the inn? Jesus, therefore, if he had been a philosopher, would have taught somewhat as follows: "Work, produce, save; get wealth. Accumulate health, money, and knowledge, for these three are forms of power; and the man of power will do more good while he is asleep than the weak man will, though he sweat drops of blood."

In my view, the great utilities and benevolences of the world are carried on by those whom Christianity would call its bad men, gauged by the Christian standard; namely, by its captains of industry, merchants, manufacturers, farmers, sailors, stock-breeders, planters, transporters, railroaders, etc. In my view, the capital invested in commerce, manufactures, agriculture, art, navigation, and in profitable business generally, renders far greater service to mankind, dollar for dollar, than that invested in punishing crime, in works of charity or justice, or in worshipping God. I think if the world were placed in the hands of men and women who would be accounted "good" according to the Christian standard, —that is, in the hands of men and women who would set about breaking up the capitals now invested in "business," *i.e.*, in money-getting, *i.e.*, in production, and who would apply them to the immediate work of relieving the poor by dispersing them among all who would accept of them, without rendering any equivalent in labor or produce for immediate consumption, —the effect would be that famine, the dark ages, and a reign of blood would again overwhelm us for a thousand years, as it overwhelmed Christendom in the second, third, and fourth centuries, under the immediate influence of cognate errors of Christianity.

Hence, I have no respect whatever for any system of so-called ethics which calls making money bad and giving it away good. As well call a flood-tide in the ocean wicked and an ebb-tide virtuous, or the earth in its perihelion good and in its aphelion sinful. I have nothing but contempt for any philosophy which speaks of an expenditure of nerve force or of pecuniary substance or of physical labor for the relief of a sick distressed person as "good," but of the accumulation in business of such an amount of capital as will, when employed at a profit, silently give honorable prosperity, relief, health, and wealth to thousands of persons by its ordinary daily ministrations, as bad. Such a system of ethics is the concomitant of a church which sought to, and for a long time did, rule and ruin the world by substituting beggary for production. In my view, A. T. Stewart was a far greater philanthropist than John Howard; Cornelius Vanderbilt and Jay Gould accomplish infinitely more good to mankind than Beecher and Talmage or than any or all the doctrines Beecher and Talmage can teach; and Captain E. B. Ward, who established rolling-mills in the West which employed five thousand men and supported twenty thousand persons, ranks as a producer, while the Moodys and Sankeys who travel in the wake of industry, and produce only superstition, rank as parasites.

V. B. DENSLOW.

Reply.

That is a pleasant conceit about the locomotive; but the machine, however powerful, is quite off the track. Mr. Denslow vigorously belabors the ethics of the Sermon on the Mount, but we are not there. Those peculiar features of the moral precepts of Jesus, which so excite his animosity and contempt, we do not accept as philosophical principles of morality more than does he: though a tolerably good showing might be made for their value in certain circumstances, as Victor Hugo has represented in the story of the Good Bishop and Jean Valjean. But, in our view, philanthropy is something very different from the indiscriminate giving away of money to those who are in want of it; and none of the illustrations in our article supported any such narrow idea. We mean by "goodness" something a great deal more than almsgiving or than even those gracious charities which are commonly embraced in the objects of a benevolent society. We mean to cover by it the whole domain of morality; and in this large sense it appeared to be used in the passage of Mr. Denslow's lecture which we criticised. Nor more than Mr. Denslow should we think of calling material enterprise, productiveness, and money-getting, wrong. In themselves, they are all right, as we have long been accustomed to maintain. They are phases of nature's effort, through the egoistic propensities, to develop strong centres of individual personality for the further accomplishment of her purposes. But there is another kind of propensities which awake later than the egoistic, both in the individual and in the race, and which must then take the reins to limit and control the egoistic, so that they may serve general rather than merely selfish ends. These are the moral propensities, reason as well as conscience and sympathy being an important factor therein.

And the root of the moral sentiments in their social bearings, according to our view,—and this is the centre of our philosophy of social ethics,—consists in the mental perception that our neighbors have equal natural rights with ourselves, and that we must respect their rights as we would claim respect for our own. This perception is not specially Christian nor Jewish nor Buddhist: it is human,—as human as the multiplication-table, and as necessary, too, when a certain stage of intelligence is reached. It is a perception that dawned early,—before Jesus, before Moses,—but until it did dawn there was no genuine morality between men, as there is none to-day where this perception does not exist or is not acted upon. Mr. Denslow's view, if we understand it, has no check for selfish aggrandizement save that which comes from the outward competition of similar self-seeking. Might becomes the measure of right. In our view, a check is developed naturally in the mental consciousness itself, just as naturally as the perception of mathematical relations. It is this moral sense that cries, Halt! to the egoistic propensities, and prevents their going on in selfish accumulation to the detriment of others' rights or the neglect of others' distresses. The Goulds and Vanderbilts and Stewarts may possibly be very useful members of society in making employment through their superior business talent and enterprise for so many thousands of their fellow-beings. But, in our opinion, they would be vastly more useful, if they would so conduct their business and regulate their enterprise as to give to these thousands of laborers, without whose help they could not carry out their plans, not a largess in charity after they have accumulated their millions, but a more equitable share of the jointly produced wealth and its advantages during the process of accumulation. At least, before making saints of these magnates of the marts of trade and the stock-exchange, we should require that they show something more than a benevolence which is merely "the casual efflorescence" of their business-productiveness: we should require that their business itself be permeated through and through with the vital sap of justice.

W. J. P.

WHO IS RIGHT?

Editors of The Index:—

During a conversation with an orthodox friend, some time since, on the subject of "external evidences" of the Christian religion, I was confronted with the passage in Tacitus (supposed to have been written about A.D. 107), wherein that historian speaks—or is made to speak—of "Christ" and "Christians." Whereupon, I immediately replied that that passage was considered spurious. To clinch his argument, my friend immediately produced a work, "written" (as he said) "by one of your own kind," the author of which admits the passage above referred to to be genuine. This was a *History of the Christian Religion to the Year Two Hundred*, by C. B. Waite, M.A., who, on page 330, says, "That the death of Jesus occurred while Pilot was Procurator is attested, not only by five extant Gospels, but by the historian *Tacitus*, who, in speaking of the Christians, says, 'They had their denomination from *Christus*, who in the reign of *Tiberius* was put to death as a criminal by the procurator, Pontius Pilate.'" And again, on page 434, "There are three good and reliable witnesses of the first century [to the fact that such a person as Jesus Christ lived at the time alleged], one [Paul] a Christian, one [Josephus] a Jew, and the other [Tacitus] a heathen."

This of course settled the question. Here was "one of my own kind"—a man who had made the subject a study—against me. I could say no more.

But now, after the lapse of several months, I am again confronted with an altogether different story. After reading through the extremely interesting volume entitled *Bible Myths, and their Parallels in Other Religions*, I at last, on page 566, came upon the follow-

Digitized by Google

ing (the italics are mine): "The use of this passage (*i.e.*, the one in the *Annals* of Tacitus, referred to above) as part of the evidences of the Christian religion is *absolutely modern*. There is no vestige nor trace of its existence anywhere in the world *before the fifteenth century*."

This is very positive language, and certainly does not agree with what we have quoted above. My object, then, in writing, is to endeavor to ascertain who is right. It is a subject which, I think, must interest a large majority of your readers. If the author of *Bible Myths*—who seems to belong in your æsthetic city—will enlighten us a little on the subject, the information will, at least, be very gratefully received by AN INQUIRER.

PHILADELPHIA, Feb. 8, 1883.

[The passage in Tacitus is considered genuine by the best recent German editors; *e.g.*, Ritter, Dübner, and Nipperdey. That it is not referred to by the fathers of the church, on whose silence the author of "Bible myths" substantially rests his case, is by no means surprising, since the Christians are said in the same section, *Annals*, xv., 44, to be held in abhorrence for their crimes, to be guilty of hatred to mankind, and to deserve punishment. These phrases make a pagan authorship certain. No Christian would have said that Jesus was put to death as a criminal, without at least adding the word unjustly. The authenticity of Paul's Epistle to the Romans is unquestionable, and hence there is every reason to suppose that Nero and his contemporaries did have some knowledge of the early Christians. It is, of course, possible, though by no means probable, that Tacitus, who lived half a century later, was misinformed.—ED.]

THE INDEX AND "THE NINE DEMANDS OF LIBERALISM."

Editors of The Index:—

A paragraph in the *Investigator* has come to my notice, which is calculated to convey a false impression, to those unacquainted with *The Index*, concerning its fealty to those liberal principles to advocate and serve which it came into existence.

In answer to a correspondent, who would know how many liberal papers are published in the United States, the *Investigator* says that only such papers are truly liberal as favor "the nine demands of Liberalism," and intimates that the publication of the Free Religionists—that is, *The Index*—may not be counted among that worthy few.

Although I should like to see "the demands of Liberalism" as "standing-matter" at the head of *The Index*, such constant reiteration of its principles, in set form, is not needful to enable any one who is conversant with the paper to know that in its aims and methods it is entirely secular, and so truly liberal that it can be courteous and respectful to those holding different opinions, conceding to all the right of imperfection.

While I would not accuse the *Investigator* of deliberate unfairness, it is still to be mildly censured for a want of thoughtfulness in neglecting to give credit where it is due, and encouraging an inference that *The Index* has repudiated its platform of principles, formulated with such brilliant conciseness, in "the nine demands of Liberalism," by the master-mind which made *The Index* and was *The Index* for so many years. J. A. J. WILCOX.

(The following is the article on which the above comment is made):—

THE LIBERAL PRESS.

A friend "would like to know how many liberal papers there are, and whether the Spiritualists are ahead of us in that respect."

We are not able to answer him exactly; but, as nearly as we can remember, the Spiritualists have *seven* papers and the Liberals *thirteen*, and probably more, as there are a number of papers (the Free Religionists', for instance) that may properly be called liberal, though they do not perhaps take that distinctive name.

But the papers that are thoroughly liberal *par excellence*, or by way of eminence, are those published by infidels and Spiritualists. These papers represent the liberal movement; that is to say, they are all in favor of the "Nine Demands of Liberalism." The Spiritual journals, it is true, teach about another world; but that is no particular objection to them, as such belief appears to us to be only "a flight of fancy," and everybody indulges more or less in that.

Any man who supports the "Nine Demands," which, when practically carried out, will make this world liberal, can believe in as many worlds as he likes, for all we care.—*Investigator*.

RECENT IMMIGRATION.

Editors of The Index:—

I desire to call attention to the wide-spread evil existing for some time past here and abroad, that of *the using printed matter and hired agents falsely to represent* to the laboring classes the great benefits to be obtained by immigrating to the United States, thereby inducing many self-supporting, comfortably situated families to sell their non-movable goods at a loss, and to come to a much worse condition of affairs than their worst doubts suggested even, and also inducing many, who were not self-supporting, who were not healthy and strong, to impose themselves on the taxpayers of America, improperly.

That this is done, largely in the interests of transportation and of private individuals none too honest, is easily demonstrated; but of course it is of minor importance to discover the guilty planners of this fraud, compared with the consideration of what means can be made use of to prevent or largely decrease the evil complained of. If our foreign consular system was much better than it is, we could, by the weekly furnishing of telegraphic statistics of the labor market in the United States of America (so checked and duplicated as to prevent fraud), offer to the local press in all foreign places means for the control of immigration; but since, as now, the consulates are capable of improvement, perhaps this is one of the first items to be improved. Again, the United States laws as to paupers, together with State laws to the same effect, should be so stringent, and yet plain, that a defence would also be possible on this side against fraudulently induced immigration, and resulting American paupers.

If the transportation interests as well as those of private individuals were thus made to feel themselves inferior to the rights of the States and the United States of America, much more caution would result in their combined action in this respect than now, we feel sure. And, until that time, all charity workers must be burthened with this evil which is so difficult to cope with, and which temporary relief fails to cure.

The idea of colonization of such immigrants "in the West," as is so often easily spoken of, sounds well, but is, as always in history, of doubtful utility. Expense, climate, inclination of local residents toward new comers, language, religion,—all help to form obstacles almost impassable.

We commend the subject thus briefly alluded to as a vital one for the authorities to consider at an early day. JOHN DIXWELL, M.D.

BOSTON, MASS., Feb. 13, 1883.

REPROBATION.

A Curiosity of Theological Literature.

Editors of The Index:—

Religion, the Bible, and theology are now being generally discussed in and out of the pulpit, by the religious and secular press, in the cars and on the street. There seems to be a revolution as well as a revision of creeds; and, as anything pertaining to the subjects under discussion may be of interest to some one, perhaps the following extract from Prof. C. G. Finney's *Lectures on Systematic Theology*, although very dry and dismal reading to most persons, may strike a sympathetic chord in some gloomy breast, and convince him that the theory of "eternal punishment" is the best way of "satisfying the demands of public justice."

"Now, sinner, let me ask you, Do you think you are a reprobate? If so, what do you think the reason is that has led the *infinitely benevolent* God to reprobate you? There must be some reason: what do you suppose it is? Did you ever seriously ask yourself what is the reason that a *wise* and *infinitely benevolent* God has never made me willing to accept salvation? It must be for one of the following reasons: either (1) he is a malevolent being, and wills your damnation for its own sake; or (2) he cannot make you willing, if he would; or (3) you behave in such a manner in the circumstances in which you are that, to his *infinitely benevolent* mind, it appears unwise to take such a course as would bring you to repentance. Such a *change* in the administration of his government as would make you willing *would not*, upon the whole, be *wise*. Now, which of these do you think it is? You will not probably take the ground that he is malevolent and desires your damnation, because he delights in misery. Nor will you, I suppose, take the ground that he could not convert you, if he would; that is, if he *thought it wise* to do so. The other, then, must be the reason; to wit, that your heart and conduct and stubbornness are so abominable in his sight that, everything considered, he sees that to use such *farther means with you* as to secure your conversion would, on the whole, *do more hurt than good* to his kingdom. Do you ask how I know that the reason why God does not make you willing is that he sees it would be unwise to do so? I answer that it is an irresistible inference from these *two facts*: that he is *infinitely benevolent, and that he does not actually make you willing*. Since the penalty of law, although infinite, under the wisest possible administration of government could not secure universal obedience, and since multitudes of sinners will not be reclaimed and saved by the gospel, one of three things must be done: either moral government must be given up, or the *wicked be annihilated*, or they must be *reprobated* and *sent to hell*. Now, that moral government should be given up will not be pretended: *annihilation would not be just*, inasmuch as it would not be an adequate expression of the abhorrence with which the divine ruler regards the violation of his law; *and, consequently, it would not meet the demands of public justice*. Now, as sinners *really deserve eternal death*, and as their punishment may be of *real value* to the universe in creating a respect for the authority of God, and thus strengthen his government, it is *plain* that their *reprobation* and *damnation* is for the *general good*, making the *best use* of the wicked that could be made."

There! don't that "take the cake" as being the most illogical piece of "cussedness" ever written? Well, that extract was used as a "campaign document" by an orthodox brother to convert a sceptic to the faith; but it reacted, and made him look with disgust and abhorrence upon a church or creed that could hold such an idea of God.

The italics are mine. W. H. S.

WEST SOMERVILLE.

BOOK NOTICES.

NOTES ON EVOLUTION AND CHRISTIANITY. By J. F. Yorke. New York: Henry Holt & Co. 1883. Price $1.50.

Cordially we welcome a brilliant book in which daring originality is united to profound scholarship. Chapter I., "The Development of Hebrew Morality," shows how Judaism arose out of the precious truth embodied in that most ancient of all books, the maxims of Prah-hotep, and other Egyptian writings earlier than the time of Moses, how the prophets taught a much higher standard of virtue than had been followed in the early history of the nation, and how similar and simultaneous progress was made in Persia and India, the same law of ethical evolution being everywhere in force. Chapter II., "The Ethics of Christianity," occupies more than half of the volume, and presents the principal sayings of Jesus, including some remarkably interesting ones not in the four Gospels, connected with corresponding passages from the Talmud, the apocryphal books of the Old Testament, the Epistles of the Apostles and the Apostolic Fathers, and arranged under four classes of headings, so as to show with unusual clearness what the first Christians held about God, prayer, providence, and forgiveness, about truth, justice, mercy, love, charity, importance of morality, etc., about ascetic purity, family ties, marriage and divorce, poverty and riches, non-resistance, etc., and finally about heaven and hell. The quotations are mostly from the Revised Version, and are illustrated by suggestions sometimes rather startling, but never trivial. Christ is called "the foremost leader of the world"; "but his originality consisted in the fact that he established the essential difference between formal and natural morality, and so was the great religious liberator of mankind." This, however, had been already done by the Buddha.

The third chapter, entitled "Morality is the Nature of Things," consists largely of extracts "from the works of the chief English exponents of the moral doctrines based on modern science,—that is to say, of Spencer, Darwin, Tylor, Lubbock, and others." The moral laws and conscience itself are shown to result from the necessary conditions of social existence, and to vary accordingly, the general direction being that of progress. Some statements are liable to misconception

Digitized by Google

for instance, "Evil is a necessary condition of physical and mental development," "an indispensable factor in the divine process of evolution." "The falsehoods with which Peter began his independent career, the murder which preceded Paul's conversion," are then spoken of as instances of "sins that are simply relics of the old savage or animal ancestry breaking out." There is the important difference that Paul says he followed his conscience, but Peter did not: one acted up to the popular standard, but the other fell plainly short. We cannot always be sure that we do perfectly right; but we know that sometimes we follow the best light we have, and sometimes we do not. Now, it is only such evil actions as are wrong through the weakness of our light, but not through any unwillingness to follow it, that can strictly be called necessary conditions of development or indispensable factors of evolution. In fact, the indispensable condition of development is fidelity to all the light that has been given. Mr. Yorke would of course admit this, but he would do well to make it plainer. On the whole his moral teaching is singularly strong and good.

EARLY NEW ENGLAND PEOPLE. By Sarah Elizabeth Titcomb. Boston: W. B. Clarke & Carruth. 1882.

Next to the interest of one's own personal history comes that of contemporary relatives and such records of ancestry as may have been rescued from the obliterating hand of time. The halo of a sort of dignified antiquity thus surrounds the imagination, somewhat soothing to one's immediate sense of insignificance in the surging throng of unrelated companions. The book in question contains some account of the "Ellis, Pemberton, Willard, Prescott, Titcomb, Sewall, and Longfellow, and allied families." It presents a copious mass of material, which shows great patience and industry in its collection, but lacks the lucid arrangement and wording desirable for a quick grasp of the memory. A few tabulated pages would be reassuring guide-boards for one who roams with diligence through the necessarily confusing by-paths of inter-related family domains. There are also some inaccuracies and omissions in the matter of names. But there is much that is highly interesting and valuable to the descendants of these families.

THE IMAGE BREAKER. By John E. Remsburg, Atchison, Kan. Published by the author. 1882.

This pamphlet contains half a dozen short essays, under the following captions: "The Decline of Faith," "Protestant Intolerance," "Washington an Unbeliever," "Jefferson an Unbeliever," "Paine and Wesley," "The Christian Sabbath." The work abounds in extracts from books and papers, and gives numerous facts of interest to general readers. The author writes in a vigorous style.

THE *Popular Science Monthly* for March shows no falling off from the high standard of this brilliant magazine. "The Growth and Effect of Railway Consolidation" is the leading article from the pen of Gerrit L. Lansing. Dr. Felix L. Oswald has a mirth-provoking article on natural history, entitled "Queer Phases of Animal Life," finely illustrated. R. W. Boodle's thought-awakening article on "Natural Religion" is concluded in this number. Dr. Yeo writes of "Vivisection and Practical Medicine." Dr. Parrish discusses the "Evolution of the Camp-meeting" from a method of revivalism to a sanitary arrangement. Alice H. Rhine writes thoughtfully of "Sewage at the Seaside." Capt. Shackford has something to say of "Ice and Fog in the North Atlantic." Dr. G. E. Walton gives his estimate of the "Remedial Value of the Climate of Florida." C. G. Büttner tells about "A South African Arcadia." Leonard Scott deals with "Piratical Publishers," in the interest of the international copyright law. There is "A Chapter in Transcendental Pathology," a "Sketch of Sir C. Wyville Thompson," with portrait, and other readable articles.

THE *North American Review* for March discusses in its usual vigorous manner various topics of present interest. Its writers comprise some of the most radical thinkers of the present time. The leading article of this number is by Henry George, on "Money in Elections"; Robert S. Taylor, a member of the Mississippi Commission, writes of "The Subjugation of the Mississippi"; M. D. Conway contributes a striking study of "Gladstone" as a man and a statesman; Hon. George W. Julian has an article on "Railway Influence in the Land Office"; Richard A. Proctor gives us an astronomer's view of "The Pyramid of Cheops"; Prof. W. G. Sumner shows the relation between "Protective Taxes and Wages"; and Elizur Wright, an acknowledged authority in such matters, writes on "Some Aspects of Life Insurance." The number closes brilliantly with one of this magazine's characteristic symposiums, this time on "Educational Needs," giving the views thereon of Prof. Stanley Hall, Felix Adler, Pres. Thomas Hunter, and Dr. Mary Putnam Jacobi.

LONGFELLOW'S posthumous poem, "Michael Angelo," is finished in the March number of the *Atlantic Monthly*. John Burroughs has a characteristic sketch of a few days' stroll "In Carlyle's Country," and gives us some new Carlyle reminiscences picked up from among his old neighbors in Ecclefechan. One of these "had seen Carlyle many a time, 'but the people here took no interest in that man,' he said, 'he never done nothing for this place.' Referring to Carlyle's ancestors, he said, 'The Carls were what we Scotch call bullies,—A set of bullies, sir. If you crossed their path, they would murder you.'" The bit of travel "H. H." has to offer us in this number is "By Horse Cars into Mexico." G. P. Lathrop gives us his view of "The Hawthorne Manuscripts." Henry James criticises the acting of "Tommaso Salvini." J. H. Allen writes about "Port Royal," under the title of "The City of Earthquakes." H. D. Warner describes some peculiarities of Caracas in South America. There is a short story by Agnes Paton, and poems by O. W. Holmes and others. The book reviews are various and interesting.

THE *Art Amateur* for February is mainly devoted to criticisms of exhibitions and to suggestions for decorative art. We seem to feel the chill of the snow-storms of January in the notices of pictures in New York, which are generally pretty cutting. All that is said in dispraise of the "Madonna dei Candelabri," attributed to Raphael, may be true, and we heartily agree with the writer that it would help art much, if every one would say honestly what he thinks instead of pretending admiration which he does not feel; but it is as easy and as common to fail to see beauties which really exist as to prate about them when they are absent. Thackeray's flippant sneer at a picture which the world treasures may show that *he* can find "only a smirking miss" in Raphael's Virgin, but by no means proves that there is nothing more there. But it is good service to lead every one to examine carefully foreign pictures brought to this country with great names appended to them, since so many are fraudulent or worthless. Sincere, patient, intelligent, reverent, but impartial criticism is what is most needed for the improvement of art in this country.

THE *Unitarian Review* for February is at hand, with a fine table of contents. Rev. C. F. Dole has a pertinent article on "The Doctrine of Prayer." Isabel Francis Bellows writes interestingly of "The Moral Element in Mrs. Kemble's *Records*," Rev. J. H. Allen has a thoughtful paper on "Papal Reaction in the Sixteenth Century." E. P. Evans treats in a delightfully unique manner "Christian Zoo-Psychology," the meaning of which befogging title we will not explain, leaving our readers to consult the article itself for that purpose. Ella F. Mosby writes of "The Book of Life" in a charmingly unique style, explaining in the beginning that "each man is his own unconscious but enduring record, his book of life." Rev. John Hopps, editor of the English *Truth-Seeker*, gives some pleasant "Notes from England." The "Editors' Note-Book" and Mrs. Lowe's "Things at Home and Abroad" are full of interest to the general reader.

THE January number of the *Revue de Belgique* is about twice the usual size, and opens with a remarkably able essay on the various methods of Minority Representation. Among other subjects of interest are the Hawaiian volcano, Kilauea; Zachary Werner, the liberal German dramatist; and Gambetta. There is also a very full account of the various sects in England, where the Anglican Church is now estimated as including 12,500,000, but a little more than half the population, and as having a total revenue of $40,000,000. The Broad Church is said to be still in the minority, but not likely to remain so very long. British Unitarianism is on the decline, as its organ, the *Christian Life*, admitted on Dec. 3, 1881. Conway and Voysey receive full and favorable notice. And so do the two leading secularists, Holyoake and Bradlaugh.

PERSONAL ITEMS.

MRS. DR. MARIA B. HAYDEN, for thirty years a practising eclectic physician in Boston and New York, died on Sunday, February 11, at her residence in the latter city.

RICHARD WAGNER, the most famous musical composer of this century, died at Venice, Italy, February 13, aged seventy. He was the composer of "Lohengrin," "Faust," and "Parsifal."

GEORGE C. MILN, the preacher-tragedian, broke one of his ribs while playing at the Phillips Opera House, Richmond; and the performance of "Hamlet" had to be postponed. He is rapidly recovering.

THE first telegram ever sent by a Chinese sovereign to a European prince was sent last week by the present Emperor of China to the Crown Prince of Prussia on the occasion of Frederick William's silver wedding.

SUSAN B. ANTHONY was to sail on Wednesday, February 21, to Europe to take needed rest. She celebrated on the 15th inst. her sixty-third birthday. A Boston lady, recently deceased, left $20,000 each to Miss Anthony and Lucy Stone, as we learn from a Rochester paper.

WASHINGTON'S birthday will be observed, as heretofore, by the Boston Young Men's Christian Union, Boylston Street. An address will be delivered in the Union Hall, Thursday evening, Feb. 22, by Rev. Robert Collyer, of New York. Subject, "The Human Life of Washington."

MR. G. H. DARWIN, M.A., F.R.S., has been elected to the Plumian Professorship of Astronomy and Experimental Philosophy at the University of Cambridge. Although only thirty-six, he has already attained distinction. He is a geologist, a biologist, and a chemist as well as an astronomer. The London *Inquirer* says he "has more than his father's power of exposition."

MR. CHARLES WATTS, of England, editor of the London *Secular Review*, delivered two discourses last Sunday in Paine Hall. The evening lecture was an exposition and defence of Secularism. The attendance was good, and the lectures were well received. B. F. Underwood will speak from the same platform next Sunday, in the afternoon at three o'clock and in the evening at half-past seven.

HON. MARSHALL JEWELL died at Hartford, Conn., on the 10th. A few hours before his death, he said to his physician, "Doctor, how long does it take?" The doctor inquired what he meant. "How long does it take for a man to die?" asked the sick man. The doctor said, "In your condition, governor, it is a matter of only a few hours." "All right, doctor," said the sufferer, as he settled back quietly upon his pillow.

MR. STUART ROBSON said at the funeral of Thorne, the actor, last week: "It was the often expressed wish of our dear friend, during the illness which resulted in his death, that no performance of a religious nature should be permitted at his funeral. In conformity with his desire, let us bid good-by to him briefly and simply. . . . Last Thursday, I saw him for the last time. He asked me, in a laughing way, if I had any clearly defined ideas in respect to a future state. I replied, as vaguely as I could, that I supposed the subject was 'rather indefinite'; that the more I thought, the less I knew, and several other current answers in popular use. He said that during his illness he had read liberally on this theme, and saw nothing more suitable to his views than the following: 'The future is a dark, impenetrable curtain, which no human being has ever drawn aside and come back to tell the tale.'" Mr. Robson then read this telegram from Robert G. Ingersoll: "Say whatever your heart prompts. A few tears, a few words, a few flowers, are all that the living can give to the dead. The tragedy is ended, the curtain has fallen, applause cannot lift it up again, but memory and hope remain. Give my sincere sympathy to those who weep." The pall-bearers lifted the coffin into the hearse, which was driven to the Grand Central Depot. The half-past ten o'clock train bore it to Woodlawn Cemetery. Here, without any words of commitment or farewell, it was placed in a receiving vault.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

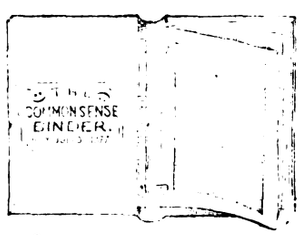
Appleton St., Boston, Mass.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,
706 Broadway, New York.

For sale at INDEX Office, 3 Tremont Place, Boston.

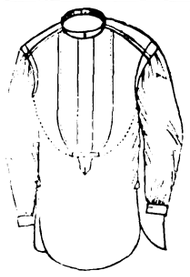
THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	" . . .	8c.	" "
" 26 " 51	" . . .	6c.	" "
" 52	" . . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.



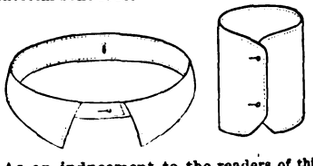
"From the Workroom to the Wearer."

6 Shirts for $6.

I have extraordinary facilities for making Fine Shirts at a remarkably low figure which will prove perfect in fit, and wear as well if not better than many for which higher prices are paid. The bodies are made of **Wamsutta Muslin,** and with **reinforced fronts.** The bosoms are made of fine Irish linen, three-ply, and shield-shaped. The trimmings are all fine linen. The yokes and sleeves are double-stitched. Sleeves and backs have facings. **All seams are double-stitched** or felled.

A Better Shirt Cannot be Made at Any Price.

A sample shirt will be sent by mail on receipt of One Dollar and 15 cents to pay postage. State size of collar worn. Samples of material sent free.



As an inducement to the readers of this paper to send for my circular, and also as a means of showing a sample of workmanship, I will mail, on receipt of 15 cents, two collars and a pair of cuffs all laundered and ready to wear. These goods are made from fine patterns of colored Cambric, and usually sell for 50 cents a set: and I warrant them to wash and wear well.

CURRENT TOPICS.

THE Montreal collector of customs, who seized a shipment of books from this city which contained the writings of Voltaire and Paine, after adjudging the *Age of Reason* and the *Philosophical Dictionary* immoral, told the bookseller, to whom they were consigned, that the books were fit only to be burned, and refused even to return them to Boston. He will be sued for damages; but, as the Springfield *Republican* remarks, "the priest-ridden government will probably indorse the robbery, as was done in Ontario something over a year ago. Ryan, guardian of Canadian morality, insists that the captured books are seizable under the statute against 'indecent, immoral, treasonable, or seditious books.' This is a fool's judgment. Next we know, there will be a torture-chamber in the Montreal custom-house, and all heretics will be immediately racked."

"CALVIN," one of the sprightliest, most wide-awake, and orthodox of the *Presbyterian's* correspondents, says of the new departure of the *Alliance* of Chicago: "It finally died from an overdose of Agnosticism administered by Dr. George C. Miln, under whose care it had been for about a year. Of course, the attending physician denies any malpractice in this case. In fact, he intimates that the patient is not *really* dead, after all. He says that his labors as America's, and perhaps the world's, great tragedian prevented him from taking due care of the patient; and he has, therefore, turned it over to another Agnostic physician, a graduate from Cornell University." We expect that Mr. Schumm, the editor of the *Alliance* (now the *Radical Review*), will ere long convince "Calvin" and the *Presbyterian* that, if the paper is dead, it is, to use a slang popular phrase, a very "lively corpse."

THE *Independent* says: "We do not know how far honest doubt may fail to accept, in a Christian land, the historical Christ, while yet accepting the essential Christ. Perhaps it may be more correct to say that we may hope that the essential God, that is, the qualities which make God, are accepted by some whose reason has not discovered the personal God nor accepted the revelation of him in his Son; and that to such, on what the Boston Lecturer calls the mountain summit of death, there may be such a revelation as shall point their souls 'higher.'" That is to say, if we understand the above statement, perhaps men may believe neither in Christ as a Saviour nor in God as a personal intelligent Being, and yet, if they accept the precepts and principles of morality, there may be in death "such a revelation as shall point their souls higher." Theology is improving rapidly, and may in time become rational, when, however, it will cease to be theology.

IT is certain that the extreme wing of the Tories, aided by a considerable number of nominal Liberals under the influence of theological rancor or social prejudice, will oppose the Affirmation Bill introduced in the House of Commons; but the success of the closure resolution last fall would seem to indicate that the Premier has gained strength enough since the failure of the affirmation proposal in a previous session to secure for this bill a majority of the House. The Irish members evidently abhor Bradlaugh's anti-theological views as much as they hate the Gladstone ministry. The *Nation* well observes: "One of the oddest features in the position of the Irish Nationalists is that, while politically the Radicals of the rest of Europe seem to be their natural allies, the infidelity of the English Radicals is a barrier to any real union or co operation between them. There is probably no Fenian assassin who does not secretly abhor a sceptic, and Bradlaugh's scepticism makes him more or less odious to the Home Rulers in Parliament. The prospect of a confused session is therefore very good."

THE papers report the collapse of the savings bank of the Augustinian fathers at Lawrence, Mass., a society composed of a number of Roman Catholic priests, who have been receiving the money of poor servant girls and others on deposit, paying high interest on the same, and, instead of investing their funds in secure properties for the good of the depositors, have used it to sustain churches and support parochial schools, running their institution on the same system practised, with most disastrous results, by Archbishop Purcell, of Cincinnati. The Augustinian fathers are compelled to announce, as might have been expected, that the bank is "dead broke." This shameful failure, they say, "has come about through bad management, and is in no sense the result of roguery." This is but poor consolation to the depositors who have lost their money. A few more failures like the saving institutions of Archbishop Purcell and the Augustinian Society may open the eyes of our Roman Catholic fellow-citizens to the unreliableness of business organizations, and the dishonesty of business methods by which the people are defrauded in the name of religion and for the benefit of the Church.

THE new French ministry is composed of men of recognized ability, strong character, and pronounced republican principles. Jules Ferry has hardly a superior in France. He it was who originated the system of secular public instruction which has given such offence to the clerical party. He now takes that department as his own. Among his associates are Challein-El-Lacour, the foreign minister, an exile from the empire, but a scholar and a man experienced in public affairs since 1870; Waldeck-Rosseau, Minister of the Interior, a young man of only thirty-seven, but identified with judicial reform; Martin Feuillée, Minister of Justice, who was under-secretary in his present department and that of the interior; Charles Marie Brun, Minister of Marine, one of the ablest opponents of monarchical scheming during the war; Meline, Minister of Agriculture, who was on the temporary ministry of Marcere, on Grévy's accession to the presidency; and Cochery, who retains his position in the post-office department, and Herisson, who takes that of commerce, both men of the Revolution of 1870. These men can hardly fail to prove a strong working body, if, indeed, a thoroughly supported government can be organized without the election of a new Chamber of Deputies, which seems probable judging from the splendid vote of confidence with which that body favored the Ferry ministry last Saturday.

THE advocacy of the principles of State secularization is no longer confined in this country, as it was but a few years ago, to two or three unpopular journals. These principles are now supported by leading papers in all, or nearly all, the Eastern and Western and some of the Southern States. Even journals published in small cities and towns, and dependent wholly upon local patronage, can now, without pecuniary sacrifice, advocate the taxation of church property, the exclusion of the Bible from the public schools, the abolition of the judicial oath, etc. The sentiment in favor of the "Nine Demands of Liberalism" is increasing every year. The following is an extract from an able editorial which we find in the Youngstown, Ohio, *News Register:* "Allowing church property to escape taxation does not belong to our form of government, and is an injustice to every other taxpayer. It is indirectly compelling people by law to support a form of religion, which, whether they believe in that particular form of religion or not, is wrong, and contrary to the genius and spirit of free institutions. The State has no more right to adopt all religions than one particular form. All are entitled to protection, but none to immunity. The State has no religion. It has no right to one. It is neither Jew nor Gentile, Catholic nor Protestant, Pagan nor Christian.... There is neither reason nor justice in allowing a wealthy association to own a costly church, built upon valuable ground, to go free of tax, and compel the poor widow who may own a shanty to shelter her, and who labors hard for that which keeps body and soul together, to pay."

A REFORM OF THE UNITED STATES INDIAN POLICY.

There are healthy signs of an awakening public interest in the condition of the Indian population of this country. It is quite time there should be such an awakening, if the nation is ever to do anything for blotting out its great crime against these aboriginal possessors of the soil. Hardly second to our national crime against the negro will history adjudge our national treatment of the Indian. If fewer human beings have suffered by reason of the outrages against the Indians than there were to suffer the injustice and cruelties of slavery, yet history will testify that the United States' management of the Indian question has been attended with more sheer waste of power, with more sheer waste of resources, with more needless and resultless wars, with more blundering and inefficient statesmanship, and with vastly less of compensating advantage on the other side to show for it all, than have attended even the national management of the slavery problem.

Indeed, if the Indian could have been enslaved, most likely his condition would have been better to-day than it is. Mere contact with the white race, even through the crime of bondage, has put the negro on the way to civilization. But the Indian had too much independence of spirit, and too much ability to defend his personal rights, to be subjected to slavery. And so he has been regarded as an incorrigible savage and outcast, the implacable foe of civilization, the legitimate prey of every marauder on the frontier,— doomed to, and fit only for, extermination. It is only within the last few years that the national government, though constituting itself the Indians' guardian, has even thought of educating and civilizing them. Whatever has been done in these directions has been done by individual and missionary efforts, and has had very little support from public opinion. The government itself, the Indians' guardian, has again and again broken its solemn promises to them; has violated written treaties it had made with them; has taken their lands without just compensation; has allowed, without ever calling to punishment, its soldiers to hunt them down like wild beasts and to massacre the defenceless women and children of even peaceable tribes; has guarded their rights so carelessly that a large part of the beneficiary allowances it has made to keep them from starvation has been stolen or "absorbed" by its agents on the way; has repeatedly made war upon them for rising in defence of their own rights against lawless adventurers from whom it should have protected them,—thereby punishing them instead of the criminals who had wronged them. In the long history of government dealings with the Indians in these United States, from the earliest colonial times to the present day, there is, in fact, but one really fair, unblotted page; and that is the record of William Penn and his Quaker colony in Pennsylvania. One fair white page in the annals of two hundred and fifty years amidst the blackness of the surrounding perfidy and cruelty, made to look all the blacker because of its whiteness!

It would be easy to bring detailed proofs to sustain this general indictment. The difficulty would rather be to select the evidence so as to bring it within practicable limits. And the proofs are mostly to be found in the government's own records at Washington,—in the reports of the War and Indian departments, and in those of congressional committees of investigation. There are many of these pages of official documents that cannot be read without a sense of deep humiliation and shame at the thought that this powerful, free, and enlightened government, professedly existing for the righting of wrongs for even the poorest and weakest of mankind, should be in any way implicated in such disgraceful, inhuman, and infamous deeds as are here confessed. There have been, it is true, terrible massacres of whites by the Indians. The Indian when driven to war is a warrior who knows little of mercy. Yet the records show that he has been more than matched, even in acts of savage ferocity, by white men called civilized and wearing the uniform of United States soldiers. And there is hardly a break in the testimony which proves that Indian wars and massacres have originated in some aggression by white people or some neglect of the government in keeping its promises. General Harney testified that he had lived on the frontier fifty years, and had "never known an instance in which war broke out between us and these tribes that the tribes were not in the right."

The governmental Indian policy has in reality been hitherto chiefly shaped by the prevalent opinion that the Indian is a being incapable of civilization, and that, standing across the pathway of Anglo-Saxon progress, "manifest destiny" dooms him to inevitable extinction. Brigadier-General Carleton, who was once in command of the department of New Mexico, in sending his official and portions of his private correspondence to a congressional committee appointed in 1867 to investigate Indian affairs, volunteered also to express his pious judgment that it is "the evident purpose of the Almighty that the red man shall disappear from the face of the earth to give place to another race"; though he humbly adds, "He has reasons too deep to be fathomed by us." And this same correspondence shows that General Carleton had been making himself a very effective instrument in carrying out this inscrutable purpose of the Almighty, by giving to his subordinates such orders as these: "There is to be no council held with the Indians, nor any talks: the men are to be slain whenever and wherever found." "If the Indians send a flag of truce and desire to sue for peace, say to them you have no power to make peace, that you are there to kill them wherever you can find them." And to this theory, though it may not in general have been put into such pious phrase, the national treatment of the Indian has been closely conformed. More ordinarily, the same belief would have been summed up in the frontier dialect in some such way as this: "This continent belongs to them who can manage it. Whoever can first seize and turn its resources into wealth shall keep them; and, in this race, Satan take the hindmost." So the poor Indian has been complacently given up to destruction, because not in the current of Anglo-Saxon civilization.

But, as a matter of fact, the Indian does not die out. In spite of "the evident purpose of the Almighty that the red man shall disappear," and in spite of the much more evident readiness and zeal of the pious General Carletons and of other men not so pious to help on this purpose which they have discovered, the Indian population is not diminishing. As a matter of fact, too, the Indian is now proved to be not incapable of civilization. Notwithstanding all the obstacles thrown in their pathway, one fifth of the Indian population of the country is already well advanced in civilization; that is, they cultivate their own land, they raise good crops, they dress like whites, they live in substantial frame houses, they have schools, both day and boarding schools with teachers of their own race, they have all the institutions of orderly government, they suppress crime, they raise revenues, and are entirely self-supporting. Such results as these in the Indian Territory and among some of the tribes farther West utterly disprove the old and dominant belief that the Indian cannot be civilized.

And these results point to the true solution of the Indian problem,—as also to the national duty, the discharge of which can alone cancel the long record of national crime. Civilization, with its concomitant conditions of education and individual ownership and cultivation of the land, to the end of substituting national and State citizenship for the tribal relation, is the formula for the solution. The work cannot be a rapid one: it will have its difficulties, more especially as the whole method of the government in dealing with the Indian question will have to be reformed from the bottom. But fifty years—yes, less—of as much energy and money as have been wasted in that time on Indian wars, judiciously applied now to measures of civilization, would forever settle the question. Summed up in a sentence, the national Indian policy hitherto has been *war without mercy upon the Indian to-day,—to-morrow, charity rations for his subsistence.* This system of alternate war and the almshouse has neither repressed the Indian nor elevated him. It has done nothing but harass and exasperate him. Let the government now try justice in place of charity, statute-laws and courts in place of the sword, education to self-maintenance in place of extermination. That would be statesmanship as well as righteousness.

WM. J. POTTER.

THE SECRET OF THE EAST;
OR,
The Origin of the Christian Religion and the Significance of its Rise and Decline.

CHAPTER I.
The Genesis of Pessimism.

"Woe to the Sphinx, if we can solve her riddle."—J. P. Richter.

About twenty-four hundred years ago, a religious Hindu retired to the hills of Barabar, near Gaya, to meditate upon the problem of life and the origin of evil. The Ceylon Buddhists date the advent of their religion from 534 B.C., but geographical traditions are generally more reliable than chronological records; and between Behar and Patna, on the Upper Ganges, the traveller of the future may linger in the valley of the Bar Mohânan to visit the fountain of the great Marah, the well of bitterness that has poisoned the life-springs of so many hundred nations, and still mixes its gall with the sources of our moral food.

Near Buddha-Gaya, in the solitude of the Barabar hill-forests, the mind of the brooding Hindu evolved a system which has the theoretical advantage of consistency. He proposed to solve the problem of existence on the nihilistic plan, and avoid the disappointments of life by renouncing its hopes. The hope of earthly happiness, according to the theory of Buddha Sakyamuni, is a chimera, a phantom that lures us from error to error through endless toils, and robs even the grave of its peace; for he who dies uncured of his delusion must return to earth, and continue the hopeless chase in another life. Quietism—*i.e.*, annihilation of desire—is the only hope of emancipation; and that goal of peace can be reached only by total abstinence from earthly pleasures. All worldly blessings are curses in disguise, and he alone who has lifted the veil of that disguise has entered the path of salvation. To him, self-denial becomes the highest wisdom, and self-abhorrence the supreme virtue. He must court sorrow and disappointment as others woo the smiles of fortune, he must avoid everything that could reconcile him to life and lure him back to the delusions

Digitized by Google

of worldly pursuits. Life is a disease, and death the only cure. The highest goal of the future is Nirvana, peace and absolute deliverance from the vexations of earthly desires. All human knowledge is vain, the great object of life being the suppression of our natural instincts. Self-affliction is the only rational pursuit. The love of wealth is folly: the slaves of covetousness forge fetters for their own feet. True believers should seek temporal peace by curtailing their wants and cultivating the virtue of indifference to the vicissitudes of fortune. He who strives after higher merit must renounce all earthly possessions, live on alms, dress in rags, shave his head, and abstain from marriage, merry-makings, and the use of animal food. He must have no fixed habitation, and must even avoid to sleep twice under the same tree, lest an undue affection for any earthly object should hinder his spirit in the progress of its emancipation from the vanities of life!

According to the Indian tradition, Mahar, the prince of the earth-spirits, exhausted all his resources to prevent the promulgation of the new dogma. But, unfortunately for the happiness of the human race, the efforts of Mahar proved unavailing. Buddha Sakyamuni preached his gospel with the zeal of a divine messenger. His apostles infested all Northern and Eastern Hindostan. Fifty years after his death, the doctrine of anti-naturalism had superseded the native religions of Cashmere, Cabul, Candahar, Bactria, and Burmah; and, five hundred years later, a modified form of the Buddha gospel was preached on the shores of the Mediterranean, and the mania of pessimism spread westward and northward with all the symptoms attending the dissemination of an unnatural vice. Vices are perverted instincts, and by fastening upon the basis of a natural propensity usurp its functions and its resources. Hence their persistency. The propaganda of Buddhism owed its first success to the enthusiasm of its apostle; but what is the secret of its further progress? What innate bias of the human mind has furnished the basis of its development,—in the cultus of the eastern nations, as well as in the mind of its founder?

Gnosticism, Essenism, Sufism, and the doctrines of the New Testament, with all the various subdivisions of its votaries, are so many excrescences of the Buddhistic parent-tree; and an exegetical reference to their complex mysticism would be an explanation *per obscurius*. But like other dogmas, and nearly all the myths of the Aryan races, Buddhism has a germ in the great pantheon of Brahmanism. In the *Sanskara*, or book of sacraments, the law of Menu lays down a special code of religious ordinances for every period of life, and assigns to extreme old age the duty of certain ascetic practices, which were supposed to harmonize with the *natural quietism* attending the subsidence of the passions and vital energies.

"When a man perceives his body flagging," says the *Sanskara*, "when he sees his hair becoming gray, when he has seen the son of his son, let him leave his home and retire into the solitude of the forest. He is to live on herbs, roots, and fruits, not to cut his hair or nails, and busy himself only with the Vedas and the contemplation of Brahm, in order to approach perfection in piety and science"; *i.e.*, he is to renounce worldly occupations and retire to the solitude of the woods, as Felix Sylla retired to his Apulian farm-house, and way-worn Firdusi to the hermitage of Thuss. "Peace returns," says Dr. Zimmermann, "at an age when solitude is enough to make a hermitage pleasant." Under the influence of sorrow and infirmity, old men become instinctive pessimists. Nature practises her delusions for wise purposes ot her own. She baits her matrimonial traps with visions of Elysium, and reconciles her children to the gathering shadows of the long night by exaggerating the disappointments of the day and the recollection of its fatigues. And, even at the end of a pleasant evening, rest becomes sweet enough to be desired for its own sake.

But this quietude of the sunset hour Buddha Sakyamuni attempts to enforce in the morning of life, his disciples are to seek refuge in sleep before their day's work is done, he gathers dry leaves to bury the budding flower. Like the genius of death, he depreciates life by dwelling upon the vanity of its hopes; and the secret of his success is to be found in the circumstance that in every human breast there is a germ of this feeling which may be stimulated into premature activity. Pessimism is precocious senility. It is a reversion of the vital instincts. Even in the prime of life, the systematic suppression of all our natural desires will lead to that weariness of earth which nature had intended to deaden the sorrow of the parting hour, as we may force a plant to return as dust to dust by depriving it of its flowers and green leaves. Young pessimists resemble the fruits that rot before they ripen. Monastic tendencies imply an abnormal condition of the human mind. Only a defeated warrior, a man without hope and without courage, can find solace in contemplating the approach of a premature night.

Buddhism and its daughter-creed can flourish only in a sickly soil. Christianity developed its first germs in the carcass of the decaying Roman Empire, and still retains its firmest hold upon the degenerate nations of Southern Europe; while the manlier races of the North resisted its propaganda to the last, and were the first to free themselves from its despotism,—just as Buddhism has been expelled from the homes of the Aryan races and relegated to the moral pest-house of the South Mongol empires, for in Japan its influence is confined to the observance of a few traditional ceremonies. Disease, crushing misfortune, mental derangement, whatever disqualifies a man for the healthy business of life, qualifies him for the reception of anti-natural dogmas. Marasmus and pessimism are as concomitant as optimism and health. Crippled foxes decry the vintage. Caged murderers, like gouty libertines, generally become devout. Nearly every scaffold orator edifies his audience by the enunciation of orthodox sentiments. Superannuated coquettes revenge themselves by denouncing the illusions of a world that neglects them. Unmasked hypocrites console themselves with the hope of a better hereafter. When the gods of war rejected his appeal, Charles IV. of Spain solaced his spirit by embroidering a petticoat for the Holy Virgin. The apostles of pessimism were mostly men who had reason to revenge themselves upon nature. Rancé, the founder of the New Trappists, became devout in consequence of a domestic tragedy, Ignatius Loyola after the siege of Pampeluna where he was crippled and disfigured, Raimund Lullius' quietism dated from the infidelity of his bride, and Count Stolberg's from the death of his wife. Swift, Schopenhauer, and Hannah More were martyrs to chronic headache, Dante was an exile, and Calvin a dyspeptic.

Tradition says that Buddha Sakyamuni entered upon his mission only after he had exhausted the pleasures of wealth and luxury. The debilitating effects of superannuation may thus be anticipated; and, if the vital energies have been spent to the dregs, night and rest become the *summum bonum*. Lethe is a refuge from the weariness of surfeit as well as from the infirmities of old age; and, under the influence of that weariness, Sakyamuni perhaps recognized its remedy, and mistook it for a panacea.

"He interdicts the sweetmeats that have become indigestible to his stomach," as Voss explained the pessimism of his friend Stolberg. The gratification of our natural instincts is, indeed, a sin against the cardinal tenet of a creed which identifies nature with the origin of evil. Hence, that *worship of sorrow*, which is the distinctive dogma of the two anti-natural religions, and which has so perverted their ethics that they refuse to recognize the merit of a virtue which they cannot exaggerate or misconstrue into a duty of self-affliction.

Pessimism is essentially the creed of decrepitude. Moribund impotence pleases itself in the idea that her lot is preferable to that of the survivors, and from that idea there is but a step to the blasphemous thought that life itself is a delusion, and earth a "vale of tears," a land of sorrow and disappointments. A eupeptic boy with a sincere predilection for such dogmas would be a monster *per defectum*, a being devoid of the instincts of content and gratitude. Hence, we find that, in spite of all street missions, the name of the Young Men's Christian Association is a misnomer, its conventicles being attended chiefly by old women of both sexes. Hence, also the frequency of "sick-bed conversions,"—

"The Devil was sick, the Devil a monk would be."

The evils caused by our sins against the health laws of nature our ignorance, indolence, and arrogance prefer to ascribe to an inherent defect of her constitution. We find it easier to pine for the gardens of the New Jerusalem than to replant the trees of our wasted earthly paradise.

Pessimism and anti-naturalism are inseparable correlatives. Buddha saw that the healthiest and noblest instincts of the human mind were opposed to his system, and met the difficulty by the total depravity dogma. In order to justify the conclusions of his diseased imagination, he had to deny the competence of mental health, and did not hesitate to denounce our natural instincts as the sources of original sin. A declaration of war against nature was the logical outcome of his system.

Every religion reflects the moral character of its birthplace: Odin-worship, the martial barbarism of the old Northland; Judaism, the loyal faith and the stern morality of the Hebrew shepherds; Islam, the chivalrous enthusiasm of the free Arab; Stoicism and Epicurism (which had assumed the ethical functions of an obsolete mythological system), the manliness and the optimistic common sense of the ancient Greeks. Of all the countries of the earth, ancient India was the most cursed with the evils of despotism, with abject and hopeless social degradation, with fantastic superstitions, combined with a neglect of all the sciences that could have enabled an inquirer to ascertain the true cause of human sufferings and their proper remedies. India, the seed-plot of the most contagious diseases and the hope of the opium-habit, was the birthland of Pessimism.

FELIX L. OSWALD.

AN ISSUE IN SOCIAL SCIENCE.

The excitement of tariff revision through which we are just passing is but one of over forty similar dissensions through which we have passed since 1789, the year wherein our protective legislation had its birth contemporaneously with the Federal Constitution. It is hard for us to modify that conception of American prosperity imbibed from our teachers and from Fourth of July oratory. Can it be possible that, after all, we are *not* "the freest, the most prosperous, and the most intelligent people upon the earth"? It is a very cheap escape

Digitized by Google

from our present trouble to hold American legislation responsible therefor. Legislation is but the recorded will of successive generations; and we are surely responsible, if we allow our own to pass away without the most zealous endeavor to enlighten the unthinking upon the actual causes of national decadence or prosperity.

Among a cloud of misconceptions, one is notable. It is the common but unhealthy ideal of the function of government. Politico-economical writers regard this, with good reason, as a pivotal question. When large bodies of men grow clamorous and aggressive toward governments like those of England and the United States, one instinctively knows that there must be a weak place in the philosophy of such mal-contents; but one is equally sure that some distortion of the province of governments has been fostered to make such claims possible. It is really no more respectable to cry out to government for protection in fortune-making than to cry out to one's neighbor. But we have so taught ourselves to look upon government as something to lean upon, as a patriarchal or paternal helper to which we might look for salvation from our own errors, that a certain reversal of the normal relations of citizenship and body politic has come about. Men are strangely willing to lean upon a government, and even to shout loudly of their right to be upheld by it in industrial and commercial undertakings, who would disdain to solicit help from individuals or from recognizable associations. But governments in republican form are but associations of one's neighbors, near and remote. I ought, by any intelligent standard, to feel ashamed to ask my neighbors for special legislation, for an arbitrary measure which they will be obliged to enforce at an enormous expense, and whereby I may thrive in my occupation. More than this, I ought to be too self-reliant to accept such a favor if thrust upon me, and too instructed to allow such a vitiated standard to go abroad in the shape of legislation, and be erected in the community as a political precedent.

Coming, then, to the plain question of the function of modern governments, what does it cover? Can it wisely be allowed to cover anything except the security of order, freedom, and peace? The security of *prosperity* (which in the American vernacular means plenty of money, or its equivalent in houses, clothes, and comfort) cannot properly be catalogued among the duties of government. The claim is not usually put in its crudest form, but it takes two veiled but recognizable shapes. Capitalists claim protection—*i.e.*, special legislation—for their industries; and laborers look to government with a blind demand for employment. Both classes stand in an unenviable attitude, both make themselves virtual suppliants to all the unprotected. By this process, governments are neatly converted into philanthropic institutions, doling out charity to those who are dependent enough to cry out for it. Why should men apply such differing standards in personal and in political claims? What a small, childish terror was that which led the ship-builders of colonial New England to stipulate for restrictive navigation laws! Nay, they held their hands from ratification of the infant Constitution until such laws were allowed, and until they were further secured in the exclusive transportation of negroes in the African slave trade. Indeed, if we unroll the historic scroll a little further, we find record of a bargain or compromise, whereby these same fathers agreed to extend federal recognition to the cotton and slave interest in consideration of these same indulgent navigation laws. Agriculture and commerce struck hands in these early days of privation and limited ideals. Manufactures were hardly in existence then; but, as they developed, they also claimed their pound of flesh.

As it stands to-day, the problem is a very large and increasingly serious one. We are expiating the mistakes of our fathers; but the re-creation of the public standard in this matter is an appalling task. Our fathers gave us freedom in documentary form; but they cancelled a part of the bequest, both by their example and by their timid, restrictive legislation. It is for us not to perpetuate the mistake. It is time that we tested the metal we are made of both as individuals and as a nation. Are we not ready, are we not strong enough, to take our place among civilized peoples in fair competition? What a pitiable figure do we present, with our tiny navy taxed nearly out of existence, and our artificial prices for sugar, silk, and cooking-ranges! Then, every four or five years, we pass through the torture of business depression, with its attendant labor agitations, its strikes, and its miserable accompaniments of impoverished and migrating families. Then, once more, as every evil is quickly voiced in newspaper and in Congress, we have the renewed discussion of causes, and the organized courage and scholarship of the country bear down once more with all their strength upon this old, deep-set fence of protection. But it does not yield. A strip is sometimes cut from the bottom of the blanket to be sewed on at the top, or a new patch is set upon a motley heap of patches. Yet the old convictions that governments must help citizens to make money, and that we are too frail to be let into the great arena of international exchange of industries, operate to keep our hands still shackled. What a humiliation! Here we stand, chained together by mutual agreement,—a kind of co-operative servitude. Our factories whistle themselves hoarse; our machinery, like ourselves, clashes itself into disuse; our products are heaped in warehouses; all the intense activity of an intense people struggles to break its chains. But we produce too much to sell to ourselves. The two millions who manufacture produce too fast for the fifty millions who consume. The markets that we might have in Canada, South America, England, India, China, Australia, and elsewhere, are only ajar, instead of wide open to us. We have no ships; and we cannot buy or hire them, because our navigation laws forbid,—*i.e.*, they impose such taxation that these purchases are unprofitable: wooden ships cannot compete with the cheap iron screw steamers of England, and so we have lost all control of the sea. If protection was once a blessing, it is certainly changing to a stumbling-block; for, suppose that home production and home markets were the great desiderata of the early days, is it not folly to hold to an obsolete legislation which cramps us in our maturity?

Finally, the one supposed unanswerable ground of protective legislation is that it raises the price of labor, and so keeps the condition of the American workman above that of the European operative. Thousands of well-intentioned people in educated New England cling to this as a sufficient reason for favoring protection. But, by the testimony of truthful figures, the wages of American factory operatives for the year 1881 averaged but five dollars a week, a little less than those of English operatives; and it is now commonly known that wages in England are nearly the same as in the United States, and yet England can undersell us in our own markets. The truth is that wages are not determined by legislation; hence, neither free trade nor protection can materially affect them. They were miserably low in protected England: they have been steadily rising under her thirty-five years of free trade. They have been exceptionally high in protected America for a half-century, and they have likewise fallen in protected America below the present average in free England. The necessary inference is that law cannot regulate the compensation of labor. It has its variable price like other things, according as it is scarce or abundant, inferior or excellent. The price of labor has been high in this country, because of the tremendous extension of business, the conquest of new lands, and of general internal development. Labor has surged hither in huge waves of immigration. While we have found an outlet for it, it has prospered and been remunerative. As soon as we are cramped in exchange, it knows not whither to betake itself, and looks helplessly to government as in some way responsible. But the duty of government ends with the gift of freedom and its permanent guarantee. Its highest wisdom is to let its citizens alone, capitalist and laborer alike. Both should be protected only in the right to buy and sell, go and come, traffic and exchange in any market which individual enterprise can open.

M. A. HARDAKER.

IS THE BIBLE THE WORD OF GOD?

Criticism of the Bible is considered to belong to an elementary stage of rationalism, and is scarcely tolerated by many advanced thinkers who have far outgrown discussion upon so trite a theme. But a book that has an annual circulation of three million copies is still deserving of attention; and it is possible there are some readers of *The Index* to whom one more statement of reasons which led an inquirer to the rejection of the inspiration of the Bible may be no less beneficial, and possibly as interesting, as the discussions upon the existence of supersensible matter that largely occupy the thoughts and pens of abler contributors.

The Book of Genesis gives an account of the creation of the present condition of the world and all its forms of life in six days, man being formed complete and "grown up" out of the dust, and woman being made from the man's rib. Science proves this to be entirely untrue, and history shows the record to be on a par with various other legends of creation, which other races of men have made, though it is superior to most in one respect, the recognition of only one God. Theologians are desperately trying to save the Bible by ingenious theories, none of which, so far, will bear the scrutiny either of science or common sense. They make the days long periods, though this is in contradiction to the plain words of Scripture, and even then fails to solve the difficulty.

The second chapter of Genesis contains another legend of the creation, differing from the first in important particulars, but no more reconcilable with facts. It is now established in the opinion of scholars that the world is of immense age, and that man has existed upon the earth for a much longer period than the story in Genesis makes possible. The records of the earth itself contradict this legend. The nebular hypothesis, though still only a theory, accounts for the formation of the universe in accordance with all known facts; and science discovers many uncontroverted evidences of the gradual progression of the earth and its inhabitants to their present form. Prof. Huxley asserts that the chalk cliffs of England, which are composed of the minute shells of sea animalcules, must have been at least ten thousand years in forming at the bottom of the ocean. They have slowly risen to the surface and subsided four different times, remaining exposed such long periods

Digitized by Google

as to collect vegetable and animal life, whose remains tell their own story. A pious lady, to whom this was mentioned, excitedly exclaimed, "It was all made by God in one night." When asked if it was either reasonable or honest in God to create old bones, fossil plants, the rock débris from icebergs, and then cover them up in four successive layers to deceive man as to the earth's origin and to contradict his own story in Genesis, she was speechless. But the next day she said, "God says so, and I believe him."

There is a marvellous succession of forms in vegetable and animal life, and a connection between each grade so close as to suggest the probability and almost certainty that the higher forms have sprung from the lower. Anatomists tell us that the embryo of man appears successively to be identical with that of a plant, an animalcule, an oyster, a fish, a quadruped, a high form of mammal, an ape. If the individual passes through these forms, is it not probable that the race has likewise developed from these lower races? Anatomists also tell us that men have rudimentary tails, and it is observed that the disuse of an organ in animals tends to its disappearance. Why should God take the trouble to make a useless tail bone, when he formed Adam out of the dust? Is it not more likely that man has developed from a tailed animal? This theory is considered revolting by many, who think it less honorable to be an improved animal than a degraded God; but taste should not be an arbiter in the judgment of truth, though it is usually deemed nobler to ascend than to descend.

But leaving the question of creation, as one proceeds through the Bible, he is confronted on nearly every page with statements which offend either his reason or conscience. If any one wishes to see a statement of Biblical errors, let him read Paine's *Age of Reason*, and with it let him take Bishop Watson's *Reply to Paine*, and read what is considered by the orthodox an unanswerable defence of the Bible. Or, for a smaller work, let him take the *Lecture on the Bible*, by Rev. Charles Voysey, published by the Index Association, Boston. It would be sufficient to read the Bible alone, to discover the falsity of the claims its friends make for it, were it not that educational prejudices are so strong one cannot easily treat the book as he does other literature. But let one take up the Bible as he does any modern book, and judge of its contents according to the impression made upon his faculties, and it seems impossible not to reject its claim to be the infallibly inspired word of God, and perceive it to be a compilation of Hebrew tradition and poetry made by men in darker ages than the present.

All the phenomena of witchcraft are now believed by scientists to be the products of natural laws. If they are right, is not God proved guilty of ignorance when he gave the edict, "Thou shalt not suffer a witch to live," and was it not a wicked ignorance which through this command has caused such countless murders and persecutions? Dr. Sprenger, in his Life of Mohammed, estimates that nine million people have been put to death as witches during the Christian era. Blackstone said that to deny witchcraft was to deny revelation. How can the inspiration of this law stand the light of the present day? The issue is avoided only by denying the facts of scientific research and reviving the old belief in "being possessed of the devil." Prof. Phelps, of Andover, has consistently avowed this solution.

The atrocities of the Hebrew armies, done in the name and by command of God, the absurd wonders of Balaam, Gideon, Joshua, Samson, Elijah, Hezekiah, and Jonah, and the incomprehensible rhapsodies of the prophets, out of which learned and ima g inative men can invent any theory they choose, are to a reflecting mind strong means of breaking down an inherited belief in the inspiration of the Bible.

But, admitting the Old Testament to be a human compilation, some think the New Testament can stand alone as the word of God. One of the first things that excites distrust here is the discovery that all the prophecies claimed as referring to Christ are found to be uttered about people or events of the times in which the writer lived, and that the application of them to Christ is either fraudulent or the use of an excessive poetic license. The story of the temptation in the wilderness is as hard to accept as that of the temptation of Adam and Eve in paradise; and, if one begins to admit that any Bible stories are mere symbols, there is no end to the extent to which its text can be symbolized away.

A comparison of the different accounts of the resurrection of Jesus reveals discrepancies that no honest harmonizing can blend into consistency with the idea that God has told us the story. Nor would any English-speaking judge accept a fact upon such testimony in a court of law. Let each write out the stories in parallel columns, and decide for himself. The different genealogies of Jesus in Matthew and Luke; the incidents of the miraculous conception and birth; the star in the east; the slaughter of children by Herod, mentioned only by Matthew and unnoticed in history; the differing accounts of Saul's conversion; the miracle stories; the fact that Jesus is not mentioned by contemporary historians; the uncertainty as to who wrote the Gospels and when they were written,—all these things, and multitudes that it would be tedious to mention, prove the New Testament to be the word of man, and of less enlightened man than exists to-day.

The study of prophecy occupies many minds. Writers upon these subjects glean many disjointed passages, which, ingeniously matched together, make a wonderful testimony; but, when these passages are read in the Bible in their proper connection, they tell a different story.

If God inspired the writers of the Bible, it would also be necessary to the fulfilment of his purpose that he should superintend the compilation of its books by councils, its translation by scholars, and its interpretation by commentators. But the facts do not show that this has been done, as new versions would not be needed, nor would doctrinal quarrels exist. Has God allowed men for eighteen hundred years to accept the plain words of his revelation which teach future endless punishment, and is he now going to accommodate his *truth* to the culture of this century, and let up a little in the severity of the doctrine? Has the Holy Spirit, who came to guide into all truth, led men to believe error for eighteen hundred years because it was best for their minds; and, now that their mental calibre demands something different, is he going to reveal "a new phase of truth," and allow men to modify the severity of the doctrine of hell? Will theologians admit that God gave a written revelation of the future destiny of men, which could not be understood till eighteen centuries of development evolved their own brilliant intellects? We can conceive of God as revealing truth progressively, as a child is taught at school, but not as teaching what is untrue, in order to prepare the way for the truth, centuries after his dupes have died.

It is a common saying, "You can prove anything by the Bible." Coincidences and far-away resemblances in different portions of the text have been made to do duty by expositors, as showing "the mind of the Spirit" in making the disjointed Scriptures an harmonious whole. At a Bible reading, I heard Harry Moorhouse explain the meaning of Christ's riding into Jerusalem on an ass's colt, after this manner: "In Job xi., 12, we read, 'For vain man would be wise, though man be born like a wild ass's colt.' The wild ass's colt is therefore an emblem of man. In Exodus xiii., 13, we read, 'And every firstling of an ass thou shalt redeem with a lamb; and if thou wilt not redeem it, then thou shalt break his neck.' Here, again, the ass's colt is the emblem of sinful man, who must be redeemed by the Lamb of God, or else perish forever. So, in Christ's entry into Jerusalem on an ass's colt, we see a symbol of the Redeemer and the redeemed entering into glory." This is making comparison "go on all fours"; but many hear such things, and exclaim: "Wonderful! how the parts of the Bible fit into each other! Only God could have inspired writings in different ages which would display such a unity of design."

An intelligent Swedenborgian tells me why Jesus was laid in a manger. It was not because there was no room for him in the inn, but because God deliberately chose the manger to illustrate a truth. The horse is used in Scripture as an emblem of the understanding. He gets his food from the manger. God therefore put Jesus in the manger, to teach the world that he was the truth upon which the understanding must feed. The Bible is only an allegory. The story of creation and the formation of Adam is merely a figurative account of the condition of the Church at a certain period. The Bible is of no value to the Swedenborgians as a literal narrative, while to the Plymouth Brethren every word has a literal import in relation to some fact. Calvinists use both methods. If their doctrine can be supported by a spiritual interpretation of the text, that is clearly the right one; but, if it brings stronger evidence as a literal statement, that is clearly its true meaning. Often, they combine both systems, and make the text work both ways, by using its primary meaning as literal, and its secondary signification as spiritual. Of course, we are at liberty to find spiritual significance and suggestion in every one of nature's facts or author's words; but it is another thing to declare the author's true spiritual thought in an ordinary statement of fact, then found a doctrine upon it, and call it by the author's name, as though he intentionally founded it. This acceptance of the Bible as supernatural and these different systems of interpreting it are the foundation of all sectarianism. The learners in every other department of knowledge dispute as to the truth of the statements made by the writers in those sciences, but they do not differ materially as to what the writers intended to teach. In medicine, one author asserts the truth of allopathy, and another maintains homœopathy: disputes are vigorously carried on as to which is right; but there is no controversy as to what each writer intended to teach. Here is where the Bible differs from all other books. God is said to have written it, and the world is divided as to what it meant to teach; but every human writer on earthly knowledge succeeds in giving his readers an understanding of what he means to assert. If we were told God had given a revelation on medicine, would we receive it as divine, if it divided up the world into two hundred medical schools, many of them utterly opposed? Would not the real meaning of God's message about medicine be understood substantially alike by all? Would any man be respected who could not tell his own mind upon medical subjects, so that his meaning could be perceived? When God writes on theology, Trinitarians, Unitarians, Swedenborgians, and all other sects, will find their occupation gone; and, when he writes on medicine, doctors will agree.

GOVERNOR BUTLER'S PROCLAMATION.

The proclamation of "His Excellency Benjamin F. Butler, Governor and Commander-in-Chief" of the Commonwealth of Massachusetts, appointing April 5th as "a day of public humiliation, fasting, and prayer," is a remarkable document, extremely orthodox in doctrine, and, to use one of Beecher's expressions, "so pious as to be utterly intolerable." He calls upon the ministers and people of the State "to assemble on that day in their several places of worship, that we may unitedly humble ourselves in the presence of Almighty God and acknowledge with deep contrition our manifold sins and transgressions, that we may devoutly deprecate his judgments and implore his merciful forgiveness through the merits of our blessed Lord and Redeemer."

No consideration is here shown for the religious belief of the Jews nor even for that of unorthodox Christians like the Unitarians, who do not rely for forgiveness on the "merits of our blessed Lord and Redeemer." The fact that no small number of intelligent men and women in Massachusetts, including some of his intimate friends, are unbelievers in all forms of Christianity, is of course beneath the notice of our pious Governor.

The "example" and "principles" of "our fathers" are referred to in the proclamation in the following language: "And, inasmuch as we have disregarded their (our fathers') example, and neglected those principles by which they obtained and transmitted to us the inestimable blessings of the Christian religion, of law and of liberty, let us earnestly beseech Him to heal our backslidings, and to restore us to that temper and conduct by which alone we can hope to be happy in this world and in that which is to come."

When we consider the treatment which Roman Catholics, Baptists, and Quakers received from "our fathers," and contrast it with the religious liberty which people of all sects and beliefs now enjoy in the Commonwealth; and when we consider that the principles of "our fathers," which were those of Leviticus and Deuteronomy, the common law being regarded as binding so far only as it agreed with the "judicial laws given to the Israelites of old," and contrast their "principles" with our bill of rights,—it is difficult to understand what our erratic Governor means by requesting the people of Massachusetts to beseech the Lord to "heal our backslidings," and restore us to that "temper and conduct" implied by the example and principles of "our fathers."

Governor Butler wants the people of the Commonwealth to ask God to "relieve our commerce from the embarrassments with which it is burdened, and grant that prosperity may again distinguish our navigation and fisheries, so that they who 'go down to the sea in ships' and do business in great waters may have abundant reason to praise his holy name." The most direct way to respond to the Governor's request in regard to fisheries would be to ask the Lord to send the fish to the localities visited by those who "go down to the sea in ships" or fishing-smacks, and that the fish be inspired or impelled to get on the hooks or into the seines which are dropped into the sea by the fishermen of this country. Why not if a fish was inspired in olden time to perform the kindly office of rescuing one of the Lord's prophets from a watery grave?

His Excellency further requests that the people of the State call upon Almighty God to "bless all means used for propagating true religion, and promote the pious purposes of those who endeavor to disseminate a knowledge of the Holy Scriptures, that all may learn his will and obey his commandments." Furthermore, he exhorts the ministers of the gospel "to feed their flocks with the Divine Word, and not discourse upon political and other secular topics which may divert the serious thoughts of the people from humble worship of the Father." Although Governor Butler may be a very devout man, which we never suspected before, he evidently regards religion as something apart from common daily life; something necessary to fit men for heaven, but of no use in political and secular matters, such as civil service, temperance, schools, prisons, etc., which relate to our earthly well-being.

But since his office is secular, not spiritual; since his official business is to execute the laws of the State, not to dabble in spiritual matters,—why this official impertinence in telling the people what to pray for,—more ships, fish, etc.,—and exhorting the clergy to abstain from the discussion of "political and secular topics which may divert the serious thought of the people from humble worship of the Father"? Governor Butler professes to be an ardent admirer of Thomas Jefferson. His attention is, therefore, respectfully invited to the following extract from a letter written by Jefferson during the first term of his presidency of the United States, when he was urged to appoint a day for fasting and prayer: —

> I consider the Government of the United States as interdicted by the Constitution from meddling with religious institutions, their doctrines, discipline, or *exercises*. . . . But it is only proposed that I should *recommend*, not prescribe, a day of fasting and prayer. That is, that I should *indirectly* assume to the United States an authority over religious exercises, which the Constitution has directly precluded them from. It must be meant, too, that this recommendation is to carry some authority, and to be sanctioned by some penalty on those who disregard it,—not of fine and imprisonment, but with some degree of proscription, perhaps, in public opinion. And does the change in the nature of the penalty make the recommendation less a *law* of conduct for those to whom it is directed? I do not believe it is for the interest of religion to invite the civil magistrate to direct its exercise, its discipline, or its doctrines; nor of the religious societies, that the general government should be invested with the power of effecting any uniformity of time or matter among them. Fasting and prayer are religious exercises; the enjoining them, an act of discipline. Every religious society has a right to determine for itself the times for these exercises, and the objects proper for them, according to their own particular tenets; and this right can never be safer than in their own hands, where the Constitution has deposited it. . . . Every one must act according to the dictates of his own reason; and mine tells me that civil powers alone have been given to the President of the United States, and no authority to direct the religious exercises of his constituents.

Some persons are uncharitable enough to intimate that the proclamation is not to be taken as an expression or even an indication of the real thought of Governor Butler, but is to be regarded rather as part of the policy of a shrewd and unscrupulous politician to get the good opinion of the orthodox element in this country to help him to the nomination for and election to a higher office than the one he now holds: Whether this be so or not, we leave our readers to judge. Meanwhile, those Liberals who have shouted so lustily for Butler may see reason in his recent proclamation for modifying their estimate of him as a representative of progressive and advanced ideas.

B. F. UNDERWOOD.

ON the evening of the 23d, Director Swift, of the Warner Observatory, discovered a comet about two and a half degrees north of the star Beta, in the constellation Pegasus, having a tail about half a degree in length, and a slow, eastward motion. It promises to be a conspicuous object in the western sky.

FREE RELIGIOUS ASSOCIATION CONVENTIONS.

The Free Religious Association will hold a convention in the Universalist Church, New Haven, Conn. (the use of the church having been kindly tendered for that purpose), Tuesday afternoon and evening, March 6, and Wednesday afternoon and evening, March 7. The Tuesday afternoon session will open with an address of welcome by Rev. M. H. Houghton, of New Haven. The President of the Association, Wm. J. Potter, will follow with an address on "The Religion of Humanity." At the Tuesday evening session, Wm. M. Salter will speak on "Religion and the Social Ideal," and Mrs. Anna Garlin Spencer upon "Ethical Unity and the Nation's Life." Wednesday afternoon, Miss Emily J. Leonard will read a paper on "The Union of Church and State in Connecticut," and B. F. Underwood will speak of "The Outlook upon the Field of Liberal Thought." Wednesday evening, addresses will be given by Wm. H. Spencer on "The Christ of the Gospels and our Moral Ideal," and by Frederic A. Hinckley on "Mystery." In addition to the above speakers, the Convention will be addressed by Rev. John C. Kimball and others.

The Association will also hold a convention in Van Vechten Hall, Albany, N.Y., on Thursday afternoon and evening, March 8, and Friday afternoon and evening, March 9. Among the speakers at Albany will be Wm. J. Potter, Anna Garlin Spencer, B. F. Underwood, Wm. H. Spencer, F. A. Hinckley, and others to be announced next week.

F. A. HINCKLEY, *Sec'y F. R. A.*

EDITORIAL NOTES.

AN article in the February number of *Macmillan*, entitled "Churchyard Poetry," contains a number of curious epitaphs, among which is the following from a tombstone in the Isle of Wight, which seems to have been written with an eye to business:—

> "Here lies the landlord of the Lion,
> He's buried here in hopes of Zion:
> His wife, resigned to Heaven's will,
> Carries on the business still."

A ROMAN CATHOLIC writer in the *Contemporary Review* tells a story of an old Irishwoman who went to her confessor much excited, declaring she had seen St. Peter: "'Had you had anything to drink, Biddy?' asked the priest, who knew his penitent. Biddy owned to a little drop of whiskey. 'Well, Biddy,' said the prudent divine, 'to-morrow take two little drops, and sure you'll see St. Paul as well.' The ecclesiastic evidently possessed the gift of discerning of *spirits*, and so a promising 'apparition' was nipped in the bud."

A CORRESPONDENT of the *Independent* writes for an explanation of the following words used by a Dr. Dobbs: "But just as these seeds of pride are bursting into a flame which might lay the foundations of a deluge that would with its fangs envenom my soul," etc. The editor replies: "Dr. Dobbs saw perfectly well what our correspondent regards as a mixing of metaphors. But it is not; for, when Dr. Dobbs wishes to confound a reader, he writes from the altitude of quadridimensional rhetoric, where the laws of ordinary tridimensional rhetoric do not apply."

THE Legislature of California has passed, by a vote of forty-five to twenty-six, a bill which provides that a murderer for whom a plea of insanity is entered shall first be examined for insanity alone; and, if the court finds him sane, he shall be tried for murder, the false plea to be entered as an "aggravation of the offence"; but, if the plea of insanity is sustained, the accused shall be sent to an insane asylum to remain there till death,

Digitized by Google

unless it shall be proved that he was insane at the time of the murder, in which case he shall be tried on the original charge. The ease with which murderers secure acquittal on the plea of "emotional insanity" clearly calls for some such legislation as this.

A LARGE number of our subscribers are in arrears in their payments. Some of them, as we happen to know, are persons of wealth, to whom the paying out of three dollars, and, in some instances, of a hundred times that, would be nothing. And here we, in *The Index* office, are planning and contriving how to make the ends meet. "Brethren, these things ought not so to be." If you who are thus at fault would only send to *The Index* its just and legal dues, the ends would not only meet, but lap beautifully over on the right side. Let then every one who means to be honest look at once at the mail-tag on his paper, and act as it and an honest conscience shall direct. A word to the *just* is sufficient.

WILL our esteemed contemporary, the *Woman's Journal*, please inform us how it stands on the subject of State secularization? Its views on temperance and many other subjects not directly related to its main object have been clearly stated; but whether it is in favor of the complete secularization of the State, of extending to all classes equal rights and privileges without regard to religious belief, we are left in doubt. Can the free thinkers who are advocating woman's suffrage reasonably expect, when the success of this movement has been achieved, that the women will use their votes to help the secularization of the State as expressed in "the Nine Demands of Liberalism," or will they oppose it? As many Liberals are apathetic on the subject of woman suffrage,—whether reasonably or unreasonably,—because they believe women are willing and anxious to use the ballot in opposition to State secularization, this question is one, our esteemed contemporary will perceive, of no little importance.

THE *Independent*, on the authority of Joseph Cook, repeats the story that Dr. George M. Beard, when dying, in response to "a devout Moravian," who said, "Trust in Jesus," answered, "I do: I am higher, *higher*," "and in a few moments had passed into that trance from which man nor angel could recall him." The *Independent* adds: "It is a thrilling story. We are glad that if faith came late, yet it came to the soul of him who doubted whether he had a soul." In the first place, the statement of an inaccurate and sensational lecturer like Joseph Cook that Dr. Beard made any such response to "a devout Moravian," as is stated, is entitled to but little credence; in the second place, if the response were made, the probability is that between the meaning of the question and the answer there was no conscious connection in the mind of the dying man; and, in the third place, the alleged utterance, even though made consciously in response to the pleading of a religious enthusiast, who availed himself of the weakness of a dying man to make a convert to his faith, is not of the slightest significance, nor would it be so regarded, did it relate to anything admitting of verification, or to anything of practical interest, the truth or wisdom of which would need to be determined in a court of justice by the laws of evidence or by the principles of common sense.

THE Boston *Herald*, commenting on Gov. Butler's proclamation, observes:—

We always knew that, when His Excellency got away from the courts, he was in danger of getting logically muddled, and of staggering, in consequence, into strange inferences, and sometimes impotent conclusions; but we cannot understand how, with the knowledge of law he must possess, he can accuse the present generation of legislators of backsliding from the example of their fathers. Our fathers, it will be remembered, muzzled Roger Williams; they banished all who were loud in uttering heterodox opinions; one Nich Knopp was fined £5 for curing scurvy by water; Philip Ratliffe was whipped, had his ears cut off, was fined £40, and banished for uttering "scandalous speeches" against the government; only church members could vote; they did not believe in a "natural right of suffrage"; voters in those days were obliged to be "of sober and peaceable conversation, orthodox in the fundamentals of religion, with £20 ratable estate"; and, moreover, they held slaves after the manner of the ancient Jews. This was the "liberty" of our fathers. And yet the Governor asks us to beseech the Maker of us all "to heal our backslidings." We do not understand it, we repeat. For has not the Governor on the stump, and with sceptre in hand, declared for manhood suffrage, and for woman suffrage as well? And is it not the hospitality which the State has extended to the people of other lands, and the prodigality with which she has distributed her ballots, that has rendered it possible for him to sit in state under the gilded dome? Certainly, the Governor would not have the Legislature to repent, and be converted again to the restricted suffrage of our fathers, and so prevent the State from again honoring him with a re-election.

THE part of Senator Ingalls' eulogy on the late Senator Hill is the introduction, which we here reproduce:—

Ben Hill has gone to the undiscovered country.

Whether his journey thither was but one step across an imperceptible frontier, or whether an interminable ocean, black, unfluctuating, and voiceless, stretches between these earthly coasts and those invisible shores,—we do not know.

Whether, on that August morning after death, he saw a more glorious sun rise with unimaginable splendor above a celestial horizon, or whether his apathetic and unconscious ashes still sleep in cold obstruction and insensible oblivion,—we do not know.

Whether his strong and subtle energies found instant exercise in another form, whether his dexterous and disciplined faculties are now contending in a higher senate than ours for supremacy, or whether his powers were dissipated and dispersed with his parting breath,—we do not know.

Whether his passions, ambitions, and affections still sway, attract, and impel, whether he yet remembers us as we remember him,—we do not know.

These are the unsolved, the insoluble problems of mortal life and human destiny which prompted the troubled patriarch to ask that momentous question, for which the centuries have given no answer,—"If a man die, shall he live again?"

Every man is the centre of a circle, whose fatal circumference he cannot pass. Within its narrow confines he is potential, beyond it he perishes. And if immortality is a splendid but delusive dream, if the incompleteness of every career, even the longest and most fortunate, be not supplemented and perfected after its termination here, then he who dreads to die should fear to live; for life is a tragedy more desolate and inexplicable than death.

THE daily papers state that the late Hon. William E. Dodge disposed by will of $5,000,000. The *Congregationalist* says: "It was stated at the funeral of the late Hon. William E. Dodge that it was his invariable custom to devote the first hour of the morning to communion with God. This is perhaps the chief key to the problem of his pre-eminent success in life. Having begun each day by reading from his heavenly Father's message to him, by reflection upon its meaning, and by the reverent yet real and free intercourse of prayer, with what assurance of the divine favor was he enabled to enter into the business or pleasure of the succeeding hours!" Now consider that Jesus, in the plainest and most unmistakable language, spoke of wealth as the greatest obstacle to the Christian life and to the salvation of the soul. He denounced the accumulation of wealth as a crime, and extolled poverty as a virtue. "Woe unto you that are rich, for ye have received your consolation." "Blessed be ye poor, for yours is the kingdom of God." "The young man saith unto him, All these things have I kept from my youth up; what lack I yet? Jesus said unto him, If thou wilt be perfect, go and sell that thou hast, and give to the poor, and thou shalt have treasure in heaven; and come and follow me. But when the young man heard that saying, he went away sorrowful; for he had great possessions. Then said Jesus unto his disciples, Verily I say unto you, that a rich man shall hardly enter into the kingdom of heaven. And again I say unto you, It is easier for a camel to go through the eye of a needle than for a rich man to enter into the kingdom of God." The early Christians sold their possessions and had all things in common. Their kingdom was not of this world. The requirements of their master are such that, if complied with, Christians must remain poor, and indifferent to whatever makes this life attractive and diverts the mind from heavenly things. And yet the *Congregationalist*, an orthodox Christian journal, says that the custom of communing with God every morning was "perhaps the chief key to the problem of his [a millionnaire's] pre-eminent success in life,"—a success represented by $5,000,000! Was this wealth acquired by contemplating spiritual things, by thinking of heaven, by following the example of the Galilean, or, by fixing the mind on this world, studying profit and loss, driving sharp bargains, manipulating the products of labor, and engaging in projects and enterprises that required forethought and calculation, energy and persistence in gathering and keeping and increasing a great fortune?

POETRY.

For *The Index*.

AGNOSTICISM.

The sun low in the bright horizon shone,
The glowing sky over the water threw
The rosy shadow of her canopy;

While, motionless upon the river's breast,
Lay the dead leaf that fell all silently,
A stray waif from a wind-forsaken shore.

The current of the water turned, and through
The purple veil there gleamed a climbing stem
That reached the air and rose—a lotos plant.

All wide the leaves were spread, and from the midst
A snowy blossom opened her great heart,
And from the centre came the type of man.

O wondrous mystery of Life and Mind!
Upon the brow unshadowed, knowledge grew,
And left her seal upon its magnitude;

And into eyes that gazed unconsciously
She flashed the messengers that work her will,
Ambition's two,—the human power and pride.

He looked in ecstasy upon the heaven,
Upon the fair green earth that round him bloomed,
Upon the flood that slow beneath him stirred.

Great was this glassy world from whence he rose:
The trembling current and the deep blue floor
Awakened a wild longing in his breast.

What lay beneath those depths so wonderful?
Were sea and sky forever to be mute,
And the wide earth itself a mystery?

"Yet shall not man deserve his doom of fate,
If idle he shall stand and idly wait
The unknown opening of the radiant gate?

"Did knowledge ever give—ever withhold—
Without some meaning in the page's fold?
And shall not victory crown the effort bold?"

Perplexed, he gazed, then raised his arms aloft,
And, gazing still, stepped from the snowy throne,
And into the blue darkness sudden sank.

Dark fell the pall of night o'er all the earth;
In mist and rain, the evening long came on;
Hope from the living world seemed far withdrawn.

Yet shall the elements be ministers
To wake the dormant energies of men,
And add to strength of vision strength of deed.

SARA W. SMITH.

The Index.

BOSTON, MAR. 1, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

Some Uncommon Thoughts on Immortality.

BY L. G.

Man cannot help speculating on his origin and his destiny, especially on his destiny, how fruitless soever it appears to him, how conscious soever he may be that life is not more than sufficient for practical duties.

The writer of this has embraced a theory which to him seems a more reasonable solution of the problem, and moreover, wherever accepted, more fruitful in practical results than any other hypothesis,—a theory by no means new, but which has been surprisingly neglected by modern thinkers. Others, very likely, have laid hold on the same theory. Such may feel more confident, when they learn that they are not alone in their conclusion. A man's belief gains infinitely to him from the moment any other human being of his own time begins to believe the same.

Of course, if those philosophers be right who teach that the soul is nothing but a function, whether of certain bodily organs or of the organism, and thus extinguished on the dissolution of that organism, there is no problem to solve at all. But the vast majority of our race, certainly, shrink back from this doctrine, thoughtful and instructed people as much as the rest. To them, the consciousness of their own personality is a refutation of it. To them, that argument for the immortality of the soul, which is as old as Plato, seems without a flaw: that just as a pear-tree is incapable of bearing anything but pears, *i.e.*, anything but what is of the essence, the nature of itself, except when an apple-twig has been inoculated into it, and then apples have become a part of its nature,—so, since the soul of man is competent to grasp, to *conceive* of eternity, it must itself partake of that eternity. They think it self-evident that, if the soul were mortal, the idea of immortality, from its strangeness, its incompatibility with the nature and existing furniture of that soul, could never have presented itself to it; and they are right in holding to that opinion, *until science puts its veto upon it.* The time for that has not yet arrived. The science of mind, psychology, is yet in its infant stage, knows as yet next to nothing about mind; and what it knows is, we should judge not very favorable to the materialistic doctrine. The well-accredited instances of the often astonishing influence of the mind over the body and of the still more wonderful control of one mind over the bodily and mental states of another tend to prove that mind is more than a "function" or an "effect." Again, by the study of cataleptic patients, it has been demonstrated that the soul has extraordinary capacities, *independent of the orderly agency* of the bodily organs, and that its perceptions in that condition are as much realities as those of its ordinary state. We, therefore, contend that, with the light before us, the doctrine of the mind's being a function, either of bodily organs or of the organism, is untenable. We shall assume, for the purpose of this argument, that the soul is an independent existence. If that is a fact, and if the conservation of energy which science predicates about material forces is true in the spiritual sphere,—and it would be a curious irregularity in nature, if it were not,—the soul must persist to all eternity, *must be immortal.*

But the sort of immortality which is offered us by the popular religion, as it by courtesy may still be called, is not satisfactory. Simply this, that it denies persistence to the intelligence and fidelity of the dog, while claiming it for the reason and affections of man, makes its dogma rather rickety. It has a weaker point, though. To say that an immortal soul has a *commencement* in time, has continuity at one end and not at another, is absolutely opposed to reason and contrary to the analogy of persistence of force in the material sphere. It further involves the acceptance of one of two other absurdities. Either a creator *must* be prepared to create a soul whenever a new body arises, or the parents transmit the soul to the embryo, on which supposition a soul whose essence is unity would have two sources.* The logical defect, the incongruity in the dogma, however, is in itself enough to discredit it; and it alone has given materialism much of whatever strength it has. But let *pre-existence* be joined to posthumous existence, and we have a *complete*, conceivable theory. That is to say, if the soul persists after the death of the body, then *it lived before the body was vitalized.* Shelley very properly remarks, "If there are no reasons to suppose that we have existed before that period at which our existence apparently commences, then there are no grounds for supposing that we shall continue to exist after our existence has apparently ceased." Pre-existence, in other words, is as certain as immortality: they are not two doctrines, but two sides of the same doctrine, a doctrine at one and the same time of the soul's origin and of its destiny,—on one side revealing an illimitable background, on the other opening a magnificent foreground. It preserves the number of spiritual existences without increase or diminution, while the prevailing religion daily adds great crowds at one end by a miraculous increase.

This accumulation of souls specially leads to a tantalizing difficulty when we come to the question, Where is the habitation of these souls without number? In that connection, David Hume sarcastically observed, "How to dispose of the infinite number of posthumous existences ought to embarrass the religious theory." There is no such difficulty for us who accept the hypothesis of pre-existence, if we add, as we logically must, that of *soul-migration: we existed in other human bodies prior to birth, we shall exist in other human bodies subsequent to death.* It was of this very theory of soul-migration that this same acute philosopher, Hume, affirmed it was "*the only system of immortality that philosophy can hearken to.*" It is, then, no new theory. Rather, it may be said to be the most wide-spread and permanently inferential of all speculative theories of human life. Multitudes of men, as numerous as Christendom, have held it and hold it at this day in a modified form; and some of the noblest and most penetrating minds of our own race in ancient and mediæval times have favored it, as also in more recent times philosophers and poets like Lessing and Wordsworth. The writer of this for years was fascinated with the idea, but not until he happened to read in the *Fortnightly Review* an essay upon it by Prof. Knight† did he venture to yield to the fascination. On seeing in a magazine of such positive thought this hypothesis pronounced "quite as remarkable a solution of the mystery which all admit as the rival theories of creation, traduction,‡ and extinction, by a writer of his own age, who, in his own words, was not "defending," but "merely restating," the argument, he seemed to feel solid ground under his feet. Yet it should here be emphatically said, that it is put forward as *nothing more than an hypothesis.* At the same time, the writer of this decidedly thinks, with Prof. Knight, that it is an hypothesis which "is quite as likely to come to the front as any rival theory, when decay overtakes those that are recognized now." Yea, more than that, he *believes in* it in the sense that he verily thinks it is the *only* hypothesis that has got any chance of being generally accepted by those who come after us. And first,—

(1) Because it is every way *more tenable* than any other theory whatever. It seems, simply from the considerations so far advanced, more probable than the extinction theory of materialism, and far more sensible than the illogical "immortality" doctrine of the prevailing religion: not the less, because it allows us to suppose that the minds of animals also pass and repass in endless cycles through the brute creation. But something more can be said in support of our hypothesis, and on this point we shall draw freely from Prof. Knight's essay. Very many can testify, before their own consciousness at least, to the following experience: Quite suddenly, a thought is darted into the mind, which cannot be traced back to any source of this life's experience. We hear a sound, see an object, or suffer a sensation, which takes us directly out of the circle of sense-perception possible to us in the present existence; or, as the poet expresses it:—

> "Full oft my feelings make me start,
> Like footprints on some desert shore;
> As if the chambers of my heart
> Had heard their shadowy steps before."

Are we not entitled to interpret these feelings, thoughts, and sensations to be shadowy revelations of a prior existence? Supported by them, we even may change the most obvious objection that can be made to our theory into a persuasive argument in favor of it. For it will naturally be said that the fact that we have no clear, verifiable remembrance of a single experience in a former existence ought to be a conclusive argument against such a hypothesis as ours. But this body, the organ of sense-perception, may be quite as much a hindrance as a help to memory. As was said of old, matter is the true river of Lethe: immersed in it, the soul forgets everything. In Wordsworth's language,

> "Our birth is but a sleep and a forgetting."

In that case, casual gleams of memory, giving us sudden, abrupt, and momentary revelations of the past *are precisely the phenomena we should expect to meet with.* Again, every person of mature age will know that it is only the merest fraction of his experience during the years that lie behind him that he remembers: whole years of his tender childhood are probably a perfect blank to him; and yet he has no doubt that he existed as the same person continuously from his birth. George H. Lewes even relates of Faraday, whose mental gifts were certainly of no mean order, that he prepared and delivered a course of lectures, which were so entirely obliterated from his memory that the next year he prepared and delivered the same course once more, without a suspicion that it was not a new one. But the writer of this thinks the theory has a future before it, mainly—and this is a point altogether unnoticed by Prof. Knight—because

(2) It is an incomparably *better working hypothesis* than any other. It is well-known that hypotheses have often been accepted as true, and still are accepted, in the various sciences with the happiest results, when they explain phenomena, even if there is no way of verifying them. Now, our hypothesis can account for many things that lie shrouded in mystery, as the recurrences of family traits, the so-called "innate" ideas, that have been such a bone of contention between philosophers, the wondrous progress which children make in the first years of their infancy. It even can explain in a quite satisfactory manner ghostly and spiritistic phenomena, if there be any real "ghosts" behind them,—as many, and those sensible people too, cannot help believing,—since, if the migration-theory be true, between every two incarnations we are truly *ghosts*, and as such cannot be expected to do much better than the "spirits" whose inane utterances so disappoint investigators of spiritism. Of more importance is the immense ethical leverage, as Prof. Knight felicitously terms it, of the doctrine. The ethical puzzle which perplexes so many—how, in this life, suffering comes to be allied to nobleness, and enjoyment to rascality—is to some extent unravelled, when this life is considered a drama whose first and last acts are alike wanting. Yet perhaps this "puzzle" ought not to perplex us. We have hardly been put into this world *for the purpose* of being happy. It seems to be more reasonable to say, with De Tocque

* Query: Is it so very whimsical to suppose that, in all organisms, the female transmits matter and its forces, and the male vitality, organic force, on which organism then, in the animal world, a soul is superimposed?

† "The Doctrine of Metempsychosis," by William Knight, *Fortnightly Review*, September, 1878.

‡ Transmission of the soul by the parents.

Digitized by Google

ville, that "life is neither fun nor a calamity, but a serious business intrusted to us, to manage and conclude in such a manner that we do not have to be ashamed of it."* This precisely is why it seems to the writer of this of *far greater consequence* that our hypothesis furnishes us with a splendid motive for right conduct, supplies us with *the strongest possible incentive to useful living*. This is the special concern of every religious theory,—of every theory regarding the mystery around us; and this exactly has been the weak point of the prevailing religions in Christian and Mohammedan countries, and it is just here that they fail to satisfy mankind in our times. These religions centre the attention on another world, *make that other world the real one*. They consequently induce their votaries to consider the present existence as vain and all affairs of this world petty and worthless. Here is to be found the real reason why the Middle Ages were so unenterprising: mankind then was so sure of another world that they did not think this worth improving. The migration-theory, on the contrary, makes *this world* the real one. If you know, beyond a reasonable doubt, that you are to live in this world for countless existences, would you not try to make this a better world, even at the risk of having this one life brought to an abrupt end? Such an all-powerful incentive is, moreover, especially needful now, when moral injunctions are losing the authority derived from their supposed sacred origin. Man must have *some* theory of the relation of this existence to the mystery around him, in order to give purpose and vigor to active life. The prevailing scepticism and indifference, euphoniously called tolerance, is, from that point of view, a very great *evil*, and only by considering it a transition state from one belief to another can we justify it as a *necessary* evil. The migration-theory seems to be the only one that can secure for itself a general and sincere acceptance,—either it or universal Agnosticism.

You, however, will probably object that the Buddhists—the multitudes we referred to—have held and hold that belief, without being moved by it to improve this world much. Ah! but there is a difference between Hindus and our hardier race. The former have modified the migration-theory very characteristically by adding thereto their *Nirvana*,—final, absolute rest and extinction of all desire, for the simple reason that this is something congenial to the Oriental mind. We, on the other hand, who measure the fulness of existence by the amount of energy put forth, value rest only as the condition for renewed activity. Or you may say, What are those future existences to me, where I shall not recognize, where I shall even absolutely and entirely forget my family and all those who are near and dear to me in this life, where I shall even lose the memory of my own personality? Yes, but your *affections* and *personality* survive. Memory is, as we saw, not necessary to personality: you may every day, by experimenting upon yourself, convince yourself that personality is an underground river, meandering through the hidden world of the unremembered or even the unconscious. And who knows but that, when you, one existence after another, have been educated in the belief of soul-migration, memory may not preserve for you all worth remembering of ante-natal experiences, instead of the vague glimpses now vouchsafed to some? And as to the beloved objects of your affections here? Well, may it not be a condition for our mental advancement that *those personal attachments shall give way to regard and concern for humanity?* Is not that the tendency of our civilization? Is not, in fact, the irresistible democratic movement here and in Europe, at the bottom, a revolt and protest against *family selfishness* and *family exclusiveness?* James Mill, it is said, led his friends to regard the cultivation of individual affections and sympathies as destructive of lofty aims and indubitably hurtful to the mental character. Such a sentiment may sound harsh to you, but is there not a good deal of truth in it? If there is, that truth must, certainly, be best for humanity, and in the long run for your beloved ones, too. Spencer says the same thing in his philosophic language: "The life of the social organism must, as a rule,—[ought it not always?]—rank above the lives of the units." Does not the history of our civilization teach us that *our highest good is identified with humanity at large*,—that all we do is vain, indeed, if it does not benefit society? Take a few striking examples. Jewish monotheism and Christianity itself played no rôle in the world's history until, first, St. Paul, and, centuries afterward, Mohammed applied it to all the races of men; and the teachings of Quakerism, on the other hand, at the time almost revolutionary in their character, have had hardly any effect on account of the exclusiveness of the teachers, their peculiar manners, peculiar habit, peculiar speech,—in short, on account of their making themselves into a *peculiar people*. Is it not reasonable to suppose that we shall, by and by, unanimously come to acknowledge that *Self-ness*, whether related to the individual or to family, *is the Satanic element of our nature?* But a religious hypothesis, such as the one under consideration, vindicating this tendency of our civilization, may be necessary to make us feel and appreciate it. This it is which has made the migration-theory really precious to the writer of this, who is one of those who believe that the age we are living in is a transition point, not merely between two beliefs, but between one social system whose motto is, "Each for himself," and a new, a brighter social order whose motto will be, "Each for all, all for each,"—precious, because there is reason to hope that this new belief will serve as a key to open men's hearts for the reception of that new social order. The religion of positivism has tried to move men's hearts, and has failed. Why may not our hypothesis succeed better, even fully? Why may it not in time become a living truth to our race? For that is true which all accept and no experience contradicts. Of course, if science once should prove that the "I" within you is, indeed, like the flame of a candle, which may be extinguished by a breath of air, or *if* in the future it shall appear that the total of human beings increases perceptibly from century to century, *of which as yet there is not a shadow of proof*,* then the hypothesis will have to be reckoned among the illusions. But, with the light we at present possess, soul-migration seems the best gospel to be preached to our fellow-men as the religious basis and preparation for social co-operation in practical affairs.

*"La vie n'est pas un plaisir ni une douleur, mais une affaire grave dont nous sommes chargés, et qu'il faut conduire et terminer à notre honneur."

*It is true that most of the nations of the continent of Europe and those of Anglo-Saxon blood everywhere have increased remarkably during the last century, but to infer therefrom that the whole population of the earth has perceptibly augmented is jumping at conclusions. The greater part of Asia and a great part of Africa, certainly, were in former times far more populous than now: that America once sustained vast empires, we know, but how vast we probably shall never know.

For *The Index*.

MADAME DE STAEL AND HEINE.

BY B. W. BALL.

The first French writer to discover intellectual Germany for her Latin countrymen was Madame de Staël, who, with Sappho, her own countrywoman George Sand, and George Eliot, constitute a starry choir, so to speak, of feminine genius, whose names and words and thoughts the world will never let die out of its memory. Though Madame de Staël was a true Frenchwoman, still her intense emotional nature made her clairvoyant and capable of appreciating the Teutonic mind, which is so widely different from that of the Latin nations. Madame de Staël appreciated the German race as thoroughly as Tacitus had done so many centuries before her day, when that race was running wild in woods, but still, to the keen eye of the great Roman historian, giving signs of its future intellectual and moral grandeur and political predominance over Europe. Madame de Staël saw at a glance that Germany was *modern* in a sense that Latin Europe, with its old Roman civilization and old Latin Church and State, could not be. Germany, she saw, had fortunately remained barbaric and intact, while the countries of Southern Europe had been thoroughly Romanized, so that they remain pagan to this very hour. Madame de Staël appreciated the deeper inward sight and the tougher moral fibre and unconquerable individualism and spirit of personal independence of the Germanic peoples when contrasted with the Latin nations. She saw that the reformation of Luther was the great initial step of modern popular progress, freedom, and enlightenment,—a step which Latin Europe, with its slavery to old Roman ideas, was incapable of taking. She also saw that the eighteenth century poets, thinkers, philologists, and *savans* of Germany were geniuses of a nobler and loftier kind than the Voltaires and Rousseaus of her own country. The fruit of her discoveries in Germany she gave to the world in her book of that name, which was published in the brutal, mindless era of the first Napoleon's military despotism. The great authoress was accused of depreciating her own country to exalt Germany, by Bonaparte and his minions. But her *Germany* constituted a great event in the mental history of Western Europe. It in effect announced the decline of France in the realm of mind, and her relegation to a secondary position. It opened the eyes of the world to the fact that Germany had come to the front in matters of thought, science, philology, and poetry.

Meantime, in the first year of the current century, there was born at Hamburg a great genius, who has not been properly appreciated until of late years. I refer to Heinrich Heine, whom Carlyle called a "blackguard," instead of recognizing in him the intellectual successor and inheritor of the genius of Goethe as he ought to have done. Mr. Charles Grant, a competent critic and judge of Heine's merits, says: "Since Goethe's death, Heinrich Heine has been the only German man of letters who has exercised a wide and direct influence on the literature of Europe. His books are read and admired in France, studied and imitated, as I hear, in Russia, and they have powerfully affected the taste of the rising poets of Italy." In fact, Heine is the most brilliant writer of prose and verse, both, whom Germany has produced; and I know not his equal in brilliancy, incisiveness, and weird, demonic power in modern literature. He was a strange spiritual combination, so to speak. He was a Jew by race, a German by birth and education, a Frenchman, a Parisian, by long residence in the gay capital of pleasure, and an old Greek pagan into the bargain; and his poetry and prose both attest the manifoldness and complexness of his spiritual nature.

Heine, during his residence in Paris, published a work on *Religion and Philosophy in Germany*, in the French language, to supplement Madame de Staël's work on his Fatherland, and give the French still more insight into the German mind. This work was published as long ago as 1833, and in it Heine distinctly and *in totidem verbis* appeared in the rôle of prophet. He knew very well that Germany's predominance in the world of thought would speedily be followed by a like predominance in the realm of statesmanship, militarism, and politics. He foresaw, with his keen, clairvoyant eye, that the Kants, Goethes, and Humboldts of his day would sooner or later be succeeded by such Teutonic conquerors and statesmen as Bismarck, Kaiser Wilhelm, and Von Moltke. In other words, he distinctly foretold, in 1833, the humiliation at the hands of Germany which France suffered in 1870, long after Heine's remains had been committed to the cemetery of Père-la-Chaise. Heine explains in the work of which mention has been made why Germany has been so slow in reaching a *political revolution*. Luther's reformation and Kant's philosophy first gave to Germany spiritual emancipation from the superstitions and mental bondage of the past. Kant, according to Heine, was an infinitely greater revolutionist than Robespierre or Danton, for they only abolished mere human kings and despots; but, in the crucible of Kant's all-dissolving philosophy, the old god of history, orthodox dogma, and ecclesiastical hierarchies and traditions, is dispersed into thin air. Speaking of Robespierre and Kant, who were both in their habits and style of living of the type of the narrow-minded citizen, Heine says: "Nature had destined them for weighing out sugar, but fate decided that they should weigh out other things; and into the scales of the one it laid a king [Louis XVI.], and into the scales of the other a God.... And they both gave the correct weight."

Of course, Kant's philosophy only annihilated the old-fashioned, extra-mundane priests' God, but not the immanent, ineffable Power, who is "the splendor of all things gathered into unity and expanded into infinite totality." Kant's philosophy reinstated the pure, impersonal reason in man, which is the veritable voice of immanent Deity, on its throne, making its judgments superior to all mere tradition, authority, and mouldy dogma. Meantime, Germany is no longer full of dreamers and abstractionists. She now rules the solid land, as she did formerly the air. Heine, in the work which I am considering, says that the hour of political revolution will at last come in Germany. "There will be played in that country," he wrote in 1833, "a drama compared to which the French Revolution will seem but an innocent idyl." "As on the steps of an amphitheatre," he says, "the nations will group themselves around Germany, to witness the terrible combat. I counsel you, ye French, keep very

Digitized by Google

quiet, and, above all, see that you do not applaud. We might readily misunderstand such applause, and, in our rude fashion, somewhat roughly put you to silence. For, if formerly, in our servile, listless mood, we could oftentimes overpower you, much easier were it for us to do so in the arrogance of our new-born enthusiasm for liberty. Ye yourselves know what in such a case men can do; and ye are no longer in such a case. Take heed, then! I mean it well with you: therefore it is I tell you the bitter truth. Ye have more to fear from a free Germany than from the entire Holy Alliance, [this was written, as has been said, in 1833, in the days of said Alliance], with all its Croats and Cossacks. For, in the first place, they do not love you in Germany, which is almost incomprehensible [sarcastic], since ye are so amiable, and during your stay amongst us took such pains to please at least the better and fairer half of the German people. But, even though this half still loved you, it is precisely the half that does not bear arms, and whose friendship, therefore, would be of little help to you." * Heine of course alludes in the above sentences to the infernal outrages and exactions which Germany suffered during its occupancy by the first Napoleon, and which it paid back in part at Waterloo and wholly at Sedan. In the political revolution which is impending in Germany, according to Heine, the old Teutonic God, Thor, will awake, and, rubbing the dust of a thousand years out of his eyes, smite in pieces with his hammer the domes of the mediæval cathedrals.

CORRESPONDENCE.

"NATURE NEVER MAKES A LEAP."

Editors of The Index :—

"There is no use talking. I can never believe that mind has been developed out of matter, nor even that vegetable and animal life has been evolved out of such inert, nebular gas."

So said our friend W. B. F.; and very many opponents of the evolution philosophy seem to have the same views. They imagine that evolution is a sudden metamorphosis, a change at one leap from matter to mind; and, this being contrary to all experience, they infer that all evolution is a monstrous absurdity. If the oak is developed from the acorn, if the animal originates from an ovum, if mind is a product of matter, then it is concluded the acorn must have contained the oak, the ovum included the mature animal, and the nebular gas must have contained the genius of a Milton and a Newton.

To one unacquainted with the forces of nature, more especially with the principle of the "conservation of force," it seems quite natural to infer that the germ of any organism, whether vegetal or animal, must contain all the qualities of the future being. Having no conception of the chemical and mechanical forces of nature,—which are always operating on every organism through the medium of the atmosphere, the soil, solar heat and light, etc.,—it is concluded that all the qualities of the mature being must have been contained in the primitive germ, and that the soil, or environment, has only been the means of developing in some mysterious way the *latent qualities* which were all there in the beginning. We are gravely told by these critics that the nebular gas must have contained life and mind,—even the mind of a Newton, if evolution be true.

Herbert Spencer, in his reply to F. E. Abbot's criticism some time ago, shows that evolution never makes such monstrous leaps, but that "every kind of being is a product of modifications wrought by insensible gradations on a pre-existing kind of being." Balfour Stewart, in his *Conservation of Energy*, shows that the forces of nature, such as gravitation, solar heat, molecular motion, chemical affinity, electricity, etc., have the *power to raise matter, step by step, from one plane to the next higher*. He represents material existence as consisting of four planes, one above the other, thus:—

4. Animal Kingdom.
3. Vegetable Kingdom.
2. Mineral Kingdom.
1. Elements.

1. The plane of elementary existence, such as the nebular gas; 2. The plane of chemical compounds, or the mineral kingdom; 3. The plane of vegetable existence; and, 4. Animal existence.

He says, "It is a remarkable fact that there is a special force whose function it is to raise matter from each plane to the plane above, and to execute movements on that higher plane. Chemical affinity raises matter from 1 to 2, and so forms the mineral kingdom. Vegetable force alone can lift matter from 2 to 3. Animal force alone can lift matter from 3 to 4. But there is no force in nature *that can raise matter in one leap* from 1 to 4 or from 2 to 4. Plants cannot feed on elements, but only on chemical compounds in the soil and atmosphere. Animals cannot feed on minerals, but only on vegetables and animals."

Spencer, again, in his *First Principles*, says "that it is proved that no germ, animal or vegetal, contains the slightest rudiment, trace, or indication of the future organism; the microscope showing that the first process set up in every fertilized germ is a process of repeated fissions, ending in the production of a mass of cells, not one of which exhibits any special character. So that the partial organization at any moment subsisting in a growing embryo is transformed by external agencies acting on it into the succeeding phase of organization, and this into the next, until the ultimate form is reached."

Each higher stage of development supplies a force for still further progress. This is especially conspicuous in the mental kingdom. The mind itself becomes a most important force in aiding further evolution. By mechanical inventions, steam-power, railroads, printing-press, mind coming in contact with mind, etc., an incalculable impetus has been given to mental and social evolution. What Spencer terms the "multiplication of effects" and the successive stages of higher development as they are reached supply additional forces to accelerate human development. Discoveries in one science aid discoveries in other sciences. Optics have greatly aided astronomy, chemistry has helped physiology, etc.

"The same germ may be evolved into different forms, according to circumstances. Thus, during its earlier stages, every embryo is sexless, becomes either male or female, as *the balance of forces acting on it* determines.

"It is well known that the larvæ of a *working*-bee will develop into a *queen*-bee, if before a certain period its food is changed to that on which the larvæ of queen-bees are fed." The ovum of a tapeworm getting into the intestines of one animal unfolds into the form of its parent; but, if carried into other parts of the animal's system, or into the intestines of some unlike animal, it becomes a cysterci,—a creature extremely different from the tapeworm in aspect and structure. Each advance in embryonic complication results from the action of incident forces on the complication previously existing. The germ, no doubt, has certain unknown properties, which, when *subject to fit external influences*, produce the special organism; but it has been proved that external forces are most important in the evolution of all organic beings. That mind has been developed by these insensible gradations, step by step, from primitive elements, through the mineral, the vegetable, and the animal kingdom up to man, seems to be almost *demonstrated*. Yet we do not call matter *mind*, until it has passed through these different transformations, any more than we call an acorn an oak or an ovum an animal until they have passed through the embryo stage and reached their mature forms. What these forces of nature are which we call chemical, electrical, magnetic, etc., it seems impossible now to tell; but we do know that these forces are persistent, unvarying, and are never interfered with by any outside power. That this "persistence of force" will ultimately develop mankind to perfection seems also quite certain, the survival of the fittest being the inevitable consequence of such persistence of force; and why there should be a general development from a lower to a higher stage seems to be accounted for by the same principle.

Those interested in the evolution of organic life will find the question fully discussed in Spencer's *Biology*, and the transformation of matter from a lower to a higher stage in Balfour Stewart's *Conservation of Energy*.

J. E. SUTTON.

Dec. 23, 1882.

THE Century Co. will revise the revised *Imperial Dictionary*, and give it the name of *The Century Dictionary*. This task will occupy several years, and will be under the direction of Prof. W. D. Whitney.

BOOK NOTICES.

THE COMPLETE WORKS OF THOMAS PAINE. In three volumes.
THE POLITICAL WRITINGS OF THOMAS PAINE, Secretary to the Committee of Foreign Affairs in the American Revolution. To which is prefixed a brief sketch of the author's Life. A New Edition with additions. Vol. I. and II.
THE THEOLOGICAL WORKS OF THOMAS PAINE. The most complete edition ever published. Vol. III. J. P. Mendum, Investigator Office, Boston. 1878. Price $7.

These three handsome volumes with which we have been favored by the publisher constitute the most complete edition of the works of Thomas Paine that has ever been published. They contain not only *Common Sense*, *The Crisis*, *Rights of Man*, and *Age of Reason*, his principal works, but all the smaller published essays, correspondence, and miscellaneous pieces, with a few unimportant exceptions, known to have been written by Paine. Among these minor productions are "A Dissertation on Government," "The Affairs of the Bank and Paper Money," "Prospects of the Rubicon," "Address to the Addresser," "Agrarian Justice opposed to Agrarian Law and Agrarian Monopoly," "Liberty of the Press," "A Discourse to the Society of the Philanthropists," "Essay on Dreams," "Thoughts on a Future State," "Reply to the Bishop of Landaff," "Origin of Free-masonry," Letters to Washington and Samuel Adams, Poetical Pieces, "The Will of Thomas Paine," etc.

Paine was the pamphleteer of American independence; and he applied his mind and his powerful pen to every subject, the treatment of which, during and after the Revolution, seemed to be demanded by the interests of the country. The value of his political writings to the cause of American liberty is sufficient to insure for them an interest among intelligent students of our Revolutionary history. The simplicity, directness, and vigor with which he wrote give to his writings on the affairs of a hundred years ago a readableness that belongs to but few works of that time on the same subjects. His ablest political work was *The Rights of Man*, a reply to Burke's *Reflections on the French Revolution*. It remains to-day unsurpassed as an attack on the monarchical principle of government, and a defence of the right of the people to form their own governments and elect their own rulers. The theological works of Paine are still read by thousands; and, although better criticisms on the Bible than the *Age of Reason* have since appeared, that work contains a vast amount of common sense and good argument, and is vastly superior to much of the cheap so-called liberal literature now in circulation.

No library can be considered complete without the works of Paine, the political and religious reformer; and Mr. Mendum is entitled to the credit of having published them in the best form in which they have ever been presented to the public.

THE OFFICIAL REPORT of the State Hospital for the Insane at Norristown, Pa.

This document is admirably arranged, and furnishes some interesting information. The ratio of recoveries to admissions is about thirty-two per cent. for men, while it is only about twenty per cent. for women. The physician gives it as his opinion that even cases of very long standing are not necessarily hopeless. The department for women is under the charge of a woman physician, who was formerly a student at the New England Hospital; and the trustees say "that they have no longer any doubt in reference to this system." "It has worked most satisfactorily, and greatly to the benefit of the inmates." They "have given the resident physicians the largest liberty in their management, throwing the entire responsibility on them." The trustees and both of the physicians speak of the benefit resulting from the introduction of various employments for the insane. "I am convinced," says Dr. Robert H. Chase, "that employment and non-restraint are twin sisters that must go hand in hand in the upward march of improvement in the treatment of the insane." The manufacture of scrubbing-brushes has been introduced; and "this shop has not only paid expenses this year, but has gained quite a little surplus. The printing-office and scroll-saw shop have also given satisfactory results." Dr. Alice Bennett says, "I believe the use of mechanical restraint to be absolutely incompatible with any influence for good." The same work in the brush shop, and scroll-sawing with knitting and fancy sewing, besides the housework and plain sewing, have occupied

* Vide *Religion and Philosophy in Germany*. A Fragment. By Heinrich Heine. Translated by John Snodgrass. Boston: Houghton, Mifflin & Co.

Digitized by Google

the women, greatly to their advantage. The causes of insanity are very various among men. Religious excitement, overwork, and want of employment have each produced the same number of cases.

Among women, four cases are traced directly or indirectly to overwork, and three to religious excitement, while want of employment is not mentioned. Out of four hundred and fifty-seven cases, in one hundred and forty-nine there was no insanity in the family, and one hundred and eighteen in which it had occurred in various relations, while in one hundred and ninety cases the condition was unknown.

All these statistics, though not conclusive, help to form a valuable fund of knowledge on this important subject, from which we may yet learn practical wisdom.

THE first number of the *Elzevir Library*, a semi-weekly magazine devoted to cheap reprints of choice standard literature, gives the story of *Rip Van Winkle*, by Washington Irving, in its first number. It is in paper covers, good type, and is sold at the low price of two cents. The price will vary from two to four cents per number, according to amount of matter printed. It is published by John B. Alden, 18 Vesey Street, New York.

AN IDEAL JELLY-FISH.

A jelly-fish swam in a tropical sea,
And he said: "This world it consists of ME:
There's nothing above and nothing below
That a jelly-fish ever can possibly know,
Since the highest reach we can boast of, sight,
Is only the vaguest sense of light;
And we've got, for *the final test* of things,
To trust to the news which one's feeling brings.
Now, all that I learn from the sense of touch
Is the fact of *my feelings* viewed as such;
But to think these have an external cause
Is an inference clearly 'gainst logical laws.
Again, to suppose, as I've hitherto done,
There are other jelly-fish under the sun,
Is a poor assumption that can't be backed
By a jot of proof or a single fact.
In short, like *Fichte*, I very much doubt
If there's anything else at all without;
And so I've come to the same conclusion,
If the question be only set free from confusion,
That the universe centres solely in me,
And if I were *not* then *nothing* would be!"
Just then, a shark who was passing by
Gobbled him up in the twink of an eye,
And he died with a few convulsive twists.
But, somehow, the universe still exists!

—*Grant Allen, in Popular Science Monthly.*

PERSONAL ITEMS.

PETER COOPER, the practical philanthropist of New York, recently celebrated his ninety-second birthday. He still attends to his business, but does not go to his office every day.

PASTEUR, the French scientist, is described as a man of low stature and powerful frame, spare, angular, and weather-beaten. He is a man of few words, abrupt, but clear in speech, and of quick, impetuous gestures.

MR. CHARLES WATTS, who spoke so acceptably at Paine Hall two weeks ago, will again speak at the same place next Sunday, at three o'clock in the afternoon and eight in the evening. Mr. Watts is one of the best known of the English representatives of Secularism, and is an able and eloquent lecturer.

THE friends of Mr. B. P. Shillaber will read the record of the death of his estimable wife with feelings of deepest sympathy. She passed away after a week's illness of pneumonia. She was a helpmeet in the truest sense; and her loss befel her husband while he was unable, through rheumatism, to stir hand or foot from his bed. She was sick about one week.

AT least, one rich woman understands how to make her surplus wealth conduce to her true happiness, Mrs. John Jacob Astor, of New York. She has for several years interested herself in finding homes in the West for the friendless children of New York. She has so far expended nearly $15,000 in this laudable work, and takes a personal interest in the children thus cared for, visiting them and giving them advice before their departure for the homes she has provided for them.

MR. LORING MOODY, of Malden, died last Saturday, aged sixty-nine years. He was born in Harwich, and was sent to the Legislature from there several successive years. He was a warm adherent of the anti-slavery cause; and, when the occasion for his services in that direction ceased, he followed other reformatory movements. He was an active member of the Society for the Prevention of Cruelty to Animals and of that for the Prevention of Cruelty to Children, the latter society being organized in this city through his efforts.

THE Cleveland *Leader* says: "In a letter written a few days since to a gentleman in St. Paul, Minn., Herr Most explained his method of operation; and that gentleman, disgusted with the man and his scheme, has given it to the public. According to the terms submitted in this letter, Most asks for every speech or lecture delivered $250, 'with travelling expenses, hotel expenses, demonstrations (such as bouquets, receptions, entertainments, etc.), to be paid by the societies asked to invite him to any city.' He, however, proposes to be liberal with those who will make a season engagement with him by offering to deliver three lectures for $600."

A. SCHELL writes from Albany, N.Y., as follows: "On Sunday evening, February 18, Mrs. Clara Neymann delivered an address upon 'The Aims of Liberalism,' at Van Vechten Hall, to a crowded house, before the Albany Liberal Association. On the evening of February 20, at the Assembly Rooms of the Old Capitol, she spoke in most eloquent strains on the woman's suffrage question, to a very large audience. She was enthusiastically received, and frequently applauded at both places. She is a woman of decided ability and pleasing address. She certainly has made herself a favorite with the people of our capital city. She has to be heard to be properly appreciated."

THE Springfield *Republican* says of Susan B. Anthony, who has just gone to Europe to take a rest, the first in thirty years' labor, that "she can look abroad upon the field she has worked in, and be, if not satisfied, yet well assured that the labor of her hands has prospered and will prosper. She had her share in the freeing of the negro race, and has a larger share in that great enlargement of the rights and responsibilities of women which is so steadily and swiftly increasing, that she may reasonably hope to see the logical political equality reached before she is translated. The fools may scoff and the old fogies protest, but their ranks are lessening and their voices feebler than they once were."

EX-GOV. MORGAN of New York was one of the highest and best types of the business man in politics which this country has produced. He carried into the public service the high sense of honor, the exact methods, the scrupulous observance of all obligations, and the balanced judgment and executive ability which had made him successful and honored in his private business. He was an admirable governor for the war-time, when great executive capacity, sterling patriotism, and thorough business knowledge were required. As a senator, his sagacity and experience made him almost equally valuable. In every relation of life, as citizen, merchant, and servant of the people, Edwin D. Morgan was a credit to his ancestry, an honor to his adopted city, and a representative product of our institutions.

HON. PAUL A. CHADBOURNE, of Amherst, Mass., died last week in New York. He had long been known as an educator and political reformer. Some years ago, after holding a professorship in Williams College, he became President of the Massachusetts Agricultural College, which position he resigned to take the presidency of the Wisconsin University. Subsequently, he was President of Williams College, and again of the Massachusetts Agricultural College, holding that position at the time of his death. By degrees conferred, he was doctor of divinity, doctor of medicine, and doctor of laws. He had travelled extensively at home and abroad, pursuing his investigations even in Greenland and Iceland. He was an impressive speaker, and gave many addresses and platform lectures on a variety of topics, and found time besides to write books which have considerable merit. He was, however, more versatile than profound. He was born in Maine in 1823. His life was a busy and useful one, and his death is a loss to Massachusetts and to the entire country.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,
706 Broadway, New York.

For sale at INDEX Office, 3 Tremont Place, Boston.

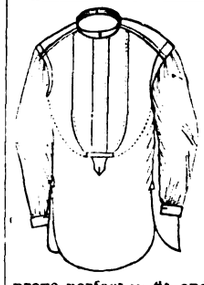
THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire conformity with its general character and purpose. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	"	8c.	" "
" 26 " 51	"	6c.	" "
" 52	"	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.



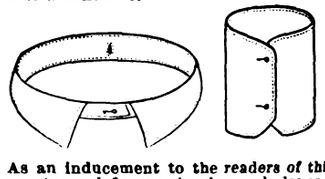
"From the Workroom to the Wearer."

6 Shirts for $6.

I have extraordinary facilities for making Fine Shirts at a remarkably low figure which will prove perfect in fit, and wear as well if not better than many for which higher prices are paid. The bodies are made of **Wamsutta Muslin,** and with **reinforced fronts.** The bosoms are made of fine Irish linen, three-ply, and shield-shaped. The trimmings are all fine linen. The yokes and sleeves are double-stitched. Sleeves and backs have facings. **All seams** are **double-stitched** or felled.

A Better Shirt Cannot be Made at Any Price.

A sample shirt will be sent by mail on receipt of One Dollar and 15 cents to pay postage. State size of collar worn. Samples of material sent free.



As an inducement to the readers of this paper to send for my circular, and also as a means of showing a sample of workmanship, I will mail, on receipt of 15 cents, two collars and a pair of cuffs all laundered and ready to wear. These goods are made from fine patterns of colored Cambric, and usually sell for 50 cents a set: and I warrant them to wash and wear well.

REV. JASPER, the astro-theological crank, recently preached another sermon to his congregation in Richmond, to prove that "the sun do move," to deny which he insists is to give up the Bible and Christianity.

THE Shah of Persia has issued an edict exempting the fire-worshippers from the special tax hitherto levied on them, and granting complete political equality to all his subjects, without distinction in regard to creed or race.

THE New York *Sun* says that "many Butlers have become famous for their writings," but thinks it is doubtful "whether for hardpan devoutness any of these clerical or clerico-legal Butlers have produced anything eclipsing Gov. Ben Butler's Fast Day Proclamation."

THE *Herald* of this city, commenting on the continued appeal for subscription to the fund for a pedestal to the statue of "Liberty Enlightening the World," to be erected at the entrance of New York Harbor, gives some facts and figures which are not very pleasant reading for an American citizen, and asks, "Wouldn't it be both modest and appropriate if the statue should point its torch toward the land,—signifying that the enlightenment is needed at home?"

SAYS the Springfield *Republican:* "The Salvation Army, notwithstanding the condescending favor of Church of England prelates and professors, will have to be pronounced a nuisance everywhere. It is certainly that in New York, where the organization seems to consist of low-class Englishmen, who make religion as vulgar as any pot-house affair; and their parades are the signal for noisy and disorderly crowds of the worst part of the population, from among whom the policemen are constantly obliged to make arrests."

THE *Independent* is certainly sound on the taxation of church property, which, it says, "should be taxed for the support of government, unless the *religious use* thereof furnishes a good reason for its exemption," and "that, if we assume such use to be such a reason, then, to be consistent, we must also assume that it is one of the functions of the State to support and regulate the religion of its citizens, which is contrary to the fundamental principles of our political system. Exemption is indirect support; and, if we have exemption for the reason alleged, we may just as well have regulation for the same reason. There is no escaping the consequence without bad logic." True, and there is no refusing or ignoring the demand for the taxation of church property, without palpable injustice and disregard of the fundamental principle of religious liberty, of equal and exact justice for all, irrespective of religious beliefs.

THE *Nation*, referring to the "Methodist Mine" swindle, which found a dupe and writer of puffs in the editor of the *Christian Advocate*, says "that it is well known that religious newspapers are a favorite medium for swindlers and charlatans desirous of getting rid of worthless stocks. For some years after the war, they were the chief agents in promoting the sale of good-for-nothing railroad securities, to the great scandal and loss of the religious world. The editors of the *Advocate* ought not, therefore, to have been taken unawares when Dr. Spence came gleaming and smiling into their office. They ought to have met him with the unalterable rule that no journal, and above all no religious journal, ought to recommend an investment under any circumstances or for any purpose. It is not the business of a newspaper, or one for which any editor is fit. If there be no canon of the Methodist discipline forbidding stock-puffing by newspapers, one ought to be promptly adopted; and it ought to operate whether the stock turns out well or ill."

THE Boston Sociologic Society was formed in this city last Thursday evening, with a membership of ten persons, men and women. This organization is affiliated with the New York society, a notice of which appeared lately in these columns, and its objects are similar to those of the parent society; namely, to study, spread a knowledge of, and advance as far as possible with the means at its command, the principles of co-operation. This they aim to accomplish by meetings, essays, lectures, discussions, the collection of statistical information, correspondence, and the use of the press. By the term "co-operation," the society does not mean any one or more of the various systems of store-keeping with which the word is so often associated, but that economic principle which forms the basis of the most valuable portions of the most civilized society. It is thought that a still further application of this principle will supersede competitive measures and harmonize conflicting social elements. All interested in the proposed work of the society are invited to communicate by mail with C. H. Codman, 34 Bromfield Street, Boston, or with Mrs. Imogene C. Fales, 52 7th Avenue, Brooklyn, N.Y., of the New York society.

THERE are some religious monomaniacs in England, known as the "Peculiar People," who believe they are the inheritors of the promises, and in sickness refuse to have the services of a physician, on the ground that for them to look for aid from medical science would be to distrust the Lord whose word they believe to be true. A mother and a three-year-old child belonging to one of these families having lately died, a coroner's court investigated the case, and found that death resulted from a complication of diseases, and that the woman and child had had no doctor or such attention as was needed, and could easily have been given. Whereupon, the jury found the father, who was a clerk in the war office, guilty of manslaughter, and handed him over to the police. In vain do the members of this sect declare that they are disciples of Christ, and that they are following the directions and relying upon the promises of the Holy Scriptures. The requirements of civilization demand that they find new interpretations of the Scriptures, and move on with the great mass of Christians, or that they be regarded as fanatics and cranks, and be punished even for the evils to society that result from their adherence, however sincere, to "the letter of the Word."

DURING one of his recent lectures on "The Sun and Stars," before the Lowell Institute, Prof. S. P. Langley threw upon a screen a series of brilliant lunar views. In explanation of the black portions of the moon's surface, the lecturer said, in substance, that it was formerly supposed that they represented oceans, but that there are no oceans, no water, not a drop of moisture, not a green thing, not even any weather to discuss. The moon is beyond the stage of habitation. It is not certain that the moon ever had an atmosphere; but it may be believed with confidence that one day in the past she had, and that oceans filled the enormous caverns now visible. The curious radiating lines on the lunar surface were discussed in connection with the theory that the moon has shrunk from a larger to its present size. The lunar Apennines were expatiated upon, and their resemblance to the Sierra Nevadas pointed out. Some of these lunar heights reach an altitude of 20,000 feet, which is enormous for the moon, equalling a mountain 80,000 feet high on the earth. Some of the lunar craters are sixty miles in diameter; and there are cracks or fissures one and one-half miles across, ten miles deep, and one hundred miles long. The temperature of the moon is at least two hundred degrees below zero. The moon is a far different creature from "the pale orbed maiden" which the poets have pictured her. Her surface remains in tenantless and eternal cold and solitude. Objects one hundred feet across can be seen on the surface of the moon with the best telescopes, but nothing smaller than one thousand feet with distinctness. The highest practicable telescopic power brought to bear upon the moon thus far is one thousand, so that she is brought within two hundred and forty miles of us.

ECCLESIASTICAL BANKING.

The Catholic population of America will probably learn in time, through the severe school of experience, that, however necessary as spiritual advisers their priests may be, they are not safe bankers. Their Church may be an excellent institution in which to invest all their hopes of a future life; but, as a place of investment for the weekly savings of their scant wages against the rainy day of sickness and old age in this life, many poor people are discovering, to their surprise and sorrow, that it is a shaky reliance. Four years ago, a large number of the hard-working Irishmen and Catholic washerwomen and seamstresses in Ohio, who had intrusted their savings to Archbishop Purcell and his priestly brother, awoke one morning to find that the bottom had fallen out of this arch-episcopal banking company, and that there was no money left with which to pay back to them either the interest or principal of their deposits. The funds had been faithfully invested in building churches and in vigorously pushing Catholic missionary operations in Ohio, but churches and missionary operations do not pay dividends in dollars and cents; and so, when the poor depositors came for their hard-earned money, all the satisfaction they could get was that of being told that their savings had helped to make the prosperity of the Church, and would be remembered to their credit in the future world. And, to this day, no other payment than this has been made to these confiding depositors, who put their money into the hands of Archbishop Purcell with the expectation of receiving it all back, with interest added for the use of it. But this is a kind of payment that will not buy food nor fuel nor clothing for this world's needs; nor will the priests themselves receive it in discharge of their fees for burials, marriages, masses for the dead, and other ecclesiastical services. Ecclesiastical banking deals in "futures" only. It is not adapted to meet this life's pressing wants.

And what happened in Ohio has just happened again in the city of Lawrence, Massachusetts. In the latter city for a number of years there has existed an organization of Roman Catholic priests known as the Augustinian Society. It, too, has had great zeal and distinguished success in missionary operations. It has invested largely in eligible city lots, erected costly churches, built parochial schoolhouses, and sustained parochial schools. But where did the money come from for all this work? Perhaps some of it was donated specially for these purposes. But most of the money has come from deposits intrusted to the society by servant girls and the operative class, who put it there for safe keeping on interest. For, as collateral to its missionary enterprises, and, it now appears, as furnishing the capital for conducting them, the Augustinian Society has also done a savings bank business. Trusting the integrity of their priests and allured by the promise, and, for several years, by the payment of a larger interest than the regular savings institutions were paying, the poor people carried their spare earnings to the Augustinian Fathers, and made them their savings bank. But church property is not an investment that pays in cash in Massachusetts more than in Ohio. The result is, as was related in *The Index* last week, the Augustinian Society has financially collapsed. It owes to its victimized depositors nearly a half million of dollars, and has hardly anything left with which to pay them. The churches and school-houses it has built with their money do not belong to it, but to the bishop of the diocese in trust for the universal Catholic Church. One who should look at the matter from a mere business point of view might be inclined to say that the universal Catholic Church, having regard to fair and honorable dealings with its members, would allow the depositors to receive a legal mortgage bond on the church property which they have helped to create, to the full extent of the debt due to them, and with annual payment of interest. But the universal Catholic Church in the Purcell case did not take this view. Ecclesiastical banking appears to be managed by different rules from those recognized in honest banking among the world's people.

The New York *Tribune*, in an excellent article on the subject, points out the folly of trusting to "clerical financiering," but says, "No one alleges any dishonesty" against the managers. We doubt whether so much as this can be conceded. The priests did not apply the money to their own personal uses, nor waste it in wild-cat speculations. This much may be granted. But how they expected honestly to pay back to all the depositors both principal and interest according to the depositors' expectation, while they were investing much the greater part of the funds, as fast as received, in entirely unremunerative property, is a puzzling question. Catholic priests are generally pretty shrewd men. And we cannot believe that the Augustinian Fathers were so simple-minded as to suppose that they were going to pay all dues to their creditors from the very small portion of their funds which they invested in interest-paying property. The interest thus received was not even enough to pay the annual interest on the deposits, and this they very well knew. But their expectation was that, as long as they kept up the delusion that the funds were safe in their hands, and that the depositors might, when duly calling, receive them all back with interest, so long a large part of the principal would not be called for, and fresh deposits would continue to be made, more than enough to meet all yearly demands for interest and occasional demands for the principal. It was by fostering this delusion among their parishioners that the priests obtained money for their bank and for their missionary operations at the same time. Had they told their confiding parishioners the honest facts in the case, the bottom would have dropped from their bank and from their plans of ecclesiastical propagandism long ago. And behind this method of ecclesiastical financiering, which strongly resembles in some of its features the notorious Mrs. Howe's Woman's Bank, lies not a little of the chronic recklessness with which the Catholic Church violates individual rights, if only the Church is the gainer. We are sorry to believe that the Augustinian Fathers would not count it a very great wrong to secure money for purposes they deem so excellent as building churches and parochial school-houses, by expressly cultivating the delusion of their simple parishioners, and that the Catholic Church would not reckon it a very heinous crime to keep the money thus obtained on false pretences, since it was being devoted to so good objects.

It is reported that, for several years, ten thousand dollars of the funds in the Augustinians' keeping have been used up in sustaining parochial schools, and that these schools will now be closed, and their pupils sent to the public schools. The reason which Catholics have given for instituting schools of their own is that the public schools teach neither religion nor morals. When the Catholic children who have been attending these parochial schools learn that the schools were maintained on the money of hard-working men and women, perhaps their own fathers and mothers, who had intrusted it to the priests, not only for safe keeping, but for earning an income, and that this money is now gone, so that its owners, however much they may suffer for the want of it, cannot recover it, we wonder what these children will think of the religion and morality of the transaction.

WILLIAM J. POTTER.

LIBERALIZING OF OPINION IN THE ENGLISH UNIVERSITIES.

No observer of the many signs which indicate radical changes in opinion can fail to remark the progress of thought in the universities of England, —by which I mean the two ancient universities of Oxford and Cambridge. England proper (excluding Scotland and Ireland) has five universities; but, of these, London is a mere examining body, and not a university at all in any genuine sense of the word, while Durham is mainly a clerical institution, and the Victoria University is composed of a group of colleges, the most important of which is Owens' College, Manchester, and has scarcely yet developed a culture of its own. Oxford and Cambridge were regarded at one time as the chief centres of a stagnant and even bigoted conservatism. M. Renan, in his interesting essay, "L'Avenir Religieux des Sociétés Modernes," said with truth of the former of these places, "Oxford, till the remarkable movement of these few years past, rivalled Rome in the absence of criticism and the stubbornness of its bigotry." Prof. Huxley, about twenty years ago, with equal truth, spoke of these venerable institutions as barren and unfruitful, as far as original investigation, able criticism, or great work in science, literature, or speculation was concerned. Matthew Arnold praised his "sweet city with her dreaming spires" for having always resisted the formidable onslaughts of the Philistines, but admitted that she was "the home of lost causes"; *i.e.*, the one place peculiarly impenetrable to that very criticism of which Mr. Arnold is so sweet and lucid an exponent.

The great names of modern English literature and science have not been the names of Oxford and Cambridge men. Grote, Faraday, Mill, Tyndall, Huxley, Spencer, were not even university men at all; while Darwin and Lyell derived no perceptible impulse for their life work from their early connections with Cambridge and Oxford respectively. And yet, were we to name the greatest representatives of the English intellect during the last half-century, these are precisely the men we would be certain to mention. And not only have these two famous institutions produced few men of note, but they have too often stoned their own prophets. Prof. Jowett was for years excluded from the university pulpit at Oxford, and a vigorous attempt was made not many years ago to exclude the late Dean Stanley. Froude's *Nemesis of Faith* was solemnly burned in the quadrangle of Exeter College, Oxford, by the learned head of that institution. Even as late as 1872, a popular evangelical preacher, who had "answered" Colenso, was elected to the chair of Moral Philosophy at Cambridge over one of the ablest philosophical teachers (and they are few indeed) whom Cambridge has had for years, because the views of the latter were supposed to be "dangerous," while the former was both Tory and orthodox. But "the old order changeth, giving place to new"; and this fact is conspicuous both at Oxford and Cambridge. The change which had taken place at Oxford was widely commented on in the English press, when Prof. Jowett was appointed last year Vice-Chancellor of Oxford University. By a singular irony of fate, his nomination was made by Lord Salisbury, the Tory leader, who happens to be also Chancellor of the University. Lord Salisbury's utterances are usually to be taken with several grains of salt. But his lordship always professes

Digitized by Google

the most rigid and unbending High Church principles. He had not long before been delivering a solemn testimony against the increasing scepticism of the times, which he associated with the growing democratic principles, conveniently ignoring the awkward fact that his own nephew, a prominent Tory member of Parliament, is well known as a practical and theoretical sceptic, the author of a *Defence of Philosophic Doubt*. It was curious that the Tory and Anglican peer should be called on to nominate to a high post the foremost representative of liberal thought in Oxford.

The death of Dr. Pusey not only deprived the ritualists of their most eminent champion in the English Church, but it also deprived Oxford University of its Hebrew professor; while the retirement of Canon Liddon from the professorship of Biblical Exegesis in the same University gave a further opportunity for another appointment. And it is significant to observe that the two new professors are very different men from their distinguished predecessors, both of them having studied and in some respects embraced the critical results of the modern liberal school. When the vehement controversy raged some seven or eight years ago round the book called *Supernatural Religion*, Dr. Sanday, who is now Canon Liddon's successor at Oxford, made some admissions and stated some facts which the representatives of the old-fashioned, uncritical, and orthodox views could hardly regard with complacency. The sister University of Cambridge has just filled up two vacancies in her professoriate in such a way as to show how the current is running there. Ignoring her own graduates, she has gone out of her way to appoint to the professorship of Arabic (rendered vacant by the murder of Prof. Palmer in connection with the Egyptian expedition) the celebrated Scotch scholar, Dr. Robertson Smith. In his annual address to the University Senate, the Vice-Chancellor congratulated that body on having secured the services of so able a man. It would be interesting to know what the divines of the Free Church of Scotland think of this reception of their rejected heretic by the great English seat of learning.

The second vacancy in the Plumian Chair of Astronomy was filled by the election of Mr. George Howard Darwin, son of the great naturalist, out of a number of eminent candidates. It is true that Mr. Darwin is not known as a heretic; but it is also equally true that his distinguished father is now known by his own admission to have been a distinct unbeliever in the popular theology, and the probabilities are that the son shares the general views of the father. In this connection, it may be said that every scientific teacher in Cambridge with perhaps one exception is a pronounced Darwinian, accepting generally the doctrines of evolution as alone explaining natural phenomena. A further criterion may be sought and found in the recipient of the honorary degrees which the universities confer from time to time. Not very long ago, it was a just ground of complaint against the two universities that they singled out chiefly colonial bishops and not very distinguished peers for this honor. *Mais nous avons changé tout cela.* Modern thought and modern science are now duly recognized in the persons of their leading representatives by the English universities. It is true that Darwin had to wait until he was seventy years of age, and when his name had become familiar as a household word all over the civilized world, before his own university set her seal to his fame. But his reception in the Cambridge senate-house in November, 1879, was something more than a personal tribute. It symbolized the triumph of a principle, the established recognition of a new intellectual method. Prof. Tyndall has received a similar honor from Oxford; while both Lyell and Huxley have been decorated with the Cambridge doctorate, and this year the latter will deliver the Rede lecture before the university. It may also be noted as a significant fact that Glasgow University, one of the principal seats of learning in orthodox Scotland, has conferred its honorary degree upon one of our ablest radical thinkers, Mr. John Morley. Surely, Mr. Spencer's turn will come next.

What is vaguely but perhaps conveniently termed the modern movement consists not in the substitution of one set of facts and beliefs for another set, but rather in the wholly different attitude of the mind toward the problems which man is called upon, or thinks himself called upon, to solve. The propelling forces of this movement have been mainly philosophy, historical criticism, and natural science. The first has not contributed any definite result in the form of increased knowledge of facts; but it has powerfully stimulated man's thinking faculty, and rendered him profoundly dissatisfied with any belief not in accord with reason. The second has so keenly scrutinized legend, myth, tradition, that they have vanished from the modern mind, "like wrecks of a dissolving dream"; and the prophets, heroes, lawgivers, and warriors of the past emerge from their canopy of fable, and are seen in just proportion and as related to their age and country. And the third has given us a new cosmogony, which by no ingenuity of reasoning can be reconciled with the old theology. Now, the changed aspect of the English universities is due to the growth therein of these three great branches of human learning. Cambridge is now the chief centre of scientific teaching in England, especially of physiology and experimental physics. The number of scientific students there increases by leaps and bounds, although it is scarcely more than thirty years since natural science was first formally recognized in the university curriculum. Indeed, it bids fair one day to take the foremost place hitherto held by mathematics.

What science is to Cambridge, philosophy is to Oxford; and, in both universities, the study of history according to the comparative and critical method is gaining ground every year. It is only necessary that this method should be applied in the domain of Hebrew history and religion in order to effect great results; and, though this will be the last outcome of the modern spirit, we need not despair of its accomplishment. Last year, the able and learned lectures of Dr. Kuenen on the development of the religion of Israel were delivered at Oxford as well as in London; and this year the new Hibbert lecturer, Mr. Beard, will follow Dr. Kuenen's example. The founding of the Indian Institute at Oxford will give a most powerful impetus to the study of comparative religion. All these facts point in the same direction: they indicate an intellectual revolution in England more powerful perhaps than any that has gone before, especially when we add to all this that the teaching and government of the university are to be taken out of the hands of the Anglican clergy, and to be given to those who will have no inducement to enter on the clerical career. I do not think that this intellectual change necessarily or even probably implies a general speedy abandonment of old forms and "time-honored" institutions. The English genius works in a different way. Rather may the proximate consequences even seem to be in some respects conservative; for criticism tends toward a *laissez faire* policy as far as action is concerned. It is a time for the removal of rubbish, the fashioning of instruments, the consideration of methods, rather than for the immediate raising of a new structure. "The native hue of resolution is sicklied o'er with the pale cast of thought." But the ultimate consequences will be vast indeed.

WILLIAM CLARKE.

THE BIBLE A HUMAN BOOK.

Why is it that differences of opinion upon earth-knowledge are regarded so much more leniently than differences upon theology? Bitter words certainly are waged between scientists, but social ostracism and denunciation of personal character seem to belong especially to religious controversy. The reason is that scientists know that all knowledge is the result of human research, but theologians claim a direct revelation from God to man about their doctrines. When they admit that knowledge of the unseen world has no other key than that which unlocks the secrets of visible matter; that all departments of learning are on an equal footing, each open to the full, free, and fearless investigation of man; that no supernatural information has ever been given by any supreme being upon any subject, but that all the attainments of man are the result of progressive steps,—then the earnest searcher for spiritual and religious truth will be no more despised than is the inventor, the chemist, or the electrician. They may still see God as the inspirer of matter, the wondrous power which enables man to take his toilsome, progressive steps into the realms of knowledge, even though they admit that he never revealed morality all at once from Sinai, nor his scheme of mercy in one dogma from Calvary, any more than he revealed the railroad in England or the telegraph in America. All have grown from man's gradual experience through the ages; and yet this is no less truly "of God," if by that name we mean the principle of action that pervades nature. God spoke as truly to Stephenson and Morse as he did to Moses and Paul. He said, Let railroad-trains run, and, Let words be telegraphed, just as truly as he said, "Thou shalt not steal." And he said it in the same way; namely, by working through matter in nature and in man's organism, until experience and observation made man perceive that theft was injurious to society, that steam could move carriages, and electricity repeat motion.

If the Bible is recognized as a human book, it will become of more real value to man. Now, it is by many worshipped ignorantly, as a sort of fetich. Others injure their intellectual powers and lose their common sense in attempting to make the works of different writers in different ages tell one harmonious story, as though written by one being. Others, who find some repulsive and incredible things in the book, spurn the whole, because obliged to consider the book as a whole. If they were allowed to read the Old Testament as a record of the traditions, history, and poetry of a distant age, it would become an intelligible, interesting, and valuable book to them. If the New Testament could be admitted to contain the best portrayal of human excellence ever written by man, and the philosophies and theologies of the early centuries of this era, it would then be prized by such men for what it is worth; and no one will honestly deny its real value. Men find there eternal punishment for the many and salvation for the few. They are told it is God's Book, and they must accept every word; but they revolt against these words, and throw away the whole.

One of the most noted authors of our day told a friend that he grew up with very little knowledge of the dogmas of religion or acquaintance with the Scriptures. Marrying a Christian woman, he yielded to her entreaties to read the Bible. He perused it from Genesis to Revelation, then shut up the book, and said, "If you wish me to have any respect for your religion, never show me that book

Digitized by Google

again." Its supernaturalism offended his reason and instincts; and, as he was told it was all God's truth and must be taken as a whole, he would have none of it. This man's books are read in every Christian family in the land, and his unbelief does not seem to disqualify him for pleasing and instructing others.

Another great difficulty in receiving the Bible as the word of God is the manner in which its books have been chosen. A large number of apocryphal books are known to have been excluded from the Old Testament, though quotations from some of them appear to be used by the apostles; and the New Testament is the result of the votes of councils, some Gospels and Epistles having been rejected, while other Epistles were retained by a bare majority, but all henceforth is the infallible word of God. When we revolt against inconsistency and error in it, we are told the finite must not judge the infinite, reason must give place to faith. But it is faith in the Christian Fathers that is needed.

Again, if God is God of the whole earth, and will have all men to be saved, even though he did not make Christ known until four thousand years after Adam sinned and brought doom to his race, why was not this word, which proclaims the fact, made intelligible to ordinary men, that they might not be the intellectual slaves of the learned hierarchy, who alone are professedly able to make a consistent story out of it? As it stands now, it is in no true sense a "revelation" to man; for scarcely two people can understand it alike. A God who had the intellectual powers of a modern college graduate could make a revelation that would not set all the world at variance in attempting to explain it; and he could find a way of making it known to the world, instead of confining its manifestation to an obscure and semi-barbarous people in a corner of the earth, leaving vast multitudes to perish ere the saving tidings could reach them. It is derogatory to infinite intelligence to call the Bible its "revelation."

Christ is said to have spoken in the Aramaic tongue, a language now extinct. His words were reported from mouth to mouth, were probably written in Hebrew, and after many years were translated into Greek. Their record was transcribed repeatedly; and the manuscripts, written several hundred years after the death of Christ, are now rendered into the English language. These words, passing through four languages, and subject to all the changes that gossips and copyists may have wrought, are now presented to us as the word of God, which determines our eternal welfare. Such a revelation is unworthy of an omnipotent being, who is conceived to have infinite perfection and who desires to convince men of truth; but it is a consistent act on the part of a God who hardened Pharaoh's heart, who is said to create evil, who said, "Make the heart of this people fat, and make their ears heavy, and shut their eyes; lest they see with their eyes, and hear with their ears, and understand with their heart, and convert, and be healed" (Isa. vi., 10), and of whom it is said, "God shall send them strong delusion, that they should believe a lie" (II. Thess. ii., 11). It is conceivable that such a God should give a revelation that would be incoprehenmsible.

Literary research is constantly throwing light upon the human origin of the Bible and the pagan sources of its doctrines. The *Bible for Learners* revolutionizes the chronology of the Old Testament and its reputed authorships. Kuenen's *Religion of Israel* gives a masterly exposition of the details of these subjects, which is condensed in a work with the same title by Knappert. The oldest books are said to be Amos, Hosea, Zechariah (ix.–xi.), and the first twenty-seven chapters of Isaiah. The principal part of Deuteronomy was written about 620 B.C. Then, at about the time of the captivity in Babylon (586–538 B.C.), Jeremiah, Ezekiel, and the rest of Isaiah were written. After the return, Ezra brings to light (444 B.C.) "God's Law which was given by Moses." The Psalms and Proverbs are gradually collected together, histories and prophecies are compiled and written, nobody knows by whom. The apocryphal books follow, and the book of latest date in the Old Testament is thought to be Daniel. (See *The Growth of the Hebrew Religion*, by W. C. Gannett, *Unity* office, Chicago.)

The author of *Supernatural Religion* proves the spuriousness of the Gospels. Draper, in *History of the Conflict between Religion and Science*, shows the Oriental origin and human development of Christianity. Greg's *Creed of Christendom* and Taylor's *Diegesis* do the same. All the Christian dogmas are found in previous creeds in Egypt, Persia, and India, or in classic mythology. The miraculous conception dogma was common among the ancients. Romulus was the son of Mars; Plato, of Apollo; Alexander, of Jupiter Ammon; Sosiosh, the Persian saviour, was born of a virgin, and will come to regenerate the world, preceded by two prophets. The Persians taught the doctrine of the resurrection, that the good will inherit the earth, and Ahriman and his angels will be purified in a lake of molten metal. One author says: "Every Christian dogma has its origin in a heathen rite.... Christian theology is only a *potpourri* of pagan mythologies." Renan says, "Nearly everything in Christianity is mere baggage brought from the pagan mysteries." In his latest work, *Marcus Aurelius*, he considers the Jewish prophets, especially Isaiah, as the founders of Christianity, saying that all Jesus did was to repeat, in popular charming language, what had been said seven hundred and fifty years before in classical Hebrew. The coincidences in the lives and teachings of Jesus and Gautama Buddha have been remarked upon by many writers. Taylor says, "Everything of Christianity is of Egyptian origin." The fables of India and Persia were brought to Egypt, and recast.

Many of our interpretations of Scripture and much of their authority rest upon the assertions of the "Christian Fathers." If any one would gain a true estimate of the value of the testimony of these worthies, let him read of their lives and writings and superstitions, and he will be slow to accept their dicta about "God's Word." If one would see how legends originate and spread, and see a plausible suggestion for the existence of many of the Bible stories, he should read John Fiske's *Myths and Mythmakers*, and S. Baring-Gould's *Curious Myths of the Middle Ages* and *Legends of Patriarchs and Prophets*.

Modern research is throwing great light on the manner in which the present Bible was compiled. How a majority of one in a council of "Fathers" could make one book the infallible word of God, and a small minority condemn another to be the word of man, is a mystery which it needs the authority of an infallible Church to make one believe. Pappus, in his *Synodikon* says all the Gospels were put under the communion table, and the inspired ones got up on the table, in answer to prayer. Stanley, in his Eastern Church, alludes to this "tradition." But, whether this story is true or not, can it be that God's Word has been left by its author to drift about the world, subject to human alteration, to be finally rescued from a mass of literary rubbish by a council of men in a dark and superstitious age? This is not God's way, or at least not the way of a God whom this century can worship.

What a terrible waste of intellect there is in the world, arising from this assertion that the Bible is the word of God and contains a harmonious system of final truth! When the powers that are now used to defend theories concerning the Scriptures are directed toward positive explorations of nature's secrets, how the world will spring forward! When theological seminaries become science schools, and look for truth in living facts, they will be greater boons to the world.

To my mind, the true theory of the Bible is that, on the principle of the survival of the fittest, the best and most helpful writings of men have been preserved; and the book is to be prized as an evidence of the working of the secret power of nature in men's minds, and also for whatever of truth it contains, according to present perceptions of the good. It is the bad use men have made, and are still making, of the Bible that has done harm. Interpreting men's sins and crude ideas as revelations of God's mind debases man. If men now find the Mosaic beginning and the Christian ending of the world, as portrayed in the Bible, to be opposed by science and sense, is it not more honoring to God and creditable to man to admit that there is no revelation save what men have slowly and painfully learned for themselves from nature's operations, while the race has been "toiling upward in the night" of ignorance and superstition? One revelation pervades all nature; and the students of this revelation have recorded their observations in Bibles, works upon natural history, and histories of man. The "Books of Moses," Hume's, Gibbon's, and Macaulay's histories, Humboldt's *Cosmos* and Darwin's *Origin of Species*, contain men's perception of revealed facts. The Psalms of David, Bryant, and Longfellow, the Proverbs of Solomon, Æsop, Cervantes, and Franklin, the prophecies of Isaiah, Carlyle, and Emerson, —all contain "the word of the Lord"; and the latest is the truest and the best, because most in accord with known facts and present needs.

ROBERT C. ADAMS.

EDUCATION LEAFLETS.

The National Bureau of Education has issued a number of very interesting leaflets and pamphlets bearing upon education here and in Europe. No. 5 gives an account of what are called "Maternal Schools in France." These are established to take care of children under six years of age who have not sufficient family training. Without the elaborate and somewhat fanciful system of the kindergarten, these schools aim at the same object,—the development of all the faculties of the child by a broad, genial exercise under the guidance of superior minds, or, in other words, "consists in imitating as closely as possible the process of education adopted by an intelligent and devoted mother." Object lessons, familiar talks, singing, drawing, reading, and arithmetic, etc., bodily exercise, games, and plays of all sorts, and simple gymnastics fill up the hours. The effects of such a school on a child should be "sound health; hearing, sight, and touch somewhat trained; ... *clear although infantile ideas of the rudiments of what will subsequently be the subjects of primary instruction*; ... a taste for gymnastics, for singing, and for drawing; an eagerness to observe, to listen, question, and answer; *the power of attention*; a generally quickened intelligence and a mind open to receive good moral influences." If these results can be accomplished in the first six years of life, as we believe they may be in a well-ordered school or family, the value of the next period of school life would be very much enhanced; and the pupil would be much better fitted to enter upon the work of life at the early age at which the majority must leave school. The minute

Digitized by Google

directions in regard to the school buildings are worthy of careful study, showing the admirable good sense which the French generally apply to practical questions. No. 3 gives an account of the University of Bonn, which will be valuable to those wishing to decide upon a course of study in Germany.

No. 4 is a lecture on Industrial Art in Schools, by Charles G. Leland, of Philadelphia. He takes the ground that "man develops the ornamental during the infancy of every race before the useful," and he thinks that the same course should be pursued in industrial education. Without deciding upon the correctness of this maxim, we may say that the lecture contains many valuable suggestions in regard to decorative and industrial art. We especially commend the following caution: "The teacher should beware of letting pupils choose too freely what they will do. Left to themselves, all the silly ones, and not a few of the wiser, would elect 'to paint,' probably to paint pretty little posies in water color, oil, or china, which would be the positive end of all practical or useful art industry with them. If you would keep a girl from becoming an artist, set her at flower painting."

A small leaflet gives an account of high schools for girls in Sweden. Gen. Eaton says: "Among the most engrossing topics of educational interest at the present day are the numerous questions connected with the improvement of the education of women. I am called upon to give the experience in this connection in every part of the civilized world." The total number of girls' high schools in Sweden is now between sixty and seventy.

Another leaflet describes the National Pedagogic Congress of Spain. It is very satisfactory to see with what earnestness the best minds of Spain, especially among the working classes, are considering the great problems of education. These were the questions discussed at one session: "What should be the organization and general conditions of public education? Should the education be gratuitous or paid for, obligatory or voluntary? What dispositions and means should be taken to diffuse education among the people, and increase the attendance of scholars at primary schools?"

E. D. C.

JOSEPH COOK'S CHARGES AGAINST KUENEN AND LEYDEN.

We recently had occasion to note, in *The Index*, the pleasure which some of our Catholic exchanges appear to feel whenever they can glean from the newspapers an incident in the life of any person in France, whose name has been connected with liberal principles, which reflects upon his character; and the quickness with which they adduce it as evidence of the need of the old theological faith to keep men in the path of moral rectitude. We could but think of the frightful immorality of the Catholic Church a hundred and fifty years ago, and of the notorious manner in which, up to the very present time, while the Church has been in the ascendency in France, the French government has hushed up the offences of lascivious priests and monks. We observed, at the time, that we were not accustomed to allude to the moral delinquencies of theologians as any proof that their teachings are false. But they should be reminded, we added, that, in assailing the character of free thinkers, they employ an argument which can be used against themselves with terrible effect by any one who chooses to retaliate, although this is a kind of warfare, whether it be offensive or defensive, for which we have no taste.

This thought is very naturally suggested again by the recent passage between Joseph Cook and Mr. Edwin D. Mead in relation to the morality of the theological students of Leyden. The University of Leyden, as most of our readers very well know, has become recognized, in these latest years, as the principal seat of advanced Biblical criticism in Europe. The labors of Kuenen and his colleagues in Holland have almost created a new school of criticism,—a school which Mr. Cook chooses to denominate the "raw school," although we believe its conclusions are substantially accepted by almost all liberal scholars, are taught in Dr. Martineau's college in London as well as in the Harvard Divinity School, and are looked upon with favor and sympathy by such critics as Robertson Smith in the nominally orthodox world.

Mr. Cook, in his recent lecture upon Old Testament criticism, made a violent attack upon the Dutch school. He did not attempt to refute or to state its positions, but thought it sufficient to intimate to his hearers that the immorality of the theological schools of Holland, and Kuenen's hall in particular, was so notorious as to relieve them of the duty of looking into any books that might come from there. Men sometimes come from their studies there, he said, "with the filth of the pit upon them"; and he implored his hearers to join him in sending forth a breath of moral dignity "to sweep out of sight all theology that does not come from a pure heart as well as a clear head." On reading in the *Independent* the corrected and authorized report of this lecture it seemed to us that the charge of immorality against the Dutch school, as published, was weak compared with the language and manner of the attack as we heard it made from the platform, but as it appeared in print it was bad enough, and upon reading this astonishing impeachment, Mr. Mead addressed the following letter to the *Independent*:—

According to the report of Rev. Joseph Cook's last lecture, which appears in the *Independent*, Mr. Cook made the following statement: "I was told by a German professor, whose name is known throughout Christendom, that it is believed that more than a few theological pupils in Holland are immoral men. Nobody pretends to doubt that, in some of the theological schools of the Netherlands, and especially in the hall at the head of which Kuenen stands, morality is not indispensable to membership of a theological class. On a topic like this, only a whisper can be uttered. I said to my informant: 'If the facts were known in the United States that theological students in certain schools are believed, on credible evidence, to be immoral men, we should no more take our theology from that style of school than we should take our drinking water from these gutters.'"

Permit me, through your columns, to ask Mr. Cook the following questions:—

Does he mean to assert that there are more immoral men among the theological students of Leyden than among those of "ultra orthodox" Leipzig?

Does he mean to assert that morality is indispensable to membership of the theological classes of Leipzig, and will he state wherein the test of character for admission to the lecture rooms and *seminars* of Luthardt, Kahnis, and Delitzsch differs from that for admission to Prof. Kuenen's classes?

If credible evidence be given that there are immoral men among the theological students of Leipzig, will Mr. Cook reject Delitzsch's views of the Old Testament? And, if evidence be given that the average morality of the theological students of Leyden is higher than that of the students of Leipzig, will Mr. Cook join the "raw school"?

Will Mr. Cook please give his evidence of the conspicuous immorality of Prof. Kuenen's students, as compared with the Leipzig students,—which "nobody pretends to doubt"? I am that nobody; and, on a topic like this, a "whisper" is precisely the thing which *cannot* be uttered unchallenged, and which, I am sure, Mr. Cook will see, on second thought, no man should wish to utter.

To this communication, Mr. Cook pays attention in his last lecture, and this is what he says:—

"I weighed every one of the few words which I thought it my duty to utter on that subject, and need not say that I have abundant evidence to justify them all, though, for evident reasons, I cannot put it before the public. If my questioner has been casting a drag-net into the life of the students in the theological departments of European universities, and has gathered matter of scandal, and wishes to open his net in the face of the public, I cannot forbid him from doing so; but he shall not have my assistance in this procedure." He then repeats his assertion that the fact of the flagrant immoralities in question is "notorious."

Mr. Cook has certainly placed himself in a very unpleasant predicament. He has made the most serious charge which it is possible to make,—impeaching, in the most sweeping and offensive manner, the general moral character of a great religious school. He has proclaimed his charge upon the house-top, although admitting that it is a matter upon which only a whisper should be uttered. He is asked to give an account of himself, and has nothing to say, contenting himself with repeating his charge, and implying that there is no way of substantiating it but an indecent one. And, then, he vents himself upon his critic by insinuating, forsooth, that, since he is charged with throwing mud himself, it must be because his critic is dredging some puddle. Is this manly or honest?

We think that Mr. Cook very much mistakes his man, if he imagines him to stand for any principle which he would ever find it necessary to defend by "abusing the plaintiff's lawyer"; and we should be very much surprised ourselves, if this is the end of the episode, and if a very sharp moral does not yet remain to be pointed.

In this general connection, the following note in the last number of the *Independent* is rather significant:—

As Mr. Cook's "whisper" has been challenged, perhaps it is our duty to give the following extract from a letter from the scholarly and careful writer of the article upon the University of Leyden, which was published a few months since in *Harper's Magazine*,—the only person we recall who has studied in both Leipzig and Leyden, and perhaps as competent as any American scholar to speak upon this subject:—

"I have no reason to suppose that any difference exists, in point of morals, between the theological students of Leipzig and those of Leyden. So far as my acquaintance extended in Leyden, my impression is altogether favorable of the vigorous intellectuality of the theological students there, and of their high personal character. I did not know all or even the greater number of the students, but some I knew intimately. At Leyden, as in the German universities, students of theology pursue their studies as they would in any department of science or philosophy, and I think with equal ardor and desire to know the truth.

"Prof. Kuenen is a noble and winning personality, and I cannot conceive of his influence as being anything but elevating and pervaded by a true humanity. The high standard of scholarship required for university degrees and church preferments would, I should judge, be favorable to thorough work, and thus indirectly to a regular and studious life. There may be students at Leyden, as elsewhere, whose work is perfunctory, and who do not rise to the full dignity of those who are studying to be moral and religious teachers of men; but this is an experience found in other countries and in all communions." B. F. U.

THE ALBANY CONVENTION.

The Convention of the Free Religious Association in Albany, N.Y., will be held on Thursday afternoon and evening, March 8, and Friday afternoon and evening, March 9. The Thursday afternoon session will open with an address of welcome, followed by the address of the President, William J. Potter, on "The Religion of Humanity." Dr. M. Schlesinger, of Albany, and others, will also speak at this session. Thursday evening there will be an address by Mrs. Anna Garlin Spencer, on "The Relation of Free Religion to Charities

Digitized by Google

and Reforms"; and B. F. Underwood will speak of "Liberal Thought and Practical Reform." Friday afternoon, Mrs. Imogene C. Fales will read a paper on "Co-operation and Progress," Rev. E. P. Powell will speak of "Our Heredity with God," and William H. Spencer of "The Christ of the Gospels and our Moral Ideal." Friday evening, F. A. Hinckley will speak on "Mystery," and an address will be made by Miss Mary F. Eastman.

F. A. HINCKLEY, *Sec'y F. R. A.*

NOTICE TO SUBSCRIBERS.

A large number of our subscribers are in arrears in their payments. Some of them, as we happen to know, are persons of wealth, to whom the paying out of three dollars, and, in some instances, of a hundred times that, would be nothing. And here we, in *The Index* office, are planning and contriving how to make the ends meet. "Brethren, these things ought not so to be." If you who are thus at fault would only send to *The Index* its just and legal dues, the ends would not only meet, but lap beautifully over on the right side. Let then every one who means to be honest look at once at the mail-tag on his paper, and act as it and an honest conscience shall direct. A word to the *just* is sufficient.

EDITORIAL NOTES.

THOMAS PAINE'S abhorrence of slavery is well known to those familiar with his writings. Edward Rushton, in 1809, in a letter to a friend, wrote: "In 1791, Thomas Paine, conversing with a gentleman on the subject of the slave-trade, wondered that God Almighty did not send a thunderbolt, and blast the damned town of Liverpool."

A WRITER in the London *Secular Review* observes: "A certain similarity of temper, it has often been observed, pervades the extremes of theism and atheism. Turn them as you will, suffuse them equally with the hue of liberal thought and culture, the dogmatic affirmation of the one and the equally dogmatic negation of the other cannot be hidden."

AT the annual meeting of the Free Religious Association in 1876, Mr. Frothingham, then its President, said:—

The Association began its existence in a departure from the Unitarian body, which it was felt at the time —perhaps with an exaggerated feeling—was lapsing into the rigidity of a sect. Therefore, the word "free" was put first. A religious association it hardly is. It recognizes religion as an institution of society, it recognizes religious doctrines as existing in the community, it recognizes the religious sentiment as an element of human nature; but it has no doctrine of its own. It propounds no dogma, and resents the imputation of dogma; it sets up no ecclesiasticism, it builds no church, it has no definitions; it does not even define religion, and the members of the society attempt their own definitions to suit themselves; but any liberty of this sort is freely conceded.

THE *Christian Register*, in refutation of the statement of Rev. Dr. Ward, a missionary, who declared that, "after a residence of twenty-five years among the heathen, he had never known there *one moral man*," quotes the following from the *Laws of Life*, by Dr. Albert Leffingwell, a man of education, who has travelled extensively:—

Not only are laws better obeyed in Europe than with us, but we are surpassed by people whom we are accustomed to regard as only half civilized. "Better not go down that street this time o' night," said a London policeman to me one evening, within sight of Westminster Abbey: "it isn't safe for strangers." Yet I have wandered afoot and alone throughout the by-ways of Tokio and Osaka late at night, without the least apprehension of danger, though surrounded by a people who could hardly understand a single sentence I might say. Even India, with a population the most poverty-stricken on the face of the globe over which a civilized flag floats, is one of the most law-abiding countries in the world. In proportion to numbers comprising the population, the criminals of India are far more often foreigners than natives, strange as that may seem. While in Bombay, I learned that the authorities had discovered the strange fact that increase in criminality was almost exactly in proportion to adoption of European ideas,—in other words, the heathen were more law-abiding than the whites who governed them.

WE have to thank Louis Prang & Co., of this city, for a number of beautiful samples of their Easter cards for this season. This well-known and deservedly popular firm, who have done so much for the encouragement and advancement of art and æsthetic culture in this country, have seemingly surpassed all previous efforts in their Easter cards for this year. In looking over these exquisite designs, poetically and artistically emblematic as they are of the doctrine of the immortality of the soul, —a religious doctrine of which Easter is the outward symbol and embodiment,—we feel tempted, for the moment, to exclaim with Agrippa, "Almost thou persuadest me to be a Christian." The services of the best and most original American artists have been secured for these cards, and Messrs. Prang & Co. deserve the thanks of the American public for their work in this direction. The tastes and needs of all classes have been consulted by them; and they have an endless variety to select from, suited to the varied wants and means of all lovers of the fine arts.

MR. CHARLES WATTS, editor of the London *Secular Review*, to whose lectures in this city a correspondent calls attention in another column, is a gentleman of ability and character, and is the most active and, next to George Jacob Holyoake, the fairest and best living representative of English Secularism. His lectures in this city have elicited praise from all who have heard them. He is a forcible, earnest, and eloquent speaker; and his discourses are marked by candor, a generous spirit, and perfect courtesy toward those whose views he criticises. In his own country, he has done good service with tongue and pen for the cause of liberal thought; and he stands deservedly among the foremost advocates of Secularism in England. He will give two more lectures in Paine Hall next Sunday afternoon and evening, after which engagements take him to Canada. His business requires his early return to England, but he informs us that he hopes before many months shall have passed to revisit this country. He will receive a cordial welcome from those who have heard him or know of the good work he has done and is doing.

MR. THEODORE STANTON, who is now residing in Paris, and who has attracted to that city his distinguished mother, Mrs. Elizabeth Cady Stanton (we trust not for permanent expatriation in either case), had recently an interesting article in the *Nouvelle Revue* on the Cornell University, of which he is a graduate. The article has won the attention of M. Francisque Sarcey, who is famous in French journalism for his attacks on "clericalism," and who devotes a column to it in the conservative Republican and anti-Church Parisian journal, *La XIX^e Siècle*. The two points of Mr. Stanton's article that particularly attracted M. Sarcey's notice are those in which he speaks of Cornell's solution of the problem of co-education of the sexes, and of its effort to be an entirely unsectarian university. Both of these features strike the French journalist as something wonderful,—something which almost separates the American people from the French as a distinct race. In one matter, however, he detects an old acquaintance. After quoting Mr. Stanton's statement that, though Cornell has no chaplain, nor stated prayers, nor exercises in the interest of any one religious denomination, it yet invites to conduct Sunday services distinguished preachers of all denominations, and that all have accepted these invitations *except Catholic preachers*, M. Sarcey adds: "This refusal of the Catholics to come into an arrangement where they would be treated as if on the same level with the Protestants of every sect or with the Israelites,—do we not recognize in this trait the intolerance of *our* priests? Everything or nothing: that is their device."

MR. A. B. BRADFORD, in the Pittsburgh *Despatch*, says:—

But another fact adds to our surprise at the seeming ignorance of Darwin on the subject of religion, and the war which was going on between it and that branch of science called the Evolution Hypothesis. He did not know the meaning of the word "atheist," but confounded it with the word "anti-theist." Now, a theist believes, from what he sees in nature, that there is a God outside of nature, who produces all the phenomena we see. But an atheist is one who simply says that to his mind the proposition is not proven. He does not say there is no God; for this would be doing what he condemns in the theist,—speaking positively where the evidence is not conclusive. He is simply an agnostic, with his mind ever open, waiting for more evidence. The Greek letter, alpha, when prefixed to the word theist, is, what the scholars tell us, only privative, not negative; and this defines an atheist to be one who sees no satisfactory proof of God's existence, instead of an anti-theist, who most unscientifically would affirm that there is no God at all. The confusion in the public mind on this subject has arisen from the fact that, when a sceptic fights against the idea of the Jewish Jehovah, the Church people imagine that he is disbelieving in the true God,—the intelligent force in the universe who makes for righteousness.

Mr. Darwin's "seeming ignorance" may be explained by the reasonable supposition that he used the word "atheist" as commonly understood; *i.e.*, as implying dogmatic denial of Deity. It is thus generally defined in the dictionaries, and used by leading writers, especially by theological writers. The substitution of the word "agnostic" seems to have been made with the desire to guard against the popular misapprehension in regard to the position of the atheist,—a misapprehension due in part, no doubt, to the writings of some of the atheistic writers who have combated theism. But why does Mr. Bradford represent that a theist must believe in "a God outside of nature," when many theists do not believe in "a God outside of nature."

POETRY.

For *The Index*.

WHISPERINGS.

A Question.

We who send our hopes afar,
With the untaught flight of birds,
O'er the untrod wilds that are
Richer than a poet's words,—
Dare we, if the years return
Burdenless, o'er wasted fields,
Happiless, with jests men spurn,
Faithless of the promised yields,
Tread as once familiar ways,
Or upon the hearth of home
Find sweet days like olden days
Ere the restive heart could roam?

The Living Age.

Ye fathers, old
With wiseman's gold;
Ye children, fleet
With wayward feet:
We pluck unseen
The flower between.

Out of throned wrong
Thoughts holy throng,
And winnowed needs
From fruitless deeds
Are light and fire
To new desire!

HORACE L. TRAUBEL.

The Index.

BOSTON, MARCH 8, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

Humanity as the Supreme Being.

BY WILLIAM FREY.

To prove that humanity is a concrete, living, and supreme being, is important to an explanation of the Religion of Humanity, because on the efficiency of the proofs depends the acceptance of the new religious forms, as shown in a previous article (*The Index*, Aug. 3, 1882).

The present article, therefore, is a careful collection and arrangement of the scientific arguments which may sustain this assertion. We have now an abundance of scientific material unknown at the time of Auguste Comte. Consequently, we regard it both as advisable and necessary to set aside the historical method, so brilliantly used by Comte, and depend chiefly on the methods used by modern thinkers, especially by those who oppose Positivism. And Herbert Spencer, being one of these, will supply us with the most powerful arguments in our favor.

At the very start, we must agree that all nations, kingdoms, and tribes which exist on the earth, are organisms in a more or less advanced stage of development. Herbert Spencer has proved this with ability and erudition. Any one having the least doubt about it should read his admirable essay on "Social Organism," in which can be found the most detailed enumeration of all points of resemblance between a society and an individual organism. He will learn there that all seeming differences, which strike the common mind as the very essential ones, are, after due analysis, but farther points of resemblance; or, to use the words of Herbert Spencer, that "ALL these differences are scarcely greater than those which separate one half of the organic kingdom from the other." Herbert Spencer compels us to agree with him that "society, under all its aspects and through all its ramifications, is a growth, and not a manufacture."

And yet there is a point in the article referred to which requires our especial attention. After having worked so much to prove Comte's idea, Herbert Spencer does not wish to become a Comtist. Basing his dissent on one of the differences which he had refuted, he says that society does not resemble a living organism. And why? Because "the community as a whole has no corporate consciousness. And this is an everlasting reason why the welfare of citizens cannot be rightly sacrificed to some supposed benefits of the State, but why, on the other hand, the State is to be maintained solely for the benefit of citizens."

Basing himself on this one argument, Herbert Spencer stands against the crushing array of all other facts which he so industrially gathered in his essay. He has a right to do so. No matter how many points of resemblance there may be, this point of difference alone, if true, will annihilate the strength of all others.

We must therefore closely analyze this objection of Herbert Spencer, as it is the only obstacle in our way to the otherwise unavoidable recognition of a Supreme Being.

First of all, we cannot help noticing that the concluding words of his argument are in strange contradiction to the facts known by everybody. Herbert Spencer says that the State exists solely for the benefit of citizens; but history shows that societies, in their struggle for existence, constantly emerge into wars, involving a great loss of individuals; and individuals, therefore, are sacrificed to some supposed benefits of the State. What moves the individuals to such a sacrifice? What moved Americans to participate in the last bloody war? The feeling which prompts a man to sacrifice his life for the benefit of his country is neither a dead nor an obnoxious feeling. Patriotism was strongly imbedded into human nature long before man began to reason about it. To this feeling, we are indebted for our civilization. Patriotism relates to a social organism in the same way as the instinct of self-preservation relates to an individual organism. As without self-preservation there would be no organic life, so, without patriotism, we of this nineteenth century would roam like wild beasts.

The instinct of self-preservation exists in every organism, social as well as individual. And as an arm, unconsciously to the man, will rise and expose itself to danger, in order to save more vital organs, so multitudes of men will arise, without the least enforcement, in order to save their country in a moment of danger.

After dismissing this preliminary error of Herbert Spencer, let us consider the very stronghold of his argument. He asserts that society possesses nothing which corresponds to the individual consciousness. But the following quotation from his own essay flatly contradicts this assertion.

"Those," says Herbert Spencer, "who regard the histories of societies as the histories of their great men, and think that these great men shape the fates of their societies, overlook the truth that such great men themselves are the products of their societies. Without certain antecedents, without a certain average national character, they could neither have generated, nor could have had the culture which formed them. They were both before and after birth moulded by their society, were the results of all these influences which fostered the ancestral character; they inherited their own early bias, their *creeds, morals, knowledge, aspiration, which are products of the general developmental process.*"

Now let us ask, To which object must we ascribe these "products of the general developmental process" of a nation? Who possesses the traits of national character, creeds, morals, knowledge, and aspiration? Evidently, not individuals. Although each member of society contributes something toward their development, none possesses them all. And yet these national traits exist beyond any doubt: they are tangible facts, subject to the investigation of a socialist as much as the moral and mental traits of an individual are subject to the investigation of a psychologist. The traits of German nationality of today are as distinct from those of English or French as one individual is distinct from another. To whom do these traits belong?

The only rational answer is that these national traits, being a depository, a summing up of all that was developed by the past and present members of a society, belong properly to the social organism regarded as a unit. They represent the soul, the mind of a social organism, exactly in the same way as the summing up of all capacities of a man represent *his* individual soul, *his* mind, although it is produced by the co-operation of the past and present cells constituting his body.

We know that the change of the cells is a necessary condition for the development of the individual consciousness; that, although the body of a man is constantly changing, his consciousness preserves the experiences of the past cells for the benefit of the present ones. In the same way, the change of individuals in a society is a necessary condition for the development of its corporate consciousness, which carries within itself the experience and knowledge of the past for the benefit of the present generation.

The opinion that society resembles other organisms, not only as a material body, but as a being endowed with high moral characteristics, is held by persons of high standing in the scientific world and not at all connected with Positivism. Renan, for instance, in his essay on "Nations," says: "A considerable accumulation of men creates a *certain moral conception. This conception alone must be called a nation.* And as long as it induces the individuals to self-sacrifice for the benefit of society, so long it is legitimate and has right to existence."

Thus, both our reason and the authority of scientists equally affirm that Herbert Spencer's point of difference which he takes as a basis for individualism is a still farther point of resemblance and a basis for the recognition of a Supreme Being. True, social organisms, even the most advanced of them, have not yet reached the perfections of the human body; but, when we take into consideration the moral conceptions represented by either, we see at once that a society is far superior to the individual men composing it.

No man can possess all that is developed by the society in which he lives. No matter how great intellectually, morally, or religiously he may be, he cannot represent in his person the full amount of knowledge, devotion, and morality diffused among the other members of his society. He may be superior to all other men, if compared one by one, but much inferior to the society as a whole. Truly, says Herbert Spencer, that man is the product of his society. Yes, man derives everything from the society which surrounds him,—*physically*, because, if left alone, he would die immediately; *mentally*, because the greatest bulk of what he knows was discovered by the past generations, and every acquisition of his own is possible only by and with the co-operation of others; *morally*, because he inherits "the organic morality" which saves him from the necessity of beginning anew the experiences of the past, and because every moral improvement can be realized only by the living with others. And when the time comes for him to die, to give his place to the younger cells of the society, his body will go back to the earth which fed him materially; while all his achievements in knowledge, all good influences, his noble aspirations, will go into the same depository which fed him spiritually. The soul of each man becomes the inheritance of the soul of society, and will forever play its parts in the future development of the social organism.

Some may ask, What would become of the evil actions? They will count and tell exactly in the same way. The principle of the conservation of forces teaches us that no action is lost, that everything has a certain influence on others. Among the multitudes of forces which operate on the social depository and determine its development, good actions, thoughts, and feelings represent positive forces which contribute to its advancement; while evil ones are negative forces, retarding its progressive movement. But the existence of evil by no means diminishes our obligations for the good which we enjoy. Once we put ourselves in a filial relation to the society in which we live, feelings of deep gratitude will take the place of pride and self-conceit, and the existing faults and vices will only stimulate us in our efforts to remove them.

Being merely cells of society, men, from time immemorial, have been building up social organisms. Unconscious of their destiny, men are always under the sway of the imperative law of nature which commands that the life of the parts of an organism is subservient to the life of the whole. Regardless of their theory of individual sovereignty, in spite of their selfish propensities, men were constantly driven into co-operation. Against their wishes, they were compelled to build up better life for the future generations. And this conflict, between the stern demand on one hand and the personal inclinations on the other, *is the* source of all our miseries. Up to this time, men have been working out the destinies of nature like "dumb, driven cattle"; but now, with the new light before us, every one of us can see his duty, and "be a hero in the strife." Our work becomes now a voluntary offering from our hearts, independent of any compulsion; and the more cheerfully we submit ourselves to our duties, the more chances we have to enjoy happiness, because happiness, after all, is but living in accordance with the laws of nature.

The study of social organisms brings us to another result, which must be shown in a most conspicuous

Digitized by Google

way. As long as individuals were regarded as superior beings, it was impossible to explain why each successive generation takes up the achievements of its predecessors, and continues to develop them in a certain definite and determinate way toward a certain end, why each society represents a continuous development of certain specific ideas. To explain this phenomenon by a mere influence of great men is a too vague and too shallow attempt to reveal the mystery. A more powerful agency was needed to unite into a harmonious whole the multitudes of men with various temperaments, dispositions, and abilities. And no wonder that men, from the lack of a better explanation, were inclined to see in history a manifestation of God's providence.

Now, we are able to make one step toward the solution of the enigma. We know that the continuous development within each society is a result of its being a living organism. We can now read Draper's *History of Intellectual Development in Europe* with great delight. His graphic representation how each society was developing certain specific ideas gives us a strong support to our conclusion that societies are beings endowed with high specific characteristics. But, after all, such conception does not fully explain the mystery in the development of the whole human race. In fact, societies themselves cannot progress perpetually, and must have their time of decay. Like men, they appear to develop certain ideas, to perform a particular part in that great mysterious drama called human history, and then dissolve themselves. Yet through all changes, successions, and co-existences of different societies, we see the same steady, uniform, and continuous development of industry, science, arts, morals, and religion, as though all societies existing in a certain time continue the work of the preceding ones in a certain predestined way.

Historians explain this phenomenon by the commingling and mutual influence of men and nations. But it is a childish explanation. It may possibly explain the rapidity of the development of the human race and the complexity of its pursuits, but never its continuity. As the continuous development within a society could not be explained by a mere contact of individuals, so the continuous development of mankind cannot be explained by a mere contact of societies. And to Auguste Comte belongs the immortal honor of solving this problem. He was the first to discover that all the varieties of historical facts are the results of the organic growth of another still larger organism, which grows out of the combinations of societies exactly in the same way as each society is growing out of the combination of individuals.

Those who see only differences in various societies, their seeming incoherency and independence of each other, fail to recognize the nations as parts of another organism. But the discovery of Auguste Comte is based on the same facts and on the same method of reasoning which were used by Herbert Spencer in his recognition of social organisms.

Let us look closer at the facts. Although each State has its well-defined boundaries, its rulers, army, and its own industry, yet all States are bound together by the chains which are unaccountable by many, but apparent to all. We see this bond of union: 1. In the growing idea of brotherhood, which strengthens daily from the contact and intercourse between the men of different nations. The fusion of customs, arts, sciences, and literature of different nations makes a deep impression that we all help each other in the struggle for the better life.

2. Wars between the States, intense as they are now, are of less occurrence to-day than ever before. The States begin to recognize the necessity of international congresses and tribunals to settle their disagreement.

3. Since the introduction of rapid communications, the dependence of one nation upon the others becomes more and more conspicuous, and every little disturbance in one corner of the world affects more or less the welfare of all. Finally,

4. Industry, in spite of all efforts of protectionists, has already laid its channels irrespectively of the boundaries of kingdoms; and the warlike spirit of ambitious rulers is already checked by the growing commercial intercourse between the nations.

The mutual dependence of nations is rather frail at present; but this fact does not diminish the strength of the arguments that nations are the parts of another larger organism, because a great many organisms, acknowledged by all as such, have the same frail dependence of their parts. Take, for instance, the animal kingdom. We have there a great sub-kingdom of articulate animals. In the lower stages of development, these animals consist of numerous segments, each segment being furnished with all vital organs. Such organisms may be cut in parts, and each part will live and even multiply itself independently from others. But, with the farther evolution, among the highest types of articulate animals (well represented by centipedes), the segments are completely fused together, and the internal organs are no longer uniformly repeated in all the segments; and, although the skeleton and the muscular system never lose all traces of segmentation, the internal organs do not conform to the external division, but penetrate the organism independent of them.

The same phenomena are seen in every social organism during its feudal period. A nation, then, was divided into distinct communities alike to each other in their organization. Each of them had its boundaries, its soldiers and laborers, its traders and rulers. They were held together nominally by fictitious submission of their respective rulers to some sovereign. They were in constant war with each other. But in time, along with the growth of central power, the demarcation of these communities disappeare, their separate organizations merge into the general organization of a nation. And, although the division into counties and parishes remains long after their fusion, the industry, which carries on the nutrition of society, wholly ignores these divisions, exactly in the same way as the internal organs of the centipede ignore the boundaries of segments or as the international commerce of our time ignores the boundaries of kingdoms.

Now, if we recognize an articulate animal as an organism, if we say that a society during its feudal system is an organism, nothing prevents us from the recognition of another, still larger organism, which embraces all mankind, and in which all the states, nations, or tribes are but different segmentations. And the same power of evolution which, during a feudal period, fused together the parts of a nation,—the same power will unite closer the parts of this mighty organism, and will develop a better division of functions, a stronger dependence of parts.

We can prove the existence of this organism in another way, by extending the other method used by Herbert Spencer.

Herbert Spencer demonstrates that each society is an organism, because it always passes through the same succession of phenomena which invariably appear in the development of all organisms, irrespectively of time, place, or surrounding circumstances. With wonderful learning and acumen he illustrates this order of evolution; and for those who never read his admirable essay on "Social Organism" it is necessary to restate his arguments, even in "condensed form."

He tells us that in the simplest organisms, such as yeast plants or sponges among the individual organisms and bushmen among the social ones, there is no division of functions: each cell lives for itself, and their union is affected more by external causes than by the internal ties. And yet even these simple organisms must necessarily pass through a certain developmental process, which begins by the separation of organs controlling the movement of the body from organs devoted to its nourishment. We see this fact in the separation of the peripheral layer of each animal germ into two layers. From the outer, serous layer are formed nerves, muscles, and bones; while the inner layer absorbs the nourishment from the yolk. A corresponding phenomenon is seen in the appearance of ruling and governing classes in each social organism.

At first, this differentiation is not stable. Hydra, for instance, may be turned inside out; and the stomach will perform the duties of the skin, and the skin the duties of the stomach. In the same way, a chief of a primitive tribe very often becomes a common warrior; while the function of ruling is assumed by another member of the tribe. But, with the farther evolution of organic life, this differentiation becomes more stable and distinct; and then presently arises a third set of organs. Between the two layers of a germ there appears a third, vascular layer, out of which is developed a system of vessels to transfer nourishment from the places where it is absorbed to the places where it is needed for growth and repair. The same phenomenon repeats itself in every social organism, when, in addition to the existing classes of slaves and masters, there appear a class of merchants.

A still farther stage of development brings us to the formation of articulate animals, which, as has been shown previously, so wonderfully corresponds to the formation of a feudal system in each society.

All these facts allow Herbert Spencer to say that each society passes through the same order of evolution which exists for individual organisms. And this conclusion gives, therefore, an additional proof that each society is a living organism.

Now, let us apply the same method to the development of mankind.

In the earliest periods of human history, we find only a mechanical agglomeration of societies, each of them living by itself. Their union is affected either by common origin or by the mutual aid in joint attacks or defences, and was not stronger than the union of monads of a sponge or the union of bushmen savages. Later, we find the ascendency of a certain society over others; but this crude differentiation was not stable and definite. Athens and Sparta alternately held supremacy over the other societies of Greece: their relation to each other was similar to that of skin and stomach of a Hydra. But, amid the confusions and tumults of war, there arose a distinction between the metropolis and its colonies, corresponding to the distinction between serous and mucous layers in animal germs or to that between nobles and serfs in a society.

Out of the relations existing between colonies and metropolis grew the international commerce whose functions and the time of appearance perfectly correspond to those of the vascular system in the individual organism or of traders in a society.

With the increase of the number of societies coming in contact with one another, the same conflict for the supremacy was going on all the time, only on a larger scale and with more lasting effects. The Romans subdued the world, and were living at the expenses of the conquered nation. Still later, Western Europe took the ascendency over the other parts of the world, and everywhere planted its colonies. But, with every step in this direction, the differentiation of parts was getting more stable and definite, the predominance of one part of the world over the others became an established fact, and the international commerce grew in its complexity and dimension to such extent as to become a necessity for the existence of the different parts of this mighty organism, whose degree of development may be well compared with that of a society during the feudal period.

These facts are sufficient to show that mankind as a whole has undergone the same changes which constitute the evolution of all organisms; and, thus, we acquire an additional proof of the existence of the organism including the whole human race.

Having established the material existence of such organism, let us turn our attention to its spiritual aspect.

We have shown that each social organism has a depository of its peculiar characteristics; that this depository, developed by the co-operation of all dead and living members of the society, belongs to the society as a whole, and determines its individuality and its continuity. Now, having admitted the existence of a still larger social organism, we must admit also the existence of another still higher and broader depository of all human achievements. It arises as a result of the work of all past and present societies. It is unthinkable without the co-operation of societies, yet it does not belong properly to either of them separately, but to all of them united into one organism. In this depository, nothing is national: everything becomes human. From this depository, each nation draws and develops certain ideas in its particular way; but, when the time comes for its dissolution, the work does not perish, but goes into the same common treasury as an inheritance of all and as a permanent element in the future development of mankind.

This depository of all human achievements explains the steady growth of mankind, and secures the continuity of human progress. Because, while individuals, easily influenced by little disturbances, are constantly tossed to and fro, while societies, being altogether steadier in their development, still sometimes represent retrograde movement, only this mightiest of all organisms,—which includes all men and nations, which carries within itself the experiences and achievements of untold ages, which represents a resultant of all inward and outward forces operating on

Digitized by Google

societies,—only this organism can move steadily and unflinchingly on the mysterious sea of the Infinite, regardless of the tumultuous waves tossing around it. A temporary suppression of truth and virtue may exist in one or another country, but it cannot be found in this Supreme Being. Great are our obligations to the society in which we live, but they are trifling in comparison to our obligation to the Being in which societies are mere transient phenomena. The superiority of social organism over individual becomes insignificant before the grandeur and sublimity of this highest organism, real, not fictitious, and yet so much superior that man can hardly conceive it, that it overwhelms our intellect and arouses our highest emotions.

Auguste Comte named this Supreme Being HUMANITY. We must always bear in mind that Humanity is his word, that we must accept it in his meaning, and cease to use it in a loose and meaningless way.

A few additional thoughts are necessary to complete this discourse.

Humanity as a living being may be regarded in two aspects. As we speak sometimes of the inner and outer man, so we may speak of the inner and outer humanity.

The inner humanity is one of the highest spiritual conceptions which can possibly be formed by man; yet, owing to its close resemblance to a human soul, it may be easily and correctly understood by every one. It is that agglomeration of traditions, knowledge, aspirations, morality, and religion which is slowly developing from the untold ages, and which is transmitted from one generation to another, to enrich the living with the experiences of the dead, and to be enriched by the contribution of the living. It is *the* mind which grows in its extent and ability exactly in the same way as grows the mind of every man. It constantly passes from easy to hard, from simple to complex. Its great discoveries and inventions, made through one or another individual, are never accidents, but always results of the past achievement. And, when this collective mind is ripe enough to discover new laws, the same discovery is very often done simultaneously by different persons. Newton and Leibnitz (differential calculus), Kant and Laplace (nebular theory), Darwin and Wallace (origin of species), are but few examples out of hundreds recorded in the history of science.

It is more difficult to form a clear conception of the outer, material humanity. By that, we must understand the organic agglomeration of all societies living on the earth in a given time. It matters not that some nations or tribes seem to be insignificant: they influence humanity by affecting more civilized nations. Besides, the races which we regard as worthless and degraded now grow stronger and better and may play, at some distant time, a very important part in human history. Remember that our own ancestors were insignificant barbarians two thousand years ago. To say that only a few chosen nations represent the outer humanity would be as correct as to say that only nervous system constitutes the material man.

Some Positivists go still farther, and include in their conception of material humanity the domesticated animals which help us so much in the improvement of the earth and in the progress of humanity. It is not an exaggeration to say that, if the world was deprived of the service of oxen and horses during one spring and summer only, the crops would be diminished tenfold, at least, three-quarters of us would die from starvation, and the rest would pass through unspeakable miseries. Auguste Comte, realizing our immense indebtedness to the domesticated animals, regards them as a part of humanity. Some laugh at this idea, but men of heart and brain regard this deduction of Comte as one of the best he ever made. It encloses into the religion of humanity all that is touching, sympathetic, and worthy of praise in Buddhism; it will prompt in a most efficient way the kind treatment of our dumb co-workers; it will impress on European nations the idea already recognized by Hindus and Japanese, that the killing and eating domesticated animals is a sacrilege, an outrage on human feeling, only a trifle better than cannibalism.

It may be said: Why, your humanity, which includes cannibals and domesticated animals, does not amount to a great deal; it is not a great object of reverence. Now, let the objectors decide what they value in a man. When they regard a man as praiseworthy, they do not apply their praises to the cells or parts of his body. They know very well that some cells are useless, some may be affected with disease, and many of them are necessarily in a state of decay. They praise the inner man, his soul, which alone and forever stands as his representative amid the continuous changes of matter. The same must be applied to humanity. When we consider its worth, we worship the inner humanity, its soul, not its outer embodiment. We know very well that some of its parts are degraded, some are decaying, some are almost useless, while some [as animals or cannibals of the Pacific Ocean] are much inferior to us; yet all these parts of the great organism are mysterious agents designed to perfect its soul and to transfer it to the succeeding generations for farther development. This soul is the only proper representative of humanity amid the continuous changes of societies and nations; and, when a Positivist speaks of humanity, he always means its inner nature, the humanity under its spiritual aspect.

But some may say, as long as humanity is influenced by so many defective and degrading parts, it will necessarily contain many brutal and disgusting characteristics which may mar its beautiful traits.

True, there are some faults and imperfections in humanity; but they do not play a conspicuous part in it. We all know the fact that humanity is gradually advancing from animalism toward humanism. As a young and fully developed organism, it *must* grow up. Progress ceases to be a sentimental word: it is a vital necessity, because the power of evolution is embodied into every living organism. But the progress is impossible, unless the good predominates over the evil. Hence, the minority, representing the best achievements of the human race, must have a decided influence over the majority. Good actions, great discoveries, lofty aspirations, coming from the few, will suppress or check the filth and ignorance coming from other sources. It matters not how numerous are the societies ejecting negative influences: they are insignificant in comparison with the influence of those who radiate light and warmth for all, and are the propellers in our progressive movement.

Besides, a great mischief is done by the supposition that only perfection may inspire in us sublime feelings. There is no such thing as absolute perfection: anything which affects a man affects him by those particular traits which find response in his own soul. Christianity, for instance, impresses the purest souls with its sublime conception of universal brotherhood, of self-denial; while the great multitude of to-day regard Christianity as a mere idolatry of saints and Bible. The Bible itself, being a compound of the noblest and coarsest utterances, remains to the present time as daily spiritual food for millions of Christians of the most diversified tastes, inclinations, and intellects. And why? Because every one of them takes from the Bible the best that he can digest, bows in admiration before the highest ideal which he is able to conceive; and, in attempting to imitate that ideal, he undoubtedly improves his life.

The same arguments, only with more force, must be applied to humanity. The grand and complex idea of humanity can affect every living soul. The chords which may vibrate in response to the appeal of humanity may vary in each individual in their firmness, sensitiveness, tenderness; but the vibration will be beneficial for every one, because it is the surest sign that man has found his ideal and is striving to attain it.

Who sees in every thing only the dark and gloomy side proves only that he himself is devoid of bright and cheering elements. For the good and grateful, humanity ceases to be a mixture of evil and good. It represents the finest emotions, the noblest deeds, the greatest accomplishments of intellect which ever were produced during the existence of the human race. It is the embodiment of their hopes and aspirations. It is their protector during life and the comforter in time of sorrow and trials.

Humanity not only guides men toward happiness, it conquers their hearts. And, as love for a pure and noble woman may rectify and cleanse the most degraded person, so love for this Sublime Being gives the strength and ability not only to learn the laws of morality, but, what is more difficult, to practise them.

Some persons think that such a vast and indefinite Being cannot impress us with the intense feeling, but they may be defeated with their own weapon.

Family, nation, and humanity are like three circles, one within the other, which circumscribe every man's activity and affection. Most of the individuals are aware only of family ties. In the family, man nurtures his sympathetic feelings: there, he is in constant and intimate relations with persons nearest to his heart, on whom he bestows his care and affection; there, he receives his strongest impressions both on his body and mind. But, nevertheless, the love of the family gives way to the love of country. The nation, although a less tangible object and far from being in need of the immediate care and service of an individual, instinctively impresses every man with such a force that he is ready to sacrifice the good of his family to the good of the country. History of all nations, and at all times, abounds with the facts sustaining this assertion. From these facts, we may suppose, *a priori*, that man's attachment to humanity—which is the object more difficult to comprehend and less in need of an individual service—ought to overpower patriotism as much, at least, as patriotism overpowers the family ties; and the history of the past sustains this conjecture. Although humanity was not at all understood as living organism, it was ever existing, ever growing, ever needful of our assistance. The moral codes, which necessarily accompany every religious creed, were but expressions of the most urgent needs of humanity; and the religious enthusiasm with which men adhere to these codes can be explained only by the impetus of the supreme law compelling individuals to serve humanity, whether they recognize it or not. As patriotism is aroused by the instinct of self-preservation in each society, so the religious feeling, which forces persons to adhere to moral codes, is but an outburst of the instinct of self-preservation common to humanity. And humanity, by the very fact of its being vast and almost incomprehensible, arouses in us the most powerful feeling of attachment, before which patriotism itself becomes pale and insignificant.

The recent discovery of humanity does not increase the intensity of religious feelings: it only clarifies them. It points clearly at that which was dimly seen through the fantastic pictures of the past religions; it drives away the fog and mist which surrounded us before; it gives us a right conception of the only Being able to excite in us the religious feelings. And we, untrammelled by the superstitions and mistakes of previous religions, but animated with the same spirit of devotion and self-sacrifice, may assist humanity with a great deal more efficiency than ever before.

Those who still suppose that love for humanity can never reach the intensity of a religious feeling may well refer themselves to the history of Judaism.

The primitive conception of God at the time of Moses was necessarily a very childish one. But Judaism did not remain a stationary faith: it gradually adapted itself to the more advanced view. In the time of the Talmudists, the Hebrews already regarded God as incomprehensible by mortal men. They tacitly agreed that the time of prophets was gone forever, but the necessity of attachment to something human and superior to individual man remained in them; and the more mysterious their God became, the more obliterated became the memory of ancient prophets, the stronger they attached themselves to the collective body,—to Israel. Israel is for them a depositary of all wisdom inherited from the past, and a preserver of the highest religious idea. As long as Israel lives, Hebrews have their comfort and consolation. Love for Israel and hope that it will triumph at last is the most prominent and essential trait of mediæval and modern Judaism. And how strong the feeling which could support the Jews during the persecution of the Middle Ages, and unite in one brotherhood a nation scattered upon the surface of the earth, deprived of fatherland, of political organization, of common language!

And, if love for one part of humanity was sufficient to keep up a religious enthusiasm, how much grander may be the attachment to the Being in which Israel is but transient phenomena,—to the Being which is a real, not presumptive, depositary of all wisdom, which through the trumpets of science declares to the world that IT LIVES as the only guide and supporter of individuals, and that it must triumph in spite of scepticism and individualism of the present time!

Let us recapitulate all that was said in this and previous articles.

We know that every religion must include a recognition of Universal Power, a necessity to obey its laws, and a need of mediators to explain or teach these laws. It was shown that man's sense of help-

Digitized by Google

lessness forces on him the attachment to somebody superior to himself; and that the more his God recedes into mystery, the more he is attached to the mediator standing between him and God.

We know that the past religions, although including these ideas, greatly distorted them. The Inscrutable Power was degraded into a fictitious anthropomorphic God; its laws were presumed to be fully revealed; and mediators, being individual men, were necessarily surrounded by exaggerations and false stories.

We outgrow these fables. Our God, whose existence is so well proven by Herbert Spencer, will forever remain for us as Mystery; and its laws, though constantly operating on us, may be disclosed only little by little. But religion, deprived of its human element, loses its hold on human hearts: hence, the present state of infidelity, anarchy, and immorality; and only Positivism, by the recognition of humanity, can revive a dormant religious enthusiasm.

Humanity, as defined by science, is the Sublime Being, endowed with the highest, truest, and noblest achievements of the human race, and, therefore, is able to excite our highest emotions without the slightest falsifications. Humanity, possessing only human attributes, is the only being which can influence us through sympathetic feelings. It discovers the laws of nature, increases the amount of happiness among individuals, and thus becomes the true mediator between us and the Infinite. It is the only being which can fill in our hearts the place left vacant after the expulsion of menlike gods and godlike men. So the very same science which destroyed the forms of previous religions, now, by the discovery of humanity, completes the structure of the New Religion, and ends the painful transitory passage from the old religious conceptions to the better, nobler ones. And the same religious enthusiasm which produced wonders in the past will, with the help of science, produce still greater wonders in the near future.

CORRESPONDENCE.

WHAT IS THE MEANING OF THE TERM "AGNOSTIC"?

Editors of The Index:—

For one, I rejoice in the indication that the subscribers of *The Index* are made up "of many men of many minds." In fact, it is understood that its editorship is of this category, the senior editor being a believer, and the junior editor being an agnostic. Now, as a subscriber, I belong to the former class. I believe that the mind of man was made to know, and that which it knows is a reality. In other words, I am a Free Religionist,—a cause which I understand *The Index* was established to champion.(1) Now, what is religion? I do not know of a more comprehensive exposition of the term than that given by Benjamin Disraeli (Beaconsfield),—"Religion is civilization, the highest; it is a reclamation of man from savageness by the Almighty." Again, he says: "All things that are good and beautiful make us more religious. They tend to the development of the religious principle in us, which is our divine nature." Disraeli was a man of genius, as these quotations go to prove.(2)

But I set out to inquire of *The Index*, What is the signification of the term "agnostic"? If I understand its meaning, it is "I don't know." It is not a condition of negation, but is simply one of a lack of knowledge,—a belief, if you can call it such, in the unknown and in the unknowable. And I inquire, Can an agnostic say, "We do not believe in a personal God"? I think not: he should say, I do not know whether such a God exists or not.(3)

It would be perfectly proper for me as a believer, one who knows, to say that I believe in the infinite God, and that in Him we live and move and have our being, as even certain of your poets have said; for we are His offspring. It would be perfectly proper for me to say that He has reasoned with me and I with Him, and that He is nearer to me than any man.(4)

I also believe in Jesus, but no doubt differently from R. Brinkerhoff, judging from his last communication. I believe in the man Christ Jesus, and do not place him on the pedestal of some heathen God.

But I would inquire of our Friend Underwood how he can classify R. Brinkerhoff's views as "wild assumptions," in relation to what he says in regard to the spiritual sense? It seems to me that an agnostic should be the most modest of men, as he is one who doesn't know.(5)

Now, mankind believes in the spiritual sense, and have believed in it for thousands of years. The ancient Chaldæans believed that we were His offspring, in common with the Greek poet Cleanthes whom Paul quoted. It is therefore no "wild assumption" thus to believe (know). It is the common thought of all humanity. And no great man ever lived in this world who did not thus believe; that is, who did not believe in the eternal, not ourselves, who makes for righteousness.(6) An agnostic should, above all things, keep from dogmatism. His philosophy, as I understand it, keeps him from knowing, even from knowing that other men know. If I am wrong, I wish to stand corrected.(7) DAVID NEWPORT.

ABINGTON, PA., Feb. 16, 1883.

Reply.

(1) A "believer" is no more a Free Religionist than is an agnostic. Many of the members of the Free Religious Association are agnostics; and its late President, Prof. Adler, was an agnostic.

(2) If Disraeli had no other claim to genius than the above definition of religion, his genius would, in our opinion, have a very frail foundation. Considered fundamentally, religion may be defined as the expression of man's relation to the source of all phenomena. Shelley defines it as "man's perception of his relation to the principle of the universe." Religion may be theistic, agnostic, or even atheistic. "As to atheistic religions," says Max Müller, "they might seem to be perfectly impossible; and yet the fact cannot be disputed away that the religion of Buddha was from the beginning purely atheistic. The idea of the Godhead, after it had been degraded by endless mythological absurdities which struck and repelled the heart of Buddha, was, for a time at least, entirely expelled from the sanctuary of the human mind; and the highest morality that was ever taught before the rise of Christianity was taught by men with whom the gods had become mere phantoms, and who had no altars, not even an altar to the Unknown God."

(3) Agnostic is a word now applied to those who admit that they do not know whether there is a Deity or a future conscious state or not. But belief or lack of belief is permissible where knowledge is unattainable. Knowledge excludes both belief and unbelief. Belief begins where knowledge ends.

(4) It would be "perfectly proper" for one who *knows* to say that he knows, and not simply that he believes. But it is proper for one who does *not* know, and who from lack of evidence cannot believe, to admit that he does not know, and to say honestly that he does not believe. Furthermore, it is proper for one who does not know, but has strong convictions, not to mistake the strength of his convictions for the certainty of knowledge, and not to assume an air of superiority over those who may know quite as much, but believe differently.

(5) Our statement was as follows: "That there is a spiritual sense which is active in those who accept Christianity, and dead or dormant in those who do not, is another of Mr. Brinkerhoff's wild assumptions." We cannot modify the statement in the least.

(6) We are not sure that we understand what our friend means by "the spiritual sense." If he means that it is something by which men may *know* that there is a personal intelligent Deity, we certainly do not believe in it. By this same sense, Mr. Brinkerhoff thinks that men may know that Christ was the Lord and Saviour. By it, the Mormons claim that they know Joseph Smith was a prophet, and the golden Bible a revelation from God.

(7) An agnostic should "keep from dogmatism," but only as all men should. There is nothing in his philosophy which prevents his knowing anything that others may know, anything that is knowable, or forming and expressing opinions where knowledge is impossible. Because he declines to say that he knows concerning matters which admit of doubt, it does not follow that, whenever he expresses his views, they should be disredited on the ground that he says he "don't know," when in fact he may know *as much* in regard to them as those who positively affirm, while questioning his right to say, "I do not believe." —ED.

THE ornamentation of language by oaths is inexcusable vulgarity.—*Seymour Times.*

WHAT DOES THE WORD "RELIGION" MEAN?

Editors of The Index:—

On page 338 of *The Index*, Jan. 18, 1883, in an article by Mr. Potter on "Science and the Religious Sense," the following occurs: "Liberalism is apt to assume that religion necessarily implies a definite belief in a personal Deity or Deities." Webster says: "*Religion.* The recognition of God as an object of worship, love, and obedience." Now, if that is the established meaning of the word "religion," the aptitude of Liberalism, as stated above, should hardly be called an assumption. Of course, the meaning of words is constantly changing: and the word "religion" may, by use, be made to convey a sense not in accordance with former usage. But why not give to a different thought a different form of expression, and let the old ideal have its old clothes? In the article alluded to above, the expression "Rational Philosophy" occurs. That is comprehensive, as expressing the powers of the universe and man's relation thereto. And, in that Rational Philosophy, religion enters as a factor just in proportion to its influence, past and present, on man's relation to his environments. I. H.

EAST PORTLAND, OREGON.

[Webster also says: "*Religion.* . . . A system of faith and worship." But dictionaries are not the final authority, especially in regard to words of such large meaning. Our correspondent himself appears to depart in his last sentence from his own quoted definition from Webster. When he says that "religion enters as a factor into Rational Philosophy," he seems to use the word in much the same sense that we should.—W. J. P.]

MR. CHARLES WATTS.

Editors of The Index:—

Mr. Charles Watts, of London, who, a fortnight ago, lectured in Paine Hall, again, by special request of numerous secular friends, appeared before the Boston Free-thinkers' Association last Sunday. His lectures —in the afternoon on "Martyrdom, Secular and Christian," and in the evening on "The Spirit of the Age" —gave great satisfaction to the large audiences that greeted him upon his second visit, which is doubtless accounted for by the able manner in which all his discourses have been delivered. His logic and eloquence have done much toward the propagation of the principles which he represents. His lectures next Sunday afternoon and evening in Paine Hall on "Immortality from a Secular Stand-point" and in the evening on "The Causes of Civilization" will afford the last opportunity for him to be heard before his departure for Canada, where he will speak in Montreal, Toronto, and other places, previous to his return to England. It is well to note here that Mr. Watts is the first secularist from England who has lectured in this country on Secularism, and from a secular stand-point. We are pleased to know that, encouraged by the warm reception which has been given him in the United States, he will probably make another visit to us in the near future. D. K.

BOSTON, March 5, 1883.

BOOK NOTICES.

THE UNENDING GENESIS; or, Creation Ever Present. By H. M. Simmons. Chicago: The Colegrove Book Company. 1883.

This charming little book is of the same size and has the same fundamental idea as Wm. C. Gannett's *Year of Miracle*, to which it makes a fitting companion volume. It gives, however, a wider illustration of the idea, tracing the working immanence of the eternal Life-Power through various processes of nature, according to the theory of evolution, up into the mental and moral life of man. If it has somewhat less of poetic expression than Mr. Gannett's four discourses, it has a not less complete and facile grasp of the facts both in their material and ideal import, and a style that is adequate to the thought. It does not stop to deal in criticisms and negation, but gives the positive side of the evolution doctrine in its bearing on religious problems. The key-note of the book is struck in the first chapter, thus: "But science, if ruining the old story [of the Biblical Genesis], is reading us a grander one from writing old as the rocks, yet fresh as the raindrops, vast as star systems, yet delicate as snowflakes. . . . All the work of the old legend is still done before our eyes; not once alone, as there,

Digitized by Google

but continually repeated, and often not merely done, but outdone. We are learning to see all around us this more wonderful *Genesis*, this Creation infinite and eternal. The aim of these pages is to trace this unceasing creation; to show how much more marvellous are the real facts than that writer's fancies, how that wondrous week is still here in this week, and those six divine 'days' are repeated in every day; and how the new story, even better than the old one, begins a Bible, and furnishes a foundation for reverence and religion."

THE *Catholic World* for March opens with "The Eschatology of Origen, Part II.," by Rev. A. F. Hewitt, who is trying hard, but not very successfully thus far, to vindicate the Orthodoxy of the illustrious Alexandrian. An interesting article, although intensely Catholic, is "Modern German Religious Poets," by R. M. Johnston. "The Location of the Earthly Paradise" is a somewhat fanciful paper by Rev. James H. Defouri. Arthur Featherstone Marshall contributes an article on "The English Lower Orders," which contains much truth and many wise reflections. "Dr. Pusey: his Life and Doings," is a contribution well worth reading by Oswald Keatinge, D.C.L., from which we quote the following sentence: "Those who recollect the immense stir caused by the appearance of *Supernatural Religion* and the violent denunciations of Dr. Pusey will be astonished to know that, when the papers of his son Philip were examined after death, it was evident that, if he was not the author, he had a considerable share in the work." "Was it Love of the Truth made M. Renan an Infidel?" is the title of an article containing extracts from Renan's story in the *Revue des Deux Mondes* of his casting aside the Levite's garb and the Christian faith. The writer endeavors to show by a kind of reasoning which can satisfy nobody but a devout Catholic that Renan "did not love the truth as it ought to be loved, and therefore he lost it." Rev. I. T. Hecker, in "The Impending Issue of the School Question," protests against the translated paper from the French on "Moral and Civil Instruction," which has been issued by the Commissioner of the Bureau of Education in the Department of the Interior. Rev. Hecker objects to taxing the people of this country, in order to reduce illiteracy by a merely secular education. The other articles are "At Tracadie, New Brunswick," by A. M. Pope, and "Mountain Legends of Auvergne," by M. P. Thompson, and a number of book reviews.

THE frontispiece page of *St. Nicholas* for March is adorned with a charming picture after the celebrated painting by Greuze, entitled "The Broken Pitcher"; and Mrs. J. W. Davis gives an interesting short sketch of that painter. Among the writers for this number are Rose Terry Cooke, Lucy Larcom, Celia Thaxter, Archibald Forbes, J. T. Trowbridge, Lucretia P. Hale, Frank R. Stockton, and other noted writers. A peculiarly interesting feature of this number is the article by Joel Stacy, in "Work and Play for Young Folks," on "Shadow Pictures and Silhouettes," with nearly four pages of illustrations of how to make pictures on the wall. These will prove a delightful source of amusement to young people during the long winter evenings.

"WIDE-AWAKE" for March is bright enough to atone for the dreariness of the month to which it belongs; and its illustrations are in no way behind previous numbers, the full-page ones being especially fine. Among these is one from a French painting illustrative of George Eliot's poem, "Oh, may I join the Choir Invisible," which is given on the opposite page. In the series of articles entitled "Our Business Boys," Rev. F. E. Clark tells about "Rocks of Danger"; E. E. Hale talks about "Gambetta and Chanzey." "Leigh Hunt," the poet, is the author treated of in this number, and Felix Oswald describes "A Brazilian Forest." We have only space to mention these attractions as specimens of its numerous contents.

FROM D. Lothrop & Co. the publishers of *Wide-Awake* and *Baby-Land*, we have received also specimen copies of the *Pansy*, a pictorial weekly paper, whose stories, poems, etc., are illustrated in the high style of art characteristic of this firm of children's publishers. Its price is only 75 cents per year.

"Labor Parties and Labor Reform," "The Law of the Blessed Life," "Gain in Loss," "The Search for God," "Fate," "Living by Faith," "The Duty of Delight," "Transcendentalism." The compiler, A. M. Haskell, while endeavoring to make selections that would present the different sides of Mr. Johnson's thought, has found himself able to gratify the wishes of his friends in regard to the selections. Almost every article has been named by some friend who had heard it. A general desire has been expressed for something giving his profound religious insight and faith. The sermons on "Gain in Loss," "The Search for God," "Fate," "Living by Faith," and "The Duty of Delight," have been selected with special reference to this demand. The volume will be rich in thought, with great beauty of expression and sweetness of spirit.

PERSONAL ITEMS.

ALEXANDER H. STEPHENS, who, although a chronic invalid for fifty years, has been the most unique figure in American political life, died last Sunday, when he was just past his seventy-first year.

B. F. UNDERWOOD will speak at Fredonia, N.Y., March 16, 17, and 18; at Magadore, Ohio, 20, 21, 22; at Chicago before the Philosophical Society the 24th, and before the Ethical Society the 25th.

ERNEST RENAN'S "Reminiscences," which have appeared in the Paris *Revue des Deux Mondes*, will shortly be published in book form; and an English translation will be issued by Chapman & Hall.

THE most learned woman in the world, says the *Young Ladies' Journal*, is Miss Ramnabel, a young lady of twenty, who is now in Paris. She is a native of India, and can read and write and talk in twelve languages, having a wonderful gift that way, besides being up in mathematics, astronomy, and history. She is studying medicine, and will go to India to practise, where she says thousands of her countrywomen die every year because they will not consult male physicians.

RED CLOUD'S formal address before the committee on appropriations last week was carefully drawn up in writing, signed by the Sioux chief, and witnessed by Laramie. It read as follows: "Law chiefs, I am an Indian! Look at me! My name is Red Cloud. I have sense. The government through General Crook in 1876 took wrongfully six hundred and five horses from me and my people. I have sense: so have my people. I represent them. I am in debt, and have a large family. Secretary Teller asks me to take cows for my horses. If the government gives me all the cows they have already promised, I will have more kine than we can milk. I am a man of sense. I want money to pay my debts. Law chiefs, pay me not in cows, but cash. I am at peace. Let me remain thus."

"NATURE" says: "The subscription for the Darwin memorial has awakened so much enthusiasm in Sweden that the local committee there formed has received subscriptions from no less than fourteen hundred persons, including 'all sorts of people,' writes Prof. Loven in a letter to the English Committee, 'from the bishop to the seamstress,' the sums varying from five pounds to twopence. The English Committee, which has its head-quarters at the Royal Society, London, has now received (inclusive of subscriptions from abroad) four thousand pounds, but the number of subscribers in the United Kingdom is only about six hundred. From this, it would seem that an interest in science is not nearly so widely spread in Britain as it is in the more thinly peopled land of Sweden."

IN introducing recently a lecturer who was to speak on Lincoln, Robert G. Ingersoll said: "Lincoln's education was derived from men and things, and hence he had a chance to develop. He was a many-sided man. He was smiles, as well as tears. He was not afraid to seek for knowledge where he had it not. When a man is too dignified to ask, he ceases to learn. Lincoln was a logician. Logic is capacity. It is the child of a good heart and a good head. He was always honest with himself. He was an orator; that is, he was natural. If you wish to be sublime, you must be close to the grass, you must sit closely to the hearth of human experience. Above the clouds, it is too cold. The difference between the orator and the mere elocutionist is nowhere better seen than in the speeches of Lincoln and Everett at Gettysburg. One came from the heart, the other was born only of the voice. Lincoln's speech will be remembered forever. Everett's no man will remember."

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

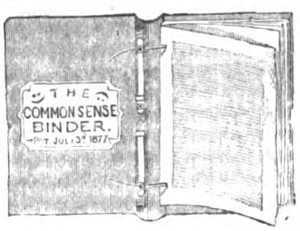
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

THE death penalty has been restored in Maine.

THE Memoir of Samuel Johnson by his friend Samuel Longfellow, mentioned in another column, will be published this week.

THE Spanish Senate last month provided a new form of oath, which allows the members, if they are Catholics, to swear, or, if they are dissenters, or profess no religious creed, to affirm under the pains and penalties of perjury.

MR. W. M. SALTER has taken charge of the Ethical Society of Chicago. He is eminently fitted for the work to which he has been called; and we hope for grand results from the new movement, under his direction, in that city.

HUXLEY says that "the clergy are at present divisible into three sections: an immense body, who are ignorant and speak out; a small proportion, who know and are silent; and a minute minority, who know and speak according to their knowledge."

A DESPATCH to the New York *Tribune* says: "Earl Granville, the British foreign secretary, has instructed Mr. Adams, British Minister at Berne, to insist upon the annulment of the decrees expelling the leaders of the Salvation Army from Switzerland."

ONE of the noteworthy events of last week was the publication of Dr. R. Heber Newton's series of sermons on the Bible, which excited so much hostile criticism when they were delivered a few weeks ago. It is stated that the author will certainly be prosecuted for heresy.

THE *Christian Statesman* says: "The number of students, graduates of colleges and universities, who enter the Christian ministry, is gradually decreasing. Sad as this may be, it is, nevertheless, a fact. It is well supported by the statistics presented. It is a fact which means something. It is a fact hard to explain."

CONVENTIONS of the Free Religious Association were held in New Haven, Conn., and Albany, N.Y., last week, essentially according to the programmes as printed in *The Index*. Though the attendance was not very large, the occasions were interesting and profitable. The tone and spirit of the meetings were excellent. We shall print a full report next week as prepared by the Secretary of the Association, containing an abstract of the essays read and of the discussions.

A DESPATCH states, that "The Society for the Suppression of Blasphemous Literature" in England proposes to get up cases against Profs. Huxley and Tyndall, Herbert Spencer, the publishers of John Stuart Mill's works, Mr. John Morley, and others, who, "by their writings, have sown widespread unbelief, and, in some cases, rank atheism." This is of a piece with the recent harangues in Berlin, of Pastor Stocker, leader of the "Christian Socialists," in which he denounced Dubois-Reymond and Haeckel as "dangerous scholars, who undermine the morality of the people," and advocated the passage of a law excluding Jews from high positions in the government.

"IF," says the Boston *Sunday Herald*, "the public schools, as Bishop McQuaid asserts, are the breeders of vice, they are not worse in this respect than our churches, our politics, and our amusements. Religion survives, politics are effective in government, and social life is enjoyable, in spite of terrible corruption; and our religious and social institutions are a clear reflex of the people whose children are in the public schools. The talk about special vice in the schools is simply nonsense. Vice is everywhere, and the children in the schools carry into them the demoralization in which they are bred. The truth in this discussion lies between the extremes of those who maintain half truths. Our schools are no better than the people who support them; and neither religion nor intelligence is to be advanced, in the long run, by sectarian schools."

ONE of the rules of the House of Representatives requires that "no spirituous or malt liquors or wines shall be offered for sale, exhibited, or kept within the Capitol; and it shall be the duty of the sergeant-at-arms of the two Houses, under the supervision of the presiding officers thereof, to enforce the foregoing provisions. Any officer or employé who shall violate or connive at the violation of this rule shall be dismissed." Yet a member of the House, speaking of the drunkenness that disgraced that body on a recent Saturday evening, says: "I went to Speaker Keifer Saturday night, and told him that whiskey, gin, and champagne was being sold openly in the house restaurant in large quantities, and considerable drunkenness was resulting. I asked him to order the sergeant-at-arms to put a stop to turning the restaurant into a common bar. He answered, 'I have no time to attend to that.'" The revelry was allowed to go on.

NOT only simple-minded fishermen in whom the superstitious element is traditionally strong, but thousands of other people in this country, were greatly disturbed by Wiggins' prediction in regard to the weather. "Is this Wiggins' storm?" was a common question last Saturday, and many who asked it exhibited not a little nervousness and fear. As the New York *Tribune* observes: "The world does so love quackery and humbug! 'Who was the mother of his country?' asked the schoolmaster. 'Liddy Pinkham!' shouted the smallest boy in the class, who was a reader of the current literature of this epoch. There are thousands of people who are on the lookout constantly for universal panaceas, telephone connection with the next world, and prophets of all kinds. To them, the Pinkhams, the Wigginses, and the Compound, Cathartic, and Anti-bilious pills are always boons to be welcomed with open arms. It matters not to them how often they are deceived."

REFERRING to a recent convention of the anti-polygamous Mormons at Sandwich, Ill., a correspondent of the *Presbyterian* says: "They seem to be increasing in Illinois, and are everywhere considered as exemplary citizens and good neighbors. We have about twelve thousand of them in the State. . . . Organizations at the following places were represented at the late conference: Plano, Sandwich, Braidwood, Streator, Leland, Pecatonica, Amboy, Marengo, Batavia, Piper City, Mission, Chicago, and Janesville, and Burlington, Wis." Some of the preachers are "men of marked ability." Among the topics discussed were the following: "What is 'Mormonism'? What are its Claims and its Objects?" "The Book of Mormon: Is it worthy of Belief?" "The Plan of Salvation"; "The Order of Christ's Church upon the Earth"; "The Second Coming of Christ"; "The Resurrection from the Dead: Different Glories, and who enjoy them"; "Eternal Judgment, Righteousness Rewarded, and the Punishment of the Wicked."

MANY of the orthodox clergy have commented, in their characteristic manner, on the death of the late Charles R. Thorne, who desired the presence of no minister while living, and directed that there should be no preaching by one at his funeral. We quote two of these references. Rev. Philip Germond (Methodist), of New York, said: "His mission was a laugh, he acted a laugh, and when he came to die asked his friend in a laughing manner what he thought of the hereafter. Think of that awful question at such a moment, and what a frame of mind must that lost man be in to ask such a question when he had reached an age of more than twoscore years! And then his bosom friend answers him vaguely, for he considered the subject of the hereafter somewhat indefinite, he said." Rev. Dr. George E. Strobridge, another Methodist minister of the same city, expressed himself in the following fashion: "We are told that an infidel can meet death as fearlessly as a Christian, and cases are cited. Just at present, the death of Charles R. Thorne is in every mouth. We are told that he always feared death as the worst of evils, yet, when it came, met it bravely, as his noble nature prompted. Yes, so long as the lash of fear may avail to enforce repentance, God does not spare to lay it on." When there is no longer hope, he says, 'Let him die in peace'; and this easy death of the unbeliever is the most hopeless of all." Comment is unnecessary.

FREE RELIGION PRACTICAL.

Even if the Free Religious movement were concerned only with problems of pure thought, we should not concede by any means that the movement is impractical. Thought is really one of the most practical things in the world. Most of the great inventions rest on hard thinking. Social and philanthropic movements need sound thought for their guidance, and, other things being equal, will be more effective in proportion to the amount of thought that goes into them.

In religious reform, thought is a necessity. Calvinism is a system of theology which has had a powerful influence in the religious world, because it presented a clean-cut logic to back up its doctrines and vindicate the emotions to which it appealed. And the new view of religion, which is to overthrow Calvinism and all its kindred creeds, must have a logic just as keen and clear, only resting on a wider range of thought and a much larger basis of knowledge. There is a good deal of thinking, it is true, on religious and philosophical problems, which seems to go round and round the treadmill of physical and metaphysical speculations and to arrive at nothing. And there is just about as much fruitless philosophical speculation on the ground of physics as on the ground of metaphysics. On both sides there is a dogmatic shutting of the eyes to large sections of facts, and a consequent seeing only of half-truths. But, nevertheless, not less, but more thinking is what is wanted,—a broader grasp of all the facts and a logic clear and profound enough to knit them all systematically together. And the Free Religious movement will not culminate in its highest practical efficiency without a distinct philosophy,—a philosophy broad and comprehensive, yet clear to and easily comprehended by the average common sense of practically thoughtful men and women.

But the Free Religious movement is also concerned directly with practical problems of human amelioration. It is interested in everything that pertains to the well-being of man. If the practical purpose of the movement could be stated in a single sentence, the sentence perhaps would be this: It is an effort to emancipate the human mind from bondage to superstitions and ecclesiastically imposed creeds, in order that religious sentiment and thought may be free for direct service in the uplifting of humanity,—free for all wise work toward the establishment of a juster, purer, and more fraternal order of society.

This fact was illustrated anew in the conventions of the Free Religious Association, which were held last week in New Haven and Albany. A more detailed report of the proceedings of these meetings will be given in the columns of *The Index* next week. We only allude to them now to show the point that the Association deals with topics that are practical. The subjects discussed at these conventions were of wide variety. But, whatever the subjects treated,—whether those that considered the history and philosophy of religion, or those that traversed the regions of destructive criticism which must needs still be traversed, or those that defined the agnostic limitations which necessarily attend all religious thinking, or those that attacked directly the social and ethical problems of the day,—all alike terminated in enunciating a higher moral ideal for human conduct, and in emphasizing those efforts which aim at the improvement of man's condition, here and now, on this earth. It was also noteworthy that a considerable portion of the time at each of the conventions was given specially to the thoughtful discussion of such topics as "Co-operation and Social Progress," "The Relation of Free Religion to Charity and Reform," and "The Need of Further Amendment of Statute Law, in order to secure full and effective Guarantees to Free Thought." No one, certainly, could have attended these conventions as an impartial observer, and gone away with the idea that the Free Religious Association is only a company of people with speculations to air, and does not concern itself with the practical interests of mankind. WM. J. POTTER.

FREE THOUGHT AND ITS LIMITS.

Free thinkers are men and women who wish that thought should be free. Thus the name was first used nearly two hundred years ago; and we who bear it have still work to do. Let us see what are the existing restrictions on the liberty of thought to express itself, which we should fight against.

With the State we need not quarrel here in Massachusetts. The laws which hinder those who think Sunday no holier than any other day from acting according to their belief are fast becoming obsolete, and the statute against blasphemy would probably not be used anywhere in the United States to check rational and deliberate expression of unbelief. Such a check was actually imposed in England as late as 1867, when the Court of Exchequer annulled a contract, giving a lecturer the use of a room to teach "that the character of Christ is defective, and his teaching misleading, and that the Bible is no more inspired than any other book." This is blasphemy by the law of England,* where Mr. Bradlaugh is still kept from his rightful seat in Parliament to punish his confession that he is an atheist. There is nothing like this in the United States, except in Pennsylvania, whose judges say to the unbeliever, when he claims his right to be a witness, "You must pretend to believe as we do, otherwise we shall not protect you against crime."

Our great enemy everywhere is still the Church. No one can think freely who has the slightest respect for the Athanasian Creed, which begins thus: "Whosoever will be saved, before all things it is necessary that he hold the Catholic Faith. Which Faith except every one do keep whole and undefiled, without doubt he shall perish everlastingly." I quote the version which is published by the Protestant Episcopal Tract Society in New York, for circulation among American Episcopalians, who thus give it a tacit, though not a strictly formal recognition, and which is formally recognized and publicly used as part of divine worship by the whole Anglican Church, numbering nearly thirteen million. The Episcopalians and the Roman Catholics, who together form nearly one half the population of those countries where English is spoken, as will be seen from the table in another column, support this creed; and its adherents are in the majority in other Christian lands. Those Episcopalians and other Protestants who do not use this creed are most of them committed to similar views of the liability of unbelief to be punished by everlasting torture. These creeds, covenants, and articles have lost much of their original force, but all they have left is exerted against freedom of thought. What is worst of all is that the Bible has driven man away again and again from the tree of knowledge, constantly treated sincere expressions of independent belief, such as idolatry and heresy as among the worst of sins, required faith in Christ as necessary to salvation, and threatened those who do not believe on him with the wrath of God. (See Genesis ii., 17; Exodus xx., 4, 5; xxiii., 13; Deuteronomy xii., 30; xiii., 9. 15; xvii., 5; xx., 16; Matthew x., 15; xviii., 17; Mark xvi., 16; John iii., 18, 36; xii., 48; xiv., 6; xv., 6; Acts xvi., 31; Romans i., 18–32; Galatians i., 8, 9; v., 20. 21; II. Thessalonians i., 7, 8; ii., 11, 12; II. Peter ii., 1; II. John, 10; Revelations ix., 20; xiv., 9; xxii., 15.) I give all these references, because they justify the hostility to the Bible as well as to the Church, into which free thinkers have been forced. We are heartily grateful to those clergymen, especially the Unitarians, who have opposed persecution, and maintained, as Jesus did in the Sermon on the Mount, that salvation depends on morality, not theology. We cannot, however, forget, that even Unitarian pulpits are not altogether free, or that their supporters are often frightened away from thinking for themselves, by being told that they must think as their neighbors do about the future life, or they will not be able to make profitable and acceptable use of this. We would make all due exceptions in favor of friends and non-combatants, and treat individuals with all possible courtesy; but the sects and churches in general we must look upon as foes.

And, third, we claim the benefit of the law of courtesy, which forbids opprobrious epithets, angry discussions, contemptuous demeanor, or insinuations of immorality. We say that society has no right to work this rule like a valve, so as to let anything pass through in one direction, but nothing in the other. I know we ought not to call a doctor of divinity names; but neither should he call us infidels, perverts, apostates, or Judas Iscariots, as I have heard him do, when we invited him to address us in his own church. No more ought one of a party of young people to have spoken as follows, and by name, of an absent lady to whom she was under obligation: "Oh! I heard Mrs. A. make such an *outré* speech the other day: she said the Bible was not a proper book to put on a parlor table," and then to have sharply silenced one of Mrs. A.'s friends, who tried to defend her. It was a bad place for a controversy, and especially so for letting only one side be heard. Why, again, should church-goers, who do not like to hear us say a word against Christianity, expect us to listen to parlor lectures on the immorality of scepticism, and thus force us to keep silence, or be considered impolite? These social restrictions enforced against free thinkers, but not against their assailants, are simply persecutions. And is it really any better for our well-meaning friends to compel us to do violence either to our affections or our convictions, by insisting on our participation in public worship, and showing pain when we refuse? Our friends like to have full liberty to do as they please in such matters. Will they not let us have it likewise? Have my neighbors any more right to say, "You ought to go to church" than I have to answer, "You ought not to go"? Even the authority of parents over children has more narrow limits here than anywhere else. Nothing is better for young people than to learn to think for themselves.

But the worst intolerance in this country is that of our politicians. Is that really a free land where a hundred thousand office-holders have been forced to contribute, vote, and electioneer for every candidate the party in power chose to set up? The Massachusetts officials had scarcely ceased working for our pious Governor, when they had to begin working against him. Every free thinker should strive to have service reform carried out thoroughly; for this is the only way to give the servants of the people leave to think for themselves and vote as they think, as well as to put men who are intelligent and energetic enough to do this into our post-offices, custom-houses, and

*While these lines were in press, the editor, proprietor, and printer of the *Free Thinker* have been sentenced to imprisonment with hard labor for blasphemous libel. Tyndall, Huxley, and Spencer are said to be threatened with prosecution.

Digitized by Google

similar places of public trust, instead of stupid, cowardly, or unscrupulous slaves. Equally are we bound to insist on the right of every private citizen to vote as he pleases, without being called renegade, turn-coat, or traitor,—epithets I have known applied to a respectable and intelligent man in a public meeting, with such distinctness that his young wife sat there weeping bitterly. Of course, I ought to form my opinions deliberately and honestly; but no one has a right to take it for granted I do not, even if they lead me over the fence. What helps most to keep our country safe is the number of independent voters who will not go with their party when it is in the wrong.

All these restrictions in the interest of particular parties, sects, and religions we free thinkers are bound to work against; but there are some checks on liberty of thought and speech which I think we ought to help keep up.

For instance, the propriety of laws against slander and libel, as well as against public meetings and other appeals likely to cause riot and sedition, is expressly admitted in J. S. Mill's Essay on Liberty. Such laws are in full harmony with the principle laid down by Herbert Spencer in *Social Statics*. "The liberty of each limited only by the like liberty of all." This would not be a free land, if fanatics had full license to publish false charges and stir up mobs against any man they disliked. Here, in the United States, it is so easy for us to protect ourselves legally from oppression that we have no right to encourage violent resistance to the laws. In Russia, it is very different. Another class of laws, designed to check the circulation of indecent publications, do not come within the range of Mill's and Spencer's principles, and have called forth widely differing opinions among American Liberals. My own opinion is that such literature is so pernicious to the welfare of society that its diffusion ought to be restricted by law. Perhaps the Comstock laws are not the best possible for this purpose; but they seem to answer it reasonably well. They might possibly be improved, but we should oppose their repeal. Of course, care must be taken to prevent the abuse of these laws, for sectarian purposes; and the same may be said of those against slander, and instigating sedition, as well as against blasphemy.

Of the right and duty of public opinion to discountenance down loose talk, and reckless denial of moral obligation, I have not the slightest doubt. Society is founded on morality, and its disparagement ought to be put under the social ban. Honest and intelligent differences as to whether this or that is right or wrong should certainly be encouraged; for the moral standard of society cannot be improved otherwise, or even kept from degenerating. I insist on the right of free discussion; but I insist also on the right of society to maintain the moral laws, on which social existence and progress depend, against reckless, ignorant, and vicious attacks. I would gladly join in sending to Coventry a man like one I once knew, who used to delight in puzzling and shocking people by saying, "Jesus was a thief," "Vices of rulers are public benefits," etc. The latter proposition, I may add, is about half true in a despotism, but wholly false in a republic.

But I must go on to restrictions which are very properly put on some expressions of thought not particularly vicious. I have no right to tell a falsehood even ignorantly, if it is in my power to find out the truth. When that is within my reach, I am morally bound to get at it before I speak. When I know it is not within reach, I am equally bound to keep silence, or speak only with proper moderation. Writers for the press and speakers in public are especially under obligation to hunt up facts and authorities, and take pains to state them accurately. Failure to do this is defrauding our readers and hearers of the truth they have a right to expect. I am sure that no organization of free thinkers would publish books so full of blunders as two I speak of here, because I fear they will not have justice done them by any other journal; namely, *The Book and its Story*, which has been kept in type for thirty years by the British and Foreign Bible Society, who have just issued the one-hundredth thousand, and *The Brief History of the Christian Church*, recently published under the sanction of several Episcopalian bishops, and already in use in their Sunday-schools, where the children, besides such minor errors as that a witch was burnt at Salem, or that Savonarola's bonfire, ably described in *Romola*, was made of relics of the saints and other popish paraphernalia, which, in fact, he believed in devoutly, are taught to call the humanitarian school of Unitarians "a most heretical and blasphemous branch, who ridicule the Divinity of our Lord." So writes a rector in Washington, whom no free thinker is likely to imitate. We are all too ready, however, to criticise authors we have not read, propose plans of whose working in past history we take no heed, censure conduct under circumstances we do not understand, and espouse philosophic and economic theories of which we know only what is said in their favor by our friends. We must expect censure for such infidelity to truth.

Thus, we are bound to keep ourselves with the utmost strictness from uttering falsehoods ignorantly, as well as from weakening the authority of the moral laws, and hindering the working of legislation in their support. And we are all the more bound to do this, because we are thus enabled to speak with more authority in favor of the rights of free speech, fair discussion, and liberty of the press, as well as against any sectarian perversion of the blasphemy and obscenity laws, all tyranny of politicians over voters and office-holders, every attempt of society to silence free thinkers, and the whole hateful system by which the Church is still frightening people away from thinking about her creeds.

F. M. HOLLAND.

DIGEST OF "PROGRESS AND POVERTY."

With Comments.

Political Economy is generally considered to be a dry subject. The average reader usually skips the article on that topic in his newspaper. And the obscure and meaningless jargon and savage inhumanity of the pseudo-science of the college text-books are enough to disgust anybody. The reaction against the Ricardo school of Political Economy had begun before Henry George wrote his *Progress and Poverty*; but he appears to have given the school its *coup de grâce*. He has given to an abstruse and subtle science the fascination and brilliancy of a romance, and at the same time has written a work which, for solid, severe thought, breadth of scholarship, and beauty of illustration, takes rank with works like Tocqueville's *Democracy in America*. *Progress and Poverty* has been translated into nearly all European languages; it has been received with dismay, fear, welcome, joy, by great economists, by mechanics, and by statesmen of Europe and America. Moncure Conway writes to the Boston *Advertiser* that thirty thousand copies have been sold in three months in Great Britain, and that the great critical journals and quarterlies there are discussing it; and yet no adequate reply has been made, no adequate refutation of it been published. The truth seems to be that the gist, or substance, of the work cannot be refuted, simply because it is a mass of solid fact. The law of gravitation cannot be refuted. Neither can a true science of society be overthrown. George's book seems to be an epoch-making work, like Darwin's *Origin of Species* or the Copernican system of astronomy. Doubtless, the fact that he lived for years in California—on the margin of the world, where he saw society crystallizing around him—was a great piece of good fortune. For he has thus been enabled to unravel the complexities and perplexities of economic questions as he could not have done in an older community. That his particular remedy for the unequal distribution of wealth may not be the cure-all he thinks it is, and that he may have given too little credit to other plans for the amelioration of social wrongs, is true. But he has pointed out these wrongs; he has thrown such a glaring light upon the subject that there can be henceforth no blinking of the truth. But let me get at once to the point, and show as well as I can what he has done.

The problem that he undertakes to solve is this: Why has poverty not decreased, but increased with the advance of material progress? Why have the wonderful labor-saving inventions and rapid exchanges of the age served only to crush the lowest classes into still deeper poverty, while the advantages have all accrued to a favored few? We had expected a golden age: we are confronted with bitter suffering. Societies are cursed with unequal distribution of wealth. There is a terrible scramble for the means of subsistence. Men live all their lives in torture because of the spectre, poverty. In such a state of things, there can be no real happiness and prosperity. The worst passions are called into play,—greed, fraud, peculation, merciless extortion, etc. But what is the matter? Where does the wealth go that is produced in such vast quantity? Why this fearful struggle for life? The answer is, that nature is bountiful enough, but that the artificial customs and laws of society interfere with her almonry. Look at a coral bank: there each insect has free room,—air, water, an assigned space, and lives and works in peace. Why should not men do the same? Evidently, they could, if all were agriculturists, and to each man were allotted a fair share of the soil. For from the soil—from nature, from the land—comes all food, all wealth. Land is a natural opportunity. But how if one man is allowed to put a fence around ten, twenty, ten thousand times as much as others of this natural opportunity, this surface of the globe intended for the support of all, and, calling it his, withhold it in speculation or by caprice from being worked for its wealth? Evidently, his action is no better than gigantic robbery. What every man *is* entitled to call his own is the result of his own labor, or the results of other people's labor which have been given or bequeathed to him. But to seize upon vast districts of the globe itself, and hold them at speculating prices in advance of emigration and development, or to hold them as deer preserves, or in any way to hinder them from being developed, is to proceed upon the theory that he has rights against the rest of humanity, that he has a better right to exist than they. He is like the man who should go first into a railway car and claim all the seats as his own, or to a banquet and turn back all the chairs, and compel the other guests to make terms with him. On this principle, one man could claim a whole county, a whole State, a whole continent. As a matter of fact, individual men have appropriated vast tracts of land in different countries and times. Thirty thousand men now own five-sixths of the soil of Great Britain, and legally have the right to expel all the other millions from the country. In this country, too, the same process is going on. Vast

Digitized by Google

tracts of land are held against cultivation for speculative purposes, while men are suffering abject poverty for the want of that land. Such is the injustice of private property in land.

But the worst has not been told. The great law which George has discovered, elucidated, and lifted into prominence, is that the wages of *all* laboring classes are kept, and always will be kept, at a minimum (*i.e.*, the bare subsistence point) by those who, by hook or crook, have succeeded in getting the valuable land of the community into their private possession and ownership. There is a correlation and interdependence between all industries, and they all require land for their operation; and what is true of one is true of all, as respects the law we have just mentioned. But agriculture is the great standard, or typical industry. Let us see how it is that the land-owner is enabled to grind the face of the poor. Suppose his hired man John or his tenant strikes for higher wages, or a reduction in rent: the land-owner says, No, if you don't like my wages, you can go and work land of your own. But all the good land has already been taken up. John could get no more from such poor land as is left than his employer or landlord would pay him: he is therefore obliged to accept his offer of mere subsistence wages, or starve. So it is with city land: those who have inherited it or purchased it may live in idleness all their days on the income from their city lots. They grow fat on their unjust monopoly; they cripple industries by holding their land at exorbitant rates, or holding it against occupation for speculative purposes. Moreover, all improvements in the arts, all new labor-saving devices, enrich not the laborer, but the land-owner. He has the monopoly. If more wealth is produced on his estate, the tenant is not allowed to enjoy it; for the landlord has but to raise the rent to appropriate it all to himself. The tenant, again, must submit, because there is no other land that he can get for himself (in Europe at least, and there will soon be none here). And this law of rent governs all wages of all laborers in whatever industry. For all wealth comes out of the soil; and as agricultural wages are, so are all wages.

The remedy for this hoggishness, this robbery, is to make all the land of the community the property of the community. To prevent this terrible inequality of privilege, says George, "we must make the nation the landlord of its land. We must destroy these gigantic monopolies, which condemn our fellow-men to deepest suffering." George does not propose that the government confiscate or purchase the land of private owners. Let them continue to buy, sell, bequeath, and devise it; let them have all the benefits of a life lease. In order to make land common property, it is only necessary to confiscate the rent; and the cheapest and best way to do this will be to take it in the shape of taxation. In this way, the real value of land will decide as to the amount it is to be taxed. Land can then no longer be held against use by speculators; for the taxes will be regulated so as to be about the same in amount as could be got by renting it at its true value. And, as the future will never disturb this ratio between taxes and rent, there will be no object in not renting at once. George further proposes to abolish all taxes except those on land, and he gives his reasons therefor. Finally, he claims that, the result of making land common property being to throw it all open to use at its just value, a great and glorious amelioration of the condition of the poorest classes and of all classes would ensue; all wages would rise, everybody would be assured of the ability to procure enough for his wants; all natural opportunities would be thrown open to labor and capital; the whole social system would be readjusted on the basis of equality of privilege (whereas, now, the poorest classes are abjectly enslaved); greed, extortion, the building up of vast and useless fortunes, and, in short, nearly all the ills of society, would disappear; and co-operation (which is the condition of all progression, by allowing division of duties and by permitting the release of mental power for noble work) would take the place of the present wrangle and scuffle for existence. Co-operation, and not conflict, is the condition of the stability of a nation's life. If we wish to perpetuate our institutions, we must beware of the mistake of past nationalities that perished as soon as internal conflict supplanted co-operation, or mutual assistance.

This meagre outline utterly fails to give any adequate idea of the glowing humanitarian spirit of George's book, of its extreme lucidity, the resistless march of its logic, and the way in which the whole literature of Political Economy and a wide range of solid general reading is drawn upon by its author for the refutation of the old political economists. I must ask for another opportunity to try to get a little closer to the details of the work, and give the proofs of the remarkable laws which George advances. All I hope to do is to get others to read the book itself. It is an easy book to read, and a second running over it will fix its principles firmly in the mind. The book is sold in editions costing 20 cents, 75 cents, $1, and upwards.

W. S. KENNEDY.

THE PASSAGE IN TACITUS.

On another page of this number of *The Index* will be found a communication from the author of *Bible Myths*, attempting to prove that the passage in the *Annals* of Tacitus, referring to Christ and the Christians, is a forgery. In the many public discussions we have had with theologians on the Bible and Christianity, we have always conceded the genuineness of this passage; and, after reading what is presented by our able correspondent, our opinion on this subject remains unchanged.

The author of *Bible Myths* repeats the statement of Robert Taylor, the author of *Diegesis*, that no reference is made to the celebrated passage before the fifteenth century. It is, nevertheless, true that Sulpicius Severus, a Christian Father, the genuineness of whose writings is universally admitted, quotes, word for word, some portion of the section in Tacitus that Jesus was executed by Pontius Pilate in the reign of Tiberius. We give the whole passage in English, putting in italics the phrases quoted.

By no "human means, either by liberal gifts or expiatory ceremonies, could the emperor free himself of *the charge of having commanded the conflagration*. Therefore, in order to suppress this rumor, Nero threw the guilt on others, and punished with the most far-fetched torture those people hated for their crimes, whom the populace called Christians. The author of this name, Christ, was executed during the reign of Tiberius, by the governor, Pontius Pilate. Though thus repressed temporarily, the hateful superstition broke out again, not only throughout Judæa, the source of the evil, but even in Rome, whither all that is wicked and abominable flows together from every quarter. Therefore, some were first brought to confess; and then by their testimony a great multitude of others were convicted, not perhaps so justly of burning the city, as of hating the human race. Their death was accompanied with insults; *for some were covered with the skins of wild beasts and lacerated by dogs, or fastened to crosses or burned alive, being lighted up, when day declined, like the nightly lamps.*"

The first phrase we have underlined is given in Tacitus as "quin jussum incendium crederetur," and in Severus as "quin ab eo jussum incendium putaretur." Then Tacitus says, "ut ferarum tergis contecti laniatu canum interirent, aut crucibus affixi, aut flammandi atque ubi defecisset dies in usum nocturni luminis urerentur." Severus gives it, "ut ferarum tergis contecti laniatur canum interirent. Multi crucibus affixi aut flamma usti. Plerique in id reservati ut cum defecisset dies in usum nocturni luminis urerentur." Thus, out of twenty-one consecutive words in Tacitus, seventeen are to be found in Severus. That the latter did not quote the mention of the crucifixion is perfectly natural; for he was writing a chronicle, and had already spoken of this event at the proper date, one page earlier. Tacitus, however, put all he had to say of the Christians in one place, without regard to chronology. It is plain that the beginning and end of the passage in question are at least as old as 400 A.D. And there is not a scrap of positive evidence against the opinion of nearly every scholar, that the whole passage is much older, and that all we have quoted was really written by Tacitus. It is not strange that testimony so unfavorable to the early Christians, which affirms nothing essential was called in question by Pagan opponents, should not have been generally appealed to by the Christian Fathers. That Tacitus was but little read, in ancient or modern times, may be due in part to his hatred of tyranny and superstition, and in part to some difficulties of style which would make it very unlikely, if we had no evidence to the contrary, that the *Annals* were forged by Poggio Bracciolini, their professed discoverer. Tacitus was a mannerist, a graphic and sublime mannerist; and any spurious addition to his peculiar narrative would be noticeable for its incongruity. Tacitus, like Thucydides, is *sui generis*. Carlyle, in his famous essay on Voltaire, asks: "For who has ever forgotten those lines inserted as a small, transitory, altogether trifling circumstance, in the history of such a potentate as Nero? To us, it is the most earnest, sad, and sternly significant passage that we know to exist in writing." And, then, he goes on and quotes the passage in the original Latin. This passage in the original scholars are agreed is a good specimen of the peculiarly compressed style of Tacitus, and has as little appearance of being an interpolation as Hamlet's soliloquy, or the passage in the "Tempest," beginning 'The cloud-capt towers, the gorgeous palaces," etc., has of being an interpolation in the text of Shakspere.

Moreover, the forty-fourth chapter of the fifteenth book of the *Annals* of Tacitus contains a sufficient reason for its occurrence, where it is found in the historian's most graphic account of Nero's reign; and without it there would be a noticeable gap in the account of the great fire at Rome, which raged for several days, destroying the old historic Rome of the Kings and of the Republic, with all its priceless mementoes, monuments, trophies, and treasures of art and opulence, leaving, of the fourteen sections of the primitive city, only four entire. All that time, Christians were looked upon much as the better classes of European society at the present day look upon Nihilists, Internationalists, Anarchists, Communists, and other enemies of the existing political and social order. Of course, the masses of the Roman Empire knew nothing about Christianity, except that it was the religion of a peculiar class of people, who treated with hatred and contempt the established usages, beliefs, and institutions of mankind at large. Such conduct was enough to make them outcasts, and objects of constant suspicion, jealousy, and hatred on the part of the rabble and aristocracies alike. They

Digitized by Google

were thus exactly the sort of scapegoats for whom Nero was seeking, because the world was ready to believe them capable of any outrage. Accordingly, he proceeded to unload his guilt upon their shoulders, and to punish them so cruelly that even the Roman populace felt compassion for the victims. It is not impossible that multitudes of converts to the new religion should be found in Rome in the time of Nero, when we consider how rapidly Christianity spread, and the circumstances which had attracted to that city both Jews and Christians, who were generally confounded in the popular mind.

The statement of Tacitus in regard to London is admitted to be accurate by Hume, Knight, the Encyclopædia Britannica, and other well-known authorities. Indeed, all the historians of the great metropolis have been proud of the fact that their city dates back, as an important mart and centre of traffic, far enough to be noticed by the great Roman historian. Tacitus, in the 33rd chapter of the 14th book of his *Annals*, says: "Suetonius, undismayed by this disaster, marched through the heart of the country as far as Londa, a place not dignified with the name of a colony, but the chief residence of merchants and the great mart of trade and commerce." Any one who reads the context will find that this mention of London occurs in the most natural manner possible, and it was probably true; for, even in barbaric times, the locality of the city was resorted to for purposes of trade, and it is not wonderful that it should, a century after the invasion of Julius Cæsar, have become a residence of merchants. This passage in Tacitus referring to Christ is regarded as genuine by scholars generally who have investigated the subject. Gibbon, who does not hesitate to say that the passage concerning Jesus Christ in Josephus "may furnish us with an example of no vulgar forgery," declares that "the most sceptical criticism" is obliged to respect the integrity of the passage in Tacitus. We will only observe in conclusion that nothing is to be gained by employing against Christianity a method of argumentation, which, if generally adopted, would destroy the value of all historical testimony.

B. F. UNDERWOOD.

NOTICE TO SUBSCRIBERS.

A large number of our subscribers are in arrears in their payments. Some of them, as we happen to know, are persons of wealth, to whom the paying out of three dollars, and, in some instances, of a hundred times that, would be nothing. And here we, in *The Index* office, are planning and contriving how to make the ends meet. "Brethren, these things ought not so to be." If you who are thus at fault would only send to *The Index* its just and legal dues, the ends would not only meet, but lap beautifully over on the right side. Let then every one who means to be honest look at once at the mail-tag on his paper, and act as it and an honest conscience shall direct. A word to the *just* is sufficient.

EDITORIAL NOTES.

"THE INDEX" will contain next week a lecture given in New York last month by Prof. Felix Adler, and contributions from Dr. Felix L. Oswald, Mr. Chadwick, and other able writers.

THE proclamation of Gov. Waller, of Connecticut, for a Fast Day, is commendably brief. He simply says:—

> In recognition of the religious character of the people of this Commonwealth, and in conformity to a revered custom of our pious forefathers, I designate and set apart Friday, the 23d day of this month of March, as a day of fasting, humiliation, and prayer.

BLACKSTONE, in the first volume of his Commentaries, which appeared in England in 1765, seventy-two years after the Salem folly and fanaticism, declares (book 4, chapter iv., 6) that "to deny the possibility, nay, actual existence of witchcraft and sorcery, is at once flatly to contradict the revealed word of God in various passages both of the Old and New Testament."

IT has been well said that the rude fisherman of the northern seas labors for the highest interests of his race, because he helps to feed the scholar's lamp. It may also be said that the scholar over his lamp labors to lift the rude fisherman's children to a higher plane of comfort and culture, by preparing the day when they will not need to follow their father's hard life, and when they, as well as the scholar, will sit by better lights than whale oil can supply.—*Nation.*

A LIBERAL thinker, well known by reputation to our readers, writes in a private letter from London: "*The Index* is becoming known here. . . . Mr. Mead has just sent me a copy (Feb. 8) with his article on Cook. It is as you say in the same number an admirable one, though I think he lets the charlatan with whom he has to deal off too easily. Such people require stern treatment. I must confess to some surprise that Mr. Cook gained such celebrity and attracted such attention in Boston. Here, I understand, he simply attracted dissenting Philistines."

THE following table of the estimated strength of religious sects in all countries where English is spoken—the United States, Great Britain, Australia, etc.—is taken from the *Revue de Belgique*:—

Episcopalians	20,000,000
Methodists	15,000,000
Catholics	14,000,000
Presbyterians	10,250,000
Baptists	8,000,000
Congregationalists	6,000,000
Unitarians	1,000,000
Free thinkers	1,000,000
Other sects	1,750,000
Other religions	8,500,000
	85,500,000

IT is believed that a considerable number of Liberals are inclined to become man worshippers. It is not quite becoming in people who won't worship God to worship men. There is a point in praise and puffery beyond which adulation and blarney become insipid and vulgar. A just meed of praise bestowed upon the great and the good—the benefactors of the race and the soldiers of principle—is commendable and proper; but, where it would convert glaring defects into virtues and degenerates into snivelling sycophancy, it becomes insufferable. It is this kind of slobber that has filled the world with Saint Johns, Saint Peters, Saint Patricks, and saint this and that and the other, till there's no turning a corner without running against a monument or a church dedicated to a dead saint. —*The Age.*

THE Boston *Herald* says, "The admirers of Walt Whitman, who quote Ralph Waldo Emerson as another admirer of their idol, will not be pleased by the newly published letter of Emerson to Thomas Carlyle, in which he speaks of Whitman as 'a nondescript monster which yet had terrible eyes and buffalo strength,' but 'wanted good morals.'" The *Investigator* quotes this paragraph, and adds: "We never could understand why Liberals should go wild over Whitman; but perhaps we don't possess the true poetic temperament." The *Investigator* is not without respect for the literary judgment of those who hold in high esteem Walt Whitman as a poet; but it is not in sympathy with those who have called special attention to the most offensive passages in his works, and sought to identify them with liberal thought. And, in this position, we entirely concur with our esteemed contemporary.

THE *Congregationalist*, in reply to an editorial note in *The Index*, says that it does not hold that Hon. W. E. Dodge's "permanent success in life consisted in his accumulation of wealth, but in the attainment and use of his wealth in such a manner as to convince people of his sincere Christian character, his unvarying purpose to do good by means of his riches as well as his example, and his victory over the usual temptations to which such wealth exposes its possessor." But Mr. Dodge could not have acquired his millions except by applying his mind to the things of this world; and in doing this, it seems to us, he disregarded the example of him who had not where to lay his head, who said, "Woe unto you that are rich, for ye have received your consolation," and "Blessed be ye poor, for yours is the kingdom of God," and whose earliest disciples, they who listened to his words as they fell from his lips, sold their possessions and had all things in common. However, our readers will note the *Congregationalist's* explanation of what it meant by referring to Mr. Dodge's "permanent success in life."

IT is not strange that Col. Bundy is hated and denounced by a certain class of "mediums," when he thus speaks in his paper, the *Religio-Philosophical Journal*, of the "dark circle": "Physical phenomena must be judged by the physical senses, and those senses must be at their best and acting in concert, in so far as the case demands, or the observations made are worthless. The condition of darkness and the ever accompanying noise of 'music' destroy the value of the evidence by lessening the competency of the witness. The lack of scientific value attaching to the average dark circle, as usually conducted, is, however, not the only or the greatest objection. Were it so, we should care but little, as the evidence of the continuity of life and the ability of spirits to return and manifest is proven by a wide range of phenomena otherwise obtainable. Promiscuous public dark circles are an abomination: they are moral pest generators, where both the medium and sitters are liable to [be], and in too many cases are, thoroughly demoralized. On this point, we do not care at this time to further expand; but we challenge successful denial, and stand prepared to prove our assertions by an overwhelming array of irrefutable evidence derived and derivable from leading lecturers, mediums, and writers who stand acknowledged as among the brightest, purest, and ablest Spiritualists, and whose past and present devotion to the cause is universally known in the movement."

POETRY.

For *The Index.*

ISIS.*

I am whatever was and is,
And also all that is to be:
No magian wise, with magic his,
Hath e'er unveiled the Mystery.

* "I am that which is. I am all that is, all that was, and all that shall be. No mortal man hath my veil uplifted."
This sublime inscription on the pedestal of the statue of Isis was kept in a frame, lying on the table before him, by that greatest of all composers, Beethoven, whenever he was engaged in the composition of those imperishable symphonies and other great musical productions which have rendered his name immortal. Appended to the inscription was the following sentence:—
"He is One,—self existent,—and to that One all things owe their existence."
Schindler, Beethoven's intimate friend, who probably knew him better than any other person, expresses the belief that, although he had been bred in the Romish Church, he was a deist,—an opinion which the perusal of this sentence can hardly fail to render a conviction.

Digitized by Google

They name me with unnumbered names,
In every age, in every land,—
On snow-fiel is red with polar flames,
And on the barren desert sand.

By widely sundered tribes, my praise
Beneath both sun and stars is sung;
They chant of my mysterious ways
In every clime, in every tongue.

The bard, lone musing by the sea,
Hears, in its vast and wandering swell,
A whisper of the Mystery
He dimly feels, but cannot tell.

And, musing thus, he strives in vain
To grasp the thought that baffles him:
A wider, more mysterious main
Spreads out before him vast and dim.

And, baffled in the end, he stands
On the last mountain-top of mind,
Seeking o'er glimmering seas and lands
The mere-stone which he cannot find.

In depths unknown, in worlds unseen,
That in your language have no name,
'Mid starless night or solar sheen,
I am, through every change, the same.

The grass that, creeping, robes the ground,
Renews through me its emerald warm;
The oak with crown of leafage crowned,
So manifold and multiform.

The winds their changeful rounds that keep
But hint to you my boundless range:
The mist far in the azure deep
Is symbol of mine infinite change.

The iris, trembling in the sun,
Or, paler in the moon's white ray,
A type of forms through which I run
By night no less than glowing day;

And the green billow of the sea
Dissolving on the winding shore,—
A changeful symbol is of me
In endless round forevermore.

And though forever I return
Again, yet is it not to stay;
And though for me ye ever yearn,
Still from your grasp I haste away.

Preluding, with grave murmurings,
Through melodies that need not words,
I touch, with hands unseen, the strings,
And rise through higher, grander chords,

And wandering on through infinite themes,
And varying infinitely still,
I chant my changes, as of dreams,
Which all the soul with longing fill.

These symphonies through life that roll,
Whose meaning ne'er hath been divined,
Leave, in the tranced and listening soul,
A music vague and undefined.

Thus, waking deathless longings deep,
Which are the soul's immortal breath,
I ward away the fatal sleep
Which were the spirit's final death.

And though I leave unsatisfied,
Yet is it all without annoy;
For, wandering through mine empire wide,
Ye find a calm, perpetual joy.

And thus I stir within the soul
The striving sweet withouten strife
Your aspirations deep control,
I am, indeed, your proper Life,—

The Life that fills all space, and sways
The Evil with its Justice strong,—
That, moving on through hidden ways,
Serenely overthrows the Wrong;

The Life that strengthens all who know
The Right and in its name have bled;
Who overthrow the Wrong, that so
The Right be stablished in its stead.

I am the Truth that was and is,
And shall throughout all æons be:
No magian grand, with magic his,
Shall e'er unveil the Mystery.

HOWARD WORCESTER GILBERT.

CHESTER COUNTY, PENNSYLVANIA, September, 1882.

TRUTH, when it is won, is the possession of the whole nature. By the action of the whole nature only can it be gained. The king must go with his counsellors at his side and his army at his back, or he makes no conquest. The intellect must be surrounded by the richness of the affections and backed by the power of the will, or it attains no perfect truth. —*Phillips Brooks.*

The Index.

BOSTON, MARCH 15, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

Practical Deductions from the Religion of Humanity.

BY WILLIAM FREY.

It was shown in preceding articles that the Religion of Humanity is but the latest development of the same ideas and forms which necessarily constitute all religions. But, if we wish to prove that this new religion is a legitimate heir of all past religions, we must go farther than that.

In fact, every religion is a philosophy, explaining our relation to the universe and to one another. The importance and vitality of every religion depend on the degree of satisfaction with which it answers the burning questions: Whence came I? Whither do I go? For what purpose do I live? What shall I do? Every great religion of the world has been the best and most advanced philosophy for its time and place. Each of them, therefore, has directed the mental and moral capacities of men during long periods of time, has created a specific civilization, has wrought deep changes in domestic, political, and social relations. And, to complete our exposition of the Religion of Humanity, we must show:—

1. That humanity, discovered by inductive science, is a source of many important deductions in religion;

2. That, out of these deductions, grows up the best and the most advanced philosophy of the nineteenth century; and

3. That the acceptance of the Religion of Humanity must necessarily produce many important changes in our domestic, social, and political life.

To condense all the variety of topics involved in such a vast programme into one short article is a difficult task, and the reader will find here only hints instead of detailed discussion. He may therefore misunderstand many points; but misunderstandings are far easier to bear than the complete ignorance which prevails in the public at large in regard to this far-reaching and most important subject.

The Religion of Humanity is based on Reason and Tolerance.

To begin with, the new religious forms and ideas are not based on faith: they can stimulate religious enthusiasm without any fictitious representation. The grand conceptions of Inscrutable Power and Humanity are based on scientific inductions, and may be verified and strengthened only by science.

The revealed religions claim to receive absolute truth and supreme wisdom directly from God; and, as such, they cannot favor a farther inquiry or farther progress. We see the proofs of such tendency in the burning of the Alexandrian Library and in the fires of the Inquisition.

But the Religion of Humanity has outgrown this childish and ominous belief. It disclaims any direct connection with the Unknown. It says that humanity itself is not a perfect being, and is far from possessing all truth. The New Religion insists on obedience to the laws already discovered by humanity and recorded in science; but, as to the farther disclosures, it suggests only to increase our devotion to the mediator, whose noble mission depends on the efficiency of our service.

Revealed religions are stationary: this religion is necessarily progressive. The former exacts obedience and uniformity of opinion: the latter says that a conflict of different opinions must necessarily precede a disclosure of every law, and thus protects liberty and diversity of opinion. True, the Religion of Humanity announces that diversity of opinion is an excellency *per se*: it teaches us that each disagreement is an indication of our ignorance; but, no matter how painful the disagreement may be to all, or how injurious it is to the erring ones, so long as none of the individuals possess the absolute truth, the diversity must continue until humanity arrives at an unchangeable conclusion. The only way to shorten this period of uncertainty and pain is to encourage the utmost diversity of pursuits and explanations, and to institute a perfect freedom of the methods of inquiries, because from the conflicts of extremes must come the pure golden truth.

Thus, tolerance is as necessary an attribute to the Religion of Humanity as intolerance is a part of the revealed religions. More than this, science teaches us that mind itself is a matter of growth, that ideas which are easily understood by a man in a certain stage of mental development are not acceptable to him while in a preparatory stage; and thus we learn to extend the meaning of tolerance far beyond its present meagre conceptions. Above the conventional tolerance which is practised when doubtful opinions clash, Positivism* points at another nobler tolerance, which forbids the enforcement of already demonstrated truth on those who are not ready yet to accept it. The best illustration of such tolerance we see in the friendship and respect with which the Religion of Humanity extends brotherly love to all existing and past religions. Compare the insulting language of Ingersoll with the words of Auguste Comte, so well restated by Herbert Spencer (in the last pages of chap. ii., *First Principles*), and see what a vast difference there is between the tolerance of the New Religion with that of the so-called Liberals.

Let no one entertain a fear that such tolerance will diminish zeal in advocating new, progressive ideas.

"Whosoever hesitates to utter that which he thinks the highest truth, lest it should be too much in advance of the time, may reassure himself by looking at his acts from an impersonal point of view. . . . It is not for nothing that he has in him these sympathies with some principles, and repugnance to others. He, with all his capacities and aspirations and beliefs, is not an accident, but a product of the time. He must remember that, while he is a descendant of the past, he is a parent of the future, and that his thoughts are the children born to him which he may not carelessly let die. He, like every other man, may properly consider himself as one of the myriad agencies through whom works the Unknown Cause; and, when the Unknown Cause produces in him a certain belief, he is thereby authorized to profess and to act out that belief." The Religion of Humanity, possessing no absolute truth, fully indorses these words of Herbert Spencer. It advocates the strongest possible *individuality, i.e.*, originality of pursuits, methods, and actions; but it is in deadly opposition to *Individualism, i.e.*, to the spirit which makes man perfectly satisfied with his small circumstances, perfectly indifferent to all that lies outside of him. The Religion of Humanity cannot enforce a unity in contesting opinions; but, instead of that, it gives a unity of moral purposes, and constantly refers us to the common thoughts, common laws, common purposes, common sympathies, common aims, and common duties.

Individualism, the widely spread disease of our age of anarchy and decomposition, will be considered afterward in all its bearings: here we will show only how the extreme tolerance, advocated alike by Posi-

* Positivism and the Religion of Humanity are the names which we shall often use to express two aspects of the same thing. The Religion of Humanity is positive philosophy regarded as affecting our emotions, while Positivism is the Religion of Humanity addressed to our intellect. Humanitarians are the devotees of Humanity as the Supreme Being.

Digitized by Google

tivists and individualists, will work under the sanction of religious sentiment.

First of all, the beautiful image of humanity reveals to us the common origin of all men and their common working for the same end. We see now that we all are bound together stronger than by a family tie. And the brotherhood of men, which on the lips of individualists is a meaningless expression, becomes for Positivists a reality, and as such will allay the bitterness of the conflict. Humanity teaches us to bear each other's differences, not with the hate of contesting enemies, not even with the restraint practised within each decent family, but with mutual respect due to co-operators in the same cause.

Again, with the recognition of humanity, the moral centre of gravity is moved from the individual man to the collective one. Those who know of no superior are naturally proud, self-willed, and supposing that the diversity of opinions is the *desideratum* of the social life; while those who see in humanity the highest court of appeal become more docile, more open to truth, more apt to curb their propensities. They see that the amount of human happiness is in direct proportion to the numbers of laws agreed upon. Unity of opinion is their ideal, and they uphold the existing diversity, not for the gratification of personal ambition, but as a temporary evil, as the best means to attain the unity. Preserving their own individuality to its fullest extent, humanitarians will look to others for the proofs and verifications of their individual opinions. Instead of being teachers, they will become pupils. Above the strong adherence to personal opinion, they recognize a higher virtue in the capacity to accept new truths, no matter whence they came and whither they may lead. Thus, men, influenced by the Religion of Humanity, are able to carry out the utmost freedom of opinions with the least possible fiction. And the religion based on science and tolerance, instead of hindering the intellectual pursuits, will give them a new and powerful impetus, because it points to the scientists a nobler aim and more important duties. Individualists may delight themselves in the pursuits of meaningless and purposeless specialization, but humanitarians will direct their mental energy toward the solution of vital problems directly affecting human happiness and human welfare.

The Religion of Humanity as Inducement to Perfection.

The grandest function of every religion is to lead men toward perfection. And the best way to show the superiority of the Religion of Humanity is to compare it with other religions in regard to this most important function.

Christianity urges men to be perfect from the fear of punishment, or from the desire of reward in the fictitious future. This method is good enough, as long as men act from personal considerations and believe in conscious existence after death. But religion, destined to bind men of the nineteenth century with their higher intellect and loftier aspirations, must present a better inducement for self-perfection.

Adherents of Cosmic Philosophy (misnamed sometimes Cosmic Religion) abandon all the attempts at the personification of the Inscrutable Power; but they do not hesitate to ascribe to it a tendency toward perfection, and boldly assert that individual man as a particle of the perfecting universe must live in accordance with its laws, and hence strive for self-perfection.

Let us see now on what ground they build this assertion. They see the improvement of human beings on the earth; and from this local observation on one of the trifling specks of the universe, and during the infinitely small period of time (as our three or four thousand years of historical time are but a moment in comparison with eternity), they come to the conclusion that the whole universe is striving toward Perfection! Such deduction is like the one made by the man, who, seeing only an infinitely small portion of a curved line, would assure us that the whole line is straight, because such is its visible particle. Cosmologists, ascribing to the infinite certain human purposes, commit a coarser error than Christians who ascribe to the Infinite certain human attributes, because it is generally understood that the disclosure of intention is a more difficult task than the disclosure of personality.

Some of the Agnostics feel how shaky and uncertain is such a foundation for morality. "Where is the proof that there is a progressive development from the less perfect to the more perfect?" asks Prof. Adler, in one of his discourses. "Whether the forward movement which we observe is more than temporary who will prove? Now, I grant that the fact of progress cannot in the strict sense be proven from experience." Prof. Adler rejects the erroneous method of Fiske; and yet he commits the other error of the past religions, because he bases everything on intuition. With all the energy and eloquence of the ardent apostle, he urges his hearers to self-perfection, because, says he, every man has an assurance of it within himself.

Is this assertion a proof? Can ethics be scientifically based on such an intuition?

Now, after disposing of the attempts of pure Agnostics, let us show how easily are avoided all difficulties, when once we recognize humanity as a living being.

Positivism, as a scientific philosophy, neither denies nor affirms the grand and ennobling deduction of cosmologists. No matter how probable or how desirable may be this deduction, the Religion of Humanity points to the necessity of perfection without committing the errors of the past religions. It starts from the fact that humanity (in end by whom we all live) is, comparatively speaking, a young organism, and, consequently, millions of years are open to its progressive development. It says farther that we, being particles of the universe, are at the same time particles of humanity, and only by working for humanity can we act in harmony with the mysterious purposes of the Unknown. But, to assist a perfecting humanity, we must perfect ourselves and perfect the life that surrounds us. Hence, perfection is a duty assigned to us by Inscrutable Power; and, by fulfilling this plain duty of ours, we perform a part of the uncomprehensible work of the universe!

The inspiring influence of such a revelation becomes still stronger, when we take in consideration a belief in personal immortality,—a belief by no means rejected by the Religion of Humanity, but only corrected of its blunders and purified from its debasing influences.

Personal Immortality.

Positivism, to be consistent, neither asserts nor denies the existence of ethereal matter capable of preserving the individuality and consciousness of man after his death. This question will be settled by scientific investigations. But millions of our fellow-men go farther than this. To the belief in the existence of the personal and conscious spirits, they add a belief in their immortality.

To convince others of the truth of this assertion, the Spiritualists must pull down the strongest acquirements of science. In fact, science teaches us, that every phenomenon is but a transformation of one form or energy into another, is a link in the circle which enters into the same source from which it started. Bodies of animals, for instance, which are fed by the earth, must at the end return to the earth, in order to feed other organisms. The water evaporates from the surface of the earth, forms clouds, and thence descends back in the shape of snow or rain to moisten the earth and to feed the springs. The theory which says that our ethereal spirits will remain forever in one form without a further transformation and final returning to their source denies the law of rotation of life, and is an uncomprehensible and suicidal theory. It must be classed together with the statement that our material body will never decompose itself, or that water, after evaporation, will forever remain in the form of clouds. In either case, the source which produced these phenomena must eventually exhaust itself, and the life (which believers in immortality are so anxious to prolong) on the earth becomes impossible. Besides, we cannot conceive the existence of anything which has its beginning, but no end; and, unless Spiritualism is a modern revival of the old Egyptian theory of transmigrations of souls (which is the end of personal immortality), it is inconceivable, and we repeat Spiritualists have a hard work before them, if they wish to prove a conscious personal immortality.

Humanitarians avoid all difficulties by striking off the word "conscious" and proving merely personal immortality. The principle of the conservation of forces teaches us that no thought, act, or feeling of ours may be lost without producing several effects, which, in their turn, become causes of many other effects, and so on without end. Humanity, as the resultant of all past effects, takes them all in as soon as they are produced, and preserves the thoughts, feelings, and actions of each individual for the further use. Thus, humanitarians may rightly say that individuals will live and work in humanity even after the death, even after the loss of consciousness.

This new scientific conception of personal immortality preserves the inspiration and sublimity of the old, time-honored belief, but does not accept its imperfections.

Old religions and modern Spiritualism lead men to think that earth is a temporary abode, that suffering and miseries here are but trifles in comparison with the glory of the everlasting life. Hence, the indifference to injustice done here; hence, the increase of selfishness, because even good acts are committed merely for the sake of personal reward. How different is the Religion of Humanity! It reveals also the existence of a hereafter; it satisfies the deeply rooted assurance of future life; but, at the same time, it directs our attention toward this earthly life, because only here we can control our activities, only here we can make our lives fit for the future. The religion teaching such views of immortality will make men nobler and purer, because it prompts them to do their duties from the impulse of love, hope, and gratitude, but never from the base selfish desire of personal reward or from the fear of personal punishment.

Nobody can attack the invulnerable position of the Religion of Humanity in regard to immortality, but many try to belittle it. They sneeringly say that poor humanity is doomed to freeze, and consequently the existence in humanity is but a poor substitute for Eternity. These imaginative persons are troubled by the event which may happen after millions of years; but they may be fought with their own weapon. Let them count all the achievements which have been already accomplished, add a childish stage of our development, and then, by the much safer stretch of imagination, they will find that the dreams of Jules Verne are not far from realization, that the inhabitants of the earth will establish a communication with the inhabitants of other planets long before the natural death of the earth. And, when the time shall come for humanity to dissolve or perish, all her experiences, achievements, and influences will be taken up by other beings, and continue to participate in the development of the to us unknown destinies of nature.

To the positive knowledge that we shall live and work as long as humanity exists, we may safely add a belief that humanity will not be lost in the universe, and that, through humanity and by it, each of us will live forever.

Thus, the short and insignificant life of individuals reaches the magnitude of the Infinite! And the sublime serenity and inspiration which flow from this scientific conception of immortality will only increase the religious enthusiasm for humanity and strengthen a desire to do our duty here in the best possible way.

Next in order is to show how humanity reveals to us this "best way" amid the contradictions and conflicts of different opinions.

Oligarchy vs. People.

A grand conception of humanity as a living organism, of which we are but building cells, forever settles the strife between the aristocratic and democratic tendencies. The conflict which was going on through the whole history, and which could not be prevented by any previous philosophy, is put to the end by the New Dispensation.

We know already that differentiation of parts and specialization of functions increase in every organism with the advance of the evolutionary process; that, at the beginning of this process, the energy of every part of an organism is directed toward various duties; but, at the end, each part is assigned—only to one duty! We conclude, therefore, that the ideal of perfection, the goal to which humanity is drifting, must be found in such adjustments of its parts as will enable each cell to perform a duty to which it has more affinity, and to occupy a place in which it may serve society in the most effective way.

A logical deduction of this law was made by Auguste Comte in his positive polity. He told us how, with the farther development of humanity, the boundaries between the kingdoms will gradually disappear, and, instead of non-essential political divisions, will come a substantial and permanent division of functions.

He depicted how women of the future will abandon all side issue and devote themselves to the elevation of morality among men, and especially in the young ones placed under their care and instruction.

Digitized by Google

He said that only a few men will devote themselves to science, and thus become the spiritual teachers of the people, without any material power to enforce their teaching. Only a comparatively few men will apply their administrative talents and their business abilities to the organization of industry, and thus become the providers of our material needs; but the vast majority of mankind would voluntarily place themselves under the guidance of the ablest men, and, enjoying all that is necessary for the physical, mental, and moral perfection of man, presenting a powerful embodiment of morality as thought by scientists and inculcated by women, they will prevent an aggrandizement or injustice on the part of the temporal rulers, by the moral force of public opinion.

The enemies of Positivism can very easily make a laughing-stock of this picture by distorting it with disconnected quotations and their own shallow arguments. A society, pictured by Comte, which has no room for individualism and distrust, for suffrage and intolerance, for competition and poverty, remains rather incomprehensible in our age of anarchy and egoism. Hence, it is denounced alike by the great and low, by the sage and ignorant, by the Liberals and Orthodox. Some regard it as an attempt to return to the old caste division, forgetting that castes are impossible in the society which gives to all men and women an equal, complete, and superior education, so as to enable them to select their occupation and to perform successfully their duties. Some have gone so far as to declare Comte's representations as Utopia, as the product of an insane mind.

But the alarm and prejudice against "Comtism" are not altogether the results of wickedness or ignorance of the public. Auguste Comte himself has done some harm to Positivism. He firmly believed that, with the discovery of humanity, men could build at once a new scientific order of life. A transitory period necessary to unite order with progress could last, according to his own opinion, not more than two hundred years. And, consequently, the picture which he regarded as a typical representation of the final evolution of society was impressed on the minds of his readers as something which must occur almost immediately. Positivists must correct this impression. Seeing in humanity a living organism, they are convinced that all sudden changes in societies are injurious and abnormal. Humanitarians do not denounce any institution, any aspiration inherited from the past: they are certain only that all these forms and opinions will gradually adopt themselves to another higher state of society similar to that pictured by Auguste Comte. The evolutionary process may last during a long period of time: a final state of equilibrium cannot be realized, unless the moral and mental condition of mankind shall insure the good results of the forthcoming change. But humanitarians are sure that such a change will come; and they base this assurance not on the words of Comte, but on the fact that humanity is an organism and must inevitably come to such solidification of parts and specializations of functions which characterize all highly developed organisms.

Humanitarians see the ultimate triumph of "Comtism" in a far future; and, instead of insisting on its immediate realization, they look at it rather as at the beacon which keeps them from running ashore in this age of false and Utopian theories, as at the guiding light which helps them to approach the inevitable goal with the least amount of friction.

A great many socialists, reacting against the aristocratic tendencies of our time, cannot perceive the necessity of Comte's division in classes. They think that such division is not compatible with progress and true brotherhood. But those who look at the beautiful image of humanity for their guidance and advice see at once that every part of the organism is equally needed and equally important; that specialization of duties by no means includes a superiority of one kind of work over the other; that every avocation of life, if honestly performed, is equally important and honorable.

Under such revelation, the humblest street-cleaner becomes as important a servant of humanity as Herbert Spencer. Suspend the work of one, and the other will perish from malaria or typhoid fever. Nay, more: the very honor of producing a modern philosophy of evolution must be ascribed not to Mr. Spencer alone, but to the millions of his contemporaries and predecessors who fed, protected, and helped him during his work. Thus, the Religion of Humanity does not encourage hero-worship, but rather abates this relic of fetichism. It teaches us that every person who honestly performs his or her duties is a hero, and equally participates in all great achievements of the age. And men, under the influence of such sublime religion, will concentrate their admiration and worship on humanity as the only being to whom all honor is due, regarding themselves as equally necessary for the exchange of mutual obligations, as equally needed for the welfare of humanity, as equally humble in their service to it.

The Religion of Humanity cures the sickly notion that one occupation is more honorable than another. It puts to an end the restlessness, discontent, and jealousy so largely displayed in the struggles for a better place. More than that, this religion is adequate to support the unfortunate and to improve the conditions of the poor.

It is pre-eminently the Religion for the Oppressed.

Auguste Comte said that the Religion of Humanity will find its most ardent apostles and most numerous followers, not among the privileged classes, but among the laborers and women who are down-trodden, and so much in need of effective consolation and support. Experience and reason fully verify this wise statement.

We all know with what ease a man carries the burden of his life, when animated by religious enthusiasm. Hardly any one will deny a comfort derived by the suffering from the Christian religion. But, unhappily, the number of true Christians becomes less and less. Even the poor classes begin to despise the religion which is evidently unable to improve the present conditions of life. Thrown on their own meagre resources, these poor men naturally succumb under the weight of their cross; they revolt against the society which oppresses them; they defy the laws and morality; they are moved only by hate and hunger.

But the Religion of Humanity can lift them from the gutters of degradation. It gives a new meaning, a sanctity, to the humblest occupation; it brightens the gloomiest life; it cheers the poor in their miserable hovels, and enables them to work with increased trustworthiness, because it teaches them to work for humanity, not for employers; it tells them that, as every stone laid in the walls of a temple is a necessity to produce the impression of its beauty, so every honest life becomes a necessity in the perpetual development of the true, beautiful, and good in humanity, —so every man may become a real participator in all great and noble achievements of his age.

The Religion of Humanity arouses in the poorest of its followers a sense of dignity and manliness unknown to the dollar-worshippers. And this dignity, coupled with the conceptions of immortality, is able to thrill and comfort the humblest worker under the most trying circumstances.

Labor and Capital.

So far, we see only that the Religion of Humanity abates the spirit of despondency, discontent, and despair; that it imparts to the oppressed a spirit of endurance and patience; that it exercises the same pacifying influence as all other religions.

But there is one vast difference between the new and old religions. Others sanction the existing order of things, and thus, by pacifying the poor, secretly play into the hands of the oppressors; while the Religion of Humanity not only allays the pain, but denounces the very causes of misery and distress,—strikes at the very root of the evil.

The political economy of individuals is based on the assumption that a personal exertion displayed in obtaining a certain thing gives a right to own it. But every one who is thoroughly imbued with the grand conception of humanity must come to the opposite view. For him, any theory of personal property is a delusion and a snare, because all the elements of production, such as industrial abilities, energy, skill, and knowledge, are transferred from the past as free gifts of humanity; and no work of an individual can ever pay for these gifts, which have been accumulated and prepared during thousands of years and by innumerable minds of men. Hence, it follows that the more a person is endowed with such gifts, the more deeply he is in debt (if we use mercenary language), the more he is under obligation to fulfil his duties toward his benefactor.

Once a capitalist becomes a humanitarian, he would easily see that riches, accumulated in his hand, have been produced not only by his hired laborers (as it is falsely asserted by the social-democrats), but by the myriads of men who built up the present civilization, and made possible such an accumulation of wealth. He will regard himself as a trustee, holding in his hands the resultant of the work accumulated through the ages; and, as such, he is under obligations to produce the greatest amount of good with his trust. He may use for himself only such a part of the accumulated wealth which is strictly necessary for his healthy and vigorous activities; and when he dies, or becomes unable to do his duties, the capital must go, not to his children or relatives, but as a sacred trust, transferred to the ablest man capable to manage it for the good of others.

If a laborer becomes a humanitarian, he will turn in disgust from demagogues claiming that to the laborers belong the fruits of their labor. As a true servant of humanity, he will work not for the wages, but for the satisfaction of his sense of duty and gratitude. He knows very well that all his work during all his life cannot equal the amount of toil and suffering spent by millions of his fellow-men in producing even a small piece of bread.

True, laborers, alike with capitalists, are entitled to that share of wealth which is necessary to make them healthy, intelligent, and moral servants of humanity; but, in taking such a share, they must take it as a free gift of humanity, and thank it by redoubling the energy and efficiency of their work for the future generations.

Positivism sees in every organic life that nutrition belongs to the whole organism, and is always distributed so as to keep every cell in the most favorable condition for the work. It infers from this fact that all wealth produced by men belongs properly to humanity, and must be equitably distributed among its various organs. But the most ingenious schemes of rational distribution of wealth must fail, as long as men regard the produced wealth as their own personal property. Positivism is not dogmatic: it does not prescribe a future order of society; it does not give a universal panacea for all miseries. But it gives a deadly blow to the present system of economy by denying *in toto* the rights of inheritance and personal property in any form or shape. It breaks down the barrier which has kept wealth from an equitable distribution, and points at the much dreaded communism as the highest law of nature.

How few radical reformers can cope their contrivances with the breadth and width of this grand economical revelation, sanctioned by the Religion of Humanity! Many, appalled at this radical deduction, say that such a reform can be realized only on a small scale, in small communities of select persons; that it is impossible to apply it to the people at large. And, here, we must repeat what was said before. Life can be improved only gradually. Those who are selfish need a disciplinary school of the present hireling system. Coopers and Godins of to-day will transgress their duty, if they would give their wealth into the hands of those who support bar-rooms and tobacco stores. This commandment may be realized at present only by men who are ready to accept all the duties involved in it; *i.e.*, who are pure, unselfish, and loving servants of humanity.

The grandeur of the Religion of Humanity is that it does not sanction the present order of things, but regards it as the unavoidable heritage of the past, and a preparatory step toward something superior in the future. This religion takes up the radical deduction of Positivism, and impresses it on the hearts of men. It puts all of us in the awkward position of men who discover that money, which was supposed to be their own, belongs now to somebody else. The religion makes us ashamed of luxurious and even comfortable living while so many are poor and destitute, and prompts us toward the realization of a better order of things. Any reform which speaks to the human heart will be realized in a more efficient way and a great deal quicker than any intellectual effort of demagogues, which leads to hatred, jealousy, and bloodshed.

Under the peaceful and ennobling influence of the Religion of Humanity, the social reforms will be realized in another way. Instead of the few philanthropists of to-day, we shall have hundreds and thousands of them in the future. In the same rate will increase the number of industrious, trustworthy, and honest laborers. Life will gradually lose its bitterness,

Digitized by Google

economical difficulties will dissolve themselves in the growing bond of mutual respect and dependence which will unite capitalists and laborers, and people will find that the only true and peaceful solution of the labor question lies in strict adherence to the teachings of the Religion of Humanity.

Elevate our sense of duty toward humanity, and you will speed a millennium: teach self-gratification, arouse bitter feelings and hatred, and you will only retard the desired end.

Governmental Reforms.

Some have great confidence in reforms imposed by governments. But forcible changes cannot be applied to social organisms, with their slow and gradual development. A man can retard or spoil the natural growth of a tree, but he cannot enforce it. No matter how good may be the intention of men in power, they cannot enforce their ideas on those who are not ready to accept them. It is time for rulers to understand that selfishness, vanity, greediness, deceit, and brutality cannot be exterminated by law; and, as long as these sources of evil-doing exist, the evil itself cannot be eradicated by any political reform. We may suppress evil in one form, but it will certainly appear in another. Life becomes better only in proportion as men get less brutal and selfish; but the improvement of morality belongs properly to religion, not to law.

The legislation may facilitate or retard the work of moral improvement; and, in this respect, it is an important element in the general developmental process of society. We object only to the folly of those who think that legislation, instead of being a result of moral improvement, is the cause of it.

As a new school of medicine teaches us to abstain from the use of drugs as long as there are doubts about their *modus operandi*, so new ethics, given by humanity as a living being, is against all legislative interferences, as long as there are doubts about a proper solution of involved problems. Hence, the folly of the rule by the majority of votes. Both tolerance and science—those two pillars of the New Religion—denounce this rule as a relic of barbarism. It may be of some use in our transitional stage of development, but it never will find a place in the better order of things. And, if the rule by ballots is far from being perfect, how much worse is the rule by bullets!

Revolution.

No organism can live healthily, when its organs are on a strike against one another. The mission of the Religion of Humanity is not to arouse one class of society against the other, but to establish a harmonious co-operation between all grand subdivisions of humanity.

Its head represented by *savants*, its heart represented by women, its sinew and bones represented by laborers, its vascular system represented by middlemen, and its nervous centres regulating the animal life represented by government, all these organs are needed, and each of them can successfully perform its duty only in co-operation with others.

An excessive and abnormal development of one organ may sometimes produce a commotion among the other organs: hence, the phenomena of a terrible social disease called "revolution." We must regard revolution as an inevitable result of the past transgressions, as a punishment for not adhering to the laws of nature, as a warning for the future, but never as the best and desirable way to reach a happy, brotherly life. When the vitality of a social organism is wasting in the struggle between its parts, the progressive movement is much retarded and sometimes becomes impossible.

Revolutionists say that disease may be beneficial, when it instructs us to avoid past errors. But even this benefit cannot compensate the injury wrought by disease. Against France, which in this century alone has passed through eight revolutions, we can put England with her wonderful progress without any revolution. And, above all, against a man who learns the laws of health through the painful process of sickness, we put a man who learns and obeys these laws.

I FIND that people who have really touched the bottom of any one subject are very modest, even upon that; and much more so in regard to giving opinions upon subjects of which they really know nothing.—*W. M. Hunt.*

CORRESPONDENCE.

THE HISTORICAL EVIDENCES OF CHRISTIANITY.

Editors of the Index:—

In your edition of February 22, under the head of "Who is Right?" a Philadelphia "Inquirer" wishes to be "enlightened" in regard to a passage in the *Annals* of Tacitus. Although you have answered his query, I feel that it would not be out of place to offer a few words relative thereto, particularly as the "Inquirer" has requested the author of *Bible Myths* to do so.

After quoting from Mr. Waite's *History of the Christian Religion to the Year Two Hundred*, for the purpose of showing that the author considers the passage in the *Annals* of Tacitus, which refers to "Christ" and the "Christians," to be genuine, he says that he is confronted with an altogether different story on page 566 of *Bible Myths*, and wishes to know "who is right."

The only difference, that I can see, between the statements made by Mr. Waite and myself, is that he considers the passage alluded to to be genuine, and *I do not*. What reasons Mr. Waite may have for coming to his conclusion is, of course, unknown to me; but, with your permission, I will give a few of the reasons for taking the position I do in the matter, feeling at the same time unwarranted in taking the space in your paper that is really necessary to do the subject justice.

In the first place, the passage is not quoted by *any* of the Christian Fathers, though some of them quote the works of Tacitus, and though all of them sadly needed such passages in support of their statements, particularly St. Clement of Alexandria, who set himself entirely to the work of adducing and bringing together *all the admissions and recognitions* which pagan authors had made of the existence of Christ Jesus or Christians before his time; but, in spite of all his research, he failed to find or mention this passage, which, if it existed at that time, I have no doubt he would have found and mentioned.

2. It has been nowhere stumbled upon by the laborious and all-seeking Eusebius, whose keen eye I do not believe it would have escaped had the passage then been in existence, and whom it would have saved the labor of forging other passages in support of the "cause of Christ," for which, he avows, it is lawful to lie and cheat. (*Ecclesiastical History*, viii., 21.)

3. Tacitus has in no other part of his writings made the least allusion to "Christ" or "Christians."

4. No reference whatever is made to this passage by any writer or historian, monkish or otherwise, before the fifteenth century, which, to say the least, is very singular, considering that after that time it is quoted, or referred to, or commented upon in an endless list of works, which by itself is all but conclusive that it was not in existence till the fifteenth century. From that day to this, the counterfeit coin has passed current, only a few having noticed the absence of the *true ring* of the genuine metal.

5. The age in which this—to me—glaring forgery appeared was one of imposture and of credulity so immoderate that people were easily imposed upon, believing, as they did, without sufficient evidence, or on slight evidence, or no evidence at all, whatever was foisted upon them. Among the numerous reasons which might be cited to show that either the *Annals*, or part thereof, could not have been written by Tacitus, is the fact that, although Julius Cæsar when he visited Britain found the inhabitants, without an exception, *thorough barbarians*, the best of them living in places that were fortified woods, yet the author of the *Annals*, who is placed only a century after this wild state of things in the barbarism of the inhabitants and the rudeness of their abodes, is made to speak of London, in the reign of Nero, in the year 60, as if it were the chief residence of merchants, and their principal mart of trade in the civilized world. Whereas, it is certain that centuries after—in the middle of the fourth—the people of London were only exporters of corn, and carried on no other kind of commerce, except it might be doing a little business in dogs, and slaves whom they captured from neighboring barbarians, their imports being polished bits of bone, toys, and horse-collars. But any one living in the fifteenth century, especially in Italy (to which circumstances point as being the place where the forger lived), and hearing a great deal of the wealth, greatness, and immense antiquity of London, might easily fall into this mistake; but any one living about the time of Nero, as Tacitus did, could never have described London as in this flourishing state of commercial greatness and prosperity. The statement, then, found in the *Annals*, that London had "the very greatest reputation for the number of its merchants and commodities of trade" in Nero's time, is utterly unfounded, nothing more nor less than outrageously absurd. The picture, however, is quite true, if London be considered during the fifteenth century.

That the Fathers of the Church—or, as we have seen, *any writer*, monkish or otherwise, until the fifteenth century—did not quote or refer to this passage, because, in the same section, the Christians are said to be held in abhorrence for their crimes, etc., does not have any weight from the fact that they have referred to passages in the writings of *others* which speak of Christians in a similar manner. Why, then, should they quote one, while overlooking another? And that "these phrases make a pagan authorship certain," and that "no Christian would have said that Jesus was put to death as a criminal, without at least adding the word 'unjustly,' I cannot allow. On the contrary, it seems to me that these are just the words they would be apt to make use of. Knowing that the person who forged the passage in Josephus rather *overdid* the matter, it was the object of the writers of this and other such passages to speak of the Christians as their enemies might have been supposed to have spoken of them, reviling and decrying themselves in as strong terms as their enemies would have been likely to use against them, believing that it would be better to be spoken of in any way than not to be spoken of at all. To show that this has been the case in one instance at least,—though others might be cited,—I will mention the *Inscription to Nero*, so called, said to have been inscribed on a public monument, and to be found in Gruter's *Inscriptions*. It is as follows: "To Claudius Cæsar Nero Augustus, Supreme Pontiff. In honor of the Province having been purged from *thieves*, and from those who were endeavoring to teach mankind a *new superstition*." Now, this, as Mr. Gibbon remarks, "is a manifest and *acknowledged* forgery," made by a *Christian*, who calls the followers of Christ "thieves" and teachers of "a new superstition," yet it was grabbed at and paraded as "external evidence" for centuries; while the passage in the *Annals* of Tacitus, which speaks of the Christian religion as being "spread over Judea," and of "vast multitudes" of Christians being in Rome in the days of Nero, A.D. 60, about thirty years after the crucifixion of Jesus,—an utterly absurd statement, and certainly not detrimental to Christianity,—is altogether overlooked!

These, then, are some of the reasons for believing the passage in the *Annals* of Tacitus, which refers to "Christ" and "Christians," to be one of the many Christian frauds: and, until some evidence stronger than that which has heretofore been given shall be presented us, I must continue to believe so.

Very respectfully yours,

AUTHOR OF "BIBLE MYTHS."

THE SUNDAY QUESTION IN LITERATURE.

Editors of The Index:—

I have noticed that, in discussing the Sunday question in the newspapers here, writers on both sides quote from authorities ancient and modern, without mentioning the place in their works where the quotation may be found; often quoting, I suppose, at second or third hand, and not having looked up the original. Although I believe in taking "truth for authority," not authority for truth, yet in a case like this, where authorities are quoted, it is well to go back to the originals once in a while; and the following list has been compiled to serve as an aid to the intelligent discussion of this question. The writers mentioned vary in opinion from those favoring what is called the Puritanical observance to those desiring merely a secular holiday for rest and recreation. The list of references to magazine articles may be greatly extended by consulting the new edition of Poole's *Index to Periodical Literature*.

BOOK NOTICES.

THE CORRESPONDENCE OF THOMAS CARLYLE AND RALPH WALDO EMERSON, 1834 to 1872. Edited by Charles Eliot Norton. Jas. R. Osgood & Co. 2 vols. $4.00.

As we might have expected, the correspondence of two such men as Carlyle and Emerson is full of interest. We get nearer to the heart of each. We inhale the perfume of a noble friendship. We are strengthened by a nearer view of the strength of these great men. Carlyle shows the stronger nature, Emerson the sweeter disposition. There are many pleasant glimpses of the inner and home life of each; and there are many execrations, or deprecations, on both sides, concerning the slipperiness and untrustworthiness of publishers. The first letter in the correspondence is that of Emerson, dated May 14, 1834; the last is Carlyle's, written in 1872, nine years before his death. The letters are one hundred and seventy-three in number. There is an introduction by the editor, Prof. Charles Eliot Norton, and excellent notes by the same careful hand. Beautiful portraits, one of Carlyle and one of Emerson, accompany the volumes; and there are very full indexes and tables of contents.

The style of Emerson's letters is stately and dignified. Indeed, they seem to belong (and in truth they do) to another age than this era of rushing powers and overturnings of thought. When this correspondence was begun, the epoch of railroads was just beginning. Letters and books took months to pass to and from England. A voyage was something serious. The distance that separates that day from ours is very well marked by one sentence of Emerson in the correspondence. He says that at the date of his writing (about 1835) nothing literary had yet succeeded in New York City. But we must give a few extracts from the letters, that the reader may judge for himself of their worth. In criticising Carlyle's style, Emerson says: "Evermore thanks for the brave stand you have made for spiritualism in these writings. But has literature any parallel to the oddity of the vehicle chosen to convey this treasure? I delight in the contents; the form, *which my defective apprehension for a joke makes me not appreciate*, I leave to your merry discretion." The sentence we have italicized is a key-note to Emerson's character. Emerson asks Carlyle for a theory of his rhetoric; is offended by it. In the second epistle, Carlyle responds: "My view is that now at last we have lived to see all manner of Poetics and Rhetorics and Sermonics, and one may say generally all manner of *Pulpits* for addressing mankind from, as good as broken and abolished. . . . I know no method of much consequence except that of *believing*, of being *sincere*: from Homer and the Bible down to the poorest Burns's Song, I find no other Art that promises to be perennial."

The great contrast brought out by the correspondence is between the priestly Puritanism of the gentle Emerson and the nobly universal, shaggy, non-priestly, Scotch Calvinism of Carlyle. Emerson is shocked at Goethe's and Shakspere's universality: he is in love with Milton and Socrates and Swedenborg and all preachers. Yet he says, "We can tolerate vice in a splendid nature whilst that nature is battling with the brute majority in defence of some human principle." But Whitman's coarseness displeased him, and he writes to Carlyle that in sending him a book by a certain journeyman printer in Brooklyn, named Walter Whitman, he warns him of the lack of morals he will find in it, and tells him he can light his pipe with it, if he pleases! In another letter, Carlyle advises Emerson to learn the German language, that he may study Goethe. And so Emerson did. Of the Unitarians, Carlyle says: "To speak with perhaps ill-bred candor, I like as well to fancy you *not* preaching to Unitarians a Gospel after their heart. I will say farther, that you are the only man I ever met with of that persuasion whom I could unobstructedly like. The others that I have seen were all a kind of half-way house characters, who, I thought, should, if they had not wanted courage, have ended in unbelief; in 'faint possible Theism,' which I like considerably worse than Atheism. Such, I could not but feel, deserve the fate they find here; the bat fate: to be killed among the rats as a bird, among the birds as a rat." There is space for but a single other extract,—a glimpse into the domestic life of Emerson. He says: "I occupy or *improve*, as we Yankees say, two acres only of God's earth; on which is my house, my kitchen-garden, my orchard of thirty young trees, my empty barn. My house is now a very good one for comfort, and abounding in room. Besides my house, I have, I believe, $22,000, whose income in ordinary years is six per cent. I have no other title or glebe except the income of my winter lectures, which was last year $800. Well, with this income, here at home, I am a rich man. I stay at home and go abroad at *my own* instance. I have food, warmth, leisure, books, friends. Go away from home, I am rich no longer. I never have a dollar to spend on a fancy."

FIGURES OF THE PAST. From the Leaves of Old Journals. By Josiah Quincy. Boston: Roberts Brothers. 1883. Price $1.50.

This book is much more interesting than its title would indicate, and this the public seem to have soon discovered, since the third edition of it is already in the market. The recent death of the distinguished author may in part explain the demand; but, to those interested in New England history, this book is especially entertaining. It is one of the few good results of keeping a journal by men and women of literary ability and keen power of observation, as it was from his old journals, mainly, that Mr. Quincy collected the materials for this pleasantly gossipy volume. To the readers of *The Index*, his reference to such acquaintances as W. E. Channing, Emerson, Lafayette, Harrison Gray Otis, Wendell Phillips, Elisha R. Potter, and others, will be of especial interest. It is rather amusing to read at this date that Emerson, a classmate at Harvard with Mr. Quincy, was asked to accept the position of class poet only after seven others of presumed superior ability had been asked, and refused. In the senior year of their class, Mr. Quincy and Emerson, competing with others for prizes in English composition, won the two prizes offered; but Mr. Quincy took the first prize! Writing of Emerson at that time, Mr. Quincy says, "He was quiet, unobtrusive, and only a fair scholar according to the standard of the college authorities." Under date of July, 1821, occurs this entry in Mr. Quincy's journal: "Attended a dissertation of Emerson's in the morning, on the subject of Ethical Philosophy. I found it long and dry." Mr. Quincy wrote in an amiable and genial, but quietly critical spirit, and at no time does his narrative grow prosy, dull, or caustic.

TE DEUM. By Vincenzo Cirillo. Issued by J. M. Russell, 59 Bromfield Street, Boston. 50 cts.

The author is the basso of the choir of the Church of the Unity, and in this vigorous musical composition has conformed to the wishes of the minister of the church, Rev. M. J. Savage, by employing words that so modify the customary phrase as to make them palatable to liberal doctrine. Mr. Savage remarks respecting it, "The attempt is here made to preserve all the main features and the traditional power of the *Te Deum*, while making such slight alterations as shall prevent its seeming to set the pulpit and choir in direct opposition to each other." Leaders of liberal church choirs have had no slight perplexity arising from the dearth of such musical effort as this.

THE *Century* for March opens with a fine full-page portrait of the dead French leader, Léon Gambetta: there is also an interesting sketch of his life, written previous to his death, by one who for years had excellent opportunities for knowing him and studying his career. The opening article is one of George Cable's historical sketches of the South, "The End of Foreign Dominion in Louisiana." Under the title of "A Good Fight Finished," Leonard Woolsey Bacon pays a filial tribute of respect to the life and character of his father, Rev. Leonard W. Bacon, D.D. H. H.'s sketch of "The Village of Oberammergau," the birthplace of the celebrated Passion Play, will be read with

Digitized by Google

much interest, in view of Salmi Morse's recent determined efforts to exhibit the play in New York. John Burroughs' "Signs and Seasons" is one of his delightful studies of nature. Lucia Gilbert Runkle, apropos of the recent demand for the admission of women to Columbia College, which she calls "A New Knock at an Old Door," writes strongly and sensibly of a higher education for women. Edward Eggleston's "Migrations of American Colonists" is accompanied among other illustrations by portraits of Peter Stuyvesant, Lord Baltimore, John Davenport, John Locke, Gen. James Oglethorpe, and William Penn. Roger Riordan has a profusely illustrated article, "The Architectural League of New York." Mrs. Foote's "Led-Horse Claim" is finished in this number, Howells' story increases in interest, and Mrs. Burnett's seems to be nearing its end. Two poems in this number are of more than usual interest,—"Jones Very," by Wm. P. Andrews, and an unfinished poem hitherto unpublished of W. Cullen Bryant's, addressed to his dead wife. "Yatil" is a short, rather weird story by Frank D. Millet. The editorial departments are filled with excellent and timely notes.

THE principal article in the *Revue de Belgique* for February relates the dictatorship of Gambetta during the Franco-Prussian war, and then his experience during the administration of Thiers in carrying out the programme which the people's orator announced thus, on June 20, 1871: "It is necessary to complete the revolution by emancipating the artisan and the peasant intellectually." A valuable series of articles on Russia, by an able author long resident there, commences in this number by a picturesque account of St. Petersburg.

WE have received a catalogue of a library provided by the Rumford Chemical Works, of Providence, for the use of the operatives. The books are carefully selected, and must afford much valuable instruction and entertainment. Of course, tastes will differ as to the proportion given to different subjects and authors. We should like to see Emerson more largely represented, and Theodore Parker not wholly forgotten; but perhaps theology is intentionally avoided, as neither Channing nor Beecher finds a place. Such libraries do a great deal toward forming the minds of the working classes, and we commend the wisdom of the Rumford Corporation in providing such good food for their workmen. Others wishing to do likewise will find this catalogue useful as a guide. It contains a small collection of German and Swedish books.

MANY readers of *The Index* will be pleased to learn that the Memoir of Samuel Johnson, by Samuel Longfellow, his bosom friend for forty years, and companion in travels at home and abroad, with some of Mr. Johnson's lectures, essays, and sermons, will be published on the 17th inst. The brief memoir with letters occupies about one hundred and fifty pages. The rest of the volume, about three hundred and twenty pages (four hundred and seventy in all), will contain lectures, etc., with the following titles: "Florence," "The Alps of the Ideal, and the Switzerland of the Swiss," "Symbolism of the Sea," "Fulfilment of Functions," "Equal Opportunity for Woman," "Labor Parties and Labor Reform," "The Law of the Blessed Life," "Gain in Loss," "The Search for God," "Fate," "Living by Faith," "The Duty of Delight," "Transcendentalism." The compiler, A. M. Haskell, while endeavoring to make selections that would present the different sides of Mr. Johnson's thought, has found himself able to gratify the wishes of his friends in regard to the selections. Almost every article has been named by some friend who had heard it. A general desire has been expressed for something giving his profound religious insight and faith. The sermons on "Gain in Loss," "The Search for God," "Fate," "Living by Faith," and "The Duty of Delight," have been selected with special reference to this demand. The volume will be rich in thought, with great beauty of expression and sweetness of spirit.

PERSONAL ITEMS.

REV. DR. R. HEBER NEWTON, of All Souls' Episcopal Church, New York, has been dangerously ill at his home in Garden City. He is now out of danger. Dr. Newton had been greatly overworked in issuing his new book, *Right and Wrong Uses of the Bible.*

MR. CHARLES WATTS addressed good-sized audiences at Paine Hall last Sunday afternoon and evening. His discourses were able and eloquent, and awakened an interest amounting to enthusiasm. He speaks next in New York, and then goes to Canada to meet engagements in Montreal and Toronto.

DR. CLEMENCEAU, the distinguished leader of the extreme left in the French Chamber of Deputies, was not only teacher of French literature in a Hartford boarding-school between the summer of 1867 and the fall of 1867, but he won as a wife one of the pupils, Miss Plummer, of Durand, Wis., who is said to have left this city with her parents while a child. He returned from France to marry her in 1869.

THE students of the Dallas Academy, Alabama, having set apart a day to be observed in honor of John G. Whittier, the poet wrote to the teacher of the school: "Say to the dear young people under thy charge that, while I loved liberty and hated slavery, I had never any but the kindest feelings toward the people of the South. I believed that they would be more prosperous and happy if slavery should cease; and I think it is already evident that the South has now started on the road to a higher degree of prosperity than it has ever known, and no one can more heartily rejoice in your welfare than myself. We are now one people: we have a common interest in the Union. Let us forget the unhappy past in the brightening prospects of the future."

A SHORT time ago, a visitor who had gone to see the famous house in Cheyne Walk where lived and died the "Sage of Chelsea" was driven by a storm to take refuge in a neighboring shop. The shopkeeper was an imposing-looking man, who might have been a royal ambassador or a lord chancellor. Curious to know what so great an individual in a small shop thought of his illustrious neighbor, the visitor questioned him upon the subject. "Why," was the reply, "we thought northinks of 'im 'ereabouts. He never spent northink at any shops in this street; and, as for temper, you should 'ave 'eard 'im slam 'is door to. But" (with a pitying sigh) "the last year or two a few people in carriages did come to see 'im, so I suppose he was recognized at last."

MR. TABOR, of Colorado, managed to get considerable fun out of his thirty days' term in the United States Senate, and to give his colleagues much amusement, too. Not the least interesting of his exploits was his personal quest—an entirely unprecedented performance—after the autographs of prominent men. His pursuit of senatorial signatures was enacted on the floor of the Senate during the last few hours of the session. The sight of a millionnaire Senator trotting from desk to desk, with an album in one hand and a blotting-pad in the other, was enough to summon a grin to the most saturnine visage. Every now and then, according to a Boston *Transcript* correspondent, he would go to his desk and check off on a tally-list the names he had secured, and then set out for the others. He repaid his colleagues for signing their names by pointing out to them his handsome new wife, who sat in the gallery.

PRINCE GORTSCHAKOFF, the oldest of the small number of distinguished European diplomats who have won a measure of fame extending far beyond the limits of his own country, is dead. He was in his ninety-fourth year, and had outlived his political importance. He was the foremost diplomat of a nation whose diplomacy is especially astute. He was the most successful foreign minister that Russia has ever seen; for he came upon the stage after his country had lost her predominance on the Continent, and his dexterous management twice regained for her much of the influence which she had forfeited by failure in the field. He was a typical Russian, devoted, heart and soul, to his master, the Czar,—imperious, mysterious, fearless, and subtle. Gortschakoff was a good friend to this country throughout the Civil War, and this fact should cause his memory to be cherished for a long time by Americans. If the Russian government had listened to the French proposition of a joint intervention with France and England to stop the contest in 1862, American affairs might not now be in the condition that they are. Gortschakoff defeated the scheme. Compared with Bismarck, he was an unsuccessful man in one sense; but it remains to be proved which has done the most for his countrymen, notwithstanding Bismarck has the German Empire passed to his credit.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents, 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

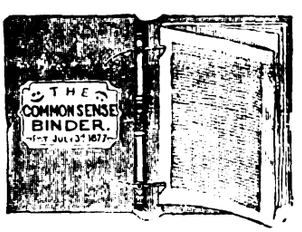
Appleton St., Boston, Mass.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

CURRENT TOPICS.

ANOTHER human form has been found among the ruins of Pompeii. It is that of a man, and very perfect.

IN the Connecticut Legislature last week, a bill was passed repealing the bill relating to the letting of vehicles on Sunday. As it stood, it was in conflict with the revised law of 1882.

THE dynamite explosion at Westminster on the 15th reminds us of the gunpowder plot of 1605, when Guy Fawkes with several other conspirators intended to blow up James I., the ministers, lords, and commons by gunpowder stored in vaults under the parliament house.

THE Lessing Association of Free Thinkers at Leipzig, having offered a prize of five hundred marks for the best essay upon the "moral laws based solely upon unquestionable facts in the natural experiences of man, which are fitted to furnish a guide for human action in the various relations of life," has now awarded the prize to an instructor in philosophy at the University of Berlin. The judges in this contest were Dr. Hermann Grimm, Dr. Lasker, and Prof. Scherer.

WOMEN are to have a department of their own at the coming Mechanics' Fair in this city. Mrs. Julia Ward Howe and some other Boston women have the matter in hand, and are sending out circulars to New England women, urging them to co-operate. Women who have invented any device for household or other purposes are expected to send in their work. Some of woman's industries which are to be represented are floriculture, bee culture, raisin culture, the making of dresses and children's clothes, carpets, wall-paper designs, art needlework, and botanical collections. An acre of space is to be given this department in the fair.

THE *Presbyterian* says: "Bishop Bedell, of Ohio, has written an article on the 'Decline of Religion,' which he admits, and gives some weighty counsels as to its recovery. The methods he suggests are 'renewed confidence in revelation as the absolute source of eternal verities; revived confidence in the apostles, and outspoken reverence for them as the embodiment of saving truth; revived confidence in the sacraments, in their simple, eternal purity, as spiritual realities; revived faith in the divine personality of the Holy Spirit; and a revival of confidence in prayer, and in the use of constant, earnest, believing prayers as the means that will bring the answer men need.'" We have no doubt whatever that, if the bishop's prescription be strictly followed, orthodox religion will also be "revived," the only drawback to his prescription being that "if."

THE *Examiner* (Baptist) freely concedes the point we have pressed in regard to the damnation of the vast majority, at least of the adult portion, of the race. It says: "The idea of a probation in this life does imply the possibility of salvation, but the possibility may never be realized. As a matter of fact, we believe that, for *the vast majority of the heathen, this possibility never is realized*, and we never yet heard of an orthodox theologian who held any other belief than this." This is meeting the issue fairly and squarely. The *Examiner* does not seem to be afraid to show its colors. Now let it print its weekly edition on black paper with a small margin of white, and its color will correspond with its doctrine. We are glad, however, that the *Examiner* is consistent. In these days of word-twisting and mental reservation, consistency is a notable virtue.—*Christian Register.*

THE London correspondent of the *Catholic Review*, a gentleman of distinction, writes: "Free thinking is now so demonstrative that it would be unwise to 'cast the pearls before the swine.' As an example of this last truth, an event occurred a few nights since which at least showed the boldness of free thinking. At one of the theatres in the metropolis, the Marquis of Queensberry rose from his stall in the pit, and protested before the audience the disrespect to the free thinkers which had been implied by certain passages in the play. Now, I have myself witnessed plays in which a travesty on Catholic priests, or a most truculent distortion of Catholic history, was put before the audience as plain fact; but no one rose from his stall to protest."

THE New York correspondent of the Boston *Transcript* says, in a recent letter: "The new Nineteenth Century Club in New York City got into a red-hot wrangle the other evening. Prof. Sumner read a paper on Sociology, showing the existence in society of forces that tend to the elimination of the weaker members and the survival of the fittest. The inference from the paper was that the humanitarians and sentimental reformers were often engaged in a worse than useless work. They undertook to keep alive the unworthy at the expense of the worthy members of society. This philosophy appeared to be very repugnant to Prof. Rice of Columbia College. He waded into evolutionists and sociologists in general, and Herbert Spencer in particular, accusing that philosopher of ignorance and inaccuracy. Prof. Boyesen took up the cudgel in Mr. Spencer's behalf, and for a time the conflict of words was sharp, if not exactly acrimonious. Prof. Sumner closed the discussion with a defence of sociology. He contended that sociology had for its object the determination of the forces at work in society, that mankind may take note of them and act in accordance with the laws of nature. Its object was neither moral nor immoral, neither benevolent nor unbenevolent."

IN New York on the same day last week were carried to the grave the bodies of the murderer McGloin, who had perished upon the gallows for his crime, and Elliott, a prize-fighter, who had been killed in Chicago by another ruffian of his own class. The funeral of each was an ovation. All the roughs of the neighborhood in which the murderer had lived turned out, the streets were lined with people, many of them sympathizers, a long line of carriages followed the hearse, a profusion of flowers and floral mottoes of elaborate construction graced the bier, and the religious ceremonies were full and auspicious of a glorious eternity for "the absent but not forgotten one." The display at the obsequies of Elliott was even greater. It was a sort of apotheosis of ruffianism. It is stated that along the line of march fully three hundred thousand people were out of doors to see the great funeral of the murdered pugilist. Of these, many were boys. It was impossible to number the carriages in attendance. In the procession were politicians, aldermen, prize-fighters, Thugs and thieves, burglars, gamblers, and a plentiful supply of bedizened women of the town. No such demonstration of the sort, the New York papers state, had been seen in the city since the funeral of Bill Poole, which occurred some twenty-five years ago. We hope this display over the bodies of a murderer and a prize-fighter, if it have no other good effect, will tend to discourage among thoughtful and self respecting people all display at funerals as manifestly out of place, as positively unseemly and vulgar. On account of the disgraceful scenes accompanying the burial, the New York *Herald* suggests that the Legislature of that State be petitioned to order the burial of murderers in the jail-yard. A reporter of the paper mentioned called upon Mr. Andrew Martin, the Treasurer of the Trustees of the Calvary Cemetery, to ask his opinion concerning the complaints of many Catholics that murderers were allowed to be buried in the cemetery. Mr. Martin said (see New York *Herald*, March 14): "Elliott sent for a priest after he was shot. McGloin, before his death, satisfied all the requirements of the Church, and died repentant, so far as we know. They were within the pale of the Church, and how could they be refused [Church] burial? . . . There is a part of the cemetery set aside for the burial of such as die without the rites of the Church. This is unblessed ground; and here are put the bodies of suicides, of still-born infants, of infants who die before the rite of baptism has been performed. —in fact, of all who do not die *as the Church decrees they ought.*"

AMENDING HISTORY.

A few weeks ago, the Boston *Daily Advertiser* celebrated its removal into its new building and its seventieth birthday by issuing a sheet of twenty pages containing copious biographical matter pertaining to itself and much historical matter pertaining to its period of seventy years. It was an occasion on which it might well congratulate itself; and it knows truly that, in spite of the proverbial laugh against it for its slowness and for its cautious grandmotherly regard for its respectability, it has won a solid credit for character which is worth possessing and worth preserving. But there are, doubtless, some things in its life of threescore years and ten which it might now wish otherwise. Even newspapers are not infallible. And the *Advertiser*, in the old days of the Abolitionists' struggle and of the Fugitive Slave Law, was, like most of the newspapers of that time, very derelict in its duty, if duty be judged by any higher standard than the law of the land. It was among the chief supports of the mob, composed of "gentlemen of property and standing" (largely its own subscribers), which broke up the anti-slavery meeting in Boston in 1835, and dragged Garrison through the streets. It denounced and reviled the Abolitionists, and sustained the Fugitive Slave measures. On all these things, it might, naturally, be expected to keep silent on its congratulatory day, unless it was ready to make a manly confession of error; and then other people would have graciously remained silent also, even though remembering these shortcomings of a bygone era.

But, unfortunately, one of the writers for the *Advertiser's* celebration number was not content with silence on these points, but threw in a little paragraph intended to defend the *Advertiser's* course in the anti-slavery struggle as right, and to show that of the Abolitionists to be wrong; and, in this six-line paragraph, he contrived to manifest not a little of the old venom by a needless fling at Hon. George Thompson and Miss Harriet Martineau as "foreign carpet-baggers," who intermeddled in our domestic problem of slavery, and of whom the old *Advertiser*, as this writer says, "was pitiless in its denunciation." This paragraph has called forth from William Lloyd Garrison, Jr., a vigorous article in protest, which was printed in the Boston *Herald*. The article shows that the son inherits a good portion of his father's power for terse, logical statement. It does not leave much of the *Advertiser's* six-line sophistical attempt to better its history. Mr. Garrison closes thus:—

> It seems to be taken for granted, in these days, that memories are short, and tarnished ancestral reputations can be reconstructed by a careful biographer. The anti-slavery agitation has receded to such a distance that, to the youth of to-day, a simple relation of what was common in Boston streets a generation ago is as incredible as the cruelties of the inquisition. Unutterably rejoiced that the curse of slavery has been removed, the anti-slavery survivors of the conflict have no disposition to open old wounds. It is only when some injudicious friend of a former transgressor, trusting to the security of forgetfulness, attempts a vindication by staining the memory of freedom's heroes that it is necessary to produce the record in defence of historical truth.

This attempt of the *Advertiser* to set these disagreeable facts of its history in a better light is an illustration of a too general habit. People, fortunately, progress, and often in spite of themselves. The logic of events is a vigorous teacher. New positions which are taken condemn those which have been held. And, thus people are tempted to try to reverse the decree of history by a kind of *ex post facto* resolution of amendment. Sometimes, they deny that they ever held the abandoned positions; and sometimes, like the *Advertiser*, they endeavor to conceal what their real positions were, or to make it appear that, whatever they were, they were at any rate better than their enemies' positions. No fact, for instance, was more notorious or more shameful than that, in the great anti-slavery conflict in America, the churches and clergy stood on the side of the slaveholder. There were honorable exceptions, a few churches and more ministers being faithful to the rights of the slave. But, as a rule, the enormous ecclesiastical power of the country in that issue was with slavery and was one of its mightiest bulwarks. And this fact it was which drove thousands of persons, to whom moral conviction was more than ecclesiastical conformity, outside of all churches, and even into positions of scepticism as to whether the Church can ever become a leader in moral and social progress. And yet, in spite of this record which the American churches wrote out for themselves, the attempt has again and again been made, since the slaveholders' rebellion was ended and sealed by the slave's emancipation, to cheat history into recording a judgment precisely the opposite.

The same thing is evident in religious progress. It was Emerson who said, as wittily as truly, that one of the most encouraging signs of advancement of thought in our time is that most of the sects are denying that they hold the opinions they are charged with. No matter what the catechisms or the statements of synods or the Andover creeds may say, there is a "substance of doctrine" always at hand for covering up or explaining away the hard points which over-critical enemies assail. And the Unitarians adopt essentially the same procedure with regard to the treatment which Emerson and Parker once received from their body. No Unitarian association or conference, it is claimed, ever excommunicated Parker; which, though it may be literally true, is so only because there was no conference or association which had authority to register the manifold acts, official and personal, by which the Unitarian denomination of the time gave Parker and the public distinctly to understand that he was an outcast from the denominational fold. And, when the Unitarians took charge of Emerson's funeral services, few persons not acquainted with the circumstances would have supposed from anything there said, or from the general obituary notices of him in their pulpits and publications, that he was ever ostracized from their respectable body as a heretic. In the Catholic Church, one motive of the strong desire for retaining the education of Catholic children in the hands of the priesthood is to insure that the innocent eyes of their youth shall only read certain dark pages in the history of the papal church through spectacles of modern Catholic manufacture.

Now, the wish, thus variously shown, to secure the approving judgment of posterity, is most commendable. But the methods which we have here noticed for attaining this object are delusive and ineffectual. No record actually made can thus be permanently expunged or amended. The best light to throw back upon any questionable point in one's past is, where it can honestly be done, frankly to confess that one erred, yet acted according to one's own honest judgment and conscience at the time. To try to explain away the point, or to newly interpret it in the light of later knowledge, amends nothing, but rather betrays a lurking consciousness that the best thing possible even then was not done, but that motives of selfish timidity and a cowardly compromising conscience had too much to do with making the record. An honest record needs no apologetic *post factum* interpretations or improvements, and never has cause to shun the impartial verdict of history.

WM. J. POTTER.

AN EASTER HOMILY.

The Easter of the churches is a celebration of the resurrection of *a* body. The fact of such a resurrection is doubted or denied by many thoughtful persons. But the Resurrection of *the* Body is a fact these persons cannot doubt and have no inclination to deny.

The human body, as an object of thought and feeling, has experienced some strange vicissitudes. The antithesis of body and mind, matter and spirit, has often been asserted in the baldest fashion. It manifests itself in our own time in the accent with which the word Materialism is invariably pronounced in theological circles, in the ill-natured concession of the most obvious facts implying any intimate connection between the body and the mind, in the still more ill-natured insistence on the irruption of some supernatural force into the material order of the world to account for the beginnings of life, the genesis of species, and so on. The signs are many of this sort. Nevertheless, they are but eddies whose uneasy bubbling and gyration mark the force of the main current and its direction toward an ever freer, fuller recognition of the spiritual significance of material things, and especially of the material body. By this sign the present time is distinguished as by no other. Various are the attempts to name aright the age in which we live. It is called the age of comfort, the age of steam, the age of science, the industrial age, and so on. But, above all things, it is the age of matter's elevation into harmonious unity with the eternal Spirit of the World and of the human body's resurrection and ascension into honored partnership with the human mind and heart and will.

Materialism is a bugbear which frightens many timid people; and, in good sooth, there is a materialism at which men may well be frightened. This is the materialism of coarse and sensual modes of life. There is, too, a theoretic materialism, which would be alarming, if science or philosophy showed any signs of accepting its statement. This is the materialism which conceives, or thinks it does, of matter as at first wholly without life, and yet ultimately producing life without any intervention of a higher power. But this materialism is only the materialism of men who do not think. Every man who thinks knows that, if there is in matter "the promise and the potency of all terrestrial life," there must be life in matter as such from the beginning, a divinity in the atoms adequate to the production of everything that has been produced. "If life and thought are the flower of matter, then any definition of matter which omits life and thought must be inadequate, if not untrue." So Tyndall puts the case. From such materialism we have much to hope; little, if anything, to fear. If matter were, indeed, "a datum objective to God," something outside of him, not of his own creation, what would become of his infinity? Infinity plus matter, plus any thing, is absurd. God must be all in all, or he is not an infinite God. But all the suggestions of science are opposed to any dualistic conception of the world. Our word Universe is not a great misnomer. It harmonizes with the fact. It means *turned into one.* The world is this, but only in virtue of an Eternal One, who does the turning, not from without, but from within. The correlation of physical and vital forces, the unities of nature and of life,—so innumerable, so wonderful,—do they not all report a central and abiding oneness at the heart of things?

Digitized by Google

The Resurrection of the Body! Matter, the Body of the Universe, is rising from the grave of dualistic thought. No contemptuous word concerning it is in order now. It is so full of mystery, so full of life, so full of deity, that we speak of it with bated breath, almost as if we dared not utter the Ineffable Name! And man's material substance shares in all the newly acquired dignities and honors of the material world. Robert Browning voices the new doctrine in his "Rabbi Ben Ezra" thus:—

"Then let us no more say:
Spite of this flesh to-day
I strove, made head, gained ground upon the whole.
As the bird wings and sings
Let us cry, All good things
Are ours: nor soul helps flesh more now than flesh helps soul."

This is the new gospel of the mutual relations of the soul and body. It is resented by the majority of men and women who still think it something fine to speak disparagingly of the body, and even to treat it somewhat unhandsomely. The mental physiologist has collected thousands of facts showing how intimate is the relation of the body and the mind, how far a man's tissues go to determine his thoughts and his morality. Whereupon, good men and women put their fingers in their ears. They will not listen to such blasphemy. It is materializing mind, materializing morals, they insist, to admit such a relation. Well, this is one way of looking at it; and, to those who are not very particular about names, perhaps as good a way as any. The fact is the great thing; and the fact is that thought and morals are conditioned to an immense degree by physical conditions. But there are two ways of reading this fact, if the good people did but know it. It can be read as the materialization of intellect and morals. It can be read as the spiritualization of brains and stomachs, nerves and muscles, air and light, clothing and food. Why not read it this way, if you do not like the other? This materialism, as men call it, imparts a transcendental significance to every circumstance of physical well-being. Mind and morals are exactly what they were before. Only the body of man, his physical life, through the perception of its intimate connection with his mind and heart and will, is mightily advanced in dignity and honor.

For it is not as if, as men once thought, the only influence of the body on the mind were prejudicial to its highest good. Men have always, or for many centuries, allowed the influence of the body on the mind. Only they have conceived of this influence as being wholly evil. It remained for modern science to demonstrate that it is not oftener for evil than for good; that either possibility implies the other.

Many and powerful are the implications of this modern doctrine of the relations of body and mind. What sanitary reformation finds its motive and its inspiration here? What individual faithfulness? Seeing that in our physical being lurk such possibilities of evil or of good, how earnestly we ought to go about to make our physical life a clean and holy thing! Henceforth is not every bath a baptism into the name of Truth and Purity? Is not every meal a sacrament whereat it is quite as possible now as it was in ancient Corinth for a man to eat and drink to his own condemnation?

What various expression the new Resurrection of the Body will find in human life the future must decide. It may not express itself in sculptured forms, as in the Greece of Pericles, nor in glorious paintings, as in the Italian Renaissance; but it will express itself. Already it has done so in many a poem of Browning and Whitman an Swinburne. If sometimes the resurrection has been insurrection, it surely is not strange. But it will yet find other and nobler expression than any it has found so far. And the best expression it can find, better than any Venus of Milo or Apollo Belvidere, is a desire to know and a resolve to do that which is best for us as physical men, if haply we may attain to higher spiritual things and to a manhood and a womanhood that is rounded and complete. Surely, to believe in this Resurrection of the Body and to act accordingly is better than to believe that eighteen hundred years ago a certain individual body rose from the dead; and the thought of it is more appropriate to that Easter festival which celebrated Nature's wide renewal for many centuries before it took the impress of the Christian doctrine.

JOHN W. CHADWICK.

THE SECRET OF THE EAST;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

CHAPTER II.

Buddha and his Galilean Successor.

"Ex Oriente Lux."

In the morning hour of reawakening reason, when men tried to explain religious traditions without questioning the infallibility of their truth, it must have sorely puzzled many an honest inquirer to reconcile certain dogmas of the Church with the daily evidence of his senses; for instance, the innate purity and candor of young children with the doctrine of natural depravity, or the mental and moral degeneration of the most orthodox communities with the dogma of regeneration by faith.

But, wherever indoctrination had not yet utterly deadened the instinct of truth, the most perplexing of all tenets must have been the theory which considers the two books of the Christian Bible as consistent and mutually confirmatory parts of a harmonious revelation. Unreasoning faith may have repeated the conventional formulas of that dogma, but only wilful blindness could ever defend it upon the internal evidence of the facts. Jean Bodin, a French mystic of the sixteenth century, wrote a book in which he bemoans the growing scepticism of the age, and, after demonstrating the reality of witchcraft by a long list of prodigies and ghost-stories, gives his reasons for enforcing the penal code against heretics, with full instructions for their discovery and torture. If that book had been published as an appendix to the philosophical works of Lucius Seneca, and under the name of the great pagan moralist, the absurdity of the mistake could not have been more glaring than that of the orthodox Bible theory.

As a continuation—a second part, as it were—of the Hebrew Scriptures, the New Testament would be utterly inexplicable. Perhaps no other two books ever published are more dissimilar in their tendencies. Here, the chronicle of a brave and simple-minded nation of shepherds and husbandmen and the code of their manful law-giver, an honest system of morals, rustic and somewhat austere, but with a realistic basis and a practical purpose; there, a compilation of contradictory miracle-legends and anti-natural dogmas: here, an honest silence on the unknowable mysteries of a future existence, a consistent avoidance of the immortality tenet; there, a constant *petitio principii* of that dogma: here, a stern inculcation; there, a constant violation of the first commandment: here, health laws, Samson traditions, and pastoral poetry; there, indifference to health, to manly strength, and the gifts of our mother earth. Here, nature, agnostic candor, optimism and realism; there, supernatural and anti-natural dogmas, mysticism, sophistry, and gnostic phantoms. The ethical characteristics of the two books would be a sufficient proof against the alleged origin of the New Testament, but there is an equally strong presumption that the so-called historical elements of that work are almost wholly fabulous. The committee of the church-council that made the "four Gospels" the canons of their faith had to select them from fifty-four contradictory versions. The evangelists themselves contradict each other on many essential points; and their chronicles can hardly have been written before the end of the second century, as not one of the earlier fathers (before Irenæus) ever quotes a single passage of their text, while they relate many events which seem to have been recorded in the apocrypha. These apocrypha, like the arbitrarily excepted works, originated in a century so prolific of spurious prophecies, forged epistles, and biographies, that it has justly been called the age of pious frauds. The four Gospels, as well as the larger part of the Pauline Epistles, were repudiated by the Socinians, and others of the more intelligent sects of the early Christians. It is equally certain that the stupendous events supposed to have attended the appearance of the new prophet are not recorded by any contemporary pagan author, and that the short passage in the seventh chapter of Josephus is a clumsy forgery. Josephus, who describes the reign of Herod in its minutest details, never mentions the miracles of Bethlehem, the appearance of a new star, the massacre of the innocents, or the prodigies of the crucifixion.

Besides, the rhetoric of the New Testament is throughout *illustrative* rather than *persuasive:* it is the eloquence which distinguishes the communication of transmitted from the introduction of original ideas. And, as Feuerbach well observes, the testator's strange neglect to insure the record of his revelation by committing it to writing is a strong presumption that he delivered his gospel as a pre-recorded doctrine.

But all such discoveries led only to negative results, and increased the obscurity of the main question, when the study of the Oriental classics, that had shed a flood of light upon the etymology of the West-Aryan languages, began to elucidate the mysteries of Biblical exegesis. Dark words were traced to their origin, occult passages assumed a meaning, perplexing contradictions became suggestive analogies. Buddhism not only explained the doctrines of the New Testament, but harmonized them by revealing the root-dogma which forms the connecting link of their logical correlation. The doctrine of Pessimism is the master-key to the ethical enigmas of the Christian creed. If the blessings of earth are curses in disguise, it behooves the wise to renounce his material possessions, and despise the precautions by which the worldly-minded seek to protect themselves against want and misfortune. If our natural instincts are wholly evil, it would be meritorious to love our enemies and hate our father, mother, sister, brother, and children, "yea, and our own life." If God has created a world the sorrows of which so far exceed its blessings, it would be perfectly consistent to expect in a future life a similar proportion of good to evil. Heaven for the elect, ten or twelve out of ten thousand; for the rest, an eternity of frightful tortures. If the pursuit of earthly happiness is a chimera, the children of light should prove their freedom from that delusion by the mortification of their desires and natural impulses: fasting, passive submission to injustice, sackcloth and ashes, and celibacy.*

*Matt. xix., 12, etc. Referring to this passage, Strauss, in his "Life of Jesus" (Vol. I., p. 618 of the first edition), says, "In order to defend Christ against the charge of

Digitized by Google

The *anti-cosmic tendency* of the Christian doctrine distinguishes it from all religions except Buddhism. In the language of the New Testament, the "world" is everywhere a synonyme of evil and sin; the flesh, everywhere the enemy of the spirit. And, when the first Christian missionaries reached the sacred cities of Thibet, they were astounded to recognize in the sacraments and ceremonies of Buddhism all the essential features of their own cultus. The *Transactions of the Royal Asiatic Society* (Vol. II., p. 491) mentions the "celibacy of the Buddhist clergy, and the monastic life of the societies of both sexes, to which might be added their strings of beads, their manner of chanting prayers, their incense and their candles. Confession of sins is regularly practised."

Father Huc, in his *Recollections of a Journey in Tartary, Thibet, and China* (Hazlitt's translation), says, "The cross, the mitre, the dalmatica, the cope,—which the Grand Lama wears on his journeys, or if he is performing some ceremony out of the temple,—the service with double choirs, the psalmody, the exorcisms, the censer suspended from five chains, and which you can open or close at pleasure; the benediction given by the Lamas by extending the right hand over the heads of the faithful, the chaplet, ecclesiastical celibacy, religious retirement, the worship of the saints, the fasts, the processions, the litanies, the holy water, —all these are analogies between the Buddhists and ourselves."

The analytical methods of comparative mythology have since been applied to the study of the Buddhistic scriptures and the writings of the early Gnostics; and, considering the results of that comparison, it can no longer be doubted that Schopenhauer's conjecture* will soon become an established fact; namely, that *the Prophet of Nazareth was a Buddhistic emissary, and preached his gospel in the name of Buddha Sakyamuni.* Myths have a curious metamorphic tendency. In a large number of indubitable instances, the sayings, doings, and adventures of legendary heroes (or myth-shrouded historical personages) have been attributed to representative men of a later period: the exploits of a Persian archer, first to a Danish soldier, and afterward to a Swiss patriot; the dicta of Zoroaster, to several of his followers; the attributes of the old Wood-god, Woden, to Barbarossa, the entranced cave-dweller of the Kyffhäuser; the adventures of the Indian Dawn-Spirits, to the heroes of Troy.

By a similar metastasis of myths, the traditions of the old Hindu Krishna legend were transferred, first to the founder of Buddhism, and afterward to the person of his western apostle. Krishna, like Buddha, was a parthenogenitus, a virgin-son. Krishna was crucified; and the sculptured Pantheon of Brahmanism includes the image of a virgin, called the "Queen of Heaven," holding an infant and cross in her arms. Krishna, like Buddha, astonished his teachers by his precocious wisdom. Both were born with a fully developed power of speech. According to the "Gospel of the Infancy" (attributed to St. Thomas), *Maria* holds a conversation with her new-born son, who informs her of his origin and his divine mission. The name of her Buddhistic prototype was *Maja.* Both Krishna and Buddha were of royal descent. A chorus of celestial singers celebrated the moment of their birth. The ruler of Krishna's birthland is frightened by a prophecy, and resolves the death of the infant. The boy's parents save his life by a timely flight, and conceal him for several years. The baffled despot commands the massacre of all male children of his kingdom. The "Gospel of the Infancy" relates the miraculous achievements of the Christ-child, his combats with serpents and dragons, the fate of persons who insult him and are stricken dead, a council of young boys who choose him as their king. The boy Krishna, according to the Bhagavat Purana, subdues a fiery serpent, strikes dead persons who insulted him, and in his plays with other boys is chosen as their king. Krishna, like Buddha, is tempted in the wilderness by the devil, rejects all proposals, and rejoices with a host of ministering angels.

In the constellation of the Pleiades, six larger and forty or fifty smaller stars are crowded together within a space that could be enclosed by the apparent circumference of the moon. Either these stars form a correlative system, or their aggregation in the field of our vision, as well as the nearly uniform size of the larger ones, must be ascribed to the strangest kind of coincidence; and the astronomer Olbers calculates that the probability of the former hypothesis exceeds that of the latter about twenty-five million times. With a similar degree of assurance, the student of the Hindu scriptures must reject the belief in the *accidental* analogies of the above-named traditions; and an equally untenable theory is the conjecture of the Jesuit missionaries, that the Buddhists derived their legends from the Christian sect of the Nestorian heretics. We might as well be asked to believe that Homer borrowed his epic from the Iliad of Alexander Pope.

Together with the unmistakable* doctrine of Buddha Sakyamuni, the prophet of Galilee probably disseminated the current tradition about the miracles and adventures of his master; and, when in the oral traditions of the next century the records of Buddha and Christ had coalesced, the East Indian legend was transferred to the soil of Palestine, while the myth-making faculty of the monastic historians supplied the details of the local coloring.

The history of Krishna fades in the cloudland of primeval traditions, and seems to be largely blended with astronomical myths. The historical existence of Buddha Sakyamuni, on the other hand, can hardly be doubted, nor that of his glowingly eloquent West-Asiatic apostle. The records of the earlier Gospels are too fragmentary and contradictory to reconstruct a trustworthy biography of the Galilean Buddhist, but his system of ethics proves that it was the main object of his mission to graft the doctrine of Buddha upon the optimistic theism of the Hebrew law-giver. Hence, the dogmatical contradictions of the Old and New Testaments; the prominence assigned to the (ante-Mosaic) paradise legend,† the penitential psalms, and all passages that could be made to assume a pessimistic significance; the open rejection of the Mosaic health-code (as absolutely irreconcilable with the gospel of anti-naturalism), the sophistry of the Patristic writings, and the forced interpretations of the Hebrew prophecies. Hence, also, the old but ever new controversy of the Pelagians and Gnostics, the former leaning toward the rational, manly, and realistic part, the other toward the mystical, pessimistic, and puling part of our heterogeneous Scriptures.

Like the votaries of Zoroaster, the Hebrew Unitarians preserved the purity of their religion; but the seed of the East Indian upas-tree did not perish. In the superstition-loaded atmosphere of Egypt and the effete vice-centres of Asia Minor, it found a more congenial climate, where it flourished, and finally betrayed its origin by bearing fruits after its kind, though its roots are still encrusted with the soil of the land that rejected it.

FELIX L. OSWALD.

unpractical principles, the Christian apologists have made haste to smuggle in the idea (*den Gedanken einzuschwärzen*) that Jesus recommended celibacy only to his disciples, and in anticipation of the peculiar difficulties of their apostolic mission; but the truth is that in this as in other passages the spirit of asceticism reveals itself too plainly to be mistaken."

*"I cannot get rid of the idea that the Christian creed will yet be traced to a Buddhistic source."—*Die Welt als Wille*, Vol. II., p. 716.

*Even in the modified form of the canonized Gospels. But, besides, there is no doubt that the Church eliminated a large number of *unpractical* dogmas. Nine-tenths of the early "heretics" were too literal Buddhists to suit the purpose of the shrewd and compromising hierarchs. The Encratites abstained from wine, animal food, and marriage. The Marcionites denounced all "worldliness,"—the pursuit of wealth, office-holding, fine houses, and clothes, etc. The Montanists tried to purify their souls by fasting and long vigils, and often took a "vow of solitude," like the Cingalese Buddhists, and retired for years to the lonely highlands of the Phrygian Mountains. The Valentinians practised communism, and subjected their novices to all sorts of ascetic ordeals. The Cassianites professed doctrines which resembled those of the modern "Shakers."

In refuting these heretics, it is curious to notice how Clemens Alexandrinus uniformly appeals to the Old Testament, and quietly ignores the precepts of the ascetic appendix. The third book of the *Stromata* is a perfect *reductio ad absurdum* of Christian pessimism, which, nevertheless, gained ground wherever the belief in the new revelation was sincere enough to turn theory into practice.

†"The essence of the Christian religion is the centre dogma of Buddhism,—the doctrine of the worthlessness of terrestrial life. With this difference only, that Christianity dates that worthlessness from the transgression of our apple-eating forefather. This modification implied the fiction of a *liberi arbitrii indifferentiae;* but it was required by the necessity of grafting the doctrine of Buddha upon the mythological dogmas of Judaism. The myth of the Fall offered here the only basis for the insertion of the scion from the East Indian parent-tree."—Schopenhauer, *Die Welt als Wille*, Vol. II., p. 694.

THE SALVATION ARMY.

A copy of the *War-Cry and Official Gazette of the Salvation Army*, published in London, has fallen into our hands. It is a decidedly unique paper. It claims to have a weekly circulation of many thousands. Exclamation points, italics, and capitals are bestrewn through its columns very liberally. Among its advertisements is one headed in large letters "Awful Calamity!! Hundreds Lost!" And then it goes on to state that "since the last *War-Cry* appeared, the Devil has, alas! succeeded in leading vast multitudes of wretched sinners TO HELL!" We give the titles of a part of its contents: "A Day and Night Battle in Hereford," in which "a few stones were thrown,... and one of the Lieutenants got a nasty cut on the head. The Commodity known as 'rotten eggs' was also conspicuous by its presence, and bags of flour and soot were thrown at the [Salvation] Army.... Some of the Army received black eyes, and got their hats and bonnets knocked off.... Blows were at one time plentifully exchanged.... I was told that one woman—a member of the Army—had her clothing terribly pulled about, and was for the most part in *puris naturalibis* [*sic*] when taken into the Barracks." After this attack by the mob, they held an all-night meeting, at which the writer of the account "couldn't help thinking, as I looked at the Lieut., with his blood-besmeared face and collar, that he showed forth the Lord dying as nothing else could do. O, may we all live ever 'beneath the shade of the cross' this way!" Another article is headed "Latest from India. 900 At First Knee-drill — Major and three Officers in Custody." A report from one town is headed "Our Cavalry Charge," and begins thus: "Hallelujah! We are fighting ahead here. Collections and *War* Crys going up. Souls at every meeting." "Heroic War-Cry Selling at Guildford," "Grand Reviews in Scotland," "A Fight with the Police," "Then I Hit her, now I Kiss her!" "About the Lass who came to Laugh," are among the titles of short articles. One, headed in capitals "Latest Telegram" from Capt. McKie, Hull, reads: "Sunday, tremendous day, crowded house. Morning, 800 for Baptism of Fire; glorious marches. Night, past description; lots of souls saved, Hallelujah!" From Nottingham, Capt. Pamela Shepherd writes: "On Sunday in the afternoon one big sinner cried for Mercy. Praise the Lord! We had six more at night. One dear woman, who had been a backslider for ten years, came, and with her apron full of beans, cried for

Digitized by Google

Mercy: Hallelujah!" Three hymns are published in this number: one, "We'll Shout Aloud," to the tune of "Champagne Charlie." "The Lord's Brigade" is accompanied by the music. We give one verse:—

"It rose from one God-sent Man, who some seventeen years ago,
In the East End of London, the powers of hell did overthrow:
For some time, single-handed, he sought to stem sin's flood,
Since then he's been surrounded by an Army filled by God."

In an acknowledgment of donations for the week, we notice several "Sales of Jewelry": one woman gives "a gold thimble"; others, "gold scarf pin," "gold locket," "a silver watch," an "ivory brooch," "a gold watch key," etc. Among "Salvation Hits" is the following: "I never thought," said a soldier at York, "of being knocked down by a little woman, but I was; a Hallelujah Lass sent such a rivet home to my heart that I fell flat at the Mercy-seat." And this is a specimen of the literature evolved by a religious organization which meets the approval of many of England's High Church dignitaries, and which, it is reported, has the sympathies of Dr. Benson, the Archbishop elect of Canterbury, who is said to have recently told "Gen." Booth, the leader of the "Salvation Army," to "go on, do all the good you can; Get at the people. We rejoice, only we would like it to be done somehow or other in harmony and in unison with the Church of England." B. F. U.

EDITORIAL NOTES.

A BIBLE agent who recently made a tour through Fair Haven, Conn., said there were two hundred families in which there were no copies of the Scriptures, and the members of which did not care to be supplied.

FATHER BJERRING of the Greek chapel which the Russian government supported in New York for several years, but from which it withdrew its support some months ago, has become a Presbyterian. It is stated that the merits of Presbyterianism did not appear to him until his position and salary as pastor of the Greek chapel disappeared. He had belonged to some other faith before espousing the Russo-Greek, and getting an appointment in New York.

IN a discourse at the opening of the new chapel at Princeton, Dr. McCosh said:—

The leading philosophic and religious error of this day is not Unitarianism, which, in fact, is dead and laid out for decent burial. It is not Rationalism, for thinking men now see that human reason cannot construct a religion. It is not exactly Atheism. Few are so bold as to assert or argue that there is no God. They claim, "We do not deny the existence of God, we are not so presumptuous as this: we make no denials, we simply maintain that we have no evidence." The most influential error of the day, the one underlying every other, is what is called Agnosticism.

MRS. L. H. HOPKINS, *née* Sarah Winnemucca, in a letter to Hon. John A. Logan, writes thus:—

I have been connected with Indian agencies from childhood, and I know whereof I speak, when I say the system of schooling Indian children, as now practised, is a farce of the first water. I can recall a half-dozen agencies where I have been, and where teachers with fifty children on the books and five in the school are drawing their pay, and scarcely a child can be found who knows a word of English, unless it is Moody and Sankey's hymns, which seem to be used for spelling-books, reader, arithmetic, geography, and everything else. I know of one agency in particular in Washington Territory that has been under Christian rule for twenty years, and yet the children sing and pray in Chinook jargon; and the few who speak English do so mechanically, and have no idea of the definition of a single word.

THE following from the Boston correspondent of *Unity* will be read with interest by many of our readers: "The Twenty-eighth Congregational Society of Theodore Parker—the one rationalistic Unitarian congregation of the city—is also steadily growing in numbers under Rev. Mr. Applebee's preaching. The society has now run over twenty years under the momentum given it by its great founder. In all this time, it has had but three settled ministers—Rev. D. W. Wasson, Rev. J. V. Blake, and Rev. J. L. Dudley, the two latter now living in the West—for an aggregate time of about seven years. The residue of the period, the pulpit has been transiently filled. Yet many of the old parishioners are constant in attendance; while hundreds of others are interspersed among the other churches of the city, notably Messrs. Savage's, Horton's, and Hale's."

MR. M. K. SCHERMERHORN, formerly minister of the Church of the Unity, Boston, and more recently of the Unitarian church at Newport, is trying to organize a new society in New York City on a somewhat broader basis. He calls it the "Third Unitarian (Theistic) Church." Though distinctly theistic, it is not exclusively Christian, but especially emphasizes the idea of the "Sympathy of Religions." The initial services were held last Sunday. The objects are stated as follows: 1. "For the spiritual worship of one only God, Creator of the Universe and Father of Mankind. 2. To honor and seek all that is *reasonable* in every religious faith in the world. 3. To extend *impartial* fellowship to all of every name and nation 'who revere God and work righteousness.' 4. To advocate that *faith* in Infinite Wisdom and Goodness which alone can save from the hopelessness and despair alike of agnostic and of atheistic unbelief."

THE *Presbyterian* admits:—

There is no doctrine of the Church's creed that is not questioned to-day, and no scheme which she forms and tries to execute that is not opposed or derided. Literature, science, and philosophy are furnishing weapons against her. Unbelief is fashionable. A young man from London assured us two weeks ago that agnosticism was the short but acknowledged creed of most of the educated young Englishmen; and the president of a college, competent to testify on the subject, assured us a little later that it was rife among the same class in this country. Orators of skill in travestying the gospel, and bold in their blasphemies, gather crowded audiences who shout and laugh as the faith of their fathers is assailed. Critics, whose "much learning" has made them self-confident and arrogant, are reconstructing the Scriptures and allowing some of the leaves to fall out. Men of science say that forces in nature are working out fresh results, and that a new religion must come. The array of antagonists is formidable, and they do not conceal their purpose to destroy the Christian faith.

AN author of reputation, and a radical Liberal, in a letter to the junior editor of *The Index*, writes: "You would greatly oblige me, if you could send me a copy of your debates with the mythology-mongers. It would help to give me a clew to their favorite sophisms. Your artillery practice has driven them into the back corners of their forts, but it can do no harm to aim a few shots at their loop-holes. I fully agree with Mr. Potter, that free thought has a positive mission, and that it is a mistake to suppose easy-going indifference could compete with galloping superstition. We cannot afford to whisper *sub rosa*, while our adversaries use a foghorn. Perhaps I go too far in the opposite direction, but I cannot help seeing that religions have never been unhorsed by scepticism, but only by stronger religions; and I hold that for the evils of our own age the best, because the only effective, remedy would be some kind of fanatical nature-worship to clean out the fanatical enemies of nature."

THE *New Church Life*, the organ of the Swedenborgian faith, is very much exercised in spirit over the recent discourses on the Bible by Rev. R. Heber Newton. It says that "these discourses are an evidence of the ever-increasing tendency in the Christian world toward a total rejection of even the letter of the Word. Mr. Newton holds that the Bible is not a 'book let down from heaven, whose real author is God,' and which was 'dictated to chosen penmen and written out by their amanuenses under a direction which secured them against error on every subject on which they treated.... Much may be tradition and myth.' Like Prof. Swing, he advocates the use of an expurgated edition of the sacred Scriptures, and thinks that 'the Bible ought not to be set in its entirety before all classes and all ages.'... New Churchmen, knowing that the Word is ineffably holy and divine down to the very jots and tittles, must regard such irreverent and even flippant language with feelings of mingled sorrow and aversion.... But what does the *Messenger* mean when, referring to Mr. Newton's sermons, it says, 'The only instruction he gives relates merely to the *appreciative study* of the letter [of the Word], and tells us little how to reach and be benefited by its spirit'? Surely, the *Messenger* does not consider that Mr. Newton's sermons have anything to do with an appreciative study of the letter of the Word!"

"VENNOR hit it this time!" We hear this said a thousand times, when the Canadian makes a lucky guess, while the dozen failures get no attention at all. Any one can foretell the weather right occasionally; and so the man who does it with an air of mystery and quantities of scientific jargon gets a reputation, just as his unnumbered guessing predecessors got theirs. Wiggins' prophecy was not received with the general faith which might have been given to it centuries ago, to be sure; but the wonder is, from any rational point of view, that it got any attention at all. Why should anybody give a second thought to such stuff? There is plainly no reason, except the tendency to superstition; and that is nearly universal. Ignorant Jack Tar is the most superstitious of beings, and it is perhaps not strange that the commotion made him afraid to take the ships to sea, and the hard-headed business men who own the vessels cannot complain very forcibly without taking the horse-chestnuts from their own pockets. Newspapers and the telegraph spread the commotion; and it may be said that with the best journalism Mr. Wiggins would have been left in his proper obscurity, but it is at least true that the papers in giving columns of space to the nonsense supplied a clear demand of the public which has always existed and is likely to for some time to come.—*Springfield Republican.*

REV. JAMES DE NORMANDIE said in a recent sermon delivered in this city: "At first, infidelity was a departure from paganism. For the first two centuries of Christianity, the correct name for Christians was 'atheists,'—disbelievers in the gods. Their infidelity afterward became disbelief in ecclesiasticism. To the Roman Catholic Church, the reformers in Luther's time were infidels. So, in later times, departures from the current belief, though really only wisdom and frankness, have been stigmatized as infidelity. Historically and as a conception of theological views, infidelity has been merely the taunt of the majority who have been ready to apply the stigma to the minority. But the real infidelity has been the evil heart of

Digitized by Google

unbelief which has lost all confidence in man's honor or woman's purity, which has a sneer for the heroism of self-sacrifice, which gives equal credence to all systems, because it really cares for none." We are here reminded of Thomas Paine's definition of infidelity. "Infidelity," he says, in his *Age of Reason*, "does not consist in believing or in disbelieving: it consists in professing to believe what he does not believe. It is impossible to calculate the moral mischief, if I may so express it, that mental lying has produced in society. When a man has so far corrupted and prostituted the chastity of his mind as to subscribe his professional belief to things he does not believe he has prepared himself for the commission of every other crime."

POETRY.

For *The Index*.

CROSSING A MOOR.

Crossing a moor in the fine weather,
I met a priest and quest him whether
Maids' new-wed joy taught not that Heaven must be.
His eyes they gleamed in the fine weather:
Right soon quoth he,—as a priest ever,—
"Fair Maid, by reason man may God e'er see."

Crossing a moor in the bleak weather,
I passed a priest and cried him whether
My dead child's death-white face were Heaven's decree.
His teeth they shook in the bleak weather;
But soon quoth he,—as a priest ever,—
"Poor Maid, by reason man did God ne'er see."

XENOS CLARK.

LIVE THOUGHTS.

By no means in desert waste,
Nor in heaven high,
Nor at confluence of streams,
Search for sanctity.
If thou art not pure of mind,
Think not the pure God to find.
No pilgrimage makes him a saint
Who was not one before he went.
—*Rachel Pomeroy, from the Hindu.*

TRUE religion! 'tis not blindly prating what the gurus prate;
But to love, as God hath loved them, all things, be they small or great.
And true bliss is when a sane mind doth a healthy body fill;
And true knowledge is the knowing what is good and what is ill.—*Edwin Arnold.*

HARD it is to conquer nature: if a dog were made a king,
'Mid the coronation trumpets he would gnaw his sandal string.—*Edwin Arnold.*

BEAUTIFUL it is to see and understand that no worth, known or unknown, can die, even on this earth. The work an unknown good man has done is like a vein of water flowing hidden underground, secretly making the ground green. It flows and flows, it joins itself with other veins and veinlets; and one day it will start forth as a visible perennial well.—*Thomas Carlyle.*

IF the pages instruct you not, they will die like flies in an hour. The way to speak and write what will not go out of fashion is to speak and write sincerely. He that writes to himself writes to an eternal public. The writer who takes his subject from his ear and not from his heart should know that he has lost as much as he seems to have gained; and when the empty book has gathered all its praise, and half the people say, What poetry! what genius! it still needs fuel to make a fire.—*Emerson.*

WHAT men want is not talent, it is purpose; in other words, not the power to achieve, but will to labor. I believe that labor judiciously and continuously applied becomes genius.—*Lytton.*

I BELONG to that church which has no name, but of which the members recognize each other wherever they meet.—*Provost Paradel.*

The Index.

BOSTON, MARCH 22, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

The Extension of the Ethical Movement.

A Lecture before the Society of Ethical Culture, New York, Feb. 18, 1883.

BY FELIX ADLER, PH.D.

I come to you to-day as a messenger of glad tidings. We stand no longer a single society for ethical culture. A sister society has been founded. A second society exists in the great city of the West,—that city which is a gateway leading to the new and virgin lands of the continent; that city whose influence upon the future civilization of the Republic is destined to be so great. The friends in Chicago have been deeply stirred. They have determined that the district nursing system shall be set into immediate operation in Chicago.

They have determined that an ethical school for the children shall be founded. They have agreed, above all, that a leader—one whose whole soul is devoted to the new principles and aspirations—is necessary for the guidance of the movement; and William M. Salter, the friend whom we all love, in whose noble heart the ethical idea has struck deep and permanent root, was unanimously elected to be their head. But, if a promising and fruitful beginning has thus been made in one city, I may add that Chicago is not the only place which is ripe for an ethical movement. The same conditions which prevail there we have observed in many other places. The minds of our Western fellow-citizens have been thoroughly liberalized: the soil has been broken, the furrows have been drawn, and men are waiting expectantly—aye, anxiously—for new seed to be sown. I do not say that any great number of persons have a clear conception of all the difficult aims which an ethical movement must propose to itself. The necessity for beginning the work of reform at home, for a thorough process of self-reform, has not yet become fully apparent. The prospect that the ethical movement will lead to ethical beliefs with regard to the universe, that it will generate a new confidence in the good tendency of the world; the conviction that it is indeed a new religion, for which we must lay the foundation,—has not yet fully come home to them; but they do feel an intense dissatisfaction with the existing order of things. They feel dissatisfied with the religion of the churches. It does not meet their wants. It does not fill their hearts. They ask for bread, and it gives them a stone. They feel equally dissatisfied with the so-called liberal movement. They have begun to see that the ethical movement is as distinct from what is commonly called Liberalism as it is distinct from what is called Christianity or Judaism. They find no comfort, no strength, in mere Liberalism, with its wrath, its bitterness, its denunciations, its negativism. They want a positive and constructive movement, which will build up rather than tear down, which will give rather than take away. They feel that private morality and public morality need strengthening, need purifying; and that the disorders from which society is suffering require the most serious, the most religious, attention. They feel the need of doing good, they feel to some extent the need of being better than they are; but, especially, they feel the need of giving to their children the advantages of a moral training such as they themselves have not had. And, indeed, all other motives being set aside, it is the importance of a wiser and better provision for the moral education of the young that is most felt by the Western communities, and that makes them especially favorable to the reception of our ideas.

I have said that societies are wanted. But the questions rises from your lips, Why, if the need is felt, should it not be satisfied? and why is the movement not extended more rapidly? The answer is a very simple one, Because we have no leaders.

I have often spoken of our work: let me speak for once of those who are to be the workers. Naturally, in every new movement, leaders are slow in developing: they cannot be made, they must grow. Yet the point for us to consider is whether we cannot in some way facilitate their growth, and whether we cannot bring to the front those who would be ready to embrace the work, but now hold back for lack of encouragement And here, of course, we are brought face to face with the other question,—What are the qualifications that the leader of an ethical society should possess, and what is the line of preparation by which he should fit himself for his novel and difficult career?

In the first place, the leader of an ethical society, like every teacher of religion, must have a high moral character: this is, indeed, the one indispensable condition. He must have an awe-inspired sense of the majesty of the moral law, and must take a firm though humble resolution to be its servant, its exponent to men. He must adore the glory of the idea that shines for him, and yearn to spread its light to others that stand in need of it. He must have an intense moral conviction, an intense and passionate desire to spread his conviction. This is the central qualification. This is the starting-point from which he must go forth, and to which he must ever return. If he has this qualification, though others may be lacking, he can make good his deficiencies. Though his voice may be weak, though his power of imagination be feeble, though walls of outward obstacles stand between him and his fellow-men, the spirit within him will pierce these walls and break them down, the spirit within him will create its own organs of expression; and the depth of his purpose will project itself as a vital force into his surroundings.

In the second place, the leader of an ethical society must have the gift of initiative: he must be able to originate lines of action and enterprise. I remember that a young and earnest student, who is interested in our work, was advised against it by an older friend on the ground that, after he should have finished his preparation, there would be no place ready for him to enter, the Society for Ethical Culture here being the only institution of its kind. But a young man who prepares to devote himself to this great work must not look forward to occupying a position: he must look forward to making a position for himself; he must carve out his own career; he must have that dominant will that will compel circumstances to do his bidding. He must remember that men, as a rule, do not clearly understand what they need. He must take the place of a physician to them, and prescribe the remedies which their ailments require. He must be deeply persuaded that the message which he comes to bring to the world is necessary, is true; and he must compel men to give him a hearing. The students of theological seminaries, when they have finished their course of study, may find places prepared for them. The leaders of ethical societies are pioneers who go out into the wilderness, whose business it is to cut new roads and to build new cities; and they must be prepared to take the responsibilities which such a task involves.

Thirdly, the leader of an ethical society must have a large measure of human sympathy. He must have a great respect for human nature in all its manifesta-

Digitized by Google

tions. He must have great confidence in human nature. He must be able to put himself into the place of others, he must divine what they feel, enter by the cordial power of sympathy into their trials, their struggles, and so become the friend and helper of his kind.

Lastly, the leader of an ethical society must have the right sort of intellectual preparation; and here I come to a point upon which I propose to dwell especially and emphatically to-day. The students of theological seminaries fit themselves for their future career mainly by a study of the sacred Scriptures, in which the foundations of their creed are laid and of the authorities of the Church who have developed and expounded that creed. They are versed in dogma and its history, they have been taught an often partial and distorted metaphysics, and know something of the history of church institutions; but of life and its myriad-fold manifestations, its burning needs, and its clashing discords, they know as a rule but little. Such a preparation would ill suit the future teacher of an ethical religion. Out of the soul-needs of his age he must speak, and to the soul-needs of his age he must address himself. He must be a captain in the army of progress. To render such a service, he must prepare himself by thorough and searching study of the philosophy of ethics. A teacher of ethics he must be: to build up a truer ethical life is his profession. But ethics rest on philosophy; and philosophy, therefore, he must embrace as his peculiar specialty, as the one subject to which he must give his most devoted attention. It has been said by a high and clear mind that the philosopher Kant was the first to give a true statement of the principle of ethics. If that be so,—and I believe it to be so,—why, then, that statement of ethics must be mastered by the student, and understood. I am one of those, I am free to confess, who believe that there is a right philosophy and a wrong philosophy.

I know that in this I go contrary to the spirit of the teaching in some of our American universities. I know that there is a wide-spread impression that the philosophical spirit is synonymous with the sceptical spirit, and that a tendency is encouraged to hold all opinions doubtful. But this is a tendency that puts an icy chill into the souls of young men, making it impossible for them to hold any conviction stoutly, paralyzing the active springs of the mind. It is a tendency which, sceptical and philosophical as it appears, is sometimes actually fostered with the sinister motive of leading the young to take refuge in some blind and unreasoning faith. For, if the human mind is so thoroughly impotent that no real truth can be ascertained by us, then the only alternative open to us is to cast ourselves wholly upon the ancient traditions of the Church, to throw ourselves into the arms of the supernatural revelation, and to cling to the letter of the Bible as the sole standard of certainty that remains.

I have said I do not share this scepticism which is not infrequently employed in the service of Orthodoxy. I believe that there is such a thing as a right philosophy, in contradistinction to a wrong philosophy; that all opinions are not equally deserving of respect and consideration; that, as in science, there are true results and false results, so in the department of abstract thinking there is a balance of truth in favor of one system, which lends it superior and eminent authority above other systems. I do not believe, indeed, that any philosophy is in so far right that its statements will not be clarified and enlarged by the further progress of human thought, and divested of elements of error that still adhere to it; but I do claim that at the present day, comparing the different systems that claim recognition with each other, it is possible to say that one is—comparatively speaking—true, and the others are—comparatively speaking—false; that one is on the right line of further truth, while the others are off on by-paths and caught in a network of side-issues; that one does contain—making allowance for all the subtractions of minor error that will have to be made from it—a basis that will always be found to be correct, while others are tainted by fundamentally false assumptions, and misconceptions that vitiate the value of their results.

And now, making the application of this thought to the subject of ethics, I must say that, from this point of view, the Herbert Spencer ethics appear to me inadequate to explain the validity of the sense of obligation. The ethics of the German schools, that are founded upon a subjective standard, seem to me equally inadequate; but the utilitarian schemes that make morality equivalent to a refined and far-sighted selfishness are utterly anti-ethical. There is but one among all the modern philosophers—namely, Kant—who to my mind has given a truly moral statement of the principle of ethics; who has done for philosophy what the Hebrew prophets did for religion; who has vindicated for the moral commandment within us its legitimate, that is to say supreme, place and authority. It was reserved for the genius of Kant, that radiant light of the modern age, that master to whom the greatest scientists of our time are now paying their weighty tribute,—it was for him at once to destroy the cobwebs of theological argumentation, to emphasize the inexorable character of natural laws, and to point out at the same time that it is intellectually possible and morally necessary to assume the fact of another kind of causation, to assume another and transcendent order of existence, from which the freedom of the human will dates its origin. The freedom of the human will is the corner-stone of every genuine ethical system. The certainty that our will is free, notwithstanding all appearances to the contrary, that we are responsible for our actions, that there is meaning in the sense of obligation, that it is not a piece of psychic jugglery, not a blind race, consciousness riding our individual consciousness, but that it is the profoundest, truest fact of our soul, the point of connection between us and the infinite—this precious conviction is the condition of all-mighty ethical teaching. No one can go out and grandly influence his fellowmen who has not this conviction; no one can go out and preach justice with authority who is not inspired by it; no one can help to build the future City of the Light, in whose heart that Light of all lights does not shine. And Kant, in his critical philosophy, gave the first real statement of the freedom of the will. And Kant and his philosophy, therefore, the future ethical teacher must understand. I do not say that he may not go beyond Kant's stand-point; but he must begin with it, he should make it his starting-point.

Thus, then, a thorough acquaintance with the most difficult of modern thinkers is indispensable; and, to obtain this understanding, preliminary studies are necessary, severe studies in logic, in the history of philosophy. And, of course, a liberal general education must have preceded, which indeed I have taken for granted.

But a philosophical training alone, however perfect, is not sufficient for the teacher of an ethical society. He is to be the teacher of ethical religion, and the development of the religious spirit in the past must not be unknown to him. This is essential; for he must take warning from the past, he must consider the errors of the past with a view to avoiding them, he must investigate the downward path by which religions have degenerated from the great intentions of their founders.

There is perhaps not one of the leading religions which was not at first grand and noble in its aims. Buddha was a man of the loftiest, sincerest, and the least superstitious convictions; and yet, after his death, his followers worshipped his toe-nails, and erected monuments over his hair. Jesus was a man of the most exalted social ideas and the tenderest love for his fellow-beings: yet read the history of the mediæval Church, and see into what a caricature of the founder's intentions his teachings were turned. And there is nothing accidental in this: there are certain general forces which tend to corruption, and these forces must be studied and heeded by those who aspire to aid in directing the future religious development of mankind. One need only study, for instance, the growth of episcopacy in the Christian Church, to perceive the dangers to religion that grow out of the very political organization of society. The natural tendency of the rural population to seek direction from the city founded the power of the episcopus, and this finally culminated in the overshadowing authority of the papacy.

But philosophical and historical knowledge, at the best, are not sufficient for the leader of an ethical society. His religion is to be a religion of life, and life with all its myriad interests and needs claims his attention; and here is the great danger besetting the path of the ethical teacher,—the danger of having his energies dissipated, of being drawn off into innumerable different directions, and, by attempting too much, to imperil his chance of accomplishing anything. In considering the vastness of the task, the ethical teacher may well exclaim with Jeremiah, "I am a child in regard to so huge an undertaking, how can I hope to accomplish it?" "The world is out of joint," says Hamlet. How can any individual or group of individuals go forth in the mad attempt to set it right. Consider for a moment the multitude of subjects that crowd upon the attention of the future reformer.

There is the economic condition of the great multitude of the people. The masses are still deep in misery and want. The pride of the strong has not yet been curbed, and the oppressor is allowed to set his heel with immunity upon the weak and the defenceless. Surely, this is a condition of things that claims the whole heart of one who believes in an ethical ideal. Surely, he will say: I must make myself a voice to utter the distress of these miserable ones. I must plead their cause, I must study their condition and how it may be elevated, I must be like one that cries in the wilderness, Repent, repent, so that the kingdom of the good may come.

There is the condition of domestic life. Surely, it needs improvement in many ways. These domestic infelicities that harrow so many hearts and blight the happiness of so many lives should be averted. The position of woman ought to be elevated. She has never yet fulfilled her functions in the highest possible way.

Then, there is the political world with its turmoils and discords. Surely, that needs renovation. Surely, the functions of government, and all the lofty ethical aims to which government should be consecrated, have never yet been fully understood, even in this republic of ours which boasts that it is in the vanguard of the political progress of the world. Surely, commercial life needs to be purged of the spirit of falsehood, which so largely pervades it. Surely, the laws need to be modified and reviewed and freed from the unmoral elements of which they are full. A truer theory of punishment needs to be promulgated. A wiser appreciation of the rights of different classes and members of society needs to be introduced.

And so in every direction the work of an ethical teacher seems to extend. As the stone is cast into the waters and the ripples flow from it on every side, and spread outward in ever-widening circles, so the thought of moral reformation sends its waves of influence widening over the whole surface of human existence. But the task is so immense, how can it ever be accomplished, how can any human being grapple with so vast a purpose, how is it possible to equip one's self with knowledge for such an undertaking? How is it possible without incurring the danger of superficiality and of making one's self the laughing-stock of those who are really informed to attempt to embrace so many subjects in one career? And yet the task is not a hopeless one, if the student will but remember the true limits by which his functions as an ethical reformer are bounded.

I have said that the ethical teacher should take pity on the economic condition of the people, should feel its injustice and seek how it may be relieved. With this end in view, he must become a student of political economy; but he must not study it as one who makes political economy his specialty. For example, he will study the present wages system, and see how it breeds inequality among men; and he may deem it his duty in the name of the moral law to demand a system like the co-operative, simply because it tends to create equality among men, and is founded upon the ethical assumption that men are morally equal. But, while it is thus his duty to point to co-operation because it is more moral than competition, it cannot be his duty, and he misunderstands his functions if he attempts, practically to introduce co-operation. He cannot become the leader of industrial enterprises, nor indicate the practical methods by which co-operation may eventually be realized. All such work he must leave to the specialists in political economy and to the men who are practically engaged in the management of affairs, and have that intimate knowledge of affairs which will enable them to devise and carry out the needful changes.

I have said that the ethical teacher must take heed of the spirit of falsehood and the low purposes that so largely contaminate commercial life. It is his mission to point out the true aim of the business man, to show that the wealth the merchant gains is an incident of the service he renders, but that the service itself should be his aim, and that the dignity of the mercantile character depends upon the clearness and force with which this aim of honorable service is realized. But it is not the duty of an ethical teacher to

Digitized by Google

show how this high ideal of business life, so high above the heads of the great crowd of money-makers, is to be introduced into the actual practice of the market.

I have said that it is the duty of the ethical teacher to lend his stimulating influence to the reform of the laws. Again, he must bring his moral theory to bear upon such questions as those of marriage and divorce, of crime and punishment and the like. But it is not his duty to draft the bills that embody the changes, or to urge their enactment upon legislatures. I have said that it is the duty of the ethical teacher to foster a deeper understanding of the moral functions of government; to make it clear that, as there are moral responsibilities resting on an individual, so there are collective moral responsibilities that rest on an entire nation. In the days before the war, it would have been his duty to declare negro slavery a crime, a stain upon the morality of the whole people, and to demand that the negro be educated to the full enjoyment of a citizen's franchise. But it would not have been the duty of the ethical teacher to frame reconstruction laws, or to suggest the practical measures of state craft by which the period of transition could be safely tided over.

And so, in all respects, a clear distinction is to be drawn between the functions of the ethical teacher and of the specialists, in the various departments into which his work overlaps. It is the function of the ethical teacher to point out the right doing, not how under existing conditions of wrong doing an approximation to the right doing may be achieved. He may never indeed content himself with lashing vice in the abstract, with saying, Be good, be holy, be pure, be righteous. Of these words, the religious literature of the day is full *ad nauseam*. He must hold up the mirror of that which ought to be to the iniquities that exist, so as to give point and aim to his strictures. He must be an awakening influence, a beacon light illuminating the distant goal; but the practical schemes for the carrying out of his purposes he must leave in others' hands.

And, thirdly, it is not sufficient that the leader of an ethical society should have a true theory of ethics, and should learn to express the general demands of righteousness in terms of the present need and with application to present unrighteousness; but he should also be a teacher in the literal sense of the word. It is one thing to have an idea clearly in one's own mind, and another thing to be able to convey it with due clearness to the minds of others. It is because this distinction has been neglected that the results of our public system of education have been in many ways so unfortunate. The leader of an ethical society must be the teacher of young children: if for this reason alone, he should acquaint himself with the theory and practice of rational pedagogy. But, even in his public work as a teacher of adults, he will gain immensely from this preliminary discipline: he will gain the power of adapting his statements to the receptivity of his hearers, and of following a psychological rather than the strictly logical order in the development of his ideas. I myself believe that the best summary of the duties of an ethical leader is given in the word "teacher." There is no nobler profession than that of a teacher; and for my part I have no higher ambition than to be worthily included in the fraternity of teachers.

Finally, let me indicate another special department of study for the ethical teacher. As an artist pores over the masterpieces of his art in order to kindle in his own soul the appreciation of the beautiful, so should the religious teacher con the writings of the great religious souls of the world, and draw their spirit into his own and inflame his ardor by contact with their never-dying fire. The Bible has recently been called a book of ethical culture. It is a book of ethical culture. It contains the songs and prophecies that burst from human souls when the moral ideal first dawned upon them in all its sublime grandeur; and those first expressions of astonishment and enthusiasm and self-forgetful love have never been equalled by any subsequent expressions for freshness and might.

The Bible must be studied as a book of ethical culture. The pity is that we have been compelled to fight the idolatrous, the superstitious view of it; and its real excellences, its positive merits, have not begun to receive sufficient attention at the hands of the moderns. But we shall make up for that by and by, and the debt that we moderns owe to the Bible will more and more be recognized. Those chastising speeches of Isaiah,—how full are they of power, how like a storm wind do they sweep over our souls! Those golden predictions of the future that occur in the writings of this prophet,—how do they rise like visions of the Islands of Eternal Bliss before our mind's eye!

How soothing sound those messages of the time when every tear shall be wiped away, and there shall be no more bitterness! How lovable are the parables of Jesus, how ineffably tender the spirit of the shepherd who carries in his arms the feeble lamb! Oh, the Bible! We shall not lose its value: the gems of wisdom and experience that are stored in it shall not be forgotten among the new generations that are arising.

But the Bible, after all, is only one book of ethical culture; not the only book; not the all-sufficient one. It does not completely satisfy: there is a larger literature of the moral life. There should be a collection of the best fruits of the world's moral culture, containing not only extracts from Biblical literature, but extracts from the gospel of Buddha, from such writings as those of Saint Augustine, of the Jew Gabirol, of Tauler, from Thomas à Kempis, from the orations of Savonarola, from Bruno's Heroic Love, from the modern writers on ethics and religion, such as Emerson. Such a collection we need for the people at large, to quicken the religious sentiment. The future teacher of an ethical religion must go to the sources, and read the works of these writers, if possible, in the original; for they have been the fountains in the great human desert of prose and materialism, they have been the living springs in the Sahara of existence, the green oases where the traveller finds shade from the burning sun, and refreshment and peace. But, for the people at large, we need a handbook of the Literature of the Moral and Religious Life.

And so this is what we demand of our leaders, that they shall study the philosophy of ethics, the practical application of ethics to the different departments of life, the science of pedagogy, the history of religion. And, now, how shall we obtain such leaders? I believe there are not a few young men who would be ready to join the good and great work, if only in their case, as in Isaiah's, the live coal could be taken from the altar and made to burn upon their tongues, so that they could say, "Here we are, ready to do what is commanded us." I believe, discarding metaphor, that there are not a few young men in the graduating classes of our colleges who would be eager to aid in doing good to their fellow-men,—eager with the generous enthusiasm of youth to join in the task of moral reformation,—if they could only be made to see the way to do it. The pulpit of some sect or denomination seems to be, at present, the only avenue for such work; and the narrowness and the limitations of the pulpit repel them, and so they give up the work altogether, and pledge themselves to other careers. I would that these young men could be reached. I am sure that in time they will be.

Oh, I know well that it is not an easy task which I recommend to them; but it is a worthy task, and one that urgently needs to be attempted. It has its thorns, but it has its roses too; it has its trials, but it has its triumphs; it has its penalties, but it has also, believe me, its great rewards.

For *The Index*.

FREE RELIGIOUS ASSOCIATION CONVENTIONS.

NEW HAVEN.

The Free Religious Association held a convention in the Church of the Messiah, New Haven, Tuesday afternoon and evening, March 6, and Wednesday afternoon and evening, March 7. The company was called to order by Rev. M. H. Houghton, of New Haven, who spoke substantially as follows:—

Members and friends of this Association, I welcome you gladly to this city and church. Not in any impulsive mood, but after a careful examination of your Constitution and reading of your history, I bid you a cordial welcome, and extend to you the right hand of fellowship. I observe that each individual upon your platform is held responsible for himself alone; and whoso speaks his honest thought is respected for his sincerity, even when you do not all agree with what he may say. This, in my judgment, is the true principle,—a principle which should prevail inside as well as outside the Church. Our cardinal object here is to promote the brotherhood of man, to throw all the light possible upon human relations. In the spirit which seeks the truth, and without assuming any responsibility for your opinions,—as you by coming here do not assume any responsibility for ours,—I greet you. I am glad to believe that there is one pulpit in this creed-bound city where honest thought can be spoken without fear or favor. And I trust that none of you will feel under any restraint, because of the place, in giving expression to such principles as you hold vital and dear. I have now the pleasure of introducing to you the President of the Association, William J. Potter, of New Bedford.

Mr. Potter said: We thank you, sir, for this cordial welcome, and we accept it in the spirit of freedom and fellowship in which it is tendered. You have said rightly that it has not been customary to invite us into the churches, but we come here none the less gladly on that account. In the largest freedom of individual thought and expression, we would seek the light, and apply to the practical, every-day life of mankind the truth.

The President then proceeded to give his address upon

The Religion of Humanity.

Mr. Potter began his essay by speaking of Auguste Comte's idea of the Religion of Humanity and of his plan of a new church, which remained a plan, only on paper. It was modelled too closely after Catholicism to be acceptable to the modern world. But the phrase, "Religion of Humanity," was a fine contribution to religious progress; and Mr. Potter said his purpose was to use it to represent certain tendencies and movements which are apparent inside and outside of churches, within Christendom and in other religions, through which an essentially new religion is growing up. The first characteristic of the Religion of Humanity, in this sense, is that it is opposed to supernaturalism. Its primary principle is that religion is the natural product of the human mind, the natural outcome of the human race,—of the human mind seeking to fathom its relations to the universe and to the infinite source of things, but still the human mind. And, hence, all religions are subject to the natural laws of development and to human limitations and fallibility. Second, to the Religion of Humanity, the special religions are so many different sects. And as each of them claims to have the only saving truth, so sectarian competition and animosity have arisen between them, resulting in cruel wars and in grievous waste of material, mental, and moral resources. The Religion of Humanity would put an end to this strife by showing that the religions have a common origin, and belong to one family. It would seek to develop what is true and good in them all, and turn it into practical benefit. Third, the Religion of Humanity is more concerned to improve the condition of mankind than to discuss speculative questions of theology or determine the merits of different forms of ecclesiasticism. It would be a religion of *humanity* in deed as well as in word. It would aim at building up true manhood and womanhood, complete, well-rounded, individually aspiring, yet mutually helpful. And it would work for this aim here and now on this earth, though not denying that there may be another world for man hereafter, but believing that to manage this world well will be the best possible preparation for any other. Finally, though the Religion of Humanity does not put into a creed any speculations concerning an acknowledged incomprehensible Supreme Being, it recognizes the logical necessity of a power more than commensurate with humanity,—of a power, causeless and eternal, as the vital energy of the universe itself. With this power, whatever it be in its essence, man is in vital relation; and when he lives truly, purely, beneficently, it becomes organized in and through him. Such a person may make no profession of having found the Eternal Power; but, what is of more importance, that Power has found *him*, and is making him its instrument.

Following the address of the President came a brief speech from the Secretary, explaining the objects and organization of the Association, and then remarks in the line of the essay by Judge Sheldon, Rabbi Kleeberg, G. W. Babb, and others of New Haven, emphasizing the need of seeking the points of agreement, and heartily commending the purposes of the Association.

The evening session of Tuesday was opened with an address by Wm. M. Salter, of New York, on "Re-

Digitized by Google

ligion and the Social Ideal." "The religion of the present day consists," said the speaker, "not in the desire for the greatest good to all, but in the determination of each to save his own personal soul. If prayers would bring the kingdom of God, would not eighteen centuries of praying have done it? Religion, if it would not be child's play, must set men to be themselves and bring about that kingdom for which they have so long vainly prayed. It must give us purer politics, more equitable industry, and a finer social life."

Mrs. Anna Garlin Spencer, of Florence, Mass., was then introduced, and addressed the assemblage upon the topic, "Ethical Unity the Nation's Life." Mrs. Spencer proceeded to consider the question of methods by which the ends alluded to by the essayist might be reached. The perpetuity of our American government, said she, rests upon the question whether we shall give scientific investigation to the social questions which come up. Free Religion is doing the best we may for ourselves and others, and also the studying of every fact which may aid us. It is not so much a new religion as a new method of administering the old religion. It is not enough to cherish a high moral purpose: we must possess as well clear moral judgment.

[We regret that, owing to loss of notes made at the time, we are unable to give full reports of these admirable addresses of Mr. Salter and Mrs. Spencer.]

The Wednesday afternoon session opened with a paper by Miss Emily J. Leonard, of Meriden, Conn., on "The Relation of Church and State in Connecticut."

[Miss Leonard's address will be given in full next week.]

Following Miss Leonard, B. F. Underwood, of Boston, addressed the meeting as follows:—

These remnants of the old papal union of Church and State, which was once universal throughout Christendom, are anomalies under this republican government; but their removal is resisted, because superstitious reverence for the forms of the past neutralizes the sentiment of justice and blinds the popular mind to the demands of perfect religious liberty. Even the concessions which have been made in favor of State secularization, here in Connecticut and in other States, have been made not from considerations of freedom and fairness, but from rivalry and jealousy among the sects. It was the cordial hatred of the Congregationalists, Baptists, and other sects, to the Episcopalians in Virginia, that made the passage of Jefferson's act for establishing religious freedom possible in the Virginia Assembly in 1786. The increase of the wealth of the Catholic Church seems to produce a stronger impression on the average Protestant in favor of the taxation of church property than is produced by any consideration of the wrong of augmenting the taxes of the people to support religious worship. When there was an acknowledged union of Church and State, it was entirely consistent to exempt the Church from taxation. The Church belonged to the State as much as did the court-house or the jail. And, then, the State prescribed doctrines and modes of worship. But here, where we profess to have a complete separation of Church and State, the Church should look for support to its adherents, and bear its part of the public expense. Take the Bible from our schools, and then say to the Catholics, "No division of the school fund among sects." Abolish the judicial oath, and no longer punish men because they conscientiously refuse to swear, nor offer a premium on hypocrisy and falsehood by making the admission of testimony depend, as it does yet in several States, upon belief in a Creator and a futnre state. This subject of State secularization should be kept before the public until the reform is effected, until the nine demands of Liberalism are acknowledged and the principles they enunciate are secured by constitutional amendments.

The closing address of the afternoon was by Rev. John C. Kimball, of Hartford, Conn., on "The Organic Relation of the Old and the New under Evolution." Radicalism, he said, is ordinarily supposed to concern itself with the new. It roots up, it is thought, the old things, and puts in their places other and better things. It is said destruction must come before construction. The handwriting of our predecessors must be sponged out from the social slate, and advanced thinkers look with some surprise and dislike upon those who cling to the superstitions of a bygone age. Revolution, a generation ago, was the highest watchword. Since then, however, the law of evolution has been discovered, and by it a new significance is given to what is old in the world's treasury. It has given us a new light by which to see. The divine method now is neither the destruction nor the preservation of the old, but the unfolding of the old into the new. There is no wiping out, but gradual growth. The houses of the children have in them the timbers of the father's. Civilization itself is a growth. The reformers' true helpers are not merely the living recruits, but the myriads now sleeping in their graves. Free Religion itself is rooted in the past. The science of evolution is the prophet of religion. So long as man evolves, religion will evolve. Continuous tradition and continuous inspiration,—the one the trunk of the tree, the other the surrounding air,—these are the elements of progress. The evolutionist in religion must in this sense be both a radical and a conservative.

Wednesday evening, the closing session of the Convention, William H. Spencer, of Florence, Mass., read a paper on "The Christ of the Gospels and our Moral Ideal."

The speaker believed that there was a Jesus of history, but the Christ of the gospel was largely a fiction. But, accepting this semi-mythical being as a real historic character, the question the speaker proposed to discuss was, Is this Christ of the gospel a perfect being? He answered the question in the negative. He gave as his reasons: First, that Jesus did not claim to be perfect. Second, the evidence of his moral imperfectness in the Gospels. He read seven comments in his indictment of the gospel character, as follows: First, the evidence of his racial prejudice, illustrated in Matt. xv., 22-28. Second, of class prejudice, in Luke xvi., 19-29, wherein the rich man, as appears, is condemned simply because he is rich, and the poor beggar goes to heaven simply because he is poor. Third, of sectarian prejudice, as evidenced in his too sweeping condemnation of the whole sect of the Pharisees, calling them all hypocrites and a "generation of vipers." Fourth, the motives to conduct offered generally were hope of reward or fear of punishment which belong to the lower motives. Fifth, the absence of temperance teaching in the gospel. Sixth, the spirit of submission to authority taught in our gospel belongs to a monarchical not a republican government. The spirit of liberty is not found in the New Testament. Seventh, the spirit of inquiry, the love of truth for its own sake, the spirit that follows it wherever it leads,—in short, the spirit of modern science,—is not found in the Gospels. All these things are evidence of the limitations and imperfections of the Christ of the gospel. The fact that we can see these limitations is proof that we have in our mind an idea of moral excellence higher than the gospel character. This moral ideal we might call the Christ of the nineteenth century, and it is better than the Christ of the first. "No Christ of the Gospels," said the speaker, "is to me so divine-like a form as this image in my own mind of what I ought to be and do." Our moral ideal is not a person, but a form of thought. Devotion to this upper thought is the essence of religion in its higher forms.

Following came an address on "Mystery," by Frederick A. Hinckley, Providence, R.I. The speaker said:—

Mystery wraps us everywhere like a cloud. We know not the stars, we know not what constitutes the real miracle of growth, we know not what it is that gives music, eloquence, or even character their greatest charm. But all the mysteries of outward nature, all the mysteries of the influence of music, eloquence, and character upon human nature, are not so impenetrable as the mysteries of death and birth. I link the two together, for which is the greater no one can tell. Our life begins in mystery, it continues in mystery, its apparent end is in mystery. The power men call God is also a mystery. How earnestly humanity has sought to find out the universal! There is nothing more pathetic in history than the manner in which the human mind has overlooked the duty nearest it to chase its ideal of a supreme power. And who was ever able to explain the presence of evil in the world? We know nothing. Are we wise enough to know that? We are all breathing, moving, thinking, loving,—how, we do not understand. We only know the fact. And yet to-day there are people who talk as if they knew it all. They have fathomed the unfathomable. They have revealed the mysteries of the unknown. For myself, I see too much in this great realm which no man has scanned, to bound it on the earthly or the heavenly side. Amid all the determination to define with most astounding minuteness of detail, which is our inheritance from a barbarous past, I turn trustingly to the scientific position, and say I do not know. I remember Goethe said in old age, "I have been fifty years learning how to read, and have not learned yet." I remember that, after all his achievements in knowledge, Newton exclaimed, "I have only picked up a few pebbles on the beach of the infinite ocean of truth." And I see in the attitude of the great poet and the great scientist the spirit of true religion, humble as a little child, with teachable mind and reverent heart standing receptive to that new truth which must ever exceed in quality and quantity the old. The sweetest comfort for those who mourn, the brightest cheer for the heavy heart, and the final solution of life's doubts and mysteries are not to be found in clinging to the old superstitions. They are to be found in facing physical and spiritual facts in a reverent scientific spirit. So shall every spot on which we tread become an altar, and every act of our lives a prayer.

At the close of Mr. Hinckley's address, Judge Sheldon thanked the Association for coming to New Haven; and the President thanked the New Haven friends for their generous hospitality, and said good-by.

The Convention drew together a not large but very thoughtful audience, and left behind a favorable impression on both sides.

ALBANY.

Thursday P.M., March 8, at 3 o'clock, the sessions of the Convention in Albany were inaugurated in Van Vechten Hall. Mr. A. Schell, of Albany, made the speech of welcome, and dwelt upon the importance of the Free Religious movement. President Potter replied in a few well-chosen words, and then proceeded to deliver his address upon "The Religion of Humanity." Mr. Hinckley followed in a brief speech, presenting the practical aims of the Association and its methods of operation. B. F. Underwood also addressed the Convention on the general principles of the Association.

The Thursday evening session began with a paper by Mrs. Anna Garlin Spencer, on the "Relation of Free Religion to Charities and Reforms." She said that charity, in the ordinary sense of the word, was the attempt to render evil circumstances tolerable, while reform aimed at the removal of the evils which had become incorporated into the workings of society. Charity relieved the yellow fever sufferers, but the sanitary boards sought to remove the causes of the epidemic and prevent its recurrence. Religion had three sides,—philosophical, moral, and emotional. In its highest sense, it meant devotion to the highest ideal through the best man could do. It had to do with the formation of individual character, and its external work was shown in the voluntary attempt of the individual to impart his character to his life work. Charity and reform were, therefore, parts of religion. One theory of government was that the Creator had given certain persons a divine right to rule over others, and that obedience to constituted authorities was pleasing to God. In this case, charity took the form of gifts from the higher to the lower class. The other theory was that of equal rights for all; that laws were the varying expression of the whole people, and not the dictum of a few; and that the good of the many was the chief object to be attained. This called for self-respect and self-development on the part of all citizens, and charity and reform in this case took the shape of mutual helpfulness and justice between men. The English system of home visitation and supervision, if attempted in this country, would be resented and repudiated. In the United States, wealthy manufacturers give back to their employés a part of the fruitage of their toil in the shape of libraries, reading-rooms, and free beds in hospitals. At the same time, by combinations among themselves, they keep down the wages of labor, and prevent the workman from rising above the position held to be naturally his. In education there were also two theories,—one which bound all children down to one arbitrary standard, and another which stimulated invention and afforded opportunities for individual development. Free thought, free industry, and free education had their wrongs as well as rights; and the revulsion from dictation might lead to license. Free industry

Digitized by Google

might result in Pittsburg riots and trades-union interference. Free Religion indicated and included all other freedom, and marked the full and thorough emancipation of man.

Mr. B. F. Underwood followed in an able address. He said:—

Liberal thought is unsectarian, and liberal thinkers work with all classes for the reforms of the day. Their influence is seen in the churches as well as outside of them, in the improved theology, in the increased breadth of thought and tolerance of spirit, in all the charitable and humane work of the day,—to which their money is freely contributed, even when carried on in the name of the Church,—in their support of education, in their efforts to secularize the schools and the government, in their contributions to science and literature. Liberal organizations exist, and are doing noble work; but their special activity and influence are no measure of the influence of the thought and spirit which they represent,—an influence which is diffused throughout society, and affects every reformatory movement, and slowly changes laws, customs, and public sentiment.

Rabbi M. Schlesinger then delivered a most acute and entertaining address, in which he dwelt upon the aims and aspirations of Judaism, and welcomed the efforts of the Free Religious Association as tending to promote an enlightened fellowship and communion between various creeds and faiths of mankind. At a late hour, the meeting adjourned.

The first article of the programme for Friday afternoon was the paper by Mrs. Imogene C. Fales, of Brooklyn, on Co-operation and Progress. This paper was a profound discussion of the labor question, and gave rise to a spirited debate, occupying the entire afternoon. The participants were Messrs. Schell, Baker, Hinckley, and others, with closing remarks by Mrs. Spencer and the President. Friday evening, Mr. Wm. H. Spencer spoke on the Christ of the Gospels and our Moral Ideal, and Mr. Frederic A. Hinckley on Mystery. At a late hour, the President said a parting word and declared the meeting adjourned. Quite a number of new members were obtained in both cities, and a good interest awakened in the work of the Association. F. A. H.

CORRESPONDENCE.

WHO IS TO DETERMINE WHICH IS THE RIGHT CONSCIENCE?

Editors of The Index:—

"Immediate, total, and affectionate self-surrender of the soul to God is demanded of all responsible human beings every instant by conscience, which is the voice of God." So says Joseph Cook. Now, who is to determine which is the *right* conscience? One man's conscience says, There is a Trinity: I must believe in that, or I am lost. Another says, I believe in God the Father and Jesus the Son; and by believing and accepting that, only, can I be saved. And still another believes that God and Christ are one and the same; and that by accepting Christ as God, and through his atoning blood, only, can he be saved. These classes all come under the head of Christians. But there is another class of people,—and it is a large one, too, and composed of persons who are highly intelligent, perfectly honest and conscientious, sober, industrious, and respectable,—in fact, just as *good*, in a worldly sense (and, really, what other sense have we to judge by?), as the other class, who believe in a higher power, be it in whatever form it may. Deists, theists, and monotheists might come under this head, perhaps, but more particularly the agnostic, who is ever ready to accept *truth* when proven,—a considerate class who *want* to be *right;* and are not they the most honest of all? For they make no pretensions of knowing what every one who thinks deeply and honestly upon the subject must admit no *living* soul knows. No doubt, many of this class would gladly lay down their lives in a moment to obtain the knowledge of future salvation for others. Seems to me it would be a glorious death, if by dying on the cross, the gallows, or in any other ignominious way, we could secure for humanity future happiness. But the agnostic, and most liberal people, cannot, on the evidence adduced, believe that anything of the kind ever has taken place; nor can they, judging from the facts of well-authenticated time, from their reason, or from the never-varying laws of nature,—so much better understood now than two thousand years ago,—believe that any thing of the kind ever will occur. This class will be the *first*, I believe,—if the source and final destiny of our being is ever discovered,—to rejoice and accept, for the very reason that they have no dogmatic assurance to get rid of, but stand ready to embrace the *truth* when *discovered*. So, again, who is to determine which is the right conscience? What right has Joseph Cook, or any other theologian, to say that such persons "are in open rebellion against God"? Such men as are to-day called Agnostics, Liberals, etc., have been from the beginning of history the pioneers of progress in thought, science, and in every thing that has been for the good of humanity. They in rebellion against God? It is a presumption that no man has a right to make. The reason that many men are agnostic is that they can form no conception of God high enough to satisfy their imagination. The God of the Bible falls far below what they themselves can conceive. Learned men in the past have told us, "No man can find out God," "God is unthinkable," "It is past the understanding of man," etc.; "yet we are told we must love what he loves, and hate what he hates." Who is to tell us the loves and hates of God,—the preachers? "It is in man to remember whence he came." Can a man remember what he never knew? Whence we came is still an open question, and the greatest scientists of the age are striving hard to solve it. In speaking of probation at death, Joseph Cook says, "It is a guess on both sides [an honest expression for a theologian to make: they generally say, *I know*]: on the one side, the guess amounts to nothing; but, on the other, it is every thing." So, to make assurance doubly sure, he guesses, No probation.

In war or politics, that kind of tactics would be shrewd, to say the least; but, to a man who has lived an upright, honest life, and believes that God will be just, and trusts to him for making all things right after death, it seems like a cowardly makeshift to abjure his reason, and accept a faith that all through life he has believed a myth. 'But life is a game of policy, and some are always guessing the opposite of what they believe or hope for, *so as to be safe* (sometimes, this is called straddling). W.

PHILADELPHIA QUAKERISM DEFENDED.

Editors of The Index:—

In *The Index* of the 22d ult., I find an article bearing hard on Philadelphia by, I suppose, a citizen of the "Hub." He was, no doubt, sun-struck during the heat of the Centennial summer, and has not yet recovered his equanimity. Philadelphia Quakerism seems to be his especial abhorrence. Its non-æstheticism seems to be the trouble. This, combined with its alleged "gross practicality," are the especial objects of his wrath. As to the "practicality" of the Friends, as compared with that of Bostonians, let us go back some two hundred years. While these same Bostonians were murdering the Indians and enacting the most cruel laws against all who dissented from them, the Philadelphians were intent upon humanity to all mankind; and, in the face of the sentiment of the whole world, the Assembly dared to exempt from the punishment of death every crime except the single one of wilful murder.

During this period, I will narrate one instance of the "practicality" of Bostonians, as given by Sewall: "Hored Gardener, an inhabitant of Newport, came, with her sucking babe and a girl to carry it, to Weymouth; from whence, for being a Quaker, she was hurried to Boston, whence she and the girl were whipped with a threefold knotted whip. After the whipping, the woman kneeled down and prayed the Lord to forgive those persecutors, which so reached a woman that stood by that she said, 'Surely, she could not have done this, if it had not been by the spirit of the Lord.'"

I suppose Friend Kennedy has heard of the "practicality" of the Bostonians in the case of Mary Dyer, Marmaduke Stevenson, and William Robinson,—how they were hanged to the stoutest limb of the Old Elm, on the Common, for the crime of being Quakers!

But let us come down to more modern time, and compare Boston's great man, Daniel Webster, to William M. Meredith and Horace Binney. Thaddeus Stephens once related to me the details of the great crime of the great Daniel, and how he and Meredith (Gen. Taylor's Secretary of the Treasury) never spoke again to the "godlike" after his seventh of March speech. Take Boston's other great man, Charles Sumner,—his "practicality" was not always at hand.

But Philadelphians are non-æsthetic, forsooth! Did our friend ever hear of Benjamin West, who declined the peerage at the hand of George III.? Did he ever hear of Thomas Buchanan Read, who wrote the finest poem, the English say, ever penned by an American? Did he ever hear of John G. Whittier, who equalled it in his "Randolph of Roanoke"? He, a Quaker, wrote his finest poems in Philadelphia, when he was the editor of the *Pennsylvania Freeman* there. Did he ever hear of Bayard Taylor, who, with his friend Read, was born in Quaker Chester County, and educated under its influence?

But the animus of our critic is seen in what he says concerning "a great philanthropist." This poor man's (I know him well) idiosyncrasy was laughed at. He was a prison inspector at a salary of some fifteen hundred dollars per annum.

Let us consider the case of Boston's great man, Theodore Parker. We all know how its Orthodoxy prayed for his removal; and they do not yet seem to have forgiven him, judging from Joseph Cook's fantasy. They do not seem to comprehend that the ground which he occupied is the *stronghold*, the religious sentiment; *i.e.*, that the Spiritual Sense knows no man. "We have known Christ," says Paul, "after the flesh: henceforth know we him no more." Our critic complains loudly of the Philadelphia Friends,—*I* speak not for *orthodox* Friends, but of the Society of Friends,—who were so ably represented by the late Benjamin Hallowell and Lucretia Mott, and who were fast friends of *The Index*. Now, the ground on which Theodore Parker stood, there we have stood for two hundred years, and there we propose to stand forever. And to-day, with Dean Stanley, we esteem Theodore Parker as a "great philosopher." And who in Boston does him reverence? Its Orthodoxy still cast stones at him, and its heterodoxy is fast drifting into agnosticism. They don't know the spiritual sense. And why? Because, says one of the same school as our critic, some Christians and Mormons run after phantoms and whimsies, that, therefore (he implies), the Spiritual Sense is a delusion and a snare. Now, we Friends hold that the Spiritual Sense knows no man, as a man. It, however, cognizes God as the Infinite God, just as it is cognizant of man,—the spiritual man.

Lucretia Mott said at Abington meeting in a sermon, some years since, that Emerson once told her that the Friends were right in their philosophy, their mode of worship,—of feeling after God, if haply they may find him.

Now, in conclusion, if I have written harshly or censoriously, I will say that I love all the sensible people of Boston and of the whole of New England.

DAVID NEWPORT.

ABINGTON, PA., 2 mo. 9, 1883.

EUSEBIUS AND PIOUS FRAUDS.

Editors of the Index:—

Will the "author of *Bible Myths*" please give the reference to Eusebius again and more carefully, so that I can find the passage?

Respectfully, INQUIRER.

BOOK NOTICES.

AN ORIGINAL LECTURE. "The Immorality of Religious Capitals." A lecture delivered in Paine Hall, Sunday evening, Jan. 28, 1883. By James Parton. Reported for the Boston *Investigator*. Boston: J. P. Mendum.

Mr. Parton delivered this lecture before the Free Religious Association in Boston, June 2, 1876, and at the Centennial Congress of Liberals in Philadelphia, July 2, 1876, under the title of "Cathedrals and Beer: or the Immorality of Religious Capitals." It was printed from the manuscript in the report of the Free Religious Association for 1876, and is a part of the report of the Centennial Congress above mentioned. Our readers generally are familiar with the lecture. But, as published by Mr. Mendum, it bears evidence of revision by the author; and, in comparing this edition with previous ones, we have found an interesting and amusing subject for psychological study. Without doubt, the mind is subject to laws as invariable as those by which the planets move in in their orbits; but it would "puzzle a Philadelphia lawyer" to explain the mental process by which some of Mr. Parton's revisions were made. We give the first two sentences from the lecture as published in the report of the Free Religious Association in

Digitized by Google

1876, and as it appears in the pamphlet just issued: "It is the happiness of the new world to be admonished by the errors of the old, and of the old world to be warned by those of the new." 1876. "It is the great happiness of this new and forming world of ours to be admonished by the errors of the old world across the sea." 1883. "Yonder lies Europe to recreate us by its venerable and picturesque antiquity." 1876. "Yonder lies Europe, distant but in plain sight, to warn and instruct us, as well as to cheer and recreate." 1883. Let us hope that Mr. Parton's next lecture will be not only "original," but a new one, or, at least, one that has not been in print half a dozen years. We have never regarded this lecture equal as a piece of composition to most of Mr. Parton's essays, although it contains much good thought. The purport of the lecture is given in the closing words: "It is not wealth that corrupts: wealth is a boon and a blessing; and, let men earn as much as they may, man must forever remain poor. It is bad distribution of wealth that corrupts. There is a tendency in property to get into heaps, which laws in every age and land have aggravated. Here, for the first time in human history, let the law leave it equally free to get into heaps and to scatter itself abroad. No privilege. No entail. No exemption. All men and all property equal before the law."

THE *Art Amateur* for March opens with a notice of an article from the *Revue des Arts Décoratifs* on "American Habitations." We wish the writer had treated it more seriously, and given us either a translation of the article or at least sufficient extracts to enable us to judge of its tone, instead of making an effort to raise a laugh at its expense. It is rarely that French criticism is not worth considering. One writer says that the first sentence of the French writer is enough to demonstrate his inaccurate way of observing things. "The Americans are not accustomed to do things by halves." To our minds, the Frenchman is quite right, as the popular phrase "going the whole hog" shows Americans do things carelessly, hastily, inaccurately, superficially, in their very attempt to do things wholesale; and they do not discriminate and analyze and do one part thoroughly, to the neglect of all the rest. The next sentence is rather confused; but, if, as appears, the Frenchman said that "we have already made a good step in the direction of developing the artistic sentiment to the profit of our industries," the improvement in our wall papers, printed calicoes, carpets, and other fabrics in which beauty of design is important, abundantly shows that he is much nearer the truth than his critic, who says "that we are far advanced in the 'exploitation' of such artistic taste as we have for the profit of our great manufacturers." The next article is a sketch of Gustave Doré. The writer hardly does justice, we think, to the large paintings of Doré exhibited in London. Doré was always to a certain extent melodramatic, it is true; but the figure of Jesus descending the steps of the Hall of Justice has always dwelt in our mind as a grand original creation. We remember well the refreshment of seeing these pictures after the dreary commonplace of the Grosvenor Gallery. The longest article is an account of the Water Color Exhibition, with some very pleasing illustrations. "Hints to Photograph Portraitists," and "Flower Painting in Water Colors," "Suggestions for Fan-painting," and "Hints to China Painters," and "New Houses" are practical articles of value to workers in these departments. The designs for decorative work are pleasing and varied.

THE *North American Review* for April presents an attractive array of notable names among its contributors for this number; and, as might be expected, the subjects treated are among the most important of the age. Dr. Theodore D. Woolsey and Judge John A. Jameson open the number by giving their views on "Divorce" from the clerical and legal stand-points; Dr. P. Bender gives "A Canadian View of Annexation"; Senator John A. Logan shows the need for "National Aid to Public Schools" in the several States and Territories; Dr. Howard Crosby writes of "The Dangerous Classes"; President J. C. Welling, of Columbia College, treats of the problem of "Race Education"; "The Water Supply of Cities" is discussed by Charles F. Wingate; Dr. F. H. Hedge writes of "Ethical Systems"; and Rev. Charles F. Deems, on "Street Begging." The concluding article is by O. B. Frothingham on "Criticism and Christianity."

IN the *Unitarian Review* for March, Rev. Charles W. Wendte writes of "Festival Days in the Church"; Rev. Rushton D. Burr has an article entitled "A Moral Unity at the Last"; under the title "M. Hyacinthe Lawson," D. Charruaud gives a critical review of the services and opinions of Père Hyacinthe; Rev. Albert Walkley reviews "Fichte: his Popular Works"; and Rev. Francis G. Peabody discourses on "The Method of the Psychology of Religion." The "Notes from England" of Rev. John Page Hopps are this month very interesting, while the editorial department is up to its usual excellent standard.

"OUR LITTLE ONES" for March is an excellent number. In addition to its numerous wise and witty stories and poems, nearly every page has one or more beautiful engravings. "The Monkey's Story," by W. E. Barker; "The Troublesome Gnat," by Mrs. Hall; "The Baby Cage," by Aunt Nell; and "Harry's Winged Mouse," by H. L. Charles, are particularly instructive. Russell Publishing House, Boston.

FRIENDS of Hebrew literature will be glad to know that an English translation of the Mishna, the most important part of the Talmud, is about to be published, with the original text, a vocabulary, and commentary, in bi-monthly parts. Price $5 a year. Subscriptions may be sent to the author, Dr. S. S. Kohn, Harvard College Library, Cambridge, Mass.

PERSONAL ITEMS.

GEN. TOM THUMB celebrated his forty-sixth birthday at Chicago on the 4th inst. He was only five years old, when first exhibited by Barnum.

MISS HULDA A. LOUD attended the recent town meeting in Rockland, and urged that the salaries of the teachers in the public schools be increased. As a result, the appropriation for schools was increased $1,000. This is the first time since the town was incorporated, nine years ago, that teachers' salaries have been increased.

THE memorial tablet in front of the house formerly occupied by Prof. Samuel Morse in Rome was unveiled in the presence of a large and distinguished company on the 5th of March. Signor d'Amico, director-general of telegraphs, paid a high tribute to Prof. Morse. In conclusion, he said: "Rome, the mother of civilized nations, honors in Prof. Morse a young nation, which is splendidly paying her debt to antiquity." A detachment of pompiers paid military honors to the occasion.

WE clip the following from a more extended notice in the New Orleans *Picayune* of the 6th inst.: "On Bethel evenings, it is customary to have some prominent citizen or visiting celebrity address the audience. Last night there was a pleasing variation from this custom; and Mrs. Lita Barney Sayles, a gifted New England poetess, was introduced to keep a promise to Dr. Witherspoon to read an original poem on the loss of the 'Central America,' Captain Herndon.... From one end of the large hall to the other, every seat was filled, and the crowds surged in through the doors."

REV. GEORGE O. BARNES, "the Mountain Evangelist," writes as follows from New York to his home paper, the *Journal* of Stanford, Ky. "I paid a visit to Mrs. Theodore Tilton a few days ago. She is a kind of cousin, though not of blood-kin, and has always been a favorite relative with me. She is and always has been a lady of rare refinement and gentle loveliness. Those who have only known her in connection with the horrible Beecher trial know nothing whatever about her. Well, I found her boarding-house on Bedford Avenue, Brooklyn, after a little search; and she welcomed my visit as of old. She is fearfully altered by these awful years. Her personal beauty, once very marked, is almost gone,—only here and there a trace. The soft, bright, innocent eye remains, but that alone. Her delicate hands, once soft as velvet, are hard with toil. The lustrous dark brown hair is very gray, and the pink and white of the old beautiful complexion replaced by a dull sallow. But her life is full of peace and rest that 'the world cannot give.' The seven-times-heated furnace has purified, not consumed (save the dross); and to-day she has what others have not, a 'conscience void of offence toward God and man.' Oh! in the day when accounts are settled,—and they will be, thank God,—let me be in her company, and there, like her, venturing all to keep everything right with God."

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.
WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.
OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.
FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.
J. H. CODMAN, Boston, Mass.

TREASURER.
JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.
Four Years.
B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Three Years.
EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

Two Years.
CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

One Year.
MINOT J. SAVAGE, Boston, Mass.
WILLIAM C. GANNETT, St. Paul, Minn.
CAROLINE M. SEVERANCE, Boston, Mass.

The office of the Association is at 3 TREMONT PLACE, BOSTON (directly in the rear of the Tremont House), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,
706 Broadway, New York.

For sale at INDEX Office, 3 Tremont Place, Boston.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c. per line.
" 13 " 25 "	. . .	8c. " "
" 26 " 51 "	. . .	6c. " "
" 52 "	. . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

CURRENT TOPICS.

THE Nebraska Legislature has just passed a bill providing that one of the two assistant physicians of the State asylum for the insane shall be a woman.

SALMI MORSE says of his "Passion Play": "I do not wish to be degraded by a license. I have not built a theatre: the building is my church. I have not written a play, but a service."

"ONCE more," says a Western journal, "the mysterious mounds of the Mississippi River bottom are being used as places of refuge by the people. They must have been built largely for that very purpose,—as a place of safety for both living and dead,—and are curiously serviceable to the very men of our civilization who almost ruin themselves making levees which last but a day."

THE "well-descended women" who petitioned the Massachusetts Legislature against suffrage will probably find a book after their own hearts in the *Lectures on the Calling of a Christian Woman*, by Rev. Morgan Dix, just published. Friends of the Episcopal Church will be glad to remember that Heber Newton is a minister of that Church as well as Morgan Dix, and that he, too, has written a book on woman's calling.

WE learn from the London *Inquirer* that the Japan *Mail* states that the Buddhist priests in that country have commenced an agitation against the obligation both of celibacy and of an exclusively vegetarian diet. A grand meeting of representatives from the various sects is announced to be held at Koyasan to discuss the advisability of removing vexatious and needless restrictions upon the liberty of the Buddhist priesthood.

THE Boston *Herald* says: "Rev. Mr. Schermerhorn need not lay the flattering unction to his soul that he has secured peace and agreement for his new church by adopting 'a simple creed of ten words, which express the fundamental principles of all the religions of the world, "God, humanity, worship, duty, providence, prayer, inspiration, revelation, repentance, retribution, holiness, and the immortal life."' There is enough dispute over the meaning of each of these words to found a fighting sect upon."

THE Common Council and Board of Education of Chicago have made St. Patrick's day and Good Friday legal holidays. Why not now make civic holidays in honor of St. George of England, St. Andrew of Scotland, St. Dennis of France, and St. Gambrinus of Germany, and the saints of other nations? A Detroit paper thinks St. Patrick has been made the patron of that city "in memory of the fact that the frogs which once inhabited the marsh upon which a great portion of the town is built have somehow been abolished."

THE "great red spot" which appeared on the planet Jupiter in 1878, since which time it has been carefully observed, has almost entirely vanished. Concerning its origin and nature, various opinions prevail. Whether it is an enormous rift in the planet's cloud atmosphere, revealing the nucleus beneath, or a crust formed on the semi-fluid of the planet, revolving with it, and now melting down and disappearing, or a cloud of smoke coming from a long-continued volcanic eruption on the planet underneath, astronomers are not yet agreed.

THE son of a Minnesota Judge was recently assigned the task of delivering a declamation before the high school of which he was a member. He commenced an extract from one of Ingersoll's speeches; was told he must select something else; declining to do so, he was expelled by the teacher. The matter was referred to the State Superintendent, and he in turn called for a decision from the Attorney-general. The decision is that the expulsion was illegal, as no specification was made of what should be spoken; and the boy had a perfect right to choose excerpts from Ingersoll, they being neither vulgar nor objectionable. The gist of the matter is that the teacher's prejudice against Ingersoll is not sufficient ground for expulsion.

THE International Literary Association announces that a convention of authors of all nations will be held in Amsterdam in September of this year, at the same time with the world's fair that is then to take place in that city. The association also offers prizes for the best essays upon "Holland and Freedom of Thought and Utterance in Europe in the Seventeenth and Eighteenth Centuries." The essays are not to exceed in length one thousand to twelve hundred lines of forty letters each, and French will be preferred as the language to be used. They may, however, be written in other languages; but such as win prizes will be translated into French at the expense of the association before they are printed. The first prize is to be a medal of silver, gold-plated. The other prizes are to be medals of bronze. Authors of every nation may compete.

THE *Unitarian Herald*, England, in reference to the bill now before Parliament for permitting members to affirm instead of taking the oath, says: "There is good hope that the Affirmation Bill will command a majority of the House of Commons. There has been long hesitation in some quarters, and a few Liberals still hold out upon their individual responsibility; but all the 'groups' have been conciliated, and even the individuals are 'considering' as though with a view to capitulation. Nothing has done more to serve the purpose of the government than the character of some of the Obstructives,—men whose perfect frankness in the smoke-room saves them from the charge of hypocrisy, and who even in the lobby candidly avow that they think of Bradlaugh only as a load for the government to carry, but who would pose in the House of Commons as 'champions of God.' However conscientiously a piously inclined Liberal may object to Mr. Bradlaugh, he objects to see men gaining the applause of the thoughtless by taking the Deity under their patronage."

"PUCK" is doing yeoman service against bigotry and superstition by such cartoons as that upon the "Appalling Attempt to muzzle the Watch-dog of Science," in the number for March 14. It was announced from London three weeks ago that "the Society for the Suppression of Blasphemous Literature proposes to get up cases against Profs. Huxley and Tyndall, Herbert Spencer, and others, who by their writings have sown wide-spread unbelief, and in some cases rank atheism." We think that the thick-skulled clerics who constitute this society would not feel any the happier for seeing themselves in this picture of *Puck's*. And this is what *Puck* says about it: "The main danger of a republic or a liberal monarchy may be that the people are not governed enough; but it is not a safe thing for every opinionated busybody with a taste for management to undertake to govern the rest of his fellow-citizens by special license. It is not safe for the public, to begin with; and, when the public wakes up to the fact, it is not safe for the busybody, to end with. It appears that London has a Society for the Suppression of Blasphemous Literature; and the Society for the Suppression of Blasphemous Literature now proposes to 'get up cases' against Profs. Tyndall, Huxley, and Spencer, and the publishers of the works of Darwin and John Stuart Mill. It is a very pretty little scheme. It is a very neat little scheme indeed. There is only one trouble about it: it is rather tardy. It would have done very well two hundred centuries ago, had Herbert Spencer *et al.* written at that period; but the people of this age are what Darwin and Huxley and Tyndall have made them, and it is among the vague improbabilities that the watch-dogs of science will ever be silenced with the very small muzzle which the Society for the Suppression of Blasphemous Literature has prepared for them. And suppose,—we throw this out simply as a hint,—suppose the watch-dogs of science should happen to turn on the Society for the Suppression of Blasphemous Literature: would there not be some rending done in the neighborhood of London?"

SOCIETIES FOR ETHICAL CULTURE.

We may safely assume that our readers have read the lecture by Prof. Adler, published in the last number of *The Index*, on "The Extension of the Ethical Movement." The lecture was suggested by the formation of a Society for Ethical Culture in Chicago similar to that over which Mr. Adler presides in New York. The Chicago society was organized last autumn, but it has only recently gone into active operation. At first there seemed some doubt whether it would attempt anything more than to sustain Sunday lectures by miscellaneous speakers,—and such a course is at present in progress. But the society has now determined, probably through the urgent persuasion of Mr. Adler, not to be content with speech only, however good, but to inaugurate at once some educational and philanthropic work as earnest of the fact that its primary purpose is the practical amelioration of human society. In pursuance of this purpose, it is to institute a school for the ethical education of the children of the society and to organize a charity of skilled nursing among the sick poor; and, further, it has invited Mr. W. M. Salter, a gentleman well known to our readers both for his fine intellectual ability and his philanthropic heart, to be its leader in these and other good enterprises which it may inaugurate. And Mr. Salter has already entered upon the work.

This planting of a second ethical society, and very distinctly as an offshoot of Mr. Adler's organization in New York, gives a fitting occasion for some general remarks on the aim, scope, and work of such societies. The society which Mr. Chainey has recently been instrumental in organizing at Horticultural Hall in Boston, though adopting a similar name, and professing, in the main, to have the same general objects, did not come through any direct influence of the New York Society, and, evidently, is not reckoned by Mr. Adler as legitimate evidence of the extension of "the ethical movement." His lecture expressly and frankly states, indeed, that he regards a certain philosophy and method, not far unlike those adopted by himself, as necessary conditions of such an ethical society as he has in mind and urges upon all earnest liberal thinkers. And the possibility of such independent sporadic organizations as that at Horticultural Hall—springing up and taking the name of ethical societies, but feeling no responsibility for imbibing the spirit or copying the methods of the New York society, to which he first gave the name—has probably led Mr. Adler to urge more strenuously upon the Chicago society, which is in a sense his direct offspring, the adoption of his specific plan, so that the West, as the East, may have a model of what he would regard as a genuine society for ethical culture. Having chosen this name for the organization of certain ideas and aims which, to his mind, have all the solemn importance of a new religious movement, he is naturally anxious that it should be confined to those very ideas and aims which, to him, give all the significance and interest of the movement, and that the public should not be confused as to the meaning of the name through its being appropriated by any chance company of Liberals who may choose to call themselves an ethical society. And he doubtless discerns too, the difficulty and delicacy of the problem here involved. How to keep the name true to his own design and at the same time respect that intellectual liberty, which is the first prerogative of the liberal thinkers to whom he appeals, will be no easy task in the propagandism of the ethical movement.

And this point touches one of the limitations which, to not a few liberal thinkers who entirely sympathize with Mr. Adler's aims, seem to inhere in his plan of organization. Take, for instance, his strong intimation in the lecture to which we have referred, that the teacher of an ethical society should not only thoroughly understand the Kantian system of ethics, but should accept it; while he more than hints that Herbert Spencer's ethical system would be a very poor equipment for such a teacher. We do not know that Mr. Adler would insist that all teachers of ethical societies should believe in Kant's ethics and not in Herbert Spencer's, though his forcible paragraph, comparing the two philosophies, looks almost as if he were ready to take that ground; that is, that, while discarding in the formation of ethical societies all *theological* creeds, he would not discard, but distinctly build upon, a certain *ethical* creed. But we incline to think that it was not so much this that he had chiefly in mind as the undoubted fact that an ethical teacher must be himself solidly grounded in ethical philosophy, and not simply an inquirer among the different philosophies and doubtful whether this or that be true; and, further, that, in his (Mr. Adler's) view, Kant's system, because of its keeping so clear the freedom of the human will and the sense of moral obligation, is better adapted than any other to produce deep moral convictions and to stimulate to earnest and enthusiastic moral actions. This seems to him the most inspiring philosophy practically; and, since the prime qualification of all in an ethical teacher is the inspiration of a high moral idea impelling to noble deeds, he naturally emphasizes the ethical philosophy which he believes most conducive to this qualification. He might hesitate, however, as we most certainly should (though not ourself accepting nor teaching the Herbert Spencer ethics) to declare that no one holding Spencer's ethical system is capable of a lofty moral ideal or of being an efficient teacher of practical morals to others. Just how the moral principles may have originated among mankind is, after all, not so important a matter as it is clearly to state what those principles are and to show their various practical applications to the problems of life. A disciple of Kant and a disciple of Herbert Spencer might work harmoniously side by side in all those problems for moral, social, political, and industrial amelioration, which Mr. Adler points out as properly engaging the interest of an ethical society.

It is also sometimes objected that, in the meetings of Mr. Adler's Ethical Society on Sundays, there is no special expression of the religious sentiment, and that yet Mr. Adler believes that the ethical movement is religious; and that therefore the form of service he has adopted does not cover all that the movement, even in his own view, really includes, and hence cannot permanently serve it. But we are not aware that Mr. Adler has ever taken the ground that his present form of service is unalterably fixed, and that no special recognition of the religious sentiment should ever be adopted by an ethical congregation. As we understand his position, it is that in time some distinct expression of such recognition will be introduced, but that it must develop naturally out of the new ideas of religion and of the relation of ethics thereto, in order to be in entire harmony with these ideas; and that, meantime, it is better to have no such special form of service than to copy, even with the most liberal interpretations and amendments, the usages of Christian churches and Hebrew synagogues, which grew out of very different ideas. And his argument on this point, since it touches the question of intellectual sincerity, deserves the most serious consideration. And it may be added that since Mr. Adler himself is a man of the deepest religious nature, full of the spirit of consecration to the loftiest ideals of life, and speaks with all the fervor of the old Hebrew prophets whose hearts burned with messages from their Jehovah, the religious sentiment is, in reality, both voiced and appealed to in his Sunday services, even though there be no utterance specially called aspiration or prayer and no singing of hymns.

But, passing by all criticisms that may be made on societies for ethical culture, either in respect to idea or practice, it is our opinion that they are well adapted to meet a present need in the liberal movement, and we should greatly like to see them multiply. There are a good many Liberals who, like the present writer, believe that even a new religion is not required to make wholly new forms for itself, but may also make over old ones to serve its uses, as all growing religions have always done; and such persons may find places where they can freely work in connection with the most liberal and advanced sections of existing churches. But there are a good many other Liberals whom the very word "church," and every thing connected with it, fret and exasperate, and who would prefer not even to hear the word "religion," but who yet believe in ethics, and who need, even if they do not desire (which some of them do), to be brought together for social and ethical work. And, in general, there is a very large class of liberal thinkers who, for one reason and another, have utterly broken away from all churches, and are not likely ever again to act with them. Now, among this class of people, if with their liberal ideas they have any social and co-operative impulse that can be appealed to, the ethical society should find a cordial welcome. There are, indeed, many of them, as we incline to think, who are too individualistic to come heartily and effectively into any kind of organization; who must ever remain critics, and carry on their guerilla warfare on the creeds and churches, each in his own way. But there are others who desire associated activity and some kind of constructive work on a radical basis, both for their own improvement and the betterment of society around them. And, for this latter class, the ethical society —assuming it not to be too rigidly patterned after one model, but, while preserving certain distinguishing features, to be elastic enough to adjust itself to different local conditions—would seem to be the organization wanted.

In the first place, the defining word in the name, "ethical," distinctly avoids all savor of ecclesiasticism, while it emphasizes and puts at the very front of everything just that which these persons say is wanting in the teaching of the churches, and which human society first of all needs. In the second place, the ethical society is not concerned with speculations merely or with objects far away in a celestial hereafter, but with seeking to promote the highest good of men and women in their earthly lives. And, thirdly, the three main features of the ethical society—namely, self-improvement and reform, the moral education of the young, and organized philanthropy of some kind for the relief of human suffering—would seem well to cover the varied obligations of life, as viewed from the stand-point of that class of Liberals we have now in mind. And how varied the problems with which the leader of an ethical society should be familiar, and how immediately these problems affect the practical interests of mankind, Mr. Adler shows by a rapid but vigorous sketch in his lecture. Surely, all earnest-minded Liberals who have been wandering rather objectless in the vast field of liberal thought, and have now come to the point where they want to unite to do something practical, should be stirred by this earnest

Digitized by Google

discourse at once to set about the good work in some way. Leaders, it is true, are needed; but so, too, is needed the readiness to accept them and give them an opportunity. There are three or four young men, Americans, now in Germany, who are well educated for the work and want nothing better than to enter the field. Are there places ready for them? Above all, in the leaders and in the societies is needed that glowing moral enthusiasm which Mr. Adler conspicuously illustrates in his own work, whatever limitations any may think attached to his methods, and which, whether it come by culture or grace, is the one pearl of great price for buying success.

WM. J. POTTER.

HARGDICKS.

"I shot a hargdick yesterday. The old woman in the cabin over there is *troubled*, and I've just taken her some of the meat."

This was spoken to me in the pine woods of Florida. The man belonged to the class known as "Crackers." When he said that the old woman was "troubled," he meant that she was crazy. When he said that he had shot a "hargdick," he meant that he had shot a heretic, and that fried heretic (they never boil heretics or anything else in the South) is good for lunatics.

The chronic condition of the South is hunger. "Now, Crump," I said to my man, "I wish you would take your gun, go into the hummock, and get us some quails. If you can't find a quail, bring anything. In Colorado, I saw a boy shooting bumble-bees. 'My little man,' I said, 'isn't that rather small game?' 'Yes,' he said, 'but it's a darned sight better than nothing.' Get something, if it is only a bumble-bee."

"I mought shoot you a hargdick," he answered. That I, who had been suspected of a fondness for heretics, should have a gustatory liking for *heretics!* "No, Crump, no: never shoot a heretic for me."

As I wouldn't eat a heretic, he thought I might relish a woodpecker. He came back with two woodpeckers.

What are heretics, or *hargdicks*, that they should be shot like pigs or cattle by Floridian Crackers? They are simply pigs or cattle. A pig or steer which has wandered from the fold and has no brand of ownership on it is a *hargdick*. The word is not known to lexicographers, but its evolution is obvious.

In times more theologic than ours, the animal which strayed from the fold and did not wear the brand of an owner was called a *heretic*. If the real heretic—that is, the man who had wandered from the fold of the Church—had been more common in the South, the name as applied to an outcast pig would have remained unchanged. As it was, the change into hargdick was natural.

Bacon says that the imagination often shoots back on the understanding, and wounds it. A Pennsylvanian once told me that he and his neighbors were raising a breed of cattle they called "Hairy-foot." I asked him why they had given the cattle such a name? He answered, "Because they have more hair on their feet than other cattle." Here, the imagination had shot back on the reason, and crippled it. The cattle were *Herefords*. As the word was not intelligible to these Pennsylvania farmers, it suffered phonetic change, and became "Hairy-foot." Then, the word began to trick the reason. The fact must answer to the name. The imagination sees an excess of hair on the feet. I had found a myth in the process of becoming. The myth of the barnacle goose, as Max Müller has shown, was evolved in a similar way.

A word must be clearly understood by the people who speak it, or it will suffer phonetic change, and take another meaning. The sailors of the "Bellerophon" did not understand the name of their ship; and the word Bellerophon, on their lips, became Billy Ruffian. Now, I doubt whether in *ante-bellum* times a real heretic was ever known in Florida. To the average peninsular mind, the name was about as intelligible as Bellerophon to the sailors, or Hereford to the Pennsylvania farmer. A vague feeling there must have been that a heretic is in some sense an outlaw and castaway. So, when the name was transferred to an unbranded animal, the penalty which had been incurred by heresy attached vicariously to the animal, and it became the lawful prey of any bullet.

With this change of meaning came a phonetic change. On the lips of the negro and "Cracker," the vocal *t* glides into the whispered *d*,—that, *dat;* them, *dem;* heretic, *hargdick*. So the word came to be; and, like the thing signified, it is a something which has gone astray. The hargdick's ear is not cropped nor its rump burned with an iron, but "hargdick" has the ear-marks and rump-brand of heretic.

Savage and semi-civilized peoples punish a man by beating something which stands as his image. The hargdick is the image of the heretic, and civilization has so far advanced that *only* the image can be punished by bullet or brand. The *savan* of a future age may find in the scanty literature of an American peninsula the word "hargdick," may trace it to heretic, and through the punishment inflicted on the beast which had strayed from the fold he may reach the fact that Christian Europe once inflicted like punishment on the man whose thought led him from the fold of the Church.

Manners are softening, and it is not quite the thing now to shoot a hargdick wherever you find him. Still, the poor wanderer has a hard life. I have observed the career of a heretical pig. From one yard, it was driven by a volley of fine shot fired into its back. Invading another, it received a baptism of scalding water on its head. Goaded by pain, it sought refuge and garbage in another. Dogs met it at the gate, and drove it back into a wilderness of pines. The poor hargdick may have had a pig-headed reason for its heresy; but the thought occurred to me that, with lead shot into its flesh, with scalding water poured on its head, with the baying of dogs at its back, it must at times breathe a lament over the lost pen and fold.

W. D. GUNNING.

ALTAMONTE, FLA., March 3, 1883.

THE JEWS.

The mediæval legend of the Wandering Jew had a great fascination for the poet Shelley, as it doubtless has for every imaginative mind in youth. This legend has been more or less romantically utilized by several distinguished writers of fiction, such as Godwin in his *St. Leon*, and by the author of *Salathiel*, and by Bulwer-Lytton in his *Zanoni*, and by the French novelist, Eugène Sue, in his famous *Errant Juif*. This renowned myth, like all other notable myths with any core of significance in them, is simply a typification, in this instance, of the fortunes of the Jewish race in the person of an alleged deathless Jew, who is condemned to undergo immortality here on the earth, and to be the contemporary of every new generation of men, he having been rendered incapable of dying by a decree of the higher powers,—not by way of boon and blessing, however, as was the Greek mythical hero, Tithonus, whom, weary of endless dotage, Tennyson represents as speaking enviously

> "Of *happy* men that have the power to die,
> And grassy barrows of the *happier* dead."

But the Wandering or Eternal Jew of mediæval story is represented as existing in a state of perpetual bodily and mental vigor. The lapsing years, centuries, and ages glide over him innocuous, inflicting upon him neither wrinkles nor physical nor intellectual decrepitude. And, in this particular also, the myth is typical of the actual fact; namely, that the Hebrew race is as young-blooded and as full of vitality and mental power to-day as it was far back in the morning of history. The Jew has indeed been a wanderer from time immemorial, and an element of population, voluntary and involuntary, in most of the leading nations of the earth from that far withdrawn foretime, when he figured conspicuously in the persons of the *élite* of his tribes as prophet, interpreter of marvels, and prime minister even of the rulers of the river-valley empires of primitive Assyria and Egypt; and when a Jewish maiden by her all-subduing charms placed the earth-dominating Persian Monarchy, in the days of the voluptuous Xerxes, at the feet, so to speak, of her captive and transported race; and when, later along, the Levant having been Hellenized by the conquests of Alexander the Great, in the city founded by and named for the Macedonian conqueror on the shores of Egypt, the Jew translated his national or tribal literature, or the various documents composing it, into the then language of civilization,—namely, the Greek,—and thus made it accessible to the world at large:—from the far foretime or times above-mentioned, the Jews, I say, have been a noteworthy element of population in all the leading nationalities down to the current date. Even such as Moses, the apocryphal Daniel, and the Pharaonic favorite, Joseph, were in the remote historic past on the banks of the Euphrates and Nile, was England's late Hebrew prime minister, Lord Beaconsfield, upon the banks of the Thames in the current century. Such is the significance of the myth of the Wandering Jew, when interpreted in the light of current facts and history.

That amateur philosopher, theologian, and critic of men and things and entire communities, Matthew Arnold, has, in his multifarious essays, much to say of Hebraism and how much the English middle class has been narrowed by it. However this may be, Hebraism is a word full of significance. It means, in fact, the Hebrew mind or spirit, as Hellenism means the primitive Greek spirit, and as Romanism might be used to signify the old Roman spirit or genius. All three were more than mere temporary manifestations of human nature. They were and are enduring elements of it, and thus must ever continue to be potent factors in human history. It is a significant fact that the leading nations of to-day are precisely those whose language naturalized the Hebrew Scriptures in their own tongues by elaborate translations of them. The God of Israel was at first a tribal god, it is true; but he was, more than any contemporary deity or deities, an impersonation of the moral sense, a deification of the principle or sentiment of inexorable justice and right,—that is, he was an exemplification of the "ought," or categorical imperative, of the sage of Königsberg. All the gods of history and tradition have been of course purely projections of human nature *in excelsis*, idealizations of their worshippers, or ideal, colossal men. The Jehovah of the Hebrews was, more than any other god, the creation and ideal of the moral sense, of the sentiment of the good and right and just. It is not true, as Heine wittily asserts, that Jehovah was cradled and reared among the divine calves and crocodiles, the sacred onions, ibises, and cats of Egypt, where his votaries were so long held

Digitized by Google

in bondage. The Hebrew Jehovah had no affinity with or relationship to the bestial pantheon of the Nile Valley, although it is true that his ritual and temple ceremonial were of Egyptian origin, and his priesthood was suggested by that of Egypt.

Several years ago, in one of the British monthlies, Mr. Joseph Jacobs gave a most interesting account of the gradual development and evolution of the Hebrew Jehovah from a mere tribal deity of a petty nomad tribe of Arabian origin, "perhaps in the beginning resident in Mesopotamia, if we may trust the national tradition of the origin of Abraham in Ur of the Chaldees," into the sublime avenger and punisher of gigantic, kingly, and national corruption, sin, outrage, tyranny, and wickedness, the god of the down-trodden, of the stranger, the widow, and the fatherless, such as he is described and represented in the writings of the great old Hebrew prophets, on to his final depersonalization as the imminent *Natura Naturans* and all-inclusive Substance of the blameless, modern Jewish philosopher and metaphysician, Spinoza. Everybody knows how thoroughly imbued with Hebraism or the old Hebrew spirit the Scotch people have been by centuries of Bible-reading and an intense Presbyterianism. It was no marvel, therefore, that Scotland's greatest recent literary man—namely, Carlyle—was, albeit he rejected all the Christian creeds and dogmas, a reproduction, as it were, in the most salient traits of his writings and fiercely censorious and denunciatory declamation in the presence of his visitors, of one of those Hebrew prophets of old, whose indignation was kindled and whose moral sense was outraged by the wickedness and abominations of the great contemporary rulers and of their populous capitals round about Judea, and by the iniquities and idolatries of an occasional king of Israel as well. The spirit of Isaiah is, in fact, to the full as manifest in the pages of Carlyle as that of his German masters, Goethe, Kant, Schiller, and Fichte. The Reformation was largely an outbreak and moral upheaval due to Hebraism or the Hebrew spirit, which rescued the nations of Northern Europe from the paganism and anthropomorphism of the South,—which threatened to overwhelm them,—and gave to them the moral fibre and individualism which constitute them the leaders and authors of modern civilization. In this instance, Hebraism became the ally of rationalism. English Puritanism and Cromwellism were a later and unmitigated outbreak of Hebraism. To it was due the colonization of New England, which became the core and germ of the great American Republic, in whose image modern society the world over will be sooner or later recreated and refashioned.

The three great races of the primitive world—namely, the Hebrews, the Greeks, and Romans—were epitomized and personified in their gods. The Muses, Pallas Athenè, Apollo, and Jupiter, were ideals of the sentiment of beauty, truth, and manly vigor, and strength. The Jupiter Stator of the Romans was a god of statecraft, of political and social organization, of jurisprudence and equity, and of war and conquest; while the Jehovah of the Hebrews was the deity of inexorable justice and of wrath against sin, although he could wear a gentler aspect, as when his royal votary represented him as leading shepherd-like his worshippers by still waters and making them to lie down in green pastures. Meantime, the desideratum of to-day is a religion which shall recognize and combine all the elements found in man's higher nature; namely, the sense of truth and beauty as well as of duty and morality.

It is said that the God in Nature of the science of to-day is as inexorable as the deity whom the old Hebrew prophets found in their conscience, or inner moral sense. The God of current science, too, visits the sins of the fathers upon the children in the enforcement of the cosmical laws, an intelligent conformity to which is found to be far more efficacious than any mere piety or adoration, however sincere it may be. It must be confessed that it is an immense descent morally from such sublime primitive Hebrews as the law-giver Moses, the ascetic and austere man of God Elijah, who haunted the savage solitudes of Carmel and whose threatening image is said still to terrify the imaginations of the people of the East; from David, the sweet singer of Israel, whose lyre grew mightier than his throne; and from his son, Solomon, whose genius raised the Hebrew commonwealth, for a brief period at least, to the highest political and commercial importance among the kingdoms and empires of the Levant; and from the Pauls and Johns and Philos, who manifest in their writings the spirit of Hebrew monotheism and Grecian world-wisdom commingled,—it is an immense descent, I say, from such exemplifiers of primitive Hebrew moral and intellectual grandeur to the sordid pawnbrokers, hucksters, and old-clothes dealers of to-day, who bear in mockery, as it were, the great old Hebrew names as their personal designations. But Rebecca, the beautiful Jewess, in Sir Walter Scott's novel of *Ivanhoe* (and, by the way, she was no ideal character, the invention of Scott, but was suggested by a fascinating American Hebrew lady, who charmed, both by her personal loveliness and superior qualities of head and heart, the American fashionable society of two generations ago), indignantly vindicates her despised people to the enamoured Templar, Sir Brian de Bois Guilbert, and explains the origin of their moral and social degradation. "Thou hast spoken of the Jew," exclaims Rebecca to her fierce lover, "as the persecution of such as thou hast made him.... Read the ancient history of the people of God, and tell me if those by whom Jehovah wrought such marvels among the nations were then a people of misers and usurers." And, in this connection, Mr. Lucien Wolf, a Hebrew journalist, in his "Jewish View of the Anti-Jewish Agitation,"—which appeared in a British monthly in 1881, when the Judeophobia in Germany was at its height,—truly said: "In the early Biblical times, the Jews, so far from being money-grubbers, were a romantically Arcadian people. In the highest degree poetical in their ideas, they knew no other occupation than agriculture; and there are but few Jewish laws relating to earning one's living which are not based on the assumption that agriculture would always be the principal interest to be catered for.... During their Egyptian slavery," he writes, "the Jews had to do hard work, if ever a people had; and, on their entrance into the land of Canaan, they had to fight bravely and stoutly. In Palestine, their occupations were principally in the field and vineyard." When Solomon was about to erect his famous temple, he was obliged to send to his neighbor, Hiram of Tyre, for architects, as neither architecture nor sculpture flourished among his own mostly pastoral people.

The statement above quoted was made to meet the charge of the Anti-Semitic pamphleteers and preachers of Germany,—that "the Jews hate real work"; that, "in the commercial as well as the domestic life of the Jews, the prevailing influence is selfishness"; that "the Jews reap where they do not sow by a hungry and unscrupulous usury, and by taking advantage of the pecuniary necessities of the people among whom they may happen to be."

For a thousand years, the Jews had to endure "an iron age" of pitiless and relentless persecution. The kings of feudal Europe availed themselves of the Jews' financial ability, and would then cast them forth to be torn in pieces by howling Christian mobs, whenever their tyrannies and exactions excited insurrections on the part of their subjects. During that long night of Christian bigotry and malignity, called the Ages of Faith,—or, better, of barbarous and childish credulity,—"the physical and moral corruption of the Jews went on apace." They were systematically excluded from all honorable pursuits, professions, and avocations in life; and thus, in the language of Mr. Wolf, they "contracted habits of thought and action

'Deep, hollow, treacherous, and full of guile,'

which have not unnaturally lingered in their posterity." It was a thousand years of Christian, or ecclesiastical and priestly, persecution which transformed the Jew into a Shylock and Isaac of York. But, even in their degradation and sordidness, they could beget such daughters as Jessica and Rebecca,—the sweetest, loveliest, and noblest heroines of tragedy and romance, who could fascinate the hearts of their oppressors and kindle in them an inextinguishable passion. But even in the Middle Age, in Andalusia in Spain, during the domination of the Moors there, Jewish genius, under the liberal sway of Mohammedan or kindred Semitic rulers, reasserted itself in such profound thinkers as Moses Mainionides, a native of Cordova, and others. The late Lord Beaconsfield descended from a Spanish-Jewish ancestry. And, apropos of this resplendent example of Jewish genius in literature and statesmanship, he unfortunately made an able living English writer implacably hostile to his race by stigmatizing him, in his novel of *Lothair*, as "a social parasite." I allude to Prof. Goldwin Smith, one of the foremost of living literary Englishmen, with all the irritability proper to his genus. Naturally enough, the Professor enlisted as a literary auxiliary in the ranks of the German Judeophobes and anti-Semites. In his article on "The Jewish Question," in the October number of the *Nineteenth Century* of 1881, he elaborately arraigns the Hebrew race, bringing to bear against it every possible charge and allegation. He characterizes the Jews as "a wandering and parasitic race, without a country, avoiding ordinary labor, and spreading over the world to live on the labor of others by means of usury and other pursuits of the same sort; as a people still in a state of tribalism, with its tribal mark and separatism and its tribal God." He further alleges that the Jew is never a liberal in politics when he has become rich, but only during his struggle for wealth and social importance. In this respect, the Jew is by no means singular. Prof. Smith also cites the fact that "among the ablest and most active organizers of that rebellion in the United States, which cost a thousand millions sterling and a million lives, was a Jewish Senator from Louisiana, who, when the crash came, unlike the other leaders, went off to push his fortunes elsewhere." Of course, Mr. Judah P. Benjamin is here alluded to, who has just retired from the British bar with an ample fortune, the fruit of his surpassing ability as a lawyer and advocate,—an ability which was so often admired in the Supreme Federal Court at Washington in the years before the war. I have lately noticed a charge in a Southern journal that a swarm of Jewish money-lenders and usurers are preying upon the hard-up and unthrifty planters and black laborers of the South. Thus, I have endeavored in brief space to present both sides of the Jewish question.

Meantime, "the iron age" of Judaism is past and gone never to return. The Jew has been emancipated throughout the area of enlightened civilization, which is becoming larger and larger

Digitized by Google

with the spread of light and toleration. All avocations, dignities, offices, and professions have been opened to him; and he has shown his eminent ability to shine in the world of politics, science, literature, and wit as well as in that of finance and traffic. The list of German Jews who have distinguished themselves in all departments of intellectual activity is too long for enumeration here. The names of Moses Mendelssohn and Hamann in philosophy and of Heine in poetry and criticism will be recalled at once in this connection. Then there was Lord Beaconsfield, *né* Disraeli, the able recent ruler of the vast British empire, which comprehends within its limits so large a portion of the entire globe and so large a fraction of the human race. But he was not only foremost as a politician and statesman, but as a novelist also. Evidently enough, the Hebrew race of to-day, with its multitudes of able men in all departments of human activity, and with its financial control in both hemispheres, is at last in a position and condition to put its detractors and persecutors to shame, and to set itself right in the estimation of the Gentile world, and to cast off the slough of sordidness and moral and social degradation, which became its badge during the long period of Jew-baiting, which disgraced Christianity as deeply as it degraded Judaism in the so-called ages of faith, or of the Inquisition's autos-da-fé.

EDUCATION.

There is a growing distrust as to the value of much that passes under the name of education. Among a very large class, the word "culture" arouses a feeling of antagonism. This may be explained in part by popular ignorance and inappreciation of real scholarship; but we cannot resist the conviction that there is some reason for it in the unpractical and dilettanteish character and undemocratic spirit of much of the so-called culture of the age. This sort of culture, lacking in robust intellectual qualities, without any noble moral purpose, and inspired by no lofty enthusiasm, serves only to widen the gulf between its disciples and the masses; increasing, on the one side, contempt for the "great unwashed" pursuing their prosaic avocations, and exciting, on the other side, aversion to a mere intellectualism which ignores the hard facts of life, is indifferent to the condition of the millions of toilers, and concerns itself almost wholly with mere literary questions, or with problems which, if not insoluble, have no perceptible bearing on the practical questions of the hour. When it is seen that this kind of culture is generally on the side of power, wealth, and fashion, ready at any time to sneer at the rights and liberties of the multitudes who earn their bread by manual labor, it is not strange that it fails to command the admiration or even the respect of the people.

But it is a great mistake to confound the pseudo-culture to which we have alluded with genuine culture, which is catholic in thought, earnest in tone, and progressive in spirit; and any standard that does not involve a distinction between them is false and pernicious. There is no culture worthy of the name which does not include with the acquisition of knowledge, the development of the moral nature, the strengthening of the love of right and the hatred of wrong. A man who has simply a knowledge of books, which he regards as of more importance to him than the things of which they treat; who has never got behind the books and in contact with nature herself, with the world and its events, with man and his relations; who possesses merely the instruments of knowledge, such as languages, without the capacity to use them wisely; who only can repeat what he has read, and makes authority serve in the place of evidence; who can tell all about the siege of Troy, but feels no interest in the great issues of to-day; who can construct elegant sentences without giving a valuable thought or suggestion to the world; whose interest in his race is simply of a sentimental kind, animated by no moral principle or philanthropic feeling,—such a man is not, properly speaking, an educated man. "With wisdom and uprightness," says Huxley, "a nation can make its way worthily; and beauty will follow in the footsteps of the two, even if she be not specially invited. While there is perhaps no sight in the world more saddening and revolting than is offered by men sunk in ignorance of everything but what other men have written, seemingly devoid of moral belief or guidance, but with the sense of beauty so keen and the power of expression so cultivated that their sensual caterwauling may be almost mistaken for the music of the spheres."

Man's most important education he gets daily through eye and ear and touch in that great university, the world, in which we are all students. Some are more richly endowed or have better opportunities, and learn more readily than others. The results of thousands of generations of observation and study are condensed in languages, governments, religions, moral codes, literatures, and the intuitions of the race. Now, the object of what is commonly called education is to acquaint the child or student with these results, with what has been learned by others, in order to enable it to understand nature's methods; or, as has been said, "to prepare the child to receive nature's education, neither incapably nor ignorantly nor with wilful disobedience, and to understand the preliminary symptoms of her displeasure without waiting for the box on the ear. In short, all artificial education ought to be an anticipation of natural education." This natural education is the instruction of the intellect in the ways of nature, which includes, of course, man and his relations to the universe, and to discipline the will and cultivate the affections so that they will be in harmony with the laws of nature. The man who is the most truly educated is he who understands the most fully nature's methods, and whose moral character is the most completely in accord with those moral principles, conformity to which is necessary to man's well being. We are not among those who depreciate the pursuit of classical learning, nor do we undervalue the advantages of a wide acquaintance with books; but one may be well versed in the literature of ancient and modern times, and yet lack some of the most important elements of a true education. This is an age of revision. And the old conceptions, definitions, and methods of education need to be revised in the interest of progress quite as much as the old theological creeds.

B. F. UNDERWOOD.

EDITORIAL NOTES.

THE Catholic clergy in the diocese of Swineford, County Mayo, passed a resolution last week, charging the English government with neglecting the distressed people, and condemning the remedies offered,—the work-house and emigration.

A NARROW-MINDED fellow, named Nelson, has introduced in the Pennsylvania Senate "an act to prevent the burning of human bodies after death," on the ground that "such bodies are generally imported from other States for cremation, and the practice is contrary to the instincts of humanity, the Christian civilization of the age, and abhorrent to the masses of the people of the State." The penalty proposed is a fine of from five hundred to one thousand dollars, or solitary confinement at labor for from one to three years, or both.

"A WELL-KNOWN clergyman," whose name is withheld, is announced by the Putnams as the translator, compiler, and editor of an expurgated edition of the Scriptures which they are about to publish. He has prepared the volume for the practical use of clergymen, teachers, and others who especially need to have the practical instructions and suggestions of the Bible separated from the mass of history, genealogy, and detail. He has also added to the volume a few selections from the sacred scriptures of Persia, Egypt, China, and other ancient nations.

THE promised Memoir of Samuel Johnson by his friend, Samuel Longfellow, with a well-selected number of Mr. Johnson's Lectures and Discourses, is now on the booksellers' tables. It is a handsome volume, and contains an engraving of Mr. Johnson's face which it does one good to look at. The book will be noticed in due time in our special review department; but to Mr. Johnson's many friends we wished just to state that they need not wait longer for the pleasure of reading again this brave, scholarly man's thought, and learning what his heart-friend, Longfellow, has said about his life. The book may be obtained through *The Index* office.

JUDGE JOHN A. JAMESON, in a contribution to the *North American Review*, makes some practical suggestions as to legislation to reduce the opportunities for fraud and collusion in divorce proceedings, among which is that the *public* shall be represented by attorneys. He concludes: "The most effective remedy will be the elevation of public sentiment in regard to the sanctity of marriage,—not sanctity in the ecclesiastical sense, which makes it a sacrament, but in that of the highest social obligation that can bind the conscience of a man of honor and honesty: the obligation to keep the faith he pledged in marriage to his wife and to the State, and which he renews upon the birth of each of his children, to abide with her until death, unless separated by law for strictly necessary cause."

WE find in the London *Inquirer* the following letter from Mr. John Bright, read at a recent meeting of the Hebden Bridge Parliamentary Debating Society:—

ONE ASH, ROCHDALE, Feb. 14, 1883.

Dear Sir,—On the question of oaths, probably there is nothing in the New Testament more especially condemned and forbidden than oaths. To those who do not care about the New Testament, this fact will be of no weight.

The practice of swearing to the truth of anything makes two kinds of truth or truthfulness. If oaths are of any avail, by so much as they make truth more certain by so much they lessen the value of any ordinary statement, and diminish the probability of its truth.

If ignorant persons are not sworn, they think they may tell lies with impunity; and their lying is made to a large extent blameless in their eyes.

I think oaths and oath-taking have done more than any other thing to impair and destroy a regard for truth. If you wish to see the question treated more at large, you will find it in an admirable book, Dymond's *Essays on Morality*, which you may obtain from any bookseller, or from Mr. Harris, 5 Bishopsgate Street, London.

I am respectfully yours, JOHN BRIGHT.

WE find the following in the *Presbyterian*: "A Scotch minister, who is said to be 'eccentric,' and whose name does not bid fair to roll down through the ages as an accomplished exegete, gives the following exegesis of Revelation xx., 1–3: The angel 'having the key of the bottomless pit and a great chain in his hand' is electrical science, the 'great chain' is a coil of telegraph wire, and the key is a telegraph key. With these in his hand, the angel

Digitized by Google

has come down, and is encircling the world with a kind of chain-lightning or electricity. Just in proportion as electricity encircles the world, evil will be subdued and the regeneration of mankind will advance. It is expected by the originator of this theory that 'that old serpent, which is the devil, and Satan,' will be bound a thousand years when the telegraph wire encircles the earth. How he is to 'be loosed a little season' even, at the end of that time, if electrical science continues to advance, we are not told. This is a weak spot in the exegesis of a preacher whose congregation ought to present him with a first-class liver-pad, and make him wear it. Or perhaps a new head would be better."

THE Bishop of Lincoln, England, a prelate famous for his exalted notions of prerogatives, has emphasized his opposition to the Deceased-Wife's-Sister Marriage Bill by preparing a special form of prayer to be used by the clergy of his diocese, which reads as follows: —

Almighty God, who in the time of man's innocency didst institute marriage, signifying to us the mystical union of Christ and his Church, and who didst drive out the natives of Canaan for desecrating that holy mystery by unchaste and impure unions contrary to the holy law, we humbly and heartily pray Thee to preserve this Church and nation from the sins which they committed, and from the miseries by which they were punished, and to enable us by Thy grace to maintain that law inviolate, that we may enjoy Thy favor here and inherit Thy kingdom hereafter, through Jesus Christ our Lord.

The religious editor of the Hartford *Courant* comments as follows on the prayer: "This sort of argument is not very effective with men, and will not avail much with the Lord, we fancy. It is eminently calculated to make the ungodly blaspheme and the judicious grieve. The Christian Church is not likely to turn back to the Book of Leviticus for its law of marriage, or to find any parallel between a marriage with a sister-in-law and the barbarous practices of the old Canaanites. Somebody ought to wake up the Bishop of Lincoln. He is snoring so loud as to disturb the other sleepers in the Anglican Church."

POETRY.

For *The Index*.

EASTER BELLS.

Kittie Virginia Haight.*

"Because I live, ye shall live also."

Ring out, sweet Easter-chiming bells!
We list to hear your glad refrain:
Our child is added to that train,
To tell whose joy your music swells!

O Easter carols, loud and clear
Proclaiming that *our dead do rise*,
A spirit gained to Paradise
Hath left us mortals lonely here!

O gracious bells, that fill the earth,
The waiting earth, with your soft rhyme,
Could any choose a lovelier time
To pass, through death, to spirit-birth?

Dear Easter bells, where'er we roam
Bringing us mem'ries sad and sweet,
Making us glad to go and greet
Our darling in her heavenly home!

Bells full of promise in your lay!
We will not let our murmurs mar
The peace of our arisen star;
For earth is joined to heaven to-day.

"That union ever shall endure,"
Thus sing the Easter-voicing bells.
And, while with theirs *her* triumph swells,
Our faith shall grow more strong and pure.

O Easter bells, that *sadly* sway
Within our stricken hearts this morn,
When comes *our* glorious Easter dawn,
Your melody shall crown our day!

LITA BARNEY SAYLES.

*Passed out of the body April 19, 1881.

The Index.

BOSTON, MARCH 29, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

The Union of Church and State in Connecticut, historically considered.

BY EMILY J. LEONARD.

Legislation is no exception to the law of evolution. Rightly to understand the traces of ecclesiasticism in our present statutes, let us briefly review our past history.

The year 1639 witnessed the permanent organization of the two principal colonies of our State. January 4th of that year, the planters of the Connecticut colony (then comprising Wethersfield, Hartford, and Windsor) met at Hartford to form a commonwealth, in order, they said, to preserve the liberty and purity of the gospel and discipline in their own churches, and to govern their civil affairs. The "Fundamental Orders," as they were called, which they adopted, are believed to have been the *first written constitution* of the New World. Under this constitution, a General Court, composed of the governor, magistrates, and deputies from the several towns, was to meet twice a year, and was empowered not only to legislate, but to administer justice according to the laws thereunder established, and "for want thereof, according to the word of God." The members of this court were elected by the freemen; *i.e.*, by all male persons who had been admitted as inhabitants of their towns, and had taken the oath of fidelity to the government of the colony. The General Court only had power to admit freemen; *i.e.*, to constitute men voters. The freemen elected the governor and magistrates.

In June of the same year, the New Haven colonists met to form a civil and religious organization. Theophilus Eaton and John Davenport were the master spirits of this colony. At this meeting, John Davenport preached a sermon, in which he argued that civil and religious polity were inseparable. His text was, "Wisdom hath hewn out her seven pillars"; and he recommended a government based on a church supported by seven pillars, or men of eminent piety. After the sermon, a series of resolutions were passed, affirming that the Scriptures contain a perfect rule for the government of men in all duties; that the colonists would be governed by the rules of Scripture in all matters, civil as well as ecclesiastical; that they had settled there with a purpose to be admitted into church fellowship; and that church members only should be free burgesses,—*i.e.*, voters; that they should choose magistrates among themselves alone, to have power of transacting all the public civil affairs of the colony, or "plantation," as it was then called.

To carry into effect these resolutions, twelve men were chosen in accordance with a recommendation by Davenport, who were empowered to elect *seven* to begin the church,—the seven "pillars" of eminent piety recommended in the sermon. Of the seven whom they chose, John Davenport and Theophilus Eaton were the principal. These seven adopted the so-called laws of Moses for the government of their colony, until they could frame others better adapted to the condition of the people.

The same year, the towns of Milford (Wepowage) and Guilford (Menungatuck) were purchased, both of which were organized after the New Haven plan, with "seven pillars."

In the New Haven as well as in the Connecticut colony, Congregationalism was the established religion. The colonial as well as the early State records speak of it as the "establishment"* or the "standing order." To its support, the inhabitants were all required to contribute by a tax levied "according to their respective estates," even when themselves members of churches of another order, and when aiding in the support of the latter churches.

In the Connecticut colony, the governor was required to be "a member of an approved congregation," though the other magistrates were not necessarily so; and, in the New Haven colony, the voters themselves were required to be church members.

As people of other denominations, however, became more numerous, or perhaps as they acquired property and became influential, their dissatisfaction with the supremacy of the "standing order" sowed the seeds of a change which culminated in the adoption of our present State constitution.

In both colonies, attendance at church was enforced by law. The penalty for its violation, however, though severe, was less so than in England, or even than in Virginia.

Both colonies, too, made witchcraft punishable by death. No conviction for this offence, however, ever took place in the New Haven colony, and but one, and possibly a second execution for it in the Connecticut colony. This number stands in striking contrast to the score of withered women and men whom Salem, led on by the blind fanaticism of Cotton Mather, sent to the ducking stool and the gallows.

At the very time when even so eminent a judge as Sir Matthew Hale was sentencing persons in England for this imaginary crime, our fathers seem to have been doubting whether such a crime really existed.

Both colonies, too, had a blasphemy law, of which the penalty was death. In both, too, were there laws to enforce the strict religious observance of Sunday; and this, notwithstanding the fact that leading church reformers, like Luther, Calvin, and Knox, condemned that strict Sabbatarianism which would prevent recreation on this day; and that by none of the earlier Christian Fathers was any Sunday law whatever represented as being in force among the Gentiles.

When the New Haven and Connecticut colonies were united in 1665, the strenuous opposition of the latter colony to the union arose from the clergy, John Davenport of New Haven and Mr. Pierson of Branford, in particular, who held almost absolute sway over the members of their churches, and who feared contamination from union with a colony that permitted men to exercise the elective franchise and to hold offices of trust without the qualification of church membership. The New Haven colony only yielded when assured by the commissioners of the king that they were included in his Majesty's patent to the Connecticut colony.

*An act of October, 1708, approved the confession of faith, heads of agreement, and regulations in the administration of discipline agreed to by the synod at Saybrook, and enacted that all churches thus united in doctrine, worship, and discipline, should be "owned and acknowledged *established by law*."

A proviso assured to societies and churches which "soberly differ or dissent" from the established churches, and which were allowed by law, the right of "exercising worship and discipline in their own way and according to their consciences." But dissenters were not thereby relieved of their obligations to pay their proportion of town taxes for the support of the established ministry. By a colony law (May, 1697), every town was to maintain a minister, in accordance with the agreement made at settlement, by a tax levied "on the several inhabitants according to their respective estates."

When the laws were revised in 1784, however, the act of 1708, recognizing "established churches," was omitted; and, in 1791, the General Assembly passed an act to relieve those who had joined other denominations from the payment of taxes to the Congregational order, while attending worship at the church of their choice. The dissenters, however, thought it wrong that, when a person attended service in no religious society, he should be taxed for the support of the located society. (Located was a term for the established societies, to distinguish them from the dissenting societies.)

Digitized by Google

The proceedings of the General Court of those days sound strangely to modern ears, accustomed as we are to the separation of legislative and judicial functions. Though, by their organization, Congregational churches had each exclusive jurisdiction over its own affairs, yet we read of serious ecclesiastical troubles in Hartford, New Haven, Windsor, Middletown, Wethersfield, Branford, Milford, and Guilford, in all of which the General Court interposed its advice, and in some of which it even investigated charges and assigned penalties. In one case, it even ordered that a synod should be called, to which clergymen of Massachusetts should be invited, to help settle matters in controversy, when these were apparently the conditions of church membership and other matters wholly ecclesiastical. It is worthy of note, however, that the advice of other churches, even when given "as God shall direct them unto by the light of Scripture and reason," availed little. Some of the controversies only terminated by the death or removal of the principal belligerents.

By the Declaration of Independence, in 1776, the *royal and provincial* governments were dissolved, and therefore formed new constitutions. Connecticut, however, having had a charter under which she was practically a republic, enacted through her General Court that the form of civil government in that State should continue as established by the charter of 1662, so far as an adherence to the same was consistent with absolute independence on the Crown of Great Britain. Hollister attributes this adherence to a charter endeared to them by past associations, by the peril it had escaped, and by the almost republican independence it secured them, largely to the fact that under it, and fortified by it, had grown up an *established religion*, which they regarded as of the highest importance to their well-being in this world and the next.

By degrees, other sects than Congregationalists grew in numbers, and acquired a social influence that could not be disregarded. They, too, had rights which they demanded should be respected. Other citizens, also, felt that the position given by law to the "standing order" placed a premium on hypocrisy, and tended to evil. In brief, the minority claimed that their rights were not properly secured by the charter, that the law directed against secret ballot was tyrannical, that the courts were partisan, that members of the council and representatives to Congress should be elected by districts, that the "establishment" had all the patronage of the dominant party, and especially that a "legal religion," as they termed it, was an "adulterous union of Church and State," and they demanded reform. Petitions for a change began to be circulated; and, in 1804, a convention of the reform party was held in New Haven, at which resolutions in favor of the formation of a constitution were passed. Nothing so clearly shows the justice of the charges of partisanship against the party in power as the fact that all the five justices of the peace who attended this convention and took part in its proceedings were impeached therefor at the next session of the General Court, and removed from office. Many persons who had hitherto failed to recognize the justice of their complaints now joined the minority party.

The old Congregational clergy had constituted the nucleus of the dominant party, and had, the minority claimed, a controlling influence in the elections, nominations to office being often made through the procurement of some influential clergyman. It was even asserted that the whole ticket of State officers was often the result of a conference between the leaders of this party and the more powerful members of the clergy. The *tolerated* sects protested so strongly against their inferior position that the leaders of the dominant party soon began to realize that some of the dissenters must be conciliated, as otherwise they would themselves not be able to hold longer the balance of power. So, when the charter of the Phœnix Bank was asked for (1814), it was suggested that, of the $50,000 bonus which the State exacted from its large capital, a portion should be applied to the Bishops' Fund,—a fund to endow an Episcopal Academy in Cheshire; and petitions to that effect were circulated. Yale received $20,000 of the bonus; but, for some reason, the Bishops' Fund did not receive the anticipated portion.* This led the Episcopalians to oppose the party in power.

Another unpopular measure was an act to distribute the moneys received from the United States Treasury in compensation for disbursements by the State for general defence in the war of 1812 among the several religious denominations of the State. The Methodists and Baptists indignantly refused, at the time, to receive the share alloted to them in the division; for they, as well as the minor sects, could not, consistently with their past professions, approve the appropriation to the support of the ministry of a fund originally raised by general taxation.*

These, and other causes of disaffection, finally led to the election of a General Court, which called a Constitutional Convention to meet at Hartford in August, 1818. This body, when elected, proved to be largely composed of men of intelligence, experience, and judgment. The Tolerationists, as the reform party was called, had a majority in the Convention. A committee was chosen by ballot, consisting of three from each county, to draft a constitution. It is especially remarkable, since there had been considerable hostility to Yale College manifested on account of the special favors it had received from the State, that, of the twenty-four men on this committee, twelve were alumni of Yale.

J. H. Trumbull has given us some interesting facts in regard to this Constitutional Convention. It appears that the fourth section of Article I. in the original draft read, "No preference shall be given by law to any 'religious' sect." But, on motion of Gov. Treadwell, it was so amended as to read "Christian" instead of "religious,"—a change which narrowed its original scope, and was therefore strongly opposed by Alexander Wolcott, one of the more prominent among the Tolerationists, as well as by two others.

The seventh article, pertaining to religion, Trumbull tells us, was the subject of protracted and lively debate. The Federalists contested its passage at every point, and succeeded in modifying, in important particulars, the draft of the committee. But, he says, they could not prevent the complete severance of Church and State, the constitutional guarantees of the rights of conscience, or the recognition of the absolute equality, before the law, of all Christian denominations.

When the final vote of the Convention was taken, the constitution, as reported from the committee, was adopted by 134 yeas to 61 nays; and, on being submitted to the freemen for their suffrages, it was ratified by them the following October (6th).

This constitution was in fact a compromise between the two extreme parties. It, however, gave a deathblow "to that type of Federalism which was identified with the established order in the Church." One of the ablest writers in the victorious party, in their leading party organ, thus expressed their feeling in reference to the result: "The rights of conscience are secured and established, the adulterous union of Church and State dissolved, legal religion abolished, and the religion of the heart encouraged, a powerful motive to hypocrisy removed, grace left free to all, 'without money and without price,' and the primitive rights of Christianity restored."

Such is the constitution under which we to-day live. It affirms that all political power is inherent in the people, founded on their authority, and instituted for their benefit. It secures freedom in religion, free speech, and a free press.

It is true that Article VII. begins, "It being the duty of all men to worship the Supreme Being, the Great Creator and Governor of the universe,"—a form of statement objectionable, as assuming in the government the right to determine the duty of a citizen in a matter in which that government has, by the same fundamental law, no right to legislate.

Now, how far are our *laws* in *harmony* with our *constitution?*

In the first clause of Article I. of the constitution, we read, "No man or set of men is entitled to exclusive . . . privileges from the community." Yet we have a statute which makes one set of men civil officers—for so our courts have held them to be—for the performance of the marriage ceremony, *without election or appointment*, and by virtue alone of the calling they follow. It is unnecessary to state that it is the clergy who enjoy this privilege. This law is a relic of ecclesiasticism inherited from Old England.

Again, by Article VII. of the constitution, "no person shall by law be compelled to . . . support . . . any congregation, church, or religious organization." Yet there is a statute on our books which exempts churches (parsonages, too, under $5,000 in value) from taxation. These exemptions, by increasing the property tax of all tax-paying citizens, virtually compel every tax-payer to pay thus indirectly toward the maintenance of all religious societies which have either churches or parsonages. The Roman Catholic citizen, when he pays his property tax, is, in fact, paying also for the support of what he deems deadly heresies. The Presbyterian is helping support the papacy as well as lending aid and comfort to what he considers the soul-destroying errors of the Universalist and the Unitarian; the Baptist helps maintain the "baby-sprinkling," which is to him both ridiculous and sinful; the Episcopalian helps, in fact, pay taxes on the capital invested in "meeting-houses," which to him are not churches; and the plain Quaker, who believes in no churches nor in a "hireling ministry," has to be taxed for the support of "churches" and "hirelings" of all denominations; and so with the others.

These exemptions are another relic of the union of Church and State.

Again, when we read the statute, "Christians of all denominations and Jews may unite to form religious societies," our first thought is that the term "religious" is limited by our statutes to Christians and Jews; and we query whether the religious freedom guaranteed by the Constitution is restricted to these sects. A reference, however, to the debates in the Constitutional Convention assures us that the "heathen" were recognized as people who had a right to worship according to the dictates of their consciences, and that all worshippers would be accounted "religious." Doubtless, however, when the statute was enacted, no such societies as the Church of Humanity, or as Prof. Adler's Society for Ethical Culture, or as the Free Congregational Society of Florence, Mass., or the Free Religious Society of Providence, R.I., and the various organizations which take the name "Church of Humanity," had been dreamed of in Connecticut, and that to the framers of the statute *all* things good were included in the term "Christian."

We sometimes wonder what the word "Christian" does mean in our laws. We do not find it defined there, nor is there probably a judge in the State to-day who would venture to define it. Our courts, however, interpret it broadly enough to cover the most diverse and even the most contrary beliefs.

A blasphemy law still defaces our statute-books,—a modified relic of the code of 1642. It condemns to a fine not exceeding $100, and imprisonment not more than a year, every one who "shall blaspheme against God, either of the persons of the Holy Trinity, the Christian religion, or the Holy Scriptures," and makes the person also liable to be bound to his good behavior. The law took its present form in 1821, since which time it is doubtful if any convictions have been made under it. Since the *gravamen* of the offence would lie in the supposed indignity offered to a divine being, it is difficult to see how such an offence could properly come under the cognizance of civil law. Were a prosecution, however, to occur under the statute, the offence would, perhaps, be *now* held to consist in the hurt to the feelings of ordinary persons in the community. Blasphemy, as defined by Blackstone, consisted in "denying the being or providence of God, contumelious reproaches of the Saviour Christ, profane scoffing at the Holy Scripture or exposing it to contempt and ridicule." As the offence implies an established religion, the statute would probably be held to be a dead letter, as it practically is. Whole sects disbelieve in the doctrine of the Trinity, most of whose members would doubtless deny it on occasion, and would therefore, by the definition of the crime when the law was enacted, be liable to prosecution and conviction. Yet no one for a moment supposes that such a conviction would be possible to-day.

Our Sunday laws have still objectionable features; though the law under which Aaron Burr, when Vice-President of the United States, was once arrested when hurrying to New York in his private conveyance on Sunday (and which it was charged that Rev.

*Eleven years afterward (1825), the State granted the Trustees of the Bishops' Fund $7,064.88, in commutation of their claim on the Phœnix Bank bonus.

*The Methodist Trustees received theirs in February, 1818, though protesting that their full share had not been granted them, and saying that they took it, thinking it not right that the appropriation should remain useless. Its acceptance was strongly censured by many of their members. The Baptist Trustees did not accept theirs until June, 1820.

Total amount rec'd from U.S.	$61,500.00
To Congregationalist	$20,500.00
Bishops' Fund	8,785.71
Baptists	7,687.50
Methodists	5,125.60
Yale College	8,785.71
Balance, unappropriated	10,616.08

L. Bacon, of Norwich, violated when he drove out with his guest, President Hayes, on that day), was last year so modified as to permit travel. Another law, however, prohibits* any "proprietor or driver of a vehicle" to permit any one to ride in said vehicle save for the purpose of carrying the United States mail, or for necessity or mercy, on that day between sunrise and sunset under penalty of $20 fine.

Secular labor is also prohibited by law, save to Jews and such Sabbatarians as religiously observe Saturday in lieu of Sunday. Sunday evening concerts or other diversions are also prohibited. Parties in New Haven were recently prosecuted for holding a sacred concert on Sunday evening.

Our courts have held that, for violations of Sunday laws, the accused is not entitled to trial by jury; that a note given on Sunday is void; that money loaned on Sunday cannot be recovered; and that contracts made on Sunday are void.

Our Sunday laws, so far as founded on religious grounds, are a relic of the union of Church and State.

A law also exists prohibiting profane cursing and swearing. Prosecutions under it are very rare, though the vice is but too common; and it is a noteworthy fact that the very persons most addicted to profanity are the very ones who are most frequently called upon to "swear" in our courts. It is worthy of serious consideration whether our courts do not thus encourage the vice the statute aims to restrain. Our statute-book contains over a page of oaths, both great and small, to be administered on specified occasions. It is the more a marvel that these oaths should still disgrace our statute-books, when we consider that a large and respectable portion of our citizens regard with peculiar reverence the precepts and example of one who is reported to have taught, *"Swear not at all."* No one, however, is obliged by law to take any of these oaths; for simple affirmation, under the penalties of perjury, is permitted in their stead. The oaths, however, should be expunged from our statute-books.

Such are the principal laws that remain to us of the old union of Church and State in Connecticut. We need not marvel at their existence. The wonder rather is that our State has, in matters pertaining to the civil and religious liberty of her citizens, kept in advance of most of the original thirteen States. South Carolina to-day, by a constitution adopted as recently as 1868, provides that no person shall be eligible to the office of governor, who denies the existence of a Supreme Being. In Texas, clergymen are ineligible to the Legislature or to State offices.

The tale concerning the "Blue Laws," so often shown to be false, we need not here repeat. That Connecticut had many laws which no enlightened legislature of to-day would enact is true; but no one of them, as far as we can learn, was out of harmony with the spirit of the age which produced it.

Besides these laws, a custom of appointing Fast and Thanksgiving days still remains to us a relic from the times when there was an "established religion." These days were at first appointed as circumstances suggested.† Fast days were frequent in colonial times, but never appointed on Good Friday, as the colonists avoided everything associated in their minds with the exercise of arbitrary power. In January, 1644, a day of fasting was ordered to be observed throughout the plantations *every month*. A similar order was issued August, 1676. Fasts were frequently appointed to avert some threatened calamity.

The question now presents itself, Have we any duty in reference to these infringements on the equal rights of citizens? and, if so, what can we do?

1st. If we are interested in any way in the maintenance of a church, or other organization, which is defrauding the rest of the community by accepting exemption from taxation, we can and ought to use our influence against this wrong until it cease, meanwhile petitioning for a repeal of such exemptions. We are not justified in robbing the rest of the community by the fact that portions of that same community are robbing us.

2d. We can, by petition and otherwise, endeavor to effect such a change in the laws concerning the marriage ceremony that all marriages of parties legally capable of contracting that bond, and duly witnessed certified and recorded, shall be held lawful. As is well known, Quakers in Pennsylvania, and elsewhere, are always married without a clergyman, by the voluntary promises of the contracting parties, made in the presence of witnesses.

3d. We can work for the repeal of all such statutes as infringe on our personal liberties or on those of other loyal citizens of the Commonwealth.

Alexander Bishop, in an address in Wallingford in 1804, said: "The 'steady habits' of New England present an obstacle to the diffusion of truth. The sailor nailed the needle of his compass to the cardinal point, and swore that it should not always be traversing. So with the New England friend of order."

Is not this *too true* of the *New England of to-day?*

* This law has just been repealed.

† The first Thanksgiving was Sept. 18, 1839.

CORRESPONDENCE.

A PLEA FOR PROTECTION.

Editors of The Index:—

Believing that protection has been one of the greatest factors in the unparalleled development of our multifarious industries, I feel constrained to say a few words in reply to Miss Hardaker's article in *The Index* of March 4, on "An Issue in Social Science." In a very rapid and what I consider a too hasty and flippant manner, she defines the functions of government, which should simply consist in securing "order, freedom, and peace," and thinks that government cannot wisely be allowed to do anything else, not even securing the "prosperity" of its people, "which, in the American vernacular, means plenty of money, or its equivalent in houses, clothes, and comfort"; and she might have added, and more leisure for self-development, of which the masses stand in much need. Now, I have been taught that one of the highest functions of any form of government is to secure happiness and "prosperity" to its people,—*i.e.*, the toilers of hand and brain; but more especially is it so with our form of government; and by all means let the government do all in its power to secure them good "houses, clothes, and comfort." This would be carrying out the good democratic doctrine of "the greatest good to the greatest number," one of the surest means of securing a permanent republic. Now, I have a thorough conviction that genuine protection will protect the employé as well as the employer or manufacturer. To secure this, the laborers must be protected from the degrading competition with "the pauper labor of Europe"; for, under present conditions, they are not able to protect themselves from the grasping and avaricious. (I could give reasons for this, but it would make this letter too long.) But this does not militate in the least against the principles of protection. Again, previous to her definition of the government's functions, Miss Hardaker says, "I ought to feel ashamed to ask my neighbors, *i.e.*, the government, for special legislation." I presume that she is not ignorant of the existence at Washington of an institution called the Patent Bureau (or Bureau of Patents), which was created by *legislation* to *protect* American inventors from being robbed by unscrupulous pirates, who would steal from them in some cases the labors of a lifetime. And I suppose that she is also aware that our pamphleteers and book writers, in connection with those of Great Britain, are, or have been, agitating for a similar protection by way of a copyright *law*. This, if secured, would be in addition to the protection that binders and publishers now receive. This would, I think, be eminently proper, and an act of simple justice. But Miss Hardaker points us to the brief functions of government, "order, freedom, and peace," and would have the government say, Hands off, leave these men to the mercy of every unscrupulous man who would sooner filch from others than work for himself. I claim that a large number of our industries still need the protection they have; for, owing to the large productive power throughout Great Britain and on the continent of Europe, built up when we were unable to help ourselves (a condition caused largely by free trade), they would be utterly ruined, if our friend's policy were to be carried out. And, when Miss Hardaker charges protection with making "artificial prices for sugar, silk, and cooking ranges," she is merely skimming the surface; for the history of protection proves the reverse to be the case. The farmer gets cheaper ploughs, harrows, threshing and reaping machines, hoes, rakes, forks, and shovels, and from fifty to a hundred per cent. better, than he could twenty years ago. And his clothes and shoes of similar quality are cheaper too. I would suggest to our friend that she read Greeley's *Political Economy*. And, speaking of getting into the markets of the world, this would necessitate a fierce competition with England, France, Belgium, and Prussia; and, of all the curses that ever came to trouble labor, competition, in that shape, would be the deepest. But, ere we think of other markets, let us endeavor fully to supply our own first; for there is an enormous bill against every year for articles which we can and really ought to make ourselves. In answer to her concluding remarks about the prices of labor here as compared with those of England and Europe, I would refer our friend to a series of letters now being published in the New York *Tribune* by R. H. Porter, one of the late members of the Tariff Commission. These refer specially to Great Britain. For Europe, she can apply to the State department at Washington for consular reports ordered by Mr. Evarts when secretary of that department. Greeley's *Political Economy* and Porter's letters can be obtained at the *Tribune* office. I do not deny a large majority of our manufacturers have reaped the lion's share of the profits earned by labor; and, whenever the latter has made an effort to obtain a more equitable distribution, it has been invariably defeated by foreign pauper labor, imported too by the very men who ask for tariff laws, because they "protect the American laborer from the pauper labor of Europe." But those who know the real facts draw their own inferences, as the readers of this must do. It is no argument against true protection. Self-protection is the first law of nature, and applies to governments as forcibly as it does to individuals.

JOHN WARR.

A WORD SUPPLIED.

Editors of The Index:—

In *The Index*, for December 28, Mr. Gill commences an article with some clear statements, but in the very next paragraph clouds them with metaphysical fog. He says, "I do not, however, affirm that this universe is an *illusion*, without *objective reality*,—just the contrary. *I know it as real, because I know it as an experienced fact*, and an objective reality, because external to my organism," etc. This statement is as clear as any scientific materialist or evolutionist could desire. But, in the next paragraph, he makes in effect the astounding statement that there are as many worlds as there are persons to see a world. Nor does his phrase, "as a subjective state," remove the fallacy of the rest of the paragraph. Calling the effect of the world on each person "world sensation," he should have stated it thus: there are as many world sensations (not worlds) as there are pieces of organized matter or persons, upon which the world acts, and by that action produces a *knowledge* of the external world. Mr. Gill and some others neglect to draw a distinction between *phenomena* and the *knowledge* of phenomena. Just this is our "word supplied." Of course, it has already been supplied many times, even so recently as in *The Index*, December 21, by Mr. Janes. But the assertion still comes up that the world *is ego*. Phenomena consist of the "world external to my organism," which Mr. Gill admits. But the *knowledge* of this external world is precisely that great mystery, human consciousness. The knowledge of a phenomenon is not the phenomenon itself. But Mr. Gill affirms that it is, for he says "all phenomena are *ego*." If there is a world external to our organism, and if *ego* is organism or at least cannot be disconnected from it, how can this world be *ego*, and be external to it?

But perhaps by phenomena Mr. Gill means not the external world or thing, but the appearance or picture which the thing makes in the individual organism. In this case, we do not have as many worlds as organisms, but merely as many pictures of the world as there are eyes to receive them. The picture is the *ego*, and the *ego* is *not* the thing pictured. There is only one visible universe, though there is more than one mouse. But there will be as many images as there are mirrors.

Now, the way in which these pictures are made is through the senses. And it is somewhat curious that modern science has apparently given support to the old idealism of Hegel, the identity of thought and matter. (Perhaps more correctly, thought and being.) Science teaches that we do not know matter directly, but only our own sensations. But this rather affords a strong inference that there is something which is not sensation, or *non-ego*, which causes the subjective sensations, or *ego*. It is plain that the only way to

Digitized by Google

know matter directly would be to *be* matter. And this is exactly the position of the real materialist.

Even so clear a writer as Mr. B. F. Underwood has written sentences which, if not explained, might be considered as supporting idealism. (See lecture on Scientific Materialism and *Index*, Nov. 23, 1882.) Some time ago, a friend writing to me made the following quotation from Mr. Underwood (lecture on Scientific Materialism): "Sound, light, color, fragrance, hardness, softness, and all the so-called secondary qualities of matter, at least, can be shown to depend for their existence upon consciousness." I do not know as I can express myself any better on this subject than by quoting part of my reply, as follows:—

I see from your quotation that Mr. Underwood has made some rather misleading expressions. They might perhaps be used to support the doctrine that there is no matter except in our subjectivity. Perhaps Mr. Underwood conveys a wrong idea as to his own thought. I suppose he means that we cannot really *know* matter, but only certain impressions. But impressions are sensations. Sensation is that kind of molecular motion by which we (the subjective) become conscious of matter outside of us (the objective). In the case of our bodies, if we assume the immaterial spirit, sensation is the mode in which the soul becomes conscious of the body and of the outside world. We are both subject and object to ourselves, but all else is objective. To the materialist, sensation is matter become conscious of itself. Now, sensation, being caused by the motion of real molecules of matter acting on the organism, therefore these molecules and their motions have just the same existence *when there is no organism present*. The ether vibrations which cause light exist when they fall on no eye. A thunderbolt or a falling tree in the wilds where no human ear is present makes just the same vibrations in the air as if a man were there and received the vibrations on his ear, thereby becoming conscious by sensation of a certain fact, and had said to himself, It has thundered, or A tree has fallen. The molecular motions which cause sound, light, color, etc., have an existence independent of ourselves; but we know nothing of them until they act on us, and this very act is the mystery of sensation. It does not seem to me that the phrase, "These qualities depend for their existence upon consciousness," exactly expresses the fact. Rather, they are a part of our consciousness. Especially is this the case with light, sound, and odors. The vibrations which cause them are purely objective. But sound itself can be nothing but a part of our consciousness. But what we call hardness does actually exist objectively. For hardness might be defined as the relative closeness and cohesion of atoms, which is an objective fact. Our knowledge of this fact is gained by the sense of touch. This is subjective hardness, or *ego*.

You say that, were it not for the animal nervous system, there could be no such thing as heat, etc., "as we understand it." True enough. But if you had said, "as we feel it," perhaps it would have been more correct. For our understanding of the nature of heat is entirely different from that of the savage, but our feeling of it is the same. When a piece of wood burns, we understand that every atom of carbon in the wood unites with two atoms of oxygen in the air to form carbonic dioxide (symbol CO_2). Also the hydrogen and oxygen of the wood and air unite to form aqueous vapor (symbol H_2O). This process is what our intellect understands by combustion. And here is a point which in my humble opinion has led to much misconception as to the question of subject and object. It is simply this. Combustion is not heat, "as we understand or feel it." Combustion is an objective fact in nature, and existed before there was any nervous system. The burning wood does not feel. But the nervous system does feel. Combustion is a motion of atoms. Heat is that atomic motion communicated to our nervous system. That motion causes the sensation which we call heat, and is a part of our physical consciousness. Combustion is *non-ego*, its sensation is *ego*. To those who do not keep in mind the distinction between a thing and the knowledge of it, Mr. Underwood's expressions might seem to resolve everything into subjective impressions.

Perhaps, after all, the difference between us is a mere juggle of words. Yet I cannot help thinking that Mr. Underwood's sentence, "Sound, light," etc., is rather misleading. Suppose I amend the proposition thus. The atomic motions which constitute the objective facts of sound, light, color, fragrance, hardness, softness, have an existence independent of animal consciousness; but these motions can only cause consciousness (on the material theory) or become known to it (on the immaterial theory) by their interaction with living organisms. These interactions between the non-living and the living are the sensations which we call sound, light, etc."

It will be seen that the above extract has some bearing on the assertion of Mr. Gill that "all phenomena *are ego*." I take the word "phenomenon" to mean an external object, and not its appearance to each individual which is *ego*. It also illustrates the distinction between a phenomenon and the knowledge of a phenomenon.

I will close by supplying the word "knowledge" in one of Mr. Gill's sentences: "For [the knowledge of] all these things is nothing else than thought [and feel]ing], and it is therefore a contradiction to suppose [the knowledge of] these can exist except as thought and feeling."

J. E. PECK.

DID JESUS REALLY TEACH SO?

Editors of The Index :—

Mr. Denslow, in his reply to Mr. Potter's criticism of his definition of "goodness," affirms that "Jesus teaches us to check out upon our bank account in behalf of every cut-throat, vagabond, or mendicant that asks us." I suppose you thought the falsity of this and similar statements apparent to every honest, unprejudiced mind, and that this was why you passed it by in your rejoinder unchallenged. But there are many who read your paper who are influenced by such statements as that article contains. Allow me, then, to say a few words upon this subject.

Every *true* radical is careful to be just to the great religious teachers whom he ventures to criticise. He approaches every subject he would investigate in the spirit of candor, anxious to know the truth, careful not to misrepresent.

There is nothing in the record we possess of the teachings of Jesus which warrants such a statement as the one quoted above. The support Mr. Denslow advances for it is the saying of Jesus: "If any man would go to law with thee, and take away thy coat, let him have thy cloak also.... Give to him that asketh thee, and from him that would borrow of thee turn thou not away." He says, "Jesus, if he had been a philosopher, ... if he wished to make his system of ethics complete"— Here lies his mistake, He judges Jesus by a false standard. He was not a *philosopher:* this he never pretended to be. He had no "system of ethics" to make complete. If it had been his object to elaborate a perfect system of ethics, then it might have been necessary carefully to balance the claims of altruism with those of egoism. He was a simple teacher of righteousness, not a philosopher; and he opposed himself to the evil tendencies of the life around him. He was too much absorbed in his present work, and in meeting the demands of his day and generation, to stop to construct ethical systems for the nineteenth century. He spoke the words that he felt ought then to be spoken. He emphasized those truths which at that time needed most to be emphasized. And he left it for those who were to come after him in future generations to meet the needs of their hour, whatever they might be.

That egoism must precede altruism, no thoughtful person can doubt. We have no reason to suppose that Jesus overlooked this fact. But Jesus recognized another truth of equal importance,— which finds no place in Denslow's system of ethics,—that altruism must follow egoism. The great duty of life consists in the adjustment of the one to the other. Now, the Jews needed no one to preach to them egoism. They were buried in selfishness and self-righteousness. The demand of the hour was for some mighty, heaven-inspired soul to plunge into the very centre of that Jewish selfism, to burst asunder its iron bands of self-righteousness, and to set free the human soul. Jesus, at the risk of his own life, rose up to meet this demand; and, against the relentless egoism of his day, he forced the truths of altruism with all the might of his being. He could not state those truths too strongly. There was no danger of the Jews becoming indiscriminately lavish in their gifts to their neighbors. Had he "begun at the beginning, with production, accumulation, and egoism," as our friend thinks he ought to have done, he would never have been crucified. He might have gone on preaching such doctrines to the end, and have died a natural death in peaceful old age. His influence would never have been felt outside his native village. His talk about "production, accumulation, and egoism" would have been heartily indorsed by the scribes and Pharisees. It would have disturbed no one. It would have helped no one. But he bearded the lion of selfishness—egoism—in its den. Thus, he aroused its wrath.

It does not follow, because Jesus said, "Give to him that asketh thee," that he believed in indiscriminate giving away of one's wealth to every "vagabond, cutthroat, or mendicant" that chances to come in his way. There is no sanction for indiscriminate charity in his teaching, except such as is forcibly wrought out of a few unguarded expressions. Words are pictures of ideas. A reasonable man does not feel bound to take them literally: he tries to catch the truth that is reflected in them. The Oriental manner of speaking was to give pictures of the truths they sought to teach rather than to try to embody them in exact words. This was peculiarly the method of Jesus' teaching: he points to the lily, the ripening grain, the birds, the bubbling spring, to picture truths that could not be put into words.

There is a common saying, that extremes meet. Bigots and iconoclasts do often make us aware of how true this is. There is a striking likeness in their characters and in their methods of reasoning. It is a somewhat curious fact that we find both insisting upon taking the words of Jesus *literally*, without making any effort to find out what he really did teach. But our critic judges no other writer by such a standard. Suppose, for instance, we were to attempt to understand Emerson's words literally. His essays would become, in our hands, a mass of glaring contradictions and unblushing falsehoods. Judged by this standard, what could we make of these lines:

> "I am owner of the sphere,
> Of the seven stars and the solar year,
> Of Cæsar's hand and Plato's brain,
> Of Lord Christ's heart and Shakspere's strain."

It cannot be shown that Jesus discountenanced toil, industry, and material enterprise. Both he and his disciples belonged to the laboring classes, and toiled for their own support. But this he did believe: that selfishness is the root of all vices, that the love of man for man is the root of all virtues. He believed that, as this love increased, war, crime, misery, and all the ills of life would decrease.

Egoism is the dark soil in which we delve for our existence; but altruism is the flower and fruit growing above it, which gives to the world its beauty, to life its joy. There is no doubt that our physical natures, our appetites and passions, will force upon us with all too much urgency the claims of egoism. If we are not on our guard, these claims, excluding all others, will become all-absorbing, and our egoism will sink into sordid selfishness. The moral guides, the reformers, the saviours of the world, will, for long ages to come, be those who hold up before the world, as did Jesus, a higher ideal of life than self-interest, self-service. They will be those who urge upon all men the necessity of living, not for self alone, but for *self* and *others*.

N. A. HASKELL.

HUMANITY AND RELIGION.

Editors of The Index :—

I have read, with very great pleasure, the ingenious and interesting argument which Mr. Frey has recently contributed to *The Index;* but, leaving other of his statements in abeyance, I must dissent from much of his last paper (printed in your issue bearing date of March 15), and particularly from that portion which treats of the relation of labor, capital, government, etc., to the "Religion of Humanity," for the reason that, as it seems to me, he presupposes conditions which it is the duty of advanced thinkers to antagonize.

"Elevate our sense of duty toward humanity, and you will speed a millennium," is a truism; but it is hard to conceive how the average workingman, spite of all our "modern improvements," can feel that he owes any duty to the capitalists who surround him,— nay, to the government itself. If he is a man of average intelligence, he must see that every colossal fortune has been augmented by *his* labor; that those whom he has enriched have repaid him by enhancing, for purposes of speculation, the prices of the very necessaries of life; that to society in general, to our "higher classes" in particular, he gives "bread," and receives for his own portion "stones." He is, to be sure, mercifully granted the right to "live"; but his

Digitized by Google

"liberty" is quite a nominal affair, and his "pursuit of happiness" is a very hopeless and dismal pursuit indeed.

"Once a capitalist becomes a humanitarian," he will doubtless employ his wealth for good ends. *But no man has a right to be a capitalist*, as the term is generally understood. Were society rightly organized, there would be no capitalists, and there would be no tramps.

"Legislation" may be a *cause*, more than an aid, of "moral improvement," if legislators will direct their attention to levelling the social inequalities which are the causes of crime. Legislation which gives to speculators millions of acres of the public domain,—restricting, to that extent, the rights of the many, to whom the land *belongs*,—which sanctions the abuses of monopolists and the thefts of corporations,—legislation of this sort is not by any means the "result" of morality, and does not tend to strengthen the faith of the masses in either religion or government.

Before we can expect the people to heed to the Religion of Humanity, we must give them reason to believe that there is such a thing as humanity in the world. After justice will come other virtues.

W. L. S.

PORTLAND, ME., March 15, 1883.

EUSEBIUS AND PIOUS FRAUDS.

To "Inquirer," Maplewood, Mass.:—

The passage in question is to be found in Eusebius' *Hist. Eccl.*, lib. viii., c. 2, and *De Martyr. Palestin.*, c. 12, wherein he confesses that he was by no means scrupulous in recording the whole truth concerning the early Christians, and that he suppresses everything which would be detrimental to them, recording such things only as might be of benefit to the Christians of his day and of future generations.

AUTHOR OF "BIBLE MYTHS."

BOSTON, March 26, 1883.

MISCELLANEOUS.

AMONG the eminent men who closed their earthly career during the past year, there are four whose immortal names should be reverently remembered in these columns,—Henry W. Bellows, Charles Darwin, Henry W. Longfellow, and Ralph Waldo Emerson, each, in his way, a representative of liberal thought. We enter here upon no eulogy of these men: we simply wish to note the hearty tributes paid to their work and worth by the representatives of Orthodoxy, and to point to the same as illustrations of the power of *character* to move the heart and win the confidence of mankind. The confession of Oxthodoxy that these men were eminent in all the moral qualities that exalt humanity is an admission that the orthodox faith is not necessary to the development of a character in accordance with the highest and noblest ideal that man has conceived. In the light which emanates from the example of such men, it is no presumption to claim that a liberal theology is adequate to the highest wants of humanity.—*Christian Register.*

WHEN a departed saint is to be canonized by the Church of Rome, a Devil's Advocate is always appointed to present the reasons against the canonization. Of course, he makes but a poor show, and is always and easily beaten. Mr. Cook has conjured up a Devil's Advocate: it is proper to say on behalf of the unvoiced thousands who are thinking for themselves on all subjects connected with the religious life —God, man, sin, punishment, forgiveness, inspiration, revelation—that the Devil's Advocate which Mr. Cook has introduced to his Boston audience is none of theirs. They do not know him: they disown him and his advocacy; and Mr. Cook may flail him to his heart's content without remonstrance or objection from them. And while he is beating his Devil's Advocate out of court, and his audiences are applauding the flagellation, the nineteenth century will go on thinking its way to a profounder appreciation of the truth and a diviner life in the truth, without at all concerning itself as to what becomes of the Devil's Advocate whom Mr. Cook has invented or the propositions which have been put in his mouth.—*Christian Union.*

CLEARLY, if I hold one opinion concerning the passage of light through certain crystals, and my neighbor holds a different or contrary opinion, I am entitled to expect either that he can be brought to adopt my opinion, or that I can be brought to adopt his. Means of verification must exist; and, even if the question cannot be settled to-day, we have no doubt that it can be settled by and by. But if I hold one opinion concerning the conscious existence of the soul after death, while my neighbor holds a contrary opinion, I am not entitled to expect that we can ever be brought to an agreement; for the question confessedly transcends the limits of scientific demonstration. Yet, spite of all that, one of our contrary opinions, and possibly both, may contain some adumbration of a truth; and more than a faint glimmering of truth we can hardly expect to be contained in any of our opinions on religious matters, for the problems are too vast when compared with our means of dealing with them. Hence, instead of condemning variety of belief on such subjects, we should rather welcome each fresh suggestion as possibly containing some adumbration of a truth which we have hitherto overlooked.—*John Fiske.*

"MR. THOMAS PAINE was fond of telling how the drunken turnkey chalked the *inside* of his cell-door, so that, when he drew it to, there was no mark to be seen: so, when they came the next morning to summon the poor fellows out of the chalked doors to mount the scaffold, Mr. Paine was saved to do a great deal of mischief among men. But he was sure this fact disproved an overruling Providence (*sic*); for he was quite convinced of his own importance, and argued that such a God as Christians believe in would never have interposed to save the like of him. Perhaps it is otherwise, however, in the deeper thought of those who have taken pains to learn something about that God whom he despised (*sic*). Even a Paine may help truth to work out its glorious revenges; and the Christian need have no hesitation in admitting the marvellous interposition of Divine Providence to save Mohammed in the cave of Thor. A pigeon sat brooding on her nest in the mouth of that hiding-place, and a spider had woven his gauzy curtain across it. Evidently, inferred his pursuers, nobody has gone in there; and the impostor (*sic*) was spared to change the manners and beliefs of millions of men, and to revolutionize peoples and kindreds and tongues, from the Caucasus, all over Northern Africa to the heart of Spain, and for thirteen centuries to impress himself upon human thought and human society."—*Bishop A. Cleveland Coxe, D.D., in the Independent.*

COMMENTING on the ruling of Judge Briggs of the Common Pleas Court of Philadelphia, that "something more is required to render one competent as a witness than a belief in a Supreme Power simply as a power or principle, which may be the resistless natural laws as exhibited by motion and operation of the elements, and to violate which will surely bring punishment here to the transgressor," the Milwaukee *Sentinel* observes: "The rule thus laid down would exclude a large number of persons, and among them many of the most intelligent and exemplary members of society. It is by no means the case that precise conceptions of the nature of the Deity and clearly defined opinions respecting a future state of existence are most frequently met with among minds of a superior order of intelligence. The child, the ignorant man or woman, they who have never traversed any part of the wide field of thought and investigation respecting subjects of this nature which the human intellect has gone over in the past, are often found with clear views and precise beliefs, however erroneous. The Divine Being, in their opinion, is somewhere above the clouds; and, when they think of him as a person, it is as a man endowed with the emotions of humanity, but with infinite power, knowledge, and goodness. It is the profound philosopher, the man of science, the thinker who has deeply studied and meditated, that finds it difficult to form that adequate and complete conception respecting the nature of God and his dealings with the souls of men in another world, which Judge Briggs regards as an essential condition of being able to tell the truth under oath. In *Faust*, the peasant girl, Marguerite, has no doubt: she believes that her ideas concerning God are clear and accurate. It is Faust, the student and thinker, who had explored the whole range of human knowledge, that hesitates to express a definite opinion, and reverently, as a finite being in the presence of the Infinite, exclaims: 'Who may name him, who confess, "I believe in him"? who presume to say, "I do not believe in him,"—him who upholds all, who comprehends all?' The rule of Judge Briggs requires that, in order to be competent to take an oath, a man must believe in 'the personality of God, and of God as generally understood by the people.' Such a decision will doubtless be quoted in future days, as the opinion of the judges a century or two ago on witchcraft are now referred to, as an illustration of the crude opinions still extant in the nineteenth century.'

BOOK NOTICES.

GOV. BUTLER VS. THE COMMON SCHOOLS OF MASSACHUSETTS. By A. D. Mayo.

The wide experience of schools which Mr. Mayo has gathered from his labors in almost every section of our land entitles his words to especial weight, when he speaks for the public school system of Massachusetts. Gov. Butler's slashing attack on it is dangerous only because it meets a response from the two extremes of selfishness in society,—the arrogant selfishness of pampered aristocracy and the ignorant, greedy selfishness of careless and lazy poverty. The great working classes, including brain-workers and hand-workers, know the value of education too well to wish to choke the streams which are conveying it to every family in the Commonwealth. Mr. Mayo sketches the position of Massachusetts as regards the Western States, and shows how her influence has helped to make them what they are, while her present task is "to deal with the most complex educational problem offered to any American State." This is "to give to every child of the laboring man and the immigrant a fair chance for the training which shall qualify him for good citizenship." This problem is being successfully worked out, as is shown both by the statistics and by the general good character of our population, who are the descendants of immigrants. Mr. Mayo gives a very condensed and clear statement of the action of the school system, showing how each part helps the other, and the influence of the high school is felt down to the very first beginnings in the primary school. He concludes: "The public school of Massachusetts has its weak spots, which are known to its friends far better than to its enemies. But if there is, on the whole, a better arrangement for taking humanity as it comes, and turning it into good American citizenship, we, after our journeyings and inspections among thirty States of the Union, have not been able to find it."

THE Elzivir Library, of which we have before spoken, seems to have reached the limits of cheap printing. It is a mystery how these compact, well-printed, neat-looking volumes can be sold at such prices. There is no excuse for any to go without good literature, when Macaulay's *Life of Frederick the Great* can be procured for seven cents, *The Pilgrim's Progress* for ten, Stoddard's *Life of Washington Irving* for six, Parton's *Sir Isaac Newton* for two, and Dickens's *Cricket on the Hearth* for ten cents, with many others equally as good at corresponding prices. Send to John B. Alden, 18 Vesey Street, New York City, for catalogue and prices.

AMONG the contributors to the April *Atlantic* are Henry James, Oliver Wendell Holmes, Charles Dudley Warner, T. B. Aldrich, Richard Grant White, Sarah Orne Jewett, Harriet W. Preston, and Rose Hawthorne Lathrop. The first act of Mr. James' dramatized version of his *Daisy Miller* is given in this number. Dr. Holmes talks of "Pillow-smoothing Authors," of whom he seems to think the author of the *Anatomy of Melancholy* the chief. Mr. Warner criticises "Modern Fiction" in a kindly spirit. In "An Early Humanist," Harriet Preston tells the story of John Pico della Mirandola. Richard Grant White explains "The Bacon-Shakspere Craze." Bradford Torry has a well-written article on "Bird-Songs," and Elizabeth Robins writes of "Stage Buffoons." There are also reviews of some "Recent Biographies," "Memorials of Rossetti," the Carlyle-Emerson correspondence, and other recent works.

THE following articles appear in the *Popular Science Monthly* for April: "Nature and Limits of the Science of Politics," by Prof. Sheldon Amos; "The Economic Function of Vice," by John McElroy; "Progress of the Back-boned Family," by A. B. Buckley; "Curiosities of Superstition," by Felix L. Oswald; "Perceptional Insanities," by Dr. W. A. Hammond; "Dwarfs and Giants," by M. Delbœuf; "The Census and the Forests," by N. H. Egleston; "Origin of the Donkey," by C. A. Pietrement; "Speculations on the

Digitized by Google

Nature of Matter," by H. H. Bates; "The Legal Status of Servant Girls," by Oliver E. Lyman; "The New York Geological Survey," by James Hall; "Origin of the Calendar and Astrology," by Prof. W. Foester; and "A Sketch of Increase Allen Lapham," with an accompanying portrait.

TO MOST readers of *The Index*, the most interesting article in the January *Fortnightly Review* will be the "Study of Longfellow," by Mr. Henry Norman. Very many Americans go to study in the English universities, but it is not often that an Englishman comes to Harvard for his education; and when one does come, like Mr. Norman, we are led to watch his career with somewhat unusual interest. And Mr. Norman's literary work will have the more interest to the liberal thinkers of Boston and vicinity, because of his hearty identification of himself with the liberal cause while he was among us. But nothing accidental is necessary to enlist the warm interest of Americans in this article; for no more discriminating and serious study of the poet has appeared since his death, none showing a finer apprehension of the true principles of poetic art or of that "aboriginal humanity of disposition," to quote words of the writer's own, which Longfellow possessed, and which is so much more and deeper than all poetic art.

The special object of this study is to show that, while Longfellow did indeed write a quantity of commonplace verse, he also did work of an exceedingly high character in many fields, and is entitled to a higher rank than that to which the English critics have customarily assigned him. "While some men of genius," says Mr. Norman, wholesomely, "in their worship at what one of their own number has called 'the altar to the unknown god of unachieved desire,' are writhing in their efforts to parade all the sensuousness of which human nature is capable, this simple man with his sweetness of life—a 'sweetness as of home-made bread'—must not be allowed to pass away without our reverent recognition. His was not the gift of 'song which shall spur you to soar'; but we may be confident that, whenever the army of true bards is mustered, the suffrage of future ages will not grudge him the fulfilment of his modest hope,—'to have my place preserved among the rest.'"

There is very much of criticism in Mr. Norman's article; all of it thoughtful and interesting, most of it very just. With the criticism of the poems of the "Excelsior" sort we heartily sympathize. We attach a much higher value than Mr. Norman does to "Hiawatha," the principal object of his criticism; and we do not sympathize with his rather slighting incidental word concerning the "New England Tragedies." We can well understand, however, why these latter should have strong interest only to those nurtured in the New England tradition. And, were Mr. Norman a New Englander, he surely would not have omitted all reference to "The Courtship of Miles Standish," which, quite aside from its historical interest, is, to our mind, second to none of Longfellow's works. Mr. Norman is right as to the peculiarly representative character of the "Tales of a Wayside Inn," and we do not remember to have seen the great merits of the "Saga of King Olaf" so clearly stated anywhere else. We were very glad, too, to note the recognition in this careful study that "it is questionable whether the English language contains a series of six original sonnets equal in every point to those which are prefixed to Longfellow's translation of the 'Divina Commedia.'" The general discussion of the translation of Dante is interesting and excellent.

We hope that this first fruit of Mr. Norman's American studies will be followed by much more equally good. Any word of his is sure of a warm welcome in the Boston and Cambridge circles where he is kindly remembered.

PERSONAL ITEMS.

MRS. ALEXANDER CARLYLE has bought the birthplace of her uncle, Thomas Carlyle, at Ecclefechan, to insure its better preservation.

THE Czar has received formal notice that the placing of the crown on his head will be the signal to blow him and all his guests skyward.

THE private secretary of Victor Hugo, M. Richard Lesclide, is contributing sundry papers upon his distinguished patron to the columns of the *Youth's Companion*.

MISS SUSAN H. WIXON will lecture in Paine Hall next Sunday afternoon at 3 o'clock. Subject, "The Rational, Practical, and Useful Observance of Sunday." Admission free. The public cordially invited to attend.

B. F. UNDERWOOD lectured in Chicago for the Philosophical Society on the 24th and for the Ethical Society on the 25th. On the 27th, he spoke at La Salle, Ill., and is announced to lecture at East Saginaw, Mich., the 28th and 29th.

GEORGE FRANCIS TRAIN'S son, Elsey McHenry Train, and the late Charles R. Thorne's step-daughter, Eliza Willing Browne, were married by Mayor Edson, Thursday. The father of the groom sent a basket of rosebuds with some doggerel verses complimentary to the mayor.

MRS. HELEN HUNT JACKSON has received from Secretary Teller of the Interior Department a commission as special inspector of certain matters relating to land titles among the California Indians. This is a just recognition of her ability and zeal in behalf of the Indians' rights.

IT is said that the physician of Alexander H. Stephens, just before the old statesman's death, proposed to read a chapter in the Bible and pray with him, if he did not object. The dying man replied with the spirit of an old Roman philosopher: "*I do object, and most decidedly.* I have no objection to prayer, for I believe in it; but *I do object to death-bed repentance.* I have made it a rule of my life to live each day as if it were going to be my last. In the heat of politics, I may have sometimes forgotten myself; but *I am no better to-day on my death-bed than I have tried to be every day of my life, and I have no special preparations to make and no special pleas to offer.*"

THE 3d of April will be notable this year as the centenary of the birth of Washington Irving, and offers to the literary men of the country a fine opportunity to pay honor to his memory. Irving is not so much read as he once was, and it may be doubted whether he could make as effective an impression upon the present generation as he made upon his own; but he was the first to answer the sneer of Sydney Smith, "Who reads an American book?" and his career as a man of letters, if not very influential in shaping the future of American literature, can be regarded with honest admiration. He was not the founder of a school, not a literary leader, not a pronounced man for anything. Mr. Bancroft was somewhat his junior, and is the last survivor in letters of the literary epoch which Irving made illustrious. Bryant, Cooper, Percival, and Dana were all younger than himself; and, for the first half of the present century, Irving was our most distinguished author.

THE late Henry Seybert left almost his entire estate, amounting to over a million dollars, to educational and charitable purposes. Among the bequests of public interest are the following: University of Pennsylvania, for the endowment of a chair of mental and moral philosophy, $60,000, and for the endowment of a ward in the wing, for chronic diseases, $60,000; city of Philadelphia, "Seybert Fund," for fuel and bread and the Educational Home, $10,000 each; Society for the Prevention of Cruelty to Children, Society for the Prevention of Cruelty to Animals, Home Missionary Society, and Children's Hospital, $5,000 each. He also gives from $1,000 to $2,000 each to seventy-three educational and charitable institutions, the aggregate of these bequests being $246,000. For a number of years before his death, Mr. Seybert was interested in the subject of Spiritualism; and, while recognizing the great amount of imposture mixed up with the subject, he held that it merited investigation, in order to determine the falsity or truth of its pretensions. In giving to the University of Pennsylvania the sum of $60,000 for the endowment of a chair of mental and moral philosophy, he stipulated, therefore, that an impartial investigation should be made of modern Spiritualism as well as of other systems assuming to represent the truth. The trustees of the university, in accepting the bequests from Mr. Seybert, have ordered that the chair thus endowed shall be known as the Adam Seybert Chair of Mental and Moral Philosophy, and that the ward for chronic diseases shall be known as the Henry Seybert Ward. The will was made in 1873; and in it Mr. Seybert expresses the wish that his body be cremated, as has been done at the LeMoyne furnace at Washington, Penn.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

J. H. CODMAN, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Three Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

Two Years.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

One Year.

MINOT J. SAVAGE, Boston, Mass.
WILLIAM C. GANNETT, St. Paul, Minn.
CAROLINE M. SEVERANCE, Boston, Mass.

The office of the Association is at 3 TREMONT PLACE, BOSTON (directly in the rear of the Tremont House), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

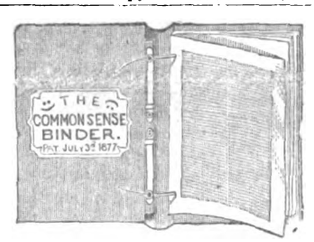
Appleton St., Boston, Mass.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,
706 Broadway, New York.

For sale at INDEX Office, 3 Tremont Place, Boston.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c. per line.
" 13 " 25 "	. . .	8c. " "
" 26 " 51 "	. . .	6c. " "
" 52 "	. . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

The Religio-Philosophical Journal

A large eight-page weekly paper devoted to the exposition of Modern Spiritualism. Established 1865.

CURRENT TOPICS.

ROBERT INGERSOLL'S lectures are being translated and circulated by Buddhist priests in Japan to counteract missionary teachings.

ITALY, Germany, Switzerland, and the United State have permitted cremation; and crematories have been established at Milan, Padua, Cremona, Lodi, and Varese.

THE *Canadian Baptist* states that, "in Boston, the stronghold of Congregationalism and Unitarianism, the Baptists have more church members than any other denomination, and are enjoying a steady growth."

MR. LAWRENCE has entered an action for $5,000 damages against the collector of customs at Montreal, for refusing to give up copies of Paine's *Age of Reason* and Voltaire's *Philosophy*, imported by the plaintiff from the United States.

THE Young Men's Christian Association, of Denver, Col., refuses to admit the *Christian Register* into its files, for the reason that it does not "accept the teachings" of th t paper. The Association's reading matter must be necessarily very limited, if it abides by that rule.

GOV. BUTLER was recently made a life member of the Lowell Young Men's Christian Association, on which occasion he said he had no doubt that the time would come when the State would support such institutions rather than spend money on reformatory institutions to reform the bad.

THE New York *Herald* has already raised over $33,000 for the relief of the sufferers by the Western floods, and will continue the work in the expectation, which events are already proving to be well founded, that there will be much sickness and suffering as the after-effects of the high water.

THE jury which gave a verdict of "not guilty" n the case of a seducer who shot and killed the father of his victim for undertaking to defend the honor of his daughter opened its deliberations by prayer. A religious paper, commenting on the circumstance, says: "If the jury prayed for light, the verdict conclusively shows that their prayer was not answered. A more abominable verdict was never given by any jury."

A MOST sensible idea is being carried out in this city in a course of six "Emergency Lectures," in which instruction is given by competent persons as to the best method to be pursued by unprofessional people in cases of accident or illness which requires prompt action as well as proper knowledge. The lectures so far given have had for their subjects "Hemorrhage, and Means of its Arrest," "Resuscitation of the Drowned," "Croup," and "Opium Narcosis Antidotes."

THE Boston *Herald* remarks: "There are ministers in Berkshire County, it is reported, who say they will not read Gov. Butler's Fast day proclamation. This is all foolishness. Benjamin F. Butler is Governor of the Commonwealth, a majority of the voters have decreed it. Why should these ministers treat his proclamations differently from those of his predecessors? They have no veto power. Fast day is a farce, anyway. Why should clergymen help to make it more farcical?"

THE chief of police, at Newcastle, Pa., on a recent Sunday, stopped the sale of papers on the streets of that place, by threatening to arrest the newsboys under the Sunday law of Pennsylvania. The law which the chief was so zealous to enforce is a statute nearly a hundred years old, and has practically been a dead letter the past quarter of a century and more. This sudden spasm of virtue, it is claimed, was inspired by the adverse criticisms of the correspondent of the Pittsburgh *Sunday Leader*, who, in a previous issue, questioned the qualifications of the officer referred to above for the position he occupies.

THE Italian papers give the programme of the Congress of Free Thinkers which is to assemble this year in Rome early in the autumn. Six topics will be brought before the Congress for discussion: (1) The scientific foundations of morality; (2) The influence of new scientific theories (especially of Darwinism and Positivism) upon the future organization of societies of free thinkers; (3) The scientific methods of instruction as applied to the popular school; (4) The relations of the Church and State in modern society, with special application to the Papal Guarantee Law in Italy; (5) The influence of free thinkers in the alteration of the laws which justify social unrighteousness, particularly in the relations between husband and wife and the differentiation of legitimate and illegitimate children; (6) The influence of free thinkers upon international questions.

APROPOS of the sentence in the recent English blasphemy case, the London *Inquirer* has the following: "A judgment given by Frederick the Great in a similar case to that of the *Freethinker* would have been very appropriate here as well. When his Majesty was asked what punishment a person should undergo who (1) blasphemed God, (2) spoke disrespectfully of the king, and (3) slandered the magistrate, Frederick answered: 'His blasphemy against God shows that he does not know him. Ignorance cannot be punished. His disrespectful speech about me I pardon. But for the offence against the worthy magistrate of Berlin he shall be imprisoned for a full hour in the fortress of Spandau.' Frederick never interfered with the religious views of his subjects, as long as they obeyed the laws of the country. 'Jeder mag nach seiner eigenen Façon selig werden' ('Every one may go to heaven according to his own ways'), was his rule."

IN a recent lecture, Joseph Cook said: "When the present Emperor dies, there will come to the throne in the German Empire a man of most liberal opinions in theology. The Crown Prince is not a rationalist. I do not regard him as an opponent to Christianity; but he is married to a daughter of Queen Victoria, who thinks that any man who believes in miracles is either a hypocrite or a fool. She was a pupil of Strauss. One of the first important remarks I heard, on going to Germany nine years ago, and the sentence came from no less a man than Prof. Tholuck, was that the Crown Prince had married a woman of frivolous opinions in theology, and that great harm might ultimately come to the Empire from her being a pupil of Strauss, the author of the mythical theory. A similar opinion I met often on a recent tour to six of the foremost German cities and universities. It is, of course, not certain, but it is probable, that the new Court that will be organized after the present venerated Emperor passes away will not be so favorable to Christianity as the present Court."

THE two exhibitions which are projected for the autumn of the current year promise to be of uncommon interest and importance to the people of this city and to many others who will come from a distance to participate in or witness them. The domestic exhibition, as we may call it in distinction from the other, which is wholly concerned with foreign products and manufactures, is under the auspices of the New England Manufacturers' and Mechanics' Institute, and will be opened in the Institute Building on Wednesday, the 5th of September. The other exhibition, which is devoted exclusively to the display of foreign arts, products, and manufactures, is under the immediate management of the Foreign Exhibition Association, and has the encouragement and aid of the Massachusetts Charitable Mechanic Association, in whose building it will be opened on the 1st of September. These two exhibitions are in no sense competitors or rivals. Each has its own field, and each supplements the other. Taking the two together, we shall have something closely approximating a world's fair; and it is safe to expect permanently good results and a very considerable strengthening and extension of business interests by these exhibitions of the products of various arts and industries, and the accompanying interchange of ideas.

PLATONIZED ORTHODOXY.

The Christian Father, Augustine, who, after the apostle Paul, and even more than the apostle Paul, may be called the father of the Orthodox creed of Christendom, left among his writings this remarkable saying: "The thing itself, which is now called the Christian religion, existed among the ancients, nor was absent from the beginning of the human race until Christ came into flesh; from which time the true religion, which already was, began to be called Christian." This sentence is especially remarkable as coming from the man who is usually regarded as having established the standard of Orthodoxy for the Christian Church. For, if this assertion be true, there did not appear with Christianity, as is commonly claimed, any absolutely new revelation of religious truth, but only a new form and new name for old truths. If this sentence be true, what becomes of the central point of the Christian Orthodox creed, that, until the advent of Jesus, the world lay utterly dead in trespasses and sins, having no saving knowledge of the truth and no ability to find the truth?

St. Augustine, indeed, was a man whose religious perceptions were much broader and deeper than the creed which is traced to his teaching and has taken his name. Doubtless, the roots of all the several articles of that creed can be found in his writings. But a good deal else can be found there also; and there was not a little in his teaching that would serve greatly to soften the severe and literal interpretation of his theological dogmas. He was well versed in the learning of his time, and was largely imbued with the Greek philosophy. It is easy to see that his view of the founder of Christianity was a transcendental one. He made a distinction between Jesus and Christ. *Christus*, the Christ, he believed had always existed. The Christ was spirit,—the spirit of God, or God himself, going forth in creative manifestation. Jesus, in his view, was a manifested form of this creative spirit in the limits of finite humanity. Jesus was born, had a historical beginning within the human race: the Christ was not born,—it was in the beginning, was with God, and was God. And, in this theology, Augustine only resuscitated and applied to Christianity the doctrine of the Logos, or the creative, divine Reason, as taught by Plato, and as developed in the Neo-Platonic philosophy of later Greece and of Alexandria. Philo, the Jew, and the Old Testament apocryphal Book of Wisdom, taught the same doctrine; and, again, it appears plainly in the proem of the mystical Fourth Gospel. According to the Book of Wisdom, wisdom, which is another term for the Logos, is a creative agent. "She is the breath of the power of God. . . . And, being but one, she can do all things; . . . and in all ages, entering into holy souls, she maketh them friends of God and prophets." Augustine's view, that Christianity had always been in the world, is in entire harmony with these developments of the Platonic philosophy. He believed that, through the effluent power of the Divine Word, man had been in possession of the saving truths of genuine religion before that religion took a new form and scope and name from the advent of Jesus.

Nor was Augustine alone among the early defenders of Christianity in teaching this broad view. Justin Martyr wrote: "One article of our faith, then, is that Christ is the first begotten of God, and we have already proved him to be the very Logos (or universal Reason) of which mankind are all partakers; and, therefore, those who live according to the Logos are Christians, notwithstanding they may pass with you for atheists. Such among the Greeks were Socrates, Heraclitus, and the like." And Clement of Alexandria said: "It is clear that the same God to whom we owe the Old and New Testaments gave also to the Greeks their Greek philosophy, by which the Almighty is glorified among the Greeks."

And there are intimations not a few that it is by reversion to these broader teachings of Augustine and others of the Christian Fathers that modern Orthodoxy is going to place itself on a more liberal basis. This, at least, seems likely to be the pathway by which scholars will make the transition, though the mass of believing people will probably take a shorter cut. There are frequent references among the leaders of the new Orthodoxy to an older and more liberal Christian doctrine than that which has hardened into the so-called Augustinian creed; and if the authority of Augustine himself, by a revival of his idea of Christianity being as old as creation, can be quoted against the severer beliefs that have passed under his name, the liberal party will have gained a great advantage; for this idea puts Christianity into the line of historical evolution with other religions, and allows a common divine element in them all. To admit that "Greek philosophy" comes by the same inspiration as the Old and New Testaments, even though in a secondary degree, would be an immense step forward. Once take the ground that Christianity is of the same piece with all religious history, woven in different forms and colors, but of essentially the same principles and aspirations, and all other liberal doctrines will in due time follow. On the whole, it would be a grand thing for Orthodoxy, if it could become thoroughly Platonized by a renaissance of the doctrine of the Logos, or divine Reason, as the formative and creative principle behind the phenomena of all religions: a grand thing for *Orthodoxy*, but it would have to go further to satisfy to-day's rational philosophy.

WM. J. POTTER.

AN ANTIPHONE OF WAR-CRIES.

There is a poor little paper circulated in Great Britain called the *War Cry*. It is the organ of the Salvation Army, sold by unhealthy youth in tawdry uniforms, who are much snubbed by the police and laughed at by busy and prosaic Englishmen of the middle class. I have occasionally scrutinized some chance copy of the *War Cry*, but not with laughter; for it sounded to my ears like inarticulate voices of the stones beginning to cry out, because the traditional oracles of salvation have become dumb. But now, suddenly, the English free-thinking world learns that there is a "War Cry" on its side also, in the form of a dingy little sheet called the *Freethinker*. Its editor, printer, and publisher are now locked in prison for twelve, nine, and three months respectively. Its sub-editor has gone insane. The salvationist *War Cry* is still flourishing, coarseness in dealing with sacred things being the privilege of believers. The *Freethinker*, well advertised by its prosecution, will be hereafter edited in a refined way, blasphemy being a class privilege.

This, even literally, is the decision reached by this latest punishment for blasphemy. It is the most interesting case that has occurred for a generation. A point in favor of freedom of discussion has been scored so completely that one may suspect the *Freethinker* folk to have played for a prosecution. You may derive from carefully spread rumors that there was something obscene about the caricatures or the writings for which these men were punished. I have before me a copy of the Christmas number, containing everything that was impugned, and assure you that there is nothing in it at all liable to prosecution as an obscene libel. The prosecuting attorney, by describing the pictures as too indecent for him to describe, only meant to forestall public sympathy by insinuating a kind of indecency which he could not prove. This non-English kind of trick is the homage which persecution is compelled to pay to the popular love of liberty. The prosecution was not undertaken by the government, but by the city of London. There is reason to believe that it would not have been instituted but from the personal animosity of a public man, who, after posing for some time as a defender of the faith, suddenly fell into a financial disgrace of which the infidels naturally quoted the published particulars as evidences of the Christianity by which they were personally insulted. The case was tried on the first day of March before an old-fashioned bigot, Judge North; and nothing could be more picturesque for a law archæologist than the whole affair. Justice North has been rather an equity judge, and not quite up to all the dexterities of the common law. For you must understand that the William and Mary statute against heretical opinions is the one statute of the English code which never, in a single case, has been enforced. The provision in it that the heretic must be shown to have been educated in or professed the Christian religion was fatal to it at birth. Consequently, the old common law has had to be stretched and manipulated to punish such men as Paine and Carlyle. Well, then, when this latent prosecution began, the prisoners, Foote and Ramsay, made able speeches, showing how many eminent men in England had published atheism. Judge North then proceeded in an honest, thorough-going way to define blasphemy for the jury: "If by writing or otherwise any one denies the existence of the Deity, throwing abuse and contumely upon sacred subjects, scoffing at God, the Trinity, or the Holy Scriptures, that by law is blasphemy." This summing up was fierce against the "blasphemers," but the jury would not convict. "Bravo, jury!" shouted the crowd. The judge was furious. He would not allow the jury to give a verdict. He discharged them, saying he would try the men the next Monday with a new jury; and he refused the prisoners bail, a thing never refused even in cases of indecent assault. So zealously resolute was this judge to punish these men.

And, now, the judge had Saturday and Sunday in which to ponder this failure of the jury to convict, to pray over it, to consult high quarters about it; and, lo! when he next charged the jury, his legal definition of blasphemy had been totally revolutionized. Not a word now about the existence of God, not a word about the Trinity; but "The legal meaning of blasphemy is any contumelious reproach or profane scoffing against the Christian religion, and any act exposing the Holy Scriptures and the Christian religion to ridicule, contempt, or derision." In three days, this change of the law was secured by these prisoners, who quoted atheism from great authors, ridicule of the Trinity from Herbert Spencer and Matthew Arnold,—his Three Lord Shaftesburys!—and so drove the first jury on the horns of the dilemma that either the chief authors of their country are blasphemers or these humble men are not. It was only by virtually deciding that atheism is legal that the judge was able to secure a conviction for the scoffing style of it. But, when once he had secured a conviction for the bad taste, he punished for the heresy. So one may fairly conclude from the fact that shortly before the same judge sentenced an old offender for aggravated manslaughter to only three months' hard labor. He, therefore, knows how to be merciful when man alone is involved. In this case, there was no hard labor, because the law doesn't allow it; but the reporters reported the sentences

Digitized by Google

as with hard labor. Whether the hard labor was really added in his zeal, or only in his voice and look, I cannot say. But he told Foote he was sorry a man to whom God had given such evident intelligence should prostitute it to the service of the devil. Foote, who is a handsome, blonde, and gentlemanly young man, received sentence politely, saying only, "I thank you, my lord, it is worthy of your creed."

The new definition of blasphemy to which Foote and Ramsey compelled Judge North, and but for which he could hardly have secured the conviction on which he was evidently bent, is contrary to the highest authorities; but it anticipates the law which the government has proposed, and which will soon be the law of the land. This new code makes blasphemy consist entirely and exclusively in conveying heresies in language not decent. It provides expressly that any opinion whatever may be expressed on any religious subject whatever, if in good faith and decent language. But the way in which the prosecution has utilized the very ambiguous word "indecent," in this case, shows that hereafter blasphemy is to be the privilege of the polite and cultured classes.

Turning now to the prosecuted paper and its rude cartoons and caricatures, let me say, in conclusion, that there is a sense in which they have for me an impressive significance. In the course of near twenty years' ministry in London, I have been able to learn and observe a good deal about the free thinkers of this vast metropolis; and it would require many copies of *The Index* to contain all the facts to which I could testify of the cruelties, heartless injuries, and in some cases utter ruin, which Christians have inflicted upon young men and old for adopting heretical opinions. In many cases, clerks, apprentices, workmen, even when especially honest and laborious, have been dismissed for reading heretical books or going to a heretical lecture. They have been dismissed without "characters," and even piously pursued by rich employers admonishing their business friends against them. There are scores of able men—like Ramsey and Foote—who have been defrauded of happiness, denied all fair prospects of success, kept in poverty, trampled into the mire. The Christian Society, which gives them no share, demands their love and loyalty. The response is this ridicule and contempt heaped upon the sacred forms of Jewish and Christian mythology, in whose names they have been oppressed.

In another sense, these reckless caricatures impress me with sadness. I have studied enough to recognize in these mythologic figures flowers of sentiment and poetic visions in which the spiritual evolution of man is traceable. To the eyes of these wronged men, they are all hard, absurd idols of superstition, with no trace of meaning or humanity in any of them. So Christianity stupidly cursed the gods and goddesses of Greece, Rome, Germany, caricatured them, degraded them to hags, witches, devils. I have long believed that the free religion which is superseding Christianity would at this point especially show itself the real religion of humanity. We have already heard the spirits of the Oriental religions singing their hymns once more around its nativity; but some of us long to see its triumphal entry into the Christian Jerusalem itself, and such transformation of these very vulgarized legends and dogmas around us, till their own children see their nobler form and cry Hosanna! These wooden caricatures of the mere letter correspond to superstitious worship of the mere letter. It is a letter that kills in both directions. As long as an imperial and luxurious national establishment of irreligion continues, this dismal antiphone between the War Cry of trampled souls and the War Cry of trampled hearts threatens to go on. There seems to be little hope when men who start out as religious leaders give up in despair,—as, for example, John Morley, one of the most vigorous thinkers and writers in England. He has entered Parliament, taken the oath, and now rejoices in the punishment of these blasphemers. In one of his noble books, "God" was printed with a small "g." But, lately, some one, asking, "Who is John Morley?" was answered, "A man who spells God with a little 'g' and Gladstone with a big one." But the *mot* was not quite correct. John Morley, M.P., no sooner became a partisan of Gladstone than he became a partisan of Gladstone's god, which I for one dare not honor with a big "g" or otherwise. A pettier idol was never set up in a noble temple than that before which Gladstone kneels. That so many brilliant men, capable of effective work among the people, should shrink from grappling with the great ecclesiastical incubus of the country, and go off into politics, is the saddest sign of the time. We can only hope that, in the course of the acute struggle now going on, an evolution may take place, which shall bring us to a point where even "a guileless fool," some Parsifal, shall be able to heal the King's wound, where the clever have failed, by sheer power of the *sang réal*,—the true blood.

M. D. CONWAY.

DIGEST OF "PROGRESS AND POVERTY."

II.

Before proceeding to his central theme,—the positive portion of his work, *i.e.*, that land should be made common property,—Mr. George first clears the ground by some negative axe-work. The political economists say that the reason why the poorest classes are kept poor is "that wages are fixed by the ratio between the number of laborers and the amount of capital devoted to the employment of labor, and constantly tend to the lowest amount on which laborers will consent to live and reproduce, because the increase in the number of laborers tends, naturally, to follow and overtake any increase in capital." In other words, wages are drawn from capital, and capital limits industry. But Mr. George points out the almost self-evident truth that wages are not in reality drawn from capital, even when they are paid from it, but are the direct produce or earnings of labor. When a man has done a day's work, he himself has created the capital that pays him: there is no advance of capital, since the employer has obtained at night a certain amount of wealth from his employé. Neither are the wages of clerks, and the like, drawn from capital; but, in virtue of the social agreements and exchanges of society, the performer of any valuable service whatever is just as much creating wealth as if he were personally driving the plough, or wielding the lassoo on the pampas of South America. Hence, "if wages are drawn, not from capital, but from the produce of labor, the current theories as to the relations of labor and capital are invalid; and all remedies, whether proposed by professors of political economy or workingmen, which look to the alleviation of poverty either by the increase of capital or the restriction of the number of laborers or the efficiency of their work, must be condemned." For, if laborers create their own wages, the more of them, the better; for, with large numbers, tasks are made lighter and more profitable by co-operation and subdivision of labor.

But here we are met with the assertion of the Malthus and Mill school, that, the moment you increase the number of your laborers, nature's larder begins to be exhausted by the new demands, and the new-comers must starve. The world is overstocked, they say; and we must restrict the increase of population, if we would better the condition of the poor.

It seems to me that George disposes of the foolish bugbear of Malthusianism in a very effectual and handsome manner. How is it, he says, that, if population is always tending to overpass the limit of subsistence, we yet find the globe so thinly populated? How is it that we find so many desolate and deserted countries in the Old World, where decadence is as common as increase? Advocates of Malthusianism point to India and China, where there is so much abject poverty and so many famines, as instances of the terrible effects of overpopulation. But, as a matter of fact, the population of India is but 132 to the square mile, while Saxony, Belgium, and England have 442 to the square mile. The reason why famines occur in India is simply owing to the horrible state of social organization which for centuries has shackled industry and utterly degraded and enslaved the working classes. Again, the analogy drawn between the reproductive tendencies of man and the lower animals is of little account: the difference between him and them is that he can give play to reproductive forces more powerful than his own. A seal eats salmon. So does man. But man can artificially increase the number of salmon, while the seal cannot. Man cannot press against the limits of subsistence till the limits of the globe are reached. And these limits never will be reached, or, at least, overpassed. For, with man, when the demand for quantity is once reached, comes the demand for quality, come the more refined and more exalted desires. Man will never be so sunken in sensuality as to regard sexual pleasure as the sole aim of existence. The tendency is away from this to higher things.

No, says George: the facts show that where population is densest, there wealth is most abundant. It is so in England, it is so in Massachusetts,—countries not nearly so rich in nature's productions as tropical lands. The reason of this is that greater numbers, closer co-operation, produce greater economy of production and distribution.

What, then, is the matter? Why is it that, just in the very localities where there are most persons and greatest wealth, we find the deepest poverty? If social adjustments were all right, suffering would be impossible in such communities. But social adjustments happen to be all wrong. The owners of vast areas of land enjoy a selfish monopoly which enables them to grow fat, while poor men starve. The landlords have monopolized the natural opportunities by which all must live and from which all wealth comes.

But if the trouble does not lie in population, in the laws which govern the production of wealth, it must be found in the laws which govern the distribution of wealth. Now, wealth is distributed into rent, wages, and interest. In discussing the laws of distribution, Mr. George incidentally examines the *raison d'être* of interest, and finds it to lie in the principle of growth, or reproduction,—natural multiplication. Interest on money is right; because, if I did not lend you money, I could put it into apiculture or agriculture or stock-raising, whereby the active forces of nature would increase its value at the end of a stated period. The result of the examination of the laws of distribution is to show that all that part of the general production of wealth which exceeds what the labor and capital employed could have secured for themselves, if applied to the poorest natural agent in use, will go to the land-owners in the shape of rent; and correlated with the law of rent are the laws of wages and interest: they both depend upon land monopoly, upon the "margin of cultivation."

Digitized by Google

But what are the dynamics of the problem? What causes advance in rents? How is it that, with the increase of material progress, the accruing advantages go to the land-owner? Answer: First, increase of population, the clustering of human bee-swarms together, gives to land at the centre of the cluster enormous value, both for business purposes and for the developing of its mineral resources and other wealth. But the increasing wealth all goes to the first settlers or buyers of the land.

Second, increase of labor-saving inventions (sad to say) only tends still to increase the land-owner's rent, and to keep wages of laborers at a minimum. For is it not plain that, if the land-owner can do a part or all of his work himself by machinery, he can dispense with his laborers, and drive them to the scrawny lands that are left on the margins of the world? But this means the lowering of the wages of agricultural laborers and of all laborers. In fact, if the time should come when all labor would be saved by increase of inventions, then, if anybody else than the land-owners continued to exist, it would simply be by the kind permission of such land-owners, or for their amusement and gratification.

Third, speculation in land. I have in my former paper considered this point, and shown (after Mr. George) how in new countries rents are enormously raised by anticipatory purchase of more land than can be used by the purchaser. By withholding land from use, he increases the rent of such land as is left. It is this speculative advance in rent that is at the bottom of financial depressions. Manufactures languish, goods are unsold, money is scarce, times are hard. Why? Simply because production at some point in the social organism has been checked: there are the same desires for things as before, but there are not enough products of labor to exchange for them. Look carefully along the linked chain of society, and you will discover that the mischief has been caused by land speculation, land manias. You cannot sell your knives and ploughs and calicoes as before, because thousands of men are made into tramps, to satisfy the greed of land speculators. There is less wheat, less corn, less coal, less wool to exchange for your knives and ploughs and calicoes, simply because vast tracts of land are lying idle.

In Book VI., George discusses remedies, and finds that the current remedies are insufficient as long as the fundamental land difficulty remains.

It is cruel irony to say that increased education and habits of industry and thrift will improve to any great extent the condition of the laborer. Improvement in personal qualities always follows material progress, not precedes it. No increase of the effective power of labor can increase general wages, as long as rent swallows up all the gain. A few here and there may better their condition by superior education; but the great mass never can, as long as material opportunities are denied them. Co-operation, too, can only increase the efficiency of labor, and hence raise rent, as in the case of labor-saving inventions. And, if opportunities were equal, competition would do all that co-operation can do. Combinations of workmen are only of limited worth. There is a constant tendency to break down the walls of guilds, and lower prices again by the invasion of new hands. If agricultural laborers combine against the land-owners, they (the laborers) will starve, while the land will simply improve by lying fallow. Lastly, to redistribute the land in smaller quantities would be only to alleviate the condition of *land-owners*, and would still leave the lowest class unrelieved. Besides, there are great economies in the cultivation by machinery of large tracts of land under one management. I have now reached the point at which I took up the subject in my previous paper. For, in the remaining three books of his work, Mr. George proposes his remedy,—the making of land common property by confiscating rent in the form of taxation,—and discusses its application and effects. He shows in his elaborate and scholarly historical investigation of land tenure that always, in every land, the common right of men to the use of the land has been recognized, and that private ownership of it has always been attained by brute force (by conquest) or by cunningly working on the superstitions of men. In Book VIII., George gives a fine analysis of the canons of taxation, showing how great an improvement it would be to substitute a single tax on land for the vexatious and complicated system now in vogue. He alleviates the fears of the small householder by showing that, although the tax on his lot will increase, he will still have as firm a tenure of it as before, and will really be the gainer by the change, in that he will be released from governmental and municipal taxes on a hundred other things, while his earnings will be largely increased by the general rise of wages and the increased briskness of trade. The effect upon social organization of the destruction of unjust land monopoly would be in large measure the salvation of society, as Mr. George believes. He does not think that stimulus to exertion would be withdrawn, but only the fear of want would be abolished; and with the disappearance of the spectre of want would disappear the great majority of social crimes and miseries.

In the *Literary World* for March 10 of this year will be found a biographical sketch of Henry George, with an account of his editorial career in San Francisco and his subsequent experiences in Great Britain. "Upon his return to the United States last autumn," says the paper just mentioned, "Mr. George was greeted at the pier in New York by an immense concourse of people. Charles Francis Adams, Robert Blissert, and August Ernest addressed him in behalf of the various New York trades-unions, and numerous receptions were given in his honor. Mr. George still resides in New York, where he has many warm friends and strong adherents." W. S. KENNEDY.

SUPERNATURALISM.

I lately listened to a carefully prepared discourse on the true and the false in science, in which the speaker complained, with a passionate sadness as of a lost cause, that the scientists did not interlard their expositions with ascriptions of authorship to God,—did not make him the designing and originating cause. His sense of loyalty seemed offended; and, to his intellect also, the story of evolution was painfully incomplete without a causing mind. And he asked, with an air of triumph, whether, in the development of the eye, those lenses were intelligent,—knew they were wanted,—and forthwith "dead unconscious matter" marched up to the pigment spots that were rudimentary eyes, and became the crystalline lenses. With those already steeped in the current conceptions, the triumph was foregone; but, to the new philosophy, the question was only a revelation of the incompetence and backwardness belonging to pre-scientific thinking.

Very likely, it will seem presumptuous in a short article to attempt the refutation of a philosophy that for thousands of years has held, and still holds, the thought of the great mass of mankind; but, at the risk of being obscure by reason of the necessary brevity, I will make assault on what seems to me the central error of that discourse, being the same that lies concealed in the general intellectual attitude and implied assumptions.

First and chiefly, supernaturalism is discredited by the philosophical principle that *what nourishes, sustains, makes grow, and modifies, is identical with what originates and causes*,—a principle forming also the leading canon of logic, under the name of the Law of Parsimony, and finding as well its theistic statement in the familiar text, "In him we live," etc.

The devotee will never expand the theistic statement of the principle into a unifying philosophy. His mood regards it simply as laudatory description, magnifying the glory of his sovereign; and the difficulty in giving the principle as formulated in philosophic statement a hearty acceptance and its full force lies in the fact that the objector requires its verification by reference to structures whose compositions and processes we do not understand. Let him take, for example, a river, a thing whose controlling conditions and forces are few and simple; and it is easy to see that there is no more need for a supernatural intervention for its origination than there is for keeping it going or changing the volume or direction of its flow. The suggestion of the kindness of Providence in making the large ones run past cities is humorous and puerile, *because* we fully understand the chronological order and the nature of the processes and forces by which the final adjustment and result comes about.

The passage from "star-dust to Shakspere" is such a long one, involving so many obscure, perhaps irresolvable operations, that it affords to supernaturalism its favorite revelling ground and field for grandiose vaporing, from which it is not easily dislodged. In intellectual campaigning, we must "divide and conquer." Take some infinitesimal portion of this immense passage, and if its processes can be formulated in terms of physical causation, assimilated in thought to, and ascertained to be identical with those going on under our eyes every day, and called "natural," it is a fair inference that the reduction of other portions will yield a similar result, and that one day the entire passage may be travelled in thought with no more need of spirit or ghostly aid than the chemists, astronomers, biologists, or sociologists feel in their respective provinces. Every one of these specialists, however, if he will abandon the scientific method and allow his mind to lapse into the religious mood, and the archaic conceptions appropriate to that mood, may raise the identical questions with respect to the most simple, natural process. For example: "Does the molecule that deposits itself in the blacksmith's arm *know* it is wanted, and then the 'dead, unconscious matter' march up to its place to be the instrument for giving defter and stronger blows?" "Does the dead, unconscious molecule that goes up in the sap to form leaf and woody fibre go itself?" "Is not a spirit there to make the dead, unconscious molecule transform itself into the snow crystal?" "How can a billiard ball or a planet illustrate the composition and resolution of forces and the complex mathematics of mass motion, unless a spirit is there to attend to the business?"

Not one of these various natural processes can by the primitive mind be realized or shaped in thought, except as coming to pass by the direct manipulation of spirits. By the primitive mind, I do not mean merely some hypothetical, far off thing, but the state in which we all are with respect to every subject-matter we have not yet scientifically reduced. The conception of natural causation is a late one in mental evolution. Its expansion to all realms of human interest is the goal of civilization. The grand conquest is to surmount, to eradicate this inveterate, mental habit, so deeply seated as to be called sometimes

Digitized by Google

an "intuition of the mind," which attributes every unexplained effect to ghostly intervention. It can be overcome only by much intellectual effort, by constant familiarity with and practice of the modern intellectual method. I do not suppose any competent geometrician in the study of quantitative relations feels any sense of incompleteness in his demonstrations proceeding without reference to Deity. The chemist and the physicist find perfect intellectual repose in the careful statement of their principles and the apprehension of them as inherent, self-sufficing, and resting in the nature of things. A chemist, puzzling himself over some unexpected behavior in his elements, if the theory of ghostly interference were suggested as a possible explanation, would resent it with a just indignation as an invitation to return to the slough of alchemy. The true intellectual habit and attitude is got and held by culture and constant effort. The other is level to the rudest thinking capacity, and is that into which the best minds sometimes lapse, when by age, disease, or misfortune the nervous fibre becomes relaxed or impaired.

The primitiveness and universality of the belief in spirits is often adduced as an argument for their existence. It would be so, were there not forthcoming an adequate explanation of the origin and force of the belief. Whoever will read Spencer's chapters on the origin of primitive ideas will get what is to me a quite satisfactory *rationale* of it. Thus:—

To explain is to classify, to place alongside of something I already know. What change-producer is more well known, more powerfully pressed on the attention than mind, as shown in the voluntary actions of men and animals. It is to the rude mentality the only effect-producer. Finding it in fact, so in all the cases where his feelings, interest, and thinking are involved, it is an easy step, an inevitable step, to infer a causing mind for every effect; and, then, the phenomena (subjective) of dreams, trance, etc., and (objective) echo, chokedamp, and a thousand natural operations, give rise to the conception of mind or spirit free and apart from body.

Vignoli, in *Myth and Science*, has shown this mental operation in animals. Were the conceptions of a dog or horse put together into a coherent system of thought, it would be the philosophy known as animism.

To those unused to these lines of thought, these suggestions will seem only another among countless speculations of visionaries. To me, not untravelled on other lines, it involves a psychology, a philosophy, that has no rival in ability to bear the severe strain of the intellectual method known as scientific.

This habit of explaining by spirit intervention I hold to be the peculiarity of archaic thinking. Everywhere, fuller knowledge makes the hypothesis useless and absurd. Just so far as we have competent knowledge, the mind rests content in a naturalistic statement of the facts and processes and the conception of their self-sufficingness and necessariness, and is offended at the suggestion of their being made, unmade, or modified by will.

To the current religious philosophy, miracle is needed as proof of the divine Being and attributes. But, if there are to be two modes of administration,—two forces, one general and the other exceptional,—for my part, I prefer to hold to the general rule, and build on that; for, from Moses to Pius IX., not an instance of so-called miraculous interference is recorded that does not offend my sense of proportion as puerile, petty, and partial, and much below in dignity the operations we ascribe to natural law merely.

"Pantheism!" Well, *Theos* and all its derivatives—than which once there were not in language words more apt and powerful to conjure with—are a belated terminology. They do not stand in this discussion for any valid fact. They are a part of the magic stage of mental development. "Aquasity" is not an absurd word, considered as an abstract term covering all the properties and behaviors of water; but to affirm that it is a third something, an immaterial entity, that is "breathed into" the compound when the two gases unite, is not only gratuitous and useless, but vicious. The vice of mediæval philosophizing was the habit of deifying abstractions. It was a sort of illicit commerce between intellectual acuteness and animistic notions, by which the brood of "primordial ideas" were begotten. Plato's "types" are refined ghost conceptions, spirits raised to a power. Personification, so conspicuous in all early literature, is another mode of manifestation of the same mental method. Macbeth's pity,

> "Striding the blast, or heaven's cherubim horsed
> Upon the sightless couriers of the air,"

will long, perhaps always (more's the pity), surpass any philosophic statement, however full and accurate, of the operation of the Power that makes for righteousness as a means of emotional delight. As a vivid dramatic putting of an ethical fact, it has no equal in literature; but, if it should ever come to be taken as a divine philosophy that those coursers were in fact the celestial archetypes and spiritual ancestors from which our finest roadsters were only a degenerate progeny, and learned treatises should be written lauding their proportions and gait, all derived from tradition and the examination of supposed supernatural tracks still pointed out by travellers in the Holy Land, I should not blame the breeders, the trainers, and the veterinary surgeons, if they declined to yield up one inch of their territory to the babblers, charm they never so eloquently, of such solemn nonsense.

CLEVELAND, OHIO.

EDITORIAL NOTES.

AT a meeting of a Freethought Association in Christchurch, New Zealand, Mr. Stout, a member, read W. M. Salter's discourse, recently published in *The Index*, entitled "Do the Ethics of Jesus satisfy the Needs of To-day?"

"I HAD long interviews with Chunder Sen, which I shall not describe in detail, although perhaps I ought to do so; yet *I am so averse to unnecessary reference to my own experiences* that you will excuse me if I do not enter into this matter elaborately." —*Joseph Cook.*

THE *Sunday School Times*, in its book review column, prefaces a notice of Prof. Bruce's *The Galilean Gospel* with the remark that there has been "scarcely any theological book published in Scotland within the last two or three years but bears on it the marks of its origin in a period of theological strife."

IN England there are thirty-one bishops; and the highest salary is that of Dr. Benson, the new Archbishop of Canterbury, $75,000. The next are those of Archbishop Thomson of York and Bishop Jackson of London, each $50,000; the next is Bishop Lightfoot of Durham, $40,000; and the lowest is that of Bishop Wilkins of Truro, the see from which Dr. Benson was promoted to Canterbury. The number of livings possessed by some of the bishops is as follows: Canterbury, 185; York, 165; London, 175; Manchester, 124; Oxford, 112; St. David's, 136; Durham, 114; Lichfield, 128; Lincoln, 119; and Winchester, 111. The value of these livings for each of the dioceses named is as follows: $411,305, $260,500, $408,590, $195,550, $167,570, $163,875, $248,410, $187,380, $183,980, and $188,860.

WE have received from the Pastor and Superintendent of the Warren Street Chapel, W. G. Babcock, a copy of its Forty-seventh Annual Report. We gladly learn that this is an unsectarian church adapted to the needs of children. A church of this sort—which, we learn from this Report, has "never been retarded in efforts to do good by the traditions which have been considered indispensable to a church; which has felt that the development of the young in good health and good morals, in reverence for the infinite and the finite, was of far greater importance than imparting to them phraseologies and opinions which have no connection with the virtues and happiness of life"—is a needed institution; and we are very happy to chronicle the fact that Boston is a leader in any such movement. Among the patrons of this church, we note the names of Rev. E. E. Hale, Dr. Henry I. Bowditch, Col. Higginson, and others.

THE Concord School of Philosophy will open on Wednesday, July 18, and close on Friday, August 10. Mr. Alcott is announced, if his health will permit, for four conversations; and Dr. H. K. Jones, Prof. W. T. Harris, F. B. Sanborn, G. H. Howison, and Rev. Dr. R. A. Holland for four lectures each. Dr. Jones will lecture on "The Platonic Philosophy"; Mr. Sanborn, on "The History of Philosophy in America"; Prof. Howison, on "Hume and Kant Philosophy." Twelve other lectures or readings will be given by the following persons: Rev. Dr. C. A. Bartol, Miss Elizabeth P. Peabody, President Noah Porter of Yale, Mrs. Julia Ward Howe, John Albee, Mrs. Ednah D. Cheney, George P. Lathrop, Rowland G. Hazard, President James McCosh of Princeton, Rev. Dr. J. S. Kidney, President J. H. Seelye of Amherst, David A. Wasson, L. J. Block. Denton J. Snider, of St. Louis, will give four lectures on "Homer and the Greek Religion." A new feature of the school will be classes formed for private study in philosophy.

AN aged man, in feeble health and poor circumstances, writes us that he would like to sell his thirteen volumes of *The Index* (to which he has been a subscriber from the beginning) for a moderate price. Of these thirteen volumes, only five, the second, seventh, ninth, tenth, and thirteenth, are *complete*, although only twenty-six numbers are missing from the whole. *The Index* office has no room on its shelves for these back volumes, nor any use, as we have many of the same sort now on hand. But, thinking that there may be among our subscribers some one or more who would like to obtain these volumes and at the same time do a kindly act, we take this opportunity to tell such persons that they can obtain the address of the party referred to by addressing this office. From the fund supplied by several generous patrons of this paper for such purposes, *The Index* will be sent free to our aged subscriber; and we hope his *Index* volumes will find some kind-hearted purchaser. In this connection, we wish also to say that if any one has a complete set of volumes one and four, we will find a buyer for them, if not too dear.

THE religious press of this country shows a decided advance in liberal sentiment in its expression of opinion in regard to the recent trial and sentence for blasphemy of the editor and publisher of the English *Freethinker*, and the threatened arrest of Huxley, Tyndall, and others for the same offence. The *Congregationalist* says:—

This society could not do a more foolish thing. That its criticism upon the works in question has

Digitized by Google

some force is true; but, even if it could prove that these authors had intended to teach unbelief and atheism, as such, which may not be easy in every case, and had violated law in so doing, it could not direct world-wide attention to these gentlemen and their books in any other way so effectively. If it really desire to diminish their influence, it should not force them into the position of martyrs. Doubtless, they would be more amused than annoyed by such a prosecution, and would welcome such an advertisement; while the only probable result to the society is the ridiculous failure of its action. We have no sympathy with infidelity or atheism, but we do not like to see professed Christians recklessly defy the dictates of common sense.

The *Presbyterian* remarks:—

We judge the movement to be a very unwise one. The unbelief disseminated is a sad thing, but it can be met only by a higher science and a wider scattering of evangelic truth.

And the *Independent* says:—

It is true that by the common law blasphemy is a crime, yet it may be well doubted whether its enforcement is of any service to society or the interest of Christianity. Religion can get along without this law quite as well as with it.

FREE RELIGIOUS ASSOCIATION FESTIVAL.

Our readers will be pleased to learn that Col. Higginson has consented to preside, and Miss Garlin's admirable Euterpe Quartette to sing, at the Festival of the Free Religious Association of Anniversary Week. The Festival this year is to be held in the large Horticultural Hall, and will consist of a sit-down supper, beginning at about six o'clock, and brief speeches from speakers whose names will be hereafter announced.

Tickets of admission, with reserved seats at the tables, at fifty cents each, may now be procured at *The Index* office, 3 Tremont Place, Boston; of the Secretary, F. A. Hinckley, Providence, R.I.; of A. G. Hill, Esq., Florence, Mass.

As it is designed to press the sale of tickets at once, it is hoped that all friends proposing to attend the Festival will make early application for seats.

F. A. H.

POETRY.

For *The Index*.

THE SOPHIST.

If thou hast no truth to tell,
And thy tongue hath borne no spell
From thy heart,
Why hast raised thy voice, or why
Dost thou lure the hungry eye
With false art?

Out upon the seas are spread
Pennants burnt a sunny red,
And proud sail:
Ah! canst thou with love depart
From the tempting of the mart
To the gale?

What art thou, if not for this?
Make the tempest's blow a kiss
Of reprieve!
Thou wert born of bravest stress,
And wert given much,—and less
Darest not give!

HORACE L. TRAUBEL.

INFIDELITY.

Who is the infidel, but he who fears
To face the utmost truth, whate'er it be!
Dreads God the light? and is his Majesty
A shadow that in sunshine disappears?
Or leads he on the swift-ascending years
Into a light where men may plainer see?
He trusts him best, to whom the mystery
Hides nothing dangerous; who ever hears

With faith unshaken his new-uttered voice,
And knows it cannot contradict the truth
It in the old time spoke. Whate'er it saith
He fears not then, but bids his heart rejoice,
In old age trustful as he was in youth.
This only, though called infidel, is faith.

—*From "Poems," by M. J. Savage.*

The Index.

BOSTON, APRIL 5, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

Practical Deductions from the Religion of Humanity.

BY WILLIAM FREY.

(*Concluded.*)

In the preceding pages, it was shown that the Religion of Humanity is vitally connected with progress, tolerance, and science; and, although it does not guarantee an immediate cure of all evils, it can never be used as a shield for oppression or dishonesty. We know that this religion is able to stimulate man's energy in improving life here on earth, and thus unites secularism with religious aspiration and enthusiasm. We know what a clear light is thrown by this religion on the most important political and social questions and to what great changes it will lead us.

Now, to complete our exposition of the Religion of Humanity, we must show how it affects the private conduct of men. We must dwell, therefore, at some length on those cardinal principles which guide man through the intricate complexity of life and give him a key for the solution of the most difficult problems. In conclusion, we will sketch the changes in private life which unavoidably follow the acceptance of the Religion of Humanity.

Duties vs. Rights.

People generally suppose that progress is impossible, unless everybody is ready to defend his right or to clamor for new ones; that there must exist a constant strife and jealousy between the different classes of society.

But a clear understanding of humanity as a living Being teaches us that the strife between the parts is not desirable; that each individual's life, work, aspirations, and knowledge, exist only by and with the assistance of humanity; that he is under eternal obligations to the Supreme Being, and consequently has no claim on any thing, no rights whatever. "Man has only one right," said Auguste Comte,—"a right to do his manifold duties." To the superficial listener, these words seem to be harsh and shocking; but they are full of good and great meaning. If everybody will do his duties toward humanity, everybody will have all natural and necessary conditions for a good and useful life. The clamor of Liberals for rights, and the stress of Positivists on duties, have the same end in view; but they differ radically as to the ways of reaching this end. The claim for rights presupposes a mutual suspicion of usurpation, it excites hate and blood-thirstiness, it makes men to expect the reforms from somebody else, while the performance of duties is but a rational interpretation of Christ's words, "Physician, heal thyself." It pacifies the discontented by reminding them that the cause of evil is within ourselves, and that the welfare of society is chiefly attainable, not by the reforms from outside, but by

Self-improvement.

Here, we touch the most neglected question of ethics. At present, the estimation of a man is based on his behavior toward others, and not at all on his actions toward himself. A drunkard, for instance, is punished when he quarrels or makes disturbances; but the drinking itself, when it does not lead directly to injury of others, is regarded as one of the inalienable rights of each man. Public opinion is indifferent in regard to self-injury. We see that in the eagerness with which people struggle for the high living of the rich, with its gluttony and indolence. Nobody seems to care much that dyspepsia and gout are natural results of such a life, that champagne drank by our *élite* saps their life and degrades them just as much as the whiskey or beer drank by the common laborer. The most glaring illustration of our one-sided morality comes from the comparison of our cruelty toward criminals, who injure others, with our leniency and kindness toward the sick, who injure themselves. It is out of place to discuss which of the two courses is most proper, whether we shall treat the sick harshly or the criminal with more tenderness. The inconsistency is pointed only to show that, although both sufferers transgress the laws of nature, and both alike injure humanity, people do not tolerate injury inflicted on others, while self-injury is regarded as a permissible, almost legitimate, act. And it could not be otherwise in our age of loose morality and individualism. As long as man regards himself as a lord of creation, his actions are supposed to be dictated by the higher agency which is known to him; *i.e.*, by his own understanding of right and wrong. When this understanding, biassed by evil propensities, leads him to the injury of self and his family, people tacitly acknowledge his right to do so, and stringent laws forbid a scrutiny or criticism of his private and domestic life.

Under such circumstances, men's activities are very seldom directed toward self-improvement. Whenever our lord of creation desires to do some good work, he necessarily thinks of saving and teaching others. Hence, the undue regard to the professional men as our supposed benefactors. Hence, so many hypocrites, so many self-appointed saviors, and so few good results of their work.

But he who is moved by the religious feelings knows that he has no more right to shorten his own life or to waste it in idleness than he has to shorten and waste the lives of others. Physical, intellectual, and moral improvement of self becomes, therefore, a most prominent trait of morality, and is obligatory on all; because only a few men can stir and improve others, while every one may improve himself, and thus speed the great work of improving humanity.

The humanitarian knows that he has no right to be sick, and that the preservation of health is his most sacred duty. The distinction between public and private life will also lose its foundation. The argument that society may oppress and uniformize the private life has some excuse now, while so many claim to possess the absolute truth, and force others to accept it. But such a fear will vanish with the spread of new morality based on science and tolerance, and the cry of inviolability and sacredness of domestic life will be upheld only by hypocrites wishing to protect themselves from the exposure. For a true and honest man, the domestic life is no more sacred than the public one; and this sacredness, instead of being an excuse for concealment, is rather a pretext for exposure,—especially when the exposure does not curtail his freedom to act out his principles. Under the influence of the Religion of Humanity, public opinion will tolerate any opinion; but it will require from every public teacher consistency. The moral fitness of a man will be considered of more importance than his intellectual and oratorical achievements. All brazen-faced saviors who teach what they do not practise will be banished, the public rostrum be left only for men of unblemished character and clear conscience, while the majority of men will turn their energies to a more difficult and important task,—that of improving themselves.

But where is the motive for self-improvement? may ask one who denies the freedom of will, and regards himself as a fatal product of society.

Digitized by Google

This question leads us to consider a bitter contest between

Fatalistic and Free-will Theories.

Many teachers of morality are not able yet to recognize humanity as a living Being. They are afraid that the loss of personal responsibility involves the loss of the last restraint on our evil propensities; and, consequently, they adhere to the free-will theory in plain contradiction to crushing arrays of statistical facts.

Let us show now, with the help of humanity as organized being, how groundless is the fear of such teachers.

The transgression, or ignorance, of the laws of nature, is the cause of disease in social organisms; and, as a diseased individual is forced to throw off the morbid matter in commotion and sufferings, so a diseased society is throwing off constantly its morbid matter in shape of criminals. The penalty paid by each society depends on the degree of its transgressions, which, in turn, depends on the physical, mental, and moral development of the average man of the society. But as the latter is changing, almost imperceptibly, with every year, no wonder that the former is displayed with such a surprising regularity in the yearly contribution of death and crime. True, we all are conscious of free will, of a possibility to improve or to degrade ourselves; but this freedom, like the molecular motion of organic cells, may be displayed within very narrow limits; and this conscious feeling of free-will is under the control of the unconscious, but far more potent activity of the whole organism. Thus, by viewing individuals as cells of another, higher organism, we can reconcile and explain the co-existence of free-will with the stern, fatalistic character of the facts displayed by the social organism as a whole.

The yearly penalty imposed on each transgressing social organism will diminish gradually under the influence of growing and improving humanity; but neither the recognition of fatalism nor the assurance of progress can check man's energy in working for the good of humanity, because

Morality is based on the Instinct of Self-preservation endowed by Humanity.

No matter whether man has a free will or not, he is a cell of a social organism which, like all other organisms, is governed by the unconscious but powerful instinct of self-preservation.

This instinct compels every cell to work for the good of the whole,—work all the time, under all circumstances, and, in time of disease, to work still more energetically than in time of health. And this instinct so intensifies our conduct and so forcibly imposes on us our duties that all side-issues and all the sophistry of metaphysicians are insignificant in comparison with the great impetus given to us by the silent and supreme law of nature.

The same clear and comprehensive position is acquired, when we apply the positive conception of humanity as the test of the relative value of the

Existing Schools of Ethics.

The pursuit of our personal happiness is the only motive for action, says one school.

The happiness of others must guide us in our life, says the other.

We must perform the duties imposed on us from within, says the third.

Each school proves its superiority over the others with equally heavy and sensible arguments. In each of them there is a great deal of truth. But each excludes the others.

The enlightened Egoism, Altruism, and Duty represent a discordant trio, which can not be harmonized by any means, as long as we refer everything to the feelings of individual man. And, what is worse, each of the systems has weak points. Touch them, and the otherwise splendid structure will fall to pieces.

What shall guide me, if my egoism is not enlightened enough, and I injure myself and others? I may ask. The great majority of men, and no utilitarian, can answer this question, because the inquirers need something to guide them before they attain a required degree of enlightenment.

Why must I care for the happiness of others, if others do not care for my happiness? may ask one of the outcasts of society, and put to shame the theory of altruism.

Where are the proofs that the sense of duty is interpreted alike by all men? Who imposed that duty on me? Why cannot I discard it, if my propensities are not in accordance with it? And the most ardent follower of Emmanuel Kant's intuition of duty and moral law is not able to answer these questions to the satisfaction of the inquirer.

Now, let us refer these difficulties to the Supreme Being, neglected or unknown to the advocates of these various ethical schools, and the answer is ready. Each individual as a mere cell of the whole organism must be subject to the same law which governs every organic life. This law says that, as parts of any organism must live for the benefit of the whole, so we must perform our duties in building up humanity, in transferring and increasing the experiences of the past for the benefit of the future. This law implies that each man must live for the good of all; *i.e.*, mostly for others, paying attention to himself only as to one cell amid the millions of others.

This is the stern but unavoidable commandment of humanity. It is based on the laws of organic growth. Woe to those who transgress it! Sweet reward is waiting those who act in accordance with it, because every conformity with the laws of nature must necessarily produce a pleasurable sensation; and, the more fully man conforms himself to this commandment, the more intense will be his personal happiness.

The ethics revealed by humanity points most emphatically and foremost of all to our *duties*, then it explains that these duties consist chiefly in *altruism*, and at the end promises to satisfy our *egoistic desire of happiness*. Thus, the trio, discordant before, blends now harmoniously together in one victorious hymn of humanity.

Positive Ethics vs. Individualism.

Positive ethics is not based on self-sacrifice. It does not require from every man to be a hero or martyr: it promises him a personal happiness, only (please, mark this) it completely reverses the course commonly pursued in our age of individualism.

The prevailing ethics of to-day teaches that personal happiness is a gratification of personal wants and desires: it leaves the individuals to determine what these wants and desires must be. The Positive ethics emphatically says that only in living for future, for others, in self-improvement, in reducing self-gratification to a minimum necessary for healthy and vigorous life, can men find a true, deep, genuine happiness.

Many honest and good individualists regard personal happiness as the chief motor of human activities: they believe that the rational satisfaction of personal happiness will necessarily lead toward the realization of general happiness. Positive ethics takes the opposite view. It bases itself on the comparative strength of our attachment to family, country, and humanity (about which allusion was made in the preceding article) and says conclusively that the fulfilment of our duties to humanity is our strongest and chief motor, that the happiness of others and our own happiness will come as the necessary result of the improvement of the whole.

The difference between the two theories is much deeper than it may seem to a superficial observer. The acceptance of one or another philosophy of life will greatly affect the human conduct.

Individualism draws the attention of man to the satisfaction of his personal desires: hence, it abates or destroys the impulse of self-sacrifice. Besides, a great majority of men, being neither good nor wise enough, naturally interpret their desires in a narrow, selfish way, and, as may be proven by millions of facts, constantly injure others instead of benefiting them. While Positive ethics teaches man to work for the welfare of humanity, regardless of the immediate sufferings which he may experience in performing his duties, it gives him only the assurance that, in the long run, his conduct will be beneficial, if not for himself, then for others.

The effect of these two theories on human conduct may be well illustrated by the example of two contesting armies on the eve of a decisive battle. Let us suppose that both armies are equally strong, equally valiant, and have equal confidence in the words of their chiefs. One of them would say: "Soldiers, you know what carnage will befall you, if defeated. If you wish to save yourselves, you must be victorious. To be victorious, you must boldly face any danger in the coming battle." The other would say: "Soldiers, do your duty even in the face of terrible danger. Some of us must necessarily perish; but the death of the few will secure the victory for others, and will save them from the disgrace and slaughter which follows defeat."

Soldiers of one army derive their duties from the instinct of self-preservation; while others do their duty, having in view the preservation and welfare of the whole army. And there is no doubt that, in the ensuing combat, the former, being less inclined to self-sacrifice, will be defeated with heavy loss, while the latter, who care the least for personal safety, will, in the end, preserve their lives much better than those who think so much of self-preservation.

Many admit that confusion and errors are necessarily connected with the theory of personal happiness; but they believe that, in the long run, this theory will lead men to the same result,—*i.e.*, will force them to live for others.

But how much useless friction and strife must precede such an end? How many will succumb under the burden of the merciless strife of every one against all?

Imagine a band of men chained together by invisible but indestructible chains; imagine that, under the influence of their teachers, they all believe in personal independence. They are assured that, to realize general happiness, each one must pursue his own course of action regardless of the course of others. But the chains, although invisible and unrecognized, will prevent a divergency. With every attempt to rush into divergent directions, they inflict pain on the erring ones; and when the people, frantic with suffering apply to the leaders for advice, they hear the same wise explanation: that the increase of miseries is the result of incomplete freedom; that, to cure the existing evils, they must increase their energy and perseverance in attaining personal independence. And so, the crowd, instigated by the teachers, redouble their efforts in the vain attempt, only to be met with redoubled penalty.

Imagine all this, and you will have a fair representation of society working under the influence of individualism. Think of the amount of dead weight which must be pulled forward by the few, amid the confusion and conflicts of many, and you will easily understand the cause of the slow progress made at present.

True, the suffering and slow progress may eventually teach some of these unfortunates that freedom is possible within a small compass, that every strong pull must necessarily inflict pain on others, and that pain of others will reflect back on those who produced it. But the majority of people will never arrive at such conclusion; and great miseries must befall all, in order to teach a few selected ones!

What a benefactor is he who reveals to all the secret of their agony, who opens their eyes and shows the chains which bind them forever!

Humanity is such a benefactor for us.

It teaches us that we are chained into one organism, and explains to all why the injury brought to one cell of the living organism must reflect on other cells.

Humanity does not possess absolute truth, and consequently cannot enforce a uniform and steady movement; but it sums up the previous experiences of mankind, and reveals to all that we must be convergent as much as possible; that amity, not enmity, must prevail between us; that personal happiness consists in serving others; that each of us, whether at the head of the column or in its rear, must do his duty in assisting a general movement, even if this duty conflicts with the personal inclinations; that the same spirit which animates the soldiers of a victorious army must animate the soldiers of humanity, if they wish a speedy and glorious victory.

That the sense of duty must predominate over the considerations of personal happiness may be conclusively proven by the following arguments.

Societies are the only organisms in which cells are endowed with the desire of personal happiness. But social organisms are but a part of the great organic kingdom; and consequently over and above the law of personal happiness, which is applicable only to the cells of social organisms, there must exist a higher, a more general law, applicable to all organisms, to all cells (both conscious and unconscious). But the highest and most general law is that life of the parts must be subservient to the life of the whole. Hence, the true personal happiness of conscious cells must be a corollary of this general law; and, in the case of conflict between the personal happiness and the hap-

Digitized by Google

piness of the whole, the latter must overrule the former.

This biological proof must be accepted by all who recognize humanity as a living organism, and, taken together with the preceding arguments, may convince every unbiassed man that individualism, even fortified by the authority of Herbert Spencer, is a false theory and a source of unspeakable misery. Men influenced by individualism are doomed to work from the wrong end. Instead of attaining personal happiness, they inflict pain on others and on themselves; and the more they persist in their course, the more they get entangled in the meshes of their sophistry. Let us hope that the rising religion of humanity will soon dispel the surrounding darkness, and will show them a true way to happiness.

But we must stop here. To speak of Positive ethics in all its bearings would require volumes. To comprehend fully its wide scope and its great influence on individuals and societies would require years of thought and contemplation.

Let those who feel themselves interested in this subject read, for further inquiries, the works of Auguste Comte and many valuable popularizations of his ideas in the numerous pamphlets issued by American, English, and French Positivists.

The only point which remains to be elicited here comes through the inquiry of many good and truth-loving men who heartily acquiesce in all deductions from the Religion of Humanity, but doubt as to the possibility of impressing this religion on the minds of others.

We are fully aware that a mere intellectual exposition does not amount to anything, as long as the emotional nature of man remains unmoved. The slow growth of the Religion of Humanity and the limited number of its adherents must be accounted for chiefly by the exclusive use of argumentation. This religion, like all others, must affect the heart first and the head afterward; but the obstacles in the way are not so great as people usually suppose.

The religious sentiment which was fed and strengthened during thousands of generations is transmitted to us in its full vigor. Some inherit it to a greater extent than others, but persons deprived of it are as few as those who are deprived of intellect. If a few cases of idiocy does not prevent us from saying that man is an intellectual being, so the existence of a few persons incapable of religious enthusiasm does not prevent us from saying that man is a religious being. But as intelleet (no matter how strongly inherited) may remain dormant or perverted for the lack of proper exercise, so the religious feelings become sometimes dormant or perverted from the lack of proper food. This is particularly true in our age of indifferentism and selfishness, when the majority of intellectual people reject the guidance of the old revealed beliefs, but do not attach themselves to a better religious conception. The question is how to arouse the dormant religious sentiment, when people cease to recognize its utility.

Let us see how it was revived in the time of early Christianity, when the Romans, abandoning old beliefs in polytheism, laughed at their gods and derided religion exactly in the same way as our Liberals do. The Romans of that time were moved by the same desire of personal enjoyment as that which characterizes our age. They indulged in the same amassing of wealth, and suffered from the same despotism and despair. The lack of higher and nobler motives was manifested in the same fearful increase of immorality and suicides.

At that gloomy and dreary time there existed a few scattered communities of Christians. Gathered from the low, ignorant classes of society, having denounced conspiracies and revolution, they relied themselves solely on the moral force of religion. The conservatives instinctively dreaded such a curious people, and bitterly persecuted them; but, in spite of the persecution, the number of Christians was rapidly increasing and a despised sect became a power in the world. Barbarians, strong enough to break the mighty Roman Empire, stood as helpless children before the moral power represented by the New Church. They recognized its spiritual head as their "papa," and meekly obeyed his commands.

Evidently, the causes which prepared this final triumph were working during a long period; and, to ascertain them, we must study the life of Christians not at the time when they were triumphant and degraded by the great influx of barbarians and high classes, but at the time when they had their meetings in hecatombs, when they were torn to pieces by wild animals.

At that time, they did not achieve much by the intellectual exposition of Christian doctrines. Noble and grand were these doctrines in comparison with polytheism, but they could not favorably impress even intellectual classes. Plinius, after hearing all that could be said in defence of Christianity, preferred to remain an infidel scientist. Only those became converted who had occasion to live with Christians or to witness the purity and benevolence of their lives. The moral and spiritual enjoyment which sprung from the communal and brotherly life of the first Christians was especially attractive in that gloomy time of egoism and self-gratification. The beauty of the new Life had conquered the hearts of the most forlorn ones, and made them ready to accept and confess the doctrines of the New Religion, in spite of social ostracism or deadly persecution. "See how these Christians love each other!" was spoken from one end of the Roman Empire to the other; and with this love they conquered the world.

Does our time differ much from that of early Christianity? Do we not feel the same lack of spiritual impetus in our dull life? Do we see many instances of true love and real brotherhood? Does not the example of Christian communities teach us how to revive the dormant religious sentiment?

Mere teaching, or a mere appeal to our better nature, is of little avail. It affects us no more than the teaching of Stoics and their individual examples affected the ancient Roman. To move society, we must use a more powerful agency,—the example of collective life. This assertion is verified by the vivid interest paid to any group of men and women which has succeeded in realizing a true brotherly life. A few communities existing now in the United States attract the attention of our best thinkers. Every visitor admits the charming influence of their simple, unpretentious living. Sometimes, men of good situation and great wealth give away their hundreds of thousands of dollars, and gladly exchange their comfortable but miserable life of isolation for the plain but happy life in a community. Only the sectarianism and narrow Christianity of these communists prevent them from becoming the spiritual leaders in the approaching moral revolution.

Many Liberals get tired of merely destructive work. Influenced by the example of Christians, they also are trying to realize a collective life based on justice and brotherhood. As a general rule, they are earnest, intelligent, honest, and energetic. They have sometimes good leaders (enough, to mention Robert Owen) and all chances for material success; and yet all their constructive attempts invariably fail, bringing only discredit on their teaching, strengthening the opinion that men are not ready for a better life.

But why were men ready for such a life eighteen hundred years ago? Why are some Christians of today ready for it?

Not because the Liberals are worse than Christians, but because there is no cohesive power in their theory of individual sovereignty. Liberals intend to build a better life with the same material which makes our present life rotten to the core. They are anxious to preserve the same looseness of actions, the same bitterness in the contest of opinions, the same denunciation of any authority outside of the big I. Their model was not in a harmonious Home, but in a noisy, intriguing Parliament. And "a house divided against itself cannot stand."

Many of the constructive Liberals get discouraged by these continuous failures, and have lost faith in the possibility of building something better. But, if we recall to our mind the success of Christians, we will easily find that the cause of failure is not with men, but with their principles.

The example of Christians teaches us that, in building a successful community, men must agree not only in the ends to be accomplished, but in the methods and details in approaching the desired end. They must co-operate not so much for the producing material wealth, but for the increase and improvement of their moral wealth. And, above all, they must have a religious devotion to something superior to individual man, whose rules and laws may guide them in all relations of life, whose imperative commandments may curb the individual propensities in time of trial and temptations, and force every one to act in accord with others.

That the religious element is of more importance than all others combined is seen from the fact that religious people always succeed in the realization of a genuine brotherly life, no matter how obsolete may be their dogmas, how poor their intellect. History abounds with the examples of communal life among the devotees of all religions. We fail to see such examples only among the Liberals!

This proves conclusively that no amount of intellect is sufficient for the realization of social reforms, if unaided by religion.

And, now,—when Positivism ends the unnatural separation of Religion and Intellect, when it is possible to combine a genuine religious enthusiasm with obedience and respect to Science,—on Positivists lays the duty to continue the social and moral reconstruction of society, so unfortunately begun by the individualists.

Positivists have already begun to group together. They form societies for mutual instruction and for the better organization of their missionary and charitable work. The impulse which gathers together the adepts of any new religion is very strong. There is an unspeakable loathing to live in isolation or to be surrounded by persons of another standard of morality. A truly religious man will inevitably seek a companionship with his co-religionists; and history abounds with the examples of religious associations started at first as a partial union, but finally evolved into communism as the only form of living fully consistent with the commandments of any religion.

And when any group of humanitarians will reach an agreement on those questions of life which are not fully decided by science, when the completeness of their spiritual union will evolve the union of property, then humanitarians must boldly accept the only issue left for them; and, as true reformers, they must show by the example of their own life the glory and manifold blessings of the Religion of Humanity.

Without such co-operative efforts, Positivists can hardly attract the attention of our busy world to the rise of the Religion of Humanity. Of course, every Positivist knows that he can do some good, even in isolation; but he knows also how infinitesimally small is the effect of one drop of sweet water in the ocean of bitter selfishness, how weak and unsatisfactory is the work of a single-handed man, unaided by others. But, once these isolated men will combine together, they become a tremendous power. The example of their collective life will stir the world. The increase of their means will help them to enlarge their charities and to carry out their missionary work with a prestige utterly unknown to our age of sermon-balking, because the truth of each word will be verified by the practical examples.

Humanitarians have already every chance for success. None of the evils which ruined the previous attempts of individualists is sanctioned by the Religion of Humanity. The tendency of this religion is to abate proud individualism, to bow before the Supreme Being, to seek moral improvement in co-operation with others, to disclaim private ownership of property, to regard work as a religious duty for all. And communal life, which is a burden and a scare for individualists, becomes an easy task for truly religious men. For them, community is not only a family, supplying its members with the means of subsistence, but a church, rewarding the faithful with innumerable spiritual blessings. Truly says Carlyle: "Religion is a social thing. Without a church there can be little or no religion. The action of mind on mind is mystical, infinite. Religious worship can hardly (perhaps not at all) support itself without this aid. I have strange glimpses of the power of spiritual union, of association among men of like object. Therein lies the true elements of religion. All wondrous things, as the foundation of Christianity, take their rise there. Men work godlike miracles thereby."

The elevating influence of the Religion of Humanity will be fully ascertained only by those who will unite themselves in the name of religion *for better and for worse*. Collective worship in a community, assisted with art, music, and singing, will arouse the religious feelings to a degree unknown to isolated families. A mysterious psychic force, which increases its influence with the increase of worshippers, will charge every individual with goodness, and enable him to carry out the ordinary duties of life with cheerfulness and benevolence unknown to individualists. He who has once experienced the softening and purifying influence of such worship is already

Digitized by Google

convinced that religion is a necessity for the successful realization of any radical reform of life.

The moral improvement of men will be closely followed by their material success. And the example of communal life, in which there is neither poor nor rich, which relieves women from the drudgery of isolated housekeeping, which improves the education of children and elevates the standard of health for all its members,—the example of such life will give an additional power to the successful propaganda of the new religion.

Humanitarians, having no consolation in the reward in future life, cannot be contented with the secluded life led by Christian communities. They will seek to complete their happiness by working for the good of all while here on earth. They will keep their doors wide open for every one who is willing to live for humanity. And the number of converts to the Religion of Humanity—a number so limited now, when its missionaries work separately—will, under these combined efforts, increase yearly.

Let nobody suppose that all these results will come from the efforts of one community, and that this community will swallow the whole world and reduce life to the uniformity so detestable to any lover of progress. No: as long as there are differences of opinion, each type of life will be represented by a separate community. Communities, like families, may be harmonious and happy only when, in addition to the sympathy and love between its members, there is an agreement on all important questions of life. And the increase of converts to the Religion of Humanity will show itself not so much in the enlargement of the pioneer communities as in the formation of the new ones.

These different communities, if close to each other, may combine themselves for religious, educational, and even industrial purposes; but home must exist only for those who are unanimous in their conceptions of true, healthy, and useful life. Every one will be free to enter one or another such community, and to lend his hand and heart for the realization of the type which he regards as the best. And, beyond the moral co-operation and mutual help which must necessarily exist within each community, there will arise another still larger co-operation between the various communities, because all of them will help each other in discovery of the laws of nature governing the physical, mental, and moral development of man.

The spirit of tolerance, as advocated by the Religion of Humanity, will bring its best fruits with the growth of this new form of life. Each community will prove the relative value of its life by the physical, mental, and moral perfection of its members. The facts which are impossible to ascertain in the present mode of living will be then open for investigation and comparison, because each type of life realized in the combined life of each community will show its benefits as well as wrongs with surprising clearness.

Thus, experience will greatly help science in diminishing the number of conflicting opinions; and the welfare of mankind will reach a height inconceivable by our poor minds, blunted now by self-conceit and intolerance.

We fully realize that communal life is possible now as a rare exception. But the very fact of its rarity speaks in its favor. Prof. Adler says:—

"Phidias did not need to leave the mark of his chisel on every stone in all the quarries of Athens. He did but need a few stones for that glorious frieze of the Parthenon that has made his name immortal. Yet these few stones he fashioned into such exquisite shapes, into such types of perfect form, that they have been the delight of the human race for thousands of years, and from generation to generation have enhanced and refined their idea of beauty. They are still a joy to those whom fate has favored to see them. And this is what we aspire to achieve with respect to the good: not to change the whole world,—we know very well that all souls are not yet ready for the fulness of the message of freedom,—but to show, in the case of a few souls, what love is possible, what self-restraint, what self-sacrifice is possible; to show in small societies the type of a social perfection, which will one day be realized among all mankind when the glad time of fulfilment shall arrive, when the utmost liberty of each shall be joined with the utmost service to the good of all. To found such an ethical union is the dream of my life. To found such ethical unions the world over, that are to be our outposts of righteousness in the dominion of darkness, shall be the life's work of the teachers of our gospel, the gospel of pure humanity." (Speech before the Free Religious Association in 1879.)

Every Positivist true to his principles and religion must heartily accord with such noble, soul-stirring words.

Even a few communities may accomplish a great work. Their example will help more than thousands of volumes in conquering demagogism and the revolutionary spirit of the present time. They will prove experimentally how much can be accomplished by reforms from within, what a power there is in love. They will create their own literature, art, and industry, and their press and missionaries will attract public opinion much sooner than is usually supposed by the impatient reformers.

Christianity became triumphant in five hundred years. In our fast living age of steam and electricity, the Religion of Humanity will sway the corrupted civilization in much a shorter period. The time is near when the oppression and misery resulting from individualism will reach its culmination; when people, tired of hate, covered with human blood, exhausted in the terrible slaughter, will discover the folly of revolutionists, and will turn *en masse* to those who succeed in realizing a better life by peaceful means. The disdain which is lavishly given now to the missionaries of peace and love will be changed then into admiration. The Religion of Humanity will become as fashionable at that time as it is ridiculed at present. And history will repeat the same scenes which occurred in the fourth and fifth centuries.

Let Positivists take the hint, and organize themselves. Let them show to the world the wonderful power hidden in co-operations for moral purposes. The sooner they prove the possibilities of a better life, higher morality, purer industry, the sooner will come to an end the dreadful period of anarchy and selfishness.

Frederick Harrison calls the nineteenth century a century of expectations. The world is tired of theories, and is waiting for the practical solution of this "problem of the problems of our age." Concourse is open to all, but the prize will be awarded to the men of energy and perseverance who shall best succeed in the realization of their theories.

The selfish console themselves that the world is not ready for a change. The energetic and devout must work to make it ready. Besides, who can prove that the field is not ripe even now, and that the golden grain is wasted only for the lack of harvesters?

CORRESPONDENCE.

NEGLECTED THINGS.

Editors of The Index:—

It seems to me a small age since I promised to resume writing for *The Index*. While I was in your country, I had it in my mind to do it daily; but, alas! I never had it on my pen. It came to pass that I was far more interested in America on my second visit than on my first. Coming to the country for the first time, I saw things which astonished me. The second time, I saw persons whom I knew and learned to like; and, when I came to leave, there were many from whom I parted with real pain. It will be a pleasant day to me, if opportunity, or duty, or fortune, or Providence (I cannot say that I know exactly what or who does regulate human affairs) shall bring me again to your enchanting shores and more enchanting society. I seem now to know all about Providence, where I met Mr. Hinckley; and New Bedford, where I met Mr. Potter; and Florence, where I met Mr. Hill, Mr. Spencer, Mrs. Spencer, and the Treasurer of the Cosmian Hall, whom I do not forget, but whom I thus describe, because I cannot for the moment recall his name. Then, there is Mr. Eddy, at Providence, in whose house I spent pleasant days; and Mr. Weeden, a famous student of association, whom I ought to have mentioned some sentences back. The first day I came to Boston, I had the pleasure to see Mr. Abbot. Nor do I forget the many courtesies I received from the Rev. Edward Everett Hale, whose writings had charmed so many of my co-operative friends in England. And, certainly, I shall not forget the many acts of friendliness received from Mr. Underwood and Mrs. Underwood. My daughter, no less indebted than myself, and the lady who accompanied us, desire me to say for them what I say for myself.

I never came to Boston but Gen. Butler was a candidate for the governorship. He appeared to be a perpetual candidate. I was glad he was elected, as, when I come again, there may be a new candidate. Because I like to hear him speak, and because he is the friend of a great friend of mine, I sent him congratulations on his election. Evermore shall I remember the last morning in Boston, which was spent with Wendell Phillips. He is the last of the great heroes of America whose name has been in the mouths and whose memory has been in the hearts of all in England who, during all my remembering years, have cared for noble speech and noble life, and for the freedom and honor of America.

You see, I write just as thoughts come into my mind. I recur to Florence, to say that I spent a short time with Mr. Hill, senior, who has since died. Nowhere have I been more struck than when speaking with him, at his great clearness of mind, his perfect human sympathy, his personal modesty, and splendid munificence of his gifts to the village, to its people, and to the cause of secular progress. With Mr. Seth Hunt, of Springfield, who often spoke of Mr. Hill, I spent well-remembered days. He was not strong when I was with him. I am glad to hear that he has regained much of his old strength. Time will never weaken his interest in all that is just and true.

Nor can I become unmindful of the generosity of *The Index* in defending me from aspersions imported from the paper of Mr. Watts, and reprinted in your city by one to whom I had always shown courtesy, who could not know that there was any truth in what he quoted, and ought to have known that there was not. Mr. Watts, I observe, wrote to you to the effect that it would not have appeared, had he been at home. But he never wrote home to contradict it. I am not enthusiastic about a reparation which consists in repudiating an injustice abroad while you maintain it at home. It is not of consequence, nor should I refer to it, save to express my acknowledgments to *The Index* for its great courtesy to me in the matter.

We have a confusion of mind just now in England, like that which affected many excellent people in America, when a book containing what many regarded as revolting suggestions appeared. Some honestly thought that freedom of the press meant freedom to publish anything. Well, we have three persons lately imprisoned on the ground of outrages charged against them. Some badly drawn pictures, taken from an offensive comic French Bible, were reproduced in a weekly paper. Thereupon arise persons who contend that no line can be drawn between argument and outrage. If no line can be drawn, free thinking will always be in the gutter.

When at Providence, a gentleman asked me to give him a copy of what for want of a better term was called an "Invocation," spoken in the Parker Memorial Hall, Boston, 1879, and which appeared in *The Index* subsequently. As I could not supply him with a copy, I promised to make another "Invocation," which I would send to you. I therefore subjoin it. It was spoken before my address at the Cosmian Hall, Florence, before leaving that pleasant city last November. What I said was as follows:—

No person, whatever his creed is precluded from making a personal address to others upon matters which for the time he deems of moment. Invocation, which is both entreaty and encomium, can only be used strictly by those who discern a Being who will give on request, and who likes to be praised. To beg seems a reproach to the Infinite Provider, to praise Infinite Excellence is beyond our competency. Gratitude to the Unknown is natural to the heart of all who think; but it is dim and romantic,—most real when it is modest, most intelligent when it is silent. To each other, however, we may make personal appeal. Every just man is glad to have discovered to him any good he might do, and is encouraged by words of discerning praise from those able to comprehend the difficulties overcome which alone make desert.

If, however, any one thinks fit to pray to Heaven, let him ask for that light which leads to peace of mind. Is there another world with its jasper pavement, its golden terraces, and diamond mansions? Shall we meet there our ancient forefathers, who hunted in long fallen forests, or who watched from beetling cliffs the unknown and restless ocean, and

Digitized by Google

whose thoughts and deeds belong to the silent pages of unwritten history?

"Shall we hear the sages of the day afar
Recount the lives of those who made us what we are?"

If this may be,—and we know it,—we shall attain the peace of that hope. If we cannot know it, let us acquire the peace of resignation. Let us bow to the destiny which is silent, and await with quiet and heroic interest the opening of the wondrous door of death, whose portals lead to the land of the unknown?

But if this world be the First Paradise placed within our reach, let us understand that. By great acts, great wrong is sometimes redressed and great misery sometimes averted; but it is by the continuity of small duties well fulfilled that general happiness is secured. No good thought is wasted on the mind which conceives it, no good deed is lost on the world on which it is bestowed. Every right effort of the humblest sweetens society as surely, and often as much, as the proudest act of the highest. Every word which is true, every tone which is kind, every gesture which has proportion and fitness in it, adds to the pleasure or truth of life. Virtue like nature works the same in silence and in storm, producing ceaseless change and ceaseless progress. The obscurest person can contribute to, or retard the improvement of the world. Every guinea in a million has its worth like any other. Not one can be left out without altering the number, not one can be bad without decreasing the value of the whole. Every particle of nature has its indestructible place and part and force. So every man and woman has an indestructible place and part and force for good or evil in the moral world. There, every right deed is a prayer. There, all right endeavor is worship; and intelligent, well-intentioned sincerity is salvation from fear. Thus, it is given to every one to practise the unceasing piety of usefulness, whose creed is duty, whose passion is service, and whose inspiration is the good of others.

Thus, not merely all collectively, but each, individually, may more or less make a paradise around himself. Thus alone may this world be made a greater paradise and fit training-ground for another hereafter, if that accrues. Therefore, if anything be given, let it be given unto us to see this: that effort may have confidence, that doubt may distract no more, that that peace of understanding may prevail which is never disturbed in itself nor disturbed by disturbance in others. What we ask is that the path of light and duty may be opened to the low as well as the high, opened to every honest conscience, opened early, opened wide, opened forever.

Upon such subjects and hopes we may speak to each other. Herein, invocation has a human place and fitness. GEORGE JACOB HOLYOAKE.

34 ALFRED PLACE, WEST, SOUTH KENSINGTON, LONDON, S.W.

MR. ADLER ON FREEDOM.

Editors of The Index:—

One of the great features in Mr. Adler's speech published in *The Index* of March 22 is an earnest plea for volitional freedom in opposition to the doctrine of necessity, which prevails among scientists. He refers to Kant as the greatest philosophical authority on the subject; and he hence repudiates Spencer's ethics as incompetent and erroneous in their base, which is necessity. Now, I do not propose to controvert Mr. Adler's thesis; but I wish to call attention to an element of great significance in it, which has not, I think, been clearly recognized.

It is very radical and wide-sweeping in its implication of supernaturalism. This has not been duly noticed and developed by either Kant or any of his followers. It has never been distinctly laid hold of and held up to the light. But, indeed, the idea is self-luminous, and needs only to be seen, I think, to become an accepted truth. Necessity is naturalism, and freedom is supernaturalism. Freedom and necessity represent two different and opposite theories of the universe. Uniformity and necessity are the stamp and signature of nature's action and force, while freedom is the symbol and operation of a power which is superior to nature. Nature is intrinsically invariable in the relation of antecedent and consequent. Freedom is not. Freedom, therefore, not only antagonizes the ethics of Spencer, but his entire philosophy, from which his ethics spring. It indorses and bases itself on the transcendental philosophy. It is noumenal in distinction from phenomenal. It is therefore entirely outside the sphere of science, whose sphere is exclusively phenomenal.

At present, I shall neither favor nor oppose this theory. I only wish to learn from Mr. Adler or any who are affiliated with him, or who adopt the Kantian doctrine of freedom whether they see all this in their theory, and in this light adopt it; and the question is of prime practical importance, because Mr. Adler makes this faith an essential element in a teacher in the school of ethical culture. I therefore feel very sure that there will be a wide-spread desire among the readers of *The Index* for a speedy and definite answer to our question. WILLIAM I. GILL.

THE PASSAGE IN TACITUS.

Editors of The Index:—

Pardon me for again asking a space in the columns of your journal, but I shall be brief.

Although, as Mr. Underwood states, my assertion (in *Bible Myths*) that the celebrated passage in the *Annals of* Tacitus was never heard of before the fifteenth century is made on the authority of Taylor's *Diegesis;* yet what I have since written on the subject is based, mainly, on the authority of John Wilson Ross,* who, I think, has proved his point.

Mr. Ross has given a list of the writers who quote the writings of Tacitus, or refer to him, from his time until the fifteenth century; but no one has mentioned either this passage or the *Annals*. Because, "out of twenty-one consecutive words" in the *Annals*, "seventeen are to be found in the writings of Sulpicius Severus," it does not follow that Severus quoted from Tacitus, particularly as he does not mention a word about the *Annals*. Might we not just as confidently assert that the author of the passage in the *Annals* quotes from Severus?

The matter seems to stand thus: There is no "positive evidence" in support of either side of the argument; and, from the evidence produced on both sides, some are disposed to believe one way, and others another. In the mean time, we would refer those who are interested in the subject to the work referred to in the *note* below. The 429 pages are devoted solely to this matter; and, as stated above, we think the author has proved his point, but do not see how his method of argumentation, if generally adopted, "would destroy the value of all historical testimony."

Very respectfully yours,

AUTHOR OF *Bible Myths*.

Reply.

Our argument, as printed in *The Index* of March 15, is stronger than as above represented. We did not say, "Out of twenty-one consecutive words in the *Annals*, seventeen are to be found in the writings of Sulpicius Severus," but "Out of twenty-one consecutive words in Tacitus, seventeen are to be found in Severus." We showed plainly in the context that we were not speaking of the writings of Severus generally, but of the particular passage in his *Chronicle* relating the event described in the *Annals*, the persecution by Nero. We showed too, as is not mentioned by the author of *Bible Myths*, that not only do the two passages in the *Chronicle* and the *Annals* end alike, word for word, but that they also begin alike word for word, and that Severus omits nothing which he could have quoted in justice to himself. As the *Chronicle* is undoubtedly a genuine work, dating from the end of the fourth century, we have fully disproved the statement "that the celebrated passage in the *Annals* of Tacitus was never heard of before the fifteenth century." The best scholars believe the Gospel of Matthew, Mark, and Luke to be derived from earlier documents, which all three writers consulted, on account of verbal resemblances, like those we pointed out. And the resemblance between the *Annals* and the *Chronicle* is even closer, may here be added, than appeared from our article, where the word *laniatu*, really the same in both passages, was in one case misprinted *laniatur*. The fact of a quotation is plain. The only question is which author quoted the other. Now, the passage in the *Annals* is long enough to show the peculiar style of Tacitus; and neither our able correspondent, nor any one else, to our knowledge, has ever asserted that it does not. The author of *Bible Myths* did maintain in his appendix that the passage is "comparatively a modern interpolation"; but he has now given up this position, and evidently believes with Mr. Ross that the whole work was written by the same hand. The ordinary style of Severus, however, differs so much from that of the *Annals* that his account of the destruction of the temple is believed by eminent Latin scholars to have been copied from one of the missing books of this work. It is therefore our opinion that Severus quoted from the *Annals*, and that the early date of this work is thus established. That it was really written by the well-known historian Tacitus seems to us proved by all the facts of the case. We are as much opposed as any one can be to the theory that Christianity had a supernatural origin; but we try to fit our theories to the facts, and do not attempt to explain away facts, because they do not happen to give our own theories all the support one might wish.—ED.

* *Tacitus and Bracciolini, the Annals forged in the Fifteenth Century.* By John Wilson Ross. London: Diprose & Bateman. 1878.

THE WESTERN FLOODS.

From private letters addressed to the junior editor of this paper by personal friends who were sufferers from the recent Western floods, we extract the following graphic descriptions of the havoc made by them: "Yours came duly to hand. It found us—that is, my wife and self—working with might and main to get rid of the effects of the flood. I mean the deposit of mud which it left behind. The financial effect will take years of hard labor combined with economy to overcome. At our residence, the water obtained a depth of eight feet nine inches; and six feet at the store, which is two blocks south of residence. The store I occupied when you were here had over nine feet of water in it. All my goods, with the exception of about three hundred dollars worth that was on the top shelves, were in the water six days. All of our furniture was ruined. Our library—well, you ought to see it! When the waters receded, they left about three inches of mud behind them. Every book was covered with two inches or more of mud, the bindings all off: they were a sorry-looking sight. My wife grieved more over the loss of her books than she did over everything else. Jeffersonville has sustained a loss that will take years to get over. Hundreds of poor people have lost their all. We stayed at H. four days. When we came back, there was over six feet of water still in our home. We reached by skiff, climbed on the roof of the summer kitchen, thence to the main building. The succeeding two days, I had to leave the house for the store by skiff, the water having got out of the latter two days sooner than the former."

The next letter is from a lady: "You should take a peep into our home this beautiful 'Lord's day morning,' and view the quarters we are occupying: bare floors, bedroom chairs brought down stairs, one table, —fifteen by thirty inches,—a stove,—flood-rust has been erased, and a copious coat of polish gives it a more homelike appearance. A shelf, made up of a backless chair and an extension-table leaf, contains the ruined remains of what we most prized,—our books. Bookcase, rack, sideboard, sofas, and tables are in the shop 'for repairs,' are promised to be 'returned as good as new.' I cannot give details of the disaster now. I know it seems to persons at a distance that we 'might have saved everything.' But wait until you *come*, and hear the report. When the muddy, angry floods were leaping, gambolling, around our basement, we being on the second floor, Mr. M. said: 'This removes my veto to our buying a home on a hill. I shall object no more. Buy as soon as you please.' Believe me, I am so tired, weary, and worn, after seventeen consecutive days of combat with broom, brushes, scrubbing, oil, paint, and varnish, that I can scarcely handle a pen. S. J. M."

BOOK NOTICES.

THE RIGHT AND WRONG USES OF THE BIBLE. By Rev. R. Heber Newton. New York: John W. Lovell Company. 1883.

We have here the famous sermons of Dr. Heber Newton, which, as they were reported and printed from his lips in New York newspapers, a short time ago, were the topic of discussion throughout the country. They are now collected and printed entire, in a version authorized by himself. And he has done well to have them put into this popular and cheap form. They are published in Lovell's Library, making 264 pages of good print, and in paper covers can be bought for twenty cents. The masses, therefore, can read them; and we hope that every man and woman in Christendom, and especially in Orthodox Christen-

Digitized by Google

dom, will read them. They would have great power to break down the Bibliolatry which so dominates the Christian Church and hinders progress; and yet they would leave the Bible still in its natural place as a book of religious thought, aspiration, and experience, having most precious value.

The style of the discourses is one which both the scholarly and the unscholarly can read with equal pleasure. The treatment is popular, but not popular in the sense of being superficial. Dr. Newton has written from a scholar's point of view and with a thorough scholarly equipment. He has been long meditating and studying for these sermons. They represent, he says in his preface, the growth of years, the essential thought of them having been stated in a discourse eight years ago. But, in coming to the task of writing, he has left most of the show of his equipment behind him, and given only results in a style ornate enough to be attractive, yet simple enough to be easily understood by any reader of ordinary intelligence, and vitalized withal by a very earnest intellectual conviction and practical purpose. He feels deeply the importance of putting the Bible in a new light before the Christian world; and he writes not simply to justify his own conviction, but to convince others.

Dr. Newton's view of the Bible is that of Kuenen and Oort and Robertson Smith and others of what may be called the evolution-school of Biblical criticism; that is, he regards it not as a book of superhuman manufacture, but as the natural literary record of a people with a special genius for religion, who progressed from primitive and crude religious ideas to a very pure monotheistic worship, and to a lofty standard of ethics as the most essential part of religion; as containing, therefore, the sublimest truths, but not unmixed with errors, which the rational judgment of man is competent to sift from its truths. The criticism, like the work of this school generally, is reverent, and designed not at all to destroy the use of the Bible, but rather to save it from falling into disuse in a rationalistic age. And the rationalistic reader, accustomed to read books on the Bible written in a more negative tone of criticism, and remembering, as he reads these discourses, that they were written by a regularly ordained Episcopal clergyman, may yet find points in them which he has been too much disposed to overlook.

To the pure rationalist, the one point in Dr. Newton's view where the limitation will most probably appear to come in is his estimate of the position and character of Jesus. His idea apparently is that "the eternal Power that makes for righteousness" found the conditions of self-revelation specially favorable among the Hebrews, and was aiming ever, through all their varied history, to make a perfect incarnation of itself in man. The consummation of this aim came through the natural ripening of historic forces and movements in the personality of Jesus,—"the perfect beauty of a human life divine," and hence the pattern for mankind ever afterward. This view of Jesus is hardly Trinitarian, yet may pass, according to some of the modern evangelical creeds. But our objections to it would be that, on grounds of natural human reason, we have no possible standard of measurement for determining that Jesus was a perfect man; that, as described in the New Testament, however lofty his character, he did not reach perfection; and that it is immeasurably more rational to suppose that the ideal goal of humanity is yet far ahead in the future than that it was reached and fixed, once for all, in an Asiatic province of the Roman Empire nearly two thousand years ago.

The prospect is that Mr. Newton will be brought to ecclesiastical trial by the Episcopal Church for the alleged heresies of these discourses,—a vexatious annoyance, doubtless, to him, but a most excellent device for multiplying his readers.

MASSACHUSETTS IN THE WOMAN SUFFRAGE MOVEMENT. A General, Political, Legal, and Legislative History, from 1774 to 1881. By Harriet H. Robinson. Boston: Roberts Brothers. 1883. Second edition. Price $1.00.

In the introduction to this second edition of Mrs. Robinson's concise yet thorough and exhaustive *résumé* of the rise and progress of the woman's movement in Massachusetts, the author says: "In the Addenda will be found new matter, and also verifications of certain statements made in the first edition, which have been called in question by those who are as anxious as I am to have the history of the movement correct, but who have not, like myself, gone to the proper sources of information to substantiate them." The new matter in the volume includes the verifications alluded to, a sketch of the National Woman Suffrage Association of Massachusetts, a record of Massachusetts legislation for women in 1881–82, a table of the legislative yea and nay votes on woman suffrage from 1868 to 1883, a list of employments for women in Massachusetts, and "Woman's Position in School Matters." A copious index of the contents accompanies the work; and, to the readers of *The Index*, the reference to the earnest labors in behalf of woman by those who have been also prominent leaders in the free-thought movement will be of peculiar interest. These pages are full of interesting reminiscences of the sympathies, opinions, and work of Theodore Parker, R. W. Emerson, Margeret Fuller, Lucretia Mott, Lydia Maria Child, Harriet Martineau, Ernestine Rose, Charles Burleigh, T. W. Higginson, Mrs. Dall, Mrs. Stanton, Lloyd Garrison, Mrs. E. D. Cheney, and the Alcotts, father and daughter, besides many others of note in the world of thought.

LECTURES ON THE CALLING OF A CHRISTIAN WOMAN AND HER TRAINING TO FULFIL IT. Delivered during the season of Lent, A.D. 1883, by Morgan Dix, S. T. D. New York: D. Appleton & Co.

The main value of this book is as a proof how far priestly arrogance can go, even now, in opposing progress. "We priests who, whatever our personal shortcomings, have a commission from above, and a message to man from God, are the mouthpiece of that Church to which His handmaidens belong," are evidently bent on keeping women in fear of loss of reputation from any sympathy with the movements to emancipate their sex. The rationalistic agitators are plainly said to "merit the Scripture epithet of strange women" (p. 32) which the Bible applies to those whose "steps take hold on hell." She who tries to compete with men in their proper pursuits is said to have fallen lower than she who degrades herself "by ministering to her own vanity and to the lusts and pleasures of sinful men" (pp. 55, 56). The faithless wife is condemned. "But worse by far is she who kills the home-idea in cold blood" (p. 87). Other characteristic passages are these: "If by higher education, you mean that women are to be trained and taught in the same way as men, we oppose it as a folly and a fraud." "Education should have for its final end the fitting woman for her own place in the Kosmos. And that we have already defined to be a place in the home." "Shame on the woman who calls any education higher than that which qualifies her for her place as regent in such a domain." Shame rather on the priest who compares reformers to harlots.

THE frontispiece of the *Century* for April is an excellent portrait of Emerson in the prime of life, and E. C. Stedman has an appreciative and discriminating essay on the poet. Ben Perley Poore's article on "The Capitol at Washington" is quite interesting and profusely illustrated. Geo. W. Cable offers in "Plotters and Pirates of Louisiana" the most fascinating chapters yet printed of his Creole papers. Charles G. Leland has an article on "Visiting the Gypsies," which is made doubly interesting from his intimate knowledge of the customs and language of those civilized nomads. H. H. describes the aspect of the village of Oberammergau during the week devoted to the Passion Play. Mrs. Burnett brings to an unsatisfactory close her unsatisfactory story of "Through One Administration," Howells' "A Woman's Reason" grows more interesting, and H. H. Boyesen has a short story, "Anastasia." The poems are by Sidney Lanier, R. U. Johnson, Elizabeth Akers, Margaret Veley, E. A. M., W. M. Briggs, Clarence Clough, and Robert Grant.

"WIDE AWAKE" comes with its literary "bill of fare" for April as tempting and appetizing as in any previous month, and we must refer our readers to its pages for its full and satisfying list of good things. The story of "Through Spain on Donkey-back" is told in a unique but graphic way by pictures. Mrs. Browning's pathetic "Mother and Poet" is finely illustrated by a full-page engraving. To young artists, the article by Mrs. Champney, "John Angelo visits the 'Water Color,'" will be of special interest. "Charles Kingsley" is the "pleasant author" whose story is told in this number. Mrs. Mary Treat writes delightfully of "The Brickmaker" in the series of "Through a Microscope"; and long instalments are given of the serial stories, Fred Ober's "Silver City" and M. H. Catherwood's "Old Caravan Days."

THE April number of *St. Nicholas* is as usual rich in numerous and lovely pictures, and filled with good reading, the contributions of some of the best writers of the day. H. H. tells in her usual vivid manner the story of "A Brave Chinese Baby," which is appropriately illustrated. Frank H. Stockton has the concluding chapters of "The Story of Viteau," Anna Eichberg has a fanciful story of "The Princess with a Glass Heart," and Edgar Fawcett another entitled "The Sad Little Prince." Trowbridge's story of "The Tinkham Brothers' Tide-Mill" deepens in semi-tragic interest. These are only a very few of the many attractions in this number of this popular magazine for young people.

"OUR LITTLE ONES" for April is a charming number, and is especially rich in its profuse and artistic illustrations, which are equally enjoyed by grown people as well as by "our little ones." Its short stories and poems furnish instruction and pleasant reading for children of all ages.

PERSONAL ITEMS.

JOHN BROWN, the Scotchman who was for so many years the faithful personal attendant of Queen Victoria, died last week at Windsor Castle.

THE Rev. J. Vila Blake, of Quincy, Ill., has been called to the pastorate of the Third Unitarian Church, Chicago. Mr. Blake is a young man, a graduate of Harvard Divinity School, and for the past six years has been filling the Unitarian pulpit at Quincy.

"THERE are divers indications that ex-Senator Conkling is taking a lively interest in politics; but we are not yet prepared to credit the floating rumor that the distinguished orator will take the stump against Sprague in Rhode Island."—*Washington Post.*

A NOTEWORTHY criticism of Mr. Herbert Spencer's work on Education is now appearing in the Boletin of the Institucion Libre de Enseñanza of Madrid. The writer, Doña Concepcion Arenal, is the first of lady philosophical writers in Spain, and in that respect is no unworthy rival of George Eliot.

THE German emperor and the crown prince will both attend the Luther celebration at Eisleben on the 10th of November next. The fourth centenary of the birth of the author of the Reformation in the place where he was born and died will be observed with more than usual solemnity. Among other events by which the day is to be commemorated will be the unveiling by the emperor of a statue of Martin Luther.

EDWIN D. MEAD is to deliver a course of four lectures upon "America in the American Poets" in New York, under the auspices of Prof. Adler's Society, in the hall of the society's new school building, on the 10th, 11th, 17th, and 18th of April. The lectures will be devoted to Longfellow, Whittier, Lowell, and Emerson, and will specially discuss the use which the poets have made of American subjects and their general services for American history and life and thought.

THE Hon. Timothy O. Howe, Postmaster-General, died at the home of his nephew, at Kenosha, Wis., on Sunday afternoon, March 25, of pneumonia, after a short illness, from which no serious results were apprehended until Saturday night. Mr. Howe was for a year a member of the Maine Legislature, for a time Chief Justice of Wisconsin, eighteen years a United States Senator, a member of the Monetary Conference which met at Paris in 1881, and for about a year Postmaster-General of the United States. His age was sixty-seven.

ONE day, after Judge Wylie had been rather severe on him in court, and had somewhat impatiently cut him short in some of his remarks, Col. Ingersoll left the court-house and walked across the street to a restaurant for lunch. He had to pass just in front of an old gray horse; and, as he did so, the animal snapped at him as if to take his head off. Luckily, the horse miscalculated the distance, but his big teeth clashed together only a few inches from the lawyer's ear. Quick as a flash, the latter turned with, "In the devil's name, what court are you the judge of?" And, when Davidge whispered the anecdote around in court that afternoon, Judge Wylie had a hard time keeping order among the lawyers.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,

CURRENT TOPICS.

AMONG the 300,447 inhabitants of Rome there are 117,991 who cannot read or write.

THE Mohammedans of Turkey have set up a Board of Publication. It has been established in Constantinople for the purpose of publishing, in a cheap form, the theological and historical works put forth by Mohammedan writers. The first publication is to be a popular edition of the Koran, for general distribution.

A RELIGIOUS crank at Reno, Nev., declares that he is commissioned by Christ to announce to the people of that place that the Messiah will shortly appear among them, preceded by Gabriel, who will blow his horn as a warning that the grand climacteric is upon them. A Reno paper irreverently remarks: "The man is evidently luny, and doesn't exactly comprehend what he is talking about. If Gabriel should strike Reno first, the boys would get him into a poker game, and win his horn before he had a chance to wake up even a night-watchman."

THE New York *Tribune* says: "Outside of Maine, it is probable that no prohibitory amendments will pass the State Legislatures this year. The general drift of legislation on the temperance question appears to be toward high license laws. Such restrictions on the liquor traffic find much favor in Ohio, Wisconsin, Illinois, Minnesota, and Missouri. The latter State has, in fact, passed a law imposing a heavy tax upon the sale of intoxicants; and it has been signed by the governor. A similar measure would have gone through the Illinois Legislature, had not the Democrats delayed it. It has now passed to a first reading. As prohibition has failed in so many cases, the public will watch with much interest this latest effort to deal with a troublesome question."

ONE of the latest swindles mentioned by the papers is the Marriage Trust Company of Indianapolis, which had been in existence about one year, and realized from its five thousand victims nearly two hundred thousand dollars. The assets of the concern when it was ventilated consisted of a small quantity of office furniture and large packages of plausible circulars. The victims are loud in denouncing the managers, but it is too much to expect that they will all gain wisdom enough from this experience to avoid being humbugged by the next smooth scheme which promises to pay a large per cent. on a small investment. The susceptibility of Americans to the blandishments of smooth-tongued swindlers is quite as conspicuous as the "smartness" for which they have a reputation abroad.

IT is little to the credit of Boston "culture" that more than twelve thousand of its citizens, among whom were many Harvard students, paid from one to two dollars each to witness such a brutal exhibition as the late prize-fight in the Mechanics' Fair Building. One of the chief actors in this interesting exhibition made a speech, from which we make an extract: "Ivery set-to will be a soientific display. [Three cheers for John L. Sullivan.] Don't ye incourage ony one o' the boxers to knock the hid off his opponint. Plase kape as quiet as ye cahn, an' injy the fun. Oi want no brutality at John L. Sullivahn's exhibitin, — niver a bit! [Applause.] Gintlemin, Oi live in Bosthon, and Bosthon is me home; an' Oi want to give a show to-night that will be recorded in histhory. Oi want it recorded that there was nivir a bit uv brutality jurin' the spar'n." [Applause.]

THE London *Times* gives an account of some experiments which were made at the entrance to Aberdeen harbor, with a view to testing the practicability of using oil as a means of reducing the danger to vessels entering there during gales of wind and high seas. The occasion was one when a stiff gale was blowing, the seas dashing high over the piers, rendering it practically impossible for any vessel to enter in safety. The oil was forced through pipes that had been laid from the shore to the desired point off the entrance to the harbor; and, although the tempest was high, within twenty minutes after the forcing of the oil was begun, the crests of the waves disappeared, the billows assuming a rolling motion, and the entrance rendered comparatively safe. Less than three hundred gallons of oil were used in the experiment, and during the time that its beneficial effects were noticeable many vessels could have obtained safe entrance.

ONE of the bright lights of the Pennsylvania Senate lately introduced a bill "to prevent the burning or cremating of human bodies after death." The proposed penalty is a fine of "from $500 to $1,000, or solitary confinement at labor for from one year to three years, or both." The grounds on which this bill was introduced are that the practice is contrary to the instincts of humanity. But cremation as a health measure is preferable to burial; and, once accustomed to the burning of the dead, the people would not feel the horror with which they now contemplate the practice. As the Cleveland *Herald*, commenting on this proposed law, remarks, "Already, though comparatively few bodies have been disposed of in the furnace, the sensation which filled the minds of the people when the first human remains were thus disposed of has passed away, and accounts of similar cases are read without a shudder, or hardly a feeling of abhorrence."

AN anti-contract labor bill has passed the Ohio Senate, which provides that persons convicted of a penitentiary offence shall receive a general sentence, the term of imprisonment to be terminated at any time under certain conditions by the directors of the penitentiary. This feature of the bill proposes a radical change in the methods of penitentiary punishment. Its object is to make a convict's term of imprisonment depend largely upon his good behavior, and to make possible the removal of an unjust punishment without the process of petitions to the Governor and the setting aside of the act of a court. Give the convict something to hope for, let him understand that good conduct and application to work will be rewarded by the shortening of his imprisonment, and it is believed there will be some incentive to reform, and that the general effect will be to lessen the demoralization of prison life and to diminish the amount of crime. It is said that the great mass of men sentenced to long terms are rearrested for crime soon after their release, while but a small proportion of the short term convicts are rearrested.

M. LEROY BEAULIEU has recently published in *L'Economiste Français* the statistics of the increase of alien population in France. According to the figures of this writer, there was no immigration into that country during the first quarter of the present century. In 1857, a small but steady stream of foreigners began to set in: "Their proportion in 1861, however, reached only 1.33 per cent. to the whole population. In 1881, the proportion had reached 3 per cent. In each year, the increase reaches 40,000. M. Beaulieu calculates that, if it continues to increase in the same proportion as the last two years for the rest of the century, one-fourth of the adult population will be aliens. The large proportion of this immigration is from Germany; and the causes of it are, according to M. Beaulieu, the abundance of capital, the high wages, and the fact that many of the trades are left unoccupied by French boys and men. The French young man, says M. Beaulieu, is too effeminate to learn a hard, steady trade. He goes to America to cook, to dance, to play some light rôle in life; while the German comes in to fill his place at home." It is not less true, it must be confessed, that multitudes of native Americans become salesmen, book-keepers, drummers, etc., and allow the skilled trades to be filled largely by German and English.

MR. O. B. FROTHINGHAM'S "CRITICISM AND CHRISTIANITY."

A good many readers have doubtless turned to the last article in the last number of the *North American Review* with special interest. The subject, "Criticism and Christianity," and the name of the author, Octavius B. Frothingham, made a combination that whetted curiosity. Since the famous sensational report in the New York *Evening Post*, alleging a very important change in Mr. Frothingham's religious views,—a change that was very generally interpreted as amounting to a recantation of the views he had been preaching for the larger part of his ministry,—Mr. Frothingham has said nothing to the public on religious topics distinctly in his own name. He took occasion to correct in certain particulars the *Evening Post's* report by a brief communication to that journal, and closed that communication with the explicit statement, "I have not gone back to any position which I had abandoned." But, beyond this, he did not choose at that time to make any public explanation of his opinions. Nor did he allow himself to read more than the merest infinitesimal part of the large quantities of matter sent to him in print and in manuscript, wherein other people discussed his opinions from their various points of view and offered him their suggestions and advice. Nearly eighteen months have elapsed since this incident. Within this time, various articles have appeared from his pen in magazines and newspapers, and his biography of George Ripley has been published; but in none of these writings has he taken occasion to consider any of the questions that were started by the newspaper "interviewer." Not until now has he chosen a topic as if with special reference to giving his own views on certain questions involved in that discussion about him. With such a subject as "Criticism and Christianity," he could hardly avoid touching some of the most prominent points then raised concerning his change of religious attitude.

But, if any one goes to this article in the April *North American* with the expectation of finding a clear statement from Mr. Frothingham of his present religious position, such a reader will probably be disappointed. And especially will any reader be disappointed who may take up the article with the thought that it is going to disclose some very great changes in Mr. Frothingham's religious belief. Those persons of the evangelical persuasions who were talking about his having recanted his opinions, and who made haste to tender him the very questionable hospitality of the repose offered in their creeds, will not find much to comfort them in this new utterance. That they are to have the pleasure of welcoming so distinguished a convert to any of their folds, the article gives no encouragement. The only religious body which may reasonably claim, on the ground of this article, more of Mr. Frothingham's sympathy than heretofore, is the Unitarian. The position taken, though only vaguely substantiated, that Christianity in its essential inner principles will survive all critical assaults, made however triumphantly, upon its externals of doctrine and ritual, and that one may not necessarily let go his Christian faith however much doubting the historic authenticity of the New Testament story of Jesus, will be recognized as enough of qualification for Unitarian fellowship, at least on the left wing of that body. But the vagueness of the answers given to the questions, What is meant by "Christian faith"? and What is "the essential inner principle of Christianity"? would incapacitate for affiliation with any other branch of the Christian Church but that which is satisfied if its adherents only keep, on whatsoever grounds, the Christian name.

It will be remembered that, in the brief letter of correction which Mr. Frothingham sent to the *Evening Post*, he said that, while he had seen no reason for changing his opinions, it had occurred to him that they did "not contain the whole truth." And the meaning behind this latter remark, as shown subsequently by the present writer and by Mr. Savage in their statements in *The Index* after conversations with Mr. Frothingham, was that he was disposed to make more account than formerly of a revealing and guiding Power in the world above material nature and above humanity as the origin and sustenance of religions; that is, as he had never been atheistic, that he would more *emphasize* the thought that religion is not merely the aspiration and effort of man toward a Power he conceives to be Supreme, but the actual impartation of that Power to man. The article in the *North American* appears to be an expansion of this idea. It begins with a reference to *The Cradle of the Christ*, which is regarded as Mr. Frothingham's most radical book, and concerning which he said to Mr. Savage that he desired to change "not one single word" in it, but "would only supplement here and there with additional statements." This essay seems therefore to be designed as somewhat supplementary to that book. He takes nothing from the book, the theory of which was that Christianity was a development of the Hebrew Messianic idea and had very little dependence on the teachings and life of Jesus; but "granting," he says, "the position taken by its writer, the question arises, Why need one abandon his Christian faith?"

But the points made do not appear to us to follow in the line of answering this question with much logical coherence. They are briefly these: the validity of spiritual truth is beyond the reach of historical criticism; the universality of religious symbols attests the presence of the same ideas among various nations and races, and from age to age; these fundamental ideas are not of terrestrial origin, but are a part of the primeval equipment from the creative spirit with which man began his career; all religion is in essence and origin supernatural in some sense, if not superhuman, the divine spirit that imparts it being a "power not ourselves"; but "supernatural" does not mean the "miraculous," it means rather spiritual as distinguished from material; all religions, though differing in texture, are of one piece; a great religion, in order hospitably to adapt itself to the present age, will insist only on such primal truths as the existence of a supreme intelligence, which communicates itself to men, raising them to superhuman possibilities of experience through aspiration and faith; Christianity may safely give over to criticism every thing but the citadel wherein are held these primal truths.

These are the several points of the essay, stated mostly in the language of the essayist. The question occurred to us as we read, How is Christianity differentiated by this argument from any other religion? There are rhetorical expressions in the course of the article about "the intrinsic excellence of the Christian system," and about "the immortal beauty of its essential truths," and about its "ineffable ideas," but no attempt is made to define the "Christian system," or to indicate what are its "essential truths" or its "ineffable ideas," beyond what are named as "primal truths" in the above extracted statements. And the only remarks which imply that Christianity has any superiority to other religions are the incidental ones that it is "the religion of the most intellectual races," and that "it belongs to the latest age, which, on the whole, is the most forward in civilization." These incidental remarks might give a reason for retaining one's Christian faith, but their subordinate position in the essay would not indicate that they had this weight to Mr. Frothingham's mind. What did have this weight with him the article does not, in our view, clearly state. The rhetoric of the article is strongly Christian. But its argument might be more correctly styled a plea for religious faith than for Christian faith. Though not on this point so clear as we might wish, Mr. Frothingham wvites, however, with that easy elegance of style and wealth of illustration which have always been the delight of his readers.

WM. J. POTTER.

THE SECRET OF THE EAST;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

CHAPTER III.

The Ethics of the Christian Religion.

"Untruth should be exposed, whether its teachers come in the name of God or of the devil."—*Ulrich Hutten.*

In the code of ethical principles which the world uses to judge the merits of a social reformer, it has long been recognized as a truism that "the end does not justify the means." But we are apt to overlook the equally cogent maxim that the means do not justify the end. The unkempt republican, who with fire and sword preaches the earth-redeeming gospel of liberty and equality, is denounced as an enemy of the human race; while the bland, well-combed, and unctuous Jesuit is revered as a saint, though he labors to perpetuate a superstition that has turned the better half of this earth into a dreary desert, and arrested the progress of the human race for fourteen hundred years. Our short-sightedness prevents us from tracing the connection of cause and effect in the fury of the purifying storm and the soft summer winds of the malarious fens. We shudder at the fury of the gale, and admire the beauty of the poisonous swamp-flower.

To the nations of the Caucasian race, the genius of salvation came in a storm-cloud, the lures of the tempter came in a small, still voice. The sound of that voice was first heard on the banks of the Ganges, and filled the lands of the East till its echo seduced the poor fishermen on the banks of the Jordan. The keystone dogma of the Christian ethics is the *anti-physical* principle of Buddhism: whatever is natural is wrong. The mission of the Galilean ascetic, like the gospel of Buddha Sakyamuni, was a declaration of war against nature. According to the doctrine of Pessimism, our natural instincts are our natural enemies; life is a disease, and death its only cure; the pursuit of earthly happiness is a chimera, and enjoyment in all its forms only serves to strengthen the fatal delusion; emancipation from the bondage of life is the *summum bonum*, and can be attained only by mortifying our natural desires.

The instinctive love of joy is wrong: the path of self-affliction is the road to salvation. "If any man will come after me, let him deny himself, and take up his cross daily." "Blessed are they that mourn." "Be afflicted and mourn and weep; let your laughter be turned to mourning, and your joy to heaviness."

Our natural affections should be suppressed. "If any man come to me and hate not his father and mother, and wife and children, and brothers and sisters, yea, and his own life also, he cannot be my disciple."

The love of health is wrong: the body is the enemy of the spirit, and does not deserve our care. "Take no thought for your life, what ye shall eat

Digitized by Google

or what ye shall drink, nor yet for your body, what ye shall put on." "Bodily exercise profiteth but little." "There is nothing from without a man that, entering him, can defile him."

The pursuit of natural science is wrong; doubt and free inquiry are sinful; submissive faith is the gate to heaven. "Blessed are they that have not seen, and yet have believed." "He that believeth in me hath everlasting life, and shall not come into condemnation." "If any man love not the Lord Jesus Christ, let him be Anathema Maranatha." "If an angel from heaven preach any other gospel unto you than that which we have preached, let him be accused." "He that believeth on me is not condemned, but he that believeth not is condemned already, because he does not believe in the name of the only begotten Son of God." "If a man abide not in me, he is cast forth as a branch, and is withered; and men gather them and cast them into the fire, and they are burned."

The trust in secular remedies is wrong: diseases can be cured by faith. "Receive thy sight, thy faith hath saved thee." "If any man is sick among you, let him call for the elders of the church, and let them pray over him, anointing him with oil in the name of the Lord." "And the prayer of faith shall save the sick, and the Lord shall raise him up." "And, when he had called unto him his twelve disciples, he gave them power against unclean spirits to cast them out, and to heal all manner of sickness and all manner of disease."

The natural instinct of resistance to injustice is wrong. "Resist not evil, but whosoever shall smite thee on the right cheek turn to him the other also. . . . If any man will sue thee at the law and take away thy coat, let him have thy cloak also. And whosoever shall compel thee to go a mile, go with him twain."

The spirit-fancies of the nature-loving nations are wrong. The wilderness swarms, not with harmless fairies, but with malevolent demons. "And the unclean spirit goeth, and taketh with himself seven other spirits more wicked than himself." "I beheld Satan as lightning fall from heaven. . . . And all the devils besought him, saying, Send us into the swine, that we may enter into them." "And the devil took him up into the holy city, and setteth him on a pinnacle of the temple." "They brought unto him many that were possessed with devils."

The belief in the peace of the grave is erroneous. For the great plurality of the human race, the end of life is the beginning of endless and horrible tortures. "Wide is the gate and broad is the way that leadeth to destruction, and many there be which go in thereat; and strait is the gate and narrow is the way which leadeth unto life, and few there be that find it." "The children of the kingdom shall be cast out into utter darkness, there shall be weeping and gnashing of teeth." "They shall be cast into the furnace of fire, there shall be wailing and gnashing of teeth."

The love of industry is wrong. A true believer shall not seek to supply his wants by earthly means, but rely on prayer and supernatural aid: "Take no thought, saying, What shall we eat? what shall we drink? or wherewithal shall we be clothed? For after all these things do the Gentiles seek." "Take no thought of the morrow, for the morrow shall take thought for the things of itself." "Ask, and it shall be given you." "If ye have faith as a grain of mustard-seed, ye shall say unto this mountain, Remove hence to yonder place, and it shall remove; and nothing shall be impossible unto you."

These dogmas were propagated with the zeal and with the disinterestedness of the purest moral enthusiasm; and yet there is no doubt that they have caused the human race more woe than all wars, all plagues, all famines, all poisonous and contagious diseases, and the rage of all the hostile elements of nature taken together: for it can be demonstrated with the utmost certainty of historical evidence that the darkness of the Middle Ages, and the horrors and the misery of that terrible night, were the direct consequences of the faith which attempted to practise the precepts of the New Testament, and that the repressed instincts of our better nature burst their dam when the faith of the Middle Ages dissolved into scepticism and the conventional assent that stops short of practice.

The worship-of-sorrow dogma led to the self torturing insanities of mediæval monachism. If physical pleasures are sinful and our physical instincts an impediment to our spiritual welfare, the seekers after salvation naturally concluded that the body must be treated like a wild beast, caged in monasteries and hermitages, and subdued by fasting, vigils, and all kinds of self-afflictions.* Hence, Anchorites, Flagellants, Celibates, Trappists, Puritans, Sabbatarians, and Shakers.

True friendship was unknown while the denunciator of natural affection passed for a divine revelator. "He that hateth not his father and brother," etc., "cannot be my disciple." "For if ye love those who love you, what reward have you?" Hence, the zeal of the wretched bigots who delivered up their friends to the knife of the Holy Inquisition, and exulted in the suppression of their better instincts.

The repudiation of the Mosaic health code and the pagan culture of the manly powers led to the physical degeneration of two kinds of the noblest Caucasian races. If the body is the enemy of the spirit, the promotion of its welfare would be a sheer waste of time, or even a crime against our higher and eternal interests. Hence, the neglect of physical education, the gluttony, the besottedness, and the crimes against nature in which the seed-plots of monachism vied with the vice-centres of the decaying Roman Empire,† the general neglect of sanitary precautions, which shortened the average longevity of mediæval Europe by fourteen or fifteen years.

The faith-cure dogma is the root of mediæval miracle-mongery. If diseases could be averted by prayer, medical science and sanitary precautions were equally superfluous. Lazy faith was easier than rational research, and the belief in the efficacy of exorcism enabled the Church to share the emoluments without the labors of secular science. Hence, Loretto chapels, Lourdes water, processions, consecrated rosaries, and relic swindle.

The propagandists of the Submission to Injustice dogma became the faithful ally of every form of despotism. The pagan pride in the majesty of self-reliant manhood was superseded by the worship of abject self-abasement and self-distrust. If human nature was essentially evil, men were unfit for self government; and their own welfare required the suppression of every revolt against the authority of the spiritual powers. Without the recognition of human rights, without the principles of personal dignity and natural justice,* social order became a legalized system of oppression, manliness, became a stigma, the love of freedom was denounced as a sign of an unregenerate heart. Hence, the national degradation of so many Aryan nations, their sickening flunkeyism, their heartless subservience to the caprices of brutal despots, as Herbert Spencer demonstrates in his masterly *résumé* of the dangers in the path of a progressive republic. A defiant resistance to every form of injustice and official despotism is the price of liberty, and that resistance is incompatible with the spirit of a system that inculcates the duty of self-abasement as an article of faith. The pagan martyrs died for human rights, for personal freedom and national independence. The Christian martyrs died for a system of spiritual slavery. The Byzantine bigots who massacred each other in their competition for a lackeyship at the court of the New Jerusalem could not defend their own city against domestic despots and foreign aggressors.

The fanatics who originated the dogmas of exclusive salvation by faith, and hell-fire as a punishment of unbelief, are responsible for the agonies of the three million human beings who perished in the flames of the stake. It is a libel against human nature to ascribe the barbarities of the Middle Ages to an innate love of cruelty; and, in order to account for the numberless epidemic outbreaks of truculent fanaticism, the Christian apologists have to invent as many different theories as the mediæval astronomers who attempted to reconcile their system with the apparently eccentric motions of the heavenly bodies. The hypothesis of Copernicus solved all those riddles, and a similar solvent of otherwise hopeless enigmas is the vainly disputed fact that the inhumanities of our Christian ancestors were the inevitable consequences of a sincere belief in the dogmas of their monstrous creed. The most relentless butchers of the Holy Inquisition were men of spotless personal morality. Many of the savage man-hunters of the Thirty Years' War were conspicuous for their clemency in private and domestic affairs. Neither the Austrians nor the frugal Spaniards† are by nature a bloodthirsty race. But the dogma of exclusive salvation left them no choice. It made the suppression of unbelief a sacred duty; for, if the propagation of erroneous doctrines could doom thousands to an eternity of unspeakable, incomparable, and hopeless tortures, the objections founded upon such scruples as compassion with the short sufferings of a condemned heretic must have assumed an appearance of almost idiotic futility.‡

Hence, inquisitions and crusades, thirty years'

* "If any sect," says Ludwig Börne, "should ever take it into their heads to worship the devil in his distinctive qualities, and devote themselves to the promotion of human misery in all its forms, the catechism of such a religion could be found ready-made in the code of several monastic colleges."

† "Quod enim Anno 1538, prudentissimus Rex Henricus Octavus cucullatorum coenobia, et sacrificorum collegia, votariorum, per venerabiles legum Doctores Thomam Leum, Richardum Laytonum visitari fecerat, et tanto numero repert: sunt apud eos scortatores, cinaedi, ganeones, pae dicones, pueraril, paederastae, Sodomitae, Ganimedes, ut in unoquoque eorum novam crediderls Gomorrham." Robert Burton's *Anatomy of Melancholy*, p. 449. And the state of affairs in Southern Europe is attested by numerous unquotable passages in the memoirs of the Italian Guiccardini, the writings of the Spaniard Sanchez, and the indictment of Pope John XXII.

* "Justice and equity were foreign to that creed. Why should man try to be better than his God? A God to whom they were taught to ascribe a monstrous system of favoritism: arbitrary grace for a few children of luck, and millions foredoomed to eternal damnation."—*Feuerbach.*

"They attributed to the Creator acts of injustice and barbarity which it would be absolutely impossible for the imagination to surpass, acts before which the most monstrous excesses of human cruelty dwindle into insignificance, acts which are, in fact, considerably worse than any that theologians have attributed to the devil."—*Lecky.*

"It is said that the King of Morocco, Muley Ismael, has five hundred children. What would you say if a dervish of Mount Atlas related to you that the wise and good Muley Ismael, dining with his family, at the close of the repast, spoke thus: 'I am Muley Ismael, who have begotten you for my glory; for I am very glorious. I love you very tenderly, I shelter you as a hen covers her chickens. I have decreed that one of my youngest children shall have the kingdom of Tafilet, and that another shall possess Morocco; and for my other dear children, to the number of four hundred and ninety-eight, I order that one-half shall be tortured and the other burned, for I am the Lord Muley Ismael.'"—*Voltaire.*

† "Travellers are unanimous in declaring that in Spain an intense passion for the bullfight is quite compatible with the most active benevolence and the most amiable disposition."—*Lecky.*

‡ "Few persons, I think, can follow the history of Christian persecution without a feeling of extreme astonishment that some modern writers, not content with maintaining that the doctrine of exclusive salvation *ought* not to have produced persecution, have ventured in defiance of the unanimous testimony of the theologians of so many centuries, to dispute the plain historical fact that it *did* produce it."—*Lecky.*

"Haeretici non solum excommunicari sed juste occidi possunt."—*Thomas Aquinas, Summa*, Vol. II., Art. III.

Digitized by Google

wars, heretic-hunts, massacres of St. Bartholomew, expulsions of the Moors, and extermination of the Albigenses. Hence, also, that chief disgrace of our own age,—the cowardly hypocrisy which, like an all-pervading poison-vapor, taints the whole atmosphere of our social life. "The fathers laid it down as a distinct proposition," says Lecky, "that pious frauds were justifiable and even laudable; and, if they had not laid this down, they would nevertheless have practised it as a necessary consequence of the doctrine of exclusive salvation. Paganism was to be combated; and, therefore, prophecies of Christ by Orpheus and the Sibyls were forged, lying wonders were multiplied, and ceaseless calumnies poured upon those who, like Julian, opposed the Church. That tendency triumphed wherever the supreme importance of these dogmas was held. Generation after generation, it became more universal: it continued till the very sense of truth and the very love of truth were blotted out from the minds of men." And this mode of thought has survived after the hot fanaticism which engendered it has cooled down to frigid bigotry. The root of hypocrisy is the belief in the atoning efficacy of faith, or, *faute de mieux*, of conventional conformity. Our bigots sacrifice their intellectual conscience where their ancestors sacrificed their reason, and would be very sorry to admit the decadence of a creed that enables them to maintain the reputation of respectable principles by such easy means as connivance, cant, and mental prostitution.

The Prayer *vs.* Labor dogma was a death-blow to industry and science. Rational agriculture was abandoned to the Moorish infidels.* Christians neglected their fields and sought to avert famine by prayer-meetings. The pursuit of natural science was regarded with suspicion. Inventors were denounced as magicians. Erudition was considered a prima facie evidence of unbelief. Scientific progress decreased with the increase of the belief in the efficacy of prayer. Hence, moral and physical deserts; the desolation of the once fertile shores of the Mediterranean; a thousand years' eclipse of common sense† and reason; mendicants, pious vagabonds, and monastic drones; blind hatred of progress, mysticism, supernaturalism, and contented ignorance. FELIX L. OSWALD.

*"The Spanish Christians considered agriculture beneath their dignity. In their judgment, war and religion were the only two avocations worthy of being followed. Some of the richest parts of Valencia and Grenada were so neglected that means were wanting to feed even the scanty population remaining there. Whole districts were deserted, and down to the present day have never been repeopled. All over Spain, the same destitution prevailed. That once rich and prosperous country was covered with a rabble of monks and clergy, whose insatiate rapacity absorbed the little wealth yet to be found. The fields were left uncultivated; vast multitudes died from want and exposure; entire villages were deserted."—*Buckle's History of Civilization.*

†How rational, sensible, and humane appear the writings of the pagan philosophers, in comparison with the ghastly nonsense of the monastic authors! In the freest cities of our most advanced countries, in Concord and Heidelberg, an ancient Athenian would feel almost at home, a modern Unitarian would hail Job as a man and brother; but a resuscitated priest of the Middle Ages would walk our streets like a spectre defying the morning sun.

THOMAS PAINE ONCE MORE.

The *History of the People of the United States*, by John Bach McMaster, is a timely, able, interesting book. It has come in answer to a conscious need, developed, in good part, by the late John Richard Green's *History of the English People*. Mr. McMaster has not the gift of Green for generalization. He is much more diffuse. He makes much more of manners and customs than his English prototype. He has drenched himself with Macaulay, and has caught the force and play without the finish of his style. His book is "as interesting as a novel," and will be read by many thousands. It is, therefore, to be hoped that it is as accurate and just as it is fascinating and brilliant. I am not prepared to say that, as a whole, it is not; but, if the pages that relate to Thomas Paine are a fair sample of the general accuracy and justice of the book, it is a pity that it ever saw the light.

The first mention of Paine is on page 75: "It is true that Paine's little pamphlet, 'Common Sense,' had gained for him a national reputation and national gratitude: but the circumstances which called it forth had passed away, and gratitude due to the public benefactor had long since given place to contempt for the infidel." Mr. McMaster is speaking of the state of literature in 1784. Paine had no public reputation as an infidel till after the publication of *The Age of Reason*, in 1795. In 1784, New York presented him with a farm in West Chester. In a foot-note to the above passage, Mr. McMaster gives the impression that Virginia was not equally generous, because of Paine's infidelity. She was not, because he had demolished in a pamphlet the claim of Virginia to the Western Lands. The absurdity of the above passage is, however, best condemned out of Mr. McMaster's own mouth. Speaking of Paine's tract on paper money, published in 1786,—two years after the time at which he says "gratitude to the public benefactor had long since given place to contempt for the infidel,"—he says, "The stirring words of 'Common Sense' and 'The Crisis' were still so fresh in the minds of men that anything by the same hand was read with consideration and delight." Here, we have truth and sense.

But the smallest part of Mr. McMaster's offence is in the count already named. Pages 150–154 of his book are devoted entirely to Paine, and give a general account of his career and character. The authority for this account is frankly specified. It is James Cheetham's Life of Paine, published in 1809. This and this only! A more worthless book was never published by a more worthless man. Cheetham was a New York editor who had been a raging Democrat. But being an Englishman, and wishing to return to England, he became a raging Federalist, and endeavored to make his peace with the English government by writing a libellous biography of Paine. William Cobbett wrote one equally libellous, and afterward became a boundless admirer of Paine, carrying his bones to England and burying them no one knows where. Cobbett and Cheetham, who had been Paine's admirer before he was his libeller, may be allowed to neutralize each other. The truth concerning Paine must be gathered from many different sources. A Brooklyn gentleman has a collection of Paine books and pamphlets, including many dozen titles; the biographies of Cheetham, Cobbett, Oldys, Vale, Rickman; and much contemporary matter.

Going through it all a few years ago, with much labor and sweat, I got a very different impression from that which Mr. McMaster has derived from Cheetham's isolated screed. The direct biographies are almost worthless. The side-lights of contemporary newspapers and correspondence are the best authorities. Three articles in the *Atlantic Monthly*, Vol. IV., 1859, show careful use of these. They extenuate nothing. They set down naught in malice. Had Mr. McMaster been aware of their existence, he could not have gone so far astray. Even the article in Appletons' Encyclopædia might have been read to good advantage. This Encyclopædia is not prone to err upon the side of liberality, and that its account of Paine is so honorable to him marks the immense divergence of Mr. McMaster's pages from the lines of truth and soberness.

It must not be understood that Mr. McMaster does not accord to Paine some elements of greatness and success. He assures us that his "Common Sense" did for the revolution what the *Federalist* did for the Constitution. But he retails the miserable lies and slanders of Cheetham without, apparently, the least misgiving. It would be impossible to justify the base constructions which he puts upon the events of his early business and domestic life. Farther on, he speaks of his connection with the Silas Deane affair as a "scandalous breach of trust." Words could not be more misleading to the general reader. In the name of truth and justice, Paine cut the official red tape of 1777, and was sacrificed to State policy for doing it. But Mr. McMaster's generalizations are worse than his particular specifications. He speaks of Paine as being "led astray by the worst of animal passions." But intemperance is the only vice that can be laid to his charge. He says, "Of all the human kind, he was the filthiest and nastiest; and his disgusting habits grew upon him with his years." They did indeed.

There is no evidence of any "disgusting habits" prior to his release from his long imprisonment by Robespierre for the most honorable action of his life and the most daring,—his speech and vote against the death of Louis XVI. From this long imprisonment, he came forth broken in body and in mind. The veil of charity should be drawn over everything that he did amiss after that terrible experience; and it would be, if he had not written *The Age of Reason*. He had been elegant in his manners and his dress, at table a good listener, not saying much, but always talking well. An immense deduction must be made from the accounts of his personal uncleanliness during the last sad years. Orthodoxy and Federalism, uniting to blacken a man, in 1806–9 could deluge him with mud. He was never, I imagine, a greater sloven than Dr. Samuel Johnson or Emanuel Swedenborg. If, at the last, he took to careless, evil ways, consider that his pride and heart were broken by the reverses of his fortune and the base ingratitude of men. The greatest fault which Mr. McMaster has committed is the imputation of the faults of his old age, which he wildly exaggerates, to his entire career. In perfect fairness, he should have reserved the noxious elements of his characterization for their appropriate time. He should, at least, have been unwilling, in a case so critical as this, to base his characterization upon the authority of a political renegade, as miserable as any that appeared upon the surface of events in a distracted and unhappy time. Our confidence in the general trustworthiness of his book would be much enhanced, if he should hasten to correct the injustice he has done to Thomas Paine.

JOHN W. CHADWICK.

NOTES OF THE FIELD.

During the past three weeks, we have given lectures in New York, Ohio, Michigan, and Illinois. As a rule, good audiences have greeted us and much interest been shown in the subjects treated. There is a large demand for lectures, and numerous engagements we have deferred till next autumn. Mention can be made here of a few places only. At Chicago, we spoke before the Philosophical Society one evening, and the following evening before the Ethical Society. The subject of the former lecture was "The Psychology of Herbert Spencer." The animated and interesting discussion which succeeded the lecture showed marked interest in the subject, and a gratifying appreciation of Spencer's contribution to philosophic thought, especially in the field of psychology. President Denslow, who presided, informed us that the society was in a flourishing condition; and the attendance and interest abundantly sustained his statement. Mr. Salter is quite hopeful that the movement of which he has taken charge in

Digitized by Google

that city will continue to grow and make itself felt in the community. He has organized a class in ethics, and steps have been taken to do charitable and benevolent work in a systematic manner. He is encouraged by the sympathy and co-operation of practical and earnest men and women.

At La Salle, Ill., we gave a lecture before the Casino, a society composed largely of Germans, and by special request made the Cosmian Society of Florence the subject of the discourse. There was a general desire to know all about the history and workings of that organization, with a possible view to adopting some of its methods. Mr. Hegeler, a wealthy zinc manufacturer, who employs from eight hundred to one thousand men, is especially desirous of an association in La Salle which shall combine opportunities for instruction and amusement, on a basis broad and liberal.

At East Saginaw, Mich., we gave two lectures in a course for which the arrangements were made by Mr. Rowland Connor.

In the second lecture, we filled the place, as far as we were able, of Mr. Holyoake, whose early return to England prevented his filling his engagement at East Saginaw. Prof. Adler and Rabbi Hirsch had lectured in the course, which has been fairly successful. The second evening, we spoke to quite a large audience. The papers of the city are very liberal, and gave fair and good reports of the lectures. Mr. Connor's society is in a vigorous condition and increasing in strength. It designs to erect a building at a cost of $10,000 this year. Mr. Connor's lectures attract large audiences, are published in the papers and widely circulated, and are having a marked influence in Northern Michigan. His society is nominally Unitarian, but composed chiefly of radical, outspoken free thinkers, including anti-Christians, agnostics, materialists, etc. Mr. Connor is not, and of course does not profess to be, a Christian, and indeed is quite as radical and pronounced in his views as either editor of *The Index*. He is doing excellent work in Michigan.

Last Saturday evening, we addressed the Spencer Club of Providence, R.I., which met at the house of Mr. James Eddy, of that city. After the address, an hour was devoted to conversational discussion, in which several persons participated, and among them, Frederick Douglass, who was present. The majority of the members are ladies, and a number of them evinced much acumen and discrimination, as well as acquaintance with philosophic theories, in discussing or commenting on Herbert Spencer's reasonings. Sunday afternoon, we spoke for Mr. Hinckley's society. We were pleased to learn that its meetings will before many months be held in a more pleasant and commodious hall. The society is not large; but it is composed of good, earnest men and women, and they are all agreed that Mr. Hinckley is the right man in the right place. B. F. U.

FREE RELIGIOUS ASSOCIATION FESTIVAL.

Our readers will be pleased to learn that Col. Higginson has consented to preside, and Miss Garlin's admirable Euterpe Quartette to sing, at the Festival of the Free Religious Association of Anniversary Week. The Festival this year is to be held in the large Horticultural Hall, and will consist of a sit-down supper, beginning at about six o'clock, and brief speeches from speakers whose names will be hereafter announced.

Tickets of admission, with reserved seats at the tables, at fifty cents each, may now be procured at *The Index* office, 3 Tremont Place, Boston; of the Secretary, F. A. Hinckley, Providence, R.I.; of A. G. Hill, Esq., Florence, Mass.

As it is designed to press the sale of tickets at once, it is hoped that all friends proposing to attend the Festival will make early application for seats. F. A. H.

EDITORIAL NOTES.

NOTWITHSTANDING the poverty so generally prevalent in Germany and the penury in a portion of the country now aggravated by the floods of the past winter, $13,000,000 have been expended in fortifying Metz and Strasburg; and a further grant is needed.

THE Insanity Map of Wisconsin, just published among the proceedings of the Conference of Charities at Madison, shows that among the counties having the fewest lunatics in proportion to population is the one which probably has the most free thinkers; namely, Sauk.

THE *Herald* remarks: "Some people think an oath a wonderful thing. A Colorado man committed five murders, and his confession thereof is believed because he swears to it. As if a man who could commit five murders could not swear falsely without damaging his conscience!"

IN one of the "Familiar Letters of John Adams," written Sept. 1, 1777, occurs the following paragraph: "Gen. Washington sets a fine example. He has banished wine from his table, and entertains his friends with rum and water. This is much to the honor of his wisdom, his policy, and his patriotism."

"THE New York *Sun*," says the Lima *Republican*, "devotes more than three columns of its closely guarded space to the review of a book, the argument of which is that animals reason. It is remarkable to what pains philosophical science subjects itself in an endeavor to prove what every one knows who has ever seen a dog avoid a second introduction to a tin can."

THE *Independent* says: "A writer in the *Presbyterian* declares that he does not know a case in which a church has repudiated its debts. We could easily give fifty cases in which a church has declared itself unable to pay its debt, and has either gone out of existence or disposed of its property at sheriff's sale, perhaps, buying it in for half the debt. Why is it that banks and insurance companies dislike to loan to churches?"

"THE State of Illinois," says the Chicago *Inter-Ocean*, "leads all the other States, not excepting populous New York and humane Massachusetts, in liberality to objects of charity. The amount invested in charitable institutions under State control and sustained at the expense of the State is, in round numbers, $12,000,000. It would seem from a recent publication that this is more than any of the four great powers of Europe has invested in a similar way."

THE papers give an account of the artificial production of an Aurora Borealis by Prof. Lendstroem, of Helsingfors. This astronomer is said to have placed a network of copper wire on the top of two mountains 6,000 feet high, in latitude 67 degrees north. He then connected this network with the base of each mountain. The net was provided with numerous points which attracted the electricity in the clouds to the earth, and produced an aurora which rose 360 feet above the mountain tops.

AS TO Science, she has never sought to ally herself to civil power. She has never attempted to throw odium or inflict social ruin on any human being. She has never subjected any one to mental torment, physical torture, least of all to death, for the purpose of upholding or promoting her ideas. She presents herself unstained by cruelties and crimes. But, in the Vatican,—we have only to recall the Inquisition,—the hands that are now raised in appeals to the Most Merciful are crimsoned. They have been steeped in blood!—*Dr. J. W. Draper.*

SAYS the Youngstown, Ohio, *News Register*: "People have a right to worship God, each in his own way; and it is right they should. But they should do it at their own expense, not by levying forced contributions on others. The widow has a right to worship God in the shanty she calls home, and perhaps that is the only place she does; but she must pay her taxes all the same, and so should the wealthy church. The real estate owned by a church organization enhances in value as rapidly as any other in its vicinity, and is as much benefited by improvement; yet, though it be owned by the same society a hundred years, it pays nothing to the support of the government whose protection it enjoys, while that by which it is surrounded has paid more than its original cost in that way."

DR. JOHN HALL, in a recent address before the students of Yale Theological Seminary, warned them carefully to avoid the misuse of words. One of the words, he said, improperly used is "infidel." It is wiser to express want of confidence in a man's judgment than to call him an infidel because he does not believe as we do. So with "sceptic." Dr. Hall considered himself a sceptic in a certain sense, and so should every man who is capable of judging evidence. The Bible teaches men to prove all things. "Let us not fear that we are sceptics, but that we do not look at the appropriate kind of evidence for the given case. Another word that should be used with caution is 'secularism.' In the true sense of that word, it was proper to be secular. We are all secularists in a way. Christian secularism is the hope of the world, the inspiration of goodness, charity, and all excellent things."

THE weakness of the Southern negro for henroosts has been a common topic of our newspaper wits. But Representative McElwe, of the Legislature of Tennessee, a colored man, in an eloquent speech against the proposition to slide down the State debt to fifty cents on a dollar, said:—

> Should you keep your word, and move beyond the domain of politics this question, which has troubled us so many years, driven capital from our State, and hindered the development of our resources, and today threatens the very life and vitality of one of the proudest States in the Union,—should you keep your word and make a final settlement, as you said you would during the campaign, will this settle it? You offer it, you say, only as a tender. They say they will not accept. Then, where is the settlement? Will you go before the people again with this question unsettled? Will you prove unfaithful to the confidence reposed in you? Will you prove false in one principle? "Falsus in uno, falsus in omnibus." Beware!

Shall we not admire the courage and honesty of this man, whom the State a few years ago treated as a chattel, with no rights that a white man was bound to respect, in declining to become a party to, and protesting against, a gigantic scheme of robbery on the part of the State of Tennessee?

LIVE THOUGHTS.

THE secret of success is constancy to purpose.—*Disraeli.*

AH! if the rich were rich as the poor fancy riches.—*Emerson.*

IN discussing anything, the weight of reasoning, and not of authority, should be sought, since the authority of those who profess to teach is, on the whole, a hindrance to those who wish to learn. For the latter cease to depend upon their own judgment, and take for granted the conclusions of those in whom they confide.—*Cicero.*

Digitized by Google

THERE seems to me no good in having an order of advocates who shall be known as the Ruffians of Progress. In a representative country, I am for using force to maintain law, and reason for changing it. He who would not maintain law by force, if it was threatened by force, is a coward who would abandon men to carnage, and society to tyranny.—*George Jacob Holyoake.*

POETRY.

For *The Index.*

TO OUR FRIEND SAMUEL JOHNSON.

O pines on yonder mournful slope,
Dark, dark against a glowing sky!
O hearts which once beat high with hope
That quiet lie!

O friend whose semblance, cold and calm,
We laid beneath yon sheltering trees!
Thy blessing, like an evening psalm,
Still haunts the breeze.

Thy purer presence by my side
Still leads me through the glooms of night;
Till death, thy faith has glorified,
Seems glad and bright.

We know thee in each nobler aim,
Each impulse toward a grander strife:
Thy influence, as a purer flame,
Still gives us life.

Thou livest in the hearts that beat
Yet higher at thy spirit's call:
Our lips again thy words repeat;
Thou speak'st in all.

O friend! beyond these turbid tides,
Sleep on beneath protecting pines:
Thy life, that as these stars abides,
Yet brighter shines.

Sleep on! No. Welcome! for thy soul
No mortal confine longer bars;
Thou com'st rejoicing, as they roll,
Th' eternal stars.

Welcome! Thou bring'st us light and rest,
A blessing from these friendly skies.
Lead on! Thine is the high behest
That never dies.

W. P. A.

For *The Index.*

WOMAN:

From Dr. Dix's Stand-point.

"O woman, in our hours of ease
Uncertain, coy, and hard to please,"—
When thoughts of "missions" rack thy brow,
How much more dreadful *then* art thou!

In teaching babies how to walk,
And showing them how they should talk,
We own thy skill; but, please to note,
Thou mayst not teach men how to vote!

Admit thy intuition might
Avail to set the wrong ones right,
Yet otherwhere thou must save souls:
We want no morals at the polls.

Wise doctors, of all sects and clans,
Proclaim thy brain weighs less than man's:
Why shouldst thou aid to evolute
A brain that would their words refute?

Nor deem it hard, if we who know
How vain are all things here below
Should bar thy entrance to the bar,
And set thee from the pulpit far:

Since Paul—who never made mistake—
Once stooped to aid thee, for men's sake,
And fixed thy place, in written word,
Like children, then, be seen, not heard!

Thy duty 'tis to mind the house,—
Not rule it,—be a faithful spouse,
To work, increase thy husband's hoard,
And be contented with—thy board.

Perchance, the coming ages will
Bring thee fresh toils, thy hands to fill;
But never, thou, leave in the lurch
Thy watchful friend, the holy Church!

WALTER L. SAWYER.

The Index.

BOSTON, APRIL 12, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

THE GENII IN COUNCIL.

BY F. M. HOLLAND.

PART I.

How are we to tell what is Right?

The genii of all the nations and religions were assembled before the throne, on which sat the Genius of Humanity.

"I have called you together," said he, "because I would have the laws of life better known. Declare, each of you in order, beginning with the oldest, by what rule right and wrong may be distinguished. Let your various tests of goodness stand forth, side by side, that the true one may be found. My children perish in ignorance. Let the way of salvation be brought to light."

First of all rose the Genius of China, extremely old, and dressed in a mandarin's full costume. On his hat of state were the peacock's feather, golden flowers, and button of high rank. He wore square-toed boots of yellow satin, a robe of light blue silk, and a red scarf crossed upon his breast. "The four hundred millions of my people," said he, "still find all the guidance that man needs in the teachings which Confucius gave their ancestors more than two thousand years ago. The true test of goodness is obedience to his precepts and those of the Five Sacred Kings, the oldest of books, written three thousand years before his birth. For thousands of years has China known the great rule, to do as one would be done by, and the celestial virtues, benevolence, justice, propriety, wisdom, and filial fidelity. These virtues, and the others which proceed from them, are taught so minutely in the Chinese sacred books that man needs no other guide. Let the younger nations go to the Celestial Empire to become wise."

The next spirit was also very old. His face was dark and his garments white as snow, and around his neck hung the Brahmin's sacred thread. "In India, also," said he, "there are hundreds of millions who find the way of life in the Vedas and Shastras, as their ancestors have done for thousands of years. Thus have the Hindus learned that paradise is open to him who doeth no evil to any creature, even the meanest, and to him who speaketh truth continually. Send my people not to China for guidance, but let the Chinese and all the other nations come to the Land of the Vedas."

Then, another spirit held up two tablets of stone, inscribed with Hebrew characters, and said: "From no writings of man, but from the mouth of Jehovah himself, hath Israel received the law. All idolatry is contrary to righteousness, and is forbidden in these Ten Commandments, which bid men serve God, not in worship of graven images, but in justice, purity, and brotherly kindness. To the eyes that turn toward these precepts will the ways of righteousness be ever plain."

The next genius was girt with the Gueber belt, and held in his hands an ancient scroll. "This holy Zendavesta," said he, "has taught the fire-worshippers how to think purely, speak purely, and act purely, and how to fight for the King of Light against the Father of Evil, until complete victory and universal salvation shall be achieved."

"Your laws are for single nations only," said the next spirit, who was clad in the yellow robe denoting sanctity in Central Asia. "The Buddha's precepts are for all mankind. Equally good in all lands, ages, classes of society, and races of men are his five great commandments: Do not kill any living thing. Do not steal. Do not lie. Do not commit impurity. Do not become intoxicated. Every one of the four hundred million Buddhists has before him, written in his sacred books and spoken by his bonzes and lamas, the way to Nirvana."

Then, another spirit, of haughtier bearing than the others, robed in purple and fine linen, crowned with a triple tiara of gold and gems, and holding in one hand a pair of keys and in the other a crozier surmounted by a double cross, said: "Your laws are all passing away: mine endure forever. Your precepts lie in your books, stale and cold: mine flow forth fresh and warm from the mouth of the ever-living Church. Every generation has new duties and needs new revelations. Moreover, human nature is so prone to rebellion against the truth as to need authority even more than knowledge. For the guidance of humanity, only the infallible Church, with her continual inspiration and her absolute power, can be sufficient. In the Church alone is salvation."

Up sprang the form of an Arab warrior, clad in coarse raiment and rusty mail, and holding a scimitar whose blade was stamped with Koran texts. "Your Church," shouted he, "is, like all its forerunners, too old and feeble to make conquests longer. My doctrines spread throughout China, India, and Africa, as fire in the jungle. The faith of Islam will prevail over all others, for therein alone are the laws of righteousness purely taught. You all teach that not only faith in these laws, but faith in images and ceremonies is necessary for salvation. You dishonor morality in your idolatries. Even Israel has let his traditions and ceremonies become idols. Through idolatry of Jesus and Mary can come no interpretation of the will of Allah. In Islam is his will revealed purely, and thereon should every nation be founded. The Koran is the only law book. Every Moslem nation is the executor of Allah's will against the infidels. All Moslem kings, judges, warriors, and scholars join in maintaining that blessed will, in submission to which alone is everlasting life."

And another warlike figure, but in full European uniform, his breast glittering with orders and his hand armed with a marshal's truncheon, said proudly: "What you would maintain in darkness and weakness, I have built in light and strength. Your work is crumbling already. Mine will endure. A million of soldiers and eighty million subjects uphold, above all the dissensions of Europe and Asia, the one true and firm standard of right and wrong, beyond all controversy, the will of the Czar. All the world listens to the voice of Russia. Safety and prosperity are theirs who follow it. For those who disobey are anarchy and ruin. No ancient books, time-serving priests, or barbarian zealots can give guidance to be named beside that of an enlightened monarch."

All these genii showed marks of old age, though those of Rome, Islam, and Russia, appeared still vigorous. The next shape was in the prime of manhood. His dress was peaceful and his hand held an open Bible; but his looks were fierce, and the voice loud and harsh, in which he cried: "There can be no real morality, where the Bible is not freely read. No man ever does right, except when he follows his own conscience, as enlightened by Holy Scripture. The only standard of right and wrong is the will of God, which the Bible alone reveals. Only by conformity to that revealed will can man gain salvation. Thus saith the Lord: 'It is not in man that walketh to direct his

Digitized by Google

steps.' 'Trust in the Lord with all thy heart, and lean not unto thine own understanding.' 'All Scripture is given by inspiration of God.' Other books which pretend to be inspired are all lying vanities. Jesus only is lawgiver for all mankind. "Neither is there salvation in any other." Every State or church which assumes any authority above or beside that of his will recorded in Scripture shall be destroyed utterly and speedily."

All who had spoken now looked angrily at each other and seemed eager to speak again; while several, who had as yet taken no part, rose together with wild looks and gestures. But the Genius of Humanity stretched forth his hand, and said: "Peace. Cease to be angry with each other. Let no one claim any authority over another's followers. You hold each a different rule of life, sufficing for your own most pressing needs, but useless to all who do not dwell in your land or believe your creed. You each condemn the others. Thus, you all condemn yourselves. I will hear no more about these private paths to heaven, open only to a portion of my children. Let him stand forth who can declare the universal laws of life, which may be followed by dwellers in every land and worshippers, under any name, of him whom no name can praise rightly, but whom all the many names given him in sincere worship reveal each in part."

Then stepped forth, with a graceful bow and genial smile, a figure whose dress and manners were those of a young man in the best society, but whose hair and teeth were plainly false and his dull eyes surrounded by the wrinkles of age. In his hand was a sheathed rapier and in his buttonhole the red ribbon of the Legion of Honor.

"Our friends," said he, "have spoken of laws imposed upon the weak by the strong. There is still a better law, by which the strong have bound themselves in favor of the weak. The law of honor commands every man to protect all who need defence, to keep his word sacred, to forego all base advantages, to keep his reputation and his family's pure, to die rather than be disgraced, to give his heart's blood gladly in his country's service. This law was first known in France, and there it is best enforced. During a hundred years of constant changes in State and Church, the law of honor has remained the same, and has kept France grand and glorious. For imperialist and red republican, for catholic, protestant, and philosopher, there is the same word of authority,—*Noblesse oblige*. From France, the law of honor has spread over all the civilized world. It is for men of every land and church alike, but especially is it for gentlemen and men of letters. They are best able to know its precepts, which grow ever more complete and precise as they are discussed in the best society and recorded in the ablest journals. Thus interpreted by public opinion, the law of honor is a sufficient guide for all men everywhere. *Vox populi, vox Dei.*"

The next shape was plainly and negligently dressed, and seemed prematurely old through much study. He wore spectacles, his pockets were full of books, and a roll of proof-sheets was in his hand. "The sword of Germany," said he dryly, "has proved the rottenness of your gilded oracle. A full system of morality needs a firmer foundation than the authority of any Church, or State, or book, or social circle. The most transient of foundations is public opinion. It poisoned Socrates and crucified Jesus. It upheld slavery and witchcraft. Still, it tolerates social and political corruption, and resists the progress of reform, philanthropy, and science. The moral laws flourish by no favor of man. They are their own sufficient authority. Let no one say that they are true, because they are revealed. They are revealed, because they are true. They are recorded more or less fully in the sacred books of all the religions. They are revealed perfectly in the nature of things, in the necessary relations of all creatures to each other and to their Creator, and also in the conditions of mutual harmony among all parts of the universal whole. Man's reason shows him the duty of fulfilling all the requirements of Universal Order, and acting only by such maxims as might become the general laws of all humanity. His natural love of goodness, simply because it is good, raises him, above all care for human praise and blame, or for divine rewards and punishments, into knowledge of Absolute Truth. In his intuitions of Truth and Goodness are all his duties made known. All other revelations would be in an unknown tongue, if this inner revelation did not interpret them. Bibles and churches have no real authority except from this higher law. Books, churches, and social opinions grow old and pass away. The Moral Law endures forever. It is a partaker of the Divine Eternity. Let man guide his steps by its primary and self-evident commands of Justice, Purity, Truth, Reverence, and Love, as by eternal stars."

"The compass is a better guide than the stars," said a stout shape, with florid face, neat business suit, and gold-mounted riding-whip. "Your eternal laws are good things to talk about, but they are too high up to follow practically. They did not show the old Greek philosophers the sin of unchastity, slavery, and infanticide, or your German philosophers the evils of absolute monarchy and infidelity. Man needs not only more knowledge, but more impulse. Your ideas have no meaning to most men, and little force to any. A sound moral system should enforce itself. Practical morality must be founded on the strongest of human desires,—the love of happiness. The full happiness of any man requires the greatest possible happiness of all others. Morality, therefore, is seeking the greatest possible happiness of the greatest number. Actions are right so far as they tend to promote happiness, and wrong as they tend to produce pain and discontent. For instance, if any man is in doubt whether a proposed amusement is right or wrong, he has first to consider whether he will really be more or less happy after indulging in it; and, second, to consider the effect on universal happiness. The moral character of all actions is discovered by calculating their results. Any one can apply this rule, however low his social or ecclesiastical standing or slight his metaphysical training. This is the Bible rule: 'By their fruits ye shall know them.' This is the great system of Utilitarianism which almost all advanced thinkers have adopted. Utilitarianism has made Great Britain the centre of the world's commerce, and given her an empire on which the sun never sets."

Then, another figure, much younger, but taller, thinner, and sallower, arose, newspaper in hand, and said: "I represent a nation even more practical than the British, practical enough to call everything by its right name, too practical to call utility morality, expediency justice, or happiness goodness. Americans believe in doing right because it is right, not because it is advantageous, and doing right without regard to consequences. Man needs some higher impulse than love of happiness, some higher test than calculation of results and profits. True morality raises man above all utilitarian calculations, into such genuine love of duty as never counts the cost. Love of happiness, even the greatest possible happiness of the greatest number, is not sufficiently disinterested to be pure morality. Pure morality must be built on a sounder foundation than man's love of happiness,—on his innate love of goodness for its own sake. Every man has not only a natural love, but a natural knowledge of goodness. He has in Conscience an all-sufficient guide. However untaught he may be otherwise, he has only to use his conscience to the utmost, and it will guide him aright. Even if he wander for a moment, his good purposes and feelings will surely bring him out right at last. The standard of morality is obedience to Conscience. The morality of an action is shown not in the utility of its results, but in the conscientiousness of its motives. Conscience tells man his duties with an authority which neither utilitarianism, rationalism, or public opinion can rival. Only Conscience can call forth all the strength and dignity of manhood. Outward revelations are useless for him who follows this Inner Light."

Then, another figure, far the youngest of all present, arose, with timid look and pleading gesture, saying: "Suffer me also to speak, though I represent no nation or religion, but only a single student's theory. Such were all the systems of morality once. Let mine be judged with those that have appeared. None has yet been generally approved. Even following conscience seems, I doubt not, to many besides myself insufficient. Nowhere do people differ more than in their consciences. The modern French conscience, like the ancient Grecian, tolerates such lying and debauchery as an American conscience abhors. Mediæval consciences enjoined persecutions, pious frauds, and self-tortures which modern consciences despise. The consciences in one-half of the United States once generally sustained an institution against which those in the other half testified indignantly. The true guide must be more clear than what most men call their consciences, and must be even more free from all pressure of external authority. It must resemble utilitarianism in being easy of application, but must appeal to a higher motive than love of happiness. The moral standard which man can safely apply must be lofty enough to call out his highest powers, plain enough to be in no danger of being misinterpreted by prejudice or passion, and commanding enough to be its own authority, without appeal to Church or State. If such a standard has yet been presented, I will say no more."

"Such," said the Genius of Humanity, "is the standard I ask for. Not yet has it been shown me. Declare it yourself, and the gratitude of mankind is yours."

(To be continued.)

CORRESPONDENCE.

A PLAIN TALK ABOUT THE INDIANS AND THEIR TREMONT TEMPLE FRIENDS.

Editors of The Index:—

Some years ago, I devoted four or five months to a study of the Indian question. I examined the entire literature of the subject, and prepared an extensive *résumé* of the history of the Indians in America, acting very much in such a capacity as that of the assistants of Mr. Hubert H. Bancroft, author of the *Native Races of the Pacific Coast*. I therefore feel that I have some right to speak on this threadbare but always fascinating subject. It would be in bad taste again to wave "the bloody shirt," and vex the ears of a much enduring public with a rehearsal of the old, old story of Indian wrongs and army atrocities. What it does behoove us to do is to settle upon some wise plan of action in behalf of the Indians and their white neighbors in the West. On Wednesday evening of April 4, another meeting of the friends of the Indians was held in Tremont Temple, Boston; and addresses were made by Edward Everett Hale, Gen. Armstrong, Col. Pratt, of the Carlisle, Pa., Indian School, and others. Nothing does more honor to the city of Boston than her active, philanthropic interest in the Indians. But the aspirations of Mrs. Jellyby for the general cultivation of the African coffee-berry *and* the natives, and the happy settlement of a portion of our superabundant home population in Borrioboola-Gha seem to me scarcely more visionary and useless than do the noble but mistaken labors of the Indian educators to settle the Indian question without first removing that eternal obstacle to Indian civilization, the present agency and reservation system. It is hard to ridicule sewing-circle and tea-drinking philanthropy, because it springs from such noble motives. But, if it stands in the way of more effectual reform, it must be thrust out of the way. It is too late in the day to think of mending wrongs by Sunday-school philanthropy alone. The great reproach of all Christian philanthropies is that they are too timid and deprecating. Instead of taking the sword from the madman, they go about applying salve to the wounds he has made, and begging the injured to be patient and meek under their sufferings. Instead of grappling with the hydra-headed monster of iniquity and stabbing it to the heart, they walk timidly around it, fulsomely begging its pardon, pretending friendship, and only occasionally backing a little at its toes or tail.

It makes one who knows the facts laugh aloud to read some things in the report of that Tremont Temple meeting on April 4. The Rev. Edward Everett Hale is a man whom I admire most of all American preachers. He is the most versatile of writers, but has not enough of the Garrison in him to make a reformer. His most charming characteristic is that he wants to make everybody happy and good-natured. I would cut my right hand off rather than doubt his utter sincerity when he soothingly told the audience at Tremont Temple that the army had always been the friend of the Indians, that probably a permanent commission of army officers would form the best Indian tribunal, and that the Indian question was at any rate practically settled now, and all we have to do is to co-operate with our excellent Indian Bureau, Indian Commission, and Indian educators. But that he is egregiously mistaken in these points is evident to all who have deeply studied the question. In fact, one seems distinctly to trace in his affirmations the influence

Digitized by Google

of conversations with army officers and those who support the present system. His astounding assertion (as reported in the Boston *Advertiser*) that the army has always been the friend of the Indian shows that he has not personally investigated the subject to the extent necessary to form a correct opinion of his own. The soldiers the friends of the Indians! The tigers the friends of the lions! The cats the friends of the rats! The panther the friend of the wolf! And the Indians have never had any truer friends than Generals Miles, Crook, and Howard! Then, indeed, is their cause miserable!

When I hear such amazing statements as these of Dr. Hale's, I recall that long and infamous list of brutal murders, treacherous faith-breakings, and insults on the part of the army, the campaigns on the Washita, the exiling of the Nez Percés, the massacre of the Cheyennes in Colorado, and a thousand other outrages like these. The army has always been the deadly enemy of the red men, and justly so. For, under the *protégé* system, the ward system, the reservation and agency system, the canting, sentimental pauperizing system that now prevails, the troops of the government are pitted as police over against bands of mad, fantastic baboons, dirty, ferocious Thugs, escaped convicts, cunning maniacs tricked out in feathers and ribbons, and riding furiously over the country with weapons in their hands. For this is what the Cheyennes, the Apaches, and the Sioux are, —no better and no worse. The one religion of their lives is murder. Certainly there are noble exceptions to such tribes as these. And there are many noble individual exceptions, but they only prove the rule. To read as I have done for months in succession the list of frightful Indian massacres, and horrible, sickening mutilations committed by the various Indian tribes of America, is enough to convince me firmly of one thing; and that is the *ineradicable* love of murder and cruelty in the Indian's nature,—ineradicable, but not impossible of suppression. The example of the Cherokees and of other tribes shows that time and education, and interbreeding, will in the end make men out of the red maniacs; but it must be remembered that the Cherokees were almost a semi-civilized race before the white man set foot in the New World. They were always different from the other Indians. Therefore, different measures must be taken for the civilization of those others. That such educational work as that of the Hampton and Carlisle schools will never accomplish anything of value while the present system of Indian management lasts is proved by the reports of the principals and teachers themselves. To send an educated Indian boy or girl out among those dirty, lazy bands of bedizened pauper Thugs on the reservations means inevitable lapse into the old barbarism. Experience has shown this. The one desirable thing, the one thing above all others toward which all the energies of Indian philanthropists should bend, is to get the Indians to work at agriculture or stock-raising on their reservations.

Most of the Indian tribes should be treated precisely like colonies of convicts made up chiefly of murderers and paupers. Any set of men—whether "civilized" butchers in our towns, or soldiers or cannibals or Indians—that make slaughter of other animals than themselves a trade should be regarded by the really civilized portion of society with suspicion. The "grandeur" of wars is a thing of the past; and the slaughter, or murder, of the peaceful species of our fellow-animals for food is a hideous and disgusting relic of the wild state, which there is no decent excuse for perpetuating. I say, then, that you are to put your fantastic red murderers to honest work at tilling the soil. Then, all the amenities of civilization will follow. *Then*, your education of Indian children will be of some use. And you need not be afraid of stepping on the precious toes of your interested War Department, and Indian Commission, and Indian Bureau. There will be plenty of use for soldiers for many a year.

See what you shall do. Disarm the Indians; stop sending them food and clothing; distribute them, putting each man on a farm; help him build a shanty, and give him tools and horses and seed-corn; distribute garrisons of soldier-police at intervals; appoint civil magistrates; subject the Indians to civil rules as nearly like those of white communities as the peculiar nature of the Indian will allow; take judicial power wholly from the army, which is never fit to be trusted with it, and make the soldiers only police executives of the civil officers. In short, subject the Indian to the compulsion of civil law; make him work or starve. No doubt but he will work then, just as the convict does (how admirable the modern convict reform system!) Above all, as soon as your Indians have reaped their first crop, send out to them blacksmiths, carpenters, and other artisans, as well as teachers, all from their own ranks. The making of these is the work which the schools at Hampton and Carlisle are now doing, and must then do more extensively than ever. There is really little new in the above plan: every feature of it has been successfully tried. It will save millions of money. The army and the Indian agents are the only ones who would like to perpetuate the present inhuman farce. Shall we stop for them? WM. SLOANE KENNEDY.

A FRENCHMAN'S VIEW OF GEORGE ELIOT.

Editors of The Index :—

In looking over the *Revue des Deux Mondes* for March 15, which has just come to hand, I found an interesting article on "George Eliot: her Works and Moral Teaching," by Emile Montegut, who will be remembered as having written some years ago for the same *Revue* two articles on Emerson: the first, "An American Thinker and Poet," published Aug. 1, 1847; and the other on "Hero-worship according to Emerson and Carlyle," Aug. 15, 1850. A portion of the article on "George Eliot," relating to her views of religion, I thought would be particularly interesting to your readers, and accordingly give it below:—

"The very striking opinions which we find in *Felix Holt* oblige us to return to a very delicate subject. In what sense can it be understood that George Eliot was a religious person, and what was the measure of this religion? Felix Holt broke with Christianity; but the rupture stopped at the dogmas, since he himself held to that which is the essential virtue of the Christian,—that love for his neighbor, *without* which the apostle tells us we are but as sounding brass and a tinkling cymbal, and that disregard for self which the mystics consider to be the crown of the spiritual life. Was it, then, these virtues which constituted all the religion of George Eliot? and the religious stamp with which she has marked *them*,—is it more than an illusion produced by the fervor with which she has preached *them*? *No: she had something* besides this; that is to say, an idea of religion itself, which remained clearly, however subtilely, distinct from the idea of morality, and which she considered as the most efficacious agent of the highest virtues. With the exception of Felix Holt, it is remarkable that none of her characters arrive at *perfection* without the aid of the religious idea. All remain invariably weak and changeable up to the *moment* when they are compelled by the logic, the passion, or the accidents of life to implore its succor. Maggie Tulliver never took such firm stand against herself as when the book of the *Imitation* fell into her hands, and Daniel Deronda was never able to emerge from his state of hazy idealism until he had been initiated into the Jewish faith through the ministry of Mordecai's friendship. Indeed, George Eliot is not very exacting in her choice of this religious succor. From whatever direction it comes and whatever name it bears,—Anglicanism, Catholicism, Calvinism, Judaism,—she is ready to accept it for her characters. But notice that this assistance comes always from a sanctuary, cloister, conventicle, or synagogue, never from the cold laboratory of the student or from exclusively philosophical meditation. More than that, she does not accept the religion without the accompaniment of certain practices; and she considers some form of these practices as indispensable to the health of the soul. She goes very far in this direction, so that she approaches singularly close—who would believe it?—to some doctrines of Catholicism on the necessity of the direction of the conscience. It is a curious thing—and it shows well at what point the nature of the sex lost little at the hands of a woman of genius—that it is for women, above all, that George Eliot recognized this need of a spiritual guide,—not because she esteemed them weaker, but because she considered them more passionate; and, consequently, they could not be saved, protected, elevated, consoled, except by a moral authority which had power over their sensibility. It is such a savior that Jeanie Dempster, of the *Scenes of Clerical Life*, sought and found in the young minister, Tryon, who drew her from an abyss of despair and the vicious habits of drunkenness; it is such a protection that Maggie Tulliver went to seek from Dr. Kenn; it is such a spiritual guide that Romola found in Savonarola. The hardness of heart and dogged silence of Hester Sorrel after her crime gave way at the religious words of Dinah Morris: done by this little Methodist, it is not less a miracle of moral resurrection than that which Catholicism attributes to the confession of sins. This need is presented as so imperative that, in default of a guide clothed with the sacerdotal authority, the feminine soul seeks it under the secular form of a friend, a husband, a master, even a lover." H. E. A.

NEWPORT, R.I., April 3, 1883.

EUSEBIUS AND "PIOUS FRAUDS."

Editors of The Index :—

No doubt there has been, and now is, very much said and done which might properly be called "pious fraud"; and the cause of true religion and sound morality is certainly best served, in the long run, by exposing such wherever found. But there is also a necessity for care that the exposure of a fraud be not a fraud itself.

Now, I have been looking up "pious frauds" myself for several years, and I read with much interest anything bearing on this question. But I see a constant tendency to detect a "pious fraud" where *none exists*. And, in the reference to Eusebius as one who favored concealment and deception "for the cause of Christ," it seems to me there is seen this same tendency. If Eusebius was an advocate of the doctrine of "doing evil that good may come," as the great Apostle to the Gentiles was not, he ought to be shown up. If not, he ought not to bear the imputation which has been cast on him.

I know of but one way to settle the matter, and that is by *quoting his words*. And so, in justice to one who is not here to defend himself, I trust, Mr. Editor, you will allow the passages referred to by your correspondent in *The Index* of March 29 to be reproduced entire, and so let all judge for themselves. I give them below:—

"All this [referring to the just judgments that came on the churches, in the form of persecution, *for the sins of pastors and people*] has been fulfilled in our day, when we saw with our own eyes our houses of worship thrown down from their elevation, the sacred Scriptures committed to the flames in the midst of the markets, the shepherds of the people basely concealed here and there, some of them ignominiously captured, and the sport of their enemies; when, also, according to another prophetic declaration, 'contempt was poured out upon their rulers, and he has made them to err in a trackless by-path, and where there is no road.'

"But it is not for me to describe fully the sorrowful calamities which they endured, since *neither does it belong to me to record* the DISSENSIONS and FOLLIES which they exercised against each other before the persecution. Hence, also, we have purposed not to extend our narration beyond the events in which we perceive *the just judgment of God*. Hence, also, we shall not make mention of those that were shaken by the persecution, nor of those that suffered shipwreck in their salvation, and of their own accord were sunk into the depths of the watery gulf. But we shall only, upon the whole, introduce those events in our history that may be *profitable*, first, *to us of the present day*, and hereafter *to posterity*." — *Eccl. Hist.*, B. VIII., chap. ii.

"But the events that occurred in the intermediate time, besides those already related, I have thought proper to pass by,—I mean, particularly, the circumstances of the different heads of the churches who, from being shepherds of the reasonable flocks of Christ that *did not govern in a lawful and becoming manner*, were condemned, by divine justice, *as unworthy of such a charge*, to be keepers of the unreasonable camel, an animal deformed in the very structure of its body; and condemned further to be the keepers of the imperial horses; also, the number and severity of the burdens and oppressions they bore, for the sake of the sacred vessels and property of the churches, from the imperial rulers and governors, at the time in the midst of insult, injury, and torment; moreover, the *ambitious aspirings* of many to office, and the *injudicious and unlawful ordinations* that took place, the *divisions* among the confessors themselves, the *great schisms* and difficulties industriously *fomented by the factions* among the new members against the relics of the Church, devising one innovation after another, and unmercifully thrusting them into the midst of all these calamities, heaping up af-

Digitized by Google

fliction upon affliction,—all this, I say, I have resolved to pass by, *judging it foreign to my purpose*; wishing, as I said in the beginning, to shun and avoid giving an account of them. But whatsoever things are serious and commendable according to the Scriptures, 'If there be any virtue, if there be any praise' [Phil. iv., 8. *Read the whole passage*], deeming it most proper to tell and to describe *these*, and present them to the attention of the faithful in a history of the admirable martyrs; as, also, most consistent with that peace which has recently shone upon us from heaven, I shall consider myself as most likely to decorate [embellish?] the close of my work, if I present to the attention of the faithful *an account of these*."—*Book of Martyrs*, chap. xii.

Here, we have the whole of the passages wherein this old church historian is said to "confess that he was *by no means scrupulous* in recording the whole truth concerning the early Christians, and that he *suppresses everything which would be detrimental to them*." The italics are mine.

The *facts* in the matter are these, as any one can see if they will read his book: Eusebius, in many places, refers to and severely condemns, not simply the errors of *belief*, but the corrupt practices of many in the early Church,—pastors and people,—using such expressions as "heated with wine and surfeiting," "perjuries and falsehoods," "fraud and treachery," to explain what it was he condemned; and, also, other immoral practices of a grosser sort, and that without any apparent reluctance.

Now, as he approaches the end of his work, designed to be a general *history* of church affairs, he acknowledges that he shrinks from the recital of things which, being done in the whole Church, *justly* incurred the divine displeasure, and brought down judgment in the shape of *persecution*. But, so far from implying that he desired to suppress what would be "detrimental" to the Church, he carefully gives a summary of the misdeeds and mistakes which brought on the Church such terrible sufferings. He does state, in substance, that he considers it no part of his duty, as an historian, to give the details of these misdoings; but, whether right or wrong in this opinion, he *never hints* at the idea of suppressing facts for fear of injuring the *Church* or "the cause of Christ." If that was his object, *why mention the matter at all?* I can see no sign of a "pious fraud" in this disposition to avoid details in regard to the heinous offences of other *members of the family*, especially when he frankly and minutely *acknowledges the facts*.

Now, we are ready for another "pious fraud."

E. P. WOODWARD.

MAPLEWOOD, MASS., March 30, 1883.

A WORD FROM MR. HEYWOOD.

Editors of The Index:—

In your issue of March 15, relative to Whitman's *Leaves of Grass*, you say that you are "not in sympathy with those who have called special attention to the most offensive passages in his works, and sought to identify them with liberal thought."

I know you intended no reflection; but, in the above passage, you attribute to me and my associates, in the case now pending in the United States Court, motives utterly foreign to our action or purpose. We have not sought recognition of Whitman's works as "liberal" or illiberal; for his books must stand on their own merits, if at all. We simply resent the invasive, irresponsible, impudent censorship of the press which Comstock incarnates. It is an outrage on the rights of every American citizen that the parcel of lascivious cranks who constitute his Vice Societies shall be allowed to say what books we may, or may not, read. The extracts alluded to were published *solely to vindicate the freedom of the press and the right of private judgment in morals*, now seriously assailed under sanction of United States law.

As what you said does us great injustice, I trust you will kindly give place to this, the needed correction. Truly yours,

EZRA H. HEYWOOD.

PRINCETON, March 16.

[While we do not admire Comstock, nor approve all his methods, we fail to see the justice of characterizing his Vice Societies "as a parcel of lascivious cranks." Furthermore we do not think that freedom of the press is likely to be promoted by publishing in tract form indecent passages from a volume in which they are blemishes, but little censured perhaps owing to the great merits of the work of which they form but a trifling part.—ED.]

A NOTE FROM MR. CHARLES WATTS.

Editors of The Index:—

On the eve of my departure for England, permit me to express my sincere thanks to the many American and Canadian friends who, during my brief sojourn in this country, have shown me so much kindness. Their hearty recognition of a humble but earnest English worker in the great cause of Liberalism will long be remembered by me as being among the most pleasing incidents of my public career. The great success of my lectures in every Northern and Western city I have visited affords me unqualified satisfaction and most gratifying remembrances. I much regret that, at the last moment, I have been unable to accept several invitations to lecture for liberal associations on account of being compelled to return to England. However, it is my intention to revisit the States at no distant date, when I hope to make a more extensive tour through the North and West districts. In the mean time, all communications for me should be sent to 17 Johnson's Court, Fleet Street, London, E.C., Eng. CHARLES WATTS.

[Mr. Watts sailed from New York on Thursday, April 5.—ED.]

THOUGHT IN DREAMS.

Editors of The Index:—

Instances of coherent thought in dreams are so rare that I think I may properly speak of one that occurred last night. I dreamed that I had a room of my own in Harvard College, and was talking to two young men there somewhat thus: "What we call an absolute monarchy really rests on a military hierarchy, and it would not be a stable form of government if there were not people who strongly preferred to have something stable and solid above them,—just as we at present are glad to have a roof over our heads rather than be out in the night air. There is also the despotism which rests on a priestly hierarchy; but of that there is no instance just now, except in Thibet." These were ideas I had never thought of before: and the form of expression, except in thinking of a military hierarchy, was reasonably coherent. After this, I passed, by some step of which I could remember nothing, into a wild adventure, out of which I finally awoke in a regular nightmare. I am sure that I felt, even in my dream, that I had rather stay out-of-doors all my life than live in a house of bondage; but I do not remember trying to express this thought before I waked. I do distinctly remember taking care not to speak with offensive severity of priests. F. M. H.

CONCORD, MASS., March 26, 1883.

IS THE BIBLE THE PARENT OF RELIGION?

Editors of the Index:—

A late issue of the *Churchman* contains the following words: "This Church, we are happy to say, has never put forth or even adopted any theory of inspiration. In her creeds, nothing whatever is said about the Bible.... Another fact to be remembered is that the Bible, in both its parts, is the Church's, and not the world's book. It was born within the Church, and was intended to serve a churchly end. Historically, it is the child rather than the parent of religion." In regard to the Bible being the book *of* and *for* the Church, isn't that the idea that has always been held by *infidels*, such as Paine, Ingersoll, and others of more or less note? The statement that the Bible is the *child* rather than the *parent* of religion seems logical, if not historically correct. For (unless we take the radical orthodox ground, that God, by word of mouth, dictated every word of it, and the number that hold that view of it is growing less day by day) the religious sentiment must have been in existence a long time before it appeared in Scripture; that is, religion must have been the product of the heart and brain, and *not* of the Bible, that was made as a storage place for it, and from that storehouse of religion we still continue to draw. We might as well call the newspaper the parent of news (and no doubt it is sometimes, when copy is scarce, for instance) or effect the parent of cause as to call the Bible the parent of religion. WILLIAM H. SPILLER.

Feb. 7, 1883.

MISCELLANEOUS.

REV. M. J. SAVAGE, of Boston, received, a short time ago, a letter from Mr. Herbert Spencer, assuring him of his interest in Mr. Savage's presentation of the religious and ethical bearing of his philosophy. The following is an extract:—

"QUEEN'S GARDEN, LONDON, Jan. 9, 1883.

"I have read with much interest your clearly reasoned and eloquent exposition of the religious and ethical bearings of the evolution doctrines. I rejoice very much to see that these aspects are coming to the front. It is high time that something should be done toward making the people see that there remains for them not a mere negation of their precious ethical and religious beliefs, as they had supposed, but, contrariwise, beliefs which, as you say, have a definite, scientific, and unshakable foundation. I hope that your teachings will initiate something like a body of definite adherents, who will become the germ of an organization. I have been long looking forward to the time when something of this kind might be done, and it seems to me you are the man to do it."

On writing Mr. Spencer for permission to publish this extract, Mr. Savage received the following:—

"Not only are you quite welcome to publish from my letter the extract you specify, but I shall be glad if you do so. The mass of the religious world is very reluctant to be undeceived in the way you have been endeavoring to undeceive them; and, in so far as my emphatic indorsement shall help to undeceive them, I shall rejoice to see it used."—*Christian Register.*

THE New Jersey *Sabbath Union* is laboring under the delusion that Heaven is much offended at the running of Sunday trains through the quiet fields and pretty meadows of the agricultural districts. According to such special information as the *Union* seems to have on the subject, Heaven is inclined to be down on Sabbath-breaking roads in general, but has a particular aversion to the Pennsylvania Railroad. Consistently with this view, the *Union* has formally uttered a protest couched in language intended to send it rattling down the corridors of time in peculiarly lively fashion.

The *Union* is so thoroughly in earnest that it seems a pity to have to undeceive it; but it has got it all wrong. It is not the running of Sunday trains which troubles Heaven. Yes, we know that the Pennsylvania road has done some queer things in its day; but, if Heaven has been considering Sunday trains, it has only been to regret that they were not run oftener, faster, and at cheaper rates. That is what troubles the Lord. It troubles him that the poor who live in the close and narrow tenements of a great city have not better facilities to get away from their crowded quarters on his day, and go out to the smiling meadows and pretty lanes beyond; that they cannot know something at least of the fragrance of the green fields and the beauty and perfume of the blossoms. And we beg to assure the *Sabbath Union* that nothing which serves to that good end will ever trouble the Lord, depend upon it. He may have a score to settle with the Pennsylvania Railroad, but it will not be on the ground of running cheap Sunday trains to the suburbs.—*New York Herald.*

BOOK NOTICES.

LECTURES, ESSAYS, AND SERMONS. By Samuel Johnson, author of *Oriental Religions*. With a Memoir by Samuel Longfellow. Boston: Houghton, Mifflin & Co.

Should the friend, admirer, lover of Samuel Johnson, feeling that this was a nobler than "one of Plutarch's men," and eager for wider diffusion of the knowledge of his life and character and of the influence of his thought, open this book with some misgiving, lest the memoir, by his friend of forty years, should, by its brevity and apparent meagreness, fail to set forth fully enough its subject, and should the doubt not at first give way on reading these calm and temperate paragraphs, and as traits and incidents of Mr. Johnson's life are recalled, alike by things said and by things omitted,—let him still read on until he finds, as he doubtless will, all feeling of disappointment gradually dispelled. The craving for more fulness of outline or of detail will cease. He will begin soon to be pleased with the simple dignity of the narrative, and with the fine reticence, so well suited alike to the subject and to the writer. He will feel at last

Digitized by Google

that *in* the lines and *between* them is all that is necessary, not for a biography, which this does not claim to be, but for what it is,—a *memoir* of a noble man, of a lofty soul, and a grand life and work. Mr. Longfellow has delicately and perhaps wisely refrained from saying much about one whose own words speak for him better than even the wisest and faithfulest friend could do. And he has composed the memoir chiefly from letters of Mr. Johnson, representing almost every period of his life and phase of his thought and feeling.

The letters from Europe show a faculty of observation and a descriptive power not often excelled in literature. And he is as original here, as independent and self-reliant, as in his more abstract thinking. He uses his own eyes, his own judgment, his own language, investing everything he describes with the peculiar qualities of his own personality, especially with its spiritual beauty, yet at the same time entering with wonderful insight and enthusiasm into all natural significance and all historical situations. And, in other letters, the criticisms of contemporaries and of events show everywhere the same self-poised individuality, the same keenness of perception, and likewise the same gentleness and affectionateness of spirit, preserving the tone of human kindness even in his severest strictures or denunciations. He does not from prejudice attack any man or party; nor does he from partiality spare even those who move most nearly upon his own lines of thought or of action, yet who, in his judgment, imperil their best aims by wrong impulse or method. But that in him which to not a few souls was the finest, purest, and most helpful quality, is revealed in the letters of consolation—what meaning the word carries when they use it for the comfort he gave!—which he sent to sorrowing friends, making them feel the gain in their loss, and flooding their world of grief with a divine light, blending every spiritual ray.

Nothing better, then, could Mr. Longfellow have done than to let these letters speak for their author. They reveal the steady growth of his mind and the gradual conception and performance of his task, from boyhood until his death. The purity of heart, the depth of thought and its swiftness, the moral independence and heroism, the unwearying industry, the cheerful patience, the self-forgetting love, which are the true measure of the man and of his work, are all visible here. And in what Mr. Longfellow has himself written of his friend, with all its delicate reserve, there is yet the fullest recognition and the most appreciative setting forth of these qualities, and of their great result in work, in life and character. Quiet and serenely strong and beautiful, like him of whom they tell, are the fitting words of this memoir,—worthy and sufficient to stand, as they will, with his own deep-thoughted writings, to be read, let us trust, by more than one generation of earnest men and women, and of thoughtful youth seeking true paths for their aspirations and hopes. Few are the guides and helpers so sure and strong and so wholly self-devoted as Samuel Johnson.

In these twelve lectures, wisely selected to show the range of Mr. Johnson's thought and moral interest, as well as the force and vividness of his imagination and the adequacy of his style for every theme, appear everywhere the same great capacities,—depth and breadth of view, clearness of statement, strength and beauty of rhetoric, acuteness of perception, power of argument, loftiness of spirit and of purpose. To some who have been deterred by the voluminous weight of his *Oriental Religions*,—exhaustive studies, from which, as yet, ordinary readers shrink—from feeling his full force and influence, this book must surely prove a fascination to draw them nearer to this wise teacher. To give any adequate idea of these various papers would require more space than can here be taken. A few remarks upon some of them must suffice.

Scholars have observed that in the *India* and the *China*, Mr. Johnson not only fulfils all that the general title, *Oriental Religions*, promises, but really presents a history of the races and civilizations with which he deals. The same thoroughness and love of fundamental work are manifest in the lectures on "Florence" and "Switzerland," the first and second in this book. Not mere description, vivid and beautiful as are the pictures here, but also history, philosophy, poetry, criticism, and prophecy enrich these lectures, yet without confusion or unwieldiness, each element inwrought with every other by the far-seeing and synthetic thinker, all analysis of nature, art, life, character, fact, form, color, of the impalpable, indescribable presence of beauty itself, recomposed into intellectual, moral, spiritual harmony.

Scarcely less remarkable in the same elements of power and beauty is the third lecture, "Symbolism of the Sea." A few persons who heard it read, probably the last time it ever became music through its author's voice, reading it now, will see how his modesty made Mr. Johnson fail, as always, to give it the emphasis of its real value. One wonders what access of "popular" power might have come to him, could he have felt the self-confidence whereby, apparently, so many men magnify their own words, commanding for that which is beneath comparison with his writings, press and people, not only the attention—which he scarcely secured—but likewise the applause of multitudes.

The essays which follow these lectures deal with great practical questions in a manner which shows that, although Mr. Johnson was, as Mr. Longfellow says, in the cast of his mind "intuitive rather than logical," he yet had no lack of power to ratiocinate with the best thinkers of his time. As a statement of the means and the end of education in its broadest sense, a criticism of our half methods, and of the wiping out of individuality in mechanized rules,—the worst fault, he thought, of modern systems in everything,—and much else of practical wisdom regarding the laws of individual growth and work, and of social and political service, the essay on "Fulfilment of Functions" is a treatise to which teachers as well as scholars, in all departments, would do well to go for instruction, suggestion, and inspiration. "We must," he says, "make our interest in education threefold what it is; count it of more importance than markets or churches to a people; put a hundred dollars for ten, wise superintendents for ignorant and contentious committees, more teachers with fewer pupils to teach, and chosen for gifts too rare to be had without skilful search and due respect, not for aptness in drilling a hundred as one, but for the rarer insight and sympathy that knows how to bring out of one a nobler import than any heap of mere numbers can show. .. Popular liberty is yet to be earned. . . . It will come when we facilitate and insist on a proper training for all functions. It will come when we account official positions not as prizes to be seized, but as outposts of peril for sleepless consciences to guard. It will come when we make such estimate the alphabet of political culture. . . . The love of doing things as they ought to be done . . . is civilization; this is liberty, culture, progress, holiness. For the art of finding one's special function rests on a deeper art, which helps to the fulfilment of many,—the art of pursuing true and right relations in everything."

Those advocates of suffrage and other "rights" for women who regarded Mr. Johnson in his later years as wanting interest in their cause, when he only refused to be forced into methods which he more than distrusted and to be made the mouthpiece of views which he held to be unsound, may look far and wait long before they find a deeper foundation whereon to build their real argument than he has laid in the essay on "Equal Opportunity for Woman." The title intimates the whole development of the subject. Not equal *rights* (as to the suffrage), but "equal opportunity," is the just, the fundamental demand. Equal obligation, too. It is "a question as to what are woman's aptitudes and duties." And he enforces the argument with such cogent reasoning as few would care to oppose. "This path [the suffrage] must open to woman simply because all paths must open to mind and will, on like terms for all. . . . If history has any record, it is that the finer moral and æsthetic forces in society have always been measurable by the degree in which woman has been respected and set free to follow her own instincts of culture and use. . . . Her political recognition will crown all other opportunities, not because it will make women vote, but because it will show that they are held equal members of the State with men in all the forms of its universal life." With his usual breadth of view, seeing that all questions become one at last, he covers in this essay the whole ground of political duty and fitness, of private capacity, and of public ends.

Those who read in the *Radical* for November, 1871, or in the reprinted pamphlet, the essay on "Labor Parties and Labor Reform," and who remember what attention it attracted, and with what kind of success it was answered by some of the leading "labor reformers," will not need to be told of the massiveness of its structure, the solidity, the energy and scope of this unrefuted argument, nor that it embraces the essential and permanent elements of the problem. Until the question is finally solved, this treatise will remain as fresh and powerful as it is to-day. That it does solve the intricate difficulties of labor and capital, the delicate questions of the relations of industry and of wealth with social justice and progress, need not be claimed while the whole matter is yet so dark. But that it sweeps away the fallacies of "class interests" and antagonisms, and demonstrates the universal claim to the honorable title of *labor* from the scavenger up to the poet or the painter, and the common sharing in wealth of all who contribute to it, and the common obligations in the producing and sharing, and proves that not antagonism at all, but co-operation, not in any partisan or technical sense, but in the sense of universal identity of interest and of aim, is the true solution,—all this may be safely said. "Labor is the grand creative energy of society, the wisdom, whose voice is to all the sons and daughters of men, calling them to that steady application of all powers to right and helpful uses, which shall stamp each person's doing with productive value and make it a common good. This universality alone can define the word, and the lofty claims must all pay allegiance to this. . . . The first step toward justifying our American 'honor to labor' is to recognize that God hath joined labor and capital, and that no man or party has authority to put them asunder or to declare them foes. . . . I cannot believe that we shall make any progress toward solving the difficult problem of the relations of labor until we start with appreciating *those aims and motives in which every one, whatever his special work, is bound to share, and which constitute the common cause.* . . . This real respect for labor is the one great lack amid all our manifestoes of its rights and ovations to its name. This, when it comes, will be true labor reform, to be hailed with enthusiasm and faith."

Over the sermons in this book,—where else are such sermons to be found, teeming as pulpits and presses are with hebdomadal "efforts," incontinently scattered over the land, and when will mankind come up to the hearing of such sermons, if they can get them?—over these sermons, one is tempted to linger, and from them to cull such flowers as are rarely seen in the sermonic vases or conservatories, and which will not wither, that the reader may taste their fragrance and judge what it might be to inhale from the whole rich atmosphere of this garden. But these sermons are too great and too individual to be exhibited in specimens. Let him who would pluck flowers from the paradise of thought come and choose for himself.

Those who still call themselves Transcendentalists will probably feel that no truer exposition of their philosophy and no stronger defence of it has ever been made than in the last of these profound papers. In some respects, "Transcendentalism" is perhaps the most remarkable of them all. No wonder that one who had written a history and, as he thought, the epitaph of Transcendentalism, could say that, if *this* were Transcendentalism, then *he* was a Transcendentalist. So would many a disciple of empirical schools, of positive philosophies, confess, could he fully take the bearings of thought in this comprehensive and luminous essay. If there is, or can be, any science, any natural fact, or human power or interest which Transcendentalism, as defined by Mr. Johnson, does not make room for and take up into its account of things, he, at least, was never persuaded of it. Such a demonstration, and such only, could have driven this idealist from the high ground where, with his *sun-mind*, he saw the sun of Everlasting Truth.

Prof. Eitel, whose notice of Mr. Johnson in the *China Review* is here printed in an appendix, bears testimony to his work and just rank as thinker and writer, with implications as to want of appreciation at home, which may well make American scholars in all schools wonder whether they have been blind or wilfully uncandid.

To Mr. Haskell, the compiler of these chapters from the scholar's multifarious work,—may he bring us much more from the same rich source!—the thanks are due of all who know or who shall yet learn the value of what he has thus, with intelligent judgment and faithful labor, helped to give to the world.

THE National Bureau of Education has issued Circular No. 6, "Technical Instruction in France." This is the first part of the report of a commission appointed by Queen Victoria "to inquire into the instruction of the industrial classes of certain foreign countries in technical and other subjects, for the purpose of comparison with that of the corresponding classes in Great Britain, and into the influence of such instruction on manufacturing and other industries in their own and foreign countries." This report has been looked for with great interest by those who are seeking to improve industrial education in this country, and it is full of important information. Although the French have had much success in industrial teaching, they are yet evidently struggling with many of the same difficulties that we are; and yet they are not discouraged, but feel that in these schools lies the power which is to bring the industries of France back to the commanding position which they once enjoyed. One important feature in French schools is to be specially noted: "corporal punishment in all French schools of every grade is absolutely unknown." Is it not a disgrace to us that even our women maintain that they cannot govern their schools without the rod? The report is so full of valuable and interesting matter that we will not attempt to condense it or to quote from it, but only advise all those interested in education—and who is not?—to give it careful study.

THE *Art Amateur* for April contains a very interesting sketch of the life of the great Dutch-English painter, Alma-Tadema. His personality is frank, original, and pleasing. The specimens of his work do not do him justice; for the engraving cannot reproduce his fine color, which is so vital a part of expression in his work. We shall look with interest for the critical account of his pictures promised.

The account of Mr. Leland's experiment in his school for decorative work in Philadelphia will be welcome to all who believe in the importance of industrial training. Mr. Leland is teaching children the simplest drawing and design, and preparing them to produce good original work. This plan is a novel one, and should be thoroughly studied by those who propose to work in this line.

The designs for decorative work in this number are very rich and pleasing, and the *Amateur* is full of useful hints and suggestions in all manner of decorative work. This magazine is growing better and better, treating artistic questions more thoroughly, and offering more variety of information in its reading matter.

THE *Revue de Belgique* contains articles on universal suffrage, Gambetta's parliamentary tournament, the region of Italy which has been enriched by Canova's genius and bounty, and the beliefs of primitive races. In treating the last subject, Goblet d'Alviella argues that Herbert Spencer has attached too much importance to the worship of ancestors, and not taken sufficient account of solar myths.

PERSONAL ITEMS.

MRS. ANNE LANGDON ALGER, wife of Wm. R. Alger, died on Saturday, the 7th inst.

THE widow of Captain Marryat, the novelist, died last month, at the age of ninety years.

EX-TREASURER SPINNER, at the hale old age of eighty-one, is enjoying life in Florida.

PROF. WILLIAM H. BREWER of Yale College is spoken of as likely to succeed Dr. Chadbourne as President of the Amherst Agricultural College.

PRESIDENT ANDREW D. WHITE, of Cornell University, says that the average health of the male students of that institution is not so good as that of the female students.

IN Baltimore, on St. Paul's Street, is displayed the sign, "Charles J. Bonaparte, Attorney-at-Law." This grand-nephew of the great emperor is a busy member of his profession.

COL. HIGGINSON avers that George Eliot, if she had ever held a dead babe in her arms, would have wanted something more to console her than the philosophy of Herbert Spencer.

LORD GRANVILLE recently apologized to Mr. Lowell for a short dinner notice to "the most engaged man (as diner-out) in England." Mr. Lowell very neatly replied that "no notice could be too short which came to the most engaged from the most engaging man."

ACCORDING to the *Academy*, the first edition of Mr. R. Bosworth Smith's *Life of Lord Lawrence*, consisting of four thousand copies, was entirely sold out within the week of its appearance. Such a success is, it is believed, without precedent in the case of Indian books.

THE portrait of George Eliot, by Mr. Frederick W. Burton, has been presented to the English National Portrait Gallery by Mr. J. Walter Cross and Mr. Charles Lewes. The face, seen nearly in full and the size of life, is drawn, in red, black, and white chalks, on gray paper.

IT is announced that prize-fighter Sullivan is going over to England to thrash Tug Wilson. There is some comfort in the thought that, if Sullivan goes to the old country, we are in a sense getting even with the aforesaid old country for having dosed us with dado Oscar and the frothy Socialist, Herr Most.

THE *Critic* of March 31 celebrated the centennial birthday of Washington Irving by a sort of symposium of mingled laudation and criticism, participated in by such writers as O. W. Holmes, Geo. W. Curtis, Chas. Dudley Warner, J. H. Morse, Edmund W. Gosse, Edith M. Thomas, and others. The same number also contained a complete bibliography of Irving's works.

MR. JOHN MORLEY, editor of the *Pall Mall Gazette* and *Macmillan's Magazine*, and author of *Edmund Burke* (1867), *Critical Miscellanies* (1871-77), *Voltaire* (1872), *On Compromise* (1874), and *Diderot and the Encyclopædists* (1878), and of the Life of Burke, in the English Men of Letters Series, of which he is the editor, has just entered Parliament, from Newcastle, as a radical. It is to be hoped that his devotion to politics will not be so exclusive as to compel the relinquishment of any of his literary or journalistic engagements.

THE death of Peter Cooper is no ordinary event. As a public benefactor, no man in the world stood above him. As a man, he was an elevating example for all men to follow. As a thinker, he was wise and prudent, remarkable for his common sense and foresight; and what he professed to be in religion he practised in his deeds. He was a philanthropist in the highest sense of the term, giving to society the benefit of the practical and superior judgment of his mind, with a pure and loving heart to aid the weak and indigent, and to encourage the strong in the high purposes of life. He acquired property that he might have the means of being useful; and, though modest in the estimate of his own great merits, no man was more happy in witnessing the good he was able to bestow upon others. To all young men and women of commendable aspirations, he was always the cordial friend and helper. To all who approached him, whether a neighbor or a stranger, he became at once a cheerful companion and an intelligent counsellor.

MRS. MARGARET CHAPPELLSMITH died at New Harmony, Ind., Feb. 27, 1883, on her seventy-seventh birthday. She was with her husband, Mr. John Chappellsmith, who survives her, a friend and supporter of Robert Owen in social experiments in England, and among his most valuable coadjutors in his work of establishing a community at New Harmony, Ind. In England, half a century ago, she wrote and lectured on various reforms from a liberal and radical stand-point. Her productions show extensive reading and careful research. For many years, she was a frequent contributor to the Boston *Investigator* and other liberal journals. In a note to us, Mr. Chappellsmith says correctly, her "leaders were Darwin, Spencer, Huxley, and Tyndall; and, though I say it, I doubt if there exists any person who could more vigorously explain their views." She was much interested in the Liberal League until it committed itself most unwisely, she thought, to a demand for repeal of all postal laws against obscenity. In the discussion on this subject, her sympathies were with Mr. Abbot, Judge Hurlburt, Col. Ingersoll, and others, who were content to ask for a reform of the existing laws. She was remarkably well versed in religion and philosophy, and some of her writings are worthy of publication in a permanent form. She was a true, good woman; and her death is a loss to the world. Mr. Chappellsmith, who has also been an able writer of the most radical views, has the sympathy of many in his sad bereavement.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

SAID Joseph Cook in Cleveland a few days ago, "Before God, and at the edge of Garfield's grave, I solemnly state that I had rather be an American to-day than a Roman under Cæsar or a Briton under Victoria." Did Mr. Cook, remembering the multitude of falsehoods he had uttered in Boston, think that the people of Cleveland would doubt the truth of a simple statement like the above, if he did not accompany it with an appeal to God and a reference to "Garfield's grave"?

THE attempt to inflict heavy fines on Bradlaugh for sitting and voting in Parliament without taking its oath of allegiance has failed. The House of Lords has declared that Mr. Clarke, as a common informer, cannot legally sue Mr. Bradlaugh, and has reversed the judgment against the latter, with costs. This persecution of Bradlaugh, urged by his political enemies, was outrageously unjust; and the reversal of the judgment against him is a triumph of common sense and fair play, at which every lover of justice and fairness must rejoice.

AT the Mormon Spring Conference at Salt Lake City, speakers declared that the Mormons were never before so prosperous or numerous. President Taylor said that their settlement was fifteen hundred miles in circumference, and was extending. Apostle Thatcher said that more than half of the Representatives who put aside principle and the rights of this people to satisfy popular clamor were not re-elected. God was in politics, and had swept the country. Even Democrats could not account for the turning of the tide in their favor. Providence had interfered to prevent farther anti-polygamous legislation.

THE Rev. Dr. S. Wainwright, president, and Mr. Alexander Scott, honorable secretary of the Society for the Suppression of Blasphemous Literature, have set before themselves a formidable task. They write: "We propose to get up cases, as our funds will allow, against Prof. Huxley, Dr. Tyndall, Herbert Spencer, Swinburne, the author of *Supernatural Religion*, the publishers of Mill's works, the publishers of Strauss' works, Leslie Stephen, John Morley, the editor of the *Jewish World*, Dr. Martineau, and others, who, by their writings, have sown wide-spread unbelief, and, in some cases, rank atheism in cultivated families."—*London Inquirer*.

IN the case of E. H. Heywood, who was tried last week in this city in the United States District Court upon complaint of Anthony Comstock, the jury returned a verdict of "not guilty." The counts of the indictment referring to the literature alleged to be obscene were quashed on account of the omission of the documents complained of from the indictment. The reason given for the omission, that the documents were unfit to be spread upon the record, Judge Nelson declared to be insufficient; and he said there was no excuse on the part of the government for drawing an indictment in so loose and careless a manner. It was evident from the ruling of the judge that he was not partial to some of Comstock's peculiar methods.

IN a letter to the Boston *Transcript*, Rev. M. J. Savage writes: "This is my ninth year in Boston, and I have not yet held a Fast Day service. For this course, my reasons are two: 1. In a country where there is no union of Church and State, I consider it simply an *impertinence* for either Governor or President to issue a proclamation appointing *any* religious service whatever. It is simply none of his *official* business. But the Governor this year has reached a pre-eminence of assumption in attempting to dictate doctrine, topic, and treatment. 2. I do not believe in Fast Day any way. The *true religious treatment* of the body is not to break its laws by either *starving* or *stuffing*. Bodily laws are divine laws; and they are to be kept by such a use of the body as shall insure health and efficiency. The rest is superstition."

A BILL has been defeated in the Pennsylvania House of Representatives, exempting from the penalties of the Sunday law of 1794 all observers of the seventh day as the Sabbath. Rev. James Neill, a Methodist preacher, and several others, spoke strongly against the bill; and it was defeated by thirty-seven yeas to one hundred and thirty nays. In regard to those who voted against the bill, the Philadelphia *Record* observes: "In this age of reform, we beg leave to say to such legislators that the day is coming when they and all others like them will be soon forgotten; and their names, if remembered at all, will only be regarded as among people who, had they lived in what we call the 'Dark Ages,' would have consigned those who differed from them in religious matters to the prison or the stake. The defeat of Bill No. 90 is a disgrace to the State of Pennsylvania, to the Christian religion, and to the age in which we live."

A BILL was introduced in the Pennsylvania Senate, last week, to prevent such exhibitions as the "Passion Play." The bill, prepared by a Methodist exhorter, prohibits any attempt to personate or represent any being recognized as a divinity in the Old or New Testaments in any show, exhibition, play, dramatic or other theatrical performance. The penalty is $1,000 fine, and not less than six months' nor more than a year's imprisonment. If any being recognized as divinity in the Old or New Testaments really existed, possessing the common sense and self-respect of an enlightened American citizen, he would be heartily ashamed of this protective legislation in his behalf. When will the free thinkers of this country unite in a determined effort to resist encroachments on religious freedom by religious zealots and unscrupulous political demagogues, who pander to their dupes for office and emolument, without regard to justice or honesty?

IT is a generally accepted conclusion that the elephant is, in the order of nature, doomed to extinction; and that, within a measurable period of time, this gigantic mammal will have suffered the fate of the Dodo. A writer in *Nature*, who thinks no feasible means for preventing so deplorable an occurrence should be neglected, writes: "Surely, the destruction of elephants might be legally controlled (in India, at any rate), and their capture (for domestication) might be limited, as it is well known they never breed in confinement. The continuous rise in the market price of ivory, and its recent unprecedented scarcity as an article of commerce, are ominous signs, and renders it incumbent on the votaries of science to consider what may be done in the matter. It is no question of mere sentiment, it is of vital importance; and—if 'ancient monuments, ruins, etc.,' are worth protecting—it cannot be denied that so remarkable and interesting a creature as our colossal pachyderm merits some effort in his behalf."

GOV. CLEVELAND has vetoed a bill, the object of which was to turn out the fire commissioners of Buffalo, men of "unquestioned probity and executive ability," in order to give the appointment of their successors to the Democratic mayor. He says: "The purpose of the bill is too apparent to be mistaken. A tried, economical, and efficient administration of an important department in a large city is to be destroyed upon partisan grounds or to satisfy personal animosities, in order that the places and patronage attached thereto may be used for party advancement. I believe in an open and sturdy partisanship which secures the legitimate advantages of party supremacy; but parties were made for the people, and I am unwilling knowingly to give my assent to measures purely partisan which will sacrifice or endanger their interests." The truth to which the governor of New York has given prominence needs, especially at this time, to be emphasized. The success of a party should be held subordinate to the interests of the people always. As the Brooklyn *Eagle* observes, "It may be a good thing for a governor to have his party stand by him, but it is a much better thing so to order his administration that the people will stand by his party."

THEISM AS A BASIS OF RELIGIOUS ORGANIZATION.

The Index gives a cordial welcome to all movements which tend to broaden religious beliefs and to promote a more genuine spirit of religious fellowship. To orthodox Congregational preachers breaking away from their old creeds and rebelling against the decisions of ecclesiastical councils, to such men as Heber Newton, preaching rationalistic sermons on the Bible in an Episcopal church, to scholars like Prof. Robertson Smith and Dr. Caird, who are stretching the tent-coverings of even Scotch Presbyterianism, to any earnest attempt in the Catholic Church—in whatever name—to break through the bondage of papal authority, to all tendencies among liberal sects to become more liberal, this journal would accord hearty recognition. These movements may fall short of what, in our view, a rational religious philosophy may require; they may even, in some cases, involve positions and statements that seem to us less logically consistent than the old positions and creeds which have been abandoned: yet we welcome them for the good habit of inquiry which they have started, for the promise of continued advance that lies in them, for the proof they give that the thought of the age is penetrating the churches—even the most creed-bound of them—and planting within them the seeds of fresh life. Any forward movement is better than stagnation; any fresh, living thought, though it may not have yet come to logical completeness, better than mere traditional adhesion to a past creed, however solidly its syllogisms may adhere together.

It is in this spirit that we have greeted the new *Theistic* Society which Mr. Schermerhorn is laboring to organize in New York City. We have, it is true, our doubts about the conditions of success for such a movement there. And we more than doubt, we should for ourselves positively reject, the idea of basing a religious society on a theistic belief. We would not have Theism for a church creed more than any other *ism*. Yet the attempt is an important step forward from the position Mr. Schermerhorn has hitherto occupied. He leaves behind the Christian name. He distinctly and expressly emphasizes the sentiment of catholicity in respect to the claims and merits of all the great religions. "The sympathy of religions"—a phrase first used, we believe, by Mr. T. W. Higginson on the Free Religious platform, and the idea of which has since been made very familiar on that platform and elsewhere—Mr. Schermerhorn brings to the front, and keeps specially prominent in his new organization. He builds on the belief in Deity and in worship,—a belief which he regards as naturally universal to mankind. He would bring forth in illustration of his own teachings the good and the true from all the faiths of the world. For its catholicity of aim, for its step away from the sectarian claims of any Christian sect and of Christianity itself, for its recognition of truth in all religions, we can, therefore, have nothing but good wishes for Mr. Schermerhorn's new society. And if personal energy, enterprise, and devotion can win success for it, he will succeed; for of these qualities he is a living incarnation. He may thus even create a demand (the natural existence of which we can but doubt) for the kind of society which he has had the courage and the faith to undertake to supply.

But, in our opinion, the time for theistic societies is past. The hour struck for them, if ever, a generation ago, when Wm. J. Fox, Francis Newman, and Theodore Parker were living prophets of theistic faith, and Sarah F. Adams wrote its most famous hymn. Parker, upon whom in his later years the Christian name hung very lightly, might have organized theistic societies quite extensively in this country, had he seen fit to make that his mission. Then, Theism represented the broadest thing known for religious organization. But, though himself a pronounced and decided theist, Parker was unwilling to foreclose the progress of religious thought by imposing Theism as a creed upon others. He would keep the lines open. The society which he founded in Boston recognized its historic connection with the religious spirit that settled New England by taking the name "Congregational," and numbering itself "the Twenty-eighth." But it took no name to indicate the creed even of its great preacher,—not Unitarian, nor Theistic, nor Christian. Nor to-day could that society be induced to accept any of these names. Since Parker's day many new issues have arisen in the field of religious thought. Science has advanced with wonderful strides. The rapid spread of the doctrine of evolution has compelled even radical thinkers to recast many of their old beliefs. Agnosticism, Pantheism, and a disposition to resort less to names and definitions of Deity, even though there be belief in his existence, prevail much more among Liberals than in Parker's time. For these reasons, even if we believed in building a liberal religious society on any kind of creed, we should deem it a specially difficult task to build to-day on Theism,—difficult, at least, if Theism be very clearly defined.

Mr. Voysey, in London, has been laboring for years with a society on a theistic basis. His sincerity is beyond question, and has cost him much. His earnestness and ability are deserving of high success. His single-hearted devotion to his work is worthy of all praise. Yet his organization is certainly not in so promising a condition as he would wish. It seems, in a measure, already to have been left in the rear by the onward march of that liberal thought to which it appeals for support; and his own thought—we say it with all respect and kindness—has appeared to us of late somewhat hampered by the rather old-fashioned phase of theistic belief to which he adheres. The Brahmo Somaj of India is also based on a theistic creed. But it has, too, a large infusion of Oriental fervor and mysticism, which would find little favor among liberal minds in Europe and America, but which are giving it considerable success among the mystically inclined descendants of Brahmanism. But the Brahmo Somaj does not satisfy all the emancipated thoughtful minds of India; and that portion of it which is led by Chunder Sen and his disciples is now adopting practices of spiritual incantation, and religious pilgrimage, and mystic communion with departed saints, which may add to its power among the Hindu populace, but which we imagine Mr. Schermerhorn's congregation of busy, money-making New-Yorkers, though willing, as requested at his services, to "rise and stand devoutly during the opening Prayer and the closing Blessing," would not take to very naturally.

The name which Mr. Schermerhorn has chosen for his new society is somewhat puzzling. It is called "Third Unitarian (Theistic) Church." By putting the word "Theistic" in parenthesis, it would seem as if he rather subordinated that idea, after all, to the leading word "Unitarian"; and the prefix of the numeral "Third" to "Unitarian" apparently indicates that he uses the latter word in its denominational rather than theological sense. Does Mr. Schermerhorn mean to insist on his right to fellowship still among Unitarian churches? We shall be interested to see what the next Unitarian *Year Book* will do with his name in its list of ministers, and whether the next National Unitarian Conference will recognize this "Third Unitarian" Society of New York, if it shall exist till that time.

But a graver question arises in connection with the collocation of words in the name of the new society. An impression has gone forth that the movement is a resuscitation of O. B. Frothingham's society. We cannot believe that Mr. Schermerhorn himself has given out any such distinct idea as this; for Mr. Frothingham's society has disbanded, and we understand that very few of his congregation—none of its prominent members—are taking any part in the new organization. What he has probably done is to speak, as our New York correspondent elsewhere reports, of his movement as an attempt to continue in somewhat different phase the work carried on by Mr. Frothingham; and such an effort would be entirely legitimate. But, this being all, it is unfortunate that the name chosen, omitting the parenthetical word "Theistic," should be the same as that by which Mr. Frothingham's society was known during most of its existence. This naturally conveys the impression, if no explanation goes with it, of a revival of the old society; and, hence, the same objections might be made to it that would be made to a new business firm adopting an old and well-known firm-name for carrying on its business, when there was really no connection between them,—that is, the objection of trading on the benefit of another's reputation. And, when Mr. Schermerhorn explains that the name "Third Unitarian Church" is retained "for historical reasons only," the explanation, unfortunately, is too suggestive; for, in 1875, Mr. Frothingham's society by a unanimous corporate vote changed its name to "Independent Liberal Church," and withdrew henceforth from nominal as well as actual fellowship with the Unitarians. The "historical" connection, therefore, with Mr. Frothingham's work would have been more directly expressed, if the Theistic Society had chosen this latter name instead of the one which Mr. Frothingham and his society had discarded.

WM. J. POTTER.

HAS WOMAN STEPPED DOWN FROM HER THRONE?

It will not do to call Dr. Morgan Dix a fossil or an old fogy. He is nothing of the kind. On the contrary, he is an able representative of a large existing community,—high-toned, moral, religious, and cultivated,—who sincerely believe that the incoming social proclivities are not only dangerous, but utterly at war with the designs of a Divine Providence; and, as such, the wheels of progress ought to be checked resolutely and defiantly. Since persecution in the shape of fire and sword is inadmissible, the keen weapons of an aroused public opinion, reprehending, making odious, denunciatory, and unresting, must be brought into action, and society protected from opinions far more to be dreaded than those that consigned Savonarola, Servetus, and Bruno to the stake.

Dr. Dix, so far from being a fossil, is a very live man,—fervid, painstaking, and forecasting. He sees what hundreds who abuse him fail to see,—the downfall of masculine supremacy, the tottering of the Church *as it now is*, and the loss of hierarchal power and privilege; but Dr. Dix, with all his fine insight, does not see the new heaven and the new earth which all this foreshadows; he does not see the *new man* of our emancipated humanity; he does not perceive the coming woman, clothed with the sun and the moon under her feet, in the presence of that divine light of justice and equality. Could he see all this, much of his anxiety would be allayed.

Like the gentle knight of Cervantes, he should have lived to put spear in rest a hundred years be-

Digitized by Google

fore he gallantly laid about upon the shadows of the past. But who would not rather weep with the pure romance of Don Quixote than be level with the times, like the trencher-henchman, Sancho Panza?

Dr. Dix has not spoken to no purpose. The sins of women (of which more hereafter) *are* fearful to contemplate. The advocates of the momentous question of equal suffrage have been too often flippant, coarse, mannish, and aggressive; but one Lucretia Mott, whom I am proud to call my friend through long years, might redeem an army of ill-advised but earnest, true-hearted women, and women who might satisfy the requirements of even a Cæsar.

These women may have too much dwelt upon the shortcomings of our brothers and the incapacity of the majority of men to *maintain* the women whom at the altar they endow with "all their worldly goods," and yet selfishly debar them from the honest exercise of their abilities to remedy the evil. It may be said that the extravagances of the sex render it difficult for the other sex to support their wives. I admit this, but aver that the women foremost in the great questions of the day do not belong to this class. They may not be "stayers at home," as Dr. Dix would have them, for they have work to do abroad; and that they have worked to some purpose in less than a half-century is evident from the manifest change of public opinion, which has called to the front, called from his cloister seclusion, so eminent a man as Dr. Dix to denounce them.

But, be it borne in mind, there has never been protest till sin was at the door. There is no wail without an undercurrent of wrong, no passionate outcry except as the utterance of unendurable pangs; and I contend that this uprising of the sex is no vain, foolish bleat of overfed lambs, but a great wholesome movement to revolutionize the social platform, to take the "weaker sex" (!) out from the swaddlings and wrappings that suffocate them, and to relieve the "stronger sex" (!) from their unequal burdens. It is a noble willingness to do our share in the world's work and help on that ameliorating spirit that shall culminate in those finer harmonies preluding *good will to man* and the reign of peace on earth.

It cannot be supposed that we women have penetrated so deeply the designs of God in our creation as a learned priest who, fasting and praying, has looked for and read the oracles; but this we can see,—there is a beautiful utilitarianism pervading all the economy of nature. Nothing is superfluous. From the age of savagery up to our own, we perceive a gradual evolvement of the higher and better aspects of humanity,—the dropping away of what was old or effete, and the induction of the more excellent. The Messianic expectation has been realized, and the most sanguine among us cannot hope to produce more than the average child of the advancing civilization; and, alas! in the one State of New York there are more than seventy-five thousand of us who cannot do even this honestly and reputably.

If all these must be put into homes and mother children, I do not see how it can be done without the old patriarchal or modern Utah polygamy, which would go counter to all advancing ideas of what is wholesome in morals. It follows, then, that to literally construe the designs of Providence in the creation of these seventy-five thousand extra women would land us in a sea of troubles. Herod's massacre of all the first-born males would not be tolerated; and nothing short of this would strike the balance, and render it possible for all these women to be wives and mothers. Such being the case, would it not be wise and well to recognize these women, born despite of the most pious calculation, outside of the pale of marriage, and see what can be honestly done for them?

If they are ungathered fruit from no fault of their own, are, it may be, as "willin'" as Barkis, and as comely as the majority of wives, and yet must accept their lot of single blessedness, why not let them seek out some compensation,—train themselves for teachers, for officials in a well-governed State, for scientific explorers, for writers, for doctors, lawyers, preachers, or whatever other pursuits are adapted to their capabilities, remembering that the measure of capacity is the measure of sphere to either man or woman, as I have been called upon to say many and oft-times?

These seventy-five thousand women must do something of this kind, as above stated, or do worse. I would have them recognize the fact that marriage is out of the question for them, and accept the situation. I would have them lay aside all ideas of sex. I do not care that they should do their "spriting over gently." I do not care to remember their sex, to say that they are womanly. Indeed, to be *manful* is required of these never to be appropriated women. Let them *work*, which is the best thing for all of us. Let them not be drones nor incubi in the body politic, but efficient, earnest, diligent workers, making society better for their existence in it.

Far be it from me to underestimate the sanctities of home,—the sweetness and blessedness of the true wife and mother. The Jew has from the first well represented the benefits of a home to the families of a nationality, and their exemption from the manifold diseases and crimes that are dragging down the glories of our republic is a better argument in favor of the household than any that we can make. But the ages have rolled on, and changes have arisen and are now working which cannot be gainsaid. Opinions, though strenuously clung to by the churches, are losing their hold on the human mind. Men are fast deserting the churches. Women are no longer the unquestioning mass that formerly filled the pews. Women are presenting a new type of womanhood. The priest is ministering to a class falling more and more into the background. I do not say the modern representative is better or worse, but I do say that the worst sins of the sex have arisen from that public opinion that persists in regarding them only from the stand-point of sex.

If woman has been degraded during the savagery of man, it was a testimony of the pervading condition of the race. If she has been exalted to the rank of queen of grace and beauty, she shared in the progress of ideas that helped to elevate man from barbarism. The chivalry that raised the few out of the degradation of the many of the sex gave place to the ascendency of the ecclesiastic over the military idea, and woman participated in all the dire persecutions of the Church, in her constancy vying with man in her patience and devotion to the truth as revealed to her. She nobly stepped down from her queendom of beauty into the arena of opinion, of thought, of deadly struggle, and womanly endurance of torture and death. In all this, she kept pace with the progress of ideas. The sense of the truth within her caused her to abdicate the throne of mere beauty and feminine homage. The priest taught her to estimate the sanctities of the virgin above the chasteness of the wife and the tenderness of the mother, to look upon the cloister as more sacred and more to be desired than the home. She fell into the snare, and thus the noblest of the sex perished at the stake or were secluded from the world, ceased to improve the race by their superior qualities, and left the office of production to those of an inferior stamp.

Protestantism did its work in stimulating her intellect, while it took from her the honors of the Lady Abbess and the canonization of the saint. She became plunged in polemics from the time, in our country, of Anna Hutchinson to our own. I do not conceive that she abdicated her throne so much in our day as a thinker as when, under priestly rule, she became a nun. She shares the fault of the general protest in making her individual judgment the law, and rejecting the consensus of the wisest and best.

So far from regretting that women no longer require undue homage, and that they can go steadily onward, even when men deny them that respect which is the natural homage of manliness, I perceive in this that they must and will compete for, and at length win, the honors and emoluments of good citizenship, that the race is to be lifted through them to a higher plane of civilization. Men will grow ashamed of their assumptions and shortcomings, and women of their turpitudes and aggressions. Home will be embellished with new light and a better life. The wife and mother, that she may the better fulfil her duties, will not feel it needful, nor will our brothers feel it needful, that, in order to be *stayers at home*, they should first, like the beetles in Madeira, be deprived of their wings; for duty will be the presiding genius of the home.

Of the sins of women, I will speak in another number.

ELIZABETH OAKES SMITH.

THE SECRET OF THE EAST;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

CHAPTER III. (*Concluded.*)

The Ethics of the Christian Religion.

Has Christianity made us more moral? A chorus of stall-fed obscurantists will denounce the impiety of the very question; but the time is past when the shadow of the cross could veil a multitude of sins against truth, and with the help of God we will lift some of these veils. A fruitful source of ethical delusions is the *autodogmatic fallacy*, or the tendency of every sect to judge the merits of its founder by the standard of his own dogmas. The votaries of barbarous creeds award the highest prize of virtue to deeds of relentless ferocity. They mistake pity for weakness, and its suppression for an act of praiseworthy heroism. The followers of Confucius inculcate the punctilious observance of ceremonies; and, tried by that standard, the Chinese moralist was undoubtedly the most perfect man. The worship of sorrow has so perverted our moral ideals that for long centuries joylessness and self-affliction ranked among the highest virtues. A jaundiced, whining abstainer from physical enjoyments was the Puritan paragon of moral perfection.* The municipal codes of many American cities still contain provisions for

* "According to this code, all the natural affections, all social pleasures, all amusements, and all the joyous instincts of the human heart were sinful. The clergy looked on all comforts as sinful in themselves, merely because they were comforts. The great object of life was to be in a state of constant affliction. Whatever pleased the senses was to be suspected. It mattered not what a man liked: the mere fact of his liking it made it sinful. Whatever was natural was wrong."

"Bathing, being wholesome as well as pleasant, was a particularly grievous offence; and no man could be allowed to swim on Sunday. It was, in fact, doubtful whether swimming was lawful for a Christian at any time, even on week-days; and it was certain that God had on one occasion shown his disapproval by taking away the life of a boy while he was indulging in that carnal practice. . . . Even on week-days, those who were imbued with religious principles hardly ever smiled, but sighed, groaned, and wept. One pious elder had acquired distinction by his faculty for what was termed 'a holy groan.' He used to weep much in prayer and preaching; he was every way 'most savory.' Even among young children, from eight years old upward, toys and games were bad, and it was a good sign when they were discarded."—*Buckle's History of Civilization.*

Digitized by Google

the suppression of public amusements on the only day on which a large plurality of our workingmen find their only leisure for recreation. The old Egyptians turned their funerals into holidays. We celebrate our holidays like funerals. Sublunary life, according to a still prevalent theory, is a state of probation for testing a man's power of self-denial. God is supposed to delight in the self-abasement and mortification of his creatures. A "man of sorrows" is our ideal of moral perfection. The cross, an instrument of torture, is the symbol of our creed. That creed has made our daily life so joyless that the mere prospect of a change must enhance the attractions of a future existence.

We have been taught to treat the body as an enemy of the soul; and, if bodily health is an obstacle to true saintliness, we have evidently progressed in the path of salvation. Under the influence of a sixteen hundred years' reign of Anti-naturalism, the degeneration of the South-European races has reached that degree where terrestrial existence ceases to be a blessing, and where the undue love of life is not apt to prevent the appreciation of spiritual comforts.

We have been taught that *faith—i.e.*, mental prostitution—is a prime condition of eternal welfare, and in many countries that virtue has been so earnestly cultivated that, if spiritual poverty is bliss, the kingdom of heaven cannot be far off.

After the measure of such standards, the Gospel of Pessimism has certainly regenerated the human race. But the virtue of a merchant should not be weighed on his own balance. The merits of a creed cannot be proved by its conformity to its own precepts. The standards we should apply are the laws of nature, the revelations of science, and the lessons of history. Such tests would teach us that the love of gloom is a mental disease; that, in a state of nature, every normal function is connected with a pleasurable sensation; that happiness, therefore, is the normal condition of every living creature; that to enjoy is to obey; and that he who deprives himself or his child of any innocent pleasure commits a crime against nature. They would teach us that physical vigor is a prime condition of moral health, and that he who neglects the health-laws of nature sins against his soul as well as against his body.* They would teach us that light is the harbinger of happiness, that the sun of science has ripened more blessings in a single year than the moonshine of mysticism in eighteen centuries, that the suppression of free inquiry has never benefited any country, and that faith without reason is not a virtue, but a vice. They would teach us that the love of earth was the gospel of all progressive nations, that the love of life lends wings to every valiant enterprise, that the love of joy is the parent of every healthy instinct, while the worship of sorrow has never produced anything but monsters and chimeras. They would teach us that pessimism is a blasphemy against the Author of life, against the Power whose all-sustaining hands furnish the weapons of its very assailants,—an insane, impious, and suicidal rebellion against our All-mother Nature, a foe to happiness, and the antithesis of all true religion.

In what respect, then, has the human race been benefited by a creed that has perverted their ethical instincts and systematically opposed the development of their physical and intellectual faculties? "In the Duty of Disinterestedness," we are told, "Christianity has revealed a higher type of virtue." A *new* type would be more correct, if the study of the Buddhistic Scriptures had not revealed the true author of that doctrine. But we should not forget that the self-denial of the New Testament is not the disinterestedness of liberality, not the unselfishness of friendship or patriotism, but the *self-abnegation of pessimism*, the indifference to the weal or woe of life which inspires the Buddhistic renunciation of worldly possessions. On the shores of the Mediterranean, that *disinterestedness* has sadly reduced the interests of real estate, and made mundane life extremely uninteresting. A joy-loving cultivator of the smallest farm, who improves his land and his trees and surrounds himself with a troop of happy children, benefits the world more than a whole convent full of disinterested Buddhists with their ascetic crotchets and puling pessimism.

Has Christianity made us more religious? Its terrorism once covered the land with churches, and the steeples of those churches still bristle in every city; but *religion—i.e.*, a whole-souled moral enthusiasm—requires the co-operation of heads and hearts, and is as different from mediæval devil-panics as from the stock-list-consulting sanctimony of our Sabbatarian Pecksniffs. Whether as brainless bigots or as heartless hypocrites, the defenders of the Trinitarian dogma have always been the worst enemies of natural religion. Even a moral atheist would object to the absurdities and atrocities they ascribe to the Supreme Being, but there are no real atheists. Naturalism, Pantheism, and Theism are only different names for the recognition of the beneficence and omnipresence of the great unseen Power; and, to every sincere worshipper of that Power, the apotheosis of Nature's enemy must be a shocking blasphemy against her God.

Has the *Reformation* improved our moral status? would be a very different question; for that reform, without admitting, and perhaps without suspecting, its ultimate mission, has proved itself a rather progressive one,—so much, indeed, that the doctrine preached from the pulpits of our Protestant churches is not Christianity, but an eclectic Bible doctrine, mixed with at least fifty per cent. of purely pagan ethics. Outside of La Trappe, few human beings could nowadays allege a reason for calling themselves Christians, and an honest repugnance to a solecism of that sort has perhaps evolved the nomenclature of our countless isms. Most Methodists know that some of Wesley's doctrines are already out of date; few Calvinists would like to mention certain tenets of the Geneva witch-hunter; and neither Catholics nor Old Kirk Presbyterians can doubt that the unqualified dogmas of the New Testament would circumscribe the sphere of a modern apostle by limiting his influence to the audience of a lunatic asylum.

The viands served in the refectory of our spiritual purveyors are half pagan and one-fourth Hebraic, but the Buddhistic flavor of the remaining fourth greatly impairs the digestibility of their collation. Their temperance-precepts are neutralized by the doctrine of the man who depreciated the health-code of the Mosaic dispensation, who denied the defiling influence of "anything that enters the mouth," and who once proved his sincere indifference to the physical welfare of his fellow-men by manufacturing a considerable quantity of intoxicating drink. The worship of God in the wonders of his visible creation is counteracted by the impious tenets of Anti-naturalism, the "vale of tears" dogma, the alleged worthlessness of earthly life, that fills convents and prebendaries with the whining gluttons who

> "With senseless, base ingratitude
> Cram, and blaspheme their feeder."

The worship of Nature in her progressive revelations, and the regenerative influence of science, are paralyzed by the dogmas of natural depravity and salvation by faith; and every champion of human rights has to contend with the rancorous opposition of the creed that inculcates the duty of self-abasement.

Protestantism has already eliminated three-fourths of the pessimistic elements in our eclectic system of ethics; and, even in the interest of religion, it ought to complete its task. We cannot regain our moral health till we cease to consult the oracle of a life-hating fanatic and to disregard the teachings of our life-preserving instincts. Religion will fulfil its mission when our Unitarians begin to deserve their name by renouncing the dogmas of the blasphemous age, when the offerings intended for the Temple of our God were carried to the house of a usurper. We must choose between Nature and Anti-naturalism. The compromise plan has failed. If the Prophet of Galilee was a god, we must humbly recognize the fact that it has pleased the Supreme Being to contradict himself in his direct and indirect revelation. If he was a man, I hold that the blindness of his followers does not absolve us from the duty of exposing his baneful errors. Can good intentions outweigh the consequences of such errors? If a quack kills my child with a poison which he honestly believed would cure it, I may forgive him because he meant to do me good instead of harm; but should I revere him as a model physician, merely because his intentions were good? And should the same reason entitle the Apostle of Anti-naturalism to be worshipped as a saviour? The advocates of the compromise plan protest against the revelation of the whole truth, and hide their real motives behind a mask of charitable forbearance; but that mask has become threadbare, and to their protest I answer: Truth needs no veil, and you would not hesitate to expose the delusions of your unfortunate fellow-men, if you did not desire their welfare less than you fear their prejudices.

FELIX L. OSWALD.

* "When life has been duly rationalized by science, it will be seen that, among a man's duties, care of the body is imperative, not only out of regard for personal welfare, but also out of regard for descendants. His constitution will be considered as an entailed estate, which ought to pass on uninjured, if not improved, to those who follow; and it will be held that millions bequeathed by him will not compensate for feeble health and decreased ability to enjoy life."—*Herbert Spencer.*

MR. GEORGE'S THEORIES.

I am sorry to see my young friend, Mr. Kennedy, for whose abilities I have a sincere esteem, taking stock in the deleterious nonsense (as it seems to me) of Mr. George's book. Mr. George's excellent philanthropic sentiments, his brisk style, and inordinate confidence in a few pet theories, seem to have greatly captivated a class of youthful theorists, where a little common sense or reflection might easily put them right. At least, if they are right and I am wrong, they ought to be able to convict me easily.

Mr. Kennedy, in last week's *Index*, states three positions of Mr. George's, as if the statement alone were proof enough of them. All three of them appear to me flagrant and manifest sophisms. They concern the three points of wages, population, and land.

As to the first, I should hardly have thought it necessary to point out that it is a mere play on words, or figure of speech, that wages can be said to be paid *from* the increased value already given to the product. Say *for*, and you are right; but that value has got to be "discounted" by capital before it can be turned into wages. Mr. Kennedy takes for truth a poor joke of Mr. George's. Was it the "added value" that paid the wages of cutting the Hoosac Tunnel, say the first ten years, which it would have been more profitable for the State to have stopped then and there, with no added value at all, or that pays for building a house which burns down when it is half done, or raising a crop that is lost or spoilt on the way to market? Go to with such nonsense! Mr. Kennedy, in his "sober second thought," knows better. And, *so far as they go*, how do such cases differ from at

Digitized by Google

least ninety-nine hundredths of those in which wages are paid at all? Of course, and necessarily, they are paid *for* added value, but *from* accumulated capital.

Mr. Kennedy thinks that Mr. George has confuted Malthus with a few fine phrases, which he copies. Now, the theory of Malthus, stripped of all verbiage, is this: that, if human beings are allowed to breed like rabbits, they, and the community or class made up of them, will in due time come to grief. Practically, Mr. Kennedy, instead of denying this, knows it perfectly well, and acts upon it. If not, what is to prevent him from starving in a hovel at thirty-five, with a horde of starving grandchildren? That is exactly what the most crowded parts of crowded England are doing to-day, as he will see by Mr. Porter's letters in the *Tribune*. And a very moderate faculty of generalization and calculation will show that this is what Malthus really means. Nobody pretends that the food-producing capacity of the earth is exhausted, or anything like it. But, for one thing, has Mr. George ever asked himself what we are going to do for lumber, if civilization and numbers go on another century, with as reckless waste as now? And so of other things almost equally essential.

As to land, I fully believe, with Mr. George, that the State, if wise and virtuous enough, ought to make a great many inalienable reservations, such as mines, forests, waterpower, and perhaps the plot laid out for a city that is sure to grow rapidly. But we seem to find that States, as they are now, are not wise and virtuous enough. Certainly, when it comes to farms and homesteads, I cannot think that even Mr. George can be wild enough to imagine that they can be better managed by political cliques at Washington or Albany than by their independent owners. If his preternaturally wild and cruel scheme of throwing all the burden of taxation upon farms and homesteads could ever be put in force, it could result, so far as I see, only in one of two things: either they would be sold very soon for taxes, in which case they would be bought up by speculating capitalists, who would make the most grasping of landlords, or else they would become the property of the public, and prove such a source of confusion and such a snarl of jobbery and corruption that the whole thing would explode, through general disgust, in a homestead law, which, with infinite misery, would bring things back to a condition something like the present, but not so good. I should think our Land Office and Indian Office had made that tolerably clear already. All which Mr. Kennedy, with his natural good sense *unperverted*, will speedily see to be the case.

J. H. ALLEN.

MORMONISM.
