"The interest of the Anti-Opium Society in the Chinese people," says the writer of the *Times*, "is of illegitimate birth,—the progeny of the disappointed zeal of the missionaries rather than the spontaneous outcome of genuine philanthropy. The whole agitation has, in fact, been got up by missionaries, who, having failed in China, as they have too often done elsewhere, are driven to find plausible reasons for the failure, the true one being too unpalatable. One old excuse of the missionaries has been the ill-defined relations between the sexes, for which they blamed their countrymen abroad, and which they alleged formed an obstacle to the spread of Christianity. But, perhaps, on considering more carefully the impression the missionary establishments themselves might be making on a people whose ideas of sanctity were indissolubly associated with a celibate priesthood, the China missionaries, at all events, appear to have dropped this question, and to have thrown the weight of their objurgations on the opium trade. There is no reason to doubt the truth of their assertions, that the Chinese do allege the opium trade as a reason for their not becoming Christians. One reason is as good as another, and this one they know to be the most acceptable to their interrogators. But whether in India, China, or elsewhere, the failure of the missionaries, according to their own standard of success, is uniform and complete. Hence, the special reason assigned for their special failure in China is irrelevant and superfluous."

The letter then goes on to state that missionary work from one point of view has been attended with great success. As philologists, educators, and colportors of religious and secular books, missionaries have done much good; but, knowing very well that this is not the kind of labor that the home societies expect of them, they despise these achievements: they must save souls! And this is precisely what they do not do. But listen to what the Singapore correspondent says on this point:—

That the missionaries do not make converts is, of course, true. At least, the numbers are so insignificant in proportion to the machinery employed as to suggest positive and not merely negative failure. The explanation may be partly contained in that very word, "machinery," which just fell from my pen. You can do many things by machinery, and it is even possible to change the nominal religion of a nation by its means; but to convert populations in the higher sense in which our missionaries understand the term transcends the apparatus of secretaries and treasurers, committees, and hired messengers. You may get men of average attainments to go abroad as missionaries, just as you get clerks or engineers. But they who adopt propagandism as a means of living—and it is no disparagement to the missionaries that they do so—are not exactly the men to impart a living impulse to the hearts of masses of people. Xaviers and Bishop Pattesons, indeed, appear at intervals, to prove that the apostolic spirit is not yet extinct among men; but such exceptional phenomena fail to redeem the commonplace character of the ordinary missionary field force. It is rare that a man becomes a missionary, if he can "do as well," in a pecuniary point of view, at home. He will not go to the "ends of the earth," as he calls it. Consequently, it is scarcely even the best of the rank and file of preachers and teachers that enlist for foreign service. By looking round on the quality of the men who fill average English pulpits, therefore, you may form an idea of the calibre of the force that is calculated, in the estimation of the promoters of missionary enterprise, to remove the mountains of heathen unbelief. These good people, of course, shelter themselves behind the pseudo-pious excuse that the meanest instruments may be used by the Almighty,—a principle, however, which they never act upon when they want a house built or a suit of clothes made, or a new organ for their worship. Strange that the flimsiest rag of sophistry should be thought good enough, when the religious welfare of mankind is concerned. . . .

Thinking they are invading a country as soldiers of the Cross, attacking the strongholds of Satan (misapplied Biblical rhetoric is unwholesome food for babes), these young missionaries go forth conquering and to conquer, denouncing the beliefs, the traditions, the worship of the people, calling on them to curse all that they have ever held sacred, and to accept, on pain of eternal perdition, the peculiar arrangement of beliefs which the missionary has compounded for them, and of which Christianity is one, but not always a very perceptible ingredient. And so the poor heathen, hungering, however unconsciously, for the bread of life, is offered instead the Shibboleths of a very Babel of sects. Is it surprising that this method of propagandism fails? Does it deserve to succeed? Nay, would its success be altogether desirable? . . .

I have suggested that the very slight success of proselytism in India and China stamps the failure as positive, and not merely negative, by which I meant to imply that the quality of the small Christian conversions that were effected was not always satisfactory. There are nine hundred thousand nominal Christians in India, or less than one-half per cent. of the population. Of these, more than half are in the Madras Presidency, and are nearly all what may be called historical Catholics. Of the remainder in the rest of India, probably one-half are also Catholics, which would reduce the number of non-Catholic Christians to about a quarter of a million, all told, or one-eighth per cent. of the whole population. In China, the case is somewhat similar, though there are no trustworthy statistics,—five hundred thousand historical Catholics, and such a small number of other sects as not to yield an appreciable percentage of the population. In both countries, the majority of the so-called converts belong to the lowest classes of the population. Not that there is any harm in that, for the gospel addresses itself specially to the poor. But there are usually reasons other than real conviction which decide the change of religion; and, when effected, it is found to have merely added the Christian forms to the substrata of the old superstitions. In every crisis of life, the Christian convert falls back instinctively on his heathenism, as a man will speak his mother tongue. Christian employers will not have Christian servants, because they learn from experience that the unconverted heathen are better. In every equivocal employment, Christians are to be found; and, even among the unfortunate class to whom vice furnishes a living, the Christian profession is not altogether unpopular. Of course there are some, perhaps even a considerable number, whose views of life are really elevated by their Christianity; but it is a fact worthy of all attention that the really devout Indians who have, under the influence of Christian teaching, cast off Hinduism, have preferred to create a new and, as they say, purer religion for themselves rather than accept Christianity in the form in which it is presented to them by the missionaries.

There is food here for much reflection. The testimony of this observer is to the effect that the non-religious efforts of missionaries—that is, the spreading of learning—is a grand success, while their purely religious, sectarian labors are a perfect failure. What course therefore should our Boards of Foreign Missions pursue? The answer is very plain. They should send out the schoolmaster armed with Webster's Spelling Book. In this way, doctrinal Christianity might gain fewer proselytes, but modern civilization would secure new devotees, which is a thousandfold more important. The motto of every missionary would then be,—I leave souls to God, and busy myself with brains.

THEODORE STANTON.

51 RUE DE VARENNE, PARIS.

CRUELTY ON THE NIGER BY AGENTS OF THE CHURCH MISSIONARY SOCIETY.

Editors of The Index:—

Allow me to enclose this scrap of paper to you. Perhaps you may be able to see better than I what it means. A relative and several friends of mine, who have spent some time in the Indian Ocean and neighboring seas, astonished me by their concurrence in the statement that a large portion of the funds sent out by Christians here for missionary purposes were employed in trading and merchandizing, many of the missionaries owning ships and acquiring fortunes. It was quite common, on inquiring of a master of a vessel, "What ship is that?" to be told, "It is a missionary ship." "Missionary ship?" inquired my brother the first time this answer was made to him. "Do you mean a ship engaged in carrying missionaries to the heathen?" "No: a trading ship bought with mission funds. Most of the trading in these parts is done by the missionaries, who get tired of trying to convert the heathen, and who make use of the funds sent to them to go into trade."

The enclosed article from the *St. James Gazette* raises the question whether the agents and schoolmasters of the Church Missionary Society haven't gone into the slave catching business. What is called "ransomed" in this article seems to mean "purchased from native captors," which is the approved Christian mode of buying slaves. The fact that they were brought back after running away indicates that the fugitive slave law is still in full force on the Niger in behalf of church missionaries.

VAN BUREN DENSLOW.

CHICAGO, Sept. 25, 1882.

[The following is the article referred to by Prof. Denslow in the above letter:—]

A Girl flogged to Death.

Newspapers published on the West Coast of Africa contain reports of the hearing of a charge against William F. John, Phœbe John, John Williams, and Kezia Williams, of having flogged a girl so cruelly as to cause her death. John

Digitized by Google

and Williams were described as *agents and schoolmasters of the Church Missionary Society at Onitsha on the Niger.* The female prisoners were their wives, and the girls whose ill-treatment led to the accusation *were persons whom the prisoners had ransomed.* The offence alleged was committed in 1877, when both girls ran away *from their employers, but were brought back.* As a punishment, they were taken to the prisoner Williams' house, when they were stripped and tied back to back. The allegations are not only that the two male prisoners savagely flogged the girls with their own hands, but that a number of natives were also ordered to keep up the punishment, which they did with guava whips, canes, ropes, and other instruments. Not content with this, the male prisoners ordered some pepper to be brought, and rubbed it into the bleeding wounds of the girls as they lay upon the ground helpless and *rolling* about in agony. This was in the morning; and the girls were left lying on the ground in the broiling sun, without shelter or aid of any kind. At mid-day, a number of boys came up from school and commenced to flog them again, by order, it is stated, of the prisoners; after which, two negroes again rubbed pepper into the wounds. During whole of the afternoon, the two victims, still tied together in the way described, lay in the sun, and, having succeeded in rolling toward a clump of bushes to seek for shade, it is said the prisoners dragged them back into the sun. In the evening, they were *untied*; and one of them, who afterward died, was taken away and lashed to a guava-tree in the yard of the prisoner John. She was then in a very weak and prostrate condition, the other girl having apparently suffered less severely. Three days after this, the girl who subsequently died was seen in the yard of the prisoner John, lying on the ground and bleeding from a fresh wound on the head, while beside her was standing Mrs. John, holding a stick about an inch in diameter. The female prisoner said that the deceased was shamming, and that she had been trying to make her get up, but in vain. The next day, the girl died. A large number of witnesses were called at the Police Court, Sierra Leone, on various days between the 2d and 7th of August, who deposed to these facts, stating that the female prisoners were looking on and laughing while the pepper was being rubbed into the bleeding flesh of the two girls, and giving other particulars of the outrage. The prisoners, against whom true bills were presented, reserved their defence, and were to be tried on the 21st ult.

DARWINISM.

Editors of The Index:—

In a recent issue of *The Index* there occurs a criticism upon a lecture of mine, published a year or two since in the Chicago *Religio-Philosophical Journal*, under the heading "The Eclipse and Decline of Darwinism."

In the criticism, the writer (anonymous) pronounces the quotation from Darwin, in said lecture upon the decline of Darwinism, "garbled," and then adds, "Darwin does not say 'life was originally breathed by the Creator into a few forms or into one.' He does not affirm *any* theory as to how life originated."

Let us see. I am not accustomed to being charged with "garbling," hence, I repeat, let us see.

In the sixth edition of Darwin's *Origin of Species*, p. 269 (see also Appleton's reissue of it in America, p. 429), I find the following paragraph upon the origin of life, which I quote *in extenso*:—

It is interesting to contemplate a tangled bank, clothed with many plants of many kinds, with birds singing on the bushes, with various insects flitting about, and with worms crawling through the damp earth, and to reflect that these elaborately constructed forms, so different from each other and dependent upon each other in so complex a manner, have all been produced by laws acting around us. There is grandeur in *this view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one*, and that, while this planet has gone cycling on according to the fixed laws of gravity, from so *simple a beginning endless forms most beautiful and most wonderful have been and are being evolved.*

There is the quotation, italics mine.

And I submit that, if the paragraph means anything, it means what the words indicate, that "life, with its several powers," was "originally breathed by the Creator into a few forms or into one," from which "simple beginning endless forms most beautiful and most wonderful have been and are being evolved."

William Denton, a zealous evolutionist before "Darwin wrote a line upon the subject," in his late book, *Is Darwin Right?* refers several times to this paragraph of Mr. Darwin relative to the origin of life, and criticises it mercilessly. Prof. Denton believes in spontaneous generation. Prof. Gunning and other evolutionists, to my knowledge, seriously object to the *position* of Mr. Darwin in the above-quoted paragraph, and object to it because it implies a special act on the part of the Creator, the equivalent of a miracle.

Is it not passing strange that many Darwinists make such wry faces at the Mosaic miracle of God's breathing "the breath of life" into dust-formed man, and yet swallow with such gusto Darwin's miracle of the Creator's breathing life into "a few forms or into *one*"?

And, further, kindly allow me, Mr. Editor, to quote the published words of Alfred R. Wallace (*Human Nature*, 1878) relative to the difference between him and Mr. Darwin upon the origin of "life" or the influx of life when man appeared. "Darwinism," says Mr. Wallace, "may be true as far as it goes, but not be the *whole* truth. Darwin's laws of natural selection and variation are true laws, which will account for much, perhaps for all the material organizations of plants and animals. He admits an influx of life from the Creator at first. I think an influx of a *higher life* occurred when man appeared. He does not *think* this necessary. This is the *real difference* between us." The above, even to the emphasizing, are Mr. Wallace's words upon this important subject.

Finally, as an individual disliking controversy, I have only to say that I am a firm believer in evolution, but not in Darwinism. J. M. PEEBLES.

HAMMONTON, N.J.

To show how little reason Mr. Peebles has for complaint, we here reproduce the "criticism" to which he objects:—

In a published discourse by a prominent Spiritualist (Mr. J. M. Peebles) on "The Eclipse and Decline of Darwinism" occurs the following:—

The fact that Darwinism is posited upon a miracle is enough of itself to throw suspicion upon the whole hypothesis. . . . These are Mr. Darwin's words *verbatim*: "Life was originally breathed by the Creator into a few forms, or into one; and, while this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning, endless forms most beautiful and most wonderful have been and are being evolved."

Now, it is not true that "Darwinism is posited upon a miracle." It is not true that Darwin affirms belief in a miracle as the origin of life on this globe. The quotation given by Mr. Peebles (from some unfair opponent of Darwinism, second-hand, probably) *is a garbled quotation.* Darwin does *not* say, "Life was originally breathed by the Creator into a few forms or into one." He does not affirm *any* theory as to how life originated. But in his *Origin of Species*, written more than twenty years ago, he attempts to allay religious prejudice by saying, in substance, what is quite true, that the origin of life is a mystery which his theory leaves unexplained; that this fact is not a valid objection to his theory; that the development of species from a few forms or from one is in no way derogatory to the character of Deity; that, on the theory of direct, divine action, the idea of God breathing life into a few forms or into one, and evolving therefrom, according to law, all the organic forms now on the earth, is quite as grand as the idea that all species were created by miracle. But it is best to give, on this point, Darwin's own words, including the sentence which is garbled in Mr. Peebles' lecture:—

It is no valid objection that science as yet throws no light on the far higher problem of the essence or origin of life. Who can explain what is the essence of the attraction of gravity? No one now objects to following out the results consequent on this unknown element of attraction, notwithstanding that Leibnitz formerly accused Newton of introducing "occult qualities and miracles into philosophy." I see no good reason why the views given in this volume should shock the religious *feelings* of any one. It is satisfactory, as showing how transient such impressions are, to remember that the greatest discovery ever made by man—namely, the law of the attraction of gravity—was also attacked by Leibnitz as "subversive of natural and inferentially of revealed religion." A celebrated author and divine has written to me that "he has gradually learned to see that it is just as noble a conception of the Deity to believe that he created a few original forms capable of self-development into other and needful forms as to believe that it required a fresh act of creation to supply the void caused by the action of his laws." (*Origin of Species*, p. 429, fifth edition. 1870. D. Appleton & Co.)

After mentioning the laws of growth, reproduction, inheritance, variability, struggle for life, and natural selection, Mr. Darwin adds:—

Thus, from the war of nature, from famine and death, the most exalted object which we are capable of conceiving—namely, the production of the highest animal—directly follows. *Thus there is a grandeur in this view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one; and that, while this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been, and are being, evolved.* (Ibid., p. 437.)

It will be seen that the quotation given by Mr. Peebles as *verbatim* is just as we stated, *garbled*; and nothing in his communication either explains the fact or lessens the force of our comments. Darwin does not say, "Life was originally breathed by the Creator," etc.; nor is that proposition implied in the sentence from which Mr. Peebles' quotation is garbled. That Darwin believed in miracles, or that he believed even in an intelligent Creator, cannot be shown by anything in the *Origin of Species*. That William Denton was an evolutionist before Darwin wrote his *Origin of Species* is likely enough, for men have written in defence of evolution more than two thousand years. This, however, will not diminish the fame of the great naturalist in connection with his discovery and application to organic life of the principle of *natural selection*. But why refer to Mr. Denton to indicate Darwin's views, when we have his own writings before us? Mr. Denton and others have, we believe, made the same mistake as that of Mr. Peebles indicated above.—ED.

AMERICA FIFTY YEARS AGO.

Editors of The Index:—

English books on America have but too commonly afforded the Englishman at home a poor chance to correct bad opinion by a knowledge of truth. But there have been exceptions, and one of them is well worthy of notice, as giving impressions formed half a century since.

While on a short stay at York, one of the finest survivals of ancient England, we met with a couple of volumes of *Letters from North America*, which Adam Hodgson, a Liverpool merchant of character and standing in his day, wrote home from the United States between the autumn of 1819 and the spring of 1821. Mr. Hodgson used a sagacity and candor very exceptional among English observers of America. When he had seen for himself, one of the conclusions to which he came was this:—

With respect to America, indeed, as well as every other country, there are two sides of the picture; but, unhappily, many of our travellers have seen or at least exhibited only one, and that, too often, the most unfavorable side. I have met with no travels in America which do not contain much that is true, but many which, in consequence of important omissions, produce an impression which is entirely false.

Even in himself, Mr. Hodgson detected a tendency to come to false conclusions, and he justly doubted whether the average traveller's conclusions can have much value. This was his statement:—

I have sometimes been ashamed to find how much my opinions were influenced for the moment by humor or circumstances. I shall in future have little confidence in any general conclusions, respecting a country, founded on the experience of a single traveller.

Mr. Hodgson pronounced this judgment:—

The American character, to be estimated correctly, must be regarded as a whole; and, as a whole, it has been calumniated to a degree derogatory both to the intelligence and the generosity of my country.

Speaking of the difficulty of reaching conclusions worthy of trust, Mr. Hodgson said:—

I would gladly relieve myself by some bouncing assertions, if I could do it *with sincerity*; but there have been *bounces* enough on the subject of America already.

Of "the largest proportion of the American population," Mr. Hodgson said:—

It is distinguished from the corresponding classes of my countrymen by greater acuteness and intelligence, more regular habits of reading, a wider range of ideas, and a greater freedom from prejudices, provincialism, and vulgarity.

He admitted also that in debate the manners of America are better than those of England. Thus, he said:—

The Americans have the advantage over us in coolness and courtesy in argument, and scarcely ever interrupt the speaker.

This is one of the contrasts which is still very great; but it should be said that it, like so many other national characteristics, is seen in England, in the mass of the people, and that, in a large superior class, a fine serenity of temper and courtesy of manner may be seen, which are all the more perfect, as many examples of the finest English excellence are, from the fact that they are a conscious victory over a prevailing habit of the people. Another point of contrast found by Mr. Hodgson was the following:—

The cities, except New Orleans, present nothing of the disgusting effrontery and unblushing profligacy which the streets of our large towns exhibit after dark.

Still another point was this:—

The bribery of subordinate custom-house officers, so disgracefully common in England, is very rare here.

And even before the great reform of fifty years ago, which put a great gulf of distinction between England and America in respect of the open toleration of

Digitized by Google

drinking habits, Mr. Hodgson could compare the two countries in the following terms:—

On the whole, I would say decidedly that, taking America generally, from Maine to Louisiana (I have seen few of the Western States), the sin of intoxication prevails less extensively there than in England; that, whatever may be the injury to the constitution from the common use of spirits instead of malt liquor, there is less derangement of the faculties, less waste of time, and, perhaps, of money, and far less misery entailed on suffering families from intemperate drinking in this country than in our own.

On a matter of vast importance in the comparison of England and America in the history of freedom and culture, Mr. Hodgson spoke with a justice none too often found in English writers. After witnessing the sale of a negro woman and four young children, he wrote:—

The melancholy feelings with which I quitted this scene were not diminished by the reflection that it was *my* country which first transported the poor African to these Western shores; that it was when they were the shores of a British colony that slavery was first introduced, by British ships, British capital, and with the sanction and encouragement of a British Parliament. Would that I could forget that, in a single year, no less than thirty thousand slaves were introduced into America by more than a hundred vessels belonging to a single British port; that the efforts of many of the American States to abolish the importation of slaves were long defeated by the royal negative, which was put on those acts of the colonial legislature which had for their sole object the extinction of the slave trade; and that Burke was but too well justified in stating in Parliament that "the refusal of America to deal any more in the inhuman traffic of negro slaves was one of the causes of her quarrel with Great Britain."

One great and glorious fact in the early history of New England Mr. Hodgson got a glimpse of, sufficient to make him say:—

I am surprised by the proofs which are presented to me of the learning of the "Pilgrim Fathers," as they call the first settlers, and with their active solicitude to found seminaries for learning, while wanting almost the necessaries of life.

Mr. Hodgson saw and heard Daniel Webster at Plymouth, in 1820, and heard him say, with reference to Lord Brougham's "plan of national education" for England, which had yet a long time to wait before Parliament would do anything:—

We see nothing in the plan but an approach to that system which has been established in New England for more than a century and a half.

Assembled on this very spot, one hundred and fifty-three years ago [in 1667], the legislature of this colony [Plymouth] declared, "Forasmuch as the maintenance of good literature doth much tend to the advancement of the weal and flourishing state of societies and republics, this court doth therefore order that, in whatever township in this government, consisting of fifty families, or upwards, any meet man shall be obtained to teach a grammar school, such township shall allow at least £12 to be raised by rate on all the inhabitants."

"THE INDEX" AND THE NATIONAL UNITARIAN CONFERENCE.

Editors of The Index:—

I confess to just a little disappointment at your editorial reception of the new Article of the Constitution of the National Unitarian Conference. And my disappointment is not a personal one, based on the fact that I originated and carried it through. I am not desirous of discussion; but I want to ask a question, make a remark, and then say why I am disappointed.

The question. Wherein is this new article "more inadequate" than the one of 1868?

The remark. In what Mr. Potter says about its being hurried through without debate, he implies that the Conference may hardly have known what it was doing. In fact, there was no debate *because none was needed*. Nearly fifty of the leading men—*prominent representatives of both extremes of thought*—had given their names to it *in advance*. No debate was needed then, because the men *who would have debated* were all ready to vote in its favor.

My disappointment. This relates purely to the attitude of *Free Religion* toward a definite movement in favor of a wider religious fellowship. I had expected that such a movement would have received at least a word of welcome. If *Free Religion* does not mean a cordial hand-clasp for all who are willing to waive individual, speculative opinions in favor of a stronger emphasis on the grand essentials of fellowship and character, then my own sympathy for it has been resting on a foundation of mistake.

Something indeed may be pardoned to the not over-pleasant memories of past debate. But I am sorry *The Index* did not rise to the generous height of crediting the Conference with larger growth and good intentions, at least until it *knew* the contrary. This would have been genuine "heaping coals of fire," etc., and would have tended toward broader sympathy and better fellowship.

M. J. SAVAGE.

Sept. 30, 1882.

[We have from Mr. Chadwick a note of similar tenor to the above, but too late for insertion this week. Our article in the present issue, defining our personal relation to the Unitarian Conference, was in type before we had seen either of the communications. Yet, in part, it anticipates and replies to them. It will be seen that we do credit the Conference with growth and progress. We welcome all evidences of its moving toward a "broader sympathy" and a "wider religious fellowship." It would have been better, if our brief note last week had also said this. But we do not want our radical friends in the Conference to be too happy over their this year's victory, as if they had come to the end. Their great victory is yet to be won: *the amendment that shall strike the theology out of the Constitution altogether*. This is all we have room to say now, in reply to Mr. Savage's welcome communication. Next week, when Mr. Chadwick's letter is printed, we shall consider the points which they both make in common.—W. J. P.]

PERSONAL ITEMS.

HERBERT SPENCER spent last week quietly at Washington, seeing few callers, but going out much. One day, he was several hours at Mt. Vernon.

THE first Life of John G. Whittier yet written will soon be published by S. E. Cassino of Boston. It is by W. Sloane Kennedy, and will contain a full bibliography.

THE wife of Mr. Francis H. Underwood, a most estimable lady, died on Monday, September 25. She was a lady of great refinement, fully sharing her husband's literary tastes; and her graceful presence and amiable manner added a rare charm to the social gatherings of *literati* which were wont to assemble at their pleasant South Boston home.

THE venerable Robert F. Wallcut, of the old anti-slavery rooms, with his worthy wife, celebrated his golden wedding on Monday last. He is now in his eighty-sixth year. Something over two thousand dollars were contributed by personal friends to aid in making their journey through life easier and more agreeable than it might be otherwise. Many hearty congratulations were sent them.

A SET of Brownson's *Quarterly Review* brings $200, and a complete copy cannot be had even at this fabulous price. The demand for Dr. Brownson's writings has at length induced his son, Mr. Henry F. Brownson, of Detroit, Mich., to bring out a complete edition of everything that his father wrote after he entered the Roman Church. This will be in seventeen octavo volumes, of about five hundred and fifty pages each, the first of which will appear early in November, the others following at intervals of three months or less, and the price for each being $3 a volume.

MISS CHARLOTTE O'BRIEN, the philanthropic young Irish woman who is making the sanitary arrangements for steerage passengers on our ocean steamships her peculiar mission, arrived in New York last week, and took up her abode with a tidy Irish family near Castle Garden, with the view of finding out the real needs of emigrants to this country. She is described by a reporter of the New York *Sun* as "a tall, slight woman, blue-eyed, fair-haired, and almost girlish in her frankness, enthusiasm, and good humor. Hers is one of the most noted families of Ireland. Though apart from this, her work has made her conspicuous, she is thoroughly unassuming.

IN Canada, Mr. George Jacob Holyoake has been the recipient of marked attention from the government, and has had several interviews with Sir John Macdonald and Hon. J. H. Pope, minister of agriculture. At Toronto, he was the guest of Prof. Goldwin Smith, who manifested a keen interest in the object of Mr. Holyoake's visit. On Friday last, Mr. and Miss Holyoake were entertained at dinner by the minister of agriculture, a distinguished company of government officers and others being present; and, on Saturday, they took luncheon with Sir John and Lady Macdonald. Before leaving Ottawa, Mr. Holyoake also dined, by invitation, with the Premier at the Rideau Club.

BOOK NOTICES.

THE PEAK IN DARIEN: With some other Enquiries touching Concerns of the Soul and the Body. An octave of essays. By Frances Power Cobbe. Boston: Geo. H. Ellis, 141 Franklin Street. Price $1.00.

This is a series of eight of Miss Cobbe's latest essays on different subjects, and takes its somewhat misleading title from the last in the series, which treats of "The Riddle of Death" as guessed at from the prevision of the dying, or, as she puts it, "Does our forerunner on the hill-top show by his looks and actions, since he is too far off to speak to us, that he beholds from his 'peak in Darien' an ocean yet hidden from our view?" Inferentially, from the tone in which she speaks of the instances of these apparent previsions or hallucinations of the dying, we should judge Miss Cobbe had answered this question for herself in the affirmative. The first essay of this volume, "Magnanimous Atheism," is even more misleading in its title than "The Peak in Darien"; for the purport of it is to prove that atheism is selfish in all its characteristics, and is wholly lacking in magnanimity. In "Hygeiolatry," Miss Cobbe attacks selfishness under the guise of what she thinks excessive care for one's health. In "Pessimism, and One of its Professors," Schopenhauer's life and philosophy are severely criticised. "Zoöphily" would make an excellent tract for the Society for the Prevention of Cruelty to Animals, and is an earnest protest against vivisection. "Sacrificial Medicine" treats of former superstitions in medical science. "The Fitness of Women for the Ministry of Religion" is one of the longest essays, and is a discussion of the pros and cons of this question so far as the author understands them, with the evidence apparently in favor of the pros. "The House on the Shore of Eternity" is an allegory indicating reasons for a belief in immortality. All these are very readable, and some of them thought-inspiring, even when the reader's views are in direct opposition to those of Miss Cobbe. The book is nicely bound and neatly printed.

THE October number of *St. Nicholas* is the last of the present volume, which thus ends very brilliantly. The frontispiece, "When we were Boys," a fine copy of a drawing by W. T. Smedley, is suggestive of half a dozen stirring stories of the youthful pranks of the two old men apparently relating to each other their boyish exploits, and will cause the boy readers of *St. Nicholas* to regret missing the recital. The opening story is by Prof. H. H. Boyesen; "Radishville," by W. O. Stoddard, gives an excellent idea, in story form, of how Western new towns are built up; "The Captain of the Orient Base-ball Nine" points an excellent moral to others besides base-ball players; "The Story of a very Naughty Girl" is delightfully told by 'Lisbeth Hall; Charles Barnard's "Learning to Ride," with its spirited illustrations by Kelly, will be read with interest by all young equestrians. Margaret J. Preston tells in some pretty verses, "Guido's Complaint," something of the story of the great painter. Mrs. Dodge's serial, "Donald and Dorothy," is brought to an interesting and satisfactory conclusion. These are but a few of the attractions of this number, which must be seen to be appreciated.

"WIDE-AWAKE" is always a welcome and entertaining visitor, and the October number is no exception to this rule. The frontispiece is a dainty drawing by Miss McDermott, designed to illustrate the pretty, fanciful story by Miss Susan Hale, entitled "The Hope Works"; Luthera Whitney, in "A Suit of Home-Spun," explains in an intertaining way, and with the aid of fifteen illustrations, the old-fashioned process of clothes-making; Mrs. A. M. Diaz tells in her own inimitable style a jolly circus story, under the title of "The Strimpcetts' Sunrise Party"; Mr. Talbot's comedy, "No Questions Asked," and Miss Harris' beautiful "Wild Flower Papers" are brought to a close in this number; E. E. Hale explains the present state of the Egyptian question very clearly to the young readers of this magazine. Among the best of the poems are Mary E. Blake's "Wonderful Country of Good-Boy Land" and Clara Dolliver's "Turkey-Tail Brooms." The Chautauqua Series is interesting and instructive as usual.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

L. PEPIN GAZETTE,

W. [illegible]SON, Editor and Publisher.

To be [illegible]kly. 12 pages. Publication day 1. Pepin, Wisconsin. Price $1.00 a [illegible].

While LAKE PEPIN GAZETTE will have very decided convictions of its own, it will accord to Christian, Jew, Heathen, Spiritualist, the same liberty that it demands for itself. It will be bound to no party, sect, nor ism, but will give them all a hearing through its columns as far as space will permit. All shades of opinion and every pattern of doctrine will be discussed free from uncouth personalities, but independent in expression.

Every number will contain descriptions of the great Northwest.

First number of LAKE PEPIN GAZETTE—5,000 copies — exhausted, except for new subscribers. Sample copies 5 cts.

Send 50 cts. for six months; or, to try it, 25 cts. for three months. Address

LAKE PEPIN GAZETTE,
PEPIN, WISCONSIN.

THE BIBLE'S FLAT EARTH AND SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

CURRENT TOPICS.

BISMARCK is denounced by the Milwaukee *Freidenker* as the leader in the persecution of the Jews.

A PILGRIMAGE is being made to the Holy Well of St. Winifred in England, to pray for the recovery of the little son of the Duke of Norfolk.

MRS. CLARA NEYMANN, while pleading in Nebraska for female suffrage as an essential element of a republican government, has openly and earnestly disclaimed any sympathy with the agitation for prohibition, which is, in some places, associated with this movement.

THE oldest newspaper in the world is published at Pekin, in China. It is called *King-Pan*, is over five hundred years old, and has not changed in size since 1351. Three editions daily are issued, two on yellow and one on red paper, and each edition has a name of its own in addition to the general one of *King-Pan*.

THE *Presbyterian* informs its readers that *The Index* acknowledges that the clause in Stephen Girard's will, excluding ministers from the college, was neither "liberal nor wise"; but it does not intimate that this journal denounces the practical violation of the will, in making the college a Christian institution, as "dishonesty and perfidy," nor has it one word to say in condemnation of this great wrong.

SAYS the Boston *Transcript:* "The Roman Catholic Central Society, which is holding its sessions at Milwaukee, Wis., has before it resolutions making it obligatory upon Catholics to have their children taught in Catholic parochial schools, and not in public institutions. Catholic societies may pass just as many such resolutions as they wish, and still the children of Catholic parents will be found in the public schools of the country, and imbibing a spirit that will lead them more and more to resent the encroachments of the Church."

THE comet, which is now exciting so much interest and attracting all eyes to the morning sky, seems to be very effective in frightening and converting the negroes in the South. A despatch from Raleigh states that many of the negroes believe the end of the world is at hand, and are making preparations accordingly; that, whenever the comet appears, the bells of their churches are rung, meetings held, and petitions offered up that the flaming monster may be directed away from the earth. According to the despatch, this comet has "caused more repentance among colored brethren than any revivalist or camp-meeting exhorter during the present generation."

THE National Reform Association, in a call for a Convention, which was to be held at Pittsburgh, October 3 and 4, reiterated the following with which our readers are already familiar: "The Constitution of the United States makes no acknowledgment of Almighty God, the author of national existence; nor of Jesus Christ, who is the ruler of nations; nor of the Bible, which is the fountain of law and good morals, as well as of religion. This has, from the beginning, been a matter of deep regret. It may have been an oversight; but it was, and it is, both an error and an evil. It does not reflect the views of the great majority of the people upon these matters. It dishonors God." The Association persists in its demand for "such an amendment to the National Constitution as will remedy this great defect, indicate that this is a Christian nation," etc. This movement does not seem to be gaining strength, and attracts but little attention at present.

ONE cannot read, without a blush of shame for a progressive nation and an advanced age, the facts brought out by the vigorous protest of the young deserter Kenneally against being taken back to the Elmira (N.Y.) Reformatory (?). He declared he would much rather be shot than be returned to the tender mercies of the persons in charge there. An agent of the New York *Herald*, investigating the matter, found out that the *reform* methods of the Reformatory consisted in striking men with iron bars, jumping upon them, kicking them, turning a hose of water on them by the hour, tricing prisoners up by manacled hands and paddling them. If, in America, we can do no better than this, it is time some Charles Reade showed us up in our true colors as Reade did the English government in his novel, *Put Yourself in His Place*, and shamed somebody into energetic measures to remove and punish such cruel officials, and institute a more humane and truly reformatory method with our criminals of all grades.

MR. GEORGE JACOB HOLYOAKE recently said: "A paper published by Sidebotham, the son of an old friend, was sent me, in which I was given to understand that, if my mission was to encourage emigrants to come and cheapen wages, that I might expect no sympathy from the trades unions. I cannot conceive how they should have so misunderstood me. I have steadily advised against emigration to such centres as the larger cities, where the new comers would only injure others as well as themselves. It is just there that the value of such an official guide book will be perceived. The only information of an official character now obtainable comes from the agents of corporations, who either do not know, or, for reasons of their own, misrepresent the conditions. What an emigrant needs to know is the cost of living, the diet, clothing, the dwellings he would have to occupy, the exposure to be undergone, the true conditions as to health, the maladies to be guarded against, and the state of the money market, and all other facts that would guide his decision where to go. If the governments should take this in hand, it might be truthfully done. Governments, you know, never lie, when it would serve their purpose better to tell the truth. Such facts, at least, it could not prove to their interest to misrepresent, and that is more than can be said of those now depended on to furnish the information. I shall endeavor to persuade the powers that be at Toronto and Washington that the work is best in their hands."

THE *Nation* has the following remarks in reference to the recent meeting of the Liberal League: "The League transacted some important business in adopting a new calendar as a substitute for that now in use, with the year 1600 B.C. as the starting-point. For the letters A.D., the letters E.M. are to be used, meaning Era of Man. This action seems to be hasty; for, however poor an opinion he may have of Christianity, even a Liberal must admit that, if the performances of the human race are to be taken as a basis for the new calendar, man had not distinguished himself in the year 1600 B.C. nearly as much as he had at the opening of the Christian era. And, as every Liberal must believe in continuous human progress, even by 1600 A.D. man had not reached the proud position he occupies in the current year. Indeed, there can be no point at which the Era of Man can be said to begin, unless it is when our primeval ancestor parted company with his simian congeners, and set up for himself as a human being. The difficulty about this as a starting-point is that it was before historical times, and the precise year in which it took place has not as yet been ascertained. But, since that time, whenever it was, there has been continuous progress year by year and month by month; and therefore, while it is perfectly fair for Christians to maintain a calendar based on what they believe to be an important religious date, no Liberal, without unfairness to Man, can possibly have the right to fix upon an arbitrary date, and assume that as the starting-point of progress; and Liberals, of all people, ought to remember that Man's unfairness to Man makes countless thousands mourn." Although we have seen no report of the proceedings, we surmise that the proposed starting-point is 1600 A.C., not 1600 B.C. But a calendar that excludes from the Era of Man the ages of Pericles and Augustus, two of the most brilliant periods of history, is more objectionable even than one making the Era begin with the year 1600 B.C.

AN ARGUMENT THAT DOESN'T WORK.

The *Christian Statesman*, in a recent issue, has a good article on "The Nation's Struggle with Corruption." That is, it is good in its statement of the premises; but, in its conclusion, it is singularly illogical. The *Statesman* well depicts the "corruption in a thousand forms, from the bribing of a legislature to the robbing of the treasury," with which the nation is in a life-and-death struggle. It instances the "sordid motives" which are so largely operative in our political contests; the "salaries and perquisites and opportunities for private thrift at the public expense," which one party seeks to keep, and another to get at the polls; the "base means" of trickery and fraud resorted to, in order to carry an election; the "flat purchase of votes" in many places, now grown to be "a public scandal"; the increasing nomination of candidates with reference to their wealth and the liberality with which they are expected to use their money in the election campaign, amounting in some cases to the virtual buying of the office; "the pledging of offices to party henchmen in the event of election"; the political "assessment of office-holders to replenish campaign treasuries"; the growth of the "machine" and "boss" power in politics; the Star-Route frauds on the post-office, by which men who have stood high in national office and have been leaders in political councils are implicated in "plundering the nation's treasury of nearly two million dollars a year," and have only escaped punishment by a jury decision which "seems to have been purchased with the money stolen from the government."

Another evidence of corruption in a different form, close at the *Statesman's* own door, it gives a special paragraph to, which we quote in full: "A committee of one hundred citizens of Philadelphia has been unearthing the rascally transactions of one municipal department after another in Philadelphia for three years past; and every fresh revelation astonishes a public which might well have lost ere now the faculty for being astonished. The latest discovery is that the guardians of the poor and the superintendent of the almshouse have been systematically robbing the paupers, and fattening on the liberal appropriations regularly made for the relief of the destitute."

The *Statesman* then turns to consider the remedy, and in this part of its article appears the astonishing *non sequitur* in its argument. It admits that there is encouragement in "the activity and determination of the battle" against these corrupt practices; in the growing interest in civil service reform; in the rising political revolution, shown in many quarters, against bad leaders. It thinks that "the masses of the American people are honest, and desire honesty and integrity in their rulers," and that the country has not reached the point at which exposure of fraud "draws after it anything less than political ruin." But, in its view, all these are only signs of temporary and superficial improvement: they do not touch the source of the evil, and therefore do not bring any real cure. According to the *Statesman*, the source of the evil lies in "the loss of all conception of government as a divine institution," as evidenced by the fact that the national Constitution contains no acknowledgment of Almighty God; and the remedy is to put into the Constitution "a simple authoritative recognition of God as the Author of civil government and of the moral laws of the Christian religion." That we may not be thought to do the argument injustice, we quote more at length: "The only remedy lies in the restoration of the Bible idea of government as a power ordained of God. To this end, the nation must proclaim in its Constitution its own conception of the nature and purpose of government. If our fundamental law contained a brief acknowledgment of the divine origin and moral accountability of government, the masses would feel that some inquiry into the moral and religious character of those whom they elevate to office was not altogether irrelevant."

Surely, if the remedy be so brief and simple, it would seem to be a most heinous crime to delay it a single day. But, unfortunately for the *Statesman's* argument, the remedy is no new discovery in political therapeutics. It has been long tried, and never been known to cure. The moral diseases which the *Statesman* enumerates are quite as prevalent in State and municipal politics as in national politics. Some of the worst of them, in fact, prevail far more under the political machinery of the States than in the national government. Yet the State Constitutions, with hardly an exception, have the very acknowledgment of the authority and power of Almighty God which the *Statesman* prescribes for the national Constitution. They have always contained this saving religious clause declared to be so efficacious, and in some of them the theological phraseology has been even a good deal stronger than that which the *Statesman* asks for. If, then, this remedy is so sure, why has it not cured or prevented the political corruption in the States?

For instance, the *Statesman's* own State, Pennsylvania, has in its Constitution a very explicit "recognition of God as the Author of civil government." Unless a change has been made within a few years, every member of its legislature has even to affirm this creed: "I do believe in one God, the Creator and Governor of the universe, the Rewarder of the good, and the Punisher of the wicked; and I acknowledge the Scriptures of the Old and New Testaments to be given by inspiration." Moreover, the Supreme Court of the State has made official declaration that Christianity is a part of the common law within the State. Yet there is a very wide-spread belief that hardly any State in the Union is deeper in political corruption than Pennsylvania, unless it be New York. The Harrisburg legislature, in spite of its creed, is popularly supposed to have had many wicked men among its members, and to have been the scene of numerous corrupt bargains. And the city of Philadelphia, existing under the very ægis of all these constitutional guarantees of religion, founded and long administered on "the Bible idea of government," and continuing under stronger evangelical influences than any other city in the United States, is the city where, the *Statesman* being witness, a committee of citizens has been, in the last three years, unearthing various "rascally transactions" in municipal administration, to the astonishment of the inhabitants, ending with the discovery that the guardians of the poor have been systematically enriching themselves by robbing the paupers of the appropriations voted for them! Now, how could all this be, if the insertion of religious words in constitutions were so effectual a remedy for political corruption as the *Statesman* argues?

In our view, there is no remedy for the disease short of a deeper indoctrination of the people in the old ideas of justice and probity; nor does history show that this kind of indoctrination is helped by the use of theological phrases in government documents. What is needed is not so much the *saying* of "God" anywhere as the *doing* of righteousness; not so much that legislators should profess belief in the Bible as that they should enact just laws. We, too, believe that government, in ideal, is a divine institution,—divine because existing to enforce an idea which mankind have discovered, indeed, through experience, but did not invent,—the idea of justice. Justice is the foundation of the moral universe. When men shall have learned to do exact justice and to keep probity one with another, the political millennium will have come; and the moral diseases of our politics will vanish in proportion as this end is approached. But it may be reasonably doubted whether the ecclesiastical type of religion which devised and now defends and glories in the moral crookedness by which the trust-funds of Girard College were perverted to uses expressly proscribed by their donor can render effective aid toward this result.

WM. J. POTTER.

THE PEAK IN DARIEN.

If for no other reason than its problematical title, this book, issued by George H. Ellis, Boston, would be sure to attract even passing attention from readers. As a volume of thoughtful essays, it is quite ambitious, and does not belie its name. It endeavors to climb up to those mountain-peaks of thought where eternal Day reigns supreme. Curiously enough, it would seem that, instead of beginning at the foot of the peak, the writer is already upon the summit. For instance, the very first essay is an elaborate discussion of the existence of God, and of the modern doctrines of immortality. Now, if these problems do not constitute "the peak of Darien," it is certain they constitute a peak of the Himalayas in modern philosophy. The authoress of this book, Frances Power Cobbe, has been an inquirer in the fields of philosophical speculation for the last quarter of a century; and the position she has gained heretofore seemed unattainable to the feminine mind. Miss Cobbe should be well known in New England, as she was once prominently identified with the movement of which Theodore Parker was the stirring spirit.

The essays in this book are not at all closely connected. Each one seems to form a landmark by itself. The first, entitled "Magnanimous Atheism," is the old controversy between theism and agnosticism, presented in another light. The writer examines the different views of atheists upon a future life. First, the positivist doctrine of "posthumous activity" is examined, and the conclusion reached by the essayist is that it offers no satisfactory explanation of immortality. So, in the same manner, the idea of annihilation is viewed in all its bearings. I do not find anything very novel in this argument. The proposition so often advanced, that the idea that death ends everything, is again asserted as cheerless and wearisome beside the glorious advantages offered to all by Christianity. The writer shudders at the prospect of annihilation, and regards the philosophy that teaches such a doctrine as vicious. Miss Cobbe cannot conceive how eternal sleep can be for a moment compared to the sleep in Paradise. It may be that she forgets the lines of Lucretius. They are worth repeating:—

> "Nil igitur mors est, ad nos neque pertinet hilum,
> Quandoquidem natura animi mortalis habitur."

The Roman philosophers halted between affirming a belief in a future state and in looking upon death as the final end. Yet the calm hope with which these men met death commands admiration from the strictest Christian. The thoughts about a future life do not disturb the mind of the man who is busily engaged in the daily affairs of this life. Theologians are slowly recognizing that word-pictures of "that invisible land" in the next world appeal more strongly to the imagination than to the reason. The conclusion arrived at, however, in this essay is this: that the doctrine which Chris-

Digitized by Google

tianity holds out concerning a future life, with its high rewards and severe punishments, is far more valid and satisfactory than the doctrines which "magnanimous atheism" lays down concerning death as some form of annihilation.

The essay on "Pessimism, and One of its Profes sors," is in some respects one of the most entertaining, if it is not one of the soberest essays in the book. The manner in which Miss Cobbe handles the person of Schopenhauer, "the professor" of pessimism, is at once suggestive of a feminine mind. The cleverness and the sprightliness with which the essayist gives little home-thrusts is eminently characteristic of the sex. In some places, it would seem as if the writer was personally aggrieved over the peccadilloes and individual failings of Schopenhauer. The asperity displayed is not always in excellent taste. We have read somewhere that it was a feminine trait not to distinguish the individual character of an opponent from the opinions he maintains. I am sorry the pessimism of Schopenhauer is so disagreeable. The character of Werther was not so offensive to Charlotte, although he was the means of leading many a German youth astray. If the pessimist is so silly as to blow his brains out, like Charlotte,

> "When his body is borne before her on a shutter,
> Charlotte, like a well-conducted person,
> Went on cutting bread and butter."

The most puzzling essay of the lot is called "Hygeiolatry." We do not see anything that would warrant the selection of out-of-the-way headings. The essay is an attempt to show the falsity of the materialist in affirming that mind and body act on one another, and are resolvable into matter and motion. She denounces vigorously those who regard "mere bodily health as the *summum bonum*, for which personal freedom, courage, humanity, and purity ought all to be sacrificed." This is an exceedingly ingenious method of stating the issue. But I would take issue with the essayist for its scientific accuracy. We know the familiar remark of Carlyle, that the condition of men's minds is influenced by the condition of men's livers. Schopenhauer's current phrase, "Welt als Wille und Vorstellung," means nothing beyond what all materialists assert concerning force and matter as directed by volition. The powerful influence of the body upon the thoughts and habits of man is accepted as the teachings of science.

The essay on "The Fitness of Woman for the Ministry" opens such a broad field for discussion that nothing like a full and free statement of our own views could be given in this short sketch. Of course, Miss Cobbe is enthusiastically in favor of permitting the women to exercise the same holy calling as men. Women have hardly yet demonstrated their ability to cope with the arduous tasks which modern clergy are called upon to perform. The question is not one of "fitness," but of propriety and necessity. We do not look upon the fitness for women entering the ministry in the same way as her fitness to exercise the right of suffrage. The one is a question of duty, the other a question of political equality. "The heroines of free thought" have been the heroines of the home and hospital, ministering to the distressed in body and in mind.

At last, we reach the Peak of Darien. We have started from lower crests until we firmly plant our feet upon this, the highest. Miss Cobbe means to represent "the peak of Darien" as the dividing-point between the two worlds, with the two great oceans on either hand. This metaphor is to represent the position of the essayist. The gist of the essays seems to be this: There are the two worlds of life and death. The question is, whether at the moment of death the dying ever get a glimpse of the blessed life beyond,—in short, whether the dying see signs of a newer and higher life. Some very instructive anecdotes are recorded of dying persons, who seemed to distinguish the Presence beyond. However, Miss Cobbe concludes that, as proofs of personal immortality, though instructive, these visions are of no practical account. They may confirm our faith in a future life, but they do not reveal to us its positive existence. This conclusion very few will care to dispute, except that the Spiritualists may find fault with the testimony.

This book, the outlines of which have been sketched out, is not all that we could desire. Some of its defects will strike the reader, others may well be passed over. Still, as an earnest endeavor to correct the unstable doctrines of atheism, and with a genuine desire to reach that peak upon which all can resolutely stand, this book can confidently be recommended.

LEE T. VANCE.

WHY SHOULD NATURALISTIC EVOLUTION BE MAINLY EVIL?

It is a very general assumption among Christians and Theists that the evolution of nature-force must be evil in the main, unless it is guided into good directions by a personal Deity. On this assumption, Mr. James Martineau has disported his eloquence with no small *éclat* against evolution. On this basis, a long yet lively article in the *Independent* of July 20 (the very date of an opposite article from my pen in *The Index*), entitled "The Lion and the Lamb," entirely upsets evolution. Finally (would it might be finally!), the speech of Prof. Chadbourne in Boston, September 11, against Mr. Underwood, takes the same ground, and makes Dr. Gray of Harvard, and even the great Darwin himself, occupy the same.

All this is fundamentally erroneous. If Dr. Chadbourne can show us any passage in the writings of Darwin or Spencer or Fiske or Lewes or Haeckel or Huxley, which unequivocally utters such a thought, we should like to see it. That would enlighten one mind at least, as I have never seen such a passage, while opposing passages I find in abundance.

Indeed, the supposition is a nullification of the great unitary thought of evolution. It affirms that nature is on the whole beneficent, and so much so that its evil is either preliminary or incipient good, or at the worst temporary mal-adjustment, as Mr. Underwood said, using our last word in his address on the occasion referred to. According to the theory of evolution, the result of a vast series of inductions, it is only because the great trend of things is in the good direction that natural forces can at all operate. In the animal world, natural selection is the selection of the most agreeable by the most agreeable and most powerful and therefore the happiest. In general, the survival of the fittest is the survival of that which has the advantage of condition and circumstance and disposition, and that in the main must be the best. Further, as evolution is a continuous progressive advancement, the idea of prevailing good is woven into the very texture of the theory. Increasing differentiation of definite heterogeneity also makes provision, or at least leaves ample room, for the evolution of all the higher faculties of a moral and spiritual order; and, the further this is carried with intellect as the growing light and physical power as the sub-agent, the more fully is the theory of evolution exemplified. Finally, it is adverse to the spirit of modern science and to the philosophy in question to assert *a priori* what nature should be. Evolution is planted on the experience, not the anticipation of nature; and from this experience it is an induction, not a deduction from a preconception of nature-force. Hence, it can have no ground for the supposition that anything whatever which appears in the course of nature, whether good or evil, is not the product and expression of the force of nature.

This view of the doctrine is also, without doubt, held by all the respectable disciples, as well as by the head masters of evolution; and Christians do themselves no credit by their failure to see this, and to give it due recognition.

WM. I. GILL.

ON SOME DEFECTS OF THE DAILY PRESS.

I.

The Index seems to be the appropriate place to say some plain things about the ethical shortcoming of the newspaper press, and especially the daily press. Matters have come to such a pass that we shall soon be (if we are not now) tyrannized over by this great institution almost as much as the Middle Ages were by pope and priest. If things go on as they have been going, daily newspaperdom will get to be as great a nuisance as Catholic priestdom; and, in freeing ourselves from the grasp of the latter, we shall only have exchanged one form of hypocrisy and greed for another,—that is all. No man or institution can afford to forego the benefits of searching and kindly criticism. The waxing arrogance, vulgarity, and mercenariness of the great daily newspaper, need to be sternly rebuked, and that frequently. It is as plain as daylight that the institution has grown false to the true nobility of its mission. What a splendid opportunity it has,—a sentinel upon the watch-tower of society, the modern representative of the Greek agora, the tribune of the people, the detective's lantern of society, that without which vast democratic governments would be absolutely impossible, the medium of universal intercommunication, the safety-valve of popular passions, the promoter of commerce, the educator of the people! And how completely most great newspapers have lost sight of the true grandeur of their function! How they corrupt the language! What old-women gossips they are! How they reek with filth and slander! How they waste our time! And how morally rotten and mercenary they are! They are proverbial as falsifiers and manufacturers of news. They are the pets of the people, and yet everybody distrusts them. Among some eight thousand journals in America, there are, perhaps, about half a dozen of first-class rank that are known to stand by the truth at all hazards, and at whatever cost to their pockets. It is true that newspapers are checks upon each other, and that by reason of their number it is almost always possible to get the truth stated at some time or in some place; that is to say, the truth upon every subject but one,—namely, their own faults. As far as concerns criticism of themselves, they form a close corporation, a kind of Cæsarian autocracy that can fulminate its decrees of annihilation over the unhappy wight who dares to criticise or censure. Can they not make and unmake fortunes? Do they not yearly blast the lives of thousands by their slander and gossip? Are not the politician, the merchant, the preacher, the author, the butcher, the baker, and the candlestick maker all at their mercy to make or mar forever? Who, then, will dare to lift a finger against them? Nobody. *Hinc illae lachrymae.*

Pity that our noblest popular institution and bulwark of liberty should so long have escaped criticism. Let us marshal the indictments against it. Let us review the shortcomings of the great newspapers, especially the dailies.

First. *The insincerity and untrustworthiness of*

Digitized by Google

their editorials on the moral issues of the day and hour. Nobody but old ladies, shopmen, and callow students ever think of attaching any great import to these editorials, except in the case of a very few papers which are known not to belong to the weather-vane fraternity. The heroic age of journalism seems almost to have passed away. There are very few Horace Greeleys and William Lloyd Garrisons in journalism now. We well remember the shock it gave us when we learned the inside history of one of the chief dailies, and discovered that those sounding religious editorials which we had been devouring so implicitly were mostly written by mere turncoats and hirelings, hacks who will take either side in a discussion at the pleasure of the editor-in-chief. George William Curtis, in his October "Easy Chair," has well characterized them as writers who "expressly renounce convictions, and blow hot or cold as the chances of probable profit, and the apparent tenor of public opinion at the moment invite." Such writers have, he says, "no legitimate influence whatever. They produce a certain effect by mere publicity and reiteration, and ridicule, and distortion and suppression of facts, and appeals to prejudice. There is a legitimate and an illegitimate power of the press. A lion and a skunk both inspire terror." Mr. Curtis' entire article is a most admirable one. He shows how serious a delusion it is to suppose that a journal can retain its influence when it transpires that its editorials are written by insincere hirelings, men whose opinions have no moral weight whatever. He admits that the organization of correspondence, collection of news, "making up" the paper, etc., demand a single responsible and supervisory executive; but he simply asks that that executive, as well as all other editorial writers, shall not write what he does not believe to be true. He says, truly, that an editorial writer is not like a paid legal advocate to be retained indifferently, "and with equal morality upon either side," and he might have given this as a reason; *i.e.*, that the function of a noble newspaper is an educative one. "The best use of a journal," said Horace Greeley, "is to print the largest practical amount of important truth,—truth which tends to make mankind wiser, and thus happier." But the papers of which we are complaining take not merely the view of Manton Marble,—that "a journalist is a merchant of news, who buys it everywhere, and sells it in any market not stocked with his own commodity,"—but also the view that the journalist is a soulless machine, a mere cat's-paw for the raking of gold into the coffers of the corporation or of the single proprietor, as the case may be. What an immoral effect the carrying out of such views must have in the case of the unhappy wretches compelled to prostitute their manhood in this kind of work is evident to everybody. And the number of such persons is very large. In thousands of instances, men are *not* able to attach themselves to journals the views of which accord with their own. But any great daily will take their contributions, and no questions asked; and so they barter their manhood for a mess of pottage.

Although keen minds easily detect the many insincere editorials of the day, yet until a short time ago, we believe, no newspaper had been bold enough openly to advocate insincerity, and announce it as its own policy. This has now been done. One of the chief dailies of the country, editorially reviewing the article of Mr. Curtis which has been quoted, has scoffed at the idea of editorial honesty. "Adaptable men," says this journal, "are more in demand than 'viewy' men." "*The claim made by Mr. Curtis, that 'a paper which represents convictions, and promotes a public policy in accordance with them, necessarily implies sincerity in its editorial writing,' seems to us, with due deference to its author, to be absurd.*" "Neither the public nor the responsible management cares to make inquisition as to the private views of the individuals whose labor is necessary" to the production of the paper. "It is the paper that needs to be held firmly, honestly, and impartially to the expression of its real convictions, because it is greater than any proprietor, stronger than any editor, and more important than any individual interest or personal view."

"What does the paper say?—not what Smith, Brown, or Robinson think,—that is the question."

The logic of these astounding utterances is not more fallacious and flimsy than the sophistry is odious. For what, pray, is this "paper" but a man of straw, a fictitious scapegoat? Hath a newspaper eyes and ears and brain? "*Its* convictions," forsooth! Put proprietor or editor-in-chief in place of "the paper," and everything is clear. It is solely because the chief dignitary wishes to put money into his purse that the editorial writers must blow hot or cold as the exigency demands. And it is for the same reason that "adaptable men" are more in request than "'viewy' men." The truth is that a great policy steadily adhered to is adopted by only a very few of the great dailies: the weather-cock policy is the more common one, and it is precisely such arguments as those we have quoted that are used to give speciousness to such policy. Rather than that a set of men should band together to prostitute their intellects in the service of hypocrisy, let them go and dig, or chop, or sail the sea. Insincerity in its leaders injures the moral tone of all society; and in the end it is bad policy for the paper itself. Let a paper, of course, pursue certain great lines of policy; let it have pronounced views on tariff, the woman question, civil service reform, State rights, evolution, etc. But let it not pride itself on a false consistency: let it demand thorough honesty and entire good faith in all of its editorial writers; and then their every word will be like the blow of a hammer to rivet tighter the nails of their arguments. If the managers of sophistical dailies could only overhear the remarks of the people in coffee-houses, in parlors, and on the streets, they would soon discover that, while their advertisements and news make their papers to be bought and read, yet the editorial portions have scarcely any moral weight with people. They are odious to men, and are only on their tables by sufferance. When people want truth, they look to the few papers known to be absolutely incorruptible. It is too late in this article to enter upon a discussion of the evils of impersonal journalism. Not the least of these is that it permits so much priest-like masquerading, and hypocrisy, and deception of the people.

W. S. KENNEDY.

UNITARIANS IN CONFERENCE.

III.

The idea of WORK has got hold of many Unitarians in recent years, to the exclusion of other guiding ideas; and the result is a position quite like that which Felix Adler takes. Ministers who hold from fifty to one hundred meetings in the year for nothing but worship, thought, and inspiration, and who do their chief part in these meetings solely by talk, come to the Conference to denounce it as a fraud and occasion of self-indulgence, a mere Saratoga picnic, because it is in great part a Conference for inspiration, for thought, for knowledge of religion. The Western men, who do not themselves lack religious interest, but who feel very keenly the need of aggressive work, of new meeting-houses in fact, and new societies for liberal faith and worship, have especially caught the Adler idea,—that what a minister or lecturer is always and chiefly doing at home it is a shameless waste of time and energy to do in public conference or convention. They would have the Conference give itself to denominational business; and, since an Association for this already exists, they would bring this Association and the Conference into one,—would merge the former in the latter, or consolidate the latter with the former.

To men that are both practical and thoughtful,—who desire business to be done in the wisest way, and the whole of religion to be thoroughly cultivated,—the scheme can never approve itself. Dr. Bellows proposed it, but on mature consideration relinquished all idea of it, and fully concurred in an adverse report. Two years ago, Dr. Bellows stated that "the critical question before this session is the possible consolidation of the National Conference with the American Unitarian Association, so as to make one corporation, and thus complete the organism of our body, now in an anomalous state." This failure of Dr. Bellows to see that one body for business and another for large and free culture was in accordance with all experience where freedom exists, and that to get culture under the control of a corporate ecclesiasticism is to stifle and enslave it, he entirely corrected upon more careful reflection. Even the Church of England has for some years past held a great free Conference annually for discussion of its chief questions. The orthodox Congregationalists of England have such a conference, so have those of America. Those bodies which meet only under a corporate ecclesiastical form are relatively in a backward and enslaved state.

Dr. Bellows cannot have had a clear idea of the true function and immense importance of the Conference as an organ of religious culture rather than of denominational business, when he said, in the report of two years ago:—

> We have, it is to be feared, seriously hampered the usefulness of our Conference by yielding so much of the time due to our missionary work to questions that more properly belong to our Ministerial Institute. The Council have endeavored to mend this error by inviting for this year only half the usual number of papers, and by having only one of a scholastic character. But it is doubtful whether a still more exclusive attention to denominational business would not be an advance in wisdom.

On the contrary, as Dr. Bellows came to see, business, as such, is no matter for a great popular conference. The true object of this is to do work similar to that of the Ministerial Institute, only for the churches as well as the ministers, and adding also other work designed to promote plans as well as ideas, and to build as well as inspire. To resolve on, and to create enthusiasm for, large plans and special schemes, belongs naturally to a Conference; but ordinary business does not.

The whole question was left two years since to a committee of seven; and, after the most careful consideration, a report was agreed upon by all but one of the committee, and was presented by Hon. Dorman B. Eaton. Mr. Eaton's report for six of the committee, appointed to consider how the Conference and the Association "may most effectually co-operate, without sacrifice of the advantages belonging to either," was an extremely able one, most wisely suggesting means for making more perfect the outline and basis of the two bodies, while maintaining their separate function as a Conference for legislation and an Association for executive work. It very clearly showed that work in a large way may be promoted by the Conference, and, as clearly, that the more particular care of work must be left to the Association. Rev. J. Ll. Jones, the seventh member of the committee, who had been out of reach on a vacation in Wales, and had not met with the committee at all, met the

Digitized by Google

report with a statement of his individual dissent, which Mr. Chadwick characterized as "untrue, unjust, and ungrateful." He declared that "a logic back of our reasonings is impelling the Conference to a more corporate life and a more disinterested and executive attitude." In proof of it, he pointed to the raising that morning of $2,000 for a special purpose, "contrary to the designs of the management." But it was *not* contrary to any designs; and Mr. Forbush was unconsciously, but entirely "untrue, unjust, and ungrateful," when he said, later on, that the Conference "had never undertaken to *do*," until two years ago it set a special committee at work to build a church at Ann Arbor. In the second Conference, at Syracuse, a single deed, carried through on the spot, was the raising of $30,000 for the Meadville Divinity School. Mr. Jones specially roused Mr. Chadwick by saying: "Men and women are beginning to be ashamed to come to Saratoga in the name of religion, simply to enjoy themselves. There is a growing sense that it is a fraud to turn what was meant to be and what ought to be a biennial pilgrimage to the altar of religion, where sacrifice is to be offered, into a picnic." "Let this Conference go to work!" was his demand, or "it will droop, dwindle, and die on our hands."

Mr. Jones could not have violated truth and justice more than he did in this line of remark. There are three things of equal necessity in religion, to two of which Mr. Jones seems to be not adequately attentive. In *Work*, including both character, the conduct of life, and the doing of good for others, there is the form and fact of true religion. Two-thirds of this Mr. Jones seems to denounce as mere self-indulgence. *Truth*, given by thought, is the intellectual side of religion; and the study of this Mr. Jones seems to denounce as self-indulgence in mere talk. So all that side of religion he makes little or nothing of. If thought gives the truth of religion, feeling gives its power; and we have *Worship* as the culture of feeling. This seems to be especially nothing to Mr. Jones. He is all for building meeting-houses, sublimely indifferent to what they are to be used for. If he took the whole ground of Felix Adler, he would be consistent.

The Conference aims, or ought to aim, broadly at better worship, purer truth, finer character and conduct, and *general* plans, with *select* special ones of work; and because the careful execution of ordinary special plans and of details is left to a purely executive body, Mr. Jones denounces the Conference as a picnic for self-indulgence, and Mr. Forbush says that it has hardly begun to *do* anything, and that we allow the enthusiasm of the Conference—"the splendid enthusiasm generated here"—to be "dissipated and lost." Mr. Jones might learn from Mr. Forbush what is generated by a conference. Mr. Forbush needs to consider that the natural work of the Conference is to generate enthusiasm, truth, principles, and plans, which the individual *churches*, through the public report, and through their ministers and delegates, will take up and work out,—first in *their own* worship, truth, and work, and then in the work of which the Association is their agent.

The building of more meeting-houses is the very smallest part of Unitarian work; and the new churches of the West, for which Mr. Jones prophesies, are least provided of all with the things of the spirit and the heart, the higher consciousness and the deeper conscience, and are most overdone with worldliness and indifferentism. Let Mr. Jones storm ahead helter-skelter, without any due order for real conference apart from business, and he will see the shutting up of meeting-houses following fast on the building of them. There is no future for any body of churches whatever whose chief aim is not to have a genuine religion *in* the churches, a pure worship, a knowledge direct and deep of truth, and a profoundly good life among their members.

These Western men forget nine-tenths of the whole matter, in their zeal for meeting-houses. They forget all fitness and propriety, all truth and justice, when they dash at the matter with wild charges like Mr. Jones's and proposals like Mr. Wendte's, who got a resolution passed to refer back the report, and request that next year another be made with a definite and detailed plan for amalgamation of the two bodies, which Mr. Eaton had so clearly shown could not be united, and ought not to be. Mr. Eaton's committee cannot stultify itself by accepting the Jones-Wendte view of the matter, and evidently the Conference did not see what it was doing in passing Mr. Wendte's resolution.

The chief need, and far the greatest need of Unitarianism, that of internal culture, is met by the Conference as it now is: only it needs to be more free and open, both as to its admissions to membership, and as to discussions, which are too much crowded out by mere business. The new Liberals appearing in every sect ought to find their way into the one body which can consistently be a conference of free churches; and all the new practical problems, of truth, of worship, of good work, of better and happier living, ought to be not only reported upon in able essays, but discussed freely and broadly.

The Western men ought to see that it is wisdom for them to accept for their Conference a place parallel to that of the American Unitarian Association, and like the latter come to the Conference not with a lot of business, but with their best matured plans, to get them indorsed and taken to heart,—the cash-as-well-as-conscience heart. Time will teach them, in their own Conference, to mature their business in committee, not in open Conference, and to hold separate meetings for business, as all other bodies do.

Thoughtful men and women can set themselves, in our time, no more important task than that of keeping culture abreast of work, even if it be only secularist culture,—a fine spirit as well as good work. A bad spirit, a deep defect of culture, has been the damnation almost of the crude radicalisms and raw reforms of the last twenty years. Mr. Jones has something to learn here. If for the next decade he could have nothing to *do*, in his sense, and could give himself wholly to bringing his culture up even with his work, he might be less of a storm among extemporized tabernacles on the prairie, but he would be far more a power for vital progress, and would more realize what is, I am sure, his own highest ideal.

E. C. TOWNE.

ROMAN CATHOLICISM AND PAGANISM.

Says our esteemed contemporary, the *Catholic Review:* "For men like the writers on *The Index*, whom we believe to be earnestly seeking for light, and who rejecting irreconcilabilities and incongruities claiming to be the Christian faith, we have all respect and deep fellow-feeling. Their weakness is to confound Christianity with the system claiming to be Christian, from which they have emerged into earnest questioners; and the bitterness of their revolt is so great that in their disappointment they turn against the divine Founder of the one system that holds this world together, so far as the proneness of man to evil will permit it to stand.

"The divine faith in its entirety, this true and only religion worthy of man and of man's Maker, exists only in the Catholic Church, for which reason the rebels against God and his revelation are bitterest against the Catholic Church, incessant and earnest in their attacks. For the spurious and second-hand Christianities that unhappily abound in this world, they have nothing but scorn. For the Church that says with divine command, 'You must obey my precepts, you must abide by my law, for God is in me, appeals to your reason and your freedom,' they have nothing but steady hostility. Their crime is that of Satan, and his their motto, 'I will not serve.'"

This extract which is from a two-column article in reply to some of our recent strictures on the Roman Catholic Church fairly indicates no doubt the attitude and feeling of the representatives of that system toward the various Protestant sects and toward unbelievers in Christianity. We have been told a thousand times that, if we would rightly estimate the religion of Jesus Christ and appreciate its divine beauty, unmarred by the sinful influence of man, we must be careful not to confound it with that monstrous perversion of the true faith called Roman Catholicism. We can only remark here on this honest difference of opinion regarding what constitutes Christianity,—that, if an infinite Being has, in consequence of man's inability to save himself from the effects of sin, supplemented his natural powers with an objective revelation, designed to make known the divine requirements and purposes, it is strange this Being has permitted his meaning to be so obscured from one cause and another that learned and honest men cannot agree as to the true doctrine and the true church of Christ.

Speaking for ourselves only, we do not believe that the Roman Catholic Church was founded by Christ, or that he authorized others who should come after him to establish any such system as Roman Catholicism. Christianity, as originally taught, was evidently a simple faith, in which moral enthusiasm was a prominent feature; but Roman Catholicism is a complex system, which appeared only when upon the teachings of the New Testament had been foisted numerous dogmas, and with the growing faith had been incorporated no small amount of that paganism amid the ruins of which ecclesiastical Christianity made its conquests. The Roman Catholic Church antedates, of course, all the Protestant sects of to-day; yet there are few, if any of them, that do not, in our opinion, represent "primitive Christianity" more correctly than Roman Catholicism.

The Roman Catholic Church, as it exists now, is the result of centuries of growth, in which there has been continual adjustment to conditions and a co-ordination of parts to the general purpose of a powerful hierarchy. This system is therefore consistent, coherent, and strong. Protestantism, on the other hand, is a revolt, in which much of the old system is retained, while the authority to decide doctrines and impose beliefs is virtually repudiated. It represents a transitional condition of thought. There is nothing abiding in the dogmas of Protestantism. The assertion of the right of private judgment is utterly inconsistent with the creeds of all the orthodox churches. Hence, as Prof. John Henry Allen says in his late work, *Our Liberal Movement in Theology:* "Protestantism as a life has been very great and noble. As dogma it has been simply an expounding and attenuating of the older creed.... Sentimentally, Protestantism helps to keep up the tradition of ecclesiastical authority, in belief and practice, with the unwholesome craving for it, and so plays fatally into the hands of its opponents. Intellectually, Catholic theologians hold their Protestant adversaries (justly or not) simply in contempt, or at least take pains

Digitized by Google

to make us think so. Their own learning is at least equal: their reliance on authority is far more consistent and distinct. But behind Protestantism itself there is a spirit and a power which they know they will have to meet presently and take account with face to face. They understand as well as we that the really formidable alternative is not 'Protestant or Catholic,' but 'Reason or Rome.'"

In our article to which the *Review* replies, we gave certain facts in the history of letters to show that the Catholic Church has hindered intellectual progress, and supported these facts by citations from Mosheim, Hallam, and Lecky. Our esteemed contemporary makes no attempt to prove our statements untrue, but coolly remarks "that no one of these is a competent judge or even a fair critic of the Catholic Church." Is an historian then not qualified to write the history of the Middle Ages or the history of learning, unless he is an adherent of the Roman Catholic Church?

Our esteemed contemporary concludes its reply by an attempt to show that "only for the Catholic Church there would have been no real progress of man, still less of woman." "Paganism," it is declared, "is the degradation of man, the worship of stocks or stones or trees, of imaginative deities, which were simply a subterfuge in the most part for the gratification of the lower appetites and base passions in man." "The gods of great Greece and of greater Rome were, to a reasonable mind, just as low, degrading, and abominable as fetich worship." "There was nothing whole, moral, or sound in all paganism, until Christ came to break the spell," etc.

These statements are distortions of the truth, and this method of defending systems of faith or philosophy is almost obsolete among the representatives of modern scholarship.

"No judge," says Max Müller, "if he had before him the worst of criminals, would treat him as most historians and theologians have treated the religions of the world. Every act in the lives of their founders, which shows that they were but men, is eagerly seized and judged without mercy; every doctrine that is not carefully guarded is interpreted in the worst sense that it will bear; every act of worship that differs from our own way of serving God is held up to ridicule and contempt. And this is done not by accident, but with a set purpose, nay, with something of that artificial sense of duty which stimulates the counsel for the defence to see nothing but an angel in one client, and anything but an angel in the plaintiff on the other side. . . . We can admire the temples of the ancient world, whether in Egypt, Babylon, or Greece; we can stand in raptures before the statues of Phidias; and, only when we approach the religious conceptions which find their expression in the temples of Minerva and in the statues of Jupiter, we turn away with pity or scorn, we call their gods mere idols and images, and class Perikles, Phidias, Sokrates, and Plato, their worshippers, with the worshippers of stocks and stones."

That there were many evils in the pagan Rome, and great wrongs and flagrant vices, does not admit of doubt; but that they have been greatly exaggerated, that in some instances vices which were confined chiefly to certain classes, and which were abhorred and condemned by the better class, have been represented as general practices; that isolated cases of barbarity and anomalous features of society have been fastened upon to illustrate the general character and conduct of the pagans, while the better and brighter side of their life has been almost wholly concealed by the old type of Christian writers,—no one will deny who has carefully studied the history of Rome, and is familiar with theological literature. What a picture of this age could be presented, if writers two thousand years hence should adopt the same method in forming an estimate of the character of this country, or of European nations as they exist to-day! The practice of theologians of raking together all the crimes and vices of pagan nations and contrasting them with the virtues of Christian lands, or the teachings of religion and ethical systems, in order to show the indebtedness of the world to their faith, is quite as unfair as would be an effort to show the superiority of pagan Greece and Rome over modern nations by drawing dark pictures of the latter without one bright spot, and dwelling in contrast on the noble lives, the sublime sayings, and the splendid achievements which shed undying lustre on the old pagan nations.

If we would judge inductively the worth of any system, we must wait until it has been tested by being brought in contact with the conceptions and temptations of social life; for its true value must consist in its power to instruct men in the right, and to furnish motives to impel them to the love of truth and the practice of virtue.

The *Review* gives an exaggerated description of the *evils* of paganism, when that system had been the established faith for hundreds of years and when there had, consequently, been time for the development of all in it which was bad in its tendency. Suppose our esteemed contemporary takes a glance at Christendom when pagan religions had been obliged to succumb to the Roman Catholic Church, when, for more than ten centuries, every opportunity existed for it to demonstrate its power to improve and elevate the mind of man, when, too, there had been time for doctrines, which at first exerted no perceptible effect, to assert their legitimate influence.

The Byzantine Empire, founded by the first Catholic emperor, existed nearly eleven centuries. Of that empire, Lecky says, "the universal verdict of history is that it constitutes, without a single exception, the most thoroughly base and despicable form that civilization has yet assumed. . . . The Byzantine Empire was pre-eminently the age of treachery. Its vices were the vices of men who had ceased to be brave without learning to be virtuous. Without patriotism, without the fruition or desire of liberty after the first paroxysms of religious agitation, without genius or intellectual activity; slaves, and willing slaves, in both their actions and their thoughts; immersed in sensuality and in the most frivolous pleasures, the people only emerged from their listlessness when some theological subtlety, or some rivalry in the chariot races, stimulated them into frantic riots." . . .

"And the Dark Ages, as the period of Catholic ascendency is justly called," says Lecky, . . . "rank immeasurably below the best pagan civilization in civic and patriotic virtues, in the love of liberty, and in the number and splendor of the great characters they produced, in the dignity and beauty of the type of character they formed. . . . Few men, who were not either priests or monks, would not have preferred to live in the best days of the Athenian or of the Roman republics, in the age of Augustus or in the age of the Antonines, rather than in any period that elapsed between the triumph of Christianity and the fourteenth century. When we remember that in the Byzantine Empire the renovating power of theology was tried in a new capital, free from pagan traditions, and for more than one thousand years unsubdued by barbarians, and that in the West the Church, for at least seven hundred years after the shocks of the invasion had subsided, exercised a control more absolute than any other moral or intellectual agency has ever attained, it will appear, I think, that the experiment was very sufficiently tried." (Lecky's *History of Morals*, vol. ii., pp. 13–17.)

That the Roman Catholic Church has performed a necessary work in the evolution of society, that some of its teachings are beautiful and ennobling, that among its adherents there have been in the past and are to-day multitudes of noble men and women, is freely admitted; but the same is true of Buddhism to-day and was true of paganism, not only in Greece and Rome, but in more ancient Egypt.

B. F. UNDERWOOD.

EDITORIAL NOTES.

THE so-called prisoner of the Vatican is amusing himself with catching birds in nets.

TWO NEWSPAPERS in Venice have been put under the ban, and writers, printers, venders, and readers are all excommunicated.

THE Louisville School of Pharmacy is now open to women, its first young lady student having recently entered with the intention of taking a full course.

FRIENDS of *The Index* can assist us in increasing its circulation by sending to this office the names of all persons they think would like to see sample copies of the paper.

RUSSIAN journals are now liable to immediate suspension by the government, the rule, allowing three warnings and three months' notice after the third, having been given up.

WE are sending out bills this week to all our subscribers who are in arrears; and we will thank those who receive them to send to this office, at once, the amounts due on their subscriptions.

IN a Franciscan church in Athlone, Ireland, a shower of stars is said to have fallen recently, on Sunday evening, just after the sermon, on the head of a statue of the Virgin, which then raised its arms to bless the congregation.

CABINET size photographs of Herbert Spencer from Martin's gallery, Montreal, where the distinguished philosopher sat for his picture a few days ago, can be had at this office for fifty cents each; also photographs of George Jacob Holyoake of the same size and price and by the same photo-artist.

WE have for sale at this office, in pamphlet form, the addresses of B. F. Underwood, Prof. P. A. Chadbourne, and Prof. Asa Gray on *Evolution in its Relations to Evangelical Religion*, given at the meeting of the Evangelical Ministers' Association of Boston and vicinity, held in this city Sept. 10, 1882. Price five cents each, twenty-five copies for a dollar.

"LESSONS FOR THE DAY" is the title of a serial to be published weekly in London, to meet the demand for the discourses given by Mr. Moncure D. Conway at South Place Chapel, Finsbury. The number published each week, it is announced, will, as a rule, consist of the discourse delivered on the preceding Sunday morning. The price of the serial will be one penny per number.

"THE way of the transgressor is hard" in the Roman Catholic Church. Dr. Tresson, a good Catholic of St. Louis, fell in love with and married a pretty Protestant; and, to satisfy the religious scruples of both, they were doubly tied by both Catholic and Protestant ceremonies. But, in spite of this, the official journal of the diocese declares that, in so doing, the doctor has made "a covenant with hell and a league with the devil, for the sake of a Protestant wife."

SOMEBODY writes to the "Inquiring Friends" column of the *Christian Union* as follows: "Do we

Digitized by Google

know things in the other world as we do here? If one of our friends dies, father, mother, brother, or sister, and is eternally lost, and we were in the better world, how could we be happy if we knew it?" To which, the *Union* ambiguously replies: "This is one of the problems concerning which we must substitute trust for knowledge. We may well put our trust in God, who has provided so amply for us in this life, to make his own wise and blessed provisions for the happiness of his loved children in the life to come."

COMMENTING on a circular, in which the Liberals of the country are requested to join the New York Freethinkers' Association and make it a national organization, the Indianapolis *Age*, after stating that the Association is "a regular auxiliary of the National Liberal League," observes: "A large body of infidels throughout the country, probably a large majority of those who favor organization, do not desire to attach themselves to *that* organization. The attitude it holds before the country is believed to be one not eminently calculated to command for free thought the respect and confidence of a free people. It is believed to be laboring under disabilities that disqualify it for extensive and general usefulness. At best, it is but a faction, and represents but a class of Liberals. While it declares for all the measures for which we all in common contend, it has bent its entire energies for the success of one, and that one a measure that interests well-meaning Liberals no more than it does well-meaning Christians—a question not of free thought at all—thoroughly foreign to the objects of enlightened and manly free thought; and it has made this question and the personal adulation of its instigators the test of 'Liberalism.' Any free thought move should be made openly, not insidiously. . . . There are Liberals who believe no organization is better for the cause than one that has been warped to illegitimate ends and that has promoted not unity, not peace, but war among those who should have been friends and co-workers in a common and a noble cause."

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index*.

THE MYSTICAL RIVER.

A Midnight Vigil.

The pulses come and go,
That mark the ebb and flow
Of vital currents in that form so dear:
The crimson on the cheek,
And lips that almost speak,
Greet the calm minister we all revere.

SLEEP! thou silent angel,
With the sweet evangel,
I thank thee for thy coming in the night,—
In the hours so dreary
To the worn and weary,
Who fain would hold thee till the morning light.

Watching by the sleeper,
Slumber grows the deeper,
And gently moves the life-wave evermore.
Musical forever
Is the mystic River,
That bathes the silver sands along the shore.

The tide comes soft and low,
As zephyrs gently blow,
To lift the spotless cov'ring of her breast:
Sleep from the bosom bare
Removes the "sleeve of care,"
And all the innocent find peaceful rest.

S. B. BRITTAN.

NEWARK, N.J., Sept. 30, 1882.

The Index.

BOSTON, OCT. 12, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought: It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

Principles and Administration of Free Government.

BY L. F. HODGE.

The question propounded by Senator Mitchell, of Pennsylvania, in the *North American Review*, "How shall the people govern their rulers?" must wait for a solution till the people are prepared, by their adverse political experience, to eliminate the elements of despotism from the federal Constitution, and establish the foundations of the government in democratic principles. The civil power must be wrested from the hands of men who are perverting it to subserve their own ambitious ends, and must be vested in the public will before the people can control the official action of their public servants. Extend the elective franchise of the people and invest them with the veto power, and we need not ask how the people shall control their rulers. They would then have no rulers, but only agents to do their public business.

The elements of despotism which pollute the Constitution have defiled the men in power and contaminated every branch of public service, until governmental power and patronage and money take the place of the elective franchise of the people, and political chicanery and schemes to rob the treasury take the place of needed legislation in the halls of Congress. The germ of despotism which was planted in the Declaration of Independence and transplanted in the Constitution has grown until its branches overshadow the republic. Its fruits are poisonous usurpations, intrigues, plots, official misdirections, legislative robberies, briberies, intimidations, frauds, and legalized monopolies, which make the nation sick. The measure of political iniquity is full of these abominations of perverted power; and, to purify the civil service, we must clean the Constitution.

The natural rights of all might find protection in the Constitution, if the civil right of each to an authoritative influence in the State were recognized. But that right has not been made a subject of artillery discussion, and has therefore never been conceded; nor will it be conceded till the few in power are convinced of its existence by the force of military argument.

The signers of the Declaration of Independence, who hurled the principles of freedom, justice, and equality into the face of despotism, and suggested the best plan of government that men had ever known, may justly claim the veneration and the gratitude of all succeeding generations; but their work was human, and the trial of a century has revealed therein a vulnerable point. For, in connection with the affirmation that governments are instituted to secure the natural rights of man, we find the guarded proposition that they derive their powers not from the *will*, but from the *consent* of the governed.

This implies that nothing more than acquiescence or compliance on the part of the governed is requisite to warrant the assumption and continued exercise of governmental powers on the part of rulers, for consent is only passive yielding to the will or choice of others. We have here a principle which underlies all forms of arbitrary or despotic government. The despots of the world rule by the popular consent, and oftentimes apply the civil and the military power to compel consent. The people may unwillingly consent to the unjust requirements of those in power over them, in order to evade some greater evil which might result from obstinacy. Consent has no impelling force: it carries with itself no weight of authority, and cannot properly be said to be a source of power. And, hence, the affirmation that governments derive their powers from the *consent* of the governed is an absurdity.

But the will, the mental power, of which volition is the act, is the impelling power of mind which gives activity and energy and force to character, and which impels all action in the sphere of life as force impels all motion in the realm of matter. The will commands, the hands consent and do its bidding. Its exercise is always voluntary, its demands imperative, and its decrees authoritative. The will, whether it be that of despots or of the people, is the primary source of all governmental power: and, where that power is vested in the will of despots, there is despotism; but, wherever it is vested in the public will, there is democracy. Sometimes, the public will arrays itself in conflict with the will of men in power, the consent of the governed is withdrawn, and there is rebellion. To say, therefore, that governments derive their powers from the public will is to affirm that those powers exist by virtue of the voluntary choice, determination, and direction of the people; but to say that they exist by popular consent conveys the idea that they continue in existence because the people do not object.

The main trouble is that the people of the United States are governed not according to their will, but by their consent, and are supposed to yield consent to one act of usurpation and aggression after another, until governmental tyranny compels them to the last resort of revolution.

The signers of the Declaration recognized the fact "that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed"; but they suggest no means by which insufferable evils at the hands of government may be prevented. They allow that abuses of the civil power may become intolerable, and concede the right of revolution when the people can endure no more; but they seem not to have conceived the thought that a restrictive veto power in the hands of the majorities would not only prevent the binding force of bad legislation and the insufferable evils resulting from it, but would obviate the necessity for future revolution.

Our government is grounded in the ancient theory of despotism, that the people have no hand in the direction of affairs of State. Insufferable evils come from the abuse of power in wrong hands, and we now need a new Declaration of Independence to proclaim that governments derive their powers from the *will* of the people.

The framers of the Constitution earnestly desired to secure the greatest good to the greatest number; but, unfortunately, they also believed in the political consensus of the competent, forgetting that the competent are oftentimes the greatest rascals. They were too distrustful of the popular intelligence; and, therefore, they impaired the efficacy of the public ballot by undue restrictions, which they fastened on the elective franchise of the people, and placed the civil power not mainly in the hands of the majorities, where its integrity would be maintained, but altogether in the hands of representatives, who have employed it for the slow extinguishment of honest principles in the administration of the government.

It was by a close vote in the Constitutional Convention that the people were allowed a direct vote in so much as the election of members of the House of Representatives. That is all the authoritative voice the people have or ever had in anything relating to the Federal Government, and even that was regarded in the Convention as a dangerous excess of democ-

Digitized by Google

racy. The election of members of the Senate was committed to the legislatures of the States. The election of the President and Vice-President was placed in the hands of electors, who might be constitutionally chosen by the people or by the legislatures or the governors or school committees, as the legislatures might direct. The legislatures have, with one exception,* confided the election of electors to the people; but the people cannot claim it as a constitutional right, nor are the electors agents of their State majorities and bound to recognize the wishes of the people in the election of President and Vice-President. They are indeed pledged to vote for particular persons, who have been put in nomination by their party convention, and to disregard their pledges would be held as dishonorable and treacherous to their constituents; but the Constitution leaves them free to violate such pledges and to vote for whom they will. The power to appoint all other officials of the United States was vested in the President and Senate. The elective franchise of the people, then, is restricted by the Constitution to the election of members of one branch of Congress: the few in power make and execute the public laws without the slightest reference to the public will; and we still continue to talk about our government by the people, as if they had authoritative influence in the government.

Let us not delude ourselves with the idea that the people rule. They have no part in the matter but to choose some of their rulers, and accord consent to any regulations which the few in power may impose. Nor have the people ever delegated any powers whatsoever to the general government. Its powers are delegated by the Constitution, but the people never authorized the Constitution to delegate powers. Their representatives in the legislatures and conventions of the several States attended to that without consulting the opinions or the wishes of the people. It is true, the Preamble of the Constitution assumes that "we, the people, . . . do ordain and establish this Constitution." But, in fact, the people of the United States had no more to do about the framing or adoption of the Constitution than they have to do about the framing or adoption of the laws by which they are misgoverned. They never had any authoritative voice in either; but they consent to both, and will consent until abuses of the civil power shall have reached the limit of forbearance.

The power of appointment and removal vested in the President and Senate is applied not altogether to secure integrity, intelligence, and efficiency in the civil service, but mainly to keep the ruling party in power. Fidelity to the party, which means co-operation in the political intrigues of the leaders, will secure appointment to position of high trust where fitness for the office fails. The man who can engineer primaries, pack conventions, control nominations, and influence votes to bolster up the party, is the man most wanted for position in the civil service. Each senator and representative in Congress, who bears the party stamp, must have a due proportion of the patronage at his disposal. This he distributes among the convention packers and local politicians of his district, as will best improve his prospects at the next election. The entire civil service is converted into a vast political machine propelled by governmental power, patronage, and money, to keep in place men morally unfit to wield the power of the State. Large numbers of honest men, whose numerical strength might control the elections, are disgusted with the bribery, intimidation, trickery, and fraud employed by men in power to perpetuate their hold upon the treasury keys, and therefore stand aloof from both the primaries and the polls; and the full control of primaries and elections passes by default into the hands of the political bosses of the party in power. The natural result is that bad legislation checks the wheels of industry and trade, and legalized monopolies impoverish the people, that millionnaires and men in power may gather up the spoils of national calamity, and build colossal fortunes on the general financial ruin.

But returning to the question, "How shall the people govern their rulers?" The Constitution must be reconstructed on a democratic basis; the power of appointment and removal must be taken from the men who are abusing it, and vested in the people where it belongs; and the veto power must be transferred from the President to the people before they can control their rulers.

* In South Carolina, the electors are chosen by the legislature.

To effect so radical a change in the foundation of the government, the honest men must come out of the political Babylon and consolidate a new party upon that issue. Indeed, the new party is already organizing upon various issues of reform, and will consolidate its forces at the proper time and in the proper manner to insure its ultimate success.

All members of the legislative branch of the government, the chief executive, the heads of the departments, and all other officials of the United States, excepting representatives of the government on foreign duty, detectives in the secret service, and perhaps a few other officers whose places cannot be used for political purposes, should be elected by the people. The chief executive and department officials at the seat of government should be elected by the whole people and be removable by impeachment. Those whose official duties are confined to local offices should be elected by the people of the district in which their offices are located. If the people of New York and Boston are qualified by their intelligence to vote properly for presidential electors and representatives in Congress, they ought to be competent to choose their own postmasters and collectors for their ports. The people could better afford to devote an hour to that duty when a vacancy occurs than to change officers with every new administration and take whom the President and Senate choose to inflict upon them for political ends. But, if the people fail to elect, the government should appoint, that the offices may be filled. There is no good reason for changing the entire *personnel* of the civil service every four years. Efficient officers, familiar with the duties of the service, and faithful in the discharge of their official obligations, might better be retained in office until age unfits them for the work. They should hold their positions during good behavior, and should be removable at the instance of either the government or the people, but only by the court and for just cause, after an impartial trial.

The power to make the public laws of binding force and to invalidate bad legislation belongs of right to the people. It is a dangerous power that can bind the people with a law without the sanction of the public vote, and in spite of public protest. A bare majority of a quorum in both branches of Congress with the approval of the President can and do bind the people with injurious laws; and the only remedy the people have lies in the slow, uncertain process of electing better men to fill the halls of legislation and the chair of the executive. But we have found by our experience that, with the elective franchise of the people hedged about by constitutional restrictions, and the whole power and patronage of the administration backed by the grand army of office hunters and both houses of Congress against it, the one remedy is not easily nor speedily applied. The government may and must be invested with some discretionary powers, the people cannot legislate in any case, nor would they take the trouble to vote yes or no upon every measure of public policy; but all statute laws should be made of binding force by the vote of people.

Under the present despotic system, the question with legislators is, Can we force this law upon the people? will they bear it? But, if the people were invested with a full elective franchise and the veto power, the main question would be, Do the people want this law? will they accept it? A better class of men would fill the offices of trust, the civil power would be applied to beneficial uses, and the people might perhaps "govern their rulers."

For *The Index*.

THE GOSPEL OF LAW.*

BY WILLIAM EMMETTE COLEMAN.

The last fifty years marks an important epoch in the world's religious development. During this period, the "scientific method" has been extensively applied in determining the facts and principles underlying the genesis, growth, and decadence of the theological faiths of humanity, the results attained being of great utility and vast importance. In conjunction with its sister sciences,—also the offspring of the present century,—comparative mythology and comparative philology, the nascent science of comparative theology, in the hands of its few well-equipped expounders, is casting much light upon many hitherto unsolved problems in religious history and experience. The analytical researches of specialists devoted to the study of the world's great religions,—of Müller, Muir, Benfey, Weber, Wilson, Whitney, Lassen, Bhandarkar, Goldstücker, etc., in Hinduism; of Rhys-Davids, Fausböll, Oldenberg, Kern, Cunningham, Beal, Childers, Bühler, Senart, etc., in Buddhism; of Haug, Spiegel, West, Dannesteter, Windischman, Westergaard, Justi, etc., in Parsism, or Zoroastism; of Kuenen, Wellhausen, Graf, Colenso, Goldziher, etc., in Judaism; of Strauss, Baur, Hilgenfeld, Davidson, Hooykaas, Zeller, etc., in Christianity; of Legge, Edkins, Faber, Chalmers, Eitel, Plath, etc., in the Chinese religions; of Sir William Muir, Wüstenfeld, Palmer, Syed Ahmad, Bosworth Smith, Dozy, Von Kremer, etc., in Mohammedanism; of Renouf, Tiele, Lepsius, Ebers, Maspero, Schiaparelli, Pierret, Brugsch Pacha, Pleyte, etc., in ancient Egyptian religions; of Sayce, Oppert, Lenormant, Smith, Boscawen, Rawlinson, etc., in Akkadian, Babylonian, and Assyrian religions,—the researches of these and many other specialists have been of incalculable service to humanity in pointing out the successive stages of religious growth and progress the race, under varying conditions and diverse environments, has evolved in its anxious search for truth.

Pari passu with this theological unfoldment, all permeated with the rationalistic spirit of the age, physical science has been steadily advancing. Coincident with the scientific exposition of the dominance of the law of evolution in the realms of theology, mythology, and ethics,—the outcome of historico-critical exigesis,—the same law of evolutionary unfoldment has been demonstrated to be regnant in universal physical nature, this one grand primal law being found to be the central principle of being, immanent alike in mind as in matter, and in their every expression. Consequent upon the discovery of this truth, the universal dominance of law as expressive of the myriad phases of evolutionary sequence, the religions of the world, in so far as the light of modern science may be enabled to reach them, will need to be radically reconstructed; and, it being in so-called Christian countries that these alike destructive and constructive truths of rationalistic science find their chief embodiment and expression, the Christian religion, perforce, is the first of the world's creeds that is called upon to reconstruct its bases of faith and adapt itself, so far as in it lies, both in its material and spiritual aspects, to the science of the day. This some of its adherents are endeavoring to accomplish. The phases of Christian thought represented by the Dutch and German schools of Kuenen and Keim, the Broad Church of England, and the more advanced Unitarians of America and England, are doing much to liberalize the older and more conservative confessions of faith; and, in general, they have largely utilized the "scientific method" in their attempts to unite pure rationalism with the peculiar and idealized form of Christianity to which they still cling. Carried to their ultimate, though, even these comparatively unobjectionable forms of Christianity must, under the workings of the law of evolution, eventually pass out of existence. No form of religion based on the life and teachings of a personal founder can possibly survive. All forms of historic religion must perish; and the religion of evolution (so ably expounded by Rev. M. J. Savage), the religion of humanity, not the religion of any one man, of a Jesus, a Buddha, or a Mohammed, must in the end cover the earth.

Prof. Kuenen, in his recent (1882) Hibbert Lectures, dissents from the above. In his concluding observations on the universal religion (*National Religions and Universal Religions*, pp. 313-317), he advances the idea that, though Buddhism and Islam are incapable of supplying all the religious needs of the world, and hence cannot become the universal religion, yet Christianity, through its inherent mutability and power of adaptation to the ever-varying demands of human nature, is capable of becoming, and he has hope that it will become, the one and only universal religion. While it is evident that the emasculate form of Christianity professed by Dr. Kuenen and his school—which really is, in essence, pure scientific rationalism, with a thin crust of what may be called Jesusism superadded thereto—approximates much nearer to the requirements of the universal religion of the future than Buddhism or Mohammedanism (it is impossible that either of these should ever become the religion of European and American rationalists),

* THE GOSPEL OF LAW: A Series of Discourses upon Fundamental Church Doctrine. By S. J. Stewart. Boston.

Digitized by Google

still, so long as the coating of Jesus worship obtains in a religion, in so far is it debarred from being the religion of the untrammelled scientist or philosopher. If, by successive permutations, all the distinctive features of Christianity, whether primitive, mediæval, or modern, are eliminated, with naught remaining but the name "Christian,"—the several Christianities of Jesus, the Twelve, Paul, the fathers, etc., having all vanished, and the religion of humanity, of the "Gospel of Law," alone remaining,—of course such a religion might become the world's religion. But such a religion, I opine, would never be called Christianity. The name "Christian" may, and doubtless will, be retained—very inconsistently—by many, to distinguish the form of faith cherished by them, though really in their faith no positive Christian element inheres. But this anomaly cannot last: the name itself is destined to perish along with the ideas and principles giving it birth. Historically and etymologically, the word "Christian" has but one legitimate signification; that is, one who believes Jesus of Nazareth to have been the Christ, the Jewish Messiah. The Messianic hope is a purely local, an exclusively Jewish conception, based on false ideas of God, nature, the world, and humanity: hence, the idea of the universal religion of humanity being based upon and bearing the name of a conception false in its essence, untrue in its realization, and local in its character, is so manifest an incongruity that the common-sense of the rationalistic thinkers of the future will assuredly spurn it. No truly universal *cultus* can ever be reared upon the Hebraic *Ha-Mashiakh*: the idea is preposterous, in my judgment.

Cultured Liberalism vs. Crude Antitheological Bigotry.

Though this is pre-eminently an age of education and widely diffused knowledge, yet great ignorance may be said to universally prevail. What a rarity is strictly accurate knowledge upon any subject, save in cases of the few specialists who may be devoted thereto! Some vague, general idea of the trend of modern science and of rational religious thought is abroad in the world; but, in most cases, even among those tolerably well-informed, naught but a mere smattering is known. Free thought and rationalism, we know, are in the air, so to speak; and yet how crude, how superficial, are most of its expressions! The world needs a cultured free thought, an accurately comprehended and accurately expressed rationalism. To further this *desideratum*, the Free Religious Association is sustained; but how little is it doing to relieve the ignorance and crudeness of radical propagandism! Mr. Underwood has recently, in *The Index*, written quite plainly concerning the antitheological madness of much that passes current for free thought, and I most heartily indorse his truthful and timely utterances thereanent. By what means are the masses being led into free-thinking forms of thought? What is the character of most of the literature and the oratory of the Liberalism of the day, and what their effects upon its converts and devotees? In sorrow be it said that coarseness, crudeness, intolerance, bigotry, misrepresentation, slander, are very largely represented in its make-up. Books, papers, tracts, flood the country, filled with exhibitions of this antitheological mania.* These productions are as rabid against Christianity, in spirit, as the Roman Catholic Church was against the heresy of the Reformation. Scurrilous abuse and misrepresentation of Jesus, the Bible, and Christianity, pollute the pages of this literature, and disgrace free-thought oratory in large measure. With these writers and speakers, everything that can be collected derived from the four winds of heaven abusive of these three, without regard to truth, honor, or decency, is greedily seized upon and scattered broadcast, to the disgrace of true Liberalism and an enlightened, conscientious rationalism.

With many of the adherents of this *soi-disant* Liberalism, for a true friend of genuine Liberalism to protest against this coarse, illiberal species of free-thought proselytism, and to deplore its unhappy effects, is, seemingly, for him to commit one of the worst possible crimes; for, let any cultured rationalist express his honest convictions concerning the bad effects of this rabid antichristian folly, he at once becomes the target for the abuse, ridicule, and denunciation of those in sympathy with this inferior type of Liberalism. His private character is assailed, his culture and scholarship laughed at and denied, his motives impugned, and expletives and epithets showered upon him in rich profusion. Of course, this class of Liberals embraces the free-lovers, the obscenity-law repealers, and the "tag-rag and bobtail" of free thinkers, as Mr. Underwood aptly termed them a few years since.

The misleading and illiberal character of much of the "liberal" literature accessible to the masses necessarily has a more or less pernicious effect upon its readers. They gather incorrect ideas concerning religion, Christianity, the Bible, Jesus, the apostles, the Jews, etc., such literature being largely permeated with untruth and error, born of prejudice, ignorance, or love of falsehood, some writers erring ignorantly, some knowingly and maliciously. And, through such writings, the masses of Liberals are being indoctrinated with prejudice, spite, illiberality, bigotry, and dogmatism, as baneful in their tendency as the same qualities when manifest in the orthodox. Illiberal Liberalism is poisoning the people with its noxious dogmas, its falsehoods, and its maliciousness; and still the evil goes on. We need a higher standard of liberal thought and endeavor at work among the masses. As it is, they are practically left to the mercy of the lower, more popular, and more unscrupulous advocates of a crude, coarse, perverted Liberalism. Converts from Orthodoxy crowd the liberal ranks, bringing with them the heritage of a long line of ancestral superstition, intolerance, narrowness, and spite. In many cases, these qualities seem to be intensified after acceptance of so-called liberal views; and this keeping alive and intensification of such deplorable mental qualities are largely due to the character of the popular free-thought literature, in much of which these qualities are strikingly manifest. Now, as of old, sea and land are compassed to make one proselyte; and, when he is made, he is tenfold more the child of hell (bigotry and intolerance) than before.

Adaptation of Mr. Stewart's Work to Present Needs.

The work whose name heads this paper, in my judgment, is an excellent representative of the class of books needed for general circulation as a counterpoise, somewhat, to the lower class of liberal literature above adverted to. Though radical and far-reaching in its sweep and conclusions, thoroughly imbued with the spirit of rationalism, in harmony with the advanced scientific and philosophic thought of the age, it is commendably free from the coarseness, irreverence, fanaticism, and scurrility conspicuously marring most of current free-thought literature. As a popular compendium of the results of the best scholarship of the day in the domain of theology, Christology, Biblical science, and cognate subjects, I have seen no other work so well adapted for its purpose. It fills an important void in liberal literature,—a work adapted to the average, common mind, voicing the best thoughts of cultured rationalism, in simple yet expressive diction, free from the asperities and bitternesses so apt to disfigure antitheological writings, adapted to popular perusal, comprehension, and digestion. Portions of the ground covered by this excellent work have been embraced in previous works, such as Mr. Chadwick's *Bible of To-day*, and in a much larger degree in his book, and in Mr. Savage's series of admirable works. Yet no one volume has, I think, included so complete a range of topics embodying the principal religious problems engaging public attention.

Much of current Free-Religious literature is of a character fitted only for scholars and thinkers, and, consequently, unadapted to reach the masses of the people; but few are philosophers, capable of appreciating or assimilating the strong mental food often given us by minds like Wasson, Weiss, and Abbot, or even Adler, Frothingham, Potter, and Underwood. The average mind cannot be made to think philosophically or scientifically except by slow growth. Mental food adapted to each class of minds, all of a clean, healthful character, is a *desideratum* in Free Religion. It is a mistake to confine the attention exclusively to the cultured in our midst, leaving the great bulk of the community, as it were, the prey of unscrupulous free-thought propagandists,—free-lovers, obscenity-law repealers, social anarchists, etc., materialist, spiritualist, and agnostic. The more cultured should be sufficiently imbued with the true philanthropic spirit to be interested in the elevation of the people at large, so far as possible, to their own plane; and, to this end, they should be willing to sacrifice a trifle of their dignity, if required. They should try to adapt their writings and oratory, in part at least, so as to reach with good effect the uncultured and the less refined. Plain, simple, common-sense presentations of the great truths of the day in morals, religion, and philosophy generally, readily comprehensible by all, in my judgment, should be prepared by the better class of free-thinkers, such as the workers and leaders in Free Religion,—works free from the debasing influence of the coarser kind of antitheological works now meeting us on every hand.

Mr. Stewart's work, in my opinion, is just such a one as the times demand, and is calculated to do good service of the character above alluded to, if it can be utilized as it merits. Could works like this supplant those of the objectionable class referred to, an elevation of sentiment, such as all true Liberals would delight to witness, would very likely obtain among free thinkers in general. As it is, would it not be well to utilize, so far as practicable, Mr. Stewart's book, replete, as we find it, with so much rationalistic truth, beauty, and efficiency? Nearly all the fundamental problems underlying current theology are frankly yet reverently discussed in his unpretentious volume, and are presented in so attractive a simplicity, alike free from the eruditely pedantic and the abstrusely metaphysical, that almost any person of ordinary intelligence, at all interested in the subjects treated, will necessarily have his attention enchained during its perusal, and be unwilling to lay the volume down till its entire contents be mastered. Its calm, dispassionate treatment of the momentous questions involved; its freedom from vituperation, harshness, and all traces of rabid antitheological mania; its evident sincerity and conscientious search for truth; its manifest appreciation of the highest ethical code, of all things good, true, and beautiful,—these, and other excellences, render the *Gospel of Law* one of the best books to be placed in the hands of inquirers after "the right way" in this age of theologic doubt and unrest.

PRESIDIO OF SAN FRANCISCO, CAL.

* It is but just to say that the writer was, a few years ago, considerably affiliated with this wing of Liberalism; but having, by a process of mental evolution, passed beyond its influence, his sympathy therewith, he is confident, can never be revived.

CORRESPONDENCE.

THE NEW ARTICLE OF THE NATIONAL UNITARIAN CONFERENCE.

Editors of The Index:—

Your editorial note concerning the constitutional amendment passed by the Unitarian Conference at Saratoga did not appear to me to be so generous or even so just as it might and should have been. It sounded just a little as if you were sorry that the Conference had taken a great step in advance, because, henceforth, your occupation as a hostile critic of the Conference would be gone. You say that the new article seems to you inadequate. Inadequate it is to make the Preamble and the Constitution ideal expressions of our radical faith. To make them this, the obnoxious expressions should be removed from the Preamble, and the ninth article—Mr. Hepworth's bit of sentimental bunting—should be abolished altogether. But I cannot see why the new article is not adequate to the comprehension of yourself and all other earnest radicals of whatever speculative belief within the fellowship of the Conference on the most cordial terms. If you do not come in, after this, and work with us, we shall feel that it is because you do not like our company, and not because you do not like our creed. Why the new amendment is not as adequate as the compromise article of 1868, I also fail to see. Devised by M. J. Savage, it was certainly intended to be as broad as the most exacting radical could wish. As for the passage of the article without debate, it was in this wise: the debate was all behind the scenes. But it was very full and perfect. It was presented to the Business Committee, backed by a list of fifty of the most influential members of the Conference. If a debate had been brought on upon the floor of the Conference, every one of these fifty men would have supported the amendment, and it would have been carried by a more enthusiastic vote than it actually received. We have no fears of any going back from this position. You would have none, if you had been at Saratoga. The general spirit of the meetings would have given you complete assur-

Digitized by Google

ance. The fact that Batchelor and Sunderland and Thayer and Hosmer are on the Council of the Conference, and that its Secretary is Russell Bellows, would have made assurance doubly sure.

I write as I have written not a whit less earnestly because I did not vote for the amending article. I opposed my solitary No to the immense majority, because I do not believe that "the Preamble and articles of our Constitution fairly represent the opinions of the majority of our churches." If they do now, they will not in 1884, if our present rate of growth continues. But this erroneous statement does not affect the spirit and intent of the amendment. Its passage was indeed "a famous victory," though a more peaceful victory was never won; and those of us who were upon the ground feel that we have a right to expect from *The Index* a much more hearty message of congratulation than you gave us in your editorial note. Yours affectionately,

JOHN W. CHADWICK.

BROOKLYN, Oct. 1, 1882.

[REPLY.—We would reassure our radical Unitarian friends that we fully appreciate the excellent hospitality of their intentions in securing the passage of the new amendment to the Constitution of the National Conference; and we rejoice that the spirit of the Conference was broad enough to give it a practically unanimous vote. Nothing would delight us more than to have our "occupation," so far as it is that of a critic of the Conference, entirely "taken away" by the entire removal of the theological phrases from its Constitution. Though it is an "occupation" that does not now take very much of our time, we shall cordially welcome the day when it shall be wholly numbered with the things past and done. But, as we said last week, in our brief note appended to Mr. Savage's communication, this final victory for liberty and fellowship in the Conference is yet far from being won. And we must confess to some doubt as to whether the action this year will help or hinder such final victory,—a doubt that is rather strengthened by Mr. Chadwick's apparent acceptance of the action as amply sufficient for removing all impediments to membership in the Conference from the consciences of those of us who have hitherto felt compelled to stay out. For ourselves, we must still say, "We like your company, but not your creed." When we go to the Conference as a member, we want to go on terms of perfect equality with all other members, and not by a special door opened for our benefit. We cannot so go yet. By what rights of equal justice and fellowship does a part of the Conference, even if it be a majority, have certain of their beliefs embodied in the Constitution contrary to the beliefs of another part? If not meant as a creed for all, or as a test of fellowship, all the more should they be removed in the interest of fellowship and equality and common fairness.

And, in connection with this remark, we may revert to a point in Mr. Savage's criticism, where he speaks of his mistake concerning "Free Religion," if it "does not mean a cordial hand-clasp for all who are willing to waive individual, speculative opinions in favor of a stronger emphasis on the grand essentials of fellowship and character." Certainly, genuine "Free Religion" does have such a "hand-clasp." But, in the case of the Unitarian Conference, we do not see that the majority have "waived" their individual speculative opinions. They still keep them inscribed in the Constitution at the mast-head of the Conference. Saying that they will not insist on adhesion to them by the minority is not saying that they are willing to take those opinions down, and to sail under the neutral flag that the radicals ask for. Yet to do this is the only practicable way in which they can "waive" their opinions equally with the radicals. And this, the complete removal of the speculative beliefs of the majority as well as those of the minority from the Constitution, is the legitimate goal to which Unitarian principles should progress. In this, we suppose our radical friends would agree with us.

But when so advanced a radical as Mr. Chadwick appears disposed to rest upon the victory this year as if all obstacles to the broadest religious fellowship were now removed, we can but query whether the victory may not prove a loss rather than a gain. A loss it will certainly be, if the radicals rest content with it. And here we may reply to the criticism which both Mr. Savage and Mr. Chadwick make of our remark that the new amendment appeared to be hurried through without debate. Since they were on the spot, their opinion on this point may be worth more than ours. Yet, from information that has come to us, we are quite sure that it was the policy of the conservatives to prevent debate. Some of them, we learn, were very anxious when they heard of Mr. Savage's proposition, and endeavored to stave it off; but, when they saw that it must come, they apparently resolved that the next best thing was to vote for it without raising any opposition, and thus get the firebrand out of the way as quietly and quickly as possible. No debate was needed, it is true, for passing the article. Yet it seems to us that something was due to the five hundred and twenty-eight delegates who were not among the fifty "behind the scenes." A public discussion might have enlightened the meeting and the public as to the significance of the amendment, and at least would have prevented the remark made by more than one delegate we have chanced to meet: "The whole thing was so quick that we hardly knew what was going on before it was done. *It did not seem to mean much of anything.*"

Our reasons for thinking the new article "more inadequate" than that of 1868 may be best given perhaps by printing the Constitution (or those parts relevant to the case) as it stood then and as it stands now, thus:—

1868.

PREAMBLE.— *Whereas* the great opportunities and demands for Christian labor and consecration, at this time, increase our sense of the obligations of all disciples of the Lord Jesus Christ to prove their faith by self-denial, and by the devotion of their lives and possessions to the service of God and the building up of the kingdom of his Son,—

ART. I.—Therefore, the Christian churches of the Unitarian faith, here assembled, unite themselves in a common body, to be known as the National Conference of Unitarian and other Christian Churches, to the end of energizing and stimulating the denomination with which they are connected to the largest exertions in the cause of Christian faith and work. . . .

ART. IX.—To secure the largest unity of the spirit and the widest practical co-operation, it is hereby understood that all declarations of this Conference, including the Preamble and Constitution, are expressions only of its majority, committing in no degree those who object to them, and dependent wholly for their effect upon the consent they command, on their own merits, from the churches here represented or belonging within the circle of our fellowship.

1882.

PREAMBLE.— *Whereas* the great opportunities and demands for Christian labor and consecration, at this time, increase our sense of the obligations of all disciples of the Lord Jesus Christ to prove their faith by self-denial, and by the devotion of their lives and possessions to the service of God and the building up of the kingdom of his Son,—

ART. I.—Therefore, the Christian churches of the Unitarian faith, here assembled, unite themselves in a common body, to be known as the National Conference of Unitarian and other Christian Churches, to the end of energizing and stimulating the denomination with which they are connected to the largest exertions in the cause of Christian faith and work. . . .

ART. IX.—Reaffirming our allegiance to the Gospel of Jesus Christ, and desiring to secure the largest unity of the spirit and the widest practical co-operation, we invite to our fellowship all who wish to be followers of Christ.

ART. X.—While we believe that the preamble and the articles of our Constitution fairly represent the opinions of the majority of our churches, yet we wish distinctly to put on record our declaration that they are no authoritative test of Unitarianism, and are not intended to exclude from our fellowship any who, while differing from us in belief, are in general sympathy with our purposes and practical aims.

It will be remembered that Article IX. of 1868 was rescinded at the next Conference, and the present Article IX. put in its place. Mr. Savage, we have no doubt, intended that his new Article (Art. X. of 1882) should be equivalent to that of 1868. Its terms do not seem to us quite so clear and conclusive as those of the rescinded Article; but, waiving this point, it strikes us that the retention of present Article IX. makes the effect of the new Article much less than the effect of that of 1868. But we confess to great uncertainty as to what is effected by it and what not. We think it might puzzle a Philadelphia lawyer to tell from the present Constitution, as a whole, who are the inviters and who the invited, who it is who reaffirm their "allegiance to the Gospel of Jesus Christ," and who can come in without making that declaration. We are willing therefore to rest our remark that the new amendment is more inadequate than that of 1868 (though not considering it a very important point to establish) on the greater general indefiniteness and contrariety of the patchwork *mosaic* which the Articles of the Constitution now present.—W. J. P.]

AN OFFER TO THE SPIRITUALISTS OF AMERICA.

Editors of The Index :—

As some three months have elapsed since the exposure of Slade, and full accounts of it have been published in many of the papers, we will not impose on your space by sending statements; but, as several articles have appeared in Spiritualistic papers, saying that Henry Slade can never expect fair treatment on British soil, and hinting that his exposers took this way of fleecing a poor medium out of his earnings, that the climate was unfavorable, and other excuses, we feel ourselves called on to make the following offer, which please publish.

Yours truly, JOSEPH TEMPLETON.

To the Spiritualists of America :—

To settle all doubt, which seems to be thrown on the Slade exposure by Spiritualistic organs, we make the following offer, on behalf of the parties who took part in Slade's exposure. We will send a committee to any convenient city in the United States, where Slade may be performing, provided that one hundred dollars be deposited in some reliable person's hands, to cover our expenses in case Slade fails to appear. And we think it will be enough to convince, even the most credulous Spiritualist, that Dr. Henry Slade is a complete humbug, if he is unable to produce phenomena when the conditions are such that fraud would be impossible. Hoping to hear from Dr. Henry Slade or his friends, in reply to this offer, which we make a standing one, we remain, on behalf committee,

Truly yours, J. L. LEWIS.
S. D. BRADSHAW.
J. R. NORTHCOTT.
JOSEPH TEMPLETON.
A. MCGINISS.

P. S.—By "convenient" is meant close to Canada as New York, Boston, Rochester, Oswego, Buffalo, Detroit, or Chicago, for instance.

WOMAN SUFFRAGE IN NEBRASKA.

Editors of The Index :—

The National Woman Suffrage Association, of which Mrs. Stanton and Susan B. Anthony are the leaders, has just closed two very successful conventions in Omaha and in Lincoln, Neb. At Omaha, the opera house was crowded at each of the three days' sessions by audiences of whose enthusiasm we cool Bostonians can have no idea. The town was thoroughly aroused, and the people talked of nothing else but the convention. The reception at the Paxton House was a very brilliant affair, and the most cultivated people of Omaha were there to welcome the brave women who had come so far to help fight the battle for woman's enfranchisement. On this occasion, a number of gentlemen who had attended the convention declared their intention of voting for woman suffrage at the coming election. Several prominent business men were introduced to Mrs. Anthony; and they told her that they had never before heard the matter fairly discussed, but, now that they had heard it, they were thoroughly converted.

The following speakers at the National Convention are detailed for active campaign work until the election, when the voters will decide whether the constitutional amendment now pending shall be adopted: Susan B. Anthony, May Wright Sewall, Helen M. Gougar, Rachel G. Foster, Elizabeth Lisle Saxon, Phœbe W. Couzins, and Harriette R. Shattuck. It is the intention of these ladies to push the work with vigor, and to speak in all the principal towns and cities in the State. Rachel G. Foster is the organizing spirit, and has planned the whole campaign with marvellous executive ability. Miss Foster is a young lady of wealth and position, who devotes her time and her means to the cause of woman suffrage. A great deal of missionary work has been done in remote localities, where the subject is new or has seldom been presented. It is always necessary to "work up" a woman suffrage convention, even in Massachusetts; and this is the way it is done in the wilds of Nebraska. After it is decided to hold a convention in a certain place, we will say Nebraska City, the organizing spirit goes to see what arrangements can be made. When she arrives at her destination, she takes a horse and carriage and goes to the different school-houses, talks with the teachers, who tell the children, who tell their parents, that the meeting is

Digitized by Google

to be held and what it is all about. She then goes to see the ministers of the different churches, calls on the leading women of the town, drops in to see the business men, and talks the matter over with them all, and gets their assistance if she can. If she is very persistent, she sometimes does her missionary work as she goes along the street. A certain "National" was seen one day last week haranguing, from her carriage, a group of school-children who had just been dismissed. Among them were several negro children, who, when she told them what the meeting was about, said, grinning, "Is it free?"

The people of Nebraska are very friendly and hospitable to the women suffragists. To show how generously they are treated, I will relate a little incident that took place a few days ago. One of the ladies had lost the last evening train for a certain town in which she was advertised to speak, and was in great distress about it. She went at once to the superintendent of the road, told her story, and tried to hire an engine. The superintendent was so much interested in her case that he sent for a special car, used by himself only, took the lady with him, free of charge, and on the way was converted to woman suffrage. Could anything be more friendly to the cause and its advocates than this?

The "Nationals" are not very sanguine as to the adoption of the woman suffrage amendment; but, whether it succeeds or not, they will have the satisfaction of knowing that they have done good and substantial work in its behalf. HARRIET H. ROBINSON.

BOOK NOTICES.

HISTORY OF WOMAN SUFFRAGE. Edited by Elizabeth Cady Stanton, Susan B. Anthony, and Matilda Joslyn Gage. Vol. II. New York: Fowler & Wells, publishers.

The very appearance of this ponderous and handsomely bound volume, filled as it is with the records of the efforts made in this country in behalf of the equal representation of American women in governmental affairs, combined with the fact that it is only one of three like volumes devoted to the same subject, ought to carry conviction to the minds of the most sceptical of the vastness, strength, and earnestness of the woman's movement, if not of its early triumph. Although woman suffrage is not yet an accomplished fact, it is none too early for such record of the movement in favor of it to be made, while yet all the records are accessible and fresh in remembrance. These volumes make a part of our national history, and as such should form part of every library in the land. Not the least interesting feature of the present volume are the biographical sketches of a number of eminent women, leaders of the movement, and the full-page steel-engraved portraits of others. Anna Dickinson's is the frontispiece portrait, accompanied by the characteristic, *fac-simile* autograph sentence, "The world belongs to those who *take* it. Truly yours, Anna Dickinson." The other portraits of the volume are those of Clara Barton, Dr. Clemence S. Lozier, Rev. Olympia Brown, Jane Graham Jones, Virginia L. Minor, Isabella Beecher Hooker, Belva A. Lockwood, Ellen Clark Sargent, Myra Bradwell, Lucy Stone, Mary A. Livermore, and Julia Ward Howe. To those interested in the subject, no one of the nine hundred and fifty-two pages will be found unworthy of perusal or dry reading. The motto on the title-page is a quotation from the fourteenth amendment to the Constitution, "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States." The eleven chapters of the "history" in this volume treat of the following subjects: "Woman's Patriotism in the War," "Congressional Action," "National Conventions in 1866-67," "The Kansas Campaign, 1867," "New York Constitutional Convention," "Reconstruction," "National Conventions, 1869," "The New Departure under the Fourteenth Amendment," "National Conventions, 1873-75," "Trials and Decisions," and "American Woman Suffrage Association." In this volume will be found an account of the attempts by women in various parts of the country to vote under the provisions of the fourteenth amendment, that clause which forms the motto of the book, with the arrest and trials which ensued. Among these is given a full report of the proceedings against Susan B. Anthony for voting at Rochester, N.Y., at the election in 1873, with the address delivered by her previous to the trial.

SOCRATES: APOLOGY AND CRITO OF PLATO. Price 50 cents. SOCRATES: THE PHÆDO OF PLATO. Price 50 cents. Boston: Roberts Brothers, publishers.

These two are companion volumes, the ninth and tenth of the "Wisdom Series" issued by this publishing firm. They are taken unabridged from Prof. Jowett's translation of Plato. They give the story of the trial, imprisonment, and death of Socrates. "The Apology" is supposed to be Socrates' defence of himself at his trial. Crito was one of his friends, who, visiting him in prison previous to his death, proposed to him to escape; and the gist of Socrates' argument in refusal of this plan is given from Plato. In the dialogue of Phædo is given Plato's account of the last hours of Socrates, and the subject is chiefly immortality. The first of these gem-like volumes gives a short but interesting sketch of the life of the great Athenian philosopher. They form hand-books of reference, and will make good holiday gift books.

THE GREAT EPICS OF MEDIÆVAL GERMANY. An Outline of their Contents and History. By George Theodore Dippold, Professor at Boston University and Wellesley College. Boston: Roberts Brothers. Price $1.50.

The title-page of this volume as given above tells pretty fully its aim, which is fairly accomplished in the work itself. It is not a history of the literature of mediæval Germany, only an account of the great epics in which Prof. Dippold thinks we find expressed the very life and soul of ancient nations. The principal epics treated of in this volume are "The Nibelungen Lied," "The Lay of Siegfried," "Godrun," "Parzival," "Tristran and Isold," and "Iwein." The stories are outlined in prose, and versified translations by Prof. Dippold. The book is interesting in style, and will be found a useful introduction to those who are interested in the study of early German literature.

WIT AND WISDOM OF DON QUIXOTE. Boston: Roberts Brothers. Price $1.25.

This handsomely bound volume is what it purports to be, a compilation of the best things in *Don Quixote*. The book will be of especial benefit to those who wish to recall in conversation or writing the many sensible and apt words of the famous Knight or his sturdy, common-sense squire, Sancho Panza. To this end, the general "Index" and "Index to Proverbs" will be found of great service. The twenty-five pages devoted to the biography of Cervantes, the author of *Don Quixote*, written by Emma Thompson, add to the value of the book.

BABY-LAND for October opens with an enticing picture of two sweet little girls with the nicknames of "Little Drops" and "Little Crumbs," and the accompanying story explains why they are called so. The story of "Three Queer Dolls" is told in picture and verse, "Rogue Rabbit," "Ida's Doll," and "How Danny said he was Sorry," with the "Outline," "Slate," and other pictures, make up the contents for this month.

THE *Art Amateur* for October is even more entirely devoted to decorative art than usual. It contains many bright suggestions in regard to the adornment of the home, and practical hints in amateur photography and embroidery. Its art news is lively and entertaining. We should be glad to feel that the public demanded and the journals could supply more varied and serious nourishment to the artistic taste.

AMONG the subjects treated of in the *Sanitarian* for October, we have space only to mention "Movements of Epidemics," "New York Tenement Houses: their Victims and their Tyrants," "Practical Argument for Sewers," "Horseback Exercise and Malaria," "Yellow Fever," and "Why Sewer Traps are Unreliable."

PERSONAL ITEMS.

BENJAMIN FRANKLIN is said to have five hundred descendants in the United States, and probably more than double that number of namesakes.

THREE of ex-President John Tyler's sons are living. One destroys cancelled national bonds at Washington, the second doctors folks at the capital, and the third teaches school at Memphis, Tenn.

BJORNSTERNE BJORNSON, the Norwegian liberal, celebrated his silver wedding with poetry at his estate in Gausdal, Norway, last August, the American flag being among those floating over his door.

PRESIDENT ARTHUR was fifty years old on Thursday the 5th inst., and the *Herald* of this city hints that the close of his half-century of life is "just as good a day as New Year's to turn over a new leaf."

BEBEL, the Socialist leader, who was recently acquitted at Zwickau, has been so ill at Leipzig that his death was reported. He is now out of all danger, except that of being soon imprisoned again.

MR. JAMES K. APPLEBEE, in connection with the Twenty-eighth Congregational Society, has just organized a series of social recreations and a Shaksperean Club for the study of the works of the great bard.

PROF. VAN BUREN DENSLOW, President of the Philosophical Society of Chicago, will give the opening lecture before that society this season, on the evening of October 14, on "Conflicts in Philosophy." The next lecture will be the 21st, by George Jacob Holyoake, on "Migration."

SENATOR S. S. COX was fifty-eight years old on the 30th ult., and wrote to a friend apropos of the anniversary: "I am becoming rather a memory than a hope daily. We do as we grow older. For the loss of the gay, luminous, all-abounding shrine of life's morning, we have the serene, reminiscent evening."

LETTERS have been received from Prof. Morse, dated at Kobe, Japan, August 18. He had just returned from a trip inland of five hundred miles, including a visit to the inland sea. He proposed to visit the city of Kioto next, and to go to China eventually; but the date of departure to that country he does not hint.

THE "Wilde" craze seems to have had its day, when one of our Boston dailies chronicles, under the heading "Minor Events near Home," the fact in very small type that "Oscar Wilde lectured before a fair-sized audience at the Lynn Music Hall last evening," and Herbert Spencer characterizes him as "an outlandish person who attempted to reconcile idiocy with art and nambypambyism with sentiment."

NOT many little children have had so distinguished a following to the grave as Gladys, the fifteen months' old daughter of Julian and grandchild of Nathaniel Hawthorne, who, dying recently, was buried beside her grandfather in Sleepy Hollow Cemetery, Concord. Among the attendants at the funeral were Rose Hawthorne Lathrop and her author-husband, Judge Hoar, Miss Ripley, and son and daughter of R. W. Emerson.

COL. INGERSOLL says: "They say I was defeated for Governor of Illinois because I was an infidel, and that I am an infidel because I was defeated. That's logic. Now, I'll tell you. They asked me whether I was an infidel, and I said I was! I was defeated. I preserved my manhood, and lost an office. If everybody were as frank as I was, some men now in office would be private citizens. I would rather be what I am than hold any office in the world and be a slimy hypocrite."

THE death of Miss Adelaide Phillips, the well-known singer, is announced as having occurred at Carlsbad, Germany, where she had recently gone by the advice of physicians in hopes that the baths there would restore her to health. Miss Phillips was born at Stratford-on-Avon, Eng., in 1833, has been on the stage since 1842, making her first appearance at the Tremont Theatre, this city, in January of that year. Her private life is said to have been "as pure and blameless as her professional works were grand and ennobling." She will be sincerely mourned by her many friends in this and other cities.

PROF. HENRY FAWCETT, the present Postmaster-General of Great Britain, although totally blind, is one of the best informed men of his time. He is a distinguished political economist, a profound mathematician, and is remarkably well read in all matters of history and literature. He is a good though not eloquent speaker, having at his command a wonderful array of facts and figures which his surprisingly retentive memory enables him to master without difficulty; and he is greatly respected by his fellow-members of the House of Commons. As Postmaster-General, he has done excellent service in spite of his physical disability, constantly introducing new, sensible, and practical reforms in his department. In many ways, he is assisted by his accomplished wife, whose attainments in literature and science are nearly as great as his own.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

Sent postpaid, on receipt of price.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

CURRENT TOPICS.

TWO NEW provinces are contemplated in the north-western part of Canada, one to be named Saskatchewan, and the other Q'Appelle.

THE ashes of Diderot, editor of the great Encyclopædia, are to be placed beside those of Voltaire, Rousseau, and Mirabeau, in the Pantheon at Paris, on the centennial anniversary of his death, July 31, 1884, when it is designed that a suitable monument shall be erected in a public square henceforth to bear his name.

THE afternoon of October 1, Prof. Felix Adler and Mr. W. M. Salter addressed a large and deeply attentive audience at the Grand Opera House, Chicago; and steps were taken to organize a Society for Ethical Culture in that city, similar to the one in New York, which is now widely known by the noble work it has done and is doing.

ON September 13, at Batavia, N.Y., was unveiled a monument erected by the National Christian Association in commemoration of Capt. William Morgan, whose disappearance, as many living can remember, was a most exciting event in the history of this country, and led to the formation of an anti-masonic political party. About a thousand persons were present at the unveiling. The ceremony was performed with religious services. The monument is a granite column sixteen feet high, surmounted by a granite statue of Morgan, seven feet high.

A DETACHMENT of the Salvation Army consisting of three men and one young woman has invaded Bombay. The men wore yellow coats reaching to the knees, pantaloons, turban, shawl, and English boots, while the woman wore a yellow dress and gayly trimmed hat. On landing, they engaged bullock carts as their war chariots, and paraded the principal streets to the music of a tambourine played by the female department of the "army." The natives enjoyed the procession hugely, taking the four missionaries for circus people. Could the worshippers of "idols of wood and stone" by any possibility act more senselessly?

PROF. WILLIAM B. CARPENTER, in his address at the recent Unitarian Conference at Saratoga, said: "I could not point to any more notable exemplification of that attribute — the love of truth for its own sake — than was given in the life of the great man whom we have lately lost. With Charles Darvin, as Prof. Huxley said, 'the love of truth was the passion of his noble nature.' And what has been the result? With a splendid carelessness of personal calumny and all selfish considerations, he simply followed on, step by step, his great inquiries. Nothing was too small or low for his investigation. The earth-worm was not too trivial a subject for his study. Nothing was too mean, nothing too remote from his scientific range of thought. Everything was brought in and combined by that wonderful philosophic power of assimilation which he possessed in a degree beyond any man of his time, perhaps of all time."

THE Association for the Advancement of Women, otherwise known as the Woman's Congress, held a series of successful meetings in Portland, Me., on Wednesday, Thursday, and Friday of last week. Among the noteworthy participants in the proceedings were Julia Ward Howe, Mrs. Kate Gannett Wells, Abby W. May, Mary F. Eastman, Antoinette Brown Blackwell, Laura Clay (daughter of Cassius M. Clay), Mrs. Henrietta L. T. Wolcott, Dr. Marie Zakrzewska, Mrs. Gen. Lander, Dr. Lorenza Haynes, Miss Emily J. Leonard, Mrs. Lita Barney Sayles, and many others more or less known to the public as thinkers and leaders. The topics discussed took a very wide range. The rights of women, the rights of children, Chinese emigration, religion, art, labor, finance, hygiene, astronomy, political economy,— these were among the problems considered by the Congress, and we have no doubt with as near an approach to success in solving any or all of them as would have been made, had they been grappled with by an equal number of men.

THE Chicago Philosophical Society enters upon the tenth year of its work, and the programme it offers to the public for the season of 1882–83 is an attractive one. Lectures will be given by a number of eminent thinkers, among the names of whom we notice those of George Jacob Holyoake, President John Bascom, Hon. C. B. Waite, Rabbi E. G. Hirsch, Prof. W. T. Harris, Prof. Felix Adler, President J. B. Angell, and Dr. George M. Beard. "Only such persons," says the prospectus of the society, "are invited to lecture by the committee as are believed competent to treat topics with philosophical candor, learning, and completeness. We avoid 'popular' lectures, and, so far as possible, lectures 'which, dealing wholly with details, manifest no perception of the bearings of these details on wider truths.' We aim to keep from our platform hot-headed enthusiasts, people of one idea and visionary schemers. We do not ask nor care what views our lecturers hold on controverted questions; but we expect them to treat adverse views with judicial calmness, and 'to be slow to assume that error is more likely to be on the other side than on their own.'"

LIEUT. DANENHOWER, of the unfortunate exploring expedition in the "Jeannette," in his recent lecture in Brooklyn said that the dangers of the expedition began when Wrangell Land was sighted in September, 1879. The sun disappeared September 9; and soon after the vessel was caught in the ice field, which did not relax its grasp until the following June, and then only to allow the vessel to sink. The arctic night was very dark between the hours of eight and ten of our mornings, but at other times was clear except during storms. The auroras were not so bright as the lecturer had seen at home. Among the displays were auroral curtains and arches. The absence of icebergs in the part of the Arctic Sea traversed by the Jeannette was specially noticeable. The ice which covered the sea in all directions was true polar ice, the frozen salt water of the sea, which grows from eight to ten feet in thickness in a single winter, and when broken up by the winds and currents becomes tumbled and heaped as "'pack ice.'" The chief amusement during the winter was hunting seals and bears. The summer season proved less comfortable than winter, owing to chilling fogs and the general dampness of the ship. The retreat of boats to the Siberian shore began on the anniversary of the Battle of Bunker Hill, June 17.

THE great high priest of Rome, who is personally a feeble old man, wears a visage more rueful and woe-begone than that of Don Quixote. His utterances are all elegiacal. He is a man with unnumbered grievances, and feels himself slighted and overlooked, and left out in the cold in the world of to-day. He weeps, because, forsooth, there is no longer a papal police in Rome to drag its citizens out of their domiciles and imprison them without warrant or explanation for neglect of some ecclesiastical rite or observance, or for cherishing a manly aspiration for freedom. A zealous Southern partisan of slavery, during the famous Lecompton debate in Congress long years ago, which was on the question whether Kansas should be admitted as a free or slave State, enlarged on his deep affection for his old black nurse, and wanted to know of Ben Wade whether he was to be deprived of the privilege of taking her along with him to Kansas in the event of his concluding to settle there. Wade replied that he saw no obstacle whatever to his taking his black nurse out there with him, even if Kansas should be admitted as a free State, unless, perchance, he "wanted to sell his old granny." So the Pope is grieved because the citizens of Rome have rights which a clerical despotism can no longer trifle with. That is one of his grievances. Meantime, let him solace himself with the scholastic ethics of St. Thomas Aquinas, the seraphic doctor, with whose works he proposes to displace those of Kant, Mill, Hamilton, and Spencer.

SOVEREIGNTY OF MIND.

To a good many people who like to meditate on curious problems, it is a question of fascinating interest, Which was first in the order of things, mind or matter? It does not appear to be a question that is likely soon to be settled by the scientific method, on account of the difficulty of securing the requisite observation of facts; and no other method of settlement will satisfy the modern world. Meantime, it seems to be just as well to rest on the assumption—which is, however, not mere assumption, but is supported by all the facts that we know—that mind and matter have always existed together. Indeed, were we to hazard a conjecture, we should say that, if science ever does settle the question, the probability is that it will decide thus: Neither mind nor matter was prior in time, but both, in their essence, were coeval elements in the most distant primordial beginnings of the universe, and each has always been necessary to every manifestation of the other; but, as between the two, the moving and vitalizing principle existed in the element of mind.

But, whether this conjecture should be true or not, there is another point concerning the relation between mind and matter which is of vastly greater practical importance, and on which we may speak with complete assurance. In the historical evolution of the universe, mind has risen more and more to manifest domination over matter, until in man the mental principle attains the point of conscious sovereignty. Moreover, in the history of the human race, progress in enlightenment, in civilization, in power, has been in direct proportion to the control which the human mind has acquired of the material forces and conditions of nature. In a word, the title and crown of *human* nature—of manhood both in the intellectual and moral sense of the word—consists in that sovereignty of mind over matter with which man by his natural capacities is invested. There is no question which of the two *ought* to have the first and controlling place in the conduct of human life. However the fact may be in individual cases, it is certainly nature's intent and aim —her *idea*, so to speak—that man's mind shall be superior, within of course certain limits, to his material environments; and, though numerous may be the exceptions where mind is enslaved to body and its physical surroundings, yet in the long courses of human history nature's idea and aim to make mind the master in human life is accomplished.

And at this day, when physical science and social science are dwelling with so much emphasis on the influence of hereditary tendencies and of the existing environment in determining both mental traits and moral character, it is especially well to keep in mind this fact of mental sovereignty, which science also discloses as a natural principle of progress. There is, indeed, a host of dark facts showing how enslaved and dwarfed the mental and moral nature may become. When we consider the wretched hovels, the poisoned atmospheres, the filthy alleys, the damp, dark cellars, the vicious neighborhoods, where great numbers of human beings are born and bred and live, and the ignorant, drunken, degraded parentage from which they come, the wonder is that anything above the lowest material existence should ever appear amidst such conditions. Animalism, brute tastes and passions and violence are almost the necessity there. And, on higher levels of life, there are daily toils and drudgeries for the bare necessities of physical existence, grim conditions of poverty and constant urgencies of physical labor, which serve almost the same purpose of enslaving the mind and degrading it to a mere appendage to the animal organism. By the one law of prenatal influence, many human lives are almost doomed to vice and crime by ancestral transgression. The soul is chained, as it were, to a body of death from the beginning.

But there is another class of facts which show the triumph of mind over most unfavorable material surroundings, and are as encouraging as those just noted are discouraging. We not infrequently see exhibitions of an inward mental and moral power which makes what to others would be stones of stumbling the very stepping-stones for its advancement,—a power that seizes untoward circumstances and converts them into a staff to walk by; that takes hereditary evil tendencies and thrusts them beneath as its footstool. Many of the real kings among men, the natural leaders in thought and action, have risen to their high places of power in just this way,—by the inherent force of inner aspiration and will controlling hard, material conditions and narrow circumstances to the service of their lofty aims. Look at the careers of such men as Benjamin Franklin, Abraham Lincoln, Richard Cobden, James A. Garfield. Judging from their surroundings and antecedents, it would not have been predicted in these cases that a great character was to appear; and yet an exceptionally great character did appear. Yet oftener the power which is to lift human beings out of bondage to material conditions comes from sources beyond the range of their own hard lot. It comes from other human beings who are better off. It is a power, however, still stored in the human race. It is to be looked for in no miracle, but through the natural supremacy which the mind of the human race as a whole attains over its physical organism and environment. The help comes, and should come, from those favored portions of the race that, by their superior knowledge and capacity, are able to improve the conditions by which the minds of so many of their fellow-beings are kept in degrading bondage.

And slowly, yet surely, the imbruting influences of even the worst evil surroundings are being ameliorated. The light of a better knowledge is spreading. The heavy burdens that press upon men's shoulders are being lightened. To mental and moral endeavor, persistently and wisely applied, even the most evil hereditary tendencies will yield at last. Science and philanthropy are learning ways for converting bad blood into good. Gradually, by the increase of wisdom and temperance and self-control, by the uplifting of the weak and the redemption of the vicious, mankind are accumulating a mental and moral power which will one day be irresistible. The mind that can tunnel mountains and seas to make highways for its thought and its enterprise, that can harness fire and wind to run on its errands, that can scale the highest heavens to resolve a spot of cloudy matter there into a system of shining worlds, that can do all the wonderful things for overcoming and using the forces of nature with which our modern journals of science and the arts are filled, —the human mind which is doing these things is surely not destined finally to be the victim and prey of material powers, but rather to rise into complete supremacy over them.

Humanity is still largely in the rough clay, earthy, unfinished, uncouth. But slowly, through the divinely artistic power with which man's own thought and hand are invested, by here a touch and there a touch, the human lineaments are being shaped into comeliness and beauty and grandeur. The uncouthness, the imperfection, the earthiness, are vanishing. Soul shines through the clay, and at last shall possess it wholly. Already, this sphinx—half animal, half man, and half-imprisoned in the soil—thinks and loves and aspires, and by and by it shall stand erect and free, and walk the earth in the full majesty and glory and liberty of sovereign mind.

WM. J. POTTER.

PROGRESS AND DEGENERATION.

The conceit of progress has had a potent ally in the doctrine of evolution imperfectly understood. The popular understanding of the doctrine of evolution is that it is synonymous with universal progress in a straight line. But this is not its proper implication. Prof. Lankester's "Degeneration: A Chapter in Darwinism," is one of the liveliest reminders of this fact that has so far appeared. A very interesting chapter it is, though its illustrations are for the most part confined to some of the humblest creatures. Prof. Lankester defines degeneration as a gradual change of the structure, by which the organism becomes adapted to less varied and less complex conditions of life. There is suppression of form corresponding to the cessation of work. The causes of degeneration are various. One of the most notable is any new set of conditions which make it a good deal easier than it has been for any animal to secure its food or safety. We should expect then a parasitic habit of life to act in this way. And very obviously it does. "Let the parasitic life be once established, and away go legs, jaws, eyes, and ears: the active, highly gifted crab, insect, or animal, may become a mere sac absorbing nourishment and laying eggs."

A commonplace of the biologist is that certain phases in the development of the young of various creatures are recapitulations of the phases through which the ancestors of these creatures have passed. For example, the creature which emerges from a frog's egg is not a frog, but a tadpole, a little aquatic creature with external gills and a tail. As the tadpole grows older, he gradually develops a pair of hind-legs, then a pair of fore-legs; then his tail grows "small by degrees and beautifully less," till finally we have an amphibious creature as much at ease upon the land as in the water. Now, it is well agreed that the various stages through which the tadpole passes on his way to the frog are reproductions of the different grades of ancestors from which the frog is descended. And what the phenomena of degeneration exhibit is a tendency of the higher forms to relapse into the lower. A certain verbal puzzle makes it plain how a man became his own grandfather. Degeneration is a puzzle, in the course of which the shrimp or barnacle becomes his own grandfather several times removed.

To illustrate: The shrimp is an active little creature, quite elaborate in his structure and tolerably varied in his modes of life. But let him settle down, as I am grieved to say he sometimes does, into an immobile parasitic life, he reverts to the external and internal structure of his remote ancestors. Or take the ship's barnacle, a little cousin of the degenerate shrimps. The egg of the barnacle gives birth to an actively swimming creature, the history of which is very astonishing. "After swimming about for a time, it fixes its head against a piece of wood, and takes to a perfectly fixed, immobile state. Its organs of touch and sight atrophy, its legs lose their locomotor function and are simply used for bringing floating particles to the orifice of the stomach," so that an eminent naturalist has compared one of these animals to a man standing on his head and kicking his food into his mouth. Again, the spider at the best impresses us as a degenerate animal; but, physiologically speaking, he is highly organized. Let him however settle down into a stationary parasitic life, and he becomes legless, daggerless; more like a worm of the dust

Digitized by Google

than like the spider of the poet. The tendency of the animal in degeneration is to become all stomach. But there are certain worms called *convoluta* that degenerate across the line which separates the vegetable from the animal world. From being an active seeker for its food, this creature settles down into a process of vegetative nutrition, living upon carbonic acid gas.

Now, what is true of evolution in these humbler walks of life is true of evolution everywhere. It is not synonymous with steady progress, uninterrupted advance. Incidental to the process of evolution, there may be many an instance of degeneration. Fixity is itself degeneration; and how many savage and barbarous races are at present in a state of arrested development, which, though far removed from their original condition, is much more hopeless! In that there was the possibility of infinite development. There is everything in *going on*. The locomotive on my train the other day broke down, and we had to go a hundred miles or more with one drive-wheel. As long as we kept going, we went very well; but, when we stopped, to start again was almost an impossibility. Confucius said, "If you have only put the first shovelful of earth upon the ground, and *go on*, you are building the mountain." And Browning sings:—

> "Be all the earth a wilderness,
> With darkness, hunger, cold, distress,
> Only let me *go on, go on*!"

But the barbarous and savage races of to-day do not all stand for mere fixity, arrested development. Some of them are undoubtedly descended from races that possessed a civilization much more highly developed than their own. The Indians of Central America, the modern Egyptians, the descendants of the ancient Persians and Babylonians, are cases in point. To these, our later studies add the Fuegians, the Bushmen, and even the Australians. Tennyson sings,—

> "Perhaps vast eddies in the flood
> Of onward time may yet be made,
> And thronéd races may degrade."

Why not? If it should prove to be so, the course of history will but recapitulate some of its phases in the past.

Even where there is progress on the whole, there may be a good deal of incidental degeneration. And it may be brought about by means peaceful or warlike. Mr. Galton reckons that the average European brain was smaller three hundred years ago than the Greek brain in the time of Pericles. He thinks we have monasticism to thank for this, — its absorption of the larger brains without reproducing them. War has been one of the most effective instruments of progressive evolution. In the long run and the wide sweep, the eagles of victory have perched upon the banners of the more intelligent races and nations, and the more highly moral. But it must never be forgotten that all wars are not made out of the same piece. Some are fruitful and creative, some are sterile and desolating. The wars of Alexander were a great ploughshare furrowing the soil of Asia and Africa for the seed-corn of Greek thought. The law of Alexander as well as that of Moses was a pedagogue, a child-leader, bringing men to Christ. But, on the other hand, a cautious writer reckons that Germany was thrown back two hundred years, compared with Holland, France, and England, by the Thirty Years' War. It does not seem unlikely, when some of the statistics are considered. "It is a proved fact that not till 1850 did Germany recover the amount of capital and material well-being that she had in 1618." What was the state of Germany in 1648? Hundreds of flourishing cities were reduced to ashes. There were towns of eighteen thousand inhabitants which could only muster a few hundreds. Ground which had been tilled for ten centuries became a wilderness. Thousands of villages had disappeared. At Weisbaden, the public market was a piece of brushwood full of deer. The population of Würtemberg was reduced from four hundred thousand to forty thousand! A messenger from Dresden to Berlin walked thirty miles, through a district once thickly settled, without finding a house to rest in. "Two-thirds of the houses, three-fourths of the population, nine-tenths of the cattle, had been destroyed." And, as was the material, so was the intellectual and moral condition of the people. A generation that had grown up during the war regarded robbery and fighting as the chief end of man. The lowest vices flourished everywhere. There was no private honesty or public trust. The rulers were tyrants, and the ruled were willing slaves. But this war was only one of many that have pushed back the hand upon the dial-plate of history.

These facts are ugly and incontrovertible. Do they remand us to despair? Are "old results that look like new," or is positive degeneracy from a higher to a lower state, the best we can expect? Let us not believe it. The fact of progress is still large enough to take up all of these ugly and depressing facts into its mighty sweep. That is the river: these are the eddies that have formed along its course. Such a conclusion will, I think, be borne in irresistibly on any healthy mind that is conversant with a wide order of phenomena, physical and animal and human. Looking narrowly, we may see much arrested development, much of positive lapse. Looking widely, we shall see that both arrest and lapse are incidents of a majestic order that from the original fire-mist has produced the present forms of things, and will from these produce yet better and the best.

But, henceforth, we cannot talk of progress quite so airily as we have sometimes done. It is not as if the army of God had moved right on, centre and flanks abreast, from the beginning of the great campaign. Many a squadron has reeled and broken; many a company has been shattered into nothingness; many an individual soldier has turned a coward back upon the advancing hosts of ignorance and wrong. However, then, we may rejoice, it must be with certain reservations. The thing that has been may be again. "History never repeats itself," the proverb says. The facts of history do not repeat themselves. Its principles are being always repeated.

There has been no degradation without cause. No race or nation has gone backward but through disobedience of the laws of life. No nation has gone forward but through obedience to these same laws. And there is little consolation for us in the assurance that the great average of life is progressive, if simultaneously we are obliged to feel that our own nation, state, or city, or our own individual life, is an illustration of those principles of degeneration and decay which have their illustrations upon every plane of life, from the ascidian to the saint.

JOHN W. CHADWICK.

NEW PHASES OF THE "HOLY WAR."

The city of St. Louis, Mo., is a long distance away from the town of Newton, Mass. The doctrines professed by "orthodox" believers are, apparently, widely different from those held by the adherents to the Roman Catholic Church. Yet, as it is possible to bridge the miles which intervene between the Western metropolis and the quiet little Bay State village, so may theological narrowness make Protestantism and Catholicism one.

Each of the St. Louis dailies of the 30th ult. gave more or less space to a discussion of the outrageous assault made by the *Western Watchman* upon a newly married pair residing in that city. The *Watchman* is the Catholic organ of the diocese, and is edited by the Rev. I. S. Phelan. Of the parties whom it so grossly vilified, the groom is a Roman Catholic, and the bride is a Presbyterian. They were married by a Catholic priest; but, in deference to the prejudices of the bride, the union was afterward "blessed" by a clergyman of her faith. It is in allusion to this latter occurrence that the *Watchman* says: "The Devil supplied the argument in this process of apostasy. He said the girl had as much right to her religion as he had to his. That was not true; but, even granting it, it was not against her religion to be married by a priest, while it was a violation of his religion and conscience to be married by a minister. Every Protestant in the world recognizes as valid and lawful any marriage that the State approves, and every State recognizes the marriage solemnized by a priest. She said she had a conscience as well as he. Granted; but her conscience would not be wounded by being married before a priest, while his would be violated by a marriage before a minister. Were she a member of the strictest Protestant sect in Christendom, she might approach the Lord's Supper in her Church without censure the day after her marriage; while the moment he did the sacrilegious deed he was barred from the sacraments, and excommunicated from the Church's pale. He did it for love. Accursed be the man who so loves a woman that he would sell his soul for her, deny his God for her, sacrifice home and heaven for her. Such a wedding is a covenant with hell and a league with the Devil."

Thus does the "Church of the Fathers," as it so fittingly calls itself, apply to the holiest of all sacraments the narrowest of all dogmas. It ignores the progress of which we see to-day the ripening fruits, as it had not been. The orthodox admirers of exploded superstitions do not go to the same length as do their Catholic brethren. Nevertheless, the former have, indirectly, somewhat to say on the mooted question of infallibility; and their retrogression is sufficiently apparent to establish the fact that they also live in the past.

In the issue of the Boston daily *Journal* bearing date of September 28 was printed an account of the controversy which led to Prof. E. P. Gould's withdrawal from the Newton Theological Institution. Prof. Gould, who, it appears, held the chair of New Testament Interpretation, had been asked to resign; and, declining to do so, he was finally removed by vote of a committee which had the matter in charge. This action was taken because of the professor's "unsound" teachings, and because of "differences of opinion" between the President (Dr. Hovey) and himself. "The differences were sufficient, in the judgment of the President, to be prejudicial to the interests of the institution. There came there, he said, young men with minds not yet trained to form opinions: it was those opinions that they were to receive; and if they had one set of opinions impressed upon them in one class room, and a different set in another, it would lead to discussion, not only as to the merits of the instruction, but of the instructors as well, which would result in harm to students and professors alike."

As between this example of Roman Catholic bigotry and this assumption of orthodox ministerial infallibility, it would not be difficult to draw a parallel. Father Phelan declares that a marriage between a Catholic and a Protestant is "a covenant with hell and a league with the Devil." President Allen intimates that his students are not to be taught to think for themselves, but that they are

Digitized by Google

to receive their opinions at second-hand. Father Phelan represents the results of the system which President Allen upholds. President Allen is attempting to mould other Phelans for the Baptist ministry.

There is, apparently, a certain community of feeling which is shared by the Roman Catholic and the orthodox churches. The latter bodies do not, to be sure, publicly excommunicate, but their creeds are as all-embracing as a papal bull. The Catholic Church sends one to hell after he commits open sin: the orthodox creed affirms that, except in the event of certain occurrences, he must go to hell, because "in Adam all sinned." The Catholic Church is the outspoken opponent of all truth or speculation which is not a part of itself. Remembering the "anti-music" decision of the Philadelphia Presbytery; the trials and examinations of Prof. Smyth; and, more recently, the condemnation of Prof. Gould's methods,—one may pertinently inquire, Are the evangelical bodies of America starting out upon the same path which has so long been monopolized by their traditional enemy?

WALTER L. SAWYER.

WORSHIP.

An English writer, Mr. Louis Grey by name, thinks that agnostics should attend church, because the teaching in church does more good than harm, and because the example of such attendance is good. Meantime, of course, the agnostic is known to have discarded the creed and dogmas of the Church; and yet he is recommended publicly to play the hypocrite by way of good example to the common people. Another English writer gives agnostics quite different advice. "Let all agnostics," he says, "be true men outside of the Church, and not sham Christians within it." We are told by still another English writer that, "even if it be granted that there is no hereafter for the individual consciousness, *worship still remains the most becoming attitude of man*,"—a proposition which one cannot help respectfully but firmly denying.

Of course, every form of worship or religious adoration implies a personal governor or government of the world or cosmos, and not only that, but a governor open to adulation and fond of glorification. For worship means just that. The old theological God was a jealous, arrogant, irritable, vain personage. His name was not to be taken in vain, or used except in prayer or to give sanctity to an oath. Utter prostration of mind and body on the part of his worshippers was what was demanded, utter abasement of the *os sublime* of man and of his naturally erect form. Hence, it has been that the religions thus far have been nurseries of despotism in rulers, and of slavishness in the ruled or the masses, and the foes of manliness and liberty and of an erect attitude, so to speak, of mind and body both. In the presence of the mystery which surrounds him and overshadows him, man, in his vividly conscious inability to cope with it and solve it, naturally enough feels a sentiment of awe; but, in the intelligent, free modern man, this awe expresses itself not in superstitious rites and the abject prostration of himself before the mystery of the universe, but in a rational endeavor to investigate his own nature and the world to the extent of his ability. In the case of the modern man, the contemplation of the universe produces science or rational knowledge; in the case of the primitive man, it produced pompous ritualisms and abject forms of worship to propitiate some imaginary omnipotent despot or despots. Thus, while religion is based on fear and servility, science is founded on reason and a struggle and aspiration for enlargement, or "mehr Licht," to borrow Goethe's final words. Theology has had the past up to within a century almost exclusively to itself; and, except among the intellectually most advanced moieties of the populations of the most advanced nations of to-day, it still reigns as of old.

In theological countries, men are exhorted to do right, not in accordance with the dictates of their own higher nature, but of some revelation or miraculously given decalogical mandate of which some old prophet was the medium, who had alleged direct communication with the theological God. As long as men continued to be grossly ignorant of their own nature and of the phenomenal world which they found given in their consciousness, they of course continued in the theological mood. They were governed by fear, and not by reason. The majority of the race are still thus governed. But the era of reason and truth has dawned, and the old, abject, degrading theological mood is sooner or later to be succeeded by a nobler, unselfish, and higher mood. The latest and grandest system of thought has taught us that we have a Sinai within our pure reason, and that we need not go to any hoary tradition or mouldy parchment to ascertain what our duty is to ourselves or to others, but to look within. Then, again, *natura rerum*, the investigation of which theology denounced, is found to be infinite in extent and duration, an eternal evolution, a boundless realm for the discipline and development of conscious spirit, and no dead, inert materialism, but an everlasting play of eternal forces. Under the influence of theology, society has been organized on the principle of the subordination and subserviency of the many to the few; that is, theology has fostered popular degradation, ignorance, and superstition.

The era of rational knowledge and of a rational morality we can already see means popular intelligence and popular liberty and an indefinite utilization of the forces of nature for the greatest good of the greatest number. We have every reason for believing that the rational and scientific stage of human development will be an immense advance on the theological stage, which began in the shades of prehistoric years and has lasted so long. But, it will be asked, in the total absence of dogmatic theology and its soothing syrups for sickness, bereavement, vital decay, and extinction, what provision will the higher reason make for sin, sorrow, and death? It is agreed that mere "cosmic emotion," or the sentiment of the natural sublime, affords no direct consolation for bereavment and the pangs of death-stricken love. But let it be remembered that the intellectually full-statured man of the future will not be appeasable, so far as the laceration of his heart by death is concerned, by the stock assurances and celestial condiments of primitive mythology and theology. "The fair land of Canaan"; "the beautiful shore beyond the river," "with its fields dressed in living green";

> "Valhalla's halls
> And skulls o'er brimmed with mead; Elysian plains;
> Eden, where life was toilless and gave man
> All things to live with, nothing to live for;
> The Moslem's bowers of love and streams of wine
> And palaces of purest adamant,
> Where dark-eyed houris, with their young, white arms,
> The ever-virgin, woo and welcome ye;
> The Chaldee's orbs of gold, where dwells the primal light,"—

all these immemorial mythologic and theologic vistas of future bliss deceive no sensible people even now. They are understood to be the mirage of the imaginative faculty and that ideal hunger for ideal felicity which dominates human nature, and is a guarantee of its grandeur and final triumph. If the bereaved man were immortal here on this bank and shoal of time and did not quickly follow his loved and lost into the shadow and eclipse of death, he might be inconsolable, as the Eleusinian mother was, according to the myth, who envied

> "Mothers of happy human clay,
> That shared at least their children's doom,
> And when the loved ones passed away
> Could track, could join them, in the tomb."

But a common fate quickly overwhelms us who have survived friends and kindred almost dearer than life. Meantime, there is no intention of speaking derisively of these consolatory dreams of bliss and reunion beyond the dark portals of the grave, wherewith the much-enduring and sorrow-stricken generations of men have in all ages and climes endeavored to lighten the load of mortal existence. Such dreams and idealisms may be, and are likely enough to be, inadequate adumbrations of unspeakable realities not describable in terms of this present life. "Hope springs eternal in the human breast," and peers confidently through the cloud of dust and ashes, into which our organs are finally dissolved, for gleams of a better life. It is a fact full of significance, and to be accepted as such.

B. W. BALL.

SOPHISTRY OF WEBSTER.

The maxim, "Say nothing but good of the dead," however right in its general intention, has one manifest exception; namely, in the cases where persistent, undeserved eulogy of a famous man seems likely, if uncontradicted, to pervert the record of history, and pre-eminently where the faults of a famous man are rhetorically gilded in the attempt to make them pass as virtues. Such an attempt I find in the eulogy of Daniel Webster, uttered at Dartmouth College, June 28th of the present year, by Senator Thomas H. Bayard of Delaware, and reported the morning following in the Boston *Daily Advertiser*.

Seeking to illustrate "the religious element of Mr. Webster's character," Mr. Bayard quotes the following passage from his argument in the Girard will case as follows:—

> There is nothing that we look for with more certainty than the general principle that Christianity is part of the law of the land. This was the case among the Puritans of New England, the Episcopalians of the Southern States, the Pennsylvania Quakers, the Baptists, the mass of followers of Whitefield and Wesley, and the Presbyterians. All brought and all adopted this great truth, and all have sustained it. And where there is any religious sentiment among men at all, this sentiment incorporates itself with the law. *Everything declares it.* The massive cathedral for the Catholic; the Episcopalian church with its lofty spire pointing heavenward; the plain temple of the Quaker; the log church of the hardy pioneer of the wilderness; the mementos and memorials around and about us; the consecrated graveyards, their tombstones and epitaphs, their silent vaults, their mouldering contents,—all attest it. *The dead prove it as well as the living.* The generations that are gone before speak to it and pronounce it from the tomb. We feel it. All, all proclaim that Christianity—general, tolerant Christianity; Christianity independent of sects and parties; that Christianity to which the sword and fagot are unknown; general, tolerant Christianity—is the law of the land.

This extract, instead of showing a religious element in Mr. Webster's character, shows rather his unscrupulousness as a lawyer, his readiness to maintain the cause of his client in opposition to truth and fact, and his skill in making glittering generalities pass for argument, and wholesale assumption for demonstration.

Taking for granted, to begin with, that "Christianity is part of the law of the land," he insists, with the emphasis of italics, that *everything declares it*. Looking, however, at the specimens he himself has selected from "everything," we find that not one of them declares it. He quotes the

Digitized by Google

Catholic, the Episcopalian, the Puritan, the Presbyterian, the Baptist, and the Methodist systems as sustaining his ground. Not one of them sustains it; and so sharply are they at variance with each other in regard to what Christianity includes and implies that, if any two of them could agree upon an interpretation of it, most of the others would controvert and oppose them. It is true that most or all of these sects would be glad to have its own particular view of the theory and practice of Christianity imposed upon the country as a law. The Roman Catholics have always tried to do this where they had the power; and the Puritans, who in this country had the power for a while, did succeed in perverting the laws of Massachusetts, to a considerable extent, to the support of their peculiar theology. Most of those perversions we have now happily got rid of, though the descendants of those people still impose upon us by law some observance of a sectarian institution which they falsely call the "Christian Sabbath." But, let it be noticed, these Puritans, when they had the power, sternly suppressed Catholics, Episcopalians, Baptists, and Quakers, just as the Episcopalians, when they had the power in England, had suppressed the Puritans; and just as the Catholics, whenever they were in the ascendant, had suppressed all dissenters.

But this is not the worst of Mr. Webster's sophistry. After quoting these Catholics, Episcopalians, and Puritans (who have always been as cat and dog to each other), as if their theory or practice supported his case, Mr. Webster has the hardihood to say that the Christianity he means is "tolerant Christianity; Christianity independent of sects and parties; that Christianity to which the sword and fagot are unknown"! That is to say, a Christianity quite distinct from what either Catholics, Puritans, or Episcopalians mean by that word!

Not one of these sects has ever established or desired to establish a tolerant, unsectarian Christianity. But, even if we make the extravagant supposition of their union in maintenance of a specific formula of Christian doctrine and practice, who has authorized these sects to make laws for the people of the United States? Are our senators and representatives to yield the halls of Congress to them, and are the people at large to bow to their dictation? We oppose, as a decided evil, the *union* of Church and State. What Mr. Webster suggests (in behalf of his client who wished to break the Girard will) is to make the State thoroughly subordinate to the Church.

To the false assumption of Mr. Webster in the extract above quoted from his plea in the Girard case, I oppose two facts, one negative and one positive, showing that Christianity is *not* part of the law of the land.

1. A society called the National Reform Association has existed in this country many years, the object of which is to *make* Christianity a part of the law of the land, and thus counteract what they complain of as "the silence of the Constitution of the United States in this respect." Of course, if the law still needs to be made Christian, it is not now Christian.

2. In a treaty made between the United States and the Bey of Tripoli in 1787, and executed January 3d of that year, it is expressly stated that "the government of the United States is in no sense whatever a Christian government." This declaration (which seems to have been called forth by some questionings of the Bey) is incorporated in Article XII. of that treaty, and the fact which it states has never been disavowed by any official authority.

CHARLES K. WHIPPLE.

NOTICE.

In addition to its other work this year, the Free Religious Association seeks to make a list, as complete as possible, of all liberal societies and organizations. If the local friends of such movements will forward at once to the undersigned the name, date of organization, and article or articles of association *in full*, of their respective societies, they will greatly help this undertaking.

F. A. HINCKLEY, *Secretary*.

PROVIDENCE, R. I.

EDITORIAL NOTES.

COPIES of *Mind* for October, containing Mr. Abbot's article on "Scientific Philosophy," have been received and are for sale at this office. Price $1.00.

FRIENDS of *The Index* can assist us in increasing its circulation by sending to this office the names of all persons they think would like to see sample copies of the paper.

A MEMBER of the Free-thought Club of Montreal writes: "The Holyoake lecture before our Club proved a grand success. The audience, assembled by special invitation by cards issued, was a full representative body of the intelligence and culture of Montreal. Men of science, members of the bar, physicians and clergymen were present; and the cordial mingling of mutual good-will and mutual respect was one of the most pleasing experiences of my life."

AMONG the recent cable reports from Cairo occurs the following incident: While the annual caravan, which departed with imposing ceremonies was moving toward Suez on the way to Mecca, the canopy of the sacred carpet was caught and overturned by a telegraph wire. This accident, which exposed to view the sacred emblem, excited the deepest concern in the minds of the dervishes; and the despatch says that the caravan will probably return to Cairo to perform over again the ceremonies of setting out. This instance of the jostling of the new against the old is very suggestive.

SAYS an exchange: "An American medium, Miss Wood, found great favor with the Spiritualists of England, and not the less because she was young and handsome. She gave materializing séances, like those invented by the Eddy Brothers; but she did not take the precaution to guard the returned spirits against assaults by the spectators. The result was that, at Peterborough, a stalwart man seized the form of 'Poche, an Indian girl,' who ventured too far from the cabinet, the lights were turned up, and Miss Wood, in Indian costume, was seen struggling violently in his arms."

SOME of our readers will remember a review of Dr. R. P. Stebbins' *Study of the Pentateuch* which appeared in our columns a few months ago. It was by no means flattering, and may have impressed our gentler readers as unduly harsh. But, in the *Modern Review* for October, the book is reviewed by the Rev. Philip H. Wicksteed, one of the ablest and most scholarly of the English Unitarians, and in terms that will make our own review soothing as balm to Dr. Stebbins' lacerated heart. It is called "a bad specimen of a bad style of book." Many of the points made by Mr. Wicksteed are the same as those made by our own critic. He says of Dr. Stebbins' most conspicuous and monumental misconception, "The merest tyro who had heard a single popular lecture on the criticism of the *Pentateuch* could not have made such a blunder." This is "putting it strong"; but it "states but the facts," to quote the language of the poet.

THE family and day school of Mrs. Emily J. F. Newhall, at 91 Newbury Street, Boston, deserves the special interest of liberals in religion. In a degree rarely sought, and still less frequently realized, this school, in all its aims and methods, stands for the evolution of character. To thoroughness of instruction, recognizing always the superiority of thought to the forms it from time to time takes on, is added respect for the individuality of each pupil, and an endeavor to develop in a natural and unsectarian manner the moral nature. Sound ethics and mental training are made to go hand-in-hand; and wholeness of life, physical, mental, and moral, is the ideal aim set before all the scholars in this institution. Those who know Mrs. Newhall best can easily understand that her own breadth of character will necessarily make its impress upon all her work; and the friends of natural religion will be especially pleased to hear that so good an opportunity is now offered for a comprehensive culture of the whole nature of girls and young women, reverent in its controlling spirit, and yet free from all sectarian cant and theological bias.

THE *Pall Mall Gazette* has the following interesting correspondence respecting the religious views of Charles Darwin: —

Sir,—The enclosed is the translation of a letter written by Mr. Darwin in answer to an inquiry from a young student at Jena, in whom the study of Darwin's books had raised religious doubts. It is, perhaps, not altogether irrelevant, at a time when priests of various creeds are claiming Darwin for their own, to publish an authentic statement of what his views really were, particularly as this statement will be widely read in Germany, and Darwin's own countrymen ought to be at least as well informed on the subject as foreigners. I am, Sir, your obedient servant, KATHARINE MACMILLAN.

FRANKFORT-ON-MAIN, September 20.

Letter from Mr. Darwin to a young student at Jena, quoted in a lecture by Prof. Haeckel at the Natural Science Congress at Eisenach.

Sir,—I am very busy, and am an old man in delicate health, and have not time to answer your questions fully, even assuming that they are capable of being answered at all. Science and Christ have nothing to do with each other, except in as far as the habit of scientific investigation makes a man cautious about accepting any proofs. As far as I am concerned, I do not believe that any revelation has ever been made. With regard to a future life, every one must draw his own conclusions from vague and contradictory probabilities. Wishing you well, I remain your obedient servant, CHARLES DARWIN.

DOWN, June 5, 1879.

THE proposition to start a new Congregational paper in this city does not receive the approval of Rev. Dr. E. B. Webb, of the Shawmut Congregational Church. He said last Sunday: "If you care for the harmony of our parishes and the fellowship of good neighborhood, do not establish another denominational paper. We have papers enough now,—papers open to the freest discussion. . . . A new paper must beget controversy and alienation of brother from brother, and turn the minds of our church-members from the work of saving the lost to a wicked and shameful crimination and recrimination of each other. To publish and circulate a new paper now is to drive a hot ploughshare, divisive and destructive, right through all our peaceful parishes. . . . Dear brethren, my locks are whiter than yours, and possibly I do not run with sufficient alacrity to embrace and defend the new things. But hear me, I pray you; hear me for the sake of the harmony of the beloved Zion; hear me for the sake of a new baptism of the Holy Ghost upon ourselves and upon our churches; hear me for the sake of a hearty, generous union to honor the name and advance the cause of our Divine Master, who loves peace and good-will; hear me, and pause and think and pray awhile before you commit us to the support of a second denominational paper."

The Index.

BOSTON, OCT. 19, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

The Strength and Scope of the Woman's Rights Movement.

An Essay read before the National Woman's Suffrage Association at Rockland, Mass., Sept. 20, 1882.

BY MRS. SARA A. UNDERWOOD.

I do not by the term "Woman's Rights" mean merely what to us Massachusetts women that term has come mainly to imply through its being the one right which at present we are the most earnest in our endeavors to obtain,—namely, the right of suffrage,—but rather all progressive movements in all parts of the world, looking to woman's social, intellectual, and moral advancement, as well as to her legal recognition as man's equal.

Let us first briefly review the present status and outlook of the woman's movement in this country,—an outlook which was never more encouraging than it is to-day, in spite of the many necessary things yet unattained. In view of the fact that legislature after legislature votes down (sometimes, however, by a very small majority) our demand for the elective franchise; that here and there influential American magazines open their columns to vigorous attacks upon woman by pseudo-scientists; that the majority of American newspapers, while treating the movement every year with more and more respect, have yet failed to accept it as a vital issue; and that its successes, though always increasing, are gained so slowly,—there are many of the workers for it who become discouraged and lukewarm in their efforts for enfranchisement. But these very obstacles should, viewed rightly, only become added incentives to renewed endeavor. The earnestness with which any reform is attacked is the measure of its strength and worth. At every stage of every progressive movement there is always to be found a large minority of timid or conservative or intellectually limited or morally stunted people who gather themselves into as imposing a phalanx of opposition as possible, and loudly but unavailingly cry, "Halt!" to the new movement. But the Woman's Suffrage Movement in this country is by far too strong and too far advanced to be either hurt or frightened by any warning cry of "Retreat!" from such sources. No other reform carrying with it such wide-spread results and upheaval of rooted prejudices has ever before made such rapid strides as the woman's movement in this country and in England.

Each session of the legislature which meets under the dome of the State House in Boston cedes always some item of the demands made by women. The sessions made this year are: first, that women may practise as attorneys-at-law in all the courts of the State; second, that, in case of a wife's dying without making a will, only one-half of her personal property, instead of the whole, as formerly, shall go to her husband. These concessions may seem to some insignificant; but they show progress, and not retrogression. "By the amended statutes of Massachusetts" (I quote now from the Boston *Transcript*), "the old theory of the legal identity of husband and wife has dissolved into thin air. The wife may now keep and use her separate property. She may do business on her own account without let or hindrance from her husband by making proper record thereof. Her property cannot be taken for his debts. She may carry on a civil process, sue and be sued, act as executrix, administratrix, or trustee, give bonds, and act as guardian, without any control by him. The law even discriminates in her favor: for, while she is not liable for her husband's debts, he is still liable for hers; and, while the law permits her to make a fortune on her own account, it stills holds the husband liable for her support. . . . The laws of the descent of property, as now amended in this State, put husband and wife upon almost exactly the same legal footing. Husbands and wives may now make their separate wills, favoring or excluding each other up to a certain point, which the law makes alike for both."

Five successive governors of our State—Claflin, Washburn, Rice, Talbot, and Long—have recommended woman suffrage to legislative consideration in their annual messages. Our most prominent Senator, Judge Hoar, "fights the battles of the women at Washington," as one of our daily papers expresses it, and our best writers and thinkers are, or were when living, in favor of woman's right to the elective franchise, including such leaders in thought as Emerson, Longfellow, Whittier, Col. Higginson, Bronson Alcott, Garrison, Wendell Phillips, and Senators Wilson and Hoar. And no influential journal in Massachusetts openly opposes the movement; while many, like the Springfield *Republican*, are outspoken in their advocacy of it. Nearly all the leading papers and many of the lesser lights of Massachusetts journalism have on their editorial or reportorial staffs one or more women; and these women, you may be sure, are not the weakest writers on the force. Although the admission of women to certain rightful privileges, as for instance admission on equal terms to Harvard College and to the Medical Association, is still denied in this State, yet the vote against such admission is so nearly even that it needs but a year or two more of patience before the votes in favor will overwhelm those against it. As an index of the position of the best thinkers among Massachusetts men toward woman's suffrage, let me here quote from Ralph Waldo Emerson words written as far back as 1862, when his intellect was at its prime:—

"It is very cheap wit that finds it so droll that a woman should vote. Educate and refine society to the highest point, bring together a cultivated society of both sexes in a drawing-room to consult and decide by voices in a question of right, and is there any absurdity or any practical difficulty in obtaining their authentic opinions? If not, there need be none in a hundred companies, if you educate them and accustom them to judge. And, for the effect of it, I can say for one that certainly all my points would be sooner carried in the State, if women voted.

"On the questions that are important, . . . they would give, I suppose, as intelligent a vote as the Irish voters of Boston, New York, and Philadelphia. . . . For their want of intimate knowledge of affairs, I do not think this should disqualify them from voting at any town meeting which I have ever attended. I could heartily wish the objection were sound. But if any man will take the trouble to see how our people vote,—how many gentlemen are willing to take on themselves the trouble of thinking and determining for you, and, standing at the doors of the polls, give every innocent citizen his ticket as he comes in, informing him that this is the vote of his party, and the innocent citizen, without further demur, carries it to the ballot-box,—I cannot but think that most women might vote as wisely. For the other point, of their not knowing the world, and aiming at abstract right without allowance for circumstances, that is not a disqualification, but a qualification."

But Massachusetts, in the vanguard as she is, is not alone nor exactly the leader in the woman's rights movement in this country. The Empire State is yearly making rapid strides in this reform, and no paper in the United States is more outspoken in favor of or more independent in its affirmative position on the question than the *Independent* of New York city; and it was only the other day that in that bluest State of Puritan New England, Connecticut, the decision was made by the Chief Justice of its Supreme Court that there is no clause in the laws of Connecticut whereby a woman may be disqualified from practising law in that State; and, on that decision, Miss Mary Hall has been admitted to practise as attorney-at-law. But it is in our Western States, peopled as they are with wide-awake, sensible, go-ahead men and women, the best blood of our New England States, that the movement is pushed with the most vigor. Already in two of the most promising Territories of the country, Wyoming and Utah, women are already allowed to vote on all questions. Only a few days ago, the annual meeting of the American Woman's Suffrage Association was held at Omaha, Neb., a city which has grown up within the memory of most of you present. And, within a few days, another woman's suffrage convention will be held there, to which your president, Mrs. Shattuck, is a delegate, and already engaged to stump the State in behalf of the cause so dear to her, until the November elections. Of the suffrage meeting already held there, the Eastern papers give us this encouraging report, which we hope will be more than duplicated by the coming one: "Reports of work were made by sixteen State societies. Letters were read from George William Curtis, Mrs. Julia Ward Howe, Mrs. Mary A. Livermore, Governor St. John of Kansas, and Chancellor Elliot of Washington University in Missouri. Sixty-eight delegates were present from twelve States and Territories. Governor John W. Hoyt and Judge Kingman, of Wyoming Territory, addressed the convention, and claimed that the experience of thirteen years of woman suffrage in their Territory was an unqualified success, and that it had proved so beneficial that all parties were now united in its support. It was voted to make an active campaign in Nebraska during the coming six weeks for the passage of a woman suffrage constitutional amendment, which is to be voted upon in the State next November."

All the Western States are keenly alive to the need of improved legislation in regard to woman's position before the law, but most especially is this the case in those States where woman's vote is needed on questions involving moral issues of any kind. Most of the leading journals in the West, in addition to employing women on their staffs in various departments, are even more outspoken than Eastern papers on this question; and it is a common occurence to meet in their columns articles written in the same spirit as the following paragraph from the Louisville (Ky.) *Courier-Journal*, an influential Western paper: "The day has gone when the 'woman question,' with its varying relations to human life and its many-toned appeals to human feeling and reason, could be whistled down the wind of masculine derision. A day has come when the rights of women hold a direct and definite correspondence with the duties of men. It is nowhere doubted among enlightened peoples that reforms of the most sweeping and radical description are indispensable: and he who either regards, or affects to regard, the subject with disdain, and who would dismiss it with a scoff or sneer as a passing fancy, the offspring of feminine vanity and caprice, exposes himself to the charge of brutality, ignorance, and bigotry."

Let us now turn our attention to a few of the things women are doing in this country in occupations comparatively new to the sex, but manifestly appropriate. A writer in a recent number of the *North American Review* undertook to demonstrate that woman's occupation, like Othello's, was gone. He says, "There is now insufficient work for women to do who are willing to work, and must work to escape starvation." In this view of the case, he continues, "who can wonder that the vigorous advocates of women's rights so called, are alive and earnest; that they are seeking blindly, perhaps, for light; are grasping wildly, perhaps, for work?" "Is that 'progress'?" he says further. "Is this civilization which forces women to unsex themselves, to enter into a race in competition with man in which she is sure to go down; which brings her to starvation wages; which involves a ruin of health and temper; which forbids all enjoyment of life; which crushes the great function of her being; which makes merchandise of human virtue,—is that

Digitized by Google

a civilization which women ought to admire, defend, or preserve?" The matter over which this writer thus works himself up into this hysterical mode of questioning is whether woman ought to enter into any of the employments hitherto monopolized by men, and, as we read, we wonder 'where Mr. Elliott has been in hermitage; for his article involuntarily reminds us of the beginning of the old hymn,

"Hark! from the tombs a doleful sound."

Certainly, he has not kept his eyes open to what is going on in the real world, when he makes his strange statements; for never before in the world's history were there so many and so lucrative avenues of employment open to women as to-day, and that this is so is a legitimate result of the agitation of the woman's rights movement. The law, medicine, the pulpit, the platform, are all now open to woman. She can be post-mistress, government clerk, and is eligible to many minor town and municipal offices. She is found in every department of journalism from typesetter to publisher and editor. One of the largest publishing firms in America is that of Mrs. Frank Leslie, and that house does more business under her management than ever before. At the recent meeting of the American Association for the Advancement of Science, held at Montreal, "among the most entertaining papers read," says the *Scientific American*, "were those presented by Miss Erminie Smyth and Miss Alice Fletcher"; and at the meeting of the Social Science Association at Saratoga, N.Y., a few days ago, a good share of the papers read and addresses made were by women. Mrs. Emily Talbot, of Boston, gave an address on "Charles Darwin"; Miss Alice Fletcher on "Indian Life and Customs"; and Miss Clara Barton, presumably, on sanitary matters. Lucy Larcom, the poetess, prepared a paper for the Association on "Factory Girls," which did not, however, arrive on time, but has been published since; but one was read on the same subject by Mrs. Harriet Robinson, which the Springfield *Republican* says was thought to have been "one of the most entertaining papers read before the Association." In many of our colleges are female professors, and college degrees are getting to be as common among women as among men.

A New York correspondent writes from that city as to the employment of women: "The number of women employed here in all sorts of capacities is steadily increasing, as any one must see who has any extended acquaintance with the city. Only a few years ago, comparatively few women were seen in dry goods shops, and in other departments of trade scarcely any women at all. Now, they abound everywhere. They are not only saleswomen: they are clerks, printers, accountants, solicitors, stenographers, type-writers, journalists, managers, and I know not what, not to speak of the vast number engaged in various handicrafts. As many as sixty-five thousand, it is estimated, earn at present their own living in New York, which necessarily includes the living of numerous others. They are not merely the young and unmarried, they are also elderly women, wives, and widows." Another writer says: "A noteworthy fact of the census statistics is the distribution of the sexes in city and country populations. In the aggregate of the nation, the males exceed the females by nearly a million; yet in the fifty largest cities there are several hundred thousand fewer males than females. . . . The larger cities attract women by the amount and variety of manufacturing work they furnish, and to this influence is added that of the roving dispositions of men, leading them to new places in search of the means of livelihood." While in the West many women are preempting land and carrying on farming business to a great extent; and one woman here East, Miss Middy Morgan, has won deserved reputation and still keeps her feminine manners, as a cattle reporter.

Even among the savage Indian tribes of America are shown strong traces of a desire for the advancement of their women. Miss Fletcher, in an interview with a leading Indian chief, was asked by him to do what she could for the Indian women in the way of educating and enlightening them. Sarah Winnemucca, a Piute princess, is a leader and a power in her tribe. "Bright Eyes," an Indian chief's daughter, has made her eloquent plea for her dusky sisters before many a cultured audience. The girls of Indian tribes are sent to Hampton College as freely as their boys, and the parents are apparently as proud of the intellectual progress of one as of the other. These facts are most decided indications of the wide scope the woman's movement has taken in this country. In England, one of the most civilized nations of the earth, if not the most civilized, the movement is even more decided in its manifestations and victories. The best English thinkers, such as John Bright, Herbert Spencer, Prof. Huxley, Frances Power Cobbe, among living men and women, and John Stuart Mill, Harriet Martineau, Canon Charles Kingsley, Mrs. Somerville, the astronomer, among the dead, have most strenuously upheld the movement. For thirteen years, English women have had municipal suffrage, and within the year the same privilege has been extended to Scotchwomen. In the Isle of Man, a dependency of England, women last year gained the privilege of voting for members of Parliament and all other public officers. At a recent election in Victoria, a British province in America, a number of women voted for mayor and councilmen. At the last session of the English Parliament, a law was passed, entitled "The Married Woman's Property Bill," which repeals the unjust usages and provisions of the common law, which made the husband the absolute owner of his wife's property and almost the absolute owner of her person, and authorizes her to hold and dispose of property and make contracts as if she were a single woman. The poorer women are especially benefited by this new law, as they can now control their own wages independent of their frequently improvident, brutal, and intemperate husbands. At Cambridge, England, there are two women's colleges, Girton and Newnham, South. A recent visitor at these colleges says, "The list of young ladies from each of these most interesting institutions who have honorably passed university examinations, even surpassing young men in some instances, though debarred from the same honors when earned, are exceedingly creditable to them." The Girton College for women is the one to which Mrs. Somerville bequeathed her scientific library, as an earnest of her interest in the higher education of her sex.

At the recent annual distribution of prizes to the students of the London School of Medicine for Women, Prof. Huxley presided, and made the presentation of the prizes. In his brief address, he said: 'It may be that we are to look to women hereafter as the intellectual and moral leaders of the universe. It may be, on the other hand, that men will retain the lead which the order of things has hitherto given them; but, should they do so, I cannot understand that it should make the slightest difference to the importance, the necessity, and the duty on the part of women that they should do all they can to render themselves useful members of the community.'" . . .

The English census of 1861 reports the number of English women over fifteen years of age as 6,727,697. Of these, 3,249,872 were working women. The census of 1871 shows a still greater proportion of working English women. In Irish affairs, women have recently taken a prominent part. The Ladies' Land League has been a most efficient aid to the Irish movement; and, whatever our sympathies may be in regard to Ireland, no one can fail to understand what an impulse must necessarily be given to woman's emancipation in Ireland by the part she has been encouraged to take in politics through patriotism, and this in the face of both law and gospel, since the women of the Land League have been obliged, from the highest motives, to defy both priest and police. A correspondent of the *Irish World*, speaking of woman's efforts in Irish affairs, says of the ladies of the Land League: "The Irish women of to-day are not yet called to defend Irish rights in the deadly breach; but yet their battle with the invader requires of them (and they prove that they have it) not the less moral courage than that which filled the souls and hearts and nerved the arms of those glorious women of Limerick that Parson Storey tells about, who whipped the swords from the clenched hands of their dead countrymen to continue the fight to the last." Much as Charles Stewart Parnell has done for Ireland, his sisters, Anna and Fanny, have been equally active and influential in arousing and keeping at white heat patriotic fervor, especially Fanny, that ardent young singer, who so recently passed away, and whose inspiring poetry fired the hearts of her countrymen and women, and won the respectful admiration of even those who radically dissented from her views.

Exactly the degree of political rights accorded to women in France I have not been able to ascertain. I understand, however, that recently a National Society for Woman's Suffrage has been established in Paris, independent of any political or religious party; and all questions not relating to obtaining the suffrage for women are rigorously excluded from the meetings. We may be sure that France will not be far behind in this reform, when England and America have led the way. In no country has greater freedom of expression and of action been granted to women than in France, and in consequence no country can show a greater number of illustrious names among women. The country which gave to the world a Joan of Arc, a Charlotte Corday, a Madame Roland, a Madame Sévigné, a Madame Necker and her daughter Madame de Staël, a Madame Récamier, a George Sand, a Rachel and a Bernhardt, and a Rosa Bonheur, is certainly not a country in which women are greatly restricted. The *Salons* of leading French women have ever been the meeting-places where the politics of the nation were determined, where wits were sharpened and wisdom evolved. These were the crucibles which resolved and shaped events. Mrs. Somerville, complaining of the slowness with which her own country adopted reforms in female education, says: "The French are more civilized in this respect; for they have taken the lead, and have given the first example in modern times of encouragement to the high intellectual culture of the sex. Madame Emma Chenier, who has received the degree of Master of Arts from the Academy of Sciences in Paris, has more recently received the diploma of Licentiate in Mathematics from the same illustrious society, after a successful examination in algebra, trigonometry, analytical geometry, the differential and integral calculi, and astronomy. A Russian lady has also taken a degree, and a lady of my acquaintance has received a gold medal from the same institution." The great French railway companies in many cases employ women as ticket and audit clerks; in several banks and public companies, they are largely employed in the clerical work; and the corporation of the city of Paris offer three hundred situations for women as clerks.

Germany is thoroughly conservative in its opinions; and the woman's movement is not so prominent there, although not long ago a Woman's Congress was held at Lübeck, in which most of the speeches were made by women. One who took part in it writes to Theodore Stanton, Mrs. Cady Stanton's son: "I am very much satisfied with our congress in some respects, less in others. I am satisfied because the meeting was much more progressive — radical, you Americans would say — than any previous one. I am also satisfied because the press has taken so much notice of it, even the Southern papers having been represented by correspondents at its sessions, — satisfied that from beginning to end there was a thronging public, so that hundreds were obliged to go away. But I am disappointed that for the first time in the history of our organization there was no positive outcome of the congress, no local association formed which might put our ideas into action." The Germans professedly prefer their women to be thorough housewives and keepers of home, yet much of the roughest of out-door work is done by them. Their men being needed for military service, the women are obliged to take their places, but with no compensating political privileges or rights of self-government. Still, Germany is a country where education is always on the increase; and, in time, it is sure to adopt better and juster laws for its women, who, as wives and mothers, are already greatly honored in a stolid sort of fashion.

In Austria, women are largely employed as railway officers, and at clerical work of many kinds. In Russia, although in many things behind other nations, yet the political disturbances and general oppression of the people by the autocratic government give to woman more importance than she would otherwise have. When all are oppressed and men are not allowed their rights, woman is more on an equality with man, and, it is found, can strike as vigorous blows for the freedom of all as man. Women have played a very conspicuous part in Russian Nihilism, and about as many women as men have been condemned to Siberian exile. Their heroism in their country's cause is well known. Yet "Vera Sassulitch, whose shot inaugurated terrorism, was the most modest of her sex. In the court-room, she blushed when she perceived any one staring at her. Lydy Figner, a charming lady and an accomplished singer, got her eight years in the Siberian mines by sitting in the parlor and playing the piano for weary hours, trying

Digitized by Google

to drown the noise made by the secret printing-press in the next room. Anna Lebedeff, a priest's daughter, in the disguise of the wife of a switchman, lived in a watchbox on the railroad, and was found on a box filled with dynamite, chatting with the switchman. Sophy Perovskaya, the daughter of a general and senator, who declined the dignity of maid of honor to the empress, and entered the Nihilist fraternity, dug the Moscow mine, and directed the late Czar's assassination. Sophy Bardin, who was welcomed as a shining star in the literary horizon, wrote a few poems which, though gems of Russian literature, were treasonable; and the singing of them is a State crime." This sort of discipline is developing the women of Russia into a higher type of womanhood than under other circumstanecs would be possible; and already they are asserting their separate individuality and also making intellectual advance, as the following paragraph, clipped from a late paper, goes to show: "The *Friend of Women* is a monthly magazine recently started in Moscow, Russia. It is conducted exclusively by women, and no production of the sterner sex can find a place in its columns. The editors invite women to write for the magazine on the needs and wants of women. Side by side with sentimental love stories, the editors publish biographies of holy women of the early Christian centuries. The *Friend of Women* is abundantly supplied with contributions by women who are anxiou to get a start in literature; but those of the sex who have an established literary reputation, and who make a living by their pen, prefer to send their productions to magazines conducted by men."

Switzerland, although a republic, still lags in the rear in giving its women their rightful dues. In Sweden, until recently, women have been held to be under age until a late date, and therefore wards of their male relations or of the government, and so were not at liberty to dispose of their own property except by consent of their guardians. In 1864 or 1865, a law was passed,—which Frederika Bremer, who was a thorough woman's rights woman, thought to be a great step in advance,—that married women should attain their majority at the age of twenty-five. Very recently, a new law has been enacted, by which both men and women are considered of age at twenty-one.

Women under Mohammedan rule have always been a subject class; but, owing largely to the influx of English, French, and Americans as residents and visitors to their country, there is now an incipient revolt going on in Turkish harems, which will eventually lead to better things. Turkish women begin to refuse to be longer treated as only playthings, children, or slaves. With the partial adoption of European dress and manners comes also the desire for European education, independence, and self-reliance. Polygamy, which is always the curse of women, degrading and cheapening them, is slowly dying out. Many of the better class of Mohammedans, even when rich enough to afford the luxury of several wives, refuse to take more than the one. The present Khedive of Egypt is a notable example of this. His wife is a charming, educated, cultivated woman of fine character; and the Khedive is devoted to her and their children. The necessity for a higher education of their women is beginning to be understood by the Turkish nation, and already steps are being taken to that end.

From "India's coral strand" comes a still stronger cry for woman's advancement. Not only is the "morning light breaking" there, but, apparently, woman's day has fully dawned. In comparatively very few years, great changes have been brought about in the treatment of women. The burning of widows with the bodies of their husbands is forbidden by law; and very recently the first remarriage of a widow has taken place, although it is yet so great an innovation on their old-time faith and customs that it was frowned upon, and the couple were formally excommunicated from the religious body to which they belonged. This first remarriage resulted from the efforts of a body of reformers, young men who are nobly struggling to break through the powers of caste and custom, and to introduce the practice of remarrying widows, and to get some rays of Western light into regions dark as Erebus.

As to what is being done in various parts of India for female education (and education is always in the direction of freedom), I will read some extracts from the *Journal of the National Indian Association in Aid of Social Progress and Female Education in India*, of the date of June, 1882. I quote first from a speech delivered before the Association by Pundit Shivanath Shastri, of Bengal. "It is gratifying," he says, "to record that actual efforts are being made both by government and the enlightened public to promote education among our females; and, as the results of all these efforts, we find the level of public opinion on this subject is daily rising. The higher university examinations have been thrown open to the fair sex. Many of our girls have successfully passed some of these examinations. One of them is going to appear for the B.A., and numbers of others are appearing for the First Arts; while the education of girls in many a private home is silently progressing." The extremely early marriage of girls in India, many marrying at the age of nine or ten, after which the child-wives are no longer allowed to attend school or other public place, is a great hindrance to their education. In Bombay, some girls are allowed to attend school after marriage; and this custom, once introduced, is sure to make headway. In the last year's report of the Director of Public Instruction in Bengal, he remarks that "female education is slowly but surely growing in public favor, and the early marriage difficulty is now practically the sole obstacle." Even this difficulty is being in a degree overcome by lady teachers, both European and native, who go out visiting native houses, giving instruction in reading, writing, and needlework. Shivanath Shastri, in the conclusion of his address, eloquently said, "Forget not, O my countrymen, that the cause of woman is also the cause of man. . . . A society that aspires to stand on the neck of degraded womanhood lays the foundation of its hopes on sand. . . . As a retribution of the manifold evils, the various forms of social and domestic tyranny that India has heaped on the head of her unfortunate and unoffending womanhood, see her now in the depths of social degradation." In Madras, India, two scholarships have been offered by the Madras Branch Committee in connection with seven girls' schools, with the object of inducing Hindu caste girls and Mohammedan girls to continue their studies at school. The condition attached to the scholarships is that the holder should appear for the next higher examination than that in which the scholarships are gained. Eight women recently passed successful examinations for admission to the Calcutta University, six of them natives of India. And all this is taking place, remember, in a country where a few years ago, when it was first proposed to open a school for girls, an old Mohammedan ruler exclaimed: "What! teach girls! The next thing will be to open a school for cows!" And he expressed the at that time general feeling in regard to the matter.

I have no information as to the status of women's rights in China. That is an atrophied nation where, until within the last quarter-century, all progress seemed at a stand-still. Mr. Elliott consolingly informs us, however, that, "in the Chinese civilization, woman is of so little value that often a wet rag is laid upon the mouth of the new-born female child, and there is one woman less in the world." We may be sure that the women who dare not protest against the cruel and useless compression of their feet, in order to gain men's admiration, cannot yet be awake to the sin of likewise compressing and belittling their brains, to the same end. Yet, even there, adult sons are in greater degree of subjection to their mothers as well as fathers than in this country, so that the motherhood of woman, at least, gains her some degree of respect. But China with Japan will soon, through contact with the aggressive civilization of to-day, catch the prevailing fever of progress, from which their women will not be exempt; and women will then be sure to claim and receive their rights. It is said that the best writers of the most learned age of Japan were women, and the most celebrated of the classical Japanese romances was the work of a court lady of great accomplishments. It was also a woman who originated the use of printing in Japan, the Empress Shiyantoku in the year 764.

In this necessarily partial survey of the increasing liberty claimed by and granted to women in all the civilized parts of our globe, there is, you perceive, much to cheer and encourage us in the efforts we are making here in Massachusetts. And, since "new occasions teach new duties," let us not forget to widen our area of thought proportionately with our wider area of experience, and to fit ourselves nobly for those new duties.

CORRESPONDENCE.

THE RADICAL UNITARIANS AND THEIR CRITICS.—BOTH SIDES.

Editors of The Index:—

It would be perhaps presumption for me to suppose that there could anything more of importance be written upon this subject. I cannot refrain from adding a little, however, first to relieve my conscience, and, secondly, because one fact about the recently adopted amendment to the Constitution of the Unitarian Conference has not yet been noticed in *The Index*. I have more than once suffered in my conscience because of keeping silent when others had almost, but not quite, expressed my convictions. For example, when *The Index* wrote its criticisms upon the publishers of the Unitarian *Year Book* last winter, I felt as if I should express myself. I refrained simply because of a desire not to transgress the laws of good taste. My connection with Unitarianism had been so brief that it seemed like presumption for me to explain any action or opinion of my own. But I wish now to relieve my conscience. Having reached my rational conclusions largely by private study under the technical influence of the older churches, and coming directly from that old influence to take charge of an independent Congregational society (Unitarian in history), without the intervention or help of conferences or councils, I knew nothing of Unitarian red-tape. After a time, I received a letter from an official of the American Unitarian Association in substance that, as I was now a pastor of such a society, he supposed I wished to have my name published in the *Year Book*. I replied, in substance, that his organization could decide for itself as to whether my name should go into the *Year Book*, but that I certainly was the regular teacher of this society. I never once thought that, when my name appeared in that book, it implied that I believe in the Preamble and Article IX. of the Constitution, as I certainly do not so believe, and did not then. I supposed that the names in that book were merely there for convenience, and had no theological significance. Simply because of a desire not to appear too conspicuous in the matter, and hoping some Unitarians "to the manner born" would take the lead, I have, however, kept silent.

When the time for the election of delegates to the National Conference came this year, I had almost decided not to go. When it was suggested in our society meeting that I was a delegate *ex officio*, I protested, and said I was not, and that I had no technical right to go as a delegate. A unanimous and strong desire was manifested that I should represent the society as an elected delegate. I at last decided to go for the following reasons and with this determination: one of the oldest societies in the movement had a right to be represented, and to be represented by one whom they supported as their teacher. In other words, the rationalism in the body would have no fair representation if the rationalists remained at home. I went, too, with the determination never to go again, if some change were not made in the Constitution, although, on the side of my social nature, it would be a great denial.

It was my wish at the Conference that all the Christian dogmatism in the Constitution should be stricken out, and I so expressed myself privately to Mr. Savage and others. But, of course, it would have been useless, for reasons already suggested, for one of the younger men to have made such a proposition. All we could do was to work privately, support any vigorous leader, and then express our convictions. Mr. Savage did very faithful work in the matter of the amendment, although his proposition was not exactly what I desired. The paper which he offered to the Business Committee, and which was signed by forty or fifty others, including myself, was, however, to a large degree satisfactory. *It was not, however, the article which was adopted.* The proposed article, which was signed, was an article offered as a substitute for Article IX., and read as follows: "No part of this Constitution is to be so construed or interpreted as to turn the Unitarian body into a sect, or to exclude from its fellowship and co-operation any honest seeker after truth or earnest worker in the cause of human advancement and education." This article, however, was changed after it reached the committee; and the Article X. was *added*, as has been already noticed in *The Index*. If the proposed substitute had been adopted, although it would not have been per-

Digitized by Google

fect, it would have thrown out that unfortunate "re-affirming" clause; and the Constitution would not have seemed so much like a piece of patchwork.

The criticisms of Mr. Potter are in general proper and just. Nearly all the members of the Free Religious organization are doing almost exactly the same work as that of radical Unitarians. They are not any more radical in their ideas, they are just as free from unscholarly iconoclasm. The only reason they are not enjoying whatever advantages there are in Unitarian fellowship is that they are true to the genius of Unitarianism itself, and will not be bound by a theological creed. From one view, too, there is just the same criticism to be made on this new amendment that we are continually making on Orthodoxy. The letter of an old dogma is preserved, and then is explained away. Even the old Unitarians were continually congratulating themselves in this Conference that here is one body on earth which has no theological tests; and, at the same time, this body has not the consistency to come out squarely and prove its professions by obliterating all dogmatism from the Constitution of its Conference. It is true that others beside Christians may now come in, if they will; but cannot Unitarians see that, in order to be consistent, they should invite in all of the same moral purpose and character? Can they afford to keep out those who are the most conscientious? In my humble judgment, it was a mistake to have no discussion on this question in the Conference. The comparative silence looked too much like an attempt to make things which differ seem alike. A speech from Mr. Savage, for instance, showing the principle for which he was contending, would have had far more moral value than the mere adoption of phrases that did not fully express the wishes of either side. One of the greatest dangers of the Conference is its drift toward sentimentalism. It would not be easy to find another such a gathering of men and women of character and culture and of such social accomplishments. There is a danger. It is not easy to stand squarely for exact ideas, for intellectual integrity among those whose social charm is so great that it almost seems wrong to differ. And yet, if Unitarianism is to guide the moral and intellectual life of the age, its teachers must venture to rise above mere self-glorification and compliments. It must not only stand for sentiment, and even character and service, but for *truth*. This much may at least be said, too, in criticism of even the radical Unitarians, that they did not put forth all the energy possible in any definite manner. Any one who watched the Conference closely must have concluded that there was a large progressive element. After hearing the applause for Learned's intensely radical utterances and John Page Hopps' statement that "there are *many* names by which we may be saved," the Constitution seemed more than ever like a huge joke.

But, admitting the justness of such criticisms, judged by an ideal standard, there is a word to be said for many of the present radical Unitarians. There is a slight difference between their position and that of those who struggled for liberty when the Constitution was first formed. The difference is not great perhaps, but nevertheless it exists. In 1865, a Constitution was formed, imposing a Christian dogmatism upon those who were in the body. It was their duty to protest; and at last they did manfully to form a Free Religious platform, because the Conference was taking away rights they inherited from Unitarianism itself. Moreover, they have done outside a good work indirectly for liberal Unitarianism, and, I believe, have largely been the cause of making it possible. They have furnished a platform and an organ, by the means of which scholarly radical Unitarianism has had a free chance to express itself, and have educated the Unitarian conscience in the direction of sincerity and tolerance. But those who have become radical Unitarians since 1870, at least, have had no new burdens laid upon them. Whatever individual intolerance there may have been, no denominational action has been taken against liberty and breadth. Some have grown into their liberalism gradually, some have come from the old churches without understanding the Unitarian controversy. There has not been, then, that pressure upon them for action that there was upon Mr. Abbot and his companions in the beginning.

If these men have not concealed the fact that they were rationalists, if they have always contended for liberty, and if they have continually heard that Unitarianism meant liberty among other things, it is not strange that many of them have taken no decided action. Moreover, the craving for fellowship is so strong that, where there is no conscious restraint, it is easy to overlook verbal inconsistencies in a constitution to which a man has not technically subscribed. Of course, truth is more valuable than sentiment; but the younger Unitarians may conscientiously reason that, as the new amendment is not a new burden, but, so far as it goes, is in the right direction, they may still be loyal to the truth by taking part, at least for a time, in the Conference. It is one of those cases of casuistry, where equally intelligent and conscientious and rational men may differ. It is the Unitarian body as a whole that is now in an inconsistent position, because of its peculiar Constitution, and not the radical Unitarians, who have expressed themselves and who are permitted to enter the Conference. Having already been told continually that Unitarianism is not a sect, and having had it now affirmed that those who are in are not excluded for their beliefs, it gives them a foothold to strive for something better in consistency with their conscience. The evil will come, if it does come, by being satisfied here. Can the body be liberalized, if those who are the most liberal forsake it? The work now to be done is, to use the language of Mr. Potter, to pass an "*amendment that shall strike the theology out of the Constitution altogether.*" However any one may differ from some of the opinions of Mr. Savage, he undoubtedly was working for what he thought, under the circumstances, was the best possible method of making a broad Unitarianism. Whatever error he made was from a conscientious desire to hurt as little as possible the feelings of those on the other side. But there will yet be a Unitarianism broad enough not only to allow such men as Abbot and Gannett and Spencer and Potter to enter, but practically to invite them, if Unitarianism is true to its genius. Conservatism cannot complain, for its right to have its opinions would not be touched. The trouble has been not alone, or chiefly, that liberal teachers have been excluded; but some of the most devoted societies which are historically connected with the body have been practically unrepresented; for there can be no fair representation, when the men who educate the society and express its living opinions are cut off because of their honesty. I do not profess to have any Unitarian right to express an opinion on this question, but have simply ventured to state the view of some who are not to the manner born, and who do think that Unitarianism may not necessarily be a "Boston notion." If Unitarianism means anything less broad than free religion and rationalism, if it means anything more than that moral and religious movement which preserves its historic continuity, and yet stands for reason and righteousness and individual liberty, it has for me no practical interest. But it nevertheless has sublime possibilities, because of its history and because of its professed method. There is a synthesis which includes both sides,—the criticisms of Mr. Potter and the position of present sincere radical Unitarians.

S. J. STEWART.

BANGOR, Oct. 6, 1882.

OUR RELATION TO THE NATIONAL UNITARIAN CONFERENCE.

Editors of The Index:—

Mr. Potter's reasons, as given in *The Index* of October 5, for still regarding himself debarred from the fellowship of the National Unitarian Conference, are very forcible, and doubtless conclusive to most readers of *The Index*; but, as they are not entirely convincing to the writer, he wishes to give his reasons therefor.

It will be remembered that, at the recent Unitarian Conference held at Saratoga, the following amendment was added to the Constitution:—

ART. X.—While we believe that the Preamble and Articles of our Constitution fairly represent the opinions of the majority of our churches, yet we wish distinctly to put on record our declaration that they are no authoritative test of Unitarianism, and are not intended to exclude from our fellowship any who, while differing from us in belief, are in general sympathy with our purposes and practical aims.

Why was this amendment adopted? I think for two reasons. First, because a large and increasing number of radical Unitarians in the body were beginning to realize clearly the inconsistency between their actual and their professed beliefs, as implied in the Preamble and the Ninth Article of the Constitution, both of which may be seen by reference to Mr. Potter's editorial of September 14. These men were troubled in conscience at their equivocal position, and were determined either to keep aloof hereafter from the Conference or to widen the doorway of its fellowship. It was to retain these men and save the body from a serious, if not a fatal, rupture that the conservative leaders acquiesced in the demand for an amendment to the Constitution. But it is, I think, due to the radicals to say that to preserve their own relations to the Conference was not their only motive for insisting on this amendment. Another and a far more generous motive was to make it possible for men who were then excluded, yet were in essential accord with them in "purpose and practical aims," to come in and join them. They protested, some of them indignantly, that such men as William J. Potter and William C. Gannett should be shut out from their communion by any theological or Christological barriers? I happen to know that this latter motive was no inconsiderable force in the movement which pushed the adoption of the Tenth Article; for I was present at the Convention, as a spectator, and had an opportunity of feeling the pulse of the young men on this question.

Did they succeed in opening this doorway? Mr. Potter thinks it is not yet wide enough for him to enter in. The denomination, he says, is still on a "Christian basis"; and, therefore, he, who like myself calls himself a non-Christian, cannot rest thereon. His reasons for so thinking are these:—

1. Messrs. Hale and Clarke, who alone spoke in favor of the amendment, expressed the opinion, in substance, that it did not change the basis of the Conference.

2. The *Christian Register* says, in an editorial reference to this action, "The Conference did not in the slightest abandon the Christian basis on which it was erected."

3. The full name of the Conference is still "The National Conference of Unitarian and other Christian Churches."

"For these various reasons," says Mr. Potter, "the Conference seems to us to be distinctly and exclusively a 'Christian' organization. We can understand how an advanced radical, who in a general sense still calls himself a 'Christian,' may, under the new article, conscientiously become a member of the Conference; but we do not see that non-Christians are even invited into its membership."

In judging of this question, one's conclusion of the non-Christian's relation to the Conference, I suppose, will depend upon how far, in his opinion, the last amendment modifies the import of the name of the organization, and therefore the breadth of its call. Mr. Potter seems to think that the amendment may amend every part of the Constitution except the name of the body. But why make such an exception? The name is a part of the Constitution. If Article X. so far modifies the Preamble and limiting parts of the Constitution as to admit such rationalistic Christians as Mr. Savage, why may it not so far modify the same as to admit such non-Christians as Mr. Potter? Is he not as truly as Mr. Savage in "general sympathy with the purposes and practical aims" of the Unitarians? If so, is he not expressly invited? But it may be said that it was not the intention of the Conference to open the door of its fellowship to those who call themselves non-Christians. To that, I reply it matters not what the *intention* of the Conference was to do: the question is what it actually did do. It is true Drs. Clarke and Hale assured the delegates that the new Article would not change the "Christian basis" of the Conference; but that does not in the least blind us, if it did them, to the fact that it does enlarge the basis of the Conference. It is true, also, that the editor of the *Christian Register* says that the Conference did not in the slightest abandon its Christian basis; but this simply shows that he is as blind to the actual result of the vote as Drs. Clarke and Hale were to its prospective effect. If a man's door is opened wide enough to let me in, it lets me in, notwithstanding he may disclaim any such intention before or after the act. His intention does not move that door back one inch after his act has opened it. But it is not true to say that the Conference, by its vote, did not intend to admit such non-Christians as Mr. Potter. No doubt, a large number, perhaps a majority of that body, only intended to open the door wide enough to receive rationalistic Christians like Savage, Stewart, F. L. Hos-

Digitized by Google

mer, Wendte, Jenk. Ll. Jones, etc.; but I believe there was a very large minority, if it was indeed a minority, of that body that did intend to open the door wide enough for Mr. Potter, Mr. Gannett, and all non-Christians in general sympathy with them. That this was their intention I am convinced not only from my conversation with several of them, but also from the language of the amendment itself. If they had intended simply to limit the lines of denominational fellowship to "Unitarian Christians," they simply needed to put on record their declaration that the Preamble and Articles of the Constitution were no authoritative test of Unitarianism. That would have secured their position within the denomination. The whole latter part of the amendment was superfluous, so far as their relations to the denomination were concerned. But they proceed to add the latter clause in this amendment, as though expressly to include such non-Christians as Mr. Potter. If they had meant to limit the invitation to "Christians," why did they not say so? If that is what they intended, how natural it would have been to have said, "Nothing in the Preamble and Constitution is intended to exclude from our fellowship any who, while differing from us as regards the nature and mission of Christ, are in general sympathy with our Christian faith and work"! That, in my opinion, is the way the amendment would have been worded, if they had intended to include only Christians within it scope. But no: they do not use the word "Christian" nor even the word "Unitarian" in this clause, but broaden out the language of invitation to everybody who is (not in *full*, but) in general sympathy with (not their ideas of God or Christ, but) their purposes and practical aims. If this is not an invitation to non-Christians like Mr. Potter, I do not know what language could make it so. It is not only so, but was intended to be so by at least a large number who voted for the amendment. But, I repeat, the *intention* of the body, whatever it might have been, does not change one iota the breadth of its invitation, as expressed in this Article X.

Shall we accept the invitation? On this point, Mr. Potter says: "For ourselves, even if we still retained general fellowship with the Unitarian denomination, we should feel impelled to stay out of the Conference, in order to protest against the keeping of the theological fence that necessitates opening the gateways." But why not, I ask, walk in at that open gateway, and, when once inside, join with others in repairing the old theological fence? Will not the "protest" inside be as effectual as outside? It could not fairly be charged upon one that he was entering that fold like a wolf in sheep's clothing. Not at all! He goes in not to destroy any sheep, but, like a good shepherd, to enlarge the fold to the growing needs of the flock; to adjust the gate to the gate-posts; and, above all, to unite with those of one spirit inside for a pull altogether for the uplifting of humanity. Whether it would be worth the while for one to give much time to the repair of that fence will of course depend upon his estimation of the vantage-ground that inside position will afford, and the relative moral value of the work it will be possible for him to do in such an organization.

My conclusion then is this: that the Article X. of the Constitution of the "National Conference of Unitarian and other Christian Churches" so far amends the Constitution, the import of the name of the body included, as to embrace within the scope of its invitation to fellowship the non-Christian as well as the rational Christian. And my further conclusion is this: that should I be the resident speaker of the Free Congregational Society of Florence, Mass., at the next biennial Conference of that above-named Unitarian body, and should this society desire to send me as one of its delegates, I shall attend not as the representative of a Unitarian Christian Church or any other Christian Church, but as the representative of a society which we believe is in general sympathy with the purposes and practical aims of that Conference. If they do not wish us inside, they must shut the door against us. If they do not mean what they say, then they must say what they mean in their invitation to fellowship. W. H. SPENCER.

[We are more than glad to print the foregoing communications. Mr. Stewart has so recently come among the Unitarians, and has so little personal interest in the old debate concerning the Conference, that his statement has special value for its independence and impartiality. What he says at the close about the position of the young men in the denomination is quite true. We have heretofore referred to the same thing; and it is one of the reasons why we think that a new and earnest discussion of the real issues involved in the theological phrases of the Constitution of the Conference is much needed. Mr. Stewart also brings out one or two important facts, not before stated, concerning the action at Saratoga on the new amendment, especially the fact that the proposition which went to the Business Committee is not the one which came from them and was adopted. Mr. Spencer was present at the Conference as a visitor, and evidently an interested one. We have read his article with care, but we cannot at all reach the same conclusion. Is not his usually keen logical eye just a little blinded by his strong desire for the good fellowship? He thinks that what the Conference *intended* to do is of no account, even though most likely a majority may have meant only to invite in those who can in some sense call themselves Christians. The main question is, he says, what it did. But to us the *intention* seems all important, even though the Conference did leave the door open, as Mr. Spencer sees, but we do not. Mr. Spencer, being an honest man, does not go into a house because he finds the door open. He first wants to know if the occupants intended to leave it open for his entrance.—W. J. P.]

ORTHODOXY AS CONSOLATION.

Editors of The Index:—

*In the month of July last, a well known and respected citizen of Nevada, Cal., went out for an evening strol with his wife. Before leaving home, the lady put her little boys, aged respectively four and seven years of age, to bed in a room upstairs, and the nursegirl was left in the sitting-room below with the baby and in charge of the house. After a short time, she perceived a smel as of smoke, and on opening the door leading into the kitchen she discovered that the latter was on fire. Losing her presence of mind, and forgetful of the two children asleep upstairs, she rusht into the street, screaming, "Fire!" A cupl of boys herd her, and ran to giv the alarm at the engine-house. The fireman arived promptly, but not until the house was envelopt in flames. No entrance coud be made, and the house was entirely burnd down. Next day, the two little boys wer found among the ruins, small, undistinguishable masses of burnd flesh and bones. Before the terrible anguish of the hart-stricken parents, the most profound sympathy was dum for a time. But at length the Christian faith of a pitying frend offerd sum solace in the following lines, the parents themselves being devout Christians:

The Answered Prayer.

"Now I lay me down to sleep,"
Mother hear your dear ones praying.
"I pray the Lord my soul to take,"
Infant lips are sweetly saying.
Oh, how soon the prayer was answered!
One short hour in dreamland sweet,
Then, with saints and angels bowing,
Joyous, at the Saviour's feet.

"Kiss me just once more, dear mamma,"
Soft white arms are round her pressed,
"Now, good-bye until the morning."
Mamma's darlings sweetly rest,—
Rest in childhood's blissful slumber,
Never thought of dangers near,
Soon the cruel flames are raging
Round their precious forms so dear.

One short step from earth to heaven,
What a glorious thought is this,—
They were wakened "in the morning"
By an angel's loving kiss.
Darling, loving little brothers,
You have travelled hand in hand
From the peaceful dreams of childhood
To the blessed glory-land.

Can we murmur, though our hearts are
Crushed and bleeding, lone and sad,
When we know their ransomed spirits
Are so happy, free, and glad?
Father, we Thy sorrowing children,
Bow submissive to Thy will,
Knowing 'tis Thy hand that chastens:
"Though Thou slay, we trust Thee still."

Now, it is especially in cases such as this that our orthodox frends exclaim, "If you take away our faith in religion, what can you offer us in its place?" I wel know that a stern logic, based on the asumtion that a personal God is the imediate and activ cauze of every event, makes that God the prompter of a Giteau's murderous aim and the director of all the ignorance and carelessness which destroy life and property, be it defectiv flues, overturned lamps, or lighted pipes; and I know, too, that, carried to its legitimate rezult, this unquestioning trust would produce a condition of fatalistic apathy similar to that of the pious Turk, who, when told of danger impending, simply exclaims, "God is great,"—and, unmoved and unmoving, continues to smoke his hookah. And yet is there not a degree of sublimity in that perfect faith in God which says, "Tho He slay me, yet wil I trust in Him"?

E. B. B.

[There is indeed nothing more pathetic in all history than that confidence with which man, in the midst of all sorts of distresses, has clung to the belief that the supreme Power in the universe meant to be kind to him, that behind the blow that struck him down was a heart that meant to lift him up. It is a persistent confidence which goes far toward assuring the fact that the grand aim of ths universe is toward moral benefit. And, when man learns that the calamities come upon him by inevitable law and not by the fiat of a personal Deity, he will not lose this serene confidence, but will rather meet the distress with the sublime belief that it is better for him to bear it than that he should be individually excepted from a law which holds the good of all in its embrace.—ED.]

"NATURAL RELIGION."

Editors of The Index:—

A notice of the book *Natural Religion* has already appeared in your columns,* and it may be you will therefore deem these words superfluous. Happily, you have a waste-paper basket. But it has occurred to me that so exceptional a book well deserves a more emphatic recommendation. There is such a freshness about the book, such candor and boldness, that its influence cannot but be good in the encouragement it will give to many timid souls to utter their latest and brightest thought in the most precise language they can find, and there leave it. The author's bold attacks on conventional Christianity; his low estimate of a God who is a sort of "head of the clerical interest" or a philanthropist; his vigorous plea on behalf of real live virtues instead of timid proprieties; his scorn of much present-day piety as consisting in a silly, simpering sentimentalism, a love of God, as he says, that does not cast out fear, but is an effeminate presumptuous thing that never knew fear; in short, his plea for sterling religious principle, in place of the pale, bloodless religiosity he finds all about him,—all these are none the less striking and effective because they come in the shape of deferential suggestions.

Naturally, there are things in the book about which we shall not be all agreed. To elevate Science into a Religion may be just the way in which many of your readers would *not* propose to spread its teachings. To welcome men of science as the true successors of the Hebrew prophets may be more than most "liberal" clergymen are ready for. But that it is of infinitely more importance to be a genuine living man, with a worship and earnest convictions of one's own, than to profess adhesion to any special form of faith, is a principle we shall all agree to. And reading this book will help to give us a broader idea of how far such a principle extends; and, if one grain of irrational bigotry had yet possession of our minds, this brave and modest utterance may serve to exorcise it.

Yours truly, J. RUDDH.

HASTINGS, SUSSEX, ENG., Sept. 23, 1882.

W. MARNER writes from London: "H. N.'s 'Explanatory Note' in *The Index* of September 14 contains an unfortunate attempt to abuse me for repelling a slander cast at a people to whom (as H. N. wrongly assumes) I do not belong. Does H. N. think that a falsehood and a slander may not be protested against, because it happens to be expressed in what he calls a 'literary statement of fact or opinion'? He accuses me of speaking without evidence; while, after more than ample time for inquiry, the only evidence he adduces is that in some obscure country town he finds Sunday concerts advertised in the local newspaper. Surely, that hardly justifies the condemnation of secularists generally as giving Sunday concerts,

* Our correspondent uses the reformed spelling.

* *Index*, August 3.

Digitized by Google

even if that were a fault! H. N.'s miserable effort to explain away his sneer at the cheap lectures of secularists shows that he is there touched with shame: reply on this point would therefore be ungenerous."

A. JUDSON RICH, Hyde Park, Mass., expresses himself as follows: "*The Index* is fair and square, earnest and able, broad and confident, scientific and religious, brave and reverent, with its face toward the future, its heart toward truth, and wholly absorbed in emancipating mind from superstition, faith from dogma, and character from the enfeebling effect of feat and love of popular favor."

LEWIS G. JANES, New York, writes: "A writer in this week's issue, Mr. Hodge, errs in stating that South Carolina chooses her electors by vote of the Legislature. It was so before the war; but, under the new *régime*, they are chosen by the people, as in the other States."

BOOK NOTICES.

THE Annual Report of the Commissioner of Education for 1880 is published. It is mainly composed of reports from the different States, and statistics in regard to education. These are of great value, as affording means of comparison in regard to school attendance, expenditures, and all other matters of educational interest. The Commissioner is not a mere reporter, however, but does not hesitate to throw the weight of his influence in favor of measures of public importance and benefit. In this report, he has a very strong article on "the sale of collegiate and professional degrees." This nefarious traffic has not only been the means of deceiving our own public by giving diplomas to ignorant and unprincipled pretenders, but has brought great discredit on our country abroad, as it has been very hard for foreigners to discriminate between these bogus diplomas and those of reputable colleges. A full account is given of the course of one John Buchanan, who pursued this course of imposition for some years, but has at last been arrested, and is likely to meet with due punishment. The education of the colored race is a topic of great interest, on which the report gives much information. According to a table of comparative statistics of education in the South, the percentage of the population enrolled in schools ranges among whites from twenty-nine in Arkansas to eighty-one in Texas, and, among the colored people, from twenty-six in Louisiana to seventy-seven in Texas, showing that the colored citizens are fast approaching the whites in respect to educational privileges. When we consider that it is but twenty years since they had no school rights at all, we cannot but feel that a single generation has accomplished a great work. South Carolina reports an increased enrolment for 1880, the proportion being three times as many colored as white. Georgia says, "Reports from the chief cities indicate that three times as many children are now taught in the public schools for a less sum of money than one-third of these formerly cost in the private schools." This is the true secret of public school education, by which all are benefited by combination, and a better education is secured for the many than could otherwise be gained by the few. We commend this report to the careful attention of all interested in education. The able and indefatigable Commissioner, General Eaton, should have their help and sympathy in carrying on his work.

THE need of a reform in education is shown in a remarkably interesting article in the *Revue de Belgique* for September, entitled the "School Excursion" (*L'Excursion Scolaire*). A boy who cannot be made to take the slightest interest in study, even by the offer of a pony from his uncle, is among the spectators, as a company of school boys from Brussels, aged from seven to thirteen, appear with their flag and their professor at the railroad station near his village. Scarcely have they fairly arrived, when maps and compasses are produced by the pupils, and the teacher asks them, "In what direction is the village?" "How far?" "Which of these roads leads to it?" They answer correctly: then, he bids them "March in the gymnasium step." And away they go, singing a song which they learned from some Zulu Kaffres, whose exhibition they have just attended. On the way they stop to pick flowers; and the village boy is astonished to hear them tell not only the names of the plants, but the character of the soil, and still more to find, as they halt before his uncle's brewery, that they can explain the process, of which he has never heard. Their principal object is to visit a paper mill, and there nothing is told them, except in answer to their questions; but they are made to search out and comprehend everything, being submitted to a constant examination by their teacher and encouraged to take constant notes. At their luncheon they tell what factories and exhibitions they have already visited in and around Brussels, and what they have learned. The boy who has shown no taste for study becomes eager to be sent to such a school. He has his wish, and returns two years later, loaded with prizes. His mother cries, "Now, you shall have your pony!" "The pony for me," he answers, "is to have an aquarium built at the bottom of the garden." Why can we not have such a school nearer than Brussels? Other articles speak of Marcus Aurelius and his relations to Christianity according to Renan, of Gasparin whose *Uprising of a Great Nation* did us such good service twenty years ago, of a visit to a harem at Constantinople, and of the career of the Princess des Ursins in politics early in the last century.

WE have received from the publishers, Burnz & Co., 21 Clinton Place, New York city, a pamphlet entitled "Urn Burial" (price ten cents), issued by the New York Cremation Society, and setting forth the aims and objects of the society, which are partially explained in its dedication, which reads as follows: "To all who like cleanliness, to all lovers of true sentiment, to all friends of economy, to all who venerate their dead, to all who are not afraid of reform, the following pages are inscribed." The society claims a thoughtful consideration of the movement in favor of cremation instead of burial, on the grounds of hygiene, economy, religion, and sentiment, each of these motives being considered under its proper heading in the pamphlet; and it is only fair to say that the society makes a very reasonable plea in each case. Illustrations are given of two artistic "Cinerary Urns" and a possible æsthetic crematory, with diagrams of plans for cremating, and statement of the inducements to join the society.

THE *Sidereal Messenger*, published at Northfield, Minn., and conducted by William W. Payne, Director of the Carleton College Observatory, is a monthly review of astronomy, and the publishers state "the only periodical in the United States devoted exclusively to popular astronomy." The October number contains "Small Planetary Nebulæ," by E. C. Pickering; "The August Meteors," by Daniel Kirkwood; "Transit of Venus" (abstract), by William Harkness; "The Evolution of the Earth" (abstract), by Samuel Houghton, D.D.; and other articles, with interesting notes by the editor. Price $2.00 per year.

PERSONAL ITEMS.

B. F. UNDERWOOD will speak at Plainville, Mass., October 24 and 25; at East Dennis, Mass., November 19.

GEORGE JACOB HOLYOAKE will lecture in this city, in Parker Memorial Hall, Sunday evening, November 12, on "My Religious Days."

OLIVE LOGAN, who has lately seen Miss Braddon, the novelist, says she is in the prime of life, full of florid health, is wealthy and happy in the love of her Scotch husband, the publisher, Mr. Maxwell.

KING CETEWAYO wished to take presents back to his wives in Zululand, and the authorities in England made a grant for that purpose; but, when it was found that there were twenty-nine wives, the original sum was increased to £50.

THE respect in which Dr. Pusey was held, even by those who naturally differed from him in belief, was shown by the attendance at his funeral of men like Cardinal Newman, Mr. Gladstone, Dean Liddell, Canon Liddon, and the Bishop of Oxford.

THE Chicago *Evening Journal* refers to the fact that Rev. Brooke Herford, Rev. James K. Applebee, and Rev. M. J. Savage, formerly ministers of Unitarian churches in that city, are now preaching in Boston, and adds, "The Hubbites know where to come to get eloquent preachers."

THE *Religio-Philosophical Journal* states that "Mr. J. H. McVicker, the popular and widely known theatrical manager, has prepared a lecture entitled "The Press, the Pulpit, and the Stage." Mr. McVicker wields a trenchant pen, he is also a good speaker; and, on the subject he proposes to lecture upon, he will be able to entertain and instruct the public. We hope he will give the lecture in his own theatre in this city during the winter."

MR. CHARLES WATTS, of England, has arrived in America, and is going South for two months. He writes: "I shall be in New Orleans, November 6, 7, and 8; Dallas, Tex., November 20; St. Louis, November 27, 28, and 29; Cincinnati, December 12, 13, and 14. Shall be glad to hear from friends in these towns as to lectures on those dates. Communications, by your kind permission, to be sent to your office. I shall visit Boston early in the new year."

CAPT. MAYNE REID, the celebrated novelist, who now has his home in Frogmore, Eng., has had his claim for pension allowed; and the United States will hereafter pay to him $15 a month while he lives. He was second lieutenant in the first New York volunteers, and went through the stirring scenes of the Mexican war, getting bullets at Chapultepec and other impressions for future utilization in story books. His claim was filed about two years ago. He sets forth in his affidavit that he is quite poor, living on a small hired farm, and that the $15 a month will help out his meagre income and make him comfortable. He is sixty years old.

POETRY.

For *The Index*.

WHISPERING PINES AT NIGHT.

O sweet susurral spray of words,
Æonian whispers faint and low!
Your countless aromatic tongues,
Your patient, lisping tongues, O pines,
I hearken, as here I walk the dusk.
Like slumbering gods ye stand around,
And mutter softly in your sleep,
While o'er your tall and lissom shapes
The clustered gold-sparks westward wheel,
Far-painted on the arch of night.
O calm, unconscious somnambules,
Majestic in your rugged strength,
Clothed with the dim and liquid night,
Breathe peace upon my troubled soul!
Whisper once more your nocturne old;
With senses strained, attent, I hear;
Your gentle speech I understand,
Your pensive minor strains,
Crescendo of sweet sibilants,
Soft as the fluttering night moth's flight,
And gentle as a mother's sigh.

Your voice, sweet Noumenon,
Through the Phainomenon
Thus subtly streams forth,
Full of immortal cheer,
Into our night.

W. S. KENNEDY.

For *The Index*.

COCKAIGNES.

Death, toil, and penury and pain
Make mortal life a serious thing,
Which else were frivolous and vain:
They are its salt, its seasoning.

The lands of ease, which poets feign,
Which ploughless yield the golden grain,
Are fictions of luxurious brain.
The soul their *idlesse* would disdain.
Not rest, but motion, is its mood,
Ascent to higher altitude.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

THE Compulsory Education Act, which provides that every French boy and girl shall learn to read and write, has gone into effect. As the State schools are by the Act thoroughly secularized, they will receive nothing but opposition from the clergy, who will do all they can to keep Catholics away from them.

A CONVENTION of Baptist ministers and laymen recently held at Hamilton, Ont., after full consideration of the proposed introduction of the Bible as a text book in the public schools of the province, declined to take part in the deputation which was to wait upon Hon. Mr. Mewatt, the Premier, on the 24th inst., assigning as a reason, while approving of the use of the Bible in the public schools, unwillingness to take any action tending to infringe on the religious freedom of any class of citizens.

THE following paragraph is from the London *National Reformer*: "A Liverpool correspondent of the Boston *Index*, using the initials 'H. N.,' says that most secularist lectures are from necessity free, implying that otherwise there would be no audience. Surely 'H. N.' must be a very strange man, or must have a very limited knowledge of England. We, personally, have attended more than five thousand secularist lectures during the past thirty years, none of these have been free, and most of them have been attended by very large audiences."

FIFTY Mormon bishops have just been sent out from Salt Lake City to Norway, Sweden, and Denmark, where they will labor to make proselytes to their faith and accessions to the church of the Latter Day Saints. They will no doubt find among the poor and ignorant people of Northern Europe, as they did once among the factories and collieries of England and Scotland, willing listeners and converts, many of whom will come to join their brethren beyond the Rocky Mountains. What Utah most needs to-day, evidently, is good public schools for the education of the rising generation. The apostles of Mormonism can make converts only where ignorance prevails; and its adherents are able to retard the inevitable decay of their system so far only as they can resist the rationalizing influences of modern thought, which increases with knowledge and enlightenment.

ONE Harvier, a worthless fellow, a hanger-on of the dramatic profession, in order to make a newspaper sensation, charged Miss Marie Prescott (Mrs. Perzel) in the boulevard sheet, *Nym Crinkle*, with some social immoralities, whereupon the aggrieved party sued the American News Company which circulated the periodical for damages, and the verdict gives her $12,000. The Springfield *Republican* which gives these facts justly remarks: "The fact is that there is a recklessness of defamation (not to speak of their seductive immorality) about a large class of irresponsible publications of that kind which contrasts singularly with the vigilance which a respectable journal with a property basis has to maintain. The news companies have heretofore shown small conscience or moral sense in the stuff they circulate; and, if this verdict tends to enforce a healthy sense of responsibility, it will have a good effect."

RELIGIOUS faith, even in this age of doubt and denial, still appears in many queer phases, of which we give two instances, chronicled within a few days by our exchanges. A man in Meriden, Conn., John Kankhak by name, because his wife wouldn't attend the church to which he belonged, whipped her so severely that she was obliged to have him arrested. And a pious real-estate agent in Springfield, Mass., has ordered for his family burial lot a monument combining religion with business in a decidedly original and unique manner. It is a solid block of marble about four feet square, wrought in the shape of a house,—a two-story house of modern design, with L part, tower in front, sloping roofs, and regular windows and doors. On the door is a door-plate with his name inscribed, and on one side a sign across the house refers to the house of many mansions above, and on another side are the family inscriptions, including that of the designer and owner, with the date of his birth.

SOME of the creditors of Archbishop Purcell, of Cincinnati, have appealed to Pope Leo XIII. for relief. They declare that, "after three years of patient waiting, the creditors, many of whom have lost all the proceeds of labor accumulated in a lifetime of toil, are becoming desperate, and that many of the poorer creditors have died from want, while others committed suicide, and others still have become insane from despair." They say that Bishop Elder, the present diocesan, and a few priests who control him, are the cause of this delay, the object of which is to avoid payment through legal technicalities. They petition the Holy See for the sale of the property into which the people's money has been put, or to authorize some steps to be taken for the payment of the debt by a subscription. Action is urged, on the ground that "the faith of thousands who firmly believed in the honesty of the Church is being unhinged by the course adopted by the administrator, and many have crossed the boundaries of infidelity through the same cause."

JUSTIN MCCARTHY, M.P., recently addressed a large meeting of his constituents in the Market Square, Longford. He said: "We had to stand up against the strongest Government, backed by the strongest, the most docile, and the most unscrupulous majority that ever supported an English Government at any time. We fought against Mr. Forster with our small numbers and our diminished strength, and what was the result of the battle? Who put Mr. Forster out of office? We did. And never again, I venture to prophesy, will you see Mr. Forster a member of an English Government. That only shows you what may be done by perseverance, by loyalty, and by faithfulness to the pledges given by members to their constituents out of doors. Now, I say, without question of doubt, that such an Irish party, small though it may be, so independent, and so resolute, has been made, for the first time in Irish history, by my friend and leader, Mr. Parnell. We compelled the Government to introduce and to pass the Arrears' Bill. Now, whatever good is in that measure, I may fearlessly say, is our doing: whatever tends to spoil it is the doing of the tinkering hands of the English Government."

REFERRING to the resolution of the New York and Brooklyn Congregational Association, that Mr. Beecher's "full and proffered exposition of doctrinal views, which he has made at this meeting, indicates the propriety of his continued membership in this or any other Congregational Association," the New York *Times* says, "In other words, it is the judgment of one of the most important Congregational Associations in the country that a minister can deny the infallibility of the Scriptures, reject the orthodox doctrine of the fall and the atonement, and scoff at the doctrine of eternal punishment, and yet be entitled to membership in any Congregational Association." On this subject, the *Commonwealth* has a fitting remark. It says, "The fact that a great heretic like Mr. Beecher is implored not to sever his connection with the Church of his fathers, while ever and anon we hear of smaller men, guilty of a much smaller heresy, cast out of their pulpits and thrown ruthlessly upon the world, would seem to indicate that, in theology as in other matters, "that in the captain is but a choleric word which in the soldier is flat blasphemy." It is not surprising that the orthodox *Presbyterian* uses the following language: "We must, however, express our great surprise that the Association which Mr. Beecher left should respond by informing him that there was no need that he should depart, and that many of them were quite willing to follow him in his theological aberrations."

THE GIRARD COLLEGE CASE AGAIN.

The affairs of Girard College never had such thorough ventilation as they are now getting. Both religious and secular journals continue to discuss the question of the meaning and character of Mr. Girard's will, and of the right of the trustees, under its terms, to allow the students to be indoctrinated in the Christian religion. That they are being thus indoctrinated is admitted. That Mr. Girard intended to exclude such indoctrination, so as to leave the pupils free to adopt, on entering active life, "such religious tenets as their matured reason may enable them to prefer," is also very generally admitted. The defence of the trustees by those who defend them in thus violating the intent of the will is that the courts have decided that Christianity may be taught in the college, if only taught by laymen, the final decision to this effect having been made by the Supreme Court of the United States. The *Sunday School Times*, in returning to the subject in a long and elaborate article in its issue of October 14, makes this defence. Its summary of the legal history of the case seems accurate and fair, and gives much plausibility to its argument.

But, against this mode of defence, the point may be made that the case was never presented to the courts from Stephen Girard's point of view. His intention and opinions, beyond certain literal directions in the will, were not considered. Daniel Webster was the leading counsel of the Girard heirs in their attempt to break the will. The essence of his claim was that a school from which the knowledge of Christianity was to be excluded and in which morals were to be divorced from instruction in religion, and especially from the Christian religion, would be most pernicious in its influence, hostile to the common law of Christendom, and not a charity that could be sustained by jurisprudence. Horace Binney, the leading counsel of the city of Philadelphia in maintaining the will, agreed fully with Mr. Webster that instruction in morals could not be divorced from Christianity, and that, if the intent of the will was as Mr. Webster argued, it ought not to stand; but he claimed that, though the will excluded *professional* teachers of Christianity from the college, it did not necessarily exclude the teaching of Christianity. And he even went so far as to assert that, since the will directed that the pupils should be taught the "purest morality," Mr. Girard himself must have supposed that they would be instructed in "the great truths of Christianity in which all Christian denominations concur"; for only thus could they "obtain the purest system of morality"!

Now, the unanimity with which all ordinary readers of Mr. Girard's will, especially if they know anything of his religious views, at once decide that he had no such thought or supposition as is here imputed to him, shows that the case for the will was presented on a narrow legal quibble, and not on any common-sense interpretation of the meaning of the document. Yet the court, with the proverbial policy of courts not to go outside of the record of a case as presented to them, made its decision on this narrow, literal basis. Accepting the view which the eminent counsel on both sides had presented, that the teaching of morals could not be separated from the teaching of Christianity, it then affirmed the position of the defence that, by the strict letter of the will, the teaching of Christianity was not excluded from the college, if conducted by laymen in an unsectarian way. Now, the *Sunday School Times* candidly declares, as will most readers of the will, that by this decision the munificent bequest of Girard was wrested from the purpose for which he meant it, and put to uses which he meant expressly to proscribe; and it is over this transaction that the *Times* exults, and reaffirms its opinion that God exults. But with persons who thus see and acknowledge that the property has been diverted to objects which the donor fully meant to proscribe, we, for our part, are entirely unable to see how the morality of the action should be affected by any official declaration of the courts.

We should also like to ask the *Times* whether the "unsectarian" teaching of Christianity which Chief Justice Story had in view in rendering the decision of the court is the same as that which it has in view when it says that "the highest law of the land" gives to a Christian layman "the privilege of proclaiming Christ and his salvation in Girard College." There are other interesting points in the article of the *Times* to which we may recur hereafter.

WM. J. POTTER.

THE ENGLISH POSITIVISTS.

I.

The friends of liberal religious thought in the United States may be interested to learn something more about the English followers of Auguste Comte than can be gleaned from the various newspapers and reviews. Agnosticism, as it is called, is the prevailing current in English cultured society; but the positivists afford a striking exception to the general rule. As the ablest and best-known of English positivists said to me some time ago, he and his fellow-Comtists are, to a certain extent, with the agnostic, since they both alike seek to lead men to trouble their heads no longer with the questions of God and the universe, of theology and metaphysics, which they regard as insoluble problems, but to concentrate their attention on human life as they perceive it unfolded before them, and to live for their fellow-beings here and now. But to this the positivists add something more. They have a philosophy, a creed, and an object of worship, all of which are not accepted—in some cases they are derided—by the agnostic, pure and simple. The positivists, in fact, do really form a kind of religious body in England, exhibiting as they do the two chief characteristics of such a body; namely, common belief and joint action. And, consequently, although but small in numbers, the English positivists exercise a not inconsiderable influence on thought in England to-day. I shall not of course advert to the general principles of Auguste Comte's philosophy, either scientific, political, or religious. I shall assume that my readers are fairly well acquainted with those principles, and that they have in most cases formed for themselves some sort of estimate of their worth. The so-called "law of the three stages" of human development,—theological, metaphysical, and positive; the Comtist watchword,—"Love our principle, order our basis, progress our end,"—these are now pretty well known by those who are in any degree acquainted with modern thought. Nor is it my business to criticise the organization of society proposed by Comte and preached by his followers, except to say that, in my opinion, its one great error is its assumption of the permanence of the proletariat as a separate class, which seems to me to imply the permanence of poverty, misery, and social disorganization. I mention this one doctrine, partly because it explains the attitude taken by the positivists toward the great combinations of working-men, which constitute one of the most important features of English social life.

The positivists are a small body, and Mark Pattison's well-known *mot* about them was not undeserved. Having attended a Comtist meeting in London, the learned Oxford scholar was asked what he saw there. "Three persons and no God," he replied. Yet small as the body is, it has manifested the "dissidence of dissent" by splitting into two sections, who are to one another as Jews to Samaritans. It is not easy to discover the real causes of this division; but I believe that one section devoted too much attention to the social and political, to the neglect of the religious portion of Comte's gospel, to please the other. Anyhow, the separation has taken place; and positivism has now two "schools," two "local habitations," in the British capital. In a small street, not far from the noisy and unattractive thoroughfare of High Holborn, London, one may see a house, with the words inscribed close by the entrance, "Positivist School." The interior of this building contains a sort of lecture-room, fitted up with seats and a desk at the end, and containing maps and portraits, and twelve busts of the illustrious men after whom the months in the Comtist calendar are named, from Moses, the Jewish lawgiver, to Bichat, the great physiologist. Near the entrance is a large bookcase, containing the books recommended by Comte as forming a complete library for the use of his disciples.

It is here that Dr. Richard Congreve preaches and teaches, representing one of the sections of positivism. I cannot say whether this is the orthodox or the heretical section. Dr. Congreve would claim for it the former character, but others would dispute such a claim; and certain it is that M. Laffitte and the Paris Comtists would dispute it also. Be this as it may, it is certain that Dr. Congreve is the oldest disciple of Comte in England, and that it is largely through his instrumentality that others were brought into the fold. Dr. Congreve is sixty-four years of age, and is a man of striking appearance, with a finely formed head and a placid, benevolent countenance. He looks more like a prosperous merchant than a heretical thinker.

It very often happens that the pioneers in some unpopular movements are more or less fanatical, and this is true of the English pioneer of positivism. Dr. Congreve is undoubtedly a fanatic, as every one would discover after a short conversation with him, or after listening to one of his discourses. He believes firmly in Comte's as the final gospel, not questioning the decisions of his oracle, and feeling absolutely certain that society will one day come round to his position. He is utterly undaunted by opposition, even though it be the united opposition of the ablest thinkers of the age. I remember when, discussing some point with him, reminding him that the general consensus of European opinion was against him. "So much the worse for Europe," replied Dr. Congreve. Believing fully in Comte's scheme of religious organization, Dr. Congreve devotes much time to definite religious teaching, and regards himself as a priestly functionary. I use this word advisedly; for Dr. Congreve himself said to me, "As a priest, I never vote."

It is this sort of spirit which gave Prof. Huxley some justification for his description of positivism as "Catholicism *minus* Christianity." Dr. Congreve has for some time given special religious discourses in his "school" on Sunday mornings, his subject being the great religious writings, particularly the Epistles of St. Paul and the *De Imitatione*. These, indeed, are favorite works with all followers of Comte, St. Paul being, in their opinion, the founder of the Catholic Church, and the author of the *De Imitatione* being the greatest of religious writers since St. Paul.

Dr. Congreve reads portions from these and other writings, and expounds them as a Christian preacher would do. He also offers up a prayer,

Digitized by Google

addressed to humanity, past, present, and to come, and especially to the great heroes and martyrs and prophets and poets of the human race, thanking them for their gifts to us of to-day, and then urges upon his hearers the duty of living for others and in accordance with discovered law. Dr. Congreve was in his day an Oxford tutor, holding a position at Wadham College in that famous university; and it was there that several of the other leading positivists, while still students, came under his influence. He has done some useful literary work, including the editing of Aristotle's *Politics;* and his is still *the* edition of that great work used in England. He has also published a series of essays on England's foreign policy. As might be expected from a Comtist point of view, he has not many good words to say for England; and, in this respect, many who are not Comtists are in substantial agreement with him, especially when he condemns England's policy of forcing opium on the Chinese for the sake of revenue, and when he advocates the surrender of Gibraltar to Spain on the grounds of international justice. Many persons, however, will be amused at one of Dr. Congreve's dicta. He asserts that the United States can never attain a foremost intellectual position in the world, on account of their obstinate adherence to Christianity.

For the Protestant evangelical type of Christianity, Dr. Congreve, like all positivists, has the greatest dislike, if not contempt. He is, however, quite willing to work with evangelicals for philanthropic objects; and I have seen him sitting side by side with good orthodox people in a deputation to the Foreign Secretary on the Chinese opium trade. Dr. Congreve was a stout champion of France during the Franco-German war. When the empire fell and the republic was proclaimed at Paris, he issued (in common with the other Comtists who were all united then) vigorous manifestoes to the working-men of England in behalf of their French brethren, and strongly urged intervention on the part of the English Government in favor of France. He apostrophized Paris as the "holy city," and asked if the psalm-singing hosts of the Prussian monarch should be allowed to pollute its classic republican streets.

Dr. Congreve was at one time a frequent contributor to the *Fortnightly Review*, when that famous organ of "advanced" thought was more distinctly positivist in its tone than it is now or than it has been for some time. However one may differ from Dr. Congreve in opinion, and however one may disapprove of his fanaticism and quasi-dogmatism, it cannot be denied that he is a single-minded, courageous, and honest man. He thinks he has a gospel, and he has preached that gospel with fervor and sincerity for many years; and he has performed the important function of fructifying other minds, which have perhaps rendered subsequently greater services to positivism than it was given him to do. His philanthropy and his championship of unpopular causes constitute a fair offset against his fanatical spirit and that assumption of the sacerdotal character which gives a reactionary coloring to his teachings. His former colleagues have all separated from him, so far as active propagandism is concerned, with the exception of Mr. Henry Crompton, a lawyer of some eminence, and a stalwart champion of the cause of labor as against capital. Let me now say a few words about those members of the other section, most of them men of great power and of much influence in England as writers and speakers, and with whose names the positivist movement in this country is generally associated by all who know anything about it, Dr. Congreve having, during the last two or three years, been far less conspicuous than formerly.

WILLIAM CLARK.

A TRANSCENDENTALIST'S PLEA FOR LIFE.

A rather pointed though not discourteous reference to myself in a paper by the junior editor of *The Index* (October 5) may call for some reply. As I am very busy and have little taste for personal controversy, the reply must be brief.

Mr. Underwood expresses himself unaware that I have ever given in my "adhesion to the doctrine of evolution in any form." That depends on how he defines the word. Some one has said that every general term is a box with a false bottom, so that you can put as much or as little into it as you please.

We radicals have always complained that "inspiration" was such a box among the Christian sects; and it seems to me a pity that we should make another box with a false bottom out of the word "evolution." Yet this is precisely, I should say, what Mr. Underwood does. If he puts into his box only the doctrines of Mr. Darwin and calls that "evolution," I can assure him that I swallowed the whole contents of that box with great satisfaction before *The Index* was born. But, if he shifts the false bottom and insists on putting into the box all the ethical, philosophical, and social opinions of Mr. Spencer, I must decline to accept them, even though he shows me the same label "evolution" on the cover. In other words, I am an evolutionist with Darwin, but not with Spencer. It may be a very unfortunate and inadequate position, but it is the one I happen to hold; and there never was any secret about it. This is all; and an apology is due to the readers of *The Index* for detaining them, even thus long, about the matter.

But the very title of Mr. Underwood's paper, "Transcendentalism at Bay," suggests something on a different point. There was a time when transcendentalism was emphatically "at bay" in the religious newspapers. That time has long passed. Is it to be similarly placed in *The Index?* If so, the Free Religious Association should certainly revise its list of vice-presidents. For one, I must still maintain that both transcendentalism and agnosticism are legitimate forms of Free Religion, and probably permanent forms, like the variety of temperaments to which they are suited. There is no "civil war" between them. Neither need stand "at bay." Transcendentalism may be true or false; but there is a class of minds, and especially of youthful minds, to which it is very attractive. It seems to me a great pity to drive our young people out of the Free Religious movement to the Concord School of Philosophy or to Phillips Brooks' church to find their demand for an ideal philosophy recognized. Yet this we do whenever we treat transcendentalism as an effete and worn-out thing, lingering only in a few old fossils who are ignorant of all that has been written for twenty-five years.

T. W. HIGGINSON.

MISS HARDAKER'S VIEW OF HERBERT SPENCER.

The Index of September 28 contains an article by Miss Hardaker on "The Spencerian Metaphysics," wherein Spencer's famous doctrine of the Unknowable is made the subject of much disparaging criticism both for fallacy of its premises and the unfortunate effect which Miss Hardaker conceives this doctrine to have had on the "popular consciousness" of the day, which we are told "has imbibed more of his [Spencer's] metaphysics than of his invaluable studies in biology, sociology, and ethics." This conclusion is one which the general observer and student of the times will find it difficult to subscribe to, inasmuch as nothing can be clearer than that the first and most direct result of the teachings of the new philosophy on the average thinking mind of the day is almost wholly materialistic in its nature, and not at all theological or metaphysical. It is the principle of evolution, with its concomitant truths of natural selection and the survival of the fittest, as applied to the physical side of life and the material concerns of men, that has most profoundly impressed present nineteenth century thought; while this same principle in its higher aspects, as it relates to the moral and religious progress of the race, has wrought but comparatively little effect, the great majority even among the professed students of modern philosophy being quite blind to all its noble uses and possibilities. In a word, the blatant agnosticism of the day, as voiced by certain popular iconoclasts, so far from being traceable to the metaphysical portion of Spencer's teachings, as Miss Hardaker declares, finds its direct source in that larger portion of his work where he deals wholly with matters of scientific knowledge, and where, through his wonderful powers of analysis and broad generalization, he seems at times to mislead his readers into the belief that the adequate cause of things is to be found in what are but mere methods of nature's law and making. The truth is that Part I. of the *Synthetic Philosophy* is known only to a comparative few of the followers of Herbert Spencer, and very rarely taken into account either by the critics or admirers of that great man. It is that part of his teachings which attempts to explain the phenomena of the universe in the light of the broadly generalized principles of evolution which has taken such powerful hold upon the popular imagination of the age, and led it all astray, either with affright or an equally unreasoning admiration, with regard to the full import of his writings.

Miss Hardaker defends her use of the objectionable term "metaphysics," as applied to the doctrine of the Unknowable, on the ground that all the reasoning contained therein is bent toward a "pure metaphysical entity." It is sufficient to say on this point that there is a large class of Spencerian students—who, for fearlessness of thought and clear understanding, are the worthy peers of Miss Hardaker herself—who have not so apprehended the teachings of their leader. The reproach of metaphysics in times past has been not with the high themes and undiscoverable nature of the objects of its investigation, but with the false and pernicious methods employed, its mode of reasoning being of the purely subjective and deductive order. It can therefore be no valid criticism of Mr. Spencer's theory of the Unknowable that it *tends toward* the establishment of a "metaphysical entity." The question of the truth of any system of philosophy rests only upon the correctness of the author's reasoning, and not at all upon the supposed outcome of his teachings, which is always differently understood according to the mental bias and disposition of the reader. Moreover, in accusing Mr. Spencer of reasoning "toward a pure metaphysical entity," Miss Hardaker, unwittingly perhaps, makes the grave charge of intellectual dishonesty against one who deserves it the least of all modern thinkers; for she implies that his theory is one in which facts are made to correspond with his preconceived assumptions. Yet nothing can be more dispassionate, more entirely free from any element of personal prejudice or pre-judgment, than the argument by which Mr. Spencer builds up his theory of the "Absolute" and the "Ultimate Reality." There is throughout his entire treatment of this subject an absence of imaginative warmth and glow, which shows clearly

Digitized by Google

enough the purely intellectual processes by which he reaches his conclusions. He confines himself to the barest, driest statement of his case, and then leaves it, concerning himself not at all with the various corollaries of religious faith and experience to which his principal theorem is related, which he apparently regards with very indifferent attention.

Proceeding with her criticism, Miss Hardaker attempts to point out the "faulty bases of the Spencerian metaphysics," but shifts her argument, and calls attention only to certain conditions of the time which have promoted the popular acceptance of modern agnostic philosophy. We are told that this popular acceptance is due to "inherited intellectual tendencies," and that Mr. Spencer is "the heir of ages of unscientific thinking," both of which statements contain a considerable degree of truth without doubt, but neither of which, with all due respect to Miss Hardaker, is exactly to the point. It is the manifest duty of Mr. Spencer's critics to prove the unsoundness of his position by the clear refutation of his arguments. This, Miss Hardaker signally fails to do. Where is the weak spot in the reasoning of the five chapters which enclose the statement of the doctrine of the Unknowable, where the single flaw in the logic which destroys the value of all the rest? Is it in the assumption of the existence of the "Absolute"? But Mr. Spencer makes no such assumption. The "Absolute" serves neither as first nor second premise in the syllogism which proves its existence, but is the final conclusion of the proposition. His argument is easily summarized, and simply this: After showing that the only just way of estimating the value of different religious faiths is by the methods of comparison and elimination,—where unlike elements are stricken out, instead of the like, as in an algebraic equation,—he points out that the same method must be employed in ascertaining the respective merits of science and religion. The point of likeness discoverable here lies in the fact that the ultimate ideas of both—of fact, space, time, motion on the one hand, and that of a self-existent or self-created God on the other—are equally unthinkable. Here, both the scientist and religionist are compelled to admit the existence of some fact or force behind phenomena, which, though it can never be understood, must forever be taken into account, and each is constrained to utter the words "The Unknowable." Spencer then reviews his argument from the *a priori* standpoint, where the theory of the relativity of knowledge is established on a basis of rational deduction. He quotes from Hamilton and Mansel in support of his theory; but, where they make belief in the "Absolute" dependent on an act of faith, Spencer conceives it as the result of the natural workings of the human mind, "necessitated by the laws of our understanding." Belief in the "Absolute" becomes a "necessary datum of consciousness," without which man cannot proceed a step in the rational investigation of the universe. Those who see in this closely reasoned, well-knit argument only the basis of a new scheme of metaphysics, should not be content with the office of mere denial, but proceed to show what other substratum of knowledge or experience man requires in his philosophical researches, or whether, indeed, he requires any substratum whatever. I should be sorry to do a writer of Miss Hardaker's eminent ability injustice; but her position, so far as I am able to determine it in the article mentioned, seems a combination of pure fatalism and dogmatic materialism, equally irreconcilable to the understanding and the heart. Miss Hardaker deprecates the use of the word "phenomenon," because of its implied relation to "noumenon," which cannot be "found in experience" nor "inferred by right reasoning." She declares that "the prop which upholds all these fallacies is the widely accepted doctrine of the relativity of knowledge," which she regards as "destined to fall with increasing knowledge." But here, again, Miss Hardaker contents herself with a simple denial; and the reader is conscious of a sense of disappointment at not being informed what the exact nature of knowledge is, if not relative. In the mean time, while we may share Miss Hardaker's admiration for the achievements of science, her statement that "it is continually advancing in the direction of making life or mind an intelligible thing" can be assented to only upon conditions; for, as there is one spirit of science abroad in our times, which, recognizing its limitations, concerns itself only with the outward experiences and more tangible necessities of mankind, leaving other and more complex needs to find such satisfaction as is possible in the teachings of philosophy and religion, so there is another spirit of science, so called, abroad,—harsh, dogmatic, self-assertive,—which, claiming to be the end-all and be-all of existence, not only fails to make life more intelligible at each of its attempted explanations of things, but renders it even more weary, stale, flat, and unprofitable than any obsolete system of theology ever had the power to do.

CELIA P. WOOLLEY.

THE CHURCH AND ITS WORK.

We find a world-wide institution, known among Christians as the Church, which may be defined as the association of people for the exercise of religious emotions. It has its church buildings, temples, mosques, and schools, ministers, priests, and teachers. Some rationalists attack this institution, charge it with every crime against humanity and obstruction of its advancement, and demand its overthrow and destruction. The evolutionist must see that such a course is highly irrational; for so universal an organization must have been founded upon the necessities of man's nature, and has doubtless contributed to its development. Its vast system, if the analogy of nature's workings is to be followed, will not be destroyed, but will become the promoter of better things. The change is perceptibly going on, and is loudly lamented by many adherents. Church attendance is falling off, ministers say, "because men are growing worldly and wicked"; others say, "because people are becoming too intelligent to be interested in ministers' preaching." Ministers are being expelled from the churches for "heresy," and others are preaching "qualified views," as far as they dare. The number of ministers is proportionably lessening, because the education of the times prevents young men from putting upon their intellects the yoke of bondage prescribed by the old creeds of the Churches, and it is foreseen that the only prospect which a thinking man has before him in the ministry is quarreling and separation. If he preaches the old theology, unless he is a genius or a mountebank, he will be considered dull, and the church will dismiss him for not filling the pews and making the church pay; and if he preaches on the topics of the times and shows advancing ideas about Moses and Joshua, although he draws a full house, some conscientious hearers will stir up disaffection, which will make him glad to accept "a providential call to a wider sphere of usefulness."

Attendants upon churches wonder why it is they are so listless and sleepy, more interested in bonnets than in the sermon; why the children cry because they have to go "to that horrid church"; why they can listen with breathless interest on a week-day evening for two whole hours to their bright minister's lecture about his "Trip to California," and on Sunday his "gifted" long prayer of fifteen minutes excites only a responsive snore, and his forty-five minutes' exposition of Jacob "watering stock," as Ingersoll expresses it, or Simon Peter catching fish, produces yawns. Why is it, men ask, that the press and the platform are so popular, while the pulpit is losing power? This is the true answer: the first treat of live facts, the last deals with dead and dying fiction. Only what is real can long enchain men's attention in this age. Many come out of church feeling, and perhaps saying, "There is something wrong about this: it does not satisfy one's cravings, it is not in the line of nature, something must be done to make preaching interesting." The change to be made is to substitute the true for the false. Destroy the churches. No, let them be the grand lecture rooms, enforcing morality, humanity, and education by exposition of the glorious and fast revealing facts of nature, upon which alone they rest, and which supply the only lasting incentive to their culture. Let Sunday be the great day of mental instruction and elevating diversion to the toiling millions, in Sunday-schools, churches, libraries, art galleries, fields, and woods. We need preachers and teachers all the more, lest the newfound liberty degenerate into license, as it always does with some natures, who have known only the restraints of law. Let radicals not be too eager to overthrow existing institutions: let them rather work in nature's way of growth, till the shackles burst by the full development of what they confine. The "crimes of Christianity" are the expression of the ignorant passions of the dark ages; and, as J. W. Chadwick has remarked, if men had not persecuted through the power of the Church, the same forces would have produced something equally bad. Give the credit that is due to Christianity, and preserve all that is helpful to man in its creed and organization. All that is good and elevating in the life of Jesus is the heritage of man: let us profit still by its benign influence, and, while we "prove all things, hold fast that which is good."

The Church is changing in accord with the spirit of the age. As interest and belief in doctrines subside, the church organization becomes useful in social and benevolent schemes. Parties, literary and musical entertainments, picnics and fairs, cause churches to be valued by many as religious fun clubs, and a decreased interest in souls gives larger scope for action to increase the temporal welfare of men.

What would Jesus think of the Church, if he came to earth again as a man? and what would the churches think of him? Is there a pulpit in a fashionable church where he would be invited to preach? If he stood at the church door and said to the rich deacon, as he came toward the carriage, "Sell all that thou hast and give to the poor, and come follow me," would not the deacon call for a policeman?

Many intelligent and scholarly ministers, who are outgrowing belief in the Calvinistic creeds to which they are officially committed, realize that these dogmas are driving from the Church men whose practical sympathies and purposes are entirely in accord with their own. To save such persons to the Church, the invitation to the Lord's Supper is made so broad that few need to turn their backs on it. One is told that, if he only can profess "loyalty to Jesus," he may reserve all opinions about evangelical doctrines. An agnostic, who denies all that is supernatural in the records of the life of Jesus, is admitted to membership in a Congregational church; and one who in honest consistency feels obliged to renounce membership is told that he should have remained inside, and helped to bring the Church to the rational position toward which it is slowly moving. At present,

Digitized by Google

men who feel obliged to antagonize erroneous creeds are placed in a false position, as apparently opposed to the practical morality of Christianity. When the churches disavow the false dogmas with which goodness has become encrusted, their practical aims and work will be assisted by many who now feel their only consistent standing-place is outside the Church.

The charity and missionary organizations of the Church must be preserved, and their working improved in method and enlarged in scope. Foreign missions are doing a great educational work, and are yearly tending toward a larger interest in the establishment of schools and colleges than in the propagation of theologies. A leader in foreign mission efforts told me, with an injunction of secrecy, that he was much less interested than formerly in the society of which he was a manager, because in their policy the salvation of souls was becoming more and more secondary to the education of the mind. We shall some day see these agencies devoted solely to spreading moral and physical knowledge among savages and ignorant nations, and then earnestly supported by rationalists. The wholesale denunciation of missionaries is unjust. I have visited numbers of mission stations, and never saw one where there was not an apparent influence for good nor where the workers were not faithful and earnest people. The religion they teach is certainly better than the one it displaces, and the dogmas of theology are not made as prominent as they are at home. When they are entirely dropped from the teaching and missionary societies become educational societies wholly, they will demand and receive the support of all intelligent men.

Those who still believe in the story of the Tower of Babel must be puzzled, as I used to be, to explain how God should have caused the existence of the greatest obstacle to the spread of knowledge,—the diversity of languages. Since learning that this story is the myth of an ignorant people, I am relieved from the necessity of believing that God, who "desires all men to repent and come to the knowledge of the truth," has been the greatest enemy of foreign missions.

Theological seminaries at present are mainly institutions where men are taught how to maintain preconceived theories formulated by their ancestors. The education thus given is one-sided, for fact is warped to conform to theory. The language of the Bible is made to conform to the desired notion by taking it literally, figuratively, or spiritually, as best suits the requirement. I am convinced that the peculiar difficulty attending the settlement of theological discussions is owing to the habit of mind which is formed by the custom of spiritualizing the meaning of Scripture words, when it helps an argument to do so. It creates an unconscious tendency to an unfair use of language in controversy. A Congregational minister tells me that his room-mate at Andover Seminary felt unable to assent to the creed. The professor said, "Oh, you can subscribe to it as we all do, in the sense which the words mean in your own mind." The necessity for such warping of mind and conscience must be injurious to intellect and heart.

But the theological seminary is not to be discarded. It may become the greatest help and the grandest power. Workers in every field of science are gathering facts, each in his own special department; and the need of a generalization of results is most apparent. The varied facts must be gathered, harmonized, and arranged in systems and philosophies, and the theological seminary is the place to do it. Instead of an exclusive study of Hebrew religion, upon the false assumption that this alone is revealed by God and all others are inventions of men, a studious comparison of all religions will be made, and the development of the religious idea in man will be traced and followed out scientifically, showing its past connections and suggesting its future resolution into one universal creed. Instead of dismissing diversity of language by a summary reference to Babel, a comparative study of ancient languages will throw light upon the growth of speech and give indications of the methods to secure a universal language. Instead of the vain effort to reconcile Genesis and science, the views of the Hebrews about nature will only have an antiquarian interest, and religion will cease to oppose all knowledge that conflicts with the theology of the Jews. Then, with unbiassed mind, the newly revealed facts of nature can be studied with reference to their relation to the infinite first cause. Political economy and many branches of social science could here find a proper nursery. In fact, there will be no end to the sphere of usefulness opened when the theological seminary shall be changed into the scientific theorizing seminary.

Christian institutions, therefore, are to be enlarged in scope, even though the names be not changed. We, who desire to be in active accord and harmony with all efforts for the welfare of man, call upon the many ministers who by the light of science have discovered the falsity of the creeds they are bound to, asking them boldly to instruct their people in the truths revealed by the evolution philosophy and modern Biblical criticism, that they may cease to shun and despise good and intelligent men who have learned that the Bible is a human compilation of scattered and fragmentary Hebrew literature, and that God has never acted save through natural laws. When these senseless prejudices, survivals of paganism and ignorance, are removed, all who love their fellow-men and whose religion is to do good can unite in the practical worship of the Church universal.

ROBERT C. ADAMS.

EDITORIAL NOTES.

"UNITARIAN PIONEERING," by Mr. Edwin D. Mead, which we are unable to give in this number, will appear next week.

WE reprint from *Nature* this week the former part of Prof. Haeckel's address, delivered September 18 at Eisenach, before the German Association, to an audience of one thousand persons. The remainder of the address will be given in our next number.

MR. F. M. HOLLAND'S Stories from Robert Browning's "Strafford," "Sordello," "Turia," "Adventures of Balaustion," "Blot in the 'Scutcheon," "Ring and Book," "Pippa Passes," "Return of the Druses," and "Colombe's Birthday," have just been published by George Bell & Sons, London.

"ZION'S HERALD" refers to Mr. Towne's recent essay in *The Index*, in reply to Matthew Arnold's criticism upon American culture, in complimentary terms; and, of Mr. Lowell's reported statement that his own nation was "the most common-schooled and the least cultivated people in the world," it says that it "is about the most snobbish thing that an intelligent American is recorded to have publicly uttered in Europe."

"IT appears from an exchange," says the *Religio-Philosophical Journal*, "that there resides a religious somnambulist (a young man) in the vicinity of Wichita, Kansas. One night, his parents were aroused by singular noises on the roof; and, knowing their son's habit of cutting capers in his sleep, they ran out to the yard and looked up. There sat the young man upon the chimney-top, clad in that garment which immemorial usage has consecrated to the purposes of slumber. Presently, he arose to his feet, and, addressing an imaginary audience, gave out the hymn, 'All hail the power of Jesus' name,' which he forthwith proceeded to sing through from beginning to end to the sonorous tune of 'Coronation.' He then selected a text from I. John v., 25, preached a vigorous discourse fifteen minutes long, and slid down the lightning-rod into a tub of water which his father had hurriedly placed where it would do the most good. The shock aroused him, and he was escorted to his bed."

IN his article on "The Progress of Thought in the Church," in the *North American Review*, Henry Ward Beecher says: "To admit the truth of evolution is to yield up the reigning theology; it is to change the whole notion of man's origin, his nature, the problem of human life, the philosophy of morality, the theory of sin, the structure of moral government as taught in the dominant theologies of the Christian world, the fall of man in Adam, the doctrine of original sin, the nature of sin, and the method of atoning for it. The decrees of God, as set forth in the Confession of Faith and the machinery supposed to be set at work for man's redemption, the very nature and disposition of God—as taught in the falsely called Pauline, but really Augustinian theology, popularly known as Calvinistic—must give way. Even if the great truth of evolution led to unbelief, it could not be so bad as that impious and malignant representation of God and his government which underlies all mediæval and most of modern theology."

IT is a sign of the times that the once implacably hostile theological camps into which Christendom has for centuries been split up are exhibiting increasing intolerance and forbearance toward one another. This fact is due probably to the abatement of the *odium theologicum* and the salutary influence of a common peril. All the Christian sects and churches of whatever name or nature are, in this day of international intercourse and general intelligence, everywhere confronted with the great foe and exterminator of superstition; namely, knowledge. The amicable commercial and social intercourse constantly going on between people of all races and nationalities shows the pettiness of differences of theological belief, which differences in times of non-intercourse and ignorance made Christians of the chief ecclesiastical divisions regard one another as children of Satan. In the presence of constantly increasing knowledge of human nature and nature in general, articles of faith and theological dogmas become more and more grotesque and absurd as explanations of man and the world.

THE editor of the Indianapolis *Age*, who has shown somewhat atheistic tendencies in the past, seems suddenly to have awakened to the force of the "design argument," and expresses himself thus: "Everything in the elements was made to enrich and comfort man, and to remind him of the beneficence of his heavenly Father. The whale, the shark, the alligator in the water, the tuneful mosquito, the winged wasp and the hornet in the air, the serpent, the tarantula, the tiger in the forest, and the active little insect in the sock-foot, all illustrate the providence of God in providing for the comfort and happiness of his creature man. It is no argument against the wisdom and goodness of God that most of these creatures are of no account to man, so far as he can discover, because God knows best what is good for us, and because his ways of accomplishing good are not man's ways. The short-sighted fail utterly

Digitized by Google

to discern the wisdom of God in his works; but the philosopher perceives design in the flea in the sock of the lazy man, and the wise adaptation of active means to inactive ends."

REFERRING to "the fact that Darwin was a subscriber to the Boston *Index*," the *Independent* last summer attempted to underrate its significance, and said, "We recall the statement by an ecclesiastical dignitary of the Church of England that nobody of any account had ever questioned the Christian faith of this 'holy man of God.'" This statement induced us to make the following inquiries: "Will our able contemporary frankly state whether it regards Charles Darwin as a Christian, and whether it indorses the statement 'that nobody of any account had ever questioned the Christian faith of this "holy man of God"'? Does the *Independent* believe that either of these statements can be made honestly by any person who is in possession of such information as may be obtained in regard to the views of Darwin?" To these inquiries, no reply was made. But, since the publication of Darwin's letter to a student in Germany, in which he says, "As far as I am concerned, I do not believe any revelation has been made," the *Independent* admits, what was quite as evident to every thinker before this letter was published, "that Mr. Darwin himself did not believe in revelation." This admission, however, is accompanied by statements designed to impair the force of the letter, and which seem to us sophistical if not disingenuous. Some of these statements we may notice next week.

THE same nice, critical discrimination which the *Churchman* shows in disposing of Col. Ingersoll it carries into its general discussions of weighty theological and historical questions. A writer in the number of September 16, vigorously assails the Low Churchmen for their prejudices against the "collects," which, he tells them, should not be disparaged, because, forsooth,—and it is made the head and front of his argument,—"one of the highest commendations given to Moses was that he was learned in all [not a part of *all*] the wisdom of the Egyptians; and a portion of this learning, according to Saint Augustine, was the introduction of collects into the services of religion." This is really delicious. The writer of the long article on this most important subject of the "collects" proceeds in the most naïve and robust unconsciousness of the fact that the "brethren in Egypt" of Saint Augustine's Letters have about the same relation to Pharaoh's Egyptians as have Arabi Pacha and the Khedive, or as the Convocation of Canterbury has to the Stonehenge Druids. We fear that Moses can't be made to serve on the "Enrichment Committee," Brother *Churchman*, but try again. By the by, we think we recognize the name of the writer of this article as that of the principal of one of the leading "church" schools. If the learned principal himself takes the classes in logic, there can be little doubt, we think, about the boys coming out genuine and reliable "Stalwarts."

SINCE Col. Cockerill, editor of the *Post-Despatch*, shot Col. Slayback, a lawyer, both of St. Louis, the bar of that city has held a meeting, and protested against "the spirit of ruffianism which is abroad, the wanton employment in speech or writing of intemperate, licentious, and defamatory language, and the resort on frivolous pretexts to deadly weapons." Commenting on this, the *Nation* observes: "'The spirit of ruffianism' is just as much abroad here as in St. Louis. Dozens of colonels in this city are constantly defaming other colonels in the most licentious manner; but the defamed colonels take no notice of it, and it soon becomes as harmless as the noise in the street. No colonel of high character and standing at our bar carries a revolver or thinks of going in quest of other armed colonels to demand retractions or apologies. The apology of a blackguard is of no use to any colonel in any part of the world. If peaceable and respectable colonels at the South would make up their minds to disregard the foul-mouthed and abusive colonels, we believe the homicidal record of that blood-stained region would rapidly improve. And, then, would it not be well to cut down the number of colonels? Would it not be well for hard-working lawyers—fathers of families—to go about as plain misters? Does not this military rank make them feel as if they had a store of military honor to look after? And can there be a more inconvenient thing for a peaceful citizen than a commodity of this kind?"

WE find in the London *Secular Review* the following statement of the principles and objects of the British Secular Union, of which the Marquis of Queensberry is President, Professor Pasteur and Ernest Renan are Vice-Presidents, and Victor Hugo is an honorary member:—

1. That the present life being the only one of which we have certain knowledge, its concerns claim our primary attention.
2. That the promotion of our individual and of the general well-being in this world is at once our highest wisdom and duty.
3. That the only means upon which we can rely for the accomplishment of this object is human effort, based upon knowledge and experience.
4. We judge conduct by its issues in this world only: what conduces to the general well-being is right; what has the opposite tendency is wrong.
5. On all questions outside these positive principles of Secularism, members are free to hold any opinions, and to promulgate such on their own responsibility.

OBJECTS.

1. The disseminating, promoting, and popularizing of the above principles by all legitimate means.
2. The increasing of Secular Halls and Institutes in the cities and towns of Great Britain.
3. The advocacy of secular principles by lecturers, and the establishment of secular lectureship in popular districts.
4. The dissemination of cheap literature expository or defensive of the Society's principles.
5. The removal of all civil disabilities grounded on belief, and the abolition of all public grants for sectarian purposes.
6. The promotion of a purely secular system of national education.
7. The promotion of political, social, or religious reform in any wise tending to increase the secular happiness of the people.

WE are pleased that a recent article in this journal has elicited from our valued contributor, Col. Higginson, the unequivocal statement that he accepted the doctrines of Darwin "with satisfaction" years ago. We assure him that we no longer doubt that he is an evolutionist in *the proper sense of the word*, although *we* have not been quite able to "swallow the whole contents of that box" which contains either *all* "the doctrines of Mr. Darwin" or "all the ethical, philosophical, and social opinions of Mr. Spencer." We regard them both as profound and original thinkers, but do not accept the entire teachings of either. We sincerely hope nothing advanced in *The Index* by any writer will "drive our young people out of the Free Religious movement," when its platform is broad enough for every class of thinkers to stand upon. Let Col. Higginson express his views regarding Spencer, even when he feels called upon to characterize him as "a writer somewhat dangerous to a large class of minds" (*Index*, Feb. 2, 1882), and let him refer to the agnostic as the "modern ascetic," whose courage and faith "are as admirable as those of the man who consistently flings himself before Juggernaut or of the fakir who spins on his iron." At the same time, let the editors of *The Index* express their views freely on these and other subjects, remembering, as Col. Higginson has said (*Index*, Feb. 2, 1882), that "the real safety is to be found in free discussion and in giving the advocates of each school their say." Meanwhile, we call attention to the standing notice in this journal: "No writers in *The Index*, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own."

POETRY.

For *The Index*.

AROMAS.

I.

The Torchbearers.

I see them stand anear, afar,
Lone-shining through the backward years.
Long interspace 'twixt star and star
Up wastes of vanished time appears.

For, e'en in history's blackest night,
Some martyr torch of reason bore;
And, ere he fell, its sacred light
To younger son of truth passed o'er.

II.

Virgin Soil.

Stateless and churchless your acreage lone
Ne'er was crimsoned with blood for a mitre or throne,
Nor are ruinous columns over you strown.
More fair for their absence, your verdurous waste
With prairie flowers sweet and long grass is graced
Where states of the future free, chainless, may rise,
O'erarched by the blue of fathomless skies.

III.

Sleep.

Sweet sleep is strenuous struggle's meed.
No downy plumage will it win
For Sybarite immersed in sin.
Such dainty lure 'twill never heed,
But quickly hies the boon to bless
The couch of honest weariness.

IV.

Life's Board.

The viands on life's table are
Not meant for a perpetual fare:
After a time they loss their zest,
The board belongs to later guest.

B. W. B.

For *The Index*.

WHERE IS GOD?

I cannot think upon the life hereafter,
And see the Father throned in majesty,
I cannot make the image of his presence,
Nor shape the thought of blessedness to be.

I cannot think of souls in sorrow lying
For error here, to suffer still for aye,
While brothers, kindred, friends, in spheres celestial,
As happy spirits rest beyond the sky.

Nor can I picture God! I cannot fathom
The mystery, the nature of his power,
Whose laws sublime, the universe controlling,
Rule suns and worlds and systems hour by hour.

But I can see his work in every flower,
In every daisy, every violet blue,
In every form of life, from clod upspringing
To laws divine, obedient, and true.

Still more in human hearts! We love the beauty
Our eyes drink in by mountain and by sea,
We feel his power in evening sunsets golden,
We love the flowers that bloom upon the lea.

But more, still more, in noble deeds and loving
Of human souls, whose virtues radiant shine,
We see the Power within, the Power mysterious,
The Power in all, through all, the Power Divine.

The Index.

BOSTON, OCT. 26, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

Prof. Haeckel on Darwin, Goethe, and Lamarck.*

When five months ago the sad intelligence reached us by telegraph from England that on April 19 Charles Darwin had concluded his life of rich activity, there thrilled with rare unanimity through the whole scientific world the feeling of an irreparable loss. Not only did the innumerable adherents and scholars of the great naturalist lament the decease of the head-master who had guided them, but even the most esteemed of his opponents had to confess that one of the most significant and influential spirits of the century had departed. This universal sentiment found its most eloquent expression in the fact that, immediately after his death, the English newspapers of all parties, and pre-eminently his conservative opponents, demanded that the burial-place of the deceased should be in the Valhalla of Great Britain, the national temple of fame, Westminster Abbey, and that there in point of fact he found his last resting-place by the side of the kindred-minded Newton.

In no country of the world, however, England not excepted, has the reforming doctrine of Darwin met with so much living interest or evoked such a storm of writings, for and against, as in Germany. It is therefore only a debt of honor we pay if, at this year's assembly of German Naturalists and Physicians, we gratefully call to remembrance the mighty genius who has departed, and bring home to our minds the loftiness of the theory of nature to which he has elevated us. And what place in the world could be more appropriate for rendering this service of thanks than Eisenach, with its Wartburg, this stronghold of free inquiry and free opinion! As in this sacred spot, three hundred and sixty years ago, Martin Luther, by his reform of the Church in its head and members, introduced a new era in the history of civilization, so in our days has Charles Darwin, by his reform of the doctrine of development, constrained the whole perception, thought, and volition of mankind into new and higher courses. It is true that personally, both in his character and influence, Darwin has more affinity to the meek and mild Melanchthon than to the powerful and inspired Luther. In the scope and importance, however, of their great work of reformation, the two cases were entirely parallel, and in both the success marks a new epoch in the development of the human mind.

Consider, first, the irrefragable fact of the unexampled success which Darwin's reform of science has achieved in the short space of twenty-three years. For never before since the beginning of human science has any new theory penetrated so deeply to the foundation of the whole domain of knowledge or so deeply affected the most cherished personal convictions of individual students; never before has a new theory called forth such vehement opposition and so completely overcome it in such short time. The depicture of the astounding revolution which Darwin has accomplished in the minds of men in their entire view of nature and conception of the world will form an interesting chapter in the future history of the doctrine of development.

In 1863, four years after the publication of Darwin's great work, opening up a new path for the human mind, when, at the meeting of naturalists at Stettin, I for the first time openly drew attention to the work, the great majority were of opinion that "nature-philosophical fantasies" of this sort were no proper subject for earnest discussion. An esteemed zoölogist pooh-poohed the whole theory as the "harmless dream of a man napping," while another compared it with table-turning and "odic force." A celebrated botanist maintained that there was not one single fact to support this "untenable hypothesis," but that, on the contrary, it contradicted all experience; and a noted geologist believed that the passing vertigo would soon inevitably sink into dull sobriety. A well-known physiologist later on spoke of the whole history of filiation as a romance, and an anatomist prophesied that in a few years there would be no more talk of it. In thick-tomed works and in numberless treatises, it was demonstrated that Darwin's theory was false from beginning to end, unproved by facts, delusive in its conclusions, ruinous in its consequences. Nay, no further back than five years ago, when in the meeting of naturalists at Munich (1877) I expounded "the current doctrine of development in relation to the whole body of science," I encountered the most unqualified antagonism in one of our most celebrated naturalists, who even went the length of demanding the exclusion from education of Darwinism as an "unproved hypothesis." I was compelled, in my paper on "Free Science and Free Teaching," to take the right of the latter emphatically under my protection.

And, of all these damnatory judgments on the part of our numerous opponents, how much remains current at the present day? Nothing. The very number and bulk of their many-sided attacks have only redounded to the completion of our triumph. For the more the immovable citadel of the new theory of nature was attacked from all sides and assailed by weapons of the most varied kind, the more did its undaunted defenders feel called upon to fill the gaps which here and there disclosed themselves in their enclosing wall of defence. Every charge on the part of the superannuated dogmas went to pieces against the iron panoply of the united experimental sciences. The gifted commander who had discovered the long-sought bond of union for the sciences, and had led the defence under the conception of oneness or monism, was able three years ago, on the celebration of his seventieth birthday, to look with entire satisfaction on the complete victory won by his troops, and with Goethe might say:—

> "Es wird die Spur von meinen Erdentagen
> Nicht in Æonen untergehn." *

That such is really the case, and that in the evening of his life Darwin was enabled to rejoice in the complete triumph of his good cause is a fact indisputably testified by the present state of the natural sciences. We have only to cast a glance into the numerous periodicals and the most important works in those departments which are more immediately and more integrally affected by Darwin's teaching,—zoölogy and botany, morphology and physiology, ontogeny and palæontology. In these subjects, scarcely any work of superior merit now appears which is not penetrated by the idea of natural development. With vanishingly few and unimportant exceptions, almost all investigations start with the assumption of Darwin's fundamental conception, that the form-relationship between different species of animals and plants is rooted in their essential blood-relationship, and that the complicate relations of the organic world are to be explained by the two factors of common origin and gradual transformation.

Darwinism, too, in its more specific sense, the theory of selection, has maintained its ground in the face of all attacks; for this it is which first discovers to us the physiological causes through which the struggle for existence mechanically produces transformation. And, if natural selection is by no means the only agent in transformation, it at all events still remains its most important instrument. Darwin, by his discovery of it under the light of artificial selection, solved one of the greatest biological riddles. For the doctrine of "natural selection through the struggle for existence" is nothing less than the final solution of the great problem: "How can forms of organisms constituted for a particular purpose come into being without the aid of a cause acting with a particular purpose? How can an edifice replete with design build itself up without design and without architect?" A question which our greatest critical philosopher, Kant, a hundred years ago, declared to be insoluble.

But in no province of natural science do Darwin's grand achievements appear so conspicuous as the one in which our own investigations revolve,—in the wide province of morphology, comparative anatomy, and the history of development. For in morphology, which was also Goethe's special favorite, *all* knowledge that is not merely superficial depends directly on the recognition of the doctrine of filiation; and here it is, particularly, that by its help the most brilliant results have been attained in the shortest time. The genealogical trees of particular groups of forms, which at the beginning hardly dared venture into the light of day as new-fangled (*heuristische*) hypotheses, are now, in the case of many organic groups, completely established facts. To cite but a few examples, no competent zoölogist any longer calls in question the descent of horses from tapir-like palæotheria, of ruminant animals from swine-like anoplotheria, of birds from lizard-like reptiles. Nor does any one any longer doubt that all higher air-breathing vertebrates have their origin in lower gill-breathing fishes. The most important and most disputed, however, of all hypotheses of descent—that, namely, which derives man from ape-like animals—has of late years, in consequence of more matured knowledge, gained for itself such general recognition at the hands of competent experts that the great majority of them now deem it just as well grounded as any of the foregoing phylogenetic hypotheses.

In the face of such encouraging unanimity, we can afford quietly to ignore the opposition which is still raised here and there by some single opponents of transformation. There is one capital fact in our favor: the whole of the younger generation is working for Darwin's spirit; and, far beyond the limits of professional circles, his doctrine is operating as a ferment, stimulating to nearer solution the greatest problems of human knowledge.

Celebrating here to-day the complete victory of Darwin's doctrine of development, as we are, accordingly, entitled to do, it is also implied that the end has come to the dreary period of violent literary warfare; and we may give all the more emphatic expression to our jubilant feeling of triumph in this respect, that we have ourselves been largely involved in those hard battles. Seeing, however, that, according to Heraclitus, struggle is the father of all things, it was not possible that the struggle for existence should spare the theory which itself laid down this principle, and raised it to be the most valuable instrument in its store-house of arguments. With all the greater welcome, we now greet the new period of peace following on that victory, and of quiet progress in which we look forward to the fairest fruits in the new courses of inquiry. It well becomes the Association of German Naturalists and Physicians who have repeatedly been witnesses of the loud tumult of those battles, now when they are happily concluded, to sanction the treaty of peace, and to solemnly recognize the doctrine of development as the sure foundation-stone of scientific inquiry.

If we now look for the causes of the extraordinary effect produced in such a short time by the Darwinian doctrines, in the teeth of the most violent opposition, we shall find them by no means exclusively in the convincing force of their inherent truth, but also in the peculiarly favorable outward circumstances in which they entered the scientific world. Not the least of these favorable conditions lies in the rare characteristic qualities of the man on whom devolved the solution of such a gigantic task. Charles Darwin united in himself a wealth of diverse intellectual gifts, which generally are to be found only apart. His fund of knowledge and his acumen as a naturalist were just as great as his far-sightedness and comprehensiveness as philosopher. To what degree he harmoniously

combined these two sides of intellectual activity, often in conflict with each other, may be inferred from the fact that many short-sighted experimentalists see in him only the conscientious observer and ingenious experimentalist, regretting that his theory should be but speculative aberration; while, on the other hand, many high aspiring thinkers look down with great depreciation on his experimental achievements, but admire the acuteness of his judgment and the lucidity of his logical train of thought. In this respect, he reminds us of our two greatest German naturalists, Johanne Müller and Carl Ernst Baer. If the latter in his title-page described his classical "History of the Development of Animals" as "Observation and Reflection," Darwin might say the same of all his works. With these rare powers of observation and judgment were associated other noble qualities of character, greatly enhancing their value and profit,—indefatigable perseverance in the pursuit of his aims, scrupulous conscientiousness in grouping the assured results, purest aspiration after natural truth, and open simplicity in communicating his conclusions. No less praiseworthy was the extraordinary modesty with which he set forth his views, and the mild meekness with which, while answering all the sharp objections of his opponents, so far as they were to the purpose, he simply ignored personal aspersions.

Truly admirable are the patience and forethought with which Darwin took in hand and carried out the weightiest task of his life,—the explanation of the origin of animal and vegetable species through natural selection. The first basis to this work was laid in his twenty-third year, when in 1832, in South America, he drew up geographical and palæontological observations on the animal species of this continent. The rich observations he accumulated in that voyage round the world, a voyage lasting five years, and of such consequence to him, did not, however, come to their full utilization till long afterward. The injury to his health wrought by the severe hardships to which that voyage subjected him forced him to withdraw completely from the restless turmoil of London, and to reduce his circle of personal friends to the narrowest compass. In 1842, in the thirty-third year of his age, he betook himself to his quiet, idyllic country seat of Down, lying gracefully between the green meadows and the wooded hills of the sweet county of Kent.

In the harmonious solitude of this verdant seat of the Muses, Darwin lived full forty years, devoting himself singly and exclusively to the continuous study of Nature and to the solution of the great problem she had revealed to him. Practising himself for many years the active work of gardener and cattle-rearer, he could see under his own eyes the transformation of the corporeal forms of plants and animals. Examining into the physiological causes of these transformations,—the laws, namely, of inheritance and adaptation,—he clearly perceived that in the domain of uncultivated as well as of cultivated nature the same mechanical laws condition change of species. He became convinced that artificial and natural rearing rested essentially on the same processes of selection. What in the one case is produced in a short time by the purposively active will of man for his own advantage is in the other produced in a much longer time by the purposelessly active "struggle for existence," to the advantage of the transformed organisms.

But although Darwin had early conceived this fundamental thought of his "theory of selection," and throughout many years had collected the richest material of observations in its evidence, he could not for a long time resolve on the publication of his theory. It would ever appear to him too full of gaps, the mass of facts required for its support too defective, the chain of inferences too incomplete. He was ever wanting to accumulate fresh evidence, to bring ever more light from all sides on the questions in hand, and, as far as possible, to anticipate and refute objections to his conclusions. Perhaps, in the end, he would never have come to communicate the treasures of his knowledge to the world, had it not been for an outward impulse which constrained him to this step. At length, then, in 1859, after the author had completed his fiftieth year, appeared his era-inaugurating chief work on the *Origin of Species*, a work to which all the rest of his writings are but deductions and commentaries. This event happened just a full century after Caspar Friedrich Wolff in Germany had discovered the true development of the animal germ, and just half a century after Lamarck in France had prophetically propounded the principles established by Darwin.

The extraordinary modesty and unassumingness which Darwin showed to such a degree on the subject of the publication of the most important of his writings displayed itself also on all hands in his extensive correspondence, and not less in his personal intercourse. Every one who had the happiness of making his personal acquaintance could not part from him without a feeling of the sincerest reverence and highest appreciation. Were it here allowed me to intercalate a few words on my personal meeting with Darwin, I would give expression especially to the high admiration of Darwin as an ideal man with which my three visits to him in Down inspired me. The first time was in October, 1866, on the occasion of a voyage I was undertaking to the Canary Islands. I had just completed the *General Morphology*, a work in which I had ventured on the experiment of mechanically establishing the science of organic forms on the basis of the theory of filiation as reformed by Darwin. By means of the proof-sheets I had sent him, Darwin was acquainted with my essay, and took all the more interest in it because these morphologic investigations lay rather remote from his own studies, which were principally experimental. It was, therefore, with the greatest pleasure that I responded to an invitation to come to Down, which he had sent me during my short stay in London.

In Darwin's own carriage, which he had thoughtfully sent for my convenience to the railway station, I drove, one sunny morning in October, through the graceful hilly landscape of Kent, that—with the checkered foliage of its woods, with its stretches of purple heath, yellow broom, and evergreen oaks—was arrayed in the fairest autumnal dress. As the carriage drew up in front of Darwin's pleasant country house clad in a vesture of ivy, and embowered in elms, there stepped out to meet me, from the shady porch overgrown with creeping plants, the great naturalist himself,—a tall and venerable figure, with the broad shoulders of an Atlas supporting a world of thoughts; his Jupiter-like forehead highly and broadly arched, as in the case of Goethe, and deeply furrowed by the plough of mental labor; his kindly mild eyes looking forth under the shadow of prominent brows; his amiable mouth surrounded by a copious, silver-white beard. The cordial, prepossessing expression of the whole face, the gentle, mild voice, the slow, deliberate utterance, the natural and *naïve* train of ideas which marked his conversation, captivated my whole heart in the first hour of our meeting, just as his great work had formerly, on my first reading it, taken my whole understanding by storm. I fancied a lofty world-sage out of Hellenic antiquity, a Socrates or Aristotle, stood alive before me.

Our conversation, of course, turned principally on the subject which lay nearest the hearts of us both,—on the progress and prospects of the history of development. Those prospects at that time (sixteen years ago) were bad enough, for the highest authorities had for the most part set themselves against the new doctrines. With touching modesty, Darwin said that his whole work was but a weak attempt to explain in a natural way the origin of animal and vegetable species, and that he should not live to see any noteworthy success following the experiment, the mountain of opposing prejudice being so high. He thought I had greatly overestimated his small merit, and that the high praise I had bestowed on it in my *General Morphology* was far too exaggerated. We next came to speak of the numerous and violent attacks on his work, which were then in the ascendant. In the case of many of those pitiful botches, one was in fact quite at a loss whether more to lament the want of understanding and judgment they showed or to give the greater vent to the indignation one could not but feel at the arrogance and presumption of those miserable scribblers who pooh-poohed Darwin's ideas and bespattered his character. I had then, as on later occasions, repeatedly, expressed my just scorn of the contemptible clan. Darwin smiled at this, and endeavored to calm me with the words, "My dear young friend, believe me, one must have compassion and forbearance with such poor creatures: the stream of truth they can only hold back for a passing instant, but never permanently stem."

In my later visits to Down, in 1876 and 1879, I had the pleasure of being able to relate to Darwin the mighty progress which in the past intervals his doctrines had made in Germany. Their decisive outburst happened more rapidly and more completely here with us than in England, for the reason chiefly that the power of social and religious prejudice is not nearly so strong here as among our cousins across the Channel, who are better placed than ourselves. Darwin was perfectly well aware of all this; though his knowledge of our language and literature was defective, as he often complained, yet he had the highest appreciation of our intellectual treasures.

Darwin having in his great work of 1859, planting the basis of his doctrine, said nothing regarding its anthropological consequences, and having with wise reserve maintained silence on this subject down to the year 1871, it was for me of the highest interest, even as early as my first visit to him in 1866, to converse with him at large on that topic. As was to be expected, the great thinker felt not the slightest misgiving in recognizing the necessary extension to man of the application of his doctrine of filiation. I had, therefore, the highest satisfaction in being able to set forth to him the first genealogical tables which I had then designed, and in all essential points to receive his approval. Though the special study of comparative anatomy and ontogeny, on which I based my phylogenetic plans, lay out of Darwin's province, he yet completely perceived their importance. In his celebrated work, in two volumes, on the *Descent of Man and Selection in Relation to Sex* (1871), he has therefore declared himself to be in all principal points in harmony with me, and has expressly emphasized the importance, in relation to the history of filiation, of the numerous animal hereditary relics we possess in our human vertebrate organism.

If now we survey the huge mass of facts which in this and other works Darwin has gathered together, with just as much forethought as boldness, to serve as a support for his ideas; if we regard the innumerable observations and experiments he has himself instituted to establish their accuracy,—we cannot but wonder at the strength of the giant mind which has amassed such an abundance of knowledge and power, of experimental knowledge and philosophical science, in the narrow compass of a single human life. Involuntarily, we exclaim, What a rare constellation of happy circumstances there must have been to render possible such extraordinary performance, conjoined with commensurate success!

We must then, undoubtedly, admit that, in the case of Darwin, merit and fortune went hand in hand, and that rare favor on the part of fate made it possible for him to execute completely his great life-task. Free from all the cares and worries of a week-day existence, enjoying in security a comfortable home and a happy family life, undisturbed by professional business and official duties, he was able to devote himself throughout half a century exclusively to his favorite studies. While the solitude of his tranquil country seat saved him from the turbulent traffic in knowledge, which in large cities consumes the best powers of a man, it also supplied him with those conditions which were most favorable to the composure and harmony of his rich world of thoughts. In our opinion, nothing is more prejudicial to scientific work of a deep and earnest character than the pedantic wrangling of our great universities and the partisanship of scientific colleges. From this, as from all posts of honor and other such disturbing influences of the outside world, Darwin, his whole life long, kept himself remote; and he acted wisely in so doing.

While, therefore, the great naturalist owed his unexampled success in the first place to himself and his noble endowment, some share in the credit must also be allowed to the favorable scientific situation of the time, which was furthersome in a high degree. Ever since the failure of the older nature-philosophy in the beginning of our century, since Goethe and Kant in Germany, Lamarck and Geoffroy in France, failed in their attempts to direct the minds of men to the natural development of the organic world, a strictly experimental method became the universal practice in the domain of biology. The task thus set before scientific laborers was that of the most exact investigation into all the particular forms and phenomena of animal and vegetable life; the monistic explanation of the whole, and, in particular, the solution of the problem of creation being abandoned. The foundation of embryonic history by Baer, of comparative anatomy and palæontology by Cuvier, the reform of physiology by Johannes Müller, the propounding of the theory of cells and of the doctrine of tissues by Schleiden and

Digitized by Google

Schwann, had opened up new and grand provinces to natural experiment, whence was drawn by numerous laborers inquisitive for knowledge an astounding abundance of facts. In the short space of half a century there arose quite a series of new sciences.

The more, however, that from year to year the number of new discoveries accumulated, the higher that the flood of literature swelled, the more confused became the chaos of the general theory of nature, and the greater was the necessity felt by thoughtful inquirers for an elevation above the stifling mass of detached observations to universal monistic points of view and to the knowledge of real causes. This requirement was now most happily met by the new doctrine of development. It is true that, as early as 1809, in the year of Darwin's birth, Lamarck had clearly demonstrated that the similarity of organic forms was to be explained by their common derivation and their diversity by their adaptation to the conditions of existence. He had, however, failed to attain a knowledge of the active causes which Darwin fifty years later disclosed in his theory of selection.

It is therefore in complete contradiction with the historical facts and a proof of utter ignorance of the history of biology, when even at the present day a few individual opponents of Darwinism declare the theory to be a vague hypothesis, in support of which evidence has yet to be adduced. In reality, the very opposite is the case. The actual evidence for the common descent of the manifold forms of life had already long been adduced before it was formulated by Darwin into a clear scientific theory. Numerous physiological experiments even had long before been carried out in support of it. For the total results of our horticulture and animal rearing, and the mass of new forms of life which civilized man has artificially produced to his own profit and advantage, are just so many experimental proofs of the theory of selection. And, as concerns the "struggle for existence," the essential element in Darwinism, no particular arguments in truth are needed; for the whole history of mankind is nothing else!

Our whole science of living nature, which in one word we designate biology, was, accordingly, perfectly prepared for the reception of the fertilizing ideas of Darwin; and hence in large measure we explain their extraordinary success, in contrast with the pre-maturity and inefficacy of the similar theories of his predecessors. The high merits of these predecessors Darwin, with his noble sense of justice, has on all occasions recognized. It is, therefore, far from the spirit of the great master when in our day some overzealous disciples of his (particularly in England) are intent on celebrating him as the sole founder of the new doctrine of development, as though it had all at once sprung ready-made from the head of the thinker, like Minerva armed from the forehead of Jupiter. On the contrary, we believe that we are acting perfectly in the spirit of our deceased master and friend, if we here call to honorable remembrance his great predecessors. The splendor of his name can only be enhanced by showing that, in the most important principles of his theory of nature, he was in unison with a select number of the greatest minds the history of human civilization can boast of.

[*Concluded next week.*]

CORRESPONDENCE.

THE UNITARIAN CONFERENCE ONCE MORE.

Editors of The Index:—

A discussion on the basis of mistakes is apt to be somewhat misleading and unprofitable. I write, therefore, for the simple purpose of testifying as to a matter of fact that your senior editor calls in question, in your issue of the 19th inst., and also to correct an important error into which Mr. Stewart has fallen in his communication.

Take these two points in their order.

I. Mr. Potter raises the question as to the *intention* of those who left the door of the Conference open. He is not inclined to go in, unless he is quite sure that the out-hanging latch-string *means* a welcome. On this point, I agree with him. I should take the same position. I have heard of the young gentleman who said he was "not going to get mad and stay at home from a party *just because he was not invited.*" Under similar circumstances, I might not get "mad," but I should certainly "stay at home."

But what are the facts in the present case? I can testify so far as this: The men who gave me their names as ready to support the proposed change were *representative men.* So far as their private opinions were concerned, they represented *both extremes.* They were nearly fifty in number; and they were no more—as I have a right to believe—for the simple reason that I did not have time to ask any more. Only three declined to sign. Two of these were men who are generally classed as *radicals;* and their reasons for not signing have no bearing on this question. The third one—a conservative—would not join in this particular move, but said distinctly that he *would* join a movement whose object should be to *abolish the doctrinal basis altogether.* He thought the Conference should be on a "purely business basis." The men who did sign were such as Drs. Clarke and Hale, Messrs. Collyer, Shippen, and Reynolds, Profs. F. P. Peabody, C. C. Everett, and J. H. Allen. And—this is the important point—I told these men that if such men as Gannett, Hosmer, Spencer, and Potter had no right in the Conference *then I had none.* I said that, while I wanted to stay, I must be able to stay conscientiously or not at all. And *it was in answer to such appeals that they gave me their names.*

I think I am fully justified in saying that Mr. Spencer's interpretation of the action of the Conference is the true one. The force of this Article Ten is like the latest piece of any legislation. So long as it stands, *it modifies and interprets all preceding legislation,* including not only the First and Ninth Articles, but even *the name itself.* And, as an evolutionist, Mr. Potter certainly ought not to be surprised that the Unitarian organism—as is the case with almost all organized forms on the globe—should carry about in itself, for a time, *certain rudimentary organs* as embodied records of its past history. If *to-day* Unitarianism stands *facing the future,* and with arms of welcome for all "who, while differing in belief, are in general sympathy with" its "purposes and practical aims," is not this all one can *expect,* or even has a *right to ask,* of a body that *grows,* and by the law of growth maintains its *personal identity along the lines of its advance?*

II. Now for the error of Mr. Stewart. And it is important that I go into this matter fully, as otherwise it may be the cause of a good deal of misunderstanding.

The first draft of my proposed new article—as Mr. Stewart rightly quotes it—was as follows: "No part of this Constitution is to be so construed or interpreted as to turn the Unitarian body into a sect, or to exclude from its fellowship or co-operation any honest seeker after truth or earnest worker in the cause of human advancement and elevation." By a slight verbal error, the last word is "education" in Mr. Stewart's version. Mr. Stewart speaks of this as "the paper which he—myself—offered to the Business Committee," etc. And, a little later, he says, "This article, however, was changed after it reached the Committee." And Mr. Potter naturally fixes his keen eye on this as an "important fact," saying, "The proposition which went to the Business Committee is not the one which came from them and was adopted." He rightly infers from his belief in such action that the Business Committee *narrowed the original proposition.*

This *would be* an "important fact," *only it doesn't happen to be a fact at all.* My friend Stewart obtained his information from me; and possibly I may be responsible for his error, without being conscious of it.

The legitimate inference from the changed form of the article is of the strongest possible kind; and it is in favor of *breadth, not narrowness,* on the part of the Conference. Notice the facts, and see.

1. *If* the article, as first drawn, be the broader one, *it was just this broader one* which all these representative men referred to *had signed.* And these signers included all the members of the Business Committee who were present when I met them.

2. The article was not changed *by* the Business Committee, nor *after* it reached their hands. Even to its punctuation points, it went through just as I wrote it. The Committee did not even suggest a change. Not only that, but all of those whom I met would be in favor of abolishing the slightest trace of dogma in the entire basis as it now stands.

3. Who made the change then? "I did it with my little hatchet." Why? *Not* under *conservative* influence, but under *radical.* A radical member, already referred to, said he not only could not sign the article as first drawn, but that *he should oppose it.* Opposition from such a quarter would have defeated it. His objection was that it did not bind the Conference to "a definite *religious* purpose." He did not want it narrowed, but he did want it religious.

4. There was talk also—as Mr. Stewart says—of making what became Article X a substitute for Article IX. But here, again, I found that I should meet with opposition. This, however, was merely a difference as to what was the practical best. And the opposition came from a prominent man who—as I happen to know—would gladly welcome Mr. Potter to membership in the Conference.

From first to last then, I did *not* meet *any* opposition that *looked like narrowness. All* the opposition was as to *details;* and, *in every instance,* it came from men who were in sympathy with the movement to break down the sectarian wall.

The plain fact then, in conclusion, is this: The Conference, *as a Conference,* has opened the door to all "in general sympathy with" its "purposes and practical aims." In accordance with the usage of all organized bodies, and according to all logical and rational inference, *all previous declarations must be interpreted in the light of this.* This is the *invitation of the Conference.* If particular members would not like to see Mr. Gannett or Mr. Potter there, I fail to see how this touches *the general invitation of the Conference,* which, in its official capacity, is the *owner of the house and the host.* Would Mr. Potter, as a delegate to Congress, decline to enter because members of the opposite party would rather he stayed at home? The Conference is a corporate body; and individual opinions in it are *only* individual opinions. And, however illogical its present basis, the *fact remains* that it *has* declared that it does *not* intend to exclude "*any* who, while differing in belief, are in general sympathy with its purposes and practical aims." It is quite possible that some members of the Conference would like to have me stay at home. But until such person or persons make it clear to me that he or they *are the National Conference,* my right to wish they would stay at home is as valid as theirs concerning me.

The Conference has taken a grand forward step. If it has not done everything that could be desired, who has? It is the *fact* of movement, and of movement *in the right direction,*—not the precise distance gone over,—that should be taken as a hopeful and cheering sign by all true friends of growth.

Oct. 20, 1882. M. J. SAVAGE.

[The *intention* of the Conference, as it seems to us, cannot be ascertained by consulting individual members as to the meaning of their votes, but must be determined by the record; and it is just what is meant by the record, or by the Constitution as it now stands, which puzzles us. However, if the Conference meant to invite non-Christians to its membership, this intention will be made plain by the Council sending the usual form of invitation to attend the next meeting to such societies as that of Mr. Spencer at Florence, the Free Religious Society at Providence, and the Society for Ethical Culture at New York. We shall wait with interest to see if it will do so. As to the misunderstanding of the facts as reported by Mr. Stewart, we are glad to have an accurate version from one in a position to know; but we do not see that the main question is much affected.—W. J. P.]

THE SUBJECTIVITY OF CONSCIOUSNESS.

Editors of The Index:—

In a brief criticism of Bowne's metaphysics, by Mr. Abbot, which appeared in *The Index* of July 20, it seems to the writer that he has struck upon the one great fallacy that vitiates all modern philosophic thought. You can hardly take up an essay on philosophic subjects, but what all its reasonings and conclusions are based upon the premise "that *the individual mind knows only its own states of consciousness.*" And this has been notably apparent in the essays that have appeared in *The Index* during the past year.

According to this dogma in philosophy, the mind is shut up to a knowledge of its own states alone, and the whole universe outside the individual mind is a vast sea of speculation and conjecture, about which nothing can ever be positively known; for, as Mr. Abbot truly says, "Once grant that an external world cannot be known, but only inferred, as the hypothetical cause of the individual's states of consciousness, and Occam's impregnable maxim (which Sir William Hamilton reaffirms in his 'Law of Parsimony') forbids the inference."

In view of these facts, it becomes a momentous

Digitized by Google

question for us to consider whether this great modern philosophic doctrine of the mind, knowing only its own conscious states, is justified by an analysis of the nature of consciousness, as far as lies in our power.

All investigators into the phenomena of consciousness have ever struck upon one vital, final, and bottom fact, beyond which no mental power could penetrate: namely, that *all* consciousness involved two opposite powers as an absolutely necessary condition,—a *me* and a *not me*, a subjective and objective; and that all conscious realization was, in some way, the result of the reciprocal interaction of these opposite powers. This same truth constitutes the idea of the "Relativity of all Knowledge." And what is the only logical conclusion to be drawn from this primordial fact? Is it not that all consciousness, being the result of two opposite factors, both of which are realized in every act of consciousness, is really no more one of these factors than the other,—in other words, is as much *objective* as *subjective*?

Where is there any proof that the subjective factor in consciousness is recognized any more directly than the objective? If we are conscious of the subjective only by means of and through the objective, then the latter is given as directly as the former.

All cognition is relative, and involves two terms, whose reciprocal action and reaction upon each other constitute the relation; and it would be an irrational inference to suppose that our consciousness, which is the result of the relation or co-equal action and efficiency of both these generic terms, should be shut up to one of them alone,—more especially when it also contradicts all our conscious experience.

The purely subjective character of consciousness is supposed to receive additional strength, if not positive confirmation, from the discoveries of modern science. It is argued by scientists that the external cause of our sensations of sound, light, and color, are merely motions in the air and ether, and that these motions have no identity with our impressions of sound and color. But neither can they any more identify our sensations of these qualities with any motions *in* our nerves or brain; and, if they do not know what constitutes sound and color inside of us, how can they determine what they are outside of us? To our consciousness, certainly, these conditions have an external existence; and no scientific knowledge yet attained furnishes the first iota of positive proof that they do not so exist.

But the reasoning by which the attempt is made to prove that all our consciousness is subjective is completely refuted by the very premise from which they reason; for, if all our consciousness of everything external is our own subjective states, then we do not even know that motion and form are external things, and we have no more logical right to infer the existence of motions in the air and ether than we have to infer the external existence of sound, light, and color.

This doctrine, in modern philosophy, of the subjectivity of all knowledge, is directly antagonistic to the very foundation principle upon which all science is based, and makes a perfect muddle of the world's philosophic thought.

It would be an anomalous state of things, if the principle through which alone the universe can be at all realized should possess the capacity to realize only what is contained within the narrow shell of our physical organisms, and all the universe outside be relegated to the realm of the unknown and uncognizable. It contradicts our whole nature and experience and all philosophic thought, by shutting up the mind from the direct cognition of principles having a universal and objective application, which can alone constitute philosophy, and by opening the door for admission into it of any creedal dogmas and superstitions with which theological inventors may desire to limit and fetter human thought; for, if they can once impress upon the mind that all outside itself never can be truly known, but must ever rest upon conjecture, then to that extent they render the universe superhuman and supernatural, and destroy any certain criterion by which the mind can determine what is true.

FRANKLIN SMITH.

DEDHAM, MASS.

THE MUSICIAN AND THE NATURALIST.

Editors of The Index :—

Did you ever hear the following story of the musician, Dr. S. Wesley? A former pupil of his sent him a letter, asking questions about the use of the so-called Gregorian Chants. Dr. Wesley replied: "Your questions about Gregorian Chants have surprised and pained me. I thought I had taught you better. You may believe me, I am a Protestant and a musician, and yours truly, S. Wesley." Now, I cannot help thinking what a great satisfaction that letter must be to all believers in the orthodox chant. You see how much it leaves them *free to believe*. It does not deny the canonicity of the chant; it does not deny that the chant comes originally from the Hebrews: for anything Dr. Wesley has said, it may be quite true that Gregorian Tone No. 1 is the identical chant to which the Hebrew girls shouted, "Saul has laid his thousands low, and David his ten thousands." Moreover, we are free to believe that St. Gregory himself was the man who obtained these wonderful chants from the Hebrews, and gave them newly revised and improved to the Christian Church.

But, in his career as a Protestant and a musician, Dr. Wesley knew nothing of them. They were outside his circle.

Dr. Darwin's letter recently printed in the *Pall Mall Gazette*, and which you will be sure to transcribe into *The Index*, much reminds me of this of Wesley. It seems to say: "Christ, Revelation, Immortal Soul? I am surprised and pained. Believe me, I am a student and a naturalist, and yours truly." Now, it is certainly possible—for the *Spectator* is doing it—to wrest comfort from the fact that Dr. Darwin does not *deny* this and that. "Evolution does not deny God as a possibility, nor can it deny revelation." Very true. But these ideas had as little to do with Darwin's life as Gregorian Chants had with Dr. Wesley's. He knew nothing about them. A great and good man lived and did his duty in this world without ever troubling himself about the suppositions of theology, without even attempting to prove that these things are *not* so. The things dear to us as Christians and parsons (for I humbly claim to be both) he simply ignored. He got on well without them. I glory in the fact. I believe that thousands of my practical-minded countrymen resemble Darwin in this. They do not know Jesus, and they do not feel their want of him; but they will not be damned, notwithstanding. There are more methods than one of living nobly; and while I endeavor to do so by Christ's aid, if not for his sake, I rejoice that others have lived and are living a nobler life than mine in the spirit of Charles Darwin, attending to what seems to be their proper mission and leaving the future world and the Eternal Being to reveal themselves.

Yours truly, J. RUDDH.

HASTINGS, Oct. 4, 1882.

MISCELLANEOUS.

OUR esteemed contemporary, the *Catholic Review*, is getting to be ill-natured. In an editorial on our address before the Evangelical Ministers' Association, it refers to us as "this well-known infidel and reviler of Christianity." But the portion of the *Review's* article which we think of most interest to our readers is the following: "Perhaps these excellent ministers of the gospel wanted to show their liberality. Why, then, did they not invite him to their pulpits? They might about as well have done so. In fact, they have probably been the occasion of giving quite as wide, if not a wider, circulation to the anti-Christian diatribe with which they were regaled, as if he had pronounced it from one of their pulpits. This doctrine of liberality may be all very well for those who don't know exactly where they stand; who have no positive, settled, well-defined, and fixed principles on the subject of Christianity; who are groping for truth, like men who are conscious that the foundations on which they have been accustomed to rest are giving way: but to Catholics, who know what they believe and the infallible ground on which their faith rests, such liberality seems not only spurious, but perfectly absurd, ridiculous, and suicidal. After all, is it not the 'fellow feeling that makes us wondrous kind' that lies at the bottom of this external show of liberality? Does it not indicate a secret prophetic consciousness that they are inevitably tending in the same direction of free thought; and that, as it is impossible to determine accurately the line of Orthodoxy, so it is really not much matter where the line is drawn between Christianity and free thought, or whether any line at all be drawn?"

IT is no discredit to this country that the works of Mark Twain, our great humorist, are widely read; but, to show the justness of Mr. Towne's reply to Matthew Arnold on American Culture, which we printed recently, we submit the following facts: When Chicago was burned down, there had stood side by side, and there fell together into smoking ruin, three of the largest bookstores in the world,—double stores of great depth, five stories high, with basement for receiving and packing and for storage. The middle one of the three was an old and solid concern, with an immense trade, built up and managed by Mr. S. C. Griggs, one of the pioneers and marked men of Chicago enterprise. At the time of the great destruction by fire, younger men had come in and had become a large part of the prosperity of the house; and, to these, Mr. Griggs gave up the bookselling business under the new name of Jansen, McClurg & Co., while he established a purely publishing interest under the old name of S. C. Griggs & Co. The development of this interest is a striking feature in the progress of that vast North-west to which Chicago is a metropolitan mart. There are twenty-one important items in the list of school and college text-books of this Chicago publishing house, such as the sixteenth edition of Boise's *First Lessons in Greek*, adapted to Goodwin's and Hadley's Grammars (the highest standards of Greek study); the fourteenth edition of Boise's first six books of Homer's *Iliad*; the fifth edition of the same author's *Exercises in Greek Syntax*, and selections from various Greek authors; the nineteenth edition of Jones's *Exercises in Greek Prose Composition*; the fourth edition of Stevens' *Select Orations of Lysias*; the third edition of D'Ooge's *Demosthenes on the Crown*; the fourth edition of Bacon's *Manual of Gesture*; the third edition of Raymond's *The Orator's Manual*; and other like first-class books for Greek, Latin, German, Norse, mathematical, etc., study. In popular reading there is the fiftieth thousand of Dr. Matthew's *Getting on in the World*; the seventeenth thousand of his *Words, their Use and Abuse*; the eleventh edition of his *The Great Conversers, and Other Essays*; the tenth thousand of his *Hours with Men and Books*; the eighth thousand of his *Oratory and Orators*; the fourth edition of his translation of some of the essays of Sainte-Beuve; and his *Literary Style, and Other Essays*. To the same popular class of books belong B. F. Taylor's *The World on Wheels, and Other Sketches*, sixteenth edition; his *Between the Gates*, ninth edition; his *Old Time Pictures and Sheaves of Rhyme*, his *Songs of Yesterday*, and his *Summer Savory*. In another line may be mentioned Foster's *Prehistoric Races of the United States*, fifth edition; Anderson's four works, *America not Discovered by Columbus*, a new edition; *Norse Mythology*, third edition; *Viking Tales of the North* and *The Younger Edda*; Winchell's two volumes, *Pre-Adamites* and *Sparks from a Geologist's Hammer*; Morris' *British Thought and Thinkers*; and Welsh's *The Development of English Literature and Language*. The latest item in this Western publishing list is a series of "German Philosophical Classics for English Readers and Students," in which the following ten volumes are already arranged for: Kant's *Critique of Pure Reason*; his *Ethics* and his *Critique of Judgment*; Leibnitz's *New Essays concerning Human Understanding*; Fichte's *Science of Knowledge*; Schelling's *Transcendental Idealism*; Hegel's *Logic*, his *Philosophy of Religion*, his *Æsthetics*, and his *Philosophy of History and of the State*.

BOOK NOTICES.

IN the *Atlantic Monthly* for November, George S. Wilson offers his solution of the problem, "How shall the American Savage be civilized?" giving the plan of "a civilization community and school of industry," by which this result, he fancies, may be reached. Charles Dudley Warner describes "A Ride in Spain"; and Eunice W. Felton, "Domestic Country Life in Greece," as it exists to-day. "Under the Sky," by Edith M. Thomas, is a bright and pleasing essay. Maria Ellery McKaye gives an interesting sketch of the dramatic author, Beaumarchais, of whom she states that "the opportune, sorely-needed succor sent by Beaumarchais from France for our brave men at Valley Forge cheered the sinking heart of the great general [Washington] in that darkest hour before dawn." The serial stories progress rapidly toward completion. The short story, "Rube Jones," is by P. Deming. The books reviewed at some length in this number are Howells' *A Modern Instance*, Boissier's *Cicero and his Friends*, Trollope's *Life of Cicero*, and Froude's *Cæsar*, the last-mentioned three under

Digitized by Google

the title "Recent Memoirs of Cicero," and Thomas Hughe's *Memoir of Daniel Macmillan*, the publisher. The poems are by Charles L. Hildreth and William Young. The *Atlantic* for 1883 promises to be unusually attractive, inasmuch as very frequent contributions are promised from Dr. Holmes; a dramatic poem, entitled "Michel Angelo," which was left completed by Mr. Longfellow, will be given in three numbers; Henry James' "Daisy Miller," rewritten in dramatic form, will be a notable attraction; and essays are promised from Mr. Howells and Mr. Warner, in addition to the other good things which the magazine is sure to have.

EACH number of the *Century Magazine* seems to strive to outdo the preceding one in brilliancy and interest, and the November number is an especially brilliant one. Among the contributors are Henry James, Jr., W. D. Howells, Col. Higginson, "H. H.," Alphonse Daudet, Charles Dudley Warner, Richard Watson Gilder, Albert Stickney, Mrs. Frances H. Burnett, Mary Hallock Foote, Washington Gladden, Edward Eggleston, John T. Stoddard, with several others. Surely, a nearly unparalleled array of acknowledged talent to be presented in one number of a magazine. The illustrations, always in the highest style of the art, are many and charming. Two fine full-page portraits are given, one of Florence Nightingale, the other of Henry James, Jr., of whose literary work Howells gives a careful criticism. Alphonse Daudet's article on Victor Hugo will be found specially interesting; and James' article on "Venice," with its profuse accompanying descriptive illustrations, drawn by the best artists, is delightful reading. "Bric-à-Brac" contains two notable features, a couple of original poems, copied in *fac-simile* handwriting, contributed to a young lady's album by Robert Browning and Longfellow, and a poem entitled "Narcissus in Camden," a clever take-off of the styles of Oscar Wilde and Walt Whitman and apparently descriptive of their recent meeting, by Helen Gray Cone.

THE *Popular Science Monthly* for November treats of the following list of subjects: "Sewer Gas," a subject in which all city people are concerned, by Dr. Frank H. Hamilton; "The Science of the Present Period" is vindicated in a masterly manner by Emil du Bois-Reymond; an account of "Some Curious Vegetable Growths," with illustrations, is given by W. H. Larrabee; Dr. Nathan Allen writes of "The Law of Human Increase"; "Science in Relation to the Arts," by C. W. Siemens, treats especially of electric and gas illumination; "The British Lion," about which Prof. W. B. Dawkins writes, is a prehistoric animal; "Scientific Farming at Rothamsted," by Dr. Manly Miles, is an account of the systematic agricultural experiments made by Messrs. Lawes and Gilbert; Dr. Felix Oswald, in his second paper on "Physiognomic Curiosities," is bright, crisp, witty, and instructive; Prof. Grant Allen asks and partially answers the question, "Who was Primitive Man?" There is a sketch, with portrait, of Charles Adolphe Wurtz, President of the French Academy of Science; and an interesting account of life among the "Battas of Sumatra," by Dr. Schreiber. Prof. Youmans, in the "Editor's Table," deals summarily with the pretensions of Mallock as a scientist.

THE *North American Review* for November ably discusses various live issues of the day. John Welsh opens the ball by attacking "English Views of Free Trade"; Judge Joseph Neilson treats of "Disorder in Court-Rooms"; Dr. William Hammond, still bearing in mind apparently the case of Guiteau, discusses some phases of semi-insanity, and calls such cases "Problem for Sociologists"; Mrs. Julia Ward Howe, in an article entitled "The Industrial Value of Woman," answers in a calm, dignified, and logical manner what there was coherent enough to answer in a recent article in the same magazine on "Woman's Work and Woman's Wages," by Charles W. Elliott; Judge Dwight Foster speaks of the "Advantages of the Jury System"; Steele Mackaye gives some good and pertinent advice as to the best means of securing "Safety in Theatres"; "The Suppression of Vice" is the subject of a sort of symposium discussion, in which Anthony Comstock, O. B. Frothingham, and Rev. J. M. Buckley participate.

THE *Catholic World* for November, under the title "God or Nothing!" takes to task the Rev. Henry Leach for his article on "The Educational Question in Belgium" in *Macmillan's Magazine* for August. Alfred M. Williams finds the original of Thackeray's Barry Lyndon in a daring young Irishman of good birth named William, alias "Tiger, Roche," whom Mr. Williams thinks "A Real Barry Lyndon"; Arthur F. Marshall, in an article on "Oxford and Cambridge," treats of the relations of these two seats of learning to Catholicism; W. J. Tenny writes of "Mr. Bancroft's New Volumes"; John MacCarthy treats of "The Catholic Element in English Life and Letters," Henry Bellingham describes some of the antics of "The 'Salvation Army' in Great Britain"; M. P. Thompson writes of "Puy-en-Velay"; and Mary Alice Seymour of "The Festival of All-Saints in Vienna." There are several other articles, stories, and a poem.

PERSONAL ITEMS.

THE date of Mr. Holyoake's lecture at the Parker Memorial has been changed to Sunday evening, November 5.

IT is stated that Stanley, the African explorer, has so won the confidence of the natives that the white men at the posts established by him are no longer under the necessity of carrying weapons.

FRANCOIS LENORMANT has gone to Southern Italy, on a mission from the French Ministry of Public instruction, to complete his researches into the archæology of Apulia and the western coast from Reggio to Pæstum.

MRS. MYRA CLARK GAINES, having fought at law for her personal "rights" through a long life, has come to the conclusion in her old age that she is as competent to vote as a man, and has joined the Woman Suffrage movement.

THERE is still some gratitude left among men. Miss Anthony has won the promise of the votes (when she runs for office) of a couple of railroad officials, because of her conscientious consideration for baggage-men in buying and using only small-sized trunks in travelling in place of the generally preferred "Saratogas."

MISS ELEANOR ORMEROD, who was lately made consulting entomologist to the Royal Agricultural Society of Great Britain, has just been appointed special lecturer on economic entomology to the Royal Agricultural College, Cirencester. Her class will consist of young men who are training as practical agriculturists.

MIDDY MORGAN, the woman stock reporter of the New York *Times*, taught an insolent policeman a valuable lesson the other day. "This fellow mistook her for a wanderer from the backwoods as she was walking on a wharf near the Battery recently, and loudly advised her to 'walk overboard.' She quietly took his number, reported him at his station, identified him when he appeared at the end of his watch, and had him suspended for two weeks without pay. The astounded rough tried to beg off, and his fellow-officer shut him up with the remark, 'Served ye right.'"

DR. MCCOSH announces the programme of a philosophic series. "For the last thirty years," he says, "I have been taking my part in the philosophic discussions of the age. I have a few things yet to say before I willingly leave the arena." These will be said in five volumes, to be issued quarterly in pamphlet form. The first number will be published about the last of this month, and will be devoted to "The Criteria of Diverse Kinds of Truth as opposed to Agnosticism, being a Treatise of Applied Logic." The last one is "A Criticism of Herbert Spencer's Philosophy as culminated in his Ethics."

PROF. SOPHOCLES, one of the oldest members of the Harvard faculty, bears the truly classical name of Evangelinus Apostolides Sophocles, and is now seventy-five years of age, having been connected with the university since 1845, when he was first appointed Greek tutor. His Greek dictionary and his text-books of ancient and modern Greek have made his name well known in the New World and the Old, and have been of great service to scholars in every country as well as to those at Cambridge. He is, like many great men, absolutely simple in his tastes, and has for some time lived a retired life, out of reach of society, devoted to his pets, of which he has many. He has a number of hens and chickens, of which he is extremely fond, and which he names after his friends as a means of keeping them constantly in his thoughts.

THE IMMORTAL LIFE.

By JOEL [illegible]S.

12mo. 255 pp., with [illegible]e Portrait of the Author. $1.50.

Mr. Weiss' great argu[illegible] a future existence is the nature o[illegible] *personality*. The argument proba[illegible] not convince persons with a stro[illegible]al tendency to disbelieve immorta[illegible] it ably maintains that science has no[illegible] many persons apprehend and some[illegible] given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, *moon*, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing *forth* through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

TO PREVENT a second repetition by the same person of "marrying in haste to repent at leisure," the Vermont Legislature is considering a bill which prohibits a divorced person from marrying within a year, and a person from whom a divorce is obtained from marrying within five years, or ever, if the ground of complaint is a crime, in which case criminal prosecution must follow the divorce proceedings.

A CORRESPONDENT of the *Investigator* writes from Osceola, Iowa: "A common school pupil was recently expelled, because he refused to read the Bible. The school directors, on being appealed to, ruled that Bible-reading and prayer could not be enforced during school hours. The teacher, therefore, calls school a quarter of an hour before the time, and the Bible class reads therefrom while the ungodly are at play, or some of them loitering on the way to school."

THE bills presented by President Garfield's physicians for the eighty days of his illness average, on the part of Drs. Bliss and Hamilton, a little over three hundred dollars per day; Mrs. Edson claims over one hundred and forty dollars per day for her services; while Dr. Boynton more modestly demands only fifty-six dollars per day: these, with other medical attendance, foot up a total of ninety thousand dollars to come out of the people's assumed-to-be capacious pocket.

EVEN in this sceptical age, "godliness," as of old, is sometimes the accompaniment of "great gain," as in the case of the Baron Wilhelm Rothschild of Frankfort, Germany, who, despite his money-getting proclivities, is so strict a Jew that, during his recent tour through Switzerland, he was accompanied not only by his ritual cook and butcher, but also by ten devout persons of his own religion, who went solely for the purpose of praying with him, as, according to Mosaic law, a congregation must consist of at least ten worshippers.

ONE of the features of the Munich Electrical Exhibition is a telephone which transmits thither pieces of music performed at Oberammergau, sixty-three miles distant. Another telephone transmits concert pieces performed in the English Café so as to be audible to the entire audience in a large hall in the palace. The transmission of power by a single wire from the coal mines of Miesbach, about thirty-seven miles distant, suggests the possibility of utilizing the heat of coal at a distance, and thus saving the labor and expense of transporting the coal.

THE widow of John Brown received two receptions in Boston last week, at which many of the old anti-slavery people were present. Her New England friends are raising a fund to give her an income for life; and any contributions to this fund will be received by William Endicott, Jr., 3 Summer Street, Boston. This week, she sets out on her return to California, where she has lived since 1864, where she has four children and seventeen grandchildren living. Her only surviving son, Salmon, who was with his father in Kansas, is a sheep farmer in Humboldt County, Cal. She buried her son Watson in the Adirondacks, October 12, before coming to New England.

AT the unveiling last Friday, on the embankment at Chelsea, of Boehm's statue of Carlyle, Prof. Tyndall delivered an impressive address, concluding with these words: "Might I append to these brief remarks a wish that a companion memorial could be raised on this Thames embankment to a man who loved our heir and was by him beloved to the end? I refer to the loftiest, purest, and most penetrating spirit that ever shone in American literature,—to Ralph Waldo Emerson, the life-long friend of Thomas Carlyle." The despatch which conveys this intelligence says that the suggestion of a companion memorial to Emerson was cordially received by the audience, which was a very brilliant one.

A COMMUNITY of peril makes the hitherto hostile hierarchies now wondrous kind to each other, so that they are even contemplating an alliance offensive and defensive, but chiefly defensive. There is in England what is called the Order of Corporate Reunion, which has for its aim the rejunction of the English with the Papal Church. In general, it is an association for the promotion of Christian unity. Hitherto, the various divisions or clans and septs of Christianity have furnished to unregenerate mankind outside of the fold of salvation a most unedifying example of mutual hate and persecution, that used to proceed to the length of fire and sword. Now, under the genial influence of free thought and scientific truth, the various Christian clans are at last exhibiting the outward appearance at least of inter-brotherly affection.

IN a London journal, Alfred R. Wallace, the naturalist, who, as is well known, is a Spiritualist, writes thus in regard to "materializations": "It is my deliberate conviction—accepting the reality of these phenomena as witnessed personally and as narrated by a crowd of competent observers, and deducing from them the obvious and close material and spiritual connection of the form and medium—that the fact of a person seizing the form and finding the medium is not and cannot be a proof of fraud, but is, in all probability, the natural and inevitable effect of trying to keep apart two beings who are really one, and who cannot be rudely interfered with without danger to the human body, whose abnormal organization supplies the material for the temporary materialization of these marvellous existences." If this be true, how properly to test a "materialized form" is not clear to one who is disposed to subject the claims of Spiritualism to scientific verification.

E. H. HEYWOOD, of Princeton, Mass., was arrested last week on the charge of depositing in the United States mail obscene literature and a notice giving information where, how, and of whom indecent articles could be obtained. The charge in the complaint in regard to obscene literature was, it is stated, based on extracts taken from Walt Whitman's *Leaves of Grass*. We have no sympathy whatever with that pruriency that would suppress a work like Whitman's, simply because it contains passages that are coarse and offensive. The authorities might as well suppress the Bible for the same reason. On the other hand, a man who culls from the *Leaves of Grass*, the Bible, Shakspere, or any other standard work or work of genius, all the passages that are vulgar or lascivious and prints them in a paper or pamphlet apart from their connections, is in contemptible business, —a business more contemptible even than the pruriency that is offended and shocked by allusion to certain great facts pertaining to manhood and womanhood, in the masterpieces of literature.

JOSEPH COOK, in reply to challenges from anti-christians to debate the claims of Christianity-has published a letter in Melbourne concerning "spiritualists, infidels, and representatives of free-thought," which indicates that there has been no improvement in him since he left Boston, either as to manners or regard for truth. All these three classes, he says, "are notoriously connected with schemes for the propagation of immorality. Several of the prominent agitators in support of infidelity and freethought have been sent to jail for distributing infamous publications through the mails. No decent man can consent to appear on the same platform with the representatives of enterprises that have a debasing effect on the public mind." "A mere worldling," remarks the Springfield *Republican*, commenting on this letter, "must pronounce it discreditable in this age of the world to spell 'free thought' in one word, and to convey by implication the slander that all his antagonists must be guilty of infamous practices. But, further, he is 'not open to challenges of which the evident object is to advertise infidelity.' This definitely shuts off every challenge, on the well-known Cookian principle that to disagree with Cook is to be an infidel. But the richest item in this proclamation is that, 'when infidels of any kind issue a book that goes through ten editions in ten years at a dollar a copy,' he will reply to it. He adds, to prove his magnanimity, that 'several volumes of the Boston Monday Lectures have gone through ten editions in five years. This is Joseph Cook all over: he would measure heads with an archangel."

THE POUND OF FLESH, BUT NOTHING ELSE.

The *Sunday School Times* is probably right in its assumption that the legal decision under which Stephen Girard's will was declared to be valid and Girard College was established, is not likely to be changed. At least, no immediate change could be expected, even if any way could be devised for bringing the case again before the courts. The decision was rendered by the Supreme Court of the country; and, though no one of the judges who then composed the court is now a member of it, courts are naturally reluctant to overturn their own decisions, and especially when, as in this case, they were unanimous.

But there is one legal point that might be raised, and it were well if it could be put at once into the form of a legal inquiry before the courts; and that is, whether the management of the college, in respect to religious teaching, is in accordance with the terms of the Supreme Court's decision. It will be remembered, as we said last week, that the court took the ground that the teaching of Christianity in the college was not prohibited by the terms of the will, if the teaching should be conducted by laymen and in an unsectarian way. The basis on which it made this decision was that the will required the inculcation of the "purest morality"; and the purest morality, in the view of the court, as of the counsel on both sides, could not be inculcated apart from Christianity. It is evident that what the court had in mind was the moral side of Christianity, and not its dogmatic. The teaching was to be "non-sectarian." The Bible might be read, and "especially the New Testament," and read even as a divine revelation, but "without note or comment." The whole tenor of the decision was in keeping with the claim of Mr. Binney, the counsel for maintaining the will, that the will, while it expressly proscribes sectarian and doctrinal teaching, "supposes that the great truths of Christianity, *in which all Christian denominations concur*, will be taught in the college." But are there any "truths of Christianity in which all Christian denominations concur" except its moral truths?

Now, we have a strong suspicion (though we are not here prepared to give any reason for it, except the ardent zeal with which conservative evangelical journals are defending the management of the college as doing a most satisfactory "Christian work") that the teaching of Christianity in the college is not confined to these non-sectarian limits; that the lay teachers there are not content to read the Bible "without note or comment," nor to restrict their instructions to those truths in which "all Christian denominations concur." This is not usually the kind of religious teaching that satisfies persons of evangelical persuasion. We remember once talking with an influential orthodox doctor of divinity on the question of Bible-reading in the public schools. He had been a member of the school committee in a Massachusetts town, and he said he had always argued in favor of removing the Bible from the public schools because the requirement, by Massachusetts law, that it be read without note or comment, naturally leads teachers to read only those parts that are plain without note or comment,—that is, the moral and spiritual parts,—*and this habit favors Unitarianism.* Hence, he preferred, on denominational grounds, no reading of the Bible in the schools to the reading of it under the restrictions now imposed by law. We believe that among the stricter sort of evangelical people there exists a like dissatisfaction with the "no-comment" practice of teaching the "great truths of Christianity." "Christ and his salvation," as the *Sunday School Times* expresses it, is not generally taught by orthodox sects in that way. We think, therefore, that the inquiry would be a timely one as to just the *way* in which Christianity is being taught in Girard College. Are the managers keeping within the strict intent and terms of the *Supreme Court's decision* (to say nothing now of the intent of the Girard will), and allowing there only that Christian teaching which is non-sectarian?

Moreover, since the decision of the court was professedly based on the interpretation of the will according to its exact letter and not according to the most rational view of Mr. Girard's wishes, it is but just that the management of the college should be required to conform to the exact letter of the court's decision. The trustees should be enjoined to exhibit the scheme of Christian teaching separated from the sectarian dogmas of Christianity, which the court declared that laymen might give in the college. They should be required to produce in black and white those general unsectarian principles of Christianity which the court affirmed would satisfy, and alone satisfy, the terms of the will. They should be legally forbidden to permit any Christian teaching in the college until they can formulate, satisfactorily to all sects, those "great truths of Christianity in which all Christian denominations concur." Since it has been decided that the college may have a certain amount and kind of Christian instruction, the college authorities should be held rigidly to the exact terms of the bond: they should be told to take their pound of flesh, but *nothing* more nor less; that, if they swerve one hair's breadth, either way, from a line on which all Christian sects from largest to smallest can agree, or if they draw one drop of any doctrine of any Christian sect which any other Christian sect, however small, disputes, then must they forfeit their trust.

Liberalism might temporarily be quite content if there were any way thus to bring a legal injunction upon the trustees to permit no teaching of Christianity in the college except in strict conformity to the letter of the Supreme Court's decision; that is, no teaching but that on which all Christian sects unite. But, in the course of time,—say in a hundred years, or even less,—a better result than this will doubtless come. Trustees and courts alike will then see that Girard, in his description of the morality to be taught in his college, had really seized on the best things in all religions; that Christianity itself, in all its doctrinal and special claims, is only one sect of the world's faith; and that the claim that morals, even the purest, cannot be taught apart from Christianity is only a form of provincial ignorance and arrogance. We do not believe that even now the United States Supreme Court would declare that a Jewish college, though its founder might expressly proscribe Christian teaching therein, would thereby forfeit its right to a legal existence because an institution contrary to public morality. And, before the year 1982, civilized mankind will have learned that morality does not depend upon any system of theology nor upon the continuance of any of the special religions of the world. WM. J. POTTER.

A DIURNAL CIRCLE.

"Luria goes not poorly forth!
If we could only wait! The only fault's with time:
All men become good creatures—but so slow!"

Poor Luria's triumphs and vindications come surely, but too slowly: the poison has done its work, and Luria lies dead. Robert Browning's poetic tragedy is a type of many that are sadly real. But possibly the poet is to-day telling how swiftly certain satanic men become good creatures; and he might illustrate it with the story of his friend Benjamin Jowett, this week taking his seat as Vice-Chancellor of the University of Oxford. Is this the same man, you ask, who, only a score of years ago, was reviled as a reverend Nihilist? Is it the writer in *Essays and Reviews* who was threatened with a prosecution for heresy, excluded from the University pulpit, and forced to resubscribe the Thirty-nine Articles? After careful inquiry, I am in a position to state that the new head of Oxford University is that same *bête noir* of conservatism. He has been appointed by the leader of the Conservative party, Lord Salisbury, to the educational Primacy of England, in harmony with the unhesitating suffrage of the nation also, whose unanimity no voice ventured to break. At the commemoration of 1863, in Oxford, I had the honor of being a guest of Dr. Jowett. He was then the Regius Professor of Greek in Balliol, and distinguished as the ablest and most hard-working teacher of that language in the country. He was retained in the professorship, which he had received through the influence of Lord Palmerston seven years before, simply because there was no statutory power that could remove him. But there was a power by which his salary could be kept down to the statutory minimum, forty pounds; and on this Prof. Jowett had to maintain his position as the most eminent scholar in Oxford. Never was a man more serene about it all,—not even his intimate friend, Socrates. I thought, in that day, there seemed written upon his great brow, pure and placid as an infant's, the calm words of his anathematized essay: "That work can hardly expect to win much popular favor, so far as it runs counter to the feelings of religious parties; but he who bears a part in it may feel a confidence, which no popular caresses or religious sympathy could inspire, that he has, by a divine help, been able to plant his foot somewhere beyond the waves of time." Again I visited Dr. Jowett, and "the waves of time" were following him like a solar tide. A few years more, and they had floated him into the Mastership of Balliol; for he never receded from his position. With perfect frankness of speech and act, and calmness of conviction, he has continued his course. The visitor to Balliol passed through a hall illumined with the faces of Darwin, Tyndall, Huxley, of many another beloved heretic, to the study of the master who felt himself no heretic, but would suffer no sacerdotal influence or traditions to separate him from his fellow-pilgrims, Faithful and Greatheart, because they did not wear the Christian garb or name.

The career of Dr. Jowett is of a significance that cannot be concealed. This diurnal circle of that celestial body, if the University from which English theology has so long emanated may be so called, corresponds with a motion of the earth not otherwise to be so well measured. Our dear old Archbishop of Canterbury, with charming *naïveté*, has just come out with the truth of it. He says the old Tractarians of Oxford are "responsible for that wave of secularism which for the last few years has raged so violently within the University." These, then, are those "waves of time" which have caught up with Dr. Jowett, and carried him to his supremacy. It is amusing to witness the perturbation caused by this confession by the Primate. His article, in the current number of *Macmillan*, elicited by Mozley's *Reminiscences* was the last thing written by him before his illness. He has been at the point of death, is not yet in safety, and consequently the papers most jealous of the Establishment are not quite free in their criticisms. But the fact is unquestionably as Dr. Tait states. The old Oxonian Church is extinct beyond revival, and is hardly a "survival." Dr. Pusey passed from his religious isolation to his grave as from one

Digitized by Google

tomb to another. The Church has brought a more complete development of its resources than he had demanded to subserve an aim directly counter to his,—a secular aim. The ideal saint upheld before the Church by its most spiritual minds is a man serviceable to men, concentrated on human work directed to actual benefit. If any one in a company of clergymen shall question the advantages of the national Church, he will be sure to find its claims based on the practical, philanthropic, educational, or other work it is doing: it would be rare to hear any champion suggesting that its continuance might be pleasing to God.

And this reminds me that it is not the first time our excellent Archbishop of Canterbury has been the *enfant terrible* of the Church. At a conference of clergymen and ministers, at which Dr. James Martineau was present, the advantages of a national establishment were discussed, and the Archbishop said that, if it were not for the Established Church, the English people would pretty certainly go off, like the Americans, into Unitarianism and similar heresies. If Dr. Martineau had said that it required a large bribe to keep people orthodox, the assembly would have shuddered, and resented his remark. The Archbishop really said about the same thing, with the air of an old Quaker delivering his burden without understanding it; and an uneasy suspicion that the testimony was ambiguous first arose among the clergy present, when Martineau arose and said that, "notwithstanding the temptation offered him by His Grace," he was not sure immediate disestablishment is advisable.

On the whole, when I consider that Charles Darwin, who supported no church but your Free Religious Association, a Prophet of that Earth which Christianity held accursed, is buried in Westminster Abbey, and that the man most like him in the Church is Vice-Chancellor of Oxford University, I feel disposed to award England a good degree of the credit claimed for her by a brilliant American thinker. "For five hundred years," wrote Chauncey Wright, in a letter to my friend Mrs. Lesley, "from the time when old William Occam asserted common sense and experience against the devoted and enthusiastic subtilties of Continental and Celtic Schoolmen, England has taken the lead in every great revolution in thought and practice, even down to Darwinism." He added that the English "have kept old forms and names, but changed the things"; and he might have added that these old forms and names, requiring every year a more costly and laborious support to maintain them, for the very reason that their subsistence in reality is gone, defraud the people of their birthright: the fruits of their "revelations," diurnal or other, bring harvest homes to every land sooner than their own.

Let me hasten, however, to qualify this general statement by saying that there are some signs of a revolution in this also. The secular spirit in the Church has so increased the velocity of religious movement that one cannot say how soon the old names and forms may be transmuted into new. One of the good facts is that this latest revolution shows no sign of going backward. When Dean Stanley died, liberal people quaked. Gladstone, the hardest theologic traditionalist in England, had to appoint the new Dean of Westminster; and every one was looking to see one of his Hard-Church friends harnessed for the work of dragging the broadest pulpit in the land back to its old formation. But Dean Bradley has proved to be as sincerely catholic as his predecessor. Without a particle of Jesuitism, a sincere Christian, he is yet a brave and frank liberal. Without being eloquent, he is an impressive preacher, a clear-minded thinker, and exact scholar; and he has a childlike simplicity of manner, a kindly plainness of speech, which are very attractive. Westminster Abbey is the most real temple of the nation. By history as well as development, it belongs to the greatness of England. Dead creeds are no more genuinely in it than the living creeds written on tablets that enshrine the dust of Lyell, Darwin, and many another great heart and brain. It will erelong contain a memorial of Longfellow also. Already there are written on its walls Emerson's stately lines on the Abbeys of England. It is for these and much stronger reasons a matter in which liberal Americans may find cause for satisfaction that, under its new administration, Westminster Abbey is not likely to lose any lustre that it has gained as representative of the real development of English genius and character.

MONCURE D. CONWAY.

ENGLISH POSITIVISM.

The other and more important branch of the "Church of Humanity" is located in a hall in Fetter Lane, off Fleet Street. This hall was formerly the old chapel of the Scottish Corporation; but, before becoming the property of that body, it was used during the last century as the meeting-place of no less famous a body than the Royal Society, it being built on ground purchased by Sir Isaac Newton, then president. This hall was formally opened on the 1st of May, 1881, by M. Laffitte, the director of Positivism in Paris. This distinguished head of the new church also gave in the hall some discourses on Positivism, and two lectures on the Rise of Sociology in the Eighteenth Century. I had the pleasure of hearing the first of these very able and interesting lectures, which attracted a large and highly intellectual audience. In this hall (which, by the way, is appropriately named Newton Hall), lectures and addresses on Positivism in its various aspects are constantly given. The most important of these have hitherto been the very eloquent lectures delivered by Mr. Frederic Harrison during the months of February and March, 1882. In these lectures, Mr. Harrison dealt first with the various objections to Positivism, and next with the direct teaching of Positivism in relation to home life, social life, the state, spiritual life, and social duty. The objectors to Positivism criticised by him were, first, the orthodox, both Catholic and Protestant; second, the deists (as the Positivists persist in calling those who speak of themselves as theists), among whom were Martineau, Jowett, F. W. Newman, and Edward Caird; third, the philosophers and men of letters, including Mill, Matthew Arnold, and Mark Pattison; and, fourth, the men of science, these being represented by Spencer and Huxley. Mr. Harrison was happiest in dealing with the first, third, and fourth of these classes, his criticism of Spencer and Huxley, with their worship of the unknown and unknowable, being especially admirable. During July last, Prof. Beesley lectured in this hall on the Positivist view of the Egyptian question, vigorously denouncing the action of the British government. The Positivists are also engaged in the really admirable task of giving in this hall free popular instruction in the elements of scientific knowledge, in accordance with the scheme of scientific education laid down by Comte. Classes in geometry, physics, and chemistry, have been formed; and others in sociology and biology will be added. This is analogous to the kind of work M. Laffitte has been carrying on in Paris, where he has a public lecture hall assigned to him by the French government. The English Positivists have not yet attained to this latter dignity; but, in France, many of the prominent public men, including Gambetta, are in sympathy with Comtist principles.

The group of Positivists who direct this movement at Newton Hall comprise some very able and remarkable men. The president is Dr. J. H. Bridges, a physician and a government inspector of factories,—a man characterized by the most unselfish and humanitarian aims. Few men are more intimately acquainted with the condition of the working classes and of the poor, and perhaps it may be added that few men have done more to alleviate their wants and to raise their condition. Dr. Bridges is essentially a man of a religious nature,—so much so that, heretic as he is, pious Catholics and evangelicals would be quite one with him in feeling and emotion.

In a lecture on "Religion and Progress," Dr. Bridges has indicated his feeling about the old religion: "The beauty of life, the calm and trustful temper, the pious hopes, the self-denying zeal that cluster round Christian churches of every kind, are facts which every one must see who does not blind his own eyes,—facts which I hope every one here would willingly recognize." These are the words of a man who is far removed from the anti-religious bigotry of many modern thinkers,—a bigotry quite as offensive as that of the orthodox and far less justifiable. Dr. Bridges was, I believe, brought up under evangelical auspices; and, while getting rid of the superstition, he has retained the good qualities engendered by that system of belief. Dr. Bridges has not written much, except occasional articles in the *Fortnightly Review;* but he has assisted in the translation of Comte's works, and has given addresses in Paris as well as in London. I have mentioned Dr. Bridges first, because he is president of the English society; but unquestionably the ablest and most influential English Positivist is Frederic Harrison. As a writer, Mr. Harrison is, in my opinion, one of the most brilliant England possesses at the present time. As a thinker, he is clear, bold, and sincere. While as a public man and exponent of sociology and politics, every one, however widely differing from him, acknowledges his power and his perfect integrity. Although Mr. Harrison has been before the public for many years, he is still in the very prime of life, and has apparently a long future before him, in the course of which he will doubtless accomplish many things. His own special studies have been in the direction of jurisprudence; and his essays on the study of that great subject in the *Fortnightly Review* have been singularly able productions, possessing the merit of being intelligible to the non-legal mind. He has served for several years as examiner in the school of jurisprudence at Oxford, and as lecturer on jurisprudence in Lincoln's Inn to London law students. Mr. Harrison's writings are probably as well known in the United States as in England, since his contributions to the *Contemporary* and *Fortnightly Reviews* and to the *Nineteenth Century* have been exceedingly voluminous; and, if I mistake not, he has written once or twice for the *North American Review.* Some of these essays, on political and economical subjects, were collected some few years ago into a volume entitled *Order and Progress.* There is no regular sequence in these essays; but they may be said in a general way to give the positivist view of politics, the reconciliation of the aspirations of the people with an energetic government,—a problem difficult enough, and which I can scarcely think Mr. Harrison has solved. The eloquent essays on "The Soul and a Future Life" which appeared in the *Nineteenth Century* will be fresh in the recollection of all readers who admire fervid rhetoric combined with cultured expression and the deep sense of the necessity of spiritual things to man's nature.

No one but a thorough-going Positivist can, I

Digitized by Google

think, accept these eloquent utterances as a satisfactory solution of the problem of immortality. Mr. Harrison seems to think that the longing for individual conscious existence beyond death is a sign of unhealthy egoism, which must be purged before one can rise to the most exalted spiritual life. Surely, this was not the view of Saint Paul or Saint Augustine or Dante, or any of those other great teachers to whom the Positivists look up. There need be nothing in the least degree selfish in the longing for immortality, as may be discerned in those lines of Tennyson:—

"The wages of sin is death: if the wages of Virtue be dust,
Would she have heart to endure for the life of the worm and the fly?
She desires no isles of the blest, no quiet seats of the just,
To rest in a golden grove, or to bask in a summer sky:
Give her the wages of going on, and not to die."

It is questionable whether a philosophy or religion, as Positivism claims to be, which does not give these wages of going on, which ignores the finest and strongest aspiration of the finest and strongest minds, can make much progress. Mr. Harrison gives us as a substitute "subjective immortality,"—*i.e.*, the individual living, through his actions and thoughts, in the subsequent life of the race. But, surely, science has demonstrated that, if the race of mankind be immortal, it must find a home in some other planet than ours, which is destined to irrevocable destruction. Nor is it any sufficient impulse to me in my work of to-day to know that a thousand years hence a noble and perfect civilization will exist here, compared with which our society of the present is a rude, clumsy, hideous barbarism. Rather must one say, with Emerson: "Will you, with vast cost and pains, educate your children to be adepts in their several arts, and, as soon as they are ready to produce a masterpiece, call out a file of soldiers to shoot them down?" If this fearful havoc of human affections, hopes, and longings, be really involved in the order of things, we cannot feel for that order the reverence and trust which Mr. Harrison enjoins. But I am criticising at too great a length, and must resume my account of English Positivists. Mr. Harrison has devoted himself with great energy to the maintenance of the rights of labor and to the movement for disestablishing the State Church. The leading Trades Unionists of England regard him as one of their stanchest friends, since he has always fought their battles with tongue and pen. Mr. Harrison's dislike of State Churches is vehement in its intensity. Speaking once to a group of us who were discussing the proposed law against the religious orders in France, Mr. Harrison said he disliked the proposition so much that he was almost prepared to sacrifice political liberty itself rather than to tolerate such interference (as he judged it) with religion on the part of the State. He has always spoken out nobly on behalf of those peoples whom the English governing classes have persecuted and oppressed. I may allude especially to his championship of the negroes of Jamaica against Governor Eyre, to his denunciation of General Roberts for his wholesale executions at Cabul, and to his severe and eloquent condemnation of Mr. Gladstone's Irish and Egyptian policy. I would also call attention to his apology for the Commune, which appeared in the *Fortnightly Review* soon after the tragic events of 1871. This should be read by all those who wish to understand both sides of a vexed question. Like all Positivists, Mr. Harrison is very friendly to France and very intimately acquainted with that country and its affairs. He and Dr. Bridges generally attend the annual commemoration of the death of Comte in the house where he died, Rue Monsieur-le-Prince, Paris. Mr. Harrison also knows several of the leading French statesmen, including Gambetta, whom he at one time regarded (and perhaps does still) as the sheet-anchor of the French Republic. Next to Mr. Harrison, the best-known Positivist in England is Prof. Beesley, who occupies the position of Principal of University Hall, a place where students of the University College, London, live under academical discipline. Mr. Beesley is also Professor of History in the college. His views are almost identical with those of Mr. Harrison; and the only specialty about him is that he takes up the practical, social, and political sides of Comte's teaching more than do the others. He is the son of an evangelical clergyman, and, like Dr. Bridges, retains much genuine and devout religious feeling. Prof. Beesley has written much on later Roman history, attempting to prove, *à la* Comte, that the Roman emperors were, for the most part, angels in disguise, filled with the most genuine humanitarian feelings. We may be glad to hear praise of a Marcus Aurelius; but, when Prof. Beesley tells us that Tiberius was a noble and upright man, I, for one, cannot help feeling somewhat incredulous. The truth which underlies this teaching, and on which the Positivists dwell with peculiar emphasis, is that the empire laid the foundations for the law and order, the policy and jurisprudence, on which the European fabric reposed. It is this which leads Comte to include Julius Cæsar among the twelve great men from whom the months are named in his calendar. But Prof. Beesley's out-and-out defence of Cæsarism (which was strongly rebuked by Mr. Freeman) seems to many a distorted and exaggerated statement of this truth. Prof. Beesley, like Mr. Harrison, is a prominent friend of the workingmen, and a vigorous defender of their trade combinations. He will fill a place in history, perhaps, by having been the president of the meeting held in London, September, 1864, when the celebrated International Society of Workingmen was formed; but, of course, he must not be accounted responsible for all the subsequent doings of that famous body, when it fell into the hands of Bakounine and the party of anarchy.

A less known but very able member of the positivist society is James Cotter Morison, who is, like Dr. Congreve, Mr. Harrison, and Prof. Beesley, an Oxford man. Though the general public knows little of Mr. Morison, some readers are grateful to him for the admirable work he has done. His most important book is the Life of Saint Bernard. He has also written the volume on Gibbon in the "English Men of Letters" series, and is engaged on another volume for that series,—on Macaulay. He has also written a good deal in the *Fortnightly Review* and in other periodicals, and he occasionally lectures for the Positivists in Newton Hall. Any person who listened to him would be much impressed by his wide knowledge and clear insight.

These are the leading Positivists of England. There are others less known, but who do much work for the cause, and who interest themselves in the culture and progress of the people in various ways. And one has only to mention George Henry Lewes, George Eliot, and John Morley, all deeply affected by Comte's teachings, to understand what a very considerable power Positivism has been in England. Mr. Morley's article on Comte, in the new edition of the Encyclopædia Britannica, is, by the way, the best summary of this system of philosophy. Nor must we forget that both John Stuart Mill and Harriet Martineau were influenced by Comte's works. I can scarcely say that Comtism is spreading in England, although several able young men gather round the leaders in London, and a few others are to be found in the universities who own allegiance to the French thinker. The ablest Comtist outside London is Mr. J. K. Ingram, Professor of Political Economy in Dublin University, and a man of vigorous mental power. Comtism has some good, positive teaching, and at the same time, as I think, some striking defects which incapacitate it for attracting those who want to be saved from aimless life or gloomy doubts. But this, at any rate, is certain: that its influence, so far as it goes, is healthy and good. It binds men together in a common belief, and urges them to noble endeavor and to unselfish striving for humanity. And, in those public questions which agitate the national life of England, its influence is wholly good; for its apostles are also the apostles of justice, freedom, and brotherhood.

WILLIAM CLARKE.

THAT HOLLOW GHOST,—IDEALISM.

Dualism is dead. None now so poor as to do it reverence. But from its grave stalks forth a gaunt and hollow spectre, misnamed Idealism, which much disturbs the nerves of monists of the materialistic type; and, in their trepidation, they make blind assaults on the objects of their own imagination. In plainer phrase, through superficial analysis and incomprehension of the significance of their own frequent admissions, material monists or objective evolutionists often turn upon idealism with a lofty air (simulacrum of courage), and charge it with the utterance of empty words,—with unconsciously shooting blank cartridge for solid shot. Thus, a really able writer, Lewis G. Janes, in *The Index* of August 31, in expounding the "synthetic philosophy," discourses as follows: "The counter-assertion of the idealist, that light, sound, etc., are purely subjective sensations, that the eye produces light and not the contrary, is evidently a mere truism. The æther vibrations, which are the objective facts recognized in the phenomenon of light, existed before any eye existed, and by their interaction with the organism developed the organ of vision. All that the idealist really asserts is that the objective fact would not appear in consciousness unless there existed a conscious being with faculties capable of perceiving it, which is the merest truism."

If Mr. Janes had stopped to ask himself as a psychologist what he must mean, when he means anything, by the "æther vibrations which existed before any eye existed," and what he should mean by the organism and its environment and their interaction, he would have spared himself the labor of that paragraph. How does the author know that there were æther vibrations before there were eyes? And what is the nature, quality, and form of previsional vibrations of æther? They could not be seen of course, could not be of the nature of light. Neither could they be of the nature of odor or taste or sound or touch before there was a sensible organism with corresponding senses. Thus, as we go through all known or conceivable sensible forms, we find that whatever the name we give them, whether vibrations or corpuscular emanations, they could have no possible existence before there was an organism and a set of senses; and to assert the existence of any preorganic or presensible or previsual vibrations is to assert we know not what,—a mental vacuity, because a sensible blank, which is something worse than the utterance of a truism. All "objective facts recognized in the phenomenon of light" are visual facts and objects, or at least sensible, else they are not objective or known as facts.

On the other hand, there can be no sensible organism—that is, no organism at all—till there are sensible objects. This may surprise some readers, because, after making the existence of sensible phenomena conditioned on the existence of an organism, I now make the existence of the organism conditioned on the existence of sensible phe-

Digitized by Google

nomena. The surprise will melt away as soon as they reflect that the organism is itself a sensible phenomenon and object, and as such only is it known. It is, therefore, a contradiction in terms to speak of a presensible or nonsensible organism. Most organisms are visible; and the visible organism is nothing but a visual sensation, or sensation called sight or vision. All organisms, I believe, are tangible; and the tangible organism is simply a sensation of touch. Hence, it is equally impossible for sensible objects or sensations to precede the organism or the organism to precede them, because they are the organism: so that, so far considered, they can only originate together.

But this leaves out of consideration, or only partially considered, all extraorganic phenomena. My own organism is only an infinitesimal fraction of the sensible phenomena of which I am the subject. There is an almost infinite number of known and knowable objects beyond my organism. All these are really and strictly extraorganic. They are not a part or mode or product or effect or cause of my organism. They are not even sensible objects of my organism or organic precepts. My organism perceives nothing. I perceive it, and so it is a mode of me. Likewise, all extraorganic phenomena are modes of me, but not of the organism. They transcend the organism, but not the *ego*, which is therefore always one with and commensurate with all the known universe.

Hence, nothing of all the universe could exist before the *ego;* for that were to make the *ego* exist before itself. On the other hand, it is logically possible for the *ego* to have existed before the evolution of some or any of its sensible modes constituting the material universe; and to this, as the fact, all experience informed by modern science, physical and psychical, is clearly pointing. Thus, we have a new aspect given to the synthetic philosophy. All evolution, as all phenomena, is subjective, an unfolding of the force or powers of the individual *ego*. How we are further to explain this and get out of the *ego* presents another subject. But our monistic friend on the other or objective side of the house will not charge us with uttering in this paper "mere truisms."

WM. I. GILL.

HERBERT SPENCER'S "ABSOLUTE."

Mrs. Celia P. Woolley has taken the pains to give a somewhat extended review of my objection to the Spencerian theory of the Absolute. Her paper, however, shows a far better comprehension of Spencer's view of the matter than of my own. I am not fond of newspaper controversy, and think it generally unfruitful; but my belief that a vital, philosophical point may be established by dwelling more thoroughly on this question leads me to restate and to try to make more distinct the illegitimacy of Mr. Spencer's induction. Mrs. Woolley objects to "mere denial." I certainly meant in my brief space to outline a more rational conception of things than that proposed by Mr. Spencer; but, if so intelligent a critic has failed to recognize the substitution, I must think that I failed to make it plain. Is it true that all thinkers "are compelled to admit the existence of some force or fact behind phenomena"? If all human knowledge be derived from experience, as the scientific philosopher holds, then the reasoning by which an Absolute is arrived at must be a process resting upon experience. But experience gives absolutely *no datum* out of which to create an Absolute. All that human sensation yields is an experience of the matter of the universe in vibration, the human being becoming aware of the various motions only as fast as his nervous system takes them up. He is indeed but a link in the great cosmic chain of correlated motions. It seems to me that, if my critic had read and thought upon the last paragraph of my former article, she would have caught the theory of knowledge implied in it.

Science has thus far demonstrated only man's physiological and material correlation with the world in which he moves. His nervous structure takes up motion from impinging matter just as one billiard ball takes up motion from another. The relativity of knowledge stated under purely experiential limitations can be nothing more than the statement of this fact of nervous impressibility. If we try to make out anything more occult than this in the connection of human beings with the universe, we at once overleap experience. This view may be the dreariest materialism or the most disheartening fatalism, but it is the simple, vigorous, and undeniable truth. Out of personal experience, however, I can testify that it is not depressing, but stimulating, to find one's self in possession of the largest induction which scientific data can yield. I would beg my critic and all lovers of consistent thinking steadily to inquire whether experience furnishes the smallest gossamer thread on which to hang the doctrine of a mysterious Absolute behind realities. Whether there is anything behind matter, anything behind the nervous thrill of our own brains and bodies, we have not found out; and since "knowing" itself, so far as ascertainable, is identical with this same nervous thrill, there seems the highest improbability, amounting almost to absurdity, that we shall ever be able to derive an Absolute from any experiential reasoning. The truth is that very careful people have mistaken the scientific data of the indestructibility of matter and of the persistence of motion for the evidence of an underlying something called an Absolute, or a noumenon.

Force itself, so much talked of as ultimate and changeless in amount, is in exact experience nothing but motion. To put *force* behind matter and motion, which Mr. Spencer has done, is as unjustifiable, as utterly unauthorized by experience and reason, as to put an Absolute there. I can find nothing disheartening in the admission of a larger truth than one previously held; and I believe that universal experience would confirm my statement, that only in transitional conditions can there be anything painful in intellectual advance.

M. A. HARDAKER.

EDITORIAL NOTES.

VOLTAIRE figures in a story call "Frau von Soldan," now appearing in the Milwaukee *Freidenker*.

"EVOLUTION: A Letter to Mr. Underwood," by Mr. D. A. Wasson, will appear in *The Index* next week.

SUPERSTITIOUS fears of vampires have recently led to disgusting outrages of the dead in Hungary, as well as in the Grecian island of Andros.

THE Free Congregation, or Freie Gemeinde of Sauk City, Wis., which has long been flourishing under the direction of that brave and earnest speaker, Edward Schroeter, is about to hold a fair to help build a new hall.

FRIENDS of *The Index* can assist us in increasing its circulation by sending to this office the names of all persons they think would like to see sample copies of the paper.

A HYMN-BOOK has recently been published in Hanover, which contains, as we learn from the *Freidenker*, such choice lines as:—

"Man is godless and accursed."
"Jesus is the Devil's poison
And the pestilence of Hell!"

WE shall print in our next number a letter received too late for this week's issue, from Mr. S. J. Stewart, in which he maintains the essential correctness of his recent statements in *The Index* regarding the Saratoga Conference.

A CORRESPONDENT of the *Commonwealth* mentions that Herbert Spencer has been a guest of Mr. Childs, of the Philadelphia *Ledger*, in which conservative journal he is pronounced the most "comprehensive" of all living writers on "religio-scientific subjects," and thinks these facts are among the indications of progress, and show "how imperceptibly powerful advances of thought creep into the lives of those who wish to, and think they do, guard most closely against them."

HENRY WARD BEECHER, in response to an invitation to use the columns of the Boston *Traveller* for any rejoinder he desired to make to a series of interviews with representative Boston ministers in regard to his recent theological departure, wrote: "I have read the somewhat large expressions of those many and excellent men in regard to my orthodoxy, consistency, influence, and general merit, without wishing for a moment to reply, as you kindly request me. When a dead man is lying on the dissecting table, under the hands of experts, it would be unbecoming in him to rise up suddenly and discuss with his surgeons the propriety of their methods and the truth of results."

THE *Presbyterian* quotes from the address of Rev. John Page Hopps at the Saratoga Conference, "There *are* other names under heaven besides the name of Jesus whereby men may be saved," and the words of the *Christian Register* that this "is the affirmation of a great truth," and then discriminatingly remarks, "This is well, if the *Register* so believes; but why be so direct, positive, and point-blank in contradiction of the Scriptures, and then be astonished when men refuse to give the name of Christian to the utterers of such bold denials?" We are not authorized to reply for the *Register;* but we presume our neighbor does not hold that it is necessary to accept either the Bible or Jesus Christ as an authority, in order to be a Christian.

MR. HOLYOAKE'S friends in New York, we are pleased to learn, will, before he leaves for England, give him a reception at the rooms of the Co-operative Dress Association, Nos. 32 and 33 West 23d Street, "to express personally their appreciation of his services as a public benefactor." Miss Kate Field, Mrs. J. C. Croly, Felix Adler, Robert Collyer, R. Heber Newton, Mrs. C. S. Lozier, M.D., Edmund C. Stedman, F. D. Grosvenor, and George S. McWalters are among those on the Committee of Arrangements. Mr. Holyoake's friends in Boston, we are sure, will avail themselves of his presence in this city to show their grateful appreciation of his exalted character and practical philanthropy. The public will have an opportunity to hear this distinguished gentleman next Sunday evening at Parker Memorial, where he will speak on "My Early Religious Days."

A PARIS correspondent of the London *Standard* gives interesting facts in regard to the extraction of a spoon from the stomach of a young man, a waiter at a café, who had accidentally swallowed it in an attempt to imitate the feats of "a famous sword-swallower." By a tube introduced through the mouth, the stomach was first cleansed, to prevent peritonitis. Then, an incision was made in the epigastric region. In order to render the coat of the stomach easily accessible, to the end projecting from the mouth was fitted a spherical vessel containing ether, which was heated by submersion in water of sixty degrees temperature. The ether vapor rushing through the tube filled the stomach, which, becoming distended, was brought forward to the wound made by the operator's knife; and

Digitized by Google

hus the spoon, which was nine inches long, was readily found and extracted. The young man has quite recovered from the effects of the operation, but the probability is that he will be less ambitious in future to emulate "the famous sword-swallower."

THE Boston *Sunday Herald* pertinently observes: "The ablest ancient writers whose works survive to us, whenever they have occasion to speak of natural phenomena, do it in such absurd terms as to make the modern school-boy laugh. Here in this free country, which ought not to be found in the ruts of a dreary old educational routine, it is a singular fact that the colleges are as wedded to such a routine, and to what may be termed an erudite conservatism, as are the old mediæval universities of Oxford and Cambridge in England. In all our thousand and one young seats of learning, the past, and the ideas, speculations, theories and beliefs of the past, are made to outweigh the present, with its vast fund of demonstrated truths, in regard both to the subjective and objective world. In none of them, save in a few exceptional technological institutes, is science in the foreground." But it is gratifying to know that the science and thought of the age are asserting their influence in all our institutions of learning, which are constantly becoming more modernized in their methods and teachings.

MR. W. F. JAMIESON, who a few years ago was lecturing and writing in defence of Spiritualism, confident, zealous, and combative, in a recent number of his paper, the Lake Pepin (Wis.) *Gazette*, makes the following announcement: "By science and logic, we propose to explode Spiritualism. At the end of twelve months, the doors will swing wide open for correspondents from all quarters to make their comments. Those who wish to overthrow our positions will then know just what they are. Ours will be the only distinctively anti-spiritualistic paper published. If we can induce people to save their time and money, instead of throwing them away upon a stupendous cheat, our labor will not be in vain. We had a quarter of a century's investigation of the subject, and will bring to light the inner mysteries of spiritual circleism.' It will be seen that Mr. Jamieson's views have undergone some change; but his zeal has suffered no abatement, and he is now as zealous and aggressive in opposing Spiritualism as he was during a quarter of a century in defending it. He says that Spiritualistic papers refuse him a hearing, and we therefore copy the above announcement, the style and spirit of which, however, are likely to offend and repel the class with whom he was formerly identified, and whose belief he helped, honestly no doubt, to strengthen and diffuse.

IN his late address at Chicago, Prof. Felix Adler said, as reported in one of the city papers: "The idea that this life is preparatory to another we are not prepared to deny or affirm. As regards the belief in immortality, we profess entire ignorance. But the corollaries that are drawn from it to the effect that this merely mundane life is despicable, that the higher is only bought at the expense of the lower life, we deny. If the kingdom of God is to come, it will come through these earthly channels. We have new ideas which must find forms adequate to expression A disbelief in special providence and a disbelief in the old theory of the universe are two great changes. Consider the rise of democracy and the period of industrialism, and you will perceive the factors in those changes. There is no doubt as to the reality of the change. The number of churches is no index to the power they hold. But some wonder why, if the Liberals are so numerous, they do not form organizations throughout the land. They fear to organize. Having rid themselves of the old shackles, they fear new ones. Self-interest binds many to the churches, after their hearts have turned away forever from Christianity and Judaism. In New York, out of a population of one million three hundred thousand, there are only ninety thousand persons belonging to the Protestant churches. The churches of the poorest class and the churches of the richest have crowded out the churches of the middle class. To show the need of a new religion, we have only to point to our vast silent constituency."

ELECTRICITY AND LIFE will be the general subject of five lectures by Rev. Edward C. Towne, to be delivered in Mr. Savage's Church (West Newton Street) on Sunday evenings, November 12, 19, and 26, and December 10 and 17. The special topics as given us by Mr. Towne are as follows: I. November 12, Oxygen and Electricity: in the making of the globe; the production of light; the force and work of our fires; and the animation of living things, both animal and plant. The cosmic hand of God. II. November 19, The Electrical Breath of Life: animals and plants alive electrically; the known electrical animals; protoplasm not the "physical basis of life"; universal creative inbreathing of life. III. November 26, The Making of the Creature: functions electrically established; all processes in animal and plant electrically carried on; structure electrically produced; all development electrically conditioned; the perpetual miracle of creative action. IV. December 10, The Ascent of the Creation: electrical separation the origin of sex; reproductive germs electrically conditioned; creative parentage; the true origin of species by natural creation, not natural selection; evolution established, but minor Darwinian theories disproved. V. December 17, The Origin of Man: creative motherhood; human origins; law of human ascent; origin of genius; conditions of physical and mental perfection of mankind; medical science on a new basis; the birth of character; creative regeneration of the degraded classes; redemption of man by natural truth; the Infinite Father the last word of science.

POETRY.

For *The Index*.

AN ANCIENT TEXT.

Not when thou stand'st on summits high
To see the morning splendor burst,
Where draughts divine of earth and sky
Assuage thy beauty-craving thirst,—
Not there thou find'st the Holy Grail:
Who seeks it thus must ever fail.

Not when thou steep'st thy being's sense
In tides of heavenly harmonies,
Nor when the artist's dream intense
Reveals itself to raptured eyes,—
Not there,—not then the treasure glows,
Nor yet for thee its fulness flows.

Go! reap the harvest's golden ears
To bind thy toil-worn neighbor's sheaf.
Thy quest forgetting, dry the tears
Of some lone weeper spent with grief.
A jewelled rim those tears shall shine!
The treasure glimmers, almost thine.

'Neath lowly roofs, by beds of pain,
Spend one brief hour in helpful heed;
Lift from a brother's anguished brain
The burning band of torturing need.
The cup thou hold'st to lips so pale
Transmuted gleams a Holy Grail!

H. T. C.

FLORENCE, MASS.

The Index.

BOSTON, NOV. 2, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

UNITARIAN PIONEERING.

BY EDWIN D. MEAD.

The *Independent* is disposed to be satirical and merry over the felicitations of the Unitarians at Saratoga, and in particular over Mr. Collyer's rather airy remarks about the Conference and the Unitarian greatness. The Unitarians, said Mr. Collyer, have been the pioneers of religious thought in America, and the leaven of the religious lump. To them the rest of American Christendom owes its better doctrines, its truer brotherly spirit, its growing tolerance, and the manifold good things which distinguish the churches of to-day from the churches of fifty years ago. The Unitarian Church does not have to measure its accomplishments, like the other churches, by its mere denominational or institutional growth, but by its success in teaching and leavening the rest; and if, as a Church, it does not grow so fast as they or so fast as it once did itself, it is because it has brought them nearer to its own gospel, and to a preaching of what is not so repellent or intolerable to rational men. It is Unitarianism which has been lifting the whole American Church forward, and to have done that is a very great thing.

To all of which the graceless and irreverent *Independent* says, "Hoity-toity!" talks about the *Zeitgeist*, and the "Nineteenth Century" as having had something to do with the "leavening," discourteously refuses to admit that the greater tolerance and fraternity among the two hundred and fifty New York churches, for instance, are chiefly the fruits of the labors of Dr. Bellows' and Mr. Collyer's societies, guarantees that it can produce thoroughly reformed people who never saw a Unitarian and don't know how one looks, and tells a wicked story which Theodore Parker used to tell when he heard about Unitarian "pioneering" in his day. It was about a wooden Chinaman, which he saw grinding a coffee-mill in a grocery window. He watched the proceeding from over the street with a good deal of interest; but he took a nearer view, and found that, instead of the Chinaman grinding the mill, it was the mill which was grinding the Chinaman.

Now, we are of those who have a vastly higher opinion of Unitarianism and of its services than the *Independent* has; but we confess to being just unregenerate enough to rather enjoy this banter, and count it just and timely. The services of the Unitarian Church, in behalf both of charity and of rationalism, have certainly been very great. No careful student of our religious history, it seems to us, can help seeing that. But it also seems to us, as it seems to most who look at the situation from a position outside the Unitarian Church, that the Church itself vastly exagger-

Digitized by Google

ates its offices as a pioneering, leavening, original force in American religious thought and life, and takes credit to itself for broad and complex results which are due only in very slight degree to its energies or insights, but are the common results in itself and the other churches, in varying degrees, of the operations and pervasive influences of the *Zeitgeist*. We believe, too, that, if the Church could be made to take this view of it at this time, and take such criticisms as this of the *Independent*, not in any sort of dudgeon, but in all seriousness and good humor, it would be much the better for it.

As to the tolerance and charity part of it, we shall say very little; for tolerance and charity are very dangerous things to make statistics about. The *Independent* is certainly intemperate, on its part, when it declares the Unitarian Church precisely the most intolerant and uncharitable of all the churches. We believe that the broad and tolerant spirit does, in some rough fashion, develop alongside of and by virtue of more rational doctrine. Yet we frankly confess to finding the connection of liberalism and liberality much less close than we used to imagine it must be, and to finding very much indeed to excuse, if not to warrant, an assertion like this of the *Independent*. A certain intolerance of the new faith and its disciples, on the part of orthodox men, is more rational and virtuous, at any rate less culpable, than the reciprocal intolerance, because the orthodox man views the new faith as a dangerous thing, while the liberal man views Orthodoxy as, at worst, only a lower grade of religious culture and a hindrance to the highest life. But in the intercourse of "liberal" and "orthodox" men and women with each other, which our own experience has shown us, we have not found that the balance of respect for opposed views and for the integrity of others, the general spirit of forbearance, courtesy, and delicate consideration, of deference and docility, has been largely upon the liberal side; while we have found the assumption that "We are the people" and "Ye are Samaritans," alike in private and in public, equally common there, and this not in that sense in which the possessor of assumed higher truth has a right to exult, but in that offensive sense with which alone the question of tolerance and charity has to do. We have not found that the mutual love and helpfulness of the Unitarian brethren, in their own churches, is greater than that of, say, the good Methodist brethren, nor have we found that they had a warmer hand for the poor Gentiles without the gate. This, we say, is the result of our own fairly varied experience and somewhat careful study; and we have been sorry for it. We hope that the studies of many others have led to conclusions emphatically contrary; and, at any rate, we are quite confident that the positive assertion of the *Independent* is unjust and cavalier.

Be the spirit of tolerance and charity greater or not in the liberal than in the orthodox Churches, however, we believe that the greater fraternity, helpfulness and *humanism* in all the churches, as compared with fifty years ago, is due to the Unitarian "leaven" in no greater degree than are the superior rationality of their current theology and the better character of their common preaching; and that, as we have said, we do not hold to be nearly so great a degree as some imagine.

Orthodoxy and Unitarianism alike, it should be well remembered, are fluctuating things, and not fixed quantities. The one has changed as much as the other in fifty years, and both have precisely the same right to change. No American church that we know of ever set up a creed as final; and the Congregational churches of the country, for instance, in discarding old creeds and writing new ones, as a good many of them are doing just now, simply do what the Unitarian churches do in leaving Andrews Norton and preaching Theodore Parker. There is nothing illegitimate or out of the way, unless the new creed is preached when the old one is not discarded, but still subscribed to. It is the commonest thing in the world to hear the Unitarian taunt the "orthodox" man for occupying positions—upon the Bible, retribution, or what not—which have been the distinct property of Unitarian theology and which Orthodoxy has distinctly opposed. Half the time, indeed, the taunt—if we may call it so—is just and proper; for the position is occupied in infidelity to some subscription. But half the time it has no relevancy whatever; and the proper retort would be: Quite right, good soul, I have come in sight of the trees which you saw yesterday. We are floating on the same river, and you have the good luck to be a day ahead. The only fault I find with you is for talking as though you were yourself the river.

We know what Orthodoxy and Unitarianism were fifty years ago, and we know very well what the new Orthodoxy and the new Unitarianism are; and Dr. Smyth is certainly not more different from Lyman Beecher than Mr. Collyer from either the senior or the junior Ware or—if we please to cross the ocean—than the Martineau of to-day from the Martineau of fifty years ago. Wherein has theology changed in this time, in the Unitarian and orthodox churches alike? It has changed at almost every point; and it would be easy to show, by an examination of almost any equally, that the influences which have effected the advance have not come primarily or largely from within the Unitarian Church.

Let us consider four or five important and typical changes of opinion, which have deeply affected and altered religious conceptions in fifty years: 1. The new cosmology and biology; 2. The results of the new Biblical criticism; 3. The decay of the belief in miracles; 4. The changed doctrine of the person of Christ. Fifty years ago, what toleration would Darwinism and our evolution theories have received in Unitarian circles,—what hospitality, indeed, did they meet with there, when they were first propounded? Fifty years ago, Unitarianism, though denying that Trinitarianism was in the Bible, admitted the Bible to be the court of final appeal. Henry Ware told the young men at Harvard that, if there appeared to them any contradiction between the reason of man and the letter of the Bible, they "must follow the written word." Jonah's great fish was then a most serious and formidable creature; while the suggestion that Elijah's fiery chariot was mythical, or, much more, that Jesus did not rise from the dead, would have shocked all pious Unitarian souls; and, as to the nature of Christ, there prevailed everywhere a high and dry Arianism, far less attractive and less true than Athanasianism itself, which did at least see the divine genuinely in one man.

This Arianism has given place in all vital Unitarian quarters to a pure humanitarianism. The process of the humanization of Christ, or perhaps we ought to say (to guard against any possible inference that the process has been one of the lowering of Christ, and not of the enlargement of the definition of humanity) of the Christianization of the idea of man, has been constant and is now well-nigh complete. So of the rest. Miracle is an intruder, and it is seen and felt that law is not the negation of freedom, but that perfect freedom works by perfect law. All books take their places for simply what they are worth in themselves, and it is seen that the Bible of the race cannot be closed until the last great soul has spoken.

What part did the Unitarian Church take in the revolution? Which idea did it originate, or to which did it hasten to give welcome? It has assimilated all sooner than the other Churches and, as yet, with greater completeness, because, as we have said, it was forward on the stream, and encountered them first; but, like them, it has dreaded them all, sharply polemicized against them one by one, yielded to them slowly and, for the most part, reluctantly. What quick or hearty service did it render, to take another instance, for the great doctrine of Hosea Ballou,—the doctrine which just now happens to be making most particular havoc in the orthodox churches?

An admirable digester Unitarianism has certainly been, but not, as it seems to us, a great producer or energy, not a "pioneer." It has been singularly barren, it seems to us, of original, virile powers; and, when fresh and vital forces have indeed sprung up within it, true prophets and pioneers,—as once, in the case of Emerson and Parker, there did,—it has hastened to disown them, to thwart and to suppress them. We do not think that we risk much in saying that these two disowned children alone—Emerson and Parker—have done more genuine "pioneering" and "leavening" work for American religious thought than the whole Unitarian Church in all its life. They have done and are still doing their revolutionizing work for Unitarianism and Orthodoxy alike, for Orthodoxy not through and by Unitarianism, but directly and at first hand.

Directly and at first hand, too, have the orthodox churches chiefly received those influences which, in these fifty years, have transformed both Orthodoxy and Unitarianism from what they were to what they are. These cardinal influences have been the achieved positions of recent science, and notably Darwinism and the law of evolution, the German criticism, and the new spirit of our poetry and general literature. Carlyle and Tennyson, Matthew Arnold and George Eliot, Longfellow, Lowell, and Whittier, all full of the spirit of the new time and the new faith, have gone where the Unitarian bell was never heard, and have taught men that the highest poetry cannot any longer live and breathe in the atmosphere of the old theology; and men everywhere instinctively divine that that with which the highest poetry does not spontaneously ally itself is no longer the highest faith. Darwin's *Origin of Species* and the *Mécanique Céleste* are what made the new heaven and the new earth,—and the same mails brought the news to Cambridge and to Andover. Leipzig and Halle and Berlin have for thirty years been full of American theological students, who now preach in orthodox pulpits and teach in orthodox schools; and, whether they have come home with any love for Kant and Lessing and Hegel and Schleiermacher and the Tübingen men or not, they have certainly brought home knowledge of them, and have not failed to feel their influence. They nave not failed, either, to bring home the German method. Its impress is as evident upon the pages of the *Bibliotheca Sacra* as upon those of the *Christian Examiner*, and these immediate influences have been far more potent upon our orthodox thought than any mediate ones. The writings of the English Broad Churchmen, again, have been, we believe, almost as influential upon American ortho dox thought as the Unitarian movement; and we believe that a large majority of the young clerical adherents of the new Orthodoxy would unhesitatingly declare that the sermons of Robertson of Brighton alone have had more to do in shaping their changed doctrines of the Bible, the atonement, the Sabbath, and the future, than all the Unitarian sermons they ever read. Arnold and Maurice and Stanley and Stopford Brooke were certainly little influenced by Unitarianism in reaching the positions which they have successively stood for. One and the self-same *Zeitgeist* brought Unitarianism and the Broad Churchmen to their places independently of each other. And it brought the Churchmen there with good grace often, while many Unitarians still strained and struggled. Witness Prof. Bowen's greeting of *Essays and Reviews*, in the *North American Review*, so laughably archaic now, when resurrected for his *Gleanings* after its sleep of twenty years.

Essays and Reviews is a good instance of the large number of special individual books which, powerful by reason either of their explicit positions or their clear implications, have appeared at intervals in these fifty years, and, by their own wide circulation and the controversies and discussions they have everywhere occasioned, have held the thought and close attention of the whole religious world, made themselves landmarks in the course of theological progress, and effected more than almost anything besides in the work of *Aufklärung* and "leavening." Strauss' *Life of Jesus* was such a book; Colenso on *The Pentateuch*, *Ecce Homo*, *Supernatural Religion*, *Literature and Dogma*, *Scotch Sermons*, Caird's *Philosophy of Religion*, Farrar's *Eternal Hope*, and various books of Kuenen, Ewald, and Renan,—books sometimes resting upon a profound philosophy, sometimes upon a shallower one, but uniformly marked by a great earnestness, remarkable critical acumen, and a deep divination of the trend of things. But none of these powerful and, in some cases, almost epoch-making books has been born of our Unitarianism. We think it is not too much to say that the *Origin of Species* and Strauss' *Life of Jesus* alone have done more "leavening" work in the various churches than the whole Unitarian literature.

We have thus indicated, in a very cursory way to be sure, what some of the genuinely original and efficient forces are which, in these fifty years, have leavened the religious lump and pioneered the better things which we now see and hear in all the churches; and we have said nothing of such fundamental forces as the Kantian and Hegelian philosophies, which, studied as carefully in orthodox quarters as in any others, could not fail in due time to produce their fruits and usher in the larger view. And the point which we are trying to make "sun-clear," as Fichte would say, in all, is that these great forces, the real "leaveners" and "pioneers" of religious thought in

Digitized by Google

these fifty years, have been operating equally upon Orthodoxy and Unitarianism,—not upon Orthodoxy mediately through Unitarianism, but immediately and at first hand. The Unitarian Church has, in each instance, assimilated them soonest and most completely, and has then given more or less help in their propagation; but, when the truth has come to Orthodoxy at Unitarian hands, it has been, in each case, as an old acquaintance, while its continued pressure from the original fountain-head has remained almost infinitely greater than its pressure through the Unitarian medium. In one word, the true "leaveners" and "pioneers" of religious thought in our day have not been the Unitarian Church or any Church at all, but the new philosophy, the new science, the new literature,—the *Zeitgeist*.

But, in considering such a question as this of the claim of a Church to the position of pioneer and leavener of the religious thought and life of the country, there is another point quite as important as that of the distinctive features of its creed and their relation to the science of the time; and that is the point of spirit and method. What constitutes the pioneer? Not, certainly, geographical position, the accident of place. Beacon Street is not nearer pioneering than Piccadilly, because it happens to be nearer Idaho. Few Americans deserve credit for being republicans; and we may not, for all our native republicanism, be doing half so much as Englishmen and Germans toward helping on to the truly democratic society and the Divine Commonwealth of good men's ideals. Whether the ship at Malta, or that at Malaga, be nearer the Holy Land, is a question more of wind and timber than of the chart. It is not anything attained that defines or qualifies the pioneer, but attitude, direction, and employment. It is the progressive and aggressive spirit, it is the way of looking at things rough-hewn and in great masses, it is the temper that is impatient of fine distinctions, of dainties, and of many questions, the mind that knows assuredly what the main chance is, presses toward it with all its might, and bothers itself very little about how this other man is working for it, so long as he be working for it.

Now, how has the Unitarian Church in America fulfilled this definition and demand in its history, in these fifty years? Comparing it with other Churches, does it show greater actual progress and a greater spirit of progress, and does it show to-day better timber and more momentum? Has it proved its greater breadth and directer, healthier devotion to the main chance by a stronger tendency to "rough it" among the doctrines, a larger patience with eccentricity and departure from standard sentiment, long rope for the adventurous, and a gentle hand for heretics?

But it may be said that there can be no Unitarian heresy, as there is no Unitarian Orthodoxy, no Unitarian creed. This indeed is sometimes said by silly people, and much reminds us of the notion that there is no such thing as a British Constitution. We remember that when, more youthful yet than now, we found ourself comfortably fixed in the British Museum, for a year on British institutions, we resolved very commendably to begin at the beginning, and frankly asked at the desk for a copy of the British Constitution; and, during that next hour after we learned that there was *no such thing in print*, our chagrin itself did not equal our dismay,—for it seemed as though the very bottom were knocked out of politics. Yet, though the Ministry itself, the very governmental centre, is all unknown to law, nobody surely doubts that there is a British Constitution, or that a Constitution can shape itself by a process of "slowly broadening down from precedent to precedent," which shall be firmer far than any which can possibly be penned by a convention.

So, when it is said that there can be no heresy if there be no creed, the simple answer is, of course, that neither can there be any Church. To be without a creed is certainly no virtue; and, of all states of mind, the weakest and most pitiable is surely that of the mind which does not know what it believes, and is proud of its powerlessness to tell. The creed may not be engrossed on parchment. Whether so or not is an entirely insignificant thing. The creed of Unitarianism has been in the books of its doctors; and we think no plain man has needed, at any time in these fifty years, to be in much more doubt as to the Unitarian Orthodoxy than, say, the Congregational Orthodoxy. And, as we review the controversies and the various agitations, we do not think that there has been a much greater distance between the front and rear lines of the one Orthodoxy than between the lines of the other,—which is not, of course, to imply coterminousness. We do not think, either, that there has been much greater patience with the heretics; for, whether there be a Unitarian Orthodoxy or not, there have certainly been Unitarian heresies in each decade, and the powers that be, as well as the rank and file, have found little trouble in determining the degree of variation from the standard doctrine and in occasioning some corresponding penalty. The well-informed will scarcely deny, we think, that men like Beecher and Bushnell have been treated by the Churches in communion with their own with a tolerance and consideration equal, at least, to that shown by the orthodox Unitarians toward men of their Church equally divergent from the standard sentiment. A docket of cases would be as odious as we hope it is unnecessary; but we may say at least, in mildness, that such hearty and wholesome *God-speeds* as that given by Dr. Bellows to Mr. Savage have not always been so common in the Church that this had no significance and that we may not remember it with pleasure. Yet, surely, a Church that could find time to dwell long on such doctrinal differences as any between Dr. Bellows and Mr. Savage could not graciously lay claim to the "pioneering" nature, or must have abdicated for the time the "pioneering" office.

But why touch upon these things at all? May not friends in council be permitted much enthusiastic magnifying, in the warm inspiration of good cause and mutual provocation? Certainly. We blame the *Independent* for forgetting that Mr. Collyer—of whose remarks we ourself are thinking very little here—was just home from Saratoga, and from seeing so many good people that his warm heart was satisfied that Nicea, Trent and Augsburg put together were nothing to it. In what hostility, then? Surely, in none at all, but simply because convinced, and most of all by this convention which has occasioned the *Independent's* merriment and satire, that American Unitarianism never had so good an opportunity as now, and that its tone and temper were never so good, never so practical and stalwart and so genuinely "pioneering." Dr. Peabody has recently written of the growing affinity on the part of the Unitarian "right wing" to the more liberal of the Trinitarian Congregationalists, "in the tendency to regard Christ's humanity as divine in a sense supreme and sole." We think that no reader of the proceedings of this last National Convention or of any recent representative gathering of the Church can find evidence that this "right wing" is large or vigorous,—vigorous enough to flutter. The man who believes that the fundamental positions of modern philosophy and science are reliable and true may well rejoice to see a Church whose congregations furnish, after all, the most *hopeful* nuclei for organized religious activity in the next future, looking stoutly forward and not backward, and, not forgetting the sharp lesson of forty years ago, honestly reaching the right hand of fellowship, with few superfluous nice questions, to whosoever seems to have the eye on the main chance. That such a Church has a great opportunity, in this breaking up, when the thing next behind it in the field is the emasculated and verbose New Orthodoxy, with its two bites at a cherry, which the merry *Independent* itself is just now advertising, who can help perceiving? How is it to make the most of the opportunity? One of the Western men told it at Saratoga, with that jaunty bravado which is rather refreshing in the Western men, "By joining the Western Conference"; and perhaps the gist of the matter was really there,—for the characteristics of the Western Conference are indeed the characteristics of the genuine pioneer. The representative Western Unitarian does seem to have a brain well aired and fairly muscular, and does seem to believe that he has a gospel that is worth having, and that it is worth other people's while to have, while his buoyant zeal in rich possession is seldom marred by the complaisant air of "having attained" or of suspecting no unconquered ground beyond. This deadly feeling of "having attained" was what sent so much of our New England Unitarianism to sleep, almost to seed, forty years ago, petrifying almost a generation into material not only most impervious to new religious thought, but, what in this matter is equally important and indicative, most provincial, Philistinish, and "essentially small" in its apprehensions of the scope of half a dozen recent intellectual movements, and stolid even to the calls of inevitable and urgent social reforms. It will not be a pleasant thing for Unitarian Harvard to remember, by and by, that, when the grand-daughter of Channing came to its door to ask for the tongue of Paul and Apollos, she was referred to the Methodist college over the river, and there got freely what she wanted, as she also did in the lecture-rooms of the University of Leipzig,—"ultra orthodox Leipzig," as Mr. Cook is fond of calling it. It is not creditable that the removal of so profound and significant a thinker as Dr. Harris from St. Louis to Concord should have been noticed no more heartily by the Unitarians of Boston than it was by the Episcopalians, and that the young men of Cambridge should not have filled his lecture-room. They seemed to count it more important to settle whether Davies' or Jowett's version of the *Republic* be the better to quote. Back Bay and Beacon Hill could easily have learned by cabling Mr. Martineau, if lacking knowledge or insight of their own, that here at the door was the ablest living expounder of a philosophy which, in its logical extension, ploughs beneath the very roots of the old orthodox system, and beside which all controversies with Moses Stewart, on the basis of old manuscripts, about the Personality of the Holy Ghost, or with Joseph Cook about "fixity of character," are mere surface scratchings.

Much more such like might, of course, be said; but we forbear. Only, in general, we count it well that, at a time when a new and hopeful era, an era of real "pioneering," seems possible to Unitarianism, it should enter upon it with very slight vain-glory, and with a very great sprinkling of dust and ashes, in consideration of the exceeding greatness of its opportunity and its most inadequate improvement. For this reason simply, we have thought it not useless to indicate what seem to us some of the prime agencies, the really great "pioneers" and "leaveners" in this current revolution, and to say why the work of Unitarianism does not seem to us to hold a place of any transcendent pre-eminence among them. If the view is true, it will not be useless, because, if true, it points out shallows that can be shunned; and, if it should appear meddlesome and unseemly in one who stands outside the Church to play the lecturer of the Church on church affairs, we are sure the offence will be condoned without a struggle by that sweet charity which we are assured so authoritatively is the "greatest on earth," for the sake of an interest which is most positive and sincere, even if accompanied by an obtuseness which may be melancholy and appalling.

We think, therefore, that all good Unitarians should thank the *Independent* for its pert and pertinent reminder of the *Zeitgeist*. But whether they do this or not, they will all alike repudiate the allegation that their leading men are busy now in repudiating Channing. It might be alleged as well that Samuel Adams and Charles Sumner were repudiators of the Plymouth Puritans. It is not what men are *in esse*, but what they are *in posse*, that counts; and we think that the invocation of the great name of Channing to sanctify provincialism, or the attempt to make him serve as the Melchisedec of the dispensation of the petrifaction, never seemed so sorry as now,—because never before have men been able to view his life and genius in their true proportions and tendencies, as they now do. After the strong words of the Newport oration of Dr. Bellows, certainly the most representative of Unitarians, it is no longer necessary to take up the cudge for Dr. Channing. It is quite sure that he was never venerated more, by the whole Unitarian Church, than he is to-day; and the *Independent* can easily satisfy itself that it is not among the men of the "left wing" that he is venerated least. However the disciples of Emerson and Parker may disagree with some of his explicit opinions, we are quite sure that none of them would hail anything more gladly, as promotive of the things most dear to themselves, than the establishment everywhere, within the Unitarian Church or without it, of Channing societies. To ourself, Channing seems to have combined in the noblest harmony the two great elements which must, we think, go to the making of every really great religious teacher and every really powerful religious organization. He believed with all his soul in a living God,—a thing which we still count virtuous in the religious teacher, and "necessary for these times"; and he believed that the Church has no place in the world at all, if its work is not that of making a better society. In one word, he had a theology, and he was possessed through and through by great social ideals; and, if American Unitarianism has these and knows how to combine them well, it surely has a future.

PROF. HAECKEL ON DARWIN, GOETHE, AND LAMARCK.*

We have to go back no less than twenty-five centuries, into the gray foretime of classic antiquity, to come upon the first germs of a philosophy of nature, pursuing Darwin's goal with distinct consciousness; the demonstration, namely, of natural causes for the phenomena of nature, and thereby the eviction of faith in supernatural causality, of faith in miracles. The founders of the Greek philosophy of nature in the seventh and sixth century before Christ were the first who laid down this true foundation-stone of knowledge, and endeavored to discover a natural, common, original basis of all things. This conscious aspiration after absolute causality, after the unifying knowledge of a common cosmic cause, appears all the more admirable that proper experimental investigation of nature was at that time quite out of the question.

Perhaps the most important among these Ionian natural philosophers was Anaximander. He assumes that out of infinity of matter, through eternal revolution, numerous world-bodies came into being as condensations of the air, and that the earth, too, as one of these world-bodies, issued out of a state originally fluid and afterward aëriform. He consequently anticipated the fundamental conception, valid at this day, of the natural development of the world, which twenty-four hundred years subsequently (in 1755) our greatest German philosopher, Immanuel Kant, in his *Universal History of Nature and Theory of the Heavens*, universally established. As here in the cosmological kingdom, Anaximander appears as forerunner of Kant and Laplace, so also at the same time in the biological kingdom he prophetically prefigures Lamarck and Darwin. For, according to him, the earliest living creatures on this globe originated in water through the operation of the sun. From these creatures, later on, were developed the land-inhabiting plants and animals, which left the water and adapted themselves to life on dry land. Man, likewise, has gradually worked himself up from animal organisms, and, in reality, from fish-like aquatic animals.

If here to our surprise we find clearly enunciated some of the most important fundamental conceptions of our current theory of development, we recognize it still more distinctly in its integrity one hundred years later in Heraclitus of Ephesus. He it was who first propounded the principle that a great, uninterrupted process of development pervades the whole universal world, that all forms are involved in an everlasting current, and that struggle is "the father of all things." Seeing that nowhere in the world exists absolute rest, and that all standing still is but apparent, we are compelled everywhere to assume a perpetual change of matter, a constant variation of form. That is only possible, however, through the fact that one form thrusts out the other, and that the new violently usurps the place of the old; or, in other words, through the universal "struggle for existence."

This principle of nature set forth by Heraclitus—that everlasting movement, or the struggle among all things, is the fundamental agent of the world—received a much deeper interpretation a little later in Empedocles of Agrigent in Sicily. He, too, assumes an uninterrupted change of phenomena, but finds the universal fundamental cause of the everlasting universal struggle in the two counteracting principles of hate and love, or, as our modern physics expresses it, of the attraction and repulsion of parts. As the mixture of bodies is effected by love, so is their separation by hate. If in the present day we regard the attraction and repulsion of atoms as the ultimate ground of all phenomena, we find, then, this fundamental proposition of our modern doctrine of atoms already anticipated in Empedocles. It is, however, still more remarkable that Empedocles makes the purposive forms of organisms come into existence through the accidental conjunction of counteracting forces. Out of this great struggle, the living forms now existing have issued victoriously, because they were best prepared for the battle, and therefore most capable of life. Here, we have not only the fundamental conception of Darwin's theory of selection forestalled, but also the solution of the great riddle indicated, "How can organic forms, constituted for a particular purpose, come into existence in a purely mechanical way without the co-operation of a final cause acting with a particular purpose?"—the same riddle the solution of which we account to be Darwin's highest philosophical merit.

Among all the great philosophers of classical antiquity, the three we have already named, Anaximander, Heraclitus, and Empedocles, are undoubtedly those who have most clearly enunciated the most important elements of the monistic theory of nature now prevalent. But, besides these, we find other contemporaries of theirs who held similar conceptions of development, such as Thales, Anaximenes, Democritus, Aristotle, Lucretius, etc. Yet were these various attempts at a genetic theory of nature soon thrust into the background by an opposing scheme of the world; that, namely, of the "philosophy of ideas," which was propounded by the sophists, and had its centre in Plato.

If these fresh-minded experimentalists of Ionian philosophy sought to explain the totality of the world by natural causes through mechanical processes, the Platonic school set up, in opposition to this view, supernatural causes, in the form of teleological ideas. There thus arose a mode of thought and inquiry which, withdrawing the mind from the objective knowledge of nature, placed the subjective being of man in the forefront of our contemplations,—a mode which throughout a space of more than two thousand years exercised its baleful influence in ever-increasing measure. In complete contradistinction to the "unity of Nature," everywhere demonstrated by the causality of her phenomena, there developed mightily the dualism invented by Plato, a harsh antithesis between God and the world, between idea and matter, between force and stuff, between soul and body. The numerous forms of organic nature which we distinguish as animal and vegetable species no longer appear as different stages in the development of common original forms, but as embodiments of so many innate, eternal, and unchangeable "ideas," as "constant species," or, as Agassiz—Darwin's greatest opponent—expressed it, "embodied creative thoughts of God."

This Platonism found its strongest support in the dogmas of Christianity which, preaching retirement from nature, came into friendly agreement with the "philosophy of ideas." The accelerating decline, again, of the sciences, which followed the tragic destruction of noble Hellenism, operated in favor of both Platonism and Christianity. Throughout the whole long spiritual night of the Christian Middle Ages there was no inward impulse to a monistic theory of nature on the ground of experimental investigation. In truth, however, there were not wanting attempts in this direction on the ground of pure speculation. In particular, the pantheistic systems of Giordano Bruno and of Benedict Spinoza in the sixteenth and seventeenth centuries are admirable essays toward a monistic and natural comprehension of nature. These pantheistic cosmologies, however, which in all material things assume an impelling world-soul in inseparable unity, were yet especially directed on the province of ethics or practical philosophy, and lacked—alas too desperately—all experimental foundation through immediate observation of nature, for in truth there was then no such thing. The whole sense and tendency of most thinkers of that time were turned away from nature and bent exclusively on man, who was considered to hold a position beyond and above nature. Even those monistic systems, therefore, of Bruno and Spinoza, had no power to establish themselves in the face of the all-mighty dualism which, through Platonism and Christianity, attained to universal supremacy.

Not till a long period afterward, not till the middle of the last century, did the natural reaction against that dualistic scheme of the world finally assert itself. Then at length did man begin to turn to the true source of all knowledge, to Nature herself. Especially in regard to the knowledge of animate bodies in nature, knowledge which had hitherto for two thousand years been drawn almost exclusively from the well of Aristotle, a new era of independent observation sprang up. The outward form and inward structure of plants and animals, their vital phenomena and their development, were now for the first time the subject of zealous and extensive investigation on the part of numerous naturalists. The plenitude of interesting facts which this source of natural revelation supplied could not, however, but again excite inquiry after the efficient causes, and soon the idea of natural development as an answer to the question forced its way out again.

The so-called school of the "older philosophy of nature," toward the end of the last and the beginning of the present century, first appears, simultaneously in Germany and France, as the new banner-bearer of this idea. But, independently of this school, we see a number of the greatest thinkers and poets of our classical literary period moved by the same idea,—above all, Goethe, Lessing, Herder, Kant; later, Schelling, Oken, and Treviranus. In France, again, we notice Lamarck, Geoffroy Saint-Hilaire, and Blainville; in England, Erasmus Darwin, the grandfather of our reformer, who, in accordance with the laws of latent heredity, transmitted a whole series of characteristic intellectual qualities to his grandson. Time does not allow us to-day to follow with a view toward comparison of the different expressions of the conception of development in these eminent thinkers; and, besides, much in this respect is already universally known. We will on this occasion confine our attention to two of the most eminent minds, to Goethe and Lamarck,—as, in our opinion, of all Darwin's predecessors they are the most important.

The significance of Goethe as naturalist has in our time been so often and so searchingly treated by several of our most esteemed biologists that we may assume the most of it also to be common property. We will therefore on this occasion expound only that point which for us-to-day is of quite peculiar interest, and has at the same time been very variously conceived; the question, namely, how far the general theory of nature held by our greatest poet agrees with Darwin's. In 1866, in my *General Morphology* I placed Goethe and Lamarck side by side with Darwin as the most important of the founders of the theory of filiation, and in the way of evidence had compiled from their writings a great number of specially remarkable passages. Their number has lately been increased by others. In the case, however, of a universal genius like Goethe, the question depends far less on the number and form of particular passages in which he communicates his view of the "formation and transformation of organic natures" as on the whole spirit of his grand and thoroughly monistic theory of nature; and, on this subject, those who have a general knowledge and comprehension of Goethe cannot now entertain any doubt. In that valuable legacy entitled "God and the World," he has left us in superabundance a collection of confessions as perfectly beautiful in their form as they are significant in their substance.

The preface to these confessions, the Proem, at once expresses the fundamental monistic thought of Goethe's general view of nature, the inseparable unity of nature and God, in a manner which leaves us in no doubt:—

> "Was wär' ein Gott, der nur von aussen stiesse,
> Im Kreis das All am Finger laufen liesse!
> Ihm ziemt's die Welt im Innern zu bewegen,
> Natur in Sich, Sich in Natur zu hegen,
> So dass was in Ihm lebt und webt und ist,
> Nie Seine Kraft, nie Seinen Geist vermisst!" *

Consider, in addition, the following wonderful poems,—"The World-soul," "One and All," "Legacy," "Parabase," "Epirrhema," etc.; consider, moreover, his pronounced confession to Spinoza's doctrine,—and we cannot really find any essential divergence from our current monistic comprehension of the world as newly established by Darwin. And what a high value Goethe himself attaches to it is seen in his question:—

> "Was kann der Mensch in Leben mehr gewinnen
> Als dass sich Gott-Natur ihm offenbare,
> Wie sie das Feste lässt zu Geist verrinnen,
> Wie sie das Geisterzeugte fest bewahre?" †

That, accordingly, our great Prince of Poets considered the world only as a monistic process of development in the sense of the Hellenic philosophy of nature, is further demonstrated, among other passages, by the dialogue between Thales and Anaxagoras in the Classical Walpurgis-Night. We would also point out the emphasis with which in geology he held fast to the theory of a gradual and uninterrupted development of our planet and its mountains. From the very beginning, he was the most decided opponent of the fallacy of repeated violent revolutions in our

* Lecture given at the Eisenach meeting of the German Naturalists and Physicians.

* What kind of God were He who impelled things only from outside, and let the universe twirl round His finger! It seems proper to Him to move the world inwardly, to cherish nature in Himself, Himself in nature, so that whatever lives and works and exists in Him never misses His power nor His spirit!

† What greater gain in life can man achieve than the revelation of God-Nature to him, the evolution of spirit from substance and the substantiation of spirit?

Digitized by Google

globe,—a fallacy which developed itself in the beginning of our century, and through Cuvier, in particular, came to be generally accepted. "The violence and leaps in this doctrine," he said, "I cannot away with, for they are not in accordance with nature. Be the matter as it will, it must stand written that I curse this confounded hurly-burly apparatus of the new creation of the world. And, assuredly, a talented young man will yet arise with the courage to oppose this universal craze!" Only a few years passed till this expectation was fulfilled. For in 1830 appeared Darwin's like-minded countryman, the great geologist, Charles Lyell, and delivered his continuity theory, the doctrine which is now universally received, of the gradual and uninterrupted development of the earth from natural causes, a mechanical geological theory which, perfectly in Goethe's sense, excluded all violent revolutions of the earth from supernatural causes.

If here, in the province of geology, Goethe shows himself as a most decided adherent to a monistic theory of development, we find him much more so in the province of biology. For the knowledge of the living substance, this "precious, glorious thing," was truly his peculiar pet study. Here, especially in morphology, his "Doctrine of Forms," he has cast glances into the inner origin and birth of organic forms,—glances deep and clear such as were possible only to a genius who was simultaneously thinker and artist, naturalist and philosopher.

Among the many interesting contributions Goethe has made to morphology, the most valuable and most elaborate is the *Metamorphosis of Plants*, which appeared in 1790. In this mature product of his botanical studies, which lasted throughout many years, and which most seriously engaged him during his travels in Italy, he deduces, as is well known, the whole endless wealth of forms in the vegetable world from one single protoplant, and makes all its different organs come into being through manifold transformation and process of development on the part of one single fundamental organ, the leaf. With this work occurred, in point of fact, the first attempt to refer the endless multiplicity of individual vegetable forms to one common original type.

"Alle Gestalten sind ähnlich, doch keine gleichet der andern;
Und so deutet das Chor auf ein geheimes Gesetz." *

This "secret law," this "sacred riddle," is the common descent of all plants from that protoplant, conjoined with the fact that the special differences are effected by the different circumstances and conditions of their existence.

As in the *Metamorphosis of Plants*, so also in the *Metamorphosis of Animals*, Goethe seeks, likewise, after the common prototype out of which all the allied forms have been produced through diverging development.

"Alle Glieder bilden sich aus nach ew'gen Gesetzen,
Und die seltenste Form bewahrt im Geheimen das Urbild.
Also bestimmt die Gestalt die Lebensweise des Thieres,
Und die Weise zu leben, sie wirkt auf alle Gestalten
Mächtig zurück. So zeiget sich fest die geordnete Bildung
Welche zum Wechsel sich neigt durch äusserlich wirkende Wesen." †

As is clearly seen in numerous other passages of his morphological studies on *Formation and Transformation of Organic Natures* that "primal form" or "type" was the inward, original community which lies at the basis of all organic forms and the original formation tendency which is transmitted by inheritance. On the other hand, the "unrestrainable progressive transformation which arises from the necessary conditions and relations of the external world" is nothing else than *adaptation* to outward conditions of existence. This latter is the centrifugal formative energy of "metamorphosis"; the former, again, is the centripetal formative energy of "specification." The clear knowledge of these two formative energies, counteracting and balancing each other, was so highly prized by the poet that he enthusiastically extols it as the "highest thought to which creative nature soared."

The province in animal morphology to which Goethe applied himself with peculiar predilection was comparative osteology, the skeleton theory of vertebrates. The reason for this is to be found in the fact that nowhere, perhaps, to such a degree as here does the operation of that highest nature conception of manifold development out of one single typical fundamental form meet us with such all-convincing force. Down to the present day, consequently, the comparative skeleton doctrine has remained the special favorite of morphologists. While in this province Goethe demonstrated the unity of the vertebral formation in the different divisions of vertebrates, and while in his celebrated skull theory he further showed that the skull was composed of a series of transformed vertebræ, he arrived, in 1796, at the following remarkable utterance: "So much, then, have we attained as to be able to assert, without any misgiving, that all the more perfect organic natures—under which we imply fishes, amphibious animals, birds, and *mammals, with man at their head*—have all been formed after one original image, which, in its highly persistent parts, only deviates more or less here and there, and yet daily, by propagation, transforms and perfects itself."

Some of our opponents have raised the objection that these and similar passages of Goethe are no "scientific truths," but only poetical or rhetorical flourishes and images: the type he meant was only an "ideal pro-type," no real genealogical form. It appears to us this objection betrays little understanding of the greatest German genius. He who is acquainted with Goethe's thoroughly objective mode of thought, who appreciates his thoroughly living and realistic view of nature, will, with us, entertain no doubt that under that "type" was intended a perfectly real descent of kindred organisms from common genealogical form. That the great understander of man did not thereby exclude man from the development series of the other vertebrates is indicated with special clearness in his comparison of the human skull with that of lower mammals. He here expressly points out several places in the human skull as remains of the animal skull "which are found in stronger proportions in such a low organization, but have not quite disappeared in man, in spite of his elevation."

No less does his celebrated discovery of the intramaxillary bone testify to the same conviction. Man, like the other mammals, having cutting teeth must also, Goethe concluded, possess the intra-maxillary bone which showed itself in the other mammals; and, in point of fact, after the most careful anatomical investigations, he established his point, although it had been disputed by the highest anatomical authorities.

Highly remarkable, moreover, in this respect, is the agreement Goethe expresses with the kindred view of Kant in his *Critique of the Faculty of Judgment*, a work the "great main thoughts of which were entirely analogous with his own work, action, and thought hitherto." The great Königsberg philosopher had enunciated the descent of all organic beings from a common original mother (from man down to polyp) as an hypothesis which "alone was in harmony with the principle of the *mechanism of nature, without which a science of nature was altogether impossible.*" This theory of descent, however, he had at the same time called "a daring adventure of reason." In reference to this passage, Goethe remarks: "Had I first unconsciously, and in obedience to inward impulse, restlessly pressed forward in the direction of that Original Form, that Type, had I even succeeded in building up a scheme conformable with nature, now at length could nothing hinder me from *boldly maintaining* the *adventure of reason*, as the sire of Königsberg calls it."

Finally, nothing can more strongly show the extraordinary interest with which Goethe followed this transformation theory, down to the end of his life, than the well-known attention he gave to the dispute between Geoffroy Saint-Hilaire and Cuvier. "This event is for me of altogether incredible importance," exclaims the gray-haired old man of eighty-one years, with youthful fire; "and I have a right to jubilate over the universal victory, at last witnessed, of a cause *to which I have devoted my whole life*, and which, too, is mine in a quite especial manner." The vivid representations of this most significant dispute, completed by Goethe in March, 1832, just a few days before his death, is the last literary legacy the greatest poet and thinker of the German nation has left behind him; and to this great intellectual contention also his last word applies,—"More light."

[*Concluded next week.*]

* All forms are similar, yet no one exactly the same as the other; and so the chorus points to a secret law.

† All members work themselves up according to everlasting laws, and the rarest form preserves in secret the primitive type. The form, therefore, determines the animal's mode of life, while, reciprocally, the mode of life reacts powerfully on all form. Thus, the regulated structure firmly maintains to itself while yielding to change through the action of outward substances.

MISCELLANEOUS.

BRONSON MURRAY, of New York, writes: "In *The Index* of October 12 is a proposal from Joseph Templeton, I. L. Lewis, and other Canadians, to send a committee to a convenient point in the United States to test Mr. Henry Slade's powers as a sensitive, or medium. This proposal, had it been addressed to Mr. Slade, were proper and reasonable. It is one that, in the *Religio-Philosophical Journal* of September 2,—the leading Spiritualistic newspaper of the United States,—I insisted long ago Mr. Slade should himself demand. There is no propriety in the Canadian gentlemen addressing their appeal, as they do, to the Spiritualists of America. The Spiritualists have no interest in convincing these Canadians that any of the phenomena of nature are facts, whether those demonstrated by Spiritualism or any other. Neither is it our part to substantiate the integrity of Mr. Slade. It is his duty to do that; and I presume all fair men, Spiritualists or otherwise, will regard it as Mr. Slade's duty to meet these gentlemen as they propose he should. Indeed, I insisted in the *Religio-Philosophical Journal*, and its editor agreed with me, that it was his duty to do that immediately when the charge of deception and of his flight from Canada was made against him. I do not mean that he is bound to put up money to cover their expenses, but I do mean he should, at an early day, visit one of those cities named by these gentlemen as acceptable to them, and from there invite them to visit and test him. Failing to do this, Dr. Slade and his friends, of whom I am one, must admit the charges as substantiated by his default."

IT is peculiarly unfortunate that every good cause, in its infancy, is troubled, like ancient Egypt, with a plague of vermin. Men whose lives differ so radically from the ordinary concepts of morality that the doors of every well-organized system are forever closed against them manage to slip edgewise into the ranks of nearly every movement which is passing through its initial stages. Here, they hope to find some excuse for their own irregularities, and to shelter their individual enormities beneath the cloak of a new religion or a new philosophy. Then again there are the men who are constantly in quest of opportunities to display their marvellous wisdom; men who have stores of speeches ever ready to be made; women who have lost the art of bread-making in learning to mouth vapid nonsense about this or that supposed evil; folks who aspire to leadership, and cannot gain it in any regular way: all such flock to every new standard as the discontented men of Israel ran to the rebellious Absalom. And the outcome, whatever its effect upon them, is simply death to Absalom. They get their reward easily. They make their speeches,—"heaven save the mark!"—they offer their resolutions, they figure on committees, and shine in a temporary blaze of calcium glory; but they leave the cause they advocate poorer than they found it, if they do not forever ruin it in the public estimation. And yet, as we have already said in substance, a certain proportion of crankism is inseparable from the incipient stages of all new movements. Christianity was so cursed, the abolition cause was so retarded, and to-day the cause of temperance is hindered more than it is helped by the foolish ranting of extremists. That the Liberals of the country should be so limited in the noble task of freeing the human mind from its servitude to superstition is not strange. Such a cause offers a snug corner for many an effete crank, and affords splendid opportunity for the ill-tempered ranting of malcontents of every stripe. It is not therefore surprising that many semi-lunatics have taken up its battle-cry and clustered beneath its standards. That so good a cause should be judged by the utterance of its weakest rather than by that of its strongest advocates is evidence of the unfairness of many within the boundaries of old and established systems. That any one should hold a school of thought responsible for the folly of its ardent but irrational adherents is unfair in the highest degree. The true and fair method of opposition is that pursued by those who seek out the strongest and not the weakest points in inimical systems. Meantime, let the true philosopher remember that his life will ever be more eloquent than his word, and that, although men may gainsay and jeer at his argumentation, none will dare to scoff at his virtue nor to presume upon his dignity.—*The Alliance.*

BOOK NOTICES.

PILGRIM'S PROGRESS. A cantata in three parts. By J. C. Beckel. Philadelphia: Lee & Walker.

This graphic allegory of Bunyan's is here put into the form of simple drama, with musical setting adapted to children's voices and a lively instrumental accompaniment. The melodies are kept within safe and comfortable range for young singers, and are by their simple structure easy for them to acquire.

"WIDE-AWAKE" sustains its established reputation as a first-class magazine for young people by its array of good things in the November number, just come to hand. That breezy, wide-awake, excellently told story, "The Trojan War," said to be written by "a boy," is finished in this number, much to the regret, we dare say, of all the *Wide-Awake* subscribers. "A Suit of Homespun" is continued, and accompanied by fourteen fine illustrations. This, and the quaint yet naturally told story of "Peggy's Mistake," give the children of this generation some idea of the doings and thoughts of a past generation. Among the poems, "Mistress Mary," by Mrs. A. D. T. Whitney, and "The Little Queen," by Susan Coolidge, rank highest. There is a short and interesting biography of Mary Russell Mitford, the story-writer, by Amanda B. Harris. Felix Oswald's "Runaway Pets" are always pleasing and instructive reading. These are a few of the many good things to be found in this number.

"ST. NICHOLAS" for November, beautifully illustrated as usual, has come to hand. "Indian Summer" is a lovely frontispiece in colors which recall this loveliest of seasons. "Torpedoes! Don't Anchor!" by Charles Barnard, with illustrations by J. B. Woodward, very clearly explains this part of the enginery of war. J. T. Trowbridge, the popular writer, begins what promises to be a very interesting story of "The Tinkham Brothers' Tide-mill." "A Boy in the White House" is the story of Thomas, better known as "Tad," Lincoln, the youngest son and pet of the martyred President, told by Noah Brooks. We mention these as a sample of the good things this number contains.

THE *Herald of Health* for October comes a little late. Some of the subjects discussed therein are "Malaria and Malarial Disease," "Tape-Worms," "Diet in Cancer," "Food of the Japanese," "Wall-paper and Ventilation," "How Singers should Live," "and Rosa Bonheur's Health Habits."

"OUR LITTLE ONES" for November vies with the larger juvenile monthlies in the beauty of its illustrations and the interest of its contributions. The lovely frontispiece, "In the Swing," ought to delight the heart of every child fortunate enough to see this number. There are twenty-six other illustrations, all good, and many of them very fine, accompanying eleven prose stories and seven poems. Russell Publishing House, Boston.

THE Doerflinger Book and Publishing Company of Milwaukee have just issued their *Freidenker-Almanach* for 1883, containing an unusual amount of astronomical and chronological information. The exact length of time since the death of Socrates, the discovery of America, the publication of Darwin's theory, and twenty-five other great events is clearly exhibited. Our own calendar is carefully compared with that of the Jews and Moslems, though, strange to say, not with that of the Positivists; and the record telling who were born and died and what happened on each successive day of the year is extremely full and very well selected. A large part of the one hundred and seventeen closely printed pages is given to spirited poems—one of which prophesies the fall of the Romanoffs—and bright, thoughtful essays. The longest of these latter is called "Two Heroes of Our Century," and tells about Darwin and Garibaldi. An especially valuable article, in view of the constant misrepresentations made by clergymen and college professors, is that on the "Stand-point of the Agnostics." This is shown to be as much opposed to atheism as to theism, and equally far from pantheism: "The Agnostic is that sensible and honorable man who has the courage to declare clearly his conviction that all arguments about the being of a God lead to nothing. He does not deny that there is such a being, but neither does he find cause to maintain that he possesses any proof of its existence.... All our knowledge is relative, since only phenomena can be known by us.... The Agnostic does not let any mist of theology or metaphysics blind his eyes, but looks boldly at naked, prosaic facts without falling into sentimental disturbance.... His motto is 'Evolution,' not 'Revolution.' A reasonable and natural system of ethics is gradually taking the place of the artificial code taught by Christianity. Pioneers like Herbert Spencer, Edward Hartmann, and Felix Adler, justify the fairest hopes ... To the Agnostic belongs the future.... For him, death has lost its sting, as we see from the account of the last moments of prominent Agnostics, like Feuerbach, Strauss, George Eliot, Lewes, Comte, Clifford, and Darwin.... Prove all things, and hold fast what is good; namely, your clear reason, mother wit, and mental independence."

We have quoted thus freely in hope of aiding the circulation of this German Almanac, which may be obtained at 470 East Water Street, Milwaukee, or at this office, for 25 cts.

PART I. of the *Lessons in Ethics*, entitled *Rights and Duties*, written by Mrs. Kate Gannett Wells, and issued by the Unitarian Sunday School Society, of 7 Tremont Place, Boston, has come to hand, and can be cordially recommended as an excellent beginning of liberal teaching in Sunday-schools or elsewhere. It is clear, simple, strong, and yet broad in its teaching of ethics, admirably suited to the comprehension of the yet unformed minds of children. Four other "Parts" are to follow, by different writers, on "Virtues and Vices," "The Conscience," "Social and Public Duties," and "The Will and the Emotions."

PERSONAL ITEMS.

MR. EDWIN D. MEAD is preparing a work on Emerson.

GEORGE JACOB HOLYOAKE writes us he will arrive in Boston next Friday.

THE Pope is protesting against the recent honors to the great Italian patriot, Arnold of Brescia.

MAX MUELLER has been invited to give a course of lectures on the Science of Language at the Lowell Institute next season.

LOUIS KOSSUTH recently celebrated his eighty-first birthday, and the thirty-first anniversary of his condemnation to death as a traitor.

M. CHEVREUL, the French scientist, is now in his ninety-sixth year, and yet spends eight hours daily in his laboratory, besides doing much literary work.

THE *Freidenker* for October 29 contains Mrs. Clara Neymann's cheerful letter from Nebraska, and an editorial about Herbert Spencer's views of America.

THE Attleboro *Chronicle* makes favorable mention and gives fair reports of lectures delivered last week at Plainville, Mass., by the junior editor of *The Index*.

MRS. LANGTRY, the celebrated "professional beauty" and actress, arrived in New York on Monday. She will make a six months' theatrical tour of the United States.

MR. IRA STEWARD, the well-known labor reformer and eight-hour advocate, is dangerously ill at the Massachusetts Homœopathic Hospital, of consumption of the blood.

THE venerable A. Bronson Alcott had a shock of paralysis one day last week; and, although at first fears were entertained that it would prove fatal, there is now hope of his recovery.

OLD Chief Pocotello at the Fort Hall Agency, in answer to questions as to the character of a former Indian agent, described him by the following terse expression: "Ugh! too much God, and no flour."

THE wife of the notorious Tichborne claimant and two children are inmates of a workhouse at Southampton, England. She still persists in calling herself "Lady Tichborne," and her name stands as such on the workhouse register.

NEW ORLEANS is to have the honor of being the first city in the Union to erect a monument to a woman. The person to be thus honored is Margaret Houghery, the recently deceased benefactress of the orphan asylum of that city.

THE late Prof. F. M. Balfour left to his friend Dr. Michael Foster of Trinity College, Cambridge, a legacy of $5,000 to be used for the promotion of science. Dr. Foster will found with it either an annual prize or a recurrent scholarship.

THE grave of Emerson is kept constantly covered with flowers by the young girls of Concord. Hawthorne's, with a stone at head and foot bearing simply his name, is thickly overgrown with glossy myrtle. Thoreau's is unadorned, save with a thick sod of green grass.

SAYS the Boston Saturday *Gazette:* "Rev. Dr. Edwards A. Park was in town last week, looking as cheerful as if his recent utterances on future damnation were only meant to be interpreted in a Pickwickian sense. He was to have preached in town to-day, but has been forbidden the exertion by his physicians on account of his health."

DR. WILLIAM B. CARPENTER, the distinguished English physiologist, gave two of his promised course of twelve lectures at the Lowell Institute in this city last week. The first six are to treat of marine geography, the last six of psychology. Mrs. Kate Gannett Wells gave a reception to Prof. Carpenter and wife one evening last week, which was a very enjoyable affair.

THEODORE PARKER, in his *Historic Americans*, gives this anecdote: "Once, John Adams went with others to see the picture of Washington in Faneuil Hall. Some one remarked on the firm mouth, and said, 'It looks as if he could keep it shut.' 'So he did,' said Adams; but, tapping with his cane his own bust, which the town of Boston had also placed in Faneuil Hall, he added, 'That d—d fool never could.'"

MR. GEORGE C. MILN recently made his first appearance as an actor in Chicago. Opinions as to his success vary, but generally agree as to his elocution. Some of his Chicago critics are severe and, we are inclined to think, ungenerous in their comments on his acting; but others, while admitting defects that can be overcome only by careful training, give him credit for considerable ability as an actor, and speak encouragingly of his future in his new profession.

PRINCE BISMARCK has hit upon a most effectual plan for keeping inquisitive intruders away from Varzin. He has issued a peremptory mandate, forbidding all the inhabitants of the village and neighboring country to entertain any strangers whatever. So strictly enforced is this order that a newspaper correspondent recently was compelled to tramp to a town several miles away at midnight for the shelter that was refused him by the chancellor's tenantry at Varzin.

EMERSON remarked of Thoreau: "He was frequently at our door for pails and spades and axes; and, if nobody was about, he would borrow them just the same. A strange creature, more like an Indian than a white man. If he awoke in the morning with an idea that the White Mountains had a claim upon him, he would simply close his door and walk to them. He was to a great extent the creature of his impulses. Though happy in congenial company, he was as well content to be alone."

HERBERT SPENCER has at length been interviewed, and has given utterance to some thoughtful and important criticisms of the people of the United States, their customs and institutions. The opinions of the great man, though in the main very flattering to us, deal unsparingly with what he regards as some of the defects and abuses of our Constitution and administration, and mark out in the clearest manner the possibilities and dangers of the Republic's future. He thinks that America has not yet evolved its ultimate form, and that the future development will certainly be in the direction of improvement.

DANIEL MACMILLAN, in a graphic sketch of Carlyle as a lecturer in London, said: "He lectures without notes of any kind, having thrown aside even the piece of paper, like a visiting card, which he used to bring with him. He is very far from being a fluent speaker. Sometimes, he rises into eloquence and gets applauded; sometimes, he comes to a dead stand for want of a word, quietly looking in the face of his audience till he finds the word; sometimes, he leaves his sentences in a quite unfinished state, and passes on to something else. He rarely moves his hands from the sides of his desk: when he does, it is to rub his two forefingers along his forehead, just above his eyebrows. This seems to be of great use, enabling him to get on much better,—at least, I suppose so, because he always said his best things after one or two of these rubs. His whole appearance and manner are exceedingly simple. I never saw any one so completely free from anything like pretension. His accent and pronunciation are very broad Scotch, much more so, I think, than Dr. Chalmers'. His dress is plain and simple enough, but no way remarkable."

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE BIBLE'S FLAT EARTH AND CIRCUMSCRIBED HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

A MONUMENT to Arnold of Brescia, the first martyr in the struggle against the temporal power of the pope, was erected by the people of that city on August 14.

SAYS the Springfield *Republican:* "The first trial of a Mormon polygamist under the Edmunds law has just been held in Salt Lake City, and it ended in smoke. A man named Hintze had two wives, sought to take a third, and was hauled up. There was no sort of doubt about the fact, but in court the second marriage could not be proved. The second wife would not admit that she was married, nor that she now cohabited with Hintze, although she had a child called by his name; and the case was dismissed."

LAST week, a case was decided in Providence, R.I., affecting the interpretation of the Sunday law. The plaintiff had been injured and crippled for life by an accident due to lack of proper precaution and care on the part of the Union Horse Railroad Company. The corporation raised the point that, since the accident occurred on Sunday, the contract to carry was null and void except in cases of necessity or charity, and that therefore the tort was without foundation. This mean subterfuge did not serve the purpose of the corporation, and a verdict of $6,925 was rendered in favor of the plaintiff.

CEYLON must be a good place to live in for one who likes snakes. Prof. Haeckel writes: "The great black scorpion (nearly a foot long) is so common in Ceylon that I once collected half a dozen in the course of an hour. Snakes exist also in great numbers. Slender green tree snakes hang from almost every bough, and at night the great rat snake (*Coryphodon blumenbachii*) hunts rats and mice over the roofs of the huts. Although they are harmless and their bite not poisonous, it is by no means a pleasant surprise when one of these rat snakes, five feet long, suddenly drops through a hole in the roof into one's room, occasionally alighting on the bed."

THE percentage of church-goers in New York is not large, according to the *Baptist Weekly*, which says: "The population of New York has largely increased; but will any one tell us of any Baptist congregations which compare in size with those which could be found thirty years ago in Broome Street, Mulberry Street, Oliver Street, Norfolk Street, Cannon Street, Macdougal Street, and Downing Street, then the seats of large assemblies and great influence? Some of these places are occupied still; but they are sparsely attended, spite of the most earnest and able presentation of the gospel. And prosperous suburban churches, when the population is considered, afford little cause for gratulation. This state of things is not peculiar to Baptists. Perhaps half a dozen Presbyterian churches in New York have large congregations, but several others show a very scanty exhibit of worshippers. The Methodist Church has not gained of late years. The Episcopal churches have increased in numbers; but were it not for the large revenues of Trinity, which help many of their churches, they would not be able to keep their doors open, and not a few of them show a very meagre attendance."

THE Boston *Transcript*, in an editorial article on the ethical teachings of Herbert Spencer, observes: "To his view, the conception of right has been slowly built up of a selection of motives and courses having reference to painful or pleasurable results. The supernatural ethics connected with theology has located these pains and pleasures in a distant future. The new scientific ethics finds them in the immediate or eventual consequences of terrestrial life. The point at issue between Mr. Spencer and Mr. Mallock is the sufficiency or insufficiency of these temporal motives. Mr. Spencer's view is certainly nobler and more honorable to human nature than that set forth in such books as the *Romance of the Nineteenth Century*. If it be really true that great numbers of human beings are too weak to stand alone on the removal of the old restraints, it must certainly be for the general weal that such take themselves out of the way as soon as possible. But let us at any rate attach no responsibility for their weakness to a man who has given his best strength to the formulation of a system forced upon the world by new and larger truth. Mr. Spencer has done what must be done in the present state of things,—shown us a way out of our moral perplexities, and done his part to prevent a moral interregnum."

IN an address to Congregational ministers in this city last week, Prof. Park, of Andover, said that there are three doctrines which should be insisted upon as essential to ordination: "These are, first, that the Bible is trustworthy as a religious guide in all its religious teaching,—not that the Bible is correct in all its astronomical and geological statements, but that in its spiritual sense and teachings it is not to be doubted. Next, that the doctrine of the atonement is a sacrificial act, as consisting in the sufferings and death of the God-man, which sufferings and death are representative of the eternal punishment of sinners; that those sufferings and that death were designed to, and in fact do, honor God's justice and love and holiness as much as the law and the holiness and justice of God would be honored by the eternal perdition of sinners. Third, that this world is the only world of probation; that the future world is the world of punishment if a man dies impenitent, and that such a man will suffer the punishment of the law, which is eternal. These doctrines must be insisted upon, and the present state of the churches demands that they be peculiarly insisted upon. Ordinarily, it is not more essential to insist upon them than upon the doctrines of regeneration, of total depravity, of the Trinity; but now it is more essential. We must insist upon these doctrines, chiefly because they are true, but because our ecclesiastical fathers have done more labor and suffered more obloquy for them than for any others."

MR. GEORGE JACOB HOLYOAKE, who arrived in this city last Saturday, accompanied by his daughter and by Mrs. Leach (who is here to examine our public-school system), has been the recipient of many attentions and courtesies from his Boston friends. Last Sunday evening, he gave a lecture in the Parker Memorial on "My Early Religious Days," in which he related in a pleasant and impressive manner the experience of a courageous and conscientious mind in its transition from the condition imposed by inherited and traditional superstition and an environment in which poverty and the crudest and narrowest theology were the most conspicuous features, to a secular view of life and duty. The story was told with that felicity of language and kindliness of spirit and enlivened by that genial humor which give a peculiar charm to all that Mr. Holyoake says or writes. In the afternoon, he attended the Parker Memorial Science Class, where the *Psychology* of Herbert Spencer was the subject of discussion. At the close of an address by the junior editor of *The Index*, Mr. Holyoake made a speech, replete with good sense, in which he paid a high compliment to Herbert Spencer, with whom he has been personally acquainted many years. On Tuesday evening, he was given a reception at the parlors of the Parker Memorial, where he received many expressions of appreciation of his services as a public benefactor. Next Sunday, November 12, Mr. Holyoake will lecture for Mr. Hinckley's society at Providence in the afternoon, and in the evening will meet members of the congregation at Mr. Hinckley's house. The subject of the afternoon lecture will be "Religious Scenes and Associations of my Early Days, and Characteristics of Congregational and Unitarian Churches." On Monday and Tuesday evenings, November 13 and 14, Mr. Holyoake will lecture in New Bedford. On Monday evening, Mr. Wm. J. Potter will preside. Mr. Holyoake's first subject in New Bedford will be "Features of Parliamentary Orators," including those of Lord Beaconsfield, Mr. Gladstone, Mr. Bright, and others. The second subject will be "Co-operation considered as a New Force in Morality and Industry." On Sunday, November 19, he will deliver his last address in America in Cosmian Hall, Florence, Mass.

EVOLUTION:

A Letter to Mr. Underwood.

My dear Sir,—You say with good warrant that I am an evolutionist. I had said as much to you, and should have said it in *The Index*, in order to correct some misapprehensions, had I found occasion to do so without coming forward for that express purpose. You have now spoken for me, and I am glad of it. But so much being said, I am under obligation to say more. For I believe in evolution without accepting as sufficient any philosophical explanation of the fact hitherto offered,—an evolutionist holding out for more adequate explanations; and I shrewdly suspect that the case is not much otherwise with Col. Higginson, little as he may be satisfied with the system and methods of Herbert Spencer. But to some of your readers, with whom the fact of evolution and Mr. Spencer's explanation of it are one and the same, and no more to be separated than the fact of gravitation and the law of gravitation as discovered by Newton, such a declaration of position will not be intelligible. I must therefore try to render it intelligible, and beg leave to do so in the form of a letter to yourself, as if in continuance of a conversation which passed between us one evening, and of which I retain a pleasant recollection.

Evolution means continuity in the process of nature, or of the known universe. The contrary notion is that of a natural process interrupted at times by obtrusions or injections of power from without; which power may thereafter either run in the channels of nature to give them a new content, or run side by side with them as a distinct supernatural current, or it may but briefly suspend the effect of natural law, and then be withdrawn, leaving all to go on as before. Now, the former conception was that of the new school of thought in New England, commonly known as the transcendental school, before Herbert Spencer was heard of. Emerson had announced it as indubitable truth in *Nature*, his earliest work. Parker had applied it to one great province or principle of human history in his *Discourse of Religion*. Higginson and Johnson, the two adherents of the school whom I first encountered upon coming to Massachusetts in 1851, were younger men, and not in the same way before the public, nor do I recall any express private declaration from either of them upon the point; but they were certainly on the same line of thought. So extended indeed was this manner of thinking, that it had reached me in eastern Maine, and in a general way determined finally my point of view, while I was yet a student there in an orthodox theological seminary, therefore between the years 1848 and 1851. "Development" was the word then, and quite as good a word as evolution, save that the latter is in some respects more convenient. This term came into vogue, displacing the older one, along with a particular explanation of the world-process, as being but the blind movement of forces purely physical or physico-chemical; and now it is the persuasion of many that the idea of continuous universal development was born into the world from the womb of this particular theory; and that one can be an evolutionist in no other form. But the idea has been abroad for a century or more. During no less a period it has been generating theories and hypotheses designed to cover some part of the great world-process, if not the whole. And familiar to American transcendentalism, though in a sense not very precisely defined, it was taken up by Hegel and worked out methodically with a thoroughness and in a way that excited the vast admiration of one age, and now excites the half-contemptuous astonishment of another.

Hegel was an evolutionist of the strictest sort. I hazard nothing in saying this, though far from being an Hegelian scholar, for a slight acquaintance with his manner of thinking makes the fact obvious. Take, for example, his *Philosophy of History*, his most exoteric work. He there represents history as a logically ordered succession of steps, whose result is a freedom self-contained and self-governed. The whole process is presumed in the first step, and in the last all the preceding ones are subsumed. But here we are to make a distinction of much importance; we are to distinguish between two very different conceptions of evolution. The first step in Hegel's historical evolution is represented by China, the second by India, another by Greece, and so on. Now, according to one style of thought the phenomenal fact, China, should have evolved itself to become India; the phenomenal fact, India, have evolved itself to become Greece; and so to the end. This would imply that what had actually come to the surface in China was sufficient to produce, and of necessity must produce, the whole course and result of history. It would imply, not simply that the actual morals, institutions, laws and manners of China sprang from productive principles in the human spirit which would elsewhere go farther and give themselves a higher manifestation, but that these morals, institutions, laws and manners would transform themselves into others of a more advanced type, and these again into others; thus that the first phenomenal result, considered as quite cut off from any unapparent resource, is in and of itself the source and principle of all subsequent evolution. Hegel thought quite differently. What he speaks of is the self-evolution of spirit, or of the human spirit. This, following an order inherent in itself, unfolds its content, and gives itself an outward representation in doing so; China representing the primary degree of this unfolding, India the next, and so on. Here the evolution and the continuity are spiritual, and spiritual only. In the outward representation we observe indeed an order of succession, but no outward line of production running from one degree to the next, say from China to India. The succession is like that of the steps in a stairway, where there is indeed a regular ascending order, but no production of one step by the next lower.

But it will now be prudent for me to get away from Hegel, and make a safe retreat. I really do not know how far the evolution of existence, as traced in his Logic should be understood as a movement taking place in time; I am only sure that the thought-process, which according to him is the veritable world-process, is evolutionary, and in the most vigorous sense. But what is here said of him is simply preparatory to a statement which might have been made without reference to him, though the preparation is not superfluous. The statement is that evolution may be, and has been, conceived of in two quite opposite ways. On the one hand, it is conceived of as proceeding from within outward, from unapparent reality to apparent form significant and representative of the reality; which representation is in and of itself, or apart from its producing principle, nothing. This, I suppose, was,—approximately at least,—the earlier thought of Emerson and of the American transcendentalists generally. Take for illustration some well-known lines from "The Problem."

> "These temples grew as grows the grass;
> Art might obey, but not surpass;
> The passive master lent his hand
> To the vast soul that o'er him planned."

The master is passive, and it is the vast soul which plans in the growth of grass and temples, dewdrops and worlds. Art is true art only when inspired and guided by conceiving Nature, the supreme and eternal artist. Spiritual Nature imagines, and the world-picture lies before us, we ourselves a part of it; she thinks, and her thoughts are the laws of structure and motion in the universe. She is not meanwhile apart from her manifestation, but ever present in it and one with it. Instinct with her life, the stone is "conscious"; instinct with her purpose, the worm is "striving to be man." Now, one may represent the fact to himself in this way, and yet be no evolutionist, even though he admit an ascending course of phenomenal manifestation. To illustrate, let us suppose that a Phidias or Michelangelo has come to the perfect maturity of his genius, and is fully qualified to plan a Parthenon or St. Peter's, but that he chooses, one cannot say why, to begin with a hut, then to build something a little finer, and so through a succession of approximations, to bring forth at last the glorious structure which was in his mind from the first. This were not evolution. On the other hand, suppose a great artistic genius in course of development; it is Turner, for example, that we are thinking of. In principle and promise the genius is fully there at the beginning of his career, but as realized and productive power it is daily arriving, and it goes on increasing during a period of some five and thirty years. Meantime it is of the nature of this genius to be productive, to give itself an outward and visible expression. Always it brings forth its best, but its best of to-day will be bettered another day, for its power grows. Reviewing Turner's works, we can trace the stages of his artistic growth; from point to point, we can see that his apprehension becomes more alive, his insight more delicate and penetrating, his imagination freer, larger and more subtile. Here is a real development, but, though represented outwardly, it takes place only in the genius of the artist. The productive principle is there, and there too is the principle of continuity. Between the picture of one year and that of another there is a connection, but they are connected only through the producing genius. Now, universal evolution has been conceived of in a manner somewhat similar, though not strictly the same. The productive power and the principle of continuity are in Nature with the capital initial, Nature as spiritual, self-active, formative, and not in the outward representation, though she is not apart from her product like the painter from the picture. This, I should say, was Emerson's way of thinking. He is indeed a hard man to corner, for he not only spoke but thought poetically, and can never be bound to a theory strictly defined. But I should say that his thought ran in the direction indicated.

Let us now turn to the opposite conception. Here physical force, as apparent in the forms and motions of material things, is the be-all and end-all. It is purely phenomenal in the sense of existing only relatively to us, as we only relatively to it. Behind it is a nondescript somewhat which exists absolutely, but of which nothing can be known, since it is in no mode of relation either with ourselves or with the world around us. Quite independently of this, in which there is no evolution, and out of which there is none, the phenomenal or physical evolves itself, passing ever from simpler to more complex forms. Its principle of continuity is the law, newly discovered, of the conservation of physical energy, or persistence of force. Its productive principle is perhaps gravitation, since this seems to be indicated as the one primordial mode of force, out of which all other modes may or must have come; though on this head a degree of reserve is maintained. The whole movement is from without inward. At the outset there is but a gas or nebulous matter, uniform in character, uni-

Digitized by Google

formly diffused through the infinitude of space, and drawn equally in every direction. This matter is all and only surface; it has no *within*, but is extension without intension. But it concentrates itself in masses, rounds itself into globes, and now has an inner and an outer, though only in the spatial sense. But again it proceeds, and in the complexities of chemical differentiation and affinity acquires a positive interior content. Then it develops life, and in this arrives at a far intenser mode of relation; then through the ever-deepening subtleties and mysteries of vital being increases incessantly the proportion of content to surface. At length, though itself mindless, it evolves conscious mind or spirit, which has no surface, but is intension without extension. And while, according to the former conception, the physical world is in and of itself nothing, but might be called a function of spirit, so here we have the precise contrary; spirit is evolved, but it is only a function of matter, and has in itself no being.

Such are the opposed conceptions, as rapidly and roughly sketched. My own persuasion is that a true and entire theory of evolution, should it one day come, will comprise both and conform to neither. I believe that the real evolution is polaric, spiritual-physical; that on both sides there is a line of continuity, and productive power in their unity. An analogy will render it fairly clear what these words mean; but this letter is already too long, and I must crave leave to continue the subject and conclude the present statement in another.

Yours very truly,

D. A. WASSON.

ON SOME DEFECTS OF THE DAILY PRESS.

II.

My second article of indictment against the daily newspapers is that *they corrupt the language.* In order clearly and unmistakably to see what a deleterious influence newspaper style is having upon the writing and speaking of pure idiomatic English, it is only necessary to compare the abominable journalese diction of some of our great dailies with any English classic, such as Goldsmith or Milton or Emerson; or to compare the speech of any one of the semi-educated, newspaper-nourished crowd of middle-class Americans with the sweet, single-syllabled, nutty-flavored words of the unsophisticated laboring classes,—farmers, artisans, negroes, mountaineers, and other (oh, most enviable!) persons who live happily ignorant of that worse pest than the mosquito or the book-agent,—the intrusive, unescapable, unexorcisable, vulgar daily journal. The first fact to which an American wakes up when he sets about cultivating his style of writing or speaking is that he has first of all, with laborious effort, to rid himself of the journalese atmosphere in which, as a member of a newspaper-reading nation, he has all his life been unconsciously enveloped. By eschewing the daily press almost wholly, or only taking moderate doses of it, and by the assiduous reading of old English classics, and by pouncing eagerly upon the pure English words of the unbookish portion of the people, one may succeed at last in acquiring a readable and hearable style. But you must be prepared to have your new classicisms appreciated by only a small constituency. There are a few great daily newspapers, and a larger number of weekly ones, which demand and appreciate idiomatic English. You can write for these, and feel sure that in using a good old English word you will not have it remorselessly cut out by some hardened editorial devotee of pure and unmitigated journalese. But even the best journals have a horror of individuality. Your practical, self-made, office-educated editor will snake out of an article all the fresh and unconventional words as neatly and unerringly as a yellow-jacket will extract the sweets from a patch of buttercups. He will often go through your article and winnow out its individuality as deftly as a fan-mill will take the pure wheat out of a bushel of "cheat." It is true that in a daily paper it is almost impossible that much attention should be paid to *style*, owing to lack of time. In such a case, the evil of incoherent, indigested agglomerations of sentences is a cureless evil. But there is no excuse for editors preferring bookish and Latinized *words* to the pure Saxon words of good conversation. The style of the average local journal in America reminds you of the country school-girl airing her knowledge of books, or of the recent college graduate returning to the paternal farm in the West to spread dismay among his kinsmen and neighbors by his awful and unintelligible language.

De Quincey, in his essay on Style, has some good things on this subject. "Formerly," he says, "the natural impulse of every man was spontaneously to use the language of life; the language of books was a secondary attainment not made without effort. Now, on the contrary, the daily composers of newspapers have so long dealt in the professional idiom of books, as to have brought it home to every reader in the nation who does not violently resist it by some domestic advantages. Time was, within our own remembrance, that if you should have heard, in passing along the street, from any old apple-woman, such a phrase as 'I will *avail myself* of your kindness,' forthwith you would have shied like a skittish horse; you would have run away in as much terror as any old Roman upon those occasions when *Bos loquebatur* (the ox spoke). At present you swallow such marvels as matters of course. The whole artificial dialect of books has come into play as the dialect of ordinary life." De Quincey proceeds to give a whimsical account of an encounter of his with a London landlady who had the newspaper mania, the reading of the daily papers being the sole and exclusive business of her life. She told De Quincey she "would spontaneously adapt the several modes of domestication to the reciprocal interests," etc. "'What's that?' we demanded. Mark the answer: 'A shed; that's what it is; *videlict* a shed; and anteriorly to the existing shed there was.'—*What* there was, posterity must consent to have wrapped up in darkness, for without further struggle against our instincts, round we wheeled, rushed down forty-five stairs, and exploded from the house with a fury, causing us to impinge against an obese, or protuberant, gentleman, and calling for mutual explanations."

To what has been said about diction, we must add that one of the most common delusions of the great horde of pedantic critics is that a word not in Webster or Worcester is no word. As a matter of fact there are hundreds and hundreds of genuine, indispensable words not found in those dictionaries. From the literary money-bags of forgotten times, it is permissible and laudable to pluck out now and then a beautiful and neglected coin; and it is also permissible to fresh-mint others when necessary.

Third article of indictment: *they waste our time.* And this in two ways: first, by spreading ideas out so thin that you can see through their threadbare texture, and by lack of time for condensing such ideas even when they would like to do so; and, second, by enticing us to read a great deal more in each paper than we have any business to do. The first of these evils can hardly be cured so long as it is deemed more respectable to earn one's living by writing on paper with a pen than by writing on the earth with a plough, to gossip about other men's business than to attend to one's own. If Jack Horner must earn his living by his pen, he must "spread himself" over as great a superficies of paper as possible. But oh that it were not so! "Simply to retrench one word from each sentence," says De Quincey, "one superfluous epithet, for example, would probably increase the disposable time of the public by one twelfth part; in other words, would add another month to the year." As to the second point, one may most heartily agree that, if we read too much and waste our time, it is our fault, and not that of the newspaper. The amount of valuable reading matter in the better class of American newspapers is perfectly marvellous. Everybody is benefited by reading a good newspaper, provided only that one reads it not too much. The daily paper is a modern institution. People don't understand yet how to read it. There is such a thing as a mania for newspaper-reading. Everybody has some one in his or her acquaintance who is afflicted with this disease, or mania (call it journalomania). Its victims are never seen unaccompanied by the white instrument of their destruction,—namely, some newspaper, often as large as the main sail of a frigate, or the patch on an East River scow. The journalomanians always have a nervous and worried and haggard look, as if their long task of pouring facts through the sieve of their heads was wearing on their health. They are the persons (generally old ladies and old gentlemen) who always read with religious scrupulosity *everything* in their daily newspaper. Now, as a matter of fact, there is in each daily paper but *one* piece of news for any one man or woman. The paper is worth its price, and more than worth it, for that piece of news. The rest of the paper is for other people, and you or I have no more business to waste our time reading other people's news than we have to go gadding about the world, or our community, to inquire by word of mouth into the lives of Tom, Dick, or Harry. Buy your paper, read it five minutes, then throw it aside (throw it out of the car window, if your will is not strong), and take out of your pocket one of the vest-pocket classics or science-books, and read a sentence that will, it may be, change your whole life for the better.

Fourth article of indictment: *They embitter the lives of thousands by their slander and gossip.* This is a large topic that cannot be entered upon here. The writer of these lines was once in the office of a New York daily, when a lady victim of one of the infernal reporters who fatten upon broken hearts and ruined reputations came in to seek to get justice done to her family. The family had been grossly slandered,—dished up in one of those vile articles that make all noble souls ashamed of American journalism. No matter what the outcome might be; even if this lady did obtain a line or two of explanation or retraction, would *that* make amends for the irreparable injury that had been inflicted? If it were not for the fact that we are a migratory people, existence would hardly be supportable to many slandered families. But at present they can move into distant regions, and begin life anew, after a cruel slander has been published. Grant that in each case of exposure there is more or less wrong on the part of the exposed, is that any reason for the publication of it to the world? It is useless to argue a truth made self-evident by the ethics of the human heart. If the daily papers cannot understand that their noble function is to educate and defend the people, but not to prey upon them, to act the part of the wise judge in rightly drawing the line that severs the punishable from the remedial, the public criminal from the private unfortunate,—if they cannot, or will not, see this, then they must be made to see it by legal measures; and everybody should be interested in bringing to justice the proprietors or

Digitized by Google

editors of those papers that unscrupulously prey upon the health and happiness of the community.

W. SLOANE KENNEDY.

"THE CONQUEST OF THIS PLANET."

Alexander the Great is said to have sighed for more worlds to conquer; but he did not conquer even this one, but only a patch of it in the Eastern hemisphere. In an article in a recent issue of *The Index*, "the conquest of the planet on which we dwell and its domestication" are spoken of as "an enterprise which is henceforth to be pursued with method as an avocation and art." The conquest here meant is of course no bloody, autocratic Alexandrian, Cæsarian, or Napoleonic conquest, but a reduction of the entire habitable or occupiable surface of our planet to the control and use and enjoyment, rational and æsthetic, of a humane, enlightened, scientific civilization,—not for the glorification of a single man or class of men, but for the behoof of the entire race. Already so easy and rapid and commodious is the transit from one country to another, from one hemisphere to the other, that it has become a means of Sybaritic enjoyment and luxury rather than a matter of peril and discomfort, so that the rich in this country and England are constantly on the wing, and leading the life of sojourners and commorants at large in the world rather than of stationary citizens in any particular country. And it is manifest that the time is rapidly approaching, when space or distance (outness) will be so cheaply and swiftly overpassed that all men will be able to dwell at large on the surface of our planet with a kinglike freedom of choice as to the locality, soil, climate, or physical environment which they will occupy. Of course, such a free and easy occupancy of the bosom of Mother Earth will do away with all localism, provincialism, and even nationalism. Literature, Goethe said long ago, had become cosmopolitan; and everything else human will soon follow suit, to the utter dismay and discomfiture of sectarians, exclusive churches, and other things of that sort. Mountains and seas interposed, in the famous phrase of Cowper, will no longer make enemies of nations; for the nations will sooner or later melt into and be swallowed up and lost in a liberal, enlightened, cosmical humanity. Genuine civilization has always meant an advance from a narrow Gentilism toward a comprehensive world-wideness. At length, the advance in that direction in the scientific era, in which we are now living, is constantly being accelerated. Time and space have hitherto been insuperable insulators of generations and communities. But we may be said, by means of a historic and philological clairvoyance, to have done away with the barrier of past time, and to have thoroughly appreciated and comprehended humanity at all the past stages of its historic development. Thus do we enjoy an unclouded, luminous retrospect or view of the past. We thus have ascertained the trend of civilization. We can now co-operate intelligently with the divinity that shapes our ends. Our thoughts and wishes are now literally *flashed* round the globe. Our bodies will soon follow with a swiftness of locomotion which is not yet dreamed of or taken into account as a possibility except by the few, who boldly speculate upon the magnificent realities of a not remote future. But, even now, one does not incur a suspicion, on the part of the most matter-of-fact and prosaic, of an extraordinary degree of visionariness, when he asserts that the air is to be the region of locomotion in the near future. Poets have always been credited with the possession of previsionary power, and the chief poet of the English-speaking world long ago saw a vision of the world of the future and all the wonders that shall be. Among these wonders, according to the illustrious British bard, were "the heavens filled with commerce, with argosies of magic sails." The imagination, as that divine faculty manifests itself in the greatest poets, is a Mænad with a blazing torch, illuminating far in advance the path of the sober scientific and inventive intellect.

The reason that savagery and desolation have reigned so long over such an immense extent of the surface of this little rotary province of the solar system has been the civilized man's inability to overcome space or distance with a celerity of movement that could rob it of its isolating power. But civilization, winged as it now is by science and invention, will erelong have taken possession of the entire earth, putting barbarism, desolation, and savagery of all sorts to utter rout. Then there will be land enough for all. Surplus populations can then literally take to flight and descend on remotest continent and island without regard to its distance, wherever there are an untilled soil and an alluring climate to furnish them with a desirable habitat for their Lares and Penates. What ravishing outlooks and downlooks will the aërial voyagers of the future enjoy! Then, the scenery of the entire globe, with its seas, deserts, and mountains, with all its zones and climates and their varying flora, and with its arctic and antarctic circles of desolation, will be subject to the rapid scrutiny and inspection of aëronautic tourists and excursionists in the course of a few brief days. It will be a short dash from the regions of the North Star to those of the Southern Cross, from the moist greenery of the meadows and fields of the temperate zone, with its coniferous forests, to the palms and richer vegetation of the tropics,

"Where the gold orange glows in the deep thicket's gloom."

Meantime, interplanetary space must remain forever untraversible except by the eye, sharpened by the telescopic lens. For seclusion and physical isolation are the lot and law of the worlds in cosmical space. But, at any rate, man, when at the height of his control of the forces of nature, will be able to expatiate at will on earth, sea, and air, so far as his own little planet is concerned. There will be

"No sequestered spot,
Lone mountain tarn, or isle forgot;
But voyagers, journeying in the sphere,
Will daily stoop to harbor there."

B. W. BALL.

A FEW MORE WORDS ON THE NATIONAL UNITARIAN CONFERENCE.

We had not intended to say anything more, at least for some time to come, concerning the National Unitarian Conference and our own relation thereto. But we have reason to believe that the remarks we have appended to our several correspondents' communications in various recent issues of *The Index*, replying to points made by them, have tended in some quarters rather to draw attention away from what we regard as our main position in the case, and which we had previously stated in editorial articles of September 14 and October 5. We wish, therefore, to make a brief summary of our position; and then, in all probability, we can leave the subject, so far as we personally are concerned, for a considerable period, though our columns will still be open to contributors who have something of value to say upon it, and all the more open because the Unitarian journals seem disposed to follow the policy of the Saratoga meeting on the question, and keep the discussion behind the scenes.

First, then, all this debate as to the exact intention and effect of the new amendment to the Constitution of the Conference does not touch *our* position in the least. We regard all the points raised concerning the special action at Saratoga, whether as to its meaning or method, as of quite subordinate importance; and for this reason we have not thought it worth while to reply to every point made by our critics. The action has its interest and value as marking the spirit of the Conference, and we willingly admit that it places the Conference in a more liberal and generous attitude than it held before. But, even though the intent and effect of the new amendment be all that Messrs. Savage and Chadwick and Spencer claim for it, our own personal relation to the Conference would not be changed. As we have previously said, we cannot share their opinion. To our view, the Constitution as it now stands does not make it at all clear that non-Christians are actually invited to the membership of the Conference or that the Conference, as a whole, intended to invite them. Some further action, we think, will have to be taken on this point before the meaning is plain. But, supposing this action to be taken and that it be such as to put the most liberal interpretation on the Constitution and distinctly to say that non-Christians are welcomed as members, we should still, so far as the invitation concerned us, have to decline it and remain outside. We did not re-enter the Conference even after the original Ninth Article was adopted, though it clearly and sweepingly affirmed that "all declarations of this Conference, including the Preamble and Constitution, are expressions only of its majority, committing in no degree those who object to them," and though there was then no such article as the present *ninth*, with its reaffirmation of "allegiance to the Gospel of Jesus Christ" and its limited invitation to membership to those "who wish to be followers of Christ." We did not re-enter, because we considered the amendment only a compromise which was unjust to the convictions of both sides, and which, so far from hastening the decision of the main question, would tend rather to postpone that question and blind people's minds to the issues involved in it. With us, the main question has always concerned the retention of the theological phrases in the Preamble and Constitution of the Conference. And, whatever else may be added to or taken from the Constitution, we cannot become a member of the Conference so long as these creed-phrases, which affirm the special authority of Christianity, are retained.

This ground we take for the following reasons, which we simply state here without arguing them:

1. We regard the elimination of these creed-phrases from the Constitution of the Conference as the proper and legitimate result of the principles that have been the most vital elements of the Unitarian movement, and as demanded by those principles.

2. Mutual justice, fairness, and equality are necessary elements of true fellowship. The members of the Conference do not come together on the same terms, or with a mutual recognition of equal rights, so long as one portion of them, though a majority, have certain of their theological beliefs stated in the Constitution, and another portion, holding other beliefs, are denied that privilege. A proper regard for the individual self-respect of members would require that the constitutional conditions of membership, in respect to beliefs, should be perfectly equal.

3. These theological phrases either cover deep, earnest convictions or they do not. If they do cover such convictions,—convictions which those holding them believe to be vitally necessary to the existence and welfare of the Conference,—then their importance ought not to be compromised away by the declaration that it is of no consequence whether members of the Conference hold

Digitized by Google

them or not. If they do not cover such convictions, but are only clung to as relics of a respectable traditional theology, then, for the sake of mental and moral sincerity, they should be dropped.

For these reasons, neither the constitutional amendment of the present year, nor that of 1868, restored our membership in the National Unitarian Conference. They were compromises to which, though we craved the fellowship, we could not consistently with our rational and conscientious judgment give countenance. In the art of practical politics, compromises may often be necessary. In religion, they are always dangerous. Religion is of little worth, if it be not the power of personal conviction and the very soul of sincerity.

Further, so long as these theological phrases in the Constitution are so tenaciously adhered to by the majority of the Conference (so tenaciously that Mr. Savage found that the present Ninth Article, introduced in 1870 by Mr. Hepworth, could not be rescinded at Saratoga as he had at first hoped), one who is outside of the Conference as a non-Christian, but who may not feel the force of these reasons which have decided our position, may yet be impelled to inquire whether the Conference can be a body with whose "purposes and practical aims" he is in such "general sympathy" as to meet even its amended test of fellowship. If those words mean all that they *ought* to mean, and what we believe they do mean to a large portion of the Conference, they will certainly shape the "practical aims" in some directions that cannot have his genuine sympathy. If, on the other hand, those words keep their place not by the force of conviction, but by the force of tradition, the question can but occur to him, whether he can give his sympathy to an organization whose basis is vitiated by such an insincerity.

WM. J. POTTER.

CONVENTIONS.

The Free Religious Association will hold a Convention in Syracuse, N.Y., beginning Monday evening, November 20, and continuing through Tuesday, the 21st. Speakers, Wm. J. Potter, Col. T. W. Higginson, Rev. M. J. Savage, Anna Garlin Spencer, Rev. N. M. Mann of Rochester, C. D. B. Mills, F. A. Hinckley, and others. The Association will also hold a Convention in Chicago, Ill., beginning Thursday evening, November 23d, and continuing through Friday, the 24th. Speakers, Wm. J. Potter, Rev. M. J. Savage, Anna Garlin Spencer, C. D. B. Mills, Rabbi E. G. Hirsch, Judge Booth, B. F. Underwood (probably), Rowland Connor, F. A. Hinckley, and others.

F. A. HINCKLEY, *Secretary.*

EDITORIAL NOTES.

SOME German clergymen are opposing the use of Goethe, Schiller, and Lessing in the public schools, from fear of rationalism.

THE junior editor of *The Index* will start West to meet engagements the latter part of this month. All applications to him for lectures should be addressed to this office.

"EVOLUTION: A Second Letter to Mr. Underwood," by Mr. Wasson, with articles by Mr. F. M. Holland, Mr. E. D. Mead, Mr. C. K. Whipple, Mr. W. I. Gill, and others, will appear in *The Index* next week.

MR. E. C. TOWNE'S first lecture on Electricity and Life will be given in Mr. M. J. Savage's church, West Newton Street, next Sunday evening, November 12, at 7.30. Special topics of this lecture: Oxygen and Electricity,—in the making of the globe; the production of all our common lights, and all our fires; and in the animation of living things, both animal and plant. Electricity the cosmic hand of God. The lectures are free.

WE find the following in our esteemed contemporary, the *Catholic Review*: "Of all the devotions in use in the Church, the rosary or beads is, perhaps, the most salutary and indispensable. Let such of you then, my brethren, as have neglected it, make up for your neglect without delay. Do not make the foolish excuse that you can read. Our holy father, the Pope, can read; but he says his beads. So do your bishops and priests. Follow, then, their example. Get a set of beads at once for yourself, and have them blessed for yourself, so that you may receive the indulgences attached to them which you will not have by borrowing other peoples. Then say them every day, if you have time, or at least as often as you can. You can do nothing in the way of prayer more acceptable to God or more efficacious to obtain grace for yourself and others."

IT is an unwritten law, well understood in journalism, that no editor is under the slightest obligation to give a reason for his acceptance or non-acceptance of a manuscript. He is not called upon to write a private critique on the article to the author of it. His acceptance or rejection is an absolute and unquestionable fact. Among amateur writers, this does not appear to be understood. All sub-editors and reporters understand that it is an unjustifiable impertinence to ask the managing editor his reason for publishing or not publishing any matter submitted to his judgment. Outside writers and aspiring amateurs rarely seem to comprehend this truth, and their transgressions are largely from ignorance rather than intention. The nature of editorial work requires absolute power of decision, in order to preserve the unities of the journal the editor conducts.—*Boston Traveller.*

AT the recent convention of the National Woman Suffrage Association in Nebraska, a letter was read from Harriot Stanton, daughter of Elizabeth Cady Stanton, addressed "To the Voters of My Generation in Nebraska." The letter was dated Toulouse, France, where, since leaving Vassar, Miss Stanton has been pursuing her mathematical studies. After comparing the position of a woman who returns to her native land, America,—a land of political slavery to her,—with that of the German immigrant, who knows that he can be politically free as soon as he becomes a citizen, Miss Stanton closes with these eloquent words: "Young men of Nebraska, I ask you to free your minds from prejudice, to be just toward the demands of another human soul, to be frank, to be wholly truthful and answer my demand: Why should I not be a citizen of this Republic? In replying, bear in mind the words of Voltaire: 'Who would dare change a law that time has consecrated? Is there anything more respectable than an ancient abuse? Reason is more ancient.'"

A SALT LAKE correspondent of the Boston *Transcript* writes:—

Said one apostate Mormon lady: "The great bar to all progress in the conversion of the Mormons is the devout belief of the women in their faith. They have been taught from their cradles that their souls' salvation rests solely with their husbands; that he, in a manner, holds the keys of heaven and hell. They are as fixed in this belief as the heathen women of India in the worship of their idols." But, notwithstanding their devotion to their religion, the Mormon women accept the one repulsive feature of polygamy as a cross. Those with whom we talked frankly admitted that it is a burden most grievous to be borne; "but," they added,—and how small a nutshell contains the whole matter!—"the Church requires it!" A daughter of Brigham Young, a bride of four months, talked frankly with a lady of our party concerning this peculiar institution of their Church, and when asked, "How will you regard the taking of another wife by your husband, which according to your code is not only his right, but his duty, and which sooner or later you expect him to do?" replied, "Of course it is a painful thought, and I try to put it away from me until the time comes; but I shall accept it as a duty to my husband, and *because the Church requires it!*"

THE *Commonwealth*, commenting on the fact that many who now take to the lecturer's platform are persons who have nothing to say worth hearing, but have in some way become notorious, remarks: "If a Dr. Tanner succeeds in keeping the principle of life in his poor body for a certain number of weeks on a liberal diet of air and water; if an Oscar Wilde poses before the world in affected attitudes, wears his hair long, and dons knee-breeches; if an excitable Mrs. Scoville goes off her balance in a frantic endeavor to save a brother from the hangman's noose; if a Captain Webb succeeds in eating, drinking, smoking, and sleeping, week in and week out, in a tank of water,—all these people, irrespective of whether they may have anything useful to say or are capable of saying it sensibly and well, must be urged to lecture! The practice has degraded the lecturer's platform, not, indeed, into a one-horse show, but into a one-ass show, which is something meaner and more despicable. In the lowest deep, a lower deep has been found. It is time we reformed it altogether. Artists should be valued and judged by the excellence of their art, and not because of some adventitious circumstance which has not of necessity anything to do with art at all."

IT may not be generally known that the "Associated Press" is composed of seven metropolitan dailies,—the *Herald, Times, Sun, World, Tribune, Mail and Express,* and *Journal of Commerce,*—which combine to procure telegraphic news at reduced rates. By this association, hundreds of out-of-town dailies are supplied, either wholly or in part. It is obvious that, since the Western Union telegraph company monopolizes the transportation of this telegraphic matter, the key to the situation is to be held by any speculator adroit and wealthy enough to procure a controlling interest in this company, and to suborn a majority of the papers represented in the association. This has been done by Mr. Jay Gould. As is indicated by the *Herald*, he holds a majority of the stock of the Western Union telegraph company. He for a long time has held a sufficient interest in the New York *Tribune, World,* and *Mail and Express* to make those papers utterly subservient to his will. And he has now, as we are informed by the *Herald*, brought the *Sun* to favor his aggrandizing plans. The rest is easily done. If the news system of the world is to be subject to the control of one man, an unscrupulous, conscienceless speculator, it is time to call a halt.—*Washington Post.*

"UNITY" asks: "Can a simpler or better statement of the aim of a Unitarian church be made than that which we have in the following newly revised covenant of Rev. T. R. Slicer's church in Providence, Rhode Island? 'In the love of truth and in the spirit of Jesus Christ, we join for the worship of God and the service of man.'" What is there in this "statement" to distinguish "the aim of the Unitarian Church" from that of the Baptist, Presbyterian, or even the Catholic Church? If the Unitarians really want the sympathy and support of honest and earnest men and women, *regardless of their speculative beliefs*, is it not about time that for the senseless phraseology of an outgrown creed, they substitute the language of common sense? If Unitarianism is so broad that all who are searching for truth and working for humanity, men like Spencer, Huxley, and Haeckel, Conway, Adler, and Holyoake, can stand upon its platform, why put into a statement of its "aim" a theologi-

Digitized by Google

cal creed and requirement? There is a large and constantly increasing number of men and women engaged in "the service of man" who do not believe and will take no part in what is commonly called "the worship of God." Will our esteemed contemporary please define the attitude of Unitarianism toward this class?

MRS. EMMA HARDINGE BRITTEN, one of the ablest and most eloquent advocates Spiritualism has ever had, in reply to a circular asking "the advice of those who are well known as tried and experienced Spiritualists," writes: "I have deemed myself amply rewarded by witnessing its triumphant acceptance in many parts of the world by tens of thousands of capable thinkers. I now see this work—to me so holy and sacred—degraded by imposture and repudiated by the most respectable portion of the community, chiefly on account of the notorious frauds practised upon it in the name of mediumship. If I have of late forborne to take any public part in a movement justly and necessarily tabooed by the classes whose influence is most needed to sustain it, it is because I have felt that my single voice was insufficient to stem the tide of fanaticism and credulity which ever seemed ready to shield the impostor, but exercised no charity for the victims imposed upon; neither could I any longer, with respect to myself, subject my remonstrances to the virulent denunciations which are visited upon those who dare to ask for test conditions in the investigation of so unprecedented a subject as spirit communion. It is not that I fear these ever ready denouncers; but, like many others of my most esteemed associates, however willing I have been, and still am, to debate the proven facts of Spiritualism with the enemies of the cause, I shrink with aversion from contest with the foes of 'our own household,' especially those who descend to abuse instead of argument, and mistake vituperation for logic."

THE CATHEDRAL UNIVERSAL

(The Valley of the Missisquoi).

'Tis Sabbath noon. No welcome bell,
To-day, upon the listening ear
Hath sent its mellow, echoing chime
To lure me as a worshipper
To house "by mortals built with hands,"
Where prayer and praise,—one day in seven,—
Arise upon the solemn air,
To pilot weary souls to heaven.

But I have found cathedral grand
Built by the Master-hand of all,
Upreared from everlasting days,
Enduring while all others fall!
No narrow dogma, sect, or creed,
Binds those who worship in this place;
No pomp nor pageantry hath need
To lead us to the Throne of Grace!

Cerulean skies are o'er my head;
A mossy rock my form receives;
Encircling, are vast ruins spread
Of countless upheaved centuries!
Around me gently sway the pines;
The poplar's quivering silver-leaf
Hangs tremulous in the balmy air
That fans with cooling, sweet relief.

I hear the cricket's homely chirp;
The lonely, dolorous whip-poor-will;
The robin warbles sweet his strains,
And bids my fretful soul *be still!*
Beyond, in noisy music, flows
Missisquoi to its chosen sea;
Behind, unto the forest's hush
Alluring whispers call to me.
Here have I stood at other times
Beside the Lord's day; and the praise
Of every living thing went up
As now, spontaneous in its lays!
Such ancient shrine may ne'er refuse
The true, the rev'rent worshipper,
But morning sun and evening moon
Invite each guest to linger there.

No need of priest, or house, or word,
To worship 'neath the heaven's blue dome:
All Nature's aspirations tend
To lift us toward a higher Home!
Missisquoi's murm'ring, rushing stream
Drowns out my murmurs in its praise,—
And banished by this peaceful scene
Are selfish cares of by-gone days!

The fern's sweet breath is on the breeze,
The wild-flower's perfume fills the air,
The firs' and hemlocks' drowsy hum
Is rising as if voiced with prayer!
A calm and holy quiet broods;
I list the growing of the vines;
I soft repose beneath the showers
Of needles dropping from the pines.

And so I leave the "builded house"
Which only offers weekly bread,—
And hie me unto Nature's church,
Whose sacrament is ever spread:
Where each may homage pay, at will,
To ideal highest of his soul,
And none "elected" are, but each
Is common heir unto the whole!

Through the green vistas of the trees
The sun is shining clear and bright,—
Reminding well, through all past days,
Of Love that ever lit my night.
And if, as now, beneath some shade,
Forlorn, I did not heed this care,
'Twas only that I turned away,
And would not know the sun was there!

Oh, sweetly might the Sabbath bell
Among these hills and valleys rise,
And with its music-tones of praise
Incline our souls toward the skies!
But far more musical thy flow,
Missisquoi,* to thine inland sea;
And more uplifting are thy songs,
O forest voices, unto me!

LITA BARNEY SAYLES.

FROM MY STUDY.

The world hath not seemed less
To him in singleness
Lost to its strife and cries;
As I pass freely by,
And far, with distant eye,
The cleared fields broader lie
And hills do kiss the skies.

I am not false, when need
That baffles words doth lead
From thee, O Man, afar;
For I have never known
How hearts for ill atone,
Till I have judged—alone—
Less every passion's scar.

No sharp wound then can bribe
From juster hours the gibe
Of venom serpentine.
My love hath won its field!
Come, O dear hearts! I yield
Tribute to good revealed
From judgment-seat divine.

HORACE L. TRAUBEL.

*Pronounced Mis-sis ko,—Indian for "much game."

The Index.

BOSTON, NOV. 9, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

Some Logical Absurdities of Idealism.

BY LEWIS G. JANES.

It is the favorite postulate of the Idealist that matter—the external universe—is an illusion, a subjective creation of the mind. It possesses no objective reality, and had no existence prior to the existence of mind. Strangely enough, the liberal Idealist does not perceive, or deliberately ignores, the fact that herein he is in close agreement with the orthodox theologian, whose lack of rationality and consistency he despises, and in irreconcilable hostility to the teachings of science. He claims the right to follow his own method to its logical conclusions, uninfluenced by comparison with any ulterior test; and, by a curious jugglery of intellectual inconsistency, at the same time appears to respect the teachings of science, which are radically out of harmony with his metaphysical dogmas. When accused of this inconsistency, he practically "confesses judgment" by asserting the supremacy of his own method, and denying the right of science to interfere and contradict its conclusions.

Science, however, acting strictly within its own legitimate province, declares that the physical universe existed ages upon ages—yes, from all past time—before man or any conscious, finite, subjective personality had being. This little globe of ours, but one among countless myriads of similar worlds, was millions of years in existence before its surface was prepared for the support of animal life. If this fact is not abundantly proven, then is no fact of science so demonstrated, then is science itself "a delusion and a snare."

"This table, this chair," says the Idealist, "exists only in your mind. This room has only an ideal, not a real existence. Depart from it, and it ceases to be." But the "common-sense" perception of the fact that the appearance is essentially identical to different individuals, the historical evidence of the world's endurance and substantial identity, though generation after generation of minds have entered and passed away, expose the sophistry of the assertion of the Idealist as it applies to individuals; and he hastens to declare that he does not mean that the world, the room, the table, or the chair is the subjective creation of any single mind, but of *all* minds,—of the mind of the race, or of all conscious beings. But this postulate also is contradicted by the plain facts of geology and the entire teaching of modern science, as every one knows.

Driven back another step, the Idealist takes refuge in the dogma of the existence of Universal Mind as a "thing in itself," and its assumed identity with the

Digitized by Google

Absolute Substance, or Deity, and also with the individual *ego*; and affirms that, accepting the teachings of science respecting the existence of the world prior to the appearance of animal or human life, it is yet true that the universe has no true objective existence: it exists only as an idea in the mind or thought of God. It is a subjective creation of the Infinite Mind, reflected thence into finite minds. Sometimes, he varies this explanation by resorting to the still more fanciful, though, to him, strictly logical and necessary hypothesis of the pre-existence of human beings before birth. In the attempt, however, to conceive of the existence of conscious subjectivity, or mind, prior to the creation of the universe, the reason is at once opposed by a tissue of logical absurdities. A subject without an object necessitates the conception of a thinker without a thought; but mind without organism and without thought cannot be defined or distinguished from absolute nonentity. Having no extension,—for that is a property belonging exclusively to matter, to the external universe,—it exists *nowhere*. But that which exists nowhere evidently has no existence.

The conception of the creation of the universe "out of nothing," therefore, whether as substantial material or as idea, involves the conception of the self-creation of Deity. If Deity be thus self-created, if by thought he has brought forth both himself and the universe, why may he not, by ceasing to think, at once annihilate both it and himself? The self-creation of Deity involves the possibility of his suicide. Both these notions are manifestly logical absurdities, yet they are legitimate deductions from the metaphysical assumption of the Idealist.

The rational philosophy maintains, on the contrary, that both mind and matter are eternally existent, uncreatable and indestructible. They depend upon no external *will* for their being. In the language of Goethe, "Spirit and matter, soul and body, thought and extension, . . . were, are, and ever will be the necessary double ingredients of the universe, which demand for themselves equal rights, and therefore both together may be looked upon as representatives of God." They are not, however, two distinct and unrelated substances, "things in themselves," but necessarily and mutually related manifestations of a common Substance or Being. "The arguments for the two substances," says Bain, "have, we believe, now entirely lost their validity: they are no longer compatible with science and clear thinking. The one substance, *with two sets of properties*, two sides, the physical and mental,—a double-faced unity,—would appear to comply with all the exigencies of the case."* The contempt and contumely so long bestowed upon matter and the human body are now regarded as the spurious teachings of an absurd metaphysic and an execrable theology. Man is taught, in the name of science and a true philosophy, to reverence his own body and the physical universe as of equal divinity with his mind; for both must be regarded as inseparable portions of the Infinite Life of the universe.

The rational philosophy is thus equally repugnant to the conclusions of materialism and idealism. Indeed, these systems are often far less divergent in their philosophical reasonings than their conclusions would appear to render probable. Philosophical materialism as well as idealism depends not unfrequently for its arguments upon the appeal to metaphysics; and it is not remarkable to find one often claimed as an apostle of scientific materialism, like the late Prof. Clifford, driven back upon metaphysical idealism as the final philosophical explanation of the universe. The rational philosophy, on the contrary, appeals not to metaphysics, but to the facts of experience; and, assuming no infallibility for its own conclusions, contents itself with presenting the rational grounds thereof in the nature of things, and exposing the logical inconsistencies inherent in the method and conclusions of metaphysics.

Pursuing the scientific method in its arguments and demonstrations, the rational philosophy does not claim to be a complete and dogmatic system of truth. It admits its present imperfections, which are such as pertain to all investigations wherein the truth is sought by the diligent and patient examination of phenomena, and search after facts, their causes and relations. It rests, however, in entire confidence in the trustworthiness of its method, and trusts to time and future patient labor to correct the crudities and imperfections of its present statements. Perceiving that all the useful knowledges have been acquired in the past by this careful searching of the facts of nature and of life, it recognizes in the very incompleteness of its present conquests the seal of correctness in its method and the sure promise of an infinite outlook for future progress.

Nor, in denying the validity of the conclusions of metaphysical idealism, does it in the least discredit the capacity of the human mind or the reliability of the rational faculty. It has no other reliance than human reason, deeming it a lever of unlimited power, provided it has its fulcrum resting on the solid ground of experience. It admits the formal logical completeness of the various psychological systems which have been built up upon the foundation of alleged "mental categories," "first truths," or "intuitional revelations." It, also, could create its own little ideal system, if it chose. It fails, however, to recognize the validity of their foundation, which admittedly permits of no inductive test or experiential proof by comparison with facts. It regards the investigation of the labor and conclusions of the metaphysician as an admirable mental exercise, and only objects to his claim that his results shall be received as demonstrated truths. In the assertion of the metaphysical Idealist that his dogmas are the valid conclusions of reason, it beholds merely an ultimate product of the myth-making tendency which belongs to the immature or dogmatic phase of mental activity,—to the primitive exercise of consciousness,—and for which the method of science is gradually substituted, as mankind advances in mental grasp and breadth of culture.*

Man has always been prone to *entify* or individualize the impressions made upon his consciousness, whether by the apprehension of the phenomena of external nature, or of the workings of his own mind. Thus, in the earlier stages of human development, he made his own gods, as now, in the ultimate phase of the entifying or myth-making faculty, he constructs his own ideal systems of the universe. The Idealist is entirely right in concluding that the systems so constructed exist only in the mind, have no objective reality. He is wrong only in assuming that therefore there *is* no objective reality, that the universal fact corresponds with his conception. In making this inference, he stands upon the plane of the idolater, who, having created his own Deity in imagination, conceives it as possessing objective validity, declares that there is no god but this product of the picture-making faculty of his own mind, and that he is its prophet. The Idealist makes an idol of his ideal.

The claim of ultimate validity and completeness for the products of the picture-making or entifying faculty of the finite human mind is, to the scientific observer, a most remarkable exhibition of intellectual conceit on the part of the metaphysician. As has been the result of the acceptance of the dogmatic systems of the past, it ossifies the intelligence, and renders it impossible for the true metaphysician to regard fairly any system or conclusion other than his own. It even leads him to affirm that "metaphysics" and "philosophy" are synonymous terms, as the dogmatic theologian affirms the identity of his special belief with religion; and to deny that any genuine philosophy can be based upon the method of science.

The Idealist, in endeavoring to escape from one dualistic system, runs into another. Logically denying that there is a *universe*, he insists on the absolute separation of philosophy and science. He fails to grasp the conception, which is becoming clear to all advanced scientific thinkers, that truth is a *unity*, and that there can be no real antagonism between the truths of science, philosophy, and religion. In the relative positions of the metaphysical Idealist and the scientific thinker, there is a curious reproduction of the antagonism of the ancient sophists and philosophers. The metaphysician, like the sophist of old, rejoices in the plenitude of his superior wisdom; while the follower of the scientific method, like the ancient philosopher, is content to be regarded as the humble seeker and lover of the truth. The term philosophy—"the love of wisdom"—is a most modest and appropriate one for the seeker after truth, and the attempt of the metaphysician to monopolize this term and to exclude men like Herbert Spencer from the company of philosophers must prove idle and vain.

The assumption of the Idealist, which identifies the individual *ego* with Universal, Self-existent Mind, is connected with the allied assumption of the entire subjectivity of consciousness; but the rational philosophy deems every act of consciousness to be objective as well as subjective. To be conscious, the mind must be conscious of *something*; and the *object* of consciousness—the somewhat without the mind—is as essential to the act of consciousness as the mind itself. *Self-consciousness*, even, is a meaningless term, save as it represents the act of differentiating self from not-self, the *ego* from the *non-ego*; and hence even this supreme refuge of the Idealist is seen to have its objective no less than its subjective side.

In the interest of clearness of thought, it is certainly desirable to discriminate between metaphysics and the method of science; but let us also recognize and correct the confusion of thought which comes from the tacit acceptance by metaphysicians of the results of science which are in absolute logical conflict with metaphysical doctrines. Let the advocates on either side be self-consistent, and also just to their opponents. In so far as the metaphysician is actuated by a sincere desire to attain truth, the advocate of the scientific method has no desire to deny to him the right to be called a philosopher, though deeming his method faulty and his conclusions erroneous. But let equal justice be done on both sides.

The superior rationality of the new philosophy, based upon the scientific method, could hardly find more apt illustration than in two recent and able articles in *The Index*, the one written from the stand point of the metaphysician, and the other from that of the scientific materialist; the first writer asserting in one breath that there is no absolute substance apart from quality, and in another the apparently incongruous postulates of metaphysics; while the second writer claims that "no 'noumenon' (or Absolute) can be found in experience, neither can any be inferred by right reasoning," and believes that, "as knowledge advances, the 'Absolute' must fade away out of mind and out of matter, like all its metaphysical kith and kin that have gone before." The one asserts that there is no philosophy but metaphysics; the other, in effect, that there is none but that of scientific materialism; while both agree, apparently, in denying that there is any substance underlying quality, either as represented physically through the senses or ideally to the mind. Surely, the rational thinker will perceive that the truth includes and underlies both these extremes of thought. The mere statement of Mr. Spencer's position in the article of the scientific materialist would seem a sufficient argument for its superior rationality to both dogmatic metaphysics on the one hand, and dogmatic materialism on the other. The latter position, however, assumed by some who, without special scientific attainments themselves, delight to use the terminology and appropriate some of the conclusions of science to sustain their materialistic preconceptions, is not maintained by Tyndall, Huxley,* and the great apostles of science, who are generally agreed that "the passage from the physics of the brain to the corresponding facts of consciousness is unthinkable." The rational method, which is not nameless, as one writer has intimated, but upon which Mr. Spencer has bestowed the appropriate title of "The Synthetic Philosophy," unites the divided halves of thought which present distorted views of truth in the antagonistic systems of the idealist and the materialist, and presents the only rational and consistent, though still admittedly fragmentary and incomplete view of the universe. The very diversity of the metaphysical systems is sufficient evidence that none of them possesses the rational validity that is claimed for each.

"These little systems have their day,"

and will always retain a certain curious interest as theories of truth. As such, they may even be of service to the scientific observer. But the method of science, capable of infinite expansion, formulating no dogmas, claiming no infallibility for present conclusions, modest, reasonable, has been the foundation of all that is progressive and hopeful in our modern civilization, and, as applied to universal problems, is building up a rational philosophy of the human mind

* *Mind and Body*, by Alex. Bain, LL.D.

* See *Myth and Science*, by Tito Vignoli, "International Scientific Series," xi., D. Appleton & Co.

* Perhaps an exception should be made in the case of Haeckel, Büchner, and certain German scientific investigators, who, by a natural revulsion from the sophistical subtleties of German metaphysics, have generally accepted the materialistic philosophy. But this natural outcome of the local intellectual environment alike emphasizes the truth of evolution and the general rule above declared.

Digitized by Google

and its relations to the universe, of man and his relations to his fellow-man,—a rational psychology and system of ethics, which will preserve to humanity all of truth that has been gained through the past centuries of thought and evolutionary travail. It will endure as the noblest outcome of the free exercise of the human reason, when the misty speculations of the idealist and the metaphysician, in congenial company with the decayed idolatries and mythologies of the past, are relegated to their place among the musty tomes of the library. There they will be sought chiefly by the curious scientific investigator of survivals of modes of thought which had their origin in the infancy of the race, and which have long ceased to possess any vital interest or influence upon the living and helpful activities of the time.

PROF. HAECKEL ON DARWIN, GOETHE, AND LAMARCK.*

[*Concluded from last week*]

It is deeply to be regretted that the *Philosophie Zoölogique*, by Lamarck,—a work of the highest moment which appeared in 1809,—was wholly unknown to Goethe. For just in the development theory of this work, which is quite differently arranged and strictly systematically composed, he would have found much that was wanting to himself, much that would have yielded him the most complete supplement for his own incomplete studies. In reference as much to the monistic and complete elaboration of the development theory as to the many-sided experimental establishment of it on fact, the great work of Jean Lamarck is much more important than the similar essays of all his contemporaries, more particularly of the like-named work of Geoffroy Saint-Hilaire. When one considers with what extraordinary interest Goethe took up the latter work, it may be concluded that he would have given a much warmer reception still to the rich-thoughted work of Lamarck.

We cannot but regard it as a truly tragic fact that the *Philosophie Zoölogique*, by Lamarck, one of the greatest productions of the great literary period in the beginning of our century, met, from its outset, with but extremely little attention, and in the course of a few years was utterly forgotten. Not till Darwin, fifty years later on, breathed new life into the transformation theory therein established, was the buried treasure again brought into the light of day; and we cannot now but describe it as the completest representation of the theory of development prior to the time of Darwin. Nay, it seems to us the necessary atonement of a great historical injustice, if again to-day (as was done sixteen years ago in the *General Morphology*) we place the great Frenchman side by side with the greater Briton and the greatest German. Each of the three great middle European nations of culture has in the course of a century presented mankind with an intellectual giant of the first rank, who grasped in its entire significance the fundamental conception of the monistic development of the world from natural causes.

It would carry us much too far, were we here to attempt setting forth an abstract of Lamarck's work and comparing it with Darwin's. It will suffice to cite some of the weightiest fundamental conceptions which characterize his theory of nature, and indicate how far he was in advance of his time. For many decades, the great French biologist had occupied himself very searchingly with systematic botany and zoölogy. Testimony of this we have in his two celebrated and much used special works, the *Flore Française* and the *Histoire Naturelle des Animaux sans Vertèbres*. While he was engaged in substantially classifying and describing not merely the forms already in existence, but also their extinct ancestors which he incorporated into his system, there was disclosed to him the inner morphologic connection between the former and the latter; and from this disclosure he inferred their common descent. All animal and vegetable forms, which we distinguish as species, possess, accordingly, but a relative temporary persistence; and the varieties are the beginnings of species. The form group of the species is, therefore, just as artificial a product of our analytic understanding as are the genus, the order, the class, and every other category of the system. The change in the conditions of life, on one hand, the employment or non-employment of the organs, on the other, exercise a constantly transforming influence on the organisms: they effect, by means of adaptation, a gradual transformation of forms, the fundamental lineaments of which are through inheritance transmitted from generation to generation. The whole system of animals and plants is in reality, therefore, their genealogical tree, and portrays to us the relations of their blood-kindredship. The course of development of life on our globe was, accordingly, continuous and uninterrupted, just as was the course of development of the earth itself.

While Lamarck thus clearly enunciates all the essential fundamental conceptions of our current doctrine of filiation, and by the depth of his morphological knowledge excites our admiration, the clear advanced outlooks he takes in his conceptions of physiology are no less surprising. While in his time the fallacy of a supernatural vital force was yet universally prevalent, Lamarck rejected that idea, and maintained that life was only a very complicated physical phenomenon. For all vital phenomena are based on mechanical processes, which are themselves conditioned by the constitution of organic matter. The phenomena of soul-life (*Seelenlebens*) are also, in this respect, not different from other vital phenomena. For the ideas and activities of the understanding are based on motional processes in the central nerve-system: the will in truth is never free, and reason is only a higher degree of development and combination of the elements.

In these and other propositions, Lamarck raises himself far above the general theory of nature held by most of his contemporaries, and sketches a programme of future biology which only in our days has come to be carried out. In view of the great clearness and consistency of his system, it is only a matter of course that he should assign to man his natural place at the head of the vertebrates, and explain the causes of his transformation out of ape-like mammals. With equal acumen, however, he handles one of the darkest and most difficult questions of the whole theory of development,—the question regarding the origin of the first living beings on our globe. For the answering of this question, he assumes that the common earliest genealogical forms of all organisms were absolutely simple beings, and that they came into existence immediately out of inorganic matter in water by *spontaneous generation*, through the combined effect of different physical causes. Such simplest organisms, however, were at that time not yet at all discovered: not till half a century afterward were they actually come upon in the Monera.

Lamarck reached the great age of eighty-five years: consequently, he lived two years longer than Goethe, and twelve years longer than Darwin. But, while the two latter enjoyed the happiness of beholding the long beautiful evening of their life glorified by a sun-like splendor of success and worldly fame, poor Lamarck closed his long and laborious life misunderstood, solitary, and needy. Ten years before his death, he suffered the misfortune of blindness, and could only from memory dictate the last part of his great natural history of invertebrate animals to his two daughters, who tenderly nursed him, and whom he left behind him without any means of support. Let us hope that the bitterness of his hard fate was qualified by the consciousness of his having cast the deepest glances into the mysteries of creative nature, and that the clear intellectual eye of the blind prophet often descried the laurel garland which thankful posterity would one day lay on his lonely grave.

Unquestionably, the greatest defect in Lamarck's work was the insufficiency of the stock of observations and experiments he brought forward in proof of his far-reaching principles. For then, as now, the great majority of naturalists want, above everything, to have palpable facts in the hand. Then, as now, we find the paradoxical phenomenon, that the great majority of people accept without any misgiving and trample under foot the most absurd hypotheses and dogmas, while on the other hand they encounter well-founded scientific theories with the more suspicion and opposition the more they approach the truth. Among the experimental proofs of theories, moreover, to most people those are not the most welcome which are furnished by a continuous series of phenomena and a whole large class of facts. What they most desire is the particular observation, the single experiment. A large part of Darwin's immense success is due to the fact that he brought into the field, to a truly overwhelming amount, exactly such particular pertinent observations and experiments. Poor Lamarck on the contrary, trusting to the logical conclusion-drawing faculty of naturalists, for the most part neglected the business of palpable particulars.

The comparison of these three great natural philosophers, in whom the foundation-laying development theory of our current natural science was most powerfully and comprehensively revealed, is of high interest; for all three are very different among themselves, both in respect of their general genius and the fortunes of their life outwardly and inwardly, as also, very especially, in respect of their courses of study and the ways by which they pursued their high aims. Lamarck starts from the most careful special studies of individual animal and vegetable forms, and by his many years' systematic examination and comparison of them is brought to the conviction that all living and fossil species have developed themselves out of a few simple common genealogical forms. Goethe arrives at the same conclusion on the ground of his general studies in comparative morphology, directed by the conviction that the unity of the common type or the hereditary protoform can be traced out everywhere in all the different organic forms, however manifoldly they may be transformed in individuals through adaptation to outward circumstances. Darwin, finally, first answers to his own satisfaction the question by what causes the new culture-forms of animals and plants reared by men come into being, and then demonstrates that the struggle for existence is the same cause which in like manner, by the interaction of adaptation and inheritance, constantly produces new organic species in the free state of nature.

In these wholly different ways and by application of wholly different methods of investigation, all these three naturalists arrive ultimately at the same conclusion; to the acceptance, namely, of a monistic and continuous development of the whole of organic nature, through the operation alone of natural causes, to the exclusion of all supernatural creative miracles. All three, however, being at the same time deep-thinking philosophers and keeping constantly in their eye the unity of the whole world of phenomena, their idea of development expands to a grand pantheistic conception of the world, to that doctrine of oneness which forms the essence of our current monistic theory of nature.

The immeasurable effect which the decided triumph of this monistic view of nature already in this day exercises on all provinces of human knowledge, an effect increasing in geometrical progression from year to year, opens to us the happiest prospect regarding the further intellectual and moral development of mankind. I repeat here my firm personal conviction that in future this progress of scientific knowledge will be esteemed the greatest turning-point in the intellectual history of man.

We would in a quite especial manner emphasize this reconciling and compensating influence of our genetic theory of nature, all the more that our opponents are constantly endeavoring to obtrude disruptive and decomposing tendencies on it. These destructive tendencies are said to be directed not merely against science, but against religion, and so against the most important foundations, in general, of our civilized life. Such grievous charges, so far as they really rest on conviction and not merely on sophistic fallacies, can be explained only by the fact of a mischievous misunderstanding of what forms the genuine kernel of true religion. This kernel does not consist in the special form of one's confession of faith, but rather in the critical conviction of an unknowable, common, ultimate ground of all things, and in practical ethics springing immediately from the purified theory of nature.

In this confession, that with the present organization of our brain the last ultimate ground of all phenomena is unknowable, the critical philosophy of nature comes athwart dogmatic religion. This faith in God, however, of course assumes endlessly different forms of confession, according to the endlessly different degrees of the knowledge of nature. The further advances we make in the latter, the more we approach that unattainable ultimate ground, the purer will be our idea of God.

The purified knowledge of the world in the present day knows that natural revelation alone, which in the book of nature lies open to every one, and which every unprejudiced man with sound senses and sound reason can learn out of it. From this is derived that purest monistic form of faith which attains its climax

* Lecture given at the Eisenach meeting of the German Naturalists and Physicians. Reprinted from *Nature*.

Digitized by Google

in the conviction of the *unity of God and nature*, and which has long ago found its most complete expression in the confessions of our greatest poets and thinkers, Goethe and Lessing at their head. That Charles Darwin, too, was penetrated by this religion of nature, and did not acknowledge a particular church confession, is patent to every man who knows his works. But since some of his compatriots have asserted the contrary since his death, and since some bigoted priests have glorified Darwin as an orthodox believer in a specific creed of the English Church, it is fitting that this falsehood should be confuted by an indubitable proof. I am happy to be able to communicate to you an invaluable and hitherto unpublished document, which leaves no doubt upon this head.

[Prof. Haeckel here states the facts as to a student writing to Mr. Darwin, and gives the letter in reply, which was omitted, for some reason, in *Nature*, but which we replace.]

Letter from Mr. Darwin to a Young Student at Jena.

Sir,—I am very busy, and am an old man in delicate health, and have not time to answer your questions fully, even assuming that they are capable of being answered at all. Science and Christ have nothing to do with each other, except in as far as the habit of scientific investigation makes a man cautious about accepting any proofs. As far as I am concerned, I do not believe that any revelation has ever been made. With regard to a future life, every one must draw his own conclusions from vague and contradictory probabilities. Wishing you well, I remain your obedient servant, CHARLES DARWIN.

DOWN, June 5, 1879.

After this open confession, no one can doubt any more that the religion of Charles Darwin was none other than that of Goethe and Lessing, of Lamarck and Spinoza. This monistic religion of humanity is in no way contradictory of that fundamental doctrine of Christianity on which is founded its real value; for universal love of mankind is recognized by the former, as by the latter, as the fundamental principle of morality. The origin of this, as Darwin has shown, is to be sought for in the social instincts of the higher animals, in those psychical functions which the latter have acquired by adaptation to social life, and have bequeathed by inheritance to men.

Only in law-regulated society can man acquire the true and full culture of the higher human life. That, however, is only possible when the natural instinct of self-preservation, egoism, is restricted and corrected by consideration for society by altruism. The higher man raises himself on the ladder of culture, the greater are the sacrifices which he must make to society; for the interests of the latter shape themselves evermore to the advantage of the individual at the same time, just as, reversely, the regulated community thrives the better the more the wants of its members are satisfied. It is, therefore, quite a simple necessity which elevates a sound equilibrium between egoism and altruism into the first requirement of natural ethics.

The greatest enemies of mankind have ever been, down to the present day, ignorance and superstition; their greatest benefactors, on the other hand, the lofty intellectual heroes who, with the sword of their free spirit, have valiantly contended with those enemies. Among these venerable intellectual warriors stand at the head Darwin, Goethe, and Lamarck, in a line with Newton, Kepler, and Copernicus. These great thinkers of nature, by devoting their rich intellectual gifts, in the teeth of all opposition, to the discovery of the most sublime natural truths, have become true saviors of needy mankind, and possess a far higher degree of Christian love than the scribes and Pharisees, who are always bearing this phrase in their mouth and the opposite in their heart.

How little, on the other hand, blind belief in miracles and the domination of Orthodoxy is in a position to manifest true philanthropy is sufficiently testified not only by the whole history of the Middle Ages, but also by the intolerant and fanatic procedure of the militant Church in our days. Or must we not look with deep shame on those orthodox Christians who, in our day, again express their Christian love by the persecution of those of other faith, and by blind hatred of race? And here in Eisenach, the sacred place where Martin Luther delivered us from the gloomy ban of adherence to the letter, did not a troop of so-called Lutherans venture, some years ago, to try anew to bend science under that yoke?

Against this presumption on the part of a tyrannical and selfish priesthood, it will to-day be permitted us to protest on the same spot where, three hundred and sixty years ago, the great reformer of the Church kindled the light of free inquiry. As true *Protestants*, we shall rise up against every attempt to force independent reason again under the yoke of superstition, no matter whether the attempt be made by a church sect or a pathologic spiritism.

Happily, we are entitled to regard these mediæval relapses as but transitory aberrations which will have no abiding effect. The immeasurable practical importance of the natural sciences for our modern culture life is now so generally recognized that no section of it can any longer dispense with it. No power in the world is able again to roll backward the immense progress to which we owe our railways and steamers, telegraphy and photography, and the thousand indispensable discoveries of physics and chemistry.

Just as little, too, will any power in the world succeed in destroying the theoretic achievements which are inseparably bound up with those practical successes of modern science. Among those theories, we must assign the first place to the development doctrine of Lamarck, Goethe, and Darwin. For by it alone are we authorized firmly to establish that comprehensive *oneness of our theory of nature*, in which every phenomenon appears as but efflux of one and the same all-comprehensive law of nature. The great law of the conservation of force thereby finds its universal application, embracing also those biological provinces which hitherto appeared closed to it.

In face of the surprising velocity with which in these last years the development theory has paved an entrance into the most diverse departments of inquiry, we may here express the hope that its high pedagogic value also will be even more recognized, and that it will quite perfect the education of the coming generations. When, five years ago, at the fiftieth meeting of naturalists in Munich, I laid stress on the high significance of the development theory in relation to education, my remarks were so misunderstood that a few words of explanation may here be allowed me. It stands to reason that, with these words, I could not mean to claim that Darwinism should be taught in elementary schools. That is simply impossible. For, just like the higher mathematics and physics, or the history of philosophy, Darwinism demands a mass of previous knowledge, which can be acquired only in the higher stages of learning. Assuredly, however, we may demand that all subjects of education be treated according to the *genetic method*, and that the fundamental idea of the development theory, the *causality of phenomena*, find everywhere its acknowledgment. We are firmly persuaded that by this means thinking and judging conformably with nature will be promoted in far greater measure than by any other method.

At the same time, through this extended application of the development doctrine, one of the greatest evils of our day in the culture of youth will be removed,—the cramming of the memory, we mean, with dead lumber, which smothers the best powers, and prevents both soul and body from coming to a normal development. This excessive cramming is based on the old fundamental ineradicable error that the *quantity* of *factual knowledge* is the best measure of culture; while, in truth, culture depends on the *quality* of causative *science*. We would therefore deem it especially useful that the selection of the material of instruction be much more carefully made, and that, in making the selection, those departments which cram the memory with masses of dead facts do not receive the preference, but those which cultivate the judgment through the living stream of the development idea. Let our worried school youth only learn half as much, but let them understand this half more thoroughly, and the next generation will in soul and body be doubly as sound as the present.

In the most gladdening manner, these requirements are being met by the reforms which are simultaneously in process of accomplishment in the most diverse provinces of science. Everywhere is stirring and moving fresh young life, stimulated by the idea of natural development,—in the comparative study of languages and in the history of culture, as also in psychology and philosophy, in ethnography and anthropology no less than in botany and zoölogy. Everywhere, the most joyful blossoms are bursting forth from the most varied branches of science, and its fruits will concurrently testify that they all spring from one single tree of knowledge, and draw their nourishment from one single root. Thanks and honor, however, to the great masters who, by their genetic and monistic theory of nature, have led us to this clear height of knowledge, from which, with Goethe, we may say:—

"Dieser schöne Begriff von Macht und Schranken, von Willkür
Und Gesetz, von Freiheit und Mass, von beweglicher Ordnung
Vorzug und Mangel, erfreue dich hoch; die heilige Muse
Bringt harmonisch ihn dir, mit sanftem Zwange belehrend.
Keinen höhern Begriff erringt der sittliche Denker,
Keinen der thätige Mann, der dichtende Künstler; der Herrscher,
Der verdient es zu sein, erfreut nur durch ihn sich der Krone.
Freue dich höchstes Geschöpf der Natur, du fühlest dich fähig,
Ihr den höchsten Gedanken, zu dem sie schaffend sich aufschwang
Nachzudenken. Hier stehe nun still und wende die Blicke
Rückwärts, prüfe, vergleiche und nimm vom Munde der Muse,
Dass du schauest, nicht schwärmst, die liebliche volle Gewissheit."*

For *The Index*.

REFLECTIONS BY THE WAY.

BY MONT E. COLLINS.

Poetry is the fragrance of the soul.

To talk of others' bondage is not all there is of freedom.

Human slavery, like all other illegitimate children, is born of a pitiable mother and a boasting father; mental weakness being the one, and physical strength the other.

He who sees nothing in his fellow-man worth loving has nothing in himself which his fellow-man should love.

As long as there is ignorance in the world, there will be sin and misery: it is useless to attempt to rid the world of crime and suffering, while their parents, ignorance and idleness, are suffered to dwell together.

Great minds are divided into two classes only,—those who give birth to great thoughts, and those who, though unable to give them birth, yet appreciate their beauty and worth.

"Practice is better than precept." Of infinitely more importance is one noble and generous deed than any amount of heartless and empty discussion about virtue and right doing.

Genius is that faculty of the soul that deals in its own goods; education is that culture of the intellect that enables us to deal in the goods of others: the former is the originality that we all admire, the latter the plagiarism that we all excuse.

There are no atheists: all men have faith in God, but all men have not faith in others' conceptions of God. Each soul, in its own uncreated light, has its inexpressible visions of that all-embracing reality that man, in his attempts to realize the infinite, formulates into the image of a personal God.

Though, along the road over which all have travelled, many are the marks of humiliating failures and squandered moments, still within the reach of every soul, scattered along life's winding pathway, are the opportunities for redeeming the time and making for itself a future full of light and joy.

MONONA, IOWA, September, 1882.

"LIARS," says the old proverb, "should have long memories." Liars should also have wide knowledge. If you are telling the truth, you need only know the thing you are telling, for it *is*. It has its niche in the wide universe, and all the fitness of things will take up the parable and complete the story for you. As somebody has said, the more you shake the truth, the more you shake it into place. But, if you shake a falsehood, it all shakes to pieces.—*Gail Hamilton*.

---

*This fair idea of might and limit, of will and law, of freedom and measure, of order in movement, of excellence and defect, gladden thee deeply; the holy Muse brings it harmoniously to thee, instructing thee with generous constraint. No higher idea achieves the moral thinker, no higher the active man, the creative artist. The regent worthy to rule finds happiness in his crown through this idea alone. Rejoice, O highest creature of nature, that thou feelest thyself able to think after nature the highest thought to which she creatively soared! Here now stand still and turn thy looks backward, examine, compare, and hear the words of the Muse, that, without illusion, thou mayest contemplate the full, lovely truth.

CORRESPONDENCE.

THE UNITARIAN CONFERENCE ONCE AGAIN.

Editors of The Index:—

I have been an interested reader of all that has been said in *The Index* touching the recent action at Saratoga. It is not to be doubted for a moment that Mr. Savage and those who are essentially at one with him in views, intended to open wide the door to fellowship in the Conference, so as to include or admit all earnest workers for and lovers of man, or certainly all *religious* persons of this kind; and it is natural that they should congratulate themselves and expect some congratulation from those who stand on the basis of free and universal religion. The article adopted is the expression of such an intention on their part, and perhaps it is on the part of many others who voted in its favor.

But there appears also good ground for those who hold, as the *Christian Register* does and as Drs. Clarke and Hale seem to, that the action in no degree changes the doctrinal basis of the Conference, or, as the *Register* puts it, "the Conference did not in the slightest abandon the Christian basis on which it was erected." So also evidently thought those who since have assured the senior editor of *The Index* in conversation that "it did not seem to *mean much of anything*." For Article X. says "that they [the Preamble and Articles of the Constitution] are not intended to exclude any who, while differing from us in belief, are in general sympathy with *our purposes and practical aims.*"

Now, these "purposes and aims,"—where shall one go to find them? Where but to the record itself, the Constitution of the body, in which they are expressly and authoritatively declared. The Preamble affirms the obligations of "all disciples of the Lord Jesus Christ to prove their faith . . . by the devotion of their lives and possessions to the service of God and the *building up of the kingdom of his Son.*" And Article I. declares the formation of the National Conference "to the end of energizing and stimulating the denomination to the largest exertions in the cause of *Christian faith* and work." (The italics are ours.) Further, Article IX. is still more explicit on the matter of fellowship. It says, "We invite to our fellowship all who wish to be followers of Christ."

What would any stranger, an intelligent, careful mind, coming freshly to this whole matter, conclude to be the purport of Article X.? I see not how he could come to any other view than that any who, however they may differ in some points from the body in their belief, are essentially at one with them, or, as the article says, "in general sympathy" with the purposes and practical aims,—which are defined above,—are invited, at least are not excluded from fellowship. And so he could fully subscribe to the declaration of the *Christian Register*, that the doctrinal or *Christian* basis of the Conference "was not in the slightest abandoned"; for it would seem obviously, undeniably true.

Either this, or the Preamble and portions of Article I. and of Article IX. have no business in their place, put the Conference in a false position, and should be swiftly expunged from its Constitution. And, if this, one would very naturally inquire why Article X. is there at all, what occasion for it, what new ground does it cover? The amendment apparently may mean much or essentially nothing, according to the mental attitude or theological views of the persons considering it. Whether that is worthy of a grave and earnest religious body, the world will judge. It might possibly be tolerated, or at least witnessed without utter surprise in a political convention: what place may it have in the deliberations and decisions of a cultured and powerful religious body, which should, by the first and distinctive principle of its being, stand ever for the most advanced thought and the highest manhood in devotion to truth?

Whether, notwithstanding these ambiguities and incongruities, this "patchwork," as it is well called,—the playing fast and loose with ideas which, whatever view may be held of them, are of vital significance, of an import too sacred for any trifling,—the Unitarian body *means* broadest fellowship, true welcome for all earnest lovers of man and doers for the race, whether of Christian or non-Christian name, is a question that will be practically tested within the next two years. It will still appear, as I believe, that the Conference holds itself as a distinctively *Christian* body, and that one of its purposes, if not rather the great and all-dominant purpose, will be to maintain and extend Christianity, to build up the kingdom of God's Son, and that the terms of fellowship, however qualified or amended, will be at bottom defined on that basis. We shall see. CHAS. D. B. MILLS.

SYRACUSE, N.Y., Oct. 30, 1882.

[The point made by Mr. Mills as to what are the "purposes and practical" aims of the Conference is important. We had not seen his article when we wrote the editorial in this issue, wherein we make the same points.—W. J. P.]

MORMONISM AND THE PRESS.

Editors of The Index:—

The practice of the press is to suppress what is favorable or emphasize what is adverse to the Mormons, and oftentimes to wrest from plain-speaking facts meaning that does not belong to them. Is this the way to disabuse the Mormon mind of religious error?

The following paragraph copied from the Springfield *Republican* in *The Index* is worthy of notice:—

> The Supreme Court of Utah has affirmed the validity of the Woman Suffrage Act of that Territory. . . . There is naturally considerable disappointment among the Gentiles over the decision, coupled with disparaging criticism of the logic by which it was reached; for, without the incubus of woman's suffrage, the liberals feel that, with the new system of registration, they could readily attain political ascendency. . . . It is estimated that thirty thousand Mormons have been disfranchised. . . . It shows that the number of plural marriages has been greatly underestimated. There are twenty-five thousand voters, fifteen to eighteen thousand being Mormon; and four out of five, women.

Instead of thirty thousand there were but ten thousand of both sexes disfranchised. In my article on Mormonism in *The Index*, which was written before the Commission had begun work, I stated that the number of polygamists in the Territory was probably about one in fourteen of the males; and this it appears has proven correct.

The number of voters is about thirty-two thousand instead of twenty-five thousand, and probably twenty-four thousand are Mormons.

Instead of four out of five being women, the female vote is about two-fifths of the whole: 56 per cent. male, 43 per cent. female. And how could it be otherwise, when the male population of the Territory is in excess of the female? The showing of these facts is of course the very opposite of what the world imagines. Figures must be wrong, because no good can come out of Nazareth. Every Mormon town is supposed to be a cluster of harems, where "the houses," to use the unimpeachable and dignified language of a leading cyclopædia, "are made of sun-dried brick, and low, with several entrances for the convenience of the wives of the owner."

That the Gentiles "felt disappointed" at the women being allowed to vote, I do not care to dispute. Not only life, but politics, is full of disappointments. But it surprises me that the vote of the women of Utah rests like an "incubus" on the work of the "liberals" there. At one time, the cry was, The women of Utah are oppressed; and now it is that the men are oppressed by the women of Utah, and the "liberals" are striving to deprive women of the ballot! And why? Because women with the ballot in their hands are saying to the world, "We are not oppressed," and are showing a determination to fight for their altars and their firesides.

It is the "political ascendency" of the haters of Mormonism, no doubt, that is so much desired. It is not the punishment of polygamists that is sought, but the placing in the hands of a minority all political power. The "liberals" would indeed be a most "disappointed" set, if a revelation were given to cease or suspend the practice of polygamy. The end justifies the means. Let conscience and the Constitution stand aside. Expediency is the watchword of to-day. Brigham Young, Jr., complains, in this October Conference, that the anti-polygamy bill is so construed as to exclude polygamists from the registration list, and admit the notoriously lewd and profligate. All are united in this holiest of crusades. A lady, on return to the East from a visit to Utah, speaks of that "unity of purpose" among the churches there as being "quite beautiful in contrast with the wrangling that sometimes overtakes a community like our own." What a hopeful sign it is! Mormonism, then, has not existed in vain.

The Mormons will elect their delegates to Congress, as usual, and have the same control in their Legislature. What next,—an advance or a retreat? In my humble opinion, every step taken in this same direction will bring only defeat. We must go deeper. The conflict is between Tradition and Reason. The questions of Church and State and of marriage have to be settled in a rational manner, which will call for courage as well as insight, before Utah can be brought to terms, or dealt with in an at all honorable manner.

T. W. CURTIS.

THE BLESSEDNESS OF THE SAINTS IS INSECURE.

Editors of The Index:—

The blessedness of the saints is insecure. Prof. E. A. Park, D.D., in an installation sermon preached October 11 at Andover, gave, among others, the following reasons why orthodox Christians fear probation after death: "When men have 'died in their sins,' are they to enjoy a future probation in which they will so revolutionize their character as to obtain forgiveness for their bad life? Then, the parallelism teaches that men who 'died in the faith' are to have a future probation in which they may transform their character and deny the Lord who bought them. Thus, the blessedness of the saints is insecure. . . . Was there to be after death a probation in which men who had died unrenewed would renounce their life-long selfishness and rise from remorse to peace of conscience? Then there was to be a probation in which men who had cherished benevolence on earth would perhaps fall from their virtue and sink from peace to remorse. Thus, again, the blessedness of the saints is insecure." The absurdity of the idea! That a saint who had "died in the faith," who had believed in the inspiration of the Scriptures and had followed its teachings all through this life, in fact had kicked against the pricks always, and had passed through the portals of death and had arrived safe in the "spirit land" where he would be sure that his course through life had been right, should (provided there was a probationary ground between the "gates of death" and the "gates of heaven" where those who had by the light of their reason believed wrongly here on earth should have a chance to change their belief and fit themselves for heaven) "fall from his virtue and sink from peace to remorse, and deny the Lord who had bought him"! Then, again, the utter selfishness of the idea that, for fear a few of the saints should fall from grace during that period of probation, they would consign the balance of humanity to the "endless torments of hell"!

Could a meaner, more selfish, more contemptible reason be invented? WM. H. SPILLER.

WEST SOMERVILLE, MASS., NOV. 3, 1882.

CURIOSITIES OF ORTHODOXY.

Editors of The Index:—

Considering what it was that Rev. Prof. Park said to his brother ministers in Park Street Church the other day (as reported in the Boston *Daily Advertiser*), we cannot wonder at his vehement prefatory request that it might *not* be reported. It would seem really quite desirable, for the credit of the orthodox ministry that such assumptions and such counsels should be kept shady. But, since they did get published, it may be well to glance at them. I will speak now of one only.

In the First Epistle of Peter, it is assumed that Christ went and preached to those "spirits in prison" which had been disobedient in the days of Noah. This of course must be believed, being declared by a verse of the infallible New Testament; but since it must also be believed, on the authority of the infallible orthodox creed, that none of those imprisoned spirits got out in consequence of that preaching, and since the plain meaning of the passage in question favors the pernicious heresy taught or implied by Rev. Newman Smyth, Prof. Park suggests to his ministerial brethren a way of evading the difficulty. He says, "The logic of this passage allows us to think that he [Christ] communed with those persons while they were in the body, through the person of Noah, who preached righteousness to them."

The orthodox creed assumes that Jesus of Nazareth was "the Christ" predicted by the Hebrew prophets. But Prof. Park seems to assume, first, that there was

Digitized by Google

a Christ long before Jesus was born, and, next, that that Christ did at least one of the things which the infallible Bible declares Noah to have done.

Truly, between what the Bible seems to say and what a learned ministry interprets it to mean, there is sometimes such wide divergence that the wayfaring man must be puzzled which to choose, especially if he believes the saying that a man cannot serve two masters. Perhaps, after all, Rome is right in maintaining that an infallible Book needs an infallible expounder. C. K. W.

MR. W. E. COLEMAN writes: "Permit me to correct the following omission in my remarks on *The Gospel of Law* in *The Index* of October 12. As published in that paper, one of its sentences reads thus: 'Portions of the ground covered by this excellent work have been embraced in previous works, such as Mr. Chadwick's *Bible of To-Day*, and in a much larger degree in his book.' After the word 'book' should have been inserted the words '*The Faith of Reason*.' Being in some doubt as regards the exact title of this very excellent work of Mr. Chadwick, in preparing my manuscript I omitted its insertion till I could refer to the work itself, and thus be sure of the name. After thus referring, I inadvertently forwarded the MS. without filling the hiatus."

A FRIEND of *The Index* and a member of Mr. S. J. Stewart's society at Bangor, Me., writes: "Last Sunday morning, could you have looked in on our congregation, you would have witnessed a very cheerful company of Liberals, who really deserve this name; for, during the week, they had paid a church debt of $2,500, and both speaker and hearers enter with renewed spirit and interest the coming year. At the close of our morning exercises, we have a class in Herbert Spencer, using for text-book *First Principles of Sociology*. It numbers fifty ladies and gentlemen."

DARWIN AND HAECKEL.

In last week's issue of *Nature*, a translation appeared of a remarkable lecture delivered at Eisenach by Prof. Haeckel, on Darwin, Goethe, and Lamarck. The translation from the German is practically a literal one, and it occupies fifteen columns of the English journal. This translation has, however, one great blot: the translator has deliberately omitted Mr. Darwin's letter on Christianity, and Prof. Haeckel's comment thereupon. It is not credible that a high-class scientific journal could stoop to pander in this fashion to the cant of its own time, so we can only suppose that the fault lies with the translator, who has maliciously omitted this important document, and has thus betrayed into a serious literary unfairness the paper on which he is employed. The full text of the passage runs as follows (*Nature* stops at the words "know his works"):—

That Charles Darwin, too, was penetrated by this religion of nature, and did not acknowledge any particular church creed, is patent to every one who knows his works. But since some of his compatriots have asserted the contrary since his death, and since some bigoted priests have glorified Darwin as an orthodox believer in a specific creed of the English Church, it is fitting that this falsehood should be confuted by an indubitable proof. I am happy to be able to communicate to you an invaluable and hitherto unpublished document, which leaves no doubt upon this head.

Prof. Haeckel then states the facts as to the student writing to Darwin, and gives the text of the now famous letter (see *National Reformer*, October 1), and then proceeds:—

After this open confession, no one can doubt any more that the religion of Charles Darwin was none other than that of Goethe and Lessing, of Lamarck and Spinoza. This monistic religion of humanity is in no way contradictory of that fundamental doctrine of Christianity on which is founded its real value; for universal love of mankind is recognized by the former, as by the latter, as the fundamental principle of morality. The origin of this, as Darwin has shown, is to be sought for in the social instincts of the higher animals, in those psychical functions which the latter have acquired by adaptation to social life, and have bequeathed by inheritance to men.

The whole of this is omitted in the report given by *Nature*.—*Annie Besant, in National Reformer.*

Do you know what heroism means? It means self-sacrifice. Always remember that. There is no man who entirely forgets self but is a hero.—*Christian Statesman.*

BOOK NOTICES.

AGAMEMNON, LA SAISIAZ, AND DRAMATIC IDYLS. By Robert Browning. Boston: Houghton, Mifflin & Co. Price $1.50.

These later poems of Browning give no evidence of any decay in the intellectual vigor of a writer who, more than any other living poet, has made for himself a place among the few whose names will be remembered and whose works will be read long after they themselves have passed away. In spite of the often apparently chaotic phraseology of his writings there is a rhythmic sweetness combined with rugged strength of thought and expression always to be found in even the most chaotic of them, which well repays the careful reader. Of nearly all his poems, it can be truly said, as Mrs. Browning wrote of his earlier "Pomegranates," that each, when

"Cut deep down the middle,
Shows a heart within blood-tinctured with a veined humanity."

The opening and longest poem of this volume—a translation of the "Agamemnon" of Æschylus—was undertaken, so Browning avers in the preface, at the earnest request of his "venerated friend, Thomas Carlyle." In addition to the lengthier poems, "La Saisiaz," "The Two Poets of Croisic," and "Pauline," the volume contains also a dozen shorter ones, called "Dramatic Idyls." With its clear type and neat binding, this book will make a welcome addition to the library of those who already possess his earlier works, and will be likely to win him new admirers among those who may have hitherto overlooked his merits.

THE RHYMESTER; OR, THE RULES OF RHYME. A Guide to English Versification. By the late Tom Hood. Edited, with additions, by Arthur Penn. New York: D. Appleton & Co. Price $1.00.

At first sight, this handsome little volume, of which a "Dictionary of Rhymes" comprises nearly one-half the contents, awakens a sense of the ludicrous in those who believe that "poets are born, not made." But a more careful inspection reveals to us the need and usefulness of such a work. "The late Tom Hood" is *not* the renowned and talented author of the "Bridge of Sighs" and "Song of the Shirt," but his son and namesake, who, though following literature as his business all through life, failed to attain any of his father's fame as a writer. Mr. Penn, in giving us an American edition of this *Rhymester*, with emendations and additions of his own, has done good service to the cause of poetic expression in America; for even the most inspired of poets would be the better writer from a perusal of this work. What its aim and scope are may be inferred from the titles of its chapters, of which we quote a few: "Classic Versification," "Of Feet and Cæsura," "Metre and Rhythm," "Of the Sonnet," "Of the Rondeau and the Ballade." From these, it will be seen how wide the range and how instructive the treatment of the subject is from the author's stand-point.

ZOOLOGICAL SKETCHES: A Contribution to the Outdoor Study of Natural History. By Felix L. Oswald. Philadelphia: J. B. Lippincott & Co.

The title-page pretty fully explains this work, which is rather a series of orderly sketches of the habits of various species of wild animals than an attempt at the scientific study of zoölogy. "The plan of the present volume," says Mr. Oswald in his preface, "is modest enough: its theories are mere suggestions; its limits have often obliged me to reduce a chapter of zoölogical adventures to a page of zoölogical anecdotes." Nevertheless, he has given us a work which, in the new light cast on animal nature by the researches of Darwin and other evolutionists, is very interesting and suggestive, the more so that Mr. Oswald himself is a thorough believer in the development theory. The first chapter of the ten into which the work is divided treats of "Our Four-handed Relatives," and the last one of "Four-footed Prize-Fighters." The style is lively, clear, unstilted, and extremely readable. The author has travelled extensively, has been a close observer, and many of his descriptive instances of singular traits of animal life are the result of his own personal observation and experience. The book is handsomely bound, and has thirty-six fine illustrations by Hermann Faber.

"MIND" is a quarterly review of Psychology and Philosophy, published by Williams & Norgate, London and Edinburgh. The October number contains articles of great merit, commencing with "Scientific Philosophy: a Theory of Human Knowledge," by Francis E. Abbot. The other essays are "Perception," by Thomas Davidson; "Causation and its Organic Conditions (IV.)," by Edmund Montgomery; "Incoherence of Empirical Philosophy," by H. Sidgwick. "Notes and Discussions" and "Critical Notices," by different writers, add to the variety and value of the October number of this periodical, which, in its special field of thought, is without an equal.

THE *Revue de Belgique* for October opens with a description of the House of Commons. Then follow an account of a journey to the Tatra Mountains, among the highest of the Carpathians, an amusing story of the difficulties of a father trying to help his son to study an abstruse article on æsthetics, a literary chronicle, and a review by the gifted Count Goblet d'Alviella of Seeley's *Natural Religion*, a work whose predecessor, *Ecce Homo*, was denounced by Lord Shaftesbury as the most pernicious book ever vomited from the jaws of hell.

PERSONAL ITEMS.

HON. JOSIAH QUINCY, mayor of Boston from Dec. 11, 1845, to Jan. 1, 1849, died at his residence at Wollaston, Thursday forenoon. He was born in Boston, Jan. 17, 1802; and his age accordingly was 80 years, 9 months, and 15 days. He was educated at Harvard College, and was graduated in 1821. He studied law, and was admitted to the bar; but his attention early became diverted to the field of municipal politics, in which his father, Josiah Quincy, Senior, had made so illustrious a record.

MR. CHARLES WATTS, of England, is travelling in the South,—whether on business or pleasure we are not advised,—and will be in the cities named below at the dates specified. He requests us to ask the friends of liberal thought in these cities to make arrangements for lectures by him. Care should be taken to write in time for letters to reach him at the dates mentioned. He will be at Galveston, Texas, November 13; Houston, Texas, 14; Brenham, Texas, 15; Austin, Texas, 16 and 17; Dallas, Texas, 19 and 20; St. Louis, Mo., 26 and the week following. He will be in Boston some time in January. Mr. Watts is well known in England as an able and eloquent lecturer in defence of Secularism, and we hope that liberal societies in this country will avail themselves of this opportunity to hear one who has done faithful and effective service for Liberalism in his native land.

THE unanimity with which the press of this country has referred in complimentary terms to our distinguished visitor, Mr. Holyoake, is very gratifying to those who know his noble qualities and are acquainted with the history of his useful life. Since his arrival in America, we have seen but one reference to him that was in an unkindly spirit. That was by a professed Liberal in this city, the lecturer at Paine Hall, and one of Mr. Holyoake's own countrymen. His conversion from theology is of recent date, and his crudeness of thought is to be expected; but the spitefulness and rancor with which he assails personally men who have passed beyond the rudimentary condition in which he remains, render it doubtful at least whether the sort of Liberalism he preaches has improved his own disposition. In the article alluded to, it is not only stated in substance that Mr. Holyoake does not understand Secularism, but intimated pretty directly that he is a temporizer and a hypocrite who will not find favor among the Liberals of this country. This insult to a man who has been loyal to his convictions through evil and through good report, and who has endured for principle everything but death, was copied into the London *Secular Review*. At this, we were greatly surprised; but we have since received from Mr. Charles Watts, who is now in this country, a letter which shows that the article was copied in his absence and without his knowledge. It is due to Mr. Watts that we print the following extract from his letter: "I was exceedingly sorry to find that the extract in reference to Mr. G. J. Holyoake appeared in the *Review*. It should not have been inserted, if I had been at home. Mr. Holyoake is a gentleman for whom I have long entertained the highest respect. He has devoted a long and honorable life to the cause of Secularism. His views upon secular principles are very much in harmony with my own. If you see him, remember me very kindly to him." We trust that this extract from Mr. Watts' letter will, in justice to Mr. Holyoake, be reproduced in the *Review*, as an offset to the insulting article which was recently copied into its columns.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. per month to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe. I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to
JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

M. L. SANDERS,
DELAVAN, ILL.

The Religio-Philosophical Journal

A large eight-page weekly paper devoted to the exposition of Modern Spiritualism. Established 1865.

PRESS COMMENTS.

. . . Seems disposed to discuss questions in excellent temper and a spirit of toleration. . . . Few care to investigate in its spirit of finding truth at any cost —*Inter-Ocean.*

. . . Seems to have got the inside track among the religious weeklies.— *Chicago (Sunday) Times.*

. . . A paper which will command the respect of all, both friends and opponents.— *Pontiac (Ill.) Sentinel.*

CONCURRENT COMMENDATIONS FROM WIDELY OPPOSITE SOURCES.

I read your paper every week with great interest —*H. W. Thomas, D.D., Methodist.*

I congratulate you on the management of the paper. . . . I indorse your position as to the investigation of the phenomena.— *Samuel Watson, D.D., Spiritualist.*

You are conducting the *Journal* in the true spirit of honest research.—*B. F. Underwood, Materialist.*

All who are investigating the subject of Spiritualism will find this paper invaluable as an assistant in their researches.

Terms of subscription strictly in advance.

One copy, one year	$2.50
One copy, six months	1.25
Twelve weeks on trial	30 cts.

SPECIMEN COPY FREE.

Remittances should be made by Money Order, Registered Letter or Draft on New York, payable to JOHN C. BUNDY, Chicago, Illinois. Do not in any case send checks on local banks.

CURRENT TOPICS.

ON the 5th of last August, a citizen of Bickern, near Gelsenkirchen, was heavily fined for refusing to make out a census paper except by quoting the prohibitions of such proceedings in the Old Testament.

THE Parliament of Norway recently passed a law, which the king has signed, giving women the privilege of attending the universities and applying for degrees in all the arts and sciences; but the right to hold office in the service of the State and of participating in the competitive examinations for such positions is not yet accorded to them.

THE Salvation Army in England, though supposed to perform merely military functions of a spiritual character, have been showing a disposition to use the weapons of the flesh. At one place, on a recent Sunday, Gen. Booth's troops fought the police, and succeeded in giving the guardians of the peace the worst of it. According to newspaper reports, one of the soldiers of the Lord "split open a youth's head."

THE *Nation*, in relating "with a moral" the story of a "neighborly murder" in Kentucky, says of the murderer that "he calmly harnessed his horses, took with him his beloved shot gun, which seems in some parts of the South to be taking the place of the family Bible as a consoler in times of affliction and perplexity, and drove off in search of" his victim "without either heat or passion," and, when he came in sight of him, shot him dead.

DR. HOWARD CROSBY, in a recent article, declares that reading Sunday newspapers is the first step toward "Sunday novel-reading, Sunday visiting, and Sunday amusements," all of which, in Dr. Crosby's estimation, is immoral and even criminal. The Springfield *Republican* professes to be unable to understand this "unco righteousness" on the part of the generally sensible Brother Crosby, while the regular religious weeklies publish such "a deal of worldly matter" in their columns, and the Monday paper has to be "made up" on Sunday.

IN the midst of so much that is hard and bitter and unforgiving in this world, it is very pleasant to learn that Mrs. Soteldo, the widow of the man who went to shoot a Washington newspaper man and was shot himself instead, begs Col. Corkhill, the government prosecuting officer for the District of Columbia, not to go further and prosecute Barton, the newspaper man, because her dead husband made it his dying wish that he should not be prosecuted, and she herself has not the heart "to bring upon his household any pain or anxiety," but her sincere prayer to heaven "is that his family may never feel for one moment that dreadful anguish that I must bear with me ever to the grave."

THE late election presents to the thoughtful observer many comical anomalies. For instance, our Governor-elect seems to be elated by success into considering himself "among the elect" in more senses than one, and, although one of the most "worldly" of men, breaks forth in one of his election-eve speeches in such pseudo-religious talk as the following: "Fellow-citizens,—Do you read the Scriptures? [Applause and a voice, 'Of course we do.'] Do you remember that in the Scriptures it says, 'The stone which the builders rejected, the same has become the head of the corner?' [Laughter and cheers.] With reverent submission, I bow in grateful thanks to the Almighty Father for his blessing in this victory and triumph of the people of the Commonwealth of Massachusetts. [Applause and cheers.]"

LAST Saturday, Prof. John Fiske gave a lecture in the Old South Church on "The Founders of New England," in which he said in substance, regarding the purpose of the men who left their home country to come to these shores, that the popular view—that the Puritans came to secure religious liberty—is incorrect; that the religious liberty of to-day is something they could not foresee, and did not desire; that, if they had foreseen it, they would probably never have come, or would never have remained here; that their aim was the construction of a theocracy, with the Scriptures as a guide and with citizenship co-extensive with church membership. Of the truth of Prof. Fiske's statements there never was any doubt in minds capable of forming a fair and impartial estimate of the character, motives, and purpose of the Puritans of New England; but the facts of history have been so distorted and the common sources of information so corrupted by theology, directly or indirectly, that it was impossible for one to speak the truth on this subject, until recently, without sacrificing his reputation. We have no sympathy either with those who, from aversion to their religion, disparage the Puritans or those who, to vindicate them, would poison the very fountains of popular knowledge.

SELDOM has Delmonico's banquet hall been filled with an assemblage of scholars and thinkers of distinction such as participated in a farewell complimentary dinner to Herbert Spencer last Thursday evening, before his departure for England. It was, says the correspondent of the Springfield *Republican*, "a splendid tribute to the man and to the growth of the doctrine of evolution. It was a spontaneous demonstration, and might have been extended to any dimension; but, in order to come within the limits of a comfortable party, only about two hundred were invited." Hon. William M. Evarts presided at the dinner. On his right sat Herbert Spencer, Prof. W. G. Sumner, Prof. John Fiske, Gen. B. F. Bristow, Henry Ward Beecher, Prof. E. L. Youmans, and E. R. Leland. To his left were Carl Schurz, Prof. O. C. Marsh, Sir Richard Temple, and Mr. Edward Lot of England, and Hon. Abram S. Hewitt. A report of the speeches is commenced in *The Index* this week. The honors lavished upon Herbert Spencer, and the praise bestowed upon his labors to-day are in marked and gratifying contrast to the inappreciation and indifference, misrepresentation and abuse, with which he had to contend during a quarter of a century. The writer of this paragraph, when he recalls the sort of opposition he has encountered within the past dozen years in his efforts to present the claims and popularize the thought of Herbert Spencer, cannot but feel peculiar pride and pleasure in this latest demonstration in honor of the great English philosopher, and in recognition of his unsurpassed labors in the domain of scientific and philosophic thought.

THE Boston *Herald*, referring to a letter in the *Congregationalist* last week, in which the writer concludes that the Church is losing the thinking men of the age, that a large part of the intellectual men of New York stand outside of all churches, attempts to point out the cause and the remedy for this state of things as follows: "It may be that the laity are better able to judge on a point like this than the clergy. At all events, we will venture to suggest that the intellect and science of the age has outgrown the Church. The Church is getting left behind. We cannot see why we must believe that everything which can be known about religion is contained within the doctrines of the Church as it now is, any more than that nothing new can be learned about nature. We know that the orthodox church has outgrown some of the doctrines which it held a half-century ago, and that, if some of the sermons of that day were preached from Boston pulpits to-day, the audience would very likely disperse before the close of the discourse. Then, why shall we believe that the doctrines of to-day will not be erelong abandoned for higher ground? We do not intend to be understood as thinking that intellect has outgrown religion,—that would be impossible,—but that religion cannot be contained within the tenets of the Church. It is the attempt to do this which disgusts thinking men, and renders them indifferent to the Church. Revise your creeds, bring them up to the intelligent standard of the best thought of this generation, abandon dogmas which no longer have any life in them, and let your teachings be such that reasoning, thoughtful men can get spiritual food from them, and the Church will win back an element which it can ill afford to lose. Put new wine into new bottles, and they will both be preserved."

Digitized by Google

THE ELECTIONS.

The Index is not a political paper. Yet its editors have their political opinions; and, when the questions of practical politics involve moral issues, they have no hesitation in expressing their opinions in this journal. *The Index* has always advocated civil service reform. The "spoils system," which the civil service reform aims to abolish, has been the central immorality corrupting our national politics since the slavery question was settled. We therefore rejoice — not with the partisans of the Democratic party, who are elated with a hope of soon having the administration of the government in their hands again, but with the sober men of all parties who desire an honest, just, economical, and efficient government more than a partisan one — at the very heavy blow which was given to the "spoils system" and to the "machine power" in politics in the State and Congressional elections held last week.

The only exception of importance we should care to make to this remark is the election of General Butler to the governorship of Massachusetts. And this is an exception of importance. Butler is so purely a demagogue, he is so utterly void of all political principles, and of all moral principles in political matters, and his political career with whatever party he has acted has been such a practical embodiment of the very evils in our politics which most need reform, that we can only regard his elevation to the Governor's chair with a feeling of humiliation and shame. The man who, in his ten minutes' speech in Faneuil Hall on the eve of his election, drew the heartiest approving laugh from the crowd before him by a pleasant joke on the drinking habits of Democratic voters, and by an indecent story which the reporters generally suppressed, is not the kind of man, certainly, in point of character, that Massachusetts has usually sought for Governor. That the persistent ambition of such a man to win this office has at last been crowned with success is an event not adapted to educate young men, who are just coming upon the stage of politics, in purer political ethics, or to cause any other improvement in political morals. He will be an obstacle to any genuine political reform. This, however, we apprehend, is about the sum of the mischief which his winning of the office will produce. And it must be remembered that he was largely helped to the winning, not by what he politically or personally represents, but by the general spirit of revolt that is abroad against the party in power.

And it is this general spirit of revolt against the party in power that we rejoice over,— not because it is the party in power, and most certainly not because of the great work of salvation which it has done for the country in the past, but because, of late, it has become identified in the public mind, and too justly, with corrupt leadership and corrupt practices. We especially rejoice that, in the great States of New York and Pennsylvania, "machine politics," engineered by "bosses" of the Republican party under the auspices of the national administration at Washington, have met with such a crushing defeat; and particularly that in the President's own State, where his Secretary of the Treasury was put forth as the administration candidate for governor, the defeat was more overwhelming than anywhere else,—Mr. Folger's candidacy being buried under an avalanche of a majority entirely unprecedented in the annals of State elections. This latter fact is specially gratifying, not only because it is never a part of the national administration's business to meddle in State elections, but because Mr. Folger's nomination was vitiated by a proved fraud. His acceptance of the nomination under the circumstances, evidently pressed by the administration to do so, was one of those blunders that are more unpardonable than crimes. It was an act which the people were in no mood to condone, however excellent Mr. Folger's previous record may have been. In the after-election light, how strange looks the strongest reason he gave for accepting the nomination notwithstanding the admitted fraud,— namely, that, if he did not, the Republican party would be left at a critical hour on the eve of a campaign without a leader, and would be put thereby in imminent danger of demoralization and defeat! The party has shown — at least, a numerous section of it has — that it preferred the leadership of the opposing candidate, honestly gained, to following its own political banner stained by fraud.

Of course, it is by no means certain that all who have helped toward this general overthrow of the administration party in the various States have had at heart the reform of the civil service or any other very definite purpose of political reform. On the contrary, it is quite certain that a majority of them are not thinking so much of these things as of getting into power again. But it is equally certain, on the other hand, that the victory would never have been won, except by the aid of those who do have the reform of the civil service and the breaking up of the machine power in politics more earnestly at heart than any other political aims at the present time. True, these reforms are not issues that at present divide political parties. Both of the great political parties, for instance, profess, in their platforms, to believe in civil service reform, and both have made vigorous use of this plank in the recent campaign. But neither of the parties, when in power, has manifested any vigor in putting the profession into practice. Since, however, the Republican party has held the national administration of the country for many years, and the present particular national administration is very particularly violating the civil service reform professions on which it was elected, the arguments for this reform are having more effect against the party in office than against the party out of office. Indeed, the attitude of the national administration on this question, the open scorn shown for civil service reform by some of its most prominent personal and official supporters, the action of the Hubbell Republican Congressional Committee in levying political assessments on office-holders, and the control of the House of Representatives in the last session of Congress chiefly by men possessed of this same political spirit, and having little appreciation of any of the political reforms demanded by the country,— these are the leading causes of the defeat of the Republican party last week.

A year ago, the people of this country were profoundly impressed by the fact that it was the "spoils system" that had taken the life of President Garfield. Some of the prominent politicians appear to have forgotten this fact, but the great body of the people have not forgotten it. And a large portion of them, moreover, have now become impressed with the fact, and are profoundly feeling the national humiliation of it,—that Guiteau's pistol has actually accomplished, in great measure, what he meant that it should accomplish; that, though it brought his own wretched life to the gallows, it put into power, as he boasted it would, the political faction, with its methods, measures, and arts, which he wished to elevate. The sober, thinking people of both parties, in the hour of the nation's grief, were ready to hope and to think the best things of President Arthur. They rallied round him with their sympathy, to uphold his hands in his difficult position. They gratefully welcomed and rejoiced in the wise and heartfelt words which evidently a sense of the solemn responsibility of the hour pressed from him, and in which he promised an unpartisan administration. But they are now obliged to confess their disappointment and mortification, as they see the President, whom they would have loved to support, using his office for factional ends and falling back into the vulgar ways of "machine politics," in which they knew he had been an adept, but which they tried to believe he had abandoned, when the awful national tragedy lifted him to his high office. And here is the reason for the general uprising of the people against the administration shown in the elections.

The uprising is the rebuke of the "machine power" and the "spoils system" in politics. Machine politics must have the offices to operate with or cease to exist. To reform the civil service and break up "machine" politics are essentially one and the same thing. The "spoils system" is the great moral offence in our politics at the present time. It is the festering centre of all corruptions. It has degraded the high offices both of legislation and administration to trivial and venal objects. It has postponed and wasted opportunities for statesmanship, in order to satisfy the preferred claims of party leaders and factions. It has turned the White House at Washington every four years and less into a scene of disgusting scramble and wrangle of office-seekers. It has made trading and bargaining in the public offices one of the political arts, whereby base demagogues get the means of lifting themselves into places of power at the expense of the public honor, and often at the severe expense of the public treasury. It has debauched the conscience of political leaders, and subjected thousands of people to the bitter necessity of choosing between their principles and their means of livelihood. It has even caused, by its traditional and imperial sway in party counsels, some of the wisest and best of our public men to stoop to ignoble deeds which they have themselves scathingly condemned as violations of public trust and detrimental to the public benefit. It has assassinated one President. It has harassed and driven another into an early grave. It has robbed all, from Jackson to Arthur, of time and talents and strength which they had sworn to give to their country. The political defeat which even looks toward rooting out such an evil is a victory for the nation's life.

WM. J. POTTER.

EVOLUTION:

A Second Letter to Mr. Underwood.

My dear Sir,—In my former letter it was said that evolution has been conceived of in two opposite ways, on the one hand, as purely spiritual in principle, and on the other as purely physical. According to the former conception, the production is from within outward; spirit brings forth, if not abstract matter, yet the forms and motions of material things, and the line of continuity is not in the outward representation, but in the conceiving and self-active genius of nature. According to the latter, the production is from without inward; matter brings forth spirit, not as a substantial entity, but as a functional effect merely; and the line of continuity lies in the law by virtue of which physical force is susceptible neither of creation nor destruction, neither of increase nor diminution. It was farther said that, by my persuasion, there is truth in both these conceptions, and the whole truth in neither; that each is false in so far as it is exclusive, and each true in so far as it affirms a particular order of continuity; and that the antithesis may be expected to disappear in a higher synthesis. And an analogy

Digitized by Google

was promised, which should render this third conception intelligible, even though serving little, or not serving at all, to render it credible.

Take the case of language, its formation and growth. Here is a special evolution; it should therefore afford us a type of evolution in general. As special, it will indeed have its peculiarities, and we shall not expect to find the exact counterpart of all its several particulars in the world-process as entire; but in all evolution there should be unity of type, and therefore we may fairly expect to see the fundamental order of universal evolution reflected, or at least adumbrated, in that of language. Now, language has two sides, a bodily and a mental or spiritual. On the one side it is physical in origin, and consists in a body of sounds, which, as represented by written or printed characters, become visible; on the other, it is spiritual in origin, and consists in meanings apparent to no sense, but only signified to the mind. And now we come to the point, to which I would call your attention. Upon either of these two sides a line of evolution may be traced, while nevertheless the real evolution of language lies in neither exclusively, but in the natural unity of both. Now, the argument of the evolutionist who follows the clew of physical science is in effect this: he finds a line of physical connection at no point broken, therefore at no point admitting of supernatural intrusion; accordingly, his theory is complete. We may find the like in the case of language, yet a theory restricted to this line of derivation would be as much false as true.

Suppose some one to follow the evolution of language upon its outward side exclusively. He begins with the vocal organs as not peculiar to man, but only perfected in him. Having traced their growth in birds and beasts, he examines them as they appear in the human animal, and shows how they are fitted to form a vast number of sounds, varied with wonderful delicacy, yet so definitely as not to be mistaken when uttered in rapid succession. Thence he passes to their first product, root-words. This is perhaps a great leap. It may be that the formation of permanent verbal roots was preceded by a long period in which the half-human creature, beginning with notes and cries not more articulate, nor more the signs of thought, than those of some brute creatures now, gradually acquired the power of an articulation more definite, and so, as over the graves of perished sounds innumerable, arrived at those which should endure. Our investigator not only admits this as possible, but thinks it highly probable. Indulging, however in no conjectures, but holding fast to observed fact, he passes at once from the physical organs to their first remaining product,—*their* product beyond question. From this point onward the evolution becomes complex; it proceeds at once from the physical organs and from the sounds they have brought forth, significantly called "roots." From verbal roots the language grows; of words words are born; each new one is the sequent of a verbal antecedent, and may itself become the antecedent of another etymological sequent; while always the action of the physical organs is implied. Our investigator follows the evolution throughout, and finds no break. He sees not only co existences and sequences, but laws of co-existence and succession. He sees words that had denoted objects or actions transformed to serve as signs of relation. He sees an increasing specialization, accompanied by integrations, as in the formation of inflections and compound words, and in a higher sense in the formation of general or abstract terms. In short, by attending only to etymological and syntactical relation, and referring for original to the physical powers of speech,—by attending only to the outside of language, and regarding it as a body of words, born for the most part one from another, but all emanating from the vocal organs,—one may trace a complete line of evolution, and defy all the world to discover in it the slightest gap. It is a perfect agnostic evolution.

Nevertheless an essential fact has been overlooked,—a fact of which we are apprised by our intimate personal consciousness, and not by any one of the five senses. It is the conscious spirit of man which speaks; and without this, no part of the said evolution would have taken place. It utters no sound, but it is the real speaker; it breaks in at no point, but is present at every point. Now we may suppose a theory of linguistic evolution drawn from this side exclusively. The human spirit, the theorist will say, unfolds itself by a strictly logical process, that is, according to an order inherent in its nature as mind. In doing so, it creates for itself a body in words, and marks every advance in its own unfolding by a corresponding step in the development of language. It obeys a law, but is itself the law it obeys; it is not therefore externally constrained or conditioned, and its relation to language is that of a pure unconditioned creator. From this point of view much could be said that would be worthy of a great thinker. Undoubtedly there is an order in the development of the human spirit, and this order is reflected in language. Accordingly, a philosopher endowed with the intellectual subtilty and grasp of a Hegel might by following this clew bring forth a transcendental theory of evolution in language, which should be richly freighted with thought and truth, and be received with admiring relish by a generation with the requisite appetite. Yet, no such theory could have more than a very transient acceptance, if one may imagine it accepted at all. Such facts as that the mind depends for the power of speech upon bodily organs, and thus is materially conditioned at the outset; that there are many languages, instead of one, and not the same total import in all, nor the same sounds for approximately the same meanings; that much in every language must be referred to special climatic historical or social conditions, that not a little, as, for example, the disappearance of the article in Latin and the phonetic changes covered by Grimm's law, appears as simply fortuitous; that while language reflects a multitude of external conditions, it is certain that one can definitely think only that which the existing language enables him in some sort to express, and thus that language is ever more or less a check upon thought, a resisting and limiting power,—facts such as these, with many others, to the like effect, are glaringly incompatible with what I have called the transcendental theory of linguistic evolution. Yet there really is a line of evolution on this side also, no less than on the physical or outward side. The evolution of language as entire, or as it actually takes place, comprehends both, and is no duality, no split thread, nevertheless.

Have we not here a type of universal evolution? A literal correspondence there is not, of course; but to my mind the analogy is genuine. Universal evolution has its physical or external side, and has also, as I must think, its spiritual or inwardly productive side. The physical process is continuous, even though never to be perfectly traced, from first to last; and in consciousness, thought, will, moral and æsthetic sensibility, in our deepest, highest, most sacred experience, is still present, still engaged; but it draws upon a resource which, like the speaking spirit of man, is in itself unseen, appearing only in representative forms. And if it be asked what this resource is, the answer might be that it is Mr. Spencer's "Unknowable,"—rather unfathomable, I should say, than unknowable. Mr. Spencer gives this the name of power, but, very strangely, it seems to be a power without effect, a power that does nothing but hide itself. Truer, perhaps, to say, that it does nothing but publish itself; that it is Goethe's "open secret," everywhere signified, everywhere on the face of things, but a secret still, since the genius of Nature, though expressive, is unfathomable.

Here I must break off, having but touched the subject as with the fingers' ends. Enough, however, has been said to indicate the direction in which I look for a theory of evolution more adequate and entire. My creed in brief is this: Thought and Force are the antithetic terms whose synthesis and unity is nature or the natural universe; and productivity or evolution is the result of the synthesis. And if challenged to find the former of those terms in the natural world, I could perhaps do so without forgetting or disputing Darwin.

Yours very truly,

D. A. WASSON.

THE "FAITH CURE" ONCE MORE.

Mr. Hepworth, like everybody else, is discussing the "Faith Cure." He contributes an article upon the subject to the *Independent* of October 19. It is an exceedingly poor article; but the fact that it represents the opinion, as we believe, of a great many people, is our sufficient warrant for noticing it. It is the utterance of the preacher of a system which supports itself by the historical appeal to miracle, and yet doggedly refuses to accept any amount of historical evidence as accrediting a miracle to-day; and it does this last by virtue of an appeal to principles which a very small amount of wit should teach it may be extended, and logically must be extended, to its own case. No unprejudiced person in the world can deny for a moment that paralytics and disordered minds are cured, and that a hundred remarkable things are brought to pass every day, in our own midst, by means every whit as much entitled to be called miraculous as cures recorded as effected at the hands of Elisha, Jesus, Peter, or Paul; and yet the questioner of the Bible miracle is declared, by the adherents of the old system, the assailer of pure and undefiled religion; while the asserter of the modern miracle is informed, by the same stalwart people, that there is "order in the universe," "the reign of law," and that no amount of evidence is sufficient now to establish the fact of any new miracle. This is precisely the way in which the *Congregationalist* did formulate it, in its discussions of Dr. Cullis and the "Faith Cure." "Were a miracle to exist," it said, "it would be as impossible to establish the fact by reasonable evidence as it would now be for the United States to declare their independence of England, because one of the essential conditions has forever passed away. God has so endowed the human mind that it never could accept any logic of miracles which left out the one condition that men were in perilous danger of eternal loss without them; and that condition having ceased forever, and Christianity having become irrefutably established upon grounds which not only do not require, but do not admit, such argumentation, the possibility of their demonstration is at an end."

This is, of course, a flat abandonment of the ground upon which the main defence of the Church's assumptions has been conducted for the last hundred years, or since Paley's time. Paley's argument was that if twelve men would undergo every sort of suffering, martyrdom even, in attestation of miracles which they claimed to have witnessed, then the miracles must have been genuine;

Digitized by Google

and, if the miracles were genuine, then the infallibility and divinity of the worker of them and of his doctrines were established. Unitarianism itself stood firmly here forty years ago. The very point defended by Mr. Norton, in his famous controversy with Ripley, was that "the miracles recorded in the New Testament are the only proof of the divine origin of Christianity." But our Orthodoxy now abandons both positions. Prof. Stearns, of the Bangor Theological School, who speaks fairly for the New Orthodoxy, expressly deprecates the committal of Christian doctrine to the test of miracle; and the *Congregationalist*, which we suppose fairly represents the stalwarts, now tells us that no amount of historical evidence is sufficient to establish the fact of miracle.

Of course, this last is true enough. Of course, we know very well that if a man should be put to death on Boston Common to-day, and twelve men or twelve hundred should vouch to seeing him alive to-morrow, we should simply go to work to find out where the mistake was. And yet the formulation of this general principle in this quarter is certainly remarkable. No amount of historical evidence is sufficient, but miracle is to be believed only in cases where we are convinced of its antecedent necessity. But what does this amount to? Simply to making us the judges as to the divine origin and nature of Christian teaching, entirely independent of the miracles alleged to have accompanied it. The alleged miracles are not to be believed, unless we are convinced independently that the gospel itself was of divine origin and nature, and absolutely necessary in the form in which it was given. But, if antecedently convinced of this, then of what use are the alleged accompanying miracles? Clearly, of none at all. Kant established this point perfectly, a hundred years ago. The assumption—we know that it is common enough—that miracles were necessary to attract and convince the Jews and Greeks, and so get an opening for the truth, but that they would not have attractive and convincing power for people nowadays, is of course a most weak and shallow begging of the whole question. No man of common sense believes for a moment—and the *Congregationalist* and all the orthodox, old and new, ought to know it—that Jerusalem and Athens were so far behind Leadville and Podunk that, if Christianity can be "irrefutably established" to the latter "upon grounds which not only do not require, but do not admit, the argument of miracle," it could have been so established to the former. No reason can be given why, if the performance of a miracle by Paul would help to get him a hearing and help the cause of Christ's gospel among the barbarians of Melita, the same thing would not similarly help the bearer of that gospel to the barbarians of the Fiji Islands; and no reason can be given why, if the miraculous cure of Peter's wife's mother served some great religious purpose, to say nothing of its "absolute necessity," the miraculous cure of John Smith of Old Orchard, Maine, may not serve some purpose too. This position the Roman Catholic Church has consistently and dignifiedly maintained, and it is still willing everywhere to stand the racket of investigation of its perennial miracles. This is the position, too, of Dr. Cullis and the "Faith Cure" men; and we say that it is a consistent and dignified position, whatever mistakes go with it. But the position of our ordinary Protestantism, the position of the *Congregationalist* and of Mr. Hepworth, who assume that no amount of historical evidence would now amount to anything toward establishing the fact of miracle, but dogmatically tell us that the alleged miracles of Christ's time and fifty years afterward—none later—are to be believed, because these, forsooth, were *a priori necessary*,—this position, we say, has neither consistency, dignity, nor reason of any sort for itself.

It was chiefly for the sake of these few general observations that we have made Mr. Hepworth's article an occasion of writing. But we wish to say a few particular words about the article. Not of such points as, for instance, its suggestion that Dr. Cullis should be "furnished with a lisp," to satisfy "the eternal fitness of things." These things belong to the mere amenities of religious journalism, and we are concerned only with the substance of Mr. Hepworth's argument. What is the substance of it? That the theory on which belief in the "Faith Cure" is based is "the result of bad logic or of a mild form of insanity," and cannot go along with any large knowledge of the methods of God's dealings with the human race. The theory is shocking, we are told, to "the thoughtful mind, which has observed that there is order in the universe, and that a man can best accomplish his purposes when he follows that order." The assertion that disease can be removed by "a certain kind of prayer in which a particular individual in the city of Boston is peculiarly gifted" is the "introduction of magic into religion"; and it is very questionable whether a theory which teaches a man that he can "make use of Deity" will bear the light of reason or produce good spiritual results. 'The object of the prayer of faith, according to, this delusion, is to persuade the Almighty to allow us to have our own way," and is "thoroughly selfish." Dr. Cullis "practically eliminates the phrase 'Thy will be done,'" "constitutes himself the judge, and dictates what must be done," demanding, "in the name of his larger faith, that the cure shall be effected, whether right or wrong." Mr. Hepworth believes that there are no well-attested proofs that cures have been effected, and finally tells his brethren that if any among them are sick and send for the minister rather than for the doctor, whom "the Lord has provided for just such an emergency," they are "without that ordinary common sense which the Lord expects them to use." "Prayer alone, without the employment of human agencies, is incredible fanaticism."

As to Dr. Cullis' "thorough selfishness" and demand that his prayer shall be granted, "whether right or wrong," the charges are quite too wide of the mark to require any refutation. Dr. Cullis, as all know who know anything at all about him, is a singularly unselfish, sincere, simple, reverent, and unassuming man; and, so far from claiming to be "peculiarly gifted" in "a certain kind of prayer," he simply does what he claims it is the right and duty of Mr. Hepworth and all Christians to do. And, for this, he has the clear warrant of the Scripture, which he faithfully believes. "Is any sick among you?" wrote St. James to the early congregations, "let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord: and the prayer of faith shall save the sick, and the Lord shall raise him up." Christ himself also, according to St. Mark, promised that the faithful believers in all the world, besides the power of casting out devils, speaking with new tongues, taking up serpents, and drinking any deadly thing without hurt, should have the power to lay hands on the sick and heal them. We believe ourself that this passage, ascribed to Christ, is *ex post facto*, and no utterance of his; but Mr. Hepworth probably does not believe it *ex post facto*, and, even if it be so, it has scarcely less significance in this discussion. But, without it, the apostolic precept and the early Christian usage are evident enough. Yet Mr. Hepworth absolutely ignores all this, and writes as if miracle had never been known to the Church's system. What does he allege against Dr. Cullis and the modern miracle that is not equally valid against the miracle of any time, or when and why would he say that what was sanctioned and commanded for the primitive Church began to be a "sickly sentimentalism," and mischievous "delusion," "thoroughly selfish," "shockingly irreverent," "illogical," and "insane"? There is no word that he writes which is not as applicable to the miracles of yesterday as to those of to day. That the problem has changed, in those terms of it which Mr. Hepworth and his brethren choose to discuss, cannot for a moment be urged. The doctor was quite as accessible as the minister in St. James' day, as well as in our own. The ground upon which the "Faith Cure" was urged then was its immediate witness to the power of God and its strengthening of the feeling of immediate dependence upon him, and that it would not mean the same to-day has never been demonstrated to us. This is the point which most simple people wish to hear discussed in this connection, for it would seem that a searching discussion of this point might establish a much more respectable general principle about miracles than the ordinary one. But this point such men as Mr. Hepworth and such newspapers as the *Congregationalist* seem scrupulously to avoid; and meantime, while most simple people have a genuine respect for the consistency of the Roman Catholic doctrine and Dr. Cullis', they have no respect at all for Mr. Hepworth and the *Congregationalist*, for the view which they defend.

Here we bethink us of an article upon the general subject of supernaturalism, which appeared in the next number of the *Independent*, we think, after that which contained Mr. Hepworth's paper. We read it with great pleasure and satisfaction, as a most serious, thoughtful, and considerable discussion, albeit containing some assumptions which we could not ourself allow. It was entirely free from the crass dogmatism which we are criticising,—a refreshing contrast to Mr. Hepworth and the *Congregationalist*,—and we were glad to see it in its place. We looked with interest for the writer's name, and found it to be Prof. Gould, of Newton,—the same, we suppose, who has just been put out of the synagogue *for heresy*.

We would ask, in closing, to touch upon a single point of fact in connection with Dr. Cullis and the Old Orchard cures. Among the cures reported this year was one of a woman who for twenty years had been compelled to use crutches for hip disease. She was said to have been completely healed, and to have walked away from the prayer-tent as well as ever; and her case was held up as the particular shining example of the power of the "Faith Cure." But one of the most eminent clergymen of Maine, who has been following up the Old Orchard cases and communicates his results to the *Independent*, has learned that the woman confessed, after the "cure," that she was suffering great pain in her hip, though she "fully believed she was healed." The person to whom the confession was made was satisfied that her suffering resulted from the disuse of her crutches, and that her mind was in an exalted mystical state, resulting from the process through which she was passing. "A few weeks ago," says the *Independent's* correspondent, "a brief paragraph in the papers confirmed his diagnosis of her case. It announced that the lady had just been removed to the Danvers Insane Asylum in a crazed condition. Of course, no further notice is taken of her case; but, surely, all the facts should be told. Nor is this a single case. I am persuaded that, if the numbers of those who lose their 'cure' were set over against the 'cured,' the one class would nearly balance the other. I write this advisedly, because I have now in mind six cases, all of whom have

Digitized by Google

fallen back into their former diseased condition; and some of these are much worse than before their 'cure.'"

The truth of this we do not doubt, and it touches a most important element in these cases of miracles of healing. As men's views of "prophecy" are greatly changed when they come to count the misses as well as the hits, so are their views of miracles of healing modified when they set the backsliders over against those who "hold their cure." That the proportion of these backsliders was almost as great in old times as to-day we should doubtless be assured of, if the "special reporter" had been as ubiquitous and indefatigable then as now. That the subjects of Christ himself did not alway hold their cure, we know from the express information that from Mary Magdalene seven devils were cast out; and doubtless there were many such cases in Christ's time, as in the centuries afterward and to-day. Yet, when every discount has been made and the shrinkage is complete, no man who accepts the regular canons of evidence can deny that there have been in every age, and never more apparently than in our own, abundant cases of "Faith Cure," or "miracles of healing," genuine and thorough. No serious person will be satisfied with the simple cheap denials of the alleged current phenomena or any of the flippant and uncritical discussions with which the Protestant press has recently contented itself. No discussion is good for anything which is not based upon a careful investigation and frank acknowledgment of all the facts and accompanied by a willingness to follow the facts where they lead. Of course, when the principles we have here implied are freely conceded, the real ground, significance, and function of the belief in miracle still remain untouched; but, until these are conceded, no advance in scientific, serious, or profitable discussion is possible.

EDWIN D. MEAD.

AGNOSTICISM:

A Letter to the Rev. Dr. McCosh.

Dear Sir,—I have read with great interest your recent pamphlet on the "Criteria of Diverse Kinds of Truth as opposed to Agnosticism," and cordially admire not only your remarkable clearness and vigor of style, but your manifest sincerity of purpose. My trust in this last quality, or, in other words, in your desire to deal justly and generously with your opponents, leads me to beg you to notice some facts, which are not presented in order to excite personal controversy, but simply in the hope of serving the cause of truth. On the cover of this pamphlet, you speak of "the position of agnosticism, which holds that all truth is contradictory"; and, on one of the early pages, you object to agnostics as people who "affirm that we can know nothing." Such charges are frequently made in pulpits and other places where they cannot be easily answered; but, when I see them in print, I feel it my duty to disprove them, as I can do, with the aid of many witnesses. Thus, the Imperial Dictionary of the English Language, Vol. I., new edition, published in London, Glasgow, Edinburgh, and Dublin, 1882, gives this definition: "*Agnostic*. One of a school of thinkers who disclaim any knowledge of God or of the origin of the universe. This school holds that the mind of man is limited to an *a posteriori* knowledge of phenomena and the relative, and that therefore the infinite, the absolute, and the unconditional are beyond all experience, and, consequently, beyond its range." Another new and standard work, the Encyclopedic Dictionary, Vol. I., Cassell, Petter, Galpin & Co., London, Paris, and New York, 1879, says: "*Agnostic*. Professing not to know or have the means of knowing any principle connected with theology or metaphysics. . . . *Agnosticism*. A school of thought which believes that, beyond what man can know by his senses or feel by his higher affections, nothing can be known. Facts, or supposed facts, both of the lower and the higher life, are accepted; but all inferences deduced from these facts as to the existence of an unseen world, or of beings higher than man, are considered unsatisfactory and are ignored. Agnostics, positivists, and secularists have much in common; and many people exist to whom any one of the three names might be indifferently applied." To the same effect speaks the Rev. John Owen, in his *Evenings with the Sceptics*, 1881, Vol. II., p. 513: "You would have our modern scientists call themselves agnostics rather than positivists. But the distinction is merely verbal; for the agnostics confine their profession of ignorance to real or final causes, and the positivists limit their certainty to real or ascertained facts and processes, so that there is in reality a perfect agreement between them. Both claim knowledge where sensible phenomena and their manifest relations are concerned: both disclaim it when ulterior causes are in question." Turn to the *Journal of Speculative Philosophy* for April, 1881, and you will find the editor, Wm. T. Harris, in his "Thoughts on the Basis of Agnosticism," give, as the thesis of Kantian agnosticism, "We cannot know things-in-themselves," and say of the more recent physiological agnosticism, "It thinks that quantity and quality are interchangeable, that no ideas are universal and necessary," and "attempts to fix the limits of human cognition." None of these definitions are, I suppose, by agnostics; but they fully represent the position of the three authors best known by this title; namely, Herbert Spencer, Comte,—the founder of Positivism,—and Tyndall, who says in a famous lecture: "Men of science have but one desire,—to know the truth; they have but one fear,—to believe a lie; and, if they know the strength of science and rely on it with unswerving trust, they also know the limits beyond which science ceases to be strong. . . . They have as little fellowship with the atheist, who says there is no God, as with the theist, who knows the mind of God." How strongly Herbert Spencer has set forth not only the limits of knowledge, but its reliability within those limits, I need scarcely say. Of statements by authors who call themselves agnostics, there are very few within my reach. A little pamphlet just issued by the German Liberals in this country, the *Freidenker-Almanach* for 1883, Doerflinger, Milwaukee, contains an article by Hugo Andriessen, called "Der Standpunkt der Agnostiker," or "The Stand-point of the Agnostics." Let me translate a few sentences: "The agnostic is he who affirms that all arguments about the being of a God lead nowhere. . . . He is as much opposed to atheism as to theism. . . . All our knowledge is relative and only about phenomena. . . . The agnostic does not let any mist of theology or metaphysics blind his eyes, but looks calmly at the naked, prosaic facts." There is so little to quote from such authors that I venture to refer to my own lines, called "An Agnostic Requiem," and beginning:—

> "This life, when I have found enough to know,
> And love, and hope for," etc.

You will, I am sure, excuse my taking advantage of a publication sure to attract so much attention as the "Criteria," in order to make it generally understood that agnosticism holds, not that all truth, but only that all theology and metaphysics, is contradictory, and that agnostics merely affirm that they can know nothing beyond the range of the senses and of reasoning from this testimony. Agnosticism means knowledge of this life, but not of any future one; of this world, but not of anything beyond. It is not a state of general uncertainty, but simply one of inability to hold any of the current theories about the infinite. Let me add that there is at least some resemblance to agnosticism in the Bible teaching of the necessity of a special and supernatural revelation for full knowledge of God. Such a doctrine is taught in many passages; for instance, Matt. xi., 27: "No man knoweth the Son but the Father; neither knoweth any man the Father, save the Son, and he to whomsoever the Son will reveal him." John xvii., 25: "O righteous Father, the world hath not known thee; but I have known thee, and these have known that thou hast sent me." I. Cor. ii., 14: "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." Here, the natural inability of man to know God is not perhaps made to seem so complete as it is according to the agnostics; but these latter differ from the teachings of the Bible, and of Orthodoxy also, mainly in not admitting that any revelation has taken place. Thus, the chief peculiarity of agnosticism is theological. In practical matters there is no difference between the agnostic and his neighbors; nor is there any as regards the certainty of scientific truth. In one thing, my dear sir, I am sure you and I agree; that is, in our desire to have error corrected and knowledge spread abroad.

I am respectfully yours,

FRED. MAY HOLLAND.

CONCORD, MASS., Nov. 1, 1882.

CONVENTIONS.

The Free Religious Association will hold a Convention in Shakspere Hall, Syracuse, N.Y., beginning Monday evening, November 20, and continuing through Tuesday, November 21. The *Monday evening* session will be opened with an address of welcome by Charles D. B. Mills, of Syracuse; and an address by the President, William J. Potter, of New Bedford, Mass., on "The Principles and Aims of Free Religion."

Tuesday morning, Frederic A. Hinckley, of Rhode Island, will open the meeting with an address on "The Unwritten Creed of the Coming Religion"; and, *Tuesday afternoon*, the first address will be from Mrs. Anna Garlin Spencer, of Massachusetts, on "The Relation of Free Religion to Reforms and Charities." During these three sessions, addresses will also be made by Rev. S. R. Calthrop of Syracuse, William H. Spencer of Florence, Mass., Rev. N. M. Mann of Rochester, Rev. E. P. Powell of Utica, Rev. Richmond Fiske of Syracuse, and others. At the closing session, *Tuesday evening*, Col. T. W. Higginson will speak upon "Darwin and Emerson," and Rev. M. J. Savage of "The Change of Front of the Universe."

The Association will also hold a Convention in Hershey Music Hall, Chicago, Ill., beginning Thursday evening, November 23, and continuing through Friday, the 24th.

The *Thursday evening* session will open with an address of welcome from Judge Booth, of Chicago; and an address by the President, Wm. J. Potter, on the "Principles and Aims of Free Religion." The *morning session* of *Friday* will begin with an address by Frederic A. Hinckley on "The Unwritten Creed of the Coming Religion," *the afternoon session* with a paper from Mrs. Anna Garlin Spencer on the "Relation of Free Religion to Reforms and Charities," and the *evening* session with the address of Rev. Minot J. Savage on "The Change of Front of the Universe."

In addition to the above, Rabbi E. G. Hirsch of Chicago, C. D. B. Mills of Syracuse, and Rowland Connor of Michigan have already accepted invita-

Digitized by Google

tions to speak; and Rev. J. Ll. Jones of Chicago, Annie L. Diggs of Kansas, Wm. C. Gannett of St. Paul, J. C. Learned of St. Louis, Wm. M. Salter of Chicago, and others, have been invited to do so.

F. A. HINCKLEY, *Secretary.*

EDITORIAL NOTES.

THE *Freidenker* for November 12 contains a long article against Female Suffrage by Anna L. Weinhagen. The same number of this ably conducted organ of German Liberalism says that Mr. Miln's appearance in Milwaukee as Iago showed his capacity of attaining the highest rank in his profession, though his former one has left him with too much fondness for declamation.

GEN. SCHOFIELD, who is in command of the Department of the Pacific, received recently a delegation of the Piute Indians in San Francisco. The "braves" urged their claim to a continuance of the free passes over the Central Pacific Railroad. They said it was necessary for them occasionally to ride on the railroad, and that they were never in a condition to pay their fares. Their spokesman concluded, with great dignity, by asking the General for a quarter of a dollar with which to purchase food.

MISS KATE SANBORN'S *Round Table Series* of twenty-five literature lessons is just the thing for clubs organized for social study. Most of the modern authors of importance are brought before us in their literary as well as in their chronological relations; and the references to sources of information are extremely full, so much so indeed as to prove useful to any student. We regret that she has not given more attention to American literature, and hope she will do so in subsequent numbers, if only to do proper justice to Emerson, of whom we find scarcely any mention. Another omission we hope to see her rectify is that of men of science.

THE word *Reverend* ought never to be written before the name of any man living or dead, unless great and noble services justly entitle him to the gratitude and reverence of his fellow-men. Its general application as a title to all who choose to accept it has destroyed even the professional significance and value it once possessed. It is no indication of ability, attainments, character, or belief, and ought to be abandoned. Think of the absurdity of writing plain Charles Darwin, John Stuart Mill, or Peter Cooper, when we put Rev. as a prefix to the name of a young man just from a Divinity school, or a fellow who, too stupid to succeed at the shoemaker's trade, has abandoned it to "preach the gospel"!

OUR esteemed contemporary, the *Catholic Review*, says: "If straws show which way the wind blows, what are we to think of the conduct of the Association of Evangelical Ministers in Boston, inviting Mr. B. F. Underwood, a pronounced infidel, or free religionist, to address them, at a recent meeting, on the question whether the modern agnostic theory of development overthrows Christianity? What is the significance of it, anyway? . . . Had these enlightened evangelical ministers any good reason to believe that this well-known infidel and reviler of Christianity—there is no use trying to put too fine a point on it—could throw any new light on the important question under discussion?" Will our esteemed contemporary point out wherein we are a 'reviler of Christianity'?

THE Chicago *Times* tells the story of the failure of the branch house of A. T. Stewart & Co., in that city, in the following peculiarly Western fashion: "A few years ago, the corpse of a New York merchant came to Chicago to select a site for business. It was unwilling to pay the rentals ordinarily obtained here, and property owners in the vicinity of the desired location actually threw in $48,000 cash as a bonus. The salaries paid by the imported concern were the meanest known in Chicago since it stood on the borders of civilization, and the treatment received by Western patrons prevented any increase in its trade. All the valuable employés of the house skipped out a year ago, and the pennies have now been placed on the eyes of the defunct establishment by the only man remaining on its pay-roll."

THE following has been given to the public as a letter written by Charles Darwin, in 1873, to a Dutch gentleman, in reply to an inquiry as to his belief in regard to the existence of a God:—

It is impossible to answer your question briefly: I am not sure that I could do so, even if I wrote at some length. But I may say that the impossibility of conceiving that this grand and wondrous universe, with our conscious selves, arose through chance, seems to me our chief argument for the existence of God; but whether this is an argument of real value I have never been able to decide. I am aware that, if we admit a first cause, the mind still craves to know whence it came and how it arose. Nor can I overlook the difficulty from the immense amount of suffering through the world. I am also induced to defer, to a certain extent, to the judgment of the many able men who have fully believed in God; but here, again, I see how poor an argument this is. The safest conclusion seems to be that the whole subject is beyond the scope of man's intellect; but man can do his duty.

This letter, it is stated, first appeared in a Dutch free-thought journal. Its genuineness has not, to our knowledge, been called in question; and it is certainly in the style and spirit of the great naturalist, who was reserved and modest where many, who are intellectual pygmies compared with him, are assertive, dogmatic, and intolerant.

IN the Liverpool *Weekly Post*, we find a "Political Letter" to George Jacob Holyoake, in which he is addressed in the following pleasant manner: "When you stand in the lobby and look into the House of Commons, your eye glances along serried rows of members, Liberals as well as Tories, who, till they were fifty or fifty-five, and had made their fortunes or their commercial positions, never thought seriously about politics at all, much less informed and exercised their minds politically. But there they sit, while you look at them through the swing doors; and they will come out and say, 'Ah, Holyoake!' and probably proceed to suck your brains, if they have a speech to make or a letter from a constituent to answer. Often have I seen it done. Yet it is these men, and not our Holyoakes, that we practical English send to Parliament to transact our politics. . . . As I read your words or hear you speak them, I regret that you had not an opportunity of taking a part in high politics. You were always content with a very humble share in great movements. Mr. Cobden picked you out very accurately, when he said that you were the man to say the most unpleasant thing in the least unpleasant way. You were always ready to stand aside or go to the front, just as was thought best. This mood of ready self-effacement is owing partly to constitutional modesty, partly to that sense of 'proper humbleness' which in this country is seldom got over by those who are born poor, unless they are adventurers."

REV. DR. GEO. E. ELLIS, the distinguished Unitarian scholar and divine, in an exceedingly able address before the Unitarian Club in this city last week, to the surprise of many of his denominational brethren, said: "Fifty years of study, thought, and reading, given largely to the Bible and to the literature which peculiarly relates to it, have brought me to this conclusion: That the book — taken with the especial divine quality and character claimed for it and so extensively assigned to it as inspired and infallible, as a whole and in all its contents — is an orthodox book. It yields what is called the orthodox creed. The vast majority of its readers, following its letter, its obvious sense, its natural meaning, and yielding to the impression which some of its emphatic texts make upon them, find in it Orthodoxy. Only that kind of ingenious, special, discriminative, and — in candor, I must add — forced treatment which it receives from us liberals can make the book teach anything but Orthodoxy. The evangelical sects, so called, are clearly right in maintaining that their view of Scripture and of its doctrines draws a deep and wide division of creed between them and ourselves. In that earnest controversy by pamphlet warfare between Drs. Channing and Ware on the one side and Drs. Worcester and Woods and Prof. Stuart on the other,—a controversy which wrought up the people of our community sixty years ago more than did our recent political campaign,— I am fully convinced that the liberal contestants were worsted. Scripture exegesis, logic, and argument were clearly on the side of the orthodox contestants. And this was so mainly because the liberal party put itself upon the same plane with the orthodox in its way of regarding and dealing with Scripture texts in their bearing upon the controversy. Liberalism cannot vanquish Orthodoxy, if it yields to the latter its own way of regarding and treating the whole Bible."

POETRY.

For The Index.

PRESENTIMENT.

O Life! Thou strange, mysterious, unknown thing,
Imperfect, ever struggling toward the light!
From the dark chaos, from a fading night,
Borne helpless onward, unacknowledged king.

Earth in her bosom carries thee, until
The shadows that have held thee let thee go,
And, into the ethereal kingdom, grow
The things that were not into thought and will.

Slowly, the growth from germ to being springs;
Slowly, the plan of human life unrolls;
Slowly, more slowly, the life of human souls
Evolves from meaner into greater things.

O king of an unknown and hapless throng!
Ignorant of thy crown, unsought of fame,
Thrown upon the world without a place or name,
To pave the way for victory over wrong.

Without the struggle, whence the strength should come
To bear the nations through the darkened days?
Slowly matured, the growing purpose sways
Ever toward nobler words, seals lips of some.

At last, the tongue is loosened, and the voice
Of reason, as a prophecy, is born;
A world had waited with a hope forlorn,
And, shaken to its centre, dared rejoice.

"O song, that never rang the wide world through!
O day, that never dawned from deeper night!
O hope, thrown broadcast, like a beam of light
Irradiating everything anew!

"What some men were may not yet others be,
Greater and better as their times unfold?
The day is deeper, longer than of old,
The soul has glimpses of a wider sea.

"Welcome the dawn of a benigner day,
When man to man grows tolerant and kind;
The fruitful issue of a larger mind,
The growth of a diviner human way!"

SARA W. SMITH.

The Index.

BOSTON, NOV. 16. 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD. . . . . }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

WHAT IS CHRISTIANITY?

BY C. K. WHIPPLE.

I suppose that religion, in the general sense, means the practical recognition of God; in other words, the persistent attempt to order one's life—one's thinking, feeling, speaking, and acting—in accordance with the idea of duty and responsibility to the Power above us. He who acts upon this principle is, to that extent, religious: he who disregards it fails to be religious.

To this general idea of religion, each of the existing special forms of faith adds some peculiar feature, in virtue of which it forms a sect and takes a descriptive appellation by which it is distinguished from other sects. Let us inquire what is this peculiar feature in some of the principal historical religions.

Mussulmans are those who recognize Mohammed as the chief authorized interpreter of the will of God, and therefore accept him as their rightful Lord and Master.

Jews are those who recognize Moses as the chief authorized interpreter of the will of God, and therefore accept him as their rightful ruler in religious matters.

Buddhists are those who recognize "the Buddha" as the chief authorized interpreter of the will of God, and, assuming Gotama to be the Buddha, therefore accept him as their rightful Lord and Master.

Christians are those who recognize "the Christ" as the chief authorized interpreter of the will of God, and, assuming Jesus of Nazareth to be the Christ, therefore accept him as their rightful Lord and Master.

When you know, in regard to an individual, that he makes systematic effort to order his life in accordance with what he understands to be God's will, you know that he is religious, but you do not in the least know to what sect or party in religion he belongs. He may be Jew or Christian, Mohammedan, Buddhist, Parsee, or Brahman. Before you can assign him to any particular class of religionists, you must learn what special doctrine he holds *in addition to* a life of conscientious endeavor, what peculiar tenet he assumes to be indispensable to acceptance with God *besides* the effort to live justly and righteously. No amount of proved justice and righteousness alone would procure him admission into either of the sects above named. To gain a place in Islam, he must acknowledge that God is one, and that Mohammed is his prophet. To be affiliated with the Buddhists, he must publicly avow that he "takes refuge with the Buddha." To join a Jewish synagogue, he must accept Moses as his lawgiver. To join a Christian church, he must profess faith in Jesus as "the Christ." Nay, more. Not only will manifest and undeniable good character fail, by itself, to procure him admission into any of these bodies, but compliance with the authorized peculiar formula will admit him into any of them with little or no inquiry in regard to good character. Men known to be mean and bad, unjust and unmerciful, have unquestioned good standing in the churches of Christians, Jews, and Mohammedans.

The opinion above stated, that recognition and acceptance of Jesus as "the Christ" are the prominent characteristic and chief essential feature of Christianity, is corroborated by the fact that all the principal churches claiming the Christian name declare that faith, and insist on its acknowledgment as an indispensable preliminary in the admission of new members. The Roman, the Greek, the Anglican, and all the other Trinitarian churches agree in holding and specially emphasizing this ground; and no person who openly disavowed it could possibly gain membership in either. It is reasonable to assume that the point which has been held of chief importance *semper, ubique, et ab omnibus*, always, everywhere, and by all who call themselves Christian, should be considered the essence of Christianity.

This opinion receives further confirmation from the historical origin of the epithet "Christian," which we find in the Acts of the Apostles. That book tells us that "the disciples"—that is, those who accepted Jesus as the Christ—were called "Christians" first in Antioch. Paul, it is there stated, had been teaching in that city a whole year; and the constant repetition of his favorite phrase, "our Lord Jesus Christ," naturally led the residents there to describe his followers as "those Christ people," or, vituperatively, "those Christ fellows,"—just as we say "the Swedenborgians" or "the Millerites." The epithet "Christian" was plainly a descriptive one; and the continued use of Paul's formula, "our Lord Jesus Christ," which has held its place in all branches of the Christian Church from that day to the present, shows the acceptance of Jesus by them all, not only as "the Christ," but as the chief authorized interpreter of God's will, and the rightful ruler of all men in religion and morals. This declaration of faith appears in the creeds and hymns of all these Churches, and in the prayers and sermons of their clergy. But speculation and discussion on theological matters have spread of late beyond the pulpit and the religious press, and have appeared and been welcomed in the best organs of secular periodical literature; and the literature of the last thirty years, both secular and theological, has shown a large and increasing tendency to discriminate between Jesus and "the Christ," and to recognize the former as historical and the latter as legendary.

There seems an agreement well-nigh universal in the acceptance of Jesus of Nazareth as a historical character. The most trustworthy account of him is thought to be found in the first three books of the New Testament, and particularly in the Gospel ascribed to Matthew. In these, it appears that, though quite destitute of what is called learning, Jesus was eminent for wisdom in the spiritual sense, standing manifestly first among the great teachers of religion and morality in all ages. Born and educated a Jew, he easily freed himself from the limitations of the Hebrew faith; and the truths of absolute religion were expressed by him not only more distinctly than ever before, but with a clearness and thoroughness which seem incapable of improvement, and which leave them still the best and highest statements in ethics and religion.

The career of Jesus as a religious teacher, judging from a comparison of the three Gospels above mentioned, seems to have lasted not much longer than a year. Through the whole of this period, the chief obstacle in his way was the inability of his followers to understand his doctrine. As they were devout Jews, holding their Mosaic system to be divinely ordained, and their Hebrew scripture a perfect rule of life, they were unable to conceive of reform in religion, except as a fulfilment of that system, a purification of it from the erroneous notions and practices incorporated with it by priestly tradition. The disciples followed Jesus expressly because they hoped to find in him a reformer of Judaism. Even the apostles, the most intelligent of these followers, clung to the same idea, and did not escape from it until after the crucifixion of their Master. Not one of them could be made to understand that their cherished Mosaic system was to be left behind, transcended, thrown aside as a worn-out garment. Recognizing in Jesus a powerful preacher of that "righteousness" which their Hebrew prophets had enjoined, they could not help connecting him in idea with "the Messiah" announced by those same prophets. From first to last, they insisted on viewing him as "the Lord's Anointed," "the Son of David," "the King of Israel." They were disappointed and puzzled throughout the earlier part of the career of Jesus as a teacher by his reluctance to assume the title thus urged upon him, and through the whole of it by his avoidance of the attitude of king, deliverer, redeemer of Israel from oppression by the Gentiles, which they assumed to be the prominent function of the Messiah, because Isaiah and Jeremiah had expressly announced it as such. I repeat, the chief obstacle to the diffusion of the doctrine set forth by Jesus was the inability of his followers to understand that his aim, his work, his intended life, were utterly incompatible with the then current idea, as with the prophetic delineations, of Messiahship.

These things being so, it seems strange that the same gospel narratives which give us the information above stated represent also that, in some part of his year's preaching, Jesus did assume the title of Messiah or Christ. This brings us to consideration of the question how far the testimony of these documents is trustworthy, and what light is thrown upon this point by evidence or probability in regard to their date and authorship.

Whenever and by whomsoever the first three Gospels were written, the best and highest statements of religious truth ascribed in them to Jesus were undoubtedly uttered by him. No other person in that age and country was competent to originate those sayings; and they were of a sort to impress themselves strongly on the mind and memory of hearers, and thus had the best chance of being correctly repeated. But these same Gospels attribute other sayings to Jesus, less creditable to his intelligence and discernment. Some of them show a participation in Jewish superstitions current at that time,—for instance, assumption of the existence of Satan and of evil spirits subordinate to him, who could possess and torment human beings. Some of them represent Jesus as quoting from Hebrew Scripture matters which have no existence there,—such as predictions that he (Jesus) should rise from the dead on the third day, and that he (Jesus) was spoken of in the books of Moses, in the Psalms, and in the Prophets. Some of them give countenance to the existence of a hell, in which men are to be confined with devils, and permanently tormented in retribution for offences committed in this mortal life. And some of them predicted an event which never took place,—the coming of him (Jesus) a second time in the clouds of heaven, within the lifetime of those who then heard him, to execute a final judgment.

If the biographical sketches described in the New Testament as "according to" Matthew, Mark, and Luke were really written by those persons, and written at a time reasonably near the occurrence of the events recorded, we should be obliged to attribute the blunders above mentioned to Jesus. It seems strange, no doubt, that such errors should co-exist with such wisdom, though history abounds with similar examples of human infirmity; but there is good reason to suspect that the blunders in question may have had another origin,—namely, the penning of those narratives from traditional report, after the generation of the associates of Jesus had passed away, and when the lapse of half a century or more had given opportunity for modification and enlargement of current tradition. We know from the testimony of Paul that, not long after the death of Jesus, the disciples were already divided into schools, each holding the doctrine of some especially venerated leader. There seems much reason to suppose that our first three Gospels were written long after Paul's time,* by persons who undertook to describe "according to Matthew," "according to Mark," "according to Luke," what Jesus had said and done.

* It may be said, and very truly said, that the post-apostolic origin of our Gospels is not proved. On the other hand, the early dates of these books assumed by the old commentators, accepted by the orthodox clergy, and printed in many editions of the New Testament, have neither proof nor probability to rest on. The reasons for supposing a later authorship of Matthew, Mark, and Luke highly probable may be found in—

An Introduction to the Study of the New Testament, by Rev. Samuel Davidson, D.D. London, 1868. Also in a later work, by an American author,—

History of the Christian Religion to the Year Two Hundred, by Charles B. Waite, A.M. Chicago, 1881.

Digitized by Google

That records of these sayings and doings were not earlier made seems accounted for by the fact that a speedy destruction of the world was confidently expected by the apostles and their followers after the death of Jesus. Their work was understood to be to convince and convert as many as possible by the living voice before the trumpet should sound, summoning dead and living to the final judgment. It was mockers who first asked, "Where is the promise of his coming?" But, after half a century of nonfulfilment, even the disciples might well think it needful to record the items of current tradition, and thus secure them against further change.

The statements in the first three Gospels,—that Jesus was long and strongly solicited to assume the title and function of Messiah, both by disciples and casual hearers, before he consented to comply with the first part of that request, and that, when he did so far comply with it, he added the strange request that they should tell no man of it,—these things seem to show that Jesus had not originally intended to take such a position; and that, if he finally accepted the title of King (interpreting it to mean servant), it was only because in no other manner could his hearers be made to receive the really important new truths which he had to teach them. His reluctance at taking the title of Messiah is abundantly justified by the contrast between his whole life and character and the chief functions ascribed to Messiahship by Isaiah and Jeremiah, from whom the Jews took their idea of it. The Messiah of prophecy was to be a triumphant deliverer, accepted by his own nation, and the vanquisher of all opposing nations. Jesus was not then, and has never since, been accepted by the Jewish people; and he was conquered by the opponents of his own time instead of conquering them. If he did consent to assume a name so much in contrast with his real character, it was a blunder. Possibly, however, the ascription to him in the Gospels, both of this and the other blunders above mentioned, may have come from the delay of scores of years before record was made of the traditions concerning him. But the greatest and worst blunder was made by the Jews themselves, who did not see that the new religious truth which Jesus offered them was far better than any literal fulfilment of Messianic prophecy.

I have mentioned above the great religious associations which, assuming Jesus of Nazareth to be the Christ, therefore accept him as their rightful Lord and Master, and are thus entitled to the name "Christian"; namely, the Roman, Greek, and Anglican Churches, the Presbyterians, Methodists, Baptists, and Orthodox Congregationalists. I now mention some of the small sects which, holding the same doctrine, are therefore entitled to the same appellation.

The Universalists hold this doctrine, since the salvation which they expect for all men is acknowledged to be due to an atoning sacrifice made for all by the Lord Jesus Christ.

The Mormons hold it, since that people expressly call themselves "The Church of Jesus Christ of Latter-day Saints."

The small sect of Friends, commonly called Quakers, are divided upon the point in question, the followers of Elias Hicks no longer accepting Jesus either as Christ or Lord.

The small sect of Unitarian Congregationalists shows a similar division of opinion; but the majority, holding to the acknowledgment of "the Lord Jesus Christ" in their worship, are clearly entitled to the name "Christian."

Is any other definition of the word "Christian" so largely inclusive, and at the same time so fairly inclusive, as this? Does anything rather than this constitute the essence, the chief distinguishing feature, of Christianity? Sectarians of every denomination would add something to the definition I have given, and add it for the purpose of excluding those who differ with them in opinion. I seek to know how many and who can be rightfully included under the Christian name.

THE truest friendship must have an upward look: the element of reverence must be in it, or it cannot have its full power. Others may not see the superiority which friendship recognizes; but friendship must see it. Jonathan may seem to others the prince of royal blood, while David seems only the shepherd lad; but Jonathan could never love David as his own soul, unless *he* saw the innate royalty of his friend. And the more one knows of a real friend, the more clearly the stamp of royalty is seen in the soul of that friend.—*Sunday-School Times.*

PHILOSOPHY AT DINNER.

Addresses delivered at a Banquet given to Herbert Spencer, in New York, Thursday Evening, Nov. 9, 1882, by Hon. William M. Evarts, Herbert Spencer, Prof. William G. Sumner, Prof. O. C. Marsh, Hon. Carl Schurz, Prof. John Fiske, and Henry Ward Beecher.

Introductory Speech by Hon. William A. Evarts.

We are here to-night, gentlemen, to show the feeling of Americans toward our distinguished guest. As no room and no city can hold all his friends and admirers, it was necessary that a company should be made up by some method out of the mass, and what so good a method as that of natural selection, and the inclusion within these walls of the ladies? It is a little hard upon the rational instincts and experience of man that we should take up the abstruse subjects of philosophy and of evolution, of all the great topics that make up Mr. Spencer's contribution to the learning and the wisdom of his time, at this end of the dinner. The most ancient nations, even in their primitive condition, saw the folly of this; and when one wished either to be inspired with the thoughts of others, or to be himself a diviner of the thoughts of others, fasting was necessary, and a people from whom I think a great many things might be learned for the good of the people of the present time have a maxim that will commend itself to your common sense. They say the continually stuffed body cannot see secret things. Now, from my personal knowledge of the men I see at these tables, they are owners of continually stuffed bodies. I have addressed them at public dinners, on all topics and for all purposes; and, whatever sympathy they may have shown with the divers occasions which brought them together, they come up to this notion of continually stuffed bodies. In primitive times, they had a custom which we only under the system of differentiation practise now at this dinner. When men wished to possess themselves of the learning, the wisdom, the philosophy, the courage, the great traits of any person, they immediately proceeded to eat him up as soon as he was dead, having only this diversity in that early time,—that he should be either roasted or boiled, according as he was fat or thin. Now, out of that narrow compass, see how by the process of differentiation and of multiplication of effects we have come to a dinner of a dozen courses and wines of as many varieties; and that simple process of appropriating the virtue and the wisdom of the great man that was brought before the feast is now diversified into an analysis of all the men here under the cunning management of many speakers. No doubt, preserving as we do the identity of all these institutions, it is often considered a great art, or at least a great delight, to roast our friends and put in hot water those against whom we have a grudge.

Now, Mr. Spencer, we are glad to meet you here. We are glad to see you, and we are glad to have you see us. We are glad to see you; for we recognize in the breadth of your knowledge such knowledge as is useful to your race, a greater comprehension than any living man has presented to our generation. We are glad to see you, because in our judgment you have brought to the analysis and distribution of this vast knowledge a more penetrating intelligence and a more thorough insight than any living man has brought even to the minor topics of his special knowledge. In theology, in psychology, in natural science, in the knowledge of individual man and his exposition, and in the knowledge of the world, in the proper sense of society which makes up the world, the world worth knowing, the world worth speaking of, the world worth planning for, the world worth working for, we acknowledge your labors as surpassing those of any of our kind. You seem to us to carry away and maintain in the future the same measure of fame among others that we are told was given in the Middle Ages to Albertus Magnus, the most learned man of those times, whose comprehension of theology, of psychology, of natural history, of politics, of history, and of learning, comprehended more than any man since the classic time certainly; and yet it was found of him that his knowledge was rather an accumulation, and that he had added no new processes and no new wealth to the learning which he had achieved.

Now, I have said that we are glad to have you see us. You have already treated us to a very unique piece of work in this reception; and we are expecting, perhaps, that the world may be instructed after you are safely on the other side of the Atlantic in a more intimate and thorough manner concerning our merits and our few faults.

This faculty of laying on a dissecting board an entire nation or an entire age, and finding out all the arteries and veins and pulsations of their life, is an extension beyond any that our own medical schools afford. You give us that knowledge of man which is practical and useful; and whatever the claims or the debates may be about your system or the system of those who agree with you, and however it may be compared with other competing systems that have preceded it, we must all agree that it is practical, that it is benevolent, that it is serious, and that it is reverent, that it aims at the highest results in virtue, that it treats evil not as eternal but as evanescent, and that it expects to arrive at what is sought through the aid of the millennium, that condition of affairs in which there is the highest morality and the greatest happiness. And, if we can come to that by these processes and these instructions, it matters little to the race whether it be called scientific morality and mathematical freedom, or by another less pretentious name. You will please fill your glasses, while I propose the health of our guest, Herbert Spencer.

Mr. Spencer's Reply.

Mr. President and Gentlemen,—Along with your kindness, there comes to me a great unkindness from fate; for now that, above all times in my life, I need full command of what powers of speech I possess, disturbed health so threatens to interfere with them that I fear I shall very inadequately express myself. Any failure in my response you must please ascribe, in part at least, to a greatly disordered nervous system. Regarding you as representing Americans at large, I feel that the occasion is one on which arrears of thanks are due. I ought to begin with the time, some two-and-twenty years ago, when my highly valued friend, Prof. Youmans, making efforts to diffuse my books here, interested on their behalf the Messrs. Appleton, who have ever treated me so honorably and so handsomely; and I ought to detail from that time onward the various marks and acts of sympathy by which I have been encouraged in a struggle which was for many years disheartening. But, intimating thus briefly my general indebtedness to my numerous friends—most of them unknown—on this side of the Atlantic, I must name more especially the many attentions and proffered hospitalities met with during my late tour, as well as, lastly and chiefly, this marked expression of the sympathies and good wishes which many of you have travelled so far to give, at great cost of that time which is so precious to the American. I believe I may truly say that the better health which you have so cordially wished me will be in a measure furthered by the wish, since all pleasurable emotion is conducive to health; and, as you will fully believe, the remembrance of this event will ever continue to be a source of pleasurable emotion, exceeded by few, if any, of my remembrances.

And now that I have thanked you, sincerely, though too briefly, I am going to find fault with you. Already, in some remarks drawn from me respecting American affairs and American character, I have passed criticisms which have been accepted far more good-naturedly than I could reasonably have expected; and it seems strange that I should now again propose to transgress. However, the fault I have to comment upon is one which most will scarcely regard as a fault. It seems to me that in one respect Americans have diverged too widely from savages. I do not mean to say that they are in general unduly civilized. Throughout large parts of the population, even in long-settled regions, there is no excess of those virtues needed for the maintenance of social harmony. Especially out in the West, men's dealings do not yet betray too much of the "sweetness and light" which, we are told, distinguish the cultured man from the barbarian. Nevertheless, there is a sense in which my assertion is true. You know that the primitive man lacks power of application. Spurred by hunger, by danger, by revenge, he can exert himself energetically for a time; but his energy is spasmodic. Monotonous daily toil is impossible to him. It is otherwise with the more developed man. The stern discipline of social life has gradually increased the aptitude for persistent industry; until among us, and still more among you, work has be-

Digitized by Google

come with many a passion. This contrast of nature has another aspect. The savage thinks only of present satisfactions, and leaves future satisfactions uncared for. Contrariwise, the American, eagerly pursuing a future good, almost ignores what good the passing day offers him; and, when the future good is gained, he neglects that, while striving for some still remoter good.

IMMENSE INJURY FROM HIGH-PRESSURE LIFE.

What I have seen and heard during my stay among you has forced on me the belief that this slow change from habitual inertness to persistent activity has reached an extreme from which there must begin a counterchange, a reaction. Everywhere, I have been struck with the number of faces which told in strong lines of the burdens that had to be borne. I have been struck, too, with the large proportion of gray-haired men; and inquiries have brought out the fact that with you the hair commonly begins to turn some ten years earlier than with us. Moreover, in every circle I have met men who had themselves suffered from nervous collapse due to stress of business, or named friends who had either killed themselves by overwork, or had been permanently incapacitated, or had wasted long periods in endeavors to recover health. I do but echo the opinion of all the observant persons I have spoken to, that immense injury is being done by this high-pressure life,—the physique is being undermined. That subtle thinker and poet whom you have lately had to mourn, Emerson, says, in his essay on the gentleman, that the first requisite is that he shall be a good animal. The requisite is a general one: it extends to the man, to the father, to the citizen. We hear a great deal about "the vile body"; and many are encouraged by the phrase to transgress the laws of health. But nature quietly suppresses those who treat thus disrespectfully one of her highest products, and leaves the world to be peopled by the descendants of those who are not so foolish.

Beyond these immediate mischiefs there are remoter mischiefs. Exclusive devotion to work has the result that amusements cease to please; and, when relaxation becomes imperative, life becomes dreary from lack of its sole interest,—the interest in business. The remark current in England that, when the American travels, his aim is to do the greatest amount of sight-seeing in the shortest time, I find current here also: it is recognized that the satisfaction of getting on devours nearly all other satisfactions. When recently at Niagara, which gave us a whole week's pleasure, I learned from the landlord of the hotel that most Americans come one day and go away the next. Old Froissart, who said of the English of his day, that "they take their pleasures sadly, after their fashion," would doubtless, if he lived now, say of the Americans, that they take their pleasures hurriedly, after their fashion. In large measure with us, and still more with you, there is not that abandonment to the moment which is requisite for full enjoyment; and this abandonment is prevented by the ever-present sense of multitudinous responsibilities. So that, beyond the serious physical mischief caused by overwork, there is the further mischief that it destroys what value there would otherwise be in the leisure part of life.

MAKING LIFE HARDER FOR OTHERS.

Nor do the evils end here. There is the injury to posterity. Damaged constitutions reappear in children, and entail on them far more of ill than great fortunes yield them of good. When life has been duly rationalized by science, it will be seen that among a man's duties care of the body is imperative, not only out of regard for personal welfare, but also out of regard for descendants. His constitution will be considered as an entailed estate, which he ought to pass on uninjured, if not improved, to those who follow; and it will be held that millions bequeathed by him will not compensate for feeble health and decreased ability to enjoy life. Once more there is the injury to fellow-citizens, taking the shape of undue disregard of competitors. I hear that a great trader among you deliberately endeavored to crush out every one whose business competed with his own; and manifestly the man who, making himself a slave to accumulation, absorbs an inordinate share of the trade or profession he is engaged in, makes life harder for all others engaged in it, and excludes from it many who might otherwise gain competencies. Thus, besides the *egoistic* motive, there are two altruistic motives which should deter from this excess in work.

The truth is, there needs a revised ideal of life. Look back through the past, or look abroad through the present, and we find that the ideal of life is variable, and depends on social conditions. Every one knows that to be a successful warrior was the highest aim among all ancient peoples of note, as it is still among many barbarous peoples. When we remember that in the Norseman's heaven the time was to be passed in daily battles, with magical healing of wounds, we see how deeply rooted may become the conception that fighting is man's proper business, and that industry is fit only for slaves and people of low degree. That is to say, when the chronic struggles of races necessitate perpetual wars, there is evolved an ideal of life adapted to the requirements. We have changed all that in modern civilized societies, especially in England, and still more in America. With the decline of militant activity and the growth of industrial activity, the occupations once disgraceful have become honorable. The duty to work has taken the place of the duty to fight; and in the one case, as in the other, the ideal of life has become so well established that scarcely any dream of questioning it. Practically, business has been substituted for war as the purpose of existence.

THE DIFFERENT IDEAL OF THE FUTURE.

Is this modern ideal to survive throughout the future? I think not. While all other things undergo continuous change, it is impossible that ideals should remain fixed. The ancient ideal was appropriate to the ages of conquest by man over man, and spread of the strongest races. The modern ideal is appropriate to ages in which conquest of the earth and subjection of the powers of nature to human use is the predominant need. But hereafter, when both these ends have in the main been achieved, the ideal formed will probably differ considerably from the present one. May we not foresee the nature of the difference? I think we may. Some twenty years ago, a good friend of mine and a good friend of yours, too, though you never saw him, John Stuart Mill, delivered at St. Andrew's an inaugural address on the occasion of his appointment to the Lord Rectorship. It contained much to be admired, as did all he wrote. There ran through it, however, the tacit assumption that life is for learning and working. I felt at the time that I should have liked to take up the opposite thesis. I should have liked to contend that life is not for learning, nor is life for working, but learning and working are for life. The primary use of knowledge is for such guidance of conduct under all circumstances as shall make living complete. All other uses of knowledge are secondary. It scarcely needs saying that the primary use of work is that of supplying the materials and aids to living completely, and that any other uses of work are secondary. But, in men's conceptions, the secondary has in great measure usurped the place of the primary. The apostle of culture as it is commonly conceived, Mr. Matthew Arnold, makes little or no reference to the fact that the first use of knowledge is the right ordering of all actions; and Mr. Carlyle, who is a good exponent of current ideas about work, insists on its virtues for quite other reasons than that it achieves sustentation. We may trace everywhere in human affairs a tendency to transform the means into the end. All see that the miser does this when, making the accumulation of money his sole satisfaction, he forgets that money is of value only to purchase satisfactions. But it is less commonly seen that the like is true of the work by which the money is accumulated,—that industry, too, bodily or mental, is but a means, and that it is as irrational to pursue it to the exclusion of that complete living it subserves as it is for the miser to accumulate money and make no use of it. Hereafter, when this age of active material progress has yielded mankind its benefits, there will, I think, come a better adjustment of labor and enjoyment. Among reasons for thinking this, there is the reason that the process of evolution throughout the world at large brings an increasing surplus of energies that are not absorbed in fulfilling material needs, and points to a still larger surplus for humanity of the future. And there are other reasons, which I must pass over. In brief, I may say that we have had somewhat too much of "the gospel of work." It is time to preach the gospel of relaxation.

A WARNING FOR THE NATION.

This is a very unconventional after-dinner speech. Especially, it will be thought strange that, in returning thanks, I should deliver something very much like a homily. But I have thought I could not better convey my thanks than by the expression of a sympathy which issues in a fear. If, as I gather, this intemperance in work affects more especially the Anglo-American part of the population; if there results an undermining of the physique not only of adults, but also in the young, who, as I learn from your daily journals, are also being injured by overwork; if the ultimate consequence should be a dwindling away of those among you who are the inheritors of free institutions and best adapted to them,—then there will come a further difficulty in the working out of that great future which lies before the American nation. To my anxiety on this account, you must please ascribe the unusual character of my remarks.

And now I must bid you farewell. When I sail by the "Germanic" on Saturday, I shall bear with me pleasant remembrances of my intercourse with many Americans, joined with regrets that my state of health has prevented me from seeing a larger number.

Prof. Sumner's Remarks.

The Chairman next introduced Prof. W. G. Sumner, of Yale College, who responded to a toast in honor of "Sociology." He said:—

In the present state of the science of sociology, the man who has studied it at all is very sure to feel great self-distrust in trying to talk about it. The most that one of us can do at the present time is to appreciate the promise which the science offers to us, and to understand the lines of direction in which it seems about to open out. As for the philosophy of the subject, we still need the master to show us how to handle and apply its most fundamental doctrines. I have the feeling all the time in studying and teaching sociology that I have not mastered it yet in such a way as to be able to proceed in it with good confidence in my own steps. I have only got so far as to have an almost overpowering conviction of the necessity and value of the study of that science.

Mr. Spencer addressed himself at the outset of his literary career to topics of sociology. In the pursuit of those topics, he found himself forced (as I understand it) to seek constantly more fundamental and wider philosophical doctrines. He came at last to fundamental principles of the evolution philosophy. He then extended, tested, confirmed, and corrected these principles by inductions from other sciences, and so finally turned again to sociology, armed with the scientific method which he had acquired. To win a powerful and correct method is, as we all know, to win more than half the battle. When so much is secured, the question of making the discoveries, solving the problems, eliminating the errors, and testing the results, is only a question of time and of strength to collect and master the data.

We have now acquired the method of studying sociology scientifically so as to attain to assured results. We have acquired it none too soon. The need for a science of life in society is urgent, and it is increasing every year. It is a fact which is generally overlooked that the great advance in the sciences and the arts which has taken place during the last century is producing social consequences and giving rise to social problems. We are accustomed to dwell upon the discoveries of science and the development of the arts as simple incidents, complete in themselves, which offer only grounds for congratulation. But the steps which have been won are by no means simple events. Each one has consequences which reach beyond the domain of physical power into social and moral relations: these effects are multiplied and reproduced by combination with each other. The great discoveries and inventions redistribute population. They reconstruct industries, and force new organization of commerce and finance. They bring new employments into existence and render other employments obsolete, while they change the relative value of many others. They overthrow the old order of society, impoverishing some classes and enriching others. They render old political traditions grotesque and ridiculous, and make old maxims of statecraft null and empty. They give old vices of human nature a chance to parade in new masks, so that it demands new skill to detect the same old foes. They produce a kind of social chaos, in which contradictory social and economic phenomena appear side by side to bewilder and deceive the student who is not fully armed to deal with them. New interests are brought into existence, and new faiths, ideas, hopes, are engendered in the minds of men. Some of these are doubtless good and sound, others are delusive: in

Digitized by Google

every case, a competent criticism is of the first necessity. In the upheaval of society which is going on, classes and groups are thrown against each other in such a way as to produce class hatreds and hostilities. As the old national jealousies, which used to be the lines on which war was waged, lose their distinctness, class jealousies threaten to take their place. Political and social events which occur on one side of the globe now affect the interests of population on the other side of the globe. Forces which come into action in one part of human society rest not until they have reached all human society. The brotherhood of man is coming to be a reality of such distinct and positive character that we find it a practical question of the greatest moment what kind of creatures some of these hitherto neglected brethren are. Secondary remoter effects of industrial changes, which were formerly dissipated and lost in the delay and friction of communication, are now, by our prompt and delicate mechanism of communication, caught up and transmitted through society.

It is plain that our social science is not on the level of the tasks which are thrown upon it by the vast and sudden changes in the whole mechanism by which man makes the resources of the globe available to satisfy his needs, and by the new ideas which are born of the new aspects which human life bears to our eyes in consequence of the development of science and the arts. Our traditions about the science and art of living are plainly inadequate. They break to pieces in our hands, when we try to apply them to the new cases. A man of good faith may come to the conviction sadly, but he must come to the conviction honestly, that the traditional doctrines and explanations of human life are worthless.

A progress which is not symmetrical is not true; that is to say, every branch of human interest must be developed proportionately to all the other branches, else the one which remains in arrears will measure the advance which may be won by the whole. If, then, we cannot produce a science of life in society which is broad enough to solve all the new social problems which are now forced upon us by the development of science and art, we shall find that the achievements of science and art will be overwhelmed by social reactions and convulsions.

We do not lack for attempts of one kind and another to satisfy the need which I have described. Our discussion is in excess of our deliberation, and our deliberation is in excess of our information. Our journals, platforms, pulpits, and parliaments are full of talking and writing about topics of sociology. The only result, however, of all this discussion is to show that there are half a dozen arbitrary codes of morals, a heterogeneous tangle of economic doctrines, a score of religious creeds and ecclesiastical traditions, and a confused jumble of humanitarian and sentimental notions which jostle each other in the brains of the men of this generation. It is astonishing to watch a discussion, and to see how a disputant, starting from a given point of view, will run along on one line of thought until he encounters some fragment of another code or doctrine, which he has derived from some other source of education, whereupon he turns at an angle, and goes on in a new course until he finds himself face to face with another of his old prepossessions. What we need is adequate criteria by which to test and classify and appropriate canons of procedure, or the adaptation of universal canons to the special tasks of sociology.

Unquestionably, it is to the great philosophy which has now been established by such ample induction in the experimental sciences, and which offers to man such new command of all the relations of life, that we must look for the establishment of the guiding lines in the study of sociology. I can see no boundaries to the scope of the philosophy of evolution. That philosophy is sure to embrace all the interests of man on this earth. It will be one of its crowning triumphs to bring light and order into the social problems which are of universal bearing on all mankind. Mr. Spencer is breaking the path for us into this domain. We stand eager to follow him into it, and we look upon his work on sociology as a grand step in the history of science. When, therefore, we express our earnest hope that Mr. Spencer may have health and strength to bring his work to a speedy conclusion, we not only express our personal respect and good will for himself, but also our sympathy with what, I doubt not, is the warmest wish of his own heart, and our appreciation of his great services to true science and to the welfare of mankind.

(Concluded next week.)

CORRESPONDENCE.

THAT CORRECTION.

Editors of The Index:—

In your issue of October 26 appears an article by Mr. Savage, a portion of which is devoted to a supposed mistake in my communication in *The Index* of October 19. The mistake, too, Mr. Savage suggests, is on a question of fact. Now, if I had made a mistake, there is no one from whom I would take correction with so good grace as from my friend Mr. Savage. But, after the most careful examination of his correction, I must assert that I fail to see where I made any error on any question of fact, even taking Mr. Savage himself as testimony. With a slight difference in the use and meaning of words there is little difference in statements of fact between Mr. Savage and myself.

The gist of the matter is here. I stated in substance what had not been noticed by any other writer in *The Index*, that Mr. Savage offered at first to the Conference a substitute for Article IX., signed by different persons. The proposed substitute Mr. Savage confesses I stated correctly, with the exception of one word. (Of course, I accept his correction of that word.) I copied the substitute from the original, after Mr. Savage had obtained leave of the Conference to present a paper. In order to save space, I will call that substitute which was not voted upon A, and the new Article X. B. I stated that A was the original paper which the most of us signed, and which was at first offered to the Conference.

At the first glance, it looks as if Mr. Savage were denying that statement; but really what he denies is that B "*narrowed the original proposition.*" In other words, his article is an attempt to show that Mr. Potter and myself are mistaken in our *opinions* about which proposition has the most breadth. But an opinion as to whether one proposition is broader than another is something which one man might decide as well as another after he has the facts. What I expected Mr. Savage to show was that he had some contradictory facts. What he really does try to show is that we are mistaken in our conclusions from the facts, because he really does not show any essential error on my part.

"The first draft of my proposed new article," he says, is "as Mr. Stewart rightly quotes it." Again, "if the article as first drawn be the broader one, *it was just this broader one* which all these representative men had signed." Mr. Savage previously shows us who some of these representative men are. So far, then, Mr. Savage simply proves that my statement was essentially correct,—that A was the original paper, and was the one signed by the most "representative men." But he seems to deny my statement that the proposition which went to the Business Committee is not the one which came from them and was adopted, although essentially he does not deny it. The whole question hangs on our interpretation of what we mean by the "*hands*" of a committee. Mr. Savage obtained leave at a certain moment to present a paper. That paper as a piece of stationery perhaps was not touched by the "*hands*" of Governor Long or the Business Committee. By a "legal fiction" (using the term in a perfectly good sense), no stationery really passed through anybody's hands, but by courtesy was permitted for the time to remain in the pocket of Mr. Savage. At that moment, however, the only legal proposition before the Committee on this subject was that of A, as no other paper on that subject was then in existence. The Business Committee had power, however, to report any action they saw proper. Very naturally, they permitted Mr. Savage to make any change he desired in the proposition before it was reported. It is of no manner of consequence, then, that Mr. Savage actually did the changing "with his little hatchet": the Committee was the responsible party for any change, and by their permission a change was made from A to B *after A was really the proposition before the Conference.* I hope no one will suppose that I consider there was necessarily anything wrong in the change by Mr. Savage. The only point I am insisting on is that, although Mr. Savage literally performed the labor of making the change before any paper was read to the Conference, yet as A was the paper in existence when he first obtained leave to present a paper, and would then have been read if delegates had called for it, I was essentially correct in stating that A went first to the Business Committee.

When I wrote my former article, I knew of course of these details which Mr. Savage mentions. I did not state them, because I did not think it was necessary to take up the space of *The Index* with non-essential points, and therefore confined myself to essential facts. Mr. Savage merely gives more information about the facts, but does not change them. A was signed by such men as Drs. Clarke and Hale, etc., he says; but, at last, he met "a radical member," who said he would oppose A. On Wednesday evening, Mr. Savage told me of this, and showed me a rough draft of another proposition, which was to be not a substitute for Article IX., but a new article. I said then that I did not like it. I do not mention this as if my opinion at that time was of any special consequence, but only to show facts. I did not know, however, that this new proposition was to take the place of A, but thought Mr. Savage would see that it was not possible to please everybody. On Thursday, when B was read by the Chairman of the Business Committee, I said to Mr. Savage at once that that was not what we signed. He said he knew it, and either then or afterwards explained that he had made the change himself. It did not please me; but, for reasons mentioned in my other article, it was better than nothing, and I voted for it.

I do not care to enter into controversy on the matter, but merely write to defend myself from the suggestion that I did not know what I was writing about in my previous communication. With the general opinions of Mr. Savage in his article I agree. I did and do doubt, however, the expediency and right of trying to get something which would meet with no opposition. We may have our own opinions, too, of that optimistic spirit which makes Mr. Savage try to prove that the most opposite facts all tend to show that everybody was anxious to get rid of dogmas. Some of his "radicals" could only be classed so under the definition that a "radical" is a "good fellow," a scholar and a gentleman. One of them did not want any change in the Constitution which would not bind the Conference to keep its membership among those who are at least of Christian heredity. I think, too, that if Mr. Chadwick, for instance, had explained his negative vote by a speech, showing that even the majority do not believe the preamble, it would have had a greater moral effect than a silent vote; and it might have shown, what was shown in the Maine Conference two years ago, that the majority do not want even Christian dogmas.

I hope no one will suppose this is a criticism of any action of Mr. Savage. I write merely to show the essential correctness of my former statements. The essence of those statements on this point is that I desired, first, that all dogmatism should be eliminated from the Constitution of the Unitarian Conference; but that, as that could not be obtained, the proposition A was "to a large degree satisfactory," but that A was changed, after it went really to the Business Committee, into B, which is valuable as a stepping-stone to something better.

S. J. STEWART.

BANGOR, Oct. 28, 1882.

[The above communication was, with Mr. Stewart's knowledge, read by Mr. Savage in the proof; and he thinks that, as the discussion has reduced itself to a contradiction concerning a matter of fact, its continuance cannot conduce to either "sweetness" or "light," and informs us that he is willing to let it end with Mr. Stewart's statement.—ED.]

BOOK NOTICES.

KANT'S CRITIQUE OF PURE REASON. A Critical Exposition. By George S. Morris, Ph.D. Chicago: S. C. Griggs & Co.

This volume, the first of a series of German Philosophical Classics for English Readers and Students, which Prof. Morris is to edit, and S. C. Griggs & Co., of Chicago, are to publish, is just what was wanted to start our students of science and philosophy upon a course of faithful investigation. It begins at the modern beginning of a great study, that of how to make knowledge not merely nominal, but real; and it will be followed by a sufficient number of other volumes to take the reader and student across the whole field of philosophical study. Prof. Morris truly says: "The steps which Kant, Fichte, Schelling, and Hegel took, mark a progress. Kant took the first step away from, or in advance of, the sensational theory of knowledge, but only the first. Fichte took another, and Schelling still another, the final one be-

Digitized by Google

ing accomplished by Hegel. The last step reached a goal to which the first one logically pointed." The volume before us makes a thorough beginning of the study of Kant; and two other volumes will come later, also devoted to Kant,—one by President Porter on the *Ethics of Kant*, and one by an able English writer, Prof. Adamson of Owen's College, Manchester, now the Victoria University, on Kant's *Critique of Judgment*. The work which is the great gate to the modern development of philosophy is the *Critique of Pure Reason*, of which Prof. Morris gives what he properly calls "A Critical Exposition." It is a criticism and an exposition calculated to interest and to instruct both those who share and those who oppose Prof. Morris' conception of the true path in philosophy. It is to him a well-considered and well-reasoned conclusion that experience is spiritual as well as sensible, and that the sensational philosophy so much in vogue since Bacon's time, and the Spencerian agnosticism now so widely accepted, should not for a moment content us. He states the case clearly and strongly, as against materialism and agnosticism, and shows exactly what ground was taken by Kant, how far he went toward making experience a means of spiritual knowledge as well as sensible, and how far he fell short and was inconsistent with himself. The exposition of Prof. Morris is clear and readable; his criticism is acute and interesting; and few studious readers, of whatever school of opinion, will regret having such a guide to such a study. At least, this volume of the admirable series which Chicago enterprise has projected ought to be taken in hand by a good many of our readers; and to all students we heartily commend it.

MINISTERS' HAND-BOOK FOR CHRISTENINGS, WEDDINGS, AND FUNERALS. Compiled and arranged by M. J. Savage. Revised and enlarged. Boston: George H. Ellis. 1882.

That a second edition of this little book has been called for is evidence of its value. If judged by any ideal standard of such a manual, defects might be found in it; but, as necessity knows no law, so hundreds of ministers, in the professional exigencies to which they are often put, will heartily thank Mr. Savage for having this book printed, and will be quick to secure a copy, without stopping to ask whether or not it is the best possible book that might be made for the purpose.

The christening and marriage services make, naturally, but a small part of the book; and most ministers who perform such services, unless they are bound to the traditional liturgies, will prefer, we imagine, to make their own. There are three forms of marriage service given: the Episcopal, "with slight changes"; a modernized and liberal form, though equally solemn, which probably Mr. Savage himself uses; and a third form, brief enough to meet the wishes of those bridal couples who want to be through the ordeal as soon as possible. A singular omission, doubtless accidental, occurs in the Episcopal form. The sentence announcing the pair to be husband and wife is not given; so that if one should literally follow this service, which is printed as if complete, the marriage probably would lack, according to Massachusetts law, the one thing needed to make it legal.

But by far the largest part of the book is made up of selections for funeral services, and it is here that its special usefulness will be found. There are funerals in which no help of any book will be needed, but the occasion itself will suggest what needs to be said. But there are others, and these perhaps more frequently occur, when ministers are in the habit of reading selections as at least a part of the service; and they do not always have conveniently at hand what they would prefer to read. Mr. Savage's manual gives a wide range of choice, both in prose and verse, and from extra-Christian as well as Christian sources. Its breadth of liberality is indicated by the fact that side by side with the Scriptural passages that are brought into the Burial Service of the Episcopal Church stands the fine address made a year or two ago by Col. Ingersoll, at the grave of his friend's child in Washington. And not least among the merits of the little book is that it can readily be carried in the pocket, and that it has blank leaves on which other selections may be written.

THE *Art Amateur* for November contains matter of unusual interest, especially in its biographical sketches. Richard Whiteing gives a very pleasant account of Henry Bacon. Bacon began his artistic career by drawing sketches of military scenes while he was a volunteer in the Thirteenth Massachusetts. He left the service in consequence of a wound, went to Paris, and entered the studio of Cabanel with his arm in a sling. He first became known as a *genre* painter, and then tried his hand at historical painting, even venturing on the difficult ground of American history. His "Boston Boys and General Gage" was shown at the Centennial Exhibition. He paints animals, and is extremely fond also of seashore scenes. The engravings of sketches which illustrate the article are very bright and vigorous, and make us ready to believe all the good things said of the artist. M. B. W. gives us a very interesting account of Miss Marianne North, an English lady, who has devoted herself to flower-painting, and who gives a free exhibition of her works in a beautiful gallery in London. The writer calls it a "rich, beautiful, and curious exhibition," and compares her flower-painting to the masterpieces of the seventeenth century. The holiday season is foreshadowed by designs for Christmas cards, quaint and pretty; and there is as usual a great deal of suggestion and instruction in decorative art.

ROSE KINGSLEY, the daughter of Canon Kingsley, contributes to the holiday *Wide Awake* an amusing article about the famous trio of dogs at Eversley Rectory,—Dandy, Sweep, and Victor. It is illustrated by drawings of the noble fellows from water-colors by Miss Kingsley, a portrait of Canon Kingsley, and a picture of Eversley Rectory, the two latter from photographs. The Christmas *Wide Awake* will be notable for a group of original illustrated poems from English poets,— Christina Rossetti, Philip Bourke Marston, A. Mary F. Robinson, and the author of *John Halifax, Gentleman*.

IN the *Unitarian Review* for November, Rev. Francis Greenwood Peabody discusses "Liberal Christianity and the Spirit of Worship"; "The Hebrew Prophets" is the subject of Rev. R. P. Stebbins' article; Rev. C. C. Everett explains some "Recent Studies in Buddhism"; Rev. E. A. Horton tries to answer the question "What shall we do with the Sunday-school?" Edward Everett Hale has a characteristic article on "Opinion and Faith"; the "Editors' Note-Book" and "Things at Home and Abroad" are earnest and spicy as usual.

AMONG the contents of the *Herald of Health* for November, we particularly note "Infants Over-handled," by Charles Reade, "The Muscle Machine," "Electric Light *versus* Gas," "Rapid Eating," "Faith Miracles," "Vinegar as a Cure for Obesity," and several other subjects.

THE *Sanitarian* for November is at hand. Among the subjects discussed in this number are "Epidemiological Society Report," "Why Sewer Traps are Unreliable," "Disguised Syphilis," "The Yellow Fever," and other matters pertinent to health.

"BABY-LAND" for November is as bright and spicy as usual. "The Cat" is the longest, cutest, and best of the poems; "Cat's Cradle," the frontispiece, is the loveliest picture; and "The Three Model Mice," the nicest story.

PERSONAL ITEMS.

BISMARCK has got his forty-fifth decoration.

KANSAS intends to erect a statue of John Brown in Washington.

WENDELL PHILLIPS will be seventy-two years old November 29.

O. B. FROTHINGHAM with his wife has returned to the Vendôme for the winter.

THE wife of President Gonzales of Mexico is studying medicine and surgery in Chicago.

THE junior editor of *The Index* will lecture at East Dennis next Sunday afternoon and evening.

FREDERICK DOUGLASS is in poor health. He lives quietly at home, and avoids exertion and excitement.

REV. JOSEPH COOK recently arrived in San Francisco on the "home stretch" of his lecturing tour around the world.

REV. WILLIAM R. ALGER will henceforth make his home in Boston, and devote himself almost exclusively to literary pursuits.

IT is said that the family of P. J. Proudhon have recently discovered a manuscript of his bearing the title *Le Césarisme et l'Histoire*. They propose to publish it.

MISS BETHAM EDWARDS is an acknowledged authority on Egyptology in England; and Miss Margaret Harkness is delivering lectures on the ancient Assyrians, at the British Museum.

MR. S. C. HALL, well known in literary circles in England, who is now eighty-two years of age, recently delivered an address two and a half hours long, which he repeated entirely from memory.

THE veteran historian, Leopold von Ranke, is now engaged in preparing for the press the third volume of his *Weltgeschichte*. It will comprise the Roman Empire and the beginning of Christianity.

A STATUE has just been unveiled at Darmstadt in memory of Luise Büchner, sister of Prof. Dr. Ludwig Büchner. Fräulein Luise Büchner is very well known in Germany by her writings and her good works.

FRANCIS AND GEORGE DARWIN, the sons of the great naturalist, are about to move from the old Down House to the vicinity of Cambridge, where they will establish a large factory for making philosophical instruments.

THE London *World*, commenting on Mr. Gladstone's skill as a logician, takes occasion to say that Englishmen are, in their way, as proud of the "hair-splitter of Hawarden" as the Americans were of the "rail-splitter of Ohio."

MR. JOHNSON, of Baltimore, and his wife (who is still remembered in Washington as Miss Harriet Lane, mistress of the White House during President Buchanan's administration) are now in Paris; but they have taken a villa at Nice for the winter.

FRENCH journals are commenting on the letter of Darwin in which he says he does "not believe that any revelation has ever been made," and wonder how the English can raise a monument in a cathedral to an unbeliever who is dead while refusing to allow a living unbeliever to take his seat in Parliament.

HERBERT SPENCER visited Boston, Cambridge, and Concord last week, in the same quiet and incognito fashion that he has glided up and down through the United States. In Cambridge, he was the guest of his disciple, John Fiske. In Concord, he called on the Emersons, and saw something of the town. He sailed for England last Saturday.

BLANCHE DELAPLAINE, of Madison, Wis., writing to the Chicago *Alliance*, in contrasting the mission of Felix Adler with that of Oscar Wilde, pertinently remarks: "How invigorating and inspiring it is to turn from the refined and enervating selfishness, which must inevitably deaden the sensibilities and corrupt the taste, to those noble workers who, welcoming the clear sunlight as one of their strongest allies, take it with them into the darkest corners, the poorest homes, and most degraded neighborhoods, making the curved line of beauty a circle which shall include all!"

QUITE a number of the friends of Mr. George Jacob Holyoake gathered on the evening of November 7, in the parlors of the Parker Memorial, to meet this English Liberal and economist who recently came to this country. Mr. Holyoake was accompanied by his daughter and Mrs. Leech. The early part of the evening was spent in general conversation. On the suggestion of Edward Everett Hale, Mr. Holyoake made an informal address, describing his work and mission. He gave an account of the birth and progress of co-operation in England. He spoke particularly of a valuable book which he had just discovered, *Social Reports*, by Dr. Burnham, which appeared about 1795. It contains more schemes of co-operation which were actually experimented upon than are known at the present day. He described the Economical Society of 1817, which formed a co-operative store that is still existing in a flourishing condition. Mr. Holyoake places greater emphasis upon the moral effects of co-operative institutions than upon the pecuniary profits. It is a step toward correcting the evil of competition, by which one man tries to undersell another, and is a means of making commerce a little more honest. Co-operative stores induce workingmen to save, make them feel that it is a degradation to be in debt, and thus beget self-reliance. The *Advertiser* and *Transcript* of this city, among other papers, gave reports of Mr. Holyoake's address, which was extremely interesting.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. per month to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe. I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to
JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

CURRENT TOPICS.

IT is said that, when a native Hindu sees another drunk, he says of him, "He has gone to Jesus"; that is, he has turned Christian and indulges in strong drink. A striking commentary and also rebuke of some Christian (?) practices.

SAYS Rev. George E. Ellis, "Probably there is not a single occupant of a Congregationalist pulpit in this State who believes literally the account of the first pair of our race in the book of Genesis, which is the turning pivot of the whole orthodox creed."

IT seems a little odd to read that in a country so advanced in intelligence as Scotland there is still so much conservatism in religious matters that it is only just now that organs are being admitted in the churches at all freely. Only a few years ago, the proposal to add an organ to a church as a means of worship was met with indignant protest against the unholy innovation from the conservative element, then in the majority.

AT a recent convention of Baptists in Brooklyn, Mr. George H. Andrews opposed the taxation of church property, on the ground that churches were not, like most other property, business investments. Rev. Dr. Briggs, of New Jersey, however, favored such taxation; said that, while in 1850 the value of church property in this country amounted to $87,000,000, now it was estimated at $700,000,000, and urged that what the State could not directly support it should not indirectly. The tax, he added, could easily be met by church members. That of Plymouth Church (Beecher's) would be, for example, no more than the price of two cigars per capita on the congregation, and that on the church property of New York State no more than twenty-two cents per capita. Rev. Dr. Wayland, of Pennsylvania, followed in the same strain. *The Index* is glad to find that it is not alone in its views on this subject.

TENNYSON is growing old, and apparently childish, judging from the tenor of his recent work. His new play, "The Promise of May," hinges on the terrible misdeeds of a freethinking hero, who is also a miscreant and avowed free-lover, who breaks up, without apparent motive, a farmer's happy home. The play is voted by even the most religious an ignominious failure as a play, whatever may be its merits as a sermon against free thought. But, even in the latter rôle, it evoked the ire of the Marquis of Queensbury, who, himself an avowed freethinker, unfortunately had not the forbearance so necessary to the exponent of new and unpopular truths, and so, on the second night of the play, rose up indignantly in the audience, and protested against Tennyson's misrepresentation of modern freethought. A noisy discussion necessarily followed; and, at the suggestion of a government official, the Marquis walked out of the theatre in disgust.

SAYS the Springfield *Republican*, referring to the Herbert Spencer Dinner in New York: "The most noticeable and assuredly the most entertaining speech was that of Henry Ward Beecher, who adroitly steered between orthodoxy and heterodoxy. He would impress persons unacquainted with his peculiar manner as a very clever trimmer and a humorist withal, bound to be funny under any circumstances and at any cost. It really was droll, the way in which he mingled St. Paul and Darwin, salvation and evolution, atonement and the survival of the fittest, the Old Testament and the gospel of humanity, St. Augustine and Herbert Spencer, materialism and spirituality, supernaturalism and reason, until the conglomerate mass was more or less chaotic. He said any number of bright things, and kept his auditory continually laughing; but I venture to affirm that no one present could have told after he sat down what his opinions were."

AT the regular monthly meeting of the Bostonian Society, held in the rooms of the society in the State House on the 14th, Mr. Samuel Adams Drake read a paper on "Taverns and Tavern Life under the King," in which he said that the old-time taverns were the resort of literary men and people of respectable standing, and were regarded as a necessity, not as a necessary evil; that the Puritan fathers punished dealers who refused to sell liquor as well as those who sold too much to an individual; that the price of liquor, like that of labor and other things, was regulated by law; that the use of tobacco was considered more sinful than that of liquor, and for a time raising it was forbidden; that many times citizens were arrested for smoking on the streets of Boston; that it was lawful to get intoxicated only at a church-raising; and that less than a century ago the omission of wine at a funeral would have led to remarks not at all flattering to the relatives of the dead.

A FEW months ago, an architect in Rome brought a suit against the major-domo of Pope Leo XIII., his claim being that he had performed certain services for which he had not been adequately paid. The lower Italian courts decided in his favor. The papal authorities protested, claiming that the civil jurisdiction of Italy did not extend to the walls of the Vatican, that the apostolic palace and all its inmates were under the independent sovereignty of the pope. But now the higher Italian courts have decided that the Vatican belongs to the legal domain of Italy, and cannot be regarded as a tract of independent territory. Pope Leo, it is said, will make an appeal to the European governments. Since the continental powers send accredited ambassadors to the Vatican, it is thought that they may be disposed to acknowledge the claims of sovereignty made by the papacy. "It would indeed be strange," says an exchange, "if a quarrel over a little bill, amounting to a few odd dollars, should have the effect of completely overturning the political standing of the Roman Catholic Church."

INSTANCES of true justice like the following, which we quote from one of our exchanges, give us a much more cheerful view of human nature than police records usually incite: "Arthur McLaughlin, a young man, was arraigned before Recorder Smyth yesterday; and the judge, after a few minutes of thinking, said: 'Arthur McLaughlin, you were convicted, and I think righteously, of having robbed Edward Dunn of $17. I sent for Inspector Murray, in whose district you live, and had your character thoroughly investigated. I am convinced that you were an honest man, and that this is your first offence. I found also that at the risk of your own life, at a fire in a tenement-house in Greenwich Street, not long ago, you saved the lives of a number of people, among them several children. The father of those children says that they would never have been rescued alive, had it not been for your gallant conduct. You there, also, had an opportunity to steal, but did not. Under the circumstances, I suspend judgment.' The prisoner left the court-room with tears in his eyes."

IF, at the end of his coming term of office, Gen. Butler fails of re-election, there seems to be indications of his eminent fitness for another no less useful vocation,—that of a revivalist preacher; for in addition to the devotional tone assumed by the General since election day, and the telegraphing of the doxology to him by his Springfield admirers, it is reported as a fact that through him a "faith-cure" has been effected. An old man over seventy years of age, living in Westfield, Mass., proudly announces that Gen. Butler's election has cured him of kidney complaint and rheumatism; and he has for the past two days been going around among the local Butler leaders, thanking them for what their efforts did for him. For a long time, he has been confined to the house, and much of the time to his bed by his complaints. He says that, much as he wanted to vote for Butler, he had not strength to walk or ride to the polls on Tuesday; but, when he got news of Butler's election the following morning, all his illness left him at once, and he found he could walk about nimbly. He is confident his cure is permanent, and wants every one to know Gen. Butler's election did it.

ASSURANCES OF PROGRESS.

Pessimism alleges that there is no assurance that human progress will continue; that, as it has happened in the past, so again intellectual and moral progress may be stayed, and civilization subverted by evils which itself generates and by a new uprising of the still barbarous forces of mankind. Now, a spice of pessimism in one's practical philosophy of life may be a good thing,—just enough, that is, to keep one conscious that there are evils in the world which are dangerous unless vigilantly watched and opposed; just enough, in other words, to counteract that easy-going optimism which complacently folds its hands, and thinks every thing will come all right, whatever people may do or forbear to do. But, if one takes any stronger dose of pessimism than this, practical moral paralysis is likely to ensue. Let us look, therefore, at two or three facts which seem calculated somewhat to relieve the dismal forebodings concerning man's continued progress which pessimistic prophets are in the habit of uttering.

And, first, no large body of people, perhaps not even a single person, can be found loving error for its own sake. If the movements of the world were set to the key-note of pessimism, we should naturally expect to find people perversely attracted to error, just because it is error. But we shall find no set of opinions or beliefs, that have had any important sway over men's minds, which can be condemned as pure and unmitigated error from the point of view of those holding them. However irrational they may appear to our minds, and however intellectually and morally wrong they may be, yet they have represented some truth to those cherishing them; and it is the truth, not the error, which has given them their power. There is no popular superstition or delusion which is clung to because it is seen to be such. That, we might say, were an impossible feat of the human mind. But people cling to superstition or delusion under the conviction that it is truth. Clarify their vision, enlarge their knowledge, change in some way their belief, and they drop the error. Even the false theologies, the mythologies, and idolatries, which have now in enlightened countries become wholly obsolete, have represented some important truths to the people among whom they have existed; and they stand for truth still, and not for the error which we may see in them, wherever they are sincerely and earnestly believed. It may be a difficult task to break up the delusions and illusions of mind that uphold these false beliefs, but that it is not an impossible task the whole past history of human progress bears witness. With the increase of knowledge and culture, the truth is separated from the erroneous opinions which environed it and becomes allied to more rational beliefs. Thus does it appear that the natural gravitation of the human mind is to truth, and not to falsehood; and this is an important fact of psychology, which is at the basis of all human progress.

A second fact of importance is that, both in respect to intellectual and moral attainment, progress is not effected so much by a steady onward movement as by waves. Now there is a forward flow, and then there may be an ebb; and yet the general movement is one of advance and ascent. Hence, it is unsafe to make a deduction concerning the general future of human progress from any special phase of mental or moral condition presented by society in a single generation or era. Crime, for instance, may be specially rife in our time and land. Political and financial corruptions have been stimulated to rank growths in this country within the last fifteen years. In consequence —at least in part—of the Civil War and its results, the national life has been undergoing a transformation which has not been favorable to moral stability. But it would be an altogether too hasty inference, were we to argue from this fact to the conclusion that society, as a whole, is hopelessly rotten and morally retrograding. If we will read the diaries of the fathers, notably those of John Adams and John Quincy Adams, we shall find many of the same evils lamented in their time, which are complained of as indicating the special political and moral degeneracy of our age. The truth is, crimes and vices are of no particular age or people, though peculiar causes may make them more excessive in one age or community than in another. Individuals, judged by the standard of their own time and nation, may not be more virtuous in modern than in ancient days. Yet, in spite of occasional aberrations and relapses owing to exceptional causes, the average standard of virtue is certainly improved and elevated with advancing civilization. One cannot read the history of any people for two or three hundred years without seeing that fact. Men, not so very old, can remember that, even in their own lifetime, the moral standard of society has changed for the better. Intemperance, bad as it still is, is not so general a vice as it was two or three generations ago. Slavery has gone down within the present generation in three of the great nations of the world, and is becoming a crime of an outgrown barbarous past. And humanity and philanthropy were never more active than they are to-day in efforts to remove the wrongs under which any portion of the human race may be suffering

Again, neither intellectual nor moral truth ever failed from the earth for the want of standard-bearers. Unwise and evil men may have sometimes delayed its course, but its power is so ingrained in the very substance of the human mind that it has never failed at last to summon victorious defenders to its side. The old Hebrew prophet declared that even ten righteous men, were there no more, could save a city. His prophetic vision, perhaps, did not reach so far as to descry the moral condition of some of our modern cities; yet seventy earnest and just men, combining their strength, certainly did something a few years ago toward cleansing New York's municipal government. And the power of even a smaller number than this, of men thoroughly earnest and determined, ready for any labor and any sacrifice, has again and again made itself felt, to the discomfiture of evil and the great good of mankind. Garrison began his work of proclaiming immediate emancipation as the right of the slave and the duty of the nation almost single-handed, with State and Church, society and wealth, against him. Agents sent by the Governor of Virginia to ascertain the strength of his resources reported that, after much searching, they could only find one man with one small printing-press in an obscure garret and a negro boy to help him; and that the movement was harmless. The one man lived to see the nation write his demand in its Constitution, and every slave in the land a free man. It is true that no great cause of human amelioration and progress ever goes of itself. A mission must have its missionaries. Philanthropy must have its workers. Truth must have its witnesses, its devotees, its soldiers, if need be its martyrs. It calls to its service the brave, the aspiring the heroic, the noble. The great popular leader of Italy, Garibaldi, used to summon his followers, not to ease and pleasure and gain, but to hunger, to thirst, to poverty, cold, and fatigue, to wounds and death. Yet the brave young Italians came, and they carried his standards to triumph. So Truth calls her followers to tasks which demand an invincible moral purpose and an undaunted will and unflinching self-sacrifice. But it is the glory of man's past, as it is his hope for the future, that her call never fails of a response from human nature.

WM. J. POTTER.

EVOLUTION:

A Third Letter to Mr. Underwood.

My dear Sir: After all, my preceding letter, with which I had hoped to make an end for the present, requires a postscript. In that letter a certain conception of evolution was rendered in a degree intelligible by means of an analogy, that of language. Apart from that analogy, or with but slight reference to it, let me now try to state broadly and directly what, on the one hand, I cannot think concerning evolution, and what, on the other hand, I am constrained to think.

1. I cannot conceive that a nebular gas should from its mere phenomenal properties as a gravitating gas produce the genius of a Shakespeare, the conscience of a Socrates, the thinking mind, the active soul, of humanity. When I seek by any process of thought to call such spirits from that vasty deep, they do not come, and my mind confesses itself incapable of the process required. At the outset we have a somewhat defined as without thought, without purpose, without initiative, direction or goal; in the end this same thing, by its mere blind push, comes to think, to know, to recognize itself, to see what it was and what it has become, to ask questions concerning itself and to answer them. In the gas there was not only no thought or knowledge, but no principle of thought or knowledge; nevertheless in man, who is simply one of the forms ultimately assumed by it, this same gas becomes conscious thinker and knower, and not only studies into its own order of being and becoming, but looks beyond itself, sees itself as embosomed in infinity and eternity, perceives that it is but an appearance only to itself appearing, and out of a spontaneous, indestructible longing renews the question it can neither answer nor quite suppress, Whence and whither? In man, too, the same blind push of physical force turns back upon itself to become through labor and invention its own conscious and purposeful master. Is this conceivable or credible? Can one really think it? To me, it is utterly unthinkable. Now, I am ready upon due occasion to believe what I cannot think, and actually do so in a thousand instances. I believe that a tree grows, though I can by no means think out the whole fact of vital growth. I believe in the fact of evolution, but am infinitely far from professing to have thought the fact fully out. But what I have spoken of is a theoretical explanation of the fact, or what purports to be such; it is the theory that all in the world has come from the phenomenal properties of a primitive gaseous matter. Now, a theory must be thinkable, though Fact have a privilege to be otherwise; and to me the one in question is not so. My mind, accordingly, simply *cannot* take it in.

It is a capital defect of this theory that there is in it no principle of origination. But along the whole line from first to last there has been origination, or what seems to be such; and evolution without this were evolution no longer, but a mere continuity of sameness. What have our philosophers to say at this point? They deny the fact of origination, and set up the conservation of energy as a bar against its possibility. It could easily be shown, though not in the space at my command just here, that this law is no bar; but supposing it such, what then? Whence come the seeming originations that are the essential fact of evolution? They come, it is answered, from the hidden properties of physical elements. In the physical

Digitized by Google

antecedents of each new and higher product there are concealed properties which in such product become apparent. As utterly unapparent, those properties were and are phenomenal, so it is said. But the phenomenal is that which appears, and, accordingly, the resource which our good philosophers here draw upon is simply this, *unapparent appearance*. Unapparent appearance appears, and there is no origination! In the primitive gas there was a wonderful deal of this remarkable somewhat, wholly inconceivable to me. Life and mind were there, but as a certain unphenomenal-phenomenal, or as appearance not appearing. To a plain man this is very puzzling. Life became phenomenal when it appeared, but how it was so before its appearance or how it is phenomenally present now in inorganic elements where no sign of it can be detected either by observation or experiment, I can by no means understand. But this is the alternative: evolution is origination, that is, the emergence into phenomenal manifestation of that which was not thus manifest, or it is the appearing of unapparent appearance,—which latter is a sort of emergence that I cannot at all conceive of.

2. On the other hand, I cannot conceive of an unconditioned being or power, call it God, spirit, the Absolute, or whatever else, as standing outside the known universe to see it go, and to intervene occasionally, or as giving it a start, and then withdrawing to let it go, or as operating continuously upon it from without to make it go. In whatever shape and under whatever name, the supernatural or unconditioned *outsider* is to me inconceivable; give it a name, and that which may seem the corresponding reality is but *nominis umbra*, the shadow cast by a word perfectly opaque. That only is unconditioned which is unrelated; and that which is unrelated, what is it? All, or nothing. The universe in its wholeness, as principle and product at once, is not outwardly conditioned, since it can have no external relations, and indeed, being infinite, has no outside. He that can see it as radiating from a centre which is at the same time content and circumference,—as the one-and-all, the one as all and the all as one,—he may speak intelligently of absolute and unconditioned being. Without clearly seeing it, even for a moment, in that light, I sometimes dream of it thus, and in the temple of the universe worship the infinite mystery, the eternal whole, not with words and postures, but only by a felt gesture of the soul; and then space and time and the stars of heaven seem but moods and motions, whose transience one may contemplate with no sense of impending loss. But whatever is engaged in the process of the universe is in relation, therefore conditioned; in other words, whatever works in the system of nature, works and appears as nature. Unconditioned action,—can any man think it? I cannot, and make bold to say that no man can. So far as we know or can think, whatever acts in any sphere must be in determinate relation with the conditions and forces there present. But, it may be said, God is the author of all physical forces, and may act at pleasure, or unconditionally, upon his own creation. God is the author of physical forces: what does this mean? It means creation *ex nihilo*, an impossibility, say some. Not necessarily; it may mean that God becomes physical force, or assumes this as a representative form, and in this form conditions himself. Suppose this the case: what then? Does he as unconditioned power break off connection with his conditioned form, and then step aside to act as a foreign power upon it? This, of course, is not to be imagined, but we may suppose him entering in another representative form, say as mind, into relation with physical force, and so bringing forth a product which could not come of the latter only. However this be, there is no place in reason for the notion of an unconditioned power which from without shoots its will and pleasure into the natural world, there to take effect without process.

Now, it is this spectre which arises before certain eyes as the necessary alternative to a blind or purely physical evolution. Herbert Spencer has it in view in his vigorous and spirited polemic against the notion of special creation. Haeckel conjures it up as the alternative which must compel us to accept his notion of spontaneous generation. To my mind, the alternative is factitious. Nor is the much-dreaded special creation escaped after all. Millions of years ago, let us say, certain atoms of oxygen, hydrogen, nitrogen, and carbon spontaneously united to produce life with all its laws and in the five or six primitive forms assumed by Darwin, empowering those atoms of the same elements which should come in the line of succession from them to continue and reproduce life. That act has never been repeated; those atoms fixed it as the order of the world that thereafter only life should be the antecedent of life. Was not that a special creation as truly as if the same work had been done by a personal creator? It was a special and wholly exceptional act performed by certain atoms of genius; and if it would have been creation as done by a God, it was creation as done by them. Yet I suppose that there was in some sort a spontaneous generation of life; but I also suppose and believe that there was and is somewhat in the play besides the powers of inorganic atoms, though the somewhat is not an unconditioned being operating upon the world *ab extra*.

3. What then? As the evolution of language has two factors, the one physical and the other mental, which two, are one in the unity of man, and again one in language, their product, so it may be in the great world-process; two principles or modes of power are at work, but they are one in the unity of Nature, and one in the evolution that proceeds from them. Speaking analytically, we say two; speaking synthetically, one; and nature is the synthesis of reciprocal opposites, between which is the flow of productive power, the generation of life, the struggle, the overcoming, the ascent of vital and spiritual existence. On the one side is that which moves, but cannot, in the proper sense of the word, act; on the other, that which veritably acts, but does not locally move. In short, I find myself pressed always toward the conclusion or hypothesis that there is in the system of nature, besides physical or physico-chemical force, an originating principle, the proper field of which is covered in Darwin's doctrine by the term "variation." Physical force conserves itself, and its highest law, as has been lately learned, is that of self-conservation; changing form, though only in a prescribed round, it is still and always the "same old sixpence." That is, it is distinctly and exclusively the conservative principle in evolution, bound to be only what it has been and to become only what it is. Nevertheless it is constantly running to waste, constantly becoming an energy out of which no work can be got. And so it is with all mere conservatism, in a Calvinistic or Catholic Church, as elsewhere; it is always running down into the shape of mere dark, unproductive heat, dogmatic or other. Now, I see no way to get evolution out of a purely conservative principle, as I see none to get the whole work and progress of history out of mere conservatism. To get on at all, I must suppose in the world of nature, as in history, a certain radical principle, which may here be named Spontaneity,— self-active, formative, productive, in a valid sense of the word creative, and the true virile antecedent, as material motion is the condition and concomitant, of thought and will, consciousness and conscience, in man. Always conditioned, always and of necessity working mediately, able to act only by and through relation with its antithesis, it is not to be judged of from what immediately is, but only from that toward which evolution looks. Will you think me quite wild if I venture to say that there may have been a dim poetic apprehension or adumbration of this principle in that imagination which has wrought so powerfully in history, the imagined Christ, the God subjected to all the conditions of terrestrial existence, eating and sleeping, working, suffering, dying, but eternal and eternally life-giving none the less. I am not mad, most noble Festus, but such a fancy has often occurred, and in some degree recommended itself, to my mind; and I love to believe that, if Bacon's "dry light" was reserved for modern science, there was real light in the colored thoughts of earlier times. However, the principle may now be seen by a light as dry as science or scientific philosophy could require. So thinks

Yours very truly, D. A. WASSON.

ENGLISH OPINION OF AMERICA.

It is extremely natural for an American at home to think lightly of such a demand as the London *Spectator* recently made for somebody in America to answer Matthew Arnold's "Word about America" with serious and earnest vindication of society and culture on this side of the Atlantic. Six or seven years ago, I should have thought of such a demand in the same way. But, after a long residence in England, I am compelled to look at the matter in a different light. I have been forced to the conclusion that, of all the shortcomings of mankind at the present time, there is none more significant and deplorable than English failure, intellectual and moral, toward America; and that an American can have no more serious duty than that of caring for the good name of his country: 1st, not lightly to malign it by charges which are understood here at their true value, but which in England are welcomed by the great majority as damning proofs that America is a hot-bed of all things detestable; and, 2d, to meet charges which are made in England, or may be made here, seriously and earnestly, for the sake of those vast interests of civilization which a close moral union of England and America would promote. Part of the object which took the present writer to England for several years' residence was study of the English in England, for the purposes of a new History of the Pilgrim Fathers and of the Puritan Fathers in part,—a history of the English Origin of Freedom and Culture in America; and, while I have found in English spirit and character a great deal to explain such a Puritan as Winthrop, the founder of Massachusetts, and to correct the singularly inaccurate views to which Dr. George E. Ellis has lent the highest authority,—that our fathers were aiming at a Theocracy, and that they were not aiming at liberty of conscience,—I have also found that through the whole history, from the earliest American settlements, there has been general antipathy in England to American democratic progress. It culminated in England's antagonism to us in the civil war, when Mr. Gladstone's "friendly" voice was against us, when Rev. Dr. Martineau was in favor of such enterprises as that of the "Alabama," and when the English Government was so contemptuous of our moral rights that, as Mr. Mozley, in his *Reminiscences*, puts it, "there was not one of her Majesty's ministers who was not ready to jump out of his skin for joy when he heard of the escape of the 'Alabama.'" The *Spectator* is "always friendly to this country";

Digitized by Google

but it is perfectly serious in its frequent reproduction of unfavorable opinions, and in the candor with which it asks us if we have anything to say why sentence on us for the failure of our culture and the enormities of our freedom should not be pronounced. My answer, after the most careful observation and study of England and the English, is that, if the light of publicity and criticism were let in, in England as in America, English failure and English enormities would appear worse than American. And I think it due, not so much to our candid friends in England as to the vast human interests which hang on the close moral union of the two countries, to meet the case as often and as carefully as we can, both to convince our English friends of their utter mistake about us, and to instruct our own people as to the need and the duty of looking after our good name, abroad as well as at home. Mr. Arnold ought to be answered, not only his recent word about us, but the earlier and graver statement in the preface of 1869 to his *Culture and Anarchy*. And our people ought to understand, a great deal better than they do, how serious the matter is.

It is difficult for Americans, who have only visited pleasantly in England, to understand how commonly current opinion in English society and English journals is contemptuous toward almost everything American, and upon what a basis of ignorance and bad feeling this contempt rests. There is a large better class, a very respectable minority, in which good feeling and kind respect prevail; but, even in this class, knowledge of America is very imperfect. After living in England five and a half years, in the vicinity of London, at Manchester, at Sheffield, and at Birmingham, and giving special attention to English characteristics, life, institutions, and history, as compared with American, I should say that very great ignorance of America is well-nigh universal in England, that the most false ideas of American characteristics and life prevail everywhere, even among those who are generous and friendly in their feeling; and that with the vulgar majority, which embraces from two-thirds to four-fifths of the population, contempt for our country, our people, our products, our public life, and our private manners, is as natural and hearty as ignorance and prejudice can make it. It is one of the largest and most extraordinary facts to be met with in England. There is hardly a public journal which does not at times reflect at least English ignorance of America, if not English spleen and bitterness. A whole range of false ideas have become rooted in the common mind; and frequently persons who mean no injustice assume the truth of some one of these, and go most absurdly wrong in their estimate of things American. In the earliest colonial days there got abroad in England the general belief that in Virginia the climate turned the colonists into negroes, and that laborers were harnessed as cattle to the wagons and ploughs. From that day to this, sources of gross misrepresentation have kept the public opinion of England richly furnished with commonplaces about America entirely destitute of truth.

A conspicuous example of these sources of misrepresentation is the *Times*, which has always been not an advanced leader of the higher culture of England, but a polished reflection of vulgar opinion. In 1861, Mr. Bright said of this great journal that it "had not had, since Mr. Lincoln took office, one fair and honorable and friendly article on American affairs." Four years later, in 1865, Mr. Bright said again that the course of the *Times* had been one of "four years' uninterrupted publication of lies with regard to America." That the spirit has not changed, I may cite proof from an English authority in the following paragraph from the *Pall Mall Gazette*, of a date near the close of the Guiteau trial:—

Readers of the *Times* who love the morbid and more hateful side of humanity found a disappointment in store for them on opening their paper on Tuesday morning. The usual telegraphic column about the Guiteau trial was missing. The want of it, however, was due to no failure of "enterprise" on the part of the conductors of the paper or of their correspondent. There was no telegram because there was no trial. To-day, the *Times* is again to the front, with its careful selection of all that is most disagreeable in these melancholy proceedings. Whatever is most discreditable to the United States, whatever is best adapted to fix a permanent stigma on the administration of justice in that Republic, the Philadelphia correspondent of the *Times* may be trusted to transmit, and, more oddly, the *Times* may be trusted to print in its most conspicuous type.

It has not been the custom of English journals to have more than a few lines of American news. The *Standard*, a conservative paper, has quite recently set an example of enterprise in this respect, but it is a new departure. The rule has been, and with most journals still is, a few lines daily of American news. But, when the Guiteau business was in hand at Washington, English journalism generally showed a great appetite for a selection of the most disgusting facts. It is a commonplace in England that American journals sin abominably in their reports of disgusting matters. Yet here was all England fed on the garbage of the Guiteau trial, although for respectable news English journalism has not found America worth special attention. It was partly because the English journals are just as apt to sin as the American, and partly because of so general English interest in anything discreditable to America.

Even cultivated England, the highest and finest tenth or fifth of the nation at large, cannot be depended on always for an ethically just and intelligently right drift of opinion and sympathy in anything so far off and so foreign to English backward ways as average American culture. Lord Chief Justice Coleridge has lately said:—

I remember the time when it was difficult even among cultivated men to get a hearing for the North, and when the sympathies of society went with slavery. As far as I know, the Church of England never raised a finger, and very few of its bishops ever raised a voice to put down our own slave-trade or set free our own slaves.

The state of things on which Lord Coleridge puts his finger, in this last sentence, goes far to explain average English antagonism toward America. Whatever is established in England, Royalty, the Church, the Aristocracy, the Social customs which maintain marked distinctions of caste, and the Conservatism of habit which is the rule still with the large majority,—all these are deeply implicated with barbarism surviving in one or another form, and laying a heavy curse on many of the best interests of the country. I expected, when I went to England to live, to go out of the front door of America into the finest paradise of modern culture. And certainly in "a good few," as the Yorkshire phrase is, a large and a very fine minority of individuals and of families, the culture is there, in its purest and noblest and most delightful form; and many persons will visit England and see hardly anything but this. But to live in England among the common people is to find frequent occasion to feel as if one had gone out of the western back door of America into a land more backward and more barbarous than any part of the United States. Even at a centre of the best English advance, like Birmingham, much of the public expression of culture in institutions is newer and more recent than in corresponding American towns.

But the worst form of the evil is in the widespread taint which survives in the Church, the Throne, the Aristocracy, the Social distinctions, and the customs and manners enforced upon the mass of the people by influences from above them. All this maintains a state of things naturally antagonistic to America. Mr. Roebuck, the Sheffield plebeian in Parliament who, during our civil war, attempted to get England and the Emperor Napoleon to join in recognizing the Confederacy, gave a voice, in his gross ignorance and almost infamous spleen, to a traditional barbarism which lies heavy on the whole land, except in the many rare spots where it has disappeared, and in the many rare individuals, almost everywhere, the elevation of whose character and largeness of whose intelligence have made them exceedingly fine examples of the best possible culture. Matthew Arnold, a very rare critic, whose ideal is all that could be desired, but whose omniscience, as an apostle of sweetness and light, has amazing spots of darkness in it, has lately said of the English people:—

As a whole, as a community, they have to acquire a larger and sweeter temper, a larger and more lucid mind. And this is indeed no light task; yet it is the capital task now appointed to us, and our safety depends on our accomplishing it.

He says again:—

The English people are improvable, I hope. Slowly, this powerful race works its way out of its confining ruts and its clouded vision of things to the manifestation of those great qualities which it has at bottom,—piety, integrity, good-nature, and good-humor. Our serious middle class, which has so turned a religion full of grace and truth into a religion full of hardness and misapprehension, is not doomed to lie in its present dark obstruction forever: it is improvable.

Mr. Arnold sees how this applies to Ireland. It no less applies to America, although Mr. Arnold does not see this, because he turns on America an eye of extremely defective omniscience, which some common knowledge would wonderfully clear Not even for their religion do the average English need to clear their minds and come to their good nature as much as they need this in their attitude toward America. Mr. Arnold is entirely right, that at bottom the fine qualities are not wanting, and that, when their working is no longer obstructed, nothing more need be desired. Those English who have outgrown British limitations present an illustration of culture almost unexampled, and they form so large a fact and so delightful a feature of English life that many visitors to England naturally fail to discover how widely antagonism to America prevails with the mass of the nation.

E. C. TOWNE.

MIND AND MATTER.

Prof. Asa Gray, in his address last September before the Evangelical Ministers' Association of Boston, said: "Either nature is the outcome of mind, or mind is the outcome of nature. We have to choose between these two hypotheses, for no other appears."

In this statement, Prof. Gray voiced the popular belief that mind and matter are so related that one must necessarily be the cause of the other; that either mind is the effect of matter or matter is the effect of mind; and that one of these must be the independent, self-existent cause of everything that exists except itself.

Is philosophy reduced to this alternative? We think not. If Prof. Gray were as well acquainted with psychology as he is with botany, in which it is well known he is an eminent authority, he would probably not have made the statement above quoted, which, to say the least, is in conflict with

Digitized by Google

the conclusions of some of the profoundest thinkers of the age.

A little careful thinking enables us to see that both matter and mind are phenomenal manifestations,—forms or appearances of an ultimate reality, the nature of which is not only unknown, but unknowable. Discarding Reed's superficial theory that we know things as they are, that in every act of perception things are given immediately in consciousness, and recognizing the psychological fact that the objective reality is known to us only as states of consciousness, we readily see that what we call matter is a symbol, an x standing for that which in itself cannot be known. We know matter as a congeries of qualities, weight, resistance, extension, etc.; and these are mere names for different ways in which our consciousness is affected. Were we destitute of sight, touch, smell, taste, and hearing, what we call the qualities of matter would have no existence; for they are the product of two factors, consciousness and the external reality. If there are beings organized differently from any known beings, so differently that it is impossible for us to form any conception of them, the objective reality may give rise to conscious states of which the word "matter" conveys no idea whatever. Nevertheless, we have sensations that come and go independently of our volitions, and we cannot divest our minds of the conviction that something not ourselves determines them. The doctrine of the relativity of knowledge necessitates the postulation of an unknowable existence beyond consciousness. As Spencer says: "When we are taught that a piece of matter, regarded by us as existing externally, cannot really be known, but that we can know only certain impressions produced on us, we are yet by the relativity of our thought compelled to think of a positive cause. The notion of a real existence, which generated these impressions, becomes nascent. The momentum of thought inevitably carries us beyond conditioned existence to unconditioned existence; and thus ever persists in us the body of a thought to which we can give no shape.... At the same time that by the laws of thought we are rigorously prevented from forming a conception of absolute existence, we are by the laws of thought prevented from ridding ourselves of the consciousness of absolute existence, this consciousness being, as we see, the obverse of absolute existence." But this absolute existence which can be known only as it manifests itself in consciousness, only as it appears under the conditions and with the limitations imposed by the constitution of the human mind, must not be identified with what we call matter; for that we know only as phenomenal manifestations, or, psychologically speaking, only as co-existent states of consciousness, which we call the perceptions of resistance, extension, color, sound, or odor.

But can the absolute reality be identified with mind? Certainly not. We know mind only as a series of states of consciousness, as a succession of sensations, as a phenomenal manifestation of the unknown reality. That a series of states of consciousness constructed this universe or produced the phenomenal existence which we mean when we speak of matter is a proposition that does not admit of proof and cannot be conceived. "If," says Spencer, "I am asked to frame a notion of mind, divested of all those structural traits under which alone I am conscious of mind in myself, I cannot do it.... If, then, I have to conceive evolution as caused by an 'originating mind,' I must conceive this mind as having attributes akin to those of the only mind I know, and without which I cannot conceive mind at all.... I cannot think of a single series of states of consciousness as causing even the relatively small groups of action going on over the earth's surface. How, then, is it possible for me to conceive an 'originating mind' which I must represent to myself as a single series of states of consciousness, working the infinitely multiplied set of changes simultaneously going on in worlds too numerous to count, dispersed throughout a space that baffles imagination? If to account for this infinitude of changes everywhere going on, mind must be conceived there under the guise of simple dynamics, then the reply is that, to be so conceived, mind must be divested of its distinguishing attributes by which it is distinguished, and that, when thus divested of its distinguishing attributes, the conception disappears, the word 'mind' stands for a blank."

To speak more concretely and from an empirical point of view, mind implies organism and environment, consciousness and something to be conscious of, perception and something to perceive, conception and something to conceive, reason and something to reason about, memory and something to remember. Mind, therefore, implies matter. We can have no conception of mind without matter; neither can we have any conception of matter without mind. The creation of either by the other is unprovable and inconceivable. So far as we know, they have no causal relation. Both are phenomenal manifestations,—phenomenal manifestations of that which is in itself inscrutable, but which forms worlds and impels them through the fields of space, thunders in the storm and murmurs in the brook, gives sensation to the worm and reason to man, wisdom to the sage and modesty to the maiden, the thrill of love, the pleasures of hope, and the satisfaction of purpose achieved.

In further support of the position that the ultimate basis of all phenomena—of which mind is one—is itself mind cannot be maintained, we will quote from one of the profoundest of modern thinkers. Says John Stuart Mill: "Because among the infinite variety of the phenomena of nature there is one,—namely, a particular mode of action of certain nerves which has for its cause, and, as we are now supposing, for its efficient cause, a state of our mind; and because this is the only efficient cause of which we are conscious, being the only one of which, in the nature of the case, we *can* be conscious, since it is the only one which exists within ourselves,—does this justify us in concluding that all other phenomena must have the same kind of efficient cause with that one special, narrow, and peculiarly human or animal phenomena?"

More reasonable it is to regard "that particular mode of action" as one of an infinite variety,—*all* due to an eternal, self-existent reality which can be known only as phenomenal manifestations, only as it is revealed to and conditioned by consciousness. "When," says Tyndall, "I attempt to give the Power which is manifested in the universe an objective form, personal or otherwise, it slips away from me, declining all manipulation. I dare not, save poetically, use the pronoun 'He' regarding it; I dare not call it Mind; I refuse to call it even a 'Cause.' Its mystery overshadows me; but it remains a mystery, while the subjective frames which my neighbors try to make it fit simply distort and desecrate it."

"May we not, therefore," Spencer asks, "rightly refrain from assigning to the Ultimate Cause any attributes whatever, on the ground that such attributes, derived as they must be from our own natures, are not elevations, but degradations?"

This, substantially, is what we should have said in reply to Prof. Gray, had we been invited after opening the discussion to examine the criticisms that were offered.

B. F. UNDERWOOD.

COMMENTS ON CHURCH STATISTICS.

Very interesting have been the comments of some of the New York city clergymen, as reported in the New York *Times*, on the church statistics which that paper presented to its readers last summer. These statistics indicate that, so far as New York is concerned, Protestantism has been brought almost to a stand still, there being but a non-Catholic church membership of ninety thousand out of a non-Catholic population of eight hundred thousand, the total population of the city being one million three hundred thousand. Dr. Rylance, Episcopal, thinks that, bad as the showing is, it is more favorable to organized religion than the facts; and Dr. Newman, Congregationalist, says to the reporter, "The *Times* gives the most favorable view possible; for, you can depend upon it, no minister ever returns a less number than the facts will warrant." The latter gentleman, who will be remembered as Gen. Grant's *protegé* in Washington, suggests, in the way of helping matters, that greater freedom be granted church members in amusements, and instances horse-racing. Others look at the matter more seriously. Dr. Rylance says, "What we need is less dogma and a higher order of Christian or spiritual ethics." Dr. W. M. Taylor, Congregationalist, and Dr. R. Heber Newton, who needs no introduction to our readers after his noble discourse on Emerson printed in these columns, though they might need to be reminded that he is in good standing in the Episcopal Church,—these gentlemen unite in the opinion that the middle class is being pushed out of New York, leaving only the extremes of wealth and poverty. Dr. Taylor utters radical sentiments as to property, which is, he declares, of the nature of a trust, and to be used not for pleasure and profit merely, but for the welfare of those not blessed with it; and contrary to what some would call "the ethics of Darwinism," with which some would replace the old philosophy of the obligation of the strong toward the weak, he declares that "the power of the strong is divinely mortgaged in the interests of the weak." Dr. Newton thinks the first condition of a revival of religion to be a new thought of religion. The churches, he fears, have been converted to what he calls the "paganism of political economy." No word, he continues, against the root-evils of our industrial system is spoken from the pulpits whence the carpenter's son has been driven by Mammon. And, to his mind, it is not charity, but justice, that the world needs. "One decade of the Christian Socialism Maurice and Kingsley tried to inspire would be better than all the Bible and Tract Societies for the reviving of religion." Rev. Robert Collyer also brings the social questions into the foreground. If the Church could, for example, unite on some method of mediation between capital and labor, he would regard it a grand thing. Our duty, he says, is to put some conscience into capital; and owners of tenements should not exact 12 and 15 per cent. as an income from them, but should be satisfied with 5 and 6 per cent., and lay out their money in such a way as would do the poor most good. Such a suggestion looks as if the clergy were awaking to some sense of the gravity of the problem of poverty. What is charity worth, may we not ask, the very means for which are in this way wrung from the poor? Mr. Collyer also urges the view of the successful business man as a steward of wealth, and says that in a sense his accumulation is also the work of others, and that these others are entitled to a larger share than they receive in the form of wages. It is his opinion that there is no place in the world where the employer cares so little for his employés as in this country,—probably, we may suggest, on account of the very spirit of freedom

Digitized by Google

and individualism that prevails among us. Prof. Felix Adler is reported as saying, in reference to such expressions of opinion as the above: "I have read with intense interest the noble utterances in this direction of several clergymen of New York published in the columns of the *Times*. It seems like a new day of hope dawning for mankind when the representatives of the old doctrinal faith themselves declare that we must have less of dogma, less of ecclesiasticism, and that the chief emphasis must be placed on ethics; or when we are told that the functions of the Christian teacher must be to plead the cause of the poor, and bring the strong to a sense of their responsibility for the weak. In such a course of action, I, too, perceive a true remedy,—the only remedy. We have trusted to material forces: it is time we trust again in moral forces. We have been growing rich in railroads and corn and goods: it is time to remember the saying, 'Let us have worse cotton and better men.'" Will not the journals of other cities, Boston and Chicago, for example, be equally enterprising, and present us with similar statistics showing the strength or weakness of the churches in their midst?

EDITORIAL NOTES.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

UNTIL further notice, make all cheques and drafts payable to the order of John C. Haynes.

THE next two months, or during Mr. Underwood's absence in the West, Mrs. Sara A. Underwood will be the acting office editor of *The Index*.

WE send this week to a large number of our readers packages of *Index* circulars, hoping all who receive them will do us the kindness to distribute them judiciously, with a view to adding new subscribers to our list.

ALL lovers of flowers will be glad to see the score of floral poems from favorite authors which Miss Kate Sanborn has brought together in a little pamphlet, bearing an appropriate illuminated cover, and called *Grandma's Garden*.

MR. EDWIN D. MEAD contributes an interesting article to the November *New Englander* on "The Pilgrim Fathers," traversing in some respects the views of Prof. Herbert B. Adams of Baltimore, who has attributed to them predominantly secular motives in coming to New England.

MR. M. J. SAVAGE'S sermons are printed every week in pamphlet form. They are widely read and highly appreciated. In a letter to Mr. Savage, Mr. Charles Voysey, of London, writes: "I am doing my best to get you more readers here, *for their own sakes* and not for yours. I can find nowhere else such perfectly satisfactory and sound religious teaching — truly needed in these days."

A WRITER in a recent number of the *Christian Register* makes an excellent showing of the effects of a liberal faith like that of the Unitarians, by quoting the names of such thinkers and workers as Longfellow, Channing, Sparks, Edward Everett, Bancroft, Ticknor, Prescott, Norton, Ripley, Emerson, Parker, Hawthorne, Holmes, Whittier, Agassiz, Lowell, Motley, John Quincy Adams, Robert Rantoul, Sumner, Gov. Andrews, and many others equally distinguished, as among those who professed that faith.

"GRUNDZUEGE DER PSYCHOLOGIE" is the title of a little volume of one hundred pages, containing the late Prof. Lotze's lectures in 1880–81 on Psychology, as taken down by his son, Robert Lotze. The Leipzig publisher, S. Hirzel, promises succeeding volumes, giving similar reports of other lectures on the philosophy of religion, practical philosophy, logic, æsthetics, history of German philosophy since Kant, etc. Since they are notes of actual dictations, we are almost as fortunate as if possessed of the work of Lotze's own pen. *Grundzüge der Religionsphilosophie* and *Grundzüge der praktischen Philosophie* have already appeared, and the remaining volumes will follow shortly.

THE *True Religion*, which started, we believe, as an organ of Universalism, and which, together with the religion it advocates, is a very good example and illustration of evolution, expresses "entire agreement with Dr. Ellis that so far as the textual controversy has been a factor the advantage has been on the orthodox side, and this for the reason that the orthodox can gather the greater number of texts, and furthermore that the age in which many books of the Bible were written was not an age of liberal opinion in religion or in anything else." So it has always seemed to us, in spite of the efforts of Universalists to make the whole Bible speak the language of benevolence and humanity.

WE recently attempted to rescue our liberal neighbor and the Unitarianism it represents from an inconsistency by remarking, "We presume the *Christian Register* does not hold that it is necessary to accept either the Bible or Jesus Christ as an authority in order to be a Christian." We knew this to be true of many ministers and members of the Unitarian denomination. But now, to confute and confound us, the *Independent* quotes Article IX. of the Constitution of the American Unitarian Association, together with "The Statement of Belief unanimously adopted by the New Hampshire Unitarian Association," and adds, "It seems that Unitarians believe in 'Jesus Christ as an authority,' whether Christians do or not." So it would seem from the *Independent's* quotations. And yet prominent Unitarian ministers, like Mr. M. J. Savage of this city, and members of the denomination we meet every day, and the majority of Unitarians with whom we are acquainted, especially in the West, have as little belief as the writer of this paragraph "in Jesus Christ as an authority." Consistency is a jewel, no doubt; but one must not always expect to find it in religious bodies during periods of rapid transition like the present.

THIS week, Mr. Gill gives us the first of a series of articles on the Philosophy of Perception. This with much more was promised in his work, *Evolution and Progress*,—a work which it will be remembered stirred up the Newark Methodist Conference a few years ago. His *Analytical Processes* was the first instalment of the promised philosophy, but that work is too abstruse to command general interest. What he now designs to present will, he thinks, be recognized by all as sufficiently striking, whatever be thought of his views. It will constitute a portion of a larger work, but of that work it will be the main conclusions. He would have offered this work for publication sooner, but for the belief that the times were unripe for it and that delay would inure to its advantage. Mr. Gill is a thorough evolutionist, yet an idealist with whom all evolution is subjective. He affirms that all sensible things or objects are modes of self, and denies that there is any proof of the existence of supersensible matter, and thus shuts us up in the *ego*. He then endeavors to exhibit a scientific egress from the known *ego* to the unknown but inferred *non ego;* and, following this, he unfolds certain logical implications of the same which favor supernaturalism. Mr. Gill thinks that his speculations are an advance on all previous attempts at philosophy, especially as they assimilate all admitted facts and principles of modern science, whether physical or psychical.

POETRY.

For *The Index*.

PROMETHEUS.

My writhing form
The wintry storm
Lashes with rain and hail and snow;
In summer time,
When melts the rime,
The lightning's arrows round me glow.

Warble in vain
To soothe my pain
The quiring Oceanides,
Bringing the spell
Of chorded shell,
Who have come from their far-off seas.

Brute Violence
With hate intense
And swart Hephæstus nailed me here;
While loudly rang
Their hammers' clang
O'er lonely steppe and crag austere.

The coasts of light
With squadrons bright
Of stars I nightly contemplate.
Hoar frosts of morn
Find me forlorn,
Still subject to an iron fate.

New-raised to sway,
'Twere vain to pray
To tyrant with unheeding ears:
A spirit hard,
A cold regard,
In insolence of power he wears.

From flashing gyre
Of Helios' fire
I snatched man to ameliorate,
Bent that my child
From savage wild
Should climb through art to high estate,—

Man, whom I wrought
From clay and taught
The gods with altars to appease,
And heavenward flame
And hymned acclaim,
For which Jove bonds to me decrees.

If ceased my race
Him prayer and praise
And fragrant altar-smoke to give,
His gods and he
Would meagre be
With fast, and unapplauded live.

The Titans old
With scorn behold
The Olympian upstarts on their thrones,
But o'er them Fate
Will drive elate,
And crush at last the starry drones.

In feast and song
The bright day long
They spend, while Man with pain and toil,
Large drops of sweat
And care and fret,
His food must gather from the soil.

In future time,
With craft sublime,
He will Jove's dreaded lightning wield,
And make it ply
In earth and sky
And servile to his bidding yield.

In that far day,
Sky-fallen, gray
Will Jove and all his conclave be,
Shrivelled to dreams
By truth's bright beams,
While man upsprings erect and free.

The Index.

BOSTON. NOV. 23. 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

Evolution Objective and Subjective.

BY WILLIAM I. GILL.

I.

Grandeur of Objective Evolution.

The theory of Evolution is the grandest and promises to be one of the most enduring monuments of the human intellect. It has opened up a field of thought and research which is literally boundless. It has fused the universe into a clear, intelligible unity, here meeting the utmost hope and want of science and philosophy, and with more thoroughness and apparently with closer approximation to ultimacy than they had ever anticipated. It avails itself to the utmost of the methods and results of physical science; and thence in a marvellous way, which cannot be controverted, it identifies matter and mind. It furnishes a scope for inductive reasoning never before known or conceived in connection with the pursuit of an ultimate and all-comprehending philosophy, and it is all along giving increasingly admirable exemplifications of the inductive method and spirit. By this method, it has made an utter end of the old, disjointed, science-repelling dualism, so that the only possible, effective enemy which remains to contest the supremacy of evolution is some form of idealism; and that cannot do it, for, to be true and effective, that must be evolution and make evolution paramount.

Evolution gives us a philosophical history of the universe, with the causes and connections of its successive changes. In all this wide field, it has the merit which belongs to physical science, the ability to unite many minds in the harmonious though emulous pursuit of the same end. As a consequence, it has already become the source of more positive intellectual wealth than accrued from all the labors and acquisitions of the world before it began its course.

Its Defective Psychology.

There is one department of research in its all-embracing field in which it is less advanced than the rest. That department is the psychological, the most important of all. Before the work of evolution is complete, all psychological phenomena must be duly registered, and their relation to each other and to the external world as a whole exhibited, and the perfect *egoistic* unity of the inner and outer worlds must be philosophically expounded. Here, as elsewhere, Mr. Spencer has done much; and his Principles of Psychology is his ablest work. But, as this department is the most difficult and profound, it should be expected to lag behind.

All Phenomena and therefore all Evolution subjective.

Growing out of this, the great defect of evolution in its present stage of development consists in its being too exclusively objective in its course and character. While evolution is objective, it is also subjective; and the question concerning their respective spheres has yet to be considered. A proper answer to this question, I believe, will give to evolution all it has ever claimed, and much more, and all more philosophically expounded and scientifically classified; will therefore make evolution more thorough and comprehensive as a theory, and may radically change its religious aspect without calling in question a single fact or principle or process which has been verified.

When the advocates of objective evolution begin to carry their researches into psychology, to study external phenomena in regard to their ulterior nature and origin and their relation to their subject, and then to analyze them to the utmost, they find (with all psychologists of modern times) that all the external world known or knowable, in every form, is purely subjective, a congeries of experiences, feelings, or modes of consciousness. These feelings imply a subject, whatever that may be and whatever its powers or origin, if origin it had. We know it as the power to have all these experiences, and we name it self or *ego* or me; and, relative to it, we say or it says, "I," or "I feel," "I think," "I will." This *ego* is the subject of all known phenomena, which is to say, simply, that they are phenomena or modes of the *ego*. The *ego* thus spreads itself over all the known universe, and says of every form and object or motion, "It is I, a mode of myself." Once clearly understood, this fact will give a sudden metamorphosis to evolution, making it dominantly subjective.

Relative to its subjective aspect, the new exposition will be generally designated by the objectionable, because partial and much ridiculed term, idealism, since it resolves all known and knowable things into ideas, using that term in the old meaning in which it was employed by Descartes, Locke, Berkeley, and other of the earlier writers. Mr. Spencer considers idealism and evolution as antagonistic to each other; and, on this ground, he makes very elaborate efforts to refute idealism, and to establish a dualism of the *ego* as unknown and some sort of an unknown external world. This betrays an incomprehension of both theories. Nothing can antagonize evolution, because evolution is a fact of indubitable experience; and, for the same reason, nothing can philosophically antagonize idealism as an assertion of the subjective nature of all phenomena. Evolution is as extensive as Mr. Spencer conceives it, and I think indefinitely more so; but it is always a subjective process, even where it is external to the organism. No one has ever attempted to carry evolution beyond the knowable universe; but all that universe is never more than the modes of one individual, *ego*. I allow that in all that universe the law of evolution reigns. But subjective evolution multiplies universes and all their evolutionary processes by the number of souls or subjects, and thus makes evolution, so to speak, infinitely more extensive and multifarious. Subjective evolution includes objective evolution, as the greater the less, as the temple includes all its parts, the grand façade, the lofty tower and pinnacle, the majestic dome, the pillared arches and every angle and curve and sculptured form in the great building.

What is called my organism is only an infinitesimal fraction of the sensible phenomena of which I am the subject. Of known and knowable objects beyond my organism, there is almost an infinite number. They are not a part or mode or product of my organism. They are not even objects of my organism, as sensible phenomena or organic precepts. My organism does not perceive them, for it perceives nothing. I perceive it, and so it is a mode of me. All extraorganic objects are modes of the *ego*, but not of the organism. They transcend the organism, but not the *ego*. It is logically possible for these to exist without the organism, or for the organism to exist without them. But, in point of fact, they begin and run their course together. On the other hand, it is a logical necessity that the *ego* exist as a condition of the existence of any phenomena, organic or extraorganic or superorganic, because these in all cases are *ego*, and nothing else. It is clearly possible that the *ego*, the essential being we now so designate, may exist before any of the phenomena of which we speak, and may then evolve phenomena in and of itself, according to laws which we may discover. That this possibility is the fact, all experience, informed by the light of modern psychological analysis, conspires to say and prove. The doctrine of the subjective nature of all phenomena logically necessitates this conclusion, as we shall see.

Nature of Supposed Material World.

That all phenomena are subjective, that all the sensible realities of heaven and earth are *ego*, I shall assume as having been sufficiently proved and generally accepted. Hence, if there is any non-egoistic material world, it is a thing which transcends all sensible experience and all direct knowledge. Nearly all German philosophers have affirmed the existence of such a world, admitting that the *non ego* can be known only indirectly. But they are singularly illogical. They offer no proof of its existence, deeming the fact that it can be known mediately only to be sufficient proof. That is no proof or argument at all. Whoever thought that the mere fact that we cannot know Cæsar or Mohammed directly is proof of their existence? It is that fact which makes proof necessary as a condition of a rational affirmation. That proof is therefore called for. Can it be furnished?

The English-speaking mind, from its more scientific habit, is more exacting concerning proof than the German mind. Here, it recognizes the need of proof, and that it needs to be good and strong, and endeavors to furnish it. We should have a good, if not sufficient, proof, if it were shown that such a world would be very useful, still more if it were really a necessary condition of experiences of which we are the subject; and this is supposed to be exhibited Mr. Spencer says: "Not a step can be taken toward the truth that our states of consciousness are the only things we can know, without tacitly or avowedly postulating an unknown something beyond consciousness. The proposition that whatever we feel has an existence which is *relative to ourselves only* cannot be proved, nay, cannot be intelligently expressed, without asserting, directly or by implication, an *external existence which is not relative to ourselves.*" What is logically implied in the phenomena of consciousness cannot surely be justly described as "*not relative to ourselves.*" It may not be ourselves, but it is relative to ourselves always. Whether it is true that the proof of egoistic phenomena is impossible without implying a *non ego*, we shall consider in its place.

In the mean while, let us make very clear to ourselves our acknowledged position and what must be the external world which would thus be proved. If all phenomena are *ego*, then the *non ego*, called the material world, if it were thus proved, is supersensible and transphenomenal. Sometimes such a thing is boldly affirmed, and called the material world. This supersensible world is supposed, in some inconceivable way, to answer to sensible phenomena, and is explanatory of them as their cause. Judging from sensible phenomena, it is supposed to operate with lexical regularity, and thus reveals its existence and action and nature in its effects. Thus, while the visible sun is only a mode of mind, it is an effect and sign of a non-egoistic, material sun, which is invisible, inaudible, intangible, and every way supersensible. Similarly of all other sensible objects. All are *ego*, and all are effects and proofs of supersensible, non-egoistic, material causes variously differing from each other in correspondence with the phenomena.

This View is Only a Metaphysical Theory.

This is a view (if we may speak of a view of the viewless) of the material world which at every point is utterly at variance with both the popular and scientific notion. All men engaged in the pursuit of physical science assume that the realities of the world are sensible; and it is only the *sensible* forms, motions, and forces of the universe that they ever contemplate, and they never think of any other universe than this same sensible universe. Never do they conceive the material universe, whose laws they are supposed to study, to be utterly beyond their senses and all direct knowledge, and so void of all qualitative differentiation as to be also entirely inconceivable. Whatever assent they give to the psychologist's assertion that all phenomena are *ego*, they none the less always speak and think of the sensible universe as the real material universe. They are inconsistent and superficial; but they are right in assuming that the sensible world is the material world, and the only material world of interest to science or practical life. Of the material world of the metaphysician they never think or feel the need, thus contradicting Spencer's alleged intellectual necessity for it in concerning phenomena.

If the material world of the metaphysician has an existence, it follows that either there are two material worlds—the sensible and the supersensible—or that

Digitized by Google

the sensible world is not material, neither of which accords with any accepted notion of the material world or is likely to find any acceptance among the living convictions of mankind. At the best, they can only be like Hume's philosophical scepticism, effective in the study, but not in the saloon, the drawing-room, or the place of business. The theory of the two worlds, one of which—and that the real one and the effective one—is absolutely unknown and unimaginable, will surely require much in the way of exposition and argument to make it intelligible, and to prove that it is neither an empty verbalism in part nor a false because a needlessly cumbersome complication, like the old Ptolemaic system of astronomy. The alternative, which denies the sensible world to be the material world and affirms that the real material world is wholly supersensible, contradicts all human thought and expression. It says that material science never is material science; that of all its objects, from nebulæ, comets, and globes to whales, animalculæ, and atoms, not one is material. But, while the ultimate nature and distinction of mind and matter are not yet agreed on, one thing is universally agreed on,—to call the sensible the material, whatever be the immaterial, or whether there be anything immaterial. The position, then, of our objective evolutionists is itself very unenviable, and of a kind which will be very difficult, if not impossible, to defend against an enemy.

PHILOSOPHY AT DINNER.

Addresses delivered at a Banquet given to Herbert Spencer, in New York, Thursday Evening, Nov. 9, 1882, by Hon. William M. Evarts, Herbert Spencer, Prof. William G. Sumner, Prof. O. C. Marsh, Hon. Carl Schurz, Prof. John Fiske, and Henry Ward Beecher.

(*Concluded from last week.*)

Address of Prof. Marsh.

Mr. Evarts then gave the following toast: "Evolution,—at first an hypothesis, now an established doctrine of the scientific world." Prof. Marsh said in response:—

Mr. President and Gentlemen,—In meeting here to-night to do honor to our distinguished guest, who is one of the great apostles of evolution, it seems especially fitting to the occasion that we should, for a moment at least, glance back to the past, and recall briefly the progress of a doctrine which has so rapidly brought about a revolution in scientific thought.

Modern science and its methods may be said to date back only to the beginning of the present century; and, at this time, the first scientific theory of organic evolution was advanced by Lamarck. During the twenty centuries before, a few far-seeing men, from Aristotle to Buffon, seem to have had glimpses of the light; but the dense ignorance and superstition which surrounded them soon enveloped it again in darkness.

Before the beginning of the present century, it was impossible for evolution to find a general acceptance, as the amount of scientific knowledge then accumulated was too small to sustain it. Hence, the various writers before Lamarck who had suggested hypotheses of development had based them upon general reasoning, or upon facts too scanty to withstand the objections naturally urged against new ideas.

With the opening of the nineteenth century, however, the new era in science began. Here, at the very beginning, the names of Cuvier and Lamarck stand forth pre-eminent; and the progress of natural science from that day to the present is largely due to their labors. Cuvier laid the foundation of the study of vertebrate animals, living and extinct; but, with all his vast knowledge, he was enslaved by the traditions of the past. Although the evidence was before him, pointing directly to evolution, he gave the authority of his great name in favor of the permanence of species.

Lamarck made a special study of the invertebrate animals, and his investigations soon led him to the belief that living species were descended from those now extinct. In this conclusion, he found the germ of a theory of development, which he advocated earnestly and philosophically, and thus prepared the way for the doctrine of evolution as we know it to-day.

The methods of scientific investigation introduced by Cuvier and Lamarck had already brought to light a vast array of facts which could not otherwise have been accumulated, and these rendered the establishment of the doctrine of evolution for the first time possible. But the time was not yet ripe. Cuvier opposed the new idea with all his authority. The great contest between him and Geoffroy Saint-Hilaire, the strongest advocate of Lamarck's views, is well known. Authority, which in the past had been so powerful in defence of tradition and creed, still held sway; and, through its influence, evolution was pronounced to be without foundation. This triumph of Cuvier delayed the progress of evolution for half a century.

During this period, however, the advance in all departments of science was constant; and the mass of facts brought together was continually suggesting new lines of research and new solutions of old problems. In geology, the old idea of catastrophes was gradually replaced by that of uniform changes still in progress; but the corollary to this proposition, that life also had been continuous on the earth, was as yet only suggested. In the physical world, the great law of the Correlation of Forces had been advanced, and received with favor; but, in the organic world, the miraculous creation of each separate species was firmly believed by the great mass of educated men. The very recent appearance of man on the earth, and his creation independent of the rest of the animal kingdom, were scarcely questioned at the close of the first half of the present century.

When the second half of the century began, the accumulation of scientific knowledge was sufficient for the foundation of a doctrine of evolution which no authority could suppress and no objections overthrow. The material on which it was to be based was not preserved alone in the great centres of scientific thought; but a thousand quiet workers in science, many of them in remote localities, had now the facts before them to suggest a solution of that mystery of mysteries, the Origin of the Species.

In the first decade of the present half-century, Darwin, Wallace, Huxley, and our honored guest, were all at the same time working at one problem, each in his own way; and their united efforts have firmly established the truth of organic evolution. Our guest to-night did not stop to solve the difficulties of organic evolution; but, with that profound philosophic insight which has made him read and honored by all intelligent men, he made the grand generalization that the law of organic progress is the law of all progress. To show how clearly, even in the beginning, he comprehended this great truth, let me recall to you one sentence which he wrote five-and-twenty years ago:—

"This law of organic progress is the law of all progress. Whether it be in the development of the earth, in the development of life upon its surface, in the development of society, of government, of manufactures, of commerce, of language, literature, science, art, this same evolution of the simple into the complex, through a process of continuous differentiation, holds throughout."

How completely the truth of this statement has since been established, you all know full well.

The evolution of life, and of the physical world, are now supplemented by the evolution of philosophy, of history, of society, and of all else pertaining to human life, until we may say that Evolution is the law of all progress, if not the key to all mysteries. These profounder departments of Evolution I leave to others, for in the few minutes allotted to me I cannot attempt to give even an outline of the progress of evolution in biology alone.

If, however, I may venture to answer briefly the question, What of Evolution to-day? I can only reply: The battle has been fought and won. A few stragglers on each side may still keep up a scattered fire; but the contest is over, and the victors have moved on to other fields.

As to the origin of species, once thought to be the key to the position, no working naturalist of to-day, who sees the great problems of life opening one after another before him, will waste time in discussing a question already solved. This question, so long regarded as beyond solution, has been worked out by that greatest of naturalists, whose genius all intelligent men now recognize, and whose recent loss the whole civilized world deplores.

Not only do we know to-day that species are not permanent, but every phase of life bears witness to the same general law of change. Genera, families, and the higher groups of animals and plants are now regarded merely as convenient terms to mark progress, which may be altered by any new discovery.

All existing life on the earth is now believed to be connected directly with that of the distant past, and one problem to-day is to trace out the lines of descent. Here embryology and palæontology work together, and the results already secured are most important. The genealogies of some of the animals now living have been made out with a degree of certainty that amounts to a demonstration, and others must rapidly follow.

In this, and in all other departments of natural science, the doctrine of evolution has brought light out of darkness, and marks out the path of future progress. What the law of gravitation is to astronomy, the law of evolution is now to natural science. Evolution is no longer theory, but a demonstrated truth, accepted by naturalists throughout the world.

The most encouraging feature in natural science—indeed, in all science—to-day is the spirit in which the work is carried on. No authority is recognized which forbids the investigation of any question, however profound; and, with that confidence which success justly brings, no question within the domain of science is now believed to be insoluble. Not even the grand problems now before us,—the antiquity of the human race, the origin of man, or even the origin of life itself.

Carl Schurz's Speech.

The next speaker was Carl Schurz, who responded to the toast, "The progress of science tends to international harmony." He spoke as follows:—

Mr. Chairman and Gentlemen,—Two things that fell from the lips of the first two speakers struck me as remarkably pertinent to our present situation. One was the proverb quoted by our worthy Chairman, that "stuffed bodies see not secret things"; and, great orator as he is, he did not fail to accompany the same with the illustration of example. The other was the remark which formed the text of the eloquent speech of Mr. Spencer, that too great continuity and intensity of work will necessarily destroy our physical constitution; and I am very sorry to see that in this respect he himself appears more like an American than an Englishman. And I hope that, when he returns to his country, his incessant labors for the benefit of humanity will sometimes be interrupted by pure relaxation. Mr. Spencer never said a wiser word than this: that the ultimate result of all our efforts to protect men against the consequences of their folly is to people the world with—I will not say what he said, "fools"—but I will say with dyspeptic philosophers. I, for my part, have resolved to belong to that class.

Leaving the discussion of profound scientific and philosophical problems to others who are more reckless of their physical well-being, I prefer to call up some pleasant personal memories which this distinguished occasion brings to my mind. Some nineteen years ago, shortly after the battle of Missionary Ridge, I was camped with my command in winter quarters not far from Chattanooga, where we had so little food for our horses that many of them died, and so little salt that we could scarcely make our beef and hard-tack palatable: but I found in my effects a copy of Herbert Spencer's *Social Statics*, and during those long winter nights in my tent I studied them by the light of a tallow candle, and for that delightful luxury I shall never cease to be grateful to our distinguished guest. I became convinced that, if the Southern people had read and thoroughly digested that excellent work, there would never have been any war for the dissolution of the Union. I essayed to hammer the fundamental principle of the *Social Statics* into the heads of the soldiers; namely, that "every man is entitled to the freedom of doing what he wills, provided he interfere not with the same freedom of any other man."

I am supposed to respond to a sentiment touching the effect that the progress of science has upon the harmony of nations. Looking at it from a common-sense point of view, I am moved to think that the effect of that progress upon different nations is very much as it may be upon different portions of one people or upon different individuals. Given a certain number of subjects of discussion beween different nations or different individuals, if the progress of science increases the number of things upon which they agree, it will in the same measure and at the same time diminish the number of things upon which they disagree, and thus lead them to a good understanding and national harmony; and, going on

Digitized by Google

further, if the progress of science increases the number of subjects of discussion between men and at the same time teaches them how to dispose of those subjects by amicable and peaceful reasoning, the less occasion there will be for them to come to blows.

I take it that science and philosophy do not accomplish their ends merely by enlightening the minds of men, but that they must also influence their conduct, and not only the conduct of a chosen few, but the conduct of the many; and, in order to influence the conduct of the many, they must be understood by the many. There was a time when the investigations of science and their results were carefully kept as a private possession by certain social orders or select circles, treating them as a mystery which could not be exposed to the gaze and the understanding of the multitude without profanation. That time is happily behind us; but I suppose some of us have seen the day when science and philosophy, at least by a good many of its representatives, were clothed in such darkness of formidable terminology and of obscure forms of speech that they were entirely inaccessible to the multitude. In fact, by many it was considered that the man of science might be accused of superficiality, if he had discussed those problems of philosophic and scientific research in a language intelligible to the rest of mankind.

In the distinguished man who this evening honors us, we greet one of the foremost representatives of that great development of thought which has burst the bonds of the closet; we greet in him the great apostle of the doctrine of Evolution; we greet him as a hero of thought who has devoted his life to the sublime task of vindicating the divine right of science as against the intolerant authority of traditional belief.

John Fiske on Evolution and Religion.

Mr. Evarts then announced as the next toast, "Evolution and Religion,—that which perfects humanity cannot destroy religion," to which, as it was a double toast, he said, there would be a duet of speakers to respond. The first of these was Prof. John Fiske, of Cambridge. He said:—

Mr. President,—The thought which you have uttered suggests so many and such fruitful themes of discussion that a whole evening would not suffice to enumerate them, while to illustrate them properly would seem to require an octavo volume rather than a talk of six or eight minutes. There are one or two points of signal importance, however, to which I may at least call attention for a moment. It is a matter which has long since taken deep hold of my mind, and I am glad to have a chance to say something about it on so fitting an occasion. We have met here this evening to do homage to a dear and noble teacher and friend, and it is well that we should choose this time to recall the various aspects of the immortal work by which he has earned the gratitude of a world. The work which Herbert Spencer has done in organizing the different departments of human knowledge so as to present the widest generalizations of all the sciences in a new and wonderful light as flowing out of still deeper and wider truths concerning the universe as a whole; the great number of profound generalizations which he has established incidentally to the pursuit of this main object; the endlessly rich and suggestive thoughts which he has thrown out in such profusion by the wayside all along the course of this great philosophical enterprise,—all this work is so manifest that none can fail to recognize it. It is work of the calibre of that which Aristotle and Newton did; though, coming in this latter age, it as far surpasses their work in its vastness of performance as the railway surpasses the sedan chair, or as the telegraph surpasses the carrier pigeon.

But it is not of this side of our teacher's work that I wish to speak, but of a side of it that has hitherto met with less general recognition. There are some people who seem to think that it is not enough that Mr. Spencer should have made all these priceless contributions to human knowledge, but actually complain of him for not giving us a complete and exhaustive system of theology into the bargain. What I wish, therefore, to point out is that Mr. Spencer's work on the side of religion will be seen to be no less important than his work on the side of science, when once its religious implications shall have been fully and consistently unfolded. If we look at all the systems or forms of religion of which we have any knowledge, we shall find that they differ in many superficial features. They differ in many of the transcendental doctrines which they respectively lay down for men's guidance. They assert different things about the universe, and they enjoin or prohibit different kinds of behavior on the part of their followers. The doctrine of the Trinity, which to many Christians is the most sacred of mysteries, is to all Mohammedans the foulest of blasphemies; the Brahmin's conscience would be more troubled if he were to kill a cow by accident than if he were to swear to a lie or steal a purse; the Turk, who sees no wrong in bigamy, would shrink from the sin of eating pork. But, amid all such surface differences, we find throughout all known religions two points of substantial agreement. And these two points of agreement will be admitted by modern civilized men to be of far greater importance than the innumerable differences of detail. All religions agree in these two assertions, one of which is of speculative and one of which is of ethical import. One of them serves to sustain and harmonize our thoughts about the world we live in and our place in that world: the other serves to uphold us in our efforts to do each what we can to make human life more sweet, more full of goodness and beauty than we find it. The first of these assertions is the proposition that the things and events of the world do not exist or occur blindly or irrelevantly, but that all, from the beginning to the end of time, and throughout the furthest sweep of illimitable space, are connected together as the orderly manifestations of a divine Power, and that this divine Power is something outside of ourselves, and upon it our own existence from moment to moment depends. The second of these assertions is the proposition that men ought to do certain things, and ought to refrain from doing certain other things; and that the reason why some things are wrong to do and other things are right to do is in some mysterious but not very real way connected with the existence and nature of this divine Power, which reveals itself in every great and every tiny thing, without which not a star courses in its mighty orbit and not a sparrow falls to the ground.

Matthew Arnold once summed up these two propositions very well, when he defined God as "an eternal Power, not ourselves, that makes for righteousness." This twofold assertion, that there is an eternal Power that is not ourselves, and that this Power makes for righteousness, is to be found, either in a rudimentary or in a highly developed state, in all known religions. In such religions as those of the Esquimaux or Zulus, this assertion is found in a rudimentary shape on each of its two sides,—the speculative side and the ethical side; in such religions as Buddhism or Judaism, it is found in a highly developed shape on both its sides. But the main point is that in all religions you find it in some shape or other. I said, a moment ago, that modern civilized men will agree that this two-sided assertion is of far greater importance than any of the superficial points in which religions differ. It is really of much more concern to us that there is an eternal Power, not ourselves, that makes for righteousness, than that such a Power is onefold or threefold in its metaphysical nature, or that we ought not to play cards on Sunday or to eat meat on Friday. No one, I believe, will deny so simple and clear a statement as this. But it is not only we modern men, who call ourselves enlightened, that will agree to this. I doubt not even the narrow-minded bigots of days now happily gone by would have been made to agree to it, if they could have had some doggedly persistent Socrates to cross-question them. Calvin was willing to burn Servetus for doubting the doctrine of the Trinity, but I do not suppose that even Calvin would have argued that the belief in God's threefold nature was more fundamental than the belief in his existence and his goodness. The philosophical error with him was that he could not dissociate the less important doctrine from the more important doctrine, and the fate of the latter seemed to him wrapped up with the fate of the former. I cite this merely as a typical example. What men in past times have really valued in their religion has been the universal twofold assertion that there is a God who is pleased by the sight of the just man and is angry with the wicked every day; and when men have fought with one another, and murmured or calumniated one another for heresy about the Trinity or about eating meat on Friday, it has been because they have supposed belief in the non-essential doctrines to be inseparably connected with belief in the essential doctrine. In spite of all this, however, it is true that in the mind of the uncivilized man the great central truths of religion are so densely overlaid with hundreds of trivial notions respecting dogma and ritual that his perception of the great central truths is obscure. These great central truths, indeed, need to be clothed in a dress of little rites and superstition, in order to take hold of his dull and untrained intelligence. But, in proportion as men become more civilized and learn to think more accurately, and to take wider views of life, just so do they come to value the essential truths of religion more highly, while they attach less and less importance to superficial details.

Having thus seen what is meant by the essential truths of religion, it is very easy to see what the attitude of the doctrine of evolution is toward these essential truths. It asserts and reiterates them both; and it asserts them not as dogmas handed down to us by priestly tradition, not as mysterious, intuitive convictions of which we can render no intelligent account to ourselves, but as scientific truths concerning the innermost constitution of the universe,—truths that have been disclosed by observation and reflection, like other scientific truths, and that accordingly harmonize naturally and easily with the whole body of our knowledge. The doctrine of evolution asserts, as the widest and deepest truth which the study of nature can disclose to us, that there exists a Power to which no limit in time or space is conceivable, and that all the phenomena of the universe, whether they be what we call material or what we call spiritual phenomena, are manifestations of the infinite and eternal Power. Now, this assertion, which Mr. Spencer has so elaborately set forth as a scientific truth, nay, as the ultimate truth of science, as the truth upon which the whole structure of human knowledge philosophically rests,—this assertion is identical with the assertion of an eternal Power, not ourselves, that forms the speculative basis of all religions. When Carlyle speaks of the universe as in very truth the star-domed city of God, and reminds us that through every crystal and through every grass blade, but most through every living soul, the glory of a present God still beams, he means pretty much the same thing that Mr. Spencer means, save that he speaks with the language of poetry, with language colored by emotion, and not with the precise, formal, and colorless language of science. By many critics, who forget that names are but the counters rather than the hard money of thought, objections have been raised to the use of such a phrase as the Unknowable whereby to describe the Power that is manifested in every event of the universe. Yet when the Hebrew prophet declared that "by him were laid the foundations of the deep," but reminded us "Who by searching can find him out?" he means pretty much what Mr. Spencer means when he speaks of a power that is inscrutable in itself, yet is revealed from moment to moment in every throb of the mighty rhythmic life of the universe.

And this brings me to the last and most important point of all. What says the doctrine of evolution with regard to the ethical side of the twofold assertion that lies at the bottom of all religion? Though we cannot fathom the nature of the inscrutable Power that animates the world, we know, nevertheless, a great many things that it does. Does this eternal Power, then, work for righteousness? Is there a divine sanction for holiness and a divine condemnation for sin? Are the principles of right living really connected with the intimate constitution of the universe? If the answer of science to these questions be affirmative, then the agreement with religion is complete, both on the speculative and on the practical sides; and that phantom which has been the abiding terror of timid and superficial minds, that phantom of the hostility between religion and science, is exorcised now and forever. Now, science began to return a decisively affirmative answer to such questions as these, when it began to explain moral beliefs and moral sentiments as products of evolution. For, clearly, when you say of a moral belief or a moral sentiment that it is a product of evolution, you imply that it is something which the universe, through untold ages, has been laboring to bring forth, and you ascribe to it a value proportionate to the enormous effort that it has cost to produce it. Still more, when with Mr. Spencer we study the principles of right living as part and parcel of the whole doctrine of the development of life upon the earth; when we see that, in an ultimate analysis, that is right which tends to enhance fulness of life, and that is wrong which tends to detract from fulness of life, we then see that the distinction between right and wrong is rooted

Digitized by Google

in the deepest foundation of the universe; we see that the very same forces, subtle and exquisite and profound, which brought upon the scene the primal germs of life and caused them to unfold, which through countless ages of struggle and death have cherished the life that could live more perfectly and destroyed the life that could only live less perfectly, while humanity, with all its hopes and fears and aspirations, has come into being as the crown of all this stupendous work,—we see that these very same subtle and exquisite forces have wrought into the very fibres of the universe those principles of right living which it is man's highest function to put into practice. The theoretical sanction thus given to right living is incomparably the most powerful that has ever been assigned in any philosophy of ethics. Human responsibility is made more strict and solemn than ever, when the eternal Power that lives in every event of the universe is thus seen to be in the deepest possible sense the author of the moral law that should guide our lives, and in obedience to which lies our only guarantee of the happiness which is incorruptible, which neither inevitable misfortune nor unmerited obloquy can ever take away.

Speech of Henry Ward Beecher.

The chairman then introduced, as the last speaker of the evening, Mr. Beecher, who spoke as follows:—

The old churches used to have two ministers: one was considered as a doctor of theology and the other a revivalist and pastor. The doctor has had his say, and now the evangelist will have his. Paul complained that Alexander the coppersmith did him great harm. Mr. Spencer has done us immense harm. I don't believe that there is an active, thoughtful minister in the United States that has not been put to a peck of troubles, and a great deal more than that, by the intrusion of his views and comparisons with the old views. I can't for the life of me reconcile his notions with those of St. Augustine. I can't get along with Calvin and Spencer both. Sometimes one of them is uppermost and sometimes the other; and I have often been disposed to let them fight it out themselves, and not take any hand in the scrape. It is to be borne in mind that, when a man is driving a team of horses that are just all that he can manage anyhow, he is not in a state of mind to discuss questions with his wife by his side, who is undertaking to bring up delicate domestic matters. A man that has a woolly-headed deacon watching everything that he does, or a gold-spectacled lawyer,—not a fat one, but a long, lean, lank one,—he can't afford to talk Spencerism: he has got to take care of himself first. He must therefore expect not to come in like an equinoctial storm: he will come in like a drizzle. He will descend as the dew.

But one thing is certain: Mr. Spencer is coming, whether men want him or not, and coming to stay. Mr. Spencer may have dyspepsia, but his books have got no dyspepsia. They like the climate, and they are working their way steadfastly in this country. When Mr. Spencer speaks of our being so industrious, he speaks like an insular gentleman. You haven't anything to do in England: you have but about three hundred miles diameter one way and eight hundred the other. We have got this whole continent to take care of. We are rather an ambitious people. We have learned from the astronomers that they are five hours ahead of us every day in England, and we have to work with all our might to make up those five hours.

Now let me say, with a little more approach to sobriety, I think that the doctrine of evolution, and its relation to the work of Mr. Spencer, which takes in that and a great deal more besides,—to speak in plain language, it is going to revolutionize theology from one end to the other, it is going to make good walking where we have had very muddy walking hitherto. It is going to bridge over rivers, which we have had to wade. There are many points in which the theology of the past did well enough for the past; but it does not answer reasonable questions, and the moral considerations that are brought to bear upon it in our day. The New Testament idea is that religion is the art of putting men on an anvil, and hammering them out into perfect manhood. There is no difference between that tendency in Mr. Spencer's work or Mr. Darwin's, or the galaxy of eminent writers that shine in the East, and ourselves, on that subject. On the other hand, the whole business of religion is not merely to insure a man against fire in the other world, but to create an insurable interest in him. The business before men is the making of themselves while they are making also the world in which they dwell. The doctrine of immortality was not known in the Old Testament day. Here we have Prof. Park, of Andover, and a great many good and godly men in New England, discussing to-day whether a man who doesn't believe that everybody that dies impenitent will be damned forever and ever is fit to preach the gospel. Five thousand years ago there was not a man on the face of the earth that knew there was a future. We have an explicit declaration in the New Testament that life and immortality were brought to light by Christ.

In conclusion, Mr. Beecher addressed these words to Mr. Spencer:—

May He who holds the storms in his hands be gracious to you, sir, and may your voyage across the sea be prosperous and speedy, and may you find on the other side all those conditions of health and of comfort which shall enable you to complete the great work, greater than any other man in this age has attempted; and may you live to hear from this continent and from that an unbroken testimony to the services which you have done to humanity; and thus, if you are not outwardly crowned, you will wear an invisible crown on your heart which will carry comfort to death, and I will greet you beyond.

A Letter from Dr. Holmes.

After Mr. Spencer's speech, Mr. Evarts read the following letter from Oliver Wendell Holmes:—

BOSTON, Nov. 6, 1882.

Dear Sir,—I regret that my engagements will not permit me to enjoy the meeting in honor of Mr. Spencer, which I hope may take place as proposed on the evening of November 9. It would have been a great pleasure to me to testify by my presence that I share the feelings of respect and admiration of which this occasion is our passing manifestation. Mr. Spencer has come nearer to the realization of Bacon's claim of all knowledge as his province than any philosopher of his time. It is a life's work to exhaust a single specialty, as it must be studied to-day. "Go to the ant," with Sir John Lubbock, "consider his ways," and learn what it is to study a square inch or two of nature's surface. The man who takes the survey of the entire order of things as his specialty must needs have a long stride and a clear outlook. He must have a well-measured and largely extended base-line of ascertained fact, to begin with, and command the views which extend themselves from all the heights of the various sciences. The facts of development furnished Mr. Spencer with his base-line. From the summit of one branch of knowledge after another, he has brought its phenomena into relation with this base-line and with each other until we look with amazement upon the reach and compass of his vast triangulation of the universe.

Nature taught him her great law in the life of an egg which completes its history,—a mass of organizable matter which has escaped being turned into an omelet; a spot; a line; a groove; a group of walled spaces with their soft contents; self-distribution into regions; self-differentiation into tissues and organs: self movement as a whole; self-consciousness as an individual; emergence at length from this inviolate secrecy of the divine studio, where it has been shaped, a creature of God, full armed to fight for its life against the elements. Just in this same way, and no other, are built up the Newtons, the Youngs, the Darwins, the Spencers, who interpret the hieroglyphics of nature and of history for common mortals. All is development; and the standing illustration of it was laid before the world by the bride of Chanticleer, when she proclaimed to the virgin creation that she was a mother.

An apple gave the hint of gravitation. An egg taught the lesson of evolution. The old Roman banquets proceeded *ab ovo usque ad malum:* the course of sciences has gone just the other way,—*a malo usque ad ovum*,—from the apple of Isaac Newton to the egg of Herbert Spencer. May he live to place the capstone on that pyramid of achievements which is already one of the wonders of the modern intellectual world. Very truly yours, O. W. HOLMES.

VIEWS of life and conduct which originated with those who propitiated deified ancestors by self-tortures enter even still into the ethical theories of many persons who have years since cast away the theology of the past, and suppose themselves to be no longer influenced by it.—*Herbert Spencer.*

CORRESPONDENCE.

DARWIN'S LETTER TO A STUDENT.

Editors of The Index:—

The recent letter of Darwin to a young student at Jena has led some to inquire whether the writings of the prominent evolutionists—Darwin, Tyndall, Spencer, Haeckel, and others—have not worked serious harm, by throwing the minds of the readers into confusion in proposing problems that confessedly have ever admitted of no valid answer. It is to be noticed that the young student to whom the letter was written had drunk deeply, but it was a dangerous draught.

> "Then was kindled within a thirst which outran
> Those perishing waters; a thirst of fierce fever,—
> Hope, doubt, desire, which consume him forever."

It seemed as if he had almost touched his parched lips to the cup of Tantalus. But the delusion was short-lived. Now, I have seen it strongly urged that no good results can flow from tormenting the mind with dread doubts that may ultimately lead the individual to become either an atheist or an agnostic. These writings, it is claimed, tend to inaugurate a struggle within the man that will never cease to vex him during his lifetime. Admitting that these writings do all this, what is the legitimate result?

There is a special meaning for each one of us in the words spoken by the good old Bishop Blougram, in Browning's verse, "When the fight begins with himself, a man's worth something." I am still of the opinion that not until a man has fought with and subdued his greatest enemy—himself—is he conscious of his own full worth. There surely comes a time in every one's lifetime when he is called upon to decide whether in the struggle with his greatest enemy he will come off the vanquished or the victor. He is a weakling who gives up the fight with himself before a blow is struck. The victor over himself alone can exclaim, as Faust did: "Here I am a man! Here dare I be a man!" The struggle begins when a conscientious man seeks to answer in a conscientious way those doubts that threaten to undermine those deeply rooted beliefs that constitute the basis of his religious faith. No lasting rest is to be found until these doubts are either answered or severely silenced. No man can deceive himself for any length of time by stifling the rising doubts that will not "down" at his bidding.

The outcome of this inner struggle is oftentimes doubtful. It may be that the individual will end in accepting the teachings of ultra-agnosticism. Perhaps the man will go to the other point, and embrace the doctrines of the strictest theism. Or, it may be that, like Hamlet, he will drift upon the open sea of troubles, not knowing the where or the whither of his destination. Many a person might frankly confess how at times he wavered between belief and unbelief; how he cautiously ventured into the paths of Orthodoxy; how he strayed timidly into the unknown fields of agnosticism; how, for days and days, he only dared to hover on the border-lands of both extremes. In this perpetual round of strife, the victim is constantly pursued by the dark visions of his uneasy mind,—*post equitem sedet atra cura.* In a recent essay, Prof. Tyndall exhibits a "fragment" only of the process by which he eventually became a convert to scientific materialism. With lively *naïveté*, the professor let us into the wanderings of his innermost thoughts during that most critical period. Many and many an hour flitted by ere he was aware that he had been dreaming to himself so long. Thus, day after day went along; and still he was no nearer to finding that rest for which he sought. At last, after years of fighting with himself, Tyndall proved his worth.

Finally, this is the legitimate result: no man ever passed through the fiery furnace of this fight with self without coming out the purer, brighter, and better for having gone through the ordeal. To those men who first quieted their own doubts before they attempted to quiet others, to those students who answered their own speculations before they gave them out to their learned brethren for solution, to all those who fought long and long with themselves, we should feel under lasting obligations. What we call unscientific thinking is due more or less to those impulsive scientists who, to use Mr. Bagehot's phrase, lack animated moderation. The man who sits still, and yet takes a good many steps, is the one who will arrive at the goal the quickest. That hilarity which scientists are wont to display when congratulating

Digitized by Google

one another upon the rapid manner in which they have progressed in their discoveries has been detected and noticed by the Rev. Mr. Chadwick. Generations of unscientific thinking at last become an undesirable inheritance which we are very glad to get rid of. On the other hand, those students who looked outwardly calm when the struggle was raging the fiercest within, have proved their worth by arriving at permanent results. It is no argument at all that the writings of Darwin and the other leading evolutionists have made sceptics: rather, they have raised doubts which led men to fight with themselves, and thus prove they were worth something. In this sense alone, they have proved to be of incalculable value to all. The young student to whom this letter was addressed was one of them.

In an "Imaginary Conversation,"—though it might easily pass for an actual conversation,—the gifted Pericles confides to his wife this secret: "I do believe, Aspasia, those studious men who look so quiet are the most restless men in existence."

LEE J. VANCE.

"THE POINT RAISED BY DR. ELLIS."

Editors of The Index :—

In his *Age of Reason*, part second, Thomas Paine, in the year 1795, wrote the following: "Before anything can be admitted as proved by the Bible, the Bible itself must be proved to be true, . . . whether there is sufficient authority for believing the Bible to be the Word of God, or whether there is not. Are we sure that the books that tell us so were written by his authority? Speaking for myself, if I had no other evidence that the Bible was fabulous than the sacrifice I must make to believe it to be true, that alone would be sufficient to determine my choice. But, in addition to all the moral evidence against the Bible, I will in the progress of this work produce such other evidence, . . . and show from that evidence that the Bible is not entitled to credit as being the word of God."

He then goes through the Bible, producing evidence which, to liberal minds, is logical and conclusive. In conclusion, he writes: "Those who rest their faith upon such authority put man in the place of God, and have no foundation for future happiness. Credulity, however, is not a crime; but it becomes criminal by resisting conviction. It is strangling in the womb of the conscience the efforts it makes to ascertain truth. The evidence I have produced to prove them forgeries is extracted from the books themselves, and acts like a two-edged sword either way. If the evidence be denied, the authenticity of the Scriptures is denied with it; for it is Scripture evidence; and, if the evidence be admitted, the authenticity of the books is disproved." The Boston *Herald*, in an editorial headed "The Point Raised by Dr. Ellis," says: "The merit of Dr. Ellis' essay before the Unitarian Club is that it goes straight to the issue which has got to be faced by the thinking men of our own time. . . . That their theology, so far as it rests upon proof-texts of the Scriptures and not upon the eternal verities of life in nature and in the mind of man, is without sufficient foundation, because the Scriptures themselves are without the authority that has been claimed for them. . . . Dr. Ellis clearly concedes this; and it is notable that such a veteran religious controversialist, who has again and again gone over every inch of the Protestant ground, should come out so flat-footed for a revision of the estimate of the Bible as a divine book, which has heretofore been put upon it. He has struck a tender chord, but it is here that the discussion is now brought."

The point I wish to raise is this, Was Thomas Paine eighty-seven years ahead of, or are some other persons eighty-seven years behind, the times?

W. H. S.

BOOK NOTICES.

STORIES FROM ROBERT BROWNING. With an Introduction by Mrs. Sutherland Orr. By Frederic May Holland. London: George Bell & Sons, York Street, Covent Garden.

To the comparatively few who stand in poetic insight and appreciation on the plane of Browning's thought, his poetry is freighted with the richest intellectual stimulus toward a still higher altitude. But, to the majority of thinkers, his expression of thought is too vague to be understood and appreciated; and the lessons he seeks to inculcate are lost, save to those who have no special need of their teaching. Mr. Holland, discerning this lack of clearness for the ordinary reader, and desirous that those who have most need of the teacher should be brought into more intelligible relations with one so capable of instructing as Browning, makes in this volume a commendable and satisfactory effort to clear away some of the mists from some of the most obscure of his poems; *i.e.*, "Strafford," "Sordello," "Luria," "The Adventures of Balaustion," "A Blot in the 'Scutcheon," "The Ring and the Book," "Pippa Passes," "The Return of the Druses," and "Colombe's Birthday." This he does by bringing these poems into prose form as stories simply, gems of history divested of their brilliant setting of poetic imagery. With these "stories" as guides or keys, the most prosaic reader can the better catch and follow the poet's erratic fancy and meaning. Mrs. Orr, who prefaces Mr. Holland's work with an "Introduction" of over thirty pages, is said to be an intimate friend of Mr. Browning, and may thus be considered as an authority for the poet's true meaning, declares that Mr. Holland's prose rendering of Browning's poetry "helps the reader who has not unlimited time and knowledge to devote to these poems to do justice to them for himself, and in this respect almost every step of the process has brought clear gain." And again: "In judging . . . Mr. Holland's stories, it must be remembered that they are written for those who do not know Browning, in no sense for those who do; and that the necessary deficiencies which cause a feeling of disappointment in the latter case only raise expectation in the former. Mr. Holland would have failed in his object, if his readers were content to rest on what he has done; and he sends them to Mr. Browning himself, with the certainty that their highest expectations will be fulfilled."

A LITTLE PILGRIM. Reprinted from *Macmillan's Magazine*. Boston: Roberts Brothers.

This unpretentious little volume of 123 pages is a new and charming version of "The Gates Ajar." It purports to give the possible experience of a gentle, loving spirit in its first entrance upon the life beyond. Although deeply religious in tone, it is in no wise sectarian, and could be read by the most rigid devotee of any sect without jarring upon his sectarian feelings; and it is so sweet a prose-poem that it will be enjoyed as such by the most pronounced agnostic or materialist. It is divided into two parts, "In the Unseen" and "The Little Pilgrim goes up Higher." The reason of the title *A Little Pilgrim* is given by the unnamed author in the following words: "When I call her a little Pilgrim, I do not mean that she was a child; on the contrary, she was not even young. She was little by nature, with as little flesh and blood as was consistent with mortal life, and she was one of those who are always little for love. The tongue found diminutives for her, the heart kept her in perpetual youth. She was so modest and so gentle that she always came last, so long as there was any one whom she could put before her. But this little body, and the soul that was not little and the heart which was big and great, had known all the round of sorrows that fill a woman's life, without knowing any of its warmer blessings. . . . She had gone about the world, which had no prize or recompense for her, with a smile."

C. P. FARRELL, of Washington, D.C., has republished *A Short History of the Bible*, by Bronson C. Keeler. Paper, 50 cts.; cloth, 75 cts. This book, which was reviewed in these columns some months ago, is the best account of the formation and development of the Canon, of the origin and growth of the Bible, in a condensed form, that we have seen, and is valuable to the majority of readers for the information it contains, and to all interested in the subject for its convenience as a work of reference.

THE *Sunday Review*, published by Trübner & Co., London, advocates, among other liberal reforms, the opening of museums and galleries on Sundays. The October number contains an interesting and suggestive article by Mr. Hodgson Pratt, Chairman of the Workingmen's Club and Institute Union, on the question "In What Way can the Influence of Art be best brought to bear on the Masses of the Population in Large Towns?"

THE *Sidereal Messenger* (published by the Carleton College Observatory, Northfield, Minn.) for November contains "Comet Cruls," by C. S. Hastings of Johns Hopkins University; "Drifting Meteor Trains," by E. E. Barnard; "Transit of Venus," by Edgar Frisby; "Observation of Comet 'B' 1882," by C. A. Young; and other articles, together with late astronomical news.

PERSONAL ITEMS.

GEN. BUTLER is sixty-four years of age.

ANTHONY TROLLOPE, the well-known novelist, was lately suddenly seized at dinner with illness, and is considered in a very precarious condition,—the result, physicians say, of overwork.

THE Springfield *Republican* describes Prof. John Fiske, one of America's most philosophic and scientific thinkers, as "the pursy, red-headed, and red-bearded German-looking lecturer at Harvard."

B. F. UNDERWOOD will speak at Canton, Ohio, November 25 and 26; Salem, Ohio, November 27, 28; Massillon, Ohio, November 29, 30, and December 1; Alliance, Ohio, December 3; Mechanicsburgh, December 5 to 10, inclusive.

A SUBSCRIPTION toward the English Darwin memorial has been opened in Stockholm. The Swedish press warmly supports the same, pointing out that it is not money which England asks for, but the tribute of a cultivated nation to one of her greatest *savants*.

FATHER HYACINTHE, who used to fill every seat in Notre Dame, now has slim congregations at his small church in the Rue d'Arras. His rent is overdue, and he is threatened with ejectment. While the French like free thought, they are said to object to deviations from the established Catholic ritual.

PROF. HAECKEL, the most eminent of German naturalists, contemplates the publication of an exhaustive analysis of the Darwinian system. He will probably take advantage of this opportunity to publish some very interesting correspondence he has had with Mr. Darwin, and also to indicate the bearing of his celebrated theory on current theological and ethical theories.

LOUISE MICHEL, the ferocious Parisian Communist, was in early life a pious Catholic schoolmistress, with a tendency to mysticism, and was the author of several devotional hymns. It was the doctrine of eternal punishment as taught by the Church, she declares, which first made her sceptical; and the support given by the clergy to the empire turned scepticism into downright disbelief and hostility to all religion.

HERBERT SPENCER is described as a man about sixty-two, slender and erect, above medium height, with fair complexion and blue eyes not wide apart, with a refined, kindly, and reflective face. His countenance is framed in gray side-locks of hair, never very dark, and a gray fringe of whiskers under the chin. His mouth is straight and firm, expressive in conversation, and easily breaking into smiles and laughter.

IN a brilliant little book on Nihilism, just published in London, Vera Sassulitch is called the first of the terrorists; and Sophy Perovsky is described as infinitely graceful and charming, as exquisitely neat and pretty; she loved children, and was the best sick nurse in the world; she had an indomitable will and the genius of affairs,—in short, a perfect Tourguéneff heroine. In Russia, she is regarded as a heroine and a martyr; and the cushion she used and the sofa she lay on are regarded as relics.

AT the dinner given to Gen. Grant at the Vendome, on the occasion of his recent visit to this city, Gen. Butler, in the absence of Gov. Long and by the Governor's request, responded for the State in his behalf, and in the course of his speech said, "Were I called upon, as representing Massachusetts, to take a distinguished stranger and show him the things wherein I was most proud of my State, of her honor and glory, I would first take him to our common schools, next to our colleges, and lastly to this exhibition of the high degree of skill reached in our mechanic arts."

KESHUB CHUNDER SEN, leader of the free Brahmins of India,—an almost Christian sect, opposed to idolatry and caste,—is a man of unusual attainments. He is a graceful orator, both in English and Bengalese, and a profound scholar in the philosophy and sciences of Europe. He has travelled much, having visited London and been presented to the Queen. Personally, he is of striking and handsome appearance, being more than six feet tall, and in the prime of life. He is very wealthy, and at his own expense maintains a large church in Calcutta, and edits and publishes a paper called the *New Dispensation*.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

THE INVESTIGATOR.

Published every [illegible] the Paine Memorial, Appleton St., [illegible]on, Mass.
Volume Fi[illegible]d.
Price $3.00 per annum, [illegible] or three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to
JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

CURRENT TOPICS.

A CHRISTIAN missionary in China, who tenderly cared for a poor native left half-dead at his gate, is somewhat taken aback at the form his *protégé's* gratitude takes. The native now spends all his spare time in beseeching Buddha to turn him (the native) at death into an ass, so that his Christian benefactor may not be without one in the future world.

IN these days of liberal thinking and talking, the business corporation which undertakes to evade its legal responsibilities under the specious cloak of its veneration for religion fares badly, as a Horse Railway Company of Providence, R.I., lately discovered, when, on being sued by a lady of that city for compensation for damages received on its road, it claimed that, as the accident occurred on Sunday, all contracts made to carry passengers on that day were void, and hence they rode at their own risk. This plea only excited the ridicule of the court, and the lady was awarded heavy damages.

IN the *Congregationalist* and other denominational papers, theologians are discussing the question whether those who die in infancy have a probation after death. The Boston *Sunday Herald* exclaims, "What a question that is for theologians to be getting up a discussion over!" "How fortunate for the children," it adds "that they are taken care of by a loving Father when they leave this world, instead of falling a prey to theorizing theologians! Theology has seemed to have a grudge against the little ones ever since the disciples tried to keep them away from Jesus. But he said: 'Suffer little children, and forbid them not, to come unto me; for of such is the kingdom of heaven.'"

WHAT the Church of Rome is doing for the poor is shown by a Parisian journal called the *Pilgrim* (*Le Pelerin*), and profusely illustrated with pictures extolling the impostures at Lourdes, representing saints, angels, and priests triumphing over the damned, and devils falling to earth where they become free thinkers, encouraging hatred of the Jews, and calling attention to the repeated charge that the common school is a preparation for hell. Truly, the Church is the same yesterday, to-day, and forever,—always the foe of knowledge and mother of persecution. The first page of each number represents the Virgin Mary standing on the globe,—a felicitous device; for the world is turning round, and the idol already beginning to tumble off.

REV. DR. WILLIAM SALTER, of Burlington, Iowa, the father of one of our contributors, wrote the following in a communication to the Tariff Commission, which was ordered to be printed: "I beg leave to submit to your candid consideration the question of the expediency of placing books upon the 'free list.' The taxation of knowledge is especially objectionable among a people whose political institutions rest upon their general intelligence. It is a singular anomaly to put a tax of twenty-five per cent. upon new books, or those printed within twenty years, while old books come in free; as though antiquated and effete learning were best for our people, and we should be made to pay dearly for the latest knowledge. Would it not be more worthy an enlightened government to place no restriction upon the importation of books fresh from foreign centres of intelligence?"

STATISTICS of church charity in New York city, recently given in the *Times*, reveal the fact that those denominations are doing the most effective work whose structure is most organic. Where there is large individualism, there is apparently little for the masses. Thus, the Catholic and Episcopal Churches easily lead, the latter doing more than all the other Protestant denominations combined. This fact should perhaps be remembered, when the reproach is brought against the Episcopal Church of being fashionable and worldly. There is a marked difference between Catholic and other charities, in that the former give no account to the donor of how the contributions are laid out. As the *Times* says, "The Catholic Church compels the public to take its work on trust"; and, as matter of fact, it draws its funds for charity to no inconsiderable extent from outside secular hands. On the other hand, the report of every Protestant or secular charity institution gives the minutest details of expenditure. Further, something like a million of dollars is paid out of the city treasury, by order of the Albany Legislature, yearly for charitable purposes; and the lion's share of this amount goes to the Catholic Church.

SAYS the Boston *Herald:* "A letter from Prof. Haeckel, in the London *Academy* for November 4, puts to rest the question whether the letter addressed to Baron Mengden by Charles Darwin in 1879 has been correctly printed. He forwards a copy of the letter, of which the essential part reads thus: 'Science has nothing to do with Christ; except in so far, as the habit of scientific research makes a man cautious in admitting evidence. For myself I do not believe, that there ever has been any revelation. As for a future life, every man must judge for himself between conflicting vague probabilities.' These are his exact words and punctuation. In addition to this, Mr. Darwin is reported to have said to Dr. Ludwig Büchner a year ago, when the German scientist visited him in his English home: 'I am with you in thought, but I should prefer the word "agnostic" to the word "atheist." . . . I never gave up Christianity until I was forty years of age.' And, in reply to a question why he had given up Christianity, he added: 'It is not supported by evidence.' Mr. Charles Voysey, the English preacher of theism pure and simple, recently asserted that Mr. Darwin acknowledged himself to him to be a theist; but it is plain, from what is now published by Prof. Haeckel and Dr. Büchner, that he was an agnostic, and so uncommitted to any special conviction as to the future life."

THE Springfield *Republican* observes: "Dr. Smyth and Mr. Thayer now both occupy evangelical pulpits, and their doctrine is the very advance ground of Orthodoxy. Yet we cannot help seeing that their extended probation is based on the narrowest grounds, those of mere intellectual belief, and makes no account of character. They might personally hesitate to place Ralph Waldo Emerson among the damned, but their conditions of probation would surely place him there. He was not one of Newman Smyth's exceptions that might have a further trial,—'infants, idiots, antediluvians, some heathen, and children born apparently to no moral chance': he had received what Orthodoxy declares the indispensable requirements, and he did not comply with them. It is this subordination of character—which every one knows to be the one thing that is good for self and fellow-men—to mere belief, which may coexist with the most harmful nature,—do not 'the devils also believe and tremble'?—which makes it impossible for many thinking men in this age to respect Orthodoxy, or greatly to admire the cautious ventures that are made at the very edge of its pale." The fact that men have for centuries been surrounded and saturated with superstition, until it has become a part of their breath and blood, so to speak, can only explain the interest they manifest in discussions like those between Dr. Smyth and Mr. Thayer on the one side and their more orthodox opponents on the other. In view of the foolish controversies with which the orthodox clergy have diverted the attention of men from matters of practical importance, the decline of their influence, corresponding with the decay of theology, is one of the most happy signs of the times; and it is gratifying to see that there are multitudes now for whom the opinions of Newman Smyth and those of Prof. Park in regard to "extended probation" have no interest whatever beyond the indications they may afford of increasing freedom and independence of thought.

SYMPATHY AS AN EDUCATOR IN ETHICS.

Under the tuition of science, we are not permitted, of course, to consider man as beginning his existence on earth in the condition in which we find him in civilized society to-day. We must think of him as beginning in the savage state, not "a little lower than the angels," but only a little above the brute animals. We must think of primitive men as subject to pain chiefly through their bodies. To mental and moral pain, they were yet dull. The "hunger and thirst after righteousness" had not yet come. It was actual bodily hunger and thirst that they knew. It was the beating of the pitiless elements upon their exposed bodies that they felt. It was not any pangs of conscience that pressed from them the cry of distress, but the keen agony of their flesh torn by wild beasts. Thus, sympathy was begotten, or the fellow-feeling of a common distress. Literally, the word "sympathy" means *suffering together*. And the first primitive manifestation of the feeling doubtless was that, when one was seen to suffer a present physical pain, another suffered over again in recollection a like pain experienced in the past. Philosophically considered, the essence of the feeling was the capacity of one man, through the faculty of remembering his own experience, to put himself imaginatively in another's place, so as mentally to feel pain because of another's physical pain.

But the function of sympathy did not stop with feeling. It immediately became active. From the *feeling* together there came a *banding* together for mutual protection against the common foes that caused the distress,—against the hunger, the cold, the pitiless elements, the ferocity of wild beasts, the assaults of more savage men. This was practical sympathy. And, in this way, the ingenuity, the strength, the experience, the quickened perception of the more fortunate and the more favored were put at the service of the weaker and less skilful members of the primitive human community. And hence this quality of sympathy between the two classes of human beings that have always existed in every human community, the distressed and the relievers of distress, the helped and the helpers, may almost be said to lie at the basis of civilization,—to be, at least, one of the most primary facts in the moral education of mankind.

And, through the whole history of the civilizing and educational development of the human race, the relation of these two classes to each other has retained, nor has yet lost, its place of dominant importance. There is no doubt that that feature of all life, human and infra-human, which later science has named "the struggle for existence," has had a tremendous influence in human education. Here has been the arena of competition and conflict in which both individual faculty and race characteristics, not only physical, but mental, have been shaped, sharpened, and strengthened. In this contest, qualities of courage, of sagacity, of independence, of hardihood, of endurance, of tenacity and persistency of purpose, have without doubt been cultivated and transmitted. And these are qualities, too, that have a moral side. But this feature of *sympathy* has had a place of equal importance in the schooling of the world; and, in its moral education, a place of vastly greater importance. The principle of the struggle for existence, with the survival of the fittest, might of itself have brought a strong intellectual development and a splendid material civilization; but it is more than doubtful whether alone it could have produced anything that could properly be called ethics. The root of ethics lies in the feeling between two or more men of having something in common whereof each must respect the other's share equally with his own. There could have been no practical morality until such a perception as this arose. Morality, therefore, demands in its very essence *fellow*-feeling, or the recognition of common interests and a common law, whereby people are bound together in mutual trust, regard, and helpfulness; that is, sympathy, both emotional and practical. But this is just the opposite of the principle of "the struggle for existence." This latter principle, operating by itself, would lead each individual to do the utmost for himself and his own life regardless of others. The weak would succumb in the struggle. The strong would survive, but each with his hand against his neighbor. Every man's house would be indeed his castle, bristling with weapons of offence and defence against every other man's; and a man's family would be merely an appendage for his own selfish aggrandizement and enjoyment and the better defence of his stronghold. There is, it is true, considerable of this attitude even to-day among the householders of civilized society toward each other. But we can better imagine than describe what would have been the state of things, if society had developed solely by this principle of "the struggle for existence," and there had come in no balancing and regulative principle of sympathy as an additional civilizing and educating force; if people had never learned to stand by and hold up and help on one another in the rough and hard places of life, and to pull one another through to some common place of safety and strength.

But, in fact, mankind learned very early that there was not merely a struggle for existence of individual against individual, or not so much that as a struggle for existence of the whole race against common foes. They learned that individuals, with all their aggrandizement of power, would stand little chance of preservation, unless the race (which to any particular people would be represented in their respective tribe or nation) should stand with or back of them. The enemies which they had to meet in nature's forces and in savage beasts could only be resisted and overcome by combination. The very weakness of individuals massed together by those capable of organizing sympathetic, co-operative effort, was thus converted into power. And, as mankind advanced, it was seen that there were other evils besides physical to which the human race was subject, other wretchedness than that of the body; and hence other ways of people standing by and helping one another than in matters of food or clothing or shelter or any real or threatened peril to the flesh. As intellectual capacity developed, it became evident that there was ignorance imprisoning many people's minds; baneful superstitions keeping them in darkness and terror; terrible passions and appetites preying upon mental as well as physical life; terrible vices consuming the vitality of intellect and heart with that of the body, and entailing their dire consequences of woe on posterity; terrible social injustices, too, keeping whole classes of people perforce in ignorance and want and degradation and animalism.

And the presence of these evils has called forth the army of helpers,—the philanthropic men, the tender, pitying women, who can themselves take no rest so long as this manifold wretchedness presses upon any portion of mankind; the benevolent hearts, the ready hands, that find in every suffering fellow-being a neighbor to be helped. Thus, the slave, the crushed and struggling peasant, the defrauded laborer, the victims of intemperance, the victims of lust, the slaves of ignorance and passion, the oppressed and degraded of every sort, whether by wrongs committed against their bodies or against their souls, have all found friends to hear their story and to plead their cause. At their cry of distress there is begotten in every genuinely human heart the feeling of compassion; and there springs up spontaneously to the rescue the band of consecrated workers, not large but determined, who have taken upon themselves the vow to live not to save themselves, but to save others, and to know no heaven as their reward but that which they shall make by lifting from mankind's shoulders its burden of woes. And it is certainly a great compensation for the hard fact of evil that, by this struggle with it, man's moral personality has been thus trained, culminating in the devout band of wise and humane souls who have been the world's redeemers and saviors.

WILLIAM J. POTTER.

THE RELATION OF THE BEAUTIFUL ARTS TO THE EVOLUTION PHILOSOPHY.

An enticing theme! and so broad and profound that one must plead guilty to the charge of rashness in throwing upon paper even a few hints, or outlines, of it.

The beautiful arts in any given epoch are always conditioned upon and organically articulated with the great substructure of the intellectual spirit of the age. Nothing so subtle, so elusive, so exquisitely capricious as beauty "gliding through the sea of form,"

> "Somewhat not to be possessed,
> Somewhat not to be caressed,"

and perhaps once in a thousand years deigning to "touch, for our despair," the work of our hands, and put upon it in one secular moment of eternity the stamp of undying beauty. It took a millennium for the art of Greece to flower out into perfect blossoms of shining stone; it took a thousand years for the Christian religion (although sublimed by the daring imagination of the Nazarene) to effloresce in the sculpture and painting and cathedral architecture of the Renaissance; and it may be a thousand years before supreme Beauty again incarnates herself in art. But it is possible for us even now to indicate the *Trieb*, or trend, which must characterize the efforts of artists.

The most apparent objective result of the discovery of human evolution has been to swing humanity around, as by the sweep of an enormous revolving platform, and entirely reverse the direction of faces.

In art, in morals, in religion, we were formerly a backward-looking race: we are now a forward-looking one,—I mean as respects our faith, our aspirations, our ideals; and, in the fine arts, these are the essential things. In regard solely to material or intellectual vision, the stretch of thought has been in every direction. The walls of experience have shot outward with enormous rapidity. And what of the fine arts? Are there any signs of reciprocal expansure on their part? Are artists aware that mankind is passing from its childhood into the dewy freshness of youth, and that the road into the new realm passes through the portal of Scientific Philosophy? Are they taking the hint? Have they caught glimpses of the inconceivable grandeur of the vista? Are they Titan-thewed for the struggle? Is the iron of eternity in their blood? Are the colored fires of the suns reflected in their eyes? Have they mental pictures of the far-stretching desolation of early geological eras, the sobbing waves, the vegetation, the monsters, the tree-combats of faun-men, the submergence of continents, the animal joy of the unconscious ages, the mythological ages? Have they caught the hint of resistless progress, and "in dens of passion and pits of woe" do they see

> "Strong Eros struggling through
> To sun the dark and solve the curse?"

If so, we ought to see signs of an abandonment

Digitized by Google

or proper subordination of the thousand-times-thrashed straw of European mythologies, and a working up of Hindu, Japanese, and Aztec lore; we ought to find poets and other artists of thought working out bravely along the lines pioneered by science; we ought to have struggles to represent in art gigantic impersonations of Fate, or Brahm, in accordance with our broadened views of the universal sway of law. We should expect to find the old bookish style of belles-lettres becoming irksome and antiquated, and a fresh nature-invigorated literature, as well as painting and sculpture, coming into vogue,—gigantesque, Gothic, wild, and luxuriant, not cramped by the old classic rules, not Greekly sculpturesque (the time for that is not yet).

And we actually do find indications of all these things. The ideas I have spoken of are percolating through the mind of artists in words, colors, and forms. There are already a good many happy prologues to the swelling act of the imperial theme. In poetry, we have Emerson and Whitman, with their superb spirituality and faith in man and democracy; in Tennyson, too, there is a slight infusion of cosmism. Then there are Jean Paul, Goethe, and Hugo, all modern, democratic, cosmic. In music, we have Shaksperean Wagner, unconsciously voicing, in his magnificent Nibelungen musical dramas, the great secular thoughts awakened by the discovery of man's far origin, his long and terrible upward struggle, and the inconceivable splendor and vastness of the universe in which he is embosomed. In sculpture, perhaps there is no recent example of an artist inspired by the spirit of the Scientific Renaissance. Angelo and Thorvaldsen come nearest to the ideal sculptor of this age. In painting, the Englishmen Turner and Blake, and our American Hunt, had the gigantesque and Gothic quality, the richness of imagination, tempered with classic severity of taste.

I know not whether we ought not almost to class religion as a fine art, the highest of all. Certainly, in its historical aspect, on its ritualistic and mythological side, it has been a fine art,—art-ificial, at least. And if we take Mr. Abbot's definition of religion, "the effort of man to perfect himself" (and it is a definition having profound metaphysical bases), we shall still have to regard religion as in some sense a beautiful art. The chiselling of a beautiful character, the painting of beautiful ideals in the mind, the rhyming of the lines of life and duty with the lines of fate or nature,—is not this a beautiful art, the art of all arts? The line severing the moral from the beautiful is hard to draw. Emerson says of beauty,—

> "All that's good and great with thee
> Works in close conspiracy."
> —*Ode to Beauty.*

And it is that noble soul, whose mortal casing lies now under the flowers of Sleepy Hollow,—it is he, our lost guide, our great one, our commander, our father, who is (still in his books) the representative preacher of the age. Surely, with him religion was a beautiful art.

Such a survey as we have taken leads us to certain conclusions. In the first place, it must be admitted that all of the artists of the ideal in words, colors, forms, and character, who have been mentioned, received their impetus and inspiration from an age of faith,—from a time when Christianity was the impelling force. Whether artists of the beautiful shall now and henceforth do strong and adequate work depends upon one thing only; namely, upon the possession by them of faith and courage in view of the realities of life and death. It depends upon whether they can enlarge the range, velocity, and endurance of their minds in correspondence with the actualities of things. It depends upon whether they can keep their faith in the noumenal, or invisible, order of things, in spite of the sneers of coarse and inferior minds who, by reason of their limitations, are unable to see in the universe anything but lumps of dirt and seas of lifeless fire.

If they can do these things, then a splendid heritage is theirs. The Christian or any other mythology could never begin to offer the inspiration that streams out of every chink of the living universe of science. If man is willing to abate his ridiculous and petty claims, and take the position of obedient self-abnegation which a marvellous and august universe demands of him, that moment he will obtain peace of mind and artistic repose; his cheerfulness will return; he will cease to grow dyspeptic over worms and souls, and will take a wholesome pagan pleasure in grass and dew and roses and clouds, his dog, his dinner, and his wife; and his religious faith will crown his nature as unconsciously and beautifully as a sunset crowns the Alps with its amethyst and crimson splendors. And, when the mass of men reach this normal condition, the world will see a great out-flowering of the ideal arts.

W. SLOANE KENNEDY.

TRUTH IN ERROR.

I. Hell.

It may be asserted that all universal beliefs have either been founded upon some genuine fact of nature or have been serviceable in the development of man. They may have been to a great extent mistaken inferences, but there was a basis of truth and a measurably beneficial result. When more of the fact is discovered, man's conceptions change, and he alters his belief and his methods. In rejecting the religious dogmas, whose falsity is being exposed by the increasing light of science, we do well to search if there is any good thing in them and preserve the truth germs they may contain, which have been helpful to man in the past, remembering Shakspere's words,—

> "There is some soul of goodness in things evil,
> Would men observingly distill it out."

One of the most prominent universal beliefs is that of punishment after death, which in Calvinism has assumed the form of the doctrine of the eternal torment in hell of all who reject the way of salvation by the atonement of Christ. The falsity of this dogma has often been shown; but its opponents do not always recognize the fact that its belief rests upon a fundamental truth, which is, that the law of the unfailing succession of cause and effect prevails in morals as truly as in the physical world.

It is considered a waste of words to attack the Calvinistic doctrine of endless punishment, for it may fairly be claimed that no intelligent person now believes it. True, many profess to believe it, and some even think they believe it; but, judged by accepted rules of evidence, their belief is disproved. Genuine belief is always manifested in corresponding action. Belief in the existence of a pitfall, the approach of an avalanche, or the presence of a wild beast, is always eagerly communicated to others. Men will not allow others to go into danger without warning, and without deep concern for their welfare. Judged by this rule, how many really believe the doctrine of everlasting punishment? If men all around us are going down to an eternal hell, and Christians believe it and know of an easy way of escape, would they so seldom vary their lives of business and pleasure by a word to the impenitent? Would they be able to live contentedly in a round of diversion, music, embroidery, and cigar-smoking, while their neighbors are dropping into ceaseless doom, where "the smoke of their torment ascendeth up for ever and ever"? Would ministers of churches only make vague allusions to the dread dogma, and leave the preaching of terror to evangelists, without charge of societies, who are not imperilled by the dissent of parishioners? It is seldom preached now in city churches, and ministers' minds are everywhere perplexed in the effort to reconcile revelation with good taste.

Genuine belief is evidenced not only by action, but also by a consistent application of the theory espoused. But the doctrine of eternal damnation is never applied within the circle of the believer's acquaintance: it only does for strangers and heathen, or possibly, like Artemas Ward, for one's wife's relations. In all cases where sympathy is aroused, it is denied or evaded. A lady, brought up in this creed, professedly held to it, until a favorite son, a wild, wayward boy, swam across a stream to rob an orchard, and, being chased by the owner, was drowned in mid stream, with profane curses on his lips. Her creed sent him to hell; but the loving mother's heart abolished the creed, and she ceased to be a Calvinist.

Two ladies, cousins, lived alongside of each other in a seaport town. One was brought up as a Calvinist, the other as a Unitarian. They were wealthy, intelligent, hospitable, and especially kind to the poor. They lived to old age, and died,—one trusting in Christ for salvation through his atoning blood, the other, without any faith in Christ, peacefully committing her soul into the hands of her heavenly Father. A lady who was a cousin of both was asked, "Can any one be saved who rejects Christ as an atoning Saviour?"

She emphatically answered, "No, the Bible clearly says so: 'He that believeth not the Son shall not see life, but the wrath of God abideth on him.'"

"Did your cousin S. believe in Christ as a Saviour?"

"No, she died as she lived, denying that he was anything more than a good man."

"Then, she is in hell!"

She started in horror, and replied: "Oh, she was a dear good soul! It can't be!"

Let us see what the doctrine of hell means, when consistently applied. The population of the world is stated to be 1,350,000,000. Of these, about 300,000,000 are nominal Christians; but very few have been converted or born again, and, "except a man be born again, he cannot see the kingdom of God." The majority rely for salvation upon the rites of the church or good works, or else are indifferent as to their future state. An estimable and learned man has lately said in a public lecture that, of those whom men call Christians, God would only call two per cent. Christians. Upon this estimate there are six million truly converted Christians in the world; and, as about forty million people die every year, it follows logically that 180,000 people yearly go to heaven, and 39,820,000 are doomed to hell. There have been many people who would have assented to this, and who had no hope for the salvation of infants and heathen; but the mind and heart of the nineteenth century revolt from these atrocious statements. Infant salvation is now generally admitted, except that Roman Catholics limit salvation to the baptized. This rescues half of the human race; and charity saves a majority of the rest, in fact all toward whom sentiment is excited. Men will not now admit there are few that be saved, though they still profess to revere the words of Jesus,—"few are chosen," and "few there be that find it." To make the doctrine less horrible, some say that the unbelieving are annihilated. They find this in the Bible, but the great majority of Christians do not so read it. Others say the heathen will not perish;

Digitized by Google

but, to justify foreign missions, Prof. Shedd preached a sermon before the American Board, entitled "The Guilt of the Pagan," enforcing Paul's words, "For as many as have sinned without law shall also perish without law"; and he proved that, according to the Scriptures, the heathen are "without excuse." The Broad Churchman relies upon Canon Farrar's interpretation of *aionios* and *gehenna* to soften the doctrine, and limit the duration of the penalty.

But none of these explanations reconcile the eflecting mind and tender heart to the doctrine of damnation as being the will and revelation of God. An eminent Congregational minister was asked what he thought about eternal punishment. "I try never to think of it," was replied. "If I do, it gives me the blues for a fortnight." When an unregenerate philanthropist dies, men fall back upon "the mercy of God," and say, "Shall not the judge of all the earth do right!" "None will perish without a good reason for it." "We know not what may have passed between the soul and its Saviour in the last moments." Carlyle, Emerson, Longfellow, and Darwin may reject revelation with impunity, but woe to the unknown and unhonored unbeliever!

A doctrine thus loosely believed is not worthy of attack, and we can only wonder that men do not abandon it in principle, as they have already done in practice. Instead of attempting to trim down the doctrine into accord with science and sense, thus conceding the imperfection of "revelation," is it not more honoring to God and more creditable to man to admit that the New Testament contains merely the human record of the human beliefs of the age in which it was written?

But is this all-prevailing idea of hell, reaching over all lands and back through distant ages, utterly false? No: it is founded on fact and use, as is every other human belief. The fact is the pleasurableness of good and the painfulness of evil. In the long run, virtue brings its own reward and sin its own curse; and these results continue while existence lasts. The sinner will forever be the worse off for his sin: no atonement, no death-bed repentance, can remove the natural consequences of sin to the guilty. It is untrue that a complete and hopeless doom will be arbitrarily inflicted upon the sinner; but the natural ill of each transgression will follow its commission. Nature has recuperative power: the wound in the flesh is healed; but the effort has made a certain drain, minute it may be, upon the stock of vitality. So, evil in the end may sometimes lead to good, but there has been a loss that is never repaired. Men seem to escape the consequences of their evil acts; but a knowledge of their thoughts and lives would show the ills they bear, and these are often more plainly manifested in their posterity. This is the truth that underlies the false doctrine of hell,—natural retribution.

The use of the belief is the restraining power of fear. This has been a potent influence in the past; but the doubted threat loses its power, and men are losing belief in hell. It no longer terrifies educated people, and its far-away curse does not restrain the passionate.

Liberals are accused of lessening the restraints upon immorality by overthrowing the Bible doctrine of everlasting punishment; but they really are more severe toward sin than are the orthodox, for they do not encourage the sinner to believe that the consequences of lifelong crimes can be escaped by the lifting of the eye to the cross. They teach unavoidable injury from sin.

Though men cease to have the dread of eternal, hopeless torture before them, other motives may be as serviceable. The perception of the advantages of goodness, a sense which is growing in man through the experience of ages, the certainty of the human retribution of crime, which social science will yet evolve, and the perception of the inevitable natural punishment which follows all wrong-doing,—this hope and these fears will regenerate the world. ROBERT C. ADAMS.

TWO CONTEMPORARY QUEENS.

An Historic Study.

Next to Helen and Cleopatra, Mary Queen of Scots is the most winning of the heroines of history and historic romance. Ever new generations of admirers love her by hearsay. She is always conceived of as was Helen, as inviolably beautiful, in spite of all her woes and sufferance, and as exciting love, desire, and admiration in all who came within her influence. She is sure to become even now the ideal lady-love of more or less historic students in each new generation, so that her memory never lacks vindicators. And she still continues to win more or less converts or perverts to Romanism, which is now nothing but a reactionary sentimentalism which fondly fancies that it can stay the tidal wave of current industrial, scientific, and democratic civilization. From her "brilliant window-niche" in history, the Scottish queen rays out a continuous charm, like Poe's "Psyche":—

> "Lo, in yon brilliant window-niche
> How statue-like I see thee stand,
> An agate lamp within thy hand,—
> Ah, Psyche, from the regions which
> Are holy land!"

Her beauty was, as it were, forever sanctified by her tragic fate. She seems the sweeter for her woes and sorrows. She is in lovely feminine contrast to her sister queen, the haughty and intellectually masculine Elizabeth. Her grim enemy, John Knox, makes her soft, feminine lineaments seem still more bewitching by contrast. She was a queen in her gracious bearing to the last, and died with heroinely fortitude.

In Schiller's "Maria von Stuart," while a prisoner at Fotheringay, she is represented as apostrophizing the clouds which were sailing over her head in the direction of that land of France, where she had known naught but joy and honor and felicity. It was no wonder that she yearned to be wafted away with them from imprisonment and impending death to the fair land of her youth. Doubtless, the Queen of Scots was a beautiful, joyous, brave woman, full of love and poetry, and as good as the terrible times and the infamous society and faith in which she was nurtured would permit her to be. It is sufficient to say that she had been brought up in the Court of Catherine de Medici of Bartholomew Massacre infamy. Mary was religious after the fashion of the France of her time and of her Church. The Roman Catholic God of the period was a Moloch, whose nostrils dilated with delight while snuffing the odor of burning heretics, and whose favorite worshippers were high-born harlots and incestuous kings, and whose favorite priests and ministers were Jesuit assassins of heretical monarchs.

The only marvel is that Mary was even as good as she was. Walter Scott, Schiller, Alfieri, and lastly Swinburne have made her the subject of dramatic and romantic representation. As for Queen Elizabeth, she was the greatest sovereign who ever sat on the throne of England. She helped to break the bonds of Rome. Largely through her it was that the Anglo Saxon race became the champions and initiators of civil and religious liberty in both hemispheres. Hers was indeed a "lion port and awe-commanding face," to borrow the words of the poet Gray.

She was, in her inexorable will and courage, a true daughter of Henry VIII.; and she needed all her determination and leonine qualities to confront and foil her enemies, whether open or covert. Spain was then the foremost power of Europe, and was roasting heretics by hecatombs wherever her hideous sway extended. The smoke of her *autodafé* darkened the atmosphere of both hemispheres. Her rulers were atrabiliar, demoniac devotees, who by contrast make Nero, Caligula, and Tiberius quite respectable and amiable. The great heretical queen of England stood like a tower, the conspicuous mark of Roman Catholic, or rather Jesuitical hate and conspiracy; for it was in Elizabeth's time that the new order of Jesuits took the Papacy in charge, with the purpose of checkmating and counterworking the Reformation of Luther, proclaiming that any means, even assassination, were justified by the end which they had in view; namely, the prevention of the enlightenment of the people by the spread of knowledge, which, according to the historian Hume, they foresaw would be fatal to superstition and priestcraft in the long run.

But Queen Bess was equal to the emergency. She baffled all her foes, whether they were sneaking Jesuitical assassins or great kings with fleets and armies behind them. She saw from the safe shore of her inviolate island-realm the mighty Armada, which was gathered for her destruction and the forcible restoration of England to the papal fold, dispersed and destroyed by the tempest and the valor of her undaunted sea-rovers or vikings, such as Drake and Raleigh. Elizabeth was not only a great ruler, but she had the elements, natural and acquired, of a great writer in her, if she had been born in a private station. In that case there would have been one illustrious literary lady in the group of great scholars, thinkers, philosophers, and poets, who were her subjects and contemporaries. Had the case been reversed, and Queen Elizabeth been in Queen Mary's power, she would have been put to death in obedience to the demand of the Roman Curia.

It was a bloody and cruel age; and Elizabeth, instead of being made a sacrifice herself, was able to sacrifice her enemies. Although a regular Tudor and despot (for as yet a constitutional monarchy was unknown), still Queen Elizabeth, by the check which she gave to the Roman Curia, the patroness of tyrannies and despotisms of all sorts, must be regarded as a forerunner and promoter of modern science, liberty, and civilization. She was, in fact, the crowned pioneer of the social, political, and intellectual state of things in which we find ourselves living to-day. As for her fairer rival, Mary, she was a siren, a Circe, whose blandishments were all on the side of mediæval or feudal tyranny, priestcraft, and popular superstition and ignorance,—that is, on the side of the feudal Church and State. Out of her loins issued that ill-starred and wrong-headed brood of Stuart kings, one of whom was a coward, an ungainly pedant, and licentious in a manner not to be described in a living speech; while another was beheaded; and another was a dissolute *roué*; and still another and the last of the bad lot was expelled from his kingdom, or ran away from it, never to return.

Thus was the ill-starred but beautiful mother succeeded by a progeny equally ill-starred. In spite of the Stuarts, feudal England was bound to become modern, industrial, and, ere long, democratic England, and to plant overshadowing republics in the farthest West and East,—republics that will yet Anglo-Saxonize the entire globe, or cover it with free Anglo-Saxon institutions, and make the air of

Digitized by Google

every land and clime resonant with the accents of the most cosmopolitan of all tongues,—namely, the English or English-American. B. W. BALL.

EDITORIAL NOTES.

UNTIL further notice, make all cheques and drafts payable to the order of John C. Haynes.

DR. G. STANLEY HALL has an article on "The Education of the Will," in the Princeton *Review* for November, which deserves the attention of those interested in the moral training of children.

USUALLY, the source of weakness in all such attempts is the religious crank, the man who determines to found the organization upon some ism, and who thrusts forward his notions as offensively as the most fanatical ecclesiastic. We remember one instance in point, where a liberal club was formed and where the majority of the members preferred that it should be confined largely to the subject of natural history, but where one individual insisted upon a new era from which history should be dated; namely, the birth of Thomas Paine. Now, a liberal society should be disposed to treat Paine and Jesus and all other men with perfect impartiality, aiming only to arrive at the real truths of history. It is not man worship, but truth we are seeking; not the substitution of one dogma or one master for another, but the perfect freedom to learn the actual facts in religious history, and the latest that science has brought to us of the universe and its life.—*New Religion*.

IN a recent discourse at Cincinnati, Rabbi Benjamin said: "The question now naturally arises, What would be the probable effect, if the ministers of the various religions persisted in purifying their faith by removing the inaccurate and unnecessary, and maintaining only the true and everlasting? There would be a steady and gradual diminution in the differences that separate sects, in the ill-will that sectarianism engenders, thus leading to the practice of a universal religion,—which I venture to prognosticate would be a reformed Judaism, and thus leading to the coming of the glorious time when all men will be as brothers, working hand in hand for the general good and for the individual happiness." The effect of the "purifying" process, according to Rev. M. J. Savage, would be Unitarianism. Now, what does Rabbi Benjamin mean by reformed Judaism and what does Mr. Savage mean by Unitarianism? Is either system broad enough to accept on terms of perfect equality the agnostic who says, I am doubtful about God and immortality, but believe in "working hand in hand for the general good and for the individual happiness."

THE following powerful sonnet is from Swinburne's *Tristram of Lyonnesse, and Other Poems*:—

ON THE RUSSIAN PERSECUTION OF THE JEWS.

O Son of Man, by lying tongues adored,
By slaughterous hands of slaves with feet red-shod,
In carnage deep as ever Christian trod
Profaned with prayer and sacrifice abhorred
And incense from the trembling tyrant's horde,
Brute worshippers or wielders of the rod,
Most murderous even of all who call thee God,
Most treacherous even that ever called thee Lord;
Face loved of little children long ago,
Head hated of the priests and rulers then,
If thou see this, or hear these hounds of thine
Run ravening as the Gadarean swine,
Say, was not this thy Passion, to foreknow
In death's worst hour the works of Christian men?

"I AM not," says Col. Higginson, "one of those to whom the election of Gen. Butler seems the worst of calamities, although I sincerely regret it. It is a part of the general reaction against the shortcomings of the Republican party, which reaction I personally share. Some of Gen. Butler's views in regard to State government seem to me very reasonable, though nine-tenths of what he says on this subject is undoubtedly pure clap-trap. He will have every inducement to make a good governor, and his powers will be so limited that he will be compelled to the exercise of some tact and conciliation. The chief evil of his election is in the bad example that it gives to our young people, of success attained by the arts of a demagogue. Nevertheless, an occasional relapse of that kind is quite inevitable under a republican government."

A CORRESPONDENT of the St. Louis *Globe-Democrat* writes that,

The Tithing House is still in active use in Salt Lake City, and through it half a million a year is collected by the Mormon officials. This comes mostly from the poor; and nobody knows to what use it is put, although many had their surmises, when they found that Brigham Young, although not entitled to any salary, died worth several millions. The rich evade their tithes in a variety of ways: the poor must pay them, or they are subjected to trouble and annoyance. When they have paid their tithes, they are not out of debt to the Church. They must contribute, when called upon, to the erection of new buildings, or do anything else which the priesthood may demand. "Better starve your body than your soul," and away goes the last bushel of corn or the last sheep or the last steer.

MR. JAMES K. APPLEBEE, in a recent discourse at the Parker Memorial, said: "There is another thing that I object to,—that is, the very common practice of giving people certain privileges because they happen to be preachers. Very often, when I have been making purchases, storekeepers have said, 'The price of this article is so much; but, as you are a minister, we'll charge you so much less.' Now, why should that be? Why should I be treated like a baby, and be defrauded of my right to drive my own bargains? Out West, they have a vicious custom of allowing ministers to travel on the railroads for half-fare. That is a union between the Church and the railroads every whit as vicious, in its way, as any union between Church and State. It costs so much to run the railroads; and, if a certain class of people pay less than others, the others must be taxed to make up the loss. Let the minister take his place, a citizen among other citizens; and let him pay his own way, as other citizens do."

PROF. FELIX ADLER, in a recent lecture before the Society for Ethical Culture, said: "The Free Religious Association arose in opposition to the claim of Christianity that it is the only true religion. Christianity has always claimed that it considers itself to be the light, and all other religions the shadow. It quietly ignores the most obvious facts, and uses the word 'Christian' as if it were synonymous with 'religious.' But in modern times, since the faith of Persia, with its fervid mysticism, has become known; since the beautiful legends of Buddha have made us acquainted with the religious ideals of millions on millions of our fellow-men in the East; since the writings of the German philosophers and of many philanthropists and reformers have been studied,—the proud claim of the Christian must be disputed. It has become evident that a vivid religiosity, reverence for the great, hate of wrong and love of right, is to be found among the professors of the world's various creeds, and not only that, but among the small company of those who have in all nations and ages held aloof altogether from the popular theologies. When the Unitarian clergy assembled at Syracuse, and after a determined opposition adopted a preamble, in which they declared themselves to be followers of the Lord Jesus Christ, there were a number of men in that body who declined to be bound by what was tantamount to a formulated creed, who declined to indorse the opinion that morality must be stamped with the name of Christianity's founder in order to pass as acceptable coin; and it was through their efforts that the Free Religious movement was started. In so far as the Free Religious Association implied a protest against intolerance and narrowness, its work was valuable."

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index*.

BUGLE-CALL.

Rouse thee, warrior! Idle dreaming
Ill befits thy stalwart might,
While the crimson watch-fires streaming
Flare above yon dusky height!

Lift thine eyes, and gird thine armor;
Never let thy stout heart quail.
Let no voice of subtle charmer
Lure thee from thy burnished mail.

Not in vain shall be thy breasting
Of the foes that strike thy steel:
If thou draw at Truth's behesting,
Naught shall make thy courage reel.

Not on reddened fields of battle,
Where the flower of manhood dies,
Where the cannon's roar and rattle
Murks the azure of the skies,

Shall thy victories await thee,
With the woven crown of fame,
But where men revile and hate thee,
And where falsehood blights thy name.

Bring the valor that thou vauntest
To thy daily, toiling life:
That shall be thy field of contest,
That thy never-ending strife!

Greet the poison of the hater
With the olive-branch of love;
Meet the whisperings of the traitor
With the whiteness of the dove.

Front the coward blow that smites thee
With the outstretched palm of peace;
Nourish him who ill requites thee
From thy harvest's full increase.

Mourn not seeming lost affection,—
That which perisheth is vain;
Nor essay its resurrection:
'Tis not worth thy tears and pain.

Cast the links so lightly riven
Back into thy changeless Past.
That which *thou* hast freely given
Grudge not! It shall surely last.

Let not Disappointment sting thee:
Sweeter than the siren's song,—
Kindly cruel,—she shall bring thee
To the highways of the strong.

Let thy step be sure and steady
On the grief-girt Hills of Time.
Keep thy heart and hand full ready
For thy brother's feet that climb!

As the years that bring thee nearer
To the daisies and the sod
Purge thine earthly vision clearer,
Till thou seest the truths of God,

That which vexed thee, that which frets thee,
Shall be caught like mist away,
By the Hand of Love that sets thee
Far above the lessening fray,

When the speech of scorn and censure
That made dark thine earlier days,
Slow-repented, peradventure,
Shall be changed to songs of praise!

The Index.

BOSTON. NOV. 30. 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

THE CREEDS OF AGNOSTICISM.

BY L. J. VANCE.

The formidable prominence into which the creeds of Agnosticism have sprung up at the present day merits (it seems to me) all the attention which conservative thinkers are bestowing upon them. The present inquiry concerns not only the genesis and development of the formulated creeds of the agnostics, but also their present acceptability.

The rapid manner in which the arguments advanced by Agnosticism are making sturdy proselytes; the aggressive attitude which it assumes toward everything in the established religion; the bold, initiatory steps which it has taken forward in matters of belief,—in these many ways, Agnosticism is fast exciting alike the hopes and fears of rival parties.

There are several features presented by Agnosticism which we may briefly point out. We find on examination that the agnostics as a class are not at all united by any one system, not subscribing to any one set of tenets, nor are they united by any other common bond except the mere fact of their Agnosticism. It may seem strange that even the agnostics cannot agree upon a creed to which they can pin fast their common faith. The result is that rival systems flourish side by side, and skilful advocates urge their acceptance as eloquently as their abilities will permit. Prominent among these creeds of Agnosticism stand face to face the systems promulgated under the names of Auguste Comte and Herbert Spencer. The antagonism between them is recognized as deeply seated. This issue raised between these creeds cannot be overlooked or avoided by the agnostics, however much they may deprecate its unfortunate occurrence. The creed of one is formulated as "The Religion of Humanity"; the other side "utterly reject" such a form of Agnosticism, as unfounded in fact and as unscientific. It would look as if the best way to reconcile this antagonism would be to keep the two creeds separate and apart. A recent writer, in an exceedingly ingenious article, thinks he can "bridge over" the chasm between the contending parties. (See *Index* for August 3.) However, a brief *résumé* of the manner in which the agnostics have arrived at their creeds will clear up much that has hindered both sides from coming to a lasting truce, and will show us wherein Agnosticism has failed at times to meet the test.

It may be confidently asserted that Religion and Agnosticism are fundamentally based upon a common origin. The truth of this proposition is at once clear and convincing. Comparative mythology, together with philology, has furnished us with evidence which explains the origin and growth of the religious beliefs of primitive man. We may briefly summarize the results of these investigations.

1. Philological inquiries point to the conclusion that, in the earliest stages of his existence, man was unconsciously a monotheist. That is to say, he worshipped one God only. The evidence seems to show that for this Power he had no distinctive name. Hence, primitive man at first said, "It rains," "It thunders," etc. It should be borne in mind, however, that the state of language at so primitive a state did not permit the use of more than a single sound to express a separate idea.

2. The evidence furnished by comparative mythology is abundant enough to show that, at a later stage of man's development, the words which were at first used as verbs were turned into nouns, and as such they became the names of deities. This is Polytheism. In the lowest stage of polytheism, everything is regarded as full of life and animation: the clouds roar; the trees speak; the mountains walk; in short, all phenomena are endowed with human attributes. In the highest stage of polytheism, man's mental, social, and moral characteristics are deified. In this stage, we have a God of Love, a God of War, a God of Peace and Plenty, together with numerous other deities, who watch over the doings of man here on earth.

3. The next forward step in the evolution of religion was taken by the Semitic people. The nature of their language necessitated such a step. Their gods are derived from roots denoting purely moral attributes. Thus, Baal signifies ruler; Moloch also means to govern; the name El signifying the "Almighty" is transformed at a later date into Jehovah, the "self-existent." The mythology of the Shemities will show quite clearly that the personalities of their gods reveal the objects of nature which they represent. (Müller, *Chips*, vol. i., pp. 348-352.)

From the preceding, it will be seen that the Rev. Mr. Chadwick correctly expresses the truth when he says that "the essence of religion is man's sense of his relation to the universe, and his endeavor somehow to convert this sense into a binding law of life." The origin of all religious belief is only partially interpreted when the writer in *The Index* (see the number for February 16) stated the source lies in man's dependence on Nature and her forces. Primitive man attempted to solve the mysteries that environed him, in order that he might take advantage of his knowledge to promote his own welfare. If man had no hopes or fears to satisfy, Religion would never have arisen. Therefore, man hoped some day that his relation to the universe would be satisfactorily known. His hopes led him to seek consolation that happiness would come through religion. When man saw that he was a mere child before the powers above and beyond him, his fears led him to seek preservation by invoking the kindly aid of gods. Hence, religion is a birth from mythology, and afterward cradled by philosophy. In the many-hued rainbow, in the vivid flash of lightning, in the chilling blasts of wind that are felt but not seen, in the movements of the sun and the heavenly bodies, in the clouds of fantastic shapes,—in all these and many other things, man was profoundly impressed with the wonders of nature. Then, again, these same wonders caused man to shudder at his dependence.

At one time the clouds, a moment before so bright, now darkened in rage, and torrents of rain and fierce storms would destroy his home. The lightning, with crashing force, would destroy the stoutest oak and cleave the body of the human victim. The burning sun would wither up all vegetation, dry up the streams, and man's means of subsistence were gone. And so the religious beliefs of man continued to be only a definition of his dependence upon the universe through the aid of gods, until some day he began to inquire into his faith and look into the grounds for his belief.

At this point there is a break. Right here, Agnosticism, which had heretofore kept pace with Religion, takes its starting. To think that the very inquisitiveness which led man to formulate a religion to satisfy his fears, and for his self-protection, should at last be the means of arousing the very hopes and fears he had hoped to satisfy! This is the fatal fact. When man first studied the wonders of nature, two important things were noticed:—

1. Some phenomena were evidently regular. Thus, the succession of day and night, the succession of the seasons, the regular growth of animal and plant, was something that occurred regularly.

2. It was observed that some phenomena took place at irregular intervals. Thus, showers of meteors, the appearances of comets, and sudden epidemics were things that took men by surprise. Hence, the important fact should be noticed that the changes which occurred so irregularly were attributed to gods. At another stage of development, man thought he could give a valid explanation of these arbitrary phenomena. In this first explanation of nature's operations, the agnostic asserts his earliest creed; namely, all changes in the universe act in blind obedience to invariable law.

This proposition, of itself, is not formidable. The subscriber to this creed may or may not be an agnostic. If we believe that invariable law is the cause of phenomena, if we accept the explanation that it includes within itself all power, then we are agnostics. If, on the other hand, we believe that there is an Infinite Power immanent in the world of spirit and of matter, yet transcending both, we are Theists. The former thinks that his creed explains itself. The latter admits that, while physical nature is governed by laws, still invariable law explains nothing either by itself or of itself. John Stuart Mill wisely declared that "the laws of nature do not account for their own origin." The question seems narrowed down to the precise meaning and import of the term "law," especially in connection with the phenomena of nature. Huxley gives a singular definition of this term. He says, "Law means a rule which we have always found to hold good, and which we expect always will hold good" (*Lay Sermons*, p. 340). Note that the wary scientist speaks of law as "a rule," not intimating whether there is a ruler. Belief in law, which is a tenet of the agnostic, is connected with belief in a law-giver, which is a tenet of the theist. If law always holds good, the one who gives those laws we expect, of necessity, would always hold good, too. This leads us irresistibly to inquire, if law reigns throughout the physical world, is it supreme over everything, or is it under control of some Power? The venerable Prof. Peirce pertinently puts it in this wise: "If everything is governed by law, and if all the power is in the physical universe that ever was there, where is God?" He adds, as his individual response, "In the intention." Another instructive interpretation may be found in the language of Principal Dawson. "Law," he writes, "expresses the uniform exercise of some force or power. We may speak of law as a voluntary limitation of God's power." The controversy over this word "law" is the direct outgrowth of metaphysical interference. No permanent advantage can be gained to either parties by quibbling over a word of their own coining. A line in Emerson correctly sets forth what both sides wish, but cannot say,—

"And Conscious Law is King of kings."

In the foregoing, enough has been indicated that this elementary creed of Agnosticism is purely objective. An Infinite Power in some form or another has ever been recognized in the earliest as well as the latest times by all men. In our method of recognizing this Infinite Power may be said to consist either our Agnosticism or our Theism. In one sense, we are agnostics, if we recognize this Power objectively. If we recognize the Infinite Power subjectively, we are, in a certain sense, theists. Here, we have the primary starting-points of the creeds of all religion. Let us briefly examine, and see how such antagonistic creeds could have arisen. This brings us down to the latest teachings of modern Agnosticism. In the writings of Herbert Spencer are found the cleverest exposition of the position of the agnostics. With laborious exactness of detail, with its cogency of argument, with its subtile analysis and felicity of expression, the work of Spencer excites at once the expressions of admiration from those who pay honor to merit. His one great aim he set out to fulfil a quarter of a century ago, and he has at last built up an imposing system of philosophy. Nothing has been spared to make it complete; nothing has seemed to escape his keen glance, in order that everything should be utilized in the erection of his philosophy. Therefore, an examination of his system, as set forth in his *First Principles* and other works, is necessary in considering the creeds of Agnosticism.

Spencer divides the universe into two divisions,—the Knowable and the Unknowable. It is unfortunate Spencer has given no express definition of either of these important terms. I have looked in vain for such an explanation. What does Herbert Spencer mean by "Knowable" and "Unknowable"? If by Knowable he means knowableness, and by Unknowable unknowableness, as concrete terms, denoting

Digitized by Google

an object by its objective properties, we refuse to believe it. If, on the contrary, Spencer uses these words abstractly, they denote, ontologically, nothing. Another thing should be noticed: Spencer uses Unknowable and Knowable with two opposite meanings. First, we have the Unknowable and Knowable in science, and, secondly, the Unknowable and Knowable in religion. And he certainly has not shown that, used in these ways, the terms are strictly identical, or of the same quality. Under the chapter of the "Knowable," he discusses (1) Ultimate Religious ideas, (2) Ultimate Scientific ideas, (3) the Relativity of all Knowledge. Let us rapidly examine these propositions.

Spencer starts out under this subject of ultimate religious ideas with the undisputed assertion that "to the aboriginal man, and to every civilized child, the problem of the Universe suggests itself." The next step is to examine the origin of the universe. He criticises the three suppositions regarding this question. He says, "We may assert that it is self-existent; or that it is self-created; or that it is created by external agency" (*First Principles*, p. 30). After carefully examining these suppositions, he comes to the conclusion that "these three different suppositions, verbally intelligible though they are, and severally seeming quite rational, turn out, when critically examined, to be literally unthinkable. It is not a question of probability, or credibility, but of conceivability." He then examines the nature of the universe. Thus, he asks, How came all these things so? and this leads him to the nature of the First Cause. He asks, "Is the First Cause finite or infinite?" He shows to his satisfaction that the First Cause, "if it can not, it must be infinite"; that it must be absolute; that the Infinite is unconditionally unlimited; that the unconditionally limited is the Absolute.

Spencer is candid enough to define "a religious creed as an *a priori* theory of the Universe, leaving out the accompanying moral code." In examining aboriginal creeds, be they fetich, polytheistic, monotheistic, or pantheistic, they assert that there is a mysterious something to be explained, that such and such is the explanation (*First Principles*, p. 44). As the final conclusion to all his philosophical examination, Spencer enunciates the creed of the agnostic; namely, that the Power which the universe manifests us is utterly inscrutable. This is an ultimate religious idea.

Under the subject of ultimate scientific ideas, Spencer starts out with five things, or objects. They are space and time, matter and motion, and lastly force. After his examination of space and time, he concludes they are "wholly incomprehensible." So, also, he says, after searching analysis, that "matter, in its ultimate nature, is as absolutely incomprehensible as space and time." Motion, after undergoing the same method, is shown, neither when considered in connection with space, or when in connection with matter, or considered in connection with rest, do we find it truly cognizable. And, again, "It is impossible to form any idea of force." The conclusion of Spencer is thus summarized: that space, time, matter, motion, and force "are all representative of realities that cannot be comprehended"; that, whether in the external or the internal world, these things are absolutely unknown; that they are beyond our comprehension, and to think of them either in past time or in the future is something we cannot do. In the final conclusion of this examination, Spencer asserts that, in its ultimate essence, nothing can be known. This is an ultimate scientific idea.

Together, these two propositions constitute the formulated creeds of Agnosticism. He attempts to combine these two conclusions into some common faith. The two creeds just enunciated both hold in common that the Absolute is unknowable. Yet Spencer elaborately argues that we have "an indefinite consciousness" of the Absolute. What is this indefinite consciousness? If it is a vague and uncertain consciousness of *something* that is absolutely inconceivable, we are agnostics of the Herbert Spencer school. This something of which we are indefinitely conscious, this something which is Absolute, this something which is unlimited and unconditioned, this something which is an inscrutable Power, this something of which we have no knowledge, this something which is all this and something more, is to be revered as the Unknowable. This Power works in us certain effects (*First Principles*, p. 557). Among these may be mentioned that man recognizes that he is a mere plaything in the hands of the Unknowable; that man must bow down with all humility before this Unknowable Power, who exacts worship in the form of obedience to his inflexible will. The Unknowable is an object of religious adoration. Yet it seems almost absurd to recognize the Unknowable as an object of worship, when Spencer is never tired of asserting that this Power is absolutely incognizable. The worship of an unknowable God is not worship at all. It is pure symbolism, and nothing else. To worship something which is incognizable, inconceivable, or incomprehensible, is to worship a *figuræ dictionis* of your own making. The Unknowable is the Frankenstein of Spencer's creation; and, as is usually the case, such a being is the spectre of its creator.

There is still another aspect of Agnosticism. This phase is presented by the teachings of Auguste Comte. A brief summary may be needful. The fundamental tenets of this class of agnostics are:—

1. That Humanity is the Supreme Being whom we should worship.

2. That Humanity is the mediator between man and the Infinite Power.

Auguste Comte propounded a religion that enunciated as its creed that "between man and the world we find Humanity." Now, what is this Humanity which is the Supreme Being? It seems that the Humanity worshipped by the agnostics is those characteristics which make up the manliness of man. We ask, What is manliness which we predicate of mankind? A writer in *The Index* (August 3) confidently urges the acceptance of Comte's theory. As he is ingenious, his statements have a sort of authoritative value. He says, we "perceive the sublime image of the Supreme Being endowed with the same characteristics which are seen in every living organism." He adds, a little further on, that "this image represents humanity as an organism endowed with high spiritual characteristics." We inquire again, What is this "image" which represents humanity, and of which we predicate spiritualness? Humanity, so used by the positivists, cannot mean the whole human race, with the individuals of both high and low, good and evil, characteristics. When Humanity is worshipped, do the worshippers include in their devotions Talmage and Beecher, Guiteau and Arabi Bey? Humanity, accordingly, is an image that has its outlines undefined. The Religion of Humanity may be defined as the sum of all human characteristics, whether in the past or present. It is the epitome of all that "humanness" which is possible of man. If I understand the tenets aright, the positivists, in humanity, see

> "Heaven's numerous hierarchy span
> The mystic gulf from God to man."

Such is the function of this Supreme Being, Humanity. Can we realize what this "image" of the Infinite Being really is? If so, why should it be worshipped instead of Humanity? The Religion of Humanity must be something more than belief in an image of a Supreme Being. I believe that Goethe has come nearer to definite solution of the problem than any one, concerning the position of humanity. Faust starts out as an eudemonist. At first, he feels the selfish passions of the race. He slowly advances from high to higher, from clear to clearer, from good to better. At last, he is a noble worker for the welfare of mankind. Faust is finally an altruist. What he has done for humanity can never be lost or forgotten. His labor has become a part of the property of humanity, and is so cherished. Well may he exclaim,—

> "Es kann die Spur von meinen Erdetagen,
> Nicht in Aeonen untergehn"!

This idea of the indestructibility of the individual, whether spiritual or material, is not totally foreign to the system of M. Comte. The materials which go to make up our corporeal structure have been clearly proved, *a priori*, to be indestructible. So the works we have performed, the deeds we have enacted, the words we have spoken, the tears that once have been shed, yea, the blush that mantles the cheek,—these are things that do not perish. Therefore, you and I, one and all, live in that humanity which we claim as our own; we live in that humanity which is quickened and made better by our deeds, by our thoughts and words.

Therefore, those who best typify the spirit of humanity are called great men. They represent in one form or another its general characteristics. Humanity identifies great men with itself. The great man is the interpreter of the divine ideas of his age. Under the spell of these great names, we acknowledge the common bond of humanity. Great men are the standard-bearers of humanity; and, following their daring footsteps, their fellow-men march stoutly forward on their appointed way. The cheering voices of the leaders touch within us the tender chords of brotherhood. But great men are great, not in themselves, but in their race,—in that humanity which all climes and all ages are rapidly enriching. This is not the teaching of Auguste Comte; but it is the teaching of that rugged iconoclast of the North, Thomas Carlyle. This constitutes the so-called hero-worship; and Carlyle reiterates, in every possible way, that such worship leads us directly to communion with the Divine

II.

It has seemed to us that a concise and matter-of-fact statement of the creeds of Agnosticism would be eminently satisfactory alike to friends and foes. The former would perhaps take pride in the strength of their well-fortified position. The latter might draw comfort in pointing out the errors which underlaid the position of their opponents. I hope I have done justice to both parties, without any display of literary expression. The greater portion of our self-appointed task is finished: we still purpose to examine whether or not these formulated creeds of the agnostics are now, or can be, acceptable. This can only be done by ascertaining their truth, as all truth is acceptable.

It should not be necessary further to explain or discuss the first elementary creed,—that all changes in the universe act in blind obedience to invariable law. As has been mentioned so many times, the whole construction of this creed depends upon the meaning we attach to the word "law." We may poetically express the meaning of the theist, and say,—

> "God is law, O Soul, and let us rejoice;
> For if he thunder by law, the thunder is yet his voice."

Or we may simply say with the agnostics, The whole course of nature is governed by supreme law, that the notion of the interference of the Deity with particular phenomena, as thunder, is false and unscientific (Lecky's *European Morals*, p. 355). I do not see how the agnostic has any special advantage over his Theistic brethren in maintaining that law reigns supreme over the phenomena of nature. The differences between the two parties centre around the powers and attributes which we give to "law." If we make natural law include the origin of the living and the non-living, and also go so far as to say that "the forces of nature," by "natural selection," etc., cause certain results, we become subscribers to the agnostic's creed.

But let us point out a subtle error underlying the position of the agnostics. In this creed, the word "law" is used as though it were all the time concrete; and they carry their error farther by objectifying an abstraction. Thus, the word itself is constantly used as though it really meant something that rules other things, and sometimes may even cause results. This is a most singular yet fatal error. The term is indisputably abstract; and then to say that laws "cause results," we objectify our own abstraction. To speak of "forces" and "laws" as if they were real things is to personify the realities thus invented. This conclusion is logical, and quite unavoidable. Suppose we take Huxley's practical definition of law, and substitute the creed of the agnostic, then could any one hold that law denotes something that regulates, something that controls agents, something that causes results? The answer is plainly in the negative. To use the word "law" in the sense which the agnostics do is to create something which is no longer law. We cannot dispense with such words as "forces," "laws," etc., until we gain a clearer insight into the cause of all phenomena, and their *modus operandi*. There is no great harm in using abstract words as if they were realities, provided we understand all along that they are fictions of our creation. Such abstractions as Forces, Laws, etc., are *muscæ volitantes* that dance before the eyes of the metaphysician. If he knows their nature, he will not attempt to brush them away. We live in a world of rapid changes: not for a moment does anything remain the same as it was the moment before. These changes are for the most part orderly and regular. Back and far beyond these natural phenomena, an Infinite Power manifests itself, —a Power infinite in wisdom, infinite in perfection, and infinite in justice. This is the simplest, easiest, and best conception we have of the Infinite. In some degree all of us are able to comprehend that the phe-

Digitized by Google

nomena in the course of nature are certain fixed ways of divine workings.

In the ancient creeds of Agnosticism, no such prominence is given to this word "law." The reason is that man's knowledge did not allow him to define exactly just what changes were subject to mere caprice and just what were regulated by invariable law. The philosophers of India were in every way deeply imaginative, and in their religion we find very subtle traces of this faculty of the imagination. Hence, Pantheism is the legitimate outcome from this imaginative notion of the nature of the world. It was repeated over and over again in Hindu philosophy that there is no God independent of nature. Whether in Vedic theology or in Buddhism, with plausible imagery the philosopher depicts in lively colors the beautiful hope in store for mankind. Thus, he says: "Thou hast seen the spider spin his web, thou hast seen it shine like a rainbow in the rays of the morning sun. From his bosom the little artificer drew forth the wonderful thread, and into his bosom he can withdraw it again. So Brahm made, so will he absorb the world." It should be pointed out that the Unknowable of Spencer is quite identical with Brahm of the Hindus. The one is (so to speak) the exact counterpart of the other. Very little can Herbert Spencer's Unknowable be distinguished from the Brahman's Undiscernible. Max Müller says that Buddha converted a philosophical system into a Religion. If this is indeed correct, Spencer has also turned his system of philosophy into a system of Religion. What Herbert Spencer terms the Spiritualistic Philosophy is nothing more nor less than Pantheism; while the materialistic school is avowedly atheistic. Prof. Huxley, with remarkable perspicuity, has finely showed the similarity between Pantheism and Materialism (his fourteenth Lay Sermon). Spencer himself confesses that the dispute between these two philosophies is a "war of words." Huxley well puts it when he says that "two paths meet at the summit of the mountain, though they set out on opposite sides of it." Let us take for examination the mind, and see how both parties arrive at the same place by different paths. As the term is commonly used, we speak of it as a reality. We say, "The mind thinks, acts," etc. However, Hume says that the mind is "nothing but a mere bundle or collection of different perceptions." For example, Hume assumed Locke's theory of ideas. This theory stated that "ideas" are formed in the mind by particles of the properties of the bodies. Hume's conclusion was that all our knowledge comes from the sensations produced by these properties. Condillac preferred the word "sensation" to the word "perception" as used by Hume. On the other hand, Spencer is quite particular to say that "mind will not be treated by the narrow, metaphysical method, but as a phase of nature's order." Here, then, are the two paths: first, the materialist makes mind "a phase of nature's order"; the other says that mind never acts "except by one of its faculties." Is not the result identical? Both clearly agree in making mind to be a mode, that its attributes, "ideas," "faculties," etc., are substances, that these substances are properties, that these properties are substance. Thus, we see how Pantheism and Materialism meet upon common ground. It is plain that Spencer in his definition does not mean by "mind" mere mental phenomena; but, as an abstract term, it is only a mode in which it acts. Therefore, Huxley's acute sense of analogy did not fail him, when he pointed out the identity between Materialism and Pantheism.

In the Grecian creeds of Agnosticism, speculations concerning the mind were not in order. Anaxagoras is a great central figure in Grecian philosophy, yet in his creed he asserted the principles of modern Agnosticism. He repeatedly exclaimed that "nothing can be known; nothing can be certain; sense is limited; the intellect is weak." If this is not the argument of Spencer over again, I greatly misunderstand his writings. The very same conclusion is arrived at in his chapter on "The Relativity of Knowledge." It is not practical to enumerate the articles in the creeds of ancient Agnosticism, because time fails us completely.

Passing down to modern times, the "method of using one's reason rightly," etc., of René Descartes, forms a starting-point for scientific Agnosticism. The method is briefly this: he sought "to resolve all the phenomena of the universe into matter and motion, or forces operating according to law." By this method, it is as easy to follow the path of Materialism as it is to tread the path of Idealism. These two systems - Idealism and Materialism—were the inevitable forerunners of the creeds of modern Agnosticism. It was of necessity a logical result that, as science developed, so soon would Agnosticism develop. The formidable controversy over "mind and matter," once sprung up, has rapidly assumed vast proportions, measured by voluminous writings. The materialists are put into this awkward position: matter—and by matter we mean the material elements, as iron, oxygen, etc.—is eternal or it is not. Of course, if these elements were created, something in existence before them must have done this act of creation. Suppose they are eternal, according to Spencer's own philosophy they must, at some time in the past, have come to a period of rest, the *equilibrium mobile*. Now, in order to pass out of this state of the minimum of condensation, something, it must be confessed, must have started or moved these material elements into motion, and afterward into action. The question is resolved then into this form: When the universe comes to "the complete equilibrium,"—that is, when all the particles and molecules have become entirely inactive, and cease completely to act on each other,—what Power can set them in motion again? This is the question the Sphinx impassionately asks of the agnostics. As before mentioned, in our method of recognizing this Power may be said to consist either our Theism or Atheism.

Herbert Spencer has, with some exceptions, embraced the philosophic recognition of the Infinite as interpreted by Sir William Hamilton. He quotes, with approval, Dr. Mansel, who says, "To conceive of the Deity as he is, we must conceive him as first cause, as absolute, and as infinite." The agnostic has seized upon these terms; and, by printing them in large capitals, they are turned into quite important objects. Hamilton says that "the mind can conceive, and, consequently, the mind can know, only the limited and the conditionally limited: the infinite, the unconditionally limited, or the absolute cannot positively be construed to the mind. . . . The infinite and the absolute, properly so called, are inconceivable to us." These terms are in form, as Hamilton admits, negative; and even our conception of them is negative. The Infinite, as such, cannot be God. The term expresses only an attribute. If we say "Infinite," we may inquire, "The infinite what?" If we mean infinity by infinite, we must agree with both Hamilton and Spencer that it is "inconceivable." It is quite as impossible to conceive of "infinity" or "absoluteness" as to conceive of "blueness" or "hardness." Putting "*the*" as an article before "infinite" is still more confusing. What have we in our mind when we speak of "the Infinite" or "the Unknowable"? The words are negative, and denote nothing. To the Unknowable, Spencer assigns infinite as an attribute. What is that *something* of which infinity is a predicate? Thus, Spencer triumphantly says that "to say we cannot know the Absolute is by implication to affirm there is an Absolute." It seems to me that, keeping in view what has been said, we may affirm that to say we do not know the Absolute does not imply that there is any Absolute to be known at all. I hold this to be indisputable.

Therefore, Herbert Spencer, in his method of recognizing Divine Power, fails to embody it so as it can be comprehended by the pure reason,—*der reinen Vernunft*. To say that the Unknowable exists is impliedly to assert that it (the Unknowable) is not wholly unknown. Indeed, there may be no Unknowable to be known. Still, to recognize the term Unknowable as something real is a fatal error of Spencer,—an error of logic as well as of metaphysics. Take again the five elements referred to by Spencer as ultimates,—motion, matter, time, space, and force. Motion is an abstract term. The word "force" is used both in an abstract and concrete sense. Spencer uses Force so as to include light, heat, magnetism, etc. As an abstract word, Force may mean matter in motion. Light, magnetism, gravity, etc., are not known to be substantial. He says that "Force, as we know it, can be regarded only as a certain conditioned effect of the Unconditioned Cause, as the relative reality indicating to us an Absolute Reality by which it is immediately produced. And, here, we see more clearly than before how inevitable is that transfigured realism to which sceptical criticism finally brings us round." Such a frank admission is worthy alone of its great writer. These five ultimates are incongruous, and whether these explain the Unknowable is very much doubted. Knowledge, according to Spencer, is only the knowledge of matter and its various manifestations,—motion, time, space, and force. This is pure materialism. And to speak of an Inscrutable Power working in the universe as the "Unknowable" is also materialism.

There is another side to the creeds of Agnosticism. This is presented by the scientific formulas of evolution. Let us briefly summarize this evidence. The creed of the agnostic declares that the Unknowable is a First Cause. We are assured that the First Cause is itself Infinite and Absolute. (*First Principles*, § 12.) Scientific Agnosticism has stoutly asserted it can get along without a First Cause. Yet science may justly claim that there is no need of recognizing a first cause, because in the various branches of science we deal only with secondary causes, which have occurred in the course of evolution. Science never finds herself face to face with a first cause: that is no reason for denying there is one. In the doctrine of the survival of the fittest, we see that, in the struggle for life, those people best adapted to their environment survive over their inferior neighbors. So with the individual: the progress of man has been in a forward direction on account of this struggle. The evidence is rapidly showing that man was originally in a barbarous condition. The question at once arises, What was the condition of the first man? How did he originate? According to the law of development the first parents must necessarily have been produced in a different way than their offspring. There was a time when there was no human being in the world. The first being gave rise to a long line of human beings, but the fact remains that the first being itself could not have arisen like its immediate descendants. In order to avoid such a conclusion, the materialists have attempted to explain the origin of man by spontaneous generation. But where did the elements come from, in order to produce such a being?

If we apply this kind of reasoning to a First Cause, the result is the same. The argument is something like this: every effect must have had an immediate cause. Every cause must have a cause back of it, and so on endlessly. But a series of causes without a first cause is, *a priori*, impossible. The first cause of a long line of causes was not produced as the other causes were, but it must have had a cause *of its own*. A first cause, which did not have a cause for itself alone, would not be rightly called a *first* cause. A first cause does not arise like the causes to which it gives birth. It must have been produced by some agency other than a mere cause. Spencer says that "evolution must come to a close in complete equilibrium or rest." When the universe was ever at a period of rest, it could never have evolved out of that condition, unless some extra agency started it in motion. If we suppose the world eternal, in the past it must have reached a point of *equilibrium mobile*. So too, if evolution had no beginning and it has been going on endlessly, it must have produced a first cause, or Infinite Being. The whole progress of evolution is continually higher and higher; and, if it has been going on forever, it must have produced the highest, God. This is a final cause. Darwin's very phrase—the survival of the fittest—by implication asserts a final cause, as something to which it is fittest. The final cause of all the manifestations in the universe is the first cause. In order to produce such a final cause as Darwin would have us believe was produced, the First Cause must have acted intelligently, in order to produce an intelligent final cause.

One reason that Spencer dissents from Theism is because we ascribe to "an ultimate cause desires that are to be classed as higher and lower like our own." The fault—if a fault it be—of representing God as he is not, of ascribing to him attributes which we conceive he must have,—these faults are inherent in man's nature. There is a latent anthropomorphism in man's breast, and no scientific philosophy can wholly eradicate it. Spencer urges that, "by continually seeking to know and continually thrown back with a deepened conviction of the impossibility of knowing, we may keep alive the consciousness that it is alike our highest wisdom and our highest duty to regard that through which all things exist as the Unknowable." Is this all? If we are to be continually striking our heads against the bars, what good can arise by telling us they will never yield? Why should we be wasting our strength, when we are solemnly warned? Why does Spencer propose his "relativity of knowledge" and "the law of evolution," if "all things exist as the Unknowable"? In other words, we are told

Digitized by Google

that beyond a certain limit all is unknowable, we can form no conception of it; yet the agnostic recommends us to spend our time and treasure in attempting to know the best we can what is unknowable. This is what Spencer teaches in various forms in his philosophy. The persistent yearning to know is universal: this grasping after the mysteries which elude our utmost endeavors is to be recognized with humility. Be it in Idealism, be it in Materialism, be it in Pantheism, be it in Theism, be it in any shape or form of religious belief, "we can hear a groaning of the spirit, a struggle to conceive the inconceivable, to utter the unutterable, a longing after the Infinite, a love of God." Is not this true, I would ask with all frankness, of all the creeds of Agnosticism?

We would draw to a close by devoting a few words to Agnosticism as formulated in the creed of Humanity. The Religion of Humanity had a place in the Transcendental movement. Yet Transcendentalism never held up Humanity, as understood by the Comtists, to the position of Supreme Being. In the last writing of his "experience," Theodore Parker took occasion to beautifully express his sentiments. He exclaims, "Oh that some young genius would write out the formulas of the universe, the celestial mechanics of mankind!" Parker did not deny the existence of God but he inculcated as his most central principle that we have "an instinctive intuition of the Divine,—a consciousness that there is a God." This is explicit enough. Parker's conception of Humanity was similar to Faust's. There is a wide gap between *Menschlichkeit* and mere *Menschheit*. Emerson, the companion of Parker in this search after the divine truth, strayed off into a by-path. His deep love for nature led him irresistibly in that direction. Faust determined that—

> "All of life for all mankind created
> Shall be within mine inmost being tested. . . .
> Stood I, O Nature! man alone in thee."

Emerson felt—

> "The mysteries of Nature's hearts;
> Though no Muse can these impart,
> Throb thine with Nature's breast,
> And all is clear from east to west."

Here we see the stand taken by Emerson as distinct from Carlyle. The latter, though he wrote no verses of his own, was a hero-worshipper: the other poured forth into song his nature-worship. If there is a tinge of Pantheism in Emerson's poetry, so there is a vein of scepticism running through his prose writings. He regarded the face of Nature as the reflection of the divine image. He thought man should put himself *en rapport* with the expressions of Nature; and, as these expressions are manifestations of Nature's God, so, by obeying and following these commands, we ally ourselves with the Divine. Therefore, Emerson leads us through the worship of nature to the worship of nature's God. His axiom is thus expressed: The laws of the mind are the laws of nature, and *vice versa*. If we know the ways of one, we are on a path of discovery to find out the workings of the other. He says, "As the history of nature is charactered in man's brain, therefore he is the prophet and discoverer of her secrets." Should this rule hold good, it appeals powerfully to the scientific agnostic. The scientist, who interprets the phenomena of nature, is led closer and closer into the presence of a God whose ways, whose works, and whose will become better known as we advance.

I have not considered the probable chances which some form of Agnosticism has to become the religion of the future, because I do not know what those chances are. It is idle to speculate how much or how little other people will accept of Agnostic Philosophy. The dominant religions of to-day were little thought to be considered religions of the future in their humble beginnings. In matters of emotional belief, mankind are strikingly peculiar. The rapid spread of some form of faith is oft-times unaccountable to the wisest philosopher, who fails to perceive the cause from the effect. Such simple formulas as these: The Voice on the Mount; There is one God; and Mahomet is his Prophet; Justification by Faith; Liberty, Equality, and Fraternity,—in these short formulas the pulse of humanity has beat quicker and quicker, and the whole course of civilization is at once changed, for better or worse.

Are the creeds of Agnosticism acceptable? If our brief examination, both *pro* and *con*, concerning these creeds, has been closely followed, it will be noticed that there are certain fundamental mistakes which are embodied in those creeds which must be eliminated before we can fully accept them. We may say that the truth largely overweighs error, and on this account accept the remainder. Yet is this a reason for not holding fast to that which is good? Finally, we come to the conclusion that in its present form the creed of Agnosticism is not unreservedly acceptable, *sed tamen in pretio*.

CORRESPONDENCE.

CATHOLICS IN POLITICS.

MILWAUKEE, Nov. 11, 1882.

The Catholic Central Society convened in Milwaukee in the latter part of September, and began proceedings by an imposing street parade on Sunday, the 24th of September. The procession was long, and included all the German Catholic societies of the city and many from other cities, Catholic officials and citizens and delegates from all over the United States. Banners were carried with ominous devices; and fifteen bands of music accompanied the procession, which passed through all the principal streets of the city.

This Sunday street parade called forth comments from the non-religious portion of the community, as it immediately followed the agitation on the Sunday observance question, which had been in progress through the early summer. It was said that, if the Turner societies had street processions and music, it was considered desecration; but a great religious body could do the same, and it was thought no wrong against the Sabbath. The *Catholic Citizen*, in reply to these comments, said: "A procession proclaiming that the manhood of our country are still imbued with religious sentiments is not at all 'a desecration of the Sabbath.' If those Protestants who talk so piously about 'disturbing the Sabbath quiet' would pay less attention to mere externals, matters of a sleek face and a sanctimonious deportment, and concentrate more interest upon interior disposition,—matters of the heart and soul,—it would be better for us all."

This expression is true enough, though the sentiment proceeds from that religious body which is undeniably the exponent of "sleek faces" and "sanctimonious deportment."

The sessions of the convention occupied three days, and matters of business were formally despatched and telegrams were received and read from the Pope and other high officers of the Catholic Church.

It had been denied that this conference would assume to dictate political action; but this was its real animus, and very soon came to the front. The Milwaukee delegation, after submitting a lengthy communication which brought up the school question and recommended certain proceedings to insure the sending of all children of Catholic parents to the Catholic schools, advising a *régime* by which Catholic schools should be conducted somewhat similar to the public schools, presented the following, which reads:

"The experience of the past few years has taught us that it has become a necessity for the Catholic citizens to effect an organization to preserve their constitutional rights intact. The Catholics demand no privileges as citizens. The fact is, however, that the rights of Catholics are being opposed. Self-protection, therefore, demands an organization of Catholics. Let us take an example from the enemy who opposes us with solid phalanx, and seeks to injure our interests and deny our rights. A united front on our part will insure us success for ourselves. We can make our power felt by giving our suffrage to only those candidates who pledge themselves to, and we are assured will, stand for the rights of, and oppose discrimination against, Catholic citizens. The Catholic citizens constitute one-seventh of the population of the United States. By united efforts, we can command the respect to which we are entitled. We do not wish to be misunderstood. Far be it from our intention to drag the Central Catholic Society into the corruption incident to politics, neither do we intend to discriminate as to the indorsement of parties, neither do we ask for offices. We ask not what is the religion of a candidate. All we desire is that a candidate desiring our votes shall be unprejudiced, so that he will allow Catholics the same rights as other citizens. We do not require that any one shall be elected to office wholly because he is a Catholic; but we protest against opposition to a candidate who possesses the qualifications on the sole ground of being a practical Catholic. Let us at all times cast our votes, without regard to party distinctions, for such men as are willing to protect our rights."

These rights the Central Society failed to set forth with any explicitness. The public was left to the imagination to find out in what they consist. Subsequent events have explained this to the satisfaction of all concerned, as the stress of all the Catholic effort has been concentrated in the recent election upon the danger the Church was in from those candidates who are in favor of church taxation. The privilege, constitutionally granted, of exemption of their church and school property from taxation, they claim as a right. The Catholics of the city have marked every man who has been in the Wisconsin Legislature since the first introduction of a bill to repeal the exemption laws of the State regarding church property. By their "united efforts," they have secured the defeat of all such who were candidates for re-election.

Catholic priests from their pulpits, on the two Sundays previous to the election, admonished all Catholics to vote only for such men as were known to be favorable to the Catholics.

Catholic citizens were indefatigable in visitation to parishioners, and in tricks to withdraw third party candidates who might weaken the straight Democratic ticket. Communications were addressed through the journals to candidates by Catholics, asking them to state publicly their position upon the question of church taxation. The *Catholic Citizen* uttered a loud warning cry to its patrons and friends to beware of that "Bigot Bate," or he would be run in again upon the strength of his well-known position upon this question.

"United effort" did tell. Those candidates who were known to favor church taxation were defeated, including Mr. Arthur Bate, who ran for re-election in the first assembly district. In this district, the Democratic victory was doubtless influenced to a degree by this religious issue; but the same causes which have resulted in the sweep of Democratic victories throughout the United States also contributed to it.

The friends of church taxation in Milwaukee congratulate themselves, in spite of defeated candidates, with the local prominence which has been given to the question. It has been taken up by the Republican party as a respectable issue; and it has stood, for the most part, in a manly attitude of defence for candidates who have espoused the question with zeal.

The *Republican Sentinel* has given large space to all discussion upon the subject, and presented several able editorial articles, containing forcible, logical, and convincing arguments in support of the justice of taxing all church property.

Milwaukee may take the palm for the successful agitation of this phase of State secularization.

The conflict between the Church and the State has been well begun. Democratic victories will not bring peace. Catholic Central Societies with grand parades and party or political organizations will not bring peace. In fact, the course pursued by the Central Society has been deprecated by many intelligent and far-seeing Catholics, who wisely interpret it as a certain means of hastening this inevitable conflict, and bringing about the sooner those disastrous results which are threatening Catholic privileges in this country. B.

ECCLESIASTICAL INTERFERENCE WITH CIVIL GOVERNMENT.

Editors of The Index:—

Many people, who are more solicitous to be patriotic than accurate, still keep asserting that this country is an example of perfect religious freedom; that here the union of Church and State is utterly unknown, except through hearsay. How false this assertion is, in a general way, the readers of *The Index* do not need to be told. Some particulars, however, may be instructive. Here in Pennsylvania, for instance, under the school law, plots of land are purchased in connection with the Normal Schools, chapels built upon them in which "Christian" services are conducted by some member of the faculty, generally the principal, and the pupils compelled to attend them under penalty of having their grade lowered. Bible classes are also formed under similar auspices; and, if it is not made absolutely obligatory to attend them, pupils are at least given to understand that compliance on their part will contribute to their good standing. The reading of the Bible by the teachers in all the public schools is made compulsory,

Digitized by Google

though all comment on the passages read is prohibited,—a provision which is, however, violated with impunity by "orthodox" teachers. Independent and impartial comment would at once awaken the ire of the parish popes.

A very few years ago, an attack, emanating apparently from a certain orthodox college of this State, was made on the common schools, on the alleged ground that they were nurseries of infidelity; and the writer very shrewdly suggested a remedy by saying that it was the fault of the "Christians" that it was so, since in the town which was the seat of the college, out of twenty-two teachers employed in the public schools, twenty were members of some orthodox church. It was a quite natural inference, of course, that the remaining two were in a hopeful frame of mind.

The communication referred to was published in the Pennsylvania *School Journal*, the official organ of the State schools; and the editor, who was also the State Superintendent of Public Instruction, called attention to it, inviting any who might be disposed to controvert the writer's positions to do so through the columns of that organ. He tacitly took the ground that the position assumed by the orthodox critic —namely, that the orthodox Christians of any given school district had a perfect right to institute an inquisition into the theological beliefs of all applicants for places as teachers in the common schools— was entirely just, contending, however, that the charge of infidel influences in the State schools was altogether unwarranted. This was done in a State founded by William Penn who in his constitutions forbade all religious tests beyond a belief in God and in future accountability, without which provision his polity would probably have been disallowed by the home government; a State, too, whose constitution contains the following clauses: "No man can of right be compelled to attend, erect, or *support* any place of worship, or to *maintain any ministry* against his consent; no human authority can, in any way whatever, *control* or *interfere* with the rights of conscience; and *no preference shall be given by law to any religious establishment or mode of worship*": the whole, be it observed, under a Federal Constitution which explicitly declares that "there shall be no legislation on the subject of religion." The contradictory clauses in the State constitution and the school law only add another example, to the immense accumulation previously existing, of that fine incapacity for logical reasoning which constitutes so charming a feature in the human intellect.

In spite of all this, Judge Duncan, of the Supreme Court of Pennsylvania, years ago decided that "Christianity was a part of the common law of this State," —a decision that was seized, in defiance of all law and justice, as a pretext for the scandalous decision of the Supreme Court of the United States which utterly frustrated Girard's determination to exclude all theological instruction from his college,—a decision worthy only of a body of pettifoggers, and which has greatly conduced to the confusion of all ideas of right and wrong in the State. Girard had taken the precaution to name as executors of his will a majority of Quakers, knowing well the Jesuitical tact of the body whom he had confronted; but they were more than a match even for him, and have utterly thwarted his clear intention in every respect except the comparatively unimportant one of the exclusion of the ordained clergy,—a provision which was so explicit as to defy even the combined ingenuity of the pettifoggers both of the State and Federal Supreme Courts. This is probably, if complete superiority were possible where there is so much that is really fine, the most perfect example on record of the difference between ingeniousness and ingenuousness. It was, however, reserved for the *Sunday School Times* to give the last and supreme touch of artistic perfection to the work, by pointing to it as an illustration of "the spirit of religious freedom which has been manifested in this Commonwealth from its inception."

This high-handed interference of the ecclesiastics and their instruments with the civil government would not be tolerated but for that muddy-brained condition so characteristic of the human race at large, and which is aggravated here by the disastrous union of Quaker quietism and German sluggishness.

A very amusing and instructive instance of the watchfulness of the parsons occurred here on the occasion of a recent Thanksgiving proclamation. The governor of the State had altered the inadvertent phraseology of his secretary, and erased the word "Christian" before the word "commonwealth" Now, the official style of this State is "the Commonwealth of Pennsylvania." For restoring the official form to the proclamation, a certain parson of the Lutheran denomination, in the city of Lancaster, fiercely denounced the governor, and declared that he had seriously resolved not to deliver the usual Thanksgiving sermon at all, but that, reflecting upon the fact that a day had been set apart for the ceremony by the President of the United States, he had concluded to comply with the superior injunction, desiring his hearers, however, to keep it in mind that it was only in obedience to this latter behest that he had deigned to favor them with his lucubrations. It is easy to imagine the loss his hearers might have sustained but for the fortunate intervention of the superior dignitary.

Let me, in conclusion, Mr. Editor, say a few words on a topic not strictly germane to the general tenor of this communication. It seems to me a great pity that *The Index* is not known all over the country as an organ of the freest expression on all subjects connected with the welfare of the human race. The *North American Review* supplies this want, to a certain extent, for a limited class of readers; but the very fact that the wealthy publishing house which has profited so largely by the work of the great liberal writers of the whole world refused any longer to allow its appearance with their imprint shows not only that their supposed liberality and independence were very much overrated, but also how greatly, notwithstanding all our boasting, we are trammelled by a hide-bound conservatism, which, without any formal censorship of the press, quietly but effectually serves very much the same purpose as does that institution in foreign countries.

Last July, I wrote for a Philadelphia journal, and at the request of its editor, an article on an important subject which has occupied more or less the pens of several of your contributors, and which contained the following incidental passage, one that could probably have obtained admission into no other journal in the city:—

"It is a common boast of the American newspaper press that it moulds and leads public opinion. Precisely the converse of this is true. The 'able editor' is selected for his post because he is in sympathy with the average reader, and is perfectly ready to do any work that may be required of him without the least regard to any moral conviction on his part, because there is no danger that with the negative character which caused his selection he will awaken any troublesome antagonism. This is the rule; though there are undoubtedly occasional exceptions, notably in the case of two or three of the more respectable and influential New York journals. And it is certainly true that in this degrading servility, which, so long as it exists, renders high-toned journalism utterly impossible, there are degrees. All newspapers, even in Philadelphia, are not subservient to the greed and desire for popularity which stamps, with the unmistakable seal of mediocrity, the majority of them."

The Index, admitting as it does in the most generous manner not only views opposed to those of its editors on important topics, but even the very frankest criticisms of their personal utterances, commends itself to the support of all independent thinkers; and it is surprising, in view of this fact, that any of its patrons should feel themselves aggrieved by the expression of sentiments however antagonistic to their own, and the fact of their discontinuing it on this ground proves that illiberality is not confined to conservatives. I can conceive of no greater service to free thought than the extension of its circulation, a work which is especially needed in view of the utter impossibility of securing a hearing on any unpopular question through the newspaper press of the country, a fact which I think was not too strongly stated in the quotation given above.

HOWARD WORCESTER GILBERT.

MR. BEECHER ON HERBERT SPENCER, EVOLUTION, AND PROGRESS.

Editors of The Index:—

The following is from the Dover (N.H.) *Daily Republican:* "Henry Ward Beecher said in his speech Thursday evening, at a banquet in honor of Herbert Spencer: 'We are rather an ambitious people. We have learned from the astronomers that they are five hours ahead of us every day in England, and we have to work with all our might to make up those five hours.' Mr. Beecher also said, 'I think that the doctrine of evolution, and its relation to the work of Mr. Spencer,—which takes in that and a great deal more besides,—to speak in plain language, it is going to revolutionize theology from one end to the other [applause], it is going to make good walking where we have had very muddy walking hitherto. [Applause.] It is going to bridge over rivers which we have had to wade. There are many points in which the theology of the past did well enough for the past, but it does not answer reasonable questions and the moral considerations that are brought to bear upon it in our day.'"

That is true, and so is a part of Mr. Beecher's article, "Progress of Thought in the Church," published in the *North American Review*, August, 1882. But Mr. Beecher finishes that essay with the following sentences:—

"Our time is one of transition. We are refusing the theology of absolute monarchy, of divine despotism, and framing a theology consistent with the life and teachings of Jesus Christ."

No person endowed with reason, common honesty, sense, and reverence, will deny the good life and teachings of Jesus, or the learning and theological training of Beecher; but can Mr. Beecher, or any free citizen, believe and advocate the divine right of kings, or the consecration and sanctification of any person?

The Christship is, in my opinion, not only a divine despotism, but also a divine partiality and weakness. No person with developed reason, and who comprehends the necessary conditions for the maintenance and propagation of republican principles, can believe in a despotic, partial God. It is also just as improbable for a reasoner of the nineteenth century to believe in a Devil, Holy Ghost, as in a spiritual ruler and saviour of the human soul. Each one is so constituted that he has to work out his own salvation.

Is it not folly and mockery of those who manifest by their sermons, essays, and conversations that their reason dictates them to believe in an all-wise, just Creator, to ask special favors of him in the name of "the Saviour, Jesus Christ"? CARL H. HORSCH.

DOVER, N.H., Nov. 13, 1882.

MISCELLANEOUS.

EXTRACTS FROM GIRARD'S WILL.

A competent number of instructors, teachers, assistants, and other necessary agents shall be selected, and, when needful, their places from time to time supplied; they shall receive adequate compensation for their services; but no person shall be employed who shall not be of tried skill in his or her proper department, of established moral character, and *in all cases persons shall be chosen on account of their merit, and not through favor or intrigue.*

. . . And, especially, I desire that by every proper means a pure attachment to our republican institutions, and to the sacred rights of conscience, as guaranteed by our happy constitutions, shall be formed and fostered in the minds of the scholars.

. . . *Secondly*, I enjoin and require that *no ecclesiastic, missionary, or minister of any sect whatsoever, shall ever hold or exercise any station or duty whatever in the said College; nor shall any such person ever be admitted for any purpose, or as a visitor, within the premises appropriated to the purposes of the said College.* In making this restriction, I do not mean to cast any reflection upon any sect or person whatsoever; but, as there is such a multitude of sects, and such a diversity of opinion among them, I desire to keep the tender minds of the orphans, who are to derive advantage from this bequest, free from the excitement which clashing doctrines and sectarian controversy are so apt to produce. My desire is that all the instructors and teachers in the College shall take pains to instil into the minds of the scholars *the purest principles of morality*, so that, on their entrance into active life, they may from *inclination and habit* evince *benevolence toward their fellow-creatures*, and *a love of truth, sobriety, and industry*, adopting at the same time such religious tenets as their *matured reason* may enable them to prefer.

THE Indianapolis *Aye*, after describing a class of so-called Liberals, who "are illiberal with the Church, more illiberal with one another," says: "There are men who claim to be atheists, materialists, infidels,

Digitized by Google

who are not making much clamor, but who are full of charity and are tolerant. They do not fall out with people who disagree with them in belief. They see the hypocrisies, the weaknesses, the bigotry, and the uselessness of the Church in the main, but are not blind to the sincerity of purpose and the purity of life of very many professed Christian people. These infidel philosophers are men of pure lives,—men who look more in pity and sorrow than in anger on the shortcomings, the false beliefs, and the follies of their fellow-men. If men can be reasoned or ridiculed good-naturedly out of false beliefs and useless customs that cost much money and time and that have no warrant in reason or common sense, it is well. But for the 'Liberal' to wage an angry warfare upon his fellow-man for doing and believing what seems to him absurd and foolish is illiberal instead of liberal and very much lacking in charity. The true infidel is generally a good man. His wish is for the welfare of his fellow-men, and he tries to promote their well-being to the extent of his ability. In all ages have the infidels to Christianity been noted for their goodness and their exalted character. If they have not built colleges and charity hospitals in the name of infidelity, they have been generous contributors to them, and suffered Christianity to have the credit and control of them. Let us who go about the business of opposing wickedness, double-dealing, immorality, and dishonor, whether inside or outside of the Church, who hate hypocrisy in a 'Liberal' as well as in a Christian, who desire to do good in the world and to give every man credit for the good that is in him regardless of his belief or unbelief, who have charity for all and malice for none, call ourselves infidels and atheists, and be done with it."

BOOK NOTICES.

THE BATTLE-GROUND OF THE SPIRITUAL REFORMATION. By S. B. Brittan, M.D., editor at large. Pages 510. New York: Published by the author. Boston: Colby & Rich, 9 Montgomery Place. 1882.

Dr. Brittan has long been known as one of the most able and scholarly advocates of modern Spiritualism. In this, his latest work, he appears to advantage as an accomplished writer and a skilful controversialist. It is made up chiefly of articles that have appeared in various journals in this country in defence and exposition of the philosophy of Spiritualism. The titles of some of these articles will suggest an idea of the scope of the work. "The Battle-ground of the Spiritual Reformation," which is the subject of the introduction, is followed by "The Poets and the Spirits"; "The Philosophy of the Inspiration of Genius"; "Religion of Faith and Fashion"; "Rev. Dr. John Hall and the Logic of the Pulpit"; "Scientific Evidence of Spiritualism"; "Wandering and Crying in the Wilderness"; "Modern Spiritualism, Review of Rev. Joseph Cook's Lecture"; "Religious Intolerance, Prof. Henry Kiddle and his Critics"; "Science versus Dogmatism, Review of Prof. Wundt's Letter"; "The Tribune on Spiritualism, Politics, Fashion, and Sporting to the Front"; "Meeting the Enemy, Charges of the Tabernacle Pastor Examined"; "A Great Darkness in Vermont,—an editor defends Satan and defames Spiritualists." The friends of Spiritualism generally, we think, will be pleased with these articles in book-form, since they discuss Spiritualism in relation to current events of interest, and in a manner to engage the attention of cultivated minds. Some of the sentences are so finely polished that their strength is impaired, and the irony and sarcasm give rather a caustic tone to some of the articles, and thereby detract from the effectiveness of the style; but, in spite of these defects, the work has literary merit and controversial strength. The latter part of the book, which is devoted to personal matters and the opposition the author has had to encounter in his work as "editor at large," is rather captious in spirit, and should in our opinion have been omitted. The typographical work of this volume is excellent, and it is handsomely bound.

THE WISDOM OF THE BRAHMIN: A Didactic Poem. Translated from the German of Friedrich Rückert by Charles T. Brooks. Boston: Roberts Brothers. Price $1.25.

"*The Brahmin* is a poem of vast range, expressing in epigrammatic form in twelve-syllable iambic rhymes the world-wisdom which the author (who was for some time Professor of Oriental Literature) had been for years storing up in his large heart and evolving out of his creative soul, enriched and quickened by sympathetic study of the poesy and philosophy of the 'Morning Land.' But the result is not a translation, nor even a transfusion (nor what N. P. Willis once called a *transcreation*) of Oriental sentences; but it is mainly an original work composed by the author in the character of a Brahmin, spiritually born in the East, but located in the West." We feel very grateful to Mr. Brooks for his appreciation of a broad and wise thinker and writer, while wishing he had not followed so closely the "twelve-syllable iambic" form of the original rhyme in which the truly Brahmimic wisdom of Rückert appeared; for in English it hardly comports with the dignity of the expressed thought, however well it may read in the German. In spite of this drawback, *The Wisdom of the Brahmin* is very strong and thought-inspiring reading, while the beauty and compactness of the volume make it a very desirable holiday gift book.

THE *Century Magazine* for December opens with an interesting article on "The Supreme Court of the United States," by E. V. Smalley, prefaced by a frontispiece portrait of Chief Justice Marshall, and embellished with a number of interesting portraits and pictures. Frank H. Cushing gives the first instalment of his unique Indian experiences, under the title "My Adventures in Zuñi," with descriptive illustrations. Wm. Elliot Griffin discusses "The Corean Origin of Japanese Art." "The Taxidermal Art," with appropriate illustrations, is the subject of a paper by Franklin H. North. Andrew Lang, a personal friend of Dr. John Brown, gives an interesting biographical sketch of "Rab's Friend," with portraits. T. R. Lounsbury writes on "The Problem of Spelling Reform," and John Burroughs talks charmingly of the "Hard Fare" of the birds and small animals in winter. Henry James, Jr., in a series of letters from travellers of different nationalities, gives an idea of "The Point of View" from which such persons get their impressions of American life and manners. "Through One Administration," by Mrs. Burnett, seems to be nearing its close; while interesting instalments are given of Rev. Dr. Gladden's and Mary Hallock Foote's serials. There is the usual number of poems, none of remarkable significance, however.

THE two serials of the *Atlantic Monthly* are concluded in the December number,—"Two on a Tower," by Thomas Hardy, in a very unsatisfactory manner; and "The House of a Merchant Prince," by Bishop, in the old-fashioned style, by a satisfactory wedding. O. B. Frothingham has an article on "Art and Wealth," Sarah Orne Jewett tells of "An Afternoon in Holland," "Persian Dualism" is the subject of Elizabeth Robins' paper, and John S. Dwight writes of "Our Dark Age in Music." The admirers of Hawthorne will be interested to read the beginning of the fragmentary romance left by him and only recently discovered, which the publishers of the *Atlantic* have secured from Mrs. Rose Hawthorne Lathrop the right to publish, and of which a long instalment is given in this number, entitled "The Ancestral Footstep, Outlines of an English Romance." "The Letters of Lydia Maria Child" are reviewed at length, and in the "Contributors' Club" and book reviews will be found excellent reading. Agnes Paton's poem on "Œdipus" is the only contribution to the poetic department.

IN the *Catholic World* for December, the Rev. A. F. Hewit discusses, from the Catholic stand-point, "A Crisis in Congregational Theology," as shown in the recent councils of Congregational ministers at New Haven, in regard to the case of Rev. Newman Smyth, and at Quincy, Ill., at the installation of Rev. Dr. Thayer. The other contents of this number are "Out of the West," a story by Henrietta M. K. Brownell; part third of "The Comedy of Conference"; "A Scrap of Unwritten History," by Julia C. Smalley; "St. Cecilia and the Organ," a poem by Rev. Alfred Young; "The Tomb of Dante, and his Portrait at Ravenna"; "A Brave Life," a story by Jane Dickens; "Powerscourt Waterfall," a poem by C. M. O'Keefe; "Guido Monaco," by Ella Edes; "The Great Comet," by Rev. George M. Searle; "The Seven Dead," a long poem by D. Connolly; and "A New but False Plea for Public Schools," by Rev. I. T. Hecker. The list of "New Publications" contains some interesting reviews.

PERSONAL ITEMS.

MR. HENRY GEORGE lectured on "The Malthusian Theory" before a highly intelligent and appreciative audience in New York last week (November 20). He was introduced by Rev. R. Heber Newton, and Prof. Felix Adler followed the lecture with a few remarks.

MR. W. H. LAMASTER, editor of the *Iconoclast*, writes us that the Lake Pepin (Wis.) *Gazette* has been consolidated with his paper, and that he and Mr. W. F. Jamieson will unite their labors in conducting the *Iconoclast*, Mr. Jamieson devoting a portion of his time to the lecture field.

THE late Francis G. Shaw (father of the brave young Col. R. G. Shaw, killed at Fort Wagner), besides being an outspoken and patriotic lover of liberty, was also a man possessed of many intellectual attainments. He translated for the American public George Sands' *Consuelo*, with its sequel, *The Countess of Rudolstadt*, and also Zschokke's *History of Switzerland*.

W. CLARK RUSSELL writes to the London *Athenæum* that he has not received a farthing from America, from the publishers here who have disposed of tens of thousands of reprints of his marine yarns. He declares that Charles Mackay was wrong when he wrote of America as the land of the free. "It is," he says, "the land of those who make free,—the land of the free and easy."

THURLOW WEED, the oldest representative of journalism in America, and according to the New York *Times* the "Warwick" of American politics, died in New York city on Wednesday, November 22, at the advanced age of eighty-five years. He was successively editor of the Norwich *Agriculturist*, the Rochester *Anti-Masonic Inquirer*, the Albany *Journal*, and New York *Commercial Advertiser*. He was of a genial, generous nature, was possessed of great energy of character, and was an honest politician.

PRESIDENT ARTHUR, it is said, cherishes the memory of his dead wife with a loving devotion which is rare in these days. Her room in their New York mansion is kept undisturbed as she left it. The needle she left in her embroidery, the pen she last used, her slippers where she put them off, her wardrobe as she arranged it, every little detail which speaks of her once living presence, remain as when her eyes last looked upon them. A fresh bouquet of her favorite flowers is placed upon her table every morning by order of her husband, who makes this room his private sanctuary on his frequent visits to New York.

PROF. HENRY DRAPER, a son of Prof. John W. Draper, and himself a well-known scientist of the largest promise, died of a sudden attack of pleurisy at his residence in New York city on Monday, November 20, aged forty-five. He held for several years the chair of Professor of Physiology in the University of New York, and was considered one of the best astronomic investigators in this country. For his services in photographing the transit of Venus in 1874, he was voted by Congress a gold medal. He made also many valuable discoveries in his favorite science, and his loss to the world at so early an age is greatly deplored.

MR. GEORGE JACOB HOLYOAKE spoke in Cosmian Hall, Florence, Mass., on Sunday afternoon, November 16, on "My Early Religious Days." In the morning, he spoke to the children in the Sunday-school, in reply to an address recited by a little girl about nine years of age. A reception was given him in the evening in the lower hall, which was crowded. He was introduced by Mr. W. H. Spencer, the resident speaker, and spoke by invitation on his "Imprisonment for Blasphemy." After which a social evening was passed, with songs by the Euterpe Quartet of this city, under the direction of Miss Lucy Garlin. A public reception was also given Mr. Holyoake in New York city last Monday evening, and on the Committee of Arrangements we notice the names of many of the most prominent people of that and other cities, such men and women as Mrs. Elizabeth Thompson, Felix Adler, Hon. Erastus Brooks, Jennie June Croly, Kate Field, Rev. Heber Newton, Edmund C. Stedman, Rev. Robert Collyer, Parke Godwin, and many others equally distinguished. Last Thursday evening Mr. Holyoake gave an address in Rev. R. Heber Newton's church, New York, on "The Moral Force of Co-operation."

Cornell University Library

The Springfield Republican

FOR 1883.

DAILY—SUNDAY—WEEKLY.

[Established in 1824 by Samuel Bowles.]

THE REPUBLICAN will continue its ministrations for the benefit of mankind in general and the New England public in particular, during the coming year, in the same liberal spirit and with the same high purposes that have marked its course in the past. In some respects, it expects to serve its constituency more acceptably than ever before.

The political developments of the past year have abundantly justified THE REPUBLICAN'S recent attitude toward public affairs, State and national. The men whom it has denounced and the measures that it has opposed have directly or indirectly brought defeat upon the Republican party and carried the Democrats into power, not because the country has special confidence in the latter, but because it is disgusted with Republican rule.

In this situation of affairs, THE REPUBLICAN finds cause for great rejoicing, mixed, it is true, with some regret that in Massachusetts the independent voter has not tempered his zeal with broader intelligence and finer discrimination. Out of this revolt there will surely grow a healthier condition of the body politic and a wiser, more honest administration of public interests. We are nearer the achievement of reform in the civil service, in taxation and administration, through the sweeping political change. Whether these reforms are to be finally and fully attained through new parties or by the awakening and purification of the old organizations is not essential. That they must be realized in some way for the safety and welfare of the republic is the vital fact. In laboring to bring them about, THE REPUBLICAN is and will be wholly independent of men, parties, and factions, recognizing and using instruments, but bound to none.

Apart from its discussions of political questions, which are the first interest of society, THE REPUBLICAN aims to perform the great duties of the modern newspaper with energy, discretion, and faithfulness. It gathers the daily news of the world, and particularly of its own field, with alertness and enterprise, sifts it intelligently, and presents to its readers all that is worthy in compact but interesting form. It interprets the term news in its broadest sense as including thought and theory as well as fact, and it seeks to inform its readers of the world's movement in morals, religion, science, and literature equally with material matters.

The larger space reserved for reading matter in THE SUNDAY REPUBLICAN makes it possible to present in that edition an unusually rich collection of stories, religious selections and discussions, special articles, special departments, poetry and literary reviews of peculiar interest and value on the chosen day of rest. This edition will be sent by the earliest mails to any part of the country, and is distributed on the morning of publication by regular and special trains and special expresses, through Western Massachusetts, Southern Vermont and New Hampshire, Northern and Central Connecticut.

THE WEEKLY REPUBLICAN furnishes in convenient form the best of the other two editions, alike of news, comment, and special matter, not loosely thrown together, but carefully selected, worked over, and condensed. It has the name of being about the best weekly review of American life that is printed. It commends itself especially to the farmer and his family, the active man in business or professional life, to New Englanders away from home, and to all others who desire to follow intelligently the progress of affairs in this country.

SUBSCRIPTION RATES.

THE DAILY REPUBLICAN is three cents a copy, 75 cents a month, $9 a year; in clubs of five or more to one address, $8 a year, and an extra copy for every 10.

THE SUNDAY REPUBLICAN is five cents a copy, 50 cents for three months, $2 a year.

THE WEEKLY REPUBLICAN is four cents a copy, 75 cents for six months, $1.50 a year; in clubs of 10 or more, $1.25 a year, and an extra copy to the club agent.

A liberal cash commission is allowed to postmasters and others acting as local agents for either edition.

All subscriptions are payable in advance. Specimen copies free.

For sale at THE INDEX office.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe. I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to

CURRENT TOPICS.

THE Dean of Westminster has consented to the placing of a bust of Longfellow in the Abbey.

THE body of Dr. Thehart, of Allegheny City, Pa., was cremated in Le Moyne Crematory at Washington, Pa., on Monday of last week. This is the fifteenth cremation in this furnace. The body was reduced to ashes in two and one-half hours.

"WHAT are we coming to?" exclaims the Boston *Herald*, anent the avowed heresy of another Congregational clergyman, Rev. Alfred J. Bray, of Montreal, Quebec. Apparently, whatever we are coming to, a majority of the ministers are coming to their senses, and a higher ideal of truth-speaking.

THE Advanced Republicans of France intend doing away with all religious ceremonies in practical matters. At a village in the Indre-et-Loire recently, the mayor of the town publicly baptized a child by pouring wine on its head,—"In the name of Liberty, Equality, Fraternity. *Vive la République!*"

THE *Christian Register* very forcibly and sensibly says, "If God ever sees fit to make an infallible book, we may be sure he will not so botch his work that the Church will have to spend half her time and strength for centuries in succession in proving its infallibility and reconciling with each other its different parts."

WE shall have to send Mr. Beecher, or some other clergyman of "advanced" views, over to Canada as a missionary of liberal religion; for they are so far behind the progressive ideas of the age there that, the other day, the collector of customs at Toronto confiscated an importation of Thomas Paine's theological works, on account of their expression of free-thought views. And yet Paine was a reverent theist, and would probably be admitted to-day as a consistent member of the Unitarian denomination.

RECENTLY, a lecturer named O'Connor, who had been a priest, was prevented by a mob of two thousand Roman Catholics from speaking in Toledo, Ohio. And yet our Catholic friends lament the tyrannous spirit of England's government, which prevents "free speech" in Ireland. The freedom of speech which this Catholic mob dubs "heresy," cannot be a whit more obnoxious to its religious feelings than the free speech which England dubs "sedition" when uttered in Ireland is to the political convictions of the ruling power in that country.

BEFORE this issue of *The Index* reaches our readers, the great astronomic event of the year—the transit of Venus—will have taken place. There has been much elaborate preparation for this event on the part of scientific men all over the civilized world, encouraged and aided by the governments of this and other nations. The main object of all this preparation and interest is said to be to obtain such observations as will enable the astronomers to determine the exact distance in miles of the earth from the sun. This is the last transit of Venus that will occur for more than a century, the next taking place in the year 2004. There was one in 1874, at which photography was brought into use, but not with entire success. The best photographs of the phenomenon were obtained by a process invented by the late Prof. Henry W. Draper. His photographic methods will be used by the American astronomers on this occasion.

TWENTY-THREE years ago the first of this month, John Brown was hanged at Charleston, Va. During these years, what important events of the century have occurred! The institution of human slavery, which had grown to be the potent political power of the nation, and which John Brown hated with all the strength of his heroic soul, has been destroyed. The States by which it was cursed have been reconstructed on the broad principle of equal justice to all. The negro, who was regarded merely as a chattel, has been raised to the plane of manhood and invested with the rights of citizenship; while those who defended slavery as a divine institution and fought to perpetuate it have become reconciled to the transformation, and but few now have any regrets to waste over "the lost cause." In reflecting on the great and significant events that have closely followed one another since John Brown's death, we find in them a practical verification of what our soldiers used to sing,—

"His soul goes marching on."

M. A. GAULT, a correspondent of the *Christian Statesman*, has been interviewing prominent Western clergymen and politicians in regard to the "God in the Constitution" amendment, but with poor success. Among others, he interviewed Gov. St. John, of Kansas, of whom he reports as follows: "His attention had been called to it before, and he expressed himself in sympathy with any movement aiming to inspire government with a deeper sense of responsibility to God and his law. But he questioned whether recognizing God in the Constitution would make the nation any more Christian? What we most need, said he, is more Christianity in the hearts of the people. I replied that the same reasoning would apply to the prohibition amendment in behalf of which he had taken such a distinguished part. A mere prohibition amendment in the Constitution would not make the nation any more temperate. What was needed was more temperance in the hearts of the people. The Governor replied that prohibition was designed to remedy a specific evil. I said that the religious amendment was designed to remedy a number of specific evils, among which were the obliteration of the Christian Sabbath, the prohibition of the Bible in our public education, as well as the great evil of intemperance. As I was leaving, he said, 'Do not understand me as opposed to National Reform, because you cannot put any too much of God in the Constitution for me.'" Apparently, *this* St. John is not "the voice of one crying in the wilderness, prepare ye the way" for true Liberalism.

A WAVE of ultra piety struck the great metropolis of New York city last Sunday, and agitated it greatly. The authorities determined to put in force the Sunday laws recently re-enacted in the penal code, and issued orders to the police board to that effect. As, with certain exceptions, the interpretation of the law was left to the discretion of the policemen, much confusion prevailed, citizens were annoyed by unexpected renderings, and some comic situations was the result. One officer ordered his men to arrest all persons found carrying food in the streets, unless it could be shown that the food was for sick persons. Newspapers were forbidden to be sold on the streets, the sale of mineral waters was not allowed, express wagons were stopped, telegraph boys were ordered not to carry bundles, baggage was not allowed to be transferred, boot-blacks were arrested, and general confusion prevailed. Over in Brooklyn, Beecher preached vigorously against such a law, saying, among other things, that "he didn't believe men were bound to respect the Sabbath from religious grounds, but solely from civil grounds, as for the public welfare. He stood for the Sabbath, because it was democratic. Drinking, card-playing, and entertainments, so long as they were confined to private property and did not interfere with public peace, should not be touched by law. If he wanted to play cards in his own home instead of reading tracts on Sunday, he could do it, and he would like to see an officer interfere. He would play under his nose, if for nothing else than a declaration of his liberties; that is, after learning how to play. He believed in the Sabbath for a poor man, a day honorable and beautiful. He would not put a stop to public conveniences, conveyances, or excursions."

A NEW UNITARIAN CONTROVERSY.

A new and unique controversy has arisen among the Unitarians. Under cover of the pleasantries of the dinner table at the Hotel Vendôme, where once a month the recently organized Unitarian Club of Boston meets to dine, and with the help of the excellent cuisine of that eminent Bostonian hostelry to promote the interests of Unitarianism, Rev. George E. Ellis, D.D., one of the most distinguished theologians and scholars of the denomination, has suddenly thrown a bomb into the Unitarian camp. In the midst of a carefully prepared and notable address, the main thesis of which was that Orthodox Congregationalism cannot satisfactorily revise its creed and allay the discussions now threatening a schism in that body until, in the light of reason, it revises its view of the authority of the Bible, he interjected the statement that, after fifty years of study, he had come to the conclusion that the Bible, under the orthodox theory of its infallible inspiration, "yields what is called the orthodox creed," and that in the old controversy between Unitarians and Trinitarians, when both parties appealed to Scripture for authority, "the liberal contestants were worsted."

It is this part of Dr. Ellis' address—but a small and incidentally, though logically, connected portion of the whole—which has aroused the protest and remonstrance of Unitarians, while it has given corresponding satisfaction to the Orthodox. The bomb, well charged and intended for the latter, has burst, in fact, to a large degree in the Unitarian ranks, and caused, if we may judge by the commotion and resuscitation of veteran combatants, a good deal of alarm. The old war-horses of the Unitarian conflict—we use the term with no irreverence, but rather with a grateful recognition of services rendered a generation ago—have sniffed the battle from afar, and wheeled into line and charged down upon their quondam fellow-warrior in a body. In other words, twelve Unitarian clergymen, of sixty years old and upwards, in and about Boston, seven of whom have retired from stated professional work, have united in a counter-statement, published over their signatures. This they begin by expressing their "surprise and pain" at reading Dr. Ellis' opinions concerning the Unitarian side of the old controversy, and end with "disavowing" for themselves "any participation in the views" uttered by him on this point. Indeed, it almost looks as if Dr. Ellis were to be drummed out of the Unitarian camp for betraying the cause of which he has long been a stalwart leader, and deserting to the enemy.

But no thinking person can read the whole address without seeing that, so far from going back to give any support or even genuine comfort to Orthodoxy, Dr. Ellis has gone on far in advance of the old Unitarian camp, and is to be found in front of even its present position rather than in its rear. It were much to be desired that these twelve remonstrants, since they felt impelled to disavow his view on this one point, had not felt equally called to express their sympathy with the main doctrine of his address. Few Unitarians—hardly one, indeed, of his age and distinction—have stated the argument against the old view of the authority of the Bible so strongly and plainly as Dr. Ellis has done in this discourse. How much greater a thing it would have been for the advancement of Unitarianism and the promotion of truth, if these twelve scholarly gentlemen and preachers had seized the occasion to place themselves by his side in this argument, than is their hastening to disavow his opinion concerning the critical merit of the respective contestants in the old controversy on Bible texts fifty years ago! We had supposed that the time had gone by, at least in the ranks of liberal scholarship, for anybody to suffer "pain" because of any other person's candid expression of an honest opinion. "Pain" at what, pray? There is no question of Dr. Ellis' honesty, no question that he spoke calmly and after deliberate study and conviction. The "pain" must be caused by his having changed his convictions after honest inquiry, and, having had the courage to acknowledge the change, thereby to have given a point apparently to the Orthodox. That is, it is not so much the spirit of truth that is aggrieved as the spirit of partisanship. For ourselves, therefore, the "surprise" comes in at reading this manifesto of the twelve, and not at Dr. Ellis' statement. It was a good deal of "surprise" to see some of the signatures among the twelve. We cannot confess, however, to feeling any "pain" at the manifesto. We are afraid rather that we smiled at beholding this mustering in hot haste of the old Unitarian squadron, and we have noticed that the spectacle has produced smiles on much better Unitarian faces than ours.

As to the statement that Unitarians have been driven to ingenious and forced constructions of Scriptural texts in order to secure Bible authority for their doctrines, we do not see how it can be denied by any one who has been acquainted with Unitarian exegesis, nor in what interest it should be denied by any who have accepted the new views concerning the origin and growth of the Bible which have come in with the modern school of Biblical learning. Dr. Noyes, in the Cambridge Divinity School, used to fight manfully against this method of *rationalizing* the text so as to get out of it one's own preconceived views. In the Old Testament and in Paul's Epistles, he was himself quite free from it, for these he no longer regarded as authority to be implicitly followed; but when he came to the reported words of Jesus, whom he still regarded as an infallible guide, even he fell into the method. But this method of Scriptural interpretation is not the exegetical vice of Unitarians only. It is the almost inevitable vice into which all sects fall that seek Biblical authority for their views. The Orthodox do not escape it. They, too, twist texts and read between the lines. "Views," fortunately, change and grow. But the Bible, the authoritative standard, does not change. Therefore, the new views must somehow be read into the old texts to get authority for them. And if Unitarians and Liberal Christians have been constrained to resort to this method of splitting open old texts to let in modern ideas more than have the Orthodox, it is because more than the Orthodox they have kept their minds open to the new growths of rational and humane thought. But, happily, rational thought in religion has now advanced so far that it has exposed the viciousness of this method, and no longer feels either the adequacy or the need of any support from Scriptural authority. So, again, the more is the pity that the twelve stanch Unitarians who have protested against Dr. Ellis' statement did not use the occasion to add their voices to his in strong condemnation of the doctrine that the Bible is the ultimate and authoritative standard of religious truth and duty.

On the question, however, whether the Bible, even on the orthodox view of its composition, "yields what is called the orthodox creed," and only by a forced interpretation can be made "to teach anything but Orthodoxy," we incline to think that the statement of Dr. Ellis in his first paper was rather too concise for entire accuracy. A second paper, printed in the *Christian Register*, expanding and illustrating the first, though professedly retracting nothing, gives certainly to his views on this point a somewhat different coloring. Still, he does not seem to us to allow sufficiently for the gradual growth of the orthodox creed in the Christian Church. (This gradual growth of doctrine can be traced in the New Testament itself, but this fact must be left out of sight in the orthodox view of the book.) Somewhere in the volume, it must be admitted, may be found the germs, the roots, of all the chief doctrines of Orthodoxy,—as also the roots of prominent Unitarian doctrines. But what is called the orthodox creed in ecclesiastical history is a compact, logically developed, and unified system of faith, which may have grown naturally enough from doctrinal germs which the Bible writers planted, but which, nevertheless, they might not recognize as any production of theirs. Paul, we may say, sketched the orthodox creed, and yet we may well question whether Paul would have accepted Augustine's and Calvin's development of his sketch; and it is these men rather than Paul that have framed what is called the creed of Orthodoxy. The germ of the Trinity may be found in the Fourth Gospel; but there is no such doctrine of the Trinity in the New Testament as the tri-personality of Deity,—the form of the doctrine that belongs to the commonly accepted orthodox creed. When, therefore, it is said that the Bible yields the orthodox creed, it is important to remember, as somewhat modifying the statement, that there is a difference between the roots of doctrines and the doctrines themselves.

WM. J. POTTER.

MATERIALISM.

John Stuart Mill wonders, in his autobiography, why Manichæan Dualism, the opposition of God and Matter, has not played a more important part in men's opinions. But surely it has had the part of Hamlet in the play; nay, rather the part of base Iago, stirring up the jealous passions of the Moor. As if matter were the most comprehensible of all things, as if it could be seen and felt and tasted, as if its very essence had been discovered, and discovered to be absolutely vile, it was maligned for many centuries by the philosophers and theologians, until at length the hatefulness of matter became thoroughly ingrained in human thought, as axiomatic as the axioms of geometry. Because this has been so, men have resented every attempt to show an intimate relationship between the body and the mind. But, surely, knowing what we do to-day of so-called matter, its wonderful combinations, the multitude of its organic forms, these wonderful revelations of the microscope and spectroscope and chemical analysis, and knowing, too, how ignorant we are of its essential character, I see not why we should not sound a truce to all our animosities, which have never had any basis of observation or experiment, but have been as purely fanciful as the stories of Jules Verne. As for myself, I find no fault at all in this which men call "matter." I find it very dear and beautiful. Why not? The stars and clouds are made of it, and these late autumn flowers that make the city gardens bright and gay, the mountains and the rivers and the sea, all of the children's faces, the baby's beaded toes, and the deeper coral of the lips that kiss them with a mother's pure delight. Wonderful matter! Catch me speaking ill of you after all the happiness that I have had with you these forty conscious years! I have no words to tell a millionth part of all your blessed ministration.

The intimate relation of the body and the mind has been resented, because such a relation seems to materialize the mind. But here, again, the feeling roots in a sentiment concerning matter which has no validity whatever. And surely there is another side to every instance of this intimate relationship which is not to be denied. It materializes spirit

Digitized by Google

no more than it spiritualizes matter. Every such instance goes to prove that matter has a spiritual endowment. My friend called his best sermon of the year "the Roast Beef Sermon," because it was written after a tremendous invoice of that vitalizing food. If there was any real connection,—nor doubt I that there was,—the sermon was no worse for it. That was not materialized. The beef was spiritualized. Goethe could work more easily when the barometer was high. The poems were no worse for that. The atmosphere was better. The best barometer is a poet's brain. No weather is so fair as that which makes his genial current flow. Plutarch affirms that "a certain temperature of air and winds" is the chief cause of inspiration. Thoreau perceived the law, but, so Emerson tells us, was "sad that atmospheric influences should bring to our dust the communion of the soul with the Infinite." But what care I how the communion comes, so that it comes? Whatever brings it, the communion is not discredited, but the messenger is approved, and should be duly crowned. It is not cause for sorrow "that the atmosphere should be an excitement; that it should be theistic, poetic; that the dull rock should be drenched with Deity." So Emerson affirmed; and what materialism there was in him was not at the expense of the ideal and the spiritual.

Is there, then, nothing which is called Materialism, or which might properly enough be called so,—if the word is to have its meaning determined, not by what matter really is, but by what it has been considered,—against which one might well lift up a warning voice? Would that it might be so, but it is not. There is even a speculative Materialism which is crude and gross, the utter thoughtlessness of those who talk as if from mere dead matter had come forth the ordered Cosmos in which we abide and part of which we are. But this does not deserve a moment's pause. The instant that a man begins to think, he is delivered from this nonsense. Quite different from this is the materialism which is rightly to be feared and shunned. Some of it goes by such high-sounding names as Ritualism and Authority and Supernatural Religion. It consists in the exaggeration of formal and external at the expense of ideal elements. It is saying nothing against matter, nothing against that special form of it which we call "water,"—which has I cannot say how many perfect uses, and takes on so many beauteous forms,—to suggest that it is possible to exaggerate the importance of a few drops upon an infant's forehead, or complete immersion in it of the adult believer. Matter has everywhere its spiritual implications. Materialism consists in making the relation of the former to the latter too abrupt and artificial. When a Roman missionary, under pretence of comforting a South Sea Island baby by sprinkling a few drops of scented water on its head, adroitly changes the flask, and uses without the mother's knowledge "the water which conveys regeneration," he is guilty of an action for which if materialism is not the right word, it is because its long association with a certain form of speculation has made it much too honorable a word to indicate such foolishness as this, to say nothing of the acted lie. And so when, in our very midst, clergymen send round among their people instructions as to the manner in which they should take the eucharistic elements, bidding them be careful never to drop the smallest crumb of bread, because it is the Lord's body, and never to wipe their lips with a handkerchief after partaking of the wine, but to "put out the tongue a little and gently suck off any that may have been left upon the mouth or beard,"—if this is not materialism, it is something for which we ought to have a harsher name. It is a gross exaggeration of the spiritual significance of the material bread and wine. The ritualist is always guilty of this exaggeration of material forms and substances. Ritualism is always materialism. The Rev. Arthur Tooth, who, after keeping the whole Church of England for some months in pain, was lately extracted from his dainty chapel and put in jail for disobeying some injunction of the courts, was not less a materialist, because he made himself a martyr for his favorite altar-cloth and gown. What but materialism is the insistence on the importance of these things one way or another? Can the acceptableness of a man's worship be affected by the color of the shirt he wears outside his other garments?

As there is sacramental materialism, so there is dogmatic. And as the tendency of the former is to set something purely formal and magical above simple goodness, so the tendency of the latter is to set up something above truth to sanction it, as when, to establish the validity of the Christian revelation, it appeals to physical marvels or to the numbers that adhere to certain statements of theology. And still another form of materialism—a form, too, which is multiform—is the materialism which most of all makes good the popular acceptation of the word as a synonyme for coarseness. This is the materialism which most of all we have to fear,—materialism not of philosophy or theology, not of ritualism or dogmatism, but of the daily life. Surely there is a difference in the ideals by which men are attracted. Surely there is a lower and a higher. There is no sense, there is no passion, which is not beautiful and honorable in its own proper sphere, within the boundaries of reason and of fellow-service. But the exaggeration of the senses, the exaggeration of the passions, at the expense of spiritual satisfactions, this is a materialism which might well monopolize all of the evil odor which attaches to the name or ever has attached to it. When a man takes no thought for his body what he shall eat or what he shall drink or wherewithal he shall be clothed, he is very apt to come to grief, and somebody else has to take thought for him. These things should be thought about. We all of us know people who do not think about them half enough; but here, too, there is the law of fitness and proportion. Man shall not live by bread alone, but by every word that proceedeth from out the mouth of God. The man who lives only for the gratification of his senses and his passions, who does not subordinate these to intellect and affection, who does not live for truth and beauty as well as for ease and comfort, he is the materialist against whom we should always be upon our guard. Not the material in which we deal makes us materialists or spiritualists. He always is the spiritualist, the idealist, who is bent on finding the ideal elements that inhere in human life, and bringing these into commanding place and power. Whatever be our philosophy of the ultimate constitution of the world or of our own personal life, let us see to it first and always that our daily life is not materialistic, in that it is sensual or coarse or petty, mean, or low. Let us live for truth and beauty, love and fellow-service, not less by any means than for our food and clothes. Let us exaggerate no incident, hold fast the simple sense of all things, being led astray by neither miracle nor magic, and, slow to argue from the philosophic creed of others to any defect of faith or character in them, see to it that our own creed does not commit the folly of supposing that a less can ever generate a greater thing, and that our life responds to every law it knows with swift obedience and crowns its every highest impulse as the vicegerent of the invisible and all-sustaining Power.

JOHN W. CHADWICK.

THE F. R. A. CONVENTIONS.

According to notices which have been published in *The Index*, the Free Religious Association has resumed this season the plan, for several years suspended, of holding autumnal conventions. Syracuse, N.Y., and Chicago were the points fixed upon by the committee, after consultation with local friends of the Association. The Convention at Syracuse opened on the evening of November 20, and continued through the following day. The attendance was good, and the spirit of the meetings excellent. The only disappointment experienced was owing to the inability of Col. Higginson to be present as one of the speakers on account of critical sickness in his family. The President of the Association, William J. Potter, the Secretary, F. A. Hinckley, Mr. M. J. Savage, and Mr. and Mrs. W. H. Spencer, were in attendance from New England; and they were well supported on the platform by Mr. Mann of Rochester, Mr. Powell of Utica, and Messrs. Mills, Calthrop, and Fiske of Syracuse. At Chicago, the Convention began on the evening of the 23d, and held through the 24th. The same speakers were in attendance from New England, with the exception of Mr. Spencer, whose place was supplied by Mr. C. D. B. Mills. Mrs. Annie M. Diggs was also present from Kansas, and Rowland Connor from Michigan, and rendered good service. But not the least notable among the addresses were those made by Judge Booth, and Rabbis Hirsch and Felsenthal, and Jenkin Ll. Jones, of Chicago. The attendance, perhaps, did not average quite so large as at Syracuse; but it was a meeting of growing interest to the end, and did an important and needed work in divesting many of the citizens of Chicago of false impressions concerning the Free Religious Association. A very considerable accession to the membership of the Association was made at these Conventions, and it is noteworthy that the general tone of the addresses was positive and constructive.

PRAYER AND AN ETHICAL VIEW OF LIFE.

Prayer seems to have its origin in a consciousness of weakness, joined with a belief in hidden sources of strength; and is an appeal, whether spoken or only felt, or indeed only a motion or look or sigh of the spirit for the strength that it may supplant and drown our conscious feebleness. Prayer may be selfish, it may be unselfish. Man has prayed for unrighteous victories over his fellow-man, he has also prayed for the "kingdom of God." Whatever seems above us and beyond us—whether it be strength of body or of soul, whether an ideal personal purity, or some great cause before which we feel the pitiful inadequacy of all we do or can do—becomes a natural object of prayer.

What, then, can lead those to abandon prayer, nay, compel them to do so, who neither disown the consciousness of weakness, nor, on the other hand, the unseen Power, and who have but slight sympathy with the outward, mechanical, secular, manner of life into which so many, alas! who have broken with existing religious institutions, incline to fall? I think it may be called an ethical, a morally serious view of life. Preparing the way to it and almost making a part of it is a purely *intellectual perception*. This perception is that prayer does not gain its end. And here let me be clear. I do not say that prayer is without effect. No motion, whether of body or mind, is without effect. I simply say it does not gain *its* effect, *i.e.*, its appropriate effect, or the one according to its idea and meaning. It is to my mind hardly more than intellectual trifling to say that the elevation and tranquillity of mind that may

Digitized by Google

often follow prayer are the answer to it, though the object of the prayer be not granted. The question is, Does prayer as such, the appeal to unseen Power, win its end? (And I need hardly say that I have in mind only prayers for what is right and good, excluding all such as are selfish and partial, to which there may be objections on other grounds.) For myself, I must say no; and I think, in so doing, I speak in more than my own name,—indeed, in the name of a scientific view of the world. The unseen Power is in all the world and in all its order, and of this order the scientific view is nothing but the transcript. But, if it made of itself a person, and acted as one of the series of causes in this order, either the order would *ipso facto* cease, or itself would cease to be the unseen Power, and become a creature like ourselves.

And this order extends to the sphere of human thoughts and purposes as well as to the phenomena of nature. By this is nowise meant that we are not free beings and original causes ourselves of effects, nor that our individual lives are not parts of a larger plan, so that results undreamt of may come from our individual actions; but simply that, under the supreme ordering, we are the proximate causes of the effects; that none happen without our causation; that as in nature no change takes place save by the expenditure of phenomenal energy, so none in our individual souls or in the order of human society, save by thought, by purpose, or some species of human energy. If I will be pure in thought, I must set my heart on purity: I must order my life and put a rein on my desires and *become* pure, and no power without in heaven or earth can *make* me so, whether with or without my prayers. If I will see justice in human society, I and my fellows must create that justice. 'Tis utterly vain to join even with John Milton in his hymn,

> "Defend the poor and desolate,
> And rescue from the hands
> Of wicked men the low estate
> Of him that help demands.
>
> "Regard the weak and fatherless,
> Despatch the poor man's cause,
> And raise the man in deep distress
> By just and equal laws."

John Milton may have been sincere in so praying, psalmists and prophets and all the religious of the olden time may have been. I make not a doubt that they were sincere in similar prayers; and far better were the prayers with the sympathy and instinct for justice they express than the low contentedness of those whose hearts nowise responded to them. But, to those who share the view of the world of which I have spoken, such prayers, so far as they are *prayers*, are superstition; and I do not believe that many educated men and women at the present day would repeat them, if they distinctly realized all their implications. Save for the aspirations and moral demands that were hid behind them and found effect in other ways, I do not think all the prayers of the ages have advanced one single step the cause of goodness or of right.

This intellectual perception is a modern gain, but it serves to give new clearness and seriousness to *a moral conviction* which is age-long. This, in one form and another, is the sense of what ought to be, the feeling of the sanctity of that conception that life, according to its idea and purpose, is an effort, a struggle to win it and irradiate the world with it. The idea of the good extends to the heights of heaven, and covers the most trivial acts of earth. John Henry Newman has given it fervid utterance by saying that it is better for the sun to drop from heaven and the earth to fail than that one soul should tell an untruth or steal a farthing's worth of property. And it is contradicted by all that way of thinking so in vogue at the present day, that makes life and happiness in life the end of man, and forgets that our human existence gets worth and meaning only as it reflects certain moral ideas. Even Juvenal teaches us better, who could point his satire at those who, for the sake of life, would virtually lose the ends of living:—

> "Summum crede nefas animam praeferre pudori,
> Et propter vitam vivendi perdere causas."

The sun shines to witness holy men and women, the earth to spread out as a field, whereon a battle, the battle of the right, may be fought. And we defeat the very purpose of their being when, for the sake of enjoying them, we do, or countenance any one in doing, shameful or unjust things. And I have no idea that religion will come again in the world (in accordance with the new view of things, I mean) till once more the sense dawns on man of something above all pleasure and happiness, more sacred even than life.

And let me bring out clearly the fact that it is we ourselves who are to win the just and the good, so that, even if some influence apart from ourselves should make us so, the demands of morality would not be met. Indeed, it must be said such justice and goodness would not *be* justice and goodness. So long as instinct or temperament or any species of influence, even if they be life-long in their action, determine us in the matter, we have not risen to the dignity of moral beings. The just and the good must be chosen, must become a principle of the will, before any worth enters into us. Neither grace of nature nor that of what the Christian calls the "Holy Spirit," but only the creative effort of man himself, can make an answer to the demands of morality. Have we then a lonely task? Yes; but we must accustom ourselves to loneliness. In the last analysis, each one is alone. Whatever influences go out from him or come to him, his personality and its character are incommunicable. Not that mighty Power, in whose hands we all are, can change our will or take the place of our own individual determination. *Thou must save thyself* is the stern mandate laid upon us: all other salvation is vain. And no matter if our own efforts win little, very little, that little has more worth — yes, infinitely more worth—than a so-called perfect life which is made for us by whatever means outside ourselves. It is not what we do or to what we attain, but what is our resolution, whither are our eyes turned, whither go out the unconquerable purposes of our spirits, —that is of moment.

And equally does this thought hold of a perfect state of society. I will not say I have no interest in it, if it is not in part made by me; but of this I am sure,—that I have no place in it. To humanity is given a task. Do we suppose the unseen nature of things, in virtue of which we have it, will dispense us from it? Do we imagine that it will defeat its own ends in placing us here, and the very significance of our being, by accomplishing the task for us? I am rather thankful that it *is* inexorable, that our wishes and prayers beat vainly against it, that it will not bend or yield, but summons us to match it in the inflexibility of our own purposes, to become ourselves gods, partners, and not underlings, in working out the eternal purpose.

Diviner action, then, must take the place of prayer. The limits which seem to close about our souls and to bar the progress of human society must be pronounced conventional and passable. Men must not merely say, but prove by their action that they are children of infinity. The religion of mere conservatism must be denied the name of religion, since it clings to the actual and denies the infinite element in man. And yet I hope it is clear that I do not mean action in any other sense. Action divorced from thought, and a divine thought of ourselves, has the interest only of a problem in mechanics. And it is true that prayer has been just such a means of connecting men, and the humblest of them, with an unseen and supersensible order of things. The connection has been conceived as one of desire (or request) and answer. And better, I believe, is almost any connection, so it be honestly thought of, than none at all. It is a part of man's dignity that he believes in something higher than himself. But there is another possible connection, at which I can now only hint. It might be expressed in almost the same words as the foregoing, but with directly opposite references. It is *demand* and answer, only the demand comes not from us, but from on high; and the answer must be given not from on high, but by us. All genuine morality is such a connecting of the individual with somewhat above the individual: it is the response of man to a task which neither he nor society imposes on him, but is set for him in the rational constitution of things, and, ideally speaking, is unalterable and unescapable. This, too, is union with the supersensible, though of a very different kind from that of prayer. The sense of it will find expressions in the future, and they will be the triumphs, the jubilations of the soul; but they will not be prayers, though they will give a new setting to the rational element at the basis of prayer, and will be soonest found, in my opinion, by those who frankly abandon prayer and adapt themselves entirely to the new attitude.

W. M. SALTER.

NOTES FROM THE FIELD.

Some of the advocates of liberal thought have the past year or two expressed surprise at the decline of interest in lectures that were better attended when the views advanced were more unpopular than they are now. It is probably true that the lecture field generally has fewer attractions for speakers than it had a few years ago. People depend for information, more now than formerly, upon books and periodicals which make easily accessible to all whatever can be presented in a popular style. But one reason perhaps that the average liberal lecturer attracts less attention now than he once did is that the people are pretty well acquainted in a general way with the thought presented. It requires the wit and eloquence of an Ingersoll to attract a large audience to hear a lecture on "The Mistakes of Moses." The people are getting familiar with objections to the divinity of the Bible, and the subject has lost its novelty. They go to hear Ingersoll, not for instruction, but to enjoy his inimitable wit and his stirring eloquence.

Yet there is room for needed and useful work in the liberal lecture field. There is among the intelligent class of dissenters from church creeds unwillingness to stop with mere disbelief, and a desire to encourage lectures which explain and popularize the best scientific and philosophic thought. Such lectures are needed in this period of transition, when people are abandoning old views faster than they are accepting and assimilating the thought which must supersede the decaying theology. In some communities there is yet a state of things that calls for the work of criticism, for the exposure of the absurdities of the Christian system and the assumptions and fallacies of the orthodox clergy.

With these convictions, we have left the editorial chair for the lecture field, in which engagements will keep us busy until the first of January. We have given a dozen lectures in Ohio to audiences numbering in some places from six to eight hundred, which have listened with an attention and interest which show the fullest appreciation of

Digitized by Google

our efforts to familiarize the people with the facts and philosophy of evolution in the physical, mental, and moral world. At Canton, Massillon, Alliance, and Salem, our first lectures have been given; and in another letter will be presented some observations and reflections based thereon, pertaining to the condition and needs of the liberal movement. A few facts in regard to one of the places we have visited may possess some interest for readers of *The Index*.

Salem has quite a history in connection with reform. It was the Western head-quarters of the anti-slavery movement, and many who still live there were members of the "Underground Railroad" Company when it did a flourishing business. The anti-slavery *Bugle*, edited at different times by Benjamin Jones, Marius Robinson, and Oliver Johnson, was during a period of some eight or ten years published at Salem. The most uncompromising and radical abolitionists, Garrison, the Fosters, Henry C. Wright, Parker Pillsbury, all in fact who wanted to express their abhorrence of human slavery and to denounce the Church, that "brotherhood of thieves," for its attitude toward the "sum of all villanies," invariably found a warm welcome and sympathetic audiences. The opposition was strong, the meetings were generally disturbed and sometimes broken up; and Marius Robinson, one of the bravest and noblest men that ever lived, was tarred and feathered by a crowd, one of whom still lives at Salem, and has long been a member of the Republican party. What political changes have occurred in this country since those days!

A Bible convention was held at Salem previous to the date of the celebrated Hartford Bible Convention. The freedom with which the character and claims of the Scriptures were discussed was something remarkable and startling for those days. Joseph Barker was one of those who took part in the discussion. He was then in his prime; and the ability and vigor with which he, a powerful speaker and experienced debater, assailed the doctrine of the inspiration of the Bible, produced a marked impression, and contributed to make the anti-slavery people in this region still more heterodox religiously, and more aggressive in their attitude toward the Churches and their creeds.

Salem was the home of Barker several years. He spoke at anti-slavery meetings, lectured against Christianity, debated with ministers who had the courage to meet him, wrote letters to the *Liberator* and *Investigator*, and gave attention besides to the cultivation and improvement of his farm. Personally, he was not liked, and was unpopular even among those who were glad to see his ability given to the support of their views. His personal unpopularity was one of the reasons of his leaving Salem and moving to Omaha.

He afterward went back to England, announced his reconversion to Christianity, lectured against "infidelity," and published a work in which he gave what purported to be an account of the circumstances that led him to abandon his faith, together with his experience as an unbeliever and the reasons of his restoration to Christ. The story is a sad one, and shows the ambitions, the vacillations, the enmities of a strong yet a weak man, one whose emotional nature and religious feelings were much of the time in opposition to the conclusions of a naturally vigorous intellect, one in whom doubt was painful, with whom faith was an indispensable condition of happiness, and yet whose active mind would not admit of that condition. In old age, which was attended with ill health and physical suffering, his religious tendencies and early impressions reasserted their control over his mind, and he was apparently in the condition expressed by the words, "Lord, I believe: help thou my unbelief." He advised all to avoid the books and even the company of free thinkers, for the reason that the mind once troubled by their objections could never quite escape their influence. Here, we are reminded what Bayle wrote: "The Christian who has allowed himself to be bothered by the objection of a sceptic has already one foot in the grave of his fidelity. The ship of Christ is not made to be tossed about on the stormy sea of doubt, but to remain securely anchored in the harbor of faith."

The Broad-gauge Church—a name bestowed by some of the orthodox people, and adopted by the members of a liberal association composed of many of the most substantial citizens of the community—flourished some dozen years in Salem. Marius Robinson was the first president. Many of the leading supporters were brought up Hicksite Quakers. During the first four or five years of its existence, the association employed Mr. Charles Ellis, who had graduated from Meadville, but was too heterodox to speak acceptably from a Unitarian pulpit. His discourses are spoken of as among the most brilliant ever given before the association, and they were not without their results on the public mind. At a later date, the desk was occupied by many of the leading representatives of liberal thought. During the last year of its existence, Mr. Parker Pillsbury spoke for the association regularly every Sunday. But after a while, Liberalism became so diffused through the community that the "Broad-gaugers" did not feel the necessity or importance of keeping up a distinct organization, and the past four or five years they have maintained a "masterly inactivity." Lately, however, the young men, encouraged by several members of the old organization, have formed a Lecture Association; and it is gratifying to note that there is a strong feeling among the active members in favor of scientific lectures, or those of a constructive character, rather than those merely that repeat the criticism of creeds and the objections to theology with which the community is already pretty familiar. B. F. UNDERWOOD.

EDITORIAL NOTES.

UNTIL further notice, make all cheques and drafts payable to the order of John C. Haynes.

"SUNSHINE CALENDAR" is the title given by Miss Kate Sanborn to her collection of extracts, taken from many good sources, selected sometimes for the sake of their humor, sometimes for their poetic beauty, but oftener for their moral worth, and ornamented by illuminated pictures and mottoes. We think it will justify its name in any household.

THE search for "True Religion" has always, so far in the world's history, brought to its seekers, conjointly with the glorious martyr spirit, the martyr misfortunes and trials. The paper by that name seems to share the usual fate of such seekers, as the editor and his assistant are sick, the compositors away, and this just after a fire and a removal. We hope better times will soon come to our contemporary.

THE *Turnzeitung*, published as an appendix to the Milwaukee *Freidenker* for November 19, contains a list of one hundred and one questions of recent interest, admirably fitted for the use of debating societies and lyceums. We add a few: "Is the father or mother the chief power in the education of children?" "Protection or Free Trade?" "Is there any doubt of the continuance of our Republic!" "Common-sense *versus* classical education." "Which country in Europe is most likely to become a republic?" "Has the moon any influence on climate?" "Should the concentration of capital in a few hands be restricted by law?" "Should telegraphs and railroads be managed by the government?"

WE have received from the manufacturers, Asa L. Shipman & Co., No. 10 Murray Street, New York city, a very neat, simple, ingenious, and durable binder for *The Index*. It has a flexible back which adjusts itself to any thickness, and, though offered as a temporary binding, is equally well adapted for a permanent one. By it, any one can bind their own papers, one sheet or number at a time, as neatly and thoroughly as a regular book binder. Those of our subscribers who keep their *Index* on file will find this binder of great use; and they can be supplied with them from this office at their retail price, $1.00.

THE following, which we clip from an exchange, shows how America is preserving and caring for her historic ruins:—

The walls of the old engine-house at Harper's Ferry, where John Brown made his last stand with a dozen men against seven thousand [says a correspondent], now furnish an artistic background to a huge placard setting forth the virtues of somebody's liver pad. The inscription on the front of the building, which tells the story of Brown's crusade, cannot be read at any distance. The advertisement of the liver pad is in letters as long as a Springfield musket. The grass grows rank in front of the heroic spot, as though few pilgrim feet visited it. A clump of tall ragweed stands in the open doorway where young Watson Brown and his brother were shot down. The roof has gone, the windows have disappeared, and there is an air of neglect and gradual decay about the spot that accords well with the stagnation of the town.

WE have received from Houghton, Mifflin & Co., of this city, two beautiful calendars for 1883, either or both of which we are sure will suit the taste of most *Index* readers. They are respectively entitled "The Emerson Calendar, 1883," and "The Longfellow Calendar, 1883." The first mentioned has for its leading decoration a gigantic pine tree: at one side of the design is a vignette of Mr. Emerson's home at Concord. The coloring of this calendar is wonderfully rich, including twenty colors, without any approach to tawdriness or glaring effects. The Longfellow Calendar has a fine portrait of the poet: on one side of the medallion containing it is a view of Longfellow's home in Cambridge, and on the other the belfry of Bruges. Below, on the right, is a picture of Evangeline standing on her father's porch, and on the left a picture of Priscilla in the snow, carrying food to the poor, while a band of golden daisies bearing the names of Mr. Longfellow's most famous works encloses the whole. This calendar is also printed in twenty colors tastefully blended. In both calendars, each day of the year has a motto accompanying it from the writings of the poet it commemorates; and the price of each is the same, $1.00.

THE new literary venture, *The Life of Whittier*, of our valued contributor, W. Sloane Kennedy, is, we are pleased to see, very favorably commented on by the critics. The *Transcript*, at the close of quite a lengthy review of it, says: "The volume shows so much care and labor in its historical and biographical bearings, so much deep thought and strong expression, so much critical ability and elaboration, that, whatever else may be said of it, the work remains one of great interest, and will attract attention." The Springfield *Republican* says: "Mr. Kennedy . . . takes hold of literature with a positive grip." The *Herald* of this city speaks in the following high terms of Mr. Kennedy's literary ability as shown in this *Life of Whittier*: "He has no reason to be ashamed of his modest efforts at authorship. He displays the free hand of the born *littérateur*, if not that of the original author; and there is an undercurrent of fresh thinking in these pages which indicates that his next work will be an expression of thoughts

Digitized by Google

of his own, which are impatiently awaiting utterance." In these favorable opinions, the readers of *The Index*, who have had occasional samples of his vigor and originality in both prose and poetry, will, we are sure, most heartily coincide.

THE *Catholic Review* informs "good Dr. Park" that neither the Congregational system nor any other phase of Protestantism furnishes any permanent resting-place in the progress of religious opinion, any logical ground of defence against the attacks of radicalism short of the Catholic Church. The *Review* thinks his recent utterances in Boston are "the last gasp of so-called Orthodoxy," and addresses the champion of Orthodoxy as follows: "With your knowledge of Catholic theology, we might naturally hope that your conservative feeling would prompt you to recoil from the fearful vortex into which modern free thought has led so many of your contemporaries, and to take refuge in the Fortress of Peter which is founded upon the rock of eternal truth. But, alas! experience leads us to fear that, like so many other orthodox old fogies who still linger as venerable fossils of a past generation, you have become so thoroughly imbedded in the conglomerate stratum of opinion, in which, at an early period, you were 'deposited,' that nothing will ever be able to liberate you from your Silurian bed but the sound of the last trumpet which shall awake the nations from the dead, and call them to their final account. Will you then, dear Doctor, be able to put in the available plea of exculpation,—the plea of 'invincible ignorance'?"

B. F. UNDERWOOD is lecturing to large audiences in Ohio. He will remain in the lecture field during December and January. All applications to him for lectures should be addressed to this office.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index*.

ELECTRICITY.

Thou ridest through the heavens, thy course is far,
Thou rollest on in thy triumphal car;
Through the vast conclave, loud thy wheels resound,
Loud echoing backward from the nether ground.
Thy varying foot-steps make the faint hearts quake;
But strong ones rouse to catch thy voice elate:
Force over other force, what should we be
Without thy penetrating agency,—
Beneficent, earth-saving Electricity!

When sultry skies and drowsy airs have come,
With insects' vague, monotonous, low hum,
Thy muttering, fierce approach how welcomed then
By all of life, from grasses up to men!
If in the morning thou dost culminate
And for the day portend a rainy fate,
Or in the evening doth expend thy dower,
Adding new beauties to the sunset hour,
Still welcome thou, cleansing and renovating power!

We hail thy lightning's instantaneous flight,
Its vivid play upon the clouds of night;
List the reverberating thunder-roar
As rolls thy chariot o'er heaven's hollow floor;
The pureness of the glorious atmosphere
When thou art roused, so cool and fresh and clear!
The water's avalanche, oh, let it burst,
That the broad thirsty earth no more may thirst,
But yield its plenty as in Eden's bowers erst!

In other forms than these thy reign we bless,
Thy bounteous, awe-inspiring graciousness!
Much coveted and lavishly bestowed,
Through thee we gain our strength to walk life's road:
Peoples have worshipped sun and moon and star,
And birds and beasts, and mythic ones afar;
But here we reverently bend the knee,
Thou all-pervading, potent one, to thee,—
Life-giving, life-sustaining *Electricity!*

LITA BARNEY SAYLES.

KILLINGLY, CONN.

The Index.

BOSTON, DEC. 7, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

Christian Theology vs. Human Fellowship.

A Discourse before the Free Religious Society of Providence, R.I.

BY FREDERIC A. HINCKLEY.

This has been what we might call a sensational year in theology. Thinking people were startled last spring by the Andover controversy. They are at least surprised by the present attitude of the National Unitarian Conference. And they may be said to wonder at the recent action of the Congregational Association of New York and Brooklyn.

It had been supposed that if Orthodoxy, of the pure and unadulterated type, had a home anywhere, it was in the Theological Seminary of Andover. As long ago as 1807, this institution, an outgrowth from Phillips Academy, had been founded with the stated object of providing for the Church "a learned, orthodox, and pious ministry." And Samuel Abbot, a Boston merchant, one of its earliest patrons, had established a professorship, in which it was specially provided that the most rigorous doctrines of the Church should be taught. But in this year, 1882, the school, now seventy-five years old, having to fill this particular chair by reason of a vacancy, selected, through its Faculty and Trustees, the Rev. Newman Smyth, well known as what is called a liberal orthodox minister. Dr. Smyth does not believe in infant damnation, neither does he believe in everlasting punishment; and so when the matter came before the Board of Visitors, a third body whose consent was required, a controversy sprang up, with the results of which you are familiar. I need not here rehearse the details. I desire now to call attention to some very interesting points which this controversy has developed.

In the first place, the Faculty, who certainly ought to know what they do, and ought to be sound on all doctrinal points if anybody is to be, selected a professor who was known to be unsound on several of them.

In the second place, the candidate selected, privately and publicly committed against at least two articles of the creed, subscribed to it without any hesitation or reservation.

Thirdly, the Faculty, when severely criticised for their action, affirm that the rigorous enforcement of the creed in its literal sense would absolutely prevent the maintenance of any trust reposing on a creed.

And, fourthly, so eminent a writer as the Rev. Dr. Leonard Bacon says: "The most obvious fact in the whole affair is this: that no one of the parties interested in it, officially or unofficially, places the slightest value on the mere fact of subscription to the prescribed creed. Neither the Faculty that nominated, nor the Trustees who elected, nor the Visitors who approved, nor the candidate who submitted to be successively catechised, nor the newspapers which pitched in, nor the critical public looking on, has any confidence whatever in the subscription, joined to however irreproachable a character for intelligence and sincerity, as giving a guarantee of the candidate's conformity to the creed subscribed." It is Dr. Bacon, remember, who says this, not I.

Bearing in mind these four points, let us turn for a moment to the Unitarians, and see what they have been doing. In the year 1866, the Unitarian denomination formed a National Conference. It was christened, and has since been called, the National Conference of Unitarian and other Christian Churches. The Preamble and first Article of the Constitution adopted were as follows:—

PREAMBLE.—*Whereas* the great opportunities and demands for Christian labor and consecration, at this time, increase our sense of the obligations of all disciples of the Lord Jesus Christ to prove their faith by self-denial, and by the devotion of their lives and possessions to the service of God and the building up of the kingdom of his Son:—

ART. I.—Therefore, the Christian churches of the Unitarian faith, here assembled, unite themselves in a common body, to be known as the National Conference of Unitarian and other Christian Churches, to the end of energizing and stimulating the denomination with which they are connected to the largest exertions in the cause of Christian faith and work. . . .

This action was of course unsatisfactory to the Radicals, and resulted in the formation of the National Free Religious Association. In 1868, however, under the pressure of the criticism which its former action had aroused, the Conference, without repealing anything, adopted the following additional article:—

ART. IX.—To secure the largest unity of the spirit and the widest practical co-operation, it is hereby understood that all declarations of this Conference, including the Preamble and Constitution, are expressions only of its majority, committing in no degree those who object to them, and dependent wholly for their effect upon the consent they command, on their own merits, from the churches here represented or belonging within the circle of our fellowship.

This was in turn unsatisfactory to the most conservative; and, a few years later, Rev. Mr. Hepworth, who has since left the Unitarian and joined the Orthodox body, offered a substitute for Article IX. as follows:—

ART. IX.—Reaffirming our allegiance to the gospel of Jesus Christ, and desiring to secure the largest unity of the spirit and the widest practical co-operation, we invite to our fellowship all who wish to be followers of Christ.

The old Article IX. was repealed, and this substitute adopted. And now in this year 1882, famous for theological somersaulting, the Conference, on motion of no less a radical than Minot J. Savage, adopts a new Article, not a substitute for Article IX., which still remains, but an additional Article, namely:—

ART. X.—While we believe that the Preamble and the Articles of our Constitution fairly represent the opinions of the majority of our churches, yet we wish distinctly to put on record our declaration that they are no authoritative test of Unitarianism, and are not intended to exclude from our fellowship any who, while differing from us in belief, are in general sympathy with our purposes and practical aims.

The points in this bit of history to which I would especially call your attention are these:—

1st. This National Conference of Unitarians affirmed its faith in the Lord Jesus Christ as the Son of God, and took to itself the Christian name.

2d. It declared that the Constitution was simply the work of the majority, and was not necessarily binding upon the minority; that is, it could mean something or nothing to its members as they might choose to interpret it.

3d. It repealed this last declaration, reaffirmed its faith in the Christian Gospels, and invited to its fellowship those, and *only* those, who wish to be followers of Christ.

And 4th. In this year 1882, it retains this Article, but adds another, saying, that nothing contained in this Constitution is intended to exclude from our fellowship any who are in general sympathy with our purposes and practical aims. So that Article IX. limits the fellowship to followers of Christ; and Article X. says we do not mean what we say in Article IX., we invite all to our fellowship who are in general sympathy with our purposes and practical aims.

Digitized by Google

Remember these points, please, while I notice briefly one more of the surprises of this eventful year.

At a recent meeting of the New York and Brooklyn Congregational Association, the Rev. Henry Ward Beecher, after a full statement of his theological views, sufficiently muddy to be hard to understand, it must be confessed, but nevertheless clear on certain points, notably the denial of the doctrines of atonement, of total depravity and everlasting punishment, laid down his membership, and withdrew. After his withdrawal, a long discussion ensued, in which it soon became evident that Mr. Beecher did not stand alone. And the meeting came to an end by unanimously adopting a resolution in which this sentence occurs: The full and proffered exposition of doctrinal views that he (Mr. Beecher) has made at this meeting indicates the propriety of his continued membership in this or any other Congregational association. And yet the doctrines that Christ died a ransom for many, that we of this day and generation are saved by his blood, that the wicked who do not repent shall be everlastingly damned, that the little child who dies before he can subscribe to the creed is totally depraved,—all this against which Mr. Beecher has been protesting for years, and which he now thinks cause for his withdrawal from the New York and Brooklyn Association, still forms a portion of the fundamental law of the orthodox body. Again allow me to suggest the salient points:—

1st. Mr. Beecher, the most noted preacher of the orthodox faith in America, holding views inconsistent with the creed of his church on vital questions, has maintained until now his formal membership with this representative association.

2d. When he resigns, the association unanimously resolve that these views are not at variance with the opposite views held and proclaimed in their constitutions and creeds, and express the hope that he will reconsider his resignation, and remain with them and of them, as heretofore.

Well, men and brethren, what are we coming to! Have words lost their meanings? Have the irregularities of the street got into the pulpit? Is Christianity, from either good or bad motives, trying to be, in a vulgar as well as in a sublime sense, all things to all men? To answer these questions candidly, but I trust also fairly, is the task I have set myself for this hour.

Theology as defined by the lexicographers is the science of God and his relations to his creatures, the doctrines we are to believe and the duties we are to practise. In the popular use of the term, and in the church use of it as well, theology relates chiefly to man's conception of and relations with God. If it involves at all the idea of duty, it is duty toward God rather than duty toward man. Christian theology, then, we may say, is that conception, or series of conceptions, of an Infinite Being, and of man's duty to him, held by the Christian Church, or, to make our definition as broad as possible, by the people calling themselves Christians. What these conceptions are in the Protestant Church, or in other words what Protestant Christian theology is, it is exceedingly difficult to determine. The position of the Catholic is more fixed and consistent, and consequently more easily measured; but the multitude of sects in Protestantism make a precise definition well-nigh impossible. Still there is such a thing as Christian theology. Let us see if we can obtain some idea of what it is. If you will go with me to the Episcopal Church some day, you will hear the rector and people repeat, in solemn tones, "I believe in the resurrection of the body and the life everlasting." If you will go with me into most any orthodox Sunday-school, you will hear recitations from the Westminster Catechism, according to which the whole pagan world—a large majority of mankind—is to be damned. If you had attended the recognition of a new church in Pawtucket the other day, you would have heard the minister confess to the council there assembled his belief in the Trinity, the infallibility of the Bible, the fall of man, the atonement, and the everlasting punishment of the unregenerated. All this is Orthodoxy, pure and simple, once the all but universal creed here in New England, now accepted literally by large numbers, and indorsed with certain reservations by many more. Mr. Beecher dissents from some of it, Miss Phelps affirms with great earnestness that a growing portion of intelligent Christians disbelieve several of its affirmations; but still it remains in plain letters as the standard of authority in the Orthodox Church, to be read of all. But let us not do injustice to the dissenters. Dr. Smyth, Mr. Beecher, and Miss Phelps may be taken as their representatives. They all distinctly reject some of the doctrines of their Church. But Miss Phelps maintains that these things are no longer the doctrines of the Church. To attack a man for the faith of his great-grandfather, she says, is only next to imputing to him the sin of Adam, and ranks the rationalist among the barbarians at whom he sneers. There must be freedom of interpretation; and if Mr. Beecher and Dr. Smyth and Miss Phelps, interpreting the Bible and the creed in the light of the civilization of to-day, find their meaning to be precisely the reverse of the interpretations given by their grandfathers,—why so much the worse for the grandfathers, that seems to be the argument. But, in the mean time, what has become of the doctrine of plenary inspiration? And how about the grandchildren of the future? Suppose they, bettering the lesson, reject all that seems vital to the grandchildren of to-day?

The simple truth is, if the signs of the times are worth anything,—the simple truth is that the old doctrines of Orthodoxy have been so thoroughly undermined in the natural progress of the evolution of thought that the most intelligent and unprejudiced minds find it necessary to reconstruct their beliefs. That is what Dr. Smyth has done; it is what Mr. Beecher has done; it is what Miss Phelps has done; more than that, it is what thousands are doing every day. But orthodox people are not peculiar in this respect. Not a denomination in our city but can testify to the same conflict; the non-thinking portion holding to the old, the thinking portion very slowly, but not less surely, breaking away from it. From the stand-point of creed, where shall we look for a church in which some of the keepers have not become betrayers of the citadel?

The Unitarian body is a very instructive example of this change, because, more than any other church organization, it represents the minimum of what was originally the Christian theology. It began, as all know, with a protest against the Trinity: it is not hampered now, it never has been hampered, by ideas of total depravity, everlasting punishment, and all that. Even its conservative wing will not hint at such doctrines as these; but they emphasize the personal Father and the special sonship to him of Jesus, the Christ. Old-fashioned Unitarianism, however, is no longer accepted without question. Indeed, the dissenters have become so numerous that it is by no means certain which is in the majority, the conservatives or the radicals? Judging from the vacillating action of the National Conference, one year it is the left, the next year the right, wing which moves the body.

Now, this radical Unitarian element retains as little of Christian theology as it is possible to possess and have any. It believes in God, but explains away nearly all the sectarian ideas concerning him. It takes the name Christian; but it believes Jesus to have been a man, as we believe him to have been. In its forms and professions, it is Christian and theistic, tenaciously so. It cannot separate Religion from Christian Theism. As was recently said by one of its representative preachers, we are necessarily theists and Christians. And yet, in its spirit, it is much like ourselves, largely universal and agnostic.

The thing called Christian theology, to-day, then, among Protestants, ranges from the strong, harsh, barbarous conceptions of ignorant Orthodoxy to the attenuated written or unwritten creed of radical Unitarian culture. Each sect and each division of a sect of course thinks it has the final and fundamental truth, would not be justified in existing if it thought otherwise; but a close study of church history shows a constant changing of statement, to meet the constant change in theological conceptions. If it had been said to Dr. Watts or Jonathan Edwards, "Gentlemen, the views concerning God and Christ which you hold are essentially false, they must give way to other and more liberal views with the progress of general enlightenment," these venerated leaders would not have believed it: they would have denounced as infidels and fanatics, they did denounce as infidels and fanatics, those who dared suggest such a thing. But the fact is, their theology has gone: the fanatics and infidels were right.

Nor is this the most interesting part of the case to us. In the ameliorated form in which we see the old theology to-day, it is going,—witness Dr. Smyth, Mr. Beecher, and Miss Phelps. Nor is this all. Not only is the ghost of the theology of Watts and Edwards vanishing, but that which was originally a protest against it is going too. It is not too much to say that, aside from the question of fellowship and the advantages of organization, a large number of radical Unitarian ministers do not care a fig for the Christian label or for any form of theology whatsoever. As we look all along the line, therefore, it is hardly necessary to say the Christian theology *must* go. It is a fact of evolution that it has been going, piece by piece, for years; and the process gives every indication of continuance, until it is all gone. I do not assert it as an opinion: I merely interpret it as a phenomenon of growth. Now, this is a startling fact, if it be a fact, to many reverent souls. What does it signify? they ask in fear and trembling. Has the Christian Church outlived its usefulness? Is Christianity itself a sham and a lie? Not at all. It simply indicates that there are people who have outgrown the Church; that the number of these is constantly increasing; and that Christianity as an exclusive system, as the means of salvation for all men, no longer has the unquestioning allegiance of men's hearts. Christian theology, in its mildest forms, assumes to define the Universal, and to regard Christianity as in a special sense a more direct revelation from the Universal than any other system known to man. Thus, it necessarily assumes for a part that which belongs only to the whole, to universal Religion. This is the pith of Unitarian theology. It is what is vital in all Christian theology. But it is based on assumption, to the falsity of which science is every day adding new proof. Therefore it is that I say the whole Christian theology is going and must continue to go.

But, side by side with this theology, there has grown up a spirit of fellowship which I greatly revere. In the Church, looking through theological spectacles, they call it *Christian* fellowship; but it is not that, it is *human* fellowship. It is a most noticeable fact, and a most natural one too, that theology has grown small just about in proportion as this feeling of fellowship has grown large. Once it was only the company of the elect that was desired. The inner body of church communicants drew about themselves a charmed circle into which only true believers could come. They called that Christian fellowship then. After a while, it broadened out a little. It was discovered that there were saints in other denominations, so a union of churches of similar faiths became possible. Still later came Universalism, proposing to enlarge the circle so that it should take in the sinners as well as the saints. But they always called it Christian fellowship, as in the beginning. And now, to-day, some men have extended their hands to Jews and Hindus and Parsees in a universal fraternity of love; and Unitarianism says, Good, very good, but labels this *Christian* fellowship too.

Now, what is the truth about it? I take it simply this: it is all the growth of the idea of the brotherhood of man, an idea which has been found under all systems. It is not Christianity, it is not Buddhism, it is not Zoroastrianism, it is the Almighty Heart making its way through these and over them to the Universal from whence it came. Systems of theology, the Christian included, have always been obstacles to be overcome, never helps to be welcomed, in the prosecution of this work. Of course, it has been well, a part of the natural environment; but, nevertheless, these forms have stood in the way of the complete manifestation of brotherhood. Their entire destruction is a condition precedent to its realization. The caterpillar may be very beautiful, but it is not the butterfly; and the power to soar comes only as the power to crawl goes. I wonder what would become of our friend's Christian fellowship, if he should carry it to China or Japan or Persia. As some great soul in a Chinese or a Japanese or a Persian body gave him that brotherly grasp which knows neither sect nor system, I fancy he would hardly like to exclaim, This is *Christian* fellowship! Suppose he did so exclaim, and suppose the Chinaman replied, No, it is Confucian; and the Japanese added, No, you are both mistaken, it is Buddhistic; and the Persian in his turn should say, No, you are wrong also, it is Zoroastrian,—what would be the result? Why, if they were sensible men, if they were able to see beyond their theological schools, they would all laugh at their own narrowness, and would exclaim with one voice, No, brothers, neither Christian, Confucian, Buddhistic, nor Zoroastrian, but Human Fellowship, —that is what our hand-clasp means to-day.

Digitized by Google

Now, friends, radicals in religion have been evolved from the crawling state, they have soared high enough to see over theological fences, they have had this vision of the Fraternity of Man. And it is the grandest thought I know, that this process of enlightenment is *going* on in every sect and under every system, and some little glimmer of this vision is throwing its divine light into every human soul. When you find a man or a woman with the enthusiasm of humanity, you find one who is openly resisting, or at least trying to explain away, the old theological statements and confessions. That is the trouble with Dr. Smyth, it is the trouble with Mr. Beecher, it is the trouble with Miss Phelps, it is the trouble with our radical Unitarian friends. They have seen a vision,—they understand now how God hath made of one blood all the nations of men for to dwell on all the face of the earth,—and henceforth that vision, even when they know it not, is the inspiration of all their living. It makes the idea of everlasting punishment so atrocious to Dr. Smyth and Mr. Beecher and Miss Phelps, it makes the idea of refusing to fellowship, without any reservations, with a good man who is non-theistic and non-Christian so abhorrent to such men as Chadwick and Savage that they would sooner cut off their right hands than tolerate it.

Very well, then, you will ask, naturally, What does it mean that these men and women cling so desperately to their old theological connections? That is precisely what we are trying to find out, and I think we are prepared now to solve the problem. In the first place, it is clear that there is no intentional dishonesty involved. The character of the persons concerned makes such a supposition impossible. It might be dishonest for you, it certainly would be dishonest for me, to do as they do; but it is not dishonest for them. We must look for an exalted motive, and I think we shall find one. These come-outers, who do not come out, are not blind to the fact of their own dissent *from* certain doctrines of the Church. They know very well that, if they proclaim this dissent, the Church ought to excommunicate them. They appreciate the logical consistency of those who stand on independent platforms affirming the inalienable rights of the human reason; but they believe honestly, though as I think mistakenly, that they can do better service for humanity, really accomplish more for human fellowship, or for what they call "Christian fellowship," by maintaining than by severing their ecclesiastical relations. They say to themselves, Here I have a church-building, attractive and imposing, and a large number of people come to hear me,—come not because they want to hear me particularly, but because they think they should go to church and help support public worship. Why should I give up my opportunity, why should I throw away my lever and fulcrum, and so lose the power I now possess? Well, it is a dangerous argument, subtly so. It leads to one of the greatest abuses of this day, the unconscious but not less real *stretching* of the formula to meet our own individual wishes. We can all see other people's sins plainer than our own. Certainly, the Unitarians can see this sin in the Orthodox Church without apparently thinking for a moment that they can find it nearer home. I quote from the *Unitarian Review*: "The great Greek historian points it out as the surest sign of degradation in his day that men altered at their will and pleasure the customary meaning of words in reference to action. It seems to be the aim of the Evangelical Church to do the same in reference to religion." I think that is true of the Evangelical and just as true of the Liberal Church. There is to-day in all denominations a tremendous holding on to the old formulas, and a tremendous license of interpretation of them in behalf of a larger fellowship, such as directly promotes dishonesty. Is it quite honest to subscribe to a creed containing doctrines which one rejects and abhors? Who will say yes to that? But Dr. Smyth has done it. And a large portion of the orthodox denomination indorse him in doing it, too. What excuse will he give for this action? He will say there is no such doctrine as you mention in the creed. Some have thought so, but the words mean nothing of that sort to me. Is it quite honest for a man to say, "I accept the tri-personality, the Trinity of God? There are difficulties in it, but so there are in all views. I believe one can be three, and three one. It cannot be demonstrated, but it follows the analogy of the world. In a general way, my theory of the atonement is the moral-influence theory. I believe in miracles, they are possible now. I believe in the miraculous conception and the resurrection of Christ. I believe in these, and also in evolution; and I have labored to lay foundations for belief which are scientific." Is it possible to find any honest, straightforward logic in such talk as this? The New York and Brooklyn Congregational Association the other day said, yes, certainly; and invited the talker to remain with them, declaring that he had said nothing to indicate any unsoundness in his orthodox theology. I do not think Mr. Beecher and the Association deliberately dishonest in all this. They are only stretching the formula, trying to reconcile their doomed theology to the facts of life.

Is it quite honest to write and publish an article to prove that the old meanings of the creeds are no longer in existence, that dissenters have no right to hold the subscribers thereto responsible for what their language has been interpreted to mean for several generations? This pouring of new wine into old bottles is the occupation in which Miss Phelps is engaged, vainly trying to reconcile reason and so-called revelation. Of course, the motives of Elizabeth Stuart Phelps are as pure as crystal, no one questions that; but is she not deceiving herself in attempting to marry old error to new truth? It seems so to me. The marvel is that so many people, of sound minds and sound morals, so easily and unconsciously sacrifice both, by means of this astonishing license of interpretation.

But most marvellous of all is the attitude of radical Unitarianism. You find it at the West, you find one example of it in Brooklyn, another in Boston,—men holding on to the old institution with their hands, while their minds are largely pulling away from it all the time. Is it quite honest for an association to say in one part of its Constitution, "We reaffirm our allegiance to the gospel of Jesus Christ, and invite to our fellowship all who wish to be followers of Christ," and in another part to say, "This is intended as no authoritative test; we hereby invite all to our fellowship who are in general sympathy with our purposes and aims." Messrs. Savage and Chadwick say it is not only honest, but ought to satisfy the most radical of us. Mr. Chadwick, writing to the Editors of *The Index*, says: "If you do not come in, after this, and work with us, we shall feel that it is because you do not like our company, and not because you do not like our creed." But how could I become a member of the Unitarian Conference, without reaffirming my faith in the gospel of Jesus Christ as the Son of God, and declaring my desire to be a follower of Christ? Of course, if the act of assuming membership of the Conference means anything, it means that. How does it happen then that such radicals as I have mentioned maintain their membership? It is because they, too, are stretching the formula. They have explained away, in their own minds, all the old meaning of the phrases "followers of Christ" and "Son of God." Christ was a man, they say, in our view. To be followers of him, then, is to be followers of the man Jesus precisely as we are followers of the man Emerson. In that way of looking at it, we reconcile Articles IX and X; and keep the body a unit for freedom, fellowship, and character in religion.

I say again it is a *most* dangerous style of argument, and can be made to justify almost any departure from the straight line of *perfect* truth. The trader who sells adulterated food and shoddy clothing can justify himself with reasons as *good*. The lawyer who lies to save his client and the politician who buys votes to save his party can justify themselves with reasons as good. What we want at this hour, and we want it not less in the pulpit than in the counting-room, the office, and the hall of legislation, is a square, upright, and downright manhood and womanhood, which will say precisely what it thinks, regardless of consequences, in language which will convey one and the same meaning to all men. The *Unitarian Review*, in an article on what it is pleased to call "The Failure of Free Religion," said, "We have noticed even the outcropping of a curious barbaric instinct in certain radical quarters, betraying utter lack of confidence in men of trained theological ability." I have noticed it too, and I will tell you its cause. It is because men of trained theological ability so often show a greater aptitude for logical hair-splitting than for practical common-sense dealing with vital questions of life that this "curious barbaric instinct" is rife. Plain common-sense people are responding to the discoveries of the real scholars of to-day much faster than the mere theologians are. And I would give more for the religion of weak, glorious Robert Burns than for all the theology of Christendom. Tear up your sectarian labels and Christian badges, O you brave-hearted reformers, striving to reconcile the decaying old with the budding new,—tear them up, let them add fuel to the flames of universal and unadulterated truth. You are not to save men in bundles. You are not to save men by your theology. You are to save them by the example of a brave, consistent life, strong in mental outlook, pure in purpose, loving in all its ways.

You know the use of the flag in time of war. It does not shoulder muskets and storm batteries, but it inspires the men who do. Strange power of the ideal that so stirs the sentiment in man when his country's colors, gathering to their folds the holiest memories and the brightest hopes, speak to him as no other colors can. But there it is a fact more potent than arsenals and forts. Men follow it to death. They follow it to immortal life.

Friends, the great army of humanity is always on the march. To-day, its most advanced column lacks leadership. It awaits the inspiration of the flag. The old division colors of sect do not arouse it now as in the days that are gone. The ensign of *human* fellowship can alone stir it to the enthusiasm of humanity. Come then, brothers,—come, drop all meaner work, and help us to loyalty to that universal religion whose temple is all space, whose ideal aim is the Commonwealth of Man.

For *The Index*.

EMERSON AND PLATO.

BY E. D. MEAD.

It will be remembered how Lowell, in his parallel or antithesis between Carlyle and Emerson, in *The Fable for Critics*, styles Emerson "half Greek." Max Müller, too, has recently said that Emerson's genius, thought, and character were not American, but, above all things else, Athenian. The same thing, of course, has been said many times in many ways, and for reasons which are quite obvious. The likenesses between Emerson's thought and the thought of Plato, in particular, have been often dwelt upon; and it is certainly true that, in tracing Emerson's intellectual ancestry, we find none in the great line whose stamp he bears so notably as his whose works, he himself has said, are those which really deserved the praise which Omar gave to the Koran, when he said, Burn your libraries, for all the truths of other books exist in better form in this. The writer has been interested in reading Emerson's essay upon Plato for the express purpose of noting how much of what is said of the philosophy and the genius and character of Plato is applicable, in varying exactness and nicety, to the thought and nature of Emerson himself. The following extracts, given in instance, will doubtless be of equal interest to others:—

"Every man who would do anything well must come to it from a higher ground. A philosopher must be more than a philosopher. Plato is clothed with the powers of a poet, stands upon the highest place of the poet."

"His subtlety commended him to men of thought. The secret of his popular success is the moral aim, which endeared him to mankind. 'Intellect,' he said, 'is king of heaven and of earth'; but, in him, intellect is always moral. His writings have also the sempiternal youth of poetry. For their arguments, most of them, might have been couched in sonnets. As the poet, too, he is only contemplative. He did not, like Pythagoras, break himself with an institution. You cannot institute, without peril of charlatanism."

"The unity of Asia and the detail of Europe; the infinitude of the Asiatic soul, and the defining, result-loving, machine-making, surface-seeking, opera-going Europe,—Plato came to join, and by contact to enhance the energy of each. The excellence of Europe and Asia is in his brain. Metaphysics and natural philosophy expressed the genius of Europe; he substructs the religion of Asia, as the base."

"A man who could see two sides of a thing was born. The wonderful synthesis so familiar in nature; the upper and the under side of the medal of Jove; the union of impossibilities, which reappears in every object; its real and its ideal power,—was now, also, transferred entire to the consciousness of a man. The balanced soul came. If he loved abstract truth, he saved himself by propounding the most popular of

Digitized by Google

all principles, the absolute good, which rules rulers and judges the judge. If he made transcendental distinctions, he fortified himself by drawing his illustrations from sources disdained by orators and polite conversers; from mares and puppies; from pitchers and soup-ladles; from cooks and criers; the shops of potters, horse-doctors, butchers, and fish-mongers. He cannot forgive in himself a partiality, but is resolved that the two poles of thought shall appear in his statement. His argument and his sentence are self-poised and spherical. The two poles appear; yes, and become two hands, to grasp and appropriate their own.... This command of two elements must explain his power and his charm."

"Where there is great compass of wit, we usually find excellences that combine easily in the living man, but in description appear incompatible. The mind of Plato is not to be exhibited by a Chinese catalogue, but is to be apprehended by an original mind in the exercise of its original power. In him the freest abandonment is united with the precision of a geometer. His daring imagination gives him the more solid grasp of facts, as the birds of highest flight have the strongest alar bones. His patrician polish, his intrinsic elegance, edged by an irony so subtle that it stings and paralyzes, adorn the soundest health and strength of frame."

"He has not a system. The dearest defenders and disciples are at fault.... One man thinks he means this; and another, that: he has said one thing in one place, and the reverse of it in another place.... Here is the world, sound as a nut, perfect, not the smallest piece of chaos left, never a stitch nor an end, not a mark of haste, or botching, or second thought; but the theory of the world is a thing of shreds and patches.... He argues on this side, and on that. The acutest German, the lovingest disciple, could never tell what Platonism was; indeed, admirable texts can be quoted on both sides of every question from him."

"He has a probity, a native reverence for justice and honor, and a humanity which makes him tender for the superstitions of the people. Add to this, he believes that poetry, prophecy, and the high insight are from a wisdom of which man is not master, that the gods never philosophize; but, by a celestial mania, these miracles are accomplished. Horsed on these winged steeds, he sweeps the dim regions, visits worlds which flesh cannot enter."

"His circumspection never forsook him. One would say, he had read the inscription on the gates of Busyrane,—'Be bold'; and on the second gate,—'Be bold, be bold, and evermore be bold'; and then again had paused well at the third gate,—'Be not too bold.' His strength is like the momentum of a falling planet; and his discretion, the return of its due and perfect curve,—so excellent is his Greek love of boundary, and his skill in definition. In reading logarithms, one is not more secure than in following Plato in his flights. Nothing can be colder than his head, when the lightnings of his imagination are playing in the sky. He has finished his thinking, before he brings it to the reader; and he abounds in the surprises of a literary master. He has that opulence which furnishes at every turn the precise weapon he needs;... he is never restricted, but has the fit word."

"He is a great average man; one who, to his best thinking, adds a proportion and equality in his faculties, so that men see in him their own dreams and glimpses made available, and made to pass for what they are. A great common sense is his warrant and qualification to be the world's interpreter. He has reason, as all the philosophic and poetic class have; but he has, also, what they have not, this strong solving sense to reconcile his poetry with the appearances of the world, and build a bridge from the streets of cities to the Atlantis. He omits never this graduation, but slopes his thought, however picturesque the precipice on one side, to an access from the plain."

"He apprehended the cardinal facts. He could prostrate himself on the earth, and cover his eyes, whilst he adored that which cannot be numbered, or guaged, or known, or named; that of which everything can be affirmed and denied; that 'which is entity and non-entity.' He called it super-essential. He even stood ready to demonstrate that it was so,—that this Being exceeded the limits of intellect. No man ever more fully acknowledged the Ineffable. Having paid his homage, as for the human race, to the Illimitable, he then stood erect, and for the human race affirmed, 'And yet things are knowable!'—that is, the Asia in his mind was first heartily honored,—the ocean of love and power, before form, before will, before knowledge, the Same, the Good, the One; and now, refreshed and empowered by this worship, the instinct of Europe, namely, culture, returns; and he cries, 'Yet things are knowable!' They are knowable, because, being from one, things correspond. There is a scale; and the correspondence of heaven to earth, or matter to mind, of the part to the whole, is our guide."

"He said, 'I announce to men the Intellect. I announce the good of being interpenetrated by the mind that made nature; this benefit, namely, that it can understand nature, which it made and maketh. Nature is good, but intellect is better, as the law-giver is before the law-receiver. I give you joy, O sons of men, that truth is altogether wholesome, that we have hope to search out what might be the very self of everything. The misery of man is to be balked by the sight of essence, and to be stuffed with conjectures; but the supreme good is reality; the supreme beauty is reality; and all virtue and all felicity depend on this science of the real: for courage is nothing else than knowledge. The fairest fortune that can befall man is to be guided by his demon to that which is truly his own.'"

"He domesticates the soul in nature; man is the microcosm. All the circles of the visible heaven represent as many circles in the rational soul. There is no lawless particle, and there is nothing casual in the action of the human mind. The names of things, too, are fatal, following the nature of things."

"He represents the privilege of the intellect, the power, namely, of carrying up every fact to successive platforms, and so disclosing, in every fact, a germ of expansion. These expansions are in the essence of thought. They are organic. The mind does not create what it perceives, any more than the eye creates the rose. In ascribing to Plato the merit of announcing them, we only say, here was a more complete man, who could apply to nature the whole scale of the senses, the understanding, and the reason. These expansions, or extensions, consist in continuing the spiritual sight where the horizon falls on our natural vision, and, by this second sight, discovering the long lines of law which shoot in every direction. Everywhere he stands on a path which has no end, but runs continuously round the universe. Therefore, every word becomes an exponent of nature. Whatever he looks upon discloses a second sense, and ulterior senses."

"More striking are his moral conclusions. He affirms the coincidence of science and virtue; for vice can never know itself and virtue; but virtue knows both itself and vice. The eye attested that justice was best, as long as it was profitable; he affirms that it is profitable throughout; that the profit is intrinsic, though the just conceal his justice from gods and men; that it is better to suffer injustice than to do it; that the sinner ought to covet punishment; that the lie was more hurtful than homicide; and that ignorance, or the involuntary lie, was more calamitous than involuntary homicide; that the soul is unwillingly deprived of true opinions; and that no man sins willingly; that the order of proceeding of nature was from the mind to the body; and, though a sound body cannot restore an unsound mind, yet a good soul can, by its virtue, render the body the best possible."

"He said, Culture; he said, Nature; and he failed not to add, 'There is also the Divine.' There is no thought in any mind but it quickly tends to convert itself into a power, and organizes a huge instrumentality of means. Plato, lover of limits, loved the illimitable, saw the enlargement and nobility which come from truth itself and good itself, and attempted, as if on the part of the human intellect, once for all to do it adequate homage,—homage fit for the immense soul to receive, and yet homage becoming the intellect to render. He said then, 'Our faculties run out into infinity, and return to us thence. We can define but a little way; but here is a fact which will not be skipped, and which to shut our eyes upon is suicide. All things are in a scale, and, begin where we will, ascend and ascend. All things are symbolical, and what we call results are beginnings.'"

THE first and last thing which is required of genius is the love of truth.—*Goethe.*

ALWAYS think the best of a man. To think the worst is the sure mark of a mean spirit and a base soul.—*Bolingbroke.*

CORRESPONDENCE.

THE RENUNCIATION OF REV. W. T. CHENEY.

In the last issue of the *Christian Index*, of Atlanta, Ga., appeared the following card:—

Inasmuch as I have been connected with the Baptist denomination, and have been known in many parts of the State as a Baptist minister, I feel it to be my duty to the public and myself to make the following statement:—

After thorough investigation, thought, and reflection, and after arriving at conclusions satisfactory to my own mind, I have seen fit to cease my labors as a Christian minister, and also to sever my connection as a member of the Baptist Church. As a conscientious man and a man of convictions, and one who would be true to himself and to the public, I make this statement. My present convictions do not allow me to believe or to preach the fundamental doctrines of the Christian system. What the future may reveal I know not. It would be out of place here to attempt to itemize my various reasons for my change of belief.

If I am in error and darkness, may the Sun of Light and Truth illuminate my mind and heart.

ROME, GA., Nov. 7, 1882. W. T. CHENEY.

Mr. W. T. Cheney is the son of a clergyman in high standing in his denomination in Georgia. Mr. Cheney is considered a young man of considerable capacity; and, in addition to officiating as a minister, he has taught elocution with considerable success, and I believe has appeared in your own city.

It is to be hoped he will cast his lot with scientific Liberalism, and become an Ingersoll of the South. Whenever a man gets his mind widened, his eyes open. A. A. BELL.

MADISON, GA.

SCIENCE AND RELIGION.

Editors of The Index:—

Enclosed please find a slip taken from the Brooklyn (N.Y.) *Eagle*. It speaks for itself. "Prof. Brooks, of the Red House Observatory, in behalf of astronomical science and astronomers, asks that prayers be offered on Sunday next in all the churches for clear weather on the 6th of December next, the date of the transit of Venus. The solution of the sublimest problem known to science is to be attempted on that occasion, the opportunity for which will not occur again for one hundred and twenty-two years. Millions of dollars and months of valuable time have been expended in preparation for the great event."

Now, it seems to me that Prof. Brooks might have made his request in a different form, and it would have been much better; namely, that prayers be offered that, if the weather should be rainy or cloudy on Wednesday, December 6, that He (God) would *postpone the transit until the next fair day.* The Professor knows that the laws governing the weather are just as sure in their operations as the laws governing the transit of Venus, and that one could be changed by prayer just as easily as the other.

BROOKLYN, N.Y., Nov. 29. L. R. HOPKINS.

NO FINALITY IN ANY PRESENT FORM OF FAITH.

Editors of The Index:—

Under "Editorial Notes," in your issue of November 30, I find a quotation from a recent discourse of Rabbi Benjamin at Cincinnati. He takes the position that the outcome of the process of religious purifying—a process that should leave only the essential and eternal elements—would be "a reformed Judaism." Then *you* go on to say, "The effect of the purifying process, according to Rev. M. J. Savage, would be Unitarianism." And you draw a moral by raising the question as to whether either Judaism or Unitarianism is "broad enough" to include all souls who are working for the welfare of humanity.

My only reason for troubling you now concerning this matter is to say that I regard the above as a misuse of my position. I have never committed myself to any such statement as that which is made concerning me. All efforts to slough off this or that, and to *get back* to original and supposed primitive elements,—as, *e.g.*, to get back to either Moses or Jesus or Paul,—I regard as necessarily misleading. The world does

Digitized by Google

not move that way. Progress means going forward. I do not believe that the final form of religion will be either Judaism or Unitarianism, as at present defined by anybody. So far as we are *alive*, we are *all of us en route*. Though I rejoice in the good work it is doing, I do not believe that the eclecticism of Free Religion is the goal any more than the others. Religion must follow the guiding intelligence of man, and be shaped by our highest conceptions of the universe and of human nature. And to talk of *any* present conception as *final* is absurd. I do not wish to be classed with any of those who are in such a hurry to *finish religion* before the world *gets done growing*.

M. J. SAVAGE.

Dec. 4, 1882.

[Though not responsible for the editorial note which has called forth Mr. Savage's good statement, the senior editor may take occasion to say that he does not regard "Free Religion," so called, as simply an "eclecticism" of the good things of all religions, but rather as the necessary condition and pathway of that endless vital growth of humanity to which Mr. Savage refers.—W. J. P.]

MISCELLANEOUS.

THE Boston Evening *Transcript*, in an editorial on Mr. George Jacob Holyoake, says: "It is well worth while to bestir one's self for a sight of this venerable, fine-natured Englishman. . . . His Sunday evening lecture in that hall was a unique bit of platform literature. His topic, 'My Religious Days,' was a sufficiently strange one for a man who has been known as the great apostle of secularism for more than a generation, and who withal has suffered incarceration for atheism in an English prison. But Mr. Holyoake's atheism is as remote as possible from the aggressive and defiant philosophy of Mr. Bradlaugh. His story of his religious experience is told out of a vivid memory and with a straightforward simplicity that stirs a reverent interest in the listener. Religious conceptions are wont to become material for derision to those who have outgrown them. But this is not Mr. Holyoake's temper. One of the most logical of living thinkers upon the present issues between theology and rationalism, he still recalls without bitterness the time when the distinctions between Wesleyanism and Unitarianism were matters of agitating moment. As a youth, he used to watch the roof of the Unitarian chapel at Birmingham, in the expectation that it would some time fall and crush the daring worshippers who dared to doubt the trinity. All these data which Mr. Holyoake reproduces so vividly ought to be looked on as so much valuable psychological material for a history of mental evolution. Few men have the power of recasting long-past mental experiences in his terse and vital language. His story is a valuable addition to the record of slow organic intellectual changes which have been gone through by men of original minds. Of Herbert Spencer, Mr. Holyoake speaks as one who has worked over in a leisurely and dignified way the intellectual field which such irrepressible spirits as himself had roughly prepared. Finally, it seems quite in order to apply to Mr. Holyoake Spencer's words at the close of the famous chapter on the reconciliation of science and religion. It is a plea for the free utterance and toleration of thought not to be forgotten by one who has read it. Spencer says: 'Whoever hesitates to utter that which he thinks the highest truth, lest it be too much in advance of the time, may reassure himself by looking at his acts from an impersonal point of view. It is not for nothing that he has in him these sympathies with some principles and repugnance to others. He, with all his capacities, aspirations, and beliefs, is not an accident, but a product of the time. He must remember that, while he is a descendant of the past, he is a parent of the future, and that his thoughts are as children born to him which he may not carelessly let die. The highest truth he sees he will fearlessly utter, knowing that, come what may of it, he is thus playing his right part in the world,—knowing that if he can effect the change he aims at, well; if not, well also, though not *so* well.'"

THE younger men in the Congregational pulpits seem to be very generally affected, and deeply affected, by the prevailing religious scepticism. Nearly all the cleverest of them are Universalists, and some of the honestest and boldest avow their doubts of inspiration. . . . Those preachers, however, do not follow the example of Dr. Channing in leaving the Congregational Church. Their flocks are in sympathy with them. They are all the more popular because of their Unitarianism or Universalism. Accordingly, they are likely to grow bolder and bolder in their liberalism. Knowing the feeling of the churches, ecclesiastical councils are usually afraid to declare such minister heretical, though there can be no doubt that the logical consequence of their teachings of their loose theology is downright infidelity. Even if a council does pronounce against a minister, he can find churches enough which will be glad to get him as a pastor, provided that he sufficiently sugar-coats his scepticism. . . . Yet, while the Congregationalists are thus approaching the Unitarians, both those denominations are losing strength. The Congregational liberals do not go quite far enough to satisfy the Unitarians, while they irritate the orthodox theologians of their own body. The Unitarians do not meet the demands of the more sceptical minds; and, instead of growing, they are losing strength because of the many desertions from their ranks into those of the infidels who wish to have nothing to do with churches. There is no vigor among either the Congregationalists or the Unitarians. Together, they are leading into scepticism the young people of New England who naturally belong to them. It is time, therefore, for the orthodox party, led by the *Congregationalist*, to bestir themselves to protect the old Puritan theology from obliteration. Would they not do better if they boldly separated themselves from the rising party of Liberalism which wears the livery of Orthodoxy only to serve the cause of scepticism? Religious earnestness and religious sincerity are lacking in New England. There is too much pretence of belief where there is really no belief. It would be a good thing to make everybody show his true colors.—*New York Sun*.

IN an article on Oscar Wilde, the Springfield *Republican* has the following: "There are great poets who have written what cannot be subjected to that test, but their offences are episodes,—eddies in the tumultuous tides of their genius. This poetaster thrust his priapisms forward as the very acme of his inspiration. Is it not a curious thing that persons of this sort, who write as if their one concern were the sexual passion, and as if all that was beautiful and precious and worthy were wrapped up in it, should be able to mix with their kind with unabashed cheeks,—nay, that women should meet them without blushes, and talk with them without embarrassment? An Oscar Wilde, in his small way, like a Swinburne or a Villon, really exhales a subtle, corrupt odor, which steals unnoticed amid the companies he frequents until the whole social atmosphere is miasmatic; yet those who breathe it are so infected that they resent nothing so much as the hint that their air is vile. It is in a really cultured portion of our society that Wilde has met with such a warm reception; and we must try to think that Anglophilism has much to do with this tolerant hospitality which has allowed the man to deny repeatedly the rumor that he is engaged to a certain young lady of the most desirable family and personal qualifications. Another part of our society, the class of moneyed leisure, ready to catch up a fashionable whim, professedly quite devoid of moral motive, has shown honor to this person. They have 'guyed' him a good deal; but, as he is on a commercial trip, and sharp enough to play his part in the guying, there has been little enough reaped on their harvest. When Wilde was at Saratoga, he was the butt of half the crowd and the idol of the other half. There was an excursion to Mt. McGregor gotten up expressly to make a mock at him; but he showed, as he had done to the Harvard students who filed into his lecture in knee-breeches, that he was quite their match in fooling. 'I shall count every one my disciple who loves the lily,' he said. And every one at table drew a pond-lily ostentatiously through his or her buttonhole. If the rest of the fools laughed, be sure he laughed as heartily as any of them. He has taken the measure of our plutocracy. Wilde is no fool, but he must think American society is made up of fools. How absurdly this passing fashion is made to count for real influence is seen in the common remarks over a display of sunflowers in one of our New England gardens. The sunflower has been the glory of our gardens for two centuries: all the farmers have planted them, if it were only to raise seeds for the fowls in the idea of the man, the good wife has cherished them also for their splendid show, and every eye that has the sense of beauty has admired them. And have we now to learn from this trivial loafer around London that the sunflower is something to admire? And did Wilde discover the lily? Had no lilies bloomed in America till this fellow, stale from nocturnal interviews with statues, observed them and called our barbarian attention to their loveliness? This Wilde business makes one sick: let us hear no more of it."

BOOK NOTICES.

THEOLOGY AND MYTHOLOGY. An Inquiry into the Claims of Biblical Inspiration and the Supernatural Element in Religion. By Alfred H. O'Donoghue, counsellor-at-law, formerly of Trinity College, Dublin. Pages 194. Price $1.00. New York: Charles P. Somerby, 121 Fourth Avenue. 1882.

In this work, the author discusses the claims of supernatural Christianity with moderation and candor. His object is, he says, "to eliminate what is purely false, without foundation in fact, and fictitious in Christianity as now taught." Arguments against the theory of the divine origin of the Bible are adduced, and a plea made for estimating the value of the book by its actual merits, by the amount of truth which it contains. Orthodox views, as to the genuineness of different books of the Bible, and of prophecies and miracles which have been relied upon to sustain these views, are briefly examined from a rational standpoint. The character of Jesus is eulogized, and the excellence of the main doctrines ascribed to him freely conceded; but the author sees no reason for regarding him otherwise than as a pure man and a brave reformer, and maintains that his essential teachings are the most effectually promoted and realized in life, not by mythological beliefs in regard to him, but by science and liberal thought. The work does not claim to be one of great erudition, nor does the author profess to bring forward facts or arguments that have not already been presented; but he has given his views with frankness and in an admirable spirit, and in a style that is clear and forcible.

BOSTON INSIDE OUT: Sins of a Great City! A Story of Real Life. By Rev. Henry Morgan. Boston: Shawmut Publishing Co., 81 Shawmut Avenue.

We have received from the author, who is well known in Boston as a sensational preacher, this handsomely bound volume, which purports in its preface to be a *bona fide* relation of veritable occurrences in the hidden life of a great city. It is written in the flashy, dramatic style of Ned Buntline's *Mysteries and Miseries of New York* and other works of that class. That Mr. Morgan intended his book as an incentive to a higher moral life in the community whose concealed sins he professes to uncover we have no occasion to doubt, but we do doubt very much as to the efficacy of his method. In our opinion, such sensational descriptions of respectable or disreputable vice only pander to the vicious tastes of the ignorant and credulous, and lead even the more innocent into wickeder ways than they had ever before known through the glowing and unreal descriptions given of the downward road. Mr. Morgan is mistaken, too, in thinking that the vices of any city are "hidden." The crime, wickedness, and weaknesses of all great aggregations of humanity are amply shown by our prisons, our reformatories, our court records, and our daily press.

THOUGHTS ON THEISM, with Suggestions toward a Public Religious Service in Harmony with Modern Science and Philosophy. Ninth thousand, revised and enlarged. pp. 100. Price one shilling. London: Trübner & Co., Ludgate Hill. 1882.

The object of this pamphlet is to meet the wants of those who believe that there exist a faith and a religion compatible with true philosophy and modern science, and through which man may express his sense of gratitude for what he is and what he may become. The work is strongly theistic, and is made up of articles and extracts expressive of faith in a Universal Providence and desire for "a Church as wide as the wants of humanity, as catholic as the first and great commandment."

WASHINGTON IRVING'S "OLD CHRISTMAS." From the *Sketch Book*. With upward of one hundred illustrations by R. Caldecott. 4to, paper, 20 cts.

WASHINGTON IRVING'S "BRACEBRIDGE HALL." From the *Sketch Book*. With one hundred and twenty illustrations by R. Caldecott. 4to, paper, 20 cts.

We have received from the publishers, Macmillan & Co., London, England, the above-mentioned books. It is a pleasure to renew one's acquaintance with these works of Irving in this fine, clear type, and

Digitized by Google

with the quaint scenes he describes so clearly brought before us by the engraver's art. These illustrations show original and sympathetic genius.

HISTORICAL AND CRITICAL REVIEW OF THE SUNDAY QUESTION: With Replies to an Objector. By George W. Brown, Rockford, Ill. Price 15 cts.

This little pamphlet treats of the derivation of the Sabbath, glances at its history, and discusses it from an ethical and legal stand-point. The author wants our libraries thrown open on Sunday and the day devoted to teaching "scientific and moral truths."

SUNSHINE IN THE SOUL. Poems selected by the editor of *Quiet Hours*, etc. Second series. Boston: Roberts Brothers. Price 50 cts.

This is one of the neat-looking "Wisdom Series" issued by the above-mentioned publishers, and consists of over one hundred selections from various authors of devotional poems.

THE *Art Amateur* for December has another interesting biographical sketch. It is of an artist now on a visit to this country, and who was during his boyhood a resident here, though he is now settled at Southampton, England. Mr. Herkomer's experience is instructive to young artists, as showing both the difficulties and the assistance which they may reasonably expect to meet with in their career at the present time. The art school is now open to the student, but it depends upon himself what use he makes of its instruction. He need no longer wait at the door of a rich patron for encouragement and protection; but he will find in the constant demand of illustrated periodical literature an opening for the exercise of any skill or excellence he may possess. He will find this patron more exacting, but also more just and impartial, than the titled connoisseur; and, if modest and teachable, he will get a discipline out of such work which will help through all his future career, besides giving him that honest pecuniary independence which is indispensable to the free development of genius. Mr. Herkomer said recently before a London audience "that he owed all his art to the training which came from drawing in black and white for a newspaper." Mr. Herkomer's pictures seem to be mainly representations of humble life, in which character is expressed with great truth and feeling, if we may judge by the clever engravings which illustrate this sketch. He is full of variety, however; and his critic hints that he may be in danger of dissipating his artistic powers by attempting too many things. He has already addressed a New York audience, and we hope that he will not fail to visit Boston. An account of the Philadelphia Exhibition is the other long article in this number, which also contains the usual variety of short notices of decorative art and patterns for work.

THE *North American Review* for December contains timely articles of practical interest. "The Health of American Women," by Dr. Dio Lewis, Elizabeth Cady Stanton, and Dr. James Read Chadwick, is full of information and suggestion on the subject treated. "Constitutional Prohibition in Iowa" is the subject of an article by Gov. Buren R. Sherman, who thinks "the spirit of the people gives every assurance that the effort to enforce the prohibition will be prosecuted with unflinching determination." "An Undeserved Stigma," by Gen. U. S. Grant, is an attempt to show that Gen. Porter is innocent of the offences for which he was tried and convicted, and that the government should, as far as possible, make the restitution which is due him. Richard A. Proctor contributes an article on "The Influence of Food on Civilization." "The Decline of Clerical Authority," by Prof. George P. Fisher, explains certain facts suggested by the title. The concluding article is "Success on the Stage," by John McCullough, Joseph Jefferson, Maggie Mitchell, Helena Modjeska, Lawrence Barrett, and William Warren.

THE opening article in the *Popular Science Monthly* for December is "Mr. Goldwin Smith on *The Data of Ethics*," by W. D. Le Sueur, in which the writer defends Spencer's ethical teachings from the misconceptions and misrepresentations of Mr. Smith with unmistakable success. Among the other articles of special interest are "Time-keeping in London," by E. A. Engler; "The Relations of the Natural Sciences," by T. Sterry Hunt, F.R.S.; "Brain-weight and Brain-power," by J. P. H. Boileau, M.D.; "The Cell State," by Prof. Ferdinand Cohn; "Speculative Zoölogy," by Prof. W. K. Brooks; "Annual Growth of Trees," by A. L. Child, M.D.; "Science in Relation to the Arts, II.," by C. W. Siemens, F.R.S.; "The Spectroscope and the Weather," by C. Piazzi Smyth; and "Criminality in Animals," by A. Lacassagne. "Editor's Table," "Literary Notices," "Popular Miscellany," and "Notes" add to the variety and excellence of the number.

THE holiday number of *Wide-Awake*, just received, even to those who know the usual variety and high tone of this magazine, must be a surprise and delight. This number of itself ought to make any young person, who receives it as a Christmas gift, content to forego all other gifts in the joy of its possession It has a beautiful illuminated sunflower cover, and contains between forty and fifty articles, many of them poems, by writers such as Mrs. Whitney, Miss Phelps, Rose Terry Cooke, Rose Kingsley, Celia Thaxter, E. E. Hale, M. E. B., Nora Perry, Mrs. Diaz, Dinah Mulock-Craik, Mrs. Stowe, Christina Rossetti, Tennyson, and many others nearly as well known, while nearly every page is adorned with one or more illustrations by some of the best artists known. The publishers, D. Lothrop & Co. of this city, have evidently surpassed in this number all previous efforts.

THE patron saint of all good children in a new guise greets us on the outside cover of the Christmas number of the delightful *St. Nicholas*, and a beautifully colored picture of "Christmas-day in the Morning," with the "compliments of St. Nicholas," meets our eyes on the first page. This is really a Christmas number, with a Christmas poem by Nora Perry, a clever short story, that is a true story as well, of "The Christmas Fairies." There is a pathetic Christmas tale by Malcolm Douglass, and a two-page Christmas carol with accompanying music. "The Tinkham Brothers' Tide-mill," by J. T. Trowbridge, grows in interest, and, in addition, the usual number of interesting articles, stories, and poems, with the always beautiful pictures which *St. Nicholas* never fails to furnish.

"OUR LITTLE ONES" for December makes a charming holiday number, combining, as it does, instruction with amusement in its matter. Of the instructive articles in this number, we note "A Three-mule Coach," by Fred A. Ober, and "Insect Life," by Mrs. G. Hall. The lovely frontispiece, "Pop-corn," with its accompanying poem, will awaken old memories in the hearts of grown people and new delight in the younger ones. "Where the Pretty Path led" has a delightful illustration of a lily-pond. Russell Publishing Co., Boston.

THE December number of *Baby-Land*, from D. Lothrop & Co., is full of lovely pictures which tell the story which they are intended to illustrate plain enough to be understood by even those babies who are too young to spell out the printed words.

PERSONAL ITEMS.

PROF. VIRCHOW has in his Berlin laboratory a collection of six thousand skulls, representing all races and periods.

HERBERT SPENCER has telegraphed from Queenstown that the voyage over did him good, and that he is much better.

THE *Woman's Journal* says: "Anna Garlin Spencer was in Chicago last week, on the occasion of the annual meeting of the National Free Religious Association, and also delivered several lectures on various topics, with which Chicago people were especially well pleased. Mrs. Spencer was greatly admired."

MR. PETER COOPER, who is very nearly ninety-two years old, recently called on Miss Clara Louise Kellogg, who sang for him several charming songs. The old gentleman then asked if she knew an old ballad called "The Tortoise-shell Cat." Miss Kellogg had not heard it, so he sang it for her with such clearness and spirit that the prima donna encored him.

"THAT's the kind of Latter Day Saint I am!" exclaimed the extant Brigham Young, Jr., after he had given utterance to such nonsense as this: "I haven't a son or a daughter I would not rather see carried to their graves than to have one of them listen to Christian teachings. I would rather take my child and throw it into hell than send it to an outside school."

THE gift of John H. Slater, of Norwich, Conn., of $1,000,000 for the educational benefit of the freedmen of the South, is now in charge of the trustees of the fund, which is now incorporated under the laws of New York State. Ex-President Hayes is the president of the board, and its other members are Chief Justice Waite, William E. Dodge, the Rev. Phillips Brooks, Daniel C. Gilman, John A. Stewart, Alfred H. Colquitt, Morris K. Jesup, James P. Boyce, and William A. Slater.

MR. SPURGEON, though in much better health than when he preached last spring, still bears traces of the sufferings he has undergone. His feet are gouty, and this detracts from the promptness and agility with which he ascended to the pulpit in former times, when the female members of his congregation would rise and peep over each other's shoulders to watch his movements. His hands are swollen and twisted with rheumatic gout, so that his gesture is no longer free and unconstrained as of old; but his voice still possesses that charm and variety of tone which in times past have overcome the scruples of the most obdurate.

MANY of our readers, and especially those among them who have been interested in *The Index* from the beginning, will be pained to learn that Mr. and Mrs. Charles M. Nye, who for two years did the typographical work on this paper when it was first started by its founder, Mr. Francis E. Abbot, in Toledo, Ohio, have recently passed through a great affliction in the loss of their eldest son, Charles Harold, who died in Cleveland, Ohio, on the 15th ult., of typhoid fever, aged thirteen. He was a youth of fine promise, and was for several years a member of the public schools and of the Sunday-school of the First Unitarian Church in Cambridge, Mass. His loss is deeply felt by his parents, for in him were centred their fondest hopes.

A CORRESPONDENT of the Springfield *Republican* writes of Robert T. Lincoln, our Secretary of War, as follows: "Robert T. Lincoln would be called a good-looking man anywhere, because of his strong, firm build, his handsome, brown-bearded face, and his shapely head; but there is something peculiar about him that takes him out of that rather commonplace state of 'good-lookingness,' and sets him apart. There is a feeling of remoteness, of reticent depths of withdrawal, induced in the spectator at first by the curious habitual drooping of his gaze, and confirmed in conversation by the sweet and deep expression of his eyes. Mr. Lincoln has a rich, low voice,—a Southern voice, as if it were inherited from the mother's side, as perhaps all his physical characteristics were."

MOST REV. ARCHIBALD CAMPBELL TAIT, D.D., Archbishop of Canterbury and Primate of the entire Anglican Communion, died at his home in England, Sunday morning, December 3, aged nearly seventy-one. The Boston *Herald* says of him: "Dr. Tait maintained a distinguished position as the leader of the best elements in the English Church to the very end. He was the peer of Bishop Thirlwall, with whom he was always in sympathy, more than a match for Bishop Wilberforce, his rival, the chosen friend of the late Bishop Ewing and of the late Dean Stanley, the defender of Bishop Colenso, when it was demanded that he should be slaughtered as a heretic without a trial, and the large-minded champion of every movement which brought the Christian Church into closer relations with modern society and modern thought."

EDWARD KING writes about the return of Stanley to Europe: "The brilliant explorer did not intend to come home until next year, according to his own letters; but he has been seriously ill, and, in addition to this drawback, he has doubtless been attracted to Europe by the extraordinary preparations making here to take away from him the legitimate profit and credit of the enterprise which he has been mainly instrumental in building up. The importance which the French attach to the mission of M. de Brazza may be estimated by the fact that the Chambers gave him without discussion a credit of 100,000 francs ($20,000) for his recent journey. If an American Congress had even given half that money to Stanley, the American flag would float now in a good many places on the African coast where only the banner of Saint George is seen."

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to

HOLIDAY GIFT.

Most acceptable to **Pastor, Parent, Teacher, Child, Friend;** for Holiday, Birthday, Wedding, or any other occasion.

It is the best practical English Dictionary extant.—*London Quarterly Review.*
It is an ever-present and reliable school master to the whole family.—*N. S. Herald.*
G. & C. MERRIAM & CO. Publrs., Springfield, Mass.

The Religio-Philosophical Journal

A large eight-page weekly paper devoted to the exposition of Modern Spiritualism. Established 1865.

PRESS COMMENTS.

. . . Seems disposed to discuss questions in excellent temper and a spirit of toleration. . . . Few care to investigate in its spirit of finding truth at any cost.—*Inter-Ocean.*

. . . Seems to have got the inside track among the religious weeklies.—*Chicago (Sunday) Times.*

. . . A paper which will command the respect of all, both friends and opponents.—*Pontiac (Ill.) Sentinel.*

CONCURRENT COMMENDATIONS FROM WIDELY OPPOSITE SOURCES.

I read your paper every week with great interest.—*H. W. Thomas, D.D., Methodist.*

I congratulate you on the management of the paper. . . . I indorse your position as to the investigation of the phenomena.—*Samuel Watson, D.D., Spiritualist.*

You are conducting the *Journal* in the true spirit of honest research.—*B. F. Underwood, Materialist.*

All who are investigating the subject of Spiritualism will find this paper invaluable as an assistant in their researches.

Terms of subscription strictly in advance.

One copy, one year $2.50
One copy, six months 1.25
Twelve weeks on trial ..... 30 cts.

THAT "Curfew *must* ring" is the decision of the Dublin (Ireland) Privy Council, in view of the recent outbreaks in and near that city; and all suspicious people found on the streets between an hour after sunset and an hour after sunrise are to be arrested. A sad state of things that, in this stage of the world's progress.

THE New York Sunday agitation can hardly fail to show those who insist on the observance of Sunday the necessity of drawing the line as to what are and what are not works of charity and necessity. Old notions on this subject are likely to undergo considerable revision before they are revised. It is too late to restore the Puritan Sabbath in this country.

THE trial of the Egyptian revolutionary leader, Arabi Pacha, was very short, occupying only a few minutes. He pleaded guilty of rebellion, and was formally sentenced to death according to the Turkish law; but the lenient spirit of the nineteenth century operates in every land to-day in despite of law, and the Khedive immediately commuted the sentence to perpetual banishment. This was thought to be done at the suggestion of the English Government, who may yet need Arabi as an ally or a witness in dealing with Egypt. It is said that Arabi's place of exile will probably be somewhere in the British domain.

THE pastor of a Columbus Avenue Presbyterian church in this city preached on Thanksgiving day a sermon, in which he advocated enforced religious instruction; that is, a union of Church and State. "We should," he said, "as a nation, see that continual and general instruction in the law of God is given to our children in our schools; and this should be non-sectarian, for on this our existence depends, and the State should see to it. It may be said that some would object; but, as in the Chinese bill passed by the government as a measure of self-defence, so now, when her very existence is threatened, it is the nation's duty to protect herself by enforcing religious with secular instruction in the schools."

CREMATION is to be made æsthetic. A writer in the London *Knowledge* suggests that as human ashes "consist wholly or principally of phosphate of lime, they therefore have only to be treated with sulphuric acid to convert them into sulphate of lime,—*i.e.*, gypsum, or plaster of Paris. With this substance, a model can be cast in a mould previously prepared, representing either the full figure of the deceased, or simply the bust, or the likeness can take the form of a medallion. Whichever form of memorial is adopted, a glass case would be sufficient protection for it; and the costly urn can be dispensed with as unnecessary, while the remains of our loved ones will themselves be gathered into the form of a compact and lifelike memorial, which itself will be composed of the veritable 'ashes of the dead.'" Wouldn't it be an improvement on this idea to mould such ashes into cups, to be distributed among the surviving relatives, something after the manner in which skulls were formerly introduced at the feasts of the great as a sort of *memento mori?*

THANKSGIVING day was very generally observed throughout the country. Business was suspended, and people gave themselves up to social enjoyment and popular amusements. But comparatively few devoted the day to religious worship. The *Evening Journal* of Chicago, commenting on this fact, observes: "It does not speak well for the religious devoutness of the average American citizen that he neglects to attend Thanksgiving services in the house of worship on the day expressly designated for that purpose by the Chief Magistrate of the government. The average American citizen may be very thankful and very full of gratitude for all favors received and all blessings enjoyed; but, if so, he prefers to manifest the fact by feasting rather than praying, by a family reunion rather than church-going,—in short, by having a 'grand good time' generally, he and all the folk around him. There are too many of us who, though thankful and grateful and God-fearing, are very prone to have our thanksgiving and our worshipping done by proxy."

THE "march of intellect" was strikingly illustrated on Wednesday of last week, the date of the transit of Venus. Once, such an occurrence, if noticed at all, would have been made the occasion of superstitious fears and omens. Science, the illuminator, has to-day made it a matter of interested investigation by all. It was pleasant to note the eager interest in the astronomic event evinced by the people in the streets of this large city. Smoked glass — which revealed only a small black dot, like a period, crossing the brassy disc of the sun — was brought, unshamefacedly, into requisition everywhere,— on the street, in the horse-cars, on doorsteps, from windows. On the Common two large telescopes were tailed, like a kite, by long lines of eager sight-seers who were obliged to get into line to see this star, greater than any theatrical "star," even greater than Mrs. Langtry, for the hour. Those who have gloried in the bright beauty of Venus as the "evening star" for the past few months were taught a rather hard lesson as to the relative importance of things in this great universe, when they saw their lovely and brilliant star reduced in the kingly splendor of the sun to an insignificant black dot. Although, at first, clouds dimmed the face of the sun, these cleared; and some excellent astronomic observations were taken.

FRANK JAMES, the notorious bandit and cut-throat of the Missouri James family, as remarkable for their piety as for their crimes, has been interviewed in his cell by a representative of the Kansas *City Journal*, in which the views of the "illustrious criminal" are given quite fully. In regard to Ingersoll, he thus expresses himself: "Ingersoll goes abroad denouncing the Bible, the most sacred of all books. He ridicules its teachings and the Saviour; and yet, amid all this, he has hearers to the number of two thousand, while a man, for using an indecent word while drunk, will be confined thirty days. My God! how can such a state of affairs be?" His reference was made to an interview with Ingersoll, as published in the *Journal*, by a visitor who said it was exaggerated, and that Ingersoll had not said so much against the prisoner as was reported. James replied that "any man who would assail the sacred book would dare do anything," adding: "The Lord is my helper: I care not what men shall do or say against me. Ingersoll is doing unspeakable injury to this nation. He is sowing the seeds of iniquity in the minds of our youth." A visitor replied: "He is having a good influence upon all. He is causing them to think." James then said, speaking to the visitor: "Even in you, we have an illustration of his evil influence upon the youth. You are a young man, and one, I suppose, whose mother endeavored to rear in the light of Christian truth; but, in your advocacy of Ingersoll, you are on the downward path, and unless you turn from its evil way you will go to hell." The visitor, endeavoring to retrieve, said that he did not indorse Ingersoll, but believed in free thinking, that God never made man to put him here and give freedom, yet bind him by laws which would compel him to pay his allegiance to the Almighty. To this, Mr. James replied: "In man there is an intuition which tells him there is a God, and any man who says to the contrary is a hypocrite. He deceives himself. God does live, and it seems that he will some time strike Ingersoll to earth for his blasphemy. How any man can live and have his being in this universe and say, 'There is no God,' I don't know." Turning to the visitor, who said he would have to retire, he said: "If you follow Ingersoll, you some day may be where I am now, in jail, and I know finally will be in hell, so turn aside. There is no one more lenient than the Creator, and you yet may escape the torments of hades."

THE ISSUE AS SEEN BY AN EXTREME ORTHODOX.

The *Presbyterian* is an organ of Orthodoxy that strives heroically to stand by the old landmarks. In an article on the address of Dr. Ellis, of which we wrote in the last number of *The Index*, it welcomes his statement as clearly defining the issue between the only Orthodoxy that can be successfully defended and the Liberalism that, whether found in the orthodox ranks or outside of them, it regards as really a foe to the one sound and saving faith. The *Presbyterian*, though noting as a valuable admission from an enemy the statement of Dr. Ellis that the Bible, on the orthodox view of its inspiration, yields the orthodox creed, does not allow itself, as do some of its evangelical contemporaries, to be drawn away by admiration of this point from the main thesis which Dr. Ellis was engaged in defending. It commends, indeed, this point to its readers as an honest and courageous statement, and as containing much encouragement for those who faithfully adhere to the old doctrines. But still more does it commend to their attention and urge upon their convictions the chief purpose of the address, which was to set forth the view that "Orthodoxy cannot readjust its creed till it readjusts its estimate of the Scriptures." Declaring that it has no wish to readjust its creed in any such way as Dr. Ellis has in mind and as many orthodox are apparently seeking, it affirms the necessity of standing by the old view of the Scriptures for the sake of keeping the old creed. It would accept Dr. Ellis' proposition, and then join issue with him on the question of the infallible inspiration and authority of the Bible.

The *Presbyterian* is both consistent and courageous. It does not stop at any of the modern difficulties which Biblical scholarship itself has discovered in this old question of the Bible's infallibility. It says that it is well to know exactly "the positions now assumed by the enemy, that the men who propose to stand by the old faith and the old Bible may know how to form their lines, and may discern early the points from which the most violent assaults will be made. *The plenary inspiration of the Bible is evidently the fort which is to be held. If we cannot hold that, all is lost.* If we maintain its authority over all theological questions, and fix it more firmly than ever in the thought and affections of the church, then all the precious truths which have been surely believed by the past generations of Christian people will abide, and exert their gracious power in the generations to come." The italics in this quotation are ours, in order to call attention to the decisiveness with which the challenge of Dr. Ellis is accepted, and to the precision with which the point of danger to the orthodox faith is detected. The writer would seem plainly to admit that the orthodox creed would not have much chance, if left to-day to the court of human reason and the human heart. It must be buttressed by this miraculous authentication from heaven, or fall.

And it is to be presumed that when the *Presbyterian* used that phrase, "plenary inspiration," it measured carefully the full meaning of its words. It knows well that the sense of Scripture often depends upon the punctuation, and still more, in the Old Testament, upon the vowel points of the Hebrew text; and hence it is, doubtless, ready to affirm and maintain that the Holy Spirit dictated to the Bible writers merely as amanuenses the exact language in which they wrote, even to these minutest particulars. Indeed, it would not much surprise us if the *Presbyterian* should take refuge in that culminating assertion of the doctrine of plenary inspiration which was declared in a decree of the Protestant Council at Geneva, in 1675, wherein it was maintained that not only had the Almighty mind dictated every writing in the Bible, even to the punctuation and vowel-points, but had also supervised the work of translation. For, if the Almighty mind had once made a literally perfect book, the exact transcript of the divine thoughts, for human guidance, it is not reasonable to suppose that such a book would have been permitted to be corrupted, and its purpose thus frustrated, by passing through the hands of merely human and fallible translators. We do not see, indeed, how we are to secure the infallible authority of the book beyond all cavil, unless we go back to that rigid Genevan decree of literal inspiration, which was more rigid than any thing contended for by Luther or Calvin, and was not announced officially in the Christian Church until one hundred and thirty years after Luther's death; and unless, too, considering the liabilities to error among the numerous copyists of the book before the art of printing was known, we extend the doctrine of that decree to cover not only the translation, but the work also of the copyists used by the translators. In this way, the infallible standard of religious doctrine might be saved—provided.

It might be saved, that is, provided one can shut his eyes to the whole work of modern historical research, and of Biblical scholarship in particular, and read the Bible utterly blindfolded to any light thrown upon the text from the learning of such men as Jowett and Stanley and Davidson and Robertson Smith, and other scholars even of the evangelical branch of the Protestant Church. In other words, the issue, as stated by the *Presbyterian*, is between learning and ignorance, between reason and superstition, between the light of the awakened intelligence of the nineteenth century and the darkness of mediæval faith. And all its attempts, however sincere and courageous, to save the old authority of the Bible, are but vain struggles to stay the progress of human intelligence, and only add another illustration to the impotent efforts of King Canute to hold back the rising tide.

WM. J. POTTER.

CHRISTIANITY IN COURT.

In the old days of anti-slavery agitation and mobs, I heard a poet express the fear that the abolition of slavery, joyful as it would be, might be the end of the picturesque in American politics. What could there be to bring out such figures as Stephen Foster and Abby Kelley? The poet had been observing Stephen from a nook in some Boston hall. The brave champion came out with a smashed hat and coat torn down the back. He would have been greeted with roars of laughter in the Museum theatre, but here the crowd sat breathless as he arraigned the American Church for its faithlessness to freedom. "This hat was smashed by the church in Portland. This coat was torn by the church in Newburyport." I am not certain those were the towns mentioned. None required any explanation of the transcendental sense in which the outrages had been committed by the churches in those places. It was a time of general sublimation. Somewhat in the same way, I find myself wondering if the crumbling away of the English Church may not prove the entrance upon a prosaic era. No doubt, if one consider only the abstract monstrosity of antiquated creeds established by law in a civilized country, the picturesque scenes to which the anomaly gives rise are hidden under the detestation it excites. But there is another way of looking at it. The English Church fell heir to a vast estate set apart for the moral and spiritual interests of the nation. In that estate, it enjoys only a life-interest. The institution, with its vast resources, with its appliances for culture and charity reaching every heart and home in the land, must infallibly pass to the next heir. And there is not the least doubt who that heir is. He is yet in his minority: he will be none the worse for not coming to his estate until he has been schooled somewhat more. Meantime, you may observe that his guardians—the scientific and philosophic thinkers—by no means unite with the dissenting sects which, under the plausible cry of separation of Church and State, would distribute the minor's estate among themselves, to be their several freehold for irresponsible sectarian purposes. At present, it is not the freehold of any Church: it is entailed on the growing thought and conscience of the nation; and they who would be the first to resist the legal establishment of a Church where one does not exist are resolved that the endowment of man's spiritual nature it here represents shall not be frittered away or sectarianized just as it is about to pass into the possession of the science and freethought which so long bore its oppression. "Kiss the son lest he be angry, and ye perish by the way," was a poet's advice to those who would resist the succession of Solomon. The Broad Church is the Establishment's kiss to the advancing heir. No dissenting sect has any "broad" wing. They hate the son of English freedom and culture, and their cry of "Liberation" really means, "Let us take his inheritance." Such, at least, is my reading of the situation, after having long seen it otherwise, through instinctive horror of the State-Church principle and of the miserable duplicities it involves. There will always be duplicity so long as civilized nations profess uncivilized creeds; and historic combinations have made the State Church here mean the resolute holding of the tree of superstition close to the secular English oak, which steadily draws away life from its root and overshadows its branches, and will ultimately absorb and transmute it to make its own grain finer.

It is not, therefore, through any cynicism or indifference that I find myself chiefly impressed by the picturesque features of the struggle implied in the situation just described. And, of this kind, two especially interesting scenes have just passed in Her Majesty's courts of law, separated only by our solar Sabbath. On Saturday, the Bishop of Manchester appeared before a purely temporal judge and petitioned for the release of a clergyman from prison. This is the latest English edition of the Emperor holding the Pontiff's stirrup; and it involved the same elements, albeit in such different proportions. The clergyman is a ritualist, and found in his Prayer-Book justification for his Romish practices. But the same State which legalizes the Prayer-Book had passed an act against those practices. The clergyman regarded himself as a servant of God, not of any secular authority: to obey Parliament against his priestly faith was to obey man rather than God; so he continued his ritualistic practices. When summoned to answer for violation of the new law, he declined to appear. This, humanly speaking, was contempt of court; and the clergyman was locked up. All he had to do was to resign his living. He was perfectly free to ritualize in any house his friends chose to open for him. But he wished to give the secular authority a fall, to have it conceded that the State had no right to say what should take place on its own property. Hence, this clergyman had a comfortable martyrdom of nearly two years in gaol. But by the law it was also decided that after the elapse of a certain period of inhibition on a rebellious clergyman his pulpit should be declared vacant. That time having elapsed, and the pulpit

Digitized by Google

having been supplied by another clergyman, it only remained for the Roman martyr to be let out of prison. But the secular judge maintained the dignity of the State. The Church must come as a petitioner at his feet, and beg that he would consider the contempt purged. This was the only bitter pill that the martyr had to suffer. He tried to evade it by resigning his charge. To be a martyr nearly two years and then see his Bishop kneeling to temporal authority was rather hard. But he had to endure it. The judge considered that, by the long imprisonment and deprivation of his pulpit, the clergyman's contempt had been purged, and he was released. The wrath of the ritualists is naturally great. When the new incumbent appeared in the church of the deprived ritualist, the congregation saw him as the figure-head of secularism with horns. Not one of them would accept the communion at his hands. He is taboo. But the step taken is irreversible. It is now published to the world by an unmistakable piece of history that the English Church is a secular institution; that all its articles and rubrics and titles, in their claims to divine inspiration and supernatural authority, are mere "survivals" from discredited ages; that the only inspiration and authority are in Parliament and the Queen's Bench, which have the right to abolish every creed to-morrow and turn every church into a lyceum.

That was the impressive sermon uttered by Lord Penzance from the bench, to which every Englishman listened the day after the release of the clergyman who had tried conclusions with the temporal State. On Monday morning, another scene of the same old drama was enacted. The curtain rose upon the forms of two very able judges,—Judge Field and Sir James Stephen,—whose white wigs were as cat-eye gems on a silver ring of wigs; for there were hardly any but lawyers present. Mrs. Besant and I sat together to witness the first stage of what is likely to be the last English trial for blasphemy. The two judges are well known for their liberal opinions. There is not a particle of doubt that, if the statute making it penal to deny the Trinity or the divinity of either person of it, or the divine authority of the Bible, were to be applied, these two judges would have to leave the bench they adorn and take their place beside the man who now rises to plead before them. This man is Charles Bradlaugh, M.P. He has not committed the offence which is to be prosecuted, but one of the agents of his publishing establishment had been selling the incriminated paper, the *Freethinker*. The whole prosecution, there is hardly a doubt, was got up by Bradlaugh's political enemies, who saw in this participation of a business agent the possibility of including him in a sentence for the sins of others, since this would incapacitate him from sitting in Parliament. This idea of imputed wickedness is quite Christian, and so was the procedure which followed. No faith with infidels was the rule by which the prosecutors acted. In a preliminary trial before the Lord Mayor, they withdrew two counts in the indictment specially aimed at Bradlaugh, because they could not sustain them, if he had sufficient time to meet them. But afterward they went before the Recorder and had them put in again, without giving him any notice. And now Bradlaugh appeared, asking the judges to quash the whole indictment on various grounds, of which this treacherous proceeding was one. The judges could not quash: they both complimented Bradlaugh on "the great ability" with which he had argued his case, but could not quash the indictment. However, the Christian Shylock should only be allowed his pound of flesh, no drop of an English freeman's blood that the law could protect. Consequently, the judges commanded that these prosecutors should appear, before any trial could occur, and answer for having inserted the counts they had withdrawn. The decision by Sir James Stephen was very interesting and important; and it is too bad that our daily papers, while giving columns to horse-races, should have reported only a few lines of a judicial statement worthy to make a chapter in the best history of England. It is literally reported in a special sheet of the *National Reformer*, a copy of which I send you.

But how indescribably droll it was to see all these cultured English gentlemen in their wigs gathered to consider seriously an offence against the gods of an ancient mythology! For such to every head of them, so soon as it is unwigged, are these crockery gods with which Sir Henry Tyler, M.P., is trying to break the head of Charles Bradlaugh, M.P. As I looked on, all these wigs seemed to be resolved into their native bristles, and to become the integument of an elephantine specimen of that animal whose philosophy is given in Carlyle's pamphlet on Jesuitism:—

"11. 'Who are lawyers?' Servants of God, appointed revealers of the oracles of God. . . .

"12. 'Where do they find that written?' In Coke upon Littleton.

"13. 'Who made Coke?' Unknown. The maker of Coke's wig is discoverable. 'What became of Coke?' Died. 'And then?' Went to the undertaker, went to the— . . .

"51. 'What are bishops?' Overseers of souls. 'What is a soul?' The thing that keeps the body alive. 'How do they oversee that?' They tie on a kind of aprons, publish charges. I believe they pray dreadfully, macerate themselves nearly dead with continual grief that they cannot in the least oversee it. 'And are much honored?' By the wise very much.

"52. 'Define the Church.' I had rather not."

MONCURE D. CONWAY.

THE NATURE OF FREE WILL.

Notwithstanding the thoroughness and exactitude of Herbert Spencer's philosophy, it is manifest that a point of great importance in human life has been very unsatisfactorily dealt with,—responsibility. Free will has been the stumbling-block of all religions, as of all systems of philosophy; and, although evolutionists in our age are agreed in most particulars regarding the ultimate causes of natural processes, they widely diverge regarding the nature of free will, or what has been called that name, to this day.

My intention, as a patient student of nature and of the evolution theory, is to compare the conclusions arrived at by some of the leading writers of the day in regard to the subject, and see whether a satisfactory conclusion may not be reached in that matter.

Th. Ribot, in his *Treatise on Heredity*, does not pronounce for or against free will, but quotes a number of eminent physiologists who stand about equally divided into two camps.

Probably, the ultimate principle attained in philosophy by those who accept the indestructibility of matter and the correlation of forces as proven facts is best expressed by T. Sterry Hunt: "All the energies seen in nature are but manifestations of the essential life and quickness of matter." Or by Rosmini: "The ultimate atoms of matter are animate; each atom having united with it, and forming its unity or atomicity, a sensitive principle." Haeckel, as quoted by Du Bois-Reymond, "has advanced as a metaphysical axiom that every atom possesses an inherent quantity of force, and is in this sense be-souled."

That is the foundation of monism, which agrees entirely with evolution. But, in the light of this philosophy, it is evident that the human being consists of a certain number of "be-souled atoms," each of which is complete in itself, is individual and free, and that man must be a *free collection* of atoms, and, consequently, independent and responsible. This is more rational than to suppose that man is the necessary intersection of certain lines of force. Should one day some great chemist prove all the elements to be modifications of one, this fact would not deprive man of the strong individuality which he would yet derive from being a compound of free atoms of that one element. It seems that mankind have recognized the seat of free will in the personality of man of old; for legal punishment has been administered to men for their intentions or their acts, not for the impressions they receive from their surroundings. Although these are all incidental causes of action, they have generally been ignored as factors.

If we look at the subject in a more materialistic and simpler way, we find that nothing inert has ever been seen in nature. The very particles of the rocks are in constant agitation under the lenses of the microscope (*Brownian Movement*), just as the stars are in constant motion. According to Stallo (*Modern Physics*, p. 53), Newton believed that the gravitation of atoms resulted from an external (pushing) force which brought them together. Whatever Newton's idea, as expressed in his letters, every physicist to-day denies absolute inertia, and formulates the law of gravity as an attraction, and assumes that the attracting force lies in the atom itself.

However, it seems that the nature of free will is better understood than are its workings in the human brain. But, before passing to that part of the subject, let us call attention to the fact that incidental causes are too often liable to be taken for primary causes. For instance, the process of natural selection, or the survival of the fittest, has originated the various species of animals and plants in an incidental manner; and, while Darwin never looked upon the process itself as a primary cause, and while Herbert Spencer refers to astronomic, geologic, and meteorologic changes as some of the primary factors of modification in organisms (*Biology*, Vol. II., § 169), yet how many to-day believe that natural selection was the original cause, to the detriment of the whole theory itself! The primary cause of a human act is referable to the cause of the man's existence, this to the species' existence, and must depend on the actions and reactions of the atoms composing living matter and giving it its independence and power. Yet how often are motives and incentives looked upon as the causes of human actions! According to J. Luys (*The Brain and its Functions*), than whom no higher psychological authority could be quoted, human personality resides in the gray cortex, outer layer, of the brain, and is an accumulation of cells which have been influenced in their growth by most of the impressions received by the various special senses. These cells represent a compendium of all past thoughts. When this part is diseased, the patient loses the consciousness of the presence of the various parts of his person, and may not know, for instance, where his legs are, as in some cases of paralysis.

But while brain-cells store various impressions, in the way that photographic paper absorbs images, these impressions are not the primary factors of the cells; for these result from a chemical union of oxygen, nitrogen, hydrogen, carbon, etc., the most powerful of the elements, and therein lie their individuality, their capacity, and their freedom. Hence, the impossibility not to think or not to move as long as life continues.

Digitized by Google

We must add, however, that certain sensations will be responded to even before they reach the brain, or when the latter has been removed, on account of the close communication of nerves of sensations and nerves of motion; and in fact sensation and consciousness of some sort exist in organisms devoid of nerves.

Man is not considered responsible, however, for acts which do not emanate from his sensorium. Suppose that, while asleep with her child, something causes a strong irritation of the foot or hand of a mother, and that by a sudden jerk she causes the child to fall off the bed and kill itself, she would not be considered responsible. For a free act is one resulting from an impression which has reached the ultimate cells of the brain (sensorium), set vibrating innumerable older impressions which react with it, and returned, thus modified, through nerves of motion. If a part of the sensorium is destroyed by inflammation or degeneration or atrophy, insanity is generally the result, and the patient cannot be responsible. This seems plain enough, and it is evident that the field of the psychologist is in the physiological laboratory.

But human freedom is in inverse ratio to the powers of the rest of nature against man. The civilized man who has partly subdued the elements is far freer than the wild creature that lives at their mercy. But a perfect freedom, as that attributed to the Christian God, has not been reached by man, though the point toward which the evolution of the mind seems to have thus far travelled is in that direction.

In conclusion, the revelations of science show that nature resolves itself into elements and forces of a wonderful individuality in their combinations, although seemingly one in its origin. And man, the highest production of our terrestrial sphere, has attained so great an individuality as to stand on his own forces, against the rest of nature, organic or inorganic. This individuality is his liberty, and man is free in proportion to his vitality or force (intellectual and corporeal). And this tallies with common sense; for, while the idiot is considered irresponsible, the man of genius is considered more responsible than the ordinary man.

H. D. V.

SCIENCE AND SENTIMENT.

The title, *Science and Sentiment*, which President Porter gives to his collection of magazine articles and lectures is singularly felicitous; for he occupies himself mainly in criticising popular scientists under the influence of sentiments which are most clearly shown, when they lead him to charge Herbert Spencer (p. 67) with "stealthy subreptions,"—the latter word, according to Worcester, meaning "a fraud committed to obtain a pardon, title, grant, or other favor by alleging facts contrary to truth," and, according to Webster, implying the "suppression or fraudulent concealment of facts." John Stuart Mill, also, is condemned for "timid and uncertain shuffling," for "jugglery," for "perhaps unconscious dexterity in shifting alternately from the sharp and rigid nomenclature of the schools to the indefinite and pliant language of common life," "for a hazy, unsettled mind which was determined to adhere to its original bent, even against its underlying convictions that its grounds had not been thoroughly examined, or were not thoroughly trustworthy," and for a "tendency to take advantage of the ambiguity of language to conceal from himself and his readers the uncertainty of his own principles." These readers will never say of Dr. Porter, as he does of the author of the *Essay on Liberty* and the *Subjection of Women*, "We might class a philosopher of this type among the pachydermatous animals, for truly he has shown himself not very thin-skinned." All lovers of justice and peace must regret such language, as well as the charge against Mill, who, in the essay just mentioned, calls it "a great error to persist in attempting to find in the Christian doctrine" a "complete rule for our guidance," who published an elaborate declaration of his own belief in the essential soundness of Comte's system, which latter is described in *Science and Sentiment* as one of "materialistic atheism," though it is really agnostic, and who lost his re-election for Parliament largely on account of irreligious speeches which were placarded on the walls of London, that he "uniformly avoided any reference to religious questions, or, in the few cases where they have been forced upon his attention, so carefully avoided committing himself as to seem wanting in both frankness and courage." It need surprise no one after this to learn that Oliver Wendell Holmes is "zealously propagating theory of necessitarian mechanism in thought and morals, which is inconsistent with moral responsibility or self-respect"; to hear about "the rankest materialists of the present age, like Alexander Bain and his associates"; to see Mill blamed on page 168 for overlooking a distinction which a quotation from the work in question, four pages later, proves him to have had constantly before his eyes; to have what Herbert Spencer says of supernaturalists represented as spoken of theists generally, many of whom do not believe in anything supernatural; to find the difference between agnostic and atheist clearly set forth near the beginning of this work, in a well-known passage from Tyndall, but so far ignored in later pages that Herbert Spencer is charged almost in the same breath with atheism and agnosticism; and, worst of all, to be told that "the priesthoods of atheistic, ethical, and political science, have sanctioned, if they have not inspired," the outrages recently committed by the Communists at Paris. We wish all these essays had been as dignified in tone as the two on the "Kantian Centennial" and on "What we mean by a Christian Philosophy."

F. M. H.

NOTES FROM THE FIELD.

Incongruities and anomalies seem to be inevitable in intellectual, social, moral, and religious evolution. Old conceptions, creeds, and forms, partially outgrown, persist through periods in which the newer thought and the movements in the line of progress are yet incomplete, unsystematized, and uncoördinated with the established order of things, causing temporarily imperfect adjustments and all sorts of inconsistencies in beliefs and habits, in ceremonies, customs, and institutions.

An illustration of the truth here stated is afforded by "*The Independent Christian Church*" of Alliance, Ohio, which, although thus named, is *without any theological creed*, and embraces in its membership almost every degree and shade of unorthodox thought. Its platform, like that of the Free Congregational Society of Florence, Mass., is broad and strong enough to support any kind of intellectual machinery,—"eccentric, concentric, or crank"; and, like the society at Florence, this church employs speakers to represent all the different religious and speculative views that prevail among its members.

The society was founded by, and is made up largely of, seceders from the Christian (Campbellite) church of the place, who, following with logical consistency the example of Alexander Campbell, protested against dogmatic authority and ecclesiastical restriction, and established a church to suit themselves. The majority of the seceders have become Spiritualists, although originally their heresy led them no farther than to protest against the propriety or importance of *baptism* as a qualification for membership. Accessions to the society have been made from other Spiritualists who were outside the church, from those who were brought up Hicksite Quakers, and from those generally not satisfied with creed of any church, yet desiring the social advantages of a church. The organization is supported in part by the most radical free thinkers of the community, even if but few of them are members; and representatives of agnosticism, atheism, materialism, etc., are invited to occupy the desk, and they are, too, expected to speak with the utmost freedom.

The society is an incorporated body; and the church a commodious structure, erected by the society, is exempt from taxation. All the members believe that churches should be taxed; but, while the law in regard to church property remains as it is, they think they should receive the benefit of exemption. The old church from which the founders of this new one seceded still exists, but it is numerically weak and not in a good condition financially.

The so-called Christian church is full of scepticism and disbelief, the result partly of the teachings and methods of Campbell, the founder, who opposed written creeds and encouraged independent thinking and discussion as a means of advancing the truth, and partly of those general influences which are everywhere contributing to the decline of the old theological beliefs; and in Alliance there was a combination of circumstances four or five years ago which brought this dissatisfaction and disbelief into prominence in the church in which it had quietly developed, and in which it would have given no offence but for its out-spoken and aggressive character. The new church is apparently in a flourishing condition. The audiences we addressed from its desk last Sunday were large and intelligent, especially the audience that assembled in the evening. The past dozen years and more, during which we have given probably not fewer than twenty-five lectures at Alliance, we have observed a very marked change in the community in the direction of free and rational thought and a liberal spirit.

Even fifty years ago there was a large number of free thinkers in the West. They gloried in the name "infidel." They were not all educated men, and their surroundings were not conducive to polish and refinement; but they were no such men as represented by Dr. Nelson in his superficial and slanderous work, "The Cause and Cure of Infidelity," which was published by the American Tract Society, and widely circulated a quarter of a century ago. Rough though many of them were, they were strong men, independent, had the courage of their conviction, possessed sterling qualities, were self-reliant, energetic, and well adapted to the work they did in laying deep and broad the foundations of States. They were of the stuff heroes are made of. From their loins came sons possessing the strength and courage to endure the hardship and privation of frontier life, and daughters fit companions for such men, with the vigor and vitality to bear and rear stalwart sons and daughters, such as were needed in a new country where untamed nature confronted men. They damned preaching, but they were as ready to give a preacher food and lodging as to argue with him. They denounced the Bible as "a pack of lies"; but they really respected whatever is good in the book, and meant only to emphasize their contempt for the claims of theologians in regard to its origin and authority. Many of them were "profane"; but their profanity, like much of the

Digitized by Google

"meetin' talk," meant nothing. In their belief there was much that would not harmonize with the rationalistic thought of to-day, and in their methods much that good taste would condemn; but by the use of their common sense, by the workings of their own minds, they came to conclusions in regard to the leading doctrines of theology, including the inspiration of the Bible, which, in the main, are confirmed by the best scholarship and most advanced thought of this generation,—conclusions to which such men as Rev. Dr. Ellis are beginning to admit they are *compelled* to assent, but which others, graduates of universities, with all the advantages that "learning" has given them, are "not yet prepared to adopt." This fact suggests to us that vigor of intellect and strength of character are greater than a *pseudo*-culture or a mere scholastic polish acquired by effeminate minds lacking native vigor and virility.

At Canton and Massillon, Ohio, among the leading citizens half a century ago, were a number of such free thinkers as are above described. Mr. Louis Scaefer, of the former place, read to us a few days ago the constitution and records of an "infidel" society that held meetings there forty years ago. Some of the strong men of that society stamped their influence upon the community so ineffaceably that it is very perceptible to-day.

Massillon was a sort of head-quarters for free thinkers. Kendall, now a part of Massillon, was settled by people from the East; and prominent among them were families of Quaker extraction from Nantucket, whose ancestors had been driven thither by persecution from the vicinity of Boston. Massachusetts Quakerism blossomed in the West into "infidelity." Among the leading men of Massillon forty years ago was Dr. B. Michener, who in some respects was a remarkable man. Brought up a Hicksite Quaker, in early life he became a free thinker. He was a man of strong intellect and extensive knowledge. His influence was enormous. The latter part of his life he lived at Adel, Iowa, and largely through his influence the community became so sceptical that the churches declined until its preachers found themselves without congregations and regarded as objects of charity.

Although a "self-made man," he was one of the best educated men in America. We knew and corresponded with him the last ten years of his life, and have always regarded him as the best informed free thinker in all matters relating to the issues between science and philosophy, on the one hand, and theology, on the other, whom we have ever met. Having retired from the practice of medicine, he devoted the last twenty years of his life to reading and study. He was not simply familiar with all the best works of the day,—Darwin, Huxley, Spencer, and Lewes,—but his vigorous and fertile mind, even in old age, was ever making contributions to their theories, or furnishing illustrations of their thought derived from his own observation and reflection. It is a matter of regret among all who knew him that he did not reduce his thoughts to writing, and leave them as a legacy to his race. He died at Adel some five or six years ago, at the age of eighty. We were present at his death, and made a few inadequate remarks at his funeral. He was an atheist, believed in nothing supernatural, and looked "not for life where life may never be." He was a strong, brave man, one of nature's noblemen; and a heaven from which such a man should be excluded would be a heaven into which no self-respecting man would wish to enter.

Another man who lived at Massillon, worthy of mention, was Dr. Samuel Underhill. More than fifty years ago, he published a vigorous free-thought sheet, *The Liberalist*, at Cleveland, when that city numbered only a few thousand inhabitants. He once met in debate in Cleveland Alexander Campbell, who afterward had discussions with Archbishop Purcell, Dr. Alexander Rice, and Robert Owen. The Campbell-Owen debate occurred at Cincinnati; and, although Campbell was the superior controversialist, he declared that Mr. Owen was the fairest and the most gentlemanly opponent he had ever met in discussion. The debate was published, and has been extensively circulated by the Campbellites. Mr. Owen made some good points; but he was not the equal of Campbell in education or in experience as a debater, and some of the arguments of the ingenious theologian were left unanswered, which fact has increased the zeal of Campbell's disciples to circulate the work as a fair discussion of the issues between the Christian and the free thinker. The work is obsolete among themselves, as indeed is the later discussion between Robert Dale Owen and Origin Bachelor, which was more thorough and satisfactory.

EDITORIAL NOTES.

UNTIL further notice, make all cheques and drafts payable to the order of John C. Haynes.

MR. GLADSTONE recently stated in Parliament that "the cost of the war in Egypt was estimated at £3,000,000, including £1,000,000 for the expenses of the Indian contingent. The total cost, including the transportation of the troops home, was estimated at £3,500,000. This cost, he said, was down to the 1st of October. From that day, the charge would be borne, either wholly or in part, by Egypt."

THE article in the last number of *The Index* on prayer and an ethical view of life, by Mr. Salter, was read at a recent Unitarian Conference in Mr. Chadwick's church in Brooklyn, New York. A correspondent of the *Christian Register* calls it "a prayer against prayer." The discussion of which this paper formed a part was remarkably significant. It was opened by Rev. C. F. Dole, whose essay, a production of great force and fineness, will soon be published in the *Unitarian*. It was more positive than Mr. Salter's, but negative of much that goes by the name of prayer in Christian churches.

THE religious census of Victoria is a curious document. Of 862,346 persons, 299,346 are entered as members of the Church of England, 197,157 as Roman Catholics, over 100,000 as Presbyterians, and nearly the same number as Methodists. The highest number of the other Protestant sects is about 20,000. Eleven thousand are returned as Pagans. There is one Millerite, one Walkerite, one Borrowite, one Colensoite, one Theosophist, one "Silent Admirer," five of the "Church of Eli Sands," twenty of "No Church at present; no creed," three "Saved Sinners," two "Neutrals," one "Believer in parts of the Bible," and three who state their religion as "£ *s. d.*" The *Catholic Review* thinks that "a much greater number might have declared themselves adherents of these last creeds, had Victorian candor been as great as Victorian liberty."

IN a recent lecture by Dr. William Huggins, on the results of spectrum analysis as applied to the heavenly bodies, this striking statement was used to give some faint notion of the enormous distance of the stars. "The earth's orbit," said the lecturer, "which is more than 190,000,000 miles in diameter, at most of the stars dwindles to a mere point, and has no sensible size whatever. If you suppose a railway from the earth to the nearest fixed star, which is supposed to be twenty billions of miles from us; and if you suppose the price of the fare to be one penny for every hundred miles,—not, mind! a penny per mile,—then, if you take a mass of gold to the ticket office equal to the national debt ($3,800,000,000), it would not be sufficient to pay for a ticket to the nearest fixed star. And I think I should not be wrong in saying that there are stars so far off that, at the price of one penny for every hundred miles, the whole treasure of the earth would not be sufficient to pay for a ticket."

E. DE LAVELEYE, the well-known author of *Primitive Property*, in a critical article on George's *Progress and Poverty* in the November *Contemporary Review*, calls attention to other and earlier advocates of George's doctrine, that land is not rightfully private property. Herbert Spencer's views in his early volume on *Social Statics* (chapter ix.) are not unknown; but, besides him, De Laveleye refers to F. Huet (*Le Règne Social de Christianisme*," book iii., chap. 5) and to the eminent German professor, Zachariae, who said: "Property inland is a reduction of the wages which might belong entirely to the laborer, if the soil were not the object of an absolute monopoly. All the sufferings against which civilized nations have to struggle may be referred to the exclusive right of property in the soil as their source." Mr. George is also given an extended notice in the *Jahrbuch für Gesetzgebung, Verwaltung, und Volkswirthschaft* (first number of 1882) by the distinguished Berlin professor, Gustav Schmoller.

OUR esteemed contemporary lets pass no opportunity to expose the inconsistencies and weaknesses of the Protestant sect. It adduces the following as "an example of the result that follows a private interpretation of the Bible, which Protestants claim is the only safe way, and which they make in fact their rule of faith": "A troublesome case has arisen in a Presbyterian church in San Rafael, California, on the literal interpretation of the passage in the Epistle of James, which is in favor of anointing with oil with a view to the healing of disease. A sick man desired the elders to come and anoint him and pray over him, according to the Scripture. They had never been called on to do this, and so they hesitated until they should ask the Presbytery. The Presbytery discussed the matter at some length, and then handed it over to the Synod. The probability is that it may now go all the way to the General Assembly, and possibly be laid over there, as the dancing question was in May last. Meanwhile, the sick man is in great quandary as to what he shall do."

THE South Australian *Register* contains a report of a discourse by Rev. J. C. Woods, B.A., in which some of Rev. Joseph Cook's statements are reviewed in a manner of which the following extract will give an idea: "The Unitarian Church everywhere had difficulties to contend with greater than that of any other denomination, yet never were its prospects fairer than now; and to say that it was dead was an assertion that was only to be met by language brief but emphatic in the way of denial. One very gratifying fact in connection with their Church was that now and then it gained adherents among people eminent for their intellectual attainments, their moral worth, and their religious enthusiasm, as, for instance, the Rev. Stopford Brooke, the most popular Episcopalian preacher in London, who had lately joined their ranks. Many people who had not entered the Unitarian Church had been influenced by its thought, and many men—especially ministers in various denominations—acknowledged their indebtedness to Channing and Martineau, while in America the influence of Theodore Parker had been immense. The busy Americans had not many great names in their lit-

Digitized by Google

erary world to be proud of, but among those few were the names of the philosopher Emerson, the Unitarian poets Bryant and Longfellow, and the divines, Channing and Parker; and any American theological pedler who vilified them was an ill bird indeed."

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index*.

KING DEATH'S SOLILOQUY.

BY OLD BIRCH.

In the home of the dead, my reign is supreme;
My subjects are ruled by forces unseen,
Are bound with my thongs invisible there,
But holding them fast in silent despair.

Protean my form, assuming at will
A thousand new shapes my victims to kill:
Securing my prey, my step never makes
A trail to the land where morn never wakes,

To welcome a sound where solitude reigns
Unbroken by all, eternity gains:
For over my realm a mystery deep
Forever will brood, my secrets to keep.

My banners are white, my colors prevail,
Reflecting their light all faces are pale;
For over the flesh my aureole shines,
Forecasting the end of fatal designs.

In silence I come, unheeding the prayer,
And reap harvest pale 'mid wailing despair:
With ebbing life-tide, my coming is planned,
They welcome at last my clammy cold hand.

With click of the clock my stepping you hear,
With passing of time my coming comes near.
With phantom-made hand I reach for the soul,
And hurry them on where Stygian waves roll.

The pulses of life my terrors appall.
A phantasy dread I brood over all;
And heart that is weak with terrors I fill
The fluttering thing till throbbing is still.

No pity I know, no mercy I give,
My presence will blast whatever will live.
The mother's lone wail, the soft baby cry,
Is music to me, when passing them by.

Of naught what is born to nothing returns,
And life is a play till candle outburns;
And quick is the blast the flaming to end,
And darkness is all when summons I send.

My city is seen where monuments rise,
And sunlight reflects what pride falsifies:
My palace is but a clod-covered cell,
No prison is known that holdeth so well.

The friends that you lost are paying my wage,
By lying at length 'neath marble-wrought page:
No whisper of love, no groaning or sigh,
No hope from above will ever come nigh.

Where soldiers arrayed for battle advance,
Where armies will fight, I lead in the dance;
And soldier who dares, defying my state,
Shall march at my side through wide-open gate.

And all who have passed allegiance have sworn,
And never go back to gather their own:
With shadowless arm, the battle I win;
I reach as they fall, and "gather them in."

Though nations in fear united may pray,
Yet cold in my arms their chieftain shall lay,
No skill can avail to rescue or save:
The chieftain I strike goes down to the grave.

With ghostly pale steed I call at the door,
And soul that is doomed goes riding before;
And, down to the vale where shadows lie deep,
I course on my way with charge that I keep,

And over the stream where mists lying low
Will hide from the sight the way that we go,
And gathering cloud like curtain will fall,
To make for the dead a funeral pall.

And silence shall reign o'er those in my power,
And their time is no more to pass by the hour;
And years gliding by are lost in the void,
Unmeasured by all the life I destroyed.

And legions unknown I've buried in earth,
And low in the dust sent backward their birth:
Nirvana's deep calm shall rest o'er their bed,
And cycles roll round unheeding the dead.

CRAFTSBURY, VT.

The Index.

BOSTON, DEC. 14, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

Do the Ethics of Jesus satisfy the Needs of our Time?

BY W. M. SALTER.

It is a not uncommon opinion at the present day that the Ethics of Jesus may survive the fall of the theological system that has been called after his name. I have no wish to attack this theological system: it has already ceased to have any vital hold upon those whom I can hope to reach or interest. It is a more serious and fundamental question, whether the moral ideals of Christianity are to suffer any change. The moral interests of humanity are her chief interests. There is so ready a feeling of this sort in the public mind that the ablest defenders of Christianity or Judaism are bringing more and more into the foreground the moral inspiration and blessing which these venerable faiths have given to mankind. And it is impossible to forget or to wish to undervalue these moral services. To seek to relax the obligations which the old religions have made us feel, to lower or anywise abate from the loftiness of the ideals which they have given to the world, would not be to make progress, but retrogression. Who would forget or ignore the moral insight and the moral heroism of conviction and of action of an Amos or an Isaiah? Who would put out of his mind, or could if he would, the lessons of gentleness, of humility, of purity of mind, of charity, of brotherhood, which fell from the lips and shone out in the life of the Son of man?* Surely, not by forgetting, but by treasuring all the good the past has won, can we hope to advance in the future.

None the less must the advance be made; and in truth all prophecy, Jewish and Christian included, has a temporary as well as a permanent element. Jesus spoke to those of his time, and with the language and the thought and, we may add, with the limitations of his time. But the time and the language and the thought of men change, and wider horizons are opened to their minds. What is the voice of prophecy for to-day? that is the question. All in vain would it be for me to assume the prophetic attitude. The prophet does not raise questions: he answers them. He has none of that hesitating, tentative spirit and method which mark the thought of even the best men of this transition age, and which will only cease when the new age shall have come, and the fire of irresistible convictions shall once more burn in the human breast. I am but a questioner along with the rest. I but seek to turn the attention toward the needs and problems of the present, and to show that they at least call for distinct answers and solutions, such as we look for in vain in the teaching of Jesus. For though I am far from denying, but have rather asserted, that Jesus taught eternal principles, we want more than this: we want the application of the principles to the issues and questions of to-day, and in a form apprehensible to the thought of to-day. Else, as has been said, the principles may become as barren as they are old.* Nothing is so common in these days as seeming reverence for the great rules of righteousness, along with ignorance of or indifference to what they mean and exact in the conduct of life. We want to make this impossible, save with a distinct consciousness of hypocrisy. Yes, sometimes those who themselves most sincerely and impressively utter the great ideas are unconscious of the full sweep of their application. The personage in Terence's play who utters the famous sentiment, "*Homo sum, humani nihil a me alienum puto*," has no horror at infanticide, and calls it irrational to keep a child alive who is in danger of growing up into a career of shame.† It is by no means a parallel case; but it is not to be forgotten that Jesus who utters the golden rule, which, adequately interpreted, would put an end perhaps to all the ills of society, makes no condemnation of slavery, and this, though a party existed in his day, which had reached a height of moral development from which they did condemn it,—the Essenes. Hence, "Christian Ethics" could be of slight service in the late anti-slavery struggles in our land. There is nothing in the New Testament inconsistent with the maintenance of slavery, if only masters are guilty of no wilful oppression or inhumanity. It was only by going back to principles of which Christian ethics themselves are but a partial statement, and which strangely enough have found modern expression in that philosophy of human rights to which the Christian Church has as often taken an attitude of hostility as of sympathy, that the way was prepared for the abolition of slavery in this country.

What then, let us ask generally, though without essaying any kind of formal completeness, are some of the moral needs of our time?

1. First, I will mention that of *intellectual scrupulousness and honesty*. It was an old Roman saying that "two augurs could never meet each other without laughing." I refer to nothing so flagrant or coarse as this. I have rather in mind what may seem to many light faults,—*e.g.*, putting interpretations on doctrines not in accordance with their natural meaning, conforming to usages after the ideas at their basis have ceased to be matters of conviction to us, staying in a church or denomination on sufferance and not because of a hearty common belief with them. Doubtless, this is often done with good intentions, and some good may be mingled with it as with all evil; but it strikes at what is of priceless value—I might say, rather, of absolute necessity—to the religious teacher,—namely, the full heart and the consciousness of entire veracity. Experience proves, too, that doctrines and institutions which require this kind of support are themselves on the downward road; and the process of decay can at the best be stayed, and may even at times, as if in irony of our equivocal intentions, be hastened, by the use of such means. Carlyle is said to have pointed out Dean Stanley to a friend, and remarked, "There goes our friend, the Dean, boring holes in the bottom of the good ship, Church of England,—and doesn't know it." ‡

Yet not of the uselessness of the compromising spirit, but of the fact that it is contrary to a true standard of intellectual honor, would I speak. Not a few have apparently yet to get the idea that the intellect as well as the will and outward life is under law,

* Cf. an attempt to do justice to some of the positive and permanent features of the Ethics of Jesus in *The Index*, Sept. 14, 1882.

* Prof. Felix Adler: "Conscience, righteousness, what is there new in these,—their maxims are as old as the hills? Truly, and as barren often as the rocks. The novelty of righteousness is not in itself, but in its novel application to the particular unrighteousness of a particular age." *Creed and Deed*, p. 164.

† Lecky, *History of Morals*, II. 30, n.

‡ The anecdote is related by G. W. S. in the New York *Tribune* (semi-weekly), Feb. 25, 1881. Instructive in another way is the remark of Emerson, in relation to severing his connection with the Unitarian Church (Second Church, Boston), to which he ministered during a few of the earlier years of his life: "I had hoped to carry them with me; but I failed." (Discourse by Rev. E. A. Horton, April 30, 1882.) Well will it be with young men with similar hopes at the present day, if they do not fail in a more decided sense than Emerson did; that is, if after a time their reforming purposes do not themselves lose their strength, and they remain in the Church, as Emerson did *not*, to signify not that they have won it over to the higher truth, but that they have lost the perception or appreciation of the truth. Did not Emerson write the following with his own ministerial experiences partly in mind? "The objection to conforming to usages that have become dead to you is that it scatters your force. It loses your time, and blurs the impression of your character. But do your own work, and you shall reinforce yourself." (Essay on "Self-reliance.")

Digitized by Google

that they are not at liberty to believe what they like, that it is unworthy to try to believe, that conviction is only honorable as it is only possible in any strength, when formed in obedience to some kind of necessity. I do not wonder that with such notions men deem ethics too small a thing to become religion. It is, when so partially understood. But ethics really means whatever ought to be, and hence is not without bearing on every part of life: it holds up an idea for the intellect as well as the outward actions, and searches the most hidden motives and processes of the soul of man. Thou must believe the truth, it says, and thou darest not twist it to thy liking or anywise play with it; and the truth must be according to thine own reason, else thou art guilty of profaning the holiest within thee. And yet the evil is not one that can be met by any precept. It is a secret spirit, and can only be met by another spirit, which shall, as it were by magic, put health and soundness into the whole intellectual nature. It is the spirit of downrightness, of absolute and utter sincerity. If such a spirit should get abroad in the community, it would turn many a young man from the easy, compromising course he is now contemplating, and empty churches of not a few who listen as well as some who preach.

And a new seriousness is needed in all our thinking. Men play with phrases; think, if they can use the same words, differences of thought need not seriously concern them. They build enormous conclusions on the slenderest premises, assume to know, for example, on the ground of positive science what never was so learned, materialism being often as assumptive and headlong as the opposite way of thinking. Or perhaps the ground of rational thought is abandoned, and by will or arbitrary faith, or for some species of subjective interest, a settlement of philosophical problems is assumed to be reached.

And, now, what have we in the ethics of Jesus that can be distinctly felt by men to have a bearing upon this lack of straightforwardness, this arbitrariness, not to say dishonesty? It is hard to find anything. I do not mean that Jesus positively slights the intellectual virtues, and I do not agree with those who put the interpretation on the first beatitude.* It is simply that he does not take any account of them, that there is not a single passage, to my recollection, in which he makes any emphatic statement concerning them. And let it be remembered it is such distinct utterance that the moral haziness of the present time calls for. And the reason of the silence of Jesus is not far to seek. The duty of man was simpler in that day, because the occasions were fewer and the horizon of man narrower. Soon, it was conceived, the supernatural order would break in upon the natural; and only the primal duties of the heart and life were emphasized. Science and criticism were not breaking up an old view of the world as now; and, so far as the time was transitional, it was conceived to be simply toward the completion and practical realization of a view which had long had currency. Now, our views of nature and of man are being in many ways radically recast; and nothing less than a new philosophy, a new general view of the world, seems to be in process of development, and never was there such occasion for an exercise of severe intellectual virtue. And, as matter of fact, the ethics of the intellect, instead of being taught by the followers of Jesus, are most impressively displayed by those whom Christian teachers have generally thought it their duty to oppose or rebuke: I mean the students and investigators in science and history. I am no believer in the all-sufficingness of science or in the finality of the lessons of history; yet the researches of students in these departments have in many cases illustrated to us an open-mindedness, an eagerness and reverence for truth, and a simple faithfulness of utterance that make a model for the conduct of all thinking. A lesson in morals, in ideal scrupulousness, is conveyed by every genuine scientific investigation, and by none more notably than those of the revolutionizer of our views of nature, the foremost scientific figure of the century, Charles Darwin. Let the same openness, the same fearlessness of investigation, the same virility of thought, and the same exact correspondence of word to thought characterize our religious thinking, and a revolution of equal consequence in this department of human interest will be the result.

2. I turn now to other needs, to those of *higher political conceptions and morality*. The State is not altogether, as some would have it, a necessary evil, but has a sacred, I might almost say, a religious mission. It is, indeed, to prevent violence, to restrain passion. As the law of gravitation keeps the planets in their courses and binds every atom to every other, so outwardly, at least, the State is to maintain a similar order among men. But, more, the State is a commonwealth, and is to secure the ends needful for all. Each man has an individual sphere of action, where he is responsible only to himself; but, when his action touches the interest of another, he has another responsibility,—namely, to the State. The State must see that, in matters and affairs where the ends of the many are touched, those ends are not made impossible of realization. It cannot allow individuals or combinations of individuals to win advantages at the expense and to the loss of others. Particularly in our own country, where ideas of equality are at the basis of the political system, is such practical injustice out of place. We have dispossessed kings and priests of their rights over us, we have a government of the people. The question is, Shall it be a government for the people? I do not mean a class called by that name, but for all. Shall the common, the universal good be secured, and no individual freedom or rights be allowed, which tend to the destruction of the freedom and rights of others? These questions must be answered, one way or another, in the next century of our national existence. And, if the choice were between a religion of the old sort and a politics intent on giving them a righteous answer, I see not how any generous-minded young man could hesitate to choose the service of the State. There is a touch of religion in all unselfish devotion to public ends, and it is just such devotion that is the crying political need of our time. The question of better civil service is at bottom nothing else.

But what are the lessons which the Christian Gospels read us in political morality? The political ideas of Jesus are a strange contrast to anything we know of by experience. His land was a Roman province. There is no evidence that he did not love it, and every reason to believe that his feeling for it was strong and deep. But his method of political redemption was one of which we in these days can scarcely entertain the idea. It was not indeed political redemption, but rather deliverance at the hand of one from whom emperors and empires derive their powers, and who, though the Lord of the whole earth, was in a special sense the God of Abraham, Isaac, and Jacob. Do we suppose that the nobler motive which leads men into the service of the State, the passion for justice and the common weal, was absent from the breast of the Son of man? Rather can our sense of justice be nowhere better refreshed than by drinking in his words, nowhere has the tenderness for the least been more strikingly shown than in the memorials left us of his sacred life. If justice was not to come from the State, it was to come from a Higher than the State; if not through blundering human instrumentalities, it was to come through the heaven-sent Son of man, before whom and his angel ministers all mankind would soon be gathered. Christian men and women lived on this faith in the early time, and nothing is more pathetic in history than the story of its gradually fading out of human souls. Now, you will indeed find it in the creeds; and a slight sense of the old awe and the old triumph may perchance come over you as you listen to the chanting of the *Te Deum*, that chiefest of Christian hymns, and hear the words, "We believe that thou shalt come to be our Judge," but they are on the lips rather than in the hearts of the worshippers.

Now, nothing is so lightly and even apologetically treated by liberal Christian critics and teachers as this primitive and always professed Christian belief. Yet it is no accident, no bit of Oriental coloring, however much of this there may be in filling out the details of the final scene, but the climax and consummation of the Christian view of the world, an answer to that deep question of man's heart, which is not merely what *are* the just and the good, but *how* are they to be accomplished, how is an actual end to be made of injustice and wrong. And religion will dawn anew on the world when the old problem again mightily engages us, and another and equally wide-reaching answer is won. The problem is justice, the bringing to every one the means and opportunity for the highest and best things. *To every one*, this is the very meaning of justice. The highest and best things are not for you or for me, or for any sort or class of men, but for all: they are the end, the right, the ideal destiny of every human being. But, if this is the problem, Jesus' method of solving it is no longer capable of belief. In simple honesty, it must be said to belong to the category of humanity's blighted hopes. The Son of man, who was to come so soon, has not come in all these centuries to bring the promised redemption: the very idea of his coming belongs to a way of thinking now outgrown.

And, since he believed in the impossible, he outlined for us no way of reaching the end that is really possible. He was not concerned with the State, indicating neither ideal nor practical course for it to follow. A similar indifference to and unbelief in what is to us practicable is shown in the writings of the Christian Fathers. Tertullian, early in the third century, says that "nothing is more remote from his interests than public affairs."* Lecky remarks of St. Cyprian (who belongs a little later in the same century) that "the conception of a converted empire never appears to have flashed across the mind of the saint: the only triumph he predicted for the Church was that of another world."† St. Augustine, a century later, pathetically asks, "What difference can it make to a man who is about to die whose government he lives under, if only there is no compulsion to impiety and injustice?"‡ His great work, from which this quotation is made, was intended to show, according to Lecky,§ that the "city of God" was not to be on earth, and that the downfall of the empire, under barbarian invasions, need not trouble his fellow Christians. If we wish a worthy conception of the mission of the State, we shall find it in the old heathen philosophers and emperors and lawyers rather than in Jesus or his followers. Marcus Aurelius, says Lecky, "made it his aim to realize the conception of a free State in which all citizens are equal, and of a royalty which makes it its first duty to respect the liberty of the citizens."‖ "Slavery," says the Roman lawyer Florentinus, is "a custom of the law of nations, by which one man, contrary to the law of nature, is subjected to the dominion of another." "As far as natural law is concerned," said another, Ulpian, "all men are equal." "By natural law," again, "all men are born free."

These conceptions, with all that they imply, were never taken up by the Church; and the work of giving them effect through the State is a far more difficult one than that of trusting and praying for the "kingdom of God," as the Church has done. We are now coming to feel that, if justice is to be done in this world (and perhaps equally in any other), it is we (*i.e.*, rational beings) who must do it, that praying for its accomplishment is but wasted energy, that its very sacredness commands that we cease all such trifling with it as prayer has now come to be, and give it a seat in our own hearts and an execution in our laws and institutions. Man is to inherit the sanctity and the glory that were to invest the Son of Man, sitting on his judgment-seat. For, I take it, the doing of justice is a sacred thing. There is a divinity hedging about every king or judge or magistrate or private citizen who takes this task into his hands. For, though justice as a reality in human conduct and government is a poor, shifting thing, the demand for it is eternal, and issues not from man, nor from the earth, nor the stars, but from somewhat older than they; and he who executes it acts in that moment as the delegate of God.

A new reverence for the State we want, then,—not a blind submission, not a passive obedience which has so often been the attitude enjoined upon Christians, but a reverence for the mission of the State, for its idea, a reverence which shall recognize the sanctity of the servants of the State, which shall demand that all legislation and administration shall in increasing measure fulfil the demands of the idea, which shall thus be the source of progress, and not the support of unreasoning conservatism. A new patriotism we want, not as an appendage, but as a part of ethics and religion. Here is not merely where we eat and sleep and work and travel, but this land is a field of duty. Here we are stationed, here we have a part: we are linked to a larger whole than

*I am compelled here to dissent from the published utterance of one to whom I cannot easily recount my obligations,—Prof. Adler (*Index*, July 8, 1880, p. 17).

our family or our business interests constitute. For public ends we are to live. The public service must come to have a dignity and honor in our eyes such as no work or private account can have; and we shall enter it, if to this we are called, as priests might enter a temple, and with thoughts as religious as theirs. And the more do we need a new patriotism, since, as men are now so largely studying the past, considering what has been rather than what may and ought to be, and learning that free institutions have so often failed, a kind of scholarly scepticism is arising as to the future of this land, if not, indeed, a kind of distrust of our fundamental doctrine of the rights of man. *It is* a great experiment, viewed from the stand-point of history, this giving of the sovereign power equally into the hands of all citizens; and those who will have certain proof of success before they act must halt and tremble, if not sigh, for other times. But those who have it in their blood to believe in the experiment will, by their very belief, help to carry it on to triumph. American patriotism is more than attachment to this land of ours: it is attachment to an idea, it is belief in a cause, the cause of liberty and human rights, and for the issue every one of us has a measure of responsibility.

And the State must itself advance. It must assume new duties,—new, that is, *not* to its mission, but to its past performance. Freedom is good, but it must be universal; and, if my freedom tends to the destruction of another's, mine must be limited. What makes the right of the State to interfere and prevent domestic slavery? What else than its very mission to secure and maintain the personal rights of every one within its borders? Are there then no other encroachments of the naturally stronger over the naturally weaker? I will not now undertake to answer this question specifically; but wherever there *is* a tendency of this sort, wherever one man or a set of men get property or power in land or means of transportation or instruments of production or the means of subsistence, placing others largely at their mercy, there the State should interfere, and, whether by legislation or actual administration in its own name, prevent the monopoly and act for the good of all. The State with us is not, as it often was in old time, the rule of the stronger over the weaker: if it were, it would have no sanctity or defence; if it should become so, then revolution would be commanded. The State is for justice, to see to it that the strong do not rule the weak, to break the force of the brute struggle for existence. And most ominons of all would be the future of that State, wherein freedom should be ostensibly honored, and yet in its very name the bonds of servitude be put on men, women, and children, wherein freedom would thus mean a freedom from law, from State examination and supervision, and be only a specious cloak behind which men might pursue their worst selfishness.

A very different spirit must animate the new religion from that which animated the old. The Stoic maxim and not that implied in the teaching of Jesus must furnish the rule for human life: "The wise man must take part in public life" (πολιτεύσεσθαι τὸν σοφόν). For through the State, and not through any mythical judgment in the clouds, the ends of justice and right are to be worked out.

3. But, if we have need of a new political morality, very closely related thereto is our need of *a new industrial ethics*. While the State should to my mind include economy to a certain extent, so that there might be some meaning in the phrase "*political* economy," and hence the true tendency is toward the assumption by the State of such properties and businesses as become large and public in their influences, the time is yet far distant when a perfect and detailed and particular justice can be prescribed or done by the State. In any case, industry may, relatively speaking, be treated as a separate topic. We live from day to day by our own industry or that of others; for I mean by industry not all kinds of pursuits, but those which aim to satisfy our physical needs and provide for our material comfort. Industrial concerns are those which touch us to the quick: a disorder here means so much less bread for some one to eat, so much of an increase in the death-rate. And society has always been partially, I may say largely, made up of those whose only means of commanding the necessaries, not to say the comforts, of life, lay in their hands and arms, either by way of labor or of threatening. I say always, yet I do not say necessarily; and here is the whole point. There are doubtless native inequalities between men, and there always will be. The ideal industrial order would be one in which the inequalities would mutually supplement one another, according to an ideal law of justice and humanity.

But this ideal order does not belong to history, but to the future: society did not fall from it, but is to rise to it; and the call to rise to it is felt to lie in the very nature and constitution of humanity, whenever it sees through its muddy vesture of brutality and selfishness, and becomes aware of the beatings of its own heart.

The ideal order is, in a word, co-operation: it means for those engaged in the production of any means of subsistence or comfort that they seek no more than a fair profit from the community which they serve, and that they divide the profit fairly among themselves. There is slight thought of fairness and justice in the present industrial arrangements. Services are doubtless done both to the community, and by the employer to the employed, as by the employed to the employer; but the simple fact that all is done for profit, or, as is said, with business motives, shows that fairness or equitableness, *not* to say humanity, are hardly determining motives.

The limit of the employer's prices is not justice, but what can or will be paid. And the wages he pays go as high not as any consideration of justice would suggest, but as the demands of the laborers can make them go, and sink as low as men or women or, perhaps, children can be found who will take them. "The very idea," says John Stuart Mill, "of distributive justice, or of any proportionality between success and merit, or between success and exertion, is, in the present state of society, so manifestly chimerical as to be relegated to the regions of romance." * The *Nation* newspaper, whose writers have generally, at least, the merit of clearness and incisiveness in thought and statement, says, "The attempt of writers like Bastiat to show an exact harmony between the rules of political economy and the demands of absolute justice involves, like the opposite error of Mr. Froude, a confusion between economical rules and moral precepts." † That is, in plain words, economy is one thing, and ethics quite another; and by the "opposite error of Mr. Froude" was probably meant a demand on his part that there be an infusion of ethics into economy, which is at least more honorable and, I believe, more really possible than the attempt of those economical charlatans—and we need not go to France to find them—who would defend and justify the present industrial arrangements on the ground not only that they are grounded "in the nature of things," but that they always mean "service for service." ‡ Service for service? In words, yes; but what not only of the intention, but of the equity of the exchange? Suppose that I succor a drowning man, and, before doing so, exact of him the greater part of his possessions. That is undoubtedly service for service, and his life he plainly values more than his possessions. But what should you say of my exaction? So there are those who take the wealth of men to-day, often the entire wealth, in their possession,—for myriads have hardly other than that stored up in their hands,—and in return give them but the bare means of subsistence. O precious equity!

A new ethics of industry must arise, or, I might almost say, ethics must be now applied for the first time in this department of human activity. What do the ethics of Jesus give us in this direction? In truth, if we turn from the habits of thought of our time to those in which the mind of Jesus worked, it is almost like going from one world into another. Did he not feel for poverty? Yes: his sympathies were boundless. But his remedy for it, aside from gifts of charity, indicates a notion of providence, of the relation between man and God, that may at times adorn a poem or a tale, but has lost all hold upon our sober belief. It was not so much even individual toil and labor as trust, belief that, as we are of more value than the sparrows, so we shall be no less provided for than they. Consider the birds, he said, that neither reap nor gather into barns, the lilies, that neither toil nor spin. Believe the less from seeing the greater. How strangely contrasted with this idyllic view of the world is that to which we in recent years have become accustomed! The language of the master is here better than any paraphrase: "We behold," says Darwin, "the face of nature bright with gladness, we often see superabundance of food: we do not see, or we forget, that the birds which are idly singing round us mostly live on insects or seeds, and are thus constantly destroying *life*; or we forget how largely these songsters, or their eggs, or their nestlings, are destroyed by birds and beasts of prey; we do not always bear in mind that, though food may now be superabundant, it is not so at all seasons of each year. . . . I estimated," he says again, "chiefly from the greatly reduced numbers of nests in the spring, that the winter of 1854–55 destroyed four-fifths of the birds in my own grounds." * The fact is that the "heavenly Father," of whom Jesus spoke, probably denies food and protection to more of his creatures than he actually provides for. If he did not, the earth would soon be covered by the progeny of any single pair of them. Hence, there often arises a struggle for existence, which for severity and pitilessness can hardly be surpassed by anything our imagination can conceive. And has man not a part in this great process in which the universal nature is involved? And is he not often equally pressed with the struggle, and as unconcernedly left to his fate by the "heavenly Father"?

Darwin would console us, in reference to the lower orders of being, "with the belief that the war of nature is not incessant, that no fear is felt, that death is generally prompt, and that the vigorous, the healthy, and the happy survive." Ah! but man is not one of the lower orders of being, and the consolation nowise fits our grief for him. Man is an animal who thinks and does feel fear; his death is often miserably drawn out; he survives often long after he or others can see the use of living; and sometimes it is at last forgotten that he is a man, and he becomes to many but a mass of flesh or filth, cumbering the ground. Oh, if we have a view of human nature that causes us no shudder and no resentment when we think or know of this, if we do not say, O remorseless struggle, thou hast no right or place in the circle of human relations, there only the law of respect and help and pity should have sway!—I am at a loss to know how to proceed. I can only address myself at the outset to those who have a different estimate of human nature, who respond to the thought of Jesus' words, if not to the inference he draws from them,—"Ye are of more value than many sparrows,"—who believe that Hamlet's words, "How noble in reason! how infinite in faculties! *in form and moving* how express and admirable, in action how like an angel, in apprehension how like a god!"—that these are none too good for man, since, though they flatter him as he often is, it is with the portrait of what he may be. I can only address those who see in man, in every man, a thing of measureless possibilities, of priceless worth. On us who think in this way, a new burden is laid. We can no longer, without hypocrisy, commend the poor and unfortunate to the care of the "heavenly Father"; nor can we assent to the cool indifference and practical materialism of *laissez-faire doctrinaires*, though the facts of the economist and the thoughts of man lying at the basis of the Christian confidence have equally our acknowledgment. We have, in a word, to cherish the thought and change the facts. For, though the facts of external nature—of rain and the soil and its fruits—are not in our power, the facts of human institution and custom and will *are*; and I believe there is no need that a single human being in the limits of civilization should suffer or want or live any but a nobly human life, if society would but awake and respond to the task laid upon it. There is no trouble in the nature of things. The nature of things ever points and commands, and in a single way. The trouble is with man, who will not accept ideal guidance, but prefers each one to take his own way, and to act without reference to the good of all.

Hence, if the old religion centred in prayer to God, the new must be an address to man, and yet not as if the word merely came from man, but in the name of the Highest, and with the aim of connecting human life once more with a supreme sanctity. This sanctity is that of justice. Jesus, it is true, taught the Golden Rule, which is a popular and apprehensible, if somewhat rude, statement of justice; but he left no distinct and binding impression that industrial life must be ordered thereby. With his peculiar view of providence and of the great change impending in human

affairs, the problem of life was hardly serious enough to call for such distinct inculcation. Hence, though for the little time his spirit was a fresh and powerful force in the minds of his followers, his high demands were matched in the order of their lives, and the earliest Christianity had some of the features of a genuine brotherhood: when discouragements came, there was felt to be no binding obligation to continue these features; and later on, and through the centuries of Christian history, very little was done to abolish the class separations into which human society always naturally falls. The practical working ideal of the Church has been, for the most part, that of charity and pity and consideration on the part of the higher classes in their treatment of the lower, and of deference and contentment from the lower to the higher. Justice would make charity, in great measure, unnecessary, and the airs of self-humiliation an offence. Instead of "Christian society," it would give us a high society of equals, wherein should be neither patronage nor obsequiousness, but only a noble, mutual courtesy and respect.

"One hour of justice," said an old Mohammedan precept, "is worth seventy years of prayer." Let us say the same of charity. All these hospitals and homes and asylums are, while in one way an honor, in another an indication of the disease of our civilization. We do not strike at the root by putting up more of these institutions, though, while the evils last, this must be done; and the Religion of the Future will only come with those who do strike at the root, and, whether at the command of the State or in obedience to the law in their own hearts, do no business and engage in no industry in which ample justice is not meted out to all who join them in it; who will use talents for leadership and initiatory enterprise, not to give them mastery over others, but, as Godin and Leclaire in France have done, for the elevation of others; and will feel in all they do and in their most material concerns as well, an o'er-mastering religious constraint. For, though religion by no means includes a system of theological dogmas or implies prayer or worship in the customary senses, I have no confidence that any great industrial reform will come, save as a product of religion. All man's natural self-regarding impulses are against any reform: those winning in the battle would rather have the battle go on as it is; and those who do not win it, and who may some time, instead of fighting for what they can only most scantily get, turn and fight their successful competitors who seem to be keeping them from getting more,—they, even if they should triumph, would only solve the problem for themselves and not for humanity, and would perhaps in turn have to give way to another inferior class who, stung by *their* oppression, should rise and overthrow them. The root of the matter, the solution of the industrial problem, is no more with the working classes than with their employers. Both are equally striving for the mastery, and I have heard it said by a manufacturer that no foreman was so self-assertive and tyrannical as one suddenly elevated from the rank of a common workman. The solution of the problem is only in an idea, a principle, and in persons only as they are permeated and actuated by the idea and principle. And the acceptance of the idea under the stress of no selfish desire or impulse, but simply because it is good and we ought to accept it, *is* religion, proving as it does man's link with what is higher and the Highest, and hinting to him as in a dream

> "The hills where his life rose,
> And the sea to which it goes." *

4. A fourth ethical need of our time is that of a new statement of *the end of human existence*. There is general dissatisfaction with the idea that this end is for each one in the saving of his own soul. The early Christian idea of the kingdom of heaven was much nobler, and indeed has a basic meaning of inestimable worth; but the form and expectation with which not only the early Church, but Jesus himself, connected it, have proved untrustworthy and delusive, the righteous ordering of human life, which was to come with the reappearance of the Son of man, and to come so soon, having failed to come in all these centuries. And the notions, which are the survival of that old conception, of a heaven beyond the skies, of a Deity who will be seen, a Son sitting on his right hand, and of angels who are their ministers,—these are all as much romance or myth to those whom I address as things which they believe. There is, hence, a wide-spread tendency to find the ends of existence in what is near, palpable, of present, even of material interest.

Now, though it is impossible not to sympathize with this tendency, so far as it contrasts with the old one of paying slight attention to human affairs and interests, it, too, has its limitations; and there are deeper moments in our experience in which we distinctly feel them. There is something within us which, at least in thought and purpose, rises above all limits and seeks a measureless good. As that something impels me to find a large share of my happiness in that of others, so it makes it impossible to find content in seeing others merely happy. I feel that the happy have but compassed the alphabet of existence, that the perfect includes the disposition of the heart, the desert of happiness, the enlargement of the mind, the ennobling of the moral life,—these all carried on to heights beyond our experience or even imagination, and that nothing less than the perfect, and this shared in by all, can be the end, the goal. It is characteristic of religion to start from the idea of this limitless good, to discern the worth of all minor or partial goods from their tendency to ultimate therein, to send our aspirations to the very stars, and put an infinite sanctity into each particular act. Jesus struck the note of religion, when he counselled his disciples to be content with no traditional rules of goodness, but only with perfection (Matt. v., 48). His impassioned apostle struck it when he wrote, "*Whatsoever* things are true or honorable or just or pure or lovely, think on them" (Phil. iv., 8). Religion is the passion of the soul for all good.

And as there are means and ends in the world, as matter is for form, and lower forms for higher, inorganic for organic, insentient for sentient, and the merely sentient for the rational, so the ends of rational existence are the ends of the world, and perfection is not merely a human, but a world problem. On every act of virtue, the stars shine; for every choice of the higher for the lower, for every immolation of the individual for a greater good than that of the individual, a mute sympathy runs through universal nature. And no act of ours born of that upward aim fails of its issue. There can be no destruction of good. There is something we mortal men can do that is not mortal, that

> "Will last and shine transfigured,
> In the final reign of Right,
> It will merge into the splendors
> Of the City of the Light." *

It is no mere earthly paradise that is here spoken of, though to strive for this as a proximate form of the perfect is necessary, but an end and outcome of human toil and struggle unaffected by earthly changes or earthly dissolution,—in truth, a world-city, wherein world-issues are to be gathered up and a world-purpose consummated, and the thought of which is once more to give dignity and the sense of permanence to life.

Do we survive with this good, shall we know in some other state of existence the good we have done in this, shall we meet those for whom we have done and recognize those whom we love? I know not; and I hold it to be at the best a curious question, albeit, one deeply touching these clinging affections that make up so much of the sweetness of human life. But the ends of moral perfection are not for our personal satisfaction, but we for them. He who loves not the true and the good better than himself, he who does not put them above all personal attachments, who does not find in the dearest object of his love a reflection of somewhat above and higher and not a mere private possession, who does not feel that no real human love is possible save as there is love for what is more than human,—he, however else fortunate or gifted, has never found himself in an act of religious veneration. For it is not man meeting with man, but man bowing before the unalterable, the eternal ideal nature of things; not God, in the ordinary sense of that term, but the God of gods,—something so secret and necessary that, were it to cease, the stars would vanish out of the sky, and, were it only to cease in human consciousness, human society would relapse into barbaric chaos. Emerson said not long ago: "I see that sensible men and conscientious men all over the world were of one religion,—the religion of well-doing and daring, men of sturdy truth, men of integrity and feeling for others. My inference is that there is a statement of religion possible which makes all scepticism absurd." * It is such a statement of religion that the time needs; and I have no idea that a personal immortality or a personal deity, as those phrases go, will make a part of it, for they are matters about which an honorable and philosophical scepticism may exist. Not that, it may be added, a license of personal belief may not exist as to them, but simply that on the ground of religion no belief can be exacted. The certainty and the sanctity of religion lie, to my mind, in man's moral nature. Here alone is, in addition to the may be or the can be, the must, the voice of command, the tone of authority, without which, and without assent to which, religion is but a playing with our opinions or our feelings. We are under orders: though we are free to obey or not, there is only honor in obedience; and religion will come to us afresh, when there is a new perception of this fact and a new recasting of life and thought and all our human relations in obedience to it.

"We have seen or heard of many extraordinary young men, who never ripened, or whose performance in actual life was not extraordinary. When we see their air and mien, when we hear them speak of society, of books, of religion, we admire their superiority, they seem to throw contempt on our entire polity and social state: theirs is the tone of a youthful giant, who is sent to work revolutions. But they enter an active profession, and the forming Colossus shrinks to the common size of man. . . . They found no example and no companion, and their heart fainted. What then? *The lesson they gave in their first aspirations is yet true; and a better valor and a purer truth shall one day organize their belief.*" Do these early words of him † who did not fail himself to hear at eve "the voice obeyed at prime," and whose recent death seemed in one way almost impossible and in another of slight moment, so fixed and central was his place in our thought and reverence,—do they come with no appeal—I might say, challenge—to the earnest young men of to-day?

CORRESPONDENCE.

A SPECTRE EXORCISED.

Editors of The Index:—

It is seldom that thoughtful minds are in such absolute antagonism as to find no single point of agreement; and it is pleasant to know that upon one topic, though a minor one, I am in hearty unison with my genial critic, Mr. William I. Gill. I perfectly agree with him that Idealism is "a gaunt and hollow spectre." My own purpose in writing the article which he criticises was none other than to exorcise this "hollow spectre," and recall men of mental ability, whose services might be invaluable in solving the practical and weighty problems of the day, from their pursuit and worship of this ghostly *ego*. For, thin and vacant though it may be, this spectre is one which yet dominates the thought of many able minds, keeping them, as ghosts always do, away from the light of day, and unfitting them for the most helpful and necessary human service.

It was not my purpose, however, to inaugurate a controversy; and it shall not be my act to prolong it. Since my critic has propounded to me, personally, some queries which may not be fully answered in my previous articles, I, however, crave a brief space for reply, and then I have done.

In the first place, permit me to correct one or two misapprehensions of my critic. If he had carefully read my original essay, he would hardly have classed me as a "material monist" or "objective evolutionist." Matter and mind were stated there to be "necessarily and mutually related manifestations of a common Substance or Being. Both are known to us *phenomenally*. To conceive of either as "a thing in itself," or as existing prior to the other, is unthinkable and illogical. Every act of consciousness is as truly objective as subjective. The external universe—the non-*ego*—is therefore known to us as directly and immediately as the workings of our own minds. I refrain from enlarging further upon these topics, having already presented what I conceive to be the substance of a rational philosophical system as clearly as possible in one or two brief essays. Certainly, the view therein set forth is no more exclusively "material" and "objective" than it is "ideal"

Digitized by Google

and "subjective." It includes both, and, as I believe, presents a truer philosophy of man, the human mind and its relation to the universe, than that of Materialism on the one hand, or Idealism on the other.

Standing upon this philosophical platform, I believe therefore that I have a very clear idea of what I meant by "the æther vibrations which existed before any eye existed." I believe that "the nature, quality, and form of the previsional vibrations of æther," which to sensible beings are known as light, were then precisely what they are now, and that their action was in no wise different from what it is at present. Though no eye was present to perceive them, science assures me that they have left their ineffaceable impress upon the structure of the world; that they helped to start the mountain torrent which, by gradual erosion of its rocky bed, has produced the soil from which sprung the earliest forms of vegetable life, long ages before a conscious being perceived anything upon this little world of ours. It assures me that they are petrified in the beds of coal which supply us with genial warmth in this inclement season; that they have left their impress in the rocky strata on which our continents are builded, and in the remains of crustaceans who dwelt thereon centuries before eye of man or mammal could perceive anything of the grandeur and beauty of this long creative process.

If all this is an illusion,—if indeed none of these things existed before conscious beings trod the earth, then is the word of science no truth, but falsehood. Wherein is the conception of the Idealist one whit more rational than that of the theologian a century or two ago, who accounted for all these natural phenomena by saying that to God all things are possible, and that he produced all these appearances of age-long evolutionary labors instantaneously by the original act of creation? "There could have been no possible existence before there was an organism and a set of senses," says Mr. Gill, and thereby places himself in absolute contradiction to the entire testimony of science. "To assert the existence of any preorganic and presensible or previsual vibration is to assert. . . a mental vacuity—because a sensible blank," he reiterates, thereby placing himself squarely on the ground of that crude Idealism which conceives of the individual, organized *ego* as the creator of the universe. Elsewhere, however, he appears to condition the existence of the ideal universe not upon the *ego* as organized, but upon the unconditioned *ego*, which "is always one with and commensurate with the known universe." Thus, with an inconsistency which is wholly impersonal, because it inheres in the sophistical fallacy which underlies the whole theory of Idealism, he appears at once to identify the *ego* with "the known universe," and to assume that the "known universe" is a subjective creation of the *ego*. In other words, the *ego* creates itself, which is the logical *reductio ad absurdum* to which all idealism ultimately comes.

In a subsequent essay, "Evolution, Objective and Subjective," he says: "This *ego* is the subject of all known phenomena, *which is to say*, simply, that they are phenomena or modes of the *ego*." It certainly requires the utmost of simplicity to say any such thing, and remain innocent of the fact that this assertion or inference is purely a "begging of the question"; for the only point of dispute is whether the fact that "the *ego* is the *subject* of all known phenomena does not involve the existence of an *object*, distinct from the *ego*, of which these phenomena are manifestations. With equal *naïveté*, he subsequently expresses another truism: "It is a logical necessity that the *ego* exist as a condition of the existence of any phenomena, organic or extra-organic or super-organic, *because these in all cases are ego, and nothing else*." An argument based entirely on the assumption of the truth of the question to be discussed is a most difficult one to undertake, and perhaps the readers of *The Index* will pardon me for declining to pursue it farther. In my own consciousness, the *ego* does *not* "spread itself over all the known universe." It appears to me limited at almost every point. "Hence, I can only argue from known facts, and can assume no omniscient intuition of the nature of things in themselves." The expression last quoted, if my critic will permit me, reminds me, as President Lincoln would have said, of a little story. A certain *ante-bellum* ex-President of the United States, while in nomination for that distinguished office, was the subject of discussion, as candidates will be, between a citizen of his native State and a resident of a distant part of the Union. "What do you, his neighbors, think of Gen. ——?" asked the latter. "Well," responded the other, "up in New Hampshire he passes for a pretty big man; but, come to spread him over the whole United States, I think he will turn out to be *mighty thin*." Of course, the application of this story to the "*ego*" and "the known universe" I take entirely to myself.

LEWIS G. JANES.

PROF. CHADBOURNE AND THE CHRISTIAN SABBATH.

Editors of The Index:—

At the Evangelical Alliance Meeting, Boston, Sept. 10, 1882, President P. A. Chadbourne is reported to have said: "After a careful study of these subjects for thirty years, I have seen no facts in nature and no arguments from any of the great men to whom we are so much indebted for scientific labors that has shaken my faith in the Bible." None have shaken the writer's faith in the Bible more than Prof. Chadbourne, in his address at the above meeting, wherein he said the six days in which God created the universe means six great creative periods. Having been taught from a child up that the weekly Sabbath is, in fact, of divine origin, founded upon the very bed-rock of the Bible, of which the first chapter of Genesis is its first and main support, is by Prof. Chadbourne made to occupy, as its rightful place, a space of time at the end of six long periods, each Sabbath or period of Sabbaths, perhaps, millions of years apart.

A departure of such vast magnitude from the ordinary and accepted sense of the language is certainly calculated to shake one's faith in the inspiration of the Bible. Of course, we can have our secular Sabbaths and be greatly benefited. But who can imagine a people enjoying a divine Sabbath with such immense divisions of time. Is it possible that the writer of Genesis, in his day, had any such object in view? Very likely, the motive power of congregations then were pretty much the same as now. Churches are nothing without people to fill them; and, to keep up church life, fuel needs be plenty and often applied, or the fires go out. Hence, the necessity of fifty-two divine Sabbaths for each year, besides week-day gatherings, to guard against defects of duty toward the recurring day. The occupation of the priests is on a scale grander than any other ever devised. Taxes are levied and revenues exacted from their willing brethren in this world, while the doctrine is taught and practised that pay day comes after death and in another world.

Do not such grand, aspiring ideas demand many Sabbaths divine, in which to execute their work?

Dr. Chadbourne knows that to rob the present Sabbath of its divinity, and make it a secular Sabbath, means pay day during life and in this world.

GILBERT BILLINGS.

CHICOPEE, MASS., NOV. 29, 1882.

THE NAME OF THE LORD.

Editors of The Index:—

It is written of Jesus Christ, "His name shall be Immanuel." There lies hidden in this sentence a wonderful wealth of revelation, when we learn to understand its meaning. The name of a thing or of a person indicates the law and form of its manifestation. Immanuel, or In-manu-El, means literally the God in man.

In the first chapters of Genesis, when the word God is mentioned, it stands for the Hebrew word Elohim, which is the plural form of El, and signifies the creative powers. Later on, in the following chapters, when the text turns to the spiritual life of man or the development of the human soul, the word God changes for the expression the Lord God, or simply the Lord; that is put for the single Hebrew form El, and means the creative power, in German *die zeugende Kraft*.

The Hebrew people recognized this power only as outside of man, although in the covenant of Abraham we perceive already the shadow from the light that was to be revealed two thousand years later.

Jesus, the Christ, recognized it as the same with its manifestation in man, or with the generative power of man. The Son is one with the Father, he taught. Therefore, his name was Immanuel, or be manifested himself, and through him in every true disciple of him, through the generative life inside of man.

This gives us the key for understanding the true inwardness of Christianity, and the full bearing of the mission of Jesus Christ as the savior of the human race, and as the great healing physician for its sins and sufferings.

JULIUS ASHMAN.

ORIGIN OF THE TERM "AGNOSTIC."

Editors of The Index:—

The following notes which may be found in the London *Notes and Queries* [6th Series, Vol. VI., Nov. 18, 1882, p. 418] may be of interest to you:—

"Agnosticism: Agnostic. If I remember rightly, when the introduction of these words was discussed, no example of their use was mentioned earlier than 1877. But, on the authority of the *Quarterly Review*, January, 1874, they can be dated three years earlier: 'Thus thinking, he repudiated all inquiry into the causation and origin of the world, all questions of the "whence" and "whither" as hopeless and inscrutable, accepting "agnosticism" (as we have heard it called) as his only possible creed.'—p. 160. 'He' is Mr. James Mill. A note on the same page speaks of 'the agnostic.' E. H. M."

"Dr. Murray states: I have now plenty of instances for 'agnosticism,' which was invented by Prof. Huxley in September, 1869, as I discovered after a considerable chase. J. R. Thorne. I have not been able to find the word in Huxley's volumes of lectures and addresses." H. E. ARMINGTON.

NEWPORT, R.I., December 2.

THE TITLE "REVEREND."

Editors of The Index:—

I have read your "editorial note" on the use of "Rev." with interest, if not with assent. I say with interest, because I remember that, soon after I was ordained, I cut out the offensive prefix from the address of the first letter which I received, and sent it back to my friend with huge exclamation points after it. But, as I grew older, I came to look at the matter from another and, I think, truer point of view. For is this word Reverend here used as an adjective? Is it not merely a professional title, like Dr., for instance? Would *The Index* refuse the latter title to a physician, because he was not literally a doctor, or teacher? So we use the prefix Hon. to mark a man who has reached a certain grade in political life, though we may more than suspect that his honor does not need a capital letter to emphasize its intensity. Shall we refuse to call any man Mr. who is not master of anything? Or should we hesitate to speak of Sir So-or-so or Lord This-or-that, because the literal meaning of those titles no longer applies? Or, again, ought the next Legislature, being largely hostile to Gov. Butler, to refuse to speak of him as "His Excellency"? Finally, however these questions may be answered, does *The Index* really think that clergymen are so insufferably conceited as to wear their title for any other reason than the one I have named, or at least because they consider themselves entitled to the reverence of their fellow-men? I fear your readers might infer this from your words. Moreover, why does *The Index* use the title, as I see it does, editorially several times in this very number?

W. H. L.

[It is true that the word "Reverend," although originally designed as an adjective, has come to be regarded by the more intelligent only as a title; but, as a word implying reverence is no longer thought to be especially applicable to the clergy as a class, it is well, we think, to discourage its use. The word "infidel," once a term of reproach when used in a religious sense, is now commonly understood to mean an unbeliever in the divine origin and authority of the Bible; but, on account of its old connotation as well as the continued use of the word to signify unfaithful, the word is disliked and disavowed by persons like our correspondent. It may be added that there are many to whom the word "infidel" conveys only its worst meaning, and they are generally those with whom the term "Reverend" means something more than a mere distinguishing title. Titles like "Honorable" and "His Excellency," in a republic like ours, have as little foundation in reason for their continuance as the "Reverend" prefixed to a preacher's name. The word "Doctor" as a physician's title is less objectionable; also "Mr." and "Sir," owing to the fact that they are not restricted to any class of men. In reply to the question whether clergymen "wear

Digitized by Google

the title" for any other reason than the one indicated by "W. H. L.," we are compelled to say that some do and some do not. Many value the title, because among the ignorant it gives them a sort of distinction, and invests them with importance; others, because they imagine that, because of their calling, they are entitled to especial consideration. *The Index* uses the title for the same reason that it conforms to usage in spelling. It may at the same time consistently point out the folly of absurd titles and the unreasonable spelling of many words. We would like to see liberal ministers, like our respected correspondent, drop the prefix "Reverend." It helps them in no way among intelligent men and women.— ED.]

MR. INGLEBY having suggested that the late Mr. Darwin's letter to a Jena student, referring to his religious beliefs, was mispunctuated in the German translation first published in the *Rundschau*, Prof. Haeckel replies, in the *Academy* of November 4, that this is not the case. Mr. Darwin's own words were as follows:—

"Down, Beckenham, Kent, June 5, 1879.

"To Nicholas Baron Mengden:

"*Dear Sir*,—I am much engaged, an old man and out of health, and I cannot spare time to answer your question fully provided it can be answered. Science has nothing to do with Christ, except in so far as the habit of scientific research makes a man cautious in admitting evidence. For myself I do not believe that there ever has been any revelation. As for a future life, every man must judge for himself between conflicting vague probabilities. Wishing you happiness, I remain, dear sir, yours faithfully,

"CHARLES DARWIN."

This letter Prof. Haeckel had forwarded to the London *Nature*, together with his lecture on "Die Naturanschauung von Darwin, Goethe, und Lamarck"; but the latter only was printed. This peculiar proceeding reminds one of the first German edition of the *Origin of Species*, in which the translator suppressed the brief reference to the descent of man. The *Academy* also contains this note:—

"In the *National Reformer* for Oct. 29, 1882, is the account of a visit paid to Darwin in the autumn of last year by Dr. Ludwig Büchner and Mr. Aveling. Darwin is there reported as having said: 'I am with you in thought, but I should prefer the word "agnostic" to the word "atheist." . . . I never gave up Christianity until I was forty years of age'; and in reply to a question why he had given up Christianity, 'It is not supported by evidence.'"

BOOK NOTICES.

SELECTIONS FROM ROBERT HERRICK. With drawings by Edwin A. Abbey. New York: Harper & Brothers. 1882.

Comparisons are invidious, but they are unavoidable; and we venture to say that this is not only the most beautifully illustrated book of the season, but the most beautiful illustrated book America has yet produced. There is oftentimes a plentiful lack of sympathy between the author and the maker of his illustrations. The illustrations are not windows that permit us to look into his meaning, but doors that shut us out from it. But so it is not here. The sympathy of Mr. Abbey with Herrick's genius is complete. If the text and the illustrations had proceeded from one and the same mind, they could not have been in more complete accord. Many of these illustrations have appeared from time to time in *Harper's Magazine*; but they show much more beautiful on this sumptuous paper, with these generous margins. The engraver and the printer have seconded the genius of Mr. Abbey as delightfully as he has seconded the genius of the poet. It is a pity that Herrick himself should not see to what his verse has come after two centuries of fame-corroding time. Is it not allowable to hope that somehow he can manage to? Mr. Abbey's special forte is in *genre* work. He is strong where American art is generally weak. What an assemblage of dainty women we have here, and what companionship for them of gentlemen and rustic swains! The men and women of Fortuny's "Spanish Marriage" are not more alive than these. But the charm of Mr. Abbey's figures would be infinitely less, if the landscape settings were not as perfect in their way. Some of the landscape head-pieces call for special admiration. Of a piece with all the rest are the purely decorative parts of Mr. Abbey's work and Mr. Austin Dobson's preface. It should be noticed that the poems are "selections." This is as it should be. Herrick in his entirety is for the critic only. Some of his poems are salacious, and such are very properly omitted from a volume intended for the freest circulation.

RESPIRATORY CONTROL for Vocal Purposes. By John Howard, of 15 East 14th Street, New York city. Issued by Edgar S. Werner, Albany, N.Y. Price 60 cents.

Part 1st of this little book treats of INSPIRATION, Part 2d of EXPIRATION; and, in the latter, the author claims a new vocal discovery most important to every speaker and singer,—*the function of the diaphragm as an expiratory agent*. It is also proved in Part 1st, by plainly described experiments, which any reader may easily apply, with immediate personal benefit, that *clavicular inhalation*, as opposed to diaphragmatic, will give the fullest volume of the breath so indispensable to all singing or public speaking, and likewise that the diaphragm has no legitimate office to perform in this act of inspiration. The arguments are given in a style so lucid and familiar that even the reader who has no acquaintance with the scientific details upon which they are based cannot help grasping their cogent truth. The same characteristics pertain to Mr. Howard's written courses of instruction in the more advanced phases of vocal study, which have been tested by correspondence pupils in all portions of this country as well as in England, Canada, and the West Indies. The principles are grounded throughout upon exact and exhaustive scientific research, but presented to the practical student with such tact and common sense that absolute success in their application is inevitable. Perhaps no department of study has been involved in greater confusion and misapprehension than this alluring vocal art, but Mr. Howard's ingenious and patient investigation seems to have opened for it a field of rare promise.

REV. F. H. HEDGE'S article on "Steps of Beauty," in the December number of the *Unitarian Review*, is a very interesting study of the æsthetic. Albert N. Blodgett, M.D., gives his views as to "The Management of Chronic Inebriates and Insane Drunkards." Rev. John W. Chadwick reviews Bancroft's *Constitutional History*. Mary B. Carret makes an earnest appeal in behalf of purity in the family, in an article entitled "Does the Protestant Church uphold and strengthen Ties of Family?" Prof. D. Charruaud writes of "The Reformed Church of France." The Editors' Note-Book contains, among other things, a notice of Dr. Pusey's life and work; and Mrs. Lowe's department is, as usual, interesting.

AMONG the interesting topics in the December number of the *Herald of Health*, we note the following: "Deep Breathing as a Means of Health," by Sophia, Marquise A. Ciccolini; "Night Ventilation in Malarial Regions"; "Smoking and the Memory"; "Practical Means of Purifying the Air"; "Contagiousness of Consumption"; with various other timely notes on hygienic matters.

PERSONAL ITEMS.

B. F. UNDERWOOD will speak at Milwaukee, Wis., Sunday evening, December 17.

ONE of the cleverest critics of the staff of the *Pall Mall Gazette* is said to be a Mrs. Otis of Boston, who has long resided abroad.

A YOUNG lady, lately banished to Siberia for complicity in the Nihilist conspiracy, has killed the governor of the Transbaikal territory.

REV. CHARLES E. STOWE, son of Harriet Beecher Stowe, and pastor of the Congregational church at Saco, Me., has handed in his resignation.

MR. THEODORE D. WELD, the veteran abolitionist and co-worker with William Lloyd Garrison, celebrated recently the eightieth anniversary of his birth at his residence in Hyde Park, Mass.

B. F. UNDERWOOD will deliver a course of lectures at Paxton, Ill., December 19 to 24, inclusive; at Danville, Iowa, December 26, 27, 28; at Quincy, Ill., December 30 and 31.

ANTHONY TROLLOPE, one of the best known of that literary family, the son of Frances Trollope, died in London, December 6, aged sixty-seven. He was a voluminous writer, mostly of novels, and had many admirers.

EDWIN ARNOLD, the author of *The Light of Asia*, has nearly ready for publication a work on Mohammedanism, which is to be entitled *Pearls of the Faith, or Islam's Rosary*, which will treat of the life and religion of Mohammed, the legends, records, and traditions of Islam being viewed from the stand-point of an Indian Mussulman, as, in Mr. Arnold's previous work, Gautama Buddha's life and doctrine were expounded from the stand-point of an Indian Buddhist.

LOUIS BLANC, well known in France and outside of it as a revolutionist and agitator, the friend of the down-trodden and oppressed, a man of fine abilities and social sympathies, died at Cannes in France on the 6th inst., aged sixty-nine. He was for many years the editor of *Revue du Progrès Politique, Social, et Littéraire*, and the author of several works on the social question. His will orders a strictly civil burial, with no religious ceremonies. His large library is bequeathed to the city of Paris.

NEW YORK has organized an "Authors' Club," which is, however, so far, quite a *manly* affair, as no lady writers' names are mentioned among its members or organizers. Some notable names, however, appear among its patrons, such as Richard Grant White, Prof. E. L. Youmans, Edmund C. Stedman, Allen Thorndike Rice, R. H. Stoddard, Fred. Law Olmsted, Clarence King, John Habberton, Parke Godwin, R. W. Gilder, Edward Eggleston, Geo. Wm. Curtis, H. H. Boyesen, and others equally as well known.

THE New York *World* says the Rev. Joseph Cook is, like Artemas Ward's kangaroo, "an amoosin' cuss," and goes on to assert that his Rev. "Lectureship" need not feel so delighted over the attentive hearing given to his lectures in Hindostan, for "the fact is, and Mr. Cook might have known this if he had been able to read Persian and Hindostanee, that he was advertised throughout the peninsula as the inspired lunatic who had shot the President of the United States, and his ravings about protoplasm and his old enemy, Bathybius, were listened to with mingled pity and religious awe, as the utterance of one mysteriously afflicted, and therefore near the throne of power."

A REMARKABLE realistic romance, "The Silver City," will be a leading serial in *Wide-Awake* for 1883. It is written by Fred A. Ober, the well-known Central American explorer for the Smithsonian Institution, and centres its interest about the exciting search for and discovery by the boy hero of the famous lost city Yucatan, of which tradition has whispered mysteriously ever since the conquest of Mexico by the Spaniards, and in which present interest is excited by the report of a traveller now in the region, that within a few months he has seen in the distance its white and shining walls. Many of the hundred striking illustrations, by W. Parker Bodfish, will have as backgrounds to the dramatic action marvellous sculptured ruins, from photographs taken by Mr. Ober himself.

THE "Jersey Lily," Mrs. Lillie Langtry, is being more than "damned with faint praise" in this country, judging from the tone of leading exchanges. A writer in the Boston *Transcript* makes the suggestion: "As there are a large number who do not care to see Mrs. Langtry disguised as an actress, but who would like to see the renowned beauty of London society; and, as both her object and that of Mr. Abbey is to make money out of her reputation *as a beauty*, I would suggest that she hold a reception in some hall or theatre, or at the Brunswick, under the direction of Mr. A., *at first-class theatrical prices*." The *Critic* is particularly severe upon the "professional beauty." It closes a criticism of her histrionic abilities in this savage fashion: "We admit it. She *is* a pretty woman. But just as certainly she is nothing more. As an actress, she can never rise higher than burlesque, comic opera, and 'leg-pieces' generally. As a woman, she has made herself a fair target for the scorn which all right-minded persons shot at that foolish fribble, Mr. Oscar Wilde. We would speak of her more kindly, were she exhibited less cynically, flattered less impudently. As matters stand, the criticism which is silent is dishonest. Let the professional beauties of England keep within their own domain. The American stage wants none of them."

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe. I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to

PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

Mr. MILLS' LECTURES.

SEASON OF 1882-83.

1. Our Original Homestead and Ancestry; or The Birthplace and Cradle of our Civilization.
2. The Beginnings and Successive Steps in the Arts of Common Life.
3. Survivals and Reminiscences of Past Conditions in Present.
4. Our Present Civilization: its Type, Quality, and Indications.
5. Mythology, its Origin, Growth, and continued Influence.
6. The Promise which Science bears for Humanity.
7. The Mission of the Industrial Arts for Society.
8. Nature's Order of Development and Mental Growth as attested in History.
9. The Relation of Supply to Demand in the World Physical, Intellectual, Religious.

Besides the above, Lectures will be given upon the following, when desired:—

1. Carlyle. 3. Huxley.
2. Emerson. 4. Tyndall.

CURRENT TOPICS.

JAPAN has a compulsory education law, which requires the attendance at school of all children over six years of age.

JUDGE CONNER, of Cincinnati, in an elaborate opinion pronounced in the Common Pleas Court held that public schools can be used only for secular education, and cannot be voted to Sunday-school purposes or religious teachings.

SAYS the *Unitarian Herald* (Eng.), "MAX MÜLLER, in a recent article in the *Contemporary Review*, speaks very highly of the moral character of the Hindus, and says he has been frequently told by English merchants that, commercial honor stands higher in India than in any other country, and that a dishonored bill is hardly ever known there."

THE faith cure establishment at Buffalo, carried on by Miss Carrie Judd, who claimed to have been cured of a chronic disease by faith and prayer, has closed under a financial cloud, owing in part to the failure to heal a cure of spinal complaint, after which the sufferer was turned out, although she had given proof of unbounded faith and had spent a large amount of money in the institution.

THE agent of a missionary society exultantly quotes, as worthy of emulation, the contribution of a poor widow of three hundred and fifty dollars, "all she possessed and the result of several years of careful economy," to help the cause of foreign missions. A few lessons in political economy would have taught this foolish widow that "charity begins at home," and that to save herself from possible pauperism she should have kept her money for her own future needs.

SPRINGFIELD, Mass., is setting an example in methods of true justice. The city has a "Probation Officer," whose duty it is to attend the courts when petty offenders against the law appear; and, as the cases are called, he uses his good judgment, and asks the judge to suspend sentence in cases where he thinks "moral suasion" may reclaim the offender, and usually his request is granted. Good advice, help, and influence are brought to bear on the criminal, and very often with most excellent results.

THERE is a strong antichristian spirit aroused in India. In Lucknow and Cawnpore, forty five publishing houses are engaged in issuing books and tracts devoted to the undoing of Christian missionary work. One house recently received a donation of four thousand dollars to aid in printing Mohammedan works. A Hindu prince presented another house with enough money to issue a million Hindu tracts. More than one hundred papers are published in the interest of Paganism and Mohammedanism, and against Christianity. One Hindu-publishing-house at Lucknow recently sent to London an order for twenty-five thousand dollars worth of paper on which antichristian tracts and other works are to be printed.

THIS is the grandiloquent style in which that modern Don Quixote, Joseph Cook, of "Lectureship" fame, announces to the New York *Independent* the scope of his coming lectures in this city: "There will be discussions in the preludes of the most blazing and strategic topics in the political and religious world; and the Lectures will make much use of my recent studies of foreign lands, especially of the Orient, on which, just now, so many books of travel are being published. New Departures *in* and *from* Orthodoxy will be noticed both from the Boston and the Andover point of view." We cannot be too grateful to Mr. Cook for this note of "réveille." It is best to be prepared for the awe-inspiring things he threatens us with.

OF the letter recently sent by the Pope to Queen Victoria, thanking her for her interest in the welfare of the British Catholics, the New York *Observer* says it "is as splendid hypocrisy as the world ever saw. Will the Pope or any of his editorial satellites tell us when the Pope ever took any interest in the welfare of Protestants in his dominions? When did he ever grant religious freedom to the subjects of his government? We were in Rome when the Pope was king as (thank God) he is not now, and we were present when the order came directing a Protestant minister to desist from holding religious services 'in his own hired house.' Not a foot of land could be had within the city walls on which to build a Protestant church!"

WE find the following in the Chicago *Religio-Philosophical Journal:* "Lord Queensberry said on the occasion of his removal from his position as a Scotch representative peer in 1880: 'This is perhaps the last chance I shall have of making the statement before my peers. That any human creature, be he peer or peasant, man or woman, pauper or millionnaire, should be visited with pains and penalties because of his or her speculative opinion on a subject wheron but few, even among professed Christians, are agreed, is a bitter satire on your vaunted liberty. My lords, it is the spirit that lighted the martyr fires of Smithfield, and that led to the stake gallant and noble souls such as Bruno. It is noble company you are placing me in, my lords; and I shall thank you for it.'"

REV. DR. F. H. NEWHALL, in *Zion's Herald*, says: "A call from the Prince of Wales, or from the Czar of all the Russias, is a trifle compared with a visit from one of the kings of the world of thought. The great thinker makes and unmakes kings. Here is a man of whom the world's masses have not yet heard, holding no office in Church, State, or institution of any kind, having no public position whatever, whose influence upon the thinking, and so upon the actions, of men is greater than that of any official person that could be mentioned. Mr. Spencer's greatest, most permanent and beneficial influence is upon the educational forces of England and America.... Here, now, is Mr. Spencer's great work as a teacher. By a generation of persistent, incessant toil against all manner of opposition,—a thirty years' war against conservatism, mighty, ancient, and honorable,—this amateur educator has succeeded in planting this relentless "why," like an angel with a drawn sword, across all the macadamized highways of educational work. That angel has slain his thousands of stupid text-books; and thousands more are bound to follow, while hundreds of thousands of children are unconsciously crying, "O Lord! how long?"

THE famous Mormon Temple in Kirtland, Ohio, the historic landmark of the first settlement of the Church of Zion, a building which has stood empty since the failure of Joseph Smith's bank broke up the settlement there and the saints took their divided march farther West, the polygamists to settle in Salt Lake City, and the anti-polygamists at Plano, Ill., has been reopened, and is now undergoing repairs for the use of "The Reorganized Church of Jesus Christ," of the Latter Day Saints. Services have been held two Sundays. It is announced that three thousand dollars have been raised at Plano, Ill., for putting the old temple in order, and that April 6, 1883, there will be a conference and reunion of this branch of the Church, when over one thousand Mormons from the West will greet the struggling few who remained behind, steadfast to the faith, while their brethren sought new fields of conquest in the West. The event, as announced by the Kirtland Mormons, will be one of great importance, and will inaugurate the permanent establishment of the Mormon church at that place, where the Saints repudiate Brigham Young and his doings, together with the entire branch of the Church which he represented. The village of Kirtland is situated about twenty-five miles east of Cleveland, and three or four miles south of the road leading to Painesville.

CHARACTER NOT DOOMED BY HEREDITY AND ENVIRONMENT.

The great facts of heredity, of environment, of inter-relation between the different branches and members of human society,—facts on which so much new light has been thrown by modern researches in anthropology,—make it necessary to restate some of the old ethical problems; and these natural facts are seen to have so much to do in determining human character and conduct that there is some danger of the appearance of a new philosophy of practical fatalism. But a broader and deeper consideration of the laws and principles involved in these facts of social science will show that they furnish also new grounds for moral motive and appeal, and offer new and important instrumentalities for furthering the moral progress of mankind.

Let it be admitted, at least for the argument, that in heredity and environment, considered in their physical, mental, and social aspects, are the great forces that determine character and conduct. What follows? Not that people should sit down and fold their hands and let things take their course, but rather an opened opportunity and a direct and strong appeal to use certain methods of moral reform and culture as presenting demonstrated assurance of success. What follows is really a larger obligation to do something. The fulcrum of reponsibility may be shifted, but it is not removed. The responsibility is put back of the environment and heredity, and those powerful agencies are brought within the domain of human volition. The field of responsibility, therefore, is enlarged, not diminished. Instead of the doctrine that facts pertaining to the social and moral condition of man are as they are by a law of necessity inhering unalterably in the nature of things, man is summoned to the task of creating for himself the conditions from which an improved social and moral humanity shall surely result. When people shall have learned thoroughly to observe the highest laws of life, then will the elements of human character and conduct be purified and enriched at their very fountains; and physical health, intellectual vigor, and moral impulse and order will alike go down in the blood for the service of generations to come. And what a motive is here added for virtuous behavior! One is to live not merely for his own happiness here or hereafter, and not merely for the greater happiness of his neighbors and contemporaries, but in such way that the life of his posterity may be purer, sweeter, nobler for what he is and does.

Yet, all-important as this point is, there is another point which specially needs at this day to be urged for the encouragement of all persons who are working on any of the practical lines of social and moral reform. Let us consider the sad fact that countless numbers of human beings are coming into existence with poor physical organism, and with defective and badly balanced mental or moral temperament, and hence, at the start, are weighted by ancestral errors toward some form of evil. And, along with this, let us consider the other fact that countless other human beings,—and very likely the majority, too, of the class just named,—are compelled by their lot in life to pass their earliest years amid such surroundings, or with such an environment, that vice, crime, degradation, and wretchedness seem only the natural consequence, and, unless in some way averted, a consequence that is inevitable. Are such people, then, fated to wickedness and woe? Is there no relief, no hope, for their condition, no deliverance from the body of death with which they are born, and to which their early years only serve to chain them the more indissolubly? Are they to be left to make their miserable struggle for existence unaided, as even some liberal thinkers openly argue, on the theory that the few who are fittest for improvement will struggle through to some good purpose, while the great multitude of them will finally felicitously perish through the imbecility that is the natural result of their fiery strife of passions and their wretched lot in life? For ourselves, we believe in no such irrevocable doom to a hell on earth. There is deliverance, there is hope; and it comes—to name now the one way which concerns our theme—through this very doctrine of environment by which, it is argued, the burdens are fastened. Change the environment, improve the surroundings, reform the circumstances, and at once new influences are set to work, new motives are inspired, new ambitions are excited, dormant elements of virtue are aroused, and finally character is regenerated.

Nor is this a mere theory of the possibilities of overcoming the evil power of bad surroundings and bad inheritance. It is a statement drawn from the solid facts of experience, and has been directly suggested, as has this entire article, by the recent annual report of the Children's Aid Society of the city of New York, wherein a brief summary is given of what that benevolent organization has been doing among the street children of that city in the last thirty years.

The Children's Aid Society for a number of years had to struggle against a strong current of utter unbelief among New York citizens as to its ability to do anything but waste money and sympathy on the so-called street Arabs. It has now, after thirty years, become one of the municipal institutions whose success is so marked that the citizens will not willingly let it die, and whose work is so systematized and registered that its statistics are becoming valuable material for social science. The report of its secretary at its recent thirtieth anniversary opens with the remark that the New York press has noted within the past year how entirely the old associations or gangs of criminal youth that existed in that city twenty years ago—gangs that were well known by sensational and sometimes ferocious names—have disappeared. These organizations were a terror to all good citizens, and almost as much so to the police. They are now wholly gone. And the police and the press both attribute their disappearance, and the great decrease of every kind of juvenile crime in the city, chiefly to the work of the Children's Aid Society. The report says, and thus indicates in few words the society's methods of action: "We have met organized crime by organized education; we have improved associated squalor and poverty by associated efforts for the teaching of cleanliness and industry; we have prevented vagrancy, not by the police and the prisons, but by affording shelter and work; we have diminished thieving and robbery by teaching honesty to the lad of the streets, and then putting him into a good home, where he had few temptations to stealing; we have lessened vagrancy and prostitution by bringing the begging and roving little girl under early influences of purity and industry, and then placing her with a kind-hearted family in the country." The report further says: "It is to our industrial schools and girls' lodging-house and emigration branch that may be attributed the remarkable decrease in our police reports of crime, and especially of vagrancy among young girls and women, during the past twenty and twenty-five years." It is estimated that in the lodging-houses of the society more than two hundred and fifty thousand different boys and girls have been sheltered and partly fed and instructed during twenty-nine years, and that in the industrial schools more than one hundred thousand poor little girls have been taught. And, of all these hundreds of thousands, though the society keeps account of them as far as possible, "it is not known that even a score have entered on criminal courses of life, or have become drunkards or beggars, though four-fifths were children of drunkards." There is a fact which shows that heredity, strong as it is, is, after all, not by any means the strongest power that helps to shape character.

With regard to the emigration branch of the society's work, or the removal of children from the city and placing them in good homes, particularly in the West, the report gives even still more remarkable facts. It says that another systematic inquiry has been made the past year concerning the after career of those children that were placed in Western homes twenty to twenty-five years ago. When we consider the birth and early breeding of these children, the result is certainly astonishing. "*Almost every one of the children* whose cases were thus investigated, and who have been in the West over twenty years, *occupies now a good position in society.*" The girls are generally well married, and are good wives and mothers. Of the boys, several have graduated from college and are in professional life. Many of them are leading citizens in their towns. Among them are prominent lawyers, physicians, teachers, artists, civil engineers, public officials, and representatives of other of the learned and skilled vocations. It is indeed noteworthy how many of them have risen out of the class of hand laborers to occupations requiring mental capacity and training. The reasoning seems valid that their early struggles for subsistence, being wisely and kindly turned to good ends, served to sharpen their intellects and awakened an honorable ambition and energy which have more than conquered the evil tendencies which beset them from bad birth and early vicious surroundings. In fine, by a change of environment, the great majority of these children have been literally saved from degradation, ignorance, idleness, vice, and crime, and converted into good and useful members of society.

And this, on a larger scale and with somewhat more of system perhaps, is only an illustration of what numerous similar societies and kindred efforts are accomplishing for ameliorating the evils and miseries of human existence, even in its most depressed conditions. With the results of such work before our eyes, let us not say that any evil inheritance or evil surroundings of early years seal the doom of character. Nature's processes of education and growth teach no such moral fatalism. Bring a new educational influence to bear through a change of environment, and the effects of disadvantageous heredity and of previous degrading circumstances may be thrown off and neutralized. Nature gives the great advantage, other things being equal, to a present force over any force acting from the past. It would indeed be a most discouraging fact for the moral reformer, if a dead ancestor's evil hand upon a living character could not be lifted. But there is a power that is more than a match for any law of heredity,—a power that can lift any dead man's evil hand, however heavy. *It is the power of the living hand of virtue.* One of the laws of moral influence is that, like the force of gravity, its strength increases with the nearness of the influencing power. The power of the dead, therefore, must yield to the power of the living. Keep the living hand of virtue applied to the disorders and pains of society,—to the spots where ancestral sins break out into foul disease or where human faculties have been maimed and starved by hard outward circumstance,—only keep it applied there patiently, wisely, warmly, lovingly, and its

touch shall shape deformity into completeness, and woo at last even the scars of old wrongs to obliteration.

WM. J. POTTER.

LYDIA MARIA CHILD.

The life and work of this remarkable woman have again been brought to public notice by the collection of her letters,* recently published, with an introductory memoir by Mr. Whittier and appendix by Mr. Wendell Phillips.

The incidents of her life are briefly, but aptly, stated by the two distinguished friends who undertook that labor of love; and something of the nobility of her lofty character shows itself in the letters which follow; yet her grandest monument is builded unseen in the hearts which knew her countless benefactions, the material blessings she purchased with noble toil and lofty self-abnegation to strew along the weary pathways of the outcast and oppressed, the uplifting light of her deeply religious spirit suffused with the radiance of a singularly sweet and kindly nature, an encircling aureole, which ever brightened the world around her.

We hear much, from our conventially "religious" friends, of our strange blindness to the glory of the incarnation of "a Spirit revealed through a historic Church,"—a church, by the by, which for over a thousand years has persistently resisted every advance of the race, and which, as a body (though with notable individual exceptions), hurled impotent anathemas at the noblest undertaking of this noble woman, the enfranchisement of the slave. Here, before our face and eyes, not vaguely discerned in the mists of uncertain oral tradition, transcribed in varying similitudes by unknown hands, was an incarnation of the great religious principle, which we all, under differing forms and symbols, alike worship; yet our fashionable friends, who had publicly renounced "the vain pomp and glory of the world," closed the doors which had been swung wide open to hail the literary artist, and withdrew the proffered privileges of the Boston Athenæum because she had dared to SPEAK, instead of fruitlessly *praying* for "all those who were in any ways afflicted or distressed."

It is curious to observe how this subtle spirit of ecclesiasticism blinds the adherents of the "revealed historic Church" to the glory round them, unless it assumes conventional forms of piety. A striking instance of this is evident in a late review of this very book by a kindly, fair-minded writer, who evidently admires Mrs. Child in a way, and, in an impartial estimate of her work and life, speaks of the "charm of her character." He concludes, however, that Mrs. Child's "*Christianity*" may be summed up in the words that she bore other people's burdens, and had a warm religious nature, "but," he adds, "untrained and disposed to run off in eccentricities." Ah! one thinks, if she had only had the advantages of being trained in the Christianity of the historic Church that anathematized her fearless "Appeal in Behalf of that Class of Americans called Africans," which she put forth at the untutored prompting of a greater than any historic fabric,—a Power that makes for righteousness through *all* the ages!

"Hardly ever," says Mr. Phillips, in his eloquent eulogy, "was there a costlier sacrifice. Few of us can appreciate it to-day. Narrow means just changing to ease after a weary struggle, fame and social position in her grasp, every door opening before her, the sweetness of having her genius recognized. But," he says, "she never hesitated. One blow, and the spreading tree is dead. At the call of duty, the young woman struck it without repining, and saw the whole scene change at once. Obloquy and hard work ill-paid, almost every door shut against her, the name she had made a talisman turned to a reproach, and life henceforth a sacrifice."

Well may Mr. Phillips affirm that "her spirit was Spartan"! But though our reviewer finds in the somewhat unfortunate portrait preceding the volume only "a vigorous, resolute old lady, with a large head, . . . and aggressive spirit," the Spartan was not the predominating element in her character: albeit this may well stand for a likeness of one of those passing moods in which her calmly poised sarcasm would breathe a rebuke withering as a desert sirocco upon the

> "Official piety, locking fast the door
> Of hope against three million souls of men,—
> Brothers, God's children, Christ's redeemed,— and then,
> With uprolled eyeballs and on bended knee,
> Whining a prayer for help to hide the key!
>
> "The 'sleek oppression' dreaming on its velvet cushions
> That, in the scale Eternal Justice bears,
> The generous deed weighs less than selfish prayers,
> And words intoned with graceful unction move
> The Eternal Goodness more than lives of truth and love."

What wonder that "she found it easier to believe in planchette," unconsciously mirroring the living faith of her own devout and tender soul, than in "a Church without humanity," in whose Prayer Book appeared a mutilated reproduction of Ary Scheffer's "Cristus Consolator," adapted for its use by the omission of the *black* slave.

The letters in this collection show this side of her character in full relief, and no doubt, like the portrait, give even undue though unavoidable prominence to the aggressive virtues we denominate as Spartan; but, to those who were privileged to know her life in its fulness, the grander aspect was the quiet beauty of the waveless waters of her daily round of duty and self-sacrifice,—a self-renunciation yet loftier in its serene resignation of all luxuries and almost of the common comforts of life, that she might help to bear the heavy burdens of all who were in any ways distressed, "to comfort and relieve them according to their several necessities."

Among the papers of Mr. Emerson has been found an epistle by another sainted soul whom the authorized vicars of the vicarious sacrifice denounced, the late Jones Very. Written apparently in the height of that ecstasy which lifted him above the world and its judgments, in it he defines prayer as the denial of self. "Use what language you will," he says, "you can never say anything but what you are." "This is prayer,—in sincerity *ever* to love your neighbor as yourself." "And, as you rise and are lifted up, you shall draw all who are dead unto you into life." Such was the litany of her hourly existence, a hidden music whose harmonies re-echo in the hearts of all who came within the sphere of its beneficent influence.

Numberless are the lives which have gathered an onward impulse from her helping hand; and her simple neighbors, though they valued her literary attainment, lost sight of it in the far greater moral achievement, the unselfish, modest, noble womanhood, whose presence among them was a constant benison of peace and good will.

The beauty of her domestic life is apparent in these letters,—that perfectly harmonious union broken only by death, the great Divider. Each was truly a helpmate to the other, and fully shared the other's labors, whether manual or intellectual. In the latter part of the book there are very touching allusions to the closeness of this marriage relation and the aid she derived from her "dear old mate's" exceptionally complete intellectual equipment, though a somewhat unpractical turn of mind never permitted him to make his full stores of knowledge as generally available as they gave promise of being, and, so it seemed, should have been.

"In her old days," says our well-intentioned reviewer, "she grew mellow; and, after her husband's death, she seemed to centre her thoughts largely upon another world where she should rejoin her companion." The smoke of the great conflict to which she gave the best powers of her life hangs over all the earlier parts of the book; and no doubt, to a person not personally acquainted with Mrs. Child, it obscures the devout, sweet spirit which there is partly hidden beneath the panoply of the energetic reformer. But, to those who knew her, her whole life was like the tender beauty of an autumn whose later frosts, of sorrow and age, could only clarify and brighten.

Our friend is mistaken in thinking her "credulous" or in any just sense "superstitious." The "unutterable longing" which voices itself in her lines to the memory of Mr. Ellis Gray Loring, and in Mr. Whittier's response, that tenderest of all our dear Quaker poet's serious and manly verse, led her, too, to reach and grasp into the great darkness with ears quickened for voice or sign, and increased her interest in all manifestations for which there seemed to be no apparent explanation. But she placed, so she herself told the present writer, no reliance of any positive nature upon anything supernatural, however it might stagger her understanding. In that season of benign calm and patient waiting for what the great Future had in store for her, her soul seemed, like Wordsworth's, to "have sight of that immortal sea which brought us hither"; but she was not deluded into a belief that she more than heard the distant rolling of the mighty waters, the lost voices that softly whisper in all our hearts.

With her, the still, small voice was very near amid the Eternal Silence, of which her gayest and most entertaining mood (and few could be more entertaining) was never wholly unconscious. Yet, cheerfully, she walked the path of duty, led to that pleasant service which doubtless was its own abundant reward. Other reward here or hereafter she asked not; nor waited for the deep-voiced organ, nor swinging censer, nor painted radiance of pictured lights, to consecrate her prayer. Her life itself, part and parcel of the Greater Life around us, was a daily litany, and abides as a benediction in the souls of all who felt the power of its gentle and persuasive influence.

> O Power unknown! that work'st behind the veil,
> That makes for Good through all man's devious ways!
> Not in the Church alone dost thou abide,
> Though petty priests would bound thee with her pale:
> In lives like these, a Light shines o'er the haze,
> That draws us as the calm moon draws the tide.

*LETTERS OF LYDIA MARIA CHILD. With a Biographical Introduction by John G. Whittier, and an appendix by Wendell Phillips. Houghton, Mifflin & Co. Boston.

TRUTH IN ERROR.

II. Atonement and Salvation.

The doctrine of atonement, which pervades the Bible and exists in some form in all religions, the necessity of the suffering of one as the condition for the forgiveness of another, must have a basis of truth, or it could never have gained such wide acceptance throughout the world as it has done.

The Calvinistic doctrine of salvation by faith in Christ is impossible to understand, and harder still to believe, except by those who adopt the motto, "I believe because it is impossible." Many different theories of the atonement are presented. The old school Calvinists believe in the sacrificial atonement, that Christ died in our stead, saving us by substitution, bearing the wrath of God that was due to us. A newer school, expounded by

Digitized by Google

Dr. Bushnell, and fast growing in our theological seminaries, accepts the moral theory of the atonement, or various modifications of the idea of vicarious atonement approaching to the moral theory, which makes the life and death of Christ efficacious only as an example, and makes salvation the act of the grace of God, not purchased by Christ's suffering. We are told to believe in Christ in order to be saved, but what we are to believe about Christ is so variously stated that the seeker is bewildered.

This is a most unsatisfactory doctrine to attack, for, whatever phase of atonement is controverted, the assailant is told he has misconceived the theory; and, if he patiently demolishes every aspect in turn, it is said that our only concern is to have faith in the person of Christ, and how he saves us, and in what way God looks upon the atonement as accomplishing this, God only knows.

This doctrine teaches us that the penitent thief upon the cross, the believing murderer on the scaffold, the dying aged sinner converted in his last illness, do, upon their deaths, immediately pass into glory; but the rational philanthropist, the earnest laborious scientist, or good moralist, of sceptical minds, after long lives of devotion to the welfare and elevation of the human race, must perish eternally.

Belief is largely accidental: the children of believers are apt to believe, the children of sceptics doubt. Comparatively few leave the creed they were brought up to profess: therefore, the children are punished for the parents' sin to remote generations. This idea universal morality condemns.

Children are seldom converted until they are twelve or fifteen years of age. What becomes of those who die earlier, a large proportion of the human race? Baptismal regeneration provides for their safety. But Calvinists reject that dogma, and make no definite logical provision for their salvation. They rest in a vague idea that God gives the benefit of the atonement to those who are not responsible for the choice; but they have never decided at what age a child becomes responsible, and the sorrowing parents must wait till eternity to know whether their children have received a free pass into heaven on account of their youth or idiocy, or have been rejected as responsible beings.

Although, in practical morality, men condemn the imposition of suffering upon the innocent in order to spare the guilty, and declare that the righteousness of one cannot offset the sin of another, yet they become familiar with voluntary sacrifice for the temporal good of others. "Nothing without labor" is a natural law. Toil for money, study for learning, exercise for strength, self-denial for benevolence, are some of the labors endured for desired results. It is observed in all life that trial and suffering are the price of advancement, and that the joy of one is promoted by the calamity of another. Men die to save other men from drowning or burning, and to preserve the liberties of their race. In nature there is not only a struggle for existence and a survival of the fittest, but on every side we see self-sacrifice for the good of others, and benefits springing from misfortunes. The parent animals devote their lives to the rearing of their young. Each order of animals dies for the sustenance of a higher race. The falling leaf and decaying tree fertilize the ground for new growths. These may be the foundation facts which men have transferred to the sphere of morals.

If the theory of eternal salvation through another's sufferings be abandoned, the fact of the possibility of the present salvation of men through our own efforts remains. Perhaps laziness and selfishness have had something to do with putting salvation upon God instead of upon our own labors, just as Sydney Smith described English benevolence, saying, "When A sees B in distress, he has a strong desire to compel C to help him." It is easier to say "God help you" than to lend a hand to a suffering brother. We may all be saviors, offering up ourselves daily for the good of others; and, by another law of nature, we shall find that such offering blesses him who gives.

Each person who endures an ill may feel that he has borne it for some one else; for only a certain proportion of accidents happen, and each one who is a victim spares another from the affliction, and thus makes atonement for him.

III. The God of the Bible.

The Bible bears the marks of having been written by sincere men. They were sometimes credulous, superstitious, and ignorant, as judged by present standards, and their writings are therefore cumbered with legend, myth, and mistake; but back of all lies truth, and every dogma has some foundation principle which we do well to recognize.

The personal Jehovah, who wars, hates, and kills, sends famines and pestilences, and creates evil,—who also creates life, loves, blesses, and forgives,—is a human conception of the mind, soul, principle, law, force, or we may say God, that works in matter, and produces all things material and mental by orderly development. Our reverence for this principle is only increased by denuding it of its human attributes; and we only change Gods, as men in every age and clime have done as their knowledge of nature has altered.

We are nearer to the foundation truth by this change, but the mystery of eternal existence without beginning is unsolved. If we cannot define this God in human phrase, it yet calls out every attribute of wonder, reverence, and aspiration in our natures. It is a far greater marvel than the Hebrew Deity or Calvin's God, and more worthy of respect.

We can see its working in the blade of grass and the forest tree, in the summer breeze and the tornado, in the calm of evening twilight and the earthquake,—not by phenomenal and arbitrary acts, but through a procession of causes reaching back beyond mortal ken. Pain and destruction are not the deliberate acts of a wrathful or chastening God, who consciously sends them with reference to their immediate effects; but they are the necessary results of an eternal succession of causes. And we do not need to propitiate the Deity that he may not send such calamities, but we need to increase our knowledge of these operations of nature, that, by coming into harmony with their workings, we may avoid their evil results. Each disaster is a factor in man's education; and experience will, in future ages, lead to his triumph over evil. The loss of life in burning buildings, instead of leading us to implore God to avert such disasters in future, teaches us to use new precautions against fire, and make improved exits. It is a great relief to feel that we are not under the discipline of a ruler who is to be propitiated by our mental exercises, but to know that the forces that now control us are merely teaching us how to become their masters.

Our reverence is called forth by this tendency toward goodness which pervades nature, whatever its origin; and our aspiration is stimulated to let our lives come into harmony with nature's methods, and let both joy and sorrow promote our own good and that of others.

IV. Conversion.

The Calvinistic theory of conversion is only the exaggerated form of a vital truth. Conversion, on its natural side, is repentance and reform, the resolve to cease from violations of natural laws, and conform our lives to a standard of right-doing which is approved by reason and conscience. These turnings about and intense resolutions to follow goodness are manifested under all religions, and will both exist and increase when their naturalness is recognized. The emotional, frenzied, and "supernatural" side of conversion is also common to all religions and climes, and is a natural effect of the intense concentration of the mind upon a given subject. This form of orthodox conversion seldom occurs to persons who have reached the age of maturity. It is supposed they have become hardened in their sins, and cannot change. But they do all their best work then in every other branch of knowledge; and why should not their estimate of religion be equally valuable? The true explanation is that theology rests upon emotion and human authority, not upon reason. Suppose a teacher proclaimed a new law of physics, and nine-tenths of all his converts were under twenty-one years of age, would not this fact be deemed strong evidence against the value of his theory?

The sudden resolution to forsake evil and choose good, called conversion, will continue to be exercised, even if belief in the supernatural is abandoned.

V. Election.

The doctrine of election, that God of his own good pleasure, from all eternity, has elected some to everlasting life, produces a hurtful conceit in the elect and an uncharitable assumption in their conduct toward sinners. They imagine the existence of a supernatural difference between themselves and other men, and hold aloof from them or patronize them offensively. If God should neglect to save them, why should we trouble ourselves about it? If God can send numbers of men to hell every day, why, if he can stand it, we can! Does not this blunt sensibility paralyze effort and hinder the brotherhood of man? This arbitrary choice of men to be saved is irrational and immoral; and yet it is the perverted form of one of the most vital truths of nature,—the survival of the fittest,—the fact that fitness finds its sphere. If one is qualified for action or service, the opportunity is apt to come to him, the occasion seeks the man. Thus there is a natural selection, leading to the triumph of the best. The true "elect" are the discoverers, the searchers, the earnest laborers, who in science, morals, education, and benevolence, are quietly but surely redeeming the world. These are "the chosen ones," "the peculiar people zealous of good works." Every creed is on their lips; but their purpose is one, and their reward cometh.

VI. Christianity.

There is nothing in Christianity that is recognized generally as good, which is lost and weakened in any way by the renunciation of its encircling superstition. Jesus may still be to us an ideal of human goodness, an example of many virtues, though stripped of what scientific criticism shows to be the accretions of credulous tradition. He was divine in nature, as all men are,—the highest products of the inscrutable force that has moved in matter till it flowered into humanity.

The Holy Spirit dwells in every unbeliever in his personality, who does not grieve him away by an evil life that debases him too low to experience an enthusiasm for goodness; and who ever sinks to this depth? It is a false assumption that this divine influence only comes to believers in a certain theory. The true holy spirit is the impulse

Digitized by Google

"to do justly, love mercy, and make other men happy," which dwells in some measure in the breast of every man, of every race, and every land, and which grows as it is exercised and as true knowledge increases.

All existence is a miracle. Revelation is continually given to the earnest student of nature. The inventor, the scholar, and the philanthropist are inspired. Rewards and punishments follow naturally upon causes. Heaven comes to bless the successful effort and lofty endeavor, bestowing as natural results present happiness on the striver and future good to his race. Hell curses the inefficient, immoral, and unnatural, bringing sorrow and pain to the evil or unwise doer and extending resulting miseries to the race. A persistent continuance in well-doing leads upward to sanctification and holiness; and habits of goodness become so confirmed that falling from grace becomes improbable, and the perseverance of saints is assured.

We are not undermining the building of goodness, or sapping the tree of virtue, by destroying Calvinism or Christianity or Judaism. We only tear down the decayed parts of the superstructure built by men upon the foundation of eternal truth, and shake off the dead leaves and prune the rotten twigs from the branches of the tree of knowledge, in order that new structures may be reared and fresh growths may be promoted.

ROBERT C. ADAMS.

NOTES FROM THE FIELD.

A few years ago, in many communities, Universalism was more hated and dreaded than "open infidelity," since it was regarded as "infidelity in disguise," and its ministers and adherents as "wolves in sheep's clothing." A single incident will illustrate the feeling that prevailed. An old lady who had known us in our boyhood, meeting us after an interval of several years, observed, in a tone and with an expression full of sadness, that she had heard we had adopted that "awful delusion, Universalianism." Assured that she had been misinformed, she appeared greatly relieved and gratified, remarking, "I never *could* think you would turn out to be so bad." "But," she inquired, "what *is* your belief?" We answered her that we were inclined somewhat to scientific materialism. She asked us to repeat the words, looked rather puzzled, but still pleased, and said: "Well, I don't know as I ever heered anything agin *that*. I am so glad you hain't got to be one of those wicked Universalists." In the community in which this incident occurred, it was common for Elder Jabez Swan, a powerful preacher and a noted revivalist, to denounce Universalism as "a damnable refuge of lies"; and on one occasion, it is said, he declared, "It is as impossible for a Universalist to get to heaven as it is for a shad from the Connecticut River to climb a greased pole with a tin pail tied to its tail." Once, during a revival, he called upon God to destroy a Universalist church by a thunderbolt from heaven. Soon afterward, the building was struck by lightning and burned to the ground. It was very generally believed among the orthodox that the event was in answer to Elder Swan's prayer, and that it was a manifestation of God's wrath toward the Universalists on account of their wicked belief in the salvation of the whole human race.

In those days, Universalists were advanced and progressive. They were above the average in intelligence, courageous and unsparing in their criticism of the orthodox theology. But a thousand causes, of which Universalism is one, have combined to soften the harsher features of "evangelical religion," and to put all the orthodox churches in the line of religious progress. In consequence, the aggressiveness of the Universalists and the bitterness of the orthodox sects have abated, indeed almost disappeared. But, while Orthodoxy has been advancing, Universalism has remained stationary, and is to-day in a condition of *arrested development*. With a broader scholarship than the representatives of Universalism could ever claim, orthodox ministers and writers are now advocating all that the Universalists have taught, while they are going far beyond them in all that relates to modern scientific and philosophic thought. The Universalists meanwhile remain stationary. The bold, radical thinkers are not attracted to them, nor do they wish to be classed with them. If brought up Universalists, they become Unitarians, if not agnostics, thus taking from the once progressive sect its intellectual vigor and activity, and leaving behind a conservative element which resists innovation and reform in the denomination.

Last week, we were in a public debate several evenings with Rev. S. P. Carleton, a Universalist minister, at Mechanicsburg, Ohio. Mr. Carleton has the *reputation* of being a very able and skilful debater. He is a gentleman of impressive appearance, fluent in speech, and about sixty-five years of age. He has been a Universalist preacher since he was a young man. He claims to have vanquished his orthodox opponents on the question of *eternal punishment* in half a hundred debates. He is well known in Ohio by his numerous discussions; and, before we met him, we had heard him spoken of in many places as "the champion of Universalism." In his own community, Woodstock, Ohio, his character commands the respect of all, orthodox and unorthodox alike.

But, as a debater on the issues between Christianity and modern free thought, he is certainly a failure; and, in saying this, we state only what is conceded by his own personal friends and supporters. In the debate with us, he affirmed the inspiration of the Bible; and, of all the weak attempts we have witnessed to establish this proposition, Mr. Carleton's was among the weakest. His incompetence was manifest to the entire audience every evening. His speeches contained no evidence that he was familiar with any recent work on science or philosophy, or that he possessed even a meagre acquaintance with the results of the study and research of the last quarter of a century in any field of thought. Of English and German Biblical criticism, of the theory of evolution, of Egyptology, philology, and archæology, he revealed not the slightest acquaintance. Indeed, he exhibited the most glaring ignorance of these and cognate subjects, an ignorance of which he seemed wholly unconscious. He claimed that the leading ideas of the Bible, including monotheism, were unknown before the time of Moses, and could have been obtained only by inspiration, ignoring the fact that the priests of Egypt believed in a Supreme Being, the generator of heaven and earth, ages before the date of Moses. He declared that Plato derived his ideas of Deity from the Jews, and in proof of this adduced the astounding fact that the Greek language was constructed from the Hebrew! His principal argument for the superhuman character of Christ was this: that illegitimate children, whose generation involves the violation of a moral law, are immoral; that from all the bastards of the world no reformer had ever come; that Jesus, being sinless, could not have been of illegitimate birth, and, since he was not illegitimate (as Joseph was not his father), he must have been begotten miraculously, as the Bible represents. His authority in history was Rollin, in theology Alexander Campbell, in geology Buckland. He referred to "the horrors of the French Revolution," and related anecdotes about "infidels" in the style of a third-rate Methodist exhorter. He declared that Col. Ingersoll was in favor of abolishing laws against obscene literature and of loosening the laws of marriage, and tried to make it appear that the free thinkers of the world are in favor of immorality and indecency. He tried to ridicule Darwinism, and affected indignation in almost every speech at the idea that man came from a monkey. He defended, or tried to defend, the Mosaic cosmogony, although in the most unskilful manner, and became lachrymose over Christ as the Saviour of men.

We need not indicate our replies to such stuff. We had expected to meet a man of ability and learning, one capable of discussing the Bible and Christianity in the light of modern knowledge; but we met instead a theological fossil, a man who was unacquainted with the subject, and wholly unqualified to discuss it. Those who had arranged for the debate in his behalf said that they were greatly disappointed, and tried to apologize for "the champion of Universalism" by saying that the debate opened up a field that was new to him. But no well-informed man, no man worthy to be regarded as a representative of an intelligent class of religious people, would or could have made such an exhibition of ignorance as Mr. Carleton made in this debate. This his own friends and neighbors admitted to the writer. Our advice to Mr. Carleton is that he stop debating with third and fourth rate preachers about hell long enough to enable him to acquaint himself with a few of the best orthodox works on subjects of current importance in the religious world, and he will never again permit himself to be subjected to the humiliation which he experienced last week. Personally, we can feel no pride in such a contest.

B. F. UNDERWOOD.

PROGRESS IN REFORM.

At the next meeting of the National Reform Association, the object of which is to Christianize the United States Constitution, it is proposed still further to promote the purposes and policy of the Association by adopting the following preamble and resolution:—

WHEREAS the education as well as the government of this country ought, obviously, to be Christian; and,

WHEREAS the multiplication-table, as taught in our schools, is at present an unchristian and even godless document,—therefore,

Resolved, That, to every copy of the multiplication-table hereafter printed in the school-books of the United States, the following or some equivalent statement, should be prefixed:—

Multiplication is of two kinds, Sacred and Secular.

SACRED MULTIPLICATION.

Three ONES *make* ONE.

Note that One of these ones is the rightful Lord and Master of all the people of the United States.

SECULAR MULTIPLICATION.

Here may follow the table of figures as heretofore printed, which, after Christianization as above, may be learned and practised without harm.

C. K. W.

A SENSIBLE and needed work is being done by what is called the Ambulance Association in Glasgow, Scotland, in establishing courses of plain lectures for working men and women, in which the proper methods to be pursued by non-professionals in cases of bleeding arteries, burned limbs, half-drowned persons, and other frequent accidents, are clearly explained and described. Many lives are lost yearly from the lack of such practical knowledge.

EDITORIAL NOTES.

IN the number of *The Index* with which we shall begin the New Year we expect to be able to give the first of a series of articles from the pen of the able and brilliant writer, Dr. Felix L. Oswald, on "The secret of the East; or, the Origin of the Christian Religion, and the Significance of its Rise and Fall." The articles will appear in the following order:—

1. Introduction.
2. The Genesis of Pessimism.
3. Buddha and his Galilean Successor.
4. The Ethics of the Christian Religion.
5. The Corruption of Europe.
6. An Expensive Creed.
7. The Night of the Middle Ages.
8. Daybreak.
9. The Protestant Revolt.
10. Regenesis.

THE *Independent* says: "The value of church property in the United States, at the present time is estimated at $700,000,000; and if this property be exempted from all taxation, as is nearly the universal fact, a huge burden must be imposed upon other property to make up for this exemption, Is this just? We do not think so."

INGERSOLL is no orator, says Joseph Cook, "judged by the great standards of Greece and Rome, or of Parliament and of Congress, or the platforms of Edinburgh and — Boston." The Springfield *Republican*, quoting this, adds, "Let us remember that one of the renowned orators of modern Boston is Flavius Josephus Cook."

OF Walt Whitman's work, Mr. Emerson said to M. D. Conway: "There are parts of the book where I hold my nose as I read. One must not be too squeamish when a chemist brings him a mass of filth, and says, 'See, the great laws are at work here also'; but it is a fine art, if he can deodorize his illustration."

AFRICA, as a mine of wealth, with its gems, minerals, ivories, vegetables, and woods, is attracting the attention of all the powers of Europe. England, generally the first to see a commercial advantage, is industriously securing a foothold there; while Italy and Belgium are moving in the same direction, each intent on possessing such portions of its territory as can be secured for commercial purposes. Recent events show that the French Republic, too, is alive to the importance of extending its possessions in the Dark Continent. It looks as though there would soon be a stream of emigration toward that region.

THERE is a reminder of the story of Esau in a Jewish transaction, which recently occurred in Troy, N.Y., save that the birth-right bought (or attempted to be bought) by this modern Jacob was a heavenly instead of an earthly one. It seems that, by a sect of the Polish Jews, the doctrine (based on a Rabbinical saying that "good deeds buy the future world") is held that a good man may sell his claim upon heaven. Acting upon this belief, Harris Udovitch bargained to buy Louis Cohen's chances in the next world for the consideration of one hundred and fifty dollars; but Cohen, on sober second thought, concluded that he had sold his heavenly claims too cheap, and endeavored to back out of the bargain, the result of which was a very commonplace and worldly fracas which brought both parties into a very earthly police court, with resultant publicity and fines for breach of peace.

MR. EDWARD ATKINSON takes a hopeful view of "the people of this land." He says: "Presently, the people of this land will have ingrafted upon the narrow but versatile intellect of the Yankee the courage and endurance of the Englishman, without his pig-headedness; the cleanliness of the Dutchman, without his stolidity; the thrift of the French peasant, without his superstition; the artistic sense of the Italian, without his treachery; the wit of the Irishman, without his incapacity to trust his neighbor; the philosophy of the German, without his scepticism; the acquisitiveness of the Jew, without his selfishness; the manual dexterity of the Chinaman, without his idolatry; and the fun and music of the negro, without his shiftlessness. Will not such a polyglot race make something of this land more than we can yet conceive? What will its moral and material influence be a century hence?"

A CHICAGO paper states that Col. Ingersoll cleared $4,000 by his last three lectures in that city, and adds: "This shows that infidelity pays tolerably well in this world, however we may doubt its success in the next. Incidentally, it also shows that Chicago is a pretty ripe field for an able-bodied missionary or two." The fact that immense audiences listen to Ingersoll's anti-theological lectures is undoubtedly one of the indications of declining belief in the creeds of the churches; but it should be remembered that these audiences are composed largely of those who go to hear the witty and eloquent orator, and who would be attracted to his lectures, on whatever subject he should speak. He would have crowded houses if the same wit and eloquence were devoted to the defence of theology. The size of his audiences is more of a tribute to the individual as an orator than an index of the popularity of what he advocates or the unpopularity of what he assails.

IT is with deep regret that we learn through the columns of the Springfield *Republican* of the death of Samuel L. Hill, one of Northampton's most prominent business men, a practical philanthropist who did not wait until warned by death to begin his benefactions, and a firm and generous friend of *The Index* and the Free Religious Association from the beginning. He died last week at Citronville, Ala., where he had gone for his health. He was seventy-five years of age. His body will be brought to his home in the village of Florence, which in him has lost a noble benefactor. In 1862, he made a gift of a $37,000 school-house to the village, and when Cosmian Hall was built donated $30,000 toward its cost. His gifts for all charitable and educational purposes have been large and continuous. He was an active anti-slavery man, and of the most liberal religious opinions. The leading business enterprises of Florence, the silk industry and sewing-machine works, were built up mainly through his capital and energy. Generous as he was, he was ever modest in his benefactions. "His hospitable home," says the *Republican*, "was always open to the weak and struggling." He leaves three children, Mr. Arthur G. Hill and two married daughters. His charity was so bountiful that he is not thought to have left a large estate.

OUR esteemed contemporary, the *Catholic Review*, in reply to our inquiry why it had called us "a reviler of Christianity," says: "A reviler is defined by Webster as 'one who treats another with contemptuous language.' We did not hesitate to speak of Brother Underwood as an infidel and reviler of Christianity, because we presumed he gloried in being considered both. We have not time to hunt over the files for specimens of contemptuous langauge used by him against Christianity. It is enough for us that he is a leading, influential member of an association that is doing all in its power to undermine and destroy Christianity; that he is a leading writer in *The Index*, which is the organ of this association, and whose columns teem with articles directly and unequivocally designed to discredit, disparage, and totally exterminate Christianity. But we wish to treat all our brethren of the press with the utmost courtesy; and, if Brother Underwood objects to the term reviler, we cheerfully withdraw it, and would substitute what we presume he will not object to,—namely, one who is laboring earnestly to discredit, disparage, and totally exterminate Christianity." Doubtless, our esteemed contemporary desires to do us justice, and meant in the above paragraph to make the *amende honorable;* but our position is still misrepresented. We are not "laboring earnestly to discredit, disparage, and totally exterminate Christianity." To disparage is "to decry unduly"; "to undervalue, underrate, detract from." We, on the contrary, aim to be just to Christianity, to recognize the good which is in it, and to strengthen and perpetuate that good, while "laboring earnestly" to eliminate from the system and to replace with truth the error which it contains.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

GIUSEPPE GARIBALDI.

A Liberal Judgment from a Roman Catholic Source.

Could we enter through the portal where the souls that are immortal
Come before the Judge of all men to be told their final fate;
Could we stand among the angels, who announce or glad evangels
Or fell judgments of damnation on the creatures who await,—
Would it mercy be or censure that our ears would, peradventure,
Hear the Arbiter who ruleth there pronounce upon the man,
Who, though recluse at Caprera, was a hero of the era
In which his days were ended, in which his days began?

He was friend of pope and foemen, and his scarlet-shirted yeomen
Fought against the Church and for her, as their leader took the whim:
If, in later years, he hated what before he vindicated,
Will all his early fealty intercede noways for him?
Who can say? Divine compassion is not stinted in the fashion
That we mete our human pity to the recreants who fall:
It forgave the Jew and Roman, dying thief and sinful woman,
And condoned the bitter hatred of the persecuting Saul.

For his country's liberation, harassed long by degradation,
Under foreign despots groaning, sighed his patriotic breast:
If, to drive out these marauders, he had spared the papal borders,
Then would pontiff, priest, and people have forgiven him the rest?
But a truce to supposition: whether malice or ambition
Was the motive of his actions, he has reached at last a shore
Where no plots of kings and kaisers, or intrigues of their advisers,
Will disturb his restless spirit with their workings any more.

— *W. D. K., in the Boston Pilot.*

For *The Index.*

TEUTONIA — ROMA.

Teutonia.

E'en thy shadow now from earth is fading,
Roma, erewhile wielding world-wide sway:
Lo! thy Latin accents voice no longer
Thought or domination of to-day.

Roma.

Dwindled first my Cæsars and my Pontiffs,
Urbs et orbs obey no longer now,
Rust my sword of conquest long has eaten,
Priestly mitre leaves at length my brow.

B. W. BALL.

The Index.

BOSTON, DEC. 21, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

A PROBLEM IN POLITICS.

BY H. L. TRAUBEL.

In this decade of rapid movement and growth, when the political as well as the more social accounts are being squared up, it is interesting to watch every change of existing things by the light of likeness and the promise of good end. There has come to men an onward-looking health in the mental structure. Questions have risen as to the legitimacy of old oaths. Something is prompting the wonder how long extorted assent to old methods or beliefs is to hold good. There is doubt concerning the extent to which parental fealties, in common with parental sins, descend to the children. Such indications, starting in the centre of the man, in the soul of the man, reach out in all directions to the throbbing activities of life. "I live in a larger world than you," I said cheerfully to a friend who approached me with a narrow belief which I could not answer. What man but has felt the future more sumptuous than the past? The time gone tells of tombs, and that coming of cradles. There is no freedom in the past, little in the present, and all there is of it, in the future. In the past there is no place for our dreams, because in death there is no dreaming: in the living days, the visions are thrust out at the point of facts we can touch, as if they were substance; but the ages ahead *invite* our dreams, feed on them, and depend upon them for the finer life they will sustain. For a few moments follow me to the political field, while I make a few observations, in the line of our general hopes, that the rushing American world has moved too quickly to have seen. Let us step into the larger world, and forget a few of the old prejudices that appeal so touchingly to us. It is not ill-fortune to stop now and then in our striding civilization, that we may rest and dream. Perhaps, when the command again comes to renew the journey, we may rise refreshed by the indulgence.

There probably is no one who has not at least a qualified sympathy with the public effort for governmental reform. Methods may engender differences, but ends provoke unity. Clear-headed Americans, who have no political interest at stake, are a unit in applauding the political disintegration now manifest. There is less of futurity given for tradition. Certain politicians, who should have been priests, are crying, "Negation!" at all proposed changes, but, happily, meet with derision, and that often, as if to add to the contradictions in the human make-up, from men who start the same call, with even less reason, after strange movements in religion. But the fact remains that the feeling exists. Religious thought passes onward, to all sight, ceaselessly. Political thought can do no less. For either to halt would be for both to belie the past and fail of their promise.

Now, while it is true we rather believe in a man's record than in his prospectus, it is true also that the former is as liable to deceive as the latter. While politicians and churchmen offer to *repeat* the past, we insist that they *use* and *surpass* it. The only portion of it they in any event could *repeat* would be its *dotage*, which is just what we do not wish. To put it in another way, we cannot, after its youth, rest faith in a body that, from the first moment of young vigor, is on its decline, subject to the demand of greater influences that oppose it. Feebleness sinks backward, strength treads the way of the sun. For a season, we accept the new power, from which, as time makes it aged, death again rescues us.

The past must not *lead*, but *follow* us, subserving ever our best use. In the civilizing application of experience, that which precedes in point of time must succeed in point of importance. In the fresh morning health of each creed, either of the political or religious nature, we believe; even its mid-day has our allegiance and our following; and night, as it comes on, will find us with smoothed pillow and tender and filial thoughts, ready to bid the dying one farewell. More could not be asked of us. To plead with us to make the tomb our home, and the ghost our ruler and guide, is to invite us to barbarism, and wipe the sun from heaven.

Such reflections are busy in American brains: they make the politician's world the worst possible one, adjustable to the theories of the gloomiest of German philosophers. In certain States there seems a death-struggle verging or verged. The natural, simple reason is in the weakened adhesion to party, and a willingness to accept the thing without regard to the *name* given it. To have reached this point guarantees the future.

Yet my conviction is—and here I enter upon my contrast—that the politician is not *exceptionally* wrong, and that his methods are not *exceptionally* vicious. Though no one seems willing to say this, the failure to believe or remark it does not remotely touch its truth. To be *below* your time in morality is your shame; to be *up to it*, your right of fellowship; to be *above* it, your glory. The general opinion discredits the political class with being the lowest in morals of all classes of citizens not absolutely among the degraded, the drunken, the acknowledged vicious or criminal. We are shown its schemes, its undoubted base practices, its selfishness; and, with these, our attention is directed to its bad influence extended to other walks of men by contact, sight, and emulation,—a tendency to consecrate particular ends by careless means. No one to whom the picture is known denies its life. Blasphemy, that fictitious crime, has no course to play here. Nevertheless, without in the least excusing the ill work of the political class, we can and, to be just, *should* indicate just where its vices are common vices, and its misdeeds but outcroppings in the one direction of family faults that, in their various degrees, pervade all institutions. If it is the sententious mandate of the street to "give the devil his due," it is particularly pressed upon us to take care not to make the devil a scapegoat or the one devil responsible for the wiles of all the devils. I think the principle works well.

Especially in Pennsylvania has the argument been used that the reform movement is sound, if for no other reason than that business men take such an active interest in it. The chief financial support of the Independent organization is given by men of the street and lawyers. Is this not to their credit? To say "Yes" requires no compromise of my position. We can grant the protesters absolute right in this protest, and as absolute wrong so far as the political methods are, fundamentally, business ways transported, or the reverse. But, to make our contrast, we must first establish a likeness; and this, we conceive, it demands no two glances to detect. Take but a few points suggested on the instant. The chicanery of politics levels with the schemes of business: the selfish purpose of the one accosts sympathetically the overreaching of the other; one buys men's votes, the other the independent arrangement of their lives; one rides into position over bribery and ignorance, the other by taking necessity as an ally and the employed as victim. The politician, true, pleads that fire must be fought by fire; but the business man shelters his frauds under the same cover. One is honest in society, a rascal in politics; the other keeping between society and business the same relation. These are broad facts picked up in a general way, and susceptible of a hundred illustrations from every thinking man. I grant that some business men shame this picture. It must be remembered, however, that political exceptions, and many of them, also exist. The politician is judged by the class. No *men* can except themselves from that standard, however an *individual* may outgrow or outlive the name he bears or the associations into which fate casts him. We deal with the generality, and not with exceptions, when we sketch the present. We consult the exceptions, when we wish to foretell the future.

Business men, who buy labor for the lowest figure at which necessity may compel its sale, and part with the product at the best it will bring, regardless of the regulating price of the workers, can have no consistent quarrel with the political rule of life. In whipping the political rascality, they lash their own sin. Self-conviction is followed swiftly by self-punishment. Every blow at the political chicanery, dealt even the most unconsciously, weakens the foundation of their own present power. The evils are so like each other that an indictment of one dooms both. No more can a system of trade last that depends for its acceptance upon principles or exactions of form rather than deserts than can a political domination continue that relies for its success upon similar dictations planted on different ground. To this the point is at last rounded finely.

No one who has watched carefully the course of business can fail to see the limitations of its nature. It is of an essentially Napoleonic disposition, contemptuous of moralities, and ready, pen in hand, to strike "Heart" from the qualities of the human brotherhood. There is something ghastly in so great an evil, planted treacherously in the broad bosom of our life. By whose weakness is it that the few are able to usurp the product of the many, or through what fatality is it that no worker's pay comes proportioned only to the ability to enforce it? Be the responsibility with him who profits or him who loses, the evil, corrupting to both, remains and destroys. Startling is it to feel that the present wage system of weak women makes prostitutes, and of weak men sneaks or thieves! What faces us multiformly brings with it ages of sorrow; enough, had it been joy, to have made our world celestial, and the best religion contemptible amid better surroundings. It is a sad story, not even yet finished, witnessed in the countless hordes of the cities. The weary faces on the street carry the unspoken tale to our very doors.

Resolving and examining essences, it is probable we should find the corruption in politics on no point nearly so far-reaching or demoralizing as the corruption in the business system. It is hard accurately to estimate and balance such a comparison; but few dispassionate men could pass the matter for themselves, and come to any conclusion not favorable to the politician. Of course, this excuses no one and no offence: it merely shows *degree* of wrong, and how "Stop thief!" is a cry not always uttered by the best men on the street.

There is an unctuous reasoning blooming through the crust of formalism, diffusing shame to the common business ways to which the approval of society is wedded. The system, it is well seen, under which the laborer now suffers, carries roots most widely of evil influence into the surrounding soil. The effects are various, and in certain quarters recognized. Labor that is not used as an independence—that is reimbursed not relatively to its worth, but to its misfortunes, bearing rich fruit only in proportion as these factors are avoided or destroyed—corrupts him who bargains for and him who sells it. It is impossible to compute how much of prostitution and crime come directly from the injustice of trade, or how much of heroically borne misery; how much hypocrisy develops in the diplomatic Jesuitism of monopolists that has, unlike the religious Jesuitism, not even a *professed* good end; how much of the moral decay of the Church results from the vain efforts of business men to hide by the fairness of the show the foulness of the substance; how much, in the most lamentable activity of all, this base system preys upon the native weakness of human nature, distorting pure tendencies, neutralizing manly motives, and exaggerating the power of the evil propensities to the point of domination. There are many facts in this universe the exact bearings of which, though far and clearly traceable, are not to be finally known or followed to their end.

We should consider the way the evils in the busi-

Digitized by Google

ness and political classes manifest themselves, and the light in which they are regarded. While there is nothing more either of secrecy or openness in one case than in the other, there is a good deal more attention given to the governmental than to the social ill-adjustments; and it is possible that the evil itself, be it this or that, is considerably or entirely weighed in the popular mind according rather as it is *seen* than as it is innately wrong. The less subtly ill works upon man, the harder issues the hate of it. The more dangerous blows excite scarce remark. Indirect wrong, often the severest in ultimate effect, produces small repulsion. The quiet influence of the philosopher, which shapes the destiny of thought, goes unnoticed beside the clamor of to-day's success or some magnetic heroism of the street. Similarly, the deeper evils—the root, in fact, of the manifestations which catch the public eye—are unnoticed beneath the noise of its superficial results.

A further and a striking resemblance we find in *profession*. It is philosophically a truth that where some men live by what they *claim*, and nobler others by what they *do*, the self-righteous ones fare best in this world's material returns. To show us "the blessedness of poverty," which we *do not* admit, and the supreme value of a rich spirit, which we *do* admit, is rather to prove than answer what I have stated as a maxim. For their own purposes, business and political rulers would indorse all that could be said in favor of starvation. See how well, and in ways sufficiently alike to imply an understanding, politicians and monopolists raise themselves into fair appearances. When some mean-spirited or dirty-fingered office-seeker feels a particular public questioning in preparation, and wishes means of outward justification, he comes to his "fellow-citizens," sketches himself as a "friend of labor," and shows the awfulness of his respect for constitutions and patriotism. When a business man finds himself in a similar position, under the necessity of as graceful a profession, he joins a church, and becomes what he calls a "lover of the Lord," the "Lord" loved, as we read it in his life, doubtless being himself, but, for all that, an object of reverence which furnishes a convenient phrase for the exigency. Well applied here would be Hubert Bancroft's saying,—that the Spanish discoverers neither forgot to pray to God nor to serve the devil. These are the two ways the two classes we have been photographing have of giving vent to what they conceive to be a necessary hypocrisy. The cause, the motive, the circumstances, the means, the deception, are throughout the same.

The evils in politics are nearing universal acknowledgment. The street, the home, the literature, often the lowest rough on the street, recognize and condemn them. Even those who are contaminated yield to the condemnation by denying the infection. This wide detection of the abuses greatly neutralizes, while it does not, as we all know, extenuate them. Their consequences are not so intricate or penetrating as results of the business troubles, and we can therefore better follow to their meaning. It is possible the ill effects are larger in the general opinion than in fact. Aside from the direct spoiling of the politician and, when compared with the moral loss, the comparatively unimportant disappearance of money into never-known channels, the corrupting influence does not extend far. As I shall state, the political nature is probably more *influenced* than *influencing*. On this score, even what has come to be known as the *reform* theorizing needs readjustment.

The instant we turn our concern upon business, we are advised of the vastly greater spread of the wrong. To it, and in a thousand dangerously unsuspected traceries, can be laid all the dire tendencies of the politician. And here the greatest ill consists in the absence of any adequate conception of the ill. A weakness once seen bears in itself a promise of betterment, but a blindness that we are too blind to comprehend shuts off necessity from our sight, and leaves us a contented vacuity. It is this that makes industrial reform less imminent, though not less inevitable, than political reform, which, though the first likely to be supplied, is the less pressing of the two needs.

The conception of trade is the old robber conception, inforced by money and the threat of want. Beneath their quarrels, both bosses and workers count it as just. There could be no more mischievous or grievous misfortune. The populace in the mass express a discontent never to be satisfied, because too much founded on the very ideas that rule the capitalist. In the most unexpected fashion, the two classes meet. The poor and the rich hold a theory in common, and think that a difference in the expression of that theory divides it into two, and holds the parts estranged forever. My main sorrow is comprehended in a failure to see such a divergency. Workers or those, as I write of them here, who exchange labor for wages, a middleman throwing the product upon the markets, in most cases rather cheerfully yield to the present principles of trade as right, but regard their administration as in the wrong hands. Excuses for the wrongs come not alone from those who profit by them. The longing for money is more passionate than the desire to get it purely. Men *envy* instead of *questioning* the capitalist. They have not yet progressed to the remedy, or, to state it more strongly, to the *savoring* of it. The root of the wrong is not yet dug to. What they attribute to a *man* belongs to a *system*; what they gently call *business*, far-sight sternly names *robbery*; and, though they are being robbed every day of their natural lives, they never know it, but continue applauding the robber. Persistently is the system regarded as just, and its *manifestation* alone unfortunate and to be improved. The legalized lying and theft of trade, the readiness to steal or to be stolen from, attains almost universal approbation,—the assent not of a *conscience*, but of a *stomach* fed by custom. It is such serious misplacements of right as these which work undiscovered ruin in the life of men allured to the mad chase after small failings magnified into grave underminings of the world.

Nor does our observation end with this condition. There is at least one more aspect in which the contrast may be profitably outlined. While attachment of responsibilities for dark social tendencies, while arraignment of this or that man or class for their inhibition, may not affect the nature of the characteristic, it still is an aid to one who prefers to snap the heart rather than the covering of unrighteous things. Therefrom, this question: Who can tell to what extent politics, at which business so scornfully points its contempt, are not in their evil direction the inevitable development politically of the business maxims? After all, may we not have been striking at the limb rather than the root of the evil? The suggestion is inforced by startling corroborations. Likeness is indubitable; and relationship, even if not that of sire and offspring, is near. We can state the several conclusions possible. It may be that the business and political rules are partners in growth, or that business rules came of those political, or that the latter owe their origin to the former. Allow any one of the three probabilities, yet in each contingency business (and by the term I would include business methods as they have obtruded into law, clericalism, and other human industries and professions) suffers by the contrast. The proof is simple. If the first possibility is true, business has outstripped its fellow in baseness, or, as we refuse to look backward for the Golden Age, in the inability to overcome its weaknesses; if the second is correct, it has exceeded the perversity of the parent; if the third should be proven, it has produced a child worthier than itself. Bringing our parallel to bear superficially or deeply, or from all allowable sides, the close connection of the evils found in the two divisions of men's interests becomes more manifest, and indicates the more powerful inspiration, if there is any difference on that score, in the spirit of trade. It matters little whether they grew together or came down to our age independent of each other. If crime finds readier and wider shelter in business than in governmental mismanagements, then 'tis to it our heaviest denunciation is called. That the worst of passing institutions is the fabric of what is called "business" I hold to be undeniable. The curse of journalism and law, for instance, is on the *business* side of the callings. By what this includes it cannot be successfully said that I make business a scapegoat for foreign misdeeds. I have not sought to shift from the politician the burden of his crimes, but to take from him the unjust superfluities of punishment. Nothing so well shows my position as to relative corruption tenable as the fact that we seldom or never speak of political abuse save with the sense of easy correction; while an appalling largeness meets us immediately as we turn and face the industrial issue. Yet the things to be remedied are much the same in character, though one is the mere spray to the other's far-spreading ocean.

Such is my problem, and each can carry it out for himself. I have made strong statements, because the evils are precisely strong enough to call for them. Unhappily, mankind is not yet, and for long will not be, done with its physician: the hopeful fact is that the nature of the disease makes the race its own healer, having of necessity to take heed by the eternal admonition, and demonstrate again and again in the future, as it has in the past, a wondrous power to grasp truth from out the perversities of its own heart. Men need clearer sight to the graver issues, and must guard against the expenditure of too much effort on outside hangings, which will fall of their own inadequacy, once the centre, the supply, is cut from them. Not that any endeavored reform be *abandoned*, but that it be *proportioned*. To give labor a juster conception of its rights, and monopoly some nearer comprehension of the impudence of its existence, is most impassioned of duties, second to no commands to political duty. An arm may be lost, but the heart will pursue its purposes with a royal unswerving. Many a season beat its remorseless call against the noble tree opposite my window, leaf was scattered, twig was broken, limb was lost; but the great heart, each new spring, sent forth its shoots. One day, however, there came, in a supreme moment, that which blasted the soul of all this life. Thenceforth came no single leaf with its annual lesson. Somewhat in this light I regard the political questions now great with hopeful living. Only let us smite the heart of the wrong. The fruitage will but come again, if the source of it evades our vigilance. The iron now is hot. Is the arm ready to strike? In bringing earthward exaggerated worths and lifting skyward the downcast future of deserving are written twin commands, but perilously disobeyed.

THE PREVALENCE OF ATHEISM.

BY CHARLES ELLIS.

Tribes of savages have been known on both hemispheres among whom no idea of God could be found, and in whose language no term answering to the conception of God existed. Darwin says that the existence of the idea of God implies a good degree of intellectual development. It has been ably argued that in the lowest mental state of man the idea of God is absent, that in and during a medium stage of intellectual development the idea of God is predominant, and that in a high state of culture the idea is once more absent. That is to say, the human race at first knows no God; but, as the intellect becomes sufficiently developed to attempt to satisfy natural curiosity as to what and why phenomena are, the absence of knowledge, on the one hand, and the persistence of the intellect in requiring a cause of some sort for phenomena, on the other hand, force into undue prominence the idea of supernatural powers, which are in time crystallized into gods; and still later, as the intellect becomes competent to point out real causes, the idea of the supernatural wanes and dies. Hence, as long as the human race is represented by these three classes of people, there will be atheism at both ends of the line of development. At the bottom, there will be atheism, because people know nothing. At the top, there will be atheism, because people know that supernaturalism cannot be a cause. In the middle, there will be belief in Gods (I write it large and plural intentionally), because people do not know natural causes, and fear that the unknown may hold some conscious power or powers that may, here or hereafter, hold them answerable for their conduct and belief.

All over the world, for ages long, morality has been considered to be the measure of the deference paid by the human race, or any part of it, to the Gods. The prime duties have been believed to be due to these celestial Creators and Kings. The secondary duties have been those covering the relations of people to each other.

But intellectual development has been chiefly in the direction of trade, commerce, possession. Acquisitiveness has been the ruling motive in the growth of all civilization. The search for knowledge in the great region of the Unknown—that is, the almost Infinite that must have lain, as it does in nearly the same magnitude yet, beyond the narrow limits of scientific knowledge—has been conducted by men mainly outside of those whose special business has been the interpretation of what they were pleased to call the will of God. Practical, scientific knowledge has been harnessed to the industries as fast as acquired, not for moral effect, but as aid to acquisitiveness. Con-

Digitized by Google

sequently, intellectual development has been, in the main, the development of "business" capacity; and business has fallen into the error of taking it for granted that morals really belong to man's relation to the Gods, instead of, as in fact they do and must, to man's relation to society. Therefore, while belief in Gods has been a powerful restraint upon evil tendencies in human nature, and has thus been moral in a negative sense, still the rapid spread of intellectual development among the masses has led them up through a gradual decay of their fears of supernatural powers and into a consequent indifference to their duties toward them. The consequence is that the "civilized" portions of the race have arrived at a condition of development and conduct in which practical atheism is coextensive with the civilization itself. It needs only a glance to assure one that, in modern civilized countries, the primitive atheism of savagery no longer exists; at least, it has no part in their civilization. The third class, as referred to above,—namely, that which has arrived at a stage of intellectual culture which takes causes out of the imaginary field of supernaturalism,—has become so large and powerful that it controls literature, art, and science. The intellectual influence of the developing power of business leads those of the second class whose lives are enmeshed in the continual "struggle for life," or wealth, into indifference to and forgetfulness of their fealty to the Gods, and so throws them practically into the third class above mentioned, and leaves as a residuum of the once large and controlling class representing the middle stage of intellectual development a comparatively small and continually smaller-growing class of people who have not work enough in life to keep their minds actively employed, and who have not sufficient intellectual stimulus to make them attractive advocates of the once widely extended and controlling belief in the Gods of the supernatural world. Therefore, I repeat that, practically, atheism is to-day universal in civilized countries.

Is there anything startling in the fact? No, it is merely a stage of growth which will gradually change and give place to another. Nature, in her process of evolution, produces savage atheism,—the timid, fearful, dim-seeing intellect that believes in Gods as naturally as modern boys take to trees and fish-ponds, under the old instinct of the hunter in search of game; and, still later, she produces the clear-sighted, brave, strong intellect that drops the belief in those Gods just as inevitably as these boys quit hunting and settle down to the more arduous and brilliant intellectual life of modern manhood. The only feature of this process of development that can be referred to as objectionable is the fact that the belief that morality was man's relation to God has made intellectual development one-sided. It has left out the idea of moral development, on the supposition that that was an affair of priesthoods and theologians. Business—that is, acquisitiveness—has grown on the plan of getting wealth honestly, if convenient, but of getting it at any rate. Business has made it the habit of the civilized portions of the race, generally speaking, to get money by hook or by crook for six days, and to leave the work of keeping things right with the Gods to priesthoods and Sabbath-day meetings. Many a man has "made a fortune" by questionable means, who has kept his account square with God by paying his minister well. The good deacon who sits by his dropping whiskey-still, and sings with gracious unction,—

"Come, thou fount of every blessing,"—

is true to the intellectual development of the age, when he interprets the "blessing" as the measure of his wealth; while a liberal hand to home and foreign missions makes all right with this world and the next also, if there is any, for, after all, the money-making business man has too much brain action now not to be extremely doubtful if there is anything to be afraid of, or even anything to be afraid, in the sweet by and by.

In this way, belief in Gods has been an obstacle to progress; and the civilization that would come to stay, that would make itself permanent, must commence by a realization of the idea that intellectual development must be full-sided, must be honest; that acquisitiveness is an unblest evil whenever and wherever it leads a people to pursue possession by any means that are not as thoroughly honest, true, and right toward one man or all men, as deeply binding in obligations to humanity, as ever were ancient ideas of duty to God. The business side of intellectual development must be elevated to a degree that will make it scorn a dishonest penny as much as people once feared an angry God. Then, the world will have discovered that atheism is not only a natural product of intellectual development, but that it is also better both to live and to die by, as the saying goes, than ever were ancient superstitions concerning the supernatural.

EMERSON AND SHELLEY.

Extract from a Paper on Emerson, read before a Social Club in this Vicinity, in 1881.

Carlyle, in his *Life of Schiller*, opens the second part with an eloquent apostrophe to a literary life, which, under favorable circumstances, he considers "the most enviable which the lot of this world affords." He claims that among this class "are to be found the brightest specimens and the chief benefactors of mankind." I think that Emerson may be put in this category of benefactors; for surely he, if any one, has kept awake the finest parts of our souls, and given us better aims than power or pleasure, and during a long life, now drawing to a peaceful close, "having travelled through it in calm and virtuous majesty," has been ever faithful to his highest ideal, the boldest, the most truthful, and the most original of all our American authors. Ever "lowly, faithful, he still obeys the voice at eve obeyed at prime"; and his voice at prime, as uttered in his Dartmouth oration, delivered in 1838, is singularly in accordance with Carlyle's high ideal of a literary life. He says: "I have reached the middle age of man, yet I believe I am not less glad or sanguine at the meeting of scholars than, when a boy, I first saw the graduates of my own college assembled at their anniversary. Neither years nor books have yet availed to extirpate a prejudice then rooted in me,—that a scholar is the favorite of heaven and earth, the excellency of his country, the happiest of men." Embosomed in the green hills of his rural home, surrounded by his books and friends, with happy family relations, in perpetual communion with that nature which he so utterly delights in and with an ever widening fame his does seem to have been the happiest lot which this world affords.

Emerson has written a great deal about the poet and poetry, but all on an ideal platform, almost too high for human attainment. Indeed, he says, "I look in vain for the poet whom I describe." In his definition of poetry, he is surpassed by Shelley in that rapturous inspiration, his "Defence of Poetry," wherein he declares poetry to be "the record of the best and happiest moments of the happiest and best minds." In reading these two authors, of what they have to say on this topic, one might almost think that Shelley and Emerson were twin brothers; but Emerson repudiates him, and rather insinuates that he is only an English rhymester. He says, "When people tell me they do not relish poetry, and bring me Shelley or 'Aiken's Poets' to show that it has no charms, I am quite of their mind." This disparagement of Shelley is quite unaccountable, and must arise in part, I think, from Emerson's lack of the musical ear, which lack is lamentably betrayed in many of his poems. His allusions to music are few and faint throughout all his writings. I fear he did not enjoy the "Fifth Symphony" or "Don Giovanni" or the "Marriage of Figaro" or the "Messiah." And consider what a blank in a man's life this deficiency implies! A stranger in a world of ecstasy, an outcast from the Palace Beautiful, from the Chamber of Peace, from the Land of Beulah. But he turns to his essay on "Compensation," and says, "For everything you have missed, you have gained something else." And *his* compensation is a voice more melodious than Apollo's lute, and a discourse more enchanting than the harp of Orpheus.

Shelley, like Emerson, was a passionate worshipper of nature, pantheistic in his philosophy, as is Emerson, and like him an ardent disciple of Plato. He read Plato in the original Greek, and made one of the best translations of the "Banquet" ever rendered into English,—a feat far beyond Emerson's accomplishment. He was a daring and courageous advocate of freedom in thought, speech, and action. Original in his convictions, pure in his morals, liberal in his benefactions, unselfish, humane, a scholar, one would think after Emerson's own heart, and far surpassing him in classical learning and poetical inspiration, and then he died so young,—oh, the pity of it! And Emerson passes him by,—ignoring his magnificent "Hymn to Intellectual Beauty," the bare title of which should have caused him to bow his head in reverence,—and praises that cold, watery, bloodless egotist, Thoreau, who wrote a sonnet on "Mist," another on "Haze," and a third on "Smoke."

What was the secret of Emerson's disparagement? Perhaps it was his Puritanic "survival."

CORRESPONDENCE.

A DYNAMICAL FICTION.

Editors of The Index:—

In an article in *The Index* of September 28, criticising the so-called "Spencerian Metaphysics," by M. A. Hardaker, are some remarkable statements on the nature of mind and its scientific relations to matter. It is confidently asserted that all force is motion, and that all the relations between the sentience of a living organism and its external environment consist of nothing but transformation of motion. It will be seen that, if all force is resolvable into motion, then the substratum involved, without which motion itself is utterly inconceivable, becomes merely an *inert* vehicle for the same. Let us make a concrete application of the doctrine in question by a simple illustration, and we shall see what havoc it will play with the fundamental concepts upon which all our science is based. Suppose two equal inert atoms moving toward each other with equal velocity from opposite directions: on contact, their motions would exactly annihilate each other, and both would come to a dead rest; conclusively showing that, if force is mere motion in space, the scientific doctrine of the "persistence of force" is not true. It also demonstrates that, if force is nothing but motion, the fundamental axiom upon which all science is based (and in which the idea of the persistence of force is involved), that "action and reaction are equal and opposite," would also be false.

It would be no scientific explanation whatever of sentience or feeling, nor of its relations to anything external, to say that it is a mode of motion, or the transformation of any mode, because it is utterly inconceivable and forever impossible to identify the two. Motion is a mere change in location, and by itself can be conceived to possess no *qualities* but extension and configuration. How, then, can it possibly be conceived as possessing feeling or consciousness, within which are contained *all* qualities which ever can be realized or known?

In the same essay, it is stated that "the latest physiological researches are proving the human body to be but a medium for the transformation of energy, a wondrously sensitive and complex medium, but still only one in a series of material masses through which motion, or energy, passes in its ceaseless round." Also, that "there is no more difficulty in conceiving the transformation of molecular or molar motion into sensation and thought than in conceiving them as transformed into electricity or heat." But read what an eminent physiological writer says on this subject, Dr. Edmund Montgomery (than whom I believe no one has made a more profound and thorough observational investigation of the physiological beginnings of life), in the *Popular Science Monthly* for September, 1878:—

"Whether the forces be conceived as specific entities, as definite modes of motion, or as different affections of matter, the idea of their equivalence and convertibility is just as unwarranted, though not so palpably incongruous, as the idea of the equivalence and convertibility of air-vibrations and sound-perception, of ether-vibrations and light-perception. A certain, even quantitatively definite relation obtains between the intensity of stimulation and the stimulated effect; but that relation is neither one of equivalence nor of convertibility. This fact is universal in nature; but becomes the more obvious, the less the mutually affecting substances resemble each other. It is just as impossible that one kind of force can be converted into another kind of force as it is impossible for any kind of force to originate out of nothing, or to exist without substratum.

"A 'force-directing' machine or apparatus corresponds to a well-known intelligible fact. A 'force-transforming' machine or apparatus corresponds to something altogether unintelligible. If substances

Digitized by Google

had really any such transforming effect on forces, even then they would themselves constitute specifically intervening powers. . . . We cannot make any considerable progress in the philosophy of reality, of which the understanding of our own life is the consummation, before we have first formally re-enthroned the sovereign energies, so strangely slighted during the long reign of visionary potentates,—the eras of anthropomorphism and metaphysics.

"Now that we are avowedly appealing to nature for knowledge, it behooves us to become natural in our mode of thinking. To fix our attention merely on changes and their relation to each other is to grasp at the shadow of reality. That which changes is in every respect the substance, the potentiality and actuality in the case; and it is essentially its specific molecular constitution which determines the nature of the change qualitatively and quantitatively. The scientifically ascertained, most specific behavior shown by the various substances, with regard to their manifestation of different modes of force, or even of one and the same mode of force, is in itself abundant proof that that which we call forces are merely specific modes of *reaction* on the part of the various substances. . . .

"The scientific conception of cause is a dynamical fiction made to suit a realm of phantasmal inertia, in which molecularly imperturbable masses pursue forever an unopposed course in a resistless medium. How can we gain an insight into reality by always mathematizing it away?

"In nature, all manifestations are the work of opposition and perturbation; agitation of pre existing states, and subversions of the same. It is in this intrinsic potentiality and mutual affectibility of so-called masses that nature has its being, its subsistence, and its perfectibility. The substrata of reality are not merely ponderable or imponderable vehicles of locomotion, but concentrations of actual and potential energies, thrilling through and through with consonant sensitiveness, reverberating with an accent of their own every commotion from the centre of the skies to the centre of the earth."

FRANKLIN SMITH.

DEDHAM, MASS., October 6, 1882.

IS PRAYER OUTGROWN?

Editors of The Index:—

The article in your last issue by Mr. W. M. Salter, entitled "Prayer and an Ethical View of Life," is so fine in spirit, so pure and lofty in tone, that one may get inspiration from it, while dissenting from the conclusion arrived at; namely, that the belief in the efficacy of prayer is not compatible with the scientific conception of the world.

Mr. Salter allows that prayer is not without its effect on man's life, that it may be followed even by elevation and tranquillity of mind, but regards it as "hardly more than intellectual trifling to say that the elevation and tranquillity of mind that may often follow prayer are the answer to it." But what if the burden of one's prayers is for just this elevation and tranquillity of mind, and oft-repeated experience convinces him that these states are induced by, that they come in response to prayer, to the earnest desire for them, whether uttered or unexpressed,—is it intellectual trifling to say so, to claim that prayer, as such, does win its end? Among those who take the ethical, the scientific view of life, as distinguished from the theological, there are those who are led by life's experience to the firmest conviction that in the great work of salvation, of spiritual attainment, of character-building, man may have, must have, help from a Power not himself.

"Thou must save thyself: . . . all other salvation is vain," will seem to them a less satisfactory, a less scientific statement of the matter than that older one: "Work out your own salvation with fear and trembling; for it is God which worketh in you both to will and to do of his good pleasure." They *know* that in all their aspirations, in all their efforts to attain the higher life, they are but co-workers with a great current of moral influences that blows around them, that by prayer they are lifted into that upper region of our spiritual atmosphere, where, as Emerson says, "a breath of will blows eternally in the direction of the Right and Necessary," and that by it their lives are blown "into order and orbit." 'Tis not in vain, they are assured by the testimony of their own experience and that of others, to join with Whittier in his prayer,

> "Shed thy rich dews of quietness,
> Bid all our striving cease,
> Take from our souls the strain, the stress,
> And let our ordered lives confess
> The beauty of thy peace."

For they have found that such prayer is a blessed remedy for the unrest, the weariness, the irritations of life; that by it the spirit of trust is developed, the soul's apprehension of "a sublime other not itself" is strengthened; that the answer to it is a growing consciousness of relationship with something grand and awful and beneficent, some mysterious Power of Good that responds lovingly to the throbs of the human heart; and that with this consciousness comes a sense of peace and satisfaction, in which

> "All the jarring notes of life
> Are blended in a psalm,
> And all the angles of its strife
> Are rounded into calm."

And there are those who have learned to breathe that sublimest of all prayers, "Thy will, O God, not mine, be done," who know that by it the darkest experiences of life are robbed of their stings, that a mysterious strength to bear steals in upon the soul, that there is even an inflowing of peace and of joy such as no gratification of desire ever produced. It is not a matter of speculative belief, but of knowledge, that there is a great unseen Power of Good on which the soul may confidingly lean in its severest trials, and that from it is wafted the sweet and assuring whisper, "My grace is sufficient for thee."

That there will be great changes in men's theories of prayer, in their ideas as to how prayer is answered, and what can and what cannot be secured by it, there can be no doubt. That an ever-increasing number will cease to attempt to express in words the deepest desires of their souls is probable. But it does not seem to me probable or even possible that any earnest soul shall cease to pray. D. ROWEN.

MISCELLANEOUS.

IN the Boston *Transcript*, we find the following from Dr. Oliver Wendell Holmes, which is the opening part of an address he delivered some years ago at a Unitarian festival in Boston: "It has occurred to me, ladies and gentlemen, that, as many clergymen are expected to make speeches on this occasion, it would be a fair thing enough if one layman should take the opportunity it affords him of delivering a sermon. I have heard a great many, and never yet pronounced one. Will you kindly listen to my virgin effort? My text is from the Apocrypha, the Book of Ecclesiasticus, 20th chapter, 13th verse:—

"'An eloquent man is known far and near, but a man of understanding knoweth when he slippeth.'"

In closing he said: "May I, without committing any one but myself, mention a few of the stumbling-blocks which still stand in the way of some who have many sympathies with what is called the liberal school of thinkers? I believe they are quite as much anthropological as theological. Some of these doctrines might be at once repudiated by those who hold other beliefs, which in reality grew out of them.

"The notion that man is responsible for the fact of suffering and death, whereas both existed long before his appearance on our planet.

"The notion that there can be such a thing as *natural* moral evil; as if any one but the God of nature could be responsible for nature's effects.

"The notion that sin is a transferable object. As philanthropy has ridded us of chattel slavery, so philosophy must rid us of chattel sin and all its logical consequences.

"The notion that what we call sin is anything else than inevitable, unless the Deity has seen fit to give every human being a perfect nature and develop it by a perfect education.

"The oversight of the fact that all moral relations between man and his Maker are reciprocal, and must meet the approval of man's enlightened conscience before he can render true and heartfelt homage to the Power that called him into being. And is not the greatest obligation to all eternity on the side of the greatest wisdom and the greatest power?

"The notion that the Father of mankind is subject to the absolute control of a certain malignant entity known under the false name of justice, or subject to any law such as would have made the father of the prodigal son meet him with an account book and pack him off to jail instead of welcoming him back and treating him to the fatted calf.

"The notion that useless suffering is in any sense a satisfaction for sin, and not simply an evil added to a previous one.

"I believe many of you will agree with me in rejecting these notions, and that in due time these and all such stumbling-blocks will be removed from the path of any whom they prevent from marching side by side with you in the grand army of the soldiers of humanity and servants of God."

LORD QUEENSBERRY'S EXPLANATION.—The Marquis of Queensberry explains his peculiar conduct at the London Globe Theatre, which was reported here by telegraph, in a letter, in which he says: "As no doubt an incident that occurred to-night at the Globe Theatre will find its way into some of the daily papers, I trust that you will allow me to make a few remarks in explanation of what actually took place in reference to myself, as otherwise my motive may be utterly misconstrued, not only by those who were present in the theatre at the time, but by others of the public outside who may hear any report not quite correctly stated of what actually did occur. This evening, I went to hear the new piece by Mr. Tennyson, as represented at the Globe Theatre, 'The Promise of May.' Toward the close of the first act, when the gentleman representing the character of Edgar appeared on the stage, I instantly became deeply interested when I perceived the character he (Edgar) had come to represent, or rather, as I took it, most grossly to misrepresent. After listening a few minutes to the sentiments expressed by this gentleman free thinker and atheist of Mr. Tennyson's imagination, I became so horrified and indignant that, rising in my stall, I simply, in a loud voice, made the following remarks apropos of Edgar's comments upon 'marriage': 'These are the sentiments that a professing Christian [meaning Mr. Tennyson] has put into the mouth of his imaginary free thinker, and it is not the truth.' This is all I said, and I sat down. When the curtain fell at the end of the first act, there were several good-natured cries and calls upon myself, from different parts of the theatre, to explain myself. I rose and endeavored to do so, as I was naturally most anxious that the motives of my interruption should not be misconstrued either by those in the theatre or by the public who might hear of it outside. I was forcibly but kindly removed while endeavoring to explain myself, and protesting against Mr. Tennyson's misrepresentations of the sentiments of the secularists and free thinkers and so-called atheists of England. My statement of the facts, I presume, explains my motives. I am a secularist and a free thinker and, though I repudiate it, a so-called atheist; and, as President of the British Secular Union, I protest against Mr. Tennyson's abominable caricature of an individual whom, I presume, he would have us believe represents some body of people, which, thanks to the good of humanity, most certainly does not exist among free thinkers."

BOOK NOTICES.

TRAVELS IN SOUTH KENSINGTON. With Notes on Decorative Art and Architecture in England. By Moncure Daniel Conway, author of *The Sacred Anthology*, *The Wandering Jew*, etc. Illustrated. Harper & Brothers.

Mr. Conway does not need any introduction to readers of *The Index*. But the rôle in which he now appears is quite a different one from that in which he generally appears in our columns, albeit these have furnished many proofs of his surprising versatility. South Kensington suggests an order of ideas very different from that of Mr. Conway's *Sacred Anthology* and his *Rejected Stone*, which, it should never be forgotten, was, if not the most solid, the most brilliant contribution to the literature of emancipation during the Civil War. Equally foreign does it seem to the Transcendentalism of New England, with its inclination to "plain living and high thinking." South Kensington and Bedford Square are more suggestive of Thackeray's inversion of the Wordsworthian phrase, "Plain thinking and high living." But the talent of Mr. Conway seems to be hardly less at home in these æsthetic circles than in the Concord woods or the study of comparative religion or the storm and stress of a great political reform. Much, if not all, of the text of his *Travels in South Kensington* has been printed in *Harper's Magazine*, and there read with much instruction and delight. The book is made up of three parts. The first part is an account of the South Kensington Museum, of its origin and growth, of the treasures it contains, of the methods it adopts to foster decorative art. The second part, "Decorative Art and Architecture in England," details what may be properly regarded as, in good part, the results of the South Kensington instruction and its impulse to æsthetic life. In the third and briefest part, we have some account of Bedford Square, the new London suburb, where everything that is most unique in architecture and household decoration most abounds. Under the head of "Decorative Art and Architecture," Mr. Conway gives an elaborate account of the Albert Memorial, which is made much more intelligible and interesting than it could otherwise be by many illustrations. Indeed, the book abounds in illustrations. Among them are the faces of several of the more distinguished leaders of the æsthetic renaissance. The face of William Morris is disappointingly meagre in contour and expression, but that of Alma-Tadema is exactly the face of a man to paint the warm and sensuous life of ancient Rome. The book is handsomely made, and has a design upon the cover which might be called "A Symphony in Yellow Night-gowns"; and, O reader, let us live up to it!

HISTORY OF ANCIENT ART. By Franz von Reber. Revised by the author. Translated and augmented by Joseph Thacher Clarke. With three hundred and ten illustrations and a Glossary of Technical Terms. New York: Harper & Brothers. 1882.

A preface to this book, by Prof. Charles Eliot Norton, is a recommendation of it to the average student, than which a better could not be conceived. Herr Franz von Reber is Director of the Bavarian Royal and State Galleries of Paintings and Professor in the University and Polytechnic of Munich. His book is an application of the historic method to the study of the Fine Arts. "The subject has been confused," Prof. Norton says, "by the intrusion of metaphysics into its domain in the guise of a professed but spurious science of æsthetics." Samples of this abound *ad nauseam* in the pages of the *Journal of Speculative Philosophy* and in the lucubrations of the Concord school. It is high praise which Prof. Norton accords to Dr. Reber's work, when he says, "There is no compend of information on the subject in any language so trustworthy and judicious as this." Dr. Reber begins with Egypt as possessing, if not the oldest civilization, the most ancient monuments. Treating of architecture, he makes short work of the nonsense of Mr. Piazzi Smyth and others who have discovered systems of astronomy and even the doctrine of the Trinity in the *Great Pyramid*. Next after Egypt, we have such account as can be given of the art of Chaldæa, Babylonia, and Assyria. Persia is next considered, then Phœnicia, Palestine, and Asia Minor. The fullest section in the book is devoted to Greece; and this is right, for here we are in the sphere of real beauty. Other sections follow on Etruria and Rome. The illustrations are very numerous, and not one is given that does not help our understanding of the text. Last, but not least, there is an excellent glossary of technical terms and an index, making complete the student's apparatus.

POEMS. By Minot J. Savage. Boston: George H. Ellis, 141 Franklin Street. 1882.

We cannot say that Mr. Savage writes poetry so well as he preaches. But that is not to say that he does not write poetry well worth printing. Among preachers, he stands in the front ranks. Among poets, he modestly claims, in his dedicatory page to this volume, no such place. And perhaps it is his very excellence as a preacher, and his praiseworthy absorption in his chosen vocation, that somewhat mars his poetical attempts. The preacher is a little too prominent in his poetry. Not only do the favorite topics of his preaching often appear in the poems, and church occasions and pastoral experiences evidently give the motive from which many of them were written,—all of which is natural and proper,—but sometimes he is so intent on making plain his thought that he forgets the necessities of poetic language, and lines of prose appear in his verses. But these are minor blemishes in a volume that is full of sweet, vigorous, and healthful sentiments, showing a very active mind and one that is not only at home in themes of theology and ethics, but equally so amid scenes of nature and the tender home experiences of human life; while, in the miscellaneous collection of short poems headed "Potpourri," there is not a little of homely wisdom and wit in true epigrammatic shape. The little book, of two hundred and fifty clearly printed pages, bound in pretty style, will find many welcoming friends.

HARPER'S YOUNG PEOPLE. 1882. New York: Harper & Brothers.

The single weekly issues of *Harper's Young People* are not particularly impressive; but the effect is quite different, when we have fifty-two numbers in a collective mass, handsomely bound together. Then, we are astonished at the amount and richness of the material. The illustrations are multitudinous, and they are capitally done. How different from the illlustrations in children's books a quarter of a century ago,—the little boys in frock-coats, very short-waisted, and plug hats, and the little girls to match! There is æsthetic education in such pictures as these. The child habituated to their beauty will go into a gallery of pictures, and intuitively discriminate between the better and the worse. There is a proper mixture in the *Young People* of fiction with agreeable information, and all the puzzles and enigmas that the most voracious can desire.

DIVORCE. By Margaret Lee. New York: John W. Lovell Company. Price 50 cts.

The evils, inconsistencies, and looseness of the present divorce laws of the United States are very cleverly shown in this novel, which purports to be and may well be founded upon fact. The story is interestingly told, and the moral a needed one. The publishers call attention to the cheapness of the work of over four hundred pages, nicely bound in cloth, the first of a series by American writers, declaring it to be their intention to test whether the increased sales will be great enough to make this form of publishing remunerative to our native authors.

THE most interesting article in the *Revue de Belgique* for November is on the higher education of women, of the success of which in the United States, Belgium, England, Switzerland, Russia, Italy, and Sweden, many illustrations are given. It is pleasant to hear that there are more than five hundred female physicians in this country, but the statement that some in the large cities earn $20,000 a year is almost incredible. Twenty-six ladies are practising medicine in England. Girton College is forced almost every year to enlarge its room on account of the number of applicants. Of the one hundred and thirty-seven girls thus far admitted, sixty-two have gained university honors; and the success of its graduates in gaining employment as teachers has been most gratifying. The only continental countries where women are now allowed to practise medicine appear to be Switzerland, Sweden, Belgium, and Italy, Russia permitting them to study, but not to practise, and both France and Germany being decidedly behind their neighbors in this respect. One lady who had been the ablest student in history at Göttingen, but had been obliged to go to Berne for her degree, is now teaching at Berlin in the Victoria Lyceum, which is attended by more than a thousand girls. Other articles speak of the illusions of universal suffrage, the Catacombs at Rome, and recent German literature.

PERSONAL ITEMS.

LAST Sunday, the 17th of December, was the seventy-fifth birthday of the poet Whittier.

MRS. OLIPHANT is said to be the author of the beautiful little prose poem, *The Little Pilgrim*.

A COMPLIMENTARY banquet is to be given to Frederick Douglass in Washington on New Year's Day next, at which ex-Senator B. K. Bruce will preside.

CAPTAIN JOHN ERICSSON is still living in New York, a hale, hearty old man, in his eightieth year. It is twenty years since his little "Monitor" revolutionized the navies of the world by its attack on the "Merrimac."

REV. JAMES BEECHER, the hermit Beecher, who has lived in the backwoods of Ulster County, N.Y., since 1875, has become so eccentric that his brother, Thomas K., has persuaded him to enter the homœopathic insane asylum at Middletown, N.Y.

MR. ROBERT MORRIS, SEN., a well-known colored lawyer of this city, died at his home here on Tuesday, the 12th inst. He was the first colored man admitted to the bar in this State. He was highly respected as a citizen and a lawyer. "Warrington" used to say of him that his legal acumen and professional charges totally disproved the inequality of the races.

FLORENCE NIGHTINGALE, although sixty-two years of age, has such a bright, unwrinkled face that she would pass for fifty. She has good teeth, brown hair, bright brown eyes, and a pleasant voice. Although she is unable to use her lower limbs, yet she does not complain by either word or look, and has an active interest in all that concerns the sufferings of others.

LOUIS KOSSUTH, the Hungarian exile and patriot, is still living and in good health in spite of his age; for he is now eighty. He resides in Turin, Italy. On the occasion of his eightieth birthday, many banquets were given in his honor, over seventy telegrams of congratulation were sent him from Hungary, and a costly album was sent him, containing more than thirty thousand Hungarian signatures.

THE latest "reliable" information we have in regard to the whereabouts of the once "Rev." W. H. H. Murray we glean from the columns of the *Presbyterian*, one of whose correspondents says that he (Murray) is living on a ranch just outside of San Antonia, Tex., where he is engaged in fine stock-breeding and managing a saw-mill, sawing timber by contract. He gives occasional lectures in the city, in which "he scolds the Church and sneers at Orthodoxy," and declares hell to be a superstition used by the clergy to *scare* the people into the Church.

EVERY one interested in the Woman's Suffrage Movement will find a very complete history of its rise and progress in this State, written in a brilliant and interesting style, in "Massachusetts in the Woman Suffrage Movement," by Mrs. Harriet H. Robinson (widow of "Warrington"), a book indorsed by the recommendation of Wendell Phillips, Col. Higginson, Louise Alcott, and others. This work is an essential part of the history of our State, and should be in the library of all Massachusetts men and women. It can be procured of the author at the reduced price of one dollar. Address Mrs. H. H. Robinson, Malden, Mass., P. O. Box 374.

AN English paper refers to the attentions bestowed on Herbert Spencer in this country, and says it is impossible to conceive of a foreign thinker, with no claim to honors beyond those of a thinker, having the same kind of a reception in England. A man's social position and the number and quality of his private introductions would determine the manner of his reception there. These considerations cause the paper in question to wonder whether Americans are naturally more given to lionizing than Englishmen, or whether "it is possible, after all, that there are sections of American society where rank in the world of light counts for more than even the possession of the almighty dollar."

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.

For sale at THE INDEX office.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe. I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to

Mr. MILLS' LECTURES.

SEASON OF 1882-83.

1. Our Original Homestead and Ancestry; or. The Birthplace and Cradle of our Civilization.
2. The Beginnings and Successive Steps in the Arts of Common Life.
3. Survivals and Reminiscences of Past Conditions in Present.
4. Our Present Civilization: its Type, Quality, and Indications.
5. Mythology, its Origin, Growth, and continued Influence.
6. The Promise which Science bears for Humanity.
7. The Mission of the Industrial Arts for Society.
8. Nature's Order of Development and Mental Growth as attested in History.
9. The Relation of Supply to Demand in the World Physical, Intellectual, Religious.

Besides the above, Lectures will be given upon the following, when desired:—

1. Carlyle.
2. Emerson.
3. Huxley.
4. Tyndall.

THE Episcopal Church reports for the last year the smallest increase of communicants recorded for many years previously.

TWO Roman Catholic priests, of Central America, have recently yielded to the tender passion, and broken the rules of their profession by marrying, and both have been promptly excommunicated therefor. Their example may prove contagious.

CHICAGO women take hold of humanitarian work with true Western go-a headativeness. As the city authorities failed to do so, an Association of women have provided matrons at the police stations to attend to the wants and needs of female prisoners.

IN the number of letters sent through the mails, according to the census, the State of Illinois ranks fourth, being exceeded only by New York, Pennsylvania, and Massachusetts. In 1880, Illinois sent through the mails 68,643,228 letters, exceeding by seven million the number sent by Ohio, which stands the fifth in order.

AT a Presbyterian Conference, held in Australia last April, a Rev. Mr. Hamilton, of Victoria, read a paper advocating the training and employment of native Australians as preachers, giving as one his reason that the ministers supplied "from the old country" (Scotland) were not sure to be "Scriptural and sound in the faith." Recounting this causes the *Presbyterian* to utter this moan: "We have reached strange and sad times, when it is said that ministers, sent out from that land to preach the gospel, cannot any longer be relied on as 'being sound in the faith.'"

"CLOSE COMMUNION," in the Baptist faith, seems in a fair way to be done away, since a Baptist clergyman consented to preach a Thanksgiving sermon in a Jewish synagogue in Philadelphia, being introduced by the rabbi, and this without any loss of his orthodox standing among his Baptist brethren. The rabbi, in introducing him to the Jewish congregation, sensibly remarked, in regard to his Christian *confrère*, "We agree to disagree on certain points; but there are many more on which we agree to agree for all time to come, and chief among them are our love of nation and love of humanity."

VENNER published a letter under date of December 11, in which he made the following prediction: "Now, you will find that there will be a very stormy ending to 1882 *everywhere*. Snow blockades will probably occur in Great Britain and France as well as at other quarters of the globe. Intensely cold weather will travel to remote southerly points, and in the far West and Northwest. Lower thermometer readings will yet be recorded for 1882 than for any previous year in a long period of time. But the winter, on the whole, will be short, being all condensed into its fore portion. There will be a great 'break up' in January before the middle of the month, and probably shortly after the first week of that month."

WE clip the following from the *Congregationalist:* "A correspondent sends us the following, cut from the 'Sunday Notices' in the daily press of a New England city: 'Rev. ——, of ——, will preach at the —— church to-morrow morning. On account of the absence of Mr. —— from the morning service, he will meet with the class in Herbert Spencer in the evening at 7.30 o'clock.' Our friend not unnaturally thinks that this 'Bible class in Herbert Spencer,' as he calls it, illustrates 'the fact that Sunday instruction among us has a wide range, quite co-extensive with the full breadth of liberty, to say nothing of its alliterative neighbors, laxity and license.' We hope it is hardly necessary to add that the said church and pastor are not of our own order."

A WRITER in the *Inquirer*, an English Unitarian paper, says that his sister, being interested in an attempt to improve the neighborhood of a Unitarian Chapel in Moreton Hampstead, wished to buy some ruinous cottages standing near it, for the purpose of pulling them down. She found the owner, a lady, after some trouble; and, the interview being pleasant and satisfactory, she felt quite sure of gaining her ends. But, soon after, the following letter was received, which shows how strong religious bigotry yet is, even among the cultivated classes in England: "Madam,—I am writing to you at once, before I return to Exeter, as I wish to tell you without delay that I cannot sell you the cottages you want for the purpose you require. I am sorry I did not think of it while you were here; but, after you left, I saw I could not, as a believer in the Lord Jesus Christ, sell you those cottages with the object of improving that which denies him."

OF the future of Chicago, which in half a century has grown from an insignificant village to a city of six hundred and fifty thousand, Emery A. Storrs said, in a recent address before the Chicago Historical Society: "We see in the future a great city stretching its arms across the prairie, with its streets thronged and populous, with its thousands and tens of thousands of contented homes, with its shops filled with busy and prosperous artisans, with its schools giving the benefit of a liberal and a free education to all who may desire it, its courts presided over by wise and just judges, its business centres inspired by the highest commercial probity, its manufacturers sending their products all around the globe, the white sails of its commerce glistening upon every sea, its patriotism as broad as the Republic. We see it the centre of sound political thought and action; and we shall, I am sure, see rising, in the presence and by the very side of warehouses and great business structures, fitting homes for music, the drama, and all the arts. We see it the resort not merely of men who would trade, but we see trade inspired with the loftiest purposes. The scholar, the poet, the actor, the painter, the sculptor,—all these we see in this future, and not so very far, seeking Chicago as a chosen home, because in the great city their music, their sculpture, their painting, all are welcomed, and all find ready and worthy appreciation."

CHRISTMAS day, which ten or fifteen years ago was scarcely observed at all in New England, has, since its adoption as a national holiday, developed into a sort of altruistic Saturnalia. Each succeeding year has seen the Christmas gift-giving mania increase and spread, until this season we feel as if it must have almost reached its utmost limit. Since the beginning of the month, the stores in this city, and doubtless in all other cities over the country, have been daily adding to their attractive displays, and have been thronged with eager and happy purchasers. Within the week, the sale of Christmas gifts must have been enormous; for at times, in many of the leading stores, entrance to late buyers was nearly impossible. Even the streets were thronged as if some great event had occurred. And all this for an unselfish purpose, to make some one else at least momentarily happy in knowing that he or she had been remembered and cared for by the giver. This Christmas craze is a very delightful and ennobling one, and much to be preferred to many other of the manias which have of late swept over the country; for we believe heartily in that scripture which declares it is "more blessed to give than to receive." Like mercy, unselfishness "is twice blessed. It blesseth him who gives and him who takes." It is true that there is much danger of indiscriminate, unthoughtful, and even of selfish giving, but there is no great good without some little accompanying evil; and as the gift season is so brief, and only of annual occurrence, we contend that its influence and its results are, in the main, good and elevating, whether those who indulge in it give in the name of the Christ-child, of Santa Claus, of Kriss Kringle, or believe that they are only celebrating the Roman Saturnalia or the winter solstice, the birthday of the sun.

THE COMING CHURCH.

In the department of correspondence will be found a letter of thoughtful inquiry from Oakland, Cal., concerning the conditions of a local religious organization which shall perfectly respect intellectual liberty. The letter, which gives an interesting account of the formation and present position of the liberal society in Oakland, over which the late lamented Mr. Hamilton presided with courageous fidelity to his convictions, closes with putting to us a question which deserves a thoughtful reply. Our correspondent is right in the supposition that the topic is one which will have more than a local interest.

We must say at the outset, however, that we do not think that free or liberal religious societies, even such as are entirely separated from all existing ecclesiastical organizations, must necessarily be formed on one pattern, or aim to do precisely the same kind of practical work. In their methods, and even in their bases of organization, they may differ, and most likely will differ. They will differ because of their very freedom from the common bond of any traditional ecclesiasticism. Their methods and plans, including any common statement which they may make of their purpose in organization, will properly depend in large measure on local conditions; that is, on the special circumstances out of which in any place the new organization may spring, and on the special needs and opportunities of the community where it is to do its work.

But, though such societies may not have the same methods nor wholly agree in their verbal statements, there are certain principles in which they will be in essential agreement. They will, in the first place, admit nothing into their fundamental statements of organization and purpose which can in any way restrict the rights of individual free thought. They will not define their terms of fellowship by the lines of any theological creed, but recognize the obligation of the human mind to avail itself of all rational aids to the fullest research and inquiry as a condition of progress. And, in the second place, though it may be first in practical importance, they will lay even greater stress on making the objects of their organization to be improvement of individual character and the amelioration of human society. And to these ends, in accordance with the differences of local conditions above referred to, all their ways and means will be adjusted.

There is a large class of liberal thinkers—probably the majority of those who have already broken away from all ecclesiastical organizations—who think that liberal societies should stop with these two points; that to secure liberty of thought, and to provide for the ethical training which includes both philanthropy and the higher culture of personal character, cover all that is necessary or consistent for a liberal organization to aim at. And, if the phrase "culture of personal character" be interpreted largely enough, the position of this class of Liberals may be granted. And, in any case, it may be granted that there are sometimes conditions where it will be wisest to limit the statement of purpose and method to these two points; where, in fact, there could not be the requisite unity for any organization, if anything further of statement were attempted, but where there may be a very effective organization, if the statement of purpose be thus limited. Nor do we see why, under such conditions, there may not be "a central idea, clear and attractive enough to all, to excite a common enthusiasm," and so to supply the "lack" which our Oakland correspondent speaks of as felt in the society there. We have never been able to understand why a society that is organized to defend and promote a moral purpose should not have as much enthusiasm and as genuine and efficient impulse for work as one that is organized to defend and propagate an intellectual belief. And, if there be any such difference in practical experience, we do not believe the difference originates in any inherent quality of human nature, but rather in the fact that human nature on the religious side has so long been trained to regard a creed as having more saving efficacy than conduct.

But, from what our correspondent says of the origin of the Oakland Society, we suspect that the majority of it would not feel that its purposes were all covered by methods that should stop with freedom of intellectual inquiry and with ethical and philanthropic aims. We note that, in speaking of the "central idea" which the society seems to him to lack for unifying its "conflicting conditions" and arousing its "enthusiasm," he defines it as "something which will combine intellectual freedom and moral culture with spiritual enlargement and discernment." By this latter phrase, he doubtless means to indicate the religious element as having a quality distinct from mental freedom or moral activity. And there are many Liberals who would agree with him in this, though they might phrase it somewhat differently, and who would agree, too, that this element must be included in any liberal organization that professes to take the place of the Church, and to be a permanent institution for promoting the highest good both of individual character and of human society. This is the opinion of the present writer.

We can well understand how those liberal thinkers, who have been accustomed to identify religion with irrational theologies and absurd superstitions, and who are wont specially to remember the inhumanities which have been committed in its name, should be disposed to regard the abolition of all religion as a consummation devoutly to be wished. But, in our view, religion, rationally and philosophically considered, represents man's attitude of relation, as expressed in thought, feeling, and action, toward the whole universe of being; and this relation would continue of necessity to exist, even though the word "religion" were to become obsolete. In the past, instituted religion, or the Church, has, with all its errors, been an attempt by man to give expression to this relation; and we believe that, in the future, whatever institution continues to exist as the Church, or in place of the Church, must in some way recognize and satisfy the perception of this relation. Mental liberty becomes of vastly greater significance, when it is conceived as the emancipation of individual faculty, not merely for the serving of individual interests, but for the serving of universal truth; and morality is infinitely enhanced in the majesty of its office and purpose, if it be lifted above the narrow standard of mutual interests between two neighbors, and is recognized as that conduct which makes man a voluntarily helpful and organic part of the life and stability of the universe itself. And here, in this spirit of consecration of individual liberty and individual character and conduct to the service of something infinitely grander and higher than any life of the finite self, is where the religious element comes in; and, as it seems to us, it is a quality to be cherished and cultivated side by side with the activities of the free intellect and the sentiments of the moral nature.

Yet we would not attempt to define the methods by which in all cases this is to be done; nor do we think that the methods in all cases would be the same. Certain we are that the religious sentiment, as thus rationally understood, is not always best fed and cherished where there are the most formalities, either of stated words or of ceremonies, for preserving it. Music, if of the right kind, is one of the best instrumentalities for expressing it. Spoken words of aspiration, if pressed glowing and burning from the heart, may kindle it to a flame of vital warmth. And, again, it may be awakened and abundantly satisfied by the spirit and passion of a speaker's discourse, even though he does not expressly aim at such an effect. Indeed, a society may be organized nominally only for ethical culture, and yet may really do more for the genuine culture of the religious sentiment than is done in many a church where the preacher's inadequate words are helped out by all the accompaniments of music, prayer and praise and liturgy and architecture. On the whole, we incline to think that, in liberal societies especially, though music if good will be a great addition, the religious element can be best expressed, so far as the Sunday service is concerned, through the spirit and utterance of the man who addresses the congregation. If he has the spirit of reverence, consecration, and devotion, *i.e.*, the religious sentiment, in his nature, it will appear in his service, even though there be no formal place for it. If he does not have it, no formalities of prayer or of Scripture reading can make up for the defect. If the Oakland Society has the good fortune to be led by a minister with such a spirit as well as with a passion for mental liberty and a faculty for setting people to work in moral and philanthropic ways, he will probably succeed in welding the "conflicting elements" together into harmony of purpose and action, even though they cannot agree on any statement of faith, and have not yet put their corporate objects in any written constitution. WILLIAM J. POTTER.

SOCIALISM AND SOCIAL DEMOCRACY.

The late Prof. Adolf Held, of Bonn University, drew a line of distinction between socialism and social democracy.* The former he explained to be (and in this he may be regarded as representing the opinion of the younger school of German economists) not so much a definite system as a tendency of thought, according to which the interests of the individual should be subordinated to those of society. Its proper antithesis is individualism, according to which no restrictions are to be placed upon each one in the following of his own interests, since, in serving himself,—so the individualistic doctrine runs,—he cannot help serving others. But social democracy, the precursors of which were Marx, Lassalle, and Engel, with their keen though one-sided analysis and criticism of existing institutions, combines an *extreme form* of socialism with a tendency to political revolution. It would indeed allow private property in the necessaries of life, food, clothing, and shelter; but the land, buildings, machines, tools, and raw material used for productive purposes, it would have become not indeed common property, as many understand that phrase (that is, distributed among or owned by the laborers), but the property of the State. It is by no means that capital should be abolished, but simply that capital should be no longer

*In 1878 Prof. Held published a little volume under the title *Sozialismus, Sozialdemokratie, und Sozialpolitik*, from which the present writer's information is, for the most part, gained. He had earlier written on *Carey's Sozialwissenschaft und das Merkantilsystem*, Würzburg, 1865, and in 1876 published a *Grundriss für Vorlesungen über Nationalökonomie* for the use of his students at Bonn. In 1879, he was called to Berlin, but in the following summer met with his death by drowning in Lake Thun, Switzerland. From his literary remains has been gathered another volume of considerable interest, *Zwei Bücher aus der Sozialen Geschichte Englands*, Leipzig, 1881, tracing the economical history of England from 1760 to 1832. It is and must remain a fragment, though containing 778 pages.

Digitized by Google

owned by private individuals or corporations; that is, that capitalists should have their function absorbed by the State.

The idea of the social democrats is, of course, that a juster distribution of the product of labor would be obtained thereby than is possible under a *régime* like the present, in which each one gets not what he needs or ought to have, but what he *can*. They even push the doctrine that labor is the source of value to the extreme conclusion, that the entire product should be divided among the laborers, each one receiving what he reasonably needs. To accomplish such a reorganization of industry, nothing less than a revolution is necessary, though it need not be a violent revolution, since the laborers may form themselves into a political party and by means of the power which their ballots give them accomplish their ends. Such a party exists in Germany, and among its demands are the following: direct legislation by the people, decision on war and peace by the people, the arming of the people in opposition to a standing army, a progressive income tax, the fixing of a normal day's labor, government watchmen of mines and factories chosen by the laborers, the forbidding of the employment of children and women, regulation of prison labor. The social democrats do *not* propose to abolish marriage; and, according to Prof. Held, their newspapers take pains to exclude from their columns all accounts of sexual immorality.

Prof. Held, however, rejects the doctrine that labor is the sole cause of value, and regards the scheme of distributing the product to each according to his needs as impractical and visionary. Still, as a socialist,—for he was the first, he tells us, to accept the designation "Catheder-Socialist," or socialist of the chair, which had previously been given derisively,—he advocates the express abandoning of the ideal of the classical English economy; namely, of perfectly free competition and *laissez-faire*, as far as the State is concerned, and urges the policy which "radical toryism" adopted under Disraeli in England, of regarding it as one of the very functions of the State to protect and guard its weaker members. He would have factory laws adopted in favor of women and children, government care of the public health and inspection of buildings, and a government police to look after those industries in which employment is attended with danger. Thus, in certain respects, though from a less radical stand-point, he would agree with the demands of the social democrats. Further, in special branches of industry, where private capital poorly satisfies the needs of society, or perhaps wins a power which threatens the rightful sovereignty of the State, he would have the control taken out of private hands and assumed by the State. That is, there should not only be restrictions on the use of property, but limitations of the sphere in which private property may exist. Prof. Held mentions in this connection the railroads and the forests of a nation. And, thirdly, the State should encourage voluntary associations among laborers, such as trades-unions (*Gewerkvereine*) and co-operative organizations, endowing them with certain rights, and securing them in their possession. A proper apprentice-system should be instituted, contracts should be held binding, boards of arbitration and conciliation should be encouraged, a gradual elevation of the laboring classes, not by abolishing property, but by enabling a larger number to win property; and thus a continuous reducing of the proportions of the proletariat, that is become so threatening an element in the cities, should be the ends sought.

Prof. Held acknowledges that the German labor associations incline to strike hands with the social democratic party, and his only hope is in the elaboration of a genuine rational socialism among the aristocratic and middle classes. He asks, "Will the Reichstag, representing so largely as it does the middle class, allow itself to be surpassed in courage and unselfishness by the landed aristocracy of England, that is still so prominent in the English Parliament, and has made the whole series of reforms from 1832 down?" Prof. Held has much admiration for English institutions and the cautious yet sure manner in which in England changes are made to suit the needs of the changing times. Whether he is optimistic in his hopes for an ideal unselfishness among the ruling classes in Germany, I will not undertake to say; but it is impossible not to sympathize with the fervor and almost pleading tone in which his hopes are expressed. Not a radical, either in politics or economy, he yet represents that spirit and method which, if persistently followed, would come near to making radicalism unnecessary.

W. M. SALTER.

FACT AND FAITH: SELF AND SACRIFICE.

I.

Richter says of the joyous Greek hero in whom he delights, the Dian of *Titan*, that he had the rare and beautiful gift of being cheerful upon journeys ("Er hatte der schöne seltene Gabe auf Reisen froh zu sein").

One cannot help wishing that the citizen of the modern world, in some way, either by means of more scrutiny of his course, or less, could school his mind above dismalness as he journeys through this trying stage of civilization to the stage beyond. Those intellectual epicures whose culture and delight it is "to travel in the past" have their joy turned to bitterness when their consciousness recurs to their actual pilgrimage in the present. Too many of the rest of us also—we who do not take it for granted that we are necessarily the supreme flower of all civilization merely because we employ the service of steam and electricity and germ theories—are now jogging along with the unseeing majority, "von Stazion zu Stazion, mit der Schlafmütze unter dem Hute," yawning and grumbling as we go.

We find little help, if we are honest with ourselves, in the superannuated props and obsolete guides of the earlier traveller; and we face with apprehension that future which is dimly shaping itself in the midst of the present. In a moment of leisure and sympathetic study of other times, we may repeat the old charms, and receive in reverence the old tales of gods and men; but we mutter our shibboleths over and over with a nervous emphasis that forebodes the loosening grip of the mind upon them,—in spite of ourselves, we twist the empty words with new inflections and round the old stories with fresh morals. In vain we journey through the world with heads turned back over our shoulders. Only the outlook of the present belongs of right to those of the present. Human adaptation to the past is lost, it is gone with the shifting years; yet the last act of despair is still left us to perform,—to drop the straws which are not ours to cling to.

> "'Tis man's perdition to be safe
> When for the truth he ought to die."

We, who are the children of the present, must be loyal to her. We cannot shirk with impunity the responsibility of our birth nor disown our citizenship in this day and generation. Until we resolve to look forward through the stages of our advance, and take, meanwhile, some interest in our passage thither, we are losing all hold of reality, all chance of healthy development.

"I remember," says our revered Emerson, "an answer which, when quite young, I was prompted to make to a valued adviser who was wont to importune me with the dear old doctrines of the Church. On my saying, 'What have I to do with the sacredness of tradition, if I live wholly from within?' My friend suggested, 'But these impulses may be from below, not from above.' I replied, 'They do not seem to me to be such; but, if I am the Devil's child, I will live then from the Devil.'"

Scientific concern for bodily well-being, growing on still from the primal necessities of the animal-man, waxing constantly more intricate in its working, more important in its results, has, in our day, attained immense proportions. Its huge bulk, made up of all sciences, trades, and labors, as members of one colossal body, looms before us like a new Hercules, muscular, heroic, holding the world upon its shoulders. Though this monster be indeed as black as it is sometimes painted, still it holds control of our civilization; and we cannot escape its influence nor refuse it our practical allegiance. We know we do not. The most doleful mediæval pessimist or the strictest adherent of the early Church among us, while he mourns the inadequacy of modern civilization to inspire an art capable of naïve and masterly anachronisms, or to foster a faith that dares be reckless of the morrow, must at the same time avail himself of the inevitable fruits of this civilization,—fruits which are born of the human wants peculiar to this side of the grave, and careless of anything beyond it, and whose use and culture are more valuable and important to us, as the appropriate growth of our own prosaic garden, than any impossible fossil variety, however luscious to the eye of the restoring imagination.

Yet, though we may acknowledge that it is useless to cast reproach upon the methods or results of that contriving ingenuity whose direct unshamefaced aim is a manifold physical comfort, we must, most of us, confess how cravenly we fear the effect of this vigorous luxury on the mental and spiritual nature of man.

We call civilization, at its present pitch of development, materialistic; and most of us consider this a bad name. It implies, as we generally take it, that matter has not only grown important in the nineteenth century, but unduly important, and absolutely opposed to the spiritual. It is this definition of the word "materialism" which appalls us, this idea of the blighting influence of materialistic civilization on the subtle, bodiless powers that "make for righteousness," and inspire the beautiful, which benumbs our aspirations, kills our joy, and puts us in the position of homesick travellers in a land of tombs and ruins. Yet, in this position, we must acknowledge ourselves not altogether wretched; for even our discontent may serve to assure us that high desire is still warm within us, that our search in life is not for an inn which another age has built for our temporary shelter and comfort, but for that sure mental abiding-place which consists in an impelling faith and a work in which we can put our strength. Nothing short of this makes life worth living. From this, no fool's paradise can long distract our attention. Let us see, then, how this, our restless, uncheated desire, meets the circumstances of modern life.

The growth and spread of knowledge and the complexity of its applications, the increase of wealth and the functions of wealth, their effects on man, and through him on his religion, his literature, his art, at first sight seem to make any high simplicity or singleness of aim in mental or moral life impossible. For the simpler citizen of the earlier age, whose own country was the world, whose own language and literature was the only

Digitized by Google

source of education, whose past was unexplored and lovely in the mist of a half-guessed mythology,—for him, it might be easy to believe as a little child, to grasp the condition of his time, to understand its needs and work for their attainment with the freshness of a sturdy body ignorant of modern comfort, and the fervor of an honest mind untrammelled by the weight of past experience and scientific conclusions. For the cosmopolitan scholar of to-day, who stretches out his hesitating hands toward the rich stores of knowledge that all the times and minds that have been have amassed, the only chance of mental health and useful labor as well as of personal thrift and social prosperity is to choose from the bulk of knowledge some specialty of work adapted to his powers, and elaborate it to the last technical detail. Nor only this: he must test his labor by the touchstone of practicality, he must translate his supreme thought into the common language and receive his compensation in the common coin. But progress in mental life has not become impossible, because its scope is wider. It has become more difficult. Thoughts are taken, like vegetables, to market; but the money they earn is, after all, only the symbol of success. The spiritual effects for which success stands cannot be readily measured. It is true the abstract idea loses its ideal perfection in the process of being adapted to common use and made manifest to the multitude. The power of alchemy is more precious than its results. Still, these outward materializations must ever be the aim of the subtler inward potency, their market value the evident measure of its worth.

The treasures of knowledge are unfolded by the scientific methods of special study, technical work, and practical application. In the same way must the development of the moral idea be attained,—by the action of the separate divination powers of the individual. Each one must do his own work: he must also see his own visions. Of what avail would it be for him to do or to see anything else? So, also, the sanction of his faith must lie in its every-day value, in its fitness for his own condition and circumstances. The mystic's life, spent in poverty and seclusion, in caring nothing for the things of the morrow, in receiving injustice without a protest, in giving to the robber of a cloak the coat also, if through any inadvertence he had before neglected to take it,—picturesque and beautiful as this life seems, it has become in every particular irreconcilable with the modern idea of insistence on the sacredness of individual rights, the sterility of any success but that proceeding from self, inconsistent with the demands of personal progress which render the receipt of alms worse than useless, and poverty of purse or spirit to the last degree undesirable. Yet as all kinds of special investigation must tend to help each other, must, in their very nature, be partial, temporary, and subsidiary to unconjectured future results, so all the separate and different manifestations of the divine must find essential points in common, must continue to supply finer inspiration and strength for new and different needs. The union of the radical points of faith among men may constitute a growing, illimitable religion, fettered by no past, though issuant from it, on a level with the highest yearnings or capable of pettiest service to the lowest personality.

There have been frequent and striking examples during recent times that the complex divisions of labor, now necessary, have been counterbalanced by a sequent union of interests, by the common support and brotherly interdependence of all the branches of knowledge. Agriculture, manufacture, and the applied sciences,—geology and chemistry, for instance,—commerce and trade, and certain speculative sciences, as political economy and sociology, have had much to say to each other that has been of surprising mutual benefit. Literature has discovered new topics, and treated them in novel ways. Music and art have found unusual but not unfitting themes in alien fields. In this way, a certain balance has been struck between the necessity of personal and special development on the one hand and social progress on the other, between the breaking up of human life into countless labors and the gathering into one pattern of every thread of the vast web of work. A like balance between the separate spiritual needs of the individual and the higher destiny of his race may determine with absolute justice the relation which the organized bodies of belief and the disorganizing influences of criticism and doubt bear to the yet irrepressible and restless search after the unknown good.

Thought, though diverging in a thousand wide directions, must be still richer and fuller at the point of focus. Religion, though it take cognizance under modern definitions of more phases of faith and unfaith than may be summed up in all the old creeds put together, cannot in essence vanish from the world.

CHARLOTTE PORTER.

WEALTH AND POVERTY.

In view of current social phenomena, observers are anxiously asking the question, Must the growth of a community in wealth, population, and mechanical contrivances for saving labor, in science, art, and literature, and in material power and splendor of all kinds, always be accompanied by the dark shadow of a correspondingly increasing poverty and crime? Must a multiplying wealthy class always be offset by a multiplying poor and dangerous class? Once we had no gigantic cities with long streets and avenues of palatial residences, the abodes of business prosperity. But neither had we at the period in question any need of gigantic and costly prisons and almshouses and reformatories such as now cast their gloomy shadows over our soil. Once there were few millionnaires among us, but at the same time there was no squalid poverty; but there was a comfortably situated average population, tilling their own acres and engaged in mechanical employments on their own private account. But we have changed all that. With increase of wealth and knowledge and mechanical power has come increase of poverty and crime. In the language of the author of *Progress and Poverty*, "the 'tramp' comes with the locomotive; and almshouses and prisons are as surely the marks of 'material progress' as are costly dwellings, rich warehouses, and magnificent churches. Upon streets lighted with gas and patrolled by uniformed policemen, beggars wait for the passer-by; and in the shadow of college and library and museum are gathering the more hideous Huns and fiercer Vandals of whom Macaulay prophesied." It is now seen and felt that political equality, from which so much was expected at the close of the eighteenth century, cannot prevent the growth of a social inequality as glaring and dangerous as ever was known under the most despotic personal sway. In point of fact, unless the citizen of a republic or popular government is both intelligent and moderately well-to-do, he can have no personal independence. He is ready to sell his vote to any wealthy candidate for office who offers to purchase it. The French Republic to-day, with its boasted "liberty, fraternity, and equality," is ruined by a multitudinous poverty, by legions of self-styled anarchists, who are eager to "wipe out" the classes above them, and to make a *tabula rasa* of society. A fiercer struggle between the rich and the poor seems to be impending in modern Europe than that which constantly raged in the ancient republics of Greece and Rome, until they were finally destroyed.

The great imperative social problem of the day is how to attain to an equitable distribution of property and of the constantly increasing product of human labor. The production of wealth now is on such a gigantic scale as renders the product of any past age trivial and of no account in comparison. Why should not this enormous and constantly augmenting production inure to the mass of the people, so as to place all in good circumstances instead of outrageously enriching the few? Why have we Vanderbilts and other personal financial monstrosities of that sort? Christianity, if it is anything definite, is at its very core a communistic religion, which always has bidden its wealthy adherents to divide their goods with their poor or poorer fellow religionists. In fact, genuine, unecclesiastical Christianity has always taught the necessity of an equitable distribution and sharing of what in Christian parlance are called "worldly goods." But the Christianity of the various Churches has been perverted into an aristocratic faith, promotive of social and political inequality as well as of theological hatred and bitterness. Pauline Christianity was, down to the middle of this century, a bulwark of slavery, and used as a shield by the slaveholders of our own Southern States. Meantime, the communisms and socialisms and Nihilisms which are menacing most of the European governments are undoubtedly latent in the *logia*, or genuine utterances and teachings, of the founder of Christianity. So that the revolution and the revolutionary classes in Europe are more Christian in reality than are the established Churches and priesthoods. Meantime, in the world of to-day, it is useless to eulogize poverty or to preach a religion of poverty, such as primitive Christianity was, which originated in a soft climate that required little or no provision for the morrow. Modern science and invention have subjected nature and the forces and riches of nature to the will of man to such an extent as to make it possible to eradicate poverty, and inaugurate an era of intelligence and comfort and material well-being for all men. There is no doubt of that. How much longer, then, shall we have the spectacle of a pampered, needlessly rich class on the one hand and an outrageously poor, brutal, and criminal class on the other, marring the social aspect even of the foremost countries in the area of civilization? The endless feuds of patricians and plebeians in the ancient democracies, which were really no democracies at all in the modern sense of the word, finally wrought their ruin. But the democracies of to-day, particularly our own American democracy, has no business to be the nursery of such glaring, social inequalities as are even now cropping out everywhere within our borders. To be truly self-governing, a people must be both intelligent and well-to-do. Populations who have never known any other condition than one of poverty and ignorance need to pass a long novitiate to be fitted for institutions like ours. It is Europe which embarrasses us, and keeps us from rapidly reaching an ideal democratic condition.

B. W. BALL.

IT must have given "the Pope of Rome" a little salutary start on being served recently with a legal summons to pay taxes on one of his estates, the summons commencing thus: "'To Citizen Joachim Pecci, by trade or profession, Pope; conducting business (also residing) at the Vatican Palace, Rome.' His Holiness paid the taxes; and in due time a receipt was returned, beginning, 'Received of Citizen Joachim Pecci.'"

NOTES FROM THE FIELD.

During the debate at Mechanicsburg, Ohio, mentioned in a previous letter, evolution was referred to frequently; but, since there was no time to advance evidence in its support or even to state the theory with fulness, there was a strong desire to hear a lecture or two on the subject. And by the request of several prominent citizens, among whom were gentlemen who had arranged for the debate in behalf of our opponent, we spoke two evenings in exposition and defence of Evolution. There was marked interest in the subject; and, at the close of the lectures, a number of persons inquired about books to which we had referred, and said arrangements would be made next season for a full course of lectures on the subject. More than a dozen in attendance, including some of the most intelligent ladies of the community, became subscribers to *The Index*. This was gratifying, since Mechanicsville, which is situated on a part of the Virginia Military Reservation, settled largely by Virginians to whom claims were sold, is an extremely orthodox town, and since arrangements for the debate had been made by Mr. Carleton's request (no pronounced free thinkers having been consulted), with the expectation that Universalism would have the prestige and advantage of a great controversial triumph. He had given his friends and the people of the community generally to understand that he anticipated easy work in disposing of "infidel" arguments and objections. Had he not been a debater nearly half a century, and had he not vanquished scores of orthodox opponents! He did not realize that he was entirely unacquainted with the results of the study and research of the last twenty-five years, and that his main positions had been utterly abandoned by the representative thinkers of the religious world. But few orthodox ministers we have met in discussion the past fifteen years have done worse in debate than Mr. Carleton, who, although personally a pleasant gentleman, is a theological fossil, of no possible use now in the world of thought, further than to show what once satisfied a liberal sect of Christians, who did good and brave work in past generations.

On our way West, we stopped at Indianapolis. In that city, a large number of the leading men are free thinkers; but they are without organization or general desire for any, the opinion prevailing that such organization is liable at the present time to result in more harm than good. The press of Indianapolis is rather liberal. Two distinctively free-thought papers are published there now,—the *Age* (formerly the *Seymour Times*), edited by Dr. J. R. Monroe, and the *Iconoclast*, started about a year ago by Mr. W. H. Lamaster, and now under the joint editorship of himself and Mr. W. F. Jamieson. The *Age* is well established, and has quite a large circulation. With the *Iconoclast*, existence is yet a struggle, as it necessarily is with all young liberal journals. Dr. Monroe is a poet and a wit; and his paper is unique in its criticism of theology, and its statements of the editor's views on current events, which show independence of thought and sprightliness of style. On questions involving great social and moral interests he takes high ground, and is pretty sure to say the right word in the right place and at the right time.

In Chicago, we learned that the Philosophical Society is in a prosperous condition, and is having a course of interesting lectures this season. "The Society for Ethical Culture of Chicago," of which Hon. Henry Booth is President, and Dr. A. B. Hosmer is Secretary, at a recent meeting decided to arrange a series of six to eight lectures, to be delivered under the auspices of the society on Sunday afternoons between January 7 and June 10, 1883. We have invitations to address both the societies above named, and hope to be able to do so before we return East.

Mr. Schumm, one of the editors of the *Alliance*, is working hard to make that paper a success. He is a young man of ability and promise. For a short time, he was proprietor and editor of a journal published at Madison, Wis., the *Radical Review*, which was one of the best little free-thought sheets that have appeared in the West. Col. Bundy, of the *Religio-Philosophical Journal*, is in improved health, and making it hot for those who attempt to practise fraud in the name of Spiritualism, and to advocate all sorts of vagaries as a part of its philosophy.

Milwaukee is rather a cosmopolitan and liberal city. The German element, as is well known, is large; and its leading representatives are broad, progressive men. The English and German dailies keep in advance of the popular sentiment. Their reports of our lecture in that city last Sunday were fair and quite full. The subject of church taxation has been fully discussed in the papers, and is a question of considerable interest among the people. The opposition of the Catholics to church taxation is strong and bitter. Some of the Protestant churches are in favor of the reform. Mr. Bate, who has been a member of the Legislature of Wisconsin, has done gallant service in the cause of State secularization; while Mr. R. C. Spencer, as a private citizen, has done more to bring this subject before the people than any other man or dozen men in the State.

Milwaukee has two or three liberal societies; but they are not strong, and the Liberals of the city generally do not appear to feel much interest in them. The German Free Thought Society is probably the largest and best sustained. The *Freidenker*, the leading German free-thought paper of this country, is published there; and it has a circulation in every State of the Union. The lecture we gave in that city was well attended. By invitation, Mr. J. L. Dudley, who spoke a year or two in Boston for the Parker Memorial Society, and Mr. McAllister, the Superintendent of Schools, made interesting remarks at the close of the discourse. This letter is written hurriedly at Paxton, Ill., where we are giving a course of lectures. To all the readers of *The Index*, a *Happy New Year!*

B. F. UNDERWOOD.

EDITORIAL NOTES.

THE *Presbyterian* deplores the fact that thirteen new theatres and only two churches have been built in Berlin the past ten years.

THERE is a wood-cut in a Roman Catholic weekly already referred to in these columns, *Le Pèlerin*, representing a young lady coming to the gates of hell, and saying that she is a high-school girl, *fille des lycées*. The devil bows her in, exclaiming, "Oh, yes! a reserved seat."

COMMENTING on a remark of Joseph Cook, that the world is "coming back" to scientific naturalism, the Cincinnati *Commercial* asks, "In what age of the world did scientific naturalism prevail, and what does he mean by it, anyhow?" It is doubtful whether the meaning of some of Mr. Cook's incontrovertible propositions is entirely clear to himself.

THE observance of a Sabbath is not enjoined in the New Testament, nor did the early Christians consider it necessary. Justin Martyr, in discussing the Sabbath question with a learned Jew, wrote, "For as circumcision began from Abraham, and *Sabbaths and sacrifices and oblations from* Moses, it has been shown, were ordered on account of the hardness of heart of your people, so it was necessary these should end, according to the counsel of the Father, in Jesus Christ, the Son of God."

YOUNG men are apt to become enthusiastic when they have taken in some great truth which is soon to become concrete in the every-day life of the world; and they sometimes think that the truth must fail if they withhold active efforts in its support, which they imagine they can give or not as they choose. This delusion has a generous and noble side; but, to use an old Greek phrase, "the gods play with loaded dice," or, in the language of to-day, "the nature of things" is always a success. Our efforts are determined by antecedents, and are but one of Nature's factors, a part of her machinery.

THE Cincinnati *Commercial*, mentioning the fact that a century has passed since the first English Bible, printed in America, was sent out from the printing-house of Robert Aiken, in Philadelphia, and the first vessel of war built by the government of the United States was launched from the Portsmouth Navy Yard, remarks that the Bible "has multiplied more than the navy since then, possibly without costing as much; but whether it has been more potent in preserving peace and good-will among men is, considering the numerous and bloody wars which have affrighted the nations, a question at least open to discussion."

THIS from the *Independent* is a specimen of the manner in which so-called orthodox journals now accept the theory of evolution: ... "If the old notion that the world is but six thousand years old found any defenders in these days, it would find itself confronted by the floral evolutionists in many ways. These believe that the bright colors of flowers are of comparatively modern origin,—that flowers were originally yellow or green. Flowers in gardens, preserved in Egyptian tombs, dating from 1100 or 1200 B.C., are found to have been in every way as bright as the flowers of our time; and this would involve a very rapid advance in the first, and a standstill during the last half of the period."

THE following is from a revised edition of McGuffey's *Eclectic Second Reader*, published by Smith & Co., Cincinnati, 1853:—

> Six thousand years ago there was no pleasant earth, and then the bright sun was not made. But the Great God lived then, and there never was a time when he did not live. When the time came that the Creator was pleased to make this world, he made it all out of nothing. When our world was first created, it had nothing beautiful upon it, but it was all dark and empty. When God wanted light, he said, "Let there be light"; and there was light. God made the air that spreads all around our earth. He made the grass to grow, the lovely flowers, the useful herbs, and all the trees that bear delicious fruit. After all these things were made, the earth was silent as the grave. There were no cattle to eat the grass, or birds or the smallest insects to fly through the air. When the fourth came, he made the glorious sun to shine by day, and the moon and stars to shine by night.

IN the preface to the seventh American edition of her *Duties of Women*, Frances Power Cobbe says, apropos of the new English "Married Women's Bill": "I believe that, as the conditions of freedom are secured, so will marriage become to the bulk of mankind the blessed thing which the Orderer of nature assuredly meant it to be. The possession of unrighteous power has hitherto been the demoralization of husbands, and submission to injustice the demoralization of wives. Only because men are better than their laws, and public opinion far in advance of the statute-book, have

Digitized by Google

there existed so many affectionate and worthy marriages as we behold. The whole influence of law has been against them. Every step toward equality in marriage is a step toward the mutual honor of husband and wife, and on no other foundation save the 'broad stone of honor' can conjugal love ever erect his time-defying towers."

HERE is Mr. Ruskin's picture of civilization: "A 'civilized nation' in modern Europe consists, in broad terms, of a mass of half-taught, discontented, and mostly penniless populace, calling itself the people; of a thing which it calls a government, meaning an apparatus for collecting and spending money; and a small number of capitalists, many of them rogues, and most of them stupid persons who have no idea of any object of human existence other than money-making, gambling, or champagne-bibbing; a certain quantity of literary men, saying anything they can get paid to say; of clergymen, saying anything they have been taught to say; of natural philosophers, saying anything that comes into their heads; and of nobility, saying nothing at all,—combine in disguising the action and perfecting the disorganization of the mass. But, with respect to practical business, the civilized nation consists broadly of a mob, money-collecting machine, and capitalist."

IT is not perhaps too late to call the attention of our readers to an unusually sensible treatment of the causes and remedies of the social evil, by Mrs. K. Gannett Wells, in the July *Unitarian Review*, under the title "Personal Influence a Preventive." The article has been reprinted by G. H Ellis, at the suggestion of the Moral Education Society of Boston. Mrs. Wells remarks that "there are thousands of women, in and around New York, who do not receive over two dollars a week; and the temptations induced by such wages are tremendous." And she does not omit to draw the moral as to the duty of employers to pay better wages. Instruction as to the relations of the sexes should be given at *home*, and not left altogether with the mothers, who cannot speak with the plainness nor with the weight of authority which fathers can have. Moreover, "gentlemen," on whom however slight a suspicion rests, should not be received into society. The article is replete with sound sense and practical suggestion.

THE *Catholic Review* has the following: "During the past two or three years, vast sums of money have been sent from this country to Ireland, much of it for pure charity to save a starving people whom the government that brought starvation upon them allowed to starve; much, also, to support an agitation among the Irish people for the removal of their political disabilities. As far as the money that was sent in charity went, it seems to have reached its destination, and to have done the work for which it was intended. Not a little good was effected also by the political agitation; but, from all accounts, it is to be feared that much of the money collected and sent to Ireland for this purpose found its way into the pockets of worthless and shameless adventurers. We say, in all good faith and on our conscience, it is time to stop contributions for purely political purposes in Ireland until at least the atmosphere clears a little, and it is seen what has been done, item by item, with the vast sums contributed to and for Irish political agencies."

THE late Francis G. Shaw was early attracted to the writings of Fourier, and translated in 1848 Pellerin's *Life of Fourier*. Notwithstanding the failure of the Fourieristic experiments in this country, he did not lose his conviction of the real existence of a social problem or of the possibility of its solution; and when, but a few years before his death, Henry George's *Progress and Poverty* appeared, he gave it a hearty and substantial welcome. Some thousand copies were distributed by him among the libraries of the villages and smaller towns of the United States; and a brief and popular statement (in the form of a dialogue) of Mr. George's views, made by him, has been scattered broadcast over Great Britain by the publishers of the book and other agencies. His daughter, Mrs. Gen. Charles R. Lowell, is well known as a member of the New York State Board of Charities, and is a prime mover in the Charity Organization Society now being formed in New York city. Another daughter married Gen. Francis C. Barlow; another, Geo. William Curtis; and still another, Robert B. Minturn.

"IS IT not almost time," asks the *Christian Register*, "to leave off quoting Napoleon in proof of the Deity of Christ? We observe that Dr. Storrs has referred to Napoleon as authority for that doctrine: 'Napoleon, on the Island of St. Helena, said, "Jesus was God!"' But Jesus himself said, 'My Father is greater than I'; and Paul said, 'To us there is but one God, the Father.' On the other hand, Napoleon and Charles H. Dana, those two eminent theologians, hold to the opposite opinion. Perhaps it is best to go to head-quarters for our belief. Such repeated appeals to Napoleon on such a subject might suggest that our friends do not find much evidence in the Bible to support the doctrine in question. Napoleon's opinion in regard to a point of military strategy would have great weight; but how much had he searched the Scriptures in regard to theological matters?" This is well said; but, going further, we will add that the doctrine of "the Deity of Christ" is so great an absurdity that the enlightened and untrammelled reason of man would reject it, even though it were taught by Jesus himself and defended by every writer of the New Testament.

Roman Catholicism, when it triumphed in Spain, drove from Spanish soil the most valuable part of the population,—the Moriscoes, a remnant of the people that had made Spain illustrious in preceding centuries. This monstrous wrong, the expulsion of about a million people from their native land, was urged on and compelled by Spanish priests. "When they were thrust out of Spain," says Buckle, "there was no one to fill their places; arts and manufactures either degenerated or were entirely lost, and immense regions of arable land were left uncultivated; . . . whole districts were suddenly deserted, and down to the present day have never been repeopled. These solitudes gave refuge to smugglers and brigands, who succeeded the industrious inhabitants formerly occupying them; and it is said that from the expulsion of the Moriscoes is to be dated the existence of those organized bands of robbers, which after this period became the scourge of Spain, and which no subsequent government has been able entirely to extirpate." (*Hist. Civilization*, vol. ii., p. 53.) The expulsion of the Jews from Spain, who next to the Moriscoes were the best part of the population, still further contributed to the downfall of that priest-ridden country.

AMERICAN freedom tends to make its subjects intelligent, self-helpful, energetic, and full of initiative; and it lifts the "average man" to a plane of comfort and luxury even. It makes him a sovereign, and thus places him in strong contrast with the "average man" of the Old World as he appears on his arrival at Castle Garden with the marks on his person of ages of social and political inferiority. Whatever may be the fortunes of the human race, the outlook for the "average man" is brightest here on this continent. But there is no prosperity without toil, self denial, and a wise foresight. "Let mankind last as long as it will," says Goethe, "it will never lack obstacles to give it trouble, and never lack the presence of necessity to develop its powers." It is the growing struggle of personal will with "fate" which develops sterling character and ability. We need not expect in this country in the future uninterrupted fair weather. Indeed, this republic has had from the start an almost continuous struggle for existence. At times, this struggle has taken on dimensions of a terrible life-and-death conflict raging with unsurpassed fury. But the republic has always emerged triumphant and with added vigor and glory. Freedom is no "fair young girl, with light and delicate limbs."

"A bearded man,
Armed to the teeth, art thou: one mailèd hand
Grasps the broad shield, and one the sword; thy brow,
Glorious in beauty though it be, is scarred
With tokens of old wars; thy massive limbs
Are strong with struggling."

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index*.

THE BUILDING OF THE TEMPLE.

A Hope and a Prophecy.

Lay we foundations wide and deep;
Build we our Temple strong and sure;
Gaze far adown the ages' steep;
Think how its beauties will endure!

Glad mark we, through earth's shadow cast,
The Temple planned in grief and tears;
Long looked for, in the darkened past;
The hope of all the coming years!

How build we through these toilful days?
What noble purpose urges on?
Here picture we our own rough ways:
Here paint what comes when we have gone.

Hope, Reason, Charity, and Faith,
Our Temple's basic stones shall serve:
Nor shall they shield the bigot's wraith,
Nor may they from Truth's centre swerve.

Reason, to point the straighter way;
Faith, to believe its ending bright;
Reason, to guide us through the day;
Faith, to illume the darkest night;

Hope, for the future of our race;
And Charity for those who fall,—
These guard our Temple's every place;
With these, its weakness is its wall!

We build upon foundations deep,
We raise our altars, firm in trust
That they will still their stations keep
When we have mouldered into dust!

Or ever, at the inmost shrine,
Some worshippers are fain to pray,
While others humbly grope and pine
For an unmarked, secluded way,—

Still hold they, though they differ much,
To these great truths which shape all creeds:
"E'en man the ark of God may touch:
Professions win not more than deeds.

"Who wills may hold within his breast
The essence of the Life Divine;
Not future hours—*to-day* is blest:
God's heaven even now is thine!

"Scorn not the man who walks apart:
Take, if thou wilt, the broader way.
He may be one with thee in heart,
May soonest reach the perfect day!"

Laid we foundations wide and deep,
Built we our Temple strong and sure,—
Gaze far adown the ages' steep—
See how its beauties yet endure!

No doubtful purpose does it own;
No humbling creed its friends profess;
It is not swayed by earthly throne:
Its only mission is to bless!

Its harmonies, all nature's tones;
Its incense, raptures of the mind;
Its votive offerings, bread, not stones;
Its worshippers, all human kind!

WALTER L. SAWYER.

The Index.

BOSTON, DEC. 28, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

II.

For *The Index.*

NO SUPERSENSIBLE MATTER.

BY WILLIAM I. GILL.

Experience our Base, and All Postulates discarded.

Perhaps it will prevent some misapprehension if I pause here to say that I make no assumptions or postulates, only that science has already clearly and abundantly proved that all sensible phenomena are subjective states. If this has not been done, my foundation is imperfect; but I can make it good, if necessary. I resort to no transcendental metaphysical principles to start with or to cover my track anywhere. Experience, and the logical implications of experience, are the beginning, middle, and end of my philosophy; and the experience must be scientifically sifted and rectified. We are told that "it is the favorite *postulate* of the idealist that matter—the external universe—is an *illusion*, a subjective creation of the mind: it possesses no *objective reality*." As a description of my method, this would be very erroneous. I hold that the material universe is egoistic; but I do not *postulate* that, but verify it scientifically as an experience, or assume that it has been done by others. I do not, however, affirm that this universe is an *illusion*, without *objective reality*,—just the contrary. *I know it as real, because I know it as an experienced fact*, and an objective reality, because external to my organism and an object of knowledge or experience; and, if ever we are the subjects of illusion, that is only through a false inference from a real experience.

The World known to Different Men is a Different World.

As a subjective state, however real and objective as well as subjective, the same thing, whether it be a mouse or a world, can never be known to more than one person,—its affected or experiencing subject. Hence there must be as many worlds of the same kind as there are world-sensations and subjects thereof of the same kind, and it is utterly erroneous to say that "the appearance is essentially identical to different persons." That is one of the certain impossibilities, because it is self-contradictory. The appearances to different persons may be alike or similar, but even that we can never directly know. We can only infer it, as we do on the basis of a natural and spontaneous system of symbolism, which I propose hereafter to explain.

Self-consciousness no Proof of non-Ego.

I call attention to an important distinction often overlooked, that between conception and experience. On this confusion, we are often told that self implies a not-self, and that neither can be known without the other. I allow that neither can be *conceived* without the other, because they are logical counterparts. But that proves nothing concerning experience and non-egoistic reality. That we can or must conceive a thing is no proof of experience or reality. Such a supposition would prove too much by involving us in endless absurdities. Therefore, self-consciousness and the conception of a *non-ego* are no proof of the existence of the *non-ego*. We must find some other proof than this.

If Matter is Supersensible, our Real Organism is Unknown.

As all sensible things are egoistic, it follows, of course, that, if there is any non-egoistic matter, it must be supersensible. Some objections to the unrecognized yet tacitly prevailing theory, that matter and all the material universe are supersensible, I propose now to mention. In stating the theory, I am impressed with its intellectual repulsiveness as a whole; but this impression will become deeper and more distinct in proportion as it is contemplated in detail. If we look at it relative, for instance, to our organism, it becomes ludicrous. It implies that my own body is always entirely unknown to me. As there is a sensible world external to my organism and its supersensible counterpart, so there is a sensible object called my body, which is not my body, but my mind; and it has its supersensible counterpart, which is my real body, and which is unknown and inconceivable, except as a thing conjectured or inferred as being someway the cause of the sensations which constitute my phantom body. Here, as everywhere, the theory makes the experiential to be the unreal and the metempirical to be the real, and makes the material to be supersensible and the immaterial to be sensible, contrary to all the wonted judgments of mankind, popular or philosophical.

That makes our Real Bodies non-Ego and Dual.

As the sensible world is *ego* and the supersensible world *non-ego*, so my sensible organism is *ego*, and the real organism which it represents is *non-ego*.

Every man not blind has two sensible organisms,—the visible and the tangible,—which have no unity except in the conscious subject, of which they are simply two complex sensations utterly unlike each other. According to the theory in question, each of these organisms must be the representative of a distinct supersensible, non-egoistic organism. There may be dualists who may be pleased with even this, as there never was an unfortunate intellectual waif found adrift upon the world but some one was ready to give it a hospitable reception.

It gives a Double twice over to All Things.

It follows that every sensible object is of two sensible forms to all men who are not blind; and that, corresponding to each of these, there is a supersensible body. This pen, this paper, this flowing ink, *as seen and as felt*, are each dual; and each has two supersensible counterparts, which are the real pens, the real papers, and the real inks. Thus, all things are quadruple,—double as sensible, and again double as supersensible. Such a philosophy reminds us of Tam O'Shanter's vain attempt to count the horns of the moon, as he could not be sure whether they were six or seven.

Its False Hetiology.

Such a theory refutes itself as soon as it is stated with any degree of clearness and fulness, so that an adequate conception of its import is proximately attained. And, as it is constructed of opposing elements, it can make but a poor showing in the formation and support of its outward defences. When we demand the evidence of the existence of this supersensible matter, and inquire as to what necessary purpose it serves, it gives us a verbal answer which is a mental blank. To the apparently intelligible plea that it must be inferred as the necessary cause and explanation of sensible phenomena, there are several answers.

In the first place, the plea is based on a method which is not justified by what in these days has received the name of "science." All strict science of modern times treats only of phenomenal causes and effects, antecedent and subsequent phenomena lexically related to each other. It is purely by this method that all the sciences, from physics to psychics, have made all their conquests. And it will be so forever. We can never investigate and discuss the unphenomenal, because it is without any qualitative marks, and all our terms are void of meaning; and the alleged supersensible world in question is of this class.

If we attempt to rise from science to philosophy, and seek an explanation of phenomena in a cause which lies back of them, the right to this may be conceded; but we must see to it that it accord with science and that the mental process be a real one, and not merely verbal, which is the character of the process in question. According to all objective evolutionists, sensible experience is the source of all real mental forms, and all are traceable back to sensible experience. But that is clearly impossible concerning supersensible matter. It is not only unsupported by experience, but it is opposed to experience, since all experience is phenomenal, conscious; while that is neither, and never can be. The final reply of the objective evolutionist is that this inference is an intellectual necessity, that all experience leads up through a narrow gateway to a transcendent reality which is knowable and conceivable only as cause and fount of the known. This example, of course, is not that which alone is recognized in science, an experiential antecedent. It is a cause which was precedent of all experience, and is now concomitant with all. Thus, it is always the same infinite causation, without change even in mode; for it has no modes, modes belonging only to its effects. And so there is no conceivable reason for the variety of its causal action, that reason being found in its effects in the uniform antecedent of other phenomena. It ultimates in self-contradiction and the abdication of ultimate philosophy in the attempt to establish such a philosophy. Its agnosticism is here sufficiently obvious.

But that is not all. The theory cannot be permitted the poor privilege of creeping mortally wounded within the veil of ultimate mystery, the last refuge of all craft and mental impotence. This ultimate refuge of the unknowable is absolutely one and unvarious, without any possible distinctions of mode or form or condition. But this is utterly inapplicable to the question at issue. Here, we are criticising a theory of supersensible matter, matter which is alleged to exist in countless various forms or modes answering to the infinitely multifarious forms of the sensible world; and these supersensible material forms are supposed to be temporal, and their duration commensurate with their sensible representatives. These are not therefore to be identified with the great only One, the absolute undifferentiated unknowable; and from this they can find no countenance or explanation. They have no support from either science or philosophy. They are metempirical, intrinsically inconceivable, and utterly incapable of explaining the phenomena of sense; while their alleged existence and action furnish new elements and a new complication (verbally, at least), which demand further explanation as to whence they came and what is the law of their operation, and their relation to the One unknown and the known many or sensible things, and they can explain nothing.

Its Various Inconsistency.

By way of carrying this theory still nearer to an ultimate and all-sided analysis, I would now ask its abettors whether they consider their supersensible matter to be spacial or non-spacial. I see not how it can be spacial or extended, since it has no points of difference or distinction, being unphenomenal; yet it were a singular matter that were unextended, since extension has always been considered its most characteristic quality. On the other hand, since it is supposed to be specially related in its parts and forms to the parts and forms of the sensible world, it must be supposed to be extended. Hence, we have two classes of extended things or matter (besides pure space itself), the sensible and supersensible; and they are supposed to be coextensive. The theory affirms that, wherever there is an external or sensible phenomenon "*there*," there is a supersensible material thing as its cause and explanation, and of which it is the representation. But this again is nullified by the doctrine in which all parties agree, though blindly, that all phenomena are *ego*. For, according to that doctrine, "here" and "there" and all local or spacial designations in the known universe are of the *ego* and within the *ego*. Hence, it makes all the forms of this same supersensible matter, though non-egoistic, to be entirely within the bounds of the *ego*, so that it is conceived of as existing only where the *ego* is, and it is indiscriminable from the *ego*, and we are logically compelled to identify it with the *ego*; and, as all spacial discriminations are of the *ego*, to apply these discrimi-

Digitized by Google

nations to it is to make it sensible and *to identify* it with the sensible. Thus, the theory is again self-destroyed, and its verbal dualism is metamorphosed into a pure senseism, or *into* Philosophical Realism which makes the permanent cause and substantive base and background of all phenomena to be the known *ego*, which is known in consciousness as both sensible and supersensible. This subjective ground and cause is complete, consistent, and self-sufficient. It leaves no unexplored or unexplained remainder, no relation which it does not so far find in itself in the comparative forces and distinctions of its own qualities.

This leads me to observe that, if force is demanded as the correlate of these phenomena, that force need not be non-egoistic force, and ought not to be. As all being is force, the *ego* is force. It is this force which evolves all the phenomena of consciousness, and it constitutes their ultimate and all-sufficient explanation. On this score, therefore, we are prohibited from passing beyond self. Thus far, we have come by clear logical necessity; and here at the same time ends the possibility of further progress and the intellectual motive to attempt it, because here all logical avenues are now closed up and every logical question is logically answered.

Its Intrinsic Improbability.

Another aspect of the doctrine of supersensible matter impresses us with a sense of its intrinsic improbability, if not absurdity. In affirming that the sensible world is only a seeming world and that the real material world is supersensible, it implies that the real light and colors are dark and invisible, that the real heat and cold are neither one nor the other, that the real odors are odorless, that all real tastes are tasteless, that all the real hardness and softness and other allied qualities are utterly other and different from what they are described and designated, and that even the real extension is unextended. Thus, all our language, with all the thinking it implies, is entirely false. We have a system of simulacra which are the opposite of the things they simulate. The lamp and its light, so called, it is allowed are simply sensations; but it is said there are a real lamp and light, which are dark and invisible, and the cause of the phenomenal lamp and light. Of this, science knows nothing; for its causes of the known light and lamp are other phenomenal antecedents, all of which are modes of the *ego* or sensations, and philosophy can find a possibly sufficient cause of phenomena in their subject, so that to go further is inadmissible, because so much is necessary and no more.

Supposed Possibility as an Argument.

'Tis said a drowning man will catch at straws; and the baffled dualist, persistent in his faith, catches at a supposed possibility, and on this he suspends his material worlds. He asks, as if that were enough for his faith, whether it is not possible for the sensible and supersensible to coexist in such relation to each other, and yet be numerically different. Allowing the possibility, that is no proof whatever to a logical or scientific mind. It is possible for the story of Bluebeard to be true, and no one can prove the abstract impossibility of the existence of centaurs, hippogriffs, and flying dragons; and, on this ground, these fantasies and the old dualism are worthy of equal credit with the theory in question.

But the possibility of the truth of such a theory cannot be allowed, because of its intrinsic inconsistencies. On the theory of a non-egoistic matter and space, sensible or supersensible, there can never be a notion of motion or rest, or here or there, a whole or part or division which does not involve insoluble contradictions. It is impossible for any theory to be true which does not reconcile all facts in a logical unity of conception. This unity, the simplest possible, is found in Philosophical Realism, which drops the supersensible matter as unsupported by experience and contradicted by logic, and explains known phenomena by referring them solely to the known *ego* as their subject, substance, and cause. This is a logical possibility and necessity, and neither can be said of any form of dualism yet invented.

Dualistic Vacillation.

Philosophical progress is not to be effected by denying or evading well-ascertained facts, the results of long and laborious research and reflection. One of these facts is the egoism of all the known. By this and on this, we must stand and advance. All our thinking must be made to square with it, because it is indubitably true; and, therefore, whatever conflicts with it must be false. Here is the great failure of objective evolution. While it affirms or admits the subjectivity of all phenomena, and makes them at most to be symbols of an unknown force, it perpetually confounds the symbol with the thing symbolized, and talks as if the sensible kosmos were something more than a complexus of subjective states, as if the known external worlds of the heavens and earth were *non-ego* and the preorganic source whence our conscious individuality was evolved. Then, with a vague, uneasy consciousness, its advocates endeavor to cover their track by saying that, when they speak of kosmic evolution and the evolution of the senses, they mean those unknown events or processes which are symbolized by the known. According to this, the real evolution is unknown; and the evolution, so called, which is known to us, is only apparent, phantasmic, symbolical of the unknown real. They have now entered a tenebrious region, which they do not much enjoy and which to the unmetaphysical minds to which they chiefly appeal appears unreal and ghostly; and so they hie away again with unphilosophical haste, and they refer to this region again only with the dubious and solemn brevity with which the ancients spoke of their visit to the shades of Proserpine. They ought now to tell us what is the mutual relation of these two sets of evolution, and how they know the unknown, and on what ground they affirm that the known is symbolic of the unknown.

Sundry Logical Points.

Allowing that there is an unknown which is manifested by the known, we ought, not without special reasons of insuperable force to affirm that it is *non-ego*. And no such reason has ever been assigned or is assignable, as far as I can see; while there are very cogent reasons for referring it to the *ego*. It ought to be considered as egoistic, because the *ego* we know as a conscious subject; and we know nothing else, so that any other reference of it is a blind action. It ought to be so considered, because we ought not to multiply entities without necessity; and here there is no necessity, either logical or experiential, for more than one. It ought to be so referred, because there is, it is assumed, a lexical connection of natural cause and effect between it and the known *ego*; and, as this causal connection is one of evolution (not creation), the known and unknown are but different modes in which exists the same one being. We thus reach the conclusion that all evolution and evolving force and being known or unknown is purely subjective or egoistic, and all evolution is limited in its operation to the one subject. We are as yet, therefore, absolutely confined within the bounds of self; and no avenue of egress opens up to us. On the other hand, against the theory of supersensible matter, in addition to what has been already said, we are obliged to make the following points:—

1. We have no proof of its existence.

2. We have no conception of it. It answers to nothing that has ever come within the range of experience.

3. We can explain all material phenomena without having recourse to this hypothesis, and by an infinitely simpler hypothesis,—that they are all the necessary product of the inherent force (created or not) of the *ego*; and the *ego* is known in consciousness.

4. This hypothesis is therefore also utterly useless as well as proofless. Neither logic nor practical life makes any demand for it.

5. None but theorists care anything about it. It is only the sensible world men care for, or that they contend for, when they affirm the existence of matter.

6. The vacillation of philosophers between the known and unknown is the cause of all the trouble. It is under the illusion of the known that they fight for the unknown. Their zeal would rapidly abate and their following would rapidly diminish, were it always clearly and distinctly kept in view that it is not the known world they contend for, but a world which is unknown, unknowable, indescribable, and inconceivable.

7. Therefore, I think it is equal philosophy and modesty not to assert, and to deny the right of any one to assert, its existence.

Dualists often tell us that the idealist must "show that the affirmation of things, in the common sense of the term, is not only not necessary, but is inconsistent, or *that the so-called world* is seen, upon reflection and analysis, to be incapable of existence apart from thought." This has already been abundantly shown concerning "the affirmation of *things, in the common sense of the term*"; for all these things are *nothing else than thought* (and feeling), and it is therefore a contradiction to suppose *these* can exist except as thought and feeling. This has indeed been long settled among the first thinkers; and the only point of controversy now remaining concerns the existence of a transphenomenal world.

Since an able contributor to *The Index* has already shown that I am very likely to be misapprehended, I must endeavor to be perspicuous, though at the expense of terseness. I will therefore adopt the language of my critic: "Every act of consciousness is as truly objective as subjective. The external universe . . . is therefore known to us as directly and immediately as the workings of our own minds." In this passage, the author inserts the phrase "the *non-ego*," as in opposition with "the external universe." That is his mistake, the head and front of his offending; and, in that, he differs from Spencer, Lewes, Huxley, Hamilton, and Mansel, and all the great host of modern psychologists, beginning with Descartes. The known external universe, all the *ensemble* of sensible things, is known as directly and immediately as the working of our own minds, because they are known as being the working of our minds solely and simply. If this is true, it is surely very important that it be fully understood and its logical implications traced out, as that would form the true and philosophical realism.

Because I thus identify the known universe with the *ego*, and yet make it evolve from the *ego*, I am charged with the self-contradiction of creating myself. If so, I only logically follow out the modern psychological doctrine affirming the egoistic nature of all phenomena. But my position involves no such absurdity. Evolution is not creation. Every one knows or believes that thoughts are evolved from the *ego* and are modes of the *ego*. What is thus unquestioned concerning our inner modes or phenomena I affirm concerning all the phenomena of the external world, that they are modes of the mind involuntarily and lexically evolved from the mind.

I wish my readers to remember that, when I call any party materialist, I use the word in a meaning worthy of the modern conception of matter. This I indicated seven years ago in my *Evolution and Progress*. By "material monist," I mean those who hold that there is, in the last analysis, no evidence of more than one substance, which through the external, material world generates all forms of conscious beings.

For *The Index*.

CURIOSITIES OF MUSIC.

BY IVAN PANIN.

I.

1. Johann Sebastian Bach, who, I know not with how much justice, is called the father of modern music, was the descendant of a race of musicians which was so numerous that, even in his day, large musical family reunions took place yearly. He himself, however, contributed not a little, perhaps as much as the rest of the family, to the number of musicians in his country. For by two marriages, in which he was singularly happy, he became the father of no less than twenty children, and the direct ancestor of some sixty of the best known organists and church composers of Germany.

2. Händel, at the age of nineteen, received the offer of the Lübeck organ, if he should marry the retiring organist's daughter. He was not averse to the proposal, and went to Lübeck with his friend Mattheson, to get at least a glance at his spouse *in spe*. As his friend, however, had been offered the same matrimonial terms, they both returned in single blessedness to Hamburg. As for this affair he may be charged by some with a lack of common sense, I will add that subsequently he showed its presence most strikingly. When present in Oxford at the triumphant performance of his "Athaliah," his university admirers urged him to accept the degree of Doctor of Music, which universities everywhere seem to be willing to bestow most liberally where it is no longer needed. Händel, however, would have had to pay a small fee for the distinction. The characteristic reply came: "Vat te tevil I trow my money away for dat vitch the blockhead vish? I no vant!"

The "Messiah" was produced for the first time April

Digitized by Google

13, 1742. The performance was for the benefit of poor and distressed prisoners for debt in the Marshalsea in Dublin. Thus, by a strange coincidence, the first performance of the "Messiah" literally meant deliverance to the captives.

Händel was a bachelor, and a cynical bachelor at that. The irony of fate would have it, however, that at the performance of his "Messiah" the hall was so crowded that the fine ladies actually consented to leave their hoops at home for the next performance, to gain thus room for a few hundred more listeners. He died at the age of seventy-five, in 1759, on Good Friday. He had often wished "he might breathe his last on Good Friday, in hope of meeting his good God, his sweet Lord and Saviour, on the day of his resurrection." And his prayer was fulfilled. Both he and Bach lost their sight shortly before death, a loss not so tragic as that of Beethoven, who lost the sense of hearing in his old age, so that he could not hear even his own compositions.

3. Gluck's favorite saying was: "My purpose was to restrict music to its true office, that of ministering to the expression of poetry without interrupting the action." His "Alceste" was first produced in Paris, and disappointed a good part of the audience, who were led to expect something different. "The piece has fallen," was the murmur quite audible in the hall. Abbé Arnaud, Gluck's devoted admirer, arose in his box, and quickly replied, "Yes, fallen from heaven!" The party favoring a rival of Gluck was well represented that night; and, while Miss Levasseur was singing one of the airs, a voice was heard to say, "Ah! you tear out my ears." Instantly, the caustic reply came, "How fortunate, if it is to give you others!" The same Abbé Arnaud, who seems to have been very quick-witted, said after the performance of Gluck's "Iphigenia in Tauris," "There was but one beautiful part in it," adding after awhile, "and that was the whole of it."

Gluck was a composer that should have pleased Carlyle, the apostle of unconsciousness in genius. I know not whether Carlyle disliked music as much as another great literary grumbler, whom he much resembled. Johnson was not fond of music. "Of all noises," said he, "music is the least disagreeable." In all the writings of Carlyle, my memory fails to recall a reference to music worthy of it. Had he known much of Gluck, he might have been glad to summon him as a witness to his theory expounded with such great force in his essay called "Characteristics." Gluck ever maintained that in composing he always tried to forget that he was a musician.

4. Haydn was always called by Mozart Papa Haydn. As Bach was the father of twenty children, so Haydn was the eldest of twenty. He had a brown complexion and small stature. The first earned him the appellation of "the little blackamoor" from his patron, Prince Esterhazy; and the second necessitated his wearing high heels, for his patron insisted that his stature should correspond with his merit. Homely, like Socrates, he was like him blessed with a Xantippe. She was a hair-dresser's daughter, with a dismal, mischievous, sullen nature, venomous tongue, and savage temper. He at last had to separate from her.

Haydn had the homely sense of true genius. When Mozart was pleading with him, begging him not to go to London, he said, "O Papa, you had no training for the wide world, and you speak so few languages." "Oh, my language is understood all over the world," said Papa, with a smile. In his later years, he fell in love with Mrs. Bellington, a famous beauty of that time. She was the most noted singer in England, and Sir Joshua Reynolds was painting her picture for the enamoured composer. She was represented as St. Cecilia listening to celestial music. "You have painted her listening to the angels, when you ought to have painted the angels listening to her," said Haydn to the painter. There are few compliments recorded so genuine and so delicate as this of the unpolished master.

The friendship between Mozart and Haydn is paralleled only in that of Goethe and Schiller. The one was as free from rivalry and jealousy as the other. Of Mozart, Haydn said, "O Mozart! If I could instill into the soul of every lover of music the admiration I have for his matchless works, all countries would seek to be possessed of so great a treasure." Mozart's admiration for Haydn was unmistakable. A professor in Vienna, of some renown, amused himself in discovering "faults" in Haydn's compositions. (It is well known that such an insignificant creature as a mosquito can try the patience of the strongest man.) He frequently came to Mozart with his discoveries of Haydn's weakness. Mozart endeavored to divert his attention and to turn the conversation; but the professor insisted. "Sir," was at last the scathing rebuke, "if you and I were both melted down together, we should not furnish materials for one Haydn."

This, together with the following two incidents, gives a tone of sublimity to his life which is rarely found in men of genius. In 1808, Haydn was present for the last time at the performance of his own "Creation." The presence of the old master, broken down by age, wheeled in as he was on a chair, roused intense enthusiasm in the audience, which could no longer be suppressed when the chorus and orchestra burst in full power upon the grand passage, "And there was light." Amid the tumult of the enraptured audience Haydn was seen striving to raise himself. Once on his feet, he mustered up all his strength; and, in reply to the applause of the audience, he cried out, "No, no, not from us, but thence, from heaven above, cometh all!" He fell back in his chair, and had to be carried out of the room. His last days were a veritable song of the swan. He was led to the piano, and played thrice the "Hymn to the Emperor," as well he might; for a shot of French cannon had just fallen into his garden. Five days after, he was dead. He could not survive his country's degradation.

5. Mozart was an extraordinary example of precocity of genius. At six, he was taken to Vienna to play before the court. Marie Antoinette, afterward queen of France, was particularly pleased with him; and little Mozart said that she was so good to him that he would like to marry her. Poor Marie! Did she think of that when she breathed her last on the guillotine? Madame Pompadour, whom Mozart might have well called Madame Pompous, refused to kiss him, which caused the little great artist to exclaim: "Who is she that she will not kiss me? Have I not been kissed by the queen?" France could not have impressed him favorably. For he would say that the French "are and always will be downright donkeys." This does not increase our respect for his common sense; for, whether the French of that time were downright or upright donkeys or not, Mozart was unwise to risk his reputation of a prophet in saying that they always will remain such. Frenchmen, he said, cannot sing. They scream,—which is not quite true nowadays. They now indeed do not sing,—but neither do they scream: they shake their voices out of their throats. Even poor Voltaire did not escape the composer's wrath. "Voltaire has just died like a dog!" One would almost be tempted to believe that, by a backward transmigration of souls, the youthful Mozart was possessed of the spirit of that master-scold, Mr. H. N. Hudson.

Mozart's musical memory was equalled only by that of Magliabecchi, who retained books after first reading. At Rome, Mozart attended the Sistine Chapel, and heard Allegri's Mass, which the pope had forbidden to be copied, for the same reason that Joan the Terrible had the eyes of the architect put out who built the St. Basil Church in the Kremlin, at Moscow. Mozart copied the entire score from the memory of a single performance. His pictures show a singularly beautiful face. Aloysa Weber, his wife's sister, to whom he first proposed marriage, refused him, however, on account of his being merely "a thin, pale young man, with a long nose, great eyes, and little head." I own I don't blame the maiden for refusing *such* a looking youth. Perhaps the matter was more serious; for his reasons for marrying, in his own words, were that he had no one to take care of his linen. He would not live dissolutely like other youths; and—*mirabile dictu!*—he loved Constance Weber, *maugre* her pretty sister, to whom he had first proposed. But he really did love his wife. Frequently, he would rise long before her to take horseback exercise. He would then kiss her asleep, and leave the following note on her forehead: "Good morning, dear little wife! I hope you had a good sleep and pleasant dreams. I shall be back in two hours, behave yourself like a good little girl, and don't run away from your husband!" Such playfulness of temperament would sometimes take the shape of true humor. Speaking of a little child, he would say, "That boy will be a true Mozart, for he always cries in the very key I am playing." The following is from one of his letters, which reminds me strongly of an anecdote of Shakspere which is recorded in something like the following language by his biographers: "This anecdote was told by Dr. Johnson, who got it from X., who got it in his turn from Addison, who said that he got it from Dryden, who got it from Pope, to whom Rowe told it." "My great-grandfather," Mozart says, "used to say to his wife, my great-grandmother, who in turn told it to her daughter, my mother, who repeated it to her daughter, my sister, that it was a very great art to talk eloquently and well, but an equally great one to know the right moment to stop. I, therefore, shall follow the advice of my sister, thanks to our mother, grandmother, and great-grandmother, and thus end not only my moral ebullition, but my letter."

I, too, am reminded by this that it is time to close this sketch. I will only add that Mozart's grave, like that of Voltaire of whom he speaks so disrespectfully, is unknown. He was buried in the pauper's lot, no one being present but the grave-digger and his wife. When Mozart's friends came some time after to erect a stone, the grave could no longer be pointed out.

CORRESPONDENCE.

LIBERAL RELIGIOUS ORGANIZATION.

WILLIAM J. POTTER, ESQ.:

Dear Sir,—I have been reading your "Why we do not go to the National Unitarian Conference," in a late number of *The Index*, with interest, as it involves questions only half-answered by many free thinkers and liberals dwelling on the boundary line between Rome and Reason, and also because we have in Oakland a movement presenting many of the characteristics of the Unitarian Conference as reported in *The Index*.

About twelve years ago, Rev. L. Hamilton was excommunicated from the Presbyterian Church for hinting that even the impenitent might after death become penitent, and might possibly be forgiven. A large portion of his congregation sympathized with him in his views and position; and, believing that they still needed his ministry, the Independent Presbyterian Church was incorporated, with Mr. Hamilton as pastor. In due time, the word "Presbyterian" fell into disuse; and liberal religious people became more and more attracted to the Church and to Mr. Hamilton. But at the time of their seemingly greatest prosperity, when men of high social standing and men who stood very high in literary and scientific attainments, were its members, the society contracted a debt and obligations which proved to be more than they could meet. The mortgaged building at last went into Mr. Hamilton's hands as the only way in which he could be paid for arrears by the few who still remained.

The Unitarians tried very hard to purchase the building, but failed for want of means. It seemed then that a liberal church in Oakland was doomed. But even after Mr. Hamilton had concluded his pastoral service, when the church was closed after the Unitarian failure, the Sunday-school continued, and the ladies of the late church still met and bravely looked disaster in the face, and bade failure defiance. In the mean time, Mr. Hamilton—a constant reader and admirer of *The Index*—by untiring study, and a determined earnestness to know the truth, had reached a position regarding the inspiration of the Bible which he wished to make known to his people,—the people of Oakland. He acknowledged his indebtedness to a very large extent to Dr. Kuenen's *Religion of Israel*. He began preaching again, not as a pastor, but as one having a message. His rational views of religion went home to many hearts, and a new era in rational and religious life was inaugurated among his people. On the Sunday evenings also, he presided over his disciples, inviting free speech, the freest criticism of his own position, and the earnest co-operation of all who loved their fellow-men.

Those evenings will long be remembered as being indeed a feast of reason and flow of soul, only marred by those who could not follow on account of their dragging anchor, or those whose impetuous souls and iconoclastic tendencies needed a stronger pressure of steam. But the movement met with an unexpected blow. In the midst of his most earnest, thoughtful discourse,—a copy of which is mailed to you,—on the 9th of April last, Mr. Hamilton fell dead in his pulpit, his last words being, "Bear in mind there are three things we do not know. We do not know what matter is"—

Digitized by Google

This was indeed a heavy blow, though it served as a cruel stimulant to those who had shared in his labors to keep alive the movement so dear to his heart.

A meeting was held, and the old society was reorganized on a new basis of more liberal range of thought and action. Rev. Clarence Fowler, a Unitarian clergyman, was elected pastor, not only as the most available, but on account of his experience as president over a similar society in San José. At the death of Mr. Hamilton, he was under engagement to exchange pulpits with him. And he has labored with acceptance and earnestness.

We are still laboring under the difficulties which must accompany all transition movements, looking backward, while moving forward. Those of us who claim to be in the vanguard dislike to be named "Christians" or "Unitarians" or any name which refers us back to conditions in which we have little or no sympathy. There are others of us who are not prepared to cast aside names, but who believe in them as serving at least a transitional useful purpose; and others again who yet retain a lingering faith in the special divinity of historic Christianity and its symbolic ordinances.

In the midst of these conflicting conditions, we painfully realize the lack of a central idea, clear and attractive enough to all to excite a common enthusiasm,—something which will combine intellectual freedom and moral culture with spiritual enlargement and discernment. You will perceive that we recognize the utility of a church system, and as plainly see the existing errors and futilities of such systems.

I have thus presented to you a bird's-eye view of the liberal movement here, in as brief and comprehensive manner as possible, to serve as a preface to a request. Will you please address yourself in *The Index* to such a society, and give us the benefit of your experience and advice?

I believe that a correspondence at the present time between all societies in our position, recognizing the religious nature of man and the absolute necessity of mental freedom, would result in much good. Hoping my request will receive due attention, I am

Yours for truth and progress, J. W. MACKIE.

OAKLAND, CAL., Nov. 5, 1882.

INTUITION.

Editors of The Index:—

We hide our best selves, lest we be not understood. Had we more faith and less distrust of our fellows, we might often find a comrade in spirit, where now we only gaze askance and disconsolate, cherishing our dumbness in an agony of selfishness.

Each natural soul is cognizant of a feeling of attraction or repulsion as it comes in contact with others. Could we but realize that this subtile yet powerful influence that speaks to our inner consciousness is the witness which interprets the soul's true measurement of its environments, we would lean upon its counsel in all trustfulness, rather than upon the admonition that comes from the intellect alone. Excessive worldly wisdom, founded upon a narrow circle of so-called facts, tends to warn us continually against our better selves. Our intuition is, I apprehend, our reason blossomed out. Too long has the higher power been subservient to the lower, too long has our ideal been snubbed by the so-called real. The coming age is one of intuition. Therein will woman assume her natural prerogative, and reign queen among those who have styled themselves her lords. Our poets, philosophers, seers, and sages have each in their turn been counted fools and maniacs, because, forsooth, their mental processes were less cumbersome and laborious than that of their fellows. Mankind will ever cultivate and cherish whatsoever is held in high esteem, and valued most among their fellow-men. In feudal times, the force of muscle was the test of power. Anon, men proved themselves athletes in intellectual achievements; and, at this tournament, full many strove, both long and well, to gain the prize, and, winning this, have rested in self-satisfaction on their laurels, holding all things subservient to the intellect. Yet, now, behold! new worlds appear unconquered; and Intuition, like the blooded steed, scents from afar the battle's din, and seeks amid the fields of moral consciousness her right and title to a royal crown. Lewes says, "Intuition is the clear vision of relations"; and, again, "All great discoveries were seen intuitively, long before it was possible to exhibit the correctness of their ground or disentangle the involved data." When, therefore, these truths shall be fully accepted in the lives of men, when the intuitive faculties, so long ignored, shall be trusted and honored and valued for their utility not less than for their beauty, then will they be coveted and cultivated; and mothers will feel honored in transmitting to their sons an inheritance heretofore despised. For, "Like father, like son," is not half so true as "Like *mother*, like son"; and although women, from time immemorial, have been sneered at as illogical because of the superiority of their intuitive faculties, the time is near at hand when the foregoing item in the category of heredity will be considered of paramount importance, at least to the cultivation of a certain variety of fan-tailed pigeons!

CLARA, PA. EVA A. H. BARNES.

REVISION OF CREEDS.

Editors of The Index:—

If we are to go back to the apostles for our religion, why not go back to the same ancient times for everything that needs revision? Has there been no improvement made on the Apostles' Creed—if they had one—(and that is a question which will probably be settled between Rev. M. J. Savage and the Boston *Herald*, as it is debatable ground between them) during all these eighteen hundred years? Is it possible the Church, especially the orthodox part of it, has been going from bad to worse ever since the last apostle departed? *If so*, religion to-day must be in a bad plight. But is such the case? I think not. It is a well-known fact that mankind, the world over, is far better to-day than in the days of the apostles; and, if so, religion must be better. These protests of to-day are but repetitions of the past; and good will come from the present stirring up, as it always has in the past, and that good will be the result of an *advance* in thought, and not of a backward movement. Why not go back to Noah's time, and revise our shipbuilding (it might benefit our navy perhaps)? Why not go back, "down the ages," and revise our *materia medica*? But why go back at all? Begin with the "eternal verities" of to-day, and build ahead, or at least keep pace with the times. The religion that people *feel* to-day—not *all* that is preached—is far ahead of that of the apostles' time. I think the ideas advanced by Rev. M. J. Savage, and his conception of God, are infinitely superior to those of years ago. As a remedy for all this trouble in religious circles, it is suggested that all the different Protestant bodies take a back track over the divergent branches to the main road, and form a Christian unity on the great Catholic creeds of historical Christianity. Won't there be a rattling of the dry bones when that event happens? It will be a bitter pill to swallow,—*i.e.*, that all the suffering, lunacy, bloodshed, and death since the Reformation has been in vain, that the mother Church has always been right, and they have been in error all these years. You gentlemen who "deal in futures" must suggest something better than that. Better "hitch your wagon to a star." W. H. S.

MISCELLANEOUS.

DR. SAVAGE says of Christmas: "In ancient Egypt, the birthday of Horus, the virgin-born son of Isis, was celebrated at the time and in the manner in which we celebrate Christmas. In Greece, the birthday of Hercules, and in Rome the Saturnalia and the birthday of the sun, were celebrated at the time of the winter solstice; and the ancient Germans celebrated their Yule feast at the same time. Among the Celtic Druids, the day was celebrated with the light of balefires. They are all the same festival under different forms. Christmas, then, always fresh to the childhood of our homes and the childhood of our hearts, is as old as the dawn of history or the life of man. (To this festival, except the names, we have added nothing.) Our trees, decorated temples, services, presents, happy children, etc., are far older than Christianity. It is a human festival far more than a Christian one. . . . They have always been regarded by the dogmatic as pagan remnants, unworthy of the day. The Puritans hoped they had left Christmas behind. . . . The truth is that the Church found Christmas so firmly fixed that they could not eradicate it; and so they kept it, only changing the names and meanings of its rites. It is a human festival which the Church was forced to keep against its will."

REV. T. MOZLEY, in his *Reminiscences*, tells a rather significant story of William Sewell, a prominent Oxford man, founder of Radley College, and a Professor of Moral Philosophy. He established a Moral Philosophy Club, where most of the talking was done by himself; and this is Mozley's story: "On one occasion, when all were assembled at Sewell's own rooms, and nobody had anything to read or to say, Sewell rose to the rescue. He had been reading a very learned work on the interior history of Mohammedanism. It presented in all respects the most marvellous correspondence to the history of the Christian Church,—exactly corresponding schools, sects, divisions, controversies, tendencies, shades of thought, and varieties of practice. Point at anything in the Christian Church, and Sewell could put his finger on the Mohammedan equivalent. *Mutato nomine*, the two things were the same; that is, the same morally and intellectually, and in what most people hold to be the substance of religion. Sewell gave illustrations, and named the fathers, the reformers, the leaders of thought, and the founders of schools in Mohammedanism, the very counterpart of our own. In truth, Cæsar was very like Pompey; and, as to be like is a feminine and dependent quality, it followed that Mohammedanism was the likest of the two. Sewell was still dilating in this strain, and seemingly on the eve of still more startling disclosures, when the clock told us time was up. The club looked like a club: it said nothing, asked no questions, and parted, sadder perhaps, but not very much wiser. There was not much gained by having it made out so satisfactorily that Turk is only another name for Christian; that is, for the Christian corresponding to the Turkish variety."

BOOK NOTICES.

SPARKS FROM A GEOLOGIST'S HAMMER. By Alexander Winchell, LL.D. Second edition. Chicago: S. C. Griggs & Company. $2.00.

The title of Prof. Winchell's *Sparks from a Geologist's Hammer* covers a part only of the very interesting contents of the volume. The opening chapters are devoted to "Mont Blanc and the Mer de Glace" and the "Ascent of Mont Blanc," and these are followed by a short essay on "The Beautiful." Then come three important papers on "The Old Age of Continents," on "Obliterated Continents," and on "A Grasp of Geologic Time." These are put under the general head of "Chronological," and under the head of "Climatic" are next given papers on "Geological Seasons," "The Climate of the Lake Region," and "Mammoths and Mastodons." Under "Historical" follow two papers on "Salt Enterprise in Michigan," and a subject, the interest of which we fail to see, which was treated with labored irony in an account of "A Remarkable Maori Manuscript." The first of the four essays given as "Philosophical" is of like doubtful interest. It deals ironically with "The Genealogy of Ships." An able attempt to state the points implied in it would have been much more to the purpose. The three concluding papers treat the following topics from a somewhat conservative point of view: "Huxley and Evolution," "Grounds and Consequences of Evolution," and "The Metaphysics of Science." These are able papers and thoroughly interesting. Their hesitation toward Darwinism will furnish a useful antidote to the feverish enthusiasm of Darwinian discipleship, which too hastily takes for granted that the last word of evolution has been spoken. Prof. Tyndall said in the Belfast address that he deemed it certain that the Darwinian views would "undergo modification"; and Prof. Huxley has expressed the fear that the new generation "will accept the main doctrines of *The Origin of Species* with as little reflection and, it may be, with as little justification as so many of our contemporaries twenty years ago rejected them." Prof. Winchell very well states what it is that we have accomplished, when we get at so much as Mr. Darwin has clearly made out:—

"We have thus come to a knowledge of certain *facts*. We have only reached the determination of a certain order of succession and a certain derivative relation. We have not yet discovered the *agencies* through which the derivation is effected, and the *conditions* under which those agencies are operative. Nor have we discovered the *efficiency* which operates the agencies, nor the mode of its activity, nor the reason why all these things are brought to pass as they are. In brief, after we have discovered *what*

Digitized by Google

takes place, it remains to learn *through* what it takes place, and *by* what it takes place, and *for* what it takes place. These are the ulterior questions which were not touched by Prof. Huxley in his lectures. He did not completely ignore them, but he waived them."

The varied contents of Prof. Winchell's volume can be heartily commended to studious readers for the interest which they will excite and the instruction which they will give. Several of the essays, nearly all of them in fact, are a good deal more than sparks from the hammer. They are thoroughly good pieces of finished work, popular in style, and full of such information as the general reader will be glad to get in so pleasant a form. The publishers of the volume, it is a pleasure to say, show by their part of the work that Chicago is not behind New York and Boston in book-making.

ART AND NATURE IN ITALY. By Eugene Benson. Boston: Roberts Brothers. 1882.

This is a delightful book,—the book of a man of generous education on the side of art, dealing with the art of Italy, its local associations, and the characteristics of its representative men. But we have here no stupid generalizations, and the concrete particulars are set in a charming framework of natural beauty. We have first a chapter on "Giorgione's Country," the broad, rich plain surrounded by the Apennines, the Alps, and the Adriatic; then, a chapter on "Titian's Country," the dolomite region of the Tyrol Mountains; then, chapters on Urbino, the birthplace of Raphael, and Perugia, and Assisi, and so on. There is a very interesting chapter on Tintoretto's conception of Satan in his picture of "The Temptation," and others on St. Peter's and Italian majolica, and Ferrara and San Gemignano, where can be seen the most famous pictures of Gozzoli, the continuator of Fra Angelico, but with original genius. Somewhat aside from the general purpose of the book is a chapter on Fortuny, "the painter of character, luxury, and blood"; but we are glad to have it with the rest. The book is throughout the book of a man entirely at home in the region of which he essays to speak.

THE *Atlantic Monthly* for January is a remarkable number; though, when we glance over the list of names of the contributors, it gives us a sort of start, as if summoned to attend a genuine "materialization" of departed spirits. And if our Spiritualist friends could at their *séances* summon spirits who could talk so like their own earthly selves as these "manifestations" of Longfellow and Hawthorne given us by the *Atlantic* read, the Spiritualistic belief would have a stronger hold on the sensible part of the community than it now has. There is a little thrill of pleasurable reminiscence given to the earlier readers of the *Atlantic* in meeting in this one number the names of Longfellow, Whittier, Hawthorne, and Holmes, with original matter from each; and in Whittier's new poem and the Autocrat's new departure in "An After-breakfast Talk" there is no trace of any loss of vigorous intellect, in spite of their more than "threescore years and ten." Thirty-five pages are given of Longfellow's "Michael Angelo," which will run through two more numbers of the *Atlantic*. And there is an instalment of seventeen pages of Hawthorne's "Outlines of an English Romance." Whittier's poem is entitled "A Summer Pilgrimage." The other contents of the magazine are equally brilliant. Charles Dudley Warner discusses "Wagner's Parsifal"; "H. H." gives an article on "Chance Days in Oregon"; Mrs. Wyman, who has hitherto written under the initials S. A. L. E. M., contributes over her own signature one of her charming and unique short stories, "A Stranger, yet at Home"; Harriet W. Preston writes of "An Apennine Valley"; there is a short poem from Edith M. Thomas, and one from Maurice Thompson on "Wild Honey." The "Studies in the South" continue with unabated interest.

AMONG the many attractions with which the *Century Magazine* for January begins the new year is an appreciative article on Darwin, written by Alfred R. Wallace, entitled "The Debt of Science to Darwin," embellished by views of his home, his study, the greenhouse in which many of his experiments and observations were made, and his favorite retired walk. The frontispiece of this number is a life-like portrait of the great naturalist, taken in a sitting position, copied from a photograph by one of Darwin's sons. The *Century* has also been smitten with the recent popular revival, or *survival*, of Hawthorne's literature, and gives us "A Look into Hawthorne's Workshop," being the preliminary notes for *Dr. Grimshawe's Secret*, which Julian Hawthorne has just had published. "Hydraulic Mining in California," by Taliesin Evans; "The Planting of New England," by Edward Eggleston; and "Who are the Creoles?" an historical sketch by Geo. W. Cable, are the most profusely illustrated articles. Frederic H. W. Myers gives an excellent sketch of "Arthur Penrhyn Stanley," late Dean of Westminster. There are interesting chapters given of the three serial stories, "The Christian League of Connecticut," by Washington Gladden, "The Led Horse Claim," Mary Hallock Foote's unique story, and "Through One Administration," by Frances Hodgson Burnett. The poetry of the number is contributed by Edith Thomas, H. C. Bunner, Henry Ames Blood, Mrs. Burnett, E. C. White, Maria W. Jones, Paul Hamilton Hayne, with others in the "Bric-à-Brac" department.

THE *Popular Science Monthly* for January opens with a timely article on "The Great Comet of 1882," by Prof. C. A. Young, of Princeton College, one of the very few American writers who are capable at once of discussing the subject fully from the scientific point of view and of answering the questions the public asks in the way it wants them answered. M. Alfred Fouillee discusses "Scientific Philanthropy" in a thoroughly scientific spirit. Among the many noteworthy articles which this number contains, we have space to mention only the following, whose titles sufficiently indicate their scope: "Traces of a Pre-Indian People," by Charles C. Abbott; "Bodily Deformities in Girlhood," by Dr. Charles Roberts; "Curiosities of Superstition," by that brilliant writer, Felix L. Oswald, M.D., who is soon to give a series of articles in *The Index*; "The Influence of Education on Observation"; "Speculative Zoölogy," by Prof. W. K. Brooks; "Playa and Playa-lakes," by Israel C. Russell, an article which treats of the different sorts of infertile basins or flat lands, like the Desert of Sahara, salt marshes, etc. Herbert Spencer's words and works while here in America are given considerable space in this number; and there is a spirited portrait of the late Prof. Henry Draper, with an interesting sketch of his life and scientific labor.

THE *North American Review* for January opens the year brilliantly. This magazine of late seems to have taken upon itself the task of, if not settling, at least of awakening interest in unsettled theological questions; and this number is no exception, as it opens with a symposium on "The Revision of Creeds," in which Dr. Newman Smyth, Dr. Lyman Abbott, and Henry Ward Beecher take part. Prof. LeConte Stevens discusses the question of "University Education for Women" in a fair-minded manner. Prof. Isaac Rice gives "A Definition of Liberty," deduced from a philosophical study of the different phases of political evolution. Gilbert M. Tucker defends "American English," and Rev. H. W. Thomas writes a thoughtful article on "The Responsibilities of Progressive Thinkers." Dr. David Hunt gives his opinion in regard to "Bigotry in the Medical Profession," and Charles T. Congdon treats of "The Adulteration of Intelligence."

THE *Catholic World* is a magazine which is always well worth perusal by non-Catholics, of whatever shade of belief or of scepticism, as one of the most cultured as well as the most decided expressions given of the Catholic faith of to-day. The January number is no exception to this general rule. Among the most vigorous papers in this number, we count those on "Mozley's *Reminiscences*," by Oswald Keatinge, D.C.L.; "A New Theory of Æsthetics," by Dr. C. M. O'Leary; and "The Fact of Home Rule," by Margaret F. Sullivan. The fourth and last part of the "Comedy of Conference" is given; and the number is more than usually rich in poetry and fiction, a fact due probably to its being a sort of holiday number.

VICK'S FLORAL GUIDE comes to us this year with no abatement of its many excellences, in spite of the death of its generous and energetic originator, the senior Mr. Vick. To all customers of this great florist and seed firm, their beautiful *Guide* is presented *free*, and to all others at the nominal price of ten cents. Although in a manner an advertisement of their business, every page of the one hundred and thirty it contains is replete with interest to all flower-lovers and gardeners of every sort. The covers for this year are after an æsthetic design; and, in addition to the many engravings of different flowers, vegetables, etc., there are two beautiful full-page colored illustrations of groups of flowers and vegetables.

PERSONAL ITEMS.

MR. JOHN G. SAXE, the poet, still resides in Albany, at the home of his son, and is an invalid. The disease from which he suffers is neuralgia, affecting the great nerve-centres, and accompanied by chronic dyspepia. He has suffered no impairment of mental strength.

MR. BRONSON ALCOTT continues to improve, and can now speak quite distinctly. His right side, which was paralyzed, begins to have some feeling; and hopes are entertained that he may recover from the shock. He is not, however, allowed to have many callers yet.

IT is stated that the Sultan of Turkey is becoming deranged. He has had built for himself an armored carriage, bullet and grenade proof. He is in constant fear of assassination; and the palace is practically in a state of siege, no one being allowed to enter unless summoned.

WEDNESDAY, the 13th inst., was the fiftieth anniversary of Mr. Gladstone's entrance into public life. Many of the English papers commemorated the day by publishing sketches and reviews of his political career. The Khedive of Egypt, the Greek government, and various home political organizations sent messages of congratulation to him on that day. The day following, he resigned the chancellorship of the exchequer.

HENRY JAMES, Sr., who died at his home on Mt. Vernon Street, in this city, on Monday, the 18th inst., was a man of considerable literary ability and fine culture. He was the author of various works on religious and philosophical subjects, among which we may mention *Moralism and Christianity*, *Christianity the Logic of Creation*, *The Secret of Swedenborg*, *The Nature of Evil*, and *Society the Redeemed Form of Man*. He was an independent thinker on religious subjects, but inclined to Swedenborgianism. He was the intimate friend of many of America's best thinkers. He was seventy-one years of age. The popular novelist, Henry James, Jr., is one of his four sons. He leaves also one daughter, who is well known in literary circles in this city.

THE poet Whittier would have received on his recent seventy-fifth birthday many heartfelt ovations from his multitude of admirers, but his health would not admit of his accepting any of the invitations to hold a public reception. As it was, many floral and other tributes of affection found their way to his quiet home. He said to a reporter that it was "rather a queer thing to congratulate a man upon, that he was seventy-five years old," smilingly adding that perhaps it was something to live so long in this wicked world. In answer to a question as to the amount of literary work he was doing this winter, he replied: "Not much. Nothing to speak of. I have done too much already, such as it is. There is no man who ought to write much after he is seventy, unless perhaps it may be Dr. Holmes."

A WRITER in the *Christian Register* who heard Mr. W. M. Salter give his address on prayer, since published in *The Index*, says of it that it "was exceedingly fine. Were it not paradoxical to say so, one might call it a prayer against prayer. The spirit in which it was given certainly seemed prayerful. It had all the solemn beauty of a prophetic utterance, and was made affecting from an undertone of sadness which seemed to indicate that a nature deeply religious had struggled to convince itself that prayer belongs to the early stages of man's development, and is irrational, if not immoral. Some certainly who listened to that remarkable address will watch the career of Mr. Salter with great interest. Faith would seem to be as essential to his soul as breath to his nostrils. Nature does not, let us hope, create religious genius (the rarest of all) to cast it into the gulf of materialism."

$850 Square Grand Piano only $245.

PIANO STYLE 31 Magnificent rosewood case, elegantly finished, **3 strings, 7 1-3 Octaves,** full patent cantante agraffes, our new patent overstrung scale, beautiful carved legs and lyre, heavy serpentine and large fancy moulding, full iron frame, French Grand Action, Grand Hammers, in fact, every improvement which can in any way tend to the perfection of the instrument, has been added.

☞ **Our price for this instrument, boxed and delivered on board cars at New York, with fine Piano Cover, Stool, and Book, only $245.00** Just reduced from our late **wholesale, factory price, $295, for 60 days only.** This is now by far the **greatest bargain** ever offered the musical public. Unprecedented success! Tremendous demand for this style! Send in your order at once. Do not lose this rare opportunity.

This Piano will be sent on 15 days' test trial. Please send reference, if you do not send money with order. **Cash sent with order will be refunded and freight charges paid by us both ways, if Piano is not just as represented.** Several other special Bargains: **Pianos, $160 up.** Over 15,000 in use, and **not one dissatisfied purchaser.** Don't fail to write us before buying. Handsome Illustrated Piano Catalogue, mailed free, giving the highest testimonials ever awarded any piano manufacturer. Every piano fully warranted for 5 years.

SHEET MUSIC at one-third price. Catalogue of 3,000 choice pieces of popular music sent for 3c. stamp.

MENDELSSOHN PIANO CO., P.O. Box 2058, New York City.

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.

For sale at THE INDEX office.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe. I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to

CURRENT TOPICS.

A RECENT telegraphic despatch from Yokohama, Japan, states that there is a large convention of Buddhist priests this month at the famous temple of Kovasan, in the province of Kii, for the purpose of abolishing the ancient rules against marriage and eating flesh by the clergy.

THE "signs of the times" are improving decidedly, when scientists and thinkers are beginning to be accorded as much attention in the surface world as fops and beauties. As one indication of this new tendency, we observe that amusement notes in some newspapers are now headed "Gospel of Relaxation," after Spencer.

BIGOTRY in so-called Liberalism is as much to be deplored and guarded against as in religion. The possible dangers of such over-zealousness is shown by instances like the one we cite: "A religion censor in France struck *Robinson Crusoe* from the list of reading-books which could be used in the public schools, on the ground that it was too religious."

THERE are still some portions of this globe where science has not yet robbed our celestial visitors of divine honors. It is reported that in Abeokuta, on the west coast of Africa, the natives are so much disturbed over the appearance of the comet, considering it a presage of evil, that human sacrifices have been made to exorcise the comet, and appease the supposed anger of their gods.

THE Australians do not seem to take kindly to religious instruction in the public schools, for a late New Zealand paper reports that the president of the Public Teachers' Association at Adelaide recently stated that "he had given notice three times in the West Adelaide school, to the effect that he would read the Bible half an hour before school hours, but not a single child attended. He had also tried the experiment in the evening, with the same result."

THE clerical party in Germany, supported by not a few of the Protestant clergy, have been working hard to secure the repeal of the law which makes the celebration of marriage by a civil magistrate compulsory, but their efforts have thus far failed, the German Bundesrath having just rejected a motion favoring the abolition of compulsory civil marriage. This action, which has not been taken probably without the consent of Bismarck, it is thought is an indication of the limit of the Chancellor's policy of conciliation and concession to the Vatican.

CATHOLICISM has gained what seems to many like a great victory in the "conversion" to the Romish faith of Sir Tatton Sykes, whose only claims to consideration, so far as we can find out, are his many ancestral acres, immense inherited wealth, and personal proclivities as a sporting man. It is said that no sooner had he made up his mind to abandon the Anglican Church and the turf than he formed the "munificent intention of building at his own cost a cathedral for the Catholic Arch-Diocese of Westminster." This conversion, it will be perceived, is not so much a matter of intellectual triumph as of love of Romish display.

HERR JOHANN MOST, the German socialist, who has recently come to this country, seems not to have very carefully studied our republican form of government. If his advice, reported as given at a recent public meeting in Chicago, were to be followed, a republic would be the most disastrous form of government imaginable. "The only thing to be done," he said, "was when the people got the upper hand, they stopped killing: they should have kept on. The people here must kill; must open banks and stores and help themselves to whatever they wanted. Bankers and capitalists must be set to work on the streets." And this arrant nonsense and bluster is said to have been received by the large audience present "with the most uproarious applause."

REV. DR. H. M. SCUDDER, a prominent Congregational preacher lately installed as pastor of a leading church in Chicago, says he believes "that Christ went down into hades, and preached to those who 'sometimes were disobedient in the days of Noah.' This is," he affirms, "the only case of future probation that I can find in the Scriptures"; and the extent of his liberal opinion is "to hope that, if there are similar cases, there may be a similar exhibition of mercy." Even in this very mild and rather incomprehensible statement, the *Christian Union* scents heresy, and throws down the gauntlet to one of its less liberal contemporaries by remarking: "The *Congregationalist*, in a circular printed, but not published, declares that the term 'evangelical' does not apply to those 'who under its mantle would advocate probation after death.' Does the *Congregationalist* deny the title of evangelical to Dr. Scudder?"

THE *Catholic Review* says: "It should be remembered that there are Irish rascals and thieves just as there are thieves and rascals all the world over, and the fact of a man or a body of men posing as patriots does not at all insure their being such. We have a painful and scandalous instance under our very eyes of the expenditure of over a hundred thousand dollars contributed to what was supposed to be the Irish cause in the shape of the 'skirmishing fund.' A 'skirmishing fund,' indeed, it is said to be. Ten thousand dollars, it is charged, went to one skirmisher to skirmish him into Parliament. Fifty thousand dollars went to another skirmisher to provide a 'ram' wherewith to destroy England. The rest went in like manner,—a thousand dollars here, a couple of thousand dollars there. *Not one cent of all this money thus contributed went to Ireland or to the Irish people!* Gentlemen, it is time to cry halt."

WE have glanced over the list of subjects suggested by the Evangelical Alliance for "the Week of Prayer," which begins January 7 and ends January 14, and feel a little sense of satisfaction that we are not "evangelical" or orthodox in belief. Otherwise, in view of the great tidal wave of doubt and denial which is submerging, even in the most orthodox circles, all former religious "high-water marks," we should feel a little out of patience at such a time in being called upon to make a special subject of prayer of such commonplace topics only as "prayer for families," "prayer for the Church universal," "prayer for the nations," "prayer for missions," etc., without taking into account prayers for the conscientious doubter, prayers for the vindication of God's written word, prayers for the substantiation of Biblical prophecies, prayers for the salvation of high thinkers and pure living people, and kindred topics.

"CLOSED to take account of stock" is inscribed over the doorway of many business firms "about this time," as the old Almanacs used to say. These words would not be out of place inscribed over the doorways to our "inner selves" "about this time." A great deal of weak wit is brought into play just now to make fun of New Year's reflections and New Year's good resolutions. But, nevertheless, the incoming of another year is just the proper time to make good resolutions to "turn over a new leaf"; and, whether these resolutions are carried into effect or not, the fact that they can be made speaks well for the moral sensitiveness of the resolvee, to coin a new word. It would be a great pity if we were no longer able or desirous of making new and good resolutions. We may not always be able to carry them out, but let us not sink so low that we are incapable of making them. We have lost many of our best teachers during the year now closed. Let us hope that this new year will disclose to us, or develop, new thinkers capable of taking the places of such men as Emerson, Darwin, the Drapers, father and son, Bellows, Bruno Bauer, Louis and Charles Blanc, Balfour, Jevons, Garibaldi, and other distinguished thinkers and actors who have passed on during the year just ended. *The Index*, sharing in the general season of combined retrospection and hope which the beginning of a new year induces, makes its best bow to its patrons, and, without making any promises, gives utterance to its earnest intention to make its columns for the coming year more than ever the exponent of the purest living, the highest thinking, and the most advanced thought of the age. We close by wishing our readers, one and all, a very "Happy New Year!"

WHERE THE COMING CHURCH IS TO COME FROM.

In reply to a correspondent, we made some remarks last week, under the title of "The Coming Church," on certain conditions of the organization of liberal societies. This subject of the coming Church is a quite favorite topic among liberal and rationalistic thinkers. But one point of the topic has not been generally touched. We do not remember to have seen or heard the question much discussed, where the coming Church is to come from; and we return to the subject for the sake of considering this point.

We very strongly doubt whether the Liberals as a class, though most interested in speculating concerning the Church of the Future, are themselves to build that Church. They will have much to do with the shaping of it, but will not be its direct creators. And we more strongly doubt whether the coming liberal Church is to be built on absolutely new foundations entirely outside of all existing ecclesiastical grounds. This subject has been one of special interest to us for many years, from both a philosophical and a practical point of view. We have carefully watched the tendencies of Liberalism inside of Churches and outside of Churches. Circumstances have brought us into pretty direct contact with both the ecclesiastical and the anti-ecclesiastical phases of liberal thought, so that we have had opportunities for feeling the sentiment and motive power of each side. And, while we do not for this reason set up for a prophet, our observations and reflections have tended toward certain conclusions that may be of interest to others. This, then, is the way in which the probabilities appear to us, looking at the sky signs from our religious weather signal-office.

Liberalism has done and is still doing a most important and necessary work. Its mission is to abolish the irrational doctrines and ceremonies which keep the churches behind the best intelligence of the times, and to set them to work for the practical welfare of humanity. And, in order to accomplish this mission, it was necessary for it in large measure to go outside of all existing ecclesiastical bounds. If it remained inside of them, it would help to nourish the very errors and superstitions which it opposed; and its position would thus be compromised, and the force of its protest greatly weakened. But, when the churches saw some of their brightest and most vigorous minds going outside of them in behalf of the interests of reason and humanity, they took the alarm, and the protest reacted upon them with greater power. There are signs, however, that Liberalism is not wholly content with this office of criticism and protest. A good many Liberals who have thus gone outside of the churches miss something that the churches gave them, even if it be only the delight of human association and fellowship; or they see that any philosophy of life, to be complete, must be positive and constructive as well as critical and negative. And these have been putting their wits to work and have been looking about them, to see if they cannot found some institution that shall take for them and their families the place of the Church. Various attempts of this sort have been made in different places and under different conditions, but generally with no permanent success or with no success at all beyond what came temporarily through the personal power of some leader. And, even if all these organizations had succeeded and remained to this day, the aggregate power of them all together would have been but small. Those Liberals who have felt the need of organization and been most eager for it have not found that Liberals in general possess the organizing faculty or care much yet for organization, beyond the better opportunities it may give for attacking the false theologies and moral shortcomings of the churches.

Nor need we seek very far to find the cause of this weakness of Liberalism on the side of organization, even though there are signs among Liberals of a growing desire for organization. The dominant power of Liberalism is reason. There is its strength. In the activity of reason, it had its origin; and this was the special faculty it needed for the office it had to fill,—the faculty which determined its office. But reason is not the founder of churches. We do not believe that reason alone, or the thought side of the human mind, ever created the Church, or that alone it ever will create any institution corresponding to the Church. And yet we believe that the Church, or some institution corresponding to it, will continue to exist, because human nature, as a whole, will continue to demand it.

As we regard the matter, the Church, considered as the sum of religious institutions, was never made: it grew. And when, in primitive times, it first originated, its root was in sentiments rather than in ideas. The primary impulse came from certain mental emotions, as man found himself in the presence of nature's powers. The mental perceptions accompanying the sentiments helped to suggest and shape the forms that were adopted to express or embody the sentiments, but the sentiments gave the impelling, vitalizing motive. And all through the history of religious institutions, under whatever form of faith, their vitalizing and sustaining force has consisted primarily in sentiment. What thought or reason has done, as the intelligence of man has improved, has been to reform and adapt the old institutions to the new uses demanded by clearer mental and moral perceptions. But, amid all changes of belief and faith, there has been a certain continuity of institutions which has remained unbroken. Even when a new religion has come, with a new name, a new creed, and new objects and modes of worship, it has not created absolutely new institutions, but made over and enlarged the old ones to serve its new occasions. Christianity not only retained many of the institutions of Judaism which came to it by direct inheritance, but, as it spread, it adopted pagan institutions also, christening them with its own names, and spread the faster for so doing. Christendom has many practices to-day which it fondly thinks originated at the time of Jesus, but which really are of pagan ancestry and have a pagan antiquity. As there are certain sentiments inherent in human nature which persist through all intellectual, moral, and social changes in the condition of mankind, so the institutions growing out of these sentiments, in their core and substance persist, however multifariously changing their form and aspect and even their significance. The Church is an institution of this nature. We may say the same of the marriage institution; and also, to a certain extent, of the institutions of government. All these great institutions of society are founded in sentiments which naturally and permanently inhere in the human mind. And these sentiments are absolutely necessary to their continued maintenance. But, left to the care of sentiment alone, they would be soon outgrown, and become entirely disproportioned to human needs. Advancing thought must keep transforming and shaping them anew, so as to adjust and justify them to man's ever-advancing requirements.

Now apply this statement of the relation between sentiment, thought, and institutions to the religious problem of our time. The Church, by too obstinate adherence to the creeds and ceremonies of a former age, has fallen behind and consequently out of harmony with the enlightened thought of the present day. Hence the conflict and the problem. The minds in which the faculty of rational inquiry and thought largely predominates have either gone outside of the Church or are just on its verge, making their protest against its errors. But the minds in which sentiment largely predominates still remain, to great extent, in the Church; sentiment, by its very nature, clinging for association's sake to the institutions it once created, until led by reason to a better support. Yet the sentiment alone is not able to reform the institutions, to make them harmonize with advancing thoughts. Thought itself must supply thought's need. Nor is the liberated rational thought outside of the Church able, to any great extent, to create new religious institutions of its own, because inadequately supplied with the sentiment which is their originating vital impulse. How shall the two separated elements be brought together to do the creative work required? By the natural process which is already in operation, and which at previous historical epochs has accomplished a similar end. The enlightened critical thought outside is being reflected within the Church, and is there transforming old beliefs, liberalizing creeds, investing symbols with new meanings, humanizing ecclesiastical practices and work, and is thus providing for the religious sentiment new instrumentalities and methods of expression within the heart of the old institutions. And in this way it is that the coming Church is being formed. It is being created, by the process of evolution, within the existing Church. The enlarging, shaping thought which has been doing its work outside is entering the old enclosure, and preparing it for new and higher uses.

Old errors of dogma and ceremony will linger, indeed, for many a day yet, and outside criticism and protest for many a day yet will be needed. There are multitudes of Liberals now living who will never feel at home within the walls of any church that will come in their time, and who will still have a mission outside. Let them organize, wherever they have the power, in their own independent way, if for no other purpose than to emphasize those things which they think the churches neglect, but ought to do. So will they help on the process of educating the churches by holding before them a model as well as a protest. But Liberalism is under no obligation to feel that the Herculean task of utterly demolishing the churches and then of building new institutions upon their ruins is put upon its hands. Nature has a more economical way than that. Corresponding to the changed ideas of mankind, the institutions of religion will change. Already the work has begun; and, if we may judge the future by the past, it will go on. The Church of the past, dogmatic, sectarian, and often cruel, enslaver of the mind and torturer of the body under the delusion of saving the soul, is being transformed into the broad, liberal, enlightened, and humanitarian Church of the Future. Its costly and elegant edifices, its vast endowments of wealth, its magnificent equipments of organized power, its fine resources of moral consecration and spiritual sentiment, are to be set free from bondage to dogma and superstition, and converted to the noblest human uses: the education of man, through appeals to his reason, imagination, conscience, and heart, as a conscious integral part of a universe which he is to help onward towards perfection; of a universe whose boundless truth he may ever aspire to know, though his knowledge can never exhaust it, but whose law of preservation and life he has discovered to be identical with the law of righteousness, which he owns as binding his conduct.

WILLIAM J. POTTER.

BY-WAYS OF SCIENCE IN COLORADO.

"In God I trusted,
In Pitkin I busted."

This farewell to Colorado I read on a little flag carried over an emigrant wagon, moving eastward toward the Plains.

My flag is up. From Pitkin, I, too, am facing eastward; and, in the columns of *The Index*, I say my farewell to Colorado. I am leaving a land rich to a naturalist in untranslated lore.

Very long ago, in times called archæan, a continent stood where America stands to-day. That archæan land went down, and on its grave *our* America rose. In Rome, you may sweep away the dust of two thousand years, and stand on the streets of pagan Rome. In Colorado, the rivers have swept away the rock of as many million years, and on the floor of their mighty cañons laid bare the face of archæan America. That America had essentially the same features as the sea-built America which overlies it.

The growth of our continent was from two centres, a long island foreshadowing the Alleghanies, and another foreshadowing the Sierras. From the first, the growth was westward; from the second, it was eastward. At the close of the carboniferous age, eastern America was land to the longitude of the Missouri, western America was land and lake to the Wasatch Mountains of Utah. The Rocky Mountains were islands in a Mediterranean which cut the growing America in twain.

The mesozoic age passed: the floor of the sea was rising; and, at the close of the cretaceous period, the twain Americas became one. The signet of the marriage ring is Pike's Dome, and Long's and Gray's, and the Mount of the Holy Cross.

From her geologic history, we should look in Colorado for a union of the floras and faunas of the Atlantic slope and Pacific slope. Such floras and faunas we find, but often under great modifications.

My first study of Colorado was a study of her minerals. I found that minerals with a feldspathic or alkaline base predominate, while phosphatic minerals are almost absent. I inferred that the soil, which is simply the abrasion of the rocks, must be replete with the alkalis and deficient in the phosphates. See, now, what modification this alkaline soil has wrought on sensitive organisms. Fix your attention on the most gorgeous of our butterflies, and note the species as you pass westward. In Michigan, you will find it in highest perfection. In Illinois and Iowa, the colors are less brilliant. On the alkaline plains of Colorado, the colors have faded out, and the wing is an ashen gray. The struggle for life on the mountains has been sharp, and the most striking result appears in "protective resemblance." Each species of butterfly has its favorite flower, to whose color it is thoroughly assimilated.

The "stream of tendency," which in man "makes for righteousness," and in nature for safety, has overdone this thing of protective resemblance, and carried certain species to the verge of idiocy. The plumage of the mountain quail changes with the changing seasons, assimilating the color of the bird to that of its habitat. The snowy plumage of winter makes the quail so completely one with the snow that discovery is almost impossible. Protected so well by nature, the bird has had but little need to employ its own wits for protection; and the result is that the wits have aborted. The stupid bird has hardly sense enough left to get out of the way of a club.

Another silly thing in these mountains is the coney, so named in Colorado. It is not the coney of Job, although "a feeble folk" living "in the rocks." It lives only above timber-line, and its only fare is the stunted lichen incrusting the rocks. Its color is so assimilated to that of the rocks that you may hear the sharp "squeak" of a dozen all around you, and see not one. It is a rodent, having certain characters of the rabbit, others of the rat, others of the squirrel, and others—especially in the structure of the bones—peculiar to itself.

It is a problem in geographical distribution as well as structure. It is found only above timber-line in Colorado and on the shores of the Black Sea. How came it here, or how came it there? To answer this question is to hypothecate a land connection, in some earlier stage of the globe's history, between the Rocky Mountains and the shores of the Black Sea. And it is to assume a vast antiquity for the Coney-Lagomys, *rabbit mouse*.

Time and change,—what stretches of time and what revolutions are recorded here! I explored one of the foothills of the chain of Rockies. It was the wreck of a Jurassic continent. Here and there grew a cactus, and here and there a piñon pine. Other sign of life there was none, almost none. The world seemed dead or dying. What was nature here in times called Jurassic? The shales were ripple-marked, showing me that I stood on the shore of a dried ocean. In these shales, I found entombed the ruins of a fauna as remote from any living fauna of earth as if they had been held in the crust of the dead moon. Here was a thigh bone six feet long, and here a rib ten feet long, agatized into a gem. These with a few vertebræ and foot-bones were all the ruins I could find. The caudal vertebræ are biconcave, telling us that in the tail of this colossal saurian lingered the structure of the fish. The astragalus and calcaneum were united into one bone, telling us that in the foot of the saurian was a foreshadowing of the bird.

This immense, lizard-like, bird-like *dinosaur* prowled along the shores of a sea that covered the plains of Kansas, Nebraska, and Colorado. This shore was tropical. We have the evidence in fossil palms agatized here and there as the saurian bones were agatized.

"Clasp, Angel of the backward look
And folded wings of ashen gray,
And voice of echoes far away,
The *stony* covers of thy book,
The weird palimpsest old and vast,
Wherein thou hid'st the spectral past."

From out that past comes a faint voice of cheer. The insect-world has no greater pest than the cockroach. Now, we have seen fossil cockroaches in triassic shales of Colorado. These ancient cockroaches differed from the living species in having one more vein in the wing. We see how nature is moving. She is moving for the abolition of the cockroach. But the mills grind slowly. From the triassic age till now, say ten million years, one wing-vein abolished; from now till the millennium, the entire cockroach abolished. How far off is the millennium?

And is Colorado a gateway to the millennium? "*Atrugetos*," unfruitful, is the word which the blind Homer wrote against the sea. It is the word which I write against Colorado. These billows and troughs of granite have no gift for man save the illusive gift of silver.

I explored a gulch misnamed "O-be-Joyful." The last gulch I explored was fittingly named "Poverty Gulch."

Farewell now to Colorado! And, O thou Poverty Gulch, fare thee well or fare thee ill, I leave thee. Within thy dismal walls, I dined with Coyote Bill from a pewter plate on "hi hos." ("What are 'hi hos'?" Question me no question, thou man with tender feet.) Thou, O Poverty Gulch, wert the primal curse of humanity. The myriads who have trod the face of the globe have defiled through Poverty Gulch. Countless generations passed before one man got so far out of this gulch as to have even a pewter plate and hi-hos. And the millions are still defiling through Poverty Gulch. And what, O Colorado, what art thou doing to help the world out of Poverty Gulch? Poor, miserable men are torturing thy mountains for silver wherewith to measure the fruitful labors of other men. Thou silver-giving Colorado, a better civilization will leave thee to thy coneys and quails, and on her retreating flag will write a travesty of this Pitkin motto,—

"In silver they trusted,
In Colorado they busted."

W. D. GUNNING.

FACT AND FAITH: SELF AND SACRIFICE.

II.

Schumann once said of reason that it was "but analyzed faith." In truth, is an inexhaustible mine, in which honest doubt may work day after day, the mine and the miner each enriching the other the while. When reason fails, faith may. Belief is still the best substitute for perfect knowledge. But perfect knowledge, however impossible to gain, is ever most desirable and always more attainable. And so long as knowledge is incomplete, so long must there be unceasing effort to attain it. Movement, physical or mental, is a necessity of life, and the proof of it. If so long as there is action there is life, then, so long as there is anything done, it is done because there is an end in view, in whose existence we believe enough to induce us to make an exertion for its sake. We may fear that the fund of spiritual truth is not inexhaustible, we may stand before its latest manifestations in the attitude of the agnostic, acknowledging to ourselves the possibility of its limitless worth and might, and the possibility of its utter emptiness; and still we have the courage of our desire, the impulsion of our hope or our despair, and venture our lives on the glorious chance.

A foreshadowed and crowning type of life or thought may breathe in many ineffectual forms during a world-epoch, while its immanent principle lasts firmly over, and animates the new age with irresistible impulse. So certain more or less gross bodies that were said to belong of necessity to the being of faith may die daily; but the life which gave the symbols grace remains unconquerably pure, unceasingly potent. "The kingdom of the Father has passed, the kingdom of the Son is passing, the kingdom of the Spirit is to be." Unite the perishable with the essence of Truth, and the perishable must await the inevitable deadly stroke of the advancing years: that which remains more powerful for each refinement from coarser elements is alone fine enough to meet the demands of the future. If this sublimated principle is good for anything, it can cope with the material and practical affairs of the world,—never before so important in their bearings, so pervading in their influence,—and make itself and them the richer for the contact.

The business of faring comfortably has not only absorbed the physical and purely intellectual energies, it is true,—we may take the word of the malcontents for it,—it has diverted spiritual interests from their wonted channels. It has struck its influence through the surface of human living, and held intimate communion with the deep indwelling power that suggests artistic visions and prompts holy sacrifices,—a lonely, isolated power in earlier days, dreaming, unpractical, and mildly disdainful of earthly conditions. Now, grown

Digitized by Google

more genial and compliant through this kindly acquaintance with the substantial elements of daily bodily existence, it blesses and is blessed in the intercourse, it confers without losing dignity. A good-natured disregard of asceticism, a matter-of-course approval of worldly prosperity, a wide-spread recognition of "the new doctrine which declares that the world can only be conquered by accepting its conditions as unalterable," have grown out of this interdependence and close communion of the material and spiritual interests. It is no longer a thought "full of wormwood"

> ..."that just at altar-service,
> The rapt hymn rising with the rolling smoke,
> When glory dawns, and all is at the best,
> The sacred fire may flicker and grow faint,
> And die for want of a wood-piler's help."

The wood-piler, who undertands the nature of this necessary service which he renders, fitly belongs to the sacred priesthood, and may not be undervalued.

Christ himself was author of the elevation of ignoble callings and humble estates, and modern civilization has done more than accept his idea in this regard: it has enlarged it, and enlarged it in a manner peculiarly its own. It has ennobled not only the worker, but the substance of his work. It has revealed matter as worthy of mind. The way in which this has been done is connected with that which is new, iconoclastic, mercenary, scientific, material; yet the result, strange as it may seem, incompletely as it may appear, can be recognized as the fulfilment and consequence of Christ's law of charity.

The idea of the human brotherhood is passing through seemingly contradictory phases. Strenuous and uncompromising as is the modern declaration of the isolation of each man's spiritual and mental centre of development, it is coupled with a growing recognition of the solidarity and interdependence of the labors, the wealth, the ideas, and destinies of man. The use of one life to another is found to lie not in the self-immolation of either, but in the intrinsic worth and distinct development of each. The high-wrought fervor and condescension of the Christian mind, in giving to that which most needed its gifts and was most ungrateful, in loving that which most craved its compassion and was most unappreciative, lavished its generous force only to obtain its own salvation. If it is "more blessed to give than to receive," he who receives must realize that it is cursed to receive and receive merely. In mutual action and reaction is impartial benefit reached. And these reciprocal relations of human spiritual lives, as those of men's intellectual advances or material welfares, are, at root, dependent on the hard, absolute law of the struggle for existence and the survival of the fittest,—the law which decrees it to be the supreme duty of the individual life to develop itself independently from its own potential germ, or perish in the attempt. Whether the individual life stands or falls in its encounter with outside forces and facts the main thing for the world and it is this sincere attempt to discover itself. Whether its strength or weakness is revealed thereby, consciously or unconsciously, willing or unwilling it must follow this law. In either case of success or failure it lends itself to a larger effect, it yields itself as a sacrificial offering to that spiritual advancement of the world which every living being in his very nature is made in order to believe, so closely knit is the struggle for the individual life with the grand collective struggle for the life of humanity.

> "Give me no life, great Heaven, but such as turns
> To energy of human fellowship,
> No strength beyond the growing heritage
> That makes c mpleter manhood."

No life but that? No strength but that? In truth there can be no other life or strength than that. No rare and exquisite manifestation of spiritual truth, whether of Christ or Socrates or Buddha, but asserts this, no sordid blindness or miserable failure can hide it. There is that inherent in us, whether we understand its operations or not, which makes our selfish lives at their worst or best subserve the general good.

If we find traces of such a bond of love working in life,—turning special studies into wider knowledge, nourishing each labor with another labor's fruit, blending independent insight with a purer truth, joining selfish interests with the general welfare,—those of us who have taken the trouble to inquire concerning it, and are convinced only of the probability of its existence, have little cause to distrust the present, none whatever to await the future with apathy. For the uniting force whose spirit dwells in love and faith must find its complement in the separating influences, we mistakenly deplore, whose issue is the development of self-interest and the persistent questioning of fact. Together,—as the like opposing planetary influences make our earth compact,—these counterbalancing life forces make our advance firm. And any comprehension of their necessary relations to each other must put us in the mood to estimate better the present outlook. Truly, our only fear and cause for mourning should be lest we ourselves prove incompetent to enjoy that prospect toward which we journey, lest we detain our progress thither by our own physical weakness, or mar our appreciation of its finer joys by our own feebleness of mind.

CHARLOTTE PORTER.

WILLIAM TELL.

There are few men about whom school-boys know more, and ripe scholars less. The scorn of the hat on the pole, the arrow cleaving the apple, the leap from the boat, the oath on the Rütli, the slaying of the tyrant, and the pulling down of the castles are precious illustrations of the truth that liberty dwells with the fearless. But is all this clearly history? Popular writers and lecturers seem confident; but it would be more like Gessler than Tell for us to shut our eyes to some grave objections.

In the first place, the accounts differ suspiciously, not only as to whether the tyrant was assassinated in the boat or on horseback, but as to the month and even the year in which this took place. The date most in favor, Monday, Nov. 19, 1307, is plainly fictitious; for that Monday would have been the 20th. It is further to be noticed that Gessler was in the service of the Emperor Albert, who was not the man to overlook the murder of his bailiff; and certainly would not have done so, if another of his officials had been killed but just before, and his castles captured shortly afterward. But no writer represents the Emperor as even threatening the rebels; and it is certain that he was preparing to lead an army against another part of Switzerland, when he was murdered by his nephew, May 1, 1308. For this crime, his children took such wholesale vengeance as to cause a thousand innocent people to be executed. But it was not before 1315 that any hostility was shown against Uri, Schwytz, and Unterwalden; and, by that time, provocation had unquestionably been given in the sack of the monastery of Einsiedeln in 1314. Meantime, in 1311, we find the Emperor Henry VII. acknowledging that Austria had been up to that time in peaceable possession of the very Cantons which Tell is said to have stirred up into a successful insurrection more than three years before. Similar statements about this time from Uri herself are also on record. The difficulty of Albert's neglect to avenge Gessler is so great that Schiller gives up the commonly received order of events, and represents governor and monarch as falling almost simultaneously. Even this arbitrary procedure leaves a strange delay of seven years before the invasion of 1315; and this difficulty is increased by putting Tell's exploits earlier than 1307.

Some narrators preferred 1314; but taking this date would intensify a new difficulty, which, on any supposition, is more formidable than either of those just stated. We have a long account of the invasion of 1315 from a chronicler who saw his countrymen returning from the battle of Morgarten, in which the expedition closed, and who spent his life at Winterthur, but thirty miles from Tell's residence. Yet this writer does not mention our hero or the conspirators on the Rütli; nor does he say anything about the capture of the castles, though he does speak of the causes of the invasion. His silence about the events in question is peculiarly hard to explain, if we suppose them to have taken place but just before Morgarten. Whenever they took place, we might reasonably expect to find them mentioned. Nor is it easy to see why they were omitted by another contemporary chronicler who wrote at Strasburg and had much to say about Switzerland, as well as by Justinger, who compiled a full account of this war and its causes, under the direction of the city of Berne in 1420. In fact, one hundred and fifty years passed by before any notice was taken of Tell by the chroniclers, though they were hard at work in Switzerland and also in Germany, where Austria had many enemies. Could we understand a neglect, until after the present time, of writers who know all about Bunker Hill, to refer to the destruction of the tea or the battle at Concord? As early as 1607, we find an historian named Willimam, after duly glorifying his country's hero, avowing in a Latin letter to his friend Goldast: "In reply to your questions about Tell, let me say that, though I have followed the common opinion in what I have published about Swiss antiquities, yet, if I may give my own serious and deliberate judgment, I think it merely a fable, especially because I have not been able to find any chronicler or other writer within a hundred years from his time who mentions him." More than this could not then be safely said.

That we find nothing said of Tell's archery until about 1470 is all the more suspicious, because a Danish story of the twelfth century—whose hero shoots an apple from his son's head, leaps ashore from the boat in which he is a prisoner, and then slays the tyrant—had been translated fifty years before from Latin into German, so that it had had plenty of time to make its way to Uri, where something may also have been known of similar English, Saxon, Icelandic, Norwegian, Grecian, and Persian legends. At all events, it was not long before 1500 that the famous archer migrated into Switzerland; but he was speedily naturalized. The brief and contradictory accounts of the poets and chroniclers of that time grew gradually into so called histories, where we find the very words spoken by Tell, Gessler, and their associates, the exact dates and even the state of the weather at the time when Tell, after escaping from the boat, is said to have made an almost impossible journey across the mountains, apparently in order to shoot Gessler where the people of Küssnacht might be able to show the spot. Of course, the importance of this act in the liberation of Switzerland was made to seem ever greater, until early in this century the assassin was immortalized by Schiller. Thus, the probability that the story was first imported from Denmark, and then much enlarged, must be added to such facts as the

Digitized by Google

silence of contemporaries, the inaction of Austria, and the discrepancies in dates and circumstances. Only the grandeur of the story has enabled it to stand against these and other objections, which have been urged again and again ever since 1760, when Freudenberger's *Guillaume Tell, Fable Danoise*, was publicly burnt by the Altorf executioner, as ordered by the magistrates of Uri. Even now, such criticisms find little favor in the eyes of people who worship William Tell, but hate those who imitate him in Russia.

These builders of the tombs of the prophets may be glad to know that there is some reason to believe their hero not entirely mythical. Apparently, we have an official record made in 1460 in Uri, to the effect that Tell's chapel at the place of his leap was built and dedicated according to a decree passed in 1388, by a provincial assembly at which more than one hundred and fourteen men who had known him were present. Was either the enumeration or the record made to meet a doubt? At all events, it is to be noticed that this document says nothing about the shot at the apple or the slaying of Gessler, so that, even if such a decree was really passed, it proves only Tell's existence and his springing from the boat. His having also refused to bow to the hat is not at all improbable in itself; and it is all the more likely that something of the sort really happened in Switzerland, because we find nothing like it in the Scandinavian, Saxon, English, Grecian, or Oriental legends of wonderful archers. If, as has been supposed by recent critics, Tell did nothing more than make this protest, and then deliver himself by springing from the storm-tossed boat, we can easily understand the silence of the early chroniclers, the erection of the chapel shortly after the victory won by Arnold Winkelried at Sempach in 1386, and the subsequent revival of the story, amid the excitement of the glorious resistance to Charles the Bold, when the shot at the apple was added from the old legend of the Danish archer, who made a similar leap, and then shot his tyrant. The neglect, not only of the contemporary chroniclers, but of the Austrian sovereigns, to notice the murder of Gessler, makes it very unlikely that this took place, especially as there is some reason to think that there never was a governor of that name in Uri. Tell's share in a conspiracy on the Rütli, in 1307, is all the more doubtful from the fact that we have no contemporary evidence of such an event at that time, and may therefore suppose this story to have arisen from the fact that a league of the three Cantons was really formed in 1291, but purely for mutual defence, and without leading to any undoubted act of rebellion before 1314, when that provocation was given at Einsiedeln, which led next year to the battle of Morgarten, an event about which we know altogether too much to be able to suppose that our hero had anything to do with it.

Thus, Tell's place among the liberators of Switzerland can be, at best, only subordinate. It was the whole people, rather than any single man, that achieved independence; and this is all the more likely because their freedom was won so gloriously and permanently. What one man does another may undo: it is only the deeds of nations that are eternal.

FRED. MAY HOLLAND.

GREAT must be the faith of the Russian who forsakes the Greek Church for any other religious belief; for a Russian subject who abandons the orthodox faith for any other whatever is deprived of his children, his estate is handed over to guardians appointed by the state, and he himself is liable to prosecution by the Holy Synod until he abjures.

EDITORIAL NOTES.

WE are sending out bills this week to all our subscribers who are in arrears; and we will thank those who receive them to send to this office, at once, the amounts due on their subscriptions.

JOSEPH COOK says that the dearth of the churches in this country is enough to make the "statues of the fathers leap from their pedestals, and precipitate the judgment day."

THE hymn "I'm glad Salvation's Free" isn't applicable to the Catholic religion. The Bishop of Montreal has "issued a mandate that parishioners of the three canonical parishes in Montreal shall immediately proceed to pay off the debt of $300,000 due on the Fabrique of Notre-Dame. Married men are to subscribe $2 and those unmarried $1 per annum, until the amount is discharged."

A DECIDED sensation was made last week in Yankton, Dakota, by the marriage of Sister Mary Paul, a prominent member of the Convent of the Sacred Heart in that place, to Dr. Sebiakin Ross, a Russian refugee. The bride is thirty, beautiful, accomplished, and talented; and her exertions have been the means of building the convent to which she belongs. Nevertheless, she will be excommunicated.

SEVERAL weeks have elapsed since the reception given in New York to George Jacob Holyoake just before his return for England. Yet we are sure our readers will be glad to see the two principal speeches made on that occasion,—those by Parke Godwin, Esq., who presided on the occasion, and by Mr. Holyoake in response,—which we print in this week's *Index*. Letters of sympathy were received from Messrs. O. B. Frothingham, J. H. Rylance, J. M. Pullman, Mrs. Elizabeth Thompson, and others.

THE *Religio Philosophical Journal* speaks from experience when it says: "To admit that everything within a party or sect is not all it should be is in the eyes of zealous partisans a sin; but to proclaim these defects and evils, and attempt a reformation within the party or sect, is rank heresy, subjecting those guilty of it to the direst penalties within the power of fanatics and those who feed and grow fat upon the folly and weakness of mankind, and often, too, to the animosity of the poor dupes upon whom the vampires feed."

DOERFLINGER'S *Amerikanischer Turner-Kalender* for 1883 contains the tables usually given in Almanacs, and more than one hundred pages of closely printed reading matter, including spirited translations in metre of the "Star-spangled Banner" and "People will Talk," select sentences from Heinzen, and many articles of special interest to lovers of gymnastics. We are glad to see that the Turner-bund of North America has more than 16,000 members, besides the 13,000 children in its schools, and 37,296 volumes in its libraries. This volume shows its influence to be as conducive to mental as to physical activity.

AN excellent method taken by many of our most progressive speakers to enlarge their congregations and widen their sphere of usefulness is that of publishing in pamphlet form the weekly discourses which they deliver from their pulpits or platforms. We receive at *The Index* office a number of these publications of liberal utterances,—among them, those of Rev. John W. Chadwick, Henry Ward Beecher, Rev. M. J. Savage, and very recently Mr. Fred. A. Hinckley's, which is published fortnightly at ten cents per copy, by J. A. & R. A. Reid, Providence, R.I.

IT would be a graceful recognition of the dignity and worth of her own sex, for some wealthy lady who is looking about in search of a fitting object for her benevolence to invest part of her surplus means in needed books of reference for the shelves of the Harvard "Annex." A number of the inadequate supply of those now on hand were presented from the fund left by Lydia Maria Child for the education of women. Women should consider at this time the educational needs of their own sex, instead, as many have done, of willing or contributing vast sums toward colleges designed for men alone, and from whose privileges women are debarred.

A RECENT despatch from Concord, N.H., states that the "board of assessors has abated the taxes levied against the following churches in that city, in conformity with the law requiring their payment on such property in excess of $10,000 in value: South Congregational, $2,200; First Baptist, $1,600; Unitarian, $1,800; Episcopal, $1,100; North Congregational, $3,000; Universalist, $1,100; Catholic, $1,200; First Methodist, $500." And yet the supposed founder of all these churches had "not where to lay his head"; and the constant tenor of his instructions to his followers was to "lay not up treasures upon earth," to take with them on their preaching tours "neither purse nor scrip," to "take no thought for to-morrow," and to sell all their possessions and "give to the poor."

"LESSONS FOR THE DAY" is the appropriate title of Moncure D. Conway's weekly publication containing his Sunday discourses, delivered before the South Place Religious Society, South Place, Finsbury, Eng. These "Lessons," which all those who know Mr. Conway through his writings or otherwise will feel assured are of the highest tone morally and intellectually, are sold by the publisher, E. W. Allen, Ave Maria Lane, London, at the nominal price of one penny each, or sent by mail at the rate of 6*s*. 6*d*. per annum. They are in convenient pamphlet form, and printed in excellent type. We notice that Mr. Conway very generously advertises *The Index* on the covers of his "Lessons," for which courtesy, which has already gained for us several new English subscribers, we tender him our sincere thanks.

DR. T. W. WILLIAMS, who is president of a Liberal League in Milwaukee, in a recent address before that body thus referred to the National Liberal League: "Its vitality is certainly at as low an ebb as it can be short of actual dissolution. If those who attended its last Congress at St. Louis did not return home disheartened, discouraged, and heart-broken at the poor attendance, the want of enthusiasm, and lack of earnest, hearty material support which such a gathering of Liberals *should* receive, they are greater optimists than I am. But we must admit that the League never has represented, and now less than ever represents, the larger as well as more respectable and intelligent class of the Liberals of the country. Thousands of good Liberals of the better and more conservative element do not belong to the League, and will not affiliate with the local Leagues. This is the case in this and every other city." Dr. Williams admits that the failure "is not owing to any lack of popularity of the fundamental principles of the League,"—the principles of State secularization which the organization was formed to promote,—but rather to a departure from "first principles" which drove from the body "men of talent and influence; and, when they objected to overloading the League with matters foreign to its purpose, their views were entitled to respect. They were the bone and sinew of the old League; and, when they left it, it sustained a loss which has never

Digitized by Google

been repaired." "But this movement," continues the author of the address, "like all reforms, had the misfortune, as previously remarked, to be eagerly espoused and championed by a class of people who are calculated to bring anything with which they are associated into disrepute. Though really forming scarcely a respectable minority of the Liberals of the country, by their audacity and noisy bravado, they have managed to push themselves forward as the representatives of the League, and make it responsible for their vagaries and peculiar theories. It is this class of pseudo-reformers who have wrecked the League, by making it appear as the exponent and defender of lust obscenity, and a variety of unpopular issues 'too numerous to mention; while the earnest, honest, and true men and women who are engaged in the work have either been overlooked or considered as contaminated by evil associations. Attached to it like vampires, they have drawn its life-blood until it is in the last stages of inanition." Dr. Williams wants the League to "set itself right before the world," and get back "the truer conservative liberal element that has been alienated from it." This address cannot be pleasant reading for the leaders of the National Liberal League who have roundly abused individuals outside of that organization for stating only a fraction of the truth, which is now admitted by one of its members and the president of one of its auxiliaries.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

"IT MOVES."

A Poem read before the Montreal Pioneer Freethought Club.
WRITTEN BY GEORGE MARTIN.

"I know it moves": so said the man
Whose genius read the astral scroll
From east to west, from pole to pole,
Yet, under a terrific ban,

Denied his thought, the truth denied,
And, crushed in soul betwixt the strife
Of love of truth and love of life,
In silent bondage slowly died.

Since that dark hour, 'tis joy to know,
The thoughts of fearless men have moved
As move the stars; the years have proved
Thy deathless worth, Galileo!

What marvel if he shrank with dread
Beneath the lifted iron hand
Whose marks were seen on every land,
Red marks where truest seers had bled.

The glare of Bruno's fiery shroud
Still seemed to haunt the midnight skies;
And, falling on his menaced eyes,
His head the noble Pisan bowed.

And who the number may compute
Of kindred souls whose secret fears
Have held them captive all their years,
And kept their lips forever mute?

Grim Persecution's baffled rage
Has many guises, all the same
In essence, differing but in name,
O'er all the earth, from age to age.

And if less potent now for harm,
Let Freedom's watchmen guard her towers;
Happy to cry the all well hours,
Ready to ring the prompt alarm.

Low sinks the race where thought and speech
Are helpless slaves to crown and cross;
Where heresy brings blame and loss;
And each is set a spy on each.

Blest is the soil where men can stand
And say, It is a crime to hide
The light of reason, to deride
The one sure Deity's command,

The voice of Conscience: here to-night
This heritage of centuries, old
And new, in sacred trust we hold:
Our watchword, "Freedom and the Right!"

—*Montreal Star.*

The Index.

BOSTON, JAN. 4, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

A Rationalist's Estimate of the Bible.

BY WILLIAM J. POTTER.

A few years ago, just after the Moody and Sankey revival meetings in Boston, in a discourse specially addressed to young converts, at Park Street Church, Joseph Cook was reported to have said: "The Bible is the only book which will bear perfect translation into life. Shakspere drips with inculcations that would not be fit for any one to immerse himself in. The same may be said of Milton, Plato, and others. We may take the whole inculcation of the Bible and find it healthful. It came from men whom the world would not be likely to honor, and yet here it is the triumphant book of the ages. There is no other book that you would be willing to have for your pillow when dying. The whole inculcation of the Bible, if absorbed into civilization, would work well." On the same day that I read this statement there came to me a printed prospectus of a new free-thought journal (that did not go, I believe, beyond the prospectus), in which the prospective editor, describing his views and motives, said: "I have long been of the opinion that the Bible is the one great obstacle to human happiness. To this book, I attribute nine-tenths of the evil, the ignorance, and the wide-spread misery among the nations of the earth at the present day. I look upon it as a work of fiction emanating from selfish, designing brains, and with none but selfish and evil intentions. It has also long been my belief that a combined effort on the part of honest and earnest, independent, reasoning men and women might do much to stem the tide of ignorance, superstition, and 'irreligion,' which emanates from the modern teachings of this book, the Bible."

Here, certainly, are very decided pronunciamentos of opinion. More thoroughly antagonistic utterances on the same subject could hardly be found. They are the two extremes from each other,—the opposite poles of American popular belief concerning the Bible. Nor have we any reason to doubt the sincerity of either of the speakers,—certainly not of the latter, who had borne much persecution, even to the point of imprisonment, on account of his views. Nor, though at such extreme distance from each other, do these men stand alone. They are representative speakers; and for that reason, and that only, it may be added, they are worthy of attention. One represents the extreme view of the so-called orthodox believer in the special inspiration and authority of the Bible. The other represents the extreme view of the so-called infidel, who denies and rejects the Bible. Both of them have a large comradeship in opinion, though not all of the so-called orthodox class nor of the so-called infidel class would assent to such extravagance of expression. The first speaks for those who declare for the Bible, the whole Bible, and nothing but the Bible, as the infallibly revealed and authoritative will of God, and the fountain of all that is good and enduring in human civilization and happiness. The second declares the Bible an imposture, the work of evil men, and the chief obstacle in the way of human progress and happiness. He finds it as completely bad from beginning to end as the other finds it completely good. With him it is the one book to be shunned and destroyed, as with the first it is the one book to be studied, preserved, and everywhere multiplied.

Now, it may be an instructive study to subject these contrary views to consideration side by side, and then to subject both of them to the light of modern rational and scientific criticism. Perhaps from such a survey it will be seen that, at the hands of both of these extremists, the Bible is a much abused book, but that, if used rationally, it is a book of immense value.

And the first thing which it seems to me ought to be said is this: these two men have an equal natural right, and in our country an equal constitutional right, to speak and publish their opinions,—an equal constitutional right, so far as the federal Constitution is concerned, though not as yet an equal constitutional right in all of the States; nor should we prejudge the moral character of either of the men by their utterances on the Bible. The question on which they thus pronounce their convictions with such positiveness is a question of intellect, not of heart, nor of morals. They may both be mistaken in their opinions; both may be narrow and dogmatic; they may have equally some grains of bigotry in their mental composition, and yet both may be honest, upright, moral men,—good citizens, good neighbors. Were the Bible an unknown book to us, and we were to hear for the first time, from men unknown to us, such contradictory views of its character, the views of one of them would be worth to us precisely as much as the views of the other, until we had subjected the book to our own rational judgment; nor would we, in such case, prejudge the moral character of the men from such expression of their views. Yet there are thousands of people in Christendom to whom the words of this man against the Bible are a shocking blasphemy, and who would think it a perfectly proper and just thing that he should be restrained from saying them by force of the civil law, and who at once leap to the conclusion that a man who can say such things of the Bible must be a man of depraved heart and evil life; and all this, not because they have themselves given any rational thought or adequate study to the question, but because the Bible is their traditional sacred book. The reason why Christian people generally are shocked if the Bible is put under criticism does not depend at all upon the question whether the criticism is true or not,—that question they do not even consider,—but it is because they regard the Bible as a specially divine book, like no other book in the world, and not amenable to any standard of judgment by which any other books are judged. It is to them the one articulated word of God,—his only spoken word in all the ages. It stands to them for God. And so long as this, the previous question, is not allowed to be debatable, it is impossible for believers in the Bible to do mental or moral justice to the Bible's critics. The man, they say, who is against the Bible is necessarily against God; and hence he is a bad man, whose utterances are blasphemy, to be silenced by law. To this falsity of logic and injustice of action does the glamour of a so-called sacred belief bring the Bible devotee.

The next thing to be said is that, though these views about the Bible which I have quoted are so far apart, they are related to each other as cause and effect: one is the product of the other,—if not by the genesis of direct descent, at least by force of repulsion and reaction. That is, this extreme infidel view of the Bible, which sees in it only a book of evil to be avoided and rejected, would never have had existence, would never have found any lodgement or suggestion in the human mind, had it not been for the extreme orthodox claim that it is an exceptionally inspired book, and from beginning to end reveals infallibly the perfect will of God. Had the Bible been left in the position of other books, as a natural and human composition, as a religious literature, extending through a long period of time and having various authorship, we certainly should never have

Digitized by Google

heard the opinion put forth in this nineteenth century, that it is an imposture emanating from designing brains with evil intent, and that, as the cause of nine-tenths of the ills of humanity, it is the one chief obstacle to human happiness. This extreme view, which seems to all devout believers in the Bible so shocking, is the natural and historical reaction against the equally extreme view that the Bible throughout is a mentally and morally perfect book, the perfect transcript of a perfect God. And, to those who read the Bible as students and not as worshippers, this latter view is not less irrational than the former. And I venture to say that it ought also to be quite as shocking to all natural genuine reverence; and doubtless it would be, if the natural reverence of people were not so often warped from nature's line by the force of traditional faith.

It will be a useful illustration, perhaps, in respect to the sources and formation of opinion, if we briefly trace the pathway by which one of these extreme views came from the other. A book of which it is alleged that it was written by supernatural communication from Almighty God; that it contains for man an infallible rule of faith and practice; that it teaches a scheme of salvation without the knowledge and acceptance of which man would go to perdition; that its whole inculcation, in every sentence and word and illustration, is true and pure and healthful; and that it is the one book of books which will bear entire translation into life,—a book with such a claim as this made for it certainly challenges attention. It cannot be expected that the human mind will admit such a claim blindly. The book itself somewhere says, "Let us reason together, saith the Lord." The claim is a challenge to reason. It is a challenge to investigation, search, study. And so the Bible began to be read critically, with the use of reason as well as with the exercise of devout feeling. And, as a result of this closer attention and inquiry, a good many people began to doubt whether the high claim made for the book could be vindicated. They found discrepancies in the statement of historical facts which ought not to exist in an infallible record. They pointed out certain errors of opinion, proved to be such by subsequent scientific knowledge, in both the Old and New Testaments. And, more than all, they discovered that the God of the Bible was not always represented as acting according to their own highest conceptions of human morality. They saw that he was often vindictive, jealous, angry, bloodthirsty, conniving at deceit, stirring up cruel wars of extermination, even when his own people pleaded with him for mercy and forgiveness toward their enemies; in fine, that he was a very human monarch, with human frailties and ambitions and crimes. And so they said the Bible could be no revelation of a perfect God, but was a fallible human book. And then the Bible-worshippers, who loved it emotionally more than rationally, and the ecclesiastics, to whom the Bible seemed the very foundation of the Church, were put on the defensive; and they began to study and investigate too, though too often with the bias to find things as they wanted to find them, and with the disposition to use all the external powers of the Church, and all its spiritual appliances of hope and fear, to uphold the claim that the Bible is the one complete Word of God. If science disputed the claim, science was to be silenced by the rack and the dungeon. If philosophy questioned it, the audacious philosopher was to be convinced of his error by the fire of the stake. If common sense doubted it, common sense was threatened with excommunication from the people of God on earth, and with eternal torments in the world to come. Hence, naturally, when the doubters and deniers of the claim again ventured to utter their opinions, they, too, began to breathe back defiance, ill-will, and scorn. In their zeal to unmask a false claim made for the Bible, they were not careful to distinguish that the book made no such claim for itself; but, as if its defenders asserted truly that it did so claim, they declared it an *imposture*,—appearing to think that its writers were somehow in league with the ecclesiastics who defended it for selfish ends of ecclesiastical ambition and power,—the whole thing, through all the centuries, being to their eyes a priestly conspiracy and fraud. Their hatred of the means used to keep the Bible in its position of authority they transferred to the book itself, as if that were responsible for all the guilty instrumentalities which bloody bigotry had brought to its defence; and, seeing how its defenders used it to check the progress of science and to keep the people in the baleful shadows of ignorance and superstition, they began to regard it as a book fraught with more evils for mankind than blessings. And this is the cry which the writer of the prospectus of the free-thought paper and others of his fellow-thinkers are reiterating to-day. They are the legitimate inheritors of a type of unbelief with regard to the Bible that was especially in vogue a century ago. And that type of unbelief was itself the legitimate reaction against, as it was historically the balance and partial cure for, the excessive claims that had previously been made for the Bible, enforced by torture and blood. The criticism was crude, the treatment often rough, but the times needed it; and it was all that the scholarship of the times afforded. Thus, we see how naturally and directly, out of the exaggerated belief in the Bible as the one all-perfect book,—perfect as a whole and perfect in every particular,—has grown the exaggerated disbelief in it, and rejection of it as a book evil in intent and evil in its effect upon the world.

But a third point to be noted is that both of these extreme and exaggerated views concerning the Bible have been set aside as wholly unfounded by the improved scholarship of later years. The attacks made upon the Bible and the necessities of the Church to come to its defence have centred upon it an amount of critical study such as no other book or collection of books in the world ever received. Its history has been investigated, its origins inquired into, its several parts collated and compared, its contents judicially considered, its language analyzed, its grammar and rhetoric minutely studied, its philosophy and theology and morality all thoroughly examined. And, as the result of all this research, it may be claimed, and claimed with perfect confidence, that it is *proved* by scientific criticism that the Bible, on the one hand, is not a book of infallible divine revelation, nor, on the other hand, a book of human imposture.

First, it is proved, and proved beyond a question to all people who will judge such a matter by reason and not by sentiment, that it is not a book of infallible divine revelation. The fallibility of the book, to eyes not blinded by tradition, is as plain as a school-boy's mistake in the multiplication table to a man of common understanding. Could an infallible God, for instance (to cull only a few illustrations from a great multitude), have directed two penmen to have reported the same census of the tribes of Israel at different numbers, the one putting it at 1,100,000, the other at only 800,000? Such a discrepancy is natural and of frequent occurrence in human chronicles, but we should not expect it in a history inspired by an omniscient Being. Or, if it could occur in a divine book, then what advantage would there be in a divinely inspired Scripture over a human? Or could an all-wise God have given such an account of creation as we find in the Book of Genesis, or have imputed physical diseases to possession by demons, as is done in the New Testament? Or could the God to whom we accord the attributes of eternal unchangeableness and perfect benevolence have ever commanded Joshua, as his special servant and minister, to put to slaughter all the inhabitants of the land he was bid to possess, so that, as the story says, not one soul was left there alive? Or could he ever have inspired this prayer, which we read in one of the Psalms, invoking curses upon an enemy? "Set thou a wicked man over him; and let Satan stand at his right hand. When he shall be judged, let him be condemned; and let his prayer become sin. Let his days be few; and let another take his office. Let his children be fatherless, and his wife a widow. Let his children be continually vagabonds, and beg.... Let the extortioner catch all that he hath; and let the stranger despoil his labor. Let there be none to extend mercy unto him; neither let there be any to favor his fatherless children. Let his posterity be cut off, ... and let not the sin of his mother be blotted out." Shall we say that this is a "healthful inculcation," that it will "bear perfect translation into life," that, "if absorbed into civilization, it will work well"? One trouble with our civilization is that altogether too much of this spirit has been absorbed into it. And, if this be "healthful," what shall we say of that other inculcation, "Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you"? Did these antagonistic inculcations have the same source, and will they work equally well?

But enough of this detail. Suffice it to say that, if scholarly research into any part of human history has proved and settled anything anywhere, it has proved and settled that the Bible is not an all-perfect book, not an infallible record either as to matters of historical fact or matters of intellectual truth or matters of moral precept; that it is a book which has to be read not blindly, not worshipfully, but, like any other book, with rational discrimination,—that is, with critical eye and with reason and conscience alert to sift its errors from its truths. And it may be said, probably with truth, that the old theory of plenary inspiration of the Bible is no longer held in strictness by any thoroughly equipped scholars. The theory has been variously modified, so as to allow for some errors in form while preserving truth in substance; or so as to admit of allegorical and ideal interpretations, as in the attempts of orthodox theologians to square the first chapter of Genesis with geology; or so as to account for certain other teachings in opposition to natural science, and for an apparent progress shown in the book in respect to theological and moral perceptions. The general proposition assumed by those who make these modifications in the old theory of Biblical revelation is that the inspiring Deity was under the necessity of conforming to the imperfections of human thought and language, in order to make himself understood at all, and made therefore a progressive revelation of himself in accordance with the advancing conditions of human intelligence. In short, the old theory of plenary infallibility has been so variously modified by the different grades of orthodox theologians, ranging all the way from Dr. Lightfoot to Dean Stanley, that the attenuated doctrine of Biblical inspiration, which is now well received in good orthodox circles, has so many liabilities to human error attached to it that, if it were not for the more reputable name and ancestry of the thing, it would have little advantage over that vulgar infidelity outside, which is charged with denying all inspiration and with having no Bible at all! And for any one to-day, especially one who professes acquaintance with the position of Biblical criticism, to say that the Bible is the one perfect book, that its every inculcation is true and healthful, that it is a book fit to be read in every part and particular at all times and places, as Shakspere and Plato and Milton cannot be, is to commit an affront against the scholarship of the age.

But, on the other hand, the same research that has proved the Bible to be no book of infallible authority has settled also that it is no imposture, and not at all the evil book, either in purpose or substance of contents, which zealous unbelievers have accused it of being. This research has shown that the Bible is not one book, but a collection of many books, of various contents, by numerous authors, in different languages and dialects, and extending through a period of probably twenty centuries or more. The authors of some of the books are known, of others unknown. Some portions of them go back to an antiquity that is very obscure and to a condition of human society that was very primitive: others were written so late as to show clearly the influence of Greek philosophy and culture. The authors exhibit as wide a difference in respect to topic and mode of thought and moral insight and mental ability as they are far apart in time. To suppose that the writers of these various books, living in so many successive centuries and under such variety of conditions, were in collusion to impose upon the world a gigantic literary fraud, is an hypothesis too absurd to call for refutation. Not less absurd would be the hypothesis that each of the books was a distinct and separate fraud. The books of the Old Testament together make the whole body of Hebrew literature that was extant at a certain epoch a few centuries before Christ. To suppose all these writings fraudulent is no more rational than it would be to suppose the whole body of English literature an imposture from the time of the Anglo-Saxon invasion to the reign of Queen Elizabeth. But, in fact, the imposture theory of the Bible falls as soon as the supports of the theory of infallible inspiration are knocked away. It never had any foundation of its own, and was only held in place as a kind of conjectured antipodes to the claim for an infallible book. The believer said, "Here is a book that is heaven-born!" The sceptically inclined man looked at it, thought he saw very distinct trail-marks of earthiness in it, and replied, "No; and, if it comes with that claim on its brow, then it is not merely earth-born, but hell-born." And hell-born it would be, if it came

Digitized by Google

with that conscious lie in its bosom. But the book does not claim infallible authority for itself. And modern scholarship has shown that it is neither heaven-born nor hell-born, neither wholly good nor wholly evil, but an earth-born book,—a book born of humanity, and sharing humanity's infirmities and aspirations, born of the human soul, and bearing a faithful record of the struggles of the human soul out of its earthiness toward moral and celestial good.

And when modern critical scholarship has put the Bible into its true position as a human book, inspired with good as man is inspired with good, but liable to error as man is liable to error, as a book originating like other ancient books and to be rationally read and judged like other books, then has scholarship really lifted the Bible into a place of new value, and endowed it with fresh power for benefiting mankind. That the book, on the old theory of its infallible authority, has done some evil in the world, though not to the extent that the extreme sceptic claims, is to be admitted. But the evil has not come so much from the book itself as from the false idea that everything in it was of divine authority and good for humanity to-day. Leave the book free to be judged and sifted by enlightened reason and conscience, and the human mind will inevitably see that there are some things in it which mankind in its mental and moral progress has already outgrown, and which it would not be at all well for civilization to reabsorb. But, on the other hand, when the Bible is placed in this, its natural and human position, the human mind will as inevitably see that there are great truths in the book,—truths which have been wrought into the human consciousness through fiery struggles of man's experience with error and with error's bitter consequences, and which it is good for man to read and ponder to-day; truths which are eternal, confined to no time or place or race, and which man will not easily let die out of his memory nor out of his most cherished literatures. Here is the literary record of a people with a special genius for religion,—a record of their experiences with the great problems of life and destiny; their poetry, their prose; their attempts at historical narrative when the materials of history were scanty and obscure; their songs of the heart's human loves; their aspirations toward an Infinite Love; their ideas of right and duty; their efforts to solve the question of creation; their struggles with the philosophy of divine providence and human freedom; their theology, often falling into mythology; their national prophecies and patriotic appeals; their codes of civil law and their declarations of the rewards and retributions of moral law: here, in fact, is a transcript of the civil, moral, religious life of a whole people, for many centuries, as they struggled out of barbarism and fetichism toward civilization and a purer worship, under the leadership of valiant and heroic souls, and with a mighty faith in their own national destiny and in the overshadowing, protecting leadership of Almighty Power above them.

We are now prepared to note the chief points in an estimate of the value of the Bible, when it is thus read and interpreted as a human production, or as a collection rather of human literary productions, according to modern methods of rational criticism. Considered thus, as the natural records of human thought and experience, what is the actual, inherent worth of these Hebrew and Christian scriptures? their worth to history, to literature, to ethics, to religion? That their value from this point of view is great will be readily admitted; but we shall better appreciate, perhaps, how great it is, when we reflect how precious in the sight of scholars, as bearing upon our knowledge of the human race, is every scrap of parchment or of papyrus, and every fragment of ancient inscription that is exhumed from Oriental dust and ruins, and at what enormous cost of labor and money the search for these fragmentary relics of the records of ancient nations has been in modern times conducted. When, a few years ago, the canonical books of the old religion of Persia were discovered, and when Champollion and his disciples, through their infinite patience and research, deciphered the hieroglyphics of the inscriptions on Egyptian pyramids and temples, the whole world of European scholarship welcomed the new treasures of knowledge with enthusiastic admiration and gratitude. What would be said, then, of the value of this treasure-house of Hebrew and Christian writings, if they had been lost and recovered in the same way?

And, first, let us consider their value to history. The value of these books *as* history may be slight, but their value *to* history is very great. Some of them that profess to be historic, as those relating to the earliest times, have little or no claim to that name; and even those that refer to the latest times must be read with the most careful study and discrimination. Just as Livy's *History of Rome* was shown, under the critical analysis of Niebuhr, to be in parts wholly unreliable as a narrative of actual facts, so has scientific study shown the same even of the historic parts of the Bible. And, like Livy, it must now be read, if one is seeking its historical worth, with the most cautious investigation. Yet just as Livy still remained, after Niebuhr's accepted analysis, an invaluable treasury *to* the historian of Rome, so does the Bible remain, though we question every part of its contents *as* history, an invaluable help to the historian of the ancient world. Even if no part of it purported to be a narrative of historical events, it would still be a rich treasure of knowledge to the historian. Its sketches of life, its record of laws, customs, usages, its deposit of traditions, its pictures of domestic and social habits, its ethical and religious teachings,—all these are of vast advantage in any attempt to construct the primitive history of the human race. But there are parts of these records, which, with the careful study and discrimination of which I have spoken, and by comparison with other records, may be safely taken as a guide, or as a skeleton plan, in the construction of the history of the Hebrew race for a long series of centuries. And though the Hebrew nation was small, and occupied but a narrow strip of earth, yet it happened that this strip of earth was central amid the migrations and activities of the ancient world,—midway between its east and its west,—and that thus the small nation that occupied it came into contact at different times with the more extensive and powerful nations around them. And, hence, the Hebrews, exclusive though they tried to be, could not live apart; but their history constantly penetrates, and is in turn penetrated by, the history of these surrounding nations, and through them is again connected with faiths and races still farther off and with movements that reach back to the most primeval times.

To the archæologist, therefore, to the ethnologist, to every one who attempts to trace civilization, religion, ethics, race, back to their primal roots,—that is, to the student of human history in any one of its great departments,—the whole collection of Biblical books, though shown to be full of errors, is replete with the most vital interest and worth.

Yet the Bible is in the main a book that has to do with the history of religion, and hence it has a special value in the construction of religious history. Persons of thought and reading are now coming to see that religion has developed naturally among mankind, just as everything else has; that the religions have a natural and logical connection with each other; that, as the sacred scriptures of each religion are generally composed of the productions of various authors and eras, so the sacred scriptures of the whole race of mankind will include the special books of all the religions. For the same historical investigation has shown that the world has more Bibles than one. There are now preserved and known the canonical sacred books of the Chinese, of the Buddhists, of Brahmanism, of the ancient Persian faith, of the Hebrew, Christian, and Mohammedan religions, besides very much that is known, though not recorded in specifically sacred writings, of the old beliefs of Greece and Rome and Egypt and Scandinavia. And it is by placing these writings, with their several faiths and traditions, alongside of each other, and comparing them together, that there has grown up a new science,—the Science of Comparative Theology (the Science of Religion Max Müller calls it),—from which we may expect great results affecting the future faith of mankind, both in its speculative aspects and in its practical issues. It is not too much to say, indeed, that this scientific study of the various religious literatures is destined to revolutionize the religious faith and attitude of mankind. Now, suppose that the Hebrew and Christian Scriptures were lost out of this chain of literatures,—the two links that are most central in it, and that more than any others connect the modern religious world with the ancient,—the loss would be irreparable; the loss, I mean, simply to this new science of religious development. I am not now speaking of the loss to ethics or practical religion, but simply from a scientific point of view of the defect in the chain of evidence that now proves the common genesis and natural brotherhood of all the religions. It would be a loss equivalent to that which would exist in the science of language, were all vestiges of the Greek and Latin tongues to have been destroyed: for somewhat in the position of those languages in the historic development of language stand the Hebrew and Christian religions in the natural historic development of religion.

And not only is the Bible valuable for its historical evidence of the natural development of religious ideas on account of its relation to the sacred books of other religions, but because it presents evidence of the same natural development and growth in the religious consciousness of the Hebrew race itself. The Old Testament exhibits this progressive development in the Hebrew religion. And then, with the help of the apocryphal Hebrew books as introductory to the New Testament, we see how, under Hellenic influence and the Messianic idea and the oracular preaching of a great prophet, a new religion grew out of the old: so that at the Christian era this *national* religious consciousness of the Hebrews opened out into the broader *Christian* consciousness, which overflowed the old boundaries both of race and creed, and brought Jew and Gentile into the fellowship of a common faith. And the Bible has a special value not only for its exhibit of the development of the Hebrew religion, but for thus disclosing the natural processes of birth and growth by which was produced the most powerful of the religions now on the earth.

And, from this point of view, the value of the several parts of the Bible is little affected by questions of the genuineness of their reputed authorship or of the historical authenticity of the contents. Their worth lies in what they are in themselves. Take, for illustration, the Fourth Gospel. The great question in Biblical investigation at the present day is the authorship of this remarkable book. Is it the production of John the disciple, or of some later John, or of some write unknown? The weight of critical judgment seems now plainly to point to a later origin than the lifetime of John the apostle. I have little or no question myself that it is a production belonging to the latter part of the first half of the second century, and that it is not so much a history or biography of Jesus as a transcript of the Christian consciousness a century after Jesus' death. Yet the book loses none of its moral value, none of its fine tenderness of sentiment, none of the broad catholicity of some of its chapters, none of its mystic beauty, none of the transcendental spirituality that pervades it, though this late authorship should be proved for it. On the contrary, it becomes specially valuable as indicating the *impress* and *development* of the ideas which had gathered about Jesus' name, and the growth of the spiritual side of the religion which organized itself upon his life. The great worth of the Fourth Gospel lies in the fact that it represents the best contents of the Christian consciousness, with regard to the Messiah and the Messianic kingdom, one hundred years after the crucifixion of Jesus, when the Church, disappointed in its early hope of a speedy return of the Messiah to earth and of his assumption of temporal royalty, had risen to a more universal and transcendental conception of him and of the religion he had inaugurated. The Messiah of the Fourth Gospel is not so much the actual, historical Jesus as the Eternal Word, to illustrate whose career on earth the facts and legends that had come down from the life of Jesus were used by the author with no critical discrimination. But behind this illustrative biographical dress are certain deep *spiritual* truths which are independent of any one being's career. Though the biographer may continually offend us by his gross exaggeration of the personality of Jesus, he is also continually suggesting to our thought, and touching our hearts with, a view of a divine humanity not limited to the prophet of Nazareth, the idea that the life of finite man may be a veritable incarnation of the spirit and power of all life, the Life of Ages. Hence do we find in this book so much of universal truth. Divest the biography of its specific form, and it becomes the biography of every human soul.

And what I have here said of the value of the Fourth Gospel, though we do not accept its historic authenticity, by way of illustrating the worth of the Bible as a record of the historical development of religious ideas, leads me to speak of a similar value that lies even in the legendary and mythical parts. Suppose that rational criticism proves, as it does

Digitized by Google

a considerable portion of the Bible to be legendary, mythical, incapable of credit as a literal narrative of fact: that does not empty even those parts of significance and worth. The mythology of Greece and Egypt are not barren of meaning. The legends of the Norsemen are not mere empty tales that carry no significance. In these stories, frivolous or monstrous as they may often seem, are preserved the primitive faiths of peoples to whom faith was as vital an experience as it is to us to-day. There is probably no form of fable or myth, however grotesque, which did not originate in some real human experience, and represent some thought or sentiment that was once a very living reality. Break through the shell of the legend, wherever we find it, and we strike that which was once a palpitating conviction, an actual brain-throb or heart-throb in the life of our distant ancestors. And the Bible legends are no exception to this rule. Stories of miracles and wonders, of resurrections and transfigurations, of supernatural births and angelic voices, of the burning bush and the unwasted oil and meal,—they are all forms in which to the popular imagination was crystallized some vital moral or spiritual truth, too subtle to be carried at the time in any other way. When we give them up as facts, then we begin to see their truth as poetry and drama. We do not believe the Greek mythology: in its literalness, we utterly reject it; yet we linger with rapture over its profound significance, when some skilful analytic mind throws aside the mythologic veil, and discloses the panorama of the vital movement of human thoughts and emotions which it conceals. So, in the myths of the Bible, there is something of the same crystallized truth. Bunsen points out how the story of Cain and Abel represents no petty quarrel between two individual men (which it seems hardly likely history would register), but a long and severe conflict between two classes of men in the primeval age, the husbandmen and the herdsmen; between the agriculturists, who wanted to till the soil and have fixed property in the soil secure against intrusion, and the shepherds, who wanted to subsist simply upon their flocks and herds, and to have liberty for them to graze where they pleased. It was a conflict, therefore, marking the dawn of civilization. And the story, when thus interpreted, becomes much richer in meaning and much worthier to stand in history than the story of a mere personal quarrel between two brothers. Or go back still further, to the Biblical story of creation. Science will not admit it, and even the common sense of the unscientific rejects it. If we try to think of it as actual fact, it becomes puerile. But when considered, not as if written by an omniscient pen, but as the struggle of the primitive thought of mankind to account for the origin of themselves and the world, clothed in the poetic dress of legend, conceive of the creative spirit as brooding over chaotic matter, and as slowly penetrating it with orderly vital process, and evolving one after another the various forms of being and life, and the story becomes sublime. But, to make it sublime, it must be read as poetical legend, not as science.

Again, the Bible has inherent valu · from a purely literary point of view. There is a good deal of it, it is trde, that has no literary merit whatever, and that, except for its antiquity and for some historic value it may have on this account, would not be worthy of preservation. But, on the other hand, there are parts of it which fair and scholarly criticism would place among the literary classics of mankind. The Book of Job deserves to stand side by side with, nay, above, the great poem of the Roman Lucretius, *De Natura Rerum*, or with Goethe's *Faust*. Could we separate it from its accustomed religious setting, and have it printed without the artificial and entirely arbitrary division into chapters and verses, just as any modern poem would be printed, and with the rhythm of the original preserved, we should much better appreciate than we now do both its subtle philosophy and its majestic poetry. There are, too, parts of the Psalms, Proverbs, and Prophets, portions of Paul's letters, and some speeches recorded of him, and discourses and parables by Jesus, which, aside from the sacredness with which piety and dogma have invested them, for their purely literary worth the world would not suffer to die.

But I must pass to the final point to be considered,—the inherent value of the Biblical writings for their moral and religious teachings. And here, again, we are to regard them not as specifically sacred books with an origin peculiarly their own, but alongside of other writings of moral and spiritual import,—alongside of writings of similar character in other religions. And, to this end, it is not necessary that we should go into any invidious comparisons, not necessary to say that they stand above and beyond any other religious writings in the world, in order to indicate their actual worth. It is better with unprejudiced opinion to look for the gold that is in them all. It is enough to say that, as Plutarch, and Epictetus, and Socrates, and Plato, and Confucius, and Marcus Aurelius are reckoned as of inestimable value for their testimony to the teachings of the moral sense, so are these records of the words and deeds of Hebrew saint and sage beyond price. Some sacred books excel in one point, others in another point. If I were to look for the doctrine of the pure spirituality of Deity freed from anthropomorphic conceptions, I should go to the earlier Hindus. That passage from a Chinese Buddhist litany, wherein the worshipper pledges himself "not to enter heaven to accept private salvation for himself, but to remain in the world of sin, sorrow, and struggle till all other souls are redeemed," is a higher utterance of the sentiment of perfect consecration and self-sacrifice than anything I recall in the Christian Bible; while there are certainly parts of all sacred books, the Bible as well as others, that no judicious teacher would think of reading to-day, for moral example and stimulus, either in the pulpit or in the family circle. On the other hand, it may be justly claimed, perhaps, that nowhere shall we find all the essential elements of ethical and religious truth combined in such fair proportion, and stated so vividly and livingly, as in the moral and spiritual parts of the Gospels. There is a remarkable richness in the character and utterances of Jesus, a rare combination of the heroic and tender. Ethically, his teaching may not be purer than that of Zoroaster, which it much resembles. He is not more self-sacrificing than Gautama Boudha, not more devoted to the interests of the poor and the miserable. Yet there seems to be more of warmth, more of spontaneous sympathy, more of real human vitality in his work. I think it is because he had less of philosophy than these other reformers, and more of the enthusiasm of humanity: he came to his work through the heart rather than through the head; and that fact has left its impress upon the records of him.

But this is not the question we are primarily to consider,—whether or not we may get more from these books of the Bible, ethically and spiritually, than from the sacred books of other faiths. Of course, in Christendom people *have got* vastly more from them than from all the others combined, and will continue to do so for a long time to come.

But the main question is, *What* is it that may be obtained from the Bible of moral and spiritual aid? Let me answer generally by saying that, using these books rationally, discriminating their teachings, not accepting a proposition as necessarily true because it is there, not making them an authority to override reason and conscience, we should find in them fine moral and spiritual nutriment. The moral sense of men, however it first originates, is confirmed, strengthened, and stimulated by outward testimony and example. These consenting voices (for in the fundamentals of ethics, when rationally discriminated, they are consenting) prove that the voice that speaks through our mental and moral intelligence to-day is no personal caprice of our own, no accents of an individual private deity that we have enthroned in our own bosoms, but that this revelation which comes through our personal consciousness is a chapter of a universal book of human experience, and that beneath our intuitions, so far from their beginning with us or having no past behind them, rests a solid bed of granite, reaching down to the very centre of the universe and back to the beginning of creation. The great value of these books, morally and spiritually, is that they show the human race to be of one stock all through. They testify that men, in the far ages and under the most opposite conditions of life, have perceived the line that separates good from evil, have felt the obligations of justice and mercy, have honored virtue, have aspired after right, have struggled against wrong, have reverenced truth and bended in worship before One who seemed the sum of all power and excellence, and have thus felt themselves invigorated and helped to meet the temptations, trials, and sorrows that befell their lot,—the same temptations and trials and sorrows that come to us to-day. Using the Bible thus, its miraculous character disappears indeed; but, for this very reason, it becomes to us a real picture of common human life, and stays much closer to our every-day sympathies and needs. Something may be found in it for every condition in life, for prosperity and adversity, for joy and for sorrow, for birth and marriage and death, for hours of remorse and for hours of happiness, because this was one and the same life which we are living now and here. These are real men and women that start up out of its pages, where they have been so long fossilized by our petrifying theologies, and they live again. Abraham and Moses, Jacob and Rebecca, Samuel, Deborah, David, Solomon, Isaiah, Jesus, Paul, John, the Marys and Martha,—these are our human brothers and sisters. Not all of them "after God's own heart" by any means, some of them very far from it, but all of them workers, more or less earnest and successful, at the hard problems of existence; and thus we join hands with them in the world's great life.

But, with these alone, the circle is not complete. Vanish all sectarian walls, all ecclesiastic bounds, all separating partitions between the religions! The family of man is not all here; and therefore the family of God is not all here. There, in old Greece and Rome and Egypt, in Persia and India and China, have lived others of His offspring, who have proved themselves to be possessors of the life that outlasts the ages. These, too, we must count within our circle. We clasp hands with them also, sharers of the same experiences, heirs of the same aspirations and hopes,—

> "In one immortal throng, we view
> Pagan and Christian, Greek and Jew";

and by and by, perhaps, we shall have a Bible that will select and combine for us the best voices from them all, the Bible of Universal Humanity.

For *The Index*.

INDUSTRIAL CO-OPERATION.

Addresses by Mr. Parke Godwin and Mr. George Jacob Holyoake at the Reception given to the Latter in New York just before his Return to England.

Address of Mr. Godwin, Chairman.

(Stenographically reported by A. L. Leubuscher.)

Ladies and Gentlemen,—The social question or, as it is sometimes called, the social problem, of which we hear so much, is, after all, only the question of labor. It is needless to say to this company how important that question is, or even to say that it is the most important of all questions, transcending all in the variety of its relation and in the depth of its bearing upon human interest; for it concerns the whole human race,—not only the many millions who labor themselves, whom it concerns directly, but the other millions, dependent on that labor, whom it concerns indirectly.

It is a peculiarity of our natural economy that man, of all animal creatures, is nearly the only one for the satisfaction of whose wants nature has not made a gratuitous supply. *He* has to avail himself, beyond a few productions of nature, for all that he gets by his own toil. He must work with his body, with his mind, and with his soul for the nutriment and the wealth and the health of his body, his mind, and his soul. It is another peculiarity of this economy in which we live that man, of all the animals, cannot work alone. When his work is performed in solitude, it is utterly inadequate and inefficient. The labor of his fellows is as needful to him as his own labor. Alone, he is merely the hunter, and scarcely removed from the savage. And, in that condition, his faculty, his intellectual faculty, is intercepted by a barbarism which prevents him from rising much beyond the savage state. It is only by a combination with his fellows that he emancipates himself from this early and degraded condition, from being a mere brute, imperfect, a denizen of the fields, into higher states,—that he rises through barbarism in its various degrees. It is only through his co-operation with his fellowmen that he is turned from the slave of nature into her master, appropriating her materials, directing her forces, making indeed the very sun to shine and the waters to flow for him, chaining the winds and harnessing the lightnings, which so often rend the heavens with great fissures of fire, into obedient and gentle messengers of social intercourse.

Such being the function of associated labor, I say that the question of labor is the most important of all questions,—the question as to *who* shall labor, the *conditions* on which that labor shall be performed, and the *methods* in which its results shall be equitably

Digitized by Google

distributed. Not only now, but in all times, it has been the foremost question, or the question lying at the bottom of all political and social agitations. In the ancient world, you remember, they managed this question in this way, by reducing the great body of laborers to a single class called slaves; while the others enjoyed the fruits of their labor. In the Middle Ages there was a perceptible grade of improvement in the condition of serfhood, when the mechanics and agriculturists performed the work, and the lords and barons on the sides of the hills took it by force. In these modern times, the wages system prevails, or salary on voluntary contract. It is an improvement upon former methods: it has given a wider scope to industry; it has imparted a higher dignity to work; it has given us greater freedom of development, greater refinement of culture, and greater and more equitable division of wealth, and more earnest, heartfelt respect for each other. But, my friends, is it perfect? Can any one say it is perfect, when he sees in every society still this large fringe and border of poverty, of squalor, and of crime? Can any one say it is perfect, when he knows of the continuous uneasiness that pervades all our civilized societies, and pervades the most civilized, perhaps, with the greatest intensity? Can any one say it is perfect, when he sees the perpetual battle of capital and labor between employer and employed, seemingly without solution, and for which the laboring men themselves have found but one solution, which is the suicide, the industrial hari-kari of the "strike," whereby a man runs the knife into his own vitals lest somebody else should do it for him? Can any one say it is perfect, when in nearly all of our cities we are constantly trembling upon the verge of some great cataclysm of revolution? Can any one say it is perfect, when wild, incoherent chimeras of social theories—Nihilism and government socialisms and anarchisms—are received by wide classes of people as a possible improvement upon the state that is? No, my friends, it is not perfect,—this system of ours, with all its advantages. It is not perfect, because it has these two capital defects: first, that it is, after all, no system, no regulated order, no organized condition of things, but a loose, helter-skelter, chaotic state, founded simply upon the notion of struggle, in which the strongest survives; secondly, so far as it does attain to any semblance of regularity or organism, it is only a chance product: the harmonies of it, which are few, are accidental, while the defects of it, which are many, are inevitable.

Now, it is not surprising, in this condition of human experience, that the thought should have come to many men that human ingenuity and human wisdom and human love should find a better mode and order of social relations. It is not surprising that men should have said that, instead of this no-system, let us have something that is organic; instead of this antagonism of interests, let us have something that is co-operative and harmonic. Now, for many years, this notion of a better order of human society has been simmering in the minds of men, in the minds of speculative men first, in the minds of men full of heart and sympathy for the human race, and finally in the minds of scientific men. We see that the outcome, the upshot, the flower, the glory of all previous sciences, is, or will be, a social science, a science of society, a science which shall dispose men in relations of absolute justice, brotherhood, and love.

It will be impossible for me on this occasion to dwell upon the many modes in which this idea has taken form in the world, many of which have been utter failures, many of which are destined still to be failures. But the idea is born in the world: it is the one fermenting idea of these times; it is the one hopeful idea; it is the only alternative that I see to a continued state of revolution and distress. I am thoroughly convinced that association, that organized industry, that united labor, is the grand key of future development. I am convinced of it for this reason, if no other: that, if there be one fact which science has made clear to us, it is that the perfection of being—the perfection of the vegetable and the animal tribes, the perfection of man himself, the perfection of man in society—depends wholly upon the degree in which he is organized. Why do we count the animal higher in the scale of creation than the vegetable? Why is the lordly oak, that breathes the thousand years, greater than the fungus or the wayside weed? Why are your Shaksperes and Goethes greater than your simpletons and your idiots? Simply in the degree of their organization. Why is your present state in New York better than that of our red Indians in the West? Simply because it has attained to a higher grade of organization. And its future progress will depend upon the degree of its increasing organization. The future depends upon these efforts toward organized labor. That is the first element of progress in all stages of life.

Many years ago, now forty, I think, I uttered sentiments like these in this city; and I uttered them in the zeal and enthusiasm of youth, and people said they were dreams. Well, at the time, they were dreams. But I remember Schiller's beautiful lines, in which he says that we must reverence the dreams of our youth. I reverenced the dreams of my youth; and now, when the snows have begun to sift their white flakes through my hair, I find that I have learned nothing, absolutely nothing, in this long interval, but a firmer and clearer, a more immovable confidence in this principle of associated and co-operated labor.

I said that I could not dwell upon the forms which this great inspiration had taken practically; but, fortunately, we have with us to-night a gentleman whom we have come to honor, who, in England, has been long connected by thought and practical service with the realization of these ideas. I am very happy, gentlemen, to express your salutation and mine, your welcome and mine, to Mr. George Jacob Holyoake, of England.

Summary of Mr. Holyoake's Address.

Co-operation is the new force of industry which attains competency without reducing any to mendicancy, and effaces inequality by equalizing fortunes. Co-operation is not a philanthropy merely, nor a new scheme of benevolence. It is not a contrivance for helping others, but a manly contrivance for enabling others to help themselves. Its idea is to have a fairer distribution of the labor and to make capital for the laboring classes. Co-operation is not, as defined by a New York newspaper recently, the marriage of a doctor's daughter with an undertaker's son. That might be co-operation for an increase of business, as illustrated by an Englishman's definition, who said that if two greyhounds hunt together they will bring their master more hares than four days' hunting separately. But industrial co-operation has for its object the catching of hares, not for the master, but for the greyhound himself. It is the association of any number of persons together, whose object is to attain, by concert, prudence, common sense, and good will, certain advantages to be divided among themselves. There are three methods of industrial co-operation,—by store, by workshops, and by bank. In France, co-operation is by the workshop, in Germany by bank, and in England by stores. No country yet has been able to extend co-operation so as to include two branches of industry. One only seems to succeed in each. America as yet has not succeeded in any. The reason of this is perhaps that Americans generally easily get too rich to think of the humble gains of co-operation, are too busy with individual work to spare any time for work that will benefit others, and too well informed to be instructed in anything looking to an improved method of living. The process by which a co-operative store is established in England is for a meeting to be called, and the fact explained that it would be advantageous, for the sake of purity of food, fairness of measure, and the attainment and creation of new capital, to combine for these ends. Then, it is proposed that each person save up until he is able to subscribe a small stipulated sum, such as $5, or even as high as $25, but never any more, for the purpose of getting the thing under way. When one hundred subscribers at $5 each are found, the store is started, a very small, obscure room being used for the purpose; and the service at first is voluntary. These one hundred persons, finding that the more people come to the store the greater their profits would be, will tell their neighbors of the venture, thus saving the expense of advertising. The purest goods are sold, fair weight given, nothing misrepresented, and market prices are charged. It is a spot cash business. From the profits, rent, help, and five per cent. interest on the capital are paid, and a reserve fund established. Then, two and one-half per cent. of what remains is devoted to educating the patrons of the store. Every patron saves ten per cent. of what he spends at the store; so that, if a householder spends $5 a week at the store, he effects a saving of fifty cents. Thus, the man with a large family grows rich faster than a man with a small one. No more than five per cent. is ever paid to the subscriber, and the balance is used for a surplus fund. The sums saved for the patrons draw interest, and the workingmen become capitalists without effort. It is simply foresight, prudence, and economy.

The membership of some of the stores in England exceeds by thousands what their original promoters hoped for them. In the Leeds store there are eighteen thousand members, and in the Halifax store twelve thousand, and the Rochdale is higher than either of these. In this last-named store, which was started just at the time when La Salle was preaching his communistic doctrine to the workingmen of Germany, £50,000 or $250,000 were divided last year in profits. This money was created out of nothing but the "custom" of workingmen, and it was given back to them. If La Salle had lived, he would have seen that it is indeed possible for workingmen to create capital for themselves. Co-operation means that many persons contribute to one end, and that end is the creation of capital. It is a scheme of industrial concert, where no one is indifferent and all work alike. The advantages the stores have over ordinary tradesmen in competitive trade are these: they ask no credit, they give no credit; they have no advertising to do; they need not pay high rents on fashionable streets; and, giving and asking no credit, they have no elaborate scheme of book-keeping that requires an army of clerks. The purchasing agents of English co-operative stores in America last year spent $2,000,000. Those in Ireland, where eggs, butter, and other produce are purchased, spend $5,000,000 annually.

Of the moral features of co-operation, the selling of the purest food by just measure, at a fair price, is itself a lesson in morality. The education derived is increased morality. With increased prosperity comes increased self-respect. Mill is the sole philosopher who knew that progress must have such conditions as not to depend upon charity. Morality depends on similar conditions, as does also a vigorous individual conscience.

The first co-operative society was formed to supply its members with wheat bread and butcher's meat. That was sixty-five years ago, the year in which the speaker was born. Under the system called "protection to home industry," the preceding generation of English workingmen had neither wheat bread nor meat to eat. When the principles of this society can be extended to other industries, so that workingmen, instead of being hired for the lowest price and giving the least return, will have their hearts as well as hands engaged, then all the irritation between capital and labor will disappear. It will be as easy for all to live in palaces as it is now for the many to live in hovels, while the few live at ease. The time will come when in every country no man will sell himself to another, but receive a share of the wealth which he helped to make. Co-operation is only popular among sober and industrious people, and only among such could it be made a success.

As for Herbert Spencer's criticism that the people in this country are in too great a hurry, Mr. Spencer himself would be in a hurry if he were to stay here six months. The great resources of this country, its opportunities and competition, are enough to make an angel hurry. In closing, Mr. Holyoake spoke favorably of this country, and hoped that the government would encourage intelligent immigration and publish trustworthy information to let the world at large know what the conditions and necessities of various parts of the country were.

BOOK NOTICES.

JOHN GREENLEAF WHITTIER. His Life, Genius, and Writings. By W. Sloane Kennedy, author of a *Life of Henry Wadsworth Longfellow*, etc. Boston: S. E. Cassino. 1882.

This volume, as the only published biography of the beloved and genial Quaker poet, would be interesting from that fact alone; but, in addition to this, we can assure all who read the work of an additional treat in the original genius of him who writes it. Let us frankly say, however, in the first place, that we do not consider biography to be Mr. Kennedy's specialty as a writer. As a "gatherer up of the unconsidered trifles," which are so necessary a part of biography, he is not wholly a success. While having made of this *Life of Whittier* an extremely readable and interesting book by reason of his own vigorous originality of thought and expression, the sketchiness of it as a whole, the lack of continuity of narrative, leave in

Digitized by Google

the mind of those readers intent only upon understanding all the varying sinuosities of circumstance and thought which have had any effect on the mental make-up and outward action of their hero a sense of something lacking and unexplained. The ideal biography is one in which the biographer is completely forgotten in the interest in his subject. In this *Life of Whittier*, one grows as interested in Mr. Kennedy as in the poet himself, the more so that Mr. Kennedy writes so evidently *con amore*. We feel quite sure as we read that this writer could never school himself to attempt to write the life of a man he did not admire. We find all through the work strong expressions of Mr. Kennedy's personal opinions in regard to men and things. The work is divided into two parts, part first comprising the biography proper, the second part being devoted to an "Analysis of Whittier's Genius and Writings." In this second part, Mr. Kennedy's own genius is seen to best advantage; but traces of that peculiar genius irradiate even what would otherwise be the dryest pages of the Life: as, for instance, in the opening chapter devoted to the genealogy of Whittier occur frequently such fine sentences as these: "A poet, no less than a solar system or a loaf of bread, is the logical resultant of a line of antecedent forces and circumstances. The fine but infrangible threads of our destiny are spun and woven out of atom-fibres indelibly stamped with the previous owners' names. Their characters immingle in our own,—the affluence or the indigence of their intellects, the sugar or the nitre of their wit, the shifting sand or the unwedgeable iron of their moral natures. ... What more appropriate emblazonment for the escutcheon of our Martial Quaker poet than a warrior's helmet, and a dove holding in its mouth the emblem of peace!" In his descriptions of places, the natural scenery by which Whittier was surrounded, Mr. Kennedy excels; and we wish we had space here to quote some of his beautiful word-pictures, which are thoroughly poetic in tone and strong in outline. From the second part of his work, the analysis of Whittier's genius, we quote this definition of one of the leading doctrines of the Quaker sect: "Philosophically, its theory of the Inner Light is identical with the doctrine of idealism or innate ideas held by Descartes, Fichte, Schelling, Cousin. It means individualism, a return to the primal sanities of the soul. ... 'I think: therefore, I am.' My thinking soul is the ultimate source of ideas and truth. In that serene holy of holies, full-grown ideas leap into being, subjective, *a priori*, needing no sense-perception for their genesis." On the whole, this is a very charming volume, and an inspiring one; for the writer is evidently a sturdy defender of the most radical opinions of the day, as well as an enthusiastic believer in the good and true wherever he thinks he has found goodness or truth. The book is nicely bound, with clear type, is illustrated with a good frontispiece portrait of Mr. Whittier, and with views of his birthplace, the old school-house at Haverhill which he attended as a boy, his home at Amesbury, his study, and a view from his home at Danvers. There is also an excellent index to the leading incidents mentioned in the work.

SOME CHILDREN'S BOOKS.

NORSE STORIES RETOLD FROM THE EDDAS. By Hamilton Wright Mabie. Boston: Roberts Brothers. 1882.

HESTER STANLEY AT ST. MARK'S. By Harriet Prescott Spofford, author of the *Marquis of Carabas*, *The Amber Gods*, etc. With illustrations. Boston: Roberts Brothers. 1882.

RED CLOUD, THE SOLITARY SIOUX. A Story of the Great Prairie. By Lieut.-Col. Butler, C.B., author of *The Great, Lone Land*, *The Wild North Land*, etc. Boston: Roberts Brothers. 1882.

THEOPHILE GAUTIER. My Household of Pets. Translated by Susan Coolidge. With illustrations. Boston: Roberts Brothers. 1822.

POSIES FOR CHILDREN. A book of verse selected by Mrs. Anna C. Lowell. Boston: Roberts Brothers. 1882.

NONSENSE SONGS, STORIES, BOTANY AND ALPHABETS. By Edward Lear. With one hundred and fifty illustrations. Boston: Roberts Brothers. 1882.

Norse Stories retold from the Eddas, by Hamilton Wright Mabie, is a delightful book. The Norse mythology has never before been presented in a form so intelligible and agreeable to the average mind. It is a book for children of fourteen and upward, of twelve, perhaps, if they are very bright; but it is equally a book for grown men and women. And it is a book that should be read not only for its pleasure, but for its instruction. The Norse religion was the religion of our forefathers; and we should do well to spend a little more time upon it, if we had to spend a little less upon the religion of the ancient Jews, whose mythology did not begin to be so varied, rich, and beautiful. Indeed, it may be doubted if any other mythology has a myth so beautiful as that which enshrines the death of Balder, or one so awful as that which depicts the Twilight of the Gods.

Mrs. Spofford's *Hester Stanley at St. Mark's* is her first venture in the field of juvenile fiction. Let us hope it will not be the last. The book is remarkably free from the overrichness of upholstery and furniture which is generally characteristic of her books. Hester Stanley is a girl born in the South Sea Islands, where she has contracted something of the wildness of the indigenous inhabitants. But she has a good mind and heart; and, as the story proceeds, these steadily assert themselves and she wins her way to the affection and esteem of all, or nearly all, her teachers and companions. Girls who have been to boarding-school will, we imagine, find many of the pictures here true to the life; and those who have not will want to try it for at least a single year.

Red Cloud, the Solitary Siouz, has certainly a little of the dime-novel sound; but it is very far from the dime-novel style of book. It may be taken for granted that boys will read books of adventure, good or bad, and by fair means or foul. It is highly important, therefore, that there should be good books of adventure. There are such, and this is one of them. It is admirably written. The author, Lieut.-Col. Butler, is evidently acquainted with the region haunted by his muse of tragedy. The motto on his title-page is certainly assuring:—

> "Like a wind that shrills
> All night in a waste land, where no one comes,
> Or hath come since the making of the world."

There is a promise here of something noble in the general conduct of the book,—a promise which is kept throughout. The author has a lively sense of natural beauty, and his pen is quick to indicate what he has seen and heard. We have tried the book on our own boy and girl, and found it a success.

Théophile Gautier's *Household Pets*, translated by Susan Coolidge, is a very bright and interesting book, but with a little care the translator could have made it much better than it is. It contains many allusions to matters purely French and Parisian, interesting only to adult French readers, which to the young American will be less than nought. A judicious parent, reading the book aloud, will omit all of these allusions. But, evidently, Gautier was an honest lover of dogs and cats, a nice observer of their ways; and he has chronicled their doings in a brilliant and engaging manner.

Mrs. Anna C. Lowell's *Posies for Children* is a collection of rhymes and poems for children all the way from three to ten; and there is plenty here that men and women of the ripest age, who still have the heart of youth in them, will read with laughter or with tears. The book will be a treasure in any nursery, a blessing on the children's hour, and as likely to wear out with constant reading as any book upon the children's shelves.

Mr. Lear's *Nonsense Songs* needs little recommendation; and the one hundred and fifty colored illustrations are like Herbert's "lovely rose," they "bid the rash gazer wipe his eye" they are so brilliant in their chromatic effects. They are more brilliant in their conception. Mr. Lear has written two immortal classics, "The Owl and the Pussy Cat" and "The Jumblies." These are still his best, but he has many others that will bring young and old together on a common ground of irrepressible laughter.

HOW TO BE WEATHER-WISE: A New View of Our Weather System. With illustrations. By Isaac P. Noyes. 12mo, pp. 51. Price 25 cts. New York: Fowler & Wells, 753 Broadway.

This is an explanation, brief and plainly written, of the causes of changes in the weather, based upon the system of the United States Signal Service. The value of the Weather Bureau is but little understood and therefore but little appreciated by those who read merely the "indications." In this little work, the author shows how the data are obtained for these indications; and the reader is made to see how simple a matter it is to observe the signs of the weather, when the principle involved is understood. Everybody, he claims, can observe the weather himself and be his own weather prophet; and Mr. Noyes presents what he has to say in good, plain English.

PERSONAL ITEMS.

MR. C. D. B. MILLS is to lecture in Brooklyn, N.Y., on January 11, and at Longwood, Pa., January 14.

REV. JAMES FREEMAN CLARKE is to give a series of week-day evening lectures on "The Anti-Slavery Conflict in the United States" in this city during the winter.

GEN. STONE PACHA, late chief of staff of the Egyptian army, has resigned his commission, and intends to return forthwith to America.

OSCAR WILDE has gone home. So has Mrs. Henrietta Pigeon Labouchere. Mrs. Langtry still remains, finding the gleanings of the rich harvest-field left by Oscar quite profitable.

MR. EDWIN D. MEAD, of Boston, has just delivered a course of four lectures on Longfellow, Whittier, Lowell, and Emerson, to full houses in Cleveland. He gives the same course by invitation in Erie, Pa., the first week in January.

MR. CHARLES BRIGHT, of Australia, is lecturing on liberal topics to full houses in Salt Lake City, Utah. He expects to be able to finish his engagements in this country in time to leave San Francisco for Australia in the early part of February.

ROBERT MORRIS, Jr., only child of the colored lawyer, Robert Morris, whose death was recently noted in these columns, and himself a promising member of the Suffolk Bar, died last week at his home on West Newton Street, this city, of pneumonia, aged thirty-five. The elder Morris died on the 12th ult.

REV. E. C. TOWNE has recently received a call to become pastor of a prominent Unitarian church in Westboro, Mass. His course of evening lectures on "Electricity" in Mr. Savage's West Newton Street Church was eminently successful, and awakened much thought and comment on the subject.

A CABLEGRAM announces the sudden death from heart disease of artist C. C. Burleigh in Germany, where he has been studying for some years. Mr. Burleigh was a son of the late C. C. Burleigh, the well-known anti-slavery advocate, and was an artist of considerable repute and promise of growth.

PRESIDENT ARTHUR'S reception on New Year's day came to a sad termination by the sudden death from heart disease of Judge E. H. Allen, minister to this country from Hawaii, who was attending the reception. He was a native of New Salem, Mass., but had lived in Hawaii since 1849, and was at one time regent of the government there. He died in the White House about noon, and the President at once gave orders that the reception was at a close.

THE *Sower* of Philadelphia says of an occasional contributor to *The Index*: "Rev. John H. Clifford, of North Andover, Mass., has been invited to the pastorate of the Unitarian Society of Germantown by a unanimous vote, and will probably accept, and begin his labors with the new year. Mr. Clifford is a man of modest manner, but with an earnest spirit and a mind of uncommon clearness and vigor. He is about thirty-four years old and in fine health. His welcome is ready and waiting."

M. LEON GAMBETTA, one of the foremost figures in French politics, and a statesman whose influence was felt in all those countries with which France had any political relations, died at midnight of Dec. 31, 1882, his life passing away with the going out of the old year. He had been ailing ever since he accidentally wounded himself, some weeks ago; but no danger was apprehended until within a few hours of his death. Pyæmia was the immediate cause. Although he had gained such eminence as a public leader, he was comparatively young in years. He was but forty-five at the time of his death. The *Pall Mall Gazette* (London, England) says of him: "Liberals all over Europe will deplore the loss of the great and remarkable figure of a statesman who used his truly virile mind for a noble cause, and who will live in French history among the most courageous, acute, and effective founders of the republic. The measure of his loss is the secret or avowed satisfaction with which it will be hailed by reactionists and the enemies of free government all over Europe." As he was an avowed free thinker, his funeral will be a civil one, with no religious services whatever.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts; one hundred, $1.50.
II. *The Bible and Science*, by John Weiss.
III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.
IV. *Transcendentalism*, by Theodore Parker. Never before published.
V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.

Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, $3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, $1.50.

For sale at THE INDEX office.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

THE INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

TESTIMONIALS.

Col. Ingersoll says, "The INVESTIGATOR is the best of all liberal papers."

A. W. Powers, of Oregon, writes: "The INVESTIGATOR comes regularly, and no paper is more thoroughly read; for, when my family and I have read it, the neighbors borrow it, and keep it going, and I am willing, hoping to do good in that way, although I would rather have them subscribe. I don't want ever again to be without the stanch old INVESTIGATOR."

H. G. Grattan (Iowa) writes: "After reading your paper for over twelve years, I will say that I like it, and that it seems to improve with age. I like your square and direct way of saying and doing things, and the clean, healthy tone of the paper generally."

R. T. Mills, Esq., of California, a subscriber of over thirty years, writes: "The INVESTIGATOR is the freest, and typographically the best paper I know of in all our broad land."

Another friend writes: "I have been one of your readers for nearly forty years; and, though the INVESTIGATOR has always been very good, I have thought that of late it is better than ever."

The INVESTIGATOR may be found on file at Geo. P. Rowell & Co.'s Newspaper Advertising Bureau (10 Spruce Street), where advertising contracts may be made for it in New York.

All letters should be directed to

CURRENT TOPICS.

THE Chicago *Times* says that "no race of people coming to this country become so soon thoroughly Americanized, and are so free from the narrow political clannishness that characterizes immigrants of some nationalities, as the Jews."

JOHANN MOST, in this country where he can rave without danger of interruption, is a less important personage than when, in Europe, the police were watching him and listening to his foolish talk, lest he might commit high treason with his tongue. Let such fellows have rope enough, and they are sure to entangle themselves so.

REV. DR. PAXTON, a Scotch-Irish Presbyterian, in a speech at a recent New England dinner in New York, made the following true and witty remark: "When the Puritan first came to these shores, he made the way to heaven so narrow that only a tight-rope performer could walk it. Now, what with his Concord philosophies, transcendentalisms, and every heresy, he has made it so wide that you could drive all of Barnum's abreast upon it, and through the strait gate."

"OBSERVER," writing from New York to the *Presbyterian*, says: "The excitement growing out of the *injudicious* enforcement of the new penal code has perceptibly abated. 'A very quiet day,' remarked a policeman to me last evening. Some of the theatres and concert saloons are coining money in performing burlesques on the code. Of course, they are simply caricatures and monstrous exaggerations. But the people laugh (I presume); and that's the main thing, you know,—if you can get their money."

A DECISION has been rendered by the Supreme Court of Iowa on the appeal of a case in which the Chicago, Burlington, and Quincy railroad was sued for the loss of a cow which had been killed on its track on a Sunday, the owner claiming that the road was doing an unlawful act in running on that day, and consequently liable for damages. The decision of the court is that the unlawful running is not sufficient to make the company responsible for injury done to persons or property. There must be contributory negligence on the part of the company or its employés, on Sunday as well as on a week day, to make it liable for damages.

THE pass to which office-seeking in an old country like China has come ought to serve as a warning to our American office-seekers, who are fast treading in the path sure to lead to a like state of affairs in this "free and enlightened" land. At the recent triennial examination of candidates for public offices at Peking, where only about three hundred offices were open to competition, over fifteen thousand applicants appeared; and the office-getting spirit has there become so fierce a fever that many defeated candidates commit suicide from disappointment. Others attend the examinations year after year, from youth to extreme old age, in hopes of success.

SPANISH Catholicism still retains a trace of the old inquisitorial spirit, as witness this curse invoked by Bishop Santander, one of Spain's leading ecclesiastics, on certain newspapers advocating liberalism in religion: "May the earth swallow them up alive! Let them be cursed day and night, sleeping and waking, in eating, in drinking, and in playing, when they speak and when they keep silence! May their eyes be blinded, their ears deaf, their tongue dumb! Cursed be every member of their body! Let them be cursed from to-day and forever! May their sepulchre be that of dogs and asses! May famished wolves prey upon their corpses, and may their eternal company be that of the devil and his angels."

THE death of Gambetta, the great statesman and republican leader of France, is a sudden shock and a sad bereavement to the people whom he served so faithfully, and a loss that is keenly felt by the friends of liberal principles throughout the world. He was a man of wonderful energy, of unsurpassed courage, of great sagacity, and wonderful powers of oratory; and these qualities, combined with love of liberty and patriotic devotion to France, made him a great intellectual force and a powerful political leader. The London *Times* remarks: "The world itself is poorer for the untimely loss of so potent a force. France is bereft of one statesman who taught her to be true to herself, even in the hour of despair." The press of Europe, while generally deploring the death of Gambetta, differ in opinion as to the effect of the event at this particular juncture in European affairs. In the German mind, his name was, as *Figaro*, the Parisian paper, says, "associated with the sound of the war trumpet"; but Gambetta was too great and wise a statesman to go into a crusade merely for revenge and retaliation against the conquering Deutschmen. The prosperity, growth, and grandeur of the French Republic will continue, we believe, uninterrupted by Gambetta's death.

REFERRING to the recent decision of Judge Briggs, of Pennsylvania, ruling out the testimony of a witness because of his unbelief in a personal God and inability to accept the common notion of divine punishment, the Chicago *Evening Journal* says: "This would rule out two-thirds of the intelligent men and women of the State of Pennsylvania. The inconsistency of this ruling is all the more manifest, when we consider that the law does not neglect to punish a man for false swearing, nor turn him over to the 'divine punishment' which is in store for him after he shuffles off this mortal coil. The human laws are humane enough not to punish a man twice for the same offence, and some of them are merciful enough to provide that his life or liberty shall not be twice placed in jeopardy for the same offence. Then why punish him here with severe pains and penalties, when he cannot 'flee from the wrath to come' at last? The safest way to proceed with witnesses is to let their theological notions alone, and receive the testimony of every candid man who is willing to take the usual oath, with the customary 'so help me God' added. Evidence in the courts rests upon its consistency with reason and the facts, and not upon the abstract religious belief of the witnesses." Even "the customary 'so help me God'" should be abolished, and for the oath should be substituted affirmation under the pains and penalties of perjury as provided by the State.

THE great religious question of the hour seems to be whether orthodox Christianity agrees with Vanderbilt in his much quoted saying or not,—in other words, whether the Church teaches the eternal "doom of the majority" or contrariwise. Dr. Withrow, of Park Street Church in this city, in articles in the *Advance* and *Christian Register*, declares that "no evangelical creed in Christendom contains such a doom for the vast majority of the human race." But Joseph Cook, an acknowledged representative of the orthodox church, in his last Monday's lecture in Tremont Temple, said, "Probation, in its strict sense, ends at death"; and Dr. S. J. Barrows, of the *Christian Register*, in an elaborate editorial in the last number of his paper, proves pretty conclusively, by extracts from the writings of those who have been accepted by the Church as her accredited representatives, that Protestant Christianity *does* teach the doctrine of eternal damnation. Of Dr. Withrow's defence of the Church from this charge, Mr. Barrows says: "We have great respect for the motive of that defence. It is an attempt to relieve Orthodoxy from the charge of having believed and taught that 'the vast majority of the human race are to be the victims of endless woe.' Dr. Withrow cannot feel more keenly than we do the reproach of such a doctrine. We welcome any argument or any confession which shall remove its stigma from the name of Christianity. But such argument or confession must be true to the facts, and the line of defence adopted by Dr. Withrow seems to us utterly untenable. Orthodoxy cannot be relieved from its responsibility for this doctrine by the plea that it has never authoritatively taught it."

GREAT MEN.

With the going out of the old year, Gambetta died, adding another to the roll of famous men whom the year 1882 has carried to their graves. There may be those who will question Gambetta's right to be classed among men genuinely great. He was, it is said, a mercurial man with a special genius for oratory; and the mercurial French people were thus led by him without his possessing the solid elements of greatness. But, whatever part of his remarkable power in France—a power which none will dispute—Gambetta owed to his gift of impassioned eloquence, no man could have done what he did in the last months of the struggle with Germany and for the establishment of the republic, and, later, to defeat the reactionary schemes which well-nigh wrecked the republic under the presidency of MacMahon, unless he had been endowed with an intellect of exceptional grasp and vigor. Even his failure as premier was due more than to anything else to the fact that the Assembly of Deputies began to be afraid lest his personal ascendency with the French people was becoming too great for the safety of the republic. He was a born leader of men. Yet he had shown no sign that he had any designs against the republic, which he was one of the chief actors in inaugurating, nor any ambition for himself beyond doing the best thing for the liberties of his country. And though, because of the sudden collapse of his brief administration, the last months of his life were passed under a political cloud, and though he has died at forty-five, before the age at which public men usually find their greatest opportunities, we believe that the judgment of history will nevertheless place him with the group of remarkable European statesmen who have intellectually adorned our own time.

It is sometimes complained that the world no longer produces great men, that this is the era of mediocrity, and that the conditions of human society do not now nourish and favor that kind of leadership which once naturally devolved on the exceptional intellectual lights of their times. This complaint rests, we believe, on a popular fallacy. We have not time nor space here to expose the fallacy wholly, but some facts may be pointed out which bear against it.

Doubtless the changed conditions of human society have affected the methods by which the exceptionally great intellects may exercise their power; and yet the exceptional intellects may come as frequently and be as great as their predecessors. In the world of thought, the leaders may now be seldom seen of men. They may be quietly at work in their libraries or in their laboratories, or in delving into nature's secrets among the glaciers, or on dredging voyages over the seas, and then laboriously putting their thoughts into books. The books to-day take the place of the living presence and the living voice. Anciently, the teachers of philosophy, who corresponded to this class of men, were *talkers*. That was the only way they had to reach the people. They talked in the market-places and in the public squares and in groves, and had their little coteries of disciples who passed on to larger circles what they had learned of their masters. Continually before the eye of their own public, they impressed their teachings by the force of their own personality to a greater degree than there may be opportunity for among the leading thinkers of our time. And yet these leading thinkers to-day may be none the less real leaders. It is safe to say that Darwin has led the thoughts of people in our own time as much as ever Socrates did in his time, and that he has changed the thoughts and beliefs of a vastly greater number of people than the wise Greek did. It is safe to say that Herbert Spencer is as effective an intellectual force in the world to-day as was Aristotle in the world of his day. Emerson was of the type of men who were hailed in ancient times as founders of religions. And, in truth, a religious founder he has been among us. His thought, more than that of any other one person of our time, has been percolating through the churches, through the creeds; and two hundred years hence it will be seen that, quietly as he lived and did his work, he was chief among the forces that revolutionized the beliefs of Christendom in this age and transformed Christianity into an essentially new religion.

The world has had, it is true, not many such minds as Emerson's and Darwin's in modern times. But it has had them. And they belong to a class of minds that do not come in flocks. In all the ages there are but few of them. They come but one or two in a century perhaps, and whole centuries have passed without one.

In the world of action, too, we venture to say that there are as great men as there ever were,—as great minds, for instance, directing their energies to the control of States as at any former period of history; though here, too, the way in which the leadership is shown is happily different. Formerly, great rulers ruled mainly by physical force. They convinced by the strength of their armies more than by the strength of their logic. Might made their right. We are not wholly away from this period yet, but we are getting away from it. The greatest statesmen, to-day, are not the greatest soldiers, but the men of greatest brains practically applied to national administration and to international diplomacy. They have powerful armies at their beck, but the armies are chiefly used as a police force against each other to guard frontiers, and are not the builders of States. Empires to-day do not exist by the sharpest sword, but by the keenest sagacity. It was not the Emperor William nor the great commander Von Moltke, nor the fine army they had trained, that transformed the divided and jealous German States into an empire: it was Bismarck. His brains have been the power behind throne and army. Nor was it Victor Emanuel, brave as he was, nor the old hero Garibaldi, romantic and valuable as was his aid, who made a united Italy: it was the far-seeing statesmanship of Cavour. No nation, no age, has ever had greater political rulers than these; nor than Gladstone, who is the real sovereign of England to-day. No king of England, in the times when kings were actual rulers, with hordes of soldiers to back their demands, ever had the power which is wielded by Gladstone. It is none the less his power, though he embodies it as chosen representative of the power of the people. Cabinet, Commons, Peers, and Queen follow his lead. Now, all these men, Gladstone, Bismarck, Cavour, have risen to their places, and kept them simply and solely through their superior intellectual strength. Not a soldier could they summon to seat them in the places of authority and leadership. They have been sovereigns by the divine right of ideas and the ability to impress their ideas upon others. They have become a necessity to thrones and kings and nations by the imperial majesty of their brains. It all had to be done by the skilful presentation of knowledge and thought; by the force of persuasion and logic; by convincing people's minds and consciences; by kindling enthusiasm in hearts and arousing imagination: in fine, by all the intellectual wit, and play of mind upon mind, and moral force, and insight into causes and consequences and into the ways of moving people both singly and in mass, which make the accomplished statesman. And, with such examples of statesmanship in our own day, let us not think either that the occasions for great statesmen are past or that the world produces them no longer.

We have been considering great men chiefly from an intellectual point of view. But, were we to look for moral greatness, we might make even a better showing for the productive capacity of the modern world. WM. J. POTTER.

HUMAN RELIGION.

Wherever we travel, we find that religious beliefs are as varying as the conditions of men, and that there is a correspondence in quality between the faith of the heart and the intelligence of the mind. Men's religious beliefs are elevated and rational in proportion to their enlightenment upon general topics. This fact has sometimes been interpreted as a proof that a man's religion determines his complete state, and that nations are high or low in the scale of civilization in accordance with the elevation of their needs. Observation, however, convinces one that religion is not the cause, but the effect, of the education of the mental faculties. The Bushman of South Africa comprehends all of God that his untutored mind is capable of receiving, while the educated modern philosopher soars into the transcendental theories that are incomprehensible to the ordinary intellects of civilized lands. The proof of this lies in the fact that the improvement of the intellect always precedes an advance in the religious creed among races of men, though the stimulus given to the mind by the statement of a nobler faith quickens the faculties, and sometimes makes both advances appear coincident. Polytheism, or idolatry, is abandoned for monotheism, or the worship of one God, when the savage learns enough of science to know that the sun is not a fiery dragon, and that all the forces of nature are not so many demons. If the higher religion is given him by authority before the facts of nature, upon which it is based, are made known, he soon degrades it to the level of his former creed. Thus, Roman Catholicism gains many followers in heathen lands simply by a change of idols and the superior sensuousness of its rites. The Chinaman worships the statue of the Virgin Mary instead of that of Joss or Buddha, and experiences no mental alteration, whereas the effort of Protestant Christianity to overthrow idolatry is based upon reason, and its progress is therefore toilsome and slow. That religious belief depends upon the intellect is evidenced by the different interpretations given to the same faith by its followers. The ignorant Persian worships fire as his God, and firmly believes it to be the supreme power. But an intelligent Parsee in Bombay once said to me, "Me no worship fire, me worship mighty God, but me worship him through fire." The ignorant Romanist is on a level with the idolater in his reverence for the objects adored in his faith, but the educated man knows they are only symbols of spiritual truths: each makes his religion to suit his capacity. The chicken-stealing member of the African Church of the Southern States has a conception of Christianity as widely different from that of the graduate from a theological seminary as is the range in the capacity of their brains and the difference in their culture. One of these devout negroes thus related his conversion to my brother, who was for a time his pastor. I will not attempt to imitate the negro dialect.

"I had been thinking a good deal about religion, and at last I had a dream one night. I thought I was on board of a ship, and a big monkey came and chased me all around the deck. I got into the rigging and climbed up the mast just as fast as I could go, but the monkey came after me; and, when I got away up to the top of the mast, he was just

Digitized by Google

going to put his paw on me, when I fell off and tumbled away down to the deck. Then, I woke up, and found out that I'd got religion." His escape from the monkey gave him "joy and peace in believing."

A sailor, who was converted under my influence at sea, told me that, while in great distress on account of his sins, he turned into his bunk, and, falling asleep, dreamed that he had a pet animal in his arms. He was pursued by the devil; and, just as he was going to fall into his clutches, he tossed the animal to him, and made his escape. He awoke feeling happy, and at once told all the ship's company he had become a Christian. Another sailor, of more education, dreamed the end of the world had come and he was wading knee-deep in a fiery river: this so impressed him that he soon after "gave his heart to God," in order to secure his eternal safety. I recall the conversion of another person of superior attainments, who for some years had been repelled from embracing religion by the representation of God as a consuming fire. When led to realize that God loved her, she said, "Then, I will love him." She became a Christian. When asked for a statement of her belief, she wrote out the following: "God loves me, and therefore I love him. Loving us, he wishes our greatest and eternal happiness; therefore bids us keep his commandments. Because we love him, we try to keep his commandments and bring forth the fruits of the spirit, so that, becoming like him, we may be fitted to enjoy his company, which is heaven." She knew nothing of conviction of sin or atonement. Others "experience religion" by feeling guilty, dreading the wrath of God, and accepting Jesus as the Saviour, through faith in his blood shed for them. Thus, Christianity is a different religion to different believers in it. Each adapts it to his own bent of mind.

The Bible statement, "God made man in his own image," is therefore rightly reversed, and we say, "Man makes God in his own image," and it is true that "an honest God is the noblest work of man"; for, as a man thinketh in his heart, so is he, and the conception each forms of the Deity shows the highest capacity and aspiration of his own nature. Many will admit that religions owe their origin to the fears and hopes of men, if we except their own religion. All are of human invention except their own, which came direct from heaven. God spoke to Confucius, Zoroaster, Gautama, Moses, Paul, Mohammed, Swedenborg, and Joe Smith,—so the follower of each claims, but denies that he spoke to any of the others. Among the followers of Moses and Paul, called "Christians," a difference exists about the interpretation of these words of God, each claiming to be the custodian of the truth. The Roman Church, the Greek Church, the one hundred and sixty sects of Christians in the United States and one hundred and forty-six in England, each believes itself to have the mind of the Spirit, that Christ promised, should lead his followers into all truth. A leading light among the "Brethren" in England seriously told me that he never knew any one to study the Bible prayerfully without accepting his views as to the order and standing of the Church: others studied, but not prayerfully. Yet this good man had quarrelled with the other leaders of his sect, and set up a separate meeting of his own. Each believed he had the infallible guidance of the Holy Ghost and possessed a knowledge of *the truth*. But their bitter expressions of disapproval of each other's divinely received views almost brought their quarrels into the civil courts. When asked, "Why, if the Brethren have the real truth of God, do they not give the divine evidence of unity?" his answer was: "When Saul and Barnabas were set apart for the work of the ministry by the Holy Ghost, Satan at once proceeded to sow dissension between them. He doesn't trouble himself to annoy professors of false creeds; but as he saw Saul and Barnabas about to engage in spreading the true faith, and therefore attacked them, so he now sees the true Church of God in the Brethren, and uses every effort to disperse them. The fact that there is more dissension among the Brethren than among almost any of the sects of Christendom is only a proof that they hold the truth whose destruction Satan deems most vital to his cause." This came from no common man, but from one noted for his learning, skill, piety, and self-sacrifice. But no utterance has done more to convince me that his religion is from man, not from God. God is not the author of confusion. Men sincerely pray for the Spirit to lead them into the right view of the written word of God, and each gets a different result. Each is equally sure of his own sincerity and conscientious search, and denounces the views of all others as error. Who shall decide what is right? No one is fitted to be judge in his own cause. No Christian can be accepted as an infallible arbiter, when he tells us all religions are human conceptions except Christianity; and no member of a Christian sect is good enough authority for the assertion that his sect only reads the Bible aright. He is assuming the infallibility which he denounces the Pope and the Romish Church for claiming. The only fair tribunal, to which can be referred the claim of Christianity to be the one divinely revealed religion, is the great and increasing body of men, who, in all civilized lands, are devoting their lives to the study of the facts of nature and society and the critical research of the records of each in past ages. Christianity, as God's sole truth, must stand or fall by its accord with the facts which are scientifically established.

The records of nature have now been found to reveal an orderly and progressive system of the development of matter and mind into its present forms extending through vast ages, proving the Mosaic story of creation to be untrue, and placing it among the myths of earlier days of the human race, which are found to abound in the traditions or literature of all people. This orderly progress of nature reveals an unvarying method, which makes every effect the result of preceding natural causes; and the violations of its methods, called "miracles," are unsupported by sufficient evidence to warrant their belief. Every miracle of which circumstances have permitted a scientific examination has been disproved, and shown either to be a fraud or to be the result of a law of nature known or fairly supposed. The miracles of our days are now on the eve of solution by the discovery of the laws of psychology and animal magnetism, which many learned men believe will in time solve all that is not fraudulent in the phenomena of Spiritualism. Historical study shows the Bible wonders to be of the same character as those recorded in the religious books of all other nations; and literary criticism proves it to abound in errors, inconsistencies, and contradictions, showing it to be the word of man. The Christian scheme of theology must therefore take its place in the order of the development of human thought, and in time give place to the next system which the advancing mind of man evolves; that, in turn, to be improved upon as knowledge of nature and the control of her forces increases.

A study of the theories of evolution leads most people to accept them, and the only certain way in which one can maintain his belief in the religious faith he has adopted by the accident of birth is never to question it. One who attempts to submit his creed to rational tests, as he treats everything else in life, must either become an entire sceptic of the supernatural, or else fall into the arms of an authoritative Church and accept all its dogmas without question. The churchman who reasons for himself is lost to his religion. This is well illustrated by the careers of the Newman brothers, who, in the search for truth, have become, one a cardinal in the Romish Church, the other an ultra-rationalist.

While firmly believing that all religious ideas proceed from men's minds, and not from direct external revelations from God, we may recognize the law of evolution in the development of religious thought as the same which produces all variation and progress in nature. Religion as well as science is the result of the working of the infinite power which inspires matter. These, and all things, in this sense, are "of God." *All* religions are therefore "of God." "God" has developed erroneous ideas in science and false notions in religion; but they were steps in progress, and the infinite force is slowly evolving newer and truer conceptions from men's minds. Religion is as truly of human origin as astronomy and mechanics, and as truly divine as geology and meteorology. "God" has revealed religion as truly and in the same manner as he has revealed ship-building.

ROBERT C. ADAMS.

REFORMATION FROM WITHIN.

Both from culture and original endowment, some men will always be in advance of others; and it is their mission to help on the rest, and raise the general average and standard. How shall they accomplish this? Shall they always separate themselves from all who have not attained their advanced position? Then, they would have to do it often in the course of a single life; and each succeeding individualistic life would have to follow in the same track, and there could be no cohesion or collective utterance and unity, nor any organized action. It is impossible for many men to think alike in much detail. Even where they assent to the same formula, it will be a really different formula to each,—the personal equation which operates everywhere, and always makes a large allowable diversity a necessary element in every large collective unity.

It is also unjust and injurious to the progressive force to be always obliged to leave the old established bodies; that is, to surrender all social and economic advantages to the inferior and decadent party, which it is supposed will grow beautifully less and fossilize, while yet it retains all the material heritage of the ages. It is still more injurious to the inferior part to be abandoned by the better part, its head of wisdom and knowledge. It is bereft of the power which should be its instructor and guide and its vital animation and stimulus.

Therefore, reformation should always be from within, as far as possible. Indeed, it must be so, and, in the main, has always been so. It is in and through the older bodies with which they have been connected that the advanced thinkers, who ultimately become leaders in new movements, were educated and developed, and of which they are the offspring; in regard to which, therefore, they have sacred rights and solemn obligations, and therefore, as long as they possibly can, they are bound to retain their old connections. I think there has always been too great a readiness to divide, partly from a mistaken conscience, and partly from a desire to be removed from organic contact and association with those whom they have outgrown, which may spring from a lack of self-conquest and self-discipline. Teachers should stay as long as they have freedom to speak accord-

Digitized by Google

ing to their convictions, and so be faithful to themselves as well as to others. And I think this will generally now be somewhat largely allowed, as long as they do not deem it their duty to denounce and needlessly irritate others. I think this practical error was the sole or chief cause of the expulsion of Dr. Thomas, of Chicago, from the Methodist Episcopal Church. I doubt not there are not a few in that Church as honest as he, and holding substantially the same doctrines, and who preach them, too, without molestatio), because they do it charitably and wisely. Private members, especially, should retain their old connections, because they can do it without difficulty; and they form a leaven for the rest, and an incipient congregation for the support of a more intelligent ministry when it comes.

In short, honest, earnest men, who are in advance of their fellows, and who believe that they are working in the line and spirit of recognized precedent reformers of their day, should never go out till they are "thrust out," and they should not wantonly provoke this expulsion. This has been the course of the most eminent reformers,—of Jesus and his disciples relative to the Jewish Church, of Luther relative to the Papal Church, of Wesley relative to the Church of England. National reform has necessarily followed the same course. The progressives, if not too ultra and disintegrating, have a right to remain in the old homestead, enjoy its advantages, and improve its condition with the aid and comfort of all the old heirlooms of the past. The division of sects is good, only so far as it promotes freedom and independence. It is *honest minds* whose rights and duty we have been describing, and who therefore will not be false to themselves and faithless to their trust in order to retain a desirable birth, but will readily sacrifice anything to moral honor and intellectual freedom; and all are not to be stigmatized, therefore, as time-servers who are broader than certain formulæ to which they have subscribed. W. I. GILL.

COUNTERACTING INHERITED VICES.

Like many others, I heartily indorse Mr. Potter's editorial in *The Index*, in which he speaks of the possibility and of the duty of counteracting hereditary evils by the stronger influences of education and good surroundings, and the living forces of human care and fellowship.

The stress that has been laid upon the laws of heredity of late is very salutary in impressing upon us the solemn responsibility of our own lives, which affect not only ourselves and our contemporaries, but may work for good or evil to coming generations. But we may lay so much stress upon this law — beneficent and necessary, but often severe and seemingly cruel—as to make it appear like a relentless fate against which it is impossible to contend. Many a victim sinks into insanity, intemperance, consumption, or other fatal evils, because he and his friends believe that the inherited tendency to these diseases is too strong to be overcome. There is no hereditary tendency that may not be counteracted by individual vitality, aided by proper conditions.

There is a danger, also, in laying too much stress upon outside circumstances; for the strengthening of the individual will is even more important, and, to accomplish this, we must have the direct action of one human being on another, in connection with all the benefits of institutions or laws. This is seen even in medicine, where in many cases nothing but the will power of the physician or nurse is able to brace up the nerves of the patient so as to restore the power of independent action.

There is a class of persons in our city who especially need help of the kind which Mr. Potter suggests, and which I think must be given them mainly by individual friendliness and care. I allude to what are called "probationers," or those criminals who, having behaved well under the restraints of the prison, are allowed to go at large before the expiration of their sentence, but still kept under the surveillance of the police. Sometimes, young offenders are not sent to prison in the first instance, but are allowed thus to make one more trial of their powers to restrain themselves.

This seems to me a work peculiarly fitted for liberal and philanthropic minds. The sectarian missionary tries it in his own way; but he too often is antagonistic to the original religious training of the probationer, and arouses a feeling of opposition. The ethical enthusiast will care little to meddle with forms of worship, if he can arouse new feelings of self-respect, of love of truth and honesty, an ambition for excellence in a useful calling, and the desire to live in just and friendly relations with his fellow-beings.

These young men are generally the heirs to weakness, if not vice, and have had few helps to strength and goodness. The temptations of the saloon are ever open to them, and it is no wonder that a love of companionship and craving for amusement lead them to smoking, drinking, and gambling. There are several places in the city where comfort and pleasure may now be found without these baleful accompaniments; but a kindly voice is needed to invite the young wanderer thither, and sometimes a friendly hand gently to constrain him into the way of virtue rather than of vice. Sundays and holidays are times of especial temptation. The last Christmas day was marked by the drunkenness and rowdyism which characterized it in many places. One man thought himself quite justified in saying "he only got drunk on Christmas day." Of course, it was not true; for the man who drinks on holidays soon has a great many in his calendar, but it shows the feeling in regard to them. Would it not be a good way of keeping one's birthday, or any other cherished anniversary, to seek out one of these wandering sheep, and try, like a good shepherd, to keep it in the fold? E. D. C.

NIRVANA.

The Buddhist idea that, at death, all individual consciousness is lost, and each identity is merged into Nirvana, is well expressed in one stanza of Edwin Arnold's work, in Buddha's speech before the king. Speaking of one dying, he says:—

"He goes
Unto Nirvana. He is one with Life,
Yet lives not. He is blest, ceasing to be,
* * * * * * * * *
The dew-drop slips into the shining sea."

This view of the state after death seems, in one way, to have its prototype in this life. The human family is a chain composed of many links, each one distinct in itself, yet, after all, so closely connected and intermingled that no one link is entirely independent of and complete without the others. Each human being is possessed of tendencies to good and evil, dependent in their development on many circumstances, and none seeming to be endowed with the former to the total exclusion of the latter, and few, if any, with the latter to the total exclusion of the former. With one set of virtues, we see certain accompanying defects; and just as certainly as we find other defects do we find other virtues. In this respect, how different are the characters in real life to the ones in the old romances, where all the lovers were compounded of bad qualities, until the real hero came upon the scene, endowed with every virtue, so that the heroine had no difficulty in recognizing her true mate, and could by no possibility make a mistake such as Isabel made in the modern *Portrait of a Lady*. Each individual character seems to possess certain possibilities and certain limitations, so that no one is able to acquire all there is of good. We glow with enthusiasm when we read of Raleigh's brave and manly character, and feel in each line of his "Soul's Errand" how he detected what was false, and saw below the surface of things, and dared to speak his thoughts in manly words. But do we not all love the gentle and scholarly Sir Philip Sidney, who crowned his life with one transcendent act of unselfishness?

Not only do we find goodness and beauty in divers forms and shapes, but in the very family itself we see links joined together, yet far apart. The very child of our affection may have inherited physique from some long deceased ancestor on one side, and mental traits from one equally removed on the other, so that in truth he may be but a link in the chain, with little physical or mental nearness to either parent, and influenced only by their training and companionship. The great Lincoln, noblest figure in American history by natural powers and what he made himself, had only the slightest resemblance to his immediate ancestry. George Eliot, in describing the winning beauty of Hetty Sorrel, shows that she possessed a character totally at variance with it. So that it might seem that the "good diffused" appears now here, now there, now in this form, and anon in that, perhaps, as the Buddhists affirm, to be in the end absorbed in the All-Good.

Yet, as opposed to this idea, how truly isolated, too, is each human soul! No man knows the heights and depths of another's nature. None can penetrate into the most sacred precincts of another's being, its hopes and fears and longings, its sources of strength and weakness. And what thoughtful soul is there who has not his innermost "holy of holies," where few, or none, can enter? This divine spark in each, if given its noblest development, may seem, and often does, too individual, too complete, too beautiful, too nearly perfect, to be lost by absorption, even in Nirvana; nor is the idea a pleasing one. Far better is George Eliot's Nirvana,—a Nirvana of this life, a life wrought up to its highest and best achievements, enriching others with its blessed influence, and winning immortality in their undying remembrance.

"This is life to come.
May I reach
That purest heaven, be to other souls
The cup of strength in some great agony:
Be the sweet presence of a good diffused,
And in diffusion ever more intense.
So shall I join the choir invisible,
Whose music is the gladness of the world."

A. O. C.

A WRITER in *Macmillan's Magazine* referring to the great efforts which have been made in England to suppress drunkenness, says that last year temperance reformers in large numbers traversed the country, whole armies of teetotallers were formed, thousands of people signed the pledge, and numerous organizations were formed to promote the movement. Yet the results are far from encouraging. The number of persons charged with drunkenness in 1881 exceeded by 1,622 the number thus charged in 1880, the former being 174,481, the latter 172,859. There was also a proportionate increase in the consumption of liquors. Many years of education—education that appeals to reason to subdue inherited and acquired appetite for strong drink, and that develops firmness and strength of character—will be required to overcome the terrible evils of intemperance.

EDITORIAL NOTES.

WE are sending out bills this week to all our subscribers who are in arrears; and we will thank those who receive them to send to this office, at once, the amounts due on their subscriptions.

A CHICAGO paper says that Henry Ward Beecher "opposes enforced prohibition, because it contravenes personal liberty," and adds, "Beecher requires more liberty than any other clergyman we know of, and, if he ever succeeds in getting into heaven,—a rather hypothetical case,—he would want the privilege of digging out and going to the other place."

J. W. BOUTON, publisher, New York, has just issued a book which will doubtless attract a good deal of attention, *Bible Myths and their Parallels in other Religions*. The author chooses to be anonymous, but the name of the publisher is a good guarantee of the merit of the work. It will be noticed in due course in our book-review department. Meantime, see advertisement on last page.

THE excellent address by John Fiske, at the Herbert Spencer banquet in New York, on "Evolution and Religion,"—which has been called the gem of all the brilliant addresses on that brilliant occasion,—has been reprinted by the Free Religious Association in a neat tract form, and is for sale at this office. Five cents for single copy, or six cents, if sent by mail; ten copies for thirty-five cents.

A SWEDISH translation of Samuel Longfellow's "Unity and Universality of the Religious Ideas," originally delivered before the Free Religious Association, and published in their volume called *Freedom and Fellowship in Religion*, has been made by Victor Pfeiff, under the title of *De Religiösa Idéernas Likformighet och Allmänlighet*, and printed in a handsome little pamphlet by Karl Gustafson, Stockholm, 1882.

IN Ohio, in this enlightened age, it is unsafe to remain unenlightened. The interest of teachers in education in that great State is unprecedented, if we may judge from the despatch that a schoolteacher lately killed one pupil and seriously cut another, because they refused to study grammar. That teacher is evidently a "stalwart," who believes in heroic treatment to prevent the murder of the English language by the next generation.

REV. REUBEN JEFFERY, an eloquent Baptist clergyman of Denver, had been invited by Rev. Martin Hart, a Dean of the Episcopal cathedral of that city, to occupy the cathedral pulpit on Thanksgiving day. Announcements had been given through the press, and a large congregation had gathered to listen to him. But, just before the hour for service, two Episcopal clergymen of Denver served a notice on Dean Hart, that, if he allowed Dr. Jeffery to preach in the cathedral, they should proceed against him ecclesiastically. In consequence, the services for that day were held in another less conservative church.

THE *Presbyterian* gives the following testimony from an orthodox source to the possibility of pure and holy living apart from any religious belief, and with no higher foundation than morality: "A Methodist Doctor of Divinity gives this opinion through a Southern religious paper: 'I have known hundreds of men and women, who made no pretensions to holiness, who had experienced no "second blessing," who had found no "new light," who sought no "higher life," who, in fact, were just as pure, true, and holy in life and conversation as the best so-called "holiness people" I ever saw, and not half so troublesome in the Church.'"

THE *Catholic Review* says: "She [the Catholic Church] teaches that angels, innumerable as motes in the rays of the sun, are watching round us; and that, as the rivals of these, appear the ministers of Satan; and that a perpetual struggle goes on between these for the erring souls of men; and that dim intimations of this strife are passingly borne in on us. And, the Church being denied in her teaching, the Protestant puts aside the help of the good angels, and at the same time her strong and majestic forms for the defeat of the bad. As a consequence, he falls under the influence of diabolical agencies, whether as exhibited in elementary shape in little signs and fortune-telling, or in the more refined and cunning developments of mesmerism and spiritism,—those abortions of Cagliostroical art."

Religious persecution, which has been fostered especially by the Catholic Church, is undeniably one of the greatest foes to intellectual advancement as well as to the general happiness of man. The best men usually are its victims. "Who can pretend to say," says Darwin, "why the Spanish nation, so dominant at one time, has been distanced in the race. The awakening of the nations of Europe from the Dark Ages is a still more perplexing problem. At this early period, as Mr. Galton has remarked, almost all the men of gentle nature, those given to meditation or culture of the mind, had no refuge except in the bosom of the Church, which demanded celibacy; and this could hardly have failed to have a deteriorating influence on each successive generation. During this same period, the Holy Inquisition selected with extreme care the freest and boldest men in order to burn and imprison them. In Spain alone, some of the best men, those who doubted and questioned—and without doubting and questioning there can be no progress—were eliminated during three centuries at the rate of a thousand a year." (*Descent of Man*, vol. i., pp. 171, 172.)

THE following is Rev. Robert Collyer's ideal of Sunday-keeping, as given by a newspaper reporter: "The law should give every man the right to such a day of rest, and leave the question of wages to be settled between the employers and the employed. We wanted for our worship simply quietness. He pleaded for recreation. He would open all the libraries and museums on the Sabbath. He would say to the boys: 'If you want to take a swim in the river on Sunday, here are the free baths. If you want to play ball or go to Sunday-school, do so.' He would open the music halls on Sunday. Clean music never hurt anybody, and there was no unclean music. It was only when wedded to unclean words that music did harm. He would have lectures on Sunday, that the masses might learn from science. Sunday in itself, Mr. Collyer declared, was no better than Saturday or Monday. He had no right to interfere with others who did not observe it as he did, as long as they did not interfere with him. He had no more right to prevent one from going to the theatre on the Sabbath than the theatre-goer had to prevent him from going to church. We must not allow ourselves to be put in such bondage as the Sunday law."

MR. JAMES MACALISTER, superintendent of the Milwaukee schools, in an admirable address before the Wisconsin Humane Society, said: "All the great leaders and thinkers in the philosophy of education have proclaimed the supremacy of reason and love in the moral training of children. Rousseau, Pestalozzi, Froebel, Herbert Spencer, have all insisted that physical force can never make a true man or woman out of a boy or girl. But all of these great reformers have published this truth to an unbelieving world. Not that I would intimate that there has been no progress in this respect in educational methods. Every one of you can testify to the diminution in the kind and quantity of corporal punishment in schools which has taken place within your own experience. But the teacher has a most difficult task to perform. He is charged with the training of children who have never known any kind of discipline but the rod or something worse, and he is surrounded by a public which has not yet become accustomed to judge of the schoolmaster's modes of discipline by ethical standards. The barbarism which still exists in society invades the school-room, and paralyzes the efforts of the progressive teacher who seeks to govern his pupils by love. For myself, I have no hesitation in saying that brute force has no right in any school-room. I do not think that corporal punishment is the proper way to enforce moral duties upon any child. What I want to call attention to is the difficulty of governing a school on moral principles, while the public sentiment lags so far behind in the duties which it is the business of this society to enforce."

THE *Religio-Philosophical Journal* received a notice in the Chicago *Daily Times* for New Year's day, from which the following is an extract: "Mr. Bundy, in his annual address to the news trade and the public, makes a very lucid statement of the editorial relations of the *Journal* to church dogma, to modern philosophical topics, and to the science and phenomena of Spiritualism, the treatment of those subjects being strictly and in all instances from a rational, scientific, and non-sectarian standpoint, the names attached to the address, with varied expressions of co-operation and fellowship, being those of H. W. Thomas, D.D., Hon. W. K. McAllister, B. F. Underwood, Samuel Watson, D.D., and others, the expression of Rev. Robert Collyer being characteristic: 'Good for you! Never man in your ranks did half so well. Brave it is and right.' It is but fair to say the *Religio-Philosophical Journal* is now not only recognized as standard authority—the highest living and contemporary authority—in the philosophy and phenomena of Spiritualism, by the rational and conservative Spiritualists of the United States and of England, but is held in the thinking circles of the world as the sanest, broadest, ablest, strongest of all the journals published in the interest of philosophic truth, the tone of the spiritualistic press of England indicating the practical conversion of the faith in that country to the doctrine so long maintained with almost austere conservatism by the *Journal* that scientific proof is the only proper attestation of spiritualistic phenomena."

IN a report of a lecture on the origin of species, by Mr. E. C. Towne, occurs the following:—

> Thus, if a living creature without the sense of sight were thrown from its natural habitat of darkness into light, nature would begin at once the process of organizing an eye or eyes. But the process would not take effect upon the individual which had thus become subject to a change of environment, but upon the embryo or the germ of the succeeding generation. Nor would the effect be produced in one generation, but the individuals of each generation would manifest an advance upon the preceding generation in respect to the development of organs of sight. It might take seven generations to reach the result; but there is no need of supposing millions of generations, as Mr. Darwin does, to bring it about. The principle thus illustrated applies equally well to any differentiations which result in new species.

It is not probable that in a creature of any considerable complexity of structure, devoid of the sense of sight, "thrown from its natural habitat," "would begin at once the process of organizing an eye or eyes." The adjustments of the parts and the functions of the animal having become coordinated, such a change as would be involved in

Digitized by Google

the formation of eyes and the development of a new sense would be extremely improbable. Such a creature "thrown from its natural habitat" would be more likely to become extinct than to acquire the sense of sight. But such a process, should it occur at all, would have to commence in the individual before the embryo could be affected. The statement that such a change might be effected in "seven generations" is certainly a very rash statement. Such criticisms of Darwin's views as these will carry no weight whatever among scientific men or those who are familiar with the works of Darwin.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

THE MARVEL OF LIFE.

(Carlyle freely versified.)

I.

Brother, who deem'st thy life but commonplace,
An iteration dull of days on days,
Uplift for once thine earthward bending gaze.
Behold the eternal Deep above thee gleaming
With Night's sidereal fires all silent-beaming;
Orion, Pleiades, in revolution grand,
Hurled forth from God's own hand.

II.

See wonderfullest earth around, below,
Where winter's storms and summer's spice-airs blow.
Behold, thou standest in the lapse sublime
Of limitless, eternal Time,
In endless vista evermore
Behind thee stretching, and before.

III.

Encircles thee, on every side
Of Force, the never-resting tide
Mysterious, thousandfold,
Upon whose shoreless current rolled,
Thyself, thine earth-like bubbles, seem
The rushing foam-flakes of a swollen stream.

IV.

Up from its depths, like night-mists from a river,
Arising, vanishing forever
In endless interplay of life and death,
A many-hued, phantasmagorial show,
Where generations come and go,
Some just inhaling, some surrendering vital breath,
Forever fluctuates Being's restless dream,
Real, though shadowlike, its pageants seem.

V.

In Time's wild-roaring loom
Fly to and fro the shuttles swift of doom,
Weaving the mystic web of human life,—
Texture of dark and bright, of woe and strife,
Rustles the woof, as if in storm-wind dread,
All spirit-wove, of many-glancing thread.

VI.

With many a sylvan century hoar,
The oak-tree falls with far-heard roar;
Meantime, another oak has sprung
Airward from bursting acorn young.

VII.

Arriving hither from the dread Unknown,
New men to virile stature quick have grown,
To strength of sinew, passionate fire;
While other men o'erweighed with years expire,
Sink motionless to ashes cold,
Waving the mute farewells,—no more
Thine eyes their long familiar forms behold,
In vain to find them parting-spot explore.

VIII.

Across life's stage, the generations pour,
Stormful with torrent-like uproar;
Forever swallowed is the eager press
In silence and forgetfulness,
But, still uprising in the rear,
Fresh generations evermore appear,
Buoyant and strong with youthful breath,
The foremost crowding over the verge of death.

IX.

And thou, O Brother, o'er the gulf of doom
Hangest—like dewdrop morning's rays illume—
Hangest but with an evanescent gleam,
Soon to be quenched in dull oblivion's stream.

—*B. W. Ball, in Boston Herald.*

The Index.

BOSTON, JAN. 11, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

CONFLICTS OF PHILOSOPHY.

A Lecture delivered before the Philosophical Society of Chicago, Oct. 14, 1882.

BY VAN BUREN DENSLOW, LL.D.,
PRESIDENT OF THE SOCIETY.

Part I.—Relation of Philosophy to Other Modes of Thought.

Philosophy may be regarded either as a mental process or as the historical and perfected result of that process. In the latter sense, it is the goal toward which the highest class of minds ever reach out in vain. In the former sense, philosophy is one of the passions,—to wit, the passion for knowing things by their kinds, for classifying them so as to draw principles of unity from heterogeneous facts. As such passion, it pervades the simplest human minds, and probably has germs in the intelligence of the higher animals and of the more developed insects. It is the faculty of separating the like from the unlike, for all reasoning begins by inferring from analogy. This looks like that: therefore, in some sort of sense, it must be that.

Philosophy in its Germ.
