Every existing form of religion must die; but the good in all will still live and help to cement the common fellowship of seekers for the truth toward which all the more intelligent minds, the world over, are converging. "The true religion of the future," says Max Müller, in a recently published letter, "will be the fulfilment of all the religions of the past,—the true religion of humanity, that which in the struggle of history remains as the indestructible portion of all the so-called false religions of mankind. There never was a false god; nor was there ever really a false religion, unless you call a child a false man." Great and glad is the day in which we live, possible in no previous generation, which permits us to see the "all-pervading unity" in faiths heretofore deemed alien and false, to recognize intelligently the brotherhood of all mankind! In this large liberty and generous liberality of thought let us continue henceforth to dwell; waiting and working, in confidence that the future holds for humanity the sure promise of a religion truer, fairer, and more satisfying than the past has ever known or the present can even dream, and believing that all the world's religions have ever been and are still working—though often crudely and blindly—toward the perfect realization of

> "That far-off, divine event
> *Toward* which the whole creation moves."

Abstract of the Discussion.

The reading of the essay was followed by a brief discussion, opened by the President of the Association, Z. S. Sampson, Esq., who, after giving a brief *résumé* of the work of the Association during the past season, called upon Prof. Franklin W. Hooper, under whose able leadership the earlier meetings were conducted.

Prof. Hooper expressed his agreement, in the main, with the conclusions of the essay, and his special gratification that the essayist had frankly taken the ground that Christianity could not be regarded as the final or perfect religion. Approaching the study of the Oriental religions with conservative prejudices, although from the Unitarian stand point, he had found it exceedingly difficult to view Christianity fairly as compared with the ethnic religions, or to regard its founder simply as a natural man, fallible, liable to err, as were the founders of other religions, and, in fact, erring at times in his method and some of his conclusions. To such a conviction, however, his studies of the past season appeared to be irresistibly compelling him.

If he were to dissent at all from the conclusions of the essay, it would be in that he could not yet see his way clearly to a definite theory of the origin of religion. It would appear that man had dwelt upon the earth perhaps one hundred thousand years, many would say even longer than this. In comparison with this great stretch of time, the three or four

Digitized by Google

thousand years of the historical period, from which our evidence must necessarily be drawn, appeared to him so recent, so remote from the beginnings, that they offered no reliable testimony respecting the origin of religion. He even surmised that that origin dated farther back than man himself, that animals possessed the germs of a religion. In conclusion, Prof. Hooper criticised somewhat severely the custom into which the Association had fallen, of placing the greater part of the work upon a few leaders, and trusted that another year each member would feel impelled to study as conscientiously and faithfully as a few had done, and take a more active part in the discussions.

Rev. John W. Chadwick, being called upon by the President, expressed his great interest in the work of the Association and his regret that he had not been able to attend its meetings more regularly. It was so long since he had gone over this ground in the preparation of a course of lectures upon the Oriental religions, and so much interesting and important matter had since been published bearing upon this topic, that he appeared as a learner rather than as a critic or teacher. He would like to inquire whether the studies of the year had thrown any light upon the position taken by Barth, Tiele, and other scholars, in their more recent publications, that the hymns of the Rig-Veda should be regarded as sacerdotal rather than popular in their character, composed by the priesthood as a part of their ritual rather than expressing the natural religious feeling of the community in general. Such a conclusion, if justifiable, would curiously harmonize with what was now the judgment of Kuenen and other scholars in regard to the age and authorship of the Hebrew Psalms.

Mr. Chadwick thought too much stress should not be laid upon the duty of every member to take an equal part in the discussions. To do the most efficient work, we must recognize that we are possessors of different gifts. Some are naturally teachers, others might attend rather as listeners and learners, yet derive great benefit from the meetings.

Dr. Janes was inclined to agree with Barth and Tiele in regard to the priestly origin of the Vedic hymns. Such a hypothesis would harmonize with all that we know concerning their use and the method of their transmission from the earliest periods. In more recent times, it has even been forbidden to teach the Vedas to any save the Brahmans,—the members of the priestly caste. It would also agree with the conclusions of Dr. Haug, who finds allusions to the three principal castes in the Avesta as well as the Vedas and Laws of Manu, and concludes that there are evidences of an organized priesthood, probably hereditary, before the separation of the Persians from the Hindu-Aryans; or, presumably, long before the hymns of the Rig-Veda or the Avestan Gâthas were composed.

In reply to Prof. Hooper's criticism, he remarked that the theory of the origin of religion in animism appeared to be sustained by the fact that this primitive superstitious belief was precisely that element which man seemed to hold in common with the higher animals, and which would naturally, therefore, enter into his very earliest religious manifestations.

Mr. Chadwick further alluded to the theory of certain liberal writers that Christianity owed its origin, or some of its more important characteristics, to Buddhism, and asserted his inability to trace any such connection as was claimed between the two religions. Moreover, the whole spirit of the two faiths, in their inception, appeared to him entirely dissimilar; the one, as represented in the teachings of Jesus, being remarkably simple and free from metaphysical dogma, while the metaphysics of Buddhism appeared to be of the most intricate and hair-splitting sort. He inquired whether, in their study of Buddhism, the members of the Association had been able to trace any historical connection between the two faiths.

Some conversation on this topic ensued, in which this assumption in Dr. Felix Oswald's *Index* articles on "The Secret of the East" was alluded to and severely criticised. It appeared to be the unanimous judgment of the Association that no such causative influence of Buddhism on primitive Christianity had been demonstrated or was probable.

After some further desultory discussion, the Executive Committee was authorized to prepare a course of study for the ensuing season, and the Association adjourned to meet at the call of the President.

For *The Index*.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER V.

No one who has but moderate experience of the ways of some of its people can doubt that America is a land of adventures. The natives of the nation include as many persons of good faith and direct manners as any community in the world. The additions from Europe, so plentifully made to the population, comprise many of doubtful designs. We all know in daily life that one who has dubious ways hardly ever believes that another individual will act differently from himself. He who is not single-minded himself will always suspect others of being sinister. No sooner does any person make a proposal for the common good than it is said there that "he has some axe to grind," meaning he has some personal interest in view. Sometimes, when a strange gentleman was announced, I would inquire, "Do you know who he is or what he wants?" The answer would commonly be, "He is somebody with an axe to grind." Sometimes, this was true; for a visitor would ask me an interview at a most inconvenient hour on the ground that he had important information to give me. After a time, it would transpire that the visitor only had in view to tell me of his own affairs and seek my aid. This mode of introducing the subject always incensed me: whereas, when an American gentleman wished for any reason to interest me in things concerning himself, he told me at once his object, and that, if any time my leisure permitted, he would like my opinion, and never pretended that his object was to promote my interest, when it was to promote his own. It always gave me pleasure to make time for such interviews. The affairs of strangers did interest me. The editor of a leading Irish journal in New York had very pleasantly commended the project of the Guide Book, which he knew I sought, and wrote very usefully about it. Shortly after, he learned from the American papers that Mr. Gladstone had approved of the object, when the same editor immediately wrote against it, although the book was likely to be of most use to his own countrymen. At the suggestion of Mrs. Thompson, I called upon him, and found him a very intelligent, energetic gentleman. After explaining to him that the proposed book was exactly what he first took it to be, he said, "Mr. Holyoake, if there is one place hotter than another in the lowest conceivable hell, I would put the British government into it." I said that that was very interesting; but I certainly hoped that the government, who had imperilled more interests and made greater sacrifices than any government that ever existed to serve his country, might be more fortunate than to fall into his hands. The editor was well informed and lively in expression, and on other subjects we had pleasant conversation. At the same time, I could see that, if I had suggested to him that the Home Rulers were better in hell, he would have thought me an uncivil visitor. He suspected my object was political, and politics had ceased to be civil with him.

Discussing this subject at Long Beach with Mrs. Ingersoll, she said, "You will find in this country a number of people who think there is something behind everything quite different from what is put in front, and it will save you both trouble and misapprehension to meet that surmise by the facts which confute it." Accordingly, I wrote to the New York *Tribune* the following letter, which, appearing in those columns, was very widely read, and fortunately proved effective for its purpose:—

Sir,—To mistake coincidences for causes is the intellectual malady of the multitude. If advantage should arise from any act, it is assumed that the advantage must be the motive of the act. As my visit to this country has been brought under this rule, I shall value the permission to say a few words in your columns thereupon.

Since you did me the honor to state in the *Tribune* that I have come to this country to submit to the government the advantages which would result to all the States of the Union from the publication, on "official authority," of an Emigrant Guide Book, I am told that many persons ask, "What is my object?" I answer that, as an Englishman, my object is that such of my countrymen as may turn their footsteps to this fertile land of enterprise may do so intelligently, knowing how to avoid the crowded towns, where they are not wanted, and betake themselves to the districts, South and otherwise, where they would be welcomed. Then, I am informed that the meaning of the question is, "What pecuniary purpose have I in this matter?" If the anxiety of these inquiries is that every man should have some personal profit out of every project for the public good, I am obliged by this generous solicitude for my advantage. The reply I have to make is, that I have not thought of this. Had I any personal interest to promote in what I am doing, it would be disingenuous to conceal it. Indeed, there would be a certain baseness in reticence upon it, since what I might say would have a savor of false pretence in it. Permit me, therefore, to aver, once for all, that I am the agent of no company. I am not in the pay of any person. I am not connected directly or indirectly with any business interest in England, America, or Canada. I represent the interest of the emigrant alone. The book I seek would not benefit England as a nation: it would only benefit those who emigrate, by giving them guiding information. It will benefit the United States and Canada, by causing well-informed emigrants to enter the land. It will not benefit me. I do not own a single acre of land in the whole world. I am unattached to any enterprise. I have no share nor part nor lot nor profit in any speculation. I entered upon this work in 1879, at the request of the Co-operative Guild of London, who wished me to ascertain, during my visit to this country in that year, what facilities existed in America for co-operative emigration. Altogether, I spent $500 in doing it. On my return to England, I wrote four hundred letters in answer to inquiries sent to me, besides a public report upon the results, delivered in Exeter Hall, London. The Guild never gave me a cent, nor paid for a single postage-stamp. They defrayed the hire of the hall in which I spoke. They had no funds for further aid.

Learning that I was bent upon returning to this country, in the hope of completing the work I had thus begun, two members of the English Parliament, Sir Charles Forster and Prof. James E. Thorold Rogers, made representation to the Premier that a portion of this expense might rightly be accorded from the Public Service Fund. The grant thus made by Mr. Gladstone was made public in England, that all whom it concerned might know it. Hearing of this, an American lady, believing the Guide in question would be useful in this country, sent me $500 in aid of it. This gift I myself published, as it is, in my opinion, contrary to good faith that anything of the kind should be unknown in public affairs; and I should have hesitated to accept it, had I not been aware that Mrs. Elizabeth Thompson was regarded here, like Miss Florence Nightingale in my own country, as unconnected with any party in the State, and that no political or interested significance could attach to her gift, prejudicing the object for which it was made.

Personally unknown in America save to journalists, some statesmen and some authors, it may be necessary for the satisfaction of the general reader to add an antecedent instance. Many years ago, the Right Hon. John Bright did me the service of drawing Lord Clarendon's attention to my proposal that the Foreign Office should issue a book for the immigrant classes similar to the one now suggested for this country. That project involved me in considerable labor. Lord Clarendon sent consuls to me who wished detailed information upon the project and plan. When the books appeared, I made reports upon them in the London *Times*. For all this work, I never asked anything. I never received anything. I never made it a reproach that I was offered nothing. I thought it sufficient honor that the State should adopt then, as it has done on another occasion, a suggestion of mine which was deemed of practical value to the nation. No man can do all he wishes or everything he should; but he can, so far as he is concerned, keep a public question free from venality, and prevent it being put back by sinister associations. This is not a merit, it is a duty. I do not claim to be different from or better than any other person, but I do claim that in this matter of the Emigrant Guide Book I shall not be regarded as acting from interested motives.

The only other point upon which it appears that explanation would be useful relates to the British government, whom some suppose have also an "object" in this matter. They have none. The proposal of this Guide Book is mine, its prosecution is mine, its responsibility is mine. They did not originate the project. They have given me no appointment. I carry with me no instructions from them. They do me the honor to accredit me as a person who may be believed on his word, and as approving of "inquiries in connection with the emigration of operatives." Nothing more. Learning that the undertaking may exceed my available means, they have made me a small grant in aid thereof, just as the American government might, if it came to their knowledge that Mr Edison's experiments in creating a new light were beyond his pecuniary power to complete, accord him aid to that end. In doing this, they would not be answerable for his project, if it failed; while, if their assistance promoted its success, they would confer an advantage upon all nations who profited by his invention. I do not compare myself to Mr. Edison. Yet that comparison, if permissible, illustrates the case of the British government.

Some men have water minds, refracting whatever is before them. The straightest fact which enters their liquid understanding seems bent. But believing that the

Digitized by Google

majority can see things as they are, if put in a clearer medium, I make this attempt so to present them.

After a day at Coney Island, discussing the land question with a friend of many years, Mr. Thomas Ainge Devyr, of the *Irish World*, who originated the theories that Mr. Davitt has since dwelt upon, we parted from Madame Errani, surely the brightest cicerone in New York. We went up the Hudson to Albany, lying all the morning in the bright sun watching the wondrous Catskill Mountains, where Rip Van Winkle used to wander. Surely, there is no river so bright and no mountains of more mysterious loveliness than those of the Catskills. Mr. Charlton of Chicago, Mr. Witton, inspector of canals in Canada, Mr. Drysdale and Mr. Littlehales of Hamilton,—who was afterward my host during many interesting days there,—came down to meet us at Niagara, which I little thought to see again. We drove over the awful Suspension Bridge, which spans the falls, and explored Iris Island. Because, in 1799, some goats kept there perished during a fierce winter, as no one could get to them, it has since been called Goat Island; but it is still Iris Island, for all the wonders of light are there. We saw more than the bow in the clouds: we saw several bows on the water,—not set above, they lay low before us, and waited while we contemplated their infinite beauty.

Americans, who remove town halls, hotels, and churches, have not moved Niagara. But it is moving itself. The Horseshoe Fall is another thing now. The arch is broken, the color is diminished, the thunder is less. Again I was impressed, as before, with the mighty Niagara River above, which feeds the fall. "Rapids" they are called; but rapids is not enough of a name: the waters come down with a ferocious alacrity.

Capt. Webb must have had all the courage of his race to imagine that he could swim in that insane and iron torrent, and live in the whirlpool below, which is a perfect maelstrom of rage and force.

CORRESPONDENCE.

"THE EVOLUTION OF MIND AND BODY."

Editors of The Index :—

I have read, in your August 23 issue, Mr. Underwood on "The Evolution of Mind and Body." The force of Mr. Underwood's statement of the "correspondence between function and faculties and structural parts" cannot be called in question. A right understanding of the law of evolution will point to a satisfactory solution of the question. The view taken by Wallace, Kardec, and Beecher has true pointings, but fails in clearness and consistency. There are principles — *a priori* facts — lying back of our mental and physical evolution,—a claim which, when made, Mr. Underwood says "must be admitted." Man is constituted of soul, mind, and body. The soul life animates all forms from mineral to man,—a soul life the same in *kind*, differing in degrees of unfoldment, dependent upon structure. Our most advanced scientists admit that their investigations fail to account for the vital forces. The first form, or forms, the point of departure for the evolution of all succeeding forms, must have come into existence by some creative process other than propagation and variation. All clear and consistent reasoning must start with the postulate of a supreme, self-existing, creative activity, manifesting itself to our rational comprehension under created forms. Accepting the nebular as the most probable hypothesis, that "not alone the human body, but the human mind itself, with all its phenomena, was once latent in a fiery cloud, potential in the fires of the sun," we first come to the planetary manifestations of this soul life under the forms of the mineral kingdom. An unfolding of the mineral from lowest to succeeding higher forms furnished the representative types, presenting the matrix for the conception of the vegetable by a direct solar overshadowing and inflowing of the creative soul life. The vegetable advanced from lowest forms to representative types, presenting the matrix for the conception of the animal in its lowest forms, and in like manner the animal, from lowest forms to representative types, presenting the virgin womb for the solar conception of man by the same direct inflowing of the soul life through solar mediation. In the language of Prof. Tyndall, "we are souls of fire and children of the sun." The different races of men may have sprung from a single pair. The preponderance of evidence, however, favors the hypothesis of a separate and distinct pair as the progenitors of each race.

The primitive man was a human animal discreted from the lower brute animal by an advance in structure, in like manner as the vegetable was discreted from the mineral and the animal from the vegetable. The forms of each kingdom, ascending, were gifted with the power gradually to put off the lower maternal form of which it had been begotten, and put on a form more and more in unity with the creative forces to which it owed its paternity. Thus, the vegetable gradually put off the mineral form, and took to itself a form distinctively vegetal, the animal a form distinctively animal; and the human put off the animal form, and took to itself a form distinctively human. The law governing this advance is the same under which our bodies are, at stated periods, put off and renewed. At birth, man is the most helpless of all animals with a mind merely in potency, its formation and growth the result of inter and co-action between soul and body. The animal mind is more rapid in its unfolding. The difference is that the mind of the animal has its limits assigned by the animal structure, whereas no limits can be assigned the human as to its possibilities.

That mind and body are correlated, and that each human mental faculty is but a higher unfolding of the same faculty with the brute creation, the result of superior brain and general organic structure, will admit of no question under the law of evolution. The same is true of different races of men and of the same race under varied stages of advance from the savage. If, as we advance, the demonstrations of science be found pointing to this order of evolution from mineral to man, it may clear the way for a yet more extended view as affecting our current theòlogies. When we get rid of the mass of ecclesiastical, metaphysical absurdity which has reduced the theological world to a state bordering on theological idiocy, it may be found that this order of ascending evolution lies at the foundation of the Christian verities. The objective point of all creative endeavor being the perfect man, individual and collective, possible of attainment in no other way than by the full and complete unity of the creative forces with the created form,—the conjunction of the creator with the created universe, the advance from simple or imperfect to compound or perfect manhood, may have demanded a conception in the same and in no other sense miraculous, but precisely under the same conditions and by the same process of evolution that secured the advance from the lower to the higher kingdom with all lower forms. At least, whatever truth is to be found underlying the claims of Christianity must be looked for in this direction. A miracle is simply "a wonder, a wonderful thing, from *miror*, to wonder" (see Webster), exciting wonder and astonishment for the reason that the underlying animating force is hidden from the immature comprehension of the beholder. W. H. G.

SAN JOSE, CAL., September, 1883.

ANOTHER CAUSE FOR SHAME.

Editors of The Index :—

We were much interested by the perusal, in your issue of September 6, of Mr. Potter's editorial upon "An August Sunday in Boston," and rejoiced that the writer had the courage to declare, "It is a shame for Boston that that old, foul block still stands," referring to the "rag-pickers' tenement block, on Lincoln Street." We are hoping that, in the line of effort toward moral reform, *The Index* will find space occasionally to speak with equal boldness against the many thousand liquor saloons that are allowed to exist in Boston and other cities, where the foulness and poisonous, corrupting influence in each saloon is tenfold greater than in all the tenements combined of that filthy block. And it is owing largely to the near presence of numerous dram-shops that so many persons can be found willing to occupy such tenements. Their habits of drinking drown all their thoughts in relation to decency, health, and moral conduct; and, with their squads of children being drilled amid such surroundings on the street as well as at home, what can we expect but evil from the rising generation of this class, who are mainly composed of our foreign population and their descendants?

And what are the surroundings in the vicinity of those squalid homes of poverty and wretchedness in Lincoln Street and Cove Street, and also in the neighborhood of the school-house of that district? Boston having long ago become lost to a sense of shame, let all the moralists and reformers of Massachusetts bow low their heads when they read this answer: that, within a space of about six hundred and fifty feet square, principally included between East, Federal, Kneeland, and Albany Streets, there are (or recently were) no less than eighty-two drinking saloons. On Kneeland Street, from Lincoln to Federal, a distance of six hundred feet, there are twenty-three buildings on one side, nineteen of which are devoted to the manufacture of drunkards, paupers, and criminals.

Of the four thousand saloons in Boston, over two thousand six hundred are licensed by the State to do their villanous, murderous work. And with each saloon in Boston alone controlling an average, probably, of ten votes, or a total of forty thousand ballots in the State, is it not time that something should be done besides calling on God to "save the Commonwealth of Massachusetts"?

If moralists, religionists, and political economists would give more attention to the present, and less to the past and future, mankind would be more comfortable and far happier, and also better prepared for the future life, whatever it may be.

GEORGE KEMPTON.

SHARON, Sept. 15, 1883.

THE CHARACTER OF JESUS.

Editors of The Index :—

I find in your *Index* of the 6th an article by Mr. Holland, which I esteem as quite just. I would add, however, in defence of the character of Jesus, that he, like Moses, was under the necessary bias of an ignorant and superstitious medium, which could accept no truth of a transcendent nature, hardly even a principle of chemistry or natural philosophy, unless invested with a prestige of "divine" authority.

Moses created a nation, and Jesus sought to create a spiritual society within that nation. Both were limited by the material of character with which they had to deal. In so far as either was practical, he had to look solely to effects, and to be more or less Jesuitical concerning the means employed. Naked truth was no more feasible then and there than for our delicate fruits to have grown and ripened in palæozoic epochs. What is truth now would not have been truth when it could find no recipients, and what appears to us as charlatanry or insane presumption may have been the best available method in past times.

It is well known to archæologists that it was the *idiom* of Egyptian science, and doubtless of the Magian and other affiliated philosophies, to carry abreast esoteric and exoteric interpretations of theology and natural philosophy which had not at that epoch become differentiated. The Abbé Pezzani, in his learned compilation on the historical evolution of the doctrine of metempsychosis from the Rig-Veda to Neo-druidism, has ably exposed this fact.

Now, Jesus, if we credit the record, followed this course, which explains many apparent contradictions. He admitted to certain disciples that, although he might adopt the audacious policy of claiming to be "the way and the truth and the light,"—*i.e.*, absolutely identified with the spiritual progress of humanity,—yet he did not find it possible to tell them the exact truth, since he predicts that only after he was gone "the spirit of truth shall come" and complete his revelation. M. E. LAZARUS.

A PROMINENT SPIRITUALIST ON THE AUTHORITY OF SPIRITS.

To the Spiritualist who believes that his spirit friends are near and around him, and that he can communicate directly with them, there is a constant tendency, when the clouds of doubt gather and there is difficulty in deciding the course of action, to appeal to them. The child asks of its parents, friend of friend, and receives counsel. Because of the preconceived prejudice which gives to spiritual beings almost infallible knowledge, there is always the danger of placing implicit confidence in the communications thus received.

The great majority of Spiritualists recognize this danger, and many have unequivocally warned against it. Hence, it is the more surprising that one like Mr.

Digitized by Google

W. J. Colville should assume the following untenable position. He is reported as saying:—

"My position is that *the spirit world sees where mortals do not*, and that, as we must in some measure bow to something, wisdom says, Yield rather to those intelligences whom you know and love, and who have always guided you well, than to men, no doubt well disposed, but necessarily ignorant of what the higher powers wish and see how to accomplish."

He thus makes a positive statement of the duty or allegiance mortals owe to spirits, clear and unequivocal. It is a doctrine fraught with utmost danger, and leads to spiritual ruin. To accept the spirit world as guides in preference to men may be well enough on some subjects; but there are subjects, such as directly relate to business and earthly life, on which men ought to be better informed than spirits. But even in the higher walks, where spirits of the purest and most noble may condescend to come, it is questionable if they should be accepted as unquestioned guides. In the very outset, how are we to learn that they see "where mortals do not"? When we glance over the history of Spiritualism, we find innumerable instances where good and honest people accepted this belief, and implicitly trusted their spirit friends. How many have been directed by "the spirit world" to search for treasures, or sent on the wildest "missions"? How much labor and what disappointment came at Dungeon Rock, when this same power which "sees where mortals do not" constantly urged the pious believers to go deeper into the hard rock, when any mortal with a smattering of science could have assured the credulous dupes that no treasure existed! And this is only one of innumerable instances which might be adduced.

How many have been told by this same "spirit world" that they had a great mission, and under the power of inspiration were to astonish the world! Whenever such assurance has been literally taken, the recipient, infatuated with the belief, has become little more than a tramp, searching for a mission. The acceptance of this doctrine would be even worse in its consequences than that of the direct action of God. How terrible is the latter, we see in the unflinching barbarity with which Abraham offered his son as a sacrifice, and the more atrocious imitation of the act by Freeman; and, later, by the lunatic who nailed his son to a cross, and placed his daughter on a burning pile of wood for an altar. Let a man believe that God directly interferes with the course of his life, and can inspire him with his thoughts, then "Thus saith the Lord" ascends the throne of reason, and an apology is ever on hand for the most atrocious crimes. To place "Thus saith the spirits" for "Thus saith the Lord" is yet more appalling in its consequences. To "bow" to them and do their bidding instead of depending on ourselves is to destroy the backbone of character and annul our responsibility; for, then, it would follow that we are only agents, and, whatever we do as thus directed, the spirits, not ourselves, must be held accountable. If we believe that they see where we do not, then we must blindly and unfalteringly follow, nor stop at what we call crime; for we do not know nor see as our guides know and see. This is an appalling belief for a thinking, responsible being, and, if actualized, leads necessarily to destruction of selfhood.

Again, who shall reveal to us the instructions of the spirit world? Mediums, of course. How are we to know that the revelation is pure and true, and just what it purports to be? If we are to set aside our reason and "bow" to the "spirit world," then we must place the medium between us and our guides. Having done this, what better off are we than the Catholic, with his heaven-appointed priests? We shall then have a holy order, a high priesthood of mediums; and our only hope of salvation from them will be the antagonism of their revelations.—*Hudson Tuttle, in the Religio-Philosophical Journal.*

BOOK NOTICES.

THE *Art Amateur* for October naturally gives much space to reports of the two large exhibitions now open in Boston, and it pronounces them very interesting. Of the foreign exhibit, it says, "As matters stand, all the interest of the affair centres in its art department and in the artistic portions of the general exhibition." It praises the general management of the art department of the American exhibition, and says, "It makes a better and more agreeable impression on the visitor than does the picture display in the Foreign Exhibition." This is a very agreeable statement to those who have feared that the work of our own artists would be entirely thrown in the shade by the foreign exhibitors. The reporter also says that the few foreign pictures in this fair "have been so arranged by Mr. Frank J. Robinson as to be of great use in an educational way, and also to serve as standards with which our native work may be compared." This is very good. These frequent exhibitions can only be justified by their being real opportunities for serious study, not a mere show to charm the occasional visitor. There is a very severe paragraph about Mr. Jarves' collection of old masters, which we hope will lead all students of art to examine them carefully, and not to be misled by great names truly or falsely appended to them. Another article gives an account of the Munich Exhibition, where three Americans, Abbey, Rosenthal, and Chase, have gained second-class medals for painting.

THE second and September number of *Dio Lewis'* new *Monthly* is at hand. It is bright and readable as well as a trifle sensational. We give the titles of its articles: "A Genuine Victory," a story with a moral, by Dio Lewis; "Inventions and Scientific Progress"; "The Respective Bearings of American and European Education," by Mrs. Gasherie De Witt; "Victory for Both Sides," by Dio Lewis; "How One Wife Managed"; "Obesity or Corpulence," giving some useful hints in regard to the real cause of corpulence. "Marriage in India," by Amerita Lal Roy; "False Morality," by W. T. Van Zandt; "The Fashions," by Aunt Bonnybell; "The Equitable Distribution of Wealth," by John De Morgan; "A Chat with Working-men," by Dio Lewis; "Window Studies"; "Postage not Stated," a lively love story by Lillie Devereux Blake; "Curious Fashions"; "Exercise with Rings," by Dio Lewis; "A Word about Corsets"; "Hygienic Department"; "Ventilation"; "Carbonic Acid Gas"; "Another Word about Sunshine"; "Passing Events," and "Our Cooking School."

THREE "continued" stories are brought to most satisfactory conclusions in the October number of the always interesting *St. Nicholas*,—"The Tinkham Brothers' Tide-mill," by J. T. Trowbridge, "Swept Away," by Edward S. Ellis, and "Little Pyramus and Thisbe," by Louise Alcott. This number has rather more than its usual quota of comic poems and pictures. The funniest poem of all is entitled "Punch and the Serious Little Boy." Rembrandt figures as chief personage in "Stories of Art and Artists," by Clara Erskine Clement. "The Kitchen-garden School" is very charmingly described in a letter supposed to be dictated by one of the little pupils, and written by Louise J. Kirkwood. The list of contributors for this magazine, for 1884, includes F. R. Stockton, "H. H.," Elizabeth Stuart Phelps, Mrs. A. D. T. Whitney, Joaquin Miller, Charles Dudley Warner, Julian Hawthorne, Philip Bourke Marston, Susan Coolidge, and many other distinguished writers.

THE *Catholic World* for October contains the following articles: "Protestantism versus the Church," by Rev. I. F. Hecker; "A Ninth Century Antiphon and its Composer," by A. J. Faust; "Infallibility and Private Judgment," by Arthur H. Cullen; "Chantelle," by M. P. Thompson; "The Torpedo Station," a pleasant sketch of a Newport institution, by Ella McMahon. The stories of this number are "The Wizard of Sainte Marie," a completed story by William Seton, and several chapters of the continued novelette, "Armine," written by Christian Reid. There is only one poem, "When Visions Pass," by William Livingston.

THE *Catholic Family Annual* for 1884 is received from the Catholic Publication Society, 9 Barclay Street, New York, N.Y. It is neatly printed, and illustrated with portraits of many notable Catholics, accompanied by biographical sketches. Although designed for the use of the faithful, there is much in it of interest to non-Catholics.

JOHN B. ALDEN, publisher of the marvellously cheap Elzevir Library, is also issuing an Irving Library at his usual low prices. This is to be devoted to the publication of the complete, or select, works of those great authors of the world, who, like Washington Irving, by the universality of the interest of their themes and by the grace and skill of their writings have won universal favor. We have received the first number of this series, which comprises, in its twenty-four pages of clear type, five of the best-known essays of "Elia" (Charles Lamb), at the nominal price of three cents. Address the publisher, 18 Vesey Street, New York City.

WE have received from Rand & Avery, of 117 Franklin Street, a Calendar with a daily memorandum attached, for the remaining months of the present year, as a specimen of what they can and intend to do in the coming year in the way of wide-awake, first-class printing.

PERSONAL ITEMS.

COL. H. S. OLCOTT, the hierophant of the theosophists, has set up in India as a mesmeric healer, and has great success, especially with paralytics, epileptics, and hysteriacs.

WM. E. GLADSTONE, Mr. Talbot of Glamorganshire, and Mr. Villiers of Wolverhampton are the three members of the British Parliament who now hold seats in that body who did so when Queen Victoria ascended the throne.

OF Mr. Beecher and his recent visit to San Francisco, the *Argonaut* says: "His Biblical vagaries have ceased to amuse the irreverent, and his irreverences have ceased to shock the religious. Nothing can save him next lecture season but a new doubt."

BARON DE STEIGLITZ is the richest man in Russia. His father was an apostate Jew, who accumulated great wealth by banking in Moscow; and he has multiplied it many-fold, in part by the handling of government loans. He lives about half his time in Paris, and quite inconspicuously, being a man of quiet tastes and mean person.

SAYS the London *Inquirer:* "Another prominent clergyman, the Rev. Prof. J. E. Symes, of University College, Nottingham, in a letter to the *Guardian*, writes that as a clergyman he is ready, if need be, to bear the suspicion of sympathizing with blasphemers for the sake of protesting that justice comes before all else. 'But such sentences as those passed on Messrs. Foote and Ramsay will do far more to excite sympathy with blasphemers than the protest of any number of clergymen against calling in policemen and the jailer to help us in fighting against spiritual foes.'"

MR. EDWIN D. MEAD has accepted an invitation to give an address upon Luther in Chicago, November 10, the four hundredth anniversary of Luther's birth. Mr. Mead spends the autumn in Boston, his address being 48 Pinckney Street. He is preparing a course of lectures upon "The Pilgrim Fathers," for delivery during the coming season,—six lectures under the following titles: "Puritanism," "New England in England," "New England in Holland," "Plymouth," "Bradford's Journal," and "John Robinson." He will also deliver in many places in the West, and in New England previous to his Western trip, the course of lectures upon "America in the American Poets," given in New York, Amherst, Cleveland, and elsewhere last season,—lectures taking up Longfellow, Whittier, Lowell, and Emerson, and showing what each has done with American subjects and for American life and thought.

MARGERY DEANE, writing of the visiting Catholic prelate, Mgr. Capel, says: "He has a wonderful charm of manner, a voice that is delightful to listen to, even if he said nothing, a magnetism that makes him most fascinating to believers or unbelievers. Yet there is a growing distrust of his great learning, and a feeling that already, considering all things, he has received a little too much attention, has been too much lionized. He claims, it is said, to be able to convert any woman to Catholicism in three conversations. It is apparent from his self-conscious manner, his always furtive look about him to be sure he is being regarded, that his own head is just a little turned by this feminine adoration; and since I have heard silly women rave over him, and declare their willingness to be converted to anything if *he* but do it, I do not wonder at his vanity. He is but human. He showed this, and that his vanity was touched deeply, when he took occasion to sneer at American newspapers and American criticism, replying to none of their questions put to him in the public print, but using a good half-hour in his sermon to show that his opponents in this land could only be such through gross ignorance."

MRS. NEWHALL'S SCHOOL

FOR GIRLS AND YOUNG LADIES

Will reopen Oct. 1, 1883. Besides the regular courses in English studies and languages, there will be some work, each week, in the line of the new or **"creative method"** either with **tools upon wood** or in **modeling.** Another special feature will be a course of **lectures** upon the **great tone-masters,** illustrated with piano and voice. As aids to the study of History, Geography, and Art, **the use of the lantern** will be continued, and the **regular visits to the Art Museum.** For catalogues, address the Principal, 91 Newbury Street, Boston.

West Newton English and Classical School.

The ninetieth term of this Family and Boarding School for Boys and Girls will begin Wednesday, Sept. 19, 1883. For information and catalogue, address

NATH'L T. ALLEN,
WEST NEWTON, MASS.

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

"It seems to me admirable both in matter and in manner, and I hope it will have a wide circulation, as it is the kind of book people need."—*John Fiske.*

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.
For sale at THE INDEX office.

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

I. *Taxation of Church Property,* by James Parton. 5 cts.; ten, 30 cts.; one hundred, $1.50.

THE RELIGION OF HUMANITY. By WILLIAM FREY. 15 cts.

AN AGNOSTIC VIEW OF THE DOCTRINE OF VICARIOUS ATONEMENT. By W. H. SPENCER. 5 cts.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

Black-eyed Peas.

To every reader of *The Index* who will send me their Post-office address and ten cents in stamps, I will send a package containing one hundred of these Peas. Two crops can be made in a year in the South. They sell at from $2 to $3 per bushel, and are the finest table pea that is raised,—very tender and easily cooked.

ALEXANDER KING,
Crockett, Texas.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

The Basis of the Ethical Movement.

Why Unitarianism does not Satisfy us.

Two Lectures before the Society for Ethical Culture, of Chicago, by W. M. SALTER.

Price 10 cts. each. For sale at INDEX office and GEO. H. ELLIS, 141 Franklin St.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—**The Christian Amendment,** by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE QUAKER INVASION OF MASSACHUSETTS. By R. P. HALLOWELL. 1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

*** *For sale by all booksellers. Sent by mail, postpaid, on receipt of price, by the Publishers,*

HOUGHTON, MIFFLIN & CO., Boston.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c. per line.
" 13 " 25	" . . .	8c. " "
" 26 " 51	" . . .	6c. " "
" 52	" . . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

CURRENT TOPICS.

A LETTER is published by Mrs. Harriette R. Shattuck, sent to her in 1881 by Mr. Robinson, now Republican candidate for Governor of Massachusetts, in which this gentleman says, "In reply to the questions proposed in your letter of the 10th inst., I say I am not in favor of woman suffrage, or of a sixteenth amendment to the United States Constitution securing suffrage to women."

THE semi-centennial celebration of the formation of the New York City Anti-slavery Society took place Tuesday last week, in New York. On the platform were gray-haired veterans who went through the trying scenes of the anti-slavery agitation half a century ago. Among them was Mr. Elizur Wright, the only survivor of the officers elected at the first meeting of the society. Among the speakers was Oliver Johnson. A poem by Whittier was read.

THE manifestation of the Parisian *Sans-culottes* toward King Alfonso was an undignified and ill-mannered affair; but why should it be made the subject of diplomatic correspondence by the monarchical governments of Europe, when the French government had no sympathy with it after President Grévy's expressions of regret, and the handsome official reception of the Spanish king in the French Republic? The *Transcript* pertinently remarks: "It is a good opportunity to use a little political leverage against republicanism; and it is to be made the most of by its enemies, who are in the interest of royalty in Madrid, Berlin, London, and perhaps in Paris. Even that embodiment of divine right and military glory, the old Emperor Wilhelm himself, feels called upon to add a little fuel to the needless flame. But these demonstrations are all political, and simply signify a hurrah for our side and down with the republic!"

SOME of the methods by which the Mormon missionaries manage to recruit their ranks in Utah were indicated by the confession of Regina Anderson, a young and beautiful Swedish girl, blind from her birth, who was rescued, on her arrival at Castle Garden, from the Mormon missionary in charge of her, by the timely interposition of a brother and sister who had previously immigrated to this country. They explained to her the risks she ran and the sort of life she was likely to lead in joining the Mormons, and she very willingly joined her relatives instead. She said that the missionary who converted her told her that the weather in Utah was always pleasant, and that nobody lived there but rich men, a great many of whom were unmarried and wanted wives. He told her that a husband was awaiting her among his people, and said he owned a big coal mine, lived in a palace, owned a dozen carriages, and a great stable full of horses.

THE oath question in these sceptical days is being shown up in all its absurdity, as, for instance, in the following cases: Mr. Carter, the West Kent coroner, was holding an inquest at Deptford, when accidentally it was discovered that the book on which the jury was being sworn, instead of being a New Testament, was a copy of Laurence Sterne's *Tristram Shandy*. Whether it had been used before for a similar purpose, and if so whether it had proved as effective as a New Testament with a cross on the cover, appears not to have been inquired into. In Queensland, another incident occurred. A Chinaman had to give his evidence, and was asked how he would be sworn. His reply was: "Me no care. Clack 'im saucer, kill 'im cock, blow out 'im matchee, smell 'im book, alle same." He was allowed to "smell 'im book." While in Nottingham, England, two borough magistrates spent so much time in a trivial case arguing with a seventeen-year-old girl that the Protestant Bible is as orthodox as the Douay Bible that the case was put over one month.

THE New York Court of Appeals last week, in the suit brought to restrain Western Union Stock watering, sustained the company at every point; and the decision of the court is generally believed among those competent to judge to be according to law. The Springfield *Republican* comments thus; "Here, we have final judicial approval of an immense stock-watering operation, which affects the whole public as no other could possibly do; and the sharpest of criticism will come from all sides. There is no need to enlarge upon the motives of the men who manipulated the bargaining, nor upon the mischief of having the great monopoly with a grossly inflated capital: all know one, and all will feel the other; but it is unfortunately true that the New York Court of Appeals is not itself above suspicion in this matter. There have been some things, notably the advancing of the case on the docket last summer, which looked very strange: and it is not impossible that the judges will find that they have in a manner sown dragons' teeth, to spring up the most troublesome of armed men. Perhaps it is too much to hope that the burden imposed by the decision will be taken from the public, but developments in New York will be waited for anxiously."

A CIRCULAR, freely distributed throughout Chinese provinces, gives to Americans and Europeans something like a Roland for our Oliver of Kearneyism. It seems like a Chinese adaptation of America's policy, when we hear that this circular declares that Europeans (and Americans also) "do not belong to the human race: they are the descendants of apes and geese. Their appearance resembles that of apes, their heart that of the devil. For this reason, the, are called 'kouitse' (European devils). This race of savages worships neither heaven nor earth, does not honor its parents, has no reverence for its ancestors. Among them, the sanctity of family ties is unknown. A veritable herd of dogs and pigs, their talk is only of equality. They know no distinction between father and son, king and subject. The English are the worst of them all,—'a small tribe on an island not bigger than your hand.' The reason that they can make steamers, railways, watches, etc., is because, under pretext of preaching religion, they come to snatch away the eyes and brains of the dying, to extract blood from children; and with these eyes, these brains, and this blood they make medicinal pills, which they sell in their country, and so acquire ability to do all these things. The handbill further says that the empire be divided into districts, and at given signal that all rise like one man and drive out the savages."

AT a recent meeting in New York of the American Astronomical Society, Mr. Serviss, the secretary, read a paper on "Changes on the Moon," in which he said that if the moon was inhabited, engineers there would be able, on account of the slight force of gravity, to build a suspension bridge across a volcanic crater forty miles in diameter, or in building railroads to tumble mountains out of the way like mole-hills. Although the moon is a dead planet, he continued, yet changes do take place on its surface. Craters have sunk probably by the crumbling of a mountain wall. Humboldt noted a similar phenomenon in the falling in of the top of the Capac Urcu, or Prince of Mountains, in Ecuador, in the fifteenth century, which dropped over three thousand feet. In 1866, Schmidt of Athens missed the crater of Linne from the Sea of Serenity in the moon. It was six and a half miles across, and Proctor says perhaps three miles deep. Only a slight elevation now marks the place where the mountain stood. Prof. Stevens suggested that the mountains in the moon might crumble, in consequence of the different temperatures on the side of the moon presented to the sun and on that which is turned away from the sun. As there could be little atmosphere around the planet, the side next to the sun must be almost like molten lead, while on the opposite side it must be like ice. Expansion and contraction of the towering volcanic masses might weaken them, and in time cause them to tumble. Prof. Eaton did not believe that the astronomers had recently discovered vapor as they had hoped.

WANTED,—A NEW SCHOOL FOR PREACHERS.

The discussion about the new Orthodoxy, and its special heresy of teaching a second probation, appears just now to lag. President Eliot's charge that the beneficiary funds given to theological seminaries and their preparatory schools for the education of ministers are a damage to the mental and moral stamina of the ministerial profession, has apparently drawn the fire of all the sectarian journals, and—as the cool-headed president has not yet fired back—hostilities at that point have temporarily ceased. Meantime, the theological schools, Andover with the rest, have started up their fires again, and entered on another year's work in preparing candidates for the various pulpits of the religious denominations; and, in due season, the new candidates, good, bad, and indifferent, will be sent forth to find their life work as the teachers and guides of American churches. It seems, therefore, to be a fitting time to ask how well they will be equipped for their tasks; and to throw out the suggestion that a new school is needed for the training of religious teachers who shall be able to meet the new demands made upon the ministerial profession by the modern progress of thought.

In all the theological schools, the main thing now taught is, of course, theology. Their name is still true to the fact in that respect, and in the liberal as well as in the conservative schools. The study and interpretation of the Hebrew Bible, the careful exegesis of the New Testament, Systematic Theology, Ecclesiastical History,—these are the branches that chiefly consume the time and attention of the students. Other studies that may be pursued are merely ancillary and complementary to these. Some of the schools, recognizing the spirit of the times, have introduced a little wider range. The Divinity School at Cambridge, for instance, has a Professor of Assyriology, and furnishes a quite liberal course of study on Comparative Religion; and the Andover school has a department on the Relation of Science to Religion, though we know not how impartially it is conducted. But, in all the existing schools for the training of preachers, the centre around which all the departments of study are grouped is theology. Theology is chief and front of the whole curriculum.

Now, theology may have its place. We are not among those who would classify all theology as mythology. We would assign it a high and honorable place still in the sphere of philosophy. But, clearly, theology does not to day hold the front place in pulpits. It did so once; but, even in the pulpits of the most conservative sects, it is losing its rank, it is falling into the background, it is taking a subordinate position. Preachers are learning either that they are obliged to treat other topics in order to attract the ears of people, or, better, that there are other topics with which they can reach the hearts and lives of people more beneficially. Subjects that are practically helpful to conduct, ethical, social, humanitarian topics,—these are largely taking the place of the theological arguments with which the pulpit was wont to deal. And yet comparatively few preachers are prepared by their professional training to treat these topics in a large, instructive, and really helpful way. They find themselves unequipped for the service demanded of them. The result is that they have little to say upon these topics with which most of their hearers are not equally familiar. And, hence, very much of modern preaching consists of moral platitudes set off by pretty appeals to the emotions. The old dogmas and Bible expositions that used to be given in the form of solid meat for thought are now largely served merely as side-dishes of sentiment.

To meet, therefore, the new demand on the pulpit, a new school for the training of preachers is wanted. In such a school, sociology should take the place now given to theology. And in sociology, which embraces all the social sciences, would be included such important branches of study as Methods of Philanthropy and Education, the practical treatment of Vice and Crime, Political Economy, the higher domains of Government and Politics. These are the topics that are coming to the front for discussion among thoughtful people, and the pulpit should be qualified to be an instructor and leader of thought upon them. Ethics, too, would have a foremost place as a department of study in such a school. Another department would be the History of Religions, under which theology as a prominent part of this history would have a legitimate place. Natural Science also, in all its bearings on questions of religion and on problems of human welfare, would make still another department. Other supplementary studies might be added; but these—Sociology (in its various divisions), Ethics, the History of Religion, Natural Science in its relation to religious and social problems—should be chief; and of these let sociology have the position and attention which theology has hitherto had in kindred schools.

Cannot the school which Mr. Wade, of Cleveland, has generously proposed to found, be established as an institution of this sort? The Unitarians, to whom the offer has been made, do not appear to be making much progress toward the realization of the project. Their plan, we believe, will be a pretty broad one, if it is ever carried into execution; but may it not be still broader and be all the better for it? There is no need of another denominational Unitarian school, nor even of another liberal theological school; but such a school as we have here briefly and imperfectly sketched would be unique, and would meet a demand nowhere else met. It would not only satisfy the wants of liberal thinkers, but let it be organized on a broad and generous scale, and equipped with professors of the best learning and the first repute in their respective departments, and students would come to it, even after completing their studies at denominational theological schools, in order to secure the special additional qualification for their tasks which such an institution would provide. Can there not be a combination of progressive thinkers, without regard to denominational lines or theological distinctions, broad enough, wise enough, and mutually trustful enough, to found and conduct this needed new school for the new order of preachers?

WM. J. POTTER.

MYTHOLOGY.

III.

The original nature-myths have undergone various transformations, and so have continued on long in history, appearing in their multiplied changes and disguises in later and far other stages of culture than those in which they had their birth. So completely have they been transmuted in instances that it becomes exceedingly difficult often to trace the ancestry and read the metamorphoses. But all the more engaging is the study for this; for we are piqued in the pursuit, and led on from step to step, finding clews that guide and keys that unlock, till we are conducted not seldom to the most surprising and wholly unexpected results.

The numerous legends, tales, etc., with which ancient and especially mediæval and modern literatures abound, have all sprung from this distant fountain-head, the nature-myth. "The divine myth," says Max Müller, "becomes an heroic legend; and the heroic legend fades away into a nursery tale. Our nursery tales have been well called the modern *patois* of the ancient sacred mythology of the Aryan race." The human mind tends ever to localize and individualize, it likes the concrete, the tangible, and determinate; and hence almost all the stories have been attached to some historic person, been made to do duty in some specific history. What was told of Herakles, sun-god, was concretized and crystallized in the personality of a monarch, called Herakles of Argos. As Mr. Tylor well says, "All men feel how wanting in sense of reality is a story with no personal name to hang it to." This want is thus graphically expressed by Sprenger, the historian, in his Life of Mohammed: "It makes on me, at least, quite a different impression, when it is related that 'the Prophet said to Alkama,' even if I knew nothing whatever of this Alkama, than if it were merely stated that he 'said to somebody.'" This somebody, therefore, appearing under unnumbered names, has played conspicuous part in the mythology of the world. As the eye wearies ever at looking in the vague and the vast, and seeks for some defined object to alight and rest upon, so the mind is ever athirst to discover or to invent some concrete, some person, to fasten and repose its thought upon.

The heroic legends are in many cases wholly fictitious and groundless as history. Drawn from the myths, in them alone they have their life. Some of them have apparently an historic kernel, others not even that, not a shred of actual fact or personal occurrence to rest on. England's patron, Saint George, may have been a Christian martyr who suffered nobly in Asia Minor near the beginning of the fourth century; but Saint George and the Dragon are a myth, borrowed from the tales of Orient and Occident. We have one prototype in the myth of Apollo and the Python, and, earlier still, in the tale of Indra and Ahi in the ancient Hindu. Others yet in the stories of Herakles and the Hydra, Perseus and the sea-monster, or, coming to later times, in Sigurd and Fafuir, Beowulf and Grendel. All this is descriptive of the deliverance of the earth from the fangs of a monster, either the storm-cloud, the night, or the icy prison of cold, the winter. In Saint George, we have the myth Christianized, touched afresh with new colors; and the hero thus presented has become one of the most popular of all the saints in the calendar. In the time of the crusades, he appeared once in light on the walls of Jerusalem, waving his sword, and led the victorious assault on the Holy City. It is not wonderful he has been long and gratefully remembered.

The same in substance might be said of William Tell, of Tannhäuser, or Thomas of Ercildoune, etc. "William Tell," says Max Müller, "is the last reflection of the sun-god, whether we call him Indra, or Apollo, or Ulysses. Their darts are unerring." The story of Tell, under one name or another, is told everywhere; and the myth in its essential features was known to the early Aryans before the separation. In the case of Tannhäuser, the story has changed much, where we find, instead of Odysseus lulled to slumber in the cave of Kalypso, or Zeus on Mount Ida, we have a French knight drawn into the Hörselberg, and kept there seven years in revelry. But the knight is the god transmuted into a character in the heroic legend.

The belief in Saint Ursula is widely spread in the Christian world. She has a church at Cologne, and thither thousands pilgrim to seek the intercession of the saint. The bones of the virgin are shown in that city to-day to the pious worshippers. Ursula, with her eleven thousand attendant maid-

Digitized by Google

ens, it is related, suffered martyrdom there at the hands of the Huns. This is put by chronicler Sigebert at 453.

The saint never existed; and the entire story has grown out of a myth of the ancient Germans in regard to their moon-goddess, Holda or Hörsel. Journeying from cloudland and night, attended by her myriad companions the pure stars, she suffers martyrdom, herself and her companions are extinguished in the light of the risen day.

Hamlet is a character that comes down from the Norse mythology. The story describes the old conflict and quarrel, quarrel of summer and winter. The prince is moody like Achilleus, and both of them are as veritably personations of the sun-god as were Odin or Indra. But the memory of all that had faded long from the minds of men, ere the tale of Havelock or Hamlet was written.

In the Pied Piper of Hameln we have another instance. The piping of this noted character was tragic for the town of Hameln; for the number of little children that were drawn by him into the side of the mountain was just one hundred and thirty, and the time laid down was the year 1284. For a long period the calamity marked the great epoch in the history of the town, public documents were dated from it, and no music was permitted, even on wedding occasions, to be played in the street, along which the piper had passed.

In this story is historicized the myth of the wind, or the wind-god Odin, coursing through the air, sweeping over the tree-tops or past the windows, with his cavalcade of ghosts; and in the piping is hinted the music not seldom heard in the breeze. This was thought to be ominous, signifying the call of souls to their home. In the tale of the Piper may be preserved some dim remembrance of a pestilence or epidemic that was specially fatal among children.

This myth, with the belief it covers, has had a wide diffusion, and is present and active to-day in survivals. In some parts of Europe, when the wind blows hard, especially at night, the windows of all the sick-rooms are thrown open, that the soul of the sufferer may, if it will, join the mystic host that is passing by. From the same superstition originates the custom of throwing open a window or a door when a person is about to depart in death. Of the same origin the belief that the howling of a dog under the window foretokens a death in the family, a connection being fancied easily enough between this sound and the wail or howl of the wind. In Persia and India, to-day, a dog is brought to the bedside of a person who is dying, that his soul may have a good and sufficient escort. Peasants in England believe that angels come and pipe for souls, especially little children, and that these are then sure to die. A Wesleyan told Mr. Baring-Gould that he was sure his little servant girl was about to die, as he had the night before heard an angel piping to her in the next room. "And when t' aingels gang that road," said the man, "they're boun' to take bairns' souls wi' em." In Germany, they call it the elf-music; and children are cautioned not to listen to it. If they do, then Frau Holle, the ancient goddess Holda, takes them to wander in the forests.

This belief comes down in the popular hymnology. Angels call, the soul must go;

> "Hark! they whisper, angels say,
> Sister spirit, come away."

Further, throughout England, the peasants believe that the spirits of unbaptized children are held in the wind, and that the wail of the wind heard sometimes at their doors and windows is the cry of the little ones, doomed to wander till the last day.

In another form, the old myth survives in the tales of the Phantom Army, the Flying Dutchman, our Wild Huntsman or Herne the Hunter, and Sir Francis Drake still leading the Wild Hunt over Dartmoor. In the legend of the Phantom Army, told in the Middle Ages, was an account of a strange apparition of two hosts of men seen to join battle in mid-air. The peasant of the Jura or the Alps could describe in minute detail how, when alone upon the mountain-side, he had seen the awful vision. To convince him that he was not the dupe of his imagination, showers of blood at length would fall, incontestable witness of the reality of what his eyes had beheld. A graphic description of such a battle, clearly seen by five soldiers out on their midnight watch, just before the battle of Mookerhyde, is given in Motley's *History of the Dutch Republic*. Two armies were observed to move rapidly toward each other, and close in fiercest conflict. The rattle of the musketry, the discharge of the cannon, and the tramp of the contending hosts were distinctly heard; and after the battle, when all else had faded away, the whole extent of the sky covered by that scene was streaked with blood. I remember to have heard, in my childhood, a like appearance described by one of the seniors, and thoroughly believed among those listening to be a bloody conflict in the heavens. I have since seen that it must have been an appearance of the Aurora Borealis.

Thus fruitful has this one myth of the wind-god been in legends and superstitions. Beyond number have they sprung up on the soil of the original nature-myths, and carried their legacy of fear and prostrating terror to the minds of men through the ages of the past. In instances, they have been surmounted, in part looked in the eye, subjected, and so kept only in reminiscence, told in familiar proverb, and named in sportive allusion. Hence has come to us the old saw in regard to the Pied Piper of Hameln, "When you dance, remember to pay the piper." In the last reflection, Odin has become the Robin Hood of our nursery tales, and the Harlequin of Christmas pantomimes.

But the spectres, not all, not nearly all, are extinguished or put under the feet. The deities of Olympus and Asgard, of Hades and Hela and Jötunheim, are alive: they rule still with tremendous power throughout Christendom. As Christianity came, they were denounced in some degree and degraded; but they continued, and held place in the beliefs and worships. The Christian missionaries did not disbelieve in them, but rather the contrary: they subordinated and accepted, adopted them. Odin was degraded to an ogre, a sprite: he had representation in the devil of popular theology, prince as he had always been of the powers of the air.

This on one side: on another, a transmutation took place, by which the same deity was exalted, and became one with the Supreme God of Christendom, the very name *Guodan*, by a slight change, furnishing our word *God*, and standing thus for the highest conception known yet to the general thought. Thus, through two processes, one of degradation, the other of exaltation, the old Norse god has come down, and has his representation in the beliefs of the Christian world. And, to the thoughtful eye, it will appear that the higher idea is not at such infinite remove from the lower; for the popular conception of God, on one side of his nature, makes him a demon, bears in it still a strong element of the savage and diabolical.

We have here one example of the remarkable transformations that occur, in the course of the ages, in the mythic conception. There are others, hardly less striking, that we shall find in the study of this intensely interesting chapter in the history of the human mind.

CHARLES D. B. MILLS.

TRAVELS IN FAITH.

I.

When Dr. Lyman Beecher was asked, "What is the best way to promote revivals?" he answered, "By telling of them." Temperance platforms, experience meetings, and the efforts of evangelists prove that the surest way to gain converts is to narrate the conversion of others. "I believed, and therefore have I spoken," has been the warrant through ages for the utterance of sincere conviction. Truth is free to all men, and every searcher for it may tell what he thinks he has found. If he is proved to be wrong, the discussion excited will help to establish the right, and his failure will be a stepping stone in the path of progress.

Religious subjects have received the chief attention throughout my life; and I venture to state some results of my study and observation, in the hope that some who are endeavoring to preserve an inherited but distrusted belief may be encouraged to think for themselves. Doubt is the father of knowledge, and its questionings may as rightly be applied to religion as to astronomy.

Some who do not care to read the theological and philosophical works of scholars may peruse and be helped by a simple narrative of personal experience and thought, for as a German proverb says, "What comes from the heart goes to the heart"; and the following thoughts are the result of years of earnest, prayerful seeking after "divine truth."

A shrinking from publicity is overcome by the desire for usefulness; and the fear of unpopularity is allayed by the sentiment expressed in the words of F. A. Lange, "Never has the thoughtful observed the right to be silent, merely because he knows that for the present there are but few who listen to him."

I was born in Boston on the first day of winter, 1839. My father* often pointed out to me a spot in the corner of his study where, when he first heard that another son had been given to him, he kneeled and commended the newly given life to God. On the first day of spring, I was "dedicated to God in baptism" at the old church in Essex Street, my father preaching a sermon from the words, "And it came to pass after the death of Abraham that God blessed his son Isaac."

My mother wrote in her journal on this day, "I took a strong hold on God as a covenant God, not only mine, but my husband's and our parents before us, even to remote generations; and I left my vow on his altar to bring up this child for him, patiently bearing any care and fatigue which in behalf of this child I may be called to endure." These vows were faithfully fulfilled, until her death from consumption when I was just eight years old. All my memories of her are pleasant, though I have but few distinct recollections of my intercourse with her. The two things which seem most forcibly stamped upon my mind are the Sunday afternoons when she talked with us and taught us the Westminster Assembly's shorter catechism, and the incongruous fact that on a Fourth of July she allowed me to smoke a sweet fern cigar,—an indulgence so contrasted with the usual restraint of my life that my wonder and gratitude have vividly remained.

In her journal, she speaks of me at the age of four as having been "such a comfort and joy to us ever since he was born." I will record a few of her complimentary statements, as they are interesting illustrations of the total depravity which theoretically possessed me; and I make no other apology for quoting a fond mother's praises. She

* Rev. Nehemiah Adams, D.D.

Digitized by Google

writes: "His most striking trait of character is a sense of justice. He sees things as they are, and acts accordingly in a way far different from any child I have had the opportunity of noticing." "With regard to his faults, I do not know of one that I could mention. I asked his father and aunt if they could tell me what his prominent failings were, but they neither of them could. Still he occasionally needs my saying, 'That is naughty,' or 'That is not right,' only, when he is reminded of doing wrong, he is usually willing to do right and make reparation." It is said that I went to school cheerfully, because, as I remarked, "I wanted to please Christ." "He has great power of association of ideas, in which his strength of memory also shows itself. A word will sometimes suggest a complete set of incidents which occurred long since. He thinks, works a thing out in his own mind, but does not seem so fond of learning to read as his brother. He looks through a subject at a glance. I have been surprised that a child of so much forethought and contrivance should be so free from cunning and guile. He is fair and open as the day." Some instances of forbearance and generosity are mentioned, and this part of the record closes with saying: "His school teacher is Mrs. Lothrop, mother of the Mary Lothrop whose little memoir is the charm of Sabbath school readers. She said to me, 'Mrs. Adams, Robert is either early to be taken to heaven, or God is qualifying him for eminent usefulness.'" Thus, it seems I was one of the good boys who, though they may charm "Sabbath-school readers," are not so popular with the general public of to-day as the Tom Sawyers and the bad boys, whose "diaries" would be preferred to the extended account of my youth, from which the above extracts are made.

The character of my mother's Sunday talks with her children is shown in the following entry: "It is my custom Sabbath evening to tell the three older children how I have enjoyed myself, what particular truths and passages of Scripture have interested me, and what the impression is which that day has left upon my mind, with which to enter on the busy scenes of the week. Sabbath before last, as I was thus sitting with them, I said: 'Children, this morning's sermon by Rev. Mr. Phelps, of Pine Street Church, made me feel that I ought not to rest satisfied with anything but your conversion. Parental and Sabbath-school instruction is not enough, you must be born again, as much as if you were heathens.' M. (nine years old) looked very solemn. I continued: 'Your father this afternoon preached to those who sincerely desire to be Christians. M., you think you are one of those, don't you?' 'Oh, yes, mother, I am sure I do. I pray and pray, but it don't come. Do tell me what father said.' The day had been intensely cold, and owing to slight indispositions the children had been kept at home. I told them about the sermon: one hindrance to some was the fear of what their acquaintance would think. 'Ha, mother!' said M., 'that ain't mine. I don't care what they think. Mother, I should be proud, *proud* to have them know I was a Christian.' Another hindrance was being afraid to trust the soul with Christ. 'I ain't afraid to,' she said. Another hindrance was loving one's lusts and passions. Here, we were interrupted. The next morning she said to me: 'Mother, I know what my hindrance is. I love my passions too well to give them up.'" Shortly after, it is written: "Sabbath evening M. came into my chamber, and said: 'Mother, I feel solemn, there is a weight on my mind, and I can't get rid of it.' I asked her what it was. She replied, 'It seems as if all the wicked things I have ever done against you have come into my mind to-day, and I must answer for them all at the judgment seat of Christ. They will all appear there. Then, she mentioned several of them. She was afraid to go to bed. I went up with her. Her feelings were very solemn and tender. Conviction of sin is a new feeling for her. Oh, how I would welcome the spirit of God, if he would but come 'under my roof'!"

A few months after this, it is said that M. printed a statement which she handed to her mother. It was headed, "Give an account of thy stewardship." After enumerating several trivial faults, exaggerated by a morbid conscience, she says: "To-day, I gave myself to God to be his child forever. I am now going, through his strength, to try not to be impudent, not to call names, and not to use any vulgar language, and not to have a coarse voice. I am not going with any of my bad companions. That little child (M. D.), ten years old, as old as I am, is a Christian; and I will try to be one too. I hope by New Year's day, at the beginning of the year, I shall be a Christian. I will read my Bible, and may I always 'consider every day as a blank leaf to be filled up for Christ.' May I always remember God will bring me to judgment. May I be a praying child, and on my dying bed may I look back with happy remembrance to this day."

The next week, my mother writes of having had to find fault with M., and says, "I told her that, in view of what she had resolved the past week, I considered it the greatest sin she had ever committed." Then follows another letter, filled with the agony of repentance and fresh resolves.

The all-overshadowing memory of my early life is this striving for conversion, which pervaded the whole family and was my own most intense idea. Being more reticent and retiring than some others of the family, I do not seem to have made as many demonstrations to my parents as they; and, therefore, I give some records of their experiences, as showing the religious atmosphere of our home and the feelings which I entertained in common with them.

My brother possessed a highly emotional nature, and was "converted" several times over. Some instances of his and my sisters' experiences will serve te illustrate my own, as I am conscious of having passed through many such strivings, though never gaining such "assurance of salvation." His first letter, written at the age of seven, is preserved. The contents were: "My dear mother, I hope that you will pray for me, that I may be one of Jesus' flock." A record of a fault and its confession says that W. came to his father, and said: "O father, last night I could not go to sleep, it worried me so; and I thought I never could be a Christian till I told you of it, and I prayed to God to forgive me, and to help tell you of it. And, father, I have felt all day like Pilgrim with a burden on his back." Though irrelevant, I will insert the next record as showing that there were limits to his Scriptural knowledge: "This morning at family worship, reading of the land of Ham in the 105th Psalm, his father asked W. what land was meant. 'The land where hams grow, father.'"

On the anniversary of our baptism, she writes: "I reminded them of it. We talked it over alone. W. was very much affected. He shed tears, and then locked himself in his chamber." We both printed verses of Scripture, which our mother pinned up on the wall of our room, "that they may be reminded of it each morning."

More than two years after my sister M.'s conversion and fall from grace already mentioned, it is said: "On this same Sabbath eve, my dear child M. came to me and said, 'Mother, I cannot but hope that I am a child of God.' I asked her why she hoped so. She replied: 'This last week, I have known what despair was. I have been in such distress about my sins. I thought, For twelve long years I have sinned against God. I asked God to forgive me my twelve long years of sin, because Christ has suffered and died for such sinners as me. I feel happy, and I want everybody to love God.' She told me a few weeks since that she had always felt entering her teens would be an important period in her life, a turning point in her history, and she meant to spend the intervening months (from April to August) in trying to become a Christian. Yesterday, W. came to his father at noon and said, 'Father, I hope that I am a Christian.' 'What makes you hope so, my son?' 'This morning, father, I felt I was a great sinner, and went to my chamber and asked to be forgiven, and gave myself to God. He incidentally said that, at the time when he gave himself to the Lord, after he had done so, he sat down in his chamber and sang, 'Jesus save my dying soul.'" Then comes an entry about myself when seven years old: "Sunday before last, R. said in my presence, 'I wish I was a Christian, but it's dreadful hard.' I said, 'Why, it is only to be like Christ.' Looking in my face, he asked in a deliberate, earnest manner, 'Mother, do you think you are like Christ?' Last Sunday he was sitting in my lap, and I said, 'If you could have what you wish, I know you would wish to be a Christian?' 'Well,' said he, 'I'd about as lief be a fairy.' 'Why?' 'Because then I could wish myself anything.' 'And what would be your first wish, if on waking to-morrow morning you should find yourself a fairy?' 'I would wish myself a Christian.'

"Yesterday, W. was ten years old. This morning, Sunday, he came into his father's study, and said: 'Father, I do think I am a Christian. I believe I have taken God for my portion.'" Two months later, "W. had an affecting conversation with his father, and then followed him in prayer, beginning with, 'My sins are more in number than the sand on the seashore.' He afterward asked his eldest sister to pray with him, weeping freely and saying, 'Oh, you don't know what a sinner I am!'"

The Calvinistic doctrine of the perseverance of saints, "once in grace always in grace," does not seem to have been impressed upon us; and, a year after this, W. experiences another conversion. My mother's hand had ceased to write her loving comments; and my father continues her journal, and says: "This morning, as I was preparing to go to meeting, W. came into my study and laid the following letter before me, and went out. To-morrow, he is eleven years old. 'My dear father, I have been led to know how vile I am, and that Jesus cleanseth from all sin; and I have cast my burden upon the Lord. I have cried unto him, and he has heard me; and the Saviour seems dear to me. I will trust in him all the days of my life. He is a good Saviour, and I will put my trust in him. My dear father, you have been the means of my loving the Saviour. You have showed me the way, I have followed it. My father, I never knew what a Saviour was. I see him nailed to the cross for me, bleeding, dying for me. Dear Saviour, how I do love thee! How I will serve thee! And, if I live to grow up, I will go far and wide and tell the poor heathen what a Saviour thou art. My father, the Lord has taken me up. I will go through my eleventh year with the Saviour. Your dear, affectionate son, W.

"'P. S.—Father, I feel the love of a Saviour.'"

"He followed me into my room after meeting, and said that for a long time, when Saturday evening was coming on, he had felt a dreadful burden. The approach of holy time seemed to make him think of his sins the week past. To-day, he said,

Digitized by Google

he had prayed and wept and begged for mercy in his room, and during his prayer he thought that he was heard and answered. He never felt so before, and he poured out his heart in this letter. Dear boy, he has had deep convictions of sin. So has C. This gives me confidence in whatever of right feeling they have. He said that he thought, while I was preaching the New Year's sermon this morning ('Lord, make me to know mine end'), if God had sent him word that he might die this year, and asking if he was willing to die or not, he would send back word, 'Father, thy will be done.' I am deeply interested and affected by his experience and appearance to-day."

The journal was discontinued soon after this entry, but contains an expression of my father's deep emotion at the bereavement which had befallen him in the loss of his beloved wife. The following instruction is then recorded for his children's benefit, when they should read it in later years:—

"God afflicts the soul of a child of his with these unutterable sorrows. He does not spare him. Bereavement with all its aggravating memories, its fearful solitude, its anticipations, consume him. All this happens to one who loves God.

"Now, this makes me think and feel how willing and able God is to see the wicked suffer hell torments. We have no adequate conception, till we are in great affliction, what the future sufferings of the wicked can be. 'If these things are done in the green tree, what shall be done in the dry?' 'And if the righteous scarcely be saved, where shall the ungodly and the sinner appear?' All the consolations of religion cannot prevent the memory of past joys from being unutterably painful. What must it be to lie down in sorrow! Besides, if the Saviour suffered as he did for you, and you reject him, there will be no unwillingness on the part of God to inflict torment. Constituted as we are, it is easy for God to make us completely miserable, just by withdrawing some things from us. O my dear children, flee from the wrath to come. 'It is a fearful thing to fall into the hands of the living God.' These two verses in the prophet Nahum appear to me to be exceedingly impressive: 'God is jealous, and the Lord revengeth, and is *furious:* the Lord will take vengeance on his adversaries, and he reserveth wrath for his enemies.' '*The Lord is good*, a stronghold in the day of trouble; and *he knoweth them that trust in him.*'" Sixteen years afterward, he opened the book and added some final comments, closing with the words: "My sorrows have deepened in me a conviction of future endless misery, and have helped me, I hope, to flee from the wrath to come. I am persuaded that God is able and willing to see men suffer hereafter. He can look on pain, especially when men have refused a dying Redeemer. Oh, may my children escape these things, and stand with me before the Son of Man."

These remarks and anecdotes will show the type of religion which pervaded our home, causing us periods of distressful fear of God; but, fortunately, our earthly father was love and tenderness personified, and though subject, either from temperament or creed or both combined, to seasons of deep depression, his gloom never was manifested in harshness or willingness to see his children suffer.

ROBERT C. ADAMS.

JOHN PARKMAN.

A large circle of friends has been held in suspense and sorrow during the past week by the announcement of the disappearance of this beloved and respected citizen. The papers of to-day give the intelligence of the recovery of the body, which at once destroys the vague hope fondly cherished that he might yet be alive, although no reasonable solution of the mystery of his absence could be found, and leaves us free to turn back from the sadness and terror of his form of death, struggling alone with the rapid current which bore him away, and to look back upon his long life, which has been so pure and true, so beneficent and so honorable, and,—in spite of deep bereavements and occasional illness of body and mind,—on the whole, so blessed and happy.

Mr. Parkman was educated for the Unitarian ministry, and he partook largely of all the best qualities which have distinguished that denomination. He was scholarly in his tastes, and felt a strong interest in all educational matters. He served on the school committee of Boston, and was much respected by the teachers, who found in him a wise counsellor and a sympathetic friend. While devout in his spirit and reverent in his affections, he was broad and free in his views, and took an active interest in all the leading reforms of the day. Thoroughly truthful and conscientious, his course was always that of following out his convictions of duty wherever they led.

He was early interested in the anti-slavery work; and it was through his influence that John P. Hale, then his parishioner at Dover, N.H., was led to read the *Liberator*, and to consider earnestly his duty and that of the North toward the national sin. The result was a change in Mr. Hale's political connections, and his thorough and hearty adherence to the anti-slavery party in which he did such service, and also a life-long friendship between him and his faithful minister. Mr. Parkman lost his only and dearly beloved son in the war. He then devoted many years to work for the education of the freedmen, being an active member of the committee on teachers, and aiding to edit the *Freedmen's Record*.

Blessed in his own union with a woman who was worthy of him in mind and character, he always held woman in the highest respect. There was a reverence in the tone with which he often said, "My wife thinks so," which seemed to express all that one could ask of tenderness and trust. He took an active interest in the Woman's Suffrage cause, and especially in the movement for school suffrage; and he voted the Women's Ticket, feeling sure that they had scrutinized the list of candidates with the sole view of selecting the men who would serve the schools most faithfully.

Courage, purity, reverence, and humanity are the traits which rise most prominently to the mind in thinking of him. He was never a brilliant or sensational preacher; but there was a thorough good sense and solid wisdom in his sermons, which impressed his hearers, who remembered his sayings as mottoes and guides in their moral and spiritual life.

A conservative in many of his tastes and habits, he was broad and free in his sympathies, delighting to widen his theological horizon by new inquiries for truth.

A sweet, pure, good life has closed on earth. Some unguarded movement threw him into the river, which bore him away to the unknown shores; but they were not strange to his thought. He had loved this life, and used it well. He trusted in the future; and I believe that on that lonely river, when, unseen by human eyes, he met the dark angel of death, his soul was less agonized by the thought of those he was leaving behind than wrapped in exalted anticipation of the reunion that awaited him.

THE LIBERAL LEAGUE CONVENTION.

From reports that have reached us of the proceedings of the annual meeting of the National Liberal League held in Milwaukee last month, we learn that considerable time and discussion were devoted to a proposition to form a new political party. This was discouraged by the president, who thought before engaging in a separate political movement that it was important to consider by what means and from what sources the necessary funds were to be raised. The secretary "said that the money so far contributed to the league movement wouldn't pay for so much as the rough board shanties for the polling booths on the corners of the streets on election days in New York City alone, to say nothing of printing and other expenses." The members of the "Union of Radicals," a German organization, were admitted to membership and participation in the proceedings; and their influence seems to have been strongly in favor of independent political action.

The Committee on Resolutions submitted a lengthy report, embracing, in addition to the nine demands of Liberalism, a number of propositions in regard to "the unity of the origin of mankind" and "the identity of human nature and human rights," a "new scientific cosmogony" which "leaves no room for the existence of the Christian's heaven and hell," and the "republic of man which is to supersede the kingdom of God" and in which "the innocent Jesus will not be permitted to bear the sins of another," etc. One of the resolutions recommends the formation of an "independent party which will uncompromisingly combat the so-called Republican and Democratic parties." For the adoption of such a party is recommended, "aside from the well-known present aims of the National Liberal League," certain "political and social reformatory demands" embodied in the platform of the "Union of Radicals." Some of these demands seem to us very good, while the wisdom of others is doubtful; and, taken as a whole, they are not likely to be the basis of a political party of any considerable numbers, in this century at least.

Among the demands are the following: "Abolition of the 'one-man power,' created in the form of the presidency of the United States, and the substitution of a revocable executive council therefor"; "no so-called temperance (prohibition) laws shall be passed"; "the designation of Sunday as the legal day for election"; "public control of railroads and other corporations, and enactment of laws leading to their ownership and control by the people." One of the demands calls for compulsory education; and this met with the greatest opposition, but it was not defeated. The leaders of the League, in previous conventions and in their speeches and writings, have hitherto advocated "State's rights," protested against "centralization," and affirmed that the function of government was limited to protection of the people in their natural rights. But they went to Milwaukee in a state of mind something like that of the old maid who was anxious for a husband, and mistaking, in the lonely woods to which she had retired for prayer, the hooting of an owl for the voice of the Lord inquiring "to-whoo," cried, in ecstasy, "Anybody, O Lord!" They saw, evidently, that, whatever change they consented to, it could not make the condition of the League worse or its influence less. We cannot learn from the reports that have reached us that a new political party was actually organized, but the following resolution was adopted: "*Resolved*, That, whenever or wherever any local or State league shall find it advisable to enter independently into political campaign, on the basis of the platform adopted by this conven-

Digitized by Google

tion, the National Liberal League pledges itself to render assistance to them in every possible way."

At the last session, a statuette of Paine was raffled off, and presented to the League by the gentleman who held the lucky number. It was afterward announced that it would be given to the most popular lady present, and that new question raised was to be decided by votes which could be purchased at ten cents apiece. There were three candidates. As the result of the contest became doubtful, votes were bought "by the wholesale," says the report; and these are the figures we find representing the number received by the three candidates respectively,—135, 100, 60. The old officers were re-elected. It does not appear from the report that the postal laws against obscene literature were made a subject of discussion. The League remains, of course, committed to the total repeal of these laws, and pledged to a policy in this respect which is so narrow and foolish that the great mass of Liberals of this country, including nearly all of prominence and influence, are virtually excluded from membership. The influence of the National Liberal League was long ago, by the folly of its managers, reduced to a minimum; and we have given this account of its recent action only that those of our readers who are but little acquainted with its history may have data on which to judge whether it fairly represents the Liberals and the Liberalism of America.

That this article will be made a pretext by the League leaders for repeating the misrepresentation that we have charged them and their adherents with being in favor of obscenity is of course to be expected.

B. F. UNDERWOOD.

EDITORIAL NOTES.

ALL associations or individuals desiring to arrange for lectures by B. F. Underwood the coming winter are requested to address him at an early date, the earlier the better, to enable him to plan his route systematically.

A DESPATCH from Berlin says, "Nihilist proclamations have been issued, solemnly sentencing the Czar of Russia to death, because he has failed to grant liberty to the people."

THE Nihilists have issued circulars demanding that the Russian government shall put a stop to the cruel treatment of prisoners, especially women, and enjoining the greatest caution upon all Nihilists in consequence of recent arrests.

SOME of the infidel papers publish scraps of news about Christians. Here is one from which they may get such comfort as they can: Chaplain McCabe goes to Dakota this month to dedicate fourteen new churches in fourteen consecutive days.—*Christian Advocate.*

The above is a sort of challenge to "the infidel papers,"—a challenge which was promptly accepted by the Springfield *Republican*, in whose columns we find it. We would like to have the facts and figures in regard to the fourteen new churches in Dakota.

IT was in the family of a well-known D.D. in Boston. For some reason there had been a slight delay in the usual prompt payment of the quarter's salary; and the pastor and his wife, unmindful of the presence of a small philosopher of five years, were planning household economies until the money came in. Suddenly, the little maiden remarked with great seriousness, not unmixed with disdain: "Now, papa, I'll tell you just what I should do. I should give my people *plain prayer-meetings* till they paid me that money!"—*The Congregationalist.*

MR. RUSKIN says: "There are no words strong enough to express the general danger and degradation of the manners of mob courtship, which have become the fashion—almost the law—in modern times; when, in a miserable confusion of candlelight, moonlight, limelight, and anything but daylight, in indecently attractive and insanely expensive dresses, in snatched moments, in hidden corners, in accidental impulses and dismal ignorances, young people smirk and ogle and whisper and whimper and sneak and stutter and fumble and blunder into what they call love."

MR. CHARLES D. B. MILLS writes to the junior editor of this journal: "Your article in *The Index* this week on Unitarians and Unitarianism is a bold, brave word, true, just, and needed. I wish the advanced, free minds in the denomination would come out of it, and leave that ambiguous, facing-both-ways sect behind. But the course of history I suppose in all ages has been that most who had their eyes illumined have tried to trim, temporize, tarry, until by some stress of circumstance they were drawn out of their old resting-places; and we have ever to learn patience."

MR. W. M. SALTER delivered his first lecture before the Ethical Society of Chicago, this season, at Weber Music Hall, Sunday morning, October 7, on "The Place of an Ethical Society in the Community." A course of lectures before the society, in addition to Mr. Salter, by Mr. Edwin D. Mead, Prof. E. J. James, Prof. F. W. Parker, Judge Henry Booth, Gen. I. N. Stiles, and Mr. Max Eberhardt, is contemplated. From a circular, we learn that a normal class of the Ethical School has been formed, the purpose of which is "to cultivate the science of ethics, and to enable its members to be in their turn teachers of the young." To the relief works of the society, the subscription, thus far, has been $1,266.50; and the scheme of district nursing, among other practical projects, "has worked admirably."

MR. STEPHEN S. MITCHELL, a druggist of Saco, Me., while in Boston the other day, dropped in at an auction of unclaimed freight, and purchased a box, of the contents of which he was ignorant. When Mr. Mitchell opened the box, he found that he was the owner of about two thousand manuscript sermons, formerly the property of a Methodist clergyman. The clergyman had written along the margin of his pages such curious suggestions to himself as the following: "Deliver this passage in solemn tones"; "Scornful smile after the word 'never'"; "Pause long enough to count twenty-five after this passage"; "Close Bible with violent slam after this passage"; "Contemplate ceiling in attitude of adoration at this point"; "Sarcastic wave of hand"; "Rapid gesture." Manuscript sermons do not possess a charm for Mr. Mitchell, and he does not exactly know what to do with his property.—*New York Sun.*

"THE Philosophical Society of Chicago," says the *Religio Philosophical Journal*, "announces the following for its fall and winter session: Oct. 6, opening address by the President, 'Idealism'; Oct. 13, Sidney Thomas, 'The True Basis of Ethics'; Oct. 20, David N. Utter, 'The New Ethics'; Oct. 27, Fred. C. Wines, 'Prospect of Charities in the North-west'; Nov. 3, Van Buren Denslow, 'Ethics'; Nov. 10, W. M. Salter, 'A Popular Statement of Idealism'; Nov. 17, Frances Ekin Allison, 'Individualism'; Nov. 24, H. D. Garrison, 'Absence of Design in Nature'; Dec. 1, W. P. Jones, 'The Irrepressible Conflict between European and Chinese Civilization'; Dec. 8, I. N. Stiles, 'The God of the Bible'; Dec. 15, Jno. C. Bundy, 'A Scientific Basis for the Continuity of Life'; Dec. 22, Emma Schumm, 'Some Thoughts Suggested by Lange's *History of Materialism.*' The remainder of the programme will be announced hereafter. The meetings will be at Apollo Hall, Central Music Hall, every Saturday evening, commencing promptly at 8 o'clock."

THE scientific exhibit in the women's department of the Mechanics' and Manufacturers' Fair, being held in this city, is largely the work of students and graduates of the Institute of Technology in Boston; but there are also fine contributions from other sources. Among the noteworthy articles are the collection of caddis worms and of oak galls by Miss Cora Clark; the seeds of forest trees, with paintings of blossoms, by Miss Jack of Montreal; and the pressed flowers, mosses, and ferns from various persons. Mrs. Richards sends a case showing the results of work in the laboratory in testing the manufacture of silks, giving specimens of various goods and a table showing how much they have lost in weight by washing or other chemical processes. We understand an arrangement has been made by which a lady will be present at the fair during the afternoons and evenings to explain these collections. This will afford opportunity for teachers and others who seek more than entertainment to gain valuable information. The display in the women's department is not showy, but there is much in it that is encouraging and instructive.

POETRY.

For *The Index.*

THE HERDSMAN'S SUNDAY.

A meeting-house is a lofty thing,
Yet the skyey blue is higher.
The organ's tone has a pious ring,
But the murmuring stream's my choir.
I follow the herds o'er the prairie sod,
For the sheep astray I fondly search,
And feel I'm a good deal nearer God
Than many a one at church.

The bleating lamb is the psalmist's cry;
The distant hills, the cloud by day.
'Tis better to water the cattle when dry
Than list to all the preacher can say.
The breath of the kine is sweet to me
Than incense, sweeter by far.
Through waving grain, 'twixt growing grass,
Are the "beautiful gates ajar."

And all the religion I ever need
God puts daily before my eyes,
To open them wide will soonest show
Where the "earthly paradise" lies.
From all I ever can know, I see
This truth in the worldly strife,—
'Neath nature's vast diversity
Lives unity of life.

E. B. CALLENDER.

For *The Index.*

A LONGING.

The world is wide, the mines are vast,
The treasures at our gate are cast;
The odors of the fields and shore
Seek entrance at our household door:
Oh! pitied be the city's snob
Who dares with reckless words abhor
To lift the latch or turn the knob!

Thou, Nature, grant me while I stay
The manhood to enjoy the day,—
One will to share the doubt and din,
And one to read the truth within,
And hope to trust the tireless feet
In wanderings seaward, and to win
The loving that the hills entreat!

The Index.

BOSTON, OCTOBER 11, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three Dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD. . . . . }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

EFFORTS OF THE JESUITS

To convert the Indians Two Hundre and Fifty Years Ago *

BY CHARLES ELLIS.

If Mohammedan or Chinese missionaries were to come to the United States for the purpose of converting the Christians of this country to an Oriental religion, and were to set about the task of learning our language that they might convey to us the sacred truths of their theologies, it is not unlikely that they would become the victims of annoying jokes; for it is believed that civilized people are fond of such.

It opens our eyes with wonder to look back nearly three hundred years and see the grim, wild savages of the North American forests perpetrating jokes on the French priests who had crossed the ocean to save the ignorant heathen from the consequences of their paganism. In 1611, two Jesuit priests, Biard and Masse, came to the French colony at Port Royal—now Annapolis, N.S.—for the purpose of converting the Indians there to the Christian faith. Seriously and with terrible earnestness, they went to work to learn the Indian language, that they might convey to the poor creatures a knowledge of their spiritual darkness and of the glorious hope gleaming before them through the doors of the Church. But the Indians put into their mouths vulgar and vile words by which to interpret the holiest meanings; and, when the fathers would be struggling with the new language in their efforts to soften the unbelieving hearts before them, they would be startled by yells of laughter from the audience, induced by the utterance of some word that revealed the joke that the sinners were having at the expense of the saints.

Had the French priests stopped then to consider that any people in whom a sense of the ludicrous was vivid enough for such a joke would never easily give up their own minds, weak though they were, to become the puppets of strangers and believers in a religion which excited only their laughter, it would have saved them many years of terrible toil, privation, misery, and even martyrdom. But they saw nothing but a vision of the New World prostrate at the foot of the cross, and so worked on. Their struggle and the result is a demonstration of the worthlessness of Christianity, unaided by purely worldly enterprise, as a power of civilization. Civilization is strictly a this-world development.

The effort at Port Royal seemed to succeed, because the Indians were bribed by presents, by food and clothing, and by constant petting into a semblance of conversion, and so they were baptized and "saved"; but, when the stores were exhausted, their Christian piety was soon at an end. Savage conditions will have savage, but not necessarily bad, religious.

In 1609, Champlain yielded to the entreaties of friendly Indians on the St. Lawrence, with whom the French fishermen had been trading for a century, to go with them on an expedition against the Iroquois, who had driven all canoes but their own from Ontario and Erie. The expedition was successful; and the Huron Indians, who were obliged to steal down to the St. Lawrence through the thousand miles of dense forest that stretched between their home and the sea, no sooner heard of the power of the French captain than they conceived a plan to obtain his interest in their behalf. They accordingly beset him to visit their country, and give them broad-hats (priests) to teach them and make them good. It was not, however, until 1615 that they succeeded. In that year, Champlain brought from France four Franciscan friars; one of whom, Le Caron, was at once sent forward to establish a mission among the Hurons, and later in the year Champlain visited it himself. His course was up the Ottawa River, around wild rapids and through dense forests, so tangled with fallen trees that they were almost impassable, into Lake Nipissing, down French River, into Georgian Bay, and eastward to its foot, when in the smaller Bay of Matchedash, at the mouth of the river Wye, he landed in the home of the Hurons.

There, he found Le Caron, who was filled with delight at sight of his general, and who expressed the utmost confidence that all the Indians needed to make them children of God was a drop of holy water. When Champlain returned, he was accompanied by a fleet of Huron warriors; and their destination was the villages of the Iroquois. They crossed Ontario, entered the land of their fierce enemies, attacked a village, and were defeated, and compelled to flee with their white chieftain for their lives. Henceforth, the task of the priest was to be a hard one. The Indians had discovered that the white warrior was not invincible, and that they had won him to their scheme in vain.

In 1625, the Franciscans (Récollets they were called) applied to the Jesuits in France for help; and three Jesuit priests were sent out,—Jean de Brebeuf, Enemond Masse, and Charles Lalemant. Brebeuf went to the Hurons in 1628. Le Caron had given up in despair, and returned to Quebec. In 1629, Quebec capitulated to the English, and for several years the work of the Jesuits was interrupted; but the country was finally restored to the French, and in 1633 Champlain was sent out again to take command of New France. The Indians welcomed him with delight, and were equally rejoiced to get rid of the English, whom they had soon learned to dislike. The French priests, Jesuits now, entered with renewed zeal upon the work of converting the Indians to the Christian faith. They met a severe loss with the death of Champlain in 1635; but they were men who had surrendered themselves wholly to the other-worldly work of saving the souls of men, and the more severe the task before them the more fully were they determined to win. They went into the wilderness ready to receive martyrdom, if that were necessary to the success of their high calling.

Brebeuf was the real father of the Huron missions. In 1635, two other Jesuits were sent to the Hurons; and, in 1636, Isaac Jogues, Chatelain, and Garnier followed them. In that year, a pestilence swept through the Hurons, and carried many of them beyond the reach of priestly hands; but Brebeuf and his brothers made the deadly harvest a birthday of souls. Through the stricken villages they went day and night, never hesitating to enter where death stared at them from the door to lay a finger, wet with holy water, on the head of the dying Indian, and to utter a prayer for the repose of his soul. They could not prevail upon a well man to receive their consolation; but the dying made no objections, and the children were put forward by the fearful parents as subjects upon which the charm of the new faith might be tried. Here was a golden opportunity to civilize the red men by introducing among them some knowledge of the godliness of being clean, some idea of the relation of chastity and sobriety to good health, some conception of the importance of making a good life here the best preparation for hereafter; but there was not a word save of prayer and the world to come. Theology failed utterly, when brought face to face with an opportunity that demanded practical godliness and wisdom. But the priests never faltered in their duty, as they understood it. The story of this pestilence reveals the firmness and character of both Indians and priests. Many a time, a dying Indian, pressed to receive the sacrament, made some such answer as that he or she desired only to go where their ancestors had gone, and had no fear of the future. Often, the priests were obliged to resort to trickery to baptize a dying person, such as putting a drop of holy water on a raisin and giving it to the sick person to eat, or of stooping over one to brush away a fly, and so touching the head with the saving liquid. They had to fight against the Indian priests and their sorcery. In 1637, they won over an Indian of high standing, and baptized him. The ice was broken, and others came for water of life; but so intense was the opposition that the Indians, incited by the sorcerers, determined to kill the priests, who were so sure that their time had come that they wrote to their Superior, taking leave of him. Then, following an Indian custom, they made a feast of their own death, signifying their readiness to die at the end of the repast, to which the Indians were invited. The coolness and courage of this act so astonished their enemies that they were permitted to live, but their escape from peril only served to whet their ardor in the work of converting the heathen.

They began to use their knowledge of the Indian character. One of them wrote to France for "a picture of Christ without a beard," because the heathen, having no beards, were rather disgusted with the spectacle of a bearded God. Others wanted a variety of representations of souls in perdition. The figures must all be looking full into the eyes of the beholder, the colors must be bright, and no flowers or animals must be seen,—all such things, being more agreeable to look at than a tormented soul, would detract the attention of the heathen. The Superior wanted pictures with "four or five devils tormenting a soul with different punishments,—one applying fire, another serpents, another tearing him with pincers, and another holding him fast with a chain. This would have a good effect, especially if everything were made distinct, and misery and rage and desperation appeared plainly in his face." Not a word in it all about teaching them how to improve their lands and increase the comforts of their lives, not a word about the value of education because of its benefits as a civilizer, not a hint of civilization, but all for Jesus. In 1636, two priests gathered a number of Indian boys to train them piously in what was called a "school" at Quebec. One boy ran off, two killed themselves by eating, another was removed by his father, and three others stole a canoe and what they could get hold of from their friends, and left. But the courage of the Frenchmen was good. They started another school with a new stock of heathen the next year with better success; and, in after years, the powerful convents and colleges of Lower Canada were the descendants of that struggling, plucky child.

The home of the Huron Indians at the time when the Jesuit priests were saving their souls was a tract of land some sixty or seventy miles square, between Lake Simcoe and the foot of Georgian Bay, including the peninsula that juts out between the smaller bays of Nottawassaga and Matchedash and the river Severn. It is in the richest agricultural lands of Ontario, and is worth to-day a great deal of money as farming land. It is a beautiful country, low, level, clean, and sweet under the clear northern air,—lying, much of it, upon the very shore of the most romantic body of water in the world, two hundred and fifty miles long by fifty broad, and freckled all over with something like thirty thousand islands, several of them—as, for instance, Grand Manitoulin, St. Joseph, and Drummond—very large, and all of them beautiful, beautiful, beautiful, as I have seen them clad in their living green under the summer sun. The land itself should make men good and tender and true, and it seems almost as though it had been producing its quiet effect upon the Hurons long before the French priests

*The matter contained in this essay has been gleaned from sundry volumes of travel and history. But the histories are all based on the "Relations" of the priests, written by themselves, and preserved in France. They have been translated and published by the Canadian government, but are better known to Americans through the writings of Parkman and the lesser work of Lanman than any others.

Digitized by Google

came among them; and woe was the day for the Indians when they did come. Had they never followed Champlain into the land of the Iroquois to excite their anger and hate by that unjust attack, they might have lived on in their lovely home, growing stronger and better year by year. They were the foremost among the Indians of the North, and were a peaceful agricultural and trading people, and were even artisans to some extent; for they manufactured fishing-nets, which they sold to the Indians around them in exchange for furs. In 1639, they had thirty-two villages and hamlets, with seven hundred houses containing about four thousand families,—in all, a population of twenty thousand. Their houses were often large, some of them being two hundred and fifty feet long. The roofs were covered with bark shingles, such as one sees to-day in many places in the North-west,—shingles that, when once well laid, will last for ages almost. Along the centre of the roof, an opening, a foot wide, allowed the smoke to escape,—the smoke which lingered so long for the chimney that it settled its disgust in indelible red upon the skin of the men who would not give it a draft. Along the sides ran scaffolds four feet high, on which the inmates slept in summer, under which in winter. Overhead ran poles that were hung with garments, skins, weapons, and abundant strings of the golden ears of the Indian corn. They were skilled hunters, and had developed by selection a breed of hunting dogs that could not bark. Proper encouragement in the natural development which they had been slowly making would have made a nation of civilized people of these Indians. They were unusually intelligent for savages; and it is said that the Huron brain was greater than that of any other Indian in North or South America, including even the races of Mexico and Peru. If, instead of disturbing their minds with the incomprehensible muddle of the mysteries of theology and making them restless with thoughts of future woe, they had been aided to a proper understanding of this life and this world and the duties and pleasures and virtues of a healthy, every-day religion, the Indian problem would have been solved long ago most happily. But they were doomed. Christianity did not make better warriors of them: it did not bring them any protection against their enemies. The cross, upon which they were taught to look and in which they were taught to trust, failed them every time in drought, famine, pestilence, and war. They had been simply bewildered and weakened by their intercourse with Christian priests, although those teachers were as brave, true, unselfish, and noble men, mistaken as they were, as ever essayed a duty in all this world. Their over-faith in the power of the whites, upon whom they at first looked as in some sort supernatural beings, was their ruin. Their attack upon the Iroquois was never forgotten, and in the end was awfully avenged.

In 1642, Jogues was sent among the Iroquois to establish a mission and begin the work of salvation there. But, alas! these red men remembered that in 1609 a white man came at the head of our army and attacked and murdered many of their unsuspecting people. They remembered that a few years later a white man came again among them, at the head of another army of Indians, and attacked them; and, though he was defeated then, the thirst for vengeance was none the less keen and wild. The Iroquois were biding their time. They, too, were a great people, and had patient, far-seeing men among them,—were, it has been said, the highest possible development of savage man. To make Christian converts of them was probably the hardest task that a missionary ever undertook to perform. Jogues was a prisoner in the hands of the men he was going to save before he had got well started from home. The people among whom he had fallen were cannibals, and he travelled unarmed save the arm of his faith in the Lord. They hurried him many weary miles through the wilderness, forcing upon him and his companion every possible indignity, and finally reached their eastern-most village in what is Northern New York. Here, the poor prisoner was hazed and tortured and tried by fire, and left at length, bound hand and foot on the ground, more dead than alive, to wait for another day. Then, they drove him to the next village, and gave the women and children and "braves" an opportunity to torture him again. His companion was at length killed. Jogues' finger-nails were torn off, his body was covered with sores caused by thrusting burning sticks into his flesh; but he never complained, and his courage won the admiration of even the devils around him. He finally escaped, and, after many dangers of recapture, succeeded in reaching New York, whence he sailed to France. He desired to return to Canada to pursue the work of converting the Indians, but was deterred, not by the thought of martyrdom, but by the knowledge that, because of his maimed, crippled hands, he could not perform the rites of the Church. The Pope by special dispensation made him whole,—that is, empowered him to act as a priest again,—and he joyfully returned to the scene of his trials. In 1646, he was sent again among the Iroquois to found the mission of the martyrs. He was again taken prisoner, and, after being subjected to the most horrible tortures, was killed. Bressani was also made a prisoner by the Iroquois, while on his way to the Hurons in 1644; and he, too, escaped by way of the Hudson, went to France, and returned to his work in Canada. It seems strange to see these human moths returning to the terrible flame that had so cruelly scorched them.

By 1645, the missions among the Hurons had grown, so that in some towns the converts outnumbered the hold-outs. At Ossossane, at St. Joseph, St. Ignace, St. Michel, and at St. Jean Baptiste, their work had flourished; and they had succeeded in withholding their converts to a considerable extent from taking part in the torturing of prisoners or in eating them after the torture was ended. But the conversion was little more than an assent, which was easily made while prosperity attended them. The general peace of 1644 was soon broken by the Iroquois, who, by preventing the Hurons from reaching Montreal, destroyed their fur trade and threw them into a state of disquiet, which soon turned into fury upon the Jesuit priests. It is evident that the Indians were willing to be guided by the missionaries as long as the latter could make it appear that they were able to insure their people safety against enemies, famine, and pestilence; and any failure was sure to precipitate a dangerous backsliding. When the Iroquois broke up their fur trade, a report became rife among the Hurons that one of their girls had dreamed that she went to the Christian heaven and was tortured, as all Indians would be, and she came back to warn her people. This so excited them that a war against the whites became imminent, and about 1647 a young Frenchman was killed. The priest, however, managed so skilfully that this act became the means of healing the rupture and making peace again; and the action of the Indians in making atonement for the murder of the Frenchman is said to be a most remarkable instance of the Indian sense of justice. The peace was, however, darkened by a threatening cloud of invasion rising over the land of the Iroquois.

On the river Wye on Matchedash Bay, the Hurons and Jesuits had their stronghold of Ste. Marie. Here was a fort one hundred and seventy-five feet long by ninety feet wide, on two sides of which were walls of masonry. The priests here were excellent farmers. They had corn enough stored here to last their people three years, and they raised poultry, swine, and cattle. At that time there were in the Huron country eighteen Jesuit priests, four lay brothers, twenty-three men working without pay, seven hired men, four boys, and eight soldiers. Fifteen of the priests were permanently engaged among the various missions and the others remained at Ste. Marie. In 1647, a famine prevailed. The Indians were without food, and they swarmed around Ste. Marie. A large party from St. Joseph attempted to reach Montreal with furs. They met a band of Iroquois, defeated them, and at once returned to torture their prisoners. When they reached their settlement, it was in ashes. The Iroquois surprised the place, destroyed it, killed most of the inhabitants,—including David, the priest,—and took seven hundred prisoners. In 1648, they captured and destroyed the town of St. Louis. Among the prisoners were Lalemant and Brebeuf, who were driven to St. Ignace, which was also destroyed; and there the father of the mission, the man who had spent twenty years in the wilderness divorced from everything that makes life, ordinarily speaking, dear to man, with no hope of reward in this world, and toiling early and late to insure the happiness of the children of the forest in the world to come,—there, surrounded by devils far worse than any he had ever pictured in purgatory, the brave Brebeuf was tortured and killed. The fortitude of the man in suffering, as told by his people who escaped, was astounding. The red fiends hung a necklace of red hot hatchets on his neck, they poured hot water over him and baptized him in mockery, they cut strips from his flesh and ate them, they tore off his scalp; but he never uttered one groan of pain. They cut open his breast; and the frantic demons rushed in to wash in his blood, and a chief tore out his heart and ate it. His companion, Lalemant, was brained with a hatchet. It seems as if they knew Brebeuf as the leader among the missionaries, from the greater vengeance which they visited upon him.

In 1649, the town of St. Jean Baptiste was captured by the Iroquois; and many persons were killed, among whom was the priest Garnier. Everywhere, the Hurons had been beaten. Their entire country was devastated, and the remnant of the people was hiding among the islands of Georgian Bay. Their long intercourse with the French seems to have destroyed their caution, if it did not also weaken their power as warriors. They seem to have lost their former courage and independence, and to have become wholly reliant upon the priests; for the converts begged to be taken to Montreal or Quebec, where they could be protected against their enemies. In 1650, three hundred Hurons and the surviving Frenchmen started for Quebec. In tears, they wandered forever away from the land that had been their home for many generations, and in which now not one of their people remained alive. But they were not safe even at Quebec; for the Iroquois, as if suspecting them, prowled everywhere, and murdered all who came within their reach. Another portion of the broken and fleeing Hurons—those who were not of the converts—refused to go among the French; as though they thought the contact had been already sufficiently deadly, went westward and settled on what is now Mackinac Island. But the Iroquois found them, and drove them from there. They were driven clean across Wisconsin to the land of the Sioux, and there the vengeance of the Iroquois was compelled to turn back: they dare not enter that country. The hunted Hurons finally settled on one of the Apostle Islands in the west end of Lake Superior; and, in 1666, some of them went to Montreal to trade, met one of their old priests, and desired him to return with them. Père Claude Allouez was sent with them, and at La Pointe he established the mission of the Holy Spirit. In 1670, the Sioux drove them from that home; and they wandered eastward, and settled at what is now Point St. Ignace on the Strait of Mackinac. Here, they mixed and blended with the Chippewa and Ottawa Indians, and became lost from the Indian world; but, one hundred years later, their descendants were among the finest warriors who made the name and fame of the great Pontiac, who (his lineage is unknown) was very likely himself a descendant of the once great Hurons.

The effect of the introduction of Christianity among these Indians was disastrous and ruinous. They had a religion and theology of their own, which should have been allowed to remain undisturbed, or to change only with their mental advancement. In so far as Christian theology moved them, it was through fear of future woe. Their minds were filled with images of tormented sinners. They lost interest in this world just as fast as they became interested in escaping from the horrors of the future. They were not as good farmers in 1649 as they were in 1630; for the Jesuits complained that, while they could raise abundance of corn, the Indians had become negligent and expected to be provided for. The attempts of the Jesuits, unequalled as it is for heroic devotion to a supposed duty, was not only a failure, but an evil. The Hurons would have been better in the long run without them. But had they gone among them to help them improve their farms, to help them enlarge their minds, to help them make more of, and be more in, this world, the result might have been very different. Again, if Champlain had not joined the Hurons against the Iroquois, that terrible war of extermination would probably never have been waged. But, having gone among them as a warrior, having led them to battle, the Frenchmen should have made them better warriors, more watchful, better guarded and stronger, instead of filling their eyes with pictures of despairing souls in hell. Altogether, the story of the Jesuits among the Indians of the North is a remarkable demonstration of the folly of attempting to introduce Christian theology among human beings who were not born under it.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER VI.

Sleepy Montmorency.—Familiar Adventures. Education of Settlers.

If there was one thing I thought fixed in this world, it was Niagara; but that had changed. The perfect Horseshoe Iridescent Arch, so long the wonder of all spectators, is no longer what it was in 1879. On parting from it in that year, I never doubted that, should I ever return, it would be the same as when I left it. My wonder made me think that parting would have less sadness in it, were we a little wiser. Everything we leave, whether scenes of nature or friends, are never the same again, when we meet them. Friends may be better, some new quality may have arisen, and reacquaintance may be a new pleasure. But what we knew, whether a mountain, a cataract, a field, a flower, or an acquaintance, is changed when we see it again. The very sun and stars have new aspects, where we have opportunity of minutely observing them. All nature, all humanity, are changing every instant and every hour: we constantly part from them to see them no more as they are. We are always parting forever from everything we know. Daily life is incessant adventure upon unknown experience and untried existence. Living itself is not a mere dream, as some say, but a romance of realities. Niagara, with its rolling volume, its mighty rage, its thunder, and its rainbows, teaches many lessons.

Niagara is undoubtedly mad,—the maddest of all waterfalls and cataracts ever known. No commissioners of lunacy, however reluctant to entertain extreme opinions, would doubt it. The riotous and irresponsible rapids are beyond all control or restraint. Far away in the same wonderland of Canada —beyond Toronto and Ottawa and Montreal, two hundred miles up the St. Lawrence, beyond the great cliffs of Quebec—are the wise, sleepy, perfectly sane falls of Montmorency. The feeding waters of the Montmorency wander lazily over broad plateaus of rock, apparently reflecting whether they will proceed or not. You see them rather than hear them arrive, and, reaching the mighty ledge of the deep gulf, they hesitate, as the maiden Dorothea might (whom Cervantes describes), at the sudden sight of the fall before them; but down which the stream descends with trembling and delicate steps, never rushing, never resting, but without precipitation spreads its silver beauty wide and deep, until it blends with the waters waiting its pleasure below. The silken tresses of a goddess would not be softer and lovelier than these coursing waters of the coquettish Montmorency. Niagara descends, because it must; Montmorency, because it chooses. But, gentle as is the descent of the mighty stream, it has an adamantine incessantness, and presents to-day the same aspect it wore when Generals Wolfe and Montcalm looked down upon it. In the cold seasons, the clouds of spray at the base freeze into a crystal mountain, over which sledges sweep far away over the sea of ice around.

There are many loose French about the suburbs of Quebec. We met one near Montmorency, who lived on the falls or by them or out of them. He excelled all beggars in his vocation. Cap in hand, he did not ask, but demanded a gift. His conduct was not entirely one-sided; for, to any one who bestowed no coins upon him, he gave them a piece of his mind, and very liberal measure he made. No sooner had he collected all the dimes and quarter-dollars available than he carefully surveyed the whole road-way around, from the eminence on which he had taken his stand, to make sure he missed none who had arrived, and that he should miss none others upon whom he could wait were arriving in sight. He slipped away for a brief period into a neighboring hotel to get half a pigeon and a glass of sherry to refresh himself after the fatigues of the morning collection. I had heard of beggars having rights and travellers having none, but never saw the right so systematically put in force as here. Let it be added, he was the only beggar about.

There is an intermediate fall at Ottawa, which, in scenic beauty of its kind, is surpassing, because it can be seen entirely with all its tributary waters from the mount on which the Parliament Houses stand. Some day, when Ottawa grows into a princely capital, and the lumber piles are swept from the banks of the Ottawa River, and the saw-mills which hide the beauty of the Causidière Falls,—if I remember the name rightly,—people will make a journey from Europe to see them. Every year adds to Ottawa the graces of a capital and seat of government.

The land over which you pass to the Montmorency Falls is possessed by an enterprising individual, who makes every visitor pay a handsome toll for visiting the wonders which he did not create and does not exalt. If we in England were to let the Tower of London and its jewels be rented to a showman, it would be a less scandal than for a great people to let the unrivalled wonders of nature pass into the custody and control of a speculator. Both America and Canada repine that they lack historic buildings, yet they possess historic glories of nature in which millions of years are funded, controlled by adventurers and disfigured by caprice. America, as well as Canada, still agrees to leave Niagara in this condition. The Canadians would do well to clear their side, when every visitor would gratefully flock there.

As we were leaving the sleepy Falls of Montmorency in the carriage, we looked out to see whether the Frenchman had got sight of us, fully expecting he would take a chaise and come after us to collect some other impost which we had evaded paying. The sun was in great force; and I was reposing in its delicious rays, thinking how delightful it was to ride into Quebec on such a day, when in an instant of time we were all dispersed about the road. In a field hard by, where a great load of lumber as high as a house was piled, a boy who was extracting a log set the upper logs rolling. This frightened the horses. They were two black steeds of high spirit, and therefore very mad when alarmed. Had they run on in their uncontrollable state, they would, if they escaped vehicles on the way, have arrived at a narrow bridge where unknown mischief must have occurred. The driver, who was a strongly built Irishman, about sixty, with good judgment and intrepidity instantly threw the horses on to the fence, which they broke, got into the ditch, and seriously cut their knees. I leaped out into the ditch with a view to help my daughter out of the carriage; but she, nimbler than I, intending to render me the same service, arrived at the ditch and assisted me out, merely asking "whether four quietly disposed persons being dispersed over the Dominion at a minute's notice was a mode of travelling in Canada." Mrs. Hall, who was riding with us, also escaped unhurt. Her husband deliberately remained some time to see what the horses were going to do; but, finding them frantic, he also abandoned the carriage. A vehicle coming by, the driver very civilly offered to take Mrs. Hall and me into Quebec, so that we might order another carriage to fetch those left behind. I thought it very kind of the owner to accord us such ready succor; but my sense of obligation was very confused when, arriving at our hotel, he said he would trouble me for two dollars for conveying us from the scene of the accident. The man to whom I still feel grateful was our brave Irish driver (for whose name I have sent, and am sorry I cannot record it here), and to whom I would make some other acknowledgment; for we owed our safety to his prompt action in risking horses and carriage. Mr. Hall made strong representations on his behalf at the hotel that he might have honor instead of blame for what occurred.

It may be as well to recount at once the few turbulent adventures by the way, which occurred to us. Returning from Guelph, which lies below Hamilton in the Niagara corner of Canada, where we had been to see the famous Agricultural College, we were one night on the railway, in what the Scotch call the "gloaming." My daughter remarked that the scenery outside the carriage was more fixed than she had before observed it, and, upon inquiry, it appeared that we were fixed, too; for the train had broken in the middle, and the movable portion had gone peacefully on its way to Hamilton. We were left, forming an excellent obstruction to any other train which might come down the line. Fortunately, the guard could see the last station we had left, two miles from us, and see also the train following us arrive there. We hoped that the station-master would have some knowledge of our being upon the line, and stop the advancing train. But, when we saw it leave the station on its way to us, we were all ordered to leave the carriages, which was no easy thing, as the banks right and left of us were steep, and the ditch at the base was deep. However, our friends, Mr. Littlehale and Mr. Smith, being strong of arm and active on a hill, very soon drew us up to a point where we could observe a collision with more satisfaction than when in the carriages. Fortunately, the man who bore the only lamp left us, and who was sent on to intercept the train, succeeded in doing it. Ultimately, we arrived at Hamilton, only two hours late. When we were all safely at home, Mrs. Leach, who accompanied us, fainted, showing admirable judgment in postponing that necessary operation until it was no longer an inconvenience. One lady fainted in the midst of the trouble, which only increased it. The excitement made fainting, sooner or later, justifiable, although an impediment; but I was glad to observe my daughter omitted to faint at any time.

On first proceeding from Niagara, we went with our pleasant friends to Hamilton, where Mr. John Smith, the chief emigration agent there, had received instructions from the Canadian government to pay us every attention in his power; and, during the many days we saw Hamilton and its great suburbs, his powers were exerted very pleasantly on our behalf. One of our excursions mentioned was to the college of Guelph. It is surrounded by a vast acreage, on which all kinds of agricultural experiments can be made. The dormitories, dining-rooms, and museums were on a most wholesome scale as respects space and perfect cleanliness. There were sons of noblemen among the pupils. The sons of tradesmen in Ontario, in which State the college is situated, have board, lodging, and instruction for £25 a year. Youths from elsewhere, some from England, are received at £50. And those who choose to earn money by their husbandry have it put to their credit. The president, Mr. Mills, was at the trouble, after the dinner to which we were entertained, to show us all the features of the place. There is nothing of the kind in this country so complete and so economical. Cattle of the finest European breeds are kept in stables and fields, and march on to the platforms of the lecture-rooms, where their points are discoursed upon and verified by the pupils. Youths passing through this college know all about agriculture, cattle, crops, soils, climate, and whatever a settler should know. The illustrations in the reports published by this college are most entertaining and instructive. For instance, four oxen of the chief known breeds of the world are sliced in the same parts and drawn in colors so realistically that the very plates look savory. The most ignorant housewife who saw those joints delineated would see at once which breed of beast to buy of, and would know when she entered a butcher's shop what breed the shopkeeper had on his counter, which is more, probably, than he would know himself, unless he had been at Guelph. The education of settlers, so complete and on terms within the means of ordinary persons, I have not heretofore seen. The president, to whom I put the question, was of opinion that a more limited intellectual education and the rough duties of a settler's life might be taught to youths of ten or twelve years, and made industrially self-supporting. Here is a field in which philanthropy might supply the conditions of buildings and some small support, so that the children of mechanics could be taught how to become settlers. In countries where land is to be had, the fortunes of millions may be made, if they have first learned to live on land. If Mr. Mundella would run over some recess and look at Guelph, he might find the means of imparting an industrial character to our board school training, which now it lacks, and tends to bring up young people to be clerks and prigs, instead of loving enterprising labor, being fitted for it, and anxious to engage in it.

Hamilton has noble views of land and water, stately buildings, imposing gasworks, and ever-extending manufactures. In Mr. Littlehale's garden, before his door, beautiful humming-birds came and displayed their dainty colors on the branches of trees. I did not expect such visitors in Canada.

THAT which we are we shall teach, not voluntarily, but involuntarily. Thoughts come into our minds by avenues which we never left open, and thoughts go out of our minds through avenues which we never voluntarily opened. Character teaches over our head. —*Emerson.*

CORRESPONDENCE.

GIVE CHRISTIANITY A COMMON LAW TRIAL.

Editors of The Index:—

The late Judge Jeremiah Black, in his controversy with Ingersoll, very confidently remarked that, if Christianity only had a common law trial, its truth would be triumphantly established. In making the following observations on the amount and character of the evidence in favor of Christianity, I hope I am not exposing myself to the charge of special pleading, as my friend Felix Oswald has unfortunately done in his violent and undiscriminating invectives against "pessimism" and the "nature-hating fanatic."

Modern critical research has disclosed the fact that the books of the New Testament, probably with the exception of one, were not written by the persons whose names they bear; and this conclusion is further strengthened by a vast amount of internal and external evidence. They are, therefore, anonymous and of little value as evidence. Secondly, they were not written by eye-witnesses, and are consequently hearsay, and hearsay of the worst description. If I, as a witness, refer to another person as the source of my information, that person may probably be shown to be a person of unimpeachable veracity, and without any motive for falsification. But, in the case of the New Testament, the writer or writers being unknown, we can have no such assurance. Thirdly, they were not written by contemporaries of Jesus; for the writers did not live until at least one hundred and fifty years after the occurrence of the events related by them, and their narratives were probably based on oral tradition. Any one of these facts is alone sufficient to exclude the evidence of the New Testament from any court of justice where the rules of evidence, as formulated by Stephen or Greenleaf, are recognized. As the interests involved in this subject are more momentous than any that can properly be the subject of legal inquiry and adjudication, the standard of proof and the amount and kind of evidence ought to be unexceptionable. How far these obvious requirements are met is notorious to every person not biassed by education or interest. There is also a vast amount of what might be described as circumstantial evidence, which is alone sufficient to make out a case against the miraculous part of Christianity. For, if the miracles attributed to Jesus are shown to be legendary, and to have had their origin in the ignorance and superstition of the age and people among whom they are alleged to have occurred, Christianity loses its claim to be considered the one religion divinely instituted for man's salvation. If we lay aside our prejudices for a minute, we will admit that, if a man should appear among us to-day, making the same claims that Jesus made, and exhibiting the same credentials that Jesus produced, we would regard him as a common impostor or a mistaken zealot, but never as a God. We would treat him as an eligible candidate for the lunatic asylum or the workhouse instead of heaven.

It is a rule of scientific evidence that all *natural* explanations of a phenomenon or an occurrence must be exhausted before we are warranted in referring it to a supernatural source. Apply this rule to the miracles of Jesus as you would to those of Mohammed or to the phenomena of modern Spiritualism, and they forthwith resolve themselves into illusions, legerdemain, or falsehoods. I will give an instance from my own experience, showing how liable the human senses are to be deceived. I recently visited a museum, in which there was exhibited an optical illusion so skilfully contrived as to present the appearance of a living human head entirely separated from the body, the mystery of which persistently baffled all attempts at solution. This "wonder" was seen daily by hundreds of people, who, if they testified to what they saw without qualifying it with an expression of their opinion based on a knowledge of the laws of physiology and optics, would be regarded as having established a *bona fide* miracle. In the Middle Ages, when physiology was little understood, and before human experience had been sufficiently generalized to afford practical rules for man's guidance, this would undoubtedly have been set down as miraculous.

Some time ago, a Cincinnati daily published what purported to be an abstract of testimony in favor of Spiritualism, gleaned from a report of the trial of a celebrated divorce case tried in this city, remarking that this was the first time sworn testimony in favor of Spiritualism had been given to the public. Of what value is this testimony, when the witnesses may have been the victims of self-delusion or of imposture, as they undoubtedly were? They probably swore to what they saw. But did they see all? And, not having seen all, were they competent to act as witnesses in the matter? There is required, not only an honesty of purpose, but a capacity for correct and thorough observation, to qualify a person to act as a witness where the human senses are liable to be deceived.

The rationalism and critical spirit of the age will inevitably destroy the miraculous and dogmatic portions of Christianity, leaving the ethical element and Jesus, the reformer, more firmly enshrined in the heart of humanity than in the Middle Ages, when unquestioning belief in the cruel and irrational dogmas of Christianity was deemed of paramount importance, and the practice of its unrivalled morality only a secondary consideration. GABRIEL G. HUBBELL.

CINCINNATI, Sept. 23, 1883.

CORRECTION.

Editors of The Index:—

I observe that my friend Mr. Underwood, by a misapprehension, perhaps very natural, classes me with those who underwent "sufferings" in the Unitarian body. This is not the case. Though brought up at the fountain of Unitarianism, I never called myself by its name nor belonged to any association bearing that title. I was for a few years, in early life, minister of the First Religious Society in Newburyport, which did not bear the name Unitarian, though properly classed with that body. This society I left solely on the ground of my anti-slavery preaching, having never received any persecution or serious annoyance in that Church or out of it on the ground of heretical opinions, although I held and expressed essentially the same views held by me now. Even exchanging with Theodore Parker caused me no trouble. This I I say not to the credit or discredit of any one, but simply as a fact.

I think that the same was true, in great measure, of Samuel Johnson, whom you also name; that is, that he encountered opposition mainly on anti-slavery, not on theological, grounds. As for Mr. Parker, he can hardly be said to have "withdrawn from the Unitarian denomination"; *for* I think he always claimed to belong to it, which I did not, and do not. And his early theological sufferings were trivial beside the political storms which he afterward encountered.

It is to be remembered also that the Transcendentalists of that day, both older and younger, believed in God and immortality, and hence had much less to create antagonism than is the case (as I understand) with Mr. Stewart and Mr. Miln. Again, the Unitarian body, since the period to which I refer, has grown first more conservative, then far more radical. When I looked over the *Sunday School Manual* of my neighbor, Rev. E. H. Hall, the other day, I could scarcely believe my eyes. Here were the views, which were in my youth considered dangerous, now taught by authority in the very church where I was brought up, and this under the sanction of the Unitarian Sunday School Society. It is a great change, and suggests the remark of G. J. Holyoake, that the silent progress of fifty years is equivalent to a revolution. T. W. H.

CAMBRIDGE.

[Our friend, we think, takes a too roseate view of the old controversy between Unitarians and the Radicals of a generation ago. Of course, we accept his qualification of our statement with regard to himself; but his letter seems to us liable to give a wrong impression of the war that was waged against Mr. Parker by the organized Unitarianism of the time. Parker's biographies show that he was cut to the heart by the antagonism aroused by his opinions. He was as much ostracized as any one could be by a denomination that had so little ecclesiastical power as the Unitarians. And the same punishment was inflicted to large extent upon those who sympathized with him. There has been great progress in Unitarianism since Parker's time,—enough, indeed, to fellowship Parker's views to-day, but not enough as yet to shake hands with the corresponding heretics of to-day. No reference was made in our article to Mr. Johnson, whom we always understood to have taken a position outside of Unitarianism.—ED.]

MORAL FREEDOM: AN IMPORTANT ERROR CORRECTED.

Editors of The Index:—

In looking over my communication on "Moral Freedom," I find an awkward mistake made inadvertently by myself, when I say "some individuals *being able* TO CALL UP many motives which others cannot do, owing to defective education," etc., thereby implying that man has power to call up any motives needed before deciding on action. If this were so, if man could call up any motive required, he would indeed be a moral free agent in the true sense of the term. But the real fact is he can only delay action until all the motives of which HE *is capable have been excited* by the laws of association, not by "his free will." Such motives, made up of emotions, feelings, sentiments, etc., circulate through his brain independently of his will, and are the result of his education, social surroundings, and innate tendencies derived from parents. The statement in a nutshell is this: Man is governed by motives: his motives are not created by himself, but by his environment; *i.e.*, his education, social surroundings, and inherited constitution. Like the engineer, he can stop action; but, when he turns on the steam, he is *forced to go on the tracks* laid down by *his individual motives*. He is a "machine-tender," but he is *forced* to go on the *track* laid down; and, where there is a *choice of* tracks, it depends upon his intelligence and moral development whether he takes the right one.

The practical importance of this view is that it demonstrates the indispensable necessity of intellectual and moral education by good schools and social surroundings; in other words, the environment must be corrected before the character can be perfected.

J. E. SUTTON.

MINNEAPOLIS, KAN.

[If man has power to correct his environment for the sake of attaining a better moral condition, he seems to us to have all the essentials of moral freedom.—W. J. P.]

STATE UNIVERSITY HOSPITALITY.—If the columns of the *Sentinel* are open to the subject, I would like to offer a suggestion for the benefit of the State University. I am prompted to do this, because I observe that certain courtesies that are much needed in connection with the University are apparently left chiefly to the Young Men's Christian Association, who evidently make use of the opportunity with a view to proselyting students. I allude to the attentions shown Freshmen and others entering the institution by way of assisting them to find boarding-places and making other necessary arrangements. This is certainly very proper and pleasant; and, if done with no intention to proselyte, would be entirely commendable. There ought to be among all classes of students, and among the faculty, a spirit of universal hospitality and courtesy, and especially toward new-comers and strangers, having for its basis no mere religious or theological end, but rather the general welfare and happiness of individuals and of the community in and about the University. That Christian students should maintain any association they please for the purpose of making converts is their right, provided they are not shown partiality in the privileges which they enjoy. There is, however, a species of immorality in any attempt to inveigle young men and women by attentions that are not prompted by genuine hospitality, but which proceed from a covert design to indoctrinate their minds with certain theological dogmas. Mere religious zeal frequently prompts to acts that are certainly beautiful, but which lose their charm to a great extent when it is discovered that the underlying motive is to surreptitiously influence religious feeling and opinion. Minds endowed with the highest sense of honor naturally feel a kind of contempt for those who employ such arts to accomplish such objects, and the dignity of the cause is lowered thereby. The State University should exemplify not only the broadest intellectual hospitality and the finest, and at the same time most democratic courtesy, but it should do this in a spirit entirely free from motives of religious propaganda. In this connection, it may not be out of place to suggest that this spirit might be greatly encouraged and cultivated, if the faculty would substitute for the daily chapel religious exercises—which are, I am informed, very thinly attended—a general exercise conducted on cosmopolitan principles animated by a

Digitized by Google

comprehensive purpose of intellectual, moral, and social hospitality. In this way, seems to me, the life of the University might be broadened and made more homogeneous, thus sending out into the life of the people something that is much finer and more noble than it now receives from that source. I am aware that the prevailing habits of the faculty are not favorable to my suggestion, and that the president, although claiming to be liberal in his views, has been trained to the old order of things in regard to the change which I propose. I should, therefore, be agreeably surprised if he and the faculty should deem best to adopt anything herein suggested, coming as it does from a citizen whose heterodoxy is apparent. But I am at the same time confident that, if any considerable number of students should express themselves to the faculty as being in favor of the measures which I propose, their wishes would be complied with. Should it meet with opposition, it would probably be found to proceed mainly from the self-righteous and narrow sentiment that too often exists among the so-called religious classes represented by the Young Men's Christian Association, who are apt to confound theology with virtue, and practical wisdom with religious dogmas and rites.—*R. C. Spencer, in Milwaukee Sentinel.*

BOOK NOTICES.

PEN PICTURES OF MODERN AUTHORS. Edited by William Shepard. New York: G. P. Putnam's Sons, 27 and 29 West 23d Street. pp. 333. Price $2.50.

By those who are interested in the biography of *littérateurs*, this handsomely bound and clearly printed volume will be warmly welcomed, although what the editor in the preface modestly says of it is quite true, that "these are not biographies, . . . but a series of sketches, anecdotes, and personal reminiscences relating to the more modern authors"; and, he continues, "as the book is a compilation, the editor has occasionally been hampered by want of available material; and, if the reader misses any face which he would like to have seen in a gallery of this sort, he will understand that it is because no satisfactory 'pen picture' could be found." The general reader will not, however, be disposed to find fault with the paucity of a collection of "pen pictures" which includes the following names in its list: Carlyle, George Eliot, John Ruskin, John Henry Newman, Alfred Tennyson, Ralph Waldo Emerson, Bryant, Longfellow, Whittier, Lowell, and Holmes, Hawthorne, Walt Whitman, Bayard Taylor, Swinburne, and Oscar Wilde, the Brownings, Dickens, Thackeray, William Black, Matthew Arnold, William Morris, Jean Ingelow, Owen Meredith, and "Ouida." Among the notables who have contributed to these pen pictures are Margaret Fuller, Kate Field, C. Kegan Paul, G. W. Smalley, Principal Shairp, William Howitt, Caroline Fox, N. P. Willis, Hawthorne, Elizabeth Oakes Smith, William Winter, Frederika Bremer, Justin McCarthy, James T. Fields, G. W. Curtis, Moncure D. Conway, Prof. H. H. Boyesen, Harriet Martineau, Mary Mitford, Douglas Jerrold, John Esten Cooke, and Miss L. M. Alcott. These names alone are sufficient guarantee of the literary quality of these "pen pictures." In addition there are accompanying portraits of Carlyle, Ruskin, John Henry Newman, Bryant, Longfellow, Hawthorne, Bayard Taylor, and Thackeray, with pictures of Longfellow's and Taylor's homes. No reader can fail to feel satisfied with the discrimination shown by the editor in his choice of the painters of his "pen pictures," which make a bright, readable, gossipy, and interesting volume.

WORK FOR WOMEN. By George J. Manson. New York: G. P. Putnam's Sons, 27 and 29 West 23d Street. Price 60 cents.

In these early days of the struggle of isolated and unhelped women for work which shall help them to become independent and self-respecting, a book like this, written by a man who recognizes the justice of woman's plea for a larger share in the paid labor of the world is both suggestive and encouraging. It is written in a plain, ungarnished, business-like style, and conveys, in language suited to the understanding of the most obtuse, sensible information in regard to the following kinds of "Work for Women,"—industrial designing, short-hand writing, telegraphy, feather curling, photography, professional nursing, proof-readers, compositors, and book binders, the drama, lecturers and readers, book agents, dressmaking, millinery, teaching, market gardening, poultry-raising, bee-keeping, housekeepers, cashiers, buttonhole making, floriculture, authorship, type-writing, and working in brass.

"DIO LEWIS' MONTHLY" increases in interest. The October number, just come to hand, contains the following articles, all written in a bright, breezy, readable style: "Our Rich Men," by the editor; "Our Young Women," by Dr. Howard Crosby; "Idol Worship in India," by Amarita Lal Roy; "Sandwich Island Sketches," by Dr. C. L. Tisdale; "Crossing the Mediterranean," by Anna Ballard; "The Shakers," by Dio Lewis; "Weight of the Human Brain," some interesting statistics by Dio Lewis; "A True Story of Lake George," by Lillie Devereaux Blake; "A True Ghost," by Carlmetto; "Open the Cage Door," "Treatment of Prisoners," "Treatment of the Insane," "Our Brains and Nerves," by Dio Lewis; "House Drainage," by Col. Waring; "A Fine Complexion," by Fanchon; "The Fashions," by Aunt Bonnybell; and "Our Cooking School," by Julia Coleman.

Pamphlets Received.

THE following are among the pamphlets recently received at this office, for which we have not room for more extended mention: "More Words about the Bible." By James S. Bush. John W. Lovell Company, 14 and 16 Vesey Street, New York. Price 20 cts. Rev. Mr. Bush takes on the Bible very much the same advanced ground as that of Rev. Heber Newton. ——No. 13 of the Q. P. Indexes is entitled "An Index to Articles relating to History, Biography, Literature, Society, and Travel, contained in Collections of Essays," etc. By W. M. Griswold, A.B. Bangor, U.S.A.: Q. P. Index Publisher. 1883.—— From George Redway, 12 York Street, Covent Garden, London, we have received a "Catalogue of Interesting and Scarce Books."——The Blade Publishing House of Concordia, Kansas, sends us C. W. Stewart's "The Cause of Civilization: The Claim of its Advocates Refuted." 38 pages.——Mrs. L. C. Pennell sends us a pamphlet filled with her peculiar personal experiences in an insane asylum, entitled "'Precedents' and Explanations. Memorial Scrap-book." Price 20 cts.——Clark W. Bryan contributes toward the elucidation of our financial conundrums a twenty-seven paged pamphlet regarding "Credit, its Meaning and Moment." New York: Bradstreet Press.——From Estes & Lauriat, of 299–305 Washington Street, Boston, comes Part I. of "The Meisterschaft System: A Short and Practical Method of Acquiring Complete Fluency of Speech in the Spanish Language." By Dr. Richard S. Rosenthal. In fifteen parts.——Several numbers of "The Sociologist Library of Useful Knowledge, published by A. Chavannes & Co., Adair Creek, Tenn., have come to hand.——"Have we a Divine Christ and an Authoritative Bible?" is the title of a sermon preached in Pilgrim Church, Nashua, June 24, 1883, by the pastor, Rev. Geo. W. Grover. From C. R. Miller & Co., 15 Willoughby Street, Brooklyn, N.Y., we have "The Supplement to the 'Gallery of Spirit Art.'"——Nos. 2 and 3 of a new monthly magazine, entitled *The Continental*, devoted to literature, poetry, and romance, published by A. C. Meyer & Co., Baltimore, Md., has reached this office. Price 50 cts. per annum.——A musical "Service for Harvest Time," prepared for congregations and Sunday-schools by Rev. H. G. Spaulding, is published by the Unitarian Sunday School Society, 7 Tremont Place, Boston.——One of the latest of the cheap and valuable Elzevir Library Series is *The Spectre Bridegroom*, by Washington Irving. John B. Alden, publisher, 18 Vesey Street, New York City.——"Sunday Laws," by John George Hertwig, is a sensible little essay that comes to us from Washington, D.C., maintaining that, according to the Declaration of American Independence and the National Constitution, everybody in this country has the right to the pursuit of happiness in his own way on Sunday as well as every other day, provided he does not infringe on the rights of others.——"The American Trotting Horse," by Francis E. Nipher, is an essay read before the St. Louis Academy of Sciences on the evolution of the American trotting horse, whose minimum time, Mr. Nipher thinks, is a mile in ninety-two seconds. He thinks the trotter will finally surpass the running horse.——"Catalogue of the Unitarian Church Library," Ann Arbor, Mich., established 1882, embraces, with a statement regarding the reading-room, the library rules and a long list of valuable books accessible to the public.——"Home Circles: How to investigate Spiritualism," suggestions and rules, etc., is from the office of the *Religio-Philosophical Journal*, Chicago. There is much in this pamphlet we deem inconsequential; but, in the following passage, we can cordially concur: "Would the spirit Webster follow the wanderings of a frail woman for the purpose of speaking to an audience affected only with wonder at his name? Would he not rather find the Senate chamber the most agreeable; and, if he had a measure to suggest, would he not find a receptive mind on the floor to whom he could impart it?"——"The Efficacy of Prayer," containing some analysis of the character of God as defined in the Bible, is a discourse delivered before the Boston Liberal Club in Investigator Hall, by John Storer Cobb, and published by J. P. Mendum, Paine Memorial Building, Boston. It gives the Bible idea of prayer, and points out its unreasonableness.——"The Twenty-eighth Congregational Society of Boston" is the title of a pamphlet of thirteen pages in regard to the services, organization, officers, and principles of the society named, with an elaborate programme of the society's work for 1883–84. This society was founded nearly thirty-seven years ago; and its first and greatest minister was Theodore Parker, whose audiences for years filled Music Hall. The society continues to have meetings every Sunday; and Mr. James K. Applebee, the present minister, speaks acceptably to the congregations that assemble at Parker Memorial.—— "Kansas: Its Resources and Capabilities." Prepared by the State Board of Agriculture, William Sims, Secretary, Topeka, Kan. This pamphlet of sixty pages contains information relating to vacant lands, agriculture, horticulture, and live stock, together with statements and statistics concerning schools, churches, manufactures, mines and mining, etc.

PERSONAL ITEMS.

THE Berlin court has ordered the German translation of Zola's *Pot Bouillé*, *Nana*, to be seized and destroyed.

DR. MCCOSH, who is generally regarded as the most profound and logical thinker among the orthodox theologians in this country, feels compelled to say that "Mr. Spencer is the most powerful speculative thinker of our day."

JOHN BULL, of Galion, Ohio, engineer of the Thunderbolt passenger train on the New York, Pennsylvania, and Ohio Railroad, died at Akron, Ohio, Sunday, from the injuries received in a collision with a freight train Saturday night. He could have saved himself by jumping, but thought of the passengers, reversed his engine, and set the air-brakes. He then put on full steam, and started the engine ahead. It broke loose from the cars, and the passengers were saved.

MISS JENNIE COLLINS, of Boffin's Bower, has just issued her thirteenth annual report. The contributions for the year just passed amounted to $1,050; balance left over from the previous year, $80. From a fund to be used for extreme cases, $320; a friend, $75; proceeds from fair and donations, $504; to assist miscellaneous cases, $215; contributions, $1,050; total, $2,244. The expenditures from May 30, 1882, to May 30, 1883, were as follows: Rent, $700; labor, $380; furniture, $85.75; gas and fuel, $125; water tax, $11; contingent expenses, $80; printing, $40; personal expenses, $53.75; meat, vegetables, and groceries, $504; total, $1,979.50; balance on hand, $264.50. The committee wishes to express its sincere thanks to those firms and individuals who gave so generously to the annual fair in aid of the poor working girls. Great stress is laid on the low wages paid at present, which is doing a great deal to demoralize and physically ruin the youth of Boston. The long hours demanded of the female help in a great many manufacturing establishments, and the baneful results of being forced to maintain a standing position behind the counters of the retail stores, are quite vividly pictured. The most important work of the Bower is to furnish labor, advice, and encouragement to applicants in all trying afflictions; to give them clothing and food when they need it, and have not the wherewithal to furnish it themselves. It is to provide for such work as the above that the Bower needs all the assistance that can be given it, and for which such urgent appeals to the public are made.

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and pr... study have been needed for the th... work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, one accustomed to dealing with evic... which he treats in lawyer-like fashion and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if detbroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

The Basis of the Ethical Movement.

Why Unitarianism does not Satisfy us.

Two Lectures before the Society for Ethical Culture, of Chicago, by W. M. SALTER.

Price 10 cts. each. For sale at INDEX office and GEO. H. ELLIS, 141 Franklin St.

TRACTS

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new concept on of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE QUAKER INVASION OF

MASSACHUSETTS. By R. P. HALLOWELL.

1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

CURRENT TOPICS.

CROMWELL'S motto of "Trust in God, and keep your powder dry," is slightly plagiarized in Dakota's motto for its coat-of-arms, lately adopted, which reads, "Fear God, and take your own part."

BARTHOLDI'S statue of Liberty to be presented by France to America is said to be the largest piece of bronze statuary in the world. The nail on the first finger is large enough for a good-sized shield. The head is large enough to contain forty people. The figure is now complete except a portion of the chest and left arm, which will be finished in about six months.

IN a Catholic church in Milwaukee recently, a mass was sung for the souls of the three hundred persons who perished in the "Lady Elgin" in Lake Michigan twenty-three years ago. It must be rather discouraging to the surviving relatives of those people drowned so long ago to think of their souls as needing masses to be performed after twenty-three years of purgatorial sufferings.

THE *Presbyterian* says: "The United Presbyterians have repealed the laws against the use of instrumental music, whereupon one of the Presbyterian newspapers gives them joy, saying, 'Miriam with her cymbals, David with his trumpet and cornet, Hezekiah with his organ, and the one hundred and forty-four thousand with their harps, are all now admissible into good and regular standing in the United Presbyterian Church.'"

THE *Pall Mall Gazette* has discovered "a new way to pay old debts," suggested by the fact that an English magistrate lately fined a man ten shillings for blasphemy. It proposes that this magistrate's example be followed all over this kingdom; and the proceeds be devoted to paying the national debt, as it feels quite sure that, if the fine be impartially laid on every Englishman who commits this crime, the debt would be paid in a very short time.

THE reformer who grows impatient at the slowness with which cherished truths are accepted by the people at large should take a lesson from the fact that all new ideas, however practical, are slow of assimilation in the public mind. As, for instance, since the adoption of the new two-cent letter rate, although the newspapers explained all about it for months before, all sorts of mistakes are being made daily in the mail. Some send foreign letters, whose rate has not been changed, at the two-cent rate, drop letters have one instead of two-cent stamps affixed, and others fear to use the old three-cent stamp at all.

THERE is always danger when a people passes from one form of government to another of excesses in the new direction by being carried beyond the end aimed at by the projectile force it has given itself in the very effort of changing. This seems likely to be the case in France at the present time, where, after the change of the religious character of the teaching in the public schools to merely secular instruction, there has begun a system of foolish and needless revision of the school books. Thus, in the *Grammaire de l'Enfance*, the example, "The catechism is a book," has been changed to "Iron is a metal," "Notre Dame is a proper name" to "Corsica is a proper name." These, however, are not so silly as some of the other alterations. Thus, "The Creator heard the horse with patience," appears as "Jupiter heard," etc.; and "Jupiter" is substituted for "Creator" wherever it occurs in the lesson.

ON the mission of Germany, the Boston *Advertiser* says: "Germany does well to have the monument on the Niederwald; but Germany cannot forget that it is not free in matters political, and that it owes a debt of honor to its Slav neighbors, whom it has either crushed or alienated. The time has come when it behooves Germany to establish parliamentary institutions, and to reduce royalty to a position which becomes a free people. No revolution! Still less a rebellion! But a great people must learn to deal with its emperor on terms of equality. And hardly less urgent is the duty which Germany owes to the Slavs. Nearly one-half of Germany is Slav territory. The Slavs and the Germans alike feel that they will fight as the Germans and the French have fought. Yet a Russo-German war would be a crime against progress and civilization. This crime must be prevented, and it is the duty of Germany and the Germans to make it impossible. The monument on the Niederwald should be the emblem of peace, past and prospective,—honestly won and honorably to be maintained, not only with France, but with the Slav world, which is the barrier between European civilization and Asiatic despotism. Such is the mission of Germania."

A DESPATCH from Rome to the New York *Herald* tends to confirm the position of our contributor, Mr. J. F. Morse, maintained in the recent article entitled "The Vatican Library Thrown Open." The despatch says: "There are reports at Rome that many private documents referring to the papacy have disappeared from the Vatican. It is feared that the Italian government may take under its protection those treasures of the Holy See which have been collected with the people's money. To these treasures belong libraries containing more than one hundred eighty thousand codices and one hundred thousand manuscripts,—among them, fifty-six gospels in the Oriental tongues, written on scrolls. To meet the emergency, the clergy are said to have been hiding: first, the archives of extraordinary ecclesiastical affairs; second, the archives of the Propaganda; third, the archives of the Inquisition; and, fourth, the archives of the Congregation of the Index Expurgatorius. These documents were once kept in the Palace of the Quirinal, but were transferred to the Vatican by a papal emissary, who persuaded the commander of the Italian troops that the said documents were simply baptismal registers without historical value. Some of them are now well guarded in the old tower near Anagi. The letters of Pope Alexander VI. are still in the Vatican, together with other papers which the Pope would never voluntarily place at the disposal of the public. Many of these documents are hidden on secret shelves, in walls, and behind other papers."

LORD COLERIDGE, in a recent speech at the New York Academy of Music, in reply to the question most frequently addressed to him, whether he was not impressed with the size of this country, said: "It is not the size of your country that strikes me most: it is the bigness of its sentiment which gave its best blood for the vindication of that thing most beloved, and for the extension of it to the poorest and most despised among you. It is not your size. Your country was as big when only solitary mammoths gazed on your great lakes; it was as big when the civilized people who preceded your Indians, and whose movements are daily coming to light, practised their rites and held the land; it was as big before you came to possess it. Russia is bigger than you are, and so is Africa. Your increase of population is remarkable in the history of the world; but it is for you, and not for me, to say whether the wholesale immigration now going on, and likely to continue for years, is an unmixed blessing. Your great fortunes do not strike me, for one can see great fortunes in Europe. No, it is not any of these things that arrest my attention. But what does rejoice me to see are the independence and prosperity of your middle classes. They own their own houses and farms. They are not a rent-paying class. I would wish to see the same thing in my own country, but of course I never shall. This is your great strength and your great happiness. English papers and periodicals are full of advice to you from gentlemen who have been here. You have been advised to establish a monarchy, have an hereditary Senate, re-enact a primogeniture law, and make other radical changes in conformity to English forms. When I read these things, I ask myself: 'What air can these men have breathed in America? What manner of Americans have they met?' I am not blind to the greatness of the virtues of my own country; but what is best for us is not best for you, and *vice versa*. Believe me, no honest Englishman envies you your magnificent prosperity and success. They all rejoice in it."

THE BRAHMO SOMAJ OF INDIA AND ITS APOSTLE IN AMERICA.

Babu Protap Chunder Mozoomdar has been greatly interesting the people of Boston and vicinity, who have had the good fortune to meet and hear him, in the religious reform movement of India, which he ably represents. He is an orator both by nature and grace; so that he interests not only by his clear statement of facts, in which he is perfectly at home, but by his persuasive and impressive eloquence. His heart is all alive with his theme. He is a genuine apostle and prophet of the old Oriental order, though proclaiming truths for modern ears. But his stay in this country is altogether too short to acquaint the American people as thoroughly as it ought to be done with the present religious and social condition of India, and with the reformatory principles, position, and efforts of the Brahmo Somaj.

We especially regret that there has been no meeting of the Free Religious Association at which this earnest Indian apostle could have been met and welcomed and heard by members of that body, though, doubtless, not a few of them have personally met him and heard him at other meetings. We have felt no jealousies, however, with regard to the courtesies and hospitalities which have been extended to him by Unitarians and even to some extent by Orthodox people, but have rather rejoiced in these evidences of a growing liberality and breadth of fellowship. The first church that was offered him for a hearing in this country was an Orthodox Congregational church in Boston; and, though the graciousness of that act was much marred by the long and tedious introduction of the speaker by Joseph Cook,—wherein Mr. Cook could not refrain from sandwiching a missionary effort to convert the distinguished heathen guest,—yet it was one of the marked signs of the times that the church was offered at all to a zealous preacher of a religion that does not take the Christian name. Dr. Duryea, the minister of that church, was also the presiding officer at the reception given to Mr. Mozoomdar at the Hotel Vendome, and in his introductory remarks there gave evidence of a breadth and freedom of view quite in contrast with the speech of Mr. Cook. Dr. Duryea said distinctly that he believed that Infinite Being had revealed himself, not through one nation or people alone, but in all history; that all the religions had somewhat of the truth; and that there are races still waiting to contribute their special and needed quota to the not yet completed revelation of the perfect truth.

If Orthodoxy can extend such a cordial greeting as this to the new gospel of India, Unitarianism of course must be ready with a still warmer and freer welcome. And it is among Unitarians that the Hindu apostle has received most attention, both public and private, since he has been in this country. This fact indicates progress, too, in that denomination. It is not many years since the influential part of Unitarianism, including its representative organ, the *Christian Register*, held up its hands in rebuke of Mr. Dall, the Unitarian missionary in India, because he thought he could best accomplish the objects of his mission by joining the Brahmo Somaj. Nor is it much longer ago that a cultivated and not at all conservative Unitarian lady, after we had given some account of the Brahmo Somaj movement, asked us in a kind of sceptical bewilderment, "But, after all, do these Brahmo teachers believe in the true God?" We are glad, therefore, that the world has so far moved in these latter years that Unitarians without hesitancy, and many Orthodox with little less hesitancy, extend a cordial welcome and right hand of fraternal fellowship to this Hindu and non-Christian missionary in his visit to America. We do not believe that even the Baptists and Episcopalians and Methodists who heard him at the Hotel Vendome reception went home with the idea that they could teach him much more about "the true God" than he could teach them; or that even Joseph Cook, with all his painstaking but useless effort to convert the Hindu preacher while introducing him at the Berkeley Street Church, can have any very serious doubts about his salvation, whether there be any probation after death or not.

Yet it would have been a natural act for the Free Religious Association to have shown special hospitality to Mr. Mozoomdar, and it was in some respects its prerogative to do so. The Secretary of the Association was in correspondence with him ten years ago, and an interesting letter from him is published in the report of the annual meeting of the Association for 1873. And, in the very first year of the existence of the Association, correspondence was opened with Keshub Chunder Sen, the distinguished leader of the Brahmo Somaj; and a long and able letter from him, giving an account of the history and aims of the movement, was read at the annual meeting of 1868, and printed in the report for that year. This was doubtless the first of any of Mr. Sen's writings that was printed, or perhaps read, in this country. Only a very few people here had ever before heard of his name or his work. This letter was printed, in whole or in part, in some of the daily newspapers in Boston and New York, and was really the first introduction of Keshub Chunder Sen and the Brahmo Somaj to a wide circle of American people. It would have been natural, therefore, for the Free Religious Association to have been foremost in welcoming this first official representative of Brahmoism who has visited America. That Association, too, from its origin has emphasized the fact that truth and goodness exist in all the religions, and that there is a certain underlying unity of religious ideas and sympathy of aspirations amid all the differing faiths of the world. This was an additional reason why that body might have been expected to show some special hospitality to Mr. Mozoomdar. And this, doubtless, would have been done, had it not been that its Executive Committee were scattered in their vacation retreats on his arrival, and that there was then a misunderstanding as to the time of his stay in the country. The Free Religious Association, however, may justly claim that, by its emphasis of the "sympathy of religions," by its proclamation of the fact of the existence of goodness and truth in all religions, and by the practical example it has set of summoning to free conference on its platform Jew, Christian, and Gentile, it has during sixteen years been an important agent in familiarizing people with these ideas, and thus has been helping to prepare for the Brahmo apostle that cordial and more general hospitality which he has been receiving from Unitarianism and liberal Orthodoxy.

We are free, moreover, frankly to say that Mr. Mozoomdar has doubtless met a more sympathetic response, for the special mission in which he is engaged, from the churches and church-people that have welcomed him than he would find among the members generally of the Free Religious Association. The Brahmo Somaj is a church, and is founded distinctly on theistic belief; and in these respects it differs from the Free Religious Association. The Brahmo movement aims expressly at building up a great, universal church, the world over, on the two doctrines of the personal fatherhood of God and the brotherhood of man; and Mr. Mozoomdar is in this country to acquaint people with these doctrines and aims of the Brahmo Somaj and to enlist interest and sympathy, from which may grow a helpful, practical fellowship between liberal Christianity in this country and the Brahmo movement in India. The theological position of the Brahmo Somaj is very near that of Theodore Parker. It is the absolute religion of Mr. Parker, pronouncedly theistic and intuitional, with the Quaker and mystic doctrine of immediate communication of divine knowledge to the human mind, added. And, since the liberal part of the Unitarians now stand in the main and essentially where Parker did, there is natural fraternization between them and the Hindu apostle of Brahmoism.

But the Free Religious Association recognizes no creed, not even that of theism. The features, therefore, of the Brahmo Somaj that most attract its sympathy as a body are that it is a reformatory and progressive movement, and, more especially, that it results in important social and moral reforms. Its efforts and growing success at the abolition of caste, the education of woman, and the reform of the Hindu marriage customs, and its aim harmoniously to save and combine the best things in the old civilization of India and the new civilization from Europe, while discarding the vices of both, come directly under the head of those "practical interests of pure religion" which it is one of the special objects of the Free Religious Association to foster and promote. Here indeed are objects and results of universal interest. The idea of founding a universal theistic church may present a sublime aim, but we doubt its practicality. We do not doubt, however, in the least that the Brahmo Somaj of India is to be one of the important agencies in founding the coming church of the brotherhood of humanity.

WILLIAM J. POTTER.

THE RATIONAL VIEW OF THE BIBLE.

When we say "the rational view of the Bible," we do not mean the special view of any critical school, as that of Kuenen concerning the Old Testament, or that of Baur concerning the New. To some of us, these special views seem eminently rational, especially the former. The rearrangement of the Old Testament, in virtue of which for the old order—law, Psalms, prophets—we have prophets, law, Psalms, impresses us as vital and organic, and certain to prevail over an arrangement which no venerableness can make other than arbitrary and mechanical. But the rational view of the Bible does not stand or fall with any of these theories. They are involved in it, not it in them. The rational view of the Bible is the natural, human view which has been forced upon the thinker and the scholar by the character of its contents and the history of their origin and vicissitudes so far as known. The sum and substance of it is that here we have not one book, but the most remarkable collection of books that has come down to us from the ancient world; a collection of the most heterogeneous character, inclusive of many diverse and even contradictory opinions on the most momentous themes; a collection the particular contents of which our knowledge of some things and our ignorance of others make it imperative for us to accept to the extent of their intrinsic rationality, beauty, moral and spiritual inspiration, and not an inch beyond. In short, for a book written as it were by God's own hand, we have a book as simply and entirely human as any that has ever come to us out of the heaven-high and hell-deep heart of man.

Let such a view of the Bible fairly conquer and displace the traditional view which has so long prevailed, and what effect will it have on the religion and the morals of mankind? Much every way; and

Digitized by Google

nevertheless there are those who expect certain immediate results from the adoption of this view, who are likely to be disappointed. The fall of the supernatural Bible is not the fall of supernatural religion. The Roman Catholic Church, regarding not the Bible, but the Christian as the ultimate repository of supernatural guidance and control, can smile with calm superiority on these results, which to the Protestant mind are generally so alarming and distressing. A supernatural or infallible Bible is no necessary part of her ecclesiastical array. And, while the situation of the average Protestant is far less impregnable than hers to the assault of critical science, it is still possible for him to say: Granted that the Bible is not as I have thought, a supernatural book, it is a record of supernatural events and of the life and death of a supernatural person of incalculable power and grace. This position, which many have assumed already, is likely to attract an innumerable company, and to be held for a considerable length of time. If it is not capable of rational demonstration, it is not easily disproved, it is so vague, so intangible, so illusive.

But, while many will content themselves for many days to come with the conception of the Bible as a human record of things supernatural, the average tendency of the rational view must surely be to eliminate the idea of the supernatural wholly from men's thoughts. So long as this idea could attach itself to the Bible, it was something perfectly concrete. It is a very different matter, when it must attach itself to something dimly appearing through the mists and vapors of a record, human and fallible at every point. The moral benefit that is likely to accrue from this result cannot be overrated. Those who are standing in the Christian order may still confidently believe that, of the great historical religions, their own is easily first, partly because of the superior quality of its original impulse, and partly because it has had the good fortune to ally itself with fresh and growing races. But, with the declension of the Bible as a supernatural or superhuman book and the correlative declension of the belief in any class of superhuman, supernatural events, there must be an immense development of religious sympathy with the truest, purest, best in all the great religions of mankind. Few things are more religiously and morally discouraging to the finest growths of character than the conceit of having a kind of private view admission to the exhibition of almighty truth and good. If a rational view of the Bible does not make an end of this conceit, it has an obvious tendency to such a happy consummation.

There is another moral benefit which is certain to accrue from a rational conception of the Bible, of which I cannot speak a word too purely glad. The Bible being what it is, a collection of writings dating all the way along from eight or nine hundred years before Christ to well-nigh two hundred after, it is to be expected that it will report a progress of ideas; that between the earlier and later portions there will be considerable divergence. But there has been no place for such progress and such divergence within the limits of the Bible view which has been heretofore maintained. Though it would seem to be a fundamental article of Christian faith that Christianity was an advance on Judaism, in practice this article has been so fundamental as to be always out of sight. Regarding the Bible as a unit, one voice has been expected from its every part. The word of God, made at one cast, it has been assumed that there could be nowhere in its various parts anything divergent, anything contradictory. And so there has grown up a system of interpretation which has been of intellectual dishonesty all compact. Things not agreeing must be made to agree. "And, when I had taken it in my hand," as the Mormon prophet said of his compass, "it did turn whichever way I would." To what acme of absurdity have we not come by way of such a method, until men have wormed a confession of the Trinity out of the Old Testament affirmation, "The Lord our God is one Lord"! If only the immorality of such intellectual methods could have been trammelled up within the scope of matters Biblical, the result would not have been so bad. But what evil method can be trammelled up in any special sphere? Who shall say what general lack of intellectual ability to see things as they are must have come from the twisting, wrenching, torturing of the Bible text into a show of uniformity? Who shall say what blurring of moral distinctions from the same source? The effect of a rational view of the Bible will be to make an end of this deplorable business. If Old Testament and New, Psalm or prophet, Gospel or Epistle, do not agree, they will be left to disagree as freely as they choose. Yea, more, the vitality, the interest, the dramatic energy and fascination of the Bible, will be found inherent in its differences and contradictions in no small degree.

Closely allied with the habit of torturing the obvious differences of the Bible into some show of harmony, in order that the idea of its supernatural unity or the exigency of some special doctrine of theology may be subserved, has been the habit of torturing, now it, now some scientific doctrine, in order that Genesis and geology, the Scriptures and science, may not in any wise conflict. To go back no further than the publication of Darwin's *Origin of Species*, in 1859, the world is hardly big enough to contain the books that have been written to prove, first, that Darwin was altogether wrong; second, that he was partly in agreement with the Bible, and so partly right; lastly, that it was all there in the Bible before Darwin wrote a word. Two books to this effect came to me recently in a single day. One of them did, indeed, suggest that the making of the woman out of Adam's rib was hardly in the line of natural selection; but this was the only matter that was difficult to manage. Here is no food for laughter, rather for sorrowfulest tears: to think what waste of intellectual energy has come of it; of what real knowledge of God's ways might have come to thousands, to whom has come only blindness and confusion, if the energy that has been wasted had been rightly husbanded and nobly used. How many have, with poor Hugh Miller, bruised themselves to death in the vain attempts to reconcile things not to be reconciled! But with a rational view of the Bible comes an end of this. Henceforth, we shall not expect the results of modern science from the Bible. Where there is difference, we shall not strive or care to make it harmony. Will here be only intellectual gain? It seems not so to me. There are ethics of the intellect as well as of the body. The traditional view of the Bible has had an enormous tendency to make the love of truth—the top and crown of intellectual ethics—subordinate to lesser things, mainly to the passionate desire to prove the Bible omniscient and infallible.

The traditional view of the Bible has hung as a bias upon every social question that has demanded a solution in our time. How was it in the anti-slavery times? Petroleum V. Nasby summarized the situation when he said that, "Cursed be Canaan!" and Paul's letter sending back Onesimus were to be taken literally, all the rest of the Bible was figurative. I do not forget that the Old Testament prophets were armorers who forged for Garrison and Parker many a mighty weapon for their conflict with the powers of darkness. But the obstruction of the Bible's evil precedents was more than any help it had to give. And not by its own fault, only because of the traditional view of its character. What hindrance to the advance of women to their rightful seats of knowledge, power, and use, has come from a few Pauline texts! Such stuff as Dr. Morgan Dix has preached and published very recently would never have been preached or published, listened to or read, but for the doctrine that the Bible is the word of God, and, as such, infallible. Given a rational view of the Bible, and men will no longer go to it for ultimate instruction concerning the position of women or divorce or communism or any other social or political affair.

Nor will they go to it for ultimate instruction in regard to many matters of religious thought, concerning which its *ultimatum*, from the traditional stand-point, is horribly confusing and depressing. For those who occupy the traditional stand-point, escape is quite impossible from the conviction that there is an everlasting hell awaiting the impenitent and unbelieving soul. The ingenuity of a Farrar may provide a way of escape for the less thoughtful; but the calmer wisdom of Dr. Samuel Davidson is convincing that the voice of Jesus, as it sounds in the New Testament, is the voice of doom. Once let a rational view of the Bible and of the function of Jesus of Nazareth prevail, and how soon would this dreadful doctrine cease to scare the heart of man and blacken the Almighty's face! But, so long as the traditional view prevails, those who abide with this and by the words of Jesus as the fountain-head of all authority will hold a creed emblazoned with the saddest doctrine that has ever crushed the variously burdened heart of man.

JOHN W. CHADWICK.

CURRENT REFLECTIONS.

The opening up of this entire continent to easy access from all the seaports of Western Europe, so that it is but a hop, skip, and jump, as it were, from Hamburg and Bremen in feudal Germany to Duluth and Bismarck in free North America, from the mouth of the Elbe to the mouth of the Hudson and the farther extremity of Lake Superior, where the boundless wilderness is all before the immigrant hither, where he can find a home whose fee-simple will be in himself, his heirs and assigns, is certainly an event full of significance, and well calculated to arrest the attention even of persons who are so busy as to have but little attention to spare for aught but their own immediate interests.

The event in question really means, sooner or later, a solution of all the social problems which are now perplexing European monarchs and statesmen with fear of change in their over-crowded and turbulent domains. Let the people of Europe leave the old-fashioned rookeries of their old-fashioned Church-and-State systems, and begin life anew on virgin soil as land-owners and popular sovereigns themselves. Let them leave the feudal and aristocratic landlords of Europe to their own devices and *minus* tenants; and, taking the wings, not of the morning, but, in this case, of the evening, quickly find themselves in a new-world environment, social and political as well as territorial. Prompt departure for fresh fields and pastures new is far better than land leagues, privy conspiracy, and murder, which disgusts mankind everywhere with all the persons and parties implicated in them, and, after all, do not accomplish anything. Feudal landlordism is a plant which, by no possibility, can take root in North American soil, or that portion of it under the broad ægis of our Republic. The great plantations of the whilom Southern slaveholders are doomed to be subdivided into small ownerships. Great capitalists, foreign as

Digitized by Google

well as domestic, may buy up vast acreages here, and railroad corporations may own immense tracts; but, in the long run, the American soil is to inure to the people,—to the many and not the few. On it, no colossal grandeeism, no partial and exclusive system of civilization, is to rest as a base.

Already, the soil of this continent, from the Atlantic to the Pacific, from the Lakes to the Gulf of Mexico, is the subject of an unparalleled popular ownership, the scene of millions of happy homes, whose heads call no man master or landlord. And this system of small ownership will grow with the growth and spread of population. We say this in the face of the ominous concentration of all kinds of business and property more and more in the hands of great capitalists and employers, individual and incorporated, which is now the social phenomenon that is attracting most attention here and exciting most alarm, as it well may. Legislatures may prove venal, and betray their constituencies to gigantic monopolists for a time; but small property-owners are in an immense majority everywhere within our borders, and can at any time, by a single determined act of collective sovereignty, put down monopoly and monopolists. Meantime, the great capitalists and millionnaires, who are amassing such vast and needless and burdensome wealth in opening up the country and its resources, will pass away, and their riches will be scattered as rapidly as they were heaped up. But the great works achieved by their audacious speculations and all-absorbing selfishness will remain. The trans-continental lines of railway will literally sow the soil contiguous to their tracks with small land-owners, who, with the suffrage in their hands, can take care of themselves against monopoly.

Meantime, to notice a noticeable item of Western growth under the stimulating influence of continental railways and other agencies, the young cities—such as St. Paul and Minneapolis, for example—which are springing up everywhere, as it were in a night, are perfect marvels, not only of rapid growth, but of architectural beauty and commodiousness. They spring up like exhalations, with all their edifices, private and public, thoroughly modern, and such as they ought to be in structure and material. Our chief cities are, in fact, already the finest on the globe. They will soon be the largest. Curiously enough, this continent, though it is so largely still in a wilderness state, is getting to be more accessible throughout its length and breadth by means of railways than in Europe itself. According to present indications, North America will, at the end of three-quarters of a century, outstrip Europe in population, wealth, and developed resources of all sorts. Thus will the last of the continents to be brought under the influences of civilization most likely, after the lapse of a few decades, take the leadership of civilization. We are free here from the vain disputes, useless memories, and useless, outworn, old-time institutions and race and class hatreds, which are so embarrassing to the nations of Europe. The path of progress here is clear of obstructions. Why, then, should we not outstrip Europe in a few years? And the elder (humanly speaking) continent, instead of feeling any jealousy, will doubtless recognize the fact that America is only a freer, more modern Europe, with all the latest improvements, and that the United States are only an improved, revised, and republicanized Germany, Great Britain, and Ireland, and Scandinavia all in one, existing under happier auspices,

"In the glory of the sunset,
In the purple mists of evening."

B. W. BALL.

TRAVELS IN FAITH.

PART II.

My brother's conversion, last recorded, was soon forgotten; and, when about sixteen years old, he became a Christian "for good," after an experience somewhat resembling those of his earlier years. He never wavered after this; but through college and his ministry, until his lamented death at the age of forty-two, he was steadfast in the faith, and through great trials exhibited a patience, forbearance, and gentleness, which, joined to the strong will and ardent temperament that he possessed, caused those who knew him best to regard him as a perfect character. He held to his father's theological views in the most minute particulars, and in every sermon portrayed the terrors of eternal doom and the hope of the atonement. Though an orator of great power, his stern theology was not relished by the lax New England churches, who, though professedly holding it in their creeds, yielded inconsistently to the enlightened spirit of the age, and tried to ignore what in honesty they should disavow. One of his hearers remarked to me, while deprecating the plainness of his preaching: "We don't go back on the old doctrines; but, you know, times have changed, and—eh— You understand."

We went to church Sunday morning, and to Sunday-school and church in the afternoon. After which, the time before tea was recognized as a period for retirement and reflection. Never shall I forget the mental experiences of those hours, and my efforts in them "to become a Christian." I would read a little in Doddridge's *Rise and Progress*, Allein's *Alarm*, Baxter's *Saints' Rest*, or some other standard book of that sort; and, having gained a certain amount of fervor, I tried to convince myself of sin by self-examination and reflection upon my "ruined state by nature,"—for, having no heinous sins of my own, I had to rely for agony upon Adam's transgression. Then, I pictured to my mind Christ's sufferings upon the cross *for me;* dwelt upon the thorns, the nails, the spear, and sought to impress my feelings till the tears flowed. Then, I thought I had gained a penitent state. I prayed in agony for forgiveness, and lingered on my knees for some evidence of conversion.

Sometimes, I felt a certain amount of peace after these exercises; but, not having such joy as I had read that others experienced, I never dared to believe that I was converted, and at frequent intervals, after I was ten years of age, these strivings were repeated.

I had some good Sunday-school teachers; but I enjoyed most the ministrations of a gentleman who, after a few minutes spent upon the regular lesson, read to us from a book about the tortures of the Spanish Inquisition. He suddenly left for the West, having forged a check; and we lost this weekly feast of horrors.

I was well grounded in the Catechism. Fox's *Book of Martyrs* and the *New England Primer* were my chief Sunday picture books, it being wicked to look at "week-day books" on the holy day. I remember running shrieking to my father's room, thinking, in nightmare, that the skeleton with a scythe that adorns the *Primer* was after me.

Vividly do I remember the Sunday evening gatherings in the parlor after tea, when verses and hymns were recited by each in turn, and we eagerly listened to the prattling song of the youngest:—

"I love my Shepherd's voice.
His watchful eye shall keep
My wandering soul among
The thousands of his sheep.
He feeds his flock, *he calls 'em names,*
His bosom bears the ten-der lambs."

One of the earliest hymns that I recited was:—

"Welcome, welcome, dear Redeemer,
Welcome to this heart of mine."

But my great favorite was:—

"Lo! he comes, in clouds descending,
Once for favored sinners slain."

I recall saying, with broken voice and intense feeling:—

"Just as I am, without one plea."

After the hymns were said, we were asked to tell anything we had heard or thought of during the day; and, if we could muster up a quotation from a sermon or a pious reflection of our own, we were very proud. These were enjoyable seasons, but I realize now how very emotional they were. It was the climax of the day, after which the evening singing and talking, or the "monthly concert of prayer for foreign missions" at Park Street Church, where we could get into a pew with other ministers' sons, gave an agreeable reaction. The excitement was not lessened, though varied, one evening, when one of these boys swallowed the ten-cent piece destined for the collection-box.

Among my schoolmates was a boy who, in beauty of person, mental capacity, and loveliness of disposition, was unrivalled in the estimation of all who knew him. I became in love with him to a degree approaching infatuation. All that pertained to him was precious to me, and his presence was bliss. I even hesitated to pray that my love to God might be increased, lest in some way that might diminish my love for Arthur.

My younger sister—ten years old—had been writing letters to her schoolmates, urging them to attend to the salvation of their souls; and, when the summer vacation separated me from my beloved friend, it occurred to me to imitate her, and make this the theme of a letter to him, asking if he did not desire to be a Christian. He replied in fervid terms, saying, "I do, I do;" and all summer a correspondence was carried on, filled with intense religious emotion. I determined to become a Christian before I met him again; and, one Sunday afternoon, I got upon my knees with the resolve to remain there till God converted me. For two hours, I wept and prayed and implored for salvation, until, tired out, I arose with the feeling that I had done my part, and, if God wouldn't do his, and save me, I must accept the fact that I was not one of the elect, and must resign myself to going to hell. I felt a peaceful satisfaction at having done my best, but had no assurance that I was a Christian. When I met my friend in the fall, our diffidence was so great that not a word was said about our correspondence, nor was the subject of religion ever alluded to in our future conversation. This evidences the unnaturalness of such mental exercises. He was converted a few years later under the influence of a sermon, and joined the Church; but his fair and promising life was blighted by disease, and the hopes inspired by his exquisite character and uncommon powers of intellect perished in his early grave.

At the age of three, I was sent to school, probably more with a view to be kept out of the way than for regard to my intellectual needs. I can remember sitting in a little rocking-chair and learning to sew small bags for holding spools of thread; but my other lessons are not recalled, though it seems to me that I was born with the ability to read, for I do not remember ever having learned the art. At an early age, I entered the Brimmer School, then in charge of that excellent teacher, Mr. Joshua Bates, ably assisted by Mr. John H. Butler and Mr. Daniel C. Brown. I was often at the head of my classes, and devoted much time out of school to the preparation of my lessons. I can remember sitting in school with folded

Digitized by Google

arms, almost bursting with self-consciousness and satisfaction at my high rank and the approval of my teachers. The studies were wisely chosen, except that English grammar was drilled into the boys by rote before they were capable of understanding its principles, and they still talked "bad grammar" in the playground. All that I ever learned in school of history, geography, and physics was gained here; and the days when natural philosophy was taught and illustrated by experiments with apparatus were the most enjoyable days of my school life, and, I believe, the most profitable. I was removed from these useful studies before the last year of the course, in order to pursue a more classical routine. In a private school for a year I was confined almost wholly to Latin, French, and algebra, and then entered the Boston Latin School, which was under the charge of the renowned teacher, Francis Gardner. The usual course of study required five years; but Mr. Gardner announced that an "advanced division" would be formed of the best scholars, which would be put through in four years. My ambition was the only reason for joining this class, and led to my being "put through" most literally in one year. Latin and French occupied nearly the whole of our attention, but the former was the great study. Andrews and Stoddard's Latin Grammar had to be committed to memory, and was recited in this way. The first boy called upon began the lesson, then another was called at random, who must continue where the first left off. If he failed to do so accurately, it was accounted an error, and every important word missed was an error. The boys were told that, if they were conscious that they could not have recited what another boy was saying or could not have answered a question asked another, they must count an error; and, at the close of the lesson, each was asked in turn how may errors he had, and was marked accordingly. Five was the highest mark given for lessons, and each error caused a deduction of one; and, if as low a mark as two was given at any recitation, the pupil failed to receive an approbation card at the end of the week. A few conscientious boys counted errors to themselves; but others, among them some of the poorest scholars, never acknowledged errors except for public failures. Thus, a direct premium was offered for lying, where detection was impossible; and my indignation was intense at being outranked sometimes in the "placing" at the end of the month by an inferior and less truthful scholar. Being morbidly conscientious, I often turned the benefit of a doubt against myself, or else was distressed with self-accusations that I could not have recited correctly, if I had been called upon. A similar rule was adopted as to conduct. When Mr. Gardner left the room, instead of appointing a "monitor" to act as spy, he said, "I leave you upon your honor." On his return, he asked, "Who have been out of order?" The "good boys" raised their hands, and were marked for disorder; but the bad boys, who had incited all the whispering and mischief, made no sign, and took home their approbation cards to their proud parents at the end of the week, provided their public lesson failures had not forfeited them. This system of reciting made me study intensely. I could repeat the Latin Grammar verbatim from the beginning, and its list of "exceptions" will haunt me all my life. But little time was taken for play; and I often cried at being sent to bed at nine o'clock, in fear that I had not properly memorized my lesson. My friend Arthur was in this class; and his wonderful genius enabled him to stand easily first, without great effort. I one month stood first, but was usually second, except when one of the non-confessors superseded me. I approached school and recitation with fear and trembling; and, after a year of this strain, headache was fastened upon me, and, after repeated attempts to continue with my class, I was obliged to leave school, and the family physician ordered me to sea.

ROBERT C. ADAMS.

"THE ORIENTAL CHRIST."*

The caption of this article is the title of a work just published, written by an earnest Hindu student of the Christian Scriptures, and an eminent missionary of the theistic movement in India, known as the Brahmo Somaj, a movement which is the joint product of Christianity and Hinduism, resulting from the contact of European thought, culture, and enterprise with a decaying faith, and the efforts of devout minds who, having been forced to discard much of the old religious belief and yet repelled by the scepticism and agnosticism which they find about them, seek to combine and unify the essential doctrines of Buddhism and Christianity as taught in the Vedas and the New Testament, and to present them in a manner adapted to the popular mind for the renovation of India.

In this volume, which derives added interest from the author's presence in this country at this time, Mr. Mozoomdar presents his views in regard to the life and ministry of Jesus Christ in language earnest, impassioned, rhetorical, and polished. In some respects, the work reminds one of Renan's *Life of Jesus*, but its spirit is far less critical and more devout and worshipful than that of Renan. The author's emotional and religious nature is predominant, and it frequently finds expression in words as passionate and confident as those of any Methodist in relating his experience. He writes: "I prayed, and besought Heaven. I cried, and shed hot tears. It might be said I was almost in a state of trance. Suddenly, it seemed to me, let me own it was revealed to me, that close to me there was a holier, more blessed, most loving personality, upon which I might repose my troubled head. Jesus lay discovered in my heart as a strange, human, kindred love, as a repose, a sympathetic consolation, an unpurchased treasure to which I was freely invited. The response of my nature was unhesitating and immediate. Jesus from that day to me became a reality whereon I might lean. . . . According to my humble light, I have always tried to be faithful to this inspiration. I have been aided, confirmed, encouraged by many, and most of all by one. My aspiration has been not to speculate on Christ, but to be what Jesus tells us all to be. That labor, I know, will not end in this life; and the goal as well as the prize is elsewhere. . . . I can with perfect truth declare that it is the grace and activity of the indwelling presence of God alone whereto I am indebted for these experiences."

In what Christian writer will we find a more complete combination of the mystic and the Methodist, the transcendentalist and the theological devotee?

The principal point of difference between the Christians and the Brahmos, according to this writer, is this: "The latter maintain that the life and teachings of Jesus have been presented by Christian missionaries through the colored medium of European theology, and have therefore failed to attract those spiritual instincts and natural sympathies for which the Hindus, as a primitive Eastern race, are distinguished." European agencies have stimulated the thought and roused the dormant nature of Eastern people, but "the light of Oriental faith and mystic devotion" is necessary to reveal the true character of the Nazarene. "Since the greatest religions of the world have sprung from Asia, it is "an Asiatic only who can teach religion to Asiatics."

The Brahmo Somaj never taught that the absolute Godhead had ever descended into Jesus or any other man. "The pre-existence of Christ" means simply that Christ existed before his birth potentially, as a part of the divine plan, as a part of the ways and means devised by God for man's deliverance in the dispensation which was to come. Christ *then* had no personality. "He was the thought and energy of God." The trinity is God, "in his own eternal glory" (the Father), God "coming down to humanity" (the Son), God "carrying up humanity to heaven" (the Holy Ghost). "This is the whole philosophy of salvation," as expounded by Keshub Chunder Sen. "As the sleeping Logos," says Keshub, "did Christ live potentially in the Father's bosom, long, long before he came into this world of ours. . . . This is the Christ who was in Greece and Rome, in Egypt and India. In the bards and the poets of the Rig-Veda was he. He dwelt in Confucius and in Sakya Muni."

Christ was an idealist, and "the relations he sought to lay down between the soul and God still constitute the ideal piety of the world. These ideals were so deeply opposed by the realities that surrounded him that the opposition cost him his life." "Christ's whole nature was swimming in the ocean of Divinity as this visible universe of ours swims in the might and majesty of God." And "we Hindu Aryans have learned to enshrine him in the heart of our philosophy, in the core of our exuberant love." The Eastern Christ is "the incarnation of unbounded love and grace." And, when we speak of the Western Christ, "we speak of the incarnation of theology, formalism, ethical and physical force."

The Oriental mind can understand Jesus. "Why did Jesus bathe?" Water, to the Oriental, means perpetual blessedness. There is in India a transcendental sense of the Divine in the rivers and the sea. "The Brahmin's most pious exercises consist of ablutions." He bathes to purify himself from personal impurity and social contamination, and to prepare himself for initiation into higher spiritual life. "The analogy between the outer and inner in the imaginative Asiatic is most natural; and, hence, Jesus bathed." "Jesus fasted. The spirit of the regenerate bathes, and then waits, watches, communes, fasts, and prays. We all know this in the East." Fasting weakens the flesh, and gives an opportunity to the devil that tempted Jesus, that tempts every man,—the carnal propensity in man, the arrogance and exaltation of self, fondness for worldly honors, wealth, and power. Jesus repudiated physical wants in the pursuit of spiritual perfection. "His mendicancy was that of the fowls of the air and the lilies of the field, which are fed by the unseen Arm above and underneath the earth." "By the vision of instinctive trust, the praying Jesus first beheld what was in the purpose of the Father, and then prayed for the fulfilment of that purpose." "The sacred law of prayer is dependence. Jesus depended, his whole religion was dependence." "Simple as a child, he breathed his wants, and then knew no more than to depend upon the Father." But the change is in man, not in God, whose foreknowledge cannot be influenced by "the petitions of little-sighted humanity." The law of prayer means "the union of spirit with spirit." "The prayer of Christ has the calm, hushed unimpassionateness of the whole world's future."

Why is the New Testament new? Its teachings of faith, self-sacrifice, unselfish love, and spiritual holiness have their parallel elsewhere. What is

* *The Oriental Christ.* By P. C. Mozoomdar. Boston: George H. Ellis, 141 Franklin Street. 1883. pp. 193.

Digitized by Google

unparalleled in the New Testament is the simple, unique teaching that "Christ is the Son of the living God." David commits crimes, Judhistir publishes a half-uttered falsehood, Moses kills an Egyptian, Mohammed proclaims a bloody war, Sakya Muni omits to teach there is a God, and in Christ alone the character of the Eternal descends for the regeneration of all men. It may be said that "Christ did not come to teach faith, or love, or morality, or piety, but that all these virtues and countless others were involved in the doctrine of spiritual Sonship, which above all things he taught and has left behind him."

One most characteristic teaching of Jesus is taking no thought for the morrow. "The whole structure of the resignation, dependence, trust, and asceticism so natural to the people of the East is raised upon this inculcation of faith." His pity and forgiveness were for the victims of mistake and passion. At the slaves of falsehood and faithlessness and religious vanity, he hurled fire and brimstone. He denounced Chorazin and Bethsaida, because "want of faith is many times more fatal than gross carnality," like that of Sodom. He was most unmistakably severe on the rich, because "spiritual aspiration dies and is buried under the superabundance of wealth." "Well and wisely does the New Dispensation act by reviving in its apostolical body the vow of poverty." Jesus "never cared much for the rich and the learned. He cared for the poor." And "the learned, the wealthy, and the self-conscious kept out of his way; and the poor, the *canaille*, the humble, greeted him and blessed him."

The questions which men often asked of Jesus he must have asked of himself. Was he Moses? Was he Elias? Was he Jeremias or any of the other prophets come to life again? "Did he come to supplant the law and the prophets?" "Is the Christian dispensation superior or inferior to the Mosaic?" etc. "With the object of satisfactorily answering these questions, Jesus made a spiritual pilgrimage to Moses and the prophets of old. He subjectively realized their ideals in himself." "Yes, if we have the spirit which Christ had, we, too, then might converse with Jesus, as Jesus, transfigured, conversed with Moses and Elias on the mountain." "Did he see ghosts, unnatural apparitions about which visionaries speak? Far from it. . . . He saw the vivid ideals of his great predecessors embosomed in the depths of God with whom he communed."

It may be that Jesus, like other rabbis of his time, understood the healing art; but the wonderful cures he effected must have resulted from the concentration of his sympathy, and herein was the secret of his success in curing spiritual blindness, leprosy, and death. "Let men awaken to sympathy, and they will convert the world." In these days, the science of medicine works miracles of cure without the aid of religion; but "religious faith should be combined with medical wisdom."

Christ fasted and practised asceticism for others' good. But he also feasted. "The East excels in the number and grandeur of its feasts." The feast is symbolic of human brotherhood. Christian missionaries in foreign lands should eat from a common table the bread of the people whom they go to convert, as Christ ate at the festive board of the publicans. "I know Roman Catholic missionaries have done so, and won the hearts of whole tribes of men." Jesus was glad to feed thousands. But this usage of Oriental saints to feed large numbers of people out of their scanty resources is universal. Who knows how Jesus symbolized the feast at which five thousand were fed? The "fasting Christ" gave bread and wine to his disciples, and said, "This do in remembrance of me," because he "saw that his people would hold him up as an objective impersonation of truth and purity, and he wished to prevent it." He desired "subjective allegiance," "internal absorption and assimilation." The bread and the wine "symbolize the incorporation of Jesus in the flesh and blood of his descendants,—the hiding of the Son of Man in the everlasting bosom of humanity." From the corrupt visible Church it may be said Christ has fled "to that invisible Church where, sitting in the heart of the humble believer, embosomed in God, he calls me and you to the mansions of peace."

Socrates showed philosophic self-composure, Cato heroic courage, Seneca stoical firmness; "but Christ alone presented on the cross the perfection of human nature."

"Jesus might rise from the grave. Repeatedly had he said this, taught it, hoped, prayed, and sung about it. To their [the disciples] untutored imagination, such a hope could have but one meaning; but the hope was there." The women, full of strange thoughts and fears "in that dark, ghostly twilight," found the stone rolled away, the entrance to the sepulchre open, the grave-clothes there, but the body gone. "'Christ is risen.' . . . The report spread like sunlight, and through the silent darkness of the centuries reaches us at the present day. Why rudely raise the veil from the face of the sweet, simple, sacred trust which soothed the bosoms of the stricken children of God in their inconsolable grief? Why expose the tender and holy confidence of millions in every age, who on their ideas of Christ's resurrection have anchored the dear hope and trust of a glorious eternity? If Jesus has risen to them, much more hath he risen to us. . . . The spirit of Jesus hath risen and reigneth." If we understand the writer, he means to say that, although the belief in the bodily resurrection of Christ was without foundation in fact, it was the only conception suited to the minds of the disciples and the world.

Jesus reigns as "the law of the spirit of heavenly life," "in the bosom of every believer," in the spirit of trustful suffering, "in some as the spirit of agony for others' sins," as the spirit of forgiveness for injuries, "as the recognizer of divine humanity in the fallen, the low, and the despicable," "as tender sympathy with every weakness and unrest," "as an approving smile in our sympathy with every good and righteous cause," "in the community that is bound together in his name." "As divine humanity and the Son of God, he reigns gloriously around us in the New Dispensation."

Such, according to Mr. Mozoomdar, were the life, ministry, and mission of Jesus. In the main, this Oriental conception of the Nazarene is probably far nearer the truth than that which generally prevails in Christendom. And the character and teachings of Jesus have more in common with the life and ideals of India than with the civilization of Europe and America, which has been reached, not by following the example or the most characteristic teachings of Christ, but by ignoring them practically, and emphasizing in theory and practice the importance of the arts and sciences, industrial pursuits, worldly enterprise and energy, wealth, taking thought for the morrow, defence of our rights, resistance to tyrants, making much of the world, etc. "If we open our eyes, and are honest enough to avow what they show us," says Strauss, "we must acknowledge that the entire activity and aspiration of the civilized nations of our time are based on views of life which run directly counter to those entertained by Christ." Mr. Mozoomdar is right. The Christ of the New Testament, of whom this Hindu is a far more ardent and consistent disciple than one usually finds among the nominal Christians of Christendom, is an "Oriental Christ"; and his views of life as a whole are not adapted to this Western world. We must either reject them largely, or regard civilization as a retrogressive movement, and oppose it.

B. F. UNDERWOOD.

EDITORIAL NOTES.

THE *Oriental Christ*, by P. C. Mozoomdar, one of the leaders of the Brahmo Somaj in India, is for sale at *The Index* office. Price $1.25.

ONE of the questions over which an English psychological society is racking its brains is, "Are angels ever sleepy?" We don't know how it is with the angels in heaven, but we have been assured on good authority that some sensible earthly angels are apt to grow sleepy when their adorers prolong their calls too far into the evening.

THE Brahmo Somaj is slowly trying to leaven the new civilization that is entering into the ancient country of Hindostan. It is trying to hold the balance between the two contending races, the English and the Indian. It is trying, as far as possible, to counterbalance the destruction of caste, to reclaim and educate, exalt and spiritualize, the women of India, trying also to fight the agnosticism and materialism that are being poured through the stream of our national education.—*P. C. Mozoomdar.*

THE *Religio-Philosophical Journal*, in an article on the weakness of the spiritualistic rostrum, says: "Spiritualism, in its present unorganized, illy defined, chaotic state, offers no inducement to educated teachers; and no person of average business capacity, with a dependent family, can afford to enter the lecture field. As a consequence, with rare exceptions, the Spiritualist rostrum gets its recruits from mediocrity, and this in the face of the fact that Spiritualism offers a solid foundation of incontrovertible facts on which to build the grandest spiritual philosophy the world has ever known,—a field which should attract the best talent, the profoundest learning, the most brilliant genius."

AGNOSTICISM in religion is said to mean "Do not know." It is the natural product of a century of lies. No wonder we don't know. . . . Bore a hole in the ground with your cane and set your dog to digging there for game, and he will dig tremendously in the first experiment; on a second, he will dig a little, but with less zeal and hope; but, when about the third time you call his attention to a possible rat in the cane-made hole, he will look at the hole and then at you, and then will lie down on the cool, green grass in philosophic peace. You have made your dog a sceptic. Thus, our times have overdone the lying business, and there are a few millions of persons who do not repose any confidence in anything or body not well backed up by collaterals.—*David Swing.*

IF Renan were as prominent as a Christian writer as he is as an antichristian, his narrow escape from death at Ischia would be ascribed to "Providential interposition." He had been a frequent visitor to that fated place when he wrote his lectures on "Marcus Aurelius" and "Caliban," and was intending to go there this year, but was persuaded by Jules Ferry to preside at a distribution of prizes in Paris. The house in which he would have been in Ischia, but for this invitation, was demolished by the earthquake, and all its inmates were killed. "Miraculous escape" would also have been the term applied to Thomas Paine's escape from the guillotine through the singular oversight of his jailer in marking his cell-door with the sign of doom *inside* instead of outside, where next day it was not observed when the prisoners were called to go to their death.

The Index.

BOSTON, OCTOBER 18, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boy ston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

AUTUMN RAIN.

Drip, drip, drip!
How sullen the autumn rain!
Drip, drip, drip,
Like tears from the eyes of Pain.
Oh, not with the promise of new buds growing,
And not with the murmur of limp streams flowing,
Like bands of sapphire in sunshine glowing,
But declarations for early snowing.
Drip, drip, drip!

Drip, drip, drip!
The raindrops strike my heart.
Drip, drip, drip!
They play, with wondrous art,
Such low refrains for the sweet dead roses,
And wailing strains for the woodland posies.
Oh, times of blooming with such sad closes!
Well, thus end *our* sunbursts and reposes.
Drip, drip, drip!

Drip, drip, drip,
Who is there likes such nights?
Drip, drip, drip,
Black hangings o'er God's lights.
Drip, drip, drip!
I look in vain where the stars were shining,
I hunt for clouds which show silver lining,
And see but crape-bands looping and twining,
As if some mourner did sky designing.
Drip, drip, drip!

Drip, drip, drip,
Down on the landscape sere!
Drip, drip, drip,
Over us mortals here!
On we plod through the slosh and raining,
All the mud we must bear disdaining,
Bidding our feet move quick and willing,
Though days are rainy and dark and chilling.
Drip, drip, drip!

For *The Index.*

John Stuart Mill, in his Social Relations.

BY SARA A. UNDERWOOD.

Mr. Mill once sent to Caroline Fox some packages of current magazines, reviews in which, as was then the literary fashion, the articles appeared without the name of the writer being given; but, that she might give credit or blame where it was due, he appended to each article the name of the writer. For this courtesy, Miss Fox sent him an appreciative letter of thanks, in replying to which he wrote: "My principal feeling in the matter was this. You are likely to hear of some of the writers; and, judging of your feelings by what my own would be, I thought it might be sometimes agreeable to you to be able to turn to something they had written and imagine what manner of persons they might be."

This sentence is my excuse for this article. Judging the readers of *The Index* by my own feelings, I have thought that, to those who have not had time or opportunity to read the chatty memoirs of Caroline Fox or Froude's Carlyle, it might be of interest to know something of the philosopher and logician as seen through their eyes. Miss Fox had no thought, when she wrote those memoirs, of their future publication. So her notices of Mill, with whom she was brought into frequent contact through her intimacy with his sisters, Clara and Harriet, were the spontaneous and genuine impressions she received of his character. So also with Carlyle. John Stuart Mill is one of the very few men who appear to have won the thorough regard and esteem of the canny, crass, and cranky Scotchman.

Mill's own autobiography does not present so fair nor, I venture to say, so accurate a portrait of him as is thus incidentally drawn by these two friends of his. Carelessly drawn as it necessarily is by this method, the intense individuality of the subject makes it, nevertheless, a strong as well as a fascinating and realistic one. The fact that he could be at the same time the friend of two such opposite characters as Caroline Fox and Carlyle, both differing as radically from him as from each other, tells us considerable of the character of the man. One rises from the perusal of the autobiography with a sense of dissatisfaction at its incompleteness; for, while we are admitted to an acquaintanceship with the thinker and philosopher, we know as little of the man as ever, and scarcely a glimpse is permitted of those phases of character which bring us into sympathetic knowledge of his oneness with the rest of humanity. But in these two writers, though they give us but fragmentary glimpses of Mill, those few glimpses reveal just what we have hitherto felt to be lacking in the autobiography.

Mill was above all things intensely serious in his nature, serious even to sadness; and it is because of this trait that his autobiography gives us the impression of a phenomenally studious youth and manhood. There is a ponderous gravity in his own story of himself which imperceptibly saddens the reader. Nevertheless, he was a most lovable, kind-hearted, modest man, a charming conversationalist, winning and frank in manner, and supremely sincere and truthful in word and deed. His childhood had been an extraordinary one. His father, himself a scholar and thinker, had chosen this child to experiment on. It was, though a cruel, a successful experiment, so far as evidencing the possibilities of early training in the direction of the intellect. To make a prodigy of learning of a child in years, he robbed the boy of his birthright of boyhood; and the feeling of this loss followed John Stuart Mill through life. "I have no remembrance," he writes, "of the time when I began to learn Greek. I have been told that it was when I was three years old. . . . I faintly remember going through Æsop's *Fables* in the Greek. Of children's books, any more than of playthings, I had scarcely any." At seven, among other Greek writings, he read Plato. At eight, he began learning Latin, being obliged at the same time to teach it to his younger brothers and sisters. "My father," he says, "in all his teaching, demanded of me, not only the utmost I could do, but much that I could by no possibility have done." Clara Mill told Caroline Fox that her father "had entirely educated John, and made him think prematurely, so that he never had the enjoyment of life peculiar to boys: he feels this a great disadvantage."

Carlyle thus describes Mill at their first meeting (Mill was then about twenty-five): "A slender, rather tall, and elegant youth, with small, clear, Roman-nosed face, two small, earnestly smiling eyes. Modest, remarkably gifted with precision of utterance, enthusiastic, yet lucid, calm. Not a great, distinctly a gifted and amiable youth. We had almost four hours of the best talk I have mingled in for long. The youth walked home with me almost to the door, seemed to profess almost as plainly as modesty would allow that he had been converted by the head of the Mystic School, to whom personally he testified a very hearty-looking regard."

It was in 1840, nine years after the foregoing passage was written, that Caroline Fox met him. She thus describes her first impressions concerning him: "He is a very uncommon-looking person. Such acuteness and sensibility marked in his exquisitely chiselled countenance, more representing a portrait of Lavater than any other that I remember. His voice is refinement itself, and his mode of expressing himself tallies with voice and countenance." A little later, she writes: "Cuningham showed us his portrait of J. S. Mill. Quite an ideal head, so expanded with patient thought, and a face of such exquisite refinement."

The intimacy of Miss Fox with the family of Mill gave her frequent opportunities to observe him in the more private relations of life, and very charming these revelations are. In these, we get glimpses of some of his gayer moods. "He is a great botanist," Miss Fox declares in her journal, "so Anna Maria [Fox] excited him about the luminous moss found in the cave at Argols. . . . We made a walking party to Pendennis Cavern, with which they were all delighted. J. S. Mill proposed leaving the lighted candles there as an offering to the gnomes. He was full of interesting talk." "John Mill joined us at dinner, and Sterling came to tea. . . . The evening was then devoted to a glorious discourse on reason, self-government, and subjects collateral, of which I can give but the barest idea. Sterling was the chief speaker; and John Mill would occasionally throw in an idea to clarify an involved theory or shed light on a profound, abysmal one. . . . Oh, how much there was this evening of poetry, of truth, of beauty!" Of a luncheon party at Penjerrick, composed of the two Misses Fox, their brother Barclay, John Stuart Mill, and his sister Clara Mill, Miss Fox says they "walked back not unpleasantly. . . . J. S. Mill says his acquaintance with Sterling began with a hard fight at the Debating Society at Cambridge, when he appeared as a Benthamite and Sterling as a mystic. Since then, they have more and more approximated. . . . He spoke of the extreme elation of spirits he always experienced in the country, and illustrated it, with an apology, by jumping. . . . When Barclay joined us, the first question agitated was the influence of habits of business on literary pursuits. John Mill considers it the duty of life to endeavor to reconcile the two, the active and the speculative; and, from his own experience and observation, the former gives vigor and system and effectiveness to the latter. He finds he can do much more in two hours after a busy day than when he sits down to write with time at his own command. . . . Barclay was lamenting his sense of incapacity to attain, in his intellectual being, to the mark which was evidently set forth in his own mind. 'This, with very few exceptions,' rejoined John Mill, 'was the case with all who had ever reflected.' . . . Then, on discouragements in intellectual pursuits: 'Here, too, you should ever aim high. Work on, even when nothing you do pleases you. Do it over again, without ever admitting discouragement. At the same time, you must curb your fastidiousness, and not let your judgment and taste get too far in advance of your power of execution, or your ardor will be damped and you will probably do nothing.'"

The next morning, Miss Fox took a walk with John and Clara Mill. They "talked about Barclay, and I said how glad I was that they had such an open talk yesterday. 'Why,' said he, 'yesterday's conversation made just the difference between knowing and not knowing your brother. Often, it is an amazing assistance to detail a little of one's own experience, when one has passed through similar discouragements and come out of them.' I remarked on the pleasure it must be to help others in this way. 'I had much

Digitized by Google

rather be helped,' he answered. The process of unhooking a bramble made him philosophize on the power of turning annoyances into pleasures by undertaking them for your friends."

It brings us nearer to the man, while it does not lessen our admiration of one whom Miss Fox calls "the first metaphysician of the age," to read such notes as these in her journal: "John Mill is going to concoct for me an almanac of the odors that scent the air, to be arranged chronologically, according to the months, beginning with the laurel and ending with the lime." "A great parcel arrived in the evening, with John Mill's kind regards, containing all the *London* and *Westminster Reviews* from their beginning, with notes in his own handwriting and the names of the writers attached to the articles. A most valuable and interesting gift." "Returned with Harriet Mill from Carlyle's lecture to their house in Kensington Square, where we were most lovingly received by all the family. John Mill was quite himself. He had in the middle of dinner to sit still for a little, and take in that we are really here. . . . Visited John Mill's charming library, and saw portions of his immense herbarium,—the mother so anxious to show everything, and the son so terribly afraid of boring us. He read us that striking passage in *Sartor Resartus* on George Fox making to himself a suit of leather. How his voice trembled with excitement as he read! . . . After a most happy day, we walked off, John Mill accompanying us through the park." "Dined at the Mills. . . . John Mill in glorious spirits, too happy to enter much into deep things; . . . talked of life not being all fun, though there is a great deal of fun in it."

The genuine modesty of the man is shown in his humorous allusions to his own writings and joking exaggeration of their importance. "'He is greatly relieved," writes Miss Fox, "at having finished his *Logic*, and is going to mark the best passages for me with notes of admiration. He said, 'My family have no idea how great a man I am.'" As this was said at dinner-table, in the presence of the family and their guests, one can easily understand the tone of banter in which it was uttered. "John Mill talked about his book on Logic which he is going to give us, but he declares it will be more intelligible than interesting. How intelligible he will find out in two years. He forbids my reading it, though, except some chapters which he will point out. 'It would be like my reading a book on mining, because you live in Cornwall. It would be making friendship a burden.'" Only modesty combined with unselfishness could have induced Mill, who "had designed writing a work on the French Revolution when he heard of Carlyle's purpose," to make over to Carlyle his own books of reference on the subject. Miss Fox states in this connection that "the world has also been deprived of a history of Greece from his pen, because Thirlwall was just beforehand with him."

His known intention of writing the history of the French Revolution before Carlyle undertook it must have given an added sting to the mortification he experienced over the loss, while in his hands, of the manuscript first volume of Carlyle's history, destroyed by a careless domestic. Mrs. Carlyle, without naming Mill as the party concerned, gave Miss Fox a graphic account of the sensation caused in their household by this serious loss. Her husband, she said, "lent the manuscript of the first volume to a gentleman who had an extensive knowledge of French affairs and was to make notes and corrections for him. One day, he called, ran upstairs, gave three little taps at their door, and sent her down to a lady who was waiting outside, just saying, 'Something dreadful has happened: she'll tell you what!' She sprang into the carriage; but the lady would only say, 'Oh, you'll never speak to him again!' . . . In fact, she could not get it out at all, and accordingly rushed back to the gentleman, and saw her husband smiling and cutting up a candle-lighter. 'What, hasn't she told you? Your husband's manuscript is entirely destroyed.' She was relieved at first, and said she had expected to hear of a murder; but afterward, when she saw her poor husband almost frantic over his work, not having kept a single note or rough copy or reference of any kind, she felt the full force of the trial."

The lady referred to as so reluctant to disclose the destruction of the manuscript was Mrs. Taylor, then, or later, the wife of Mill, and the mother of Helen Taylor, whose earnest efforts in behalf of humanitarian movements do honor to her parents' teaching. It was of this lady that Mill wrote in his autobiography that "her friendship has been the honor and chief blessing of my existence, as well as the source of a great part of all that I have attempted to do or hope to effect hereafter for human improvement." "What I owe," he remarks in another place, "even intellectually, to her, is in its detail almost infinite." And again, "When I came into close intellectual communion with a person of the most eminent faculties, whose genius as it grew and unfolded itself into thought continually struck out truths far in advance of me, but in which I could not, as I had done in those others, detect any mixture of error. The greatest part of my mental growth consisted in the assimilation of those truths."

His love story is a singular episode in the history of John Stuart Mill. Mrs. Taylor was the wife of an old and valued friend of the Mills. When he first became acquainted with her, she was twenty-three and he twenty-five years of age. It was twenty years later, and some time after Mr. Taylor's death, before she became the wife of Mill. His sincere tribute to the worth and goodness of the first husband of his wife is by no means the least interesting part of the history of his love; and yet, on her death, he mourned for her as if he had been the one love of her life as she was of his. At the commencement of his friendship for Mrs. Taylor, Carlyle speaks of it in a letter to Mrs. Carlyle as follows: "Mrs. Austin had a tragical story of his [Mill's] having fallen desperately in love with some young philosophic beauty (yet with the innocence of two sucking doves), and being lost to all his friends and to himself and what not; but I traced little of this in poor Mill, and even incline to think that what truth there is or was in his adventure may have done him good. Good Buller also spoke of it, but in the comic vein." Later, Carlyle was introduced to Mrs. Taylor, and writes: "Our most interesting new friend is a Mrs. Taylor, who came here for the first time yesterday, and stayed long. She is a living romance heroine, of the clearest insight, of the royalest volition, very interesting, of questionable destiny, not above twenty-five." Later, he writes in this fashion of meeting her in a park in London, where he had stopped to rest. "Mrs. Taylor with her husband make their appearance walking; pale she, and passionate and sad-looking; really felt a kind of interest in her,"—a great confession and concession for the chronic growler to make in behalf of anybody, and one which makes his readers more than ever interested in Mill for whose sake so much was conceded. Mill himself writes of his first acquaintance with Mrs. Taylor thus: "Although it was many years after my introduction to Mrs. Taylor before my acquaintance with her became at all intimate or confidential, I very soon felt her to be the most admirable person I had ever known. . . . To her outer circle, she was a beauty and a wit, with an air of natural distinction felt by all who approached her. To the inner, a woman of strong, deep feeling, of penetration and intuitive intelligence, and of an eminently meditative and poetic nature. . . . I soon perceived that she possessed in combination the qualities which in all other persons I had been only too happy to find singly. . . . Her intellectual gifts did but minister to a moral character at once the noblest and the best balanced which I have ever met with in life."

Mrs. Mill died in 1858 of pulmonary congestion, after only a few days' illness, at Avignon, France. She had been his wife for seven happy years; and, to the end of his own life, Mill never recovered from the shock of her death. The depth of his sorrow is indicated in his autobiography in these words: "Since then, I have sought for such alleviation as my state admitted of by the mode of life which most enabled me to feel her still near me. I bought a cottage as close as possible to the place where she is buried; and there her daughter—my fellow-sufferer, and now my chief comfort—and I live constantly during a great portion of the year. My objects in life are solely those which were hers. My pursuits and occupations those in which she shared or sympathized, and which are indissolubly associated with her. Her memory is to me a religion, and her approbation the standard by which, summing up as it does all worthiness, I endeavor to regulate my life."

This grief was so excessive as to become morbid. The house in which he lived adjoined the cemetery where she was buried. He bought every article of furniture, even to the carpet, belonging to the room in which she died, and with them furnished his own private room. He made himself a voluntary exile from his English home and friends, in order to be near her dear dust. Every day, he visited her grave, spending hours in thought, seated on a bench beside the sacred spot. The flowers with which he testified his undying love were renewed every day; and the marble slab which commemorates her virtues declares also, in glowing words, his regard and love for this woman whose rare good fortune it was to be exceptionally beloved by a genius so great as Mill. For fifteen years, he remained thus devoted to her memory, when "the grave was opened again, and husband and wife slept together." Through this love of Mill for his wife, all women were the ultimate gainers; for he ascribes to her influence that interest in the whole sex which made him for years the indomitable and courageous champion of women's rights, and directed his mind into those channels of thought which caused him to embody in his simple, direct style one of the clearest statements of the injustice done to women that has ever yet been given. But he says, "That perception of the vast practical bearings of women's disabilities, which found expression in the book on the *Subjection of Women*, was acquired mainly through her teachings."

He was the most chivalrous knight that the women of this generation have known. Wherever the sex needed a friend or champion for their cause, he stood ready to help. As one instance of this ever-ready chivalry, I quote from an article by George Jacob Holyoake, entitled "John Stuart Mill as Some of the Working Classes knew him": "The first time he appeared at a public meeting and made a speech was at the Whittington Club, before a large tea gathering of co-operators with their wives and families. I was asked to urge him to speak, and I was as glad as surprised when he consented. Had it not been for the evidence of so many women taking interest in co-operative economy, he, I suspect, had not spoken there." In another place, Mr. Holyoake, in speaking of a monument contemplated to be raised to the memory of Mr. Mill, after his death, remarks: "If he should return to earth, I do not think Mr. Mill would ever go to see his own statue. But, if any one shall extend mental and sociological science, he would be sure to read their essays; and, if women wrote any of them, he would, if necessary, apply for further leave of absence in order to read theirs."

That gentleness of manner united with firmness of principle which characterized Mill must have been the attraction which most strongly invited Carlyle's friendship and the bond which cemented it for so long. It is refreshing, in reading Carlyle's wholesale diatribes against nearly everybody and everything, to come to any mention of Mill, who seems to have exerted a most soothing effect upon the rancorous philosopher. A few quotations from Carlyle's letters will show the estimation in which he held Mill. "Tuesday night," he writes to Mrs. Carlyle: "John Mill came in and sat talking with me till near eleven,—a fine clear enthusiast, who will one day come to something. . . . You will like Mill." "Of male favorites," he writes to his brother John, "John Mill stands at the top." And, again, "Mill's letters are too speculative; but I reckon him an excellent person, and his love to me is great." "Very kind letter from Mill, whose zealous approbation and appropriation of 'Johnson' gratifies me, I doubt, far more than it should. Unspeakable is the importance of man to man." "When you return to London, you must see Mill. He is growing quite a believer, . . . yet with all his old utilitarian logic quite alive in him; a remarkable sort of a man, faithful, one of the faithfulest (yet with so much calmness) in these parts."

Mill's indisposition to hurt the feelings of any one in controversy seems to have led his religious friends sometimes to imagine that he acquiesced in their views; for Miss Fox records in her journal that "Dr. Calvert, in speaking of the great humility compatible with high metaphysical research, spoke of John Stuart Mill standing on one side, and himself on the other, of his brother's [Henry Mill, who died of consumption at the age of nineteen] death-bed. Dr. Calvert remarked, 'This sort of scene puts an end to Reason, and Faith begins.' The other emphatically answered, 'Yes.' The conversation which followed, displaying much humility and deep feeling, and as coming from the first metaphysician of the age, was most edifying."

In 1834, Carlyle writes to his mother: "By far the

Digitized by Google

sensiblest man I see is Mill, who seems almost fonder of me than ever. The class he belongs to has the farther merit of being genuine and honest as far as they go." And to Dr. John Carlyle, "Mill is on the whole our best figure, yet all too narrow in shape, though of wide susceptibilities, and very fond of us. He hunts me out old books, does all he can for me." At a later date, he writes: "Mill and one or two of his set are on the whole the reasonablest people we have. However, we see them but seldom, being so far off; and Mill himself, who would be far the best of them all, is greatly occupied of late times with a set of quite opposite characters, . . . Fox, the socinian, and a flight of really wretched-looking 'friends of the species,' who struggle not in favor of duty being done, but against duty of any sort being *required*. . . . Mill is far above all that: . . . he is one of the best people I ever saw." Thus, throughout his correspondence, Carlyle speaks his lovingest word of the friend who perhaps more materially differed from him in opinion than any other of his intimates. Charles Buller, an esteemed friend and former pupil of Carlyle, who understood and admired both men, though he held opinions more in sympathy with those of Mill than with those of Carlyle, writes to the latter thus: "Conceive how great was my pleasure on learning that you had called on,—that you had come for the purpose of making acquaintance with John Mill, and that you had met him to your mutual delight. I knew well that to make you esteem one another nothing was wanting but that you should understand each other. But I did not do sufficient justice to the catholicism of both of you to feel quite confident that this would be the certain effect of your meeting. . . . In names and professed doctrines, you and John Mill differ as widely as the poles; but you may well meet on that point where all clear spirits find each other,—the love of truth,—which all must attain in their road to truth. To you, without any fear, I point out John Mill as a true utilitarian, and as one who does honor to his creed and to his fellow-believers, because it is a creed that in him is without sectarian narrowness or unkindness, because it has not impaired his philosophy or his relish for the beautiful, or repressed any one of the good, honest feelings which God gave all men before Bentham made them utilitarians."

The limits of this paper forbid the admission into it of many of the always friendly and often admiring allusions to Mr. Mill contained in the *Reminiscences of Carlyle* and *Memoirs of Caroline Fox*. Enough, however, has been given to show the truly social and friendly character of Mill. As a thinker and writer, he was strong, clear, logical; as a reformer, he was earnest, courageous, consistent; as a scholar, he was learned, exact, reliable; as a friend, he was loyal, trustful, helpful; as a son and brother, he was loving, beloved, and admired; as a lover and husband, he was devoted, constant, chivalrous, and almost romantic in the worshipfulness of his attachment; as a man, he was modest, truthful, philanthropic. In every divergent phase of social relation in which he is revealed to us, his character shines with added lustre; and we feel indebted to those who, in taking notes of their private intercourse with him, gave us the opportunity to know John Stuart Mill as we otherwise never should have known him through his published philosophic works or even through his modest, serious, self-analytic autobiography.

For *The Index*.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER VII.

Visit to Carlyle's Sister.—Co-operative Lectures in Toronto.—Interviews with the Canadian Government.

Among the attractions of Hamilton, not the least was the fact that it was the residence of Mrs. Hanning, Thomas Carlyle's sister, whose name occurs in recent books relating to the Chelsea sage as Janet Carlyle. Mrs. Hanning soon after her marriage, which took place when she resided near Manchester, went to Canada with her husband, and has resided in Hamilton many years. Her residence is what in England we should call a pleasant, detached villa. Quite a country garden surrounds it, from which she gathered a bright bunch of flowers for my daughter, when we visited her,—an act of pleasant, familiar country life at home, which made us forget that Niagara was hard by. A full-length sketch of her illustrious brother, in which he appears reclining against a wall in a careless manner, with hat in hand, hangs on the wall in the parlor. It appears to be a sketch of Count d'Orsay's. Carlyle was quite a young man then. Mrs. Hanning has a bookcase filled with the costliest editions of her brother's works, which he had sent her from time to time. All his volumes on Cromwell and Frederick the Great are there, and his last book on John Knox. They all bear affectionate inscriptions, written by himself. One book which interested me was one given by Mrs. Carlyle to Mrs. Hanning. It was when she was living near Manchester. It bears the inscription: "To Janet Carlyle, with Jane Welsh Carlyle's affectionate regards. Comely Bank, January 10, 1827." It was not long after her own marriage to Carlyle, and apparently she had not anything more costly to send as a memorial of her having entered the family. The book was one of her earlier school books, being a volume of examples in eloquence and composition of the last century, —a book which happily had not influenced her own style, which was natural, bright, and elastic beyond anything I observed in the book, which bore an earlier inscription than the one I have quoted,—namely, "Jean Welsh, 1806," written with attempts at ornament, and the letters dotted round as a child writes its name for the first time. The book was undoubtedly sent as a memento of regard, and might have been intrinsically interesting to Miss Janet, and no doubt was in some senses, since she has preserved it to this day.

Viewed in some aspects, it must be owned that Carlyle was the greatest ruffian in literature since the days of Dr. Johnson; but, like Dr. Johnson, he had the great redeeming virtue of honesty and heroic love of truth. But by idolizing power, without defining or limiting its uses, he has taught modern revolutionists a ferocity unknown heretofore. Nevertheless, no man has inculcated self-help and self-trust as he has; and his noble sense of justice was shown in the letters of his wife, which, at his desire, Mr. Froude has published, although the impressions they would make Carlyle knew would be against himself.

On remarking to Mr. Froude that to publish her letters was an act of justice to her memory, "Yes," answered the great historian; "but who thinks of doing justice to his wife"? The nature of the sisterly fidelity of Mrs. Hanning toward her brother's friend, Mr. Froude, the reader may see in the paper contributed by me to the *Nineteenth Century* for August. The object of these papers being to relate matters not elsewhere recorded, I say no more on this subject. No one who reflects can help admiring Carlyle, even while he blames him, since the things against him were published by his own order to vindicate his wife, whom, absorbed in his own ideas, he had neglected while she lived. The singular thing is that Mr. Froude—who published these works in obedience to Carlyle's wish, who implored him as his friend to do it—has been censured and, indeed, abused, as though he had been the author of the letters. It has really been very noble of Mr. Froude to incur all this censure himself, through fidelity to his friend; and it has seemed to me an act of justice to record that Carlyle's sister had honor in her heart for Mr. Froude.

As protection in America and Canada has considerable influence on co-operative success, it will be referred to here but briefly, as it is elsewhere spoken of in the article in the *Nineteenth Century*, already mentioned. People very prosperous are not likely to enter upon the slow, prudent, patient, but sure methods of co-operation. America and Canada being prosperous now, and so many avenues of enterprise being open to the people, co-operation will not be carried through from the inspiration of need, as it has been in England, but from the conviction that it saves trouble, takes adulteration by the throat, and makes equity profitable. Two effects of protection naturally make great impression upon people,—it appears to increase manufacturing enterprise and the public revenue. As, however, manufactures are supported by the people, who pay a higher price for them, and since the customs' duties are also paid by the people, who consume the articles imported, the protected people put their hands in their pockets to pay for their own "good times," which led Mr. Goldwin Smith to say one of those unrivalled phrases which abound in the *Bystander*, that governments imposing protection are under the impression that the people can be taxed into prosperity. George Eliot tells us that, in England, "a glorious war time was felt to be a peculiar favor of Providence toward the landed interest." In America and Canada, protection is the peculiar favor of Providence toward manufacturers. Besides, it has the moral effect of preventing working people becoming too rich, and thereby corrupted with the "filthy lucre" of this world. With a considerateness to the people not often shown by "their betters" elsewhere, manufacturers and dealers in these two countries take upon themselves the melancholy risk of being too well off.

An advertisement appeared in the Hamilton paper, saying that, "by invitation of a number of eitizens," I should deliver a lecture on "Parliamentary Oratory in England." Mr. B. E. Charlton, of that city, presided. Mr. F. Mackelcan, Q.C., and Mr. G. Tuckett spoke afterward. This was my first address in Canada. Of course, my object was not to illustrate oratory itself, but to explain, for the entertainment of those curious in the matter, the characteristics of the great parliamentary speakers during the last forty years, and the rhetorical principles by which their great fame was attained.

At Toronto, we had the pleasure of being the guest of Prof. Goldwin Smith, at the Grange, the most English manorial house I had seen in that country or America,—quaint, strong, and capacious, with endless dark-panelled rooms, bright with paintings and other signs of historic opulence. It was built, I understood, by an ancestor of Mrs. Smith, who held some high legal appointment in his day, which escapes my memory now. By request of the Co-operative Society of Toronto, made to me by Mr. Piddington, —at whose house I met many advocates of mark in the city who take part in affairs of progress,—I delivered my first lecture on co-operation in Canada, in the Albert Hall. Mr. Goldwin Smith presided, and opened the proceedings in a speech of that freshness, grace, and unfaltering precision, in which, to my mind, he excels Lord Coleridge. At the Oxford Congress, Mr. Goldwin Smith made a short speech, which will enable any one who heard it to recall his manner. The pleasant associations of that evening will long linger in my memory.

Before we left Toronto, Mr. Smith drove us through the principal parts of the city, showed us the glories of the university, and was at the trouble to go to the top with us, and from that distinguished eminence show us the far-extending glories of Toronto. To accompany us over a great building, over which he must have been so often, was more than civility.

We next proceeded to Ottawa, where I had the honor of interviews with the Premier, Sir John Macdonald, the Hon. J. H. Pope, the Minister of Agriculture, and Mr. John Lowe, the distinguished secretary of that department. Though the labor of preparing the Guide Book would fall upon him, he accorded it his indispensable approval. The Premier invited me to dinner at the Rideau Club, at which all the chief ministers of State were present. The only other Englishman present, besides myself, was the Hon. Mr. Bethel, of our own House of Lords. Another night, I and my daughter dined with the Minister of Agriculture, when several ministers were also present, and Mr. Bompas, Q.C., of England. Afterward, my daughter had the honor of accepting an invitation to luncheon with Lady Macdonald. Of course, these countless civilities are gratifying to me to record; but that would not be a sufficient reason to relate them. The better reason is that they show the friendliness of the Canadian government to the interest of the emigrant, whom they believe me to represent. In this way, pleasant facilities were afforded me of discussing with official personages the object and character of the guide-book which a European settler would welcome. Early in this year, such a book was issued, which, being compiled from materials collected by the government, written by its authority, and published over its name, the public can trust. At the time of its appearance, I described in the *Times* newspaper the interest and extent of information which Mr. John Lowe has infused into the work. Any secretary of a co-operative store or member of any society who would like to see this guide-book, and who sends me a post-card to that effect, I could, I believe, cause a copy to reach him free of expense.

I left Ottawa all too soon. In an uncalculating hour, I had accepted an invitation to speak in Mon-

Digitized by Google

treal, and telegraphed for further latitude of time, but was informed that personal invitations had been sent to more than three hundred citizens, including professional and public persons, which invitations could not be recalled. Having, as I trusted, some repute for keeping faith in my own country, I did not want it to be thought that my word was not to be relied upon abroad. Glad as I was with the prospect of visiting Montreal, I left Ottawa with reluctance and regret not yet extinguished in my mind.

CORRESPONDENCE.

MR. MOZOOMDAR.

Editors of The Index:—

The visit of Mr. Mozoomdar, of Calcutta, to our country, and his reception by the Christian churches, is a most interesting and important event, showing the progress in Free Religious ideas, and the larger feeling, not of tolerance only, but of cordial sympathy and respect for other forms of religion than that in which we were born and reared. I think the whole battle for Free Religion is gained by the admission that, outside of any special faith, human nature may attain to the great religious truths which are important for human progress and welfare.

I had the pleasure of hearing the Hindu preacher for the first time in Hartford,—the stronghold of Orthodoxy,—in the Rev. Mr. Twitchell's church. The pastor arranged the services, both of hymn and Bible-reading, to express a graceful welcome to the stranger, introduced him in a few simple words, and evidently listened to him with great interest and sympathy. Mr. Mozoomdar's address was admirable in its condensed thought as well as in its eloquence and pathos. His tribute to the character and personality of Jesus as the highest personification of the divine in humanity was more rich and glowing than I have ever heard from Christian lips, but I think it was slightly misinterpreted by the report in the *Courant* as a recognition of the special divinity of Jesus. It is reported that this liberal Brahmin is about to publish a book. I trust he will give us a full history of the important movement which he represents, so that we can fully understand its relation to the religion of India as well as to other forms of faith, and also its practical bearing on social customs and conditions.

Is the Religion of the Future to come to us from the East, as those of the past have done? I have no faith that a new sect can be formed at once, which will not become narrowed and corrupted as others have done. As Mr. Mozoomdar well said, the forms of religion will always depend upon the condition of the people who receive it; but every such movement toward larger and purer views will bring emancipation to many individual minds, though only a higher state of enlightened civilization will be able to embody them in churches or institutions. E. D. C.

CRITICISM.

Editors of The Index:—

I have just received two sample copies of your paper. I suppose it was your desire that I would examine the paper. I have tried to do so, and hope you will pardon the following free and open expression of my opinion regarding it.

In looking over the pages, I have been both pleased and pained,—pleased at the general appearance of the paper, pleased at the array of important subjects discussed, pleased especially at its exalted aim as indicated in those three beautiful words that stand at the head of the *title-page*, but pained to find in its pages the indiscriminate admixture of fact and fancy, of truth and error, especially of misrepresentation by which you hope to attain that object. This remark applies chiefly to the treatment which Christianity receives at the hands of your publication.

For example, in reading the articles, I am struck with this thought,—Christianity is held responsible for all the horrid crimes that have ever been perpetrated in that name. Let me illustrate. In the number for July 12, 1883, p. 16, after an elaborate array of historical *facts* which no man denies, I find this language: "Christianity has turned whole nations of freedom-loving men into slaves and flunkeys." Now, I am heart and hand with the author of that article in execrating Jesuitism and every other such ism with all their "Satanic incarnations"; but to represent, or rather *misrepresent*, that these are the outgrowth of the teaching and practice of Jesus Christ, I affirm is an outrage upon divinity and humanity, as well as upon common sense, reason, and history. The author of that article would have displayed an infinitely higher degree of good judgment, had he ransacked the United States for all the counterfeit money that has ever been sent afloat among the people, and then, because of the quantity and baseness of that coin, denounced our whole monetary system as a fraud and a failure. Were it not for overtaxing your patience and valuable space, I might refer to the number of "slaves and flunkeys" which *genuine* Christianity has liberated in our own and other lands during the last forty years.

Again, I am struck with the profound ignorance, manifested in some of the articles, of the principle of Bible interpretation. Suppose a chest is placed before you which *is said* to contain gold: you have no right to ridicule the idea *until* you obtain and employ the key which will unlock the chest.

A partial quotation of truth may be equivalent to a misquotation or a misrepresentation of that truth. Let me illustrate by referring to the article on "The Bible and Woman" in *The Index* for July 5, 1883. The quotations there are correct, but they are not *fundamentals* on that subject. Let me give the fundamental principle of the Bible relation between man and woman in a golden chain of quotations:—

Gen. ii., 24: "Therefore shall a man leave his father and his mother, and shall cleave unto his wife; and they shall be one flesh."

Mark x., 7. Christ says: "For this cause shall a man leave his father and mother, and cleave to his wife; and they two shall be one flesh."

Now, what does the expression "one flesh" mean? Let the apostle Paul explain:—

Eph. v., 28: "So ought men to love their wives as their own bodies. He that loveth his wife loveth himself. For no man ever yet hated his own flesh."

Such a love will annihilate every element of discord or inequality.

Now let the author of the article referred to take this fundamental principle and with it compare the Levitical law to which he refers and the quotation from the apostle Paul, or, as he might wish, the Pauline rule, together with all the circumstances of those times, and he will in all probability never again assert such a bald contradiction both of a Bible principle and of *historical fact*. I mean by historical fact the position which woman actually occupies to-day in the *Christian homes* of every Christian land.

Now, Messrs. Editors, I am a man who hails with joy the light of truth from every legitimate source; but I despise the principle that leads a man to shut his eyes against the light, and then positively and confidently affirm that the sun does not shine.

Whetever we may believe, let us not misrepresent the truth.

I am, most sincerely, yours for truth.

JOHN M. WYLIE.

ELIZABETH, PA.

ONE ARGUMENT FOR CREMATION.

Editors of The Index:—

No human love, veneration, or respect can by any possibility withstand the fearful mental shock of seeing the object on which such sentiment is centred after death in the natural processes of slow decomposition. Once seen, it cannot be forgotten. For this simple reason alone, I urge on thinking readers of *The Index* to forward the cause of cremation in place of burial as far as possible hereabouts.

No existing religious or civil custom need be altered to adopt this method of disposal of our dead; for the undertaker could be intrusted to remove the corpse in its coffin from the house or church to the furnace, and thence, in due time, the ashes to the grave. No one now interested in a given death could be thus shocked or interfered with, while the happy assurance would be had by the friends of the dead person that thus dust had gone to dust at once without anything of horrors to mar the restful remembrance.

The many potent arguments in favor of this disposal rather than any other of the dead bearing on health, private and public, are purposely not used here, as much more of opposition from sentimental grounds has to be met with than from any other, it seems. JOHN DIXWELL, M.D.

BOSTON, MASS., Oct. 6, 1883.

DIFFERENCES IN THE NATIONAL LIBERAL LEAGUE.—The National Congress of Liberals has failed, thus far, to attract that public attention which was expected; and the attendance of delegates is much less than was promised. The facts which lead to this state of things are these. Aside from the real honesty of purpose which inspires many of those connected with the movement, these people have differed as widely in certain points as they differ in the main from the adherents of the Christian Church, against which they make common war. In the first place, they have been divided into two pronounced factions on social questions and matters connected with the institution of the family. In this special field of controversy, however, those who hold to "old-fashioned" ideas—like Col. Ingersoll and Prof. Spencer of this city—have been forced to retire, and those who believe in "social freedom" remain in possession of the field. Again, the movement finds among its so-called followers two factions widely differing in political theories. The one faction holds to the most ultra-communistic idea of a paternal government; and the other seeks to limit the province of the general government to the smallest possible functions, and to vest the great proportion of power in the individual. And a third ground of wide difference is connected with the question of Spiritualism. One party in the movement holds to the doctrine of communication with the spirits of the departed; and the other contends for the materialistic school, holding that there is no conscious hereafter. This latter distinction is very marked among the local Liberals here, and has led to a lack of success in the efforts to bring about harmonious action. The actual machinery of the local league is in the hands of the anti-Spiritists. But the local league exists only on paper, and the Spiritists have held public meetings almost continuously for a long time without any charter from the National League. Again, Prof. Spencer, though ostracised by the National League because of efforts in behalf of what he claimed to be decency, is a power in matters; and, just before the meeting of the present congress, he secured the adoption of a resolution at a mass meeting of Liberals, disavowing all responsibility for any action which the national body might take. In the midst of all these circumstances, the National Congress has convened. One of the chief features of interest in the program of to-day's proceedings was further discussion of the platform suggested for the proposed Independent political party. The number of delegates in attendance has increased somewhat since the opening. The planks of the platform were discussed and finally adopted. At the same time, the congress was not prepared to take open ground in favor of the formation of a separate Independent party, but recommends that action be taken by individual leagues whose hope is entertained of electing candidates to office.—*Milwaukee despatch to Chicago Tribune*, September 22.

HELL IN THE HOLLOW OF THE EARTH.—Materialists are apt to deride hell, because they fear it on account of its intangible, spiritual nature. It is a dream of enthusiasts, say they. It has nowhere a possible existence in the universe. Let them listen to what geologists have to tell us. Geologists say that the earth is like an egg. The thin shell represents the ground or crust on which we walk; while, inside, the contents of the egg represent a mass of burning, fiery, molten matter, ever rolling and seething in the depths, and occasionally bursting up through the mountainous cones and undulations erected by it into steaming, all-destroying volcanoes of lava and brimstone. The recent horror of Ischia is an instance. Sometimes, these red-hot floods of ashes destroy thousands, overrunning towns and villages by the score. What if hell be here? There is room a plenty in the hollow of the rotten earth for all the wretch-shams of men who ever trod upon the surface. And there, perhaps, in undreamed-of torments, the spirits of the lost languish now, awaiting that day when a lower hell and more agonizing pain shall swallow them, body and soul. But, oh, what a thought, to think that, while we lie in some sweet covert or bower of summer verdure, and look out over the waving green of the pastoral fields, the white and yellow cottages of the husbandmen hid in vines and leaves, the singing brook below with the white pebbles in it, the azure of the sky overhead, the sun playing hide-and seek behind huge billows of fleecy clouds, all the while, beneath us, separated only by a thin crust of earth, the dwelling of the damned, the home of impurity and curses,

the wretch-abode of everlasting despair and fire and the worm that dieth not! What a thought, what a thought!—*Hugh P. McElrone, in the Catholic Review.*

BOOK NOTICES.

THE AMERICAN GIRL'S HOME BOOK OF WORK AND PLAY. By Helen Campbell. New York: G. P. Putnam's Sons. 1883. Price $2.00.

This beautifully bound and profusely illustrated book of four hundred and ten pages of clear type is just the present to make glad the hearts of thousands of girls during the coming holiday season. And no one present could combine more of the useful with the beautiful than this which contains so many guides to home amusement and instruction for girls from eight to eighteen years of age. In addition to the many parlor and out-of-door games described, instruction is given in such occupations as wood carpentering, wax-flower making, leather work, silk culture, strawberry culture, bee-raising, fruit-canning, poultry-raising, and many similar ways of earning a living. From the department of games, we quote a sentence as evincing how the Darwinian theory is now an accepted part of all literature and science. "As you grow older, you will often hear two sentences used by everybody, some knowing just what they mean, and many not at all. But they are used all the same, and are 'the law of natural selection' and 'the survival of the fittest,' applying just as much to plays as to people, and meaning for us that boys and girls, almost from the beginning of the world, have had sense enough to make plays that were pleasant and suitable for the place they were to be played in, and that, where there were too many, they were weeded out, and only those lived that were good and pleasant everywhere."

DIE LITERAER-UND KULTUR-GESCHICHTLICHE ENTSTEHUNG DES URCHRISTENTHUMS. Ein Vortrag von E. Schäger, Dr. Phil. Berlin. 1883. 31 pp.

This pamphlet on the literary history of the origin of Christianity is an interesting specimen of scholarly and reverent rationalism, and is especially remarkable for the impressive account given of Bruno Bauer's discovery that those cases of similar phrases in the New Testament and in the writings of Seneca, from which Roman Catholics have tried to make this brilliant free thinker appear to be a convert to the apostles, really prove that the Gospels and some of the Epistles were written by Christians of the second or third generation, who had learned liberal and philanthropic ideas from Seneca and other Stoics.

HEALTH NOTES FOR STUDENTS. By Burt G. Wilder, Professor of Physiology in Cornell University. New York: G. P. Putnam's Sons. Price 20 cents.

This is a compact treatise of hygienic methods, which "form the basis," according to the author's preface, "of four of the six lectures on hygiene which are attended by nearly all the students of Cornell University." The subjects treated are "Food and Drink," "Choice of Rooms," "Drainage," "Ventilation and Heating," "Clothing," "Bathing," "Sleep," "Exercise," "Methods of Study," "Stimulants and Narcotics," and "Hygiene and Morality."

A NOTABLE feature of the *Continent* of late has been its Reference Calendar, in which, at short intervals, the more important current events are recorded, and, in connection with each, an admirable summary of books and standard reviews covering the topics. This weekly magazine is combining with much skill the most excellent features of a weekly and of a magazine; and it is gratifying, but not at all surprising, to hear that the new idea so thoroughly well carried out is meeting with remarkable success.

PERSONAL ITEMS.

DAVID DUDLEY FIELD will soon celebrate his eightieth birthday.

MR. GLADSTONE has translated Cowper's hymn, "Hark! my soul," into the Italian.

B. F. UNDERWOOD will lecture at Montreal, under the auspices of the Pioneer Free Thought Club, November 4, 5, and 6.

THE efforts of Judge Hoadly's opponents in Ohio to make political capital out of his connection with the Free Religious Association did not prevent the people of that State electing him governor.

A CABLEGRAM has been received, announcing the death of Prof. William Denton, who for the past two years had been engaged in scientific explorations in Australia, New Zealand, and China. He is supposed to have been in Java at the time of the earthquake, and to have been one of its victims.

IN 1879, the University at Oxford conferred upon Turgeneff the honorary degree of doctor of civil law. The whole town was searched in vain for a university cap large enough for him. He had finally to content himself with his every-day black silk "stovepipe." The sight of such a hat over the Doctor's flaring red gown had never before been seen at Oxford.

DR. OLIVER WENDELL HOLMES recently said to a friend: "I have written much that I would willingly let die. The public have treated me beyond my deserts. It would be better if I should be found out in my lifetime. A Life of Emerson engages my whole attention at present, and whatever light reminiscent effort I am capable of in intervals of time must be put forth for the *Atlantic*. I receive every day requests to write for this or that publication, but I must decline them all."

THE *Radical Review* refers to our lamented friend, Mr. Charles H. Codman, as "a Boston gentleman who was a boy at Brook Farm, and whose face would always flush with joy at the mention of it. And, contrary to the usual order, the experiences of his youth were the dreams of his manhood. It was his dearest wish and hope to see another co-operative community. We are forced to speak in the past tense, since the last number of *The Index* brings to us the painful news of his death. It was Charles H. Codman. He was one of the directors of the Free Religious Association."

THE Martin Luther Society of New York expected to have ready for the Luther celebration in November a statue of the reformer, which would subsequently be set up at Washington. It is now announced that it will not be ready until February 1. The statue, which will stand thirty feet high, will represent Luther in a standing position with clerical robes, and the right hand resting on an open Bible. It will cost twenty thousand dollars, all raised by voluntary subscriptions throughout the United States. The work is intrusted to a German foundry, which has also in hand a statue of Luther and Melanchthon to be unveiled at Dresden in November.

THE pretensions of the late Dr. J. R. Newton as a miracle worker are considered by the Rev. Dr. J. M. Buckley, editor of the *Christian Advocate*, whose conclusion is that Newton was inclined to believe in himself. He convinced many thousands that they were instantly cured at his touch of command, and for eighteen years was crowded by patients wherever he went. Dr. Buckley was acquainted with him, and says that he was, as a healer, superior to any other contemporaneous operator in that line. He accomplished his wonders by the faith of the people and the concentration of their minds upon his processes with the expectation of being cured. His positiveness of manner had a controlling influence.

A GERMAN journalist gives an interesting account of the surroundings amid which M. Renan delivers his lectures at the Collége de France. The lecture-room is one of the smallest in the college, about thirty feet long and half as wide. Its principal furniture consists of a long table laden with old Bibles, an enormous blackboard, and a faded map. Its sole ornaments are two busts, one of Aristotle, the other of Quintilian. The audience is surprisingly small, consisting mainly of elderly scholars, with here and there a clergyman, a rabbi, or an occasional visitor. Renan appears punctually at the stroke of the clock. He begins his lectures in a quiet, almost indifferent sort of way, but soon warms up, and never fails to charm his hearers.

PHOTOGRAPHS.

Cabinet Photographs of the following named persons are for sale at THE INDEX office, and will be sent by mail upon receipt of price:—

Darwin, Huxley, Tyndall, Spencer, Holyoake, and Abbot, 50 cts.; Emerson, Parker, Garrison, Sumner, Curtis (G. W.), Weiss, Adler, and Hinckley, 35 cts.; Card Photographs of Adler, 25 cts.; of Higginson, Abbot, and Frothingham, 15 cts.

Address THE INDEX, 44 Boylston Street, Boston.

MRS. NEWHALL'S SCHOOL

FOR GIRLS AND YOUNG LADIES

Will reopen Oct. 1, 1883. Besides the regular courses in English studies and languages, there will be some work, each week, in the line of the new or **"creative method"** either with **tools upon wood** or in **modeling.** Another special feature will be a course of **lectures** upon the **great tone-masters,** illustrated with piano and voice. As aids to the study of History, Geography, and Art, **the use of the lantern** will be continued, and the **regular visits to the Art Museum.** For catalogues, address the Principal, 91 Newbury Street, Boston.

West Newton English and Classical School.

The ninetieth term of this Family and Boarding School for Boys and Girls will begin Wednesday, Sept. 19, 1883. For information and catalogue, address

NATH'L T. ALLEN,
WEST NEWTON, MASS.

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

"It seems to me admirable both in matter and in manner, and I hope it will have a wide circulation, as it is the kind of book people need."—*John Fiske.*

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.
For sale at THE INDEX office.

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

JESUS:

Opinions and Character.

A Testament Studies of a Layman.

...me and profound study have bec... for the thoughtful work entitle... *His Opinions and Character. The N... ament Studies of a Layman.* Whoeve... the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

The Basis of the Ethical Movement.

Why Unitarianism does not Satisfy us.

Two Lectures before the Society for Ethical Culture, of Chicago, by W. M. SALTER.

Price 10 cts. each. For sale at INDEX office and GEO. H. ELLIS, 141 Franklin St.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions, *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE QUAKER INVASION OF

MASSACHUSETTS. By R. P. HALLOWELL.

1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

*** *For sale by all booksellers. Sent by mail, postpaid, on receipt of price, by the Publishers,*

HOUGHTON, MIFFLIN & CO., Boston.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be *honestly* made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

CURRENT TOPICS.

A BILL granting women the right of suffrage passed the House of the Washington Territory Legislature on the 17th by a vote of 14 to 7.

AT an election for members of the Common Council, held in Berlin on the 18th, the anti-Semite ticket was defeated, the liberals obtaining a large majority.

A HANDBILL announcing a children's temperance entertainment given recently in Lawrence, Kan., contained the following: "The baby used on this occasion is furnished from one of the first families in town."

THE carriages of the fast train which is to run from Paris to St. Petersburg will be supplied with adjustable wheels, which will enable them to travel on various gauges. The speed of the trains will be one not hitherto attempted on the continent,—fifty-six miles (without stoppage) an hour. It is said that the trains are on the American pattern, including kitchen, dining saloon, reading and drawing rooms, and other comfortable arrangements essential to modern travelling.

THE civil rights law—which has, in its operation, justified neither the expectation of its supporters nor the predictions of its opponents, and which has just been declared unconstitutional by the Supreme Court of the United States—passed the House in 1875 by a vote of 148 to 113, and the Senate by 38 to 26. Butler, of the House, and Carpenter (who predicted that the Supreme Court would decide it unconstitutional), Ferry, and Schurz, of the Senate, were among the negative voters. Edmunds was the strongest advocate of its constitutionality.

THE English treasurer of the Tara Trust Fund, Mr. John Unwin, became bankrupt recently; and the fund, amounting to over one thousand dollars, was thus lost to the subscribers, members of the Anglo-Israel Society. As this sum had been raised for the purpose of excavating the Tara Mount in Ireland, in order to recover the deeds that were given to the prophet Jeremiah when he purchased the land of Palestine, and with its loss perishes the hope of recovering those deeds, our readers, we hope, will duly sympathize with the defrauded subscribers.

LIEUT. SIMPSON of the Third Cavalry was recently tried and sentenced to dismissal from the army for "conduct unbecoming a gentleman and an officer." The specification was that he had married a woman who had been his mistress. The judge-advocate-general refused to affirm the sentence, evidently not agreeing with the officers who constituted the commission, that a fellow-officer whose conduct before marriage, although illegal, passed uncondemned, should be punished for deciding to live no longer in violation of law, but to exchange his illegal condition for the lawful state of matrimony.

A POOR creature, a colored woman, was hanged at Calhoun, Ga., last week, in the presence of from thirty-five hundred to four thousand people. After a prayer by a minister, and the singing of "Jesus, lover of my soul," the prisoner made a speech in which she said: "I have heard they have said hanging is too good for me: that I ought to be burned. I hope they will repent like me and meet me in heaven, for there is no forgiveness here. Every tub must stand on its own bottom here, but up there I will get justice. . . . I hope you will all raise your children so as to meet me in heaven, and never stand on the gallows."

ACTING PRESIDENT FRIEZER of the Michigan State University, in his annual report to the regents of that institution, says: "The State of Michigan is a Christian State, and her institutions are founded and governed upon Christian principles. Christianity, therefore, is not merely tolerated in the university, not merely not proscribed, but is unhesitatingly honored and cherished. Our dependence upon God is acknowledged in the invocation of his blessing on the meetings of the regents, and in the public exercises of prayers in the chapel throughout the year." Michigan is a State in which vigorous agitation of State secularization is evidently much needed.

THE United States government, it seems, does not consider itself amenable to the rules of the Society for the Prevention of Cruelty to Animals; for, recently, an officer of the society, having been notified that many of the oxen used in the navy yard were, by reason of age, unfit for work, called at the yard, and, seeing two emaciated oxen hard at work, ordered their driver to unharness them. The team was stopped, but the driver insisted that he was obeying the orders of his boss. The boss was seen, but he sent the officer to the head of the department: from there, he was sent to the commandant. He was everywhere told that he had no jurisdiction, and that he had no right to interfere with the national government, and at last left to get further instructions from the society's officers.

THE Adventists of this country will have to look out for their laurels. It is now some time since a real "end of the world" boom has been organized and led by this sect, to whom such boom strictly belongs. But, despite the apathy of our Adventist friends, the world is "coming to an end" all the same; but it is the Moslems of the East who are the prophets of the new revelation concerning the end of our little world. "Tradition declares that in the present month, during the Ramadan fast, the sun shall rise in the west, the day of mercy and forgiveness shall cease, and that of judgment and retribution begin. Thus, a proclamation has been issued from Mecca, warning all true believers to prepare for the coming day, which, the *Times* of India tells us, has been widely circulated, and has created a great impression. A fanatical pilgrim to the prophet's tomb at Medina, Muhammed Saleb, declares that Mohammed appeared to him in a dream last March, and warned him of the approaching end. There are twenty-five signs to be fulfilled before the great day; and some of these the Mohammedans already recognize, the closing signs being the coming of Iman Mahdi, the director, with his troops, bearing black ensigns, and a mighty wind which shall bear away the souls of all who have but a grain of faith in their hearts. After the Mahdi's reign, the trumpet shall sound two blasts, the dead shall rise, and the judgment begin."

AT Foxon, about four miles from New Haven, a score of persons were arrested on a recent Sunday for "violating the Sabbath." The warrant for their arrest was based on a law enacted in 1702. According to accounts published in the papers, just on the borders of Foxon, standing by the roadside, are a number of walnut trees, under and around which the ground is thickly covered with fallen nuts. Persons riding by stopped, and gathered up a handful of these nuts. Twenty, six of them women, were arrested by a couple of farmers acting under authority from a constable and a grand juror, and kept in an open barnyard, in a drizzling rain till evening, when Justice Tuttle of East Haven opened his court-room and the prisoners were marched in before him. He demanded a $25 bond from each. Those who could not give it were locked up all night. The next morning, the same justice imposed a fine of $3 and $2.94 costs on each offender. The only evidence required was the testimony of the deputy constables that they detected the parties riding along the public highway on the Sabbath. None of the prisoners could claim that their riding that day was "an act of necessity or mercy." In no instance did the officials attempt to halt a carriage that passed without stopping. It is stated that some of the persons arrested are ill from the effects of long exposure in the rain. "Religion" is not likely to gain converts by legal injustice like this. This old "blue law" of 1702 should be repealed; but, until repealed, it should be, as it generally is, disregarded, and the meanness of those who take advantage of it to persecute people should receive the severest condemnation. There is no State in which there is greater need of united and organized effort for State secularization than the State of Connecticut.

"CHRISTIAN HONESTY" IN GIRARD COLLEGE.

In a recent issue, the New York *Independent*, among its editorial notes, had this significant paragraph: "We have our opinion of the Christian honesty of getting around the prohibition of the founder of Girard College, as to Christian ministers entering it, which is reported. It is said they have a chapel in the institution and get young, *unordained* theological students and others to do the regular preaching."

It were to be wished that the *Independent* had followed up the report in question, and spoken out its "opinion." It is quite time that the trickery which is going on in Girard College, in order to get around the intention of the founder with regard to the religious indoctrination of the pupils, should be fully exposed and called by its right name. And it is quite time that organs of the evangelical denominations, to which the managers of the college appear to belong, should speak out in clear condemnation of those managers' doings, and not cease to speak until they are brought to their moral senses. Opinions from such quarters will have a chance to be heard. The opinion of *The Index* will be regarded as only the voice of an enemy. Yet we are in a position to assure the Girard trustees and managers that their action in this matter is doing more to make sceptics toward the Christian religion than would a hundred colleges conducted in the way in which Stephen Girard meant this should be. We can assure them that there are thousands of fair-minded men and women in this country who are watching their management, and, if it be not changed, are ready to say, "If this be the outcome of your Christian faith and zeal, the less we have of such faith and zeal the better." These men and women are not scoffers: they are not even such as you are wont to call infidels and atheists. They are honest, earnest, intelligent inquirers and believers. They have not as yet discarded the Christian name and doctrine. They would treat with respect your intellectual convictions so long as sincerely held and honestly maintained. But, when they see your efforts to maintain and propagate them by subterfuge and trick and stratagem, to the end of cheating Stephen Girard's intention out of its fulfilment, they are likely to turn their backs upon convictions that can incite to or even tolerate such practices.

Whether the particular report to which the *Independent* alludes, that "*unordained* theological students" regularly preach in the college, be well founded or not, it is really no more than was made public a year ago with regard to the methods of giving religious instruction there. When President Allen died last year, his death was especially lamented by some of the evangelical friends of the college, because of his great talent, though a layman, for instructing the students in religion. The *Sunday School Times*—though candidly admitting that Girard meant to exclude from the college, not merely clergymen, but the kind of instruction which they are accustomed professionally to give—said that "President Allen had himself done the work of a clergyman in the college"; and the *Times* exultingly added that divine Providence had so far overruled Girard's intention that to a Christian layman is given "the privilege of proclaiming Christ and his salvation in Girard College."

Now, when it is remembered that Girard, while directing in his will that the students should be carefully educated intellectually, morally, and physically, expressly prohibited any provision for instructing them in the tenets of any sect or church or religious faith, no word seems too hard to describe the perfidy of the act by which this prohibition has been annulled, and the funds which were given for the endowment of a purely secular school have been perverted to the service of teaching those theological tenets which the *Sunday School Times* sums up in the phrase "Christ and his Salvation." We know that the attempt is made to justify this perversion, on the ground that the United States Supreme Court so decided. But we know also that the court's decision, though not, in our opinion, a fair interpretation of the will, did not go to the length of such perversion as this. That decision was that, in order to train the pupils, as the will enjoined, in the "purest morality," they would have to be instructed in Christianity, but that that instruction must be given by laymen, and be entirely "non-sectarian,"—that the Bible, "especially the New Testament," might be read, but "without note or comment." It is evident that the court did not have in mind any such religious instruction as that over which the evangelical *Sunday School Times* exulted as being to-day given in the college. Nor do we believe that the court would have given its sanction to any such subterfuge as that by which it is openly boasted that "the work of a clergyman is done in the college," though by an unordained man. The Supreme Court would never have attempted to get round the will by such a verbal quibble as that. If it had, it would have given its power to the perpetration of a scandalous fraud. In admitting unordained men to the college to do the work of clergymen there, the trustees claim that they are strictly observing the letter of Girard's will, though all the time they are breaking its spirit and intent, and know that they are. The Supreme Court did not lend itself to any such dishonesty as that.

Liberals are sometimes tauntingly asked by Christians, Where are the colleges and asylums which your free thinkers have endowed? They may answer, We should have had at least one in this country,—an orphan asylum and college together, and endowed with a munificence beyond any other institution of learning in the land,—if Christians had not stolen it. WM. J. POTTER.

UNITARIAN PRESBYTERIANISM.

Mr. Underwood's recent article on Unitarianism affords opportunity for saying a word upon what seems to me the primary cause of such "sufferings" as liberal Unitarian ministers* may endure and of the certain failure of the Unitarian Church to take the strong position in our society which some think it ought to take, and which would seem to be so easy.

This cause is also the cause of the "sufferings" and obstruction in the Congregational churches of New England. It is the recreancy of the churches of both denominations to the simple polity which they profess,—the Independency of John Robinson and Robert Browne. Both churches have become Presbyterianized. The congregation is neglected, the denomination magnified more and more. The successive troubles in the Congregational churches during the last ten years have almost all come from this Presbyterianism,—the abdication of judicial and executive functions, the giving up of independence by the congregation, and the calling of a council of outside clergy to sanction or veto its measures, be it the choice of a minister or what not. The action of these councils, when they have asserted themselves at all, has almost invariably been such as to hinder progress; and so it will always be, so long as such councils exist. As the conversation in general polite society is fated, according to Goethe, to adapt itself to the level of the smallest minds present, so, in the synod, as the history of New England Congregationalism has shown a dozen times in a dozen years, the thing which sets the tone and makes men, who are elsewhere reasonably independent, as dumb here as sheep before their shearers, is the obtuseness and traditionalism of the common Philistine, who is sure to be in the majority. Lessing had well observed a hundred years ago, and this anent ecclesiastical assemblies, with which he had very considerable experience, "that half a dozen reasonable men, when put together, often don't amount to more than one old woman." And I think that no one can contemplate the anile formulas which have come from Saratoga, sealed with the seals of reasonable and worthy men, all of whom seemed to go thither firm in Channing's faith about creeds and creed subscription, without charging the phrase with much new power. The whole genius of Presbyterianism is rigid and repressive, just as the tendency of genuine, self-trusting Congregationalism is liberal and progressive.

The greatest mischiefs which have come to Unitarianism have come from this Presbyterianizing, this attempt to put upon individual congregations the yoke of bondage to some formula or legislation devised by some general synod to which they unsuspectingly bartered their independence. If we were to put into one word the cause of nine-tenths of the "sufferings" of liberal Unitarian ministers to-day, that word would be *Saratoga*. The sufferings, the obstruction, and the impotence are the result of infidelity to the first principle of their polity. And just as long as congregations professing independence delegate the right of making creeds and laws, just so long will there be suffering and paralysis; and so long there ought to be. If ministers had to deal simply with their own congregations in point of doctrine, there would never be any of that mischievous jealousy and recrimination that we have heard so much of in these last years. The trouble always comes from the ghostly Saratoga shibboleths, Presbyterian superimpositions, which nobody seems personally very responsible for, and which have no rational excuse for being, but whose contemptible annoyances are the just penalty, vicariously endured, of somebody's unintelligence and careless tampering with birth-rights.

Magna Charta and the Dutch *Great Privilege* were chiefly mere reassertions of rights long recognized and fundamental, but fallen into abeyance through encroachments and neglect. It is high time that the Unitarian congregations and ministers of the country reasserted their *great privilege*, —the privilege of honest Congregationalism or Independency. No new minister is bound by any Presbyterian definitions, and none should tolerate for a moment the assumption that he is; and every "minister with liberal ideas" identified with any congregation which has in any way admitted the Presbyterian bondage should hasten to repudiate it for himself, and refuse to act in a representative capacity in any conference or convention where the polity of Independency is not faithfully respected, and where the attempt is made to dictate creeds to the congregations.

Let there be twenty years of honest Congregationalism in the Unitarian Church of America, and I should be very much surprised if an effectual end were not made to the unedifying spectacle of Unitarian ministers asking grace from our common Father "for Christ's sake," and of the sacrament of the Supper still kept up—so poorly has

*I may be permitted to say, correcting Mr. Underwood's article on a minor point, that I never prepared myself for the ministry of the Unitarian Church, and never in my life had any serious intention of entering that ministry.

Emerson's lesson been learned—after the form has become so lifeless and unreal that obliging non-church-members have to be called on (as was actually the case in one Massachusetts church this month) to help in passing the bread and wine to the apologetic array of communicants.

This matter is important to every one who has at heart the interests of rational religion in the country; for it seems to me still that, whatever faults there may be, there is no definite quarter to which the cause may look so hopefully and from which it must expect to draw so much as from our Unitarian congregations. The general liberality and breadth of that Church's leading and younger men seems to me notable. I do not find in any *class* of men a better combination at once of rationalism and religion,—a glad readiness to welcome all knowledge, and a generally firm and intelligent hold of Idealism (which means, first of all, genesis in the Idea), and confidence in the eternal nature of the mind,—faith, in more religious phrase, in the living God and the immortal soul. These beliefs, which to me seem fundamental in religion, I suppose generally to obtain in all the Unitarian congregations, radical or conservative. If a preacher should persistently slight these or run counter to them, I suppose he would "suffer," as I suppose that I myself should "suffer," were I to minister to a congregation of men, agnostic or negative as to these positions. That is simply the common law of life, of which nobody has any reason to complain; and I suppose that every one of us who preaches or teaches in any way, in pulpits or out of them, learns very soon that congregations or audiences are not given him simply to reflect and indorse and applaud his opinions, but to be slowly and patiently and painfully transformed, through much misconception and many wrongs, into conformity with the truth that is in *him*, if so be any truth indeed be in him.

As concerns this general question of "suffering," in cases where there is essential disagreement between minister and people as to doctrine or method, my own candid opinion is that the suffering is quite as often greatest on the part of the congregation as the reverse. And I may be permitted to add that, in most cases of collision or friction, it has seemed to me that the congregation was not the least patient and indulgent of the two parties. Representing, as in some poor sort I do, the pew and not the pulpit, I feel bound to say thus much in behalf of the much-abused congregation, which seldom enough finds anybody to take up the cudgel on its side. Even in cases where ministers "of liberal ideas" have really "suffered," I think that, in nine cases out of ten, it has been owing to no serious antagonism to the "liberal ideas" in themselves, but to the dreary, everlasting iteration and reiteration of them, through fifty-two Sundays of the year, by special students, who imagine common humanity to be as much interested in their specialties as they are themselves. It seems to me that all of us "Liberals" need to realize that our "Liberalism," after all, touches but a very small part of this great, rich, deep, needy, human life; and those who are forever harping upon the one string of "enlightenment," whether as concerns our remote ancestry or anything else, must expect to find themselves grow uninteresting to the mass of warm-blooded men and women. It has seemed to me—I may be antiquated and altogether wrong, but it has seemed to me—that our liberal preachers as a class deal far too often in their pulpits with critical and sociological generalities, forgetting that there is such a thing (some of us at least are still naïve enough to believe it) as *the personal religious life*. Most men and women, worn almost threadbare by books and newspapers and lectures full of critical and sociological generalities, look upon it as a very special function of the Church, or whatever attempts to do the Church's work in the world, to recognize and minister to this very signal factor in human nature. There is no reason why this ministry should not be best performed by the most "enlightened" men; but one thing is certain,—that, where men cannot get religious inspiration along with the most pronounced "enlightenment," then they will get it with the next best thing. For my own part,—who represent poor human frailties, I have always imagined, in a very average sort of way,—I must frankly say that, here in Boston, I go again and again from the perfectly correct discourses of most "enlightened" men to the sermons of one of deep spiritual insight and experience, like Phillips Brooks,—who may speak of Jesus a dozen times in a sermon in phrase not squaring with my canon,—with a sense of almost infinite satisfaction. To one who has a shilling's worth of the historic consciousness, whose intellectual pabulum has been something other and more varied than *Aufklärung* pamphlets, and who thinks, in listening to a great prophet of the soul, of many things quite as important as the squabble in the last newspaper, the antique phrase finds easy translation into current thought; while for the lack of religiousness and genuine humanism in the preacher nothing can compensate.

Meantime, as concerns Unitarianism, it is pleasant to note that strength in the various congregations seems generally in proportion to the rational and progressive tendency. The assertions of Dr. Putnam and others, in the recent controversial passage, seem precisely counter to the facts as they appear. The general appearance surely is that, where a Unitarian congregation is trying to maintain a galvanized Orthodoxy, there is inefficiency and death; while, where we see a resolute and hearty devotion to the new science and the new faith, there we see movement and enthusiasm and accomplishment. EDWIN D. MEAD.

TRAVELS IN FAITH.

III.

I had made a voyage to Spain as a passenger, and was about to start on a voyage to England. Sea life had deadened my religious impressions somewhat; and the profanity which prevailed on shipboard had become familiar to my ear, though not to my lips. My brother and I had a small billiard-table in an upper room, upon which we had given instructions to some of the deacons' sons, to the scandal of certain good ladies of the parish. A pious and faithful servant, who had been sixteen years in the family, tossed this table out of window one night; and we rescued it, badly broken, from a neighboring yard the next day. That night, as Barbara sought her couch, her bed collapsed in ruins, and proved that "Providence" is often on the side of small boys as well as of "the heaviest artillery." Let me record here that, one spring, when the snow melted in the West Roxbury woods, old Barbara was found peacefully sleeping her last sleep, with her head upon her muff, she having strayed away in the fall in aberration of mind and laid herself down to die.

The billiard-table was repaired after a fashion, though its bed was hardly a dead level; and, during one exciting game with my brother, I startled him and myself, also, by uttering my first oath. That evening, my father called me into his study, and asked me if I did not feel that I could call myself a Christian. I answered, "No." He then asked me to write out a statement of my religious feelings which he might read to the examining committee of the church, saying that he would like to have me make some sort of an avowal before sailing upon another voyage. I did this, and accompanied him to the meeting, where my letter was read, and some of the good deacons put questions to me, which I answered; but I told them frankly I did not feel warranted to call myself a Christian. The next day, I was astounded at being told by my father that I was accepted for admission to the Church. My brother was little less than thunder-struck, for he evidently considered me less pious than I had ever been. My father said he had long believed I was a Christian, without being conscious of it myself, and that, if I would begin and endeavor to live like one, the evidences would come to me. After my voyage to England, I decided to adopt the sea as my profession; and, accordingly, I shipped before the mast in a clipper ship, bound on a voyage around the world. At my father's request, I joined the Church; and I gradually accustomed myself to the belief that I was a Christian.

I soon after entered upon life in a ship's forecastle. My surroundings were not what would be called edifying, nor would they be considered "means of grace." My church vows were a conscious restraint upon me, but neither these nor the fear of God exercised so strong a hold upon me as my father's love. He had been both father and mother to me; and my reverence and affection for him were so great that he always controlled me without commands, his usual utterances being, "I wouldn't do so," or "I think you had better not do that." Now that I was separated from him, in any temptation the first thought that came to me was, "What would my father say?" And this so governed me that, after years of roving about the world, I was able to say to him I could not recall an act that I should be ashamed to tell him.

For two years, between the ages of seventeen and nineteen, I remained on shore in a counting-room in Boston. Being thrown again into religious surroundings, and a great revival being then in progress all over the land, I began to test my evidences of conversion. I recalled the manner of my joining the Church; and, realizing that I never had anything like the ecstatic sensations which were proclaimed on all hands by new converts, I fell into despondency, and regarded myself as a false professor; feared I had committed the unpardonable sin, and grieved away the Holy Ghost; and that, in partaking of the Lord's Supper, I had eaten and drank unworthily, and had thus eaten and drank damnation to myself (I. Cor. xi., 29). For some months, gloom and despair haunted me, and I could understand why people committed suicide; but, at last, I resolved to think no more of the past, but to be a Christian from the present. A paper of Addison's in the *Spectator*, No. 465, "Means of Strengthening Faith," greatly assisted me, especially his first rule,—that, being once convinced of the truth of any article, we should never after suffer ourselves to call it in question; and my father taught me that joy and peace were not invariable accompaniments of conversion, but were blessings which God, for wise purposes, might sometimes withhold for a time. Now, I began a truly "religious life": became a Sunday-school teacher, picking up my class from the streets and in house to house visiting; distributed tracts on the sly, dropping them on the Common or leaving them secretly on seats; made addresses at neighborhood meetings among the poor, and started a young men's prayer-meeting. The pastor and deacons disapproved of this, and thought we should exercise our gifts in the church prayer-meeting. After a while, we yielded to their desires; and they took pains to "bring us forward." I used to crouch

Digitized by Google

behind a pillar at the Friday evening prayer-meeting, dreading the words, "Brother A., will you lead in prayer?" This became a great bondage to me; and the happiest moments of the week were when the leader said, "We will close with the doxology," and I had escaped a call. All the week, I dreaded the approach of that evening, yet never failed to attend, and sometimes refused most attractive invitations, because they came on prayer-meeting night. The joyous life that many of my acquaintances led, by comparison, increased the sombreness of my own; and I recall these two years as the gloomiest period of my life.

My health obliged me to take to the sea again; and I followed it steadily for several years, working painfully through all the grades of third mate, second mate, mate, and captain. The life was always uncongenial to me, and unsuited to my disposition and tastes; but I accepted it as a providential calling, and, by faithful devotion to duty, I in a measure overcame the lack of natural aptitude.

My voyages were mostly long ones, in "deep water," as sailors say. Though I made short voyages to the Mediterranean and the Baltic, California, China, the East Indies, and British India were the most frequent destinations. I sailed twice around the world, and several times half-way around, and back the same way. Seven times I sailed past Cape Horn, and ten times I passed the Cape of Good Hope. The distances sailed on the various voyages amount to about three hundred and fifty thousand miles.

For several years, I accepted implicitly the scheme of theology in which I was educated. If a question arose about any doctrine, I consulted the catechism and the Bible; and, if the latter was not intelligible, I referred to Scott's Commentary for an explanation. What satisfied Thomas Scott's intellect I thought should be sufficient for my humble mind; but, if a final appeal became necessary, I consulted my father's book, *Evenings with the Doctrines*, and that settled the matter. Doubt was sinful, and sceptical or controversial works were to be read only by trained theologians who had been skilfully educated to combat them. The Catechism got well mixed up in my mind with the Bible and Milton's *Paradise Lost;* and a Methodist Bible-class leader at the Young Men's Christian Association, good Captain Sirdler, snubbed me painfully, when I asserted, in reply to his attacks upon election, that the Bible said God "hath foreordained whatsoever comes to pass" (using the words of the Catechism). I never had really thought for myself upon religious doctrines until my first voyage as master of a vessel, when, on an East India voyage, I visited the ports of Singapore and Penang. There, I met some English missionaries who held the doctrines of the Plymouth Brethren; though, when asked if they belonged to that sect, they answered, "Oh, *dear*, no!" I learned afterward that the Brethren had differed upon some such question as whether Christ would have sinned if he could, or could have sinned if he would; and those who held to the "peccability" of Christ were excluded from communion with the Plymouth body. A very bitter conflict arose; and any one who had not "judged the evil" was worse than a heathen to the original sect, led by John Darby. These good men first instilled dissent into my mind. I was a strict Sabbatarian, and they startled me with the declaration that the Lord's day was in no sense the Sabbath. I belived in infant baptism; and they taught believer's baptism, with immersion as the mode. I had taken in all Scott's spiritual interpretations of the Old Testament prophecies and his theory of the Book of Revelation, which maintained that nearly all its prophecies had been fulfilled in past history, and soon the "drying up of the Euphrates"—which meant the decline of Turkey—would be followed by the millennium. But these Brethren taught the principle of the literal interpretation of the Scriptures,—that they might be read and understood without note or comment by any one who undertook the task under the guidance of the Holy Spirit. They declared that God meant what he said, and that it was a sin against the Holy Ghost to explain away the direct meaning of his words by interpreting all the promises made to the Jews as foretelling blessings to the Christian Church. This principle led to the theory that the Jews would yet be restored to Palestine, Christ would appear to the select few on earth, and they would meet him in the air with the dead saints, who would rise in the first resurrection. Then, the "marriage supper of the Lamb" would take place, and, in the mean time, antichrist would gain power over the earth; but, at the height of his persecutions of the Jews, Christ and his followers would appear "in flaming fire, taking vengeance on them that know not God." Then, the kingdom of Christ would be established upon earth, and a thousand years of blessedness would ensue. After which, a brief and decisive conflict with Satan would follow, and the second resurrection and last judgment would end the record of this present world. They objected to the present one-man ministry of the churches, and declared that the New Testament taught the liberty of ministry of all believers, according to their gifts. They made much of the indwelling and guidance of the Holy Spirit. Their disapproval of commentators was chiefly directed toward the standard works; and they urged me to read Macintosh's *Notes*, and gave me a good supply of tracts relating to their views. I studied the Bible diligently at sea, and in time came to accept many of their doctrines.

I especially saw that Jesus foretold, and the apostles believed in, his speedy return to the earth to destroy the wicked and establish his kingdom; and the system of interpretation, which made all these yearning hopes, expressed on nearly every page of the New Testament, to be merely prophetic forecasts of spiritual blessings to the "Church" two thousand years later, did violence to all my conceptions of the common-sense way of treating language. Let any one read what Paul says, "by the word of the Lord," in I. Thess. iv., 13–18, and say if the expression "*we* that are alive and remain unto the coming of the Lord," and the whole tenor of the passage, does not require the honest admission that these events were looked for during the lifetime of some then living. They were mistaken, and Paul's inspiration was disproved; but the Brethren found some ingenious excuses to save this last admission, though I now see them to be as dishonest as the theories I abandoned.

While at sea, I took much interest in the welfare of sailors. In my early experience, I saw and heard a good deal of the hardship and abuse which came to their lot, much of which seemed to me unnecessary. To improve their condition on shipboard, I studied control by moral suasion, improvement in food, and in the hours and methods of work. To enable them to overcome the temptations of life in port, I endeavored to elevate their characters by moral and religious instruction, and their minds by lectures and educational classes. Religious services were held, Bibles and tracts freely supplied, and temperance pledges obtained. The result commended all these measures to my mind. A few cases of conversion occurred; and, on one voyage, five professed "a change of heart." I wrote an account of this voyage for publication, and inserted narratives of the religious experience of the sailors. I afterward heard such reports from four out of the five that I felt obliged in honesty to withdraw these records and publish the book without allusion to them. My views about sailors will be found in *On Board the "Rocket."*

I found it easy to secure resolutions of moral reform, but felt disappointed in my efforts to secure "conversions." The influence during the voyage just mentioned was largely through a sailor who was converted in the first month of the outward passage, an ignorant but intensely enthusiastic man, who aroused the emotions of his shipmates. I preached "the pure gospel" over and over,—sin, eternal doom, and the atonement. But I thought often I should have succeeded better, as to the number of my converts, if I could have been more passionate and less rational. Orthodox conversion is oftener the result of feeling than of reasoning. "Religion off Soundings," a little pamphlet published by the American Seaman's Friend Society, gives my ideas about religious effort at sea.

On my East India voyages, we called, for the last port, at Padang, on the west coast of Sumatra, to fill up with coffee and cassia. The consignee, a kind and intelligent Dutch gentleman, invited me to reside with him; and often, in the evenings, we sat on the spacious veranda, stretched out in reclining chairs, in those free and easy attitudes which Eastern travellers will recall, and my host sometimes indulged in attacks upon the Bible representations of the Jew's Jehovah and the Christian's God, while I stoutly defended the inspired Word of God. The waving palms, the balmy air filled with delicious scents, the singing beetles, the glistening fire-flies, the tinkle of the Swiss music-box, and the luxurious repose were suggestive of paradise; but most incongruous seemed these blasphemous attacks upon what were to me the most sacred ideas.

I found infidelity very prevalent in the Dutch settlements of Java and Sumatra; and I was told that a large number of infidel books had been scattered there some years before, and had produced a marked effect. The Lutheran minister at Padang preached orthodox sermons on Sunday, as obliged by the government under whom he held his position; but, on the week days, he told his hearers privately that he did not believe the doctrines he preached. Upon my return home, I fortified myself with tracts and books on the inspiration of the Bible; and, studying these at sea, I vigorously contended with my sceptical friends, during subsequent visits to the East India ports. I never heard that I made any converts; but, on the other hand, I got my mind impressed with many forcible arguments against the puritanical theology that I had been taught to regard as the final form of truth.

ROBERT C. ADAMS.

EDITORIAL NOTES.

THE *Medical Times and Gazette*, an English journal, states as a "remarkable" fact that there are in the House of Commons thirty-four or thirty-five members who are total abstinence men.

AMONG the vice-presidents of the British Association for the Advancement of Science are Prof. Huxley, Lyon Playfair, Dr. Charles William Siemens, the Marquis of Lansdowne, and the Marquis of Lorne. The next meeting of the Association is to be held in Montreal, Canada, in August of next year.

A METHODIST congregation in Canada has set a good example to other denominations by striking out the word "obey" from the marriage service.

Digitized by Google

At present, their clergyman is likely to obtain the monopoly of wedding fees in the town, since the wishes of the bride generally governs in the choice of the one selected to tie the nuptial knot.

THE Shah of Persia, if a liberal and generous ruler is also a shrewd one, as is evidenced by his making the following conditions in granting leave for the Presbyterians to erect a chapel for the use of the Protestant community in Teheran,—that Mussulman children shall not be admitted to the chapel, and that no other Mohammedan, of whatever age, be allowed to attend service or receive religious instruction there.

THE *Nation*, referring to Rev. Talmage's expressed wish to have Gen. Sheridan sent to Utah to slaughter the Mormons in order to put down polygamy, says: "If he is wise, however, he will drop this view, because, if the practice of suppressing disagreeable people by 'the sword' should ever creep into American life, he himself would certainly perish by violence. Thousands in this city already favor the use of the army against him, and are only restrained by that general peaceableness and humanity of the American character which he is trying to break down."

W. T. HARRIS, eminent as a teacher and philosopher, thus arranges the fourteen prominent nations of the earth in the scale of civilization, taking into consideration the morality, education, liberty, and material prosperity of the masses, religion being left out of the question: 1, United States; 2, England; 3, Germany; 4, France; 5, Austria; 6, Italy; 7, Spain; 8, Russia; 9, Turkey; 10, Persia; 11, India; 12, Egypt; 13, Japan; 14, China. And now some of our exchanges are exercised over the question as to whether Judaism or Christianity is to receive the credit for the foremost ones.—*Unity.*

THE coming Luther celebration seems to excite the ire of our Catholic friends; and the *Catholic Mirror* denounces him as "a gross, superstitious, drivelling scoundrel," while the *Catholic Review* declares that it would "transcribe a few of Luther's sayings," for the information of the people in regard to his true character, only that it writes "with the fear before our eyes of public decency, if not of the postal laws relative to obscene literature," and affirms in addition that "the great reformer was a most virulent and fanatical opponent of government by, for, and of the people. It was this phase of his character that made him Carlyle's darling."

ROBERT COLLYER tells this story with a moral: "There was a young man sent to Chicago a few years ago to set all the heretics right, and to bring everybody back to the old grooves of Calvin. 'Of course, we replied to him,' said Dr. Collyer, playfully: 'we had nothing else to do, and thought we might as well.' A friend had remarked that perhaps it was not worth while; for, as the champion of Calvinism was only a young man, he might improve. 'No,' said Dr. Collyer, 'he is not a young man. He takes up Calvinism exactly as Calvin left it; and, as Calvin died in 1564, this young man is just about three hundred and seventeen years old!' When we see a man who was born in a pent-up creed getting glimpses of some wider, better thing, in calculating the probabilities of his realizing his thought, we must ask how old he is. If he begins too late, he will probably end too soon."

In the October *Century*, in an article on outdoor "Industries in Southern California," H. H. thus refers to insanity among sheep-herders: "The loneliness of the life is, of itself, a salient objection to the industry. Of this, the great owners need know nothing: they can live where they like. But for the small sheepmen, the shepherds, and, above all, the herders, it is a terrible life,—how terrible is shown by the frequency of insanity among herders. Sometimes, after only a few months of the life, a herder goes suddenly mad. After learning this fact, it is no longer possible to see the picturesque side of the effective groups one so often comes on suddenly in the wildernesses,—sheep peacefully grazing, and the shepherd lying on the ground watching them, or the whole flock racing in a solid, fleecy, billowy scamper up or down a steep hillside, with the dogs leaping and barking on all sides at once. One scans the shepherd's face alone, with pitying fear lest he may be losing his wits."

A LITTLE sheet which rarely refers to this journal without misrepresenting it quotes from Ward's *Dynamic Sociology* a passage expressive of our own views, and of the spirit and purpose of this journal, and prefaces it with a dedication "To *The Index* of Boston and the *Radical Review* of Chicago, 'the consensus of the competent,' and generally to those liberals who are engaged in getting up an 'aristocracy of culture.'" We give the passage: "The present enormous chasm between the ignorant and the intelligent, caused by the unequal distribution of knowledge, is the worst evil under which society labors. This is because it places it in the power of a small number, having no greater natural capacity and no natural right or title, to seek their happiness at the expense of a large number. The large number, deprived of the means of intelligence, though born with the capacity for it, are really compelled by the small number, through the exercise of a superior intelligence, to serve them without compensation. This is the result of the ultimate analysis of the problem of the present un, equal distribution of wealth. For it is not the idler but the toiler, the real producer of wealth, who has none; while the man who has wealth is usually a man of leisure,—at least he has rarely or never acquired it through labor in creating it. The former occupies his position solely in consequence of his relative ignorance: the latter occupies his solely in consequence of his relative intelligence. Knowledge is power; and power has ever been wielded for self-aggrandizement, and must ever be so wielded. To prevent inequality of advantages, there must be equality of power, *i.e.*, equality of knowledge."

WE learn from the New York *World* that the first of a series of meetings in favor of industrial co-operation was held in Dr. Pullman's church on Fifty-seventh Street, near Eighth Avenue, last week. Rev. J. H. Rylance, who presided, said it was necessary to teach co-operation to the people. "Mrs. Imogene C. Fales, of Brooklyn, the President of the Sociologic Society, was introduced, and made an eloquent address on 'Industrial Changes,' interesting her listeners for over an hour on the questions of capital, labor, and co-operation. 'As employers combine,' said Mrs. Fales, 'to increase capital and keep wages down, so must the workingmen continue to maintain their rights. So long as labor is not organized, it is at the mercy of the capitalist. There is only one way by which industry can be conducted with justice to all, and that is by co-operation. We only ask that business shall be conducted on business principles. Capital and labor should be united, and antagonism to industry destroyed. Under this new system there would be more satisfaction than under the old. Competition causes the merchant to reduce his prices until his profits suffer. The manufacturer suffers through the merchant. Next comes the reduction of wages. Competition compels men to sell their labor at any price, in order that their families may have bread. It causes theft and other crimes. It produces suicide, and causes little children to suffer for the want of life's necessities. Competition brings about degradation of the people and the general lowering of the moral tone of the entire community. Eventually, co-operation will take the place of competition. We are in the transition state: one form of life has completed itself, while the other is in evolution. Through selfishness we are growing into unselfishness, through discord we are growing into harmony, and through the heat of conflict we are growing into that state when we consider the rights of our fellow-mortals.'"

WE recently received from Mr. Benjamin Tucker a little work, translated by him from the French, by Michael Bakounine, "founder of Nihilism and apostle of anarchy," with request that we would give it such notice as in our opinion it deserved. We reviewed the pamphlet, and said all that we could say conscientiously in favor of it. From our criticism, much was omitted that might have been added in truth and fairness; for the thought of the work is superficial and crude, and the style dogmatic and denunciatory, having been written from a stand-point, as the *Commonwealth* justly remarks, "as crude as, with all the advanced thinkers of the world, it is happily out of date,"—the standpoint of eighteenth century materialism. The author did not possess a philosophic mind, and his essay shows that he lacked the intellectual grasp to comprehend modern scientific and philosophic thought. Our notice of the pamphlet did not please Mr. Tucker, and he gives expression to his displeasure in the following words:—

The Index review is patronizing, ignorant, superficial, thoughtless. One sentence in it is particularly stupid: "An acquaintance with evolution, as now taught by English and German thinkers, and especially with psychology and sociology, would have enabled the writer to correct many of his errors, and to see the unscientific and unphilosophic character of many of the statements advanced by him as truisms." One would suppose from this that Bakounine died twenty years ago instead of in 1876, and no doubt the editor of *The Index* supposed such to be the case. The facts are that Bakounine was perfectly familiar with all the principal languages, and resided for long periods in almost all the chief European countries. With their literatures, he was thoroughly conversant; with their principal writers, he was in many instances personally intimate; and, if he had a passion for any thing outside of the actual revolutionary movement, it was for philosophy, especially German philosophy. The fact that Bakounine died in 1876, that he was familiar with languages and resided in "almost all the chief European countries," indicates nothing to the purpose. There are men still living, not unacquainted with languages, authors, and European countries, who lack the ability to comprehend and assimilate the best German and English thought of the day. Were Mr. Tucker himself acquainted, as we know he is not, with modern psychology and sociology, he would not waste time translating little pamphlets from anarchical and cranky minds, or denouncing those who distinguish between reasoned thought and wild vagaries, between argument and abuse, between liberty and license. Bakounine's work may please those whose "conversion" from Orthodoxy to Liberalism has been a sudden transition, and who, having discarded theology, still retain its spirit, and imagine that radicalism consists in undiscriminating protest, sweeping assertions, and unqualified denunciation of whatever has passed under the name of religion; but no other class, except, indeed, those opponents of Liberalism who would like to see it confounded in the popular mind with whatever is untenable and absurd.

The Index.

BOSTON, OCTOBER 25, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

REBELLION.

A sewing woman, helpless, pallid, friendless, asks a rich patron if she believes in immortality, and gives herself the answer as portrayed in the following lines:—

I.

"Nay, dare you tell me this is all,
I who have drained a cup of gall
E'en to its bitterest dregs of woe!
And you smile when you say it, but, oh,
You stand in the warmth of the sunshine,
While I in the shadow must shiver and pine.

II.

"What know you, with your proud, cold face,
Your silken gown, your costly lace?
What know you, with your high-born air,
Of want and woe and bitter despair,
Of the beaconing street, of the garret drear,
Of poverty's groan, of misery's tear?

III.

"What know you of the homeless waif,
You in your palace warm and safe?
You with your wealth of love and gold
Know not the need of the hungry and cold.
So, with the sunshine glinting bright,
Bathing you in its ruddy light,
You say to the outcast, hungry and poor,
The struggle is bitter, but rest is sure.

IV.

"Musing, you loll in your velvet chair;
And, unclasping the gems in your sheeny hair,
You leave me stretching my weary hand
For a bud of truth. Your shadow-land
I cannot enter. My master, gaunt,
Strangles the dreamer: his name is Want.

V.

"What know you of the ceaseless ache
Of the whispering self, alive, awake,
But fettered with a forgeless chain
Whose clanking drowns its cry of pain?
O whispering self, O best endeavor,
Pleading softly, pleading ever,
Best leave thy white throne, if this be all,
Best quaff the poisoned nectar, spill the gall.

VI.

"Nay, again, again, what did you say?
And say in that charming, silken way:
'It all ends here: that pauper who stands
With his ragged hat in his skinny hands
Will be rich as I with my lands so broad
(We can neither claim but a bed of sod;)
And the frozen clay with dumb lips sealed
Will rest as deep in the Potter's Field
As the monarch in his guarded tomb:
We are but dust with a common doom.'

VII.

"You in your velvet 'broidered chair,
You with gems in your sheeny hair,
On your milk-white hands and your languid breast,
Speak to the toil-stained drudge of rest!
From the o'erfull heart, the prisoned speech
Bursts forth, Then *live* the creed you preach.
If in death we share each other's fate,
Why not in life? Why need we wait?
If a 'common doom' we share in the grave,
Why is the king a king, the slave a slave?

VIII.

"O God! (you smile at the name) is it just
That *you* ride in a carriage, *I* toil in its dust,
And after the journey *both* lie in a hole
With the beast you drive? From out the goal
To rise no consciousness? Then life is naught,
There is no account of battles fought.
Through the watches of an anxious night,
We wait with eager longing for the light,
Wait for the sunrise, wait for the bird-song,
Wait and long and dream, for what? Oblivion!

IX.

"Night, blacker than the black night behind,
The night in which we wandered blind
To aught save Hope, who whispered, 'Live,
Deserve the light which morn will give.'
The morn, you say, will never come:
Upon this night shall rise no sun.
The sport of cruel destiny, we
Are thrust, unasked, on a shoreless sea,
With a vision in our storm-tossed souls
Of fragrant dells and sunny shoals.

X.

"How envied is the beast that dies
As should all dust,—no gilded lies
To mock the vanquished hope of truth!
False! false, I say, else would I soothe
To eternal sleep my weary breast,
The "coal black wine" I'd drink, and rest.
Hush, whispering voice, hush, best endeavor,
Thy pleading tone I'd still forever.

XI.

"O lady, in your velvet pew,
You've faith in neither Christian nor Jew.
You listen, then laugh at the folly which I
In my garret must curse as a pitiful lie.
You can laugh at it all, while I in my want
Of a faith without shadows must rave at the rant
Which shouts of a God of love and of malice
Who puts ten in a hovel and one in a palace,

XII.

"A God who does not govern each and all
By universal law, but builds a wall
And casts his children weak and blind
Into eternal night. They cannot find
The way. Poor waifs, is it their fault
That they are sick and blind and halt?

XIII.

"Weary, *so* weary, my lips are athirst
For a draught of the 'coal black wine.' Accursed
Is life. Then drink the wine, drink deep,
And woo silent, dreamless, eternal sleep.

. . . . . .

Yet will I hear thee. '*Thou shalt not kill.*'
O whispering voice, be still, be still."

THE SECRET OF THE EAST;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

BY FELIX L. OSWALD, M.D.

APPENDIX.

I.

Indian Sources of the New Testament.

The study of Comparative Mythology has established the rule that the metastasis of myths confines itself to a descending line of transmission. The attributes, doings, and sayings of national *numina* are transferred from gods to heroes, from heroes and demigods to favorite saints and political leaders, from exuberant and popular religions to inchoate and aspiring creeds. Sarama, the Spirit of the Dawn, becomes a Grecian Helena; the stronghold of the night-gods shrinks to a Mysian city; Wodan, with his celestial companions, descends to the vault of a German castle or rides the storm-cloud through the midnight woods. A mythical hero of ancient Iran sinks to a Danish warrior, and finally to a Swiss peasant; Venus becomes a lamia; Hertha, the earth-goddess, a nursery witch. Conquered nations degrade their old idols, if they cannot preserve them on better terms. The priests and devotees of a newly promoted Olympian try to establish his claim by identifying him with a deity of superior rank.

It is therefore not probable that the *Krishna-tradition* was transferred directly from Brahmanism to Christianity. Long before the advent of the Galilean avatar, Krishna, the heaven-born lover of the milkmaids, had ceased to be the centre of a special worship, Buddhism had reacted on Brahmanism as the doctrine of Luther had reacted on the Catholic religion. It had forced the older creed to relinquish its exuberant myths, and retreat to the stronghold of its essential dogmas. Those portions of the Krishna legend which have blended with our gospel myths were probably transmitted through the medium of Buddhism, and, being confined chiefly to the infancy traditions of the two Messiahs, have no ethical importance whatever.

Of far different significance is the concordance of Christianity and Buddhism. The character and the astounding number of their analogies not only reveal the genesis of the Christian myths, but also elucidate numerous otherwise obscure passages in the parables and ethical precepts of the New Testament, and thus confirms the intrinsic proofs of its extra-Hebraic origin and its pessimistic tendency.

The chronological subterfuge of the Christian apologists has been effectually disposed of. It had been supposed that the *Lalita Vistara*, the chief compend of the Buddha legend, was a Cingalese romance of comparatively recent date, and that its compilers might have availed themselves of West-Asiatic traditions. But the researches of Burnouf, Wassiljew, Köppen, Max Müller, Seydel, Julien, and Plath have not incontestably established the fact that Cingalese Buddhism, though a younger branch of the great Indian religion, has more faithfully than the northern sects preserved the original traditions of the Buddha Bible, and that the canonical recognition of the *Lalita Vistara*—not to mention the period of its development—far ante-dates those of the Christian gospels. Stanislas Julien proved by an ancient Chinese catalogue of the Kaygur scriptures that the *Lalita* was one of the books which in the first century of our chronological era were translated from the old Indian originals, and that therefore, even at that early period, the *Lalita* was included among the canonical books of Buddhism. Besides, many of the most suggestive passages of the Cingalese gospel are found already in the Thibetan *Hinayânas*, which more than two centuries before Christ had taken rank among the sacred scriptures of the northern Buddhists. Plath demonstrates that 230 B.C. the *Hinayânas* had already assumed their present form. Prof. Rudolph Seydel, the learned Christian apologist, admits that the canonical recognition of the *Lalita* cannot be assigned to a later period than 20 years after the birth of Christ. "But what would it avail us," he adds, "to postpone that date to the uttermost limit of possibility? We could not make it less incredible that the Buddhists should have copied from the legends of a creed which was then only in its cradle, and whose traditions had not even begun to crystallize into fixed forms."—(*Das Evangelium von Jesu*, p. 79, Leipzig, 1882.)

Especially since Buddhism was then in the very zenith of its vigor. The homage which the Jews, Christians, and Mohammedans have paid to the

Digitized by Google

founders of their religions, is frigid, compared with the fervor of devotional enthusiasm which gathered about the person of Buddha Sakyamuni. In Ceylon, the name of Gautama has *twelve thousand* synonymes. Compared with the self-tortures of the Buddhistic anchorites, the askesis of the Christian monks looks like self-indulgence. Millions of Buddhistic laymen devoted a tenth part of every day to the study of their sacred scriptures, and committed whole books and chronicles to memory. And shall we believe that the priests of that religion—a religion which then counted its converts by hundreds of millions, and was daily preached from many hundred thousand pulpits—dared to adulterate their gospel with the traditions of a creed which, from their point of view, was professed only by a small sect of a contemptible and ignorant mountain tribe of Western Syria? Suppose that the English translator of the Vulgate had tried his hand at a mediæval romance: would any Protestant sect have attempted to enrich the New Testament with the adventures of Sir Lancelot du Lac? And can we believe that the Cingalese, the most orthodox sect of Buddhism, have thus tampered with the sacred canon of their Hinayâna gospel? It would not be more absurd if a thousand years hence a student of comparative mythology should assert that our new version of the Scriptures had been borrowed from the writings of Joseph Smith, or that the chronicle of the wars and adventures of Mohammed were a mere paraphrase of Voltaire's drama.

On the other hand, no circumstance in ancient history is more clearly established than the fact that, before the appearance of Christ, Buddhistic traditions and Buddhistic missionaries had reached the land of the Mediterranean nations. Like all great movements in the history of the human race, Buddhism at first advanced toward the setting sun, and only the recoil of its westward tide led to the inundation of Eastern Asia. Long before China and Siam were brought under the sway of the "Word," Buddhistic colonies had been planted beyond the Indus. Spiegel's translation of the *Five Gathas* and Târanatha's *History of Buddhism* (translated by Wassiljew) mention Buddhistic missions in Western Persia during the reign of Artaxerxes Longomanus (about B.C. 450). Alexander Polyhistor describes the ascetic practices of Buddhistic monks in Bactria, and speaks of self-torturing hermits and mendicant orders; while in the Thirteenth Edict of Girnar, King Asoka, the "Constantine of Buddhism," refers to missionary embassies sent to the Yôna (Ionian or Greek) kings, Antiochus, Ptolemäus, Antigonos, and Magas. Under the reign of Artaxerxes Mnemon, the Grecian philosopher Ktesias gathered a large amount of curious information about India and Indian religions; and the historian Aristoxenos, a contemporary of Alexander the Great, mentions an Indian *magus* who visited Socrates and other philosophers—probably Pythagoreans—whose doctrine of metempsychosis and abstinence from wine and animal food indicates an East Indian origin. When Alexander the Great returned to Persia, the Indian ascetic Calanos accompanied him to Persepolis, and burned himself at the stake to demonstrate his indifference to earthly existence. Two hundred years before Christ, the city of Alassada, near the sources of the Oxus, was a central point of the West Buddhistic propaganda. The conquests of Alexander established a constant intercourse between the Mediterranean and the western cities of Central Asia, caravans travelled to and fro, the Grecian colonists were probably as tolerant as their western countrymen, and the zealous missionaries of the Cashmere convent towns can hardly have failed to avail themselves of such favorite opportunities. Clemens Alexandrinus, St. Jerome, and Suidas speak of a deified "Butta." Pliny (H. N. 37, 11) refers to the large overland trade between India and Cappadocia; *i.e.*, between the stronghold of Buddhism and a region which swarmed with Greeks, Jews, and the early proselytes of Christianity. The same historian (H. N. VI., 19, 22, 26) records the fact that the commerce by sea between India and Europe drained the Roman Empire of a yearly sum of fifty million sesterces, and that Indian ships with accommodation for five hundred passengers with their baggage and merchandise landed every year at Alexandria and Syracuse. Among the ambassadors whom King Poros, or Paurava, sent to the court of Augustus, there was the Buddhist Zarmanochegas (Srâmanacharya, *i.e.*, teacher of Srâmana, the doctrine of self-mortification), who afterward went to Athens, and, like Calanos, burned himself on a funeral pyre to attest his belief in the worthlessness of earthly life.

II.

Concordance of Buddhism and Christianity.

A. TRADITIONAL ANALOGIES.

1. Both Buddha and Christ were of royal lineage. Both were born of a mother who, though married, was still a virgin.

2. Both virgin mothers were overshadowed by the Holy Ghost, and, though found with child, remained immaculate.

3. The birth of the future Saviour is announced by a heavenly messenger. The apparition which Maya sees in her dream informs her: "Thou shalt be filled with highest joy. Behold, thou shalt bring forth a son bearing the mystic signs of Buddh, a scion of royal lineage, a son of highest kings. When he shall leave his kingdom and his country to enter the state of devotion, he shall become a sacrifice for the dwellers of earth, a Buddha who to all men shall give joy and the glorious fruits of immortality." (*Rgya Cher-rol-pan*, 61, 63.)

The angel says unto Mary: "Fear not, Mary, for thou hast found favor with God. And behold thou shalt bring forth a son and call his name Jesus. He shall be great, and shall be called the Son of the Highest; and the Lord God shall give unto him the throne of his father David." (Luke i., 30, 31.)

4. At the request of Maya, King Sudodhana renounces his connubial rights till she has brought forth her first son. (*Rgya*, 69–82.) "And Joseph knew her not till she had brought forth her first son." (Matt. i., 25; Luke i., 39–56.)

5. The immortals of the Tushita-heaven decide that Buddha shall be born when the "Flower-star" makes its first appearance in the east. (Lefmann, 21, 124; Wassiljew, p. 95.) "Where is he that is born king of the Jews? for we have seen his star in the east." (Matt. ii., 2.)

6. A host of angelic messengers descends and announces tidings of great joy: "A hero, glorious and incomparable, has been born, a Saviour unto all nations of the earth! A deliverer has brought joy and peace to heaven and earth." (*Lotus*, 102, 104. *Rgya*, 89, 97.) "And the angel said unto them, Fear not; for, behold, I bring you good tidings of great joy which shall be to all people. . . . For unto you is born this day a Saviour." (Luke ii., 9.)

7. Princes and wise Brahmans appear with gifts, and worship the child Buddha. (*Rgya*, 97, 113.) "And when they were come into the house, they saw the young child and worshipped him; . . . and they presented unto him gifts, gold and frankincense and myrrh." (Matt. ii., 11.)

8. The Brahmin Asita, to whom the Spirit has revealed the advent of Buddh, descends from his hermitage on Himalaya to see the new-born child. He predicts the coming kingdom of heaven and Buddha's mission to save and enlighten the world. (Sutta-Nipatha, iii., 11; *Buddhist Birth Stories*, i., 69.) "And it was revealed unto him by the Holy Ghost that he should not see death before he had seen the Lord's Christ. . . . Then he took him up in his arms, and blessed God, and said, Lord, now lettest thou thy servant depart in peace. . . . For mine eyes have seen thy salvation. . . . A light to lighten the Gentiles, and the glory of thy people Israel." (Luke ii., 26.)

9. Hymnic Intermezzos.—The Gospel of Luke, like the *Lalita Vistara*, abounds with hymnic rhapsodies, which in the parallel passages of the Buddhistic original harmonize with the spirit of the epic; while, in the Christian chronicle, their abrupt introduction suggests omissions and arbitrary selections. (Luke i., 13–17, 30–33, 35, 42–45, 46–55, 67–79; ii., 10–14, 29–32, 34, 38; xix., 37.)

10. The *Abhinish-Kramana Sutra* relates that the king of Maghada instructed one of his ministers to institute an inquiry whether any inhabitant of the kingdom could possibly become powerful enough to endanger the safety of the throne. Two spies are sent out. One of them ascertains the birth of Buddha, his tribe and dwelling-place, and the promise of his future glory. He makes his report to the king, and advises him to take measures to exterminate the tribe. (Cf. Matt. ii., 1–11.)

11. The Presentation in the Temple.—The princes of the Sakya tribe urge the king to present (or introduce) his son in a public assembly of nobles and priests. Spirits accompany the march of the procession; inspired prophets extol the future greatness of the Messiah. The parallel story of Luke supplies the motive of the ceremony with the words: "As it is written in the law of the Lord." But diligent comparison of the sources of Hebrew law has revealed the fact that no such ordinance ever existed. The rite of purification merely required the mother to offer up a sacrifice, a ceremony which demanded neither the presence of the husband nor of the child, the motive of the narrator's fiction being evidently the necessity of fitting the incident into a frame of Hebrew customs.

12. Names and Titles.—Among the twelve chief names of Buddha,—the Word, the All-wise, the Messiah, the Way, the Awakened, the Saviour, the Intercessor, the Truth, the Life, the Prince of Peace, the Good Shepherd, the Light of the World,—all but the second and fifth have been applied to the Prophet of Nazareth.

13. Buddha's parents miss the boy one day; and, after searching for him far and near, they find him in an assembly of Rishis (sages of the past), who listen to his discourse and marvel at his understanding. (*Birth Stories*, 74; Plath, xii., 2.) "And when they found him not, they turned back again to Jerusalem, seeking him. And it came to pass that, after three days, they found him in the temple, sitting in the midst of the doctors, both hearing them and asking them questions. And all that heard him were astonished at his understanding and answers." (Luke ii., 45–47.)

14. Buddha, before entering upon his mission, meets the Brahmine Rudraka, a mighty preacher, who, however, offers to become his disciple. Some of Rudraka's followers recede to Buddha, but leave him when they find that he does not observe the fasts. (*Rgya*, 178, 214.) Jesus, before entering upon his mission, meets John the Baptist, who recognizes his superiority. Two of John's disciples follow Jesus, who states his reasons for rejecting John's rigid observance of the fasts. (John i., 37.)

15. Buddha retires to the solitude of Uruvilva,

Digitized by Google

and fasts and prays in the desert till hunger forces him to leave his retreat. (*Rgya*, 364; Oldenberg's *Mahâvagga*, p. 116.) "Then was Jesus led up of the Spirit into the wilderness, to be tempted by the devil. And, when he had fasted forty days and forty nights, he was afterwards a-hungered." (Matt. iv., 1.)

16. After finishing his fast, Buddha takes a bath in the river Nairanjana. When he leaves the water, purified, the devas open the gates of heaven, and cover him with a shower of fragrant flowers. (*Rgya*, 259.) Comp. Matt. iii., 13.

17. The Temptation.—During Buddha's fast in the desert, Mâra, the Prince of Darkness, approaches him, and tempts him with promises of wealth and earthly glory. Buddha rejects his proposals by quoting passages of the Vedas. The tempter flees: angels descend and salute Buddha. (Mâra: Köppen, i., 88; *Dhammapadam*, vii., 33.) "And said unto him, All these things will I give thee, if thou wilt fall down and worship me. Then Jesus saith unto him, Get thee hence, Satan; for it is written, Thou shalt worship the Lord thy God, and him only shalt thou serve. Then the devil leaveth him, and, behold, angels came and ministered unto him." (Matt. iv., 9–11.)

18. Precursors.—During the transfiguration on the mountain, Christ is joined by Moses and Elias. Sakyamuni has frequent interviews with the *two* Buddhas who preceded him. (Seydel, 163.)

19. Under the Fig-tree.—The shade of the sacred fig-tree that shelters the meditating Buddha is the scene of the conversion and ordination of the first disciples, formerly followers of Rudraka. Christ chooses his first disciples from among the former followers of the Baptist; and in John i., 48, his remark about a fig-tree appears wholly incongruous and irrelevant to the context. In the answer of Nathanael, the circumstance of having been seen under a fig-tree is accepted as a proof of Christ's messiahship!

20. Disciples.—Before Buddha appoints a larger number of apostles, he selects five favorite disciples, one of whom is afterward styled the pillar of the Faith; another, the bosom-friend of Buddha. Before Christ selects his twelve apostles, he chooses five chief disciples, among them Peter, the "rock of the Church," and John, his favorite follower. Among the followers of Buddha there is a Judas, Devadatta, who tries to betray his master, and meets a disgraceful death. (Köppen, i., 94; Lefmann, 51; *Birth Stories*, p. 113.)

21. Sakyamuni alludes to an interview with several former Buddhas. Sceptics question his statement: "Only forty years ago, you left your native town: how can you claim to have seen all those saints of old?" Buddha explains it by the pre-existence of his soul in other forms. (*Lotus*, xiv. and xv.) "Then said the Jews unto him, Thou art not yet fifty years old, and hast thou seen Abraham?" (John viii., 57.)

22. The Macarisms.—The first words of Christ are the macarisms (blessings) in the Sermon of the Mount. When Buddha enters upon his mission, he begins a public speech (according to the French translation of *Rgya*, 355): "Celui qui a entendu la Loi, celui qui voit, celui qui se plaît dans la solitude, *est heureux;* lié (à l'existence) au milieu des créatures vivantes, et ne faisant pas de mal, il *est heureux* dans le monde. Parvenu à se mettre au-dessus des vices, exempt des passions, il *est heureux;* celui qui a dompté l'égoisme et l'orgueil est *parvenu à la suprême félicité.*"

23. Buddha remains homeless and poor; repeatedly instructs his disciples to travel without money, and trust to the aid of Providence. (Comp. Matt. iv., 23; viii., 20.)

24. Ananda, Buddha's favorite disciple, at the end of a wearisome journey, sits down near a well. A woman of the despised caste of the Chandalas appears with a water-jug. Ananda asks her for a drink of water. The woman warns him that he will lose caste by persisting in his request. Ananda laughs at her scruples; and, while they argue the question, Buddha comes up and approves the view of Ananda, who, as he perceives, has found favor in the eyes of the woman. (Burnouf's *Divya-Avadâna.*) Comp. John iv., 1–20. "He whom thou now hast is not thy husband."

25. If thy right eye offends thee, pluck it out and cast it from thee. (Matt. v., 29.) According to Max Müller's translation of the *Ocean of Legends*, a young monk of the mendicant order meets a rich woman who pities his hard lot, and wonders what could induce him to renounce the world. "Blessed is the woman," says she, "who looks into thy lovely eyes." "Lovely?" says the monk. "Look here." And, plucking out one of his eyes, he holds it up, bleeding and ghastly, and asks her to correct her opinion.

26. Miracles.—Buddha walks on the Ganges, as Christ on the lake. He heals the sick by a mere touch of his hand; and, according to Wassiljew, the *Mayana-Sutra* relates the miracle of the loaves and fishes. Buddha repeatedly has a miraculous escape from the snares of his adversaries. "But he, going through the midst of them, went his way." (Luke iv., 30.) A transfiguration, ascension, speaking in foreign tongues, are additional parallels. Buddha descends to hell, and preaches to the spirits of the damned.

27. In the story of the blind man (John ix.), the disciples ask: "Who did sin,—this man or his parents?" The meaning of the question is revealed by the Buddhistic parable of a *wilfully blind* (obstinate) heretic, whose perversity is caused by his sins in a former existence. (*Lotus*, 82.) For, in the version of the gospel, the guilt of a man *born* blind could hardly be alleged as a cause of his misfortune; while, in the Buddhistic original, the idea is in perfect harmony with the doctrine of metempsychosis.

28. Instructions to disciples.—*Lotus*, v., 105; *Gâtha*, pp. 53, 143, 165, and other passages, repeat the injunction of self-denial, meekness, the duty of declining presents, often nearly in the words of Matt. vii., 6. Several of Buddha's disciples receive power to exorcise evil spirits.

29. At the death of Buddha, the earth trembles, the rocks are split, phantoms and spirits appear. (Köppen, i., 114; Saint-Hilaire, 44; Seydel, 281.) "And, behold, the earth did quake, and the rocks were rent, . . . and the graves were opened, and many bodies of the saints which slept arose." (Matt. xxvii., 51–53.)

B. DOGMATICAL ANALOGIES.

1. Belief in the necessity of redemption by a supernatural mediator.

2. The founder's exaltation to the rank of a God. Buddha is equal to Brahm; demons are powerless against his word; angels and Arhats minister unto him.

3. Belief in a hell of fire and ceaseless torments.

4. Belief in a prodigious number of malevolent demons.

5. Demerit of wealth. "It is difficult to be rich and keep the way."

6. Merit of mendicancy. Monastic brotherhoods resembling the order of St. Francis.

7. The moral merit of celibacy. Abstinence from sexual intercourse a constitutional rule of Buddhistic convents and priest-schools.

8. Rejection of ancient rites, sacrifices, etc.

9. Monastic seclusion; merit of a retired life; hermitages and convents.

10. Vanity of earthly joys.

11. Depreciation of labor, industry, the pursuit of worldly advantage and worldly honors; monastic vows of poverty and obedience.

12. The sinfulness of scepticism.

13. Auricular confession of sins.

14. Efficacy of vicarious atonement.

15. Inculcation of patience, submission, and self-denial; neglect of the active, manly, and industrial virtues.

16. Love of enemies; submission to injustice and tyranny.

17. Depreciation of worldly affections; merit of abandoning wife and children.

18. Trinity of holiest names,—Buddha, Dharma, and Sangha. Dharma is the "Word." "And the Word was with God."

19. The worship of saints.

20. Miracle-mongery. The chronicle of the Buddhistic church is overloaded with the records of prodigies.

21. Evangelical analogies.—Buddha is called the "Light of the World" (*Gâtha*, p. 105). Buddha's mercy is compared to a rain cloud which showers blessings upon the just and unjust. Earthly joys are compared to the grass which blooms to-day and to-morrow is cast into the fire (*Dhamm.*, 334). True believers are advised to gather treasures which neither thieves can steal nor fire or water can spoil (*Lotus*, 130). Ignorant teachers are likened to the blind guiding the blind. The repentant sinner is described in a parable of a prodigal son, who wastes his substance in foreign countries, but at last returns to the house of his father, and, after serving him as a common day laborer, is pardoned, and becomes the father's chief heir.

C. CEREMONIAL ANALOGIES.

Monasteries; nunneries; popery; the Thibetan Lama is worshipped as God's vice-regent upon earth; œcumenical councils; processions; worship of relics; strings of beads; incense; confession of sins; chaplets; service with double choirs; pulpits; dalmaticas; a censer suspended from five chains; litanies; holy water; chalices; shaven polls; priests go bareheaded; weekly and yearly fasts; exorcism; division of temples into a nave and lateral halls; aspersion with consecrated water; bell-ringing; candlemas; feast of the Immaculate Conception; masses for the repose of departed souls.

The chief proof of the essential identity of the two creeds is the *anti-cosmic principle*, the nature-hating and earth-despising tendency which distinguishes Buddhism and Christianity from all other religious systems. The gospel of Buddha, though a pernicious, is, however, a perfectly consistent doctrine. According to the ethics of Gautama,—"the Awakened," as his followers call him in distinction from benighted mortals,—birth, life, and rebirth is an eternal round of sorrow and disappointment; the present and the future are but the upper and lower tire of an ever-rolling wheel of woe; existence is wholly evil, and the only salvation from the misery of life is the escape to the peace of Nirvana. The attempt to graft this doctrine upon the optimistic theism of Palestine has made the Christian ethics so inconsistent and contradictory. A paternal Jehovah, who yet eternally and horribly tortures a vast plurality of his children. An earth, the perfect work of a benevolent God, yet all a vale of tears, not made to be enjoyed, but only to be despised and renounced. An omnipotent heaven, yet unable to prevent the intrigues and constant victories of hell. Christianity is evidently not a homogeneous, but a composite, a hybrid religion; and, considered in connection with the indications of history and the evidence of the above-named ethical and traditional

Digitized by Google

analogies, these facts leave no reasonable doubt that the founder of the Galilean Church was a disciple of Buddha Sakyamuni.

Those who oppose this theory should, besides, remember that the question at issue is not between gospel truth and borrowed traditions, but between borrowed traditions and deliberate fiction; for that the narrative of the New Testament has no historic value admits of mathematical demonstration. Not only does it abound with the records of prodigies at variance with the normal experience of mankind and entirely unsupported by the testimony of contemporary historians, but also with self-contradictions which remove the last doubt that the chronicle of the Synoptic Gospels, whatever may be its origin, is not based upon facts.

III.

Historical Value of the New Testament.

The following are a few of the self-evident proofs of the historical (and, *a fortiori*, *canonical*) value of the book which Prof. Christlieb calls "a canon which it has pleased the Lord to reveal and which the Lord's children are therefore bound to believe."

In the first chapter of Matthew, the Lord reveals the fact that from the birth of Christ to the reign of David there were twenty-six generations, which are enumerated by name. In the Gospel of St. Luke, it has pleased the Lord to reveal a genealogy of forty-three names, of which only the first and last agree with that of the former list.

Matthew also informs us that Herod ordered the massacre of an enormous number of young children, and that the parents of Christ saved their infant son only by a timely flight to Egypt. St. Luke does not mention the massacre, and states that the parents of Christ, instead of fleeing to Egypt, continued to dwell in their native city of Nazareth. (Luke ii., 22–39.) Josephus, who relates every trifling circumstance in the reign of Herod, especially the despotic acts of the viceroy, does not mention the murder of a single child.

St. Matthew states that the name of Mary's father-in-law was Jacob. (Matt. i., 16.) According to the Gospel of St. Luke, Dr. Christlieb is bound to believe that the gentleman's name was Heli. (Luke iii., 23.)

Mark mentions that John was in prison when Jesus came into Galilee. John informs us that at that time John was not yet in prison.

Matthew relates that the centurion came in person to beseech Christ in behalf of his sick servant. Luke states that he sent the elders of the Jews.

According to Mark (xv., 25), Jesus was crucified at the third hour. According to John (xix., 14, 15), the preparation for the crucifixion only began at the sixth hour.

St. Matthew (xxvii., 5) asserts that Judas hanged himself. The Acts (i., 18) relate that he died in a different way.

According to John, only one woman came to the sepulchre. According to Matthew, she was accompanied by a namesake. Their statements might be reconciled, but Mark informs us that not less than three women came together. But, even that must be an under estimate, for Luke assures us that there were more than four women.

Matthew and Mark's women saw an angel at the sepulchre: Luke's more numerous witnesses oblige us to believe that they saw two angels; but the dim religious light of the tomb may have confused their vision, for, while Matthew informs us that the apparition was seen without the sepulchre, John and Mark admit that it was seen within. Mark's statement that they reached the sepulchre at the time of the rising sun is no positive counterproof, for John confesses that they reached it while it was yet dark. Matthew's angel was sitting down. Luke's angels did not think it proper to keep their seat in the presence of so many ladies.

Matthew and Luke state that the women hastened to carry the news to the disciples. Mark (whose women had reached the sepulchre after daylight) admits that they had no excuse for saying anything to anybody.

If we shall believe Matthew, Jesus was three days and three nights in the grave. The account of Mark implies that he was resurrected during the second night.

According to Luke, the ascension of Christ took place at Bethany. The Acts (i., 9, 12) state that he ascended from Mount Olivet. Both accounts differ from that of Luke (xvi., 19).

In the Gospel of St. Matthew, we are informed that at the death of Christ "there was darkness over all the land from the sixth hour unto the ninth." The veil of the temple was rent, the earth quaked, the rocks split, and troops of corpses sallied from their tombs and availed themselves of the opportunity to visit their metropolitan friends. St. Mark and St. Luke do not think it worth while to report such trifles. St. John, an eyewitness of the crucifixion, does not allude to them. Josephus, in his detailed history of the same time and the same country, never mentions them. The Roman historians, whose countrymen ruled all Syria and Asia Minor, mention nothing of the kind. Can we doubt that the rumbling of Matthew's earthquake was the echo of that East Indian tradition which the writers of the New Testament mistook for the revelation of the Lord? When Buddha, the saviour, died at Kusinagra, the earth quaked and the rocks were rent, phantoms ascended from their caves, and the nine heavens were darkened, as well as the earth.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER VIII.

Unfamiliar Facts about Canada.—Canadian Co-operation.

Though I left Ottawa with regret, I have not forgotten it, nor the information with which I was favored there. Canada needs to be better known, is destined to be better known, and deserves it. For comprehensiveness of facts and compactness of statement concerning the unfamiliar land, the reader will not easily find anything more instructive than the article upon the Dominion, by H. B. Witton, in the Cyclopædia of Political Science, published by Rand & M'Nally of Chicago. We have no similar book in England. Witton calls attention to the difference between old and new Canada, which few understand. The Canada our fathers knew "was but a fringe of settlements along the heavily timbered banks of the St. Lawrence and Ottawa and shores of the great lakes. It had no prairies and no accessible seaport. The Canada of to-day has fine harbors on both sides of the continent, and virgin prairies nowhere surpassed. East and west, Canada now extends from ocean to ocean, and north and south, from the frozen sea to the frontier of the United States." Mr. John Lowe, in the government "Guide Book," shows that, including the areas of its rivers and lakes, "Canada covers three million six hundred and ten thousand square miles, being nearly eighteen thousand square miles larger than the United States with Alaska (the last American acquisition) combined, and is the physical equivalent of the kingdoms of Italy, France, Belgium, Germany, Austria, the British Islands, Russia in Europe, Sweden and Norway." Here is a splendid choice of lands and climates. The settler may choose the latitudes of England, Paris or Rome, Germany or Norway, and other countries of Europe. Sir John Macdonald one day made some remarks which threw more light on European conceptions of Canada than any other I heard. He said artists were the defamers of Canada. They all paint the snows, sledges, and ice, and the people in furs. The superb-hued fruit, the magical vines, the golden harvests, the forests, the flowers, the splendid rivers and glories of tropical seasons the great land has, we never see painted These appeared to me as sagacious, observant, and original observations, the unfamiliar facts of the Canadian continent being presented in few words. The Dominion, he said, was vast beyond European conception,—ripens tomatoes in the open air,—which cannot be done in England,—grows tobacco, and supplies wines with a frost-crisped flavor which flat, Southern lands never know. Mr. Lowe mentioned, what few would expect, that eighteen kinds of grapes ripen in Ottawa in the open gardens. The ground, kept warm in winter by a covering of dry snow, is fertilized when the snow falls; and, when the warm sun pours down its rays, things grow faster than money at compound interest. To workmen of England or Europe, a country in which active labor is suspended six months in the year, must be a paradise of industry and repose to those who have skill in using the seasons.

Witton gives the population in 1871 at more than three millions and a half. Lowe gives that of 1881 at more than four millions and a half, an increase of six hundred thousand in ten years. The Catholics amount to a million and three quarters, the Presbyterians to three-quarters of a million, the Methodists as many, while the residue consists of more progressive faiths, so that, when forty millions are added to the population, for which there is plenty of room, society will be as varied as in the United States. It is not lacking now in attractions which Englishmen appreciate.

It is well understood now by the testimony of independent travellers, who have spent more time in Canada than I did in 1879 and 1882, that it is a land where men can live with satisfaction. The new North-west contains great unoccupied areas, where, apart from Australia and New Zealand, people of Anglo-Saxon, Teutonic, and Scandinavian blood can find plenty of good land waiting occupancy, and familiar conditions of climate and industry. One who lately went two thousand miles through the country, one thousand of the two on horseback and in wagon, which enabled the country to be seen and inquired into thoroughly, reports to the *Daily News* that on the belt of a thousand miles, extending from Minnesota to the Rocky Mountains, though the winters are colder than in the north of England, the dry atmosphere is invigorating; and a temperature of ten degrees below zero is not nearly so trying as one of ten degrees above in a sea-coast country. The Canadian Pacific route, which lies from two to three hundred miles further north, has colder and longer winters and shorter summers, but long enough for growing wheat and oats, as the experience of Manitoba settlers shows.

A writer of wide and accurate information, Mr. S. E. Dawson, in his interesting "Handbook of Montreal," remarks that, "where the temperature is twenty degrees below zero, the frost does not penetrate far into the soil, which is protected by its mantle of snow, and roots and plants are secure from injury until the spring, which returns with a sudden and magical power astonishing to Englishmen accustomed to reluctant and lingering springs. The mean temperature of summer is that of Orleans in France, and the mean winter temperature resembles that of Moscow in Russia." The "Guide Book" written by Mr. Lowe gives such full information on this head that any settler can choose his temperature for himself. America, having torrid temperatures in some parts, includes places where malaria may lurk about as it does about Rome. Canada appears to be free from these risks, and to possess permanent healthiness, save that arising from cold, which, being periodic, is a measurable enemy; and, being a dry and not a damp enemy, is less formidable and more manageable than strangers suppose.

But enough of this. I quite share the reader's prejudice against useful information, which is generally dull, and always seems a digression. Since, however, many Europeans have friends in the country, and intending English settlers are seeking its shores, and Americans run over the border on excursions of pleasure and business, there are many who have an international interest in knowledge of the great Dominion. Still, I am always shy of utility. I was one

Digitized by Google

of the earlier readers of publications of Lord Brougham and Charles Knight, of which it was said:—

"If there should be another flood,
For refuge to them fly;
Though all the world should be submerged,
Their books would still be dry."

When at Niagara, a captain in those parts invited myself and friends to a drink of sherry to welcome me to Canada in English fashion. We were six in all. Mr. Charlton, in assenting for me, made the condition that it should be but one drink; and that ended it. Otherwise, some one would next invite the captain to drink a round with him; and each in turn must have repeated the invitation, which would have ended in thirty-six drinks. Had I taken my share of them, I might have seen six Canadas, while one seemed as much as I could hope to master.

Mr. John Smith, the Canadian emigrant agent at Hamilton, has a bureau, to which persons prepared to offer employment to emigrants communicate. Those who have friends are forwarded to them; those who have some capital and a destination are directed there; those without friends or means are provided for until they can be placed in some employment. The emigrants who say they "can do anything" are the worst, as they are persons who, as a rule, do not want to work: what they want is to be messengers in a bank or placed in the customs.

Since temporary relief was provided for those in obvious need, Mr. Smith was asked if he was not sometimes imposed upon by persons mingling with the arrivals. He said: "Very rarely. He knew an emigrant when he came into his hands." Being asked in what way, he answered, "By the smell," meaning that passengers who lived a fortnight in the steerage bore for some time the odors of their residence about them. The government have considerately arranged that Mr. Smith shall provide a building of warm baths, so that emigrants can bathe on their arrival, and enter a sweet country in a sweet condition. To poor mothers with children, who are unable on a sick passage to bathe them at all, a bath on landing must be both refreshment and luxury.

The signs of a settler who is going to succeed are not many. He must be healthy, not old, willing to do anything, and not be given to drink. From all I heard, I came to the conclusion that whiskey is bad for crops, and that he who ploughs with a bottle turns up his own grave. These two maxims would save thousands of settlers.

Mr. Piddington's place of business in Toronto is described as the "largest store in the Dominion," and seemed to me to answer to the description. It was as diversified, as protracted in its passages, and as interesting as Noah's Ark. Certainly, if Noah had as many things in that wandering boat of his, he must have had perplexing moments. It was at Mr. Piddington's that I met, with other co-operators, Mr. Jury, the president of the store. Mr. Jury informed me that their society had two hundred and fifty-two members at that time, and paid one per cent. to an educational fund. I do not remember seeing this feature in the balance sheet of any co-operative society in the United States, though in a proposed society in Cincinnati, of which the prospectus was sent me in 1880, an instruction fund was set down. In Montreal there is a fine Co-operative Supply Association, of which the president is Mr. Matthews, a gentleman who takes real interest in increasing the equity and good faith of commerce and its economy of procedure. On the plan of the Civil Service Society of London, the Montreal store occupies larger and brighter business premises (unless those being rebuilt in the Haymarket prove more cheerful and spacious than other stores). It was owing to Mr. Matthews' influence that I was invited to speak in the Synod Hall. It is proof that there is intellectual liberty in Montreal as well as in New York, since I was permitted to speak on co-operation within those quiet, pleasant, sacerdotal walls. The interior more resembles the Society of Arts in London—the best conference room we have—than any other I spoke in abroad. This was the first lecture on co-operation which had been delivered in Montreal. My aim was to explain in what way co-operation conduced to morality in private life, to economy in commerce, and in what way the Co-operative Supply Association brought to the doors of the middle and upper classes those advantages the English store furnished to the working class. I spoke also in another hall on the invitation of Mr. George Martin (an eminent photographer in that city) and Dr. M. O. B. Ward, the subject chosen being "My Early Religious Days." Except in New York and Washington, I spoke nowhere to audiences that knew so much of co-operation as at Toronto and Montreal. In the Toronto store and the Supply Association of Montreal, Canada has two excellent examples of forms in which co-operation has been perfected in England. In qualities of judgment, persistence, and in appreciation of methods of business which requires no apology, Canadians, so far as I came to know them, seem to me to excel Americans.

CORRESPONDENCE.

GRATUITOUS DISTRIBUTION OF THE MAHA-BHARATA.

Editors of The Index :—

An association of native Hindu scholars, called the Datavya Bhárat Karyalya, have for several years been publishing for gratuitous distribution to Sanskritists, learned societies, etc., translations of leading Sanskrit works. At present, an English translation of the Maha-Bhárata is being published, primarily for gratuitous distribution, a certain number of copies, however, being reserved for sale to parties desiring the work not included in the distribution as above. The manager and publisher of the association, Babu Protaba Chandra Roy, has written to me, requesting me to send him a list of the literary and other societies in America interested in Sanskrit literature to which copies of his publications may be sent. I shall be pleased, therefore, if any reader of *The Index* having a knowledge of any such society will send me its name and address for transmission to India. Any person desirous of procuring a copy for himself can obtain information as to terms, etc., by addressing the Babu at 367 Upper Chitpore Road, Calcutta, India.

WM. EMMETTE COLEMAN.

PRESIDIO OF SAN FRANCISCO, CAL.

KANSAS LIBERAL UNION.

Editors of The Index :—

The fifth annual meeting of the State Association of the Liberals of Kansas was held in Forest Park, Ottawa, October 6 and 7. The main purpose of the State organization in holding a meeting this year was to call together some of the earnest workers to devise and act upon measures for more systematic and effective work during the coming year. A better outcome than the most hopeful hoped for was the result. Not only were the most excellent business arrangements perfected, but the meeting was otherwise a success. The addresses were unusually excellent, the weather fine, and the social reunion delightful.

A debate between Mr. C. B. Hoffman, President of the Union, and Mr. Robertson, a Christian minister, created considerable interest. The theology of the minister was so largely leavened by rationalism that the discussion was of an unusual complexion. The minister vied with Mr. Ingersoll in his scathing denunciation of the teaching which makes men believe that they may lead a life of infamy, and at last swing from the gallows to glory. Finally, the orthodox advocate rested his case upon the value and saving influence of Christ's example and character as a model for mankind to pattern after. Mr. Hoffman's ability to present the affirmations as well as the negations of rational religion enabled him to meet his opponent in the most thorough and effectual manner, and to compass the inconsistencies of a claim for the specially *divine* nature of Jesus which at the last must rest upon his specially *human* nature.

Many appreciative words have been spoken during the year of Mr. Frederick A. Hinckley and of his presence and work at our meeting last year. The rounded out radicalism, unmarred by haste or unfairness, which Mr. Hinckley so finely represents, is gaining ground in Kansas.

There will be a ten days' meeting of the Kansas Liberal Union at Ottawa in the latter part of July or the first of August next. The Executive Committee of the Union will make every effort during the year to make this meeting a fine success.

There will also be a two days' meeting of the Kansas Liberal Union at Enterprise in January.

The officers of the Union for the coming year are C. B. Hoffmann, President; Mrs. L. L. Hilliker, Treasurer; Annie L. Diggs, Secretary; W. W. Fraser, V. P. Wilson, J. Y. Haughy, Alfred Taylor, J. E. Sutton, Sarah A. Brown, members of Executive Committee.

ANNIE L. DIGGS.

A FRIEND in Boston writes thus encouragingly of the work of Mr. W. G. Babcock: "Two hundred members, including young and old, attend the Free Chapel, Paine Building, doing their best to make this world better and happier by discourses, social gatherings, literary studies, public entertainments, etc. Their numbers are increasing every week, and means have been secured to meet the most important expenses for the year; but additional subscriptions are needed, and will be gratefully received and devoted to the good work." Address Mr. W. G. Babcock, Dorchester, Mass.

MR. J. G. JENKINS writes from Denver, Col.: "Mr. Beecher made quite a stir here. His lecture on evolution was a veritable bombshell in the camp of the orthodox. All the reverends in town replied to him on the following Sunday, when, of course, he was far away. Dr. Hays replied to him in rather a coarse, ungentlemanly way. You would hardly know Denver now, it has so grown since you last visited it. You would no doubt get good audiences here now, could you come, as you always have when you have spoken in Denver."

A MEDIUM named Frank Baxter recently got into trouble at Georgetown, N.Y. Says the Syracuse *Journal:* "The Central New York Association of modern Spiritualists held their annual convention at Brown's Hall in this village, and had for their chief speaker Frank Baxter of Boston, whose sole occupation is to go from place to place to lecture and give these wonderful communications. While stopping here, Mr. Baxter had rooms at a private house; and, after his departure, the lady of the house found in the bed in the room Mr. Baxter had occupied an envelope containing printed and written obituary notices of the people who had spiritually manifested themselves (?) to him while he was here, and twenty-five obituary notices of people who had lived in and about Saratoga Springs, where he was going to lecture the coming week; and also many more miscellaneous ones, some from Norwich, N.Y., and vicinity, where he lectured before coming here." "The circumstances of the case," says the *Religio-Philosophical Journal*, "are briefly these: A lecturer on Spiritualism, who also claims to be clairvoyant and clairaudient, offers his services to the public. The most interesting feature in his platform work is the séance at the close of his lecture, during which he describes, personates, and gives names of those who have died, with dates, and, sometimes, striking incidents connected with their lives. This lecturer goes to a little town, lectures, gives the usual séance, and departs. Following his departure, an envelope is found in his room, containing data which might have been for use, at least some of it, to make success certain at the customary séance; material which every opponent of Spiritualism will eagerly declare, and with apparently good reason, shows incontrovertible evidence of fraudulent practices; material which even the average Spiritualist will be disturbed to hear of, and whose suspicions can only be removed or confirmed by further explanation. The circumstantial evidence against the accused is fearfully strong, as conclusive as would have been the discovery in like manner of counterfeit money in the possession of a travelling live-stock buyer in a community which had suffered from counterfeiters: possession would be seemingly evidence of a guilty intention to utter it." But the *Journal* says that Mr. Baxter "makes a plausible explanation; but of itself alone, without the moral support of character to reinforce it, this would not be accepted by the great majority of Spiritualists." A few years ago, it will be remembered by some, Mr. Baxter gave a communication at Lake Pleasant from a negro named Abe Bunter, of whom by some mistake an obituary notice had been published, but who proved to be still in the flesh. The mistake was never explained; but Mr. Baxter's friends, far from losing confidence in him, made it a means of advertising him and his work.

OF no use are the men who study to do exactly as was done before, who can never understand that to-day is a new day.—*Emerson.*

BOOK NOTICES.

DARWINISM IN MORALS, AND OTHER ESSAYS. Reprinted from the *Theological* and *Fortnightly Reviews*, *Fraser's* and *Macmillan's Magazines*, and the Manchester *Friend*. By Frances Power Cobbe. Boston: George H. Ellis, 141 Franklin Street. 1883. pp. 422. Price $2.00.

The essay which gives to this volume its title appeared in the *Theological Review* in 1871, since which time the subject has been discussed by many able and acute thinkers; but it can justly be said that in this essay is presented with force and clearness the main objection to Mr. Darwin's views of the origin of moral conceptions, and Spencer's doctrine in regard to the experiential nature and evolution of the moral sense. There are still minds with whom these objections have great weight, although their force, we believe, has been very much impaired, if not destroyed, by the expositions of several writers. Miss Cobbe endeavors to turn against Mill his famous declaration that he would rather go to hell than flatter Deity by saying what is evidently false. She thinks a consistent utilitarian could not have said this. But Mill would probably have answered that self-respect with him was of greater importance than physical comfort. The other articles are "Hereditary Piety," "The Religion of Childhood," "An English Broad Churchman," "A French Theist," "The Devil," "A Prehistoric Religion," "The Religions of the World," "The Religions of the East," "The Religion and Literature of India," "Unconscious Cerebration," "Dreams as Illustrations of Unconscious Cerebration," "Auricular Confession in the Church of England," "The Evolution of Morals and Religion." All these essays are full of thought, and some of them are of rare excellence. The volume will be welcomed by the many admirers in this country of the accomplished author.

MARGARET FULLER (MARCHESA OSSOLI). By Julia Ward Howe. Boston: Roberts Brothers. 1883. Price $1.00.

This is the fifth volume of the "Famous Women Series" now being published by Roberts Brothers, the previous ones treating of George Eliot, Emily Brontë, George Sand, and Mary Lamb. The *motif* for this new life of one of Boston's most famous daughters is given in the second paragraph of the opening chapter, "In the turning and perseverance of this planet, present soon becomes past, and that which has been best said asks to be said again." And, in addition, we may say that the life of a "woman's woman," such as Margaret Fuller was, would seem somehow incomplete without a woman's interpretation of her life, works, and character; and Mrs. Howe would, by those who know something of the history of both women, seem to be the woman best fitted for writing such biography. But, to those who have read the more enthusiastic (though more fragmentary) tribute to her memory paid by her personal friends James Freeman Clarke, Channing, and Emerson, this work of Mrs. Howe's brings up very little that is new in fact or incident, though the criticism of Margaret Fuller's writings and the order of arrangement of the incidents of her life are in Mrs. Howe's best vein.

A PHYSICIAN'S SERMON TO YOUNG MEN. By William Pratt, Master of Arts, Doctor of Medicine, Fellow of the Royal College of Surgeons of England, and Licentiate of the Royal College of Physicians of London. New York: M. L. Holbrook & Co. pp. 48 Price 25 cts. For sale by W. B. Clarke & Carruth, Boston.

This is a little work which we can heartily commend, and a copy of which we wish could be put into the hands of every young man in the land. The words by Prof. R. P. Proctor, quoted in the preface, are pertinent and just: "The little work before us, of fewer than fifty pages, is intended to be put into the hands of young men by fathers who are unwilling or incapable of discharging a father's duty in this respect. And, as not one father in ten is, we believe, ready to do what is right by his boys himself, it is well that such a book as this should be available, especially as it gives some information which a physician is able to give with special authority. We commend it to the especial attention of fathers and sons alike. To the former, as showing what they should tell their boys; to the latter, as containing lessons which they should take to heart."

THE opening article in the *North American Review* for November is by Senator H. B. Anthony, who, under the title of "Limited Suffrage in Rhode Island," gives an interesting sketch of the early constitutional history of that State; Dr. Norvin Green, in "The Government and the Telegraph," cites the provisions of the Federal Constitution and the decisions of the Supreme Court to show that the general government is debarred from assuming the management of the telegraph lines; Rev. David Utter, in an article entitled "John Brown of Osawatomie," gives an account of Brown's doings in Kansas, and attempts to show that his character had little in it that was admirable, that he was wrong in principle and practice, and that "as his true history, too long concealed, becomes known, admiration for him will be changed to disgust, and disgust to anger, that we have been so long deceived"; Balfour Stewart has an able paper on "Solar Physics"; and Gen. John Newton writes on "Modern Explosives." "Conversation with a Solitary," by W. H. Mallock, is an imaginary passage-at-arms between a radical and a conservative relating to society and government. "Suggestions in regard to the Public Service," by Green B. Baum, defends the faithfulness and efficiency of the clerks and other government employés at Washington before the passage of the Civil Service Act. "Dr. Hammond's Estimate of Woman" is criticised by Mrs. Lillie Devereux Blake, Miss Nina Morais, Mrs. Sara A. Underwood, and Dr. Clemence S. Lozier.

THE gem of the November *Atlantic Monthly* is Emerson's sketch of "Ezra Ripley, D.D.," written for the Social Circle ("a club in Concord now more than a century old") soon after the death of the subject of the sketch, in 1841. Brooke Herford has an article on "The Trustworthiness of the Hebrew Traditions"; Maria Louise Henry's sketch of "A Noble Lady" (Marie de Hautefort) is very interesting reading; Albert S. Bolles deals with one of the urgent questions of to-day in an article entitled "What Instruction should be given in our Colleges?" Gilbert A. Peirce pays a glowing tribute to the genius of Joseph Jefferson in his "Good-by to Rip Van Winkle"; Crawford's "A Roman Singer" begins to show traces of the mysticism which characterized *Mr. Isaacs;* Lathrop's "Newport" is continued; and the sketches of travel in this number are Henry James' "En Province," Charles Dudley Warner's "Random Spanish Notes," and William Chauncy Langdon's "Recollections of Rome during the Italian Revolution." The poems are by Edith M. Thomas, Christopher P. Cranch, and John Boyle O'Reilly. Sarah Orne Jewett has one of her realistic stories, "An Only Son"; and Olive Thorne Miller, in "The Bird of the Morning," portrays some of the characteristics of the American robin.

THE November number of the *Popular Science Monthly* contains a number of very interesting papers. Prof. Josiah P. Cooke writes on "The Greek Question," claiming that, while the sciences should be given an advanced position, there is much need of the classics. The editor has an able article on the same subject, in reply to President Porter's paper in the September number of the *Princeton Review*. M. Ch. Velain gives an account of "Ischia and its Earthquakes," Prof. H. A. Howland makes "A Plea for Pure Science," and Dr. Felix L. Oswald considers "The Alcohol Habit." Other articles are "The Age of Trees," by J. A. Farrer; "Some Unsolved Problems in Geology," II., by Dr. J. W. Dawson; "Inlets for Infection," by R. T. Thorne, F.R.C.P.; "Remarks on the Influence of Science," by Leslie Stephen; "A Home-made Telescope," by Dr. George Pyburn; "The Utility of School Recesses," by Joseph Carter; "The Chemistry of Cookery," by W. M. Williams; "Sketch of Lamarck," with portrait; "Correspondence," "Editors' Table," "Literary Notes," and "Popular Miscellany Notes."

THE *Catholic Review* for November has the following articles: "Luther and the Diet of Worms," by Rev. I. T. Hecker; "Ancient Celtic Art," by Bryan J. Clinche; "Our Grandmother's Clock," an anonymous story; "The Early Fruits of the 'Reformation' in England," by S. Hubert Burke; "The Franco-Annamese Conflict," by Alfred M. Cotte; "Scepticism and its Relations to Modern Thought," by Conde B. Pallen; the third number of review of Bancroft's History, treating of "Maryland Toleration," by Richard H. Clarke; "The Returning Comet of 1812," by Rev. Geo. M. Searle. There are two chapters given of the pleasant serial, "Armine," by Christian Reid; and the department of "New Publication" gives a pretty full *résumé* of recent Catholic publications.

AMONG the contributors to the October *Wide Awake* are Joaquin Miller, Mrs. S. M. B. Piatt, Edward Everett Hale, Mrs. A. M. Diaz, Marion Harland, Christopher P. Cranch, Fred A. Ober, and Mrs. A. T. D. Whitney. Tennyson's poem "The Brook" is given with a beautiful full-page illustration by W. L. Taylor, and Hood's "Queen Mab" is set to music by Julius Eichberg. There is an interesting description of "The Blind Children's Kindergarten" at the Perkins Institution for the Blind, written by Emilie Poulsson; a short biography of Peter Cooper, by Sarah K. Bolton, with a portrait; and the first of a series of papers on how to act "In Case of Accident," by Prof. Sargent of the Harvard College Gymnasium.

THE contents of the *Unitarian Review* for October are as follows: "Christian Optimism," by Rev. Cazneau Palfrey; "The New Movement in Orthodoxy," by Rev. Rushton D. Burr; "Kuenen *vs.* Delitzsch," by Rev. R. P. Stebbins; "Determining Conditions of the Reformation," by Rev. S. C. Beach. "The Editors' Note-Book" contains an interesting notice of Protap Chunder Mozoomdar and his mission. Among "Things at Home and Abroad" are paragraphs on "Schiller on Scepticism" and "a Russian Unitarian," while the "Review of Current Literature" is quite full and interesting.

THE charming story, "Christie's Christmas," which has been running through the *Pansy* magazine, published by D. Lothrop & Co., is concluded in the October number. This is an excellent number, full of choice reading and pretty pictures, one of its attractions being a sketch and picture of John Ruskin.

PERSONAL ITEMS.

BISMARCK is so superstitious that he will never begin an undertaking on Friday, nor sign an important document on that day. He is said to have predicted the day and hour of his own death, and to be greatly interested in astrology.

A SENSIBLE Californian who was worth $80,000 left the following direction in his will in regard to his funeral: "Let my coffin be a plain, redwood box, put together with common nails or screws, without paint or varnish, with plain iron handles. Let there be a cheap shroud and no flowers. What is a dead man but a handful of dust? Instead of a hearse, I may just as well be carried to the grave upon some ordinary vehicle in every-day use, since life is but the journey of a day and death the final rest."

THE Comtesse de Chambord was ever a faithful wife to the late "Henry V." The latter wooed and wedded her long years ago according to royal rules: he courted by despatch and married by proxy. The negotiations were carried on with profound secrecy. When the older people—the relatives, the chancellors, and the chamberlains—had settled matters, the young lady was asked her opinion; and she gave it in becoming form, in a document which was a model of the correspondence of princely courtship: "I consent to unite my lot to that of the Comte de Chambord, for I feel sure this union will make me happy. Firmly resolved to devote my whole life to Comte de Chambord, I shall love France as he loves her; and all my prayers and all my vows will be for our common country."

AN exchange says: "John H. Noyes, founder of the Oneida Community, who fled the State about a year since to escape indictment, is now at Clinton, Canada, near Niagara Falls, living with his wife, although three others of the community women went with her, when she joined him. The community at the time furnished him with a home and funds. Noyes was the autocrat of the community. His word was the law from which there was no appeal. Since his departure, the family, or 'community,' has been governed by a committee of ten men and ten women, who consider all questions arising and direct all business. They have abolished the mixed-marriage system, and adopted the monogamic relation. Many wedding ceremonies have been performed, and those who were married previous to entering the community are again living together. The functionary who links the couples is an ex-Episcopal minister who has for fifteen years been a member of the community."

Address THE INDEX, 44 Boylston Street, Boston, Mass.

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

The Basis of the Ethical Movement.

Why Unitarianism does not Satisfy us.

Two Lectures before the Society for Ethical Culture, of Chicago, by W. M. SALTER.

Price 10 cts. each. For sale at INDEX office and GEO. H. ELLIS, 141 Franklin St.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

THE report of the Mormon missions in the Sandwich Islands, published last week, shows a membership of thirty-six hundred.

KING HUMBERT, it is stated, designs to erect a monument to the late King Victor Emmanuel, in the centre of the Pantheon. If this is done, the Pope says he will declare it a pagan temple.

THE Nihilists have issued a proclamation demanding that the Czar summon the representatives of the Russian people, and asking for full amnesty, freedom of the press, freedom of speech, and the right to hold public meetings as the only means of preventing revolution.

THE meetings of the Boston Liberal Club, which are held at Paine Hall Sunday morning, are increasing both in attendance and interest. The defence of Democratic institutions last Sunday, by Mr. Horace Seaver, against the croakings of political pessimists, was able and eloquent, and elicited hearty applause.

THE following charming story, an English paper says, was related to his congregation by a well-known evangelical preacher, who lately resigned his living in South London to avoid a criminal prosecution: "A railway train was entering a tunnel, when the driver saw two children on the line. He instantly blew his whistle as shrilly as possible, the guard applied all the brake power at command; and, as the train thundered into the tunnel *with every passenger's head out of window*, the tiny voice of one of the children was heard to say, 'Hold fast to the rock, brother,' as they clung to the side of the tunnel in safety."

AT the regular executive meeting of the National Woman Suffrage Association of Massachusetts, held in Boston last Friday, the following resolution was unanimously adopted: "Whereas an act of the Legislature of 1879 provided that the State board of health, lunacy, and charity shall consist of nine persons; and whereas, by a recent decision of the Attorney-general of Massachusetts, a woman is not eligible to appointment under the statute as a member of this board, and consequently a woman is not a person,—therefore, *Resolved*, That we call on the members-elect of the next Legislature to pass an act declaring that the women of this State shall hereafter be recognized as persons."

COUNT DE LESSEPS delivered an address last week in Paris at the annual meeting of the five academies on the scientific and civilizing character of great enterprises that facilitate intercourse between nations. The maritime highways, he said, should no longer be subjected to the vicissitudes of the active politics of governments; seas, straits, Bosphoruses, and maritime canals must be freely open at all times, irrespective of all international conflict; the construction of the Suez Canal and the eventual construction of the Panama Canal have effected the introduction of a new principle, which is more important even than the execution of the works,—namely, a vast association of the capital of the world, which conduced to the solidarity of the interests of all nations.

SAYS the Springfield *Republican:* "There has lately been published at Vienna a very interesting collection of documents from the Vatican, showing what the papacy did in the great struggle for the preservation of Christian civilization in Europe against the Turkish onslaught in the latter part of the seventeenth century. There is no question and there has never been raised a question of the importance of the pope at that time to the fate of Europe. It is such things as this which Leo XIII. offers to the world,—things which are accepted history: he does not and dares not offer the unmutilated records of the Vatican of Luther's time, or of the era of the Borgias; and it is quite within the bounds of credibility that many such records are being hidden from profane hands."

GEN. BUTLER is a political demagogue for whom we never did and never shall vote; but he is a human being who possesses some good qualities and has done some good service. We have, therefore, no sympathy with the wholesale and indiscriminate disparagement and abuse of him by papers and politicians whose praise of him but yesterday, as it seems, was quite as extravagant and foolish as much of their present abuse, and whose methods seem to be morally but little, if any, superior to those of Butler. The tone of the press and of much of the stump-speaking during this campaign, in which it must be admitted the Republican candidate has conducted himself with the most dignity and fairness, are to us painful indications of intellectual and moral degeneracy in Massachusetts, some of the causes of which, at least, it is not difficult to discern.

SAYS the *Independent:* "Felix L. Oswald's *Zoological Sketches* are an entertaining and valuable contribution to the out-door study of natural history; and we should commend it freely to our readers, were it not for the preface, which boldly avows that the book is written as an essay toward the superseding of story books that are based on an assumption of supernaturalism and of faith in an unseen world—that is, we suppose, in Christianity—with stories of natural science. This transforms it into a *Tendenz-schrift* of the worst kind, and makes us suspicious that there may be poison at least in the coloring-matter of the book, if not in the facts, though we have not discovered it." The *Independent's* objection to Dr. Oswald's *Zoölogical Sketches*, entirely consistent from a Christian stand-point, is a recommendation of the book to those who do not believe in supernaturalism.

THE St. Petersburg correspondent of the London *Times* says: "It is a strange illustration of the state of Russia that, although the whole country is honoring the memory of Turgenef, a vast majority of its people, all told, have either never read a chapter of his works or heard of his name. The council of the Miestchanin (bourgeois) corporation in St. Petersburg actually passed a resolution the other day to the effect that, as most of the members knew nothing of Turgenef or his works, copies of his works were at once to be distributed, in order that they might forthwith make acquaintance with the manner of man whose funeral they were called upon to attend. In the municipal council of St. Petersburg, when the mayor proposed the honors to be given to the deceased author, one member, a tradesman, and I think a butcher, got on his legs and objected in the following terms: 'Who's Turgenef? He was a Westerling. He was not one of us. He only scribbled. The Lord be with him!'"

THE work of erecting a monument over the grave of Thomas Jefferson at Monticello, Va., in accordance with a joint resolution of Congress, is completed. The monument consists first of two foundation courses, the lower twelve feet square, and the next eight feet square, and each nine inches in height, surmounted by a die three feet seven inches in height, and three feet two inches square, and this by a granite obelisk twelve feet eleven inches high, making a monument eighteen feet high. The inscription composed by Mr. Jefferson, and, in accordance with his directions, placed on the obelisk, is as follows: "Here was buried—Thomas Jefferson—Author of the Declaration of American Independence, of the Statute of Virginia — for — religious freedom—and father of the University of Virginia." And upon the die, "Born April 2, 1743, O.S.—Died July 4, 1826." On the upper surface of the four sides of the lower foundation step are inscriptions marking the four graves above mentioned as surrounding that of Mr. Jefferson: namely, the grave of Martha Jefferson, his wife; those of Martha J. Randolph and Maria J. Eppas, his daughters; and of Gov. Thomas M. Randolph, his son-in-law. The total expenditure for the work was $8,352, leaving a balance of $1,648 of the appropriation still unexpended.

A MODERNIZED SCHOOL FOR PREACHERS.

Our recent word on the need of a new school for preachers receives strong indorsement in the article following this by Rev. Heber Newton. Since Mr. Newton is one of the most distinguished and able of Broad-Church Episcopalian preachers, and yet speaks from within the lines of that denomination, his views and arguments are especially noteworthy, and should attract wide attention. It will be seen that he not only thinks such a school much needed, but believes in its possibility. And —a point particularly noticeable—he wants such an institution, not only for the prominence it would give to sociological and ethical studies, but also for the freer and larger scope which would be allowed in the departments of comparative religion and of Hebrew and Christian history than is now permitted, or is likely to be permitted for a long time to come, in any of the denominational theological seminaries. He does not fear to commit even these latter branches of study to a school conducted on the principle of the broadest liberty of inquiry, and in which the scientific method of criticism and investigation would prevail. He evidently sees that only thus can the public teachers of religion be well equipped to meet the new demands which modern progressive thought imposes upon them.

Mr. Newton is a witness who addresses from Sunday to Sunday a cultivated and intelligent audience, and speaks from the pulpit of a denomination that is commonly regarded as "aristocratic" in its spirit, and that appears to be specially attractive to the wealthy classes of society. But in our department of correspondence will be found a brief letter from another witness, Rev. William G. Babcock, who, from a very different stand-point, also indorses our idea of a new kind of training for religious teachers. Mr. Babcock has had long experience in the city of Boston in a "mission" chapel, and is still engaged in this work. He has been accustomed to address, and in his work associate with, the laboring classes and the poor. He has studied their needs. And he has learned that it is not merely Bible instruction nor sentimental talks about trusting God and following Christ that will satisfy their wants. He finds that some of them are grappling with the deepest problems of thought, and that all of them need the wisest and most modern instruction with regard to practical improvements in their conditions of living, and that questions are daily coming before him which require, for a right decision, a large equipment of knowledge with regard to the best methods of philanthropy and of social advancement. The proposed school, he sees, would supply a need in training leaders for this kind of work.

We repeat Mr. Newton's question, "Is not such a school possible?" And, encouraged by his belief in it, we are disposed to answer—at least, more stongly to hope—that it is a possibility that may be realized. Could Mr. Wade's offer to establish a school at Cleveland—which the Unitarians, we believe, have still under consideration—be made available for an institution of this character, we venture to predict that the problem of raising the balance of the endowment needed for the enterprise would be much simplified. Liberal and wealthy Unitarians, who are now hesitating about helping to endow another denominational theological school, even though on a broader scale, might be very ready to aid in establishing the Cleveland school, when they should see that it was not to compete with, but to supplement their present schools. It might well be expected, too, that the progressive section of evangelical Christendom, which Mr. Newton represents, would furnish some of the necessary financial help. Mr. Newton's own influence in this direction, we are sure, would aid materially. Is it too much to suppose that this branch of religious liberalism would liberally endow, for instance, one professorship in such a school?

And, then, there are the Liberals outside of all churches, many of whom would gladly give their aid. Unchurched Liberalism is, to a large degree, dissatisfied with its disorganized condition, and yet has also largely outgrown that species of lectures and literature which deals chiefly in exposing the absurdities of the Bible and the shortcomings of churches. It has not become less radical, but it wants something more constructive, more positively helpful in the practical problems and work of life. It, too, begins to make a demand for well-equipped and well-trained men to lead along the new lines of thought and action which the new age has opened. And, among this class of Liberals, there are persons of pecuniary means who recognize this need and would willingly join in an enterprise to supply it. The movement for the establishment of societies for ethical culture represents perhaps, at present, the most hopeful phase of this constructive tendency of unchurched liberal thought. And this movement specially demands that its teachers shall be specially trained for their work. Prof. Adler, in various public addresses, has particularly emphasized this requirement; and he and his friends in New York, though we have no right to speak for them, could probably be depended upon to give solid assistance toward the establishing of a school of the character sketched. Indeed, when Prof. Adler became President of the Free Religious Association, he broached the project of a somewhat similar institution as an enterprise for that body to undertake. So that the germinal idea of it may almost be said to be his. But, though entirely in the line of its principles and aims, that Association alone could not assume a responsibility of such magnitude. Now, however, a possible opportunity opens for a realization of that project on even a larger scale.

The question is, Can the possible factors toward this realization be brought effectively together? There need be no doubt that the school, if established, would have students. There are earnest young men craving just those opportunities of instruction and study which it would offer, in order to fit them for their life-work. There are young men who have been in pulpits just long enough to learn what they need for their tasks, who would eagerly seize the chance to go back for additional preparation in such a school. The demand is earnest and urgent. Let there be equal earnestness on the part of those who recognize the demand and whose privilege it may be to answer it, and the problem is solved.

WM. J. POTTER.

A HIGHER TRAINING-SCHOOL FOR PREACHERS.

The Index set forth a real need of our time, as it seems to me, when in a late issue it broached the idea of a higher training-school for preachers. Some such idea has floated, in a nebulous sort of way, in my own mind for some time past. Doubtless, others have seen this same need. It is one that must force itself upon all those who, whatever their church connections and private opinions, desire to see the preparation for the ministry approach somewhat nearer its ideal. In some churches, the standards of clerical education are painfully low. In all Orthodox churches, those standards are warped from their ideal forms by the influence of denominationalism and of orthodox traditionalism. Each church feels itself obliged to shape its curriculum by its denominational "ism." No church is wholly free to study theology or church history apart from pre-conceived and pre-determined theories. Presbyterian or Episcopalian, Methodist or Baptist, the seminary is committed to a sectarian view of many of the most important matters studied there. The professors hold retainers for one side of the case. They are salaried to give students the Episcopalian or the Presbyterian view of church polity, the Calvinistic or the Armenian system of doctrine. And, even worse than this, different schools or parties within one church will have their several institutions to teach the fractional bit of a denominational theology; and we have a Nashotah and an Alexandria, a Princeton and an Andover.

The traditional view of the nature of all dogma, and especially of the dogma of the Bible, forecloses true liberty of investigation. All schools are committed to the theory of a supernatural system of thought in divinity and to the theory of a miraculous book in the Bible. There can of course be no questions raised when "the fundamentals" are concerned, except in order to be met by the incontestable foregone conclusion, and so to be laid away as settled.

It is no reproach to the ability or honesty of those who teach in these schools to say that, under the conditions of study laid down of necessity by denominational schools, there can rarely be any thorough work done. The limitation of vision induced by the traditional theory of theology shuts out from the field of investigation many studies of the utmost importance to a thorough theology. What, for example, is taught, or can rightly be taught, in most denominational schools concerning comparative religion, concerning the real development of Hebrew thought in the generations immediately preceding Christianity, concerning the development of thought in the early church, concerning physical science in its relations to theology, etc.? Much may be said about these subjects, but the conditions are absent for a frank and unprejudiced investigation of them.

The need here is precisely that which is expressed by the memorial for the foundation of a Hibbert lecture in England:—

> From the fact that all the chief divinity schools of this country are still laid under traditional restraint, from which other branches of inquiry have long been emancipated, the discussion of theological questions is habitually affected by ecclesiastical interests and party predilections, and fails to receive the intellectual respect and confidence which are readily accorded to learning and research in any other field. There is no reason why competent knowledge and critical skill, if encouraged to exercise themselves in the disinterested pursuit of truth, should be less fruitful in religious than in social and physical ideas. . . . The time, we think, is come, when a distinct provision for the free consideration of such problems by scholars qualified to handle them may be expected to yield important results.

And then, as *The Index* pointed out, there are many fields of thought of the greatest value to the living preacher,—fields into which he must go, simply because his flock are there already,—of which he learns next to nothing in his preparation for the ministry. All that *The Index* said of these unopened domains is unquestionably true. These fields — the ethical problems of the nineteenth century, the philanthropic problems of our age, the whole sphere of social science—are the ones supremely needing to be cultivated, in order to fit men for the actual work of the ministry. And there is no doubt that the lack of any serious attempt of the average pulpit to guide the real thought and life of our day is due to its lack of training for these real tasks of the preacher. The

Digitized by Google

results of this state of things are to be seen in the unorganized ethical forces of the churches,—unorganized for their real task of conquering society for a nobler humanity. There is plenty of ethical energy; but, lacking guidance, it fails to carry civilization for justice and brotherliness and public spirit.

The practical question is, What can be done to remedy this state of things? There is no use in trying to remodel denominational schools. Slowly, bit by bit, the *Zeitgeist* will change them. But this is a process whose results are for future generations. The fundamental defects of such schools will cling to them as long as they exist as denominational schools. They meet, and will long continue to meet, the need of the large majority of students, as they express the ideas of a large majority of the members of these churches. Here and there, however, there are already men who want to reach their conclusions only after hearing more than one side of the case. They not seldom go round and drink of the cisterns in two or three schools, and balance Union against the General Theological Seminary.

There are now young men who want to build upon their seminary studies a broader and more generous course. They generally go to Germany, if they are able. The Harvard school doubtless offers them the best chance of such an after course on our shores; but that stands under denominational relations, though of a much freer sort than are to be found elsewhere, and does not, I believe, fill out the range of studies requisite for a post-graduate course. There still exists, unfortunately, too much of denominational weakness to allow of an ideal school, meeting the need, if bound to any denomination.

What is needed is, as *The Index* said, a "Johns Hopkins" for preachers,—a school to which men of open minds and scholarly habits could go after leaving their denominational seminaries, and where they could study branches which are passed by in the church schools, and study in a larger and more thorough way the subjects already covered after the fashion of the denominational institutions. I believe with *The Index* that such a school is the educational want of religion in our land to-day.

Is it possible? A question much easier raised than answered. Doubtless, the denominations would view it with great suspicion, if not with open denunciation, if it were established. But it would take care of itself. It would have plenty of students. It would not necessarily injure any denomination. Men would very likely remain of the same belief as when they entered it,—even as now men in the different churches remain Baptists and Methodists and Congregationalists and Episcopalians, after pursuing for many years the studies that would there be carried on; but they would be bigger men and broader churchmen. No denomination that regards itself as holding the truth could expect such a school to pervert its young men without impugning its own estimate of itself.

But can such a school be established? That means first, Can representatives of different churches and of religion outside the churches be found who would meet as trustees of such an institution, prepared to consider plans for its operation, and with grace enough in them to carry out such plans in their largest and freest forms? I may be over-sanguine, but I believe such men are to be found.

It would go without saying that the full convictions of no one engaged in the management of such an institution could be embodied in it. It would be equally axiomatic to remark that such an institution—its general plan once agreed upon—would open positions for which ability and character would be the sole qualifications; and the bias of the individual professor would have to be allowed for, as now is done in our universities and the higher colleges.

Can the money be had for such a splendid scheme? That cannot be known without an agitation of the subject; and, therefore, I follow up your editorial article with a word to keep the meeting moving, if possible. What a chance for some one to become the American *Hibbert!*

As *The Index* suggests, our Unitarian friends are the natural leaders in such an effort. They have the unique position which enables them to meet all phases of liberal religion in our country, and from the elements in all organizations which are mutually sympathetic to crystallize such a beautiful conception. They may not thank an outsider for meddling in their affairs; but, if they were to rise to the opportunity presented by Mr. Wade's great offer, and make it the germ of such a school, they would add a new debt to that large obligation which already progressive religion owes them in our day. R. HEBER NEWTON.

GARDEN CITY, N.Y., Oct. 23, 1883.

TRAVELS IN FAITH.

PART IV.

In my voyages to India and China, I was greatly impressed with the sight of the multitudes of people and their varying religions. Human life seems to be a weed that grows rankly over these lands. Its individual value appears to be small; and I was often oppressed with the questionings of my mind as to the immortality of these herds of coolies, and as to the idea that God was concerning himself separately with each one, deciding his destiny in heaven or hell. As I visited the mission rooms and saw twenty or thirty of the elect gathered out of a million heathen, it seemed incredible that these were to be saved, because, by accidental circumstances, they had come under the influence of the missionaries and been converted, and the rest of the million were to endure eternal torment. Adam's sin and their own shortcoming from the teachings of the creation had sealed their doom. These theories do not shock one so much in the prayer-meeting at home, where one sees only the elect, and the poor heathen are ten thousand miles away; but, when you see the toiling millions pass by you, and when you become acquainted with individuals and find them to be brother-men and not weeds, and observe kindly and virtuous traits of character, and witness instances of family affection and neighborly benevolence, this whole scheme of damnation excites such a feeling of revolt that only the utter extinction of one's reason and a blind acceptance of "the Word of God" can preserve one's belief. A Calvinist who wishes to keep his faith should never travel and never read secular books. By confining his acquaintance to the circle of the church and feeding his mind constantly upon evangelical reading, he may be safe. This is the life that many pietists lead; but it is so unnatural, it seems impossible that it can be right or can develop the best sort of men.

I was surprised to see the morality that prevailed in Asiatic lands. I could not observe that the people I came in contact with were any worse than the laboring and mercantile classes that a shipmaster meets in Christian lands; and, sometimes, the unwelcome conviction was forced upon me that the heathen were the best. They were infinitely the most temperate, and no more dishonest. The people who had not met with mercantile Christians were better in their habits than those who lived at the seaports. The seeming injustice of sending these people to hell on account of Adam's sin and their own shortcomings from the teachings of the light of nature was a weight upon my mind that I could never get rid of, though I tried to "lay my reason at the feet of Christ," as I once heard a Boston lady in spectacles say at a "holiness" meeting.

When I first visited China, I was told by the missionaries at Fuh Chau that they had just baptized the first convert to Christianity after eleven years of labor in a district containing three million people. It occurred to my mind that God had not devised very effective machinery for "making disciples of all nations"; and I recalled the enthusiasm at home in the monthly concert of prayer for foreign missions, when a letter from a missionary told of a few conversions, and how the leader of the meeting would give out the hymn,—

> "The morning light is breaking,
> The darkness disappears,"

which would be sung with great fervor.

On the spot, the conversions only excited a painful comparison.

My father was for thirty-six years a member of the Prudential Committee of the American Board of Commissioners for Foreign Missions, and was devoted to their work. In his later years, I took him on a voyage around the world in the ship "Golden Fleece." At Canton, he visited the missions he had been so accustomed to delight in; and, when he saw the result of all these years of effort and contrasted it with the vast, surging tide of heathenism that rolled around him, he was greatly depressed, and said to me, "I don't believe the world will ever be converted by the preaching of the gospel."

These impressions never made me disparage missionary effort; for I believed it did some good, and was necessary to Christian consistency. It only excited wonder at God's way of doing things. How an omnipotent and benevolent God should fail to spread his "glad tidings of great joy" to all people in an effective way was beyond my comprehension. He evidently had miraculous power enough, and had exercised it on very trivial occasions in the past. Did he not make iron swim to recover an axe? Did he not destroy two companies of fifty men with fire from heaven, because their captains did not invite Elijah in a respectful manner to "come down"? Did he not send two bears to tear forty-two children who had called names in the street? Did he not make the sun and moon stand still until the people had avenged themselves upon their enemies? If he could do such things for mere wonder or revenge, why should not love call forth his power, when countless myriads of heathen are going down to everlasting perdition for lack of a revelation they can understand? All this confounded and oppressed me, and I found no peace save in unquestioning submission and refusal to think.

In later voyages to the East Indies, I found that the Holy Ghost was leading the good "Brethren" to differ among themselves, some becoming so exclusive in their separation from evil that they could only recognize the true Church of God as existing in their own gatherings. An adventurer came to Singapore, announcing that the Holy Ghost was gathering the Lord's people to await his coming at the town of Wellington in South Africa, where all the prophesies of blessing were being fulfilled. He assembled a few brethren and sisters in a room; and, after hours of intense prayer, some were seized with an ecstasy which was called receiving the Holy Ghost. One of the sisters was prevailed upon to go to South Africa, and she wrote back letters enthusiastically declaring that "the half had not been told her." I afterward met in China a captain in the British army,

Digitized by Google

who, under the influence of this man, gave up his commission, and prepared to go to South Africa. But, at Singapore, he learned that the man's lady travelling companion was not his wife, he having left that person behind when he became "the Lord's freeman." This opened the captain's eyes; and, declaring that the Lord did not countenance debauchery, he changed his plans, greatly shaken up in mind.

Arriving in San Francisco after a passage around Cape Horn of nearly five months, in which I had attained to a great degree of faith and consecration through constant study of the Bible and the literature of the Brethren, I experienced a great shock from the words and demeanor of the ministers and Christians of that city. I went to hear nine preachers while there; and none of them showed any knowledge of the Christian's calling out of the world, and none of them preached salvation by Christ. I wrote in my journal: "Ear-tickling and soul-lulling orations about benevolence, moral duties, or Scripture history, formed the sermons; and, if any direction was given to sinners, it was such as Moses preached before the righteousness of God without the law had been manifested. Nor did I meet with any warm-hearted Christians. All seemed to think more of dress, amusement, Pacific railroad, and China steamers than of their Lord. It seemed impossible, from the words and attitudes of all these, that we were instructed to 'love not the world, neither the things that are in the world,' and to watch for our Lord's coming; for no one seemed to act upon such an idea, and yet they read their Bibles or studied theology continually." I could not answer this fact by the Brethren's sweeping condemnation of all believers but themselves; and, having seen their own variance of opinion, it appeared that the infallible guide, the Holy Spirit, led each prayerful believer to distinct and differing views, often utterly opposing those of other equally devout and prayerful believers. My mind was not satisfied by the theory that these views of truth were like different views of a mountain from various points of observation, and were capable of union into a harmonious whole, when seen from God's stand-point. The only solution of the differences among Christians and of the ever-varying religions and views which I found to prevail all over the world appeared to my mind to be that every man makes his own religion in accordance with his surroundings and the constitution of his mind.

A friend had presented me with Herbert Spencer's book, *Illustrations of Universal Progress*. I had glanced at it and laid it aside; for I had never in my life read a book opposed to Orthodoxy, and I had understood he was one of the vain men who, by "oppositions of science, falsely so called," were striving to make the word of God of none effect. But, about this time, I took it up, and found that its theories about religion agreed with my observation and experience. He applied the law of evolution to religion, commencing with the savage's worship of his dead chief, which developed into the conception of a deity who, at first human in all things, has been gradually losing human likeness, each race of men forming ideas of God in accordance with their own intelligence and desires. He says, "As humanity is a growth and not a manufacture, men's theologies must be determined into such forms as the conditions require"; and it follows "that the religious creeds through which mankind successively pass are, during the eras in which they are severally held, the best that could be held." The human origin of all religion thus seemed to explain all my difficulties.

I sailed for the west coast of Mexico, and experienced a reaction from the fervor which had characterized my thoughts on the outward passage. I subsided into an indifference about religious truth which, during two months' stay on the lonely coast of Mexico, degenerated still further into doubts concerning the whole scheme of Christian theology. I thought Satan was let loose upon me; for every form of infidelity came flooding upon my mind, and I could not read a chapter in the Bible without rationalistic suggestions of its improbability or overestimated import. I still kept up services with my sailors, though I preached what was not very authoritative to my own mind. I hope preachers on shore never do this. I remember walking off into the *monte*, as the Mexicans call the wild-brush-covered plains, and in the evening twilight I stretched out my arms to heaven, and with intense feeling called on God to reveal himself to me, and convince me of the truth of what claimed to be his written word. But no answer came. Some weeks after, when sailing toward Cape Horn, my emotions were strongly aroused by one of those trade-wind sunsets which only voyagers know, whose glories the ablest pens would fail to describe. Suddenly, the words came to me, "Now is Christ risen from the dead." I started at the seeming lack of connection with my thoughts, and said: "Is it true? If so, the teachings of Christ and his apostles are true. I can believe anything, if that fact is established." I searched the Scriptures, aided by Scott's and Lange's Commentaries and Gilbert West's treatise on the Resurrection; and my faith increased. I made no critical study of the text for myself, but read the conclusions of these critics. The story seemed well vouched for; and, in the course of my daily study of the Greek Testament, I came upon Paul's charge to Timothy, "Remember Jesus Christ risen from the dead," implying that this was the foundation of the Christian faith. As such I resolved to receive it, and I determined to doubt no more.

I read Paul's warning to Timothy, "that in the last days perilous times shall come," "that some shall depart from the faith, giving heed to seducing spirits and doctrines of devils"; and, in his Epistle to the Thessalonians, I read, "God shall send them strong delusion, that they should believe a lie." So I tried to believe that all these logical conclusions and most reasonable ideas that seemed so to agree with my observation and common sense were only delusions characteristic of the last time, and proved that the Lord was truly at hand. So firm a hold had my Bible taken of me that reason was doomed to a still longer subjection to a blind faith, and for years all the light of science and the wisdom of the age were rejected as delusions it was dangerous and sinful to encounter.

I thought my feeling of consecration might be increased if I went through the form of believers' baptism; and, after the end of the voyage, I was immersed, one cool October day, in a New Jersey lake, by Mr. James Inglis, editor of the *Witness*, a monthly paper devoted to the truths of Brethrenism minus its exclusiveness, though Mr. Inglis had, like most of the Brethren whom I have known, gradually withdrawn from fellowship with others, and was accustomed "to break bread" on the Lord's Day in his own house with any friends who chanced to come. After the plunge, he kept me standing dripping on the shore, while he made a gospel address to the dozen stragglers who attended us. I never had placed any stress upon the mode of baptism; but I imbibed a strong opinion of the unseemliness of this mode, and ever after doubted if immersion had been divinely prescribed for all climes and periods, though I believed that baptism was only to be used as the sign of the faith of its recipient. I may add that I read books in favor of infant baptism, but nothing on the other side except the Bible. No increase of "holiness" came to me; but, by resolutely refusing to reason and keeping my sympathies warm in religious work, I kept on for years sincerely leading a Christian life. I saw that many wise and learned men were able to accept Christianity in spite of the light of modern science, and I clung to their faith as an argument for the maintenance of my own.

ROBERT C. ADAMS.

GODLESS WORSHIP IN ENGLAND.

The Count Goblet d'Alviella publishes under this title, in the *Revue de Belgique* for September, a chapter about Agnostics, Comtists, and Secularists, extracted from his forthcoming work called *The Contemporaneous Evolution of Religion among English, Americans, and Hindus* (*L'Evolution Religieuse Contemporaine chez les Anglais, les Américains, et les Hindous*. 1 volume, octavo. 420 pp. Librairie Mauquardt: Bruxelles et Leipzig). The first section, on agnostic worship, tells how this is carried on at South Place, London, where M. D. Conway—who is described as an American favorably known in English literature, and now about fifty years of age, tall, lean, vigorous, with gray beard and bright, restless eyes—has been speaking since 1864, when he took the place of William Fox, who had preached Christian theism. The house of worship, like many of those used by dissenters, is of Grecian architecture, and can seat about five hundred people. The congregation represents more liberal views of politics than does that which meets with Charles Voysey in St. George's Hall. On the walls at South Place are printed in letters of gold the names of Shakspere, Socrates, Voltaire, and Moses, while still higher is that of Jesus. Mr. Conway reads selections from his *Sacred Anthology*, and also uses a book of *Hymns and Anthems*, compiled partly by himself and partly by his predecessor. A "meditation" takes the place of prayer. The sermons speak of Jesus as a representative man, and ascribe to him all that is most grand and ennobling in the New Testament, what is narrow and irrational being treated as an interpolation. The preacher, while declaring that we are forced instinctively to do homage to that superior principle which is called God, bids us take care not to limit the idea too much, or shut it up in formulas likely to conflict with the revelations to be expected from science. For him, God is merged in the ideal of humanity, which men have always been too apt to locate outside of themselves, to embody in concrete form, and to clothe with attributes that have become dogmas. His discourse on the "Religion of Humanity," preached in May, 1880, gives a most complete exposition of his system, wherein are traces of Hegelianism. It is urged that all history may be summed up in the struggle of man against external nature, and that our feelings have always been on the side of our adversary. After transforming the forces of nature into gods, we granted them as their kingdom all that we could not control ourselves: so that the real claims of humanity have always been opposed to those of theology. Gradually, these personifications of natural forces gave place to abstract dogmas; but these latter have been merely descriptions, in the language of theology, of the brutal resistance to progress made by inanimate forces. Alas that man has worshipped what true religion commands him to fight against and enslave!

Similar ideas are embodied in Comtism, whose worship of humanity is carried on in London, under the direction of Prof. Congreve, in a building which might be mistaken for a Protestant church, if the walls were not ornamented with

Digitized by Google

plaster busts of Moses, Homer, Aristotle, Archimedes, Cæsar, Paul, Charlemagne, Dante, Gutenberg, Shakspere, Descartes, Frederick II., and Bichat, the thirteen great men after whom are named the months of the Positivist calendar. The number of English Comtists is not so small as would be inferred from the jest of Mark Pattison, —that he had found in their chapel three persons, but no God. Among them is the brilliant essayist, Harrison, who refused to follow Congreve into revolt against Lafitte, Comte's immediate successor, and who has taken the lead in establishing the "Positivist Society of London" which worships in Newton Hall, and which has made most earnest protestations against the Afghan war, the annexation of the Transvaal Republic, and the coercion of Ireland.

After contrasting Comte's doctrine of the obligation of subordinating individual to universal happiness with Spencer's theory that the general welfare is best secured by each individual's making himself happy, D'Alviella quotes, as a successful attempt to unite in the same religious conception the Great Unknown of Herbert Spencer and the Supreme Being of Comte, the essay published in *The Index* for Aug. 8, 1882, by William Frey, who there "shows, with great force of reasoning and real elevation of sentiment, that the cause of our religious feelings is our dependence on the universe, but that man has found it necessary to represent this mysterious Power in human forms, so that the anthropomorphic attributes of which it has been stripped have been simply transferred to mediators." These facts lead Mr. Frey, like Mr. Conway, to that form of the religion of humanity which seems most likely to increase, and which accepts humanity as the true mediator between the individual and the Unknown."

The next section describes the liturgy used by the Secularists at weddings and funerals as well as in naming children, the formula for the latter purpose being translated at some length. These English radicals are described as striving to concentrate human activity on objects within the range of experience, holding that, as we know nothing about God or immortality, we have no right to affirm or dispute their existence, and claiming as requisites of human happiness that thought should be absolutely free, but should be directed toward seeking truth within the sphere of observation by the senses, speculations outside of this limit being idle and therefore injurious. The National Secular Society, which was founded in 1846, and which still publishes the *National Reformer*, has become so much devoted to Bradlaugh's peculiar plans that the British Secular Union was founded in 1874 by Holyoake and other prominent agitators for the disestablishment of churches and the secularization of schools.

D'Alviella's conclusion is that these attempts of the most advanced radicals to imitate ecclesiastical formulas show that England is still fundamentally religious, despite the recent progress of scepticism. "We are far removed to-day from the time when Montesquieu could say, on returning from London: 'Religion in England is dead. If any one speaks of it, everybody laughs.' Without doubt, the religious reaction, which effaced during the first half of this century the indifferentism of the previous epoch, has reached its zenith; and it is possible that, amid the difficulty of adjusting ancient beliefs to modern ideas, a new flood of scepticism will spread over England. But what conclusion can be drawn from these resuscitations except a lesson of prudence for those who delight in proclaiming either the final triumph of faith or the last twilight of the gods? At most, it may be possible to discover the law by which, through all the oscillations of the English intellect, religious thought is advancing toward more rational, liberal, and fruitful solutions."

F. M. H.

BEFORE our next issue, the most exciting political campaign which Massachusetts has gone through for many years will have been decided. *The Index* is not a political paper, but it believes in the practical application of moral principles to politics. It cannot but earnestly hope, therefore, that the people by their votes will relegate to private life the man who in his public career, both official and non-official, has shown less regard for moral principles and more regard for his own personal ambitions than any man who ever before sat in the Governor's chair in Massachusetts. This is not political partisanship. We held the same opinion when Gen. Butler was in the Republican party.

EDITORIAL NOTES.

AT a meeting of the Liberal Union Club of Boston, next Saturday evening at Young's Hotel, Francis E. Abbot will deliver an address on "The Aims and Objects of the Liberal Union Club."

B. F. UNDERWOOD will speak for the Montreal Free Thought Club, November 4, 5, and 6, on the following subjects: "The New Science and the Old Theology," "The Philosophy of Herbert Spencer," "Evolution in the Domain of Religion and Morals."

MR. MEAD holds to the popular view that faith "in the living God and the immortal soul" is "fundamental in religion." If this conception of religion be correct, among *un*religious minds must be classed John Stuart Mill, George Henry Lewes, George Eliot, Harriet Martineau, Charles Darwin, W. K. Clifford, Herbert Spencer, Ernest Haeckel, T. H. Huxley, John Tyndall, J. G. Romanes, and Edith Simcox, with many others eminent for greatness and goodness. A religion not possessed by such men and women, however much valued by multitudes, cannot fairly be regarded as necessary to a high degree of intellectual and moral development,—a degree of development, indeed, as high as is seen among the adherents of this religion.

FROM a report of the remarks of the president of the National Liberal League, in an interview had by a reporter of a Milwaukee journal, we copy the following: —

"I believe there are quite a number of distinguished Liberals who were formerly connected with the leagues, who have withdrawn?" "Yes. Notably, Col. Robert G. Ingersoll, F. E. Abbot, and B F. Underwood. These gentlemen were unable to agree with the leagues in regard to the Comstock legislation, and so, with a few others, prefer to work for Liberalism without organization, which they have a perfect right to do. But whenever the test comes, as it will, they must side with the secular government and the leagues, or go over to the churches. Our government will be and should be either a republic or a hierarchy: a mixture of the two will never work."

"These gentlemen" desired the League to keep to its original object, the secularization of the State, and objected to a policy demanding the total repeal of postal laws against the transmission of obscene prints through the mails,—laws which no doubt need revision, but ought not to be and are not likely to be repealed. To "side with the secular government" is not to side with the leagues, and to refuse to work with the leagues is not to "go over to the churches" or to favor a "hierarchy." But the statement that anybody has a "perfect right" "to work for Liberalism without organization" is an extremely courteous concession, considering that withdrawing from the League and protesting against its policy have subjected individuals to no small amount of censure and abuse from the leaders of the League.

LIVE THOUGHTS.

IT is infamy to die and not be missed.—*Wilcox.*

MALICE has a keen scent for blemishes.—*Punshon.*

BUT for the positive men, every enterprise would perish.—*Dr. J. R. Monroe.*

THERE would be no progress but for the men of clear convictions and the bravery to vindicate them in the face of prejudice and public clamor.—*Dr. J. R. Monroe.*

COMMON sense plays the game with the cards it has. It does not ask an impossible chess-board, but takes the one before it and plays the game.—*Wendell Phillips.*

WHEN you do anything from a clear judgment that it ought to be done, never shrink from being seen to do it, even though the world should misunderstand it: for, if you are not acting right, shun the action itself; if you are, why fear those who wrongly censure you?—*Epictetus.*

POETRY.

For *The Index.*

HYPERION.

Night and all her sickly dews,
Her spectres wan, and birds of boding cry,
He gives to range the dreary sky;
Till down the eastern cliffs afar
Hyperion's march they spy, and glittering shafts of war.
—*Gray.*

Thine arrows ever keener, brighter grow,
Resplendent Titan, with the lapse of time,
As o'er us in empyreal azure go,
Thy flashing wheels upon their course sublime:
Puissant sire of light, sun, moon, and star
Thy radiant progeny and vassals are.

Before thee ancient Night in terror fled
And Cosmos lay apparent in thy beams.
Emerging from the spectral darkness dread
Of chaos, beauteous creation gleams:
The roseate glow of primal dawn was thine,
When nature vibrant grew with light divine,

And Memnon music thrilled earth, sea, and air;
While vapors upward from the valleys curled,
And, primal darkness vanquished, green and fair
With grass and flowers rejoiced the illumined world.
Fit theatre and stage became it then
For birds and beasts and reason-guided men.

The realm of spirit thou enlightenest too,
Scaring the spectres of the mind away,
Demons and gods, whom grosser ages knew.
Round us thou shedd'st meridian reason's ray;
And not alone great souls dost thou illume,
But from all breasts art chasing night and gloom.

Full o'er our heads, thy glorious march we see
With vertical splendor in the zenith blue;
While radiance-stricken priest and bigot flee
To shrines which never aught but twilight knew,
Where low-browed ignorance, in servile fear
Suppling itself, doth incantations hear.

B. W. BALL.

RIDDLES OF LIFE.

O'er questions of life I reason in vain,
The case on theory resting,
While mysteries deep forever remain
Concealed for a final testing.

Over the creeds our fathers believed
Shadows of doubt are falling,
And lost is their faith through logic received
From sceptical voices calling.

Out of the night, enshrouding the past,
Monsters of faith are glowering:
By heritage power they hold me fast,
The peace of my life devouring.

"Guess me no guess to pillow my head,"
The facts of the case forestalling,
When arrows of death to my heart have sped
And darkness around me is falling.

Enigmas of life forever must last:
The sphinxy old riddles defy me,
And, mocking my hope, o'er reason they cast
A shadow that ever stands by me.

A. D. MARCKRES.

The Index.

BOSTON, NOVEMBER 1, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

RITUALISM OR RATIONALISM.

BY HOWARD WORCESTER GILBERT.

Ritualism pure may be defined as the supreme devotion to ecclesiastical ceremonial, an acceptance of established church formulas as the essence of religion; while rationalism, on the contrary, is the unreserved adoption of all the results of a sound logic reasoning from undisputed facts. In reality, however, we never find either unmingled with the opposite element. The ritualist is never, perhaps, without some lingering impulses of reason, some remaining tincture of the moral sense; while the rationalist, on the other hand, hardly ever completely emancipates himself from the theology of the past. No more than elsewhere is there here a perfect separation of the antagonistic elements. Except in the case of a few utterly negative and passive characters, there will always be discovered a more or less distinct polarity, so to speak, more or less inclination to the opposite poles of the battery. But, as the difference is, strictly speaking, an intellectual one, as no personal injustice is involved in the disagreement, the discussion may go on without any violence. Nevertheless, the affinities which might have been anticipated are plainly discoverable. The ritualist is generally the friend of old abuses; while the rationalist arrays himself, with more or less judgment, on the side of innovation and reform.

It becomes every day more evident that the theological contest is between ritualism and rationalism. The process goes on as regularly as the distribution of the particles of a compound in chemical disintegration to the positive and negative poles of the battery. Clear thinking inevitably emancipates the mind from the bondage of all absurd theology. Minds incapable of reflection, and therefore compelled to submit to authority, naturally take refuge in that negative state which requires no thought, which prefers the ease that comes of blind intellectual obedience.

The natural refuge of all such is, of course, the Romish Church; but there are vast numbers not ready to take the final step, who are, nevertheless, on the road to that haven of rest for feeble intellects. The Protestant churches are full of such people, who would at any time go over, if properly led. No one who regards with due consideration the defections that are everywhere occurring can doubt this fact. And no observant person can doubt, any more than he does this, that many of the evangelical clergy would infinitely prefer a return to popery rather than an advance to free-thinking: indeed, some of the leading ones openly avow it. Their well-founded dread of scientific trainings is instinctive: the instinct is true. A large body of the parsons are thoroughly treacherous to the cause of free inquiry, the very essence of Protestantism. Wherever the taint of infallibility enters, it will finally destroy all independent intellectual processes as completely as the parasitic germ corrupts and destroys the healthy fruit.

The danger to us lies in two classes, the reactionary evangelical parsons and the political demagogues with whom our country is swarming: the former ready to betray the cause of liberty at any time, for the sake of the cloth; the latter in the hope of "going down through history to the latest posterity" as governors and presidents and great orators,—the more degraded of them, who have no such hope or aspiration, for the sake of the more tangible rewards of their scandalous pecuniary gains and transient notoriety.

"The Slies are no rogues" nowadays any more than they were in the time of Shakspere; and many of the most successful of the class occupy high places, both in Church and State. The priests and the political tricksters both pander to and profit by the ignorant, fickle, and treacherous elements of society; and yet they are often lauded as honest and conscientious men, even by Liberals, on the false plea of a philosophical toleration. It is a spectacle that must excite the wonder of an impartial observer, this eulogy of men who have been the steadfast allies of both American slavery and popery. Neither those who are the avowed enemies of free speech and even of personal liberty itself, nor those who aid and abet them, deserve any quarter. As might have been expected, the political tricksters are usually faultlessly "evangelical."

The Romish hierarchy is dangerous, because it exacts from its subjects a brutish obedience. The illustrious statesman who founded Pennsylvania comprehended the full bearing of this peculiarity of her teachings. In his political tract entitled "England's Great Interest in the Choice of a Parliament," written in the perilous times of the Stuarts, he says: "And that Principle which introduces Implicit Faith and Blind Obedience in Religion will also introduce Implicit Faith and Blind Obedience in *Government*. . . . This is that Fatal Mischief Popery brings with it into Civil Society, and for which such Societies ought to beware of it, and all those that are Friends to it."

Of the Romish Church, it may be truly said that the depth and crookedness of her intrigues are past finding out. This being so, we should be utterly at a loss how to act, but for the saving fact that we know her to be, at bottom, the enemy of all liberty, that she is never, under any possible circumstances, to be trusted. She is as wise as the serpent, but she is by no means as harmless as the dove. To any one who might be disposed to regard this portraiture as an exaggeration, I can only refer to her uniform history, to facts which she can neither conceal nor gainsay. When she thinks it safe or inevitable, she avows and justifies them.

As for the newspapers, with a few highly honorable exceptions, the friends of liberty have no hope of any aid from them. They are gagged, through their pecuniary interests and their ambition. Here, in the metropolis of Pennsylvania, the journals which ridiculously boast of themselves as "the great Philadelphia dailies" treat their readers to nothing better than a diurnal mess of poor and very innutritious hash. To call them educational instrumentalities is an insult to the understanding.

We are all, more or less, influenced by our immediate environments, and liable to take limited views of a subject. So those who live in a region where the advocacy of women's political rights is popular are apt to conclude that the nation is ready to adopt female suffrage, and the sanguine humanitarian is convinced that the whole nation is thoroughly converted from the diabolism which led to the slaveholders' rebellion. And so with all other questions,—the wish is father to the thought. It is undoubtedly true, on the other hand, that those who are surrounded by a dominant conservatism are inclined to despondency; but it is certainly safer, where danger exists, to take the less rather than the too sanguine view. The enemies of every good cause encourage the apathy of over-confidence, as they are thus enabled to carry out their designs with the greater security. People who are off their guard are more easily surprised and conquered. And it seems to be the peculiar mission of certain persons everywhere, who profess friendliness to reform, to foster this fancied security with the soothing assurance that all is safe. When the peril from Romish intrigue is pointed out, this is the answer: "The American nation are too intelligent to be in any danger." But this was precisely the cry at the outbreak of the slave-holders' rebellion, which was pooh-poohed when we were on the very eve of that revolt, and in the same confident manner, by several very conspicuous persons, who did not all abate their efforts to reassure us, even after the long and bloody contest was fairly begun. I suppose there is no one who fears an attack *vi et armis*. Rome is mistress of much more insidious and efficacious methods of attack. Nevertheless, I agree entirely with Prof. Huxley that the papacy is the greatest menace to the human race in existence. Many a "leader" of a party is called its "head," for no other reason, apparently, than because he does so little of its real thinking. One would often wonder why such were "leaders," if he did not reflect that what the masses want is not a philosophic or sensible thinker, but one who sympathises with their passions and prejudices. The man who is much in advance of the mob can never be their leader, in the ordinary acceptation of the term: he can be their leader only in the sense that he precedes in the path where they will eventually follow.

It will have to be realized in the end that the Romish Church is a State within the State, and that her open claim of infallibility and her distinct avowal of her determination to render the civil sword the instrument for the accomplishment of her criminal purposes is no empty threat. She declares herself not only infallible, but superior to all earthly powers, whose duty it is to play the part of her submissive servants. In these assumptions, she is more or less directly abetted by all the orthodox Protestant sects, which, to a certain extent, claim the same infallibility, demanding for their dogmas of the plenary inspiration of the Bible and the Trinity the same immunity from examination as "the mother Church" does for all her arrogant pretensions. This most important point of agreement renders a transition from Prot-

Digitized by Google

estantism to popery extremely easy. The final step of accepting an infallible expounder is readily taken, as we constantly see. The principle of priestly infallibility is involved in both. The manifest inclination to ultramontanism of the conservative Protestant party in the German Reichstag is a striking example of this truth; and instances of the tendency are visible everywhere in our own country to affiliate with "the only true Church."

When we reflect that the increase of the number of ignorant voters must, in all human probability, increase her power, we need not in the least wonder if she should be disposed to favor universal suffrage. Yet, with this regard, it is by no means necessary to conclude that she is at all democratical, in the sense that she favors the carrying out of the will of the majority, however poor an approximation this is to the realization of justice or even of expediency. She will not oppose the incorporation into the Constitution of the doctrine of the Trinity, because she expects to fall heir to all the conquests of Protestant bigotry, and by no means objects to having the work done for her by her stupid rivals. She is the bitter and inexorable opponent of the taxation of church property; and in this she is kindly supported by the same stupid class, the vast majority of whom are ignorant of the immense extent of her possessions, and could not, by any array of evidence, be convinced of the enormous power for bribery which they confer upon her.

She holds dubious relations, it is true, with the princes of this world; but she is not in the least over-nice, and is not above making her bed with the beggar, especially in a democracy where the beggar has a vote. Of course, she parades it all as evidence of her Christian humility and benevolence. "The union of the blacks and the reds" has passed into a proverb in those European countries which have been the great theatre of her intrigues. She is an element of disturbance and danger wherever she enters, and she will unite with any faction whatever to accomplish her nefarious designs.

She is by no means necessarily opposed to universal suffrage. On the contrary, she would probably everywhere welcome the masses to the polls with peculiar satisfaction. Her hope is in the hordes. It may be replied that the political influence of the ignorant multitude is too insignificant to merit any notice; but it must be remembered that this is a democracy, where a rascal and a fool counterbalance two men of character and principle. When female suffrage prevails, the whole body of grossly ignorant and half-educated women will be added to the great horde of Romish Irish, who already control some of our greatest as well as many of our smaller municipalities. The vote of Sister Celestina and Biddy O'Flanagan will counterbalance the ballots of women who are the acknowledged equals of the foremost men. As to which class of women is the more numerous in the country I need say nothing. When we remember that the daintier intellectual food of a very large body of both men and women, who would be greatly offended if set down as ignorant, consists in Scott's novels, whose disastrous influence is so clearly set forth by Borrow, while the diet which one may, using a figure of rhetoric, call the substantial portion of their intellectual fare, is composed of the insipid literary mince-meat and tasteless political wishy-washy of such journals as "the great Philadelphia dailies,"—when we take all this into consideration, we shall not be likely to rely greatly upon any imaginary superiority of judgment among what are satirically called "the intelligent classes" any more than we should look for physical stamina and vigor among those who subsist on the corresponding physical diet.

That Rome will not necessarily oppose female suffrage she has shown beyond a peradventure, since women have figured throughout her history as her most efficient instruments. Of this assertion, the truth is so notorious that all individual examples are superfluous to any one who has even a superficial acquaintance with secular, to say nothing of ecclesiastical, history. Her well-trained female militia are found in all civilized countries, and are especially active in America at this time. The employment of female warriors is not to be monopolized by the royal savage of Ashantee. The negro Amazons are certainly more open and brave in their methods of attack; but, in slyness and subtlety, they are greatly surpassed by their Christian sisters. The French statesmen, among various other influences, brought to bear against their enlightened efforts to free public instruction from the mischievous interference of the priesthood, were compelled to encounter a petition bearing over seven hundred thousand names of women whose signatures had been secured through the co-operation of the priests and the sisters, of various names, but one spirit.

Poor Mrs. Wittitterly, with her unbounded admiration of "the dear Middle Ages," is the type of a large body of women in America who habitually shun the clear noonday of science and fact, greatly preferring to live in the very "dim religious light" of mediævalism, even though the shadowy aisles and Gothic arches be the haunt of "doleful creatures," "an habitation of dragons and a court for owls"; and they will be very prompt to vote for the incorporation of the doctrine of the Trinity into the Constitution of the United States, at the bidding of priest and parson. Significant hints of female intrigue, coming from West Point and Washington, warn us that the popish clericals are playing the same quiet game here which they have played long and successfully in Europe. Here, again, we meet with the reply that our people are too intelligent to admit of any danger from these sources; but this assumption is, unfortunately, without foundation. The masses have no acquaintance with either civil or ecclesiastical history, and are not acquiring such knowledge in the public schools. An ignorant antipathy to Catholicism is all we have to rely upon in that quarter.

Here, in America, the Romish Church arrayed all her hosts on the side of slavery, as long as it was dominant. The Irish papists in the United States were so universally the sycophantic friends of the slaveholder and the bitter enemies of the slave and his advocates, the abolitionists, that the fact became proverbial, and their ecclesiastical status was regarded as all-sufficient evidence of their political position. No well-informed person will dispute this. But, when she discovered that emancipation was imminent, she issued her orders, in secret, for a propaganda among the enfranchised negroes: she hoped that they, too, might be brought to swell her army for the subjugation of the intellect and conscience of the nation. It is a remarkable coincidence, at least, that the orthodox Protestant sects pursued a very similar course in their dealings with the institution of Southern slavery, while, in very fair proportion to their freedom from dogma, the Northern churches inclined to the side of the slave. Other causes were in operation, it is true; and the division was not clearly defined nor accurate. Nevertheless, the respective tendencies were most striking, and could hardly have been mere coincidences. And Rome is playing her old game in Ireland at this very time. She has permitted the commission of the most frightful assassinations year after year, without rebuke, while she knew perfectly well that an authoritative word from her would have put an end to them at once; and she preserved an unbroken silence, until the united voice of the indignant nations compelled her to make a show of disapproval. But Parnell boasts that, instead of a diminution of the funds that were poured into his coffers, proving a result of the pope's mandate, the contributions have increased; and thus her utter insincerity has been brought to light, for no person of even moderate capacity will believe that the Fenian assassins have abandoned her communion or that their crimes have been made a bar to it. The action of the Romish Church in this matter is one of the most adroit of all the successful tricks she has ever perpetrated. Parnell himself is careful never to alienate the murderers; and the American newspaper press is, to a large extent, badly debauched by concealed Fenian influences, which are so skilfully disguised as to deceive the very elect.

Rome is often held up as a striking example of a vitality which endures through all vicissitudes, and this is pointed to as a proof of her divine commission. But, unfortunately, the facts are against her assumption of a heavenly inspiration. This tenacious vitality she enjoys in common with some of the most vicious and venomous organizations in the animal world, as well as the most pestilent political conspiracies, which seem to defy all efforts for their extinction. The Holy Mother lies "crafty sick" at Rome, but it is only the feigning of a cunning animal at the approach of danger. All the old traits will spring into new life when the danger is past. Her vitality is inextinguishable; for is she not "the milk-white hind" which may be wounded indeed, but never mortally? She makes noble promises; and the only reasonable objection that can be brought against them is that her whole history shows them to be utterly insincere, false, and deceitful. And here one cannot but recall the words of our universal Shakspere,—

> "I speak of peace, while covert enmity,
> Under the smile of safety, wounds the world."

Progressive people, especially in this country, talk much of the necessity of "turning our faces to the rising sun," and "marching with hopeful hearts toward the glorious future." And they have many other fine flowers of rhetoric, to none of which any serious objection can be made. But it will be wise if, while we take care to march steadily forward on the highway of reform, we also occasionally turn our eyes to the path we have traversed. The evolutionist well knows that all development is not improvement, that there are such phenomena as retrogression and depauperation. In the vanward let there be the hopeful leader, Progress; but let there be in the rearward the guard, Experience. If Prometheus is to guide us in the onward course, his glorious forehead glowing with the light of intellect and enthusiasm, let us not forget that his brother in blood is Epimetheus, whose rueful vision is fixed upon the past in regretful afterthought over neglected warnings and of the things that might have been.

Her ignorant, reactionary forces are completely submissive to all the commands of Holy Church; and she can securely reckon on them to do her bidding, and to accept without questioning all her decisions, however absurd or criminal they may be. She long ago accomplished the unapproachable by placing her Holy Bible, the prime source of all her arrogant assumptions, in the same category with the pestilent books on her *Index Expurgatorius*,—in the list of forbidden literature. Let it not be forgotten that that precious pair, the Holy Father and the Holy Mother, have a large and hopeful

Digitized by Google

progeny who follow in the parental footsteps with an obedience which partakes in a wonderful degree of what we are instructed to believe is an exclusively Oriental servility.

The contest is between ritualism and rationalism,—between a ritualism which makes the acceptance of mere beliefs, with their accompanying ecclesiastical ceremonies, the whole of religion, and which is ready, as we have seen, to acquiesce in and even openly to defend American slavery or any other outrage upon human rights; between this ritualism on the one hand, and, on the other, that sensible and manly rationalism which, acknowledging frankly the infinite mystery by which we are surrounded, and interfering dogmatically with the mere beliefs of none, is nevertheless keenly alive to all infringements of equity, and boldly and unhesitatingly undertakes the defence of the truth whenever and wherever it is discovered, and assumes as its own especial work the overthrow of all wrong and the establishment of the right on the lasting foundation of perfect justice and honesty.

For *The Index*.

THE OTHER SIDE OF CO-OPERATION.

BY JOHN B. WILLARD.

Till very lately, two leading ideas have everywhere been accepted as of the highest wisdom in relation to business. One was that business was necessarily a matter of competition. The other was that it was necessarily a matter of antagonism;—competition between leaders engaged in the same line of production or trade, antagonism between leaders and their employés. An illustration of the latter doctrine has been lately manifested to an admiring world in the case of Telegraphers *vs.* Western Union.

Some centuries ago there appeared in one of the two authorized New Testament Gospels a suggestion of another form for business. This suggestion or, rather, overwhelmingly impressive teaching was that the true principle for conducting business was that of co-operation, oneness, unity. The one who, in that Gospel, stated this principle, said at various times that his work here was the same as that of his Father. And, when this teacher had come close to the end of his life, in a prayer which is one of the most marvellous productions letters record, he, with an intensity that seems as though it must burst the words that would contain it, asked that his disciples might be one, one with another, as he and his great Co-worker were one,—that they might "be perfect in one." This was teaching co-operation, or oneness, unity, in business, immeasurably more forcibly than it has ever been taught all otherwheres, before or since.

This singular and forcible teaching lay mostly dead through the Roman era, the Middle Ages, after the Renaissance, till within our generation. There has of late been considerable awakening to the idea that, instead of antagonism, of competition, the truest policy or method for business is co-operation. But this awakening has only proceeded so far as to recognize its value for the oppressed and weak classes. It has been thought that, for the strong, for those who could carry through their own will, high-handedly, to success, co-operation would only be a drawback to the splendor of their condition.

I have a dissent to offer from this last view.

I had a most dear friend who for many years was a proprietor and manager of one of the largest and most fashionable hotels in the world. This friend was peculiarly well fitted for carrying on this hotel business, and, during his administration of it, his establishment was eminently popular, and so prosperous that my friend acquired in it a large fortune.

Being for many years on terms of daily and intimate intercourse with the friend referred to, I naturally talked to him a great deal on so intensely interesting a subject as a great metropolitan hotel. And my friend never spoke of his connection with it without expressing most bitter and painful aversion for the life he led in it. He described that life as one of unceasing anxiety and torturing worry. "Why," he has often said to me, "we had an army of servants who took so little interest in their business that I was always trembling for fear that they would break valuable dishes, or injure the house, or spoil the furniture, or be inattentive or insolent to guests, or set the building on fire and burn us all up. In a year, our loss from breakage of dishes alone, by careless servants, has been three thousand dollars." And time and again has my friend said to me, "I would rather be shot than to keep a hotel, were I to have my choice." And this was not a weak man in his business, but a very strong man in it.

Now, let any of my readers estimate the value of a life out of which must be deducted very many years of such misery as this. Wise or humane readers will try to discover some means by which to prevent future business men from nullifying—ay, much worse than nullifying—so large a block of a man's earthly existence.

The secret of my friend's bitter misery, in an employment that ought to have been as delightful to him as the play and games of childhood, lay in the fact that his army of servants took so little interest in their business. They felt that they were merely hirelings; and, if they got their wages, what did they care how much waste they made or injury they caused? Had the waiter, who handled a ten-dollar dish so that he broke it, been a partner in the establishment instead of a hireling, the dish would have been handled so carefully that, when the hotel was transferred to new proprietors, the dish would have been transferred at a good price with it. Had the chambermaid been a partner instead of a mere hireling, she would never have so carelessly flirted the wax candle among the lace curtains as to call for some hundreds of dollars to replace the gorgeous furniture burned up. Had the porter, who answered a valuable boarder so rudely that he took himself and his large family to another boarding-house and gave a bad name to the hotel that they left, been a partner instead of a hireling, self-interest would have kept back the words that were sure to injure his business and his property. Had my friend's employés been all partners with him, he could have led, in his business, a life as free from anxiety and worry, as charming an alternation of work, rest, amusements, and social delights, as a boy ever led in the house of an indulgent father. His business life would have been a long, sweet September day of dreamlike beauty. To give every man such a life as this is one meaning and aim of the Christian doctrine of unity.

After my friend had left his hotel-keeping, to realize the sweet, ever-cherished dream of his life, he retired to a lovely country town, where he had bought for himself a delightful farm and homestead. He lived not only in abundance, but refinement. Yet, being a man of simple, healthy tastes, a property of twenty thousand dollars would have been ample, most ample, to gratify all his wants. The care of his superabundant hundreds of thousands, he freely confessed, seriously marred and interfered with the happiness that it had been his long-cherished hope to enjoy in serene later years. Thirty-five years of life spent in the worry and wretchedness of business antagonism with his employés to end only in the disappointment of a defaced and broken hope! Yet this is the highest business wisdom our age has reached. Are there no sweeter, sunnier wisdoms than this?

My friend's was not a solitary case. By far the greater part, if not all, of the eminently successful business men of the world, the men that our foolish boys and girls, taught to be so by their foolish fathers and mothers, envy irrepressibly, *sooner or later* "lose their lives" as my friend lost his. Said a physician of high standing and long practice among the families of great business men in the city of New York, "Could our farmers' boys know, as I know, the miseries that mark the lives of the great merchants in whose families I practise, they would be eager to stay on the farms instead of coming here." This doctor did not discriminate rightly. Many men must keep hotels, many must be merchants, many must be manufacturers. Otherwise, we should all revert and become wild Indians. The trouble is not in the business, but in the manner of doing it. The manner or system of doing it is not of partnership, but antagonism; not of brotherhood, but of enmity; not of unity or federation, but of competition and gouging; not of the Christ and co-operation, but of the devil and individualism.

My friend's physical and mental fibre was of the hardiest. So his constitution never broke down under his worries. But all about us come the cries that multitudes of our business men are not only wretchedly unhappy, as my friend was, but they become miserable wrecks of palsy, softening of the brain, painful and horrifying heart and nervous diseases, hypochondria. Very lately there came to my knowledge an instance to my purpose. Calling, one evening this summer, at the house of a lawyer, he told a most pitiable story of a case in which he had had to act on that day. He had been called to a great, dazzling hotel to write a will disposing of two hundred and fifty thousand dollars. His client was a man of thirty-nine, a perfect wreck in body, and wretched to the last degree in mind and spirits. This will-maker told his lawyer that he had softening of the brain to such an extent that his doctor forbade him to read even in a newspaper. My informant, a man long accustomed to the luxurious side of life, said that the dinner, provided for himself and client, was one of the most exquisite he had ever sat down to. But his poor, tremulous companion was so shattered in stomach and palate that he could only toy with his portion of it. The unfortunate legator explained the cause of his horrible condition. He said that he had had a great, profitable, but exacting business, that he had often sat at his desk writing till, through sheer exhaustion, his pen had fallen from his hand and he had dropped insensible upon the floor, to lie there in an unrefreshing sleep of stupor, till some of his people found him and carried him to his bed.

This unfortunate man had, as I have said, two hundred and fifty thousand dollars. He could have lived sufficiently, amply, for every reasonable gratification of life, on twenty-five thousand. Suppose that he had taken nine of his employés as partners,—into co-operation or unity with him. But, I am too fast: the nineteenth century has decided that the chances of two hundred and fifty thousand dollars with a ruined brain, a ruined stomach, depression that fully anticipates the torments of hell, are infinitely to be preferred to the prospect of a moderate competence with health, and spirits abounding and unflagging.

The dominant thought of our generation has determined that Christianity is but a weak system intellectually and for all practical uses. Perhaps that system may humbly ask a revision of this judgment in relation to, at least, unity in business. Very likely in the many other and more important phases of unity, the Christian doctrine will be found exceedingly contemptible. But so depressed is that system to-day that we can afford to be generous to the poor thing, and acknowledge that in one somewhat important matter it is not quite pure folly.

Most bitter agony causes millions of aching hearts to-day to call frantically for what is known as "the solidarity of humanity." Eighteen hundred and fifty years ago, one transcendent vision saw this immeasurable need. From the awful intensity of the seventeenth chapter of John, it would almost seem that his prophetic eye must have been tortured by a full sight of the lonely chambers, the restless tossings, the clenched hands, the bitter wailings, the self-inflicted ends of the isolated, the desolate of to-day. Every word of his great Sermon on the Mount tends upward to its culmination in that seventeenth of John,—to unity, oneness. A little faith—yes, despised faith—in his doctrine of unity and of the teachings that lead thereto, and, without our painful journeying through the arid air and over the burning marl of individualism, our wretched ones would have been resting now "amid green pastures and clear streams, freedom and quiet rest."

CORRESPONDENCE.

A LETTER FROM NEW YORK.

The Installation Service of Dr. Bellows' Successor.

Editors of The Index:—

The Rev. Theodore C. Williams, of Winchester, Mass., was installed recently in All Souls' Church, of this city, as Dr. Bellows' successor. At such an occasion, it might be supposed that one could learn something as to the ideas and aims of Unitarianism; and so the writer availed himself of the opportunity to learn what the Unitarian message is. At eight

Digitized by Google

o'clock, the appointed hour for the service to begin, the church was filled. In the pulpit, which was beautifully decorated with flowers, sat the Rev. Theodore C. Williams, a slender, youthful-looking gentleman, dressed in a black, flowing gown, which at once marked him as not belonging to that class of young radical preachers who have a strong prejudice against priestly dress and priestly manners. In front and about the pulpit sat five of the recognized Unitarian leaders,—Clarke, Hale, Peabody, Collyer, and Chadwick,—all of whom, as we were glad to see by the programme, were to take part in the services. In the utterances of these five distinguished leaders of Unitarianism and of the two young ministers who were to take part, we felt sure we should find out the message we had come to hear. The services began with a prayer by Rev. Mr. Chadwick, which was not a prayer in the old sense. It was not a petition, but rather a beautiful aspiration, a truly poetical utterance of the heart's noblest wishes, yet addressed to "our Father," "our eternal Friend," etc., thus showing a decided theistic belief. There was no reference to Christ, and one could not have told from the prayer but that Mr. Chadwick was a representative of the Brahmo Somaj of India. In another great metropolis, somewhat less than four thousand miles from here, is a religious society—which, at least, claims to be such—which has an avowed atheist settled as its preacher. Mr. Chadwick's religion, judging from his prayer, would not fully satisfy such a society or one which was thoroughly and consistently agnostic. In giving prominence to the theistic idea, Mr. Chadwick's prayer struck the key-note of the whole evening's exercise. The following hymns and prayers and sermon and addresses only brought out more clearly and emphasized more strongly this idea. There was an occasional reference to Christ as our "Brother," "Friend," "Lord," "Master," "Saviour"; but the chief emphasis was laid upon belief in and fellowship with God as the sum and substance of religious life. The sermon was by Rev. Francis G. Peabody, who took for his text the first four verses of Peter's sermon on the day of Pentecost. This was the first Christian sermon that was ever preached. It converted three thousand people and brought them into the Church; and that which was the secret of its power was the secret of the power and worth of every Christian sermon since,—namely, an appeal to the spirit of the living God. Without religious experience, without a sense of God's power and presence, the soul was without that which was of highest worth. The young preacher should bring to his pulpit, not the daily affairs of the world, not the doubts and difficulties of philosophical and critical inquiry, but the consciousness of a divine power,—the spirit and teachings of Christ. The installing prayer was by Rev. James Freeman Clarke, which came much nearer to being a prayer in the old sense than Mr. Chadwick's did. The Rev. H. Price Collier (son of Robert Laird Collier) then read the installation hymn, which he himself had written for the occasion. The first verse was as follows:—

"Speak to thy children gathered here,
O God, our living guide,
And make us feel, in loving fear,
Thee at thy servant's side."

Rev. Robert Collyer gave the right hand of fellowship in the pleasant Robert Collyer style, making the audience smile and feel serious with him by turns. He exhorted the new minister to believe that the founder and builder of New York City was God,—a statement which quite startled some of his audience.

Dr. Hale's address to the people was the best thing of the evening. It was an earnest exhortation to the laymen to feel that they must take upon themselves the practical work which, in the Catholic Church, was done by the great body of priests.

The services closed with a responsive service prepared and led by the newly installed minister. The following is one of the passages selected for the "pastor": "I preach not myself, but Christ Jesus our Lord, and myself, your servant, for Jesus' sake, that God the Father may abide with you as in Jesus Christ, his well-beloved Son."

The Unitarian message, then, as far as we could learn it from the installation service, is this: Recognize Christ as your Lord and Master; but, above all, believe in God and have a sense of communion and fellowship with him.

It has been said that Unitarianism stands on the border-line which divides the Christian and liberal, or non-Christian, world. It stands, we should judge, on the inside of the Christian border. The message it would give to the world is the Christian message, the one which the Church has been announcing for eighteen hundred years. But, from Unitarian lips, it loses its old power. It satisfies neither Christian nor non-Christian. It neither awakens into new life the one, nor converts or even touches the heart of the other. Is there not a message, an effective, soul-elevating message, for the great body of rationalists, for all those who cannot conscientiously keep up the Christian forms nor believe in the fundamental Christian doctrines, even in their attenuated Unitarian presentation? Where shall we look for such a message? What is its nature? AN OBSERVER.

NEW YORK, Oct. 19, 1883.

A PLEA FOR HEROIC TREATMENT.

Editors of The Index:—

Let us tell the people plainly why we reject the Bible as an authority concerning morals. Let us show them why it should no longer be regarded as the oracle of God; that this book teaches both good and bad without discrimination; mingles confusedly wise precepts and atrocious falsehoods, thus leading the world astray tenfold more easily than if it were entirely bad; that the same code which demands restitution for a trifling wrong establishes an accursed system,—that of human slavery,—which not only outlived the better precept, but made it seem a mockery. Let us show the world that this code omitted from its "Decalogue" at least *two* commandments which would have proved more potent for human good than all the ten; that the adoption of at least one of these omitted precepts would have necessitated the expurgation of half the laws written in the Pentateuch, especially those found in the twenty-fifth chapter of Leviticus and the twenty-first chapter of Exodus.

It is but fair that the people should be constantly reminded of the incontrovertible fact that the first of the chapters named directed the establishment of slavery as a "divine institution," while the other unblushingly justified its worst abuses. Let the passages alluded to be read together. Here is the first: "Both thy bondmen and bondmaids . . . shall be of the heathen that are around about you: of them ye shall buy bondmen and bondmaids. Moreover, of the children of the strangers that do sojourn among you, of them ye shall buy, and of their families that are with you which they begat in your land; and they shall be your possession. And ye shall take them as an inheritance for your children to inherit them for a possession. They shall be your bondmen *forever*."

A minister once admitted to me that the Bible established slavery, but he denied that the book justified the abuses of slavery. I called his attention to the other passage alluded to, in the twenty-first chapter of Exodus. Here it is: "And, if a man smite his servant or his maid with a rod, and he die under his hand, he shall be surely punished: notwithstanding, if he *continue* a day or two, he shall not be punished; *for he is his money*."

Under this barbarous code, the Southern overseer was not only justified in holding slaves, but in whipping them to death whenever it suited his devilish humor.

When the first slaves were brought to the American colonies, the consciences of the Puritan Fathers sustained no shock. The Scriptural directions had been complied with to the letter. The victims were "of the heathen." Thus, slavery in the colonies grew to be a national institution by the "grace of God" and the sanction of the Bible.

Who can doubt that, if the Decalogue had contained two more commandments, one prohibiting slavery and the other abominating polygamy, neither of these blighting infamies would have ever been practised in the United States? Such was the devotion of the early Puritans to what they considered the Word of God that every slave brought to our shores would have been set free in a moment, had the Bible forbidden slavery. Moreover, who does not now believe that the passage (Ex. xxii., 18) which reads, "Thou shalt not suffer a witch to live," has been the death-sentence of hundreds of thousands of innocent women? Who can doubt that, if this murderous superstition had never been taught in the Bible, the history of our country would have been spared the bloody records of the "Salem Witchcraft," not to speak of the numberless atrocities its belief incited in other lands?

Shall free thinkers, then, continue to palliate the crimes of the Bible by pointing to its virtues? Or shall we rather teach our children that a dose of poison is rendered no less deadly in its effects by sugar-coating it? Can the good precepts in the Bible ever be wholly effective, so long as the bad ones are not expunged? Let the people answer.

J. C. OCHILTREE.

CONNERSVILLE, IND.

RELIGION AND SCIENCE.

Editors of The Index:—

John Fiske shows that religion is not at war with science, but needs it in order to keep pace with the progress of the age and race. Ethical science is summed up in the doctrine that conduct which results in pain and suffering is a deterrent, and that conduct which tends to happiness is an invitation to continue such conduct.

The outcome of all social science, therefore, is to increase human happiness; and religion is but organized human effort to suppress inhumanity and brutality. The words Science and Religion need no qualifying adjectives, such as true or free. Science is organized knowledge. Religion is organized society. Philosophy is organized method. The last comes first, and is the road by which seekers after truth must travel to find it.

The old philosophy began with the unknown and the unknowable, but, like Noah's dove, found no place upon which to rest its feet. The new philosophy begins with the known and the knowable and concatenates fact with fact, until a chain of relationship is established in the three worlds known to man,—the inorganic, the organic, and the human. Philosophy and science can neither concatenate nor reason outside of these.

Theology as a system was philosophical, scientific, and religious to the extent of its actual knowledge, and no more.

The deductive method was but a dim Indian trail leading through a wilderness.

The inductive method is a railroad fenced by telegraphy, lighted by electricity, leading to homes, villages, and cities.

The science of the old method created facts out of its imagination and the unknowable, failing to discover facts open to observation and demonstration.

The old religion organized itself around its ignorance, and the unity remained so long as facts were excluded. Good and evil accounted for all the facts that were discovered, and logic made it necessary to create a world for each. Good from God, evil from the devil.

The new religion finds no place for two infinites, and the logic of science admits of neither good nor evil outside of relativity. Whatever injures man is inhuman; and our first duty is to combine against it, even to the destruction of everything that lives and breathes except for human uses. Unconsciously, humanity combines to destroy races of men who are more beast than man. In the struggle, the superior races are selected to survive: such is evolution. But, since all individuals die, there is benevolence in the law that permits only the best to live. S. S. M.

AN OPEN LETTER TO A PROHIBITIONIST.

Editors of The Index:—

If I am not mistaken, it is the ultimate purpose of yourself and your coadjutors entirely to suppress the manufacture of and traffic in spirituous, vinous, and fermented liquors within the boundaries of the United States, and also to prohibit their importation from other countries. If you succeed in the execution of your designs, it will be tantamount to saying to every American citizen, Henceforward, you are forbidden to touch, taste, or handle, for any purpose whatever, all alcoholic products of whatsoever name or nature.

Now, I assume that, in the State of Massachusetts alone, there are some thousands of invalid persons whose various ailments require in their treatment, either internally or externally applied, a greater or lesser quantity of alcoholic stimulants. If my assumption is correct, will you be good enough to answer this question, Would it not be inflicting a great and unwarrantable wrong upon these, your unfortunate fellow-citizens, if, having the power, you should exercise it to deprive them of the benefits resulting from the use of these remedies? That this would be the logical sequence to the carrying into

Digitized by Google

effect of your prohibitionary schemes seems inevitable. Again, upon what theory of ethics do you attempt to defend your proposed arbitrary action? These are questions of a public nature, vitally affecting individual rights, and demand to be answered in an explicit and coherent fashion. But I have another to ask, which, though entirely personal, is quite as pertinent. I am a chronic invalid, having been confined within doors for upward of fifteen years by a painful and incurable malady. After having run up and down the gamut of medical treatment, both quack and regular, and trying all sorts of medicaments, I find nothing so effectual as a means of relief as the external application of alcohol in some of its various forms. My comfort demands its use to a considerable extent; but, not being a millionnaire, its high cost prevents its application as freely as is desirable.

Owing to existing laws affecting its manufacture and sale, its cost is, at least, four times what it should be, were these onerous restrictions removed. Now, I maintain that the prohibition, or ultra-temperance, party is largely responsible for these unwarrantable exactions, some of which I will enumerate. First, by Congressional enactment, the distiller has to procure, at heavy cost, a license to prosecute his business. He has then to pay an excise equal to about double the value of his product. Next, the aid of State legislation is invoked to enact a system of taxation and hindrances which largely augments the burdens imposed upon the traffic by Congress. Now, I, who am only a very humble member of this great Republic which was founded by the Fathers on the basis of man's inalienable rights, would like to be informed why it is that, in utter disregard of these, I am made to suffer from the effects of oppressive laws? Do not misunderstand me. I am not an advocate of intemperance. So far from it that I am very decidedly in favor of the summary punishment by jail, house of correction, or whipping-post, if you please, of all drunken men and women who disturb the peace, abuse their families, or in any way become public nuisances.

At the same time, every instinct of my nature revolts at the reckless disregard of the rights and wants of the sick and suffering which your policy so plainly suggests. I am well aware that it is a maxim of law that individual rights may be infringed for the public good. But this principle has its limitations. I am entirely willing to yield somewhat of my own individuality to the public exigencies, but am not quite angelic enough to endure martyrdom in furtherance of what I regard as an impracticable policy. This much, however, may be fairly admitted,—that you have succeeded admirably in imposing onerous pecuniary burdens and many petty annoyances upon a large class of temperate, order-loving, well-disposed persons; but you have miserably failed in restraining the dog from his vomit or the sow from her wallowing.

There are reformers and philanthropists,—noble, self-sacrificing, devoted men and women, whom all right-minded people respect and admire. There are also hobby-horse jockies and busybodies, whom no one need love. Between these two classes there is the difference that there is between fame and notoriety, and it does not require the aid of microscopic vision to enable one to make the distinction. D. C.

WHAT PREACHERS NEED.

Editors of The Index:—

I am in sympathy with Mr. Potter's editorial on "A New School for Preachers." Apart from or in connection with the gift of oratory, the best preaching is done by the *best characters*. A preacher of large social qualities, of real benevolence, will do good service in spite of his theological opinions.

How much more good would he do, if his chief reliance should be upon his knowledge of social evils and the way to remove them! The unnatural solemnities of supernaturalism should give way to the earnestness of philanthropy. Long and persistent prayers to God should be addressed to our best and ablest men and women. Our anthems of praise should be given to the benefactors of our race. Preachers should be qualified to persuade capitalists and laborers to love each other as brethren. Society ought not to drag along so slowly in the ruts of custom. We need preachers who can change public sentiment for the better, and remove public vices and degrading amusements. Mr. Potter's suggestion therefore is a good one. WM. G. BABCOCK.

ORTHODOX TACTICS IN GIRARD COLLEGE.

Editors of The Index:—

Mr. Potter's article in the last *Index* on "Christian Honesty in Girard College" arrested my attention, and recalls an incident in my experience. In company with my friend L. M. Fitch, the well-known dentist of Boston, I visited Girard College some years since.

After inspecting the institution, in conversation with President Allen regarding the general management of the lads, we naturally referred to that provision in Mr. Girard's will in relation to religious teaching in the college. It was in effect an utter prohibition of all attempts to indoctrinate the lads in the theological tenets of *any* class of religionists,—Hindu, Mohammedan, Christian, or other. President Allen, who was an entire stranger to us, was asked what general principles were relied upon and what course was taken with the youth to develop their moral character. He answered, "We pursue the usual course through using the catechism." Interested in unsectarian teaching and moral training, and supposing the system adopted and practised there was something peculiar, if not entirely original, the following conversation in effect took place. "What catechism?" "The common catechism used in evangelical churches." "What! do you teach these lads the doctrines of total depravity, the Trinity, eternal damnation, and other tenets of Calvinism?" "Yes." "But these are in *direct disregard* of and in opposition to the plain provisions and stipulations of the donor's will and bequest,—doctrines Mr. Girard utterly repudiated and detested?" The President, evidently nettled by our remark, answered, "We cannot expect to please Mormons, Unitarians, and Infidels."

As no further discussion seemed necessary, we took our leave.

An account of the incident was written and sent to an esteemed friend in Philadelphia, who, I think, was President of the Board of Directors of the college, and a most honorable man; yet no response was elicited.

It would seem that friends of Free Religion should insist upon a practical adhesion to the plain provisions of Mr. Girard's will. The college should at least conform to the "non-sectarian" teaching of Christianity required by the decision of the court.

NATHANIEL T. ALLEN.

WEST NEWTON, October 27.

MISCELLANEOUS.

AFTER DR. HAMMOND WITH STICKS.—Dr. Hammond got into a nest of hornets when he gave his low estimate of women last August in the *North American Review*, and predicted that the woman suffrage movement, unlike most revolutions, would go backward. The Doctor was unwise enough to return to the physiological line of argument used in anti-slavery times. He does not examine the "female" heel in his search for arguments against the right to vote, as in the case of the negro; but he makes a good deal of the difference between the brain formation of the two sexes. The male has a superior development of the frontal lobes, more intricate convolutions, and many more secondary fissures. But Mrs. Lillie Devereux Blake's development of frontal lobes is sufficient to start in her the inquiry as to how the thousands of individuals of the fairer sex, with shallow sulci, have been able to go into the professions and in business, often taking the honors in institutions of learning, and gaining names as writers and thinkers and even rulers of nations. Moreover, some scientific man has told her that, when the brain of a male weighs less than thirty-nine ounces, he is an idiot; while a woman with an allowance of thirty-two ounces of brain gets on very comfortably. Mrs. Blake concludes there is a want of "compactness" in the larger brain: therefore, more intricate convolutions are quite necessary in a man's brain. Mrs. Sara A. Underwood, dealing with the same argument, cites the case of an Ohio mulatto with a sixty-four and three-quarters ounce brain, which was some five ounces heavier than Cuvier's. The mulatto was illiterate and not very intelligent. If voters' brains are to be weighed instead of counted, many women would enjoy more political privileges and many men less. If Dr. Hammond thought to dip into a speculative vein and to befog his enemies by arguing very abstrusely that women were intuitive, and that intuition was not properly judgment, he was very much mistaken. Mrs. Underwood is right at his heels with a sharp stick. She is up in German philosophy. Intuition is experiential in its origin; it depends primarily upon intellectual processes; it is connate in the individual; it is strong as an aptitude in those directions in which the reasoning powers for centuries have been continually exercised; it is a good deal more, says Mrs. Underwood,—all which must convince the Doctor that Mrs. Underwood's mental convolutions are intricate enough and her brain lobes deep enough to entitle her to vote in any State in the Union. If cranial dimensions have any political significance (and Mrs. Underwood is evidently ready to measure with the Doctor), there are certain women in this country who ought to vote, but who are not allowed to under the present laws. Dr. Hammond's opponents are naturally indignant at some of his free conclusions. He says, for example, that women, while having an abhorrence of falsehood, do not "understand the necessity for being exact in the ordinary affairs of every-day life." Mrs. Blake would like to know, if falsehood is the basis of disfranchisement, where the Democrats and Republicans are to get their votes. Isn't the Doctor proving too much? He has recently said that the great life insurance companies do not take risks on women. This is not the fact; and, according to his own views of the qualifications of voters, he is in danger of losing his franchise. The woman suffrage people make the Doctor's remarks on the emotional nature of women rather ridiculous by picturing such scenes as the Madison Garden prize-fight, where jurists and statesmen lose their dignity, and also the domestic scenes, where masculine emotions take the connate form of blows. Dr. Hammond will have to deepen his sulci, and try again.—*Springfield Republican.*

LUTHER.—Luther was the child of peasant parents, who, notwithstanding their lowliness of social position, were yet people of strong traits of character. His father was a miner in the Hartz Mountain region, a haunted region, famous in German history and poetry,—in the poetry of Goethe and Heine, for instance. Luther was a man of his time, superstitious to the last degree, with all his strong German sense. In his moods of spiritual exultation and overpowering conviction of duty and right, he was a fierce enthusiast and mystic, with the terrible power proper to such a character. He believed in witchcraft and in demoniacal possession. In fact, he occasionally saw, or deemed that he saw, demons himself, and promptly confronted them with perfect fearlessness, even the arch-fiend of the period himself. Of course, free thought and toleration—in the large modern sense of the words—and free, scientific inquiry, irrespective of, and even in defiance of, theology and theological creeds, Luther could not appreciate. In fact, he could have no notion of them at his time of day; for Dr. Martin Luther was a theologian all through, and substituted the infallible Book in place of the infallible Pope. According to his belief, the parchment on which the Bible was written was the source and fountain-head of all truth and right principle for perplexed and much-enduring humanity. But Dr. Luther, with all his fiery enthusiasm and theological and Biblical fervor and zeal, was also an eupeptic Teuton. He was no purist or ascetic. He loved beer and wine and song and his wife and children, as all true Teutons do, or are supposed to do. Perhaps his greatest work was the translation of the Bible into the German language. Luther's Bible is the corner-stone and underpinning of the vast and magnificent superstructure of German literature. Luther made the tongue of his country a book language. The ancient Hebrew prophets and poets, with their intense sentiment of morality and their love of right and wrong, appealed most powerfully to a similarly intense sentiment or sense in the Germanic spirit, with its profound inward sight and unequalled reflective capability. Heine says, writing in 1833: "Luther created the German language. This he did by translating the Bible. The divine Author of this book seems to have known as well as we do that the choice of a translator is by no means a matter of indifference. Through the Bible, which the new-born press—the black art—scattered by thousands of copies among the people, the Lutheran language spread in a few years through the whole of Germany, and was raised to the rank of a written tongue. This written tongue holds its place to this day in Germany, and gives to that politically and religiously dismembered

Digitized by Google

nation [it is no longer *politically* dismembered] a literary unity. Luther's Bible is a perennial source of rejuvenescence for the German tongue."—*Boston Sunday Herald.*

A CHARACTERISTIC POEM.—Extract from verses written by the late Charles H. Codman, for a social family gathering, and read at Mr. Codman's funeral by the Rev. E. A. Horton, Saturday, Sept. 22, 1883:—

For I know the dear departed,
If such be God's sweet will,
Are around us and above us,
At least in spirit still;
And our love for those who've left us,
Of whom we've been bereft,
Should not be lost to this dear world,
But showered on those still left.

Let us help all those who need it,—
The poor, sad, wicked, weak;
Let us give both gold and sympathy
To those who these must seek.
Let us educate and strengthen
And make all classes free,
And strive to make the human race
Blest in true unity.

Let us drive away the darkness,
The evil, and the night;
Let us leave the world some better
For having seen the light.
And, if we do not see it all,
Our brother surely may;
And we'll have the glorious thought that we
Helped bring the happy day.

These simple lines have a significance, to those who knew Mr. Codman, quite independent of their literary merit. They are a literal expression of the spirit of his life. In all public and private relations, he was indeed the ideal citizen. Now that he is removed from our daily association, the beauty of his character becomes more clearly apparent.—*H. B. B., in the "Woman's Journal."*

IN an article from Mr. Holyoake, in *The Index* of August 23, is the following passage:—

On my trial in 1841, the judge seemed to think that I had spoken (the words for which I was indicted) with levity. But, in this day, nobody is in any danger in England now, even for "levity." A writer in the *Secular Review* went last year beyond all the bounds of levity. He wrote of the Virgin Mary as "Moll of Bethlehem," and put songs into her mouth in that character. He was never prosecuted. Surely, that is liberty enough. I am not easily perturbed about language; but I left the *Review* on that account, because I thought Secularism was being dragged through the gutter by that sort of thing. It was an outrage on Catholic and Christian feeling, and had no elevation of thought in it.

In regard to this passage, Mr. W. Stewart Ross, co-editor of the *Secular Review*, writes us as follows: "In your issue of August 23, I observe that Mr. Holyoake refers to 'a writer' who, in the *Secular Review*, wrote of the Virgin Mary in a manner 'beyond all the bounds of levity.' *I* am the writer referred to; and I contend I had a perfect right, if I thought fit, to go 'beyond all the bounds of levity' without consulting the tastes of Mr. Holyoake. He asserts that I put songs into the mouth of the Virgin Mary. I positively never did anything of the kind, and I challenge Mr. Holyoake to prove or withdraw his statement. 'I am not easily perturbed about language,' writes your correspondent; but this language in regard to the Virgin Mary was such that 'I left the *Review*.' Now, the truth is, Mr. Holyoake never 'left the *Review*': the *Review* left him. Mr. Holyoake is powerless for mischief here, and powerless for good. He dare not breathe a word against me here; and so he goes to the other side of the Atlantic to defame myself and my journal, and makes your columns the medium of his envy and spleen, and I appeal to you, sirs, not to permit him to do so without also admitting to your columns this, my reply and protest. Should you do me the courtesy to insert this letter, I am not likely to trouble you further." The animus of this "reply and protest" is decidedly objectionable; but, since Mr. Ross thinks the publication of the above is due him and his journal, we give him the advantage of it. We must here remind Mr. Ross that, more than a year ago, he copied into his journal a most unkind and unjust reference to Mr. Holyoake, which, before his arrival among us, had appeared in a paper published in this city by George Chainey. In regard to that paragraph, Mr. Charles Watts wrote us: "I was exceedingly sorry to find that the extract in reference to Mr. G. J. Holyoake appeared in the *Review*. It should not have been inserted, if I had been at home. Mr. Holyoake is a gentleman for whom I have long entertained the highest respect. He has devoted a long and honorable life to the cause of Secularism. His views upon secular principles are very much in harmony with my own."

BOOK NOTICES.

RELIGIOUS DUTY. By Frances Power Cobbe. Boston: George H. Ellis, 141 Franklin Street. London: Trübner & Co. 1883. pp. 311. Price, cloth, $1.00.

Miss Cobbe is a devout theist; and the treatise in this volume is offered as a contribution toward "the development of theism as a religion for the life, no less than a philosophy for the intellect." The author maintains that it is a moral and religious duty to recognize love and worship a personal God. A chapter is devoted to an attempt to prove this. Another chapter is given to the discussion of "Religious Offences," which are blasphemy, apostasy, hypocrisy, perjury, sacrilege, persecution, atheism, pantheism, polytheism, idolatry, and demonology. "Religious Faults" is a title under which are considered thanklessness, irreverence, prayerlessness, impenitence, scepticism, and worldliness. The concluding chapter enforces "Religious Obligations," which are thanksgiving, adoration, prayer, repentance, faith, and consecration. The spirit of the work is extremely worshipful; and, with a few passages omitted or modified, it would be well adapted to the wants of orthodox Christians, while it contains in every chapter much that is open to criticism from the agnostic point of view, and not a little to which a large class of theists would object. The volume contains, of course, much excellent thought; but it is in our opinion the least valuable of all her published works. It is a reprint of a book published twenty years ago.

SEVEN SPANISH CITIES, AND THE WAY TO THEM. By Edward Everett Hale. Boston: Roberts Brothers. 1883. Price $1.25.

This is a record of a flying visit to Spain, by a well-known, breezy, and versatile writer. The seven cities treated of seem to be Madrid, Cordova, Seville, Cadiz, Granada, Toledo, and Jaca, though so many other cities and towns are incidentally noted that the reader is not quite sure, as the "seven cities" do not assert themselves too prominently. These seven cities and the various towns were all visited in the course of seven weeks. Though this volume does not pretend to be a book containing an exhaustive research into the history of all the events and incidents connected with the places visited, yet from it a very good idea is obtained as to how Spain appears to the eyes of hasty tourists. Mr. Hale's impressions of anything are generally forcibly and earnestly portrayed, and this work is no exception to his usual vigorous and graphic style.

ORTHODOXY AND HERESY IN THE CHRISTIAN CHURCH. By Edward H. Hall. Boston: American Unitarian Association. 1883. pp. 237. Price 75 cts.

We have here a series of lectures by an able Unitarian minister, which contain a large amount of information for general readers. We give the titles of the chapters: "Paul and the Apostles," "Views of the Early Church concerning Christ," "Arianism and the Council of Nicæa," "Controversy concerning the Two Natures," "The Pelagian Controversy," "The Catholic Church," "The Lutheran Heresy," "Other Trinitarian Heresies," "Unitarian Heresies," "Religion and Dogma." These lectures were published in compliance with the earnest request of leading Unitarian ministers, with the belief that they would fill an important and hitherto unoccupied place in Unitarian literature. They are of a character to be read with interest, and to be valued by all friends of liberal religious thought.

LEAD, KINDLY LIGHT. By John Henry Newman. Illustrated. Boston: Robert Brothers.

Dr. Newman's well-known hymn is not one that lends itself to illustration with the utmost readiness. The hymn is so personal to the author—he wrote it in the Bay of Genoa, on his way back to England to initiate the Anglican movement—that there seems a certain incongruity in the feminine character attributed to the person speaking. In the illustration to the words, "I do not ask to see the distant scene. One step enough for me," the distant scene is represented as a mosque with dome and minarets. A representation of St. Peter's would have been just the thing. Newman had no fear of becoming a Mohammedan, but apparently he had a suspicion that he might become a Romanist. To our mind, a strong man, out in the night amid the torrents and the storm, would have made a more impressive figure than this woman much enwrapt in fluffy drapery. But, whatever the value of the illustrations, as illustrations they have much intrinsic beauty. This is especially true of the sepia-colored pages, on which the lines of the poem are interwoven with suggestive and ingenious ornament. The concluding page has the music for the hymn with a head-piece of exceeding daintiness.

THE HIGH TIDE ON THE COAST OF LINCOLNSHIRE. 1571. By Jean Ingelow. Published by Roberts Brothers of Boston, in the State of Massachusetts, A.D. MDCCCLXXXIII.

We have here a ballad worthy of all praise, illustrated in the most elaborate and charming manner. The illustrations are by Church, Fenn, Rogers, Murphy, Appleton Brown, and other skilful artists; and the engraving of their work is such as it deserves, seconding their intentions in the most agreeable manner. Hardly could they have been more fortunate in the local situation with which the ballad deals. St. Botolph's church, which named the town Botolph's town, which became Boston in due time, is the principal object; and a more picturesque one it would be hard to find. "My son's wife, Elizabeth," as conceived by Mr. Church, is far too lovely to have been drowned so cruelly. The illustrations are of great variety, and the make-up of the book is quaint and beautiful in every way. In an appendix there is a picture of Jean Ingelow's home and one of the old vicarage in Boston in which John Cotton lived before he came to *our* Boston in 1633. Jean Ingelow may well be pleased with this enshrinement of her ballad; and the writer of this notice knows that she is, for he has seen a letter in which her pleasure overflows at every line.

THE SUN: Its Constitution, its Phenomena, its Condition. By Nathan T. Carr, LL.D., Judge of the North Judicial Circuit of Indiana. New York: J. Fitzgerald, publisher, 20 Lafayette Place. 47 pp. Price, post free, 15 cts.

This treatise is part of a more extended work on the *Evolution of Worlds*, now in preparation. It explains in a popular manner the chief results of solar research. The author is not only an able expositor of the views of others: he offers an original theory of solar physics, which cannot fail to be of interest to thinkers, and appears to reconcile some of the conflicting theories and observations of astronomers.

WE have received "The Thirty-Fourth Annual Report of the Executive Committee of the Children's Mission to the Children of the Destitute, in the city of Boston, with an account of the Proceedings at the Annual Meeting, May 30, 1883." It is a record that will warm anew the heart of the philanthropist as a renewed pledge of what has been and may be done by persistent, undiscouraged effort. We give—having no room for more of a very interesting report—the following summary of the last year's work: "Children in the Home at beginning of the year, 28; admitted during the year, 150; total number under care, 178; provided with homes and places, 155; returned to parents and friends, 155."

THE *Art Amateur* for November holds out the hope of a very important and interesting loan exhibition in New York in the month of December at the Academy of Design. It has also notices of exhibitions at Cincinnati and Louisville, as well as at Lyons, Paris, and Munich. The most attractive article, however, is one of Walter Crane, illustrated by *fac-similes* of his original drawings in pen and ink. The spirited sketch of his life will be gratifying to those who have long enjoyed his original and characteristic sketches; and they will be glad to see the drawings of the frieze, illustrating Longfellow's "Skeleton in Armor," which he has made for a house in Newport, and, still more, to learn that he is likely to visit this country. He is a genuine artist of the new school; and his work is full of expression and life, if he sometimes sacrifices beauty to grotesqueness, and comes near to mannerism in his repetition of similar effects.

THE leading article in *Macmillan's Magazine* for October is a sketch of "A Swiss Peasant Novelist," Albert Bitzius, who wrote under the pseudonym of Jeremias Gotthelf. Sir Charles Hobhouse gives some "Plain Facts in Indian Policy." The other articles are "A Panhellenic Festival of To-day"; "Corporal Punishment in Schools"; "The 'Why' and the 'How' of Land Nationalization," by Alfred B. Wallace; "Genius"; and two chapters of Mrs. Oliphant's story, "The Wizard's Son."

MRS. NEWHALL'S SCHOOL

FOR GIRLS AND YOUNG LADIES.

Will reopen Oct. 1, 1883. Besides the regular courses in English studies and languages, there will be some work, each week, in each line of the new or **"creative method,"** either with **tools upon wood** or in **modeling.** Another special feature will be a course of **lectures** upon the **great tone masters,** illustrated with piano and voice. As aids to the study of History, Geography, and Art, **the use of the lantern** will be continued, and the **regular visits to the Art Museum.** For catalogues, address the Principal, 91 Newbury Street, Boston.

West Newton English and Classical School.

The ninetieth term of this Family and Boarding School for Boys and Girls will begin Wednesday, Sept. 19, 1883. For information and catalogue, address

NATH'L T. ALLEN,
WEST NEWTON, MASS.

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

"It seems to me admirable both in matter and in manner, and I hope it will have a wide circulation, as it is the kind of book people need."—*John Fiske.*

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.
For sale at THE INDEX office.

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

THE agricultural and other food resources of England are entirely inadequate for self-support, and she imports food to the amount of $500,000,000.

A NOTICE hangs in the principal church of Cherbourg, France, deprecating the anger of heaven against the country for its profanation of the Sabbath. Is France becoming Sabbatarian?

THE Spanish Prime Minister, in reply to an address from a deputation of the Anti-slavery Society, has said that the government has decided to abolish punishment by the use of stocks and fetters on slaves in Cuba, and will do all it can to suppress the patronage exercised by slaveholders.

WE find this in the *Presbyterian:* "The vagaries of the pulpit in the present day are quite remarkable. Among the latest are the performances of Rev. Dr. Hinkle, rector of Grace Church in Cleveland, Ohio. He is thus described in one of the secular journals: 'He is a short man, with a fondness for tobacco, base-ball, and Romanism. It was only recently that he attempted to establish a confessional in his church, but was rebuked by his parishioners. Lately, it was learned that he crosses himself in mounting his pulpit. His latest freak was the taking for his text the stigmata of St. Francis,' St. Francis being a Roman saint."

SAYS the Springfield *Republican:* "The special directions of the pope for the observance of the present month of devotion, in view of the accidents and calamities following fast upon each other, are as follows: In the churches dedicated to the Blessed Virgin, five decades of the rosary and the litanies of Loreto shall be recited daily, mass being said at the same time, or the blessed sacrament exposed, with benediction afterward. Public processions are prescribed where they are possible: where they are not, the holy father enjoins increased attendance in the churches. And to those who take part in these public devotions, or, if lawfully hindered, perform them in private, special indulgences are granted on the usual conditions." Could priestcraft go farther in moulding the understanding of men, and imposing upon the credulity of its victims?

WE presume that the following, which we find in the *Banner of Light*, headed "Spirit Sight among the Zulus," is given seriously and not in jest: "Writing to the editor of *Light*, Mr. G. Damiani says that in August of last year he held half an hour's conversation with the luckless sable king, Cetewayo, his chief object being to ascertain his views of another life. He introduced the subject by saying to him that Major Poole, an Englishman, whose death Cetewayo greatly lamented, was not dead, but lived in the spirit spheres and was praying to God for his happiness. At this, Cetewayo said, 'I know that friend Poole lives, but as to God'— and indicated his doubts on that point by a significant shrug of his shoulders. It was subsequently explained by the interpreter 'that the Zulus only believe what falls under their senses. They acknowledge the existence of spirits *because they see them*, but cannot understand a Supreme Being whom they cannot perceive.'"

SHALL we ever have on this planet an ideal society or state conformed to that sense of right, justice, beauty, and truth which is the *human* part of us, the higher nature in us? Great souls in all ages have had dreams of such a society; but, as yet, it is far, very far, from realization. Business and politics, as at present conducted even in this land of alleged freedom, equality, and universal suffrage, have for their motors, for the most part, the purely selfish instincts and propensities. It is the devil take the hindmost, and a crowding of the weak, the ignorant, and the poor to the wall, or a utilizing of them by the strong and rich for their own selfish ends. If human beings could be universally swayed by their ideal nature, by the sense of justice, truth, and beauty, society would be speedily reconstructed in accordance with the dictates of that sense, and

> "Man to man the world o'er
> Would brother be, and a' that."

as Burns sings. The above thoughts have been suggested by the perusal of a lecture on "The Social Ideal" before the Society for Ethical Culture of Chicago, by W. M. Salter. It makes a pamphlet of twenty-four pages, and is altogether the most eloquent statement of what society *ought* to be, which we have read.

A FRIEND has sent us a "saloon map," showing the streets in front of the Albany and Old Colony Depots, Boston, and giving the number and location of the rum-shops. The space covered by the map is about six hundred and fifty feet square, and within the limits of this space there are eighty-two saloons. "On Federal Street," says this tract, "every other door opens into a rum-shop. Kneeland Street, from Lincoln to Federal, a distance of six hundred feet, has on one side twenty-three buildings, nineteen of which are given up to the whiskey business. With but four exceptions, *every door* opens into a rum-shop. Albany Street is almost one continuous line of saloons, and the part of the street shown in the map is not the worst." Boston, it is affirmed, has four thousand saloons, some licensed and some not; and it is "a lamentable truth that no man can be elected Mayor of Boston without the consent of the saloons. If there is no choice in the candidates, there will be no fight. But if one is known to be their friend, ready and willing to protect their interests, and the opposing candidate is known to be determined to do his whole duty,—to enforce the laws, especially those that directly affect the saloons,—then there is no chance for his election."

IT will be remembered that some time ago the collector of customs at Montreal seized and retained some volumes of Paine's and Voltaire's works, on the ground that they were immoral literature. Mr. Lawrence, a Montreal merchant, who had imported the books from this city for his private library, remonstrated with the minister of customs; but that high functionary refused redress. Whereupon, Mr. Lawrence took action in court for damages against the collector. The case was argued by able counsel on both sides. After long consideration, the court decided not to go into the merits of the case, and last week gave judgment on a technical point raised by the government lawyer, that the plaintiff had omitted to conform to that section in the tariff act requiring an importer to give formal notice to the collector of his intention to claim the books within a month after the seizure. The case was dismissed with costs. Several educated free thinkers, among whom were Mr. George Martin and Captain R. C. Adams, had testified in regard to the character of the books; and the ruling and remarks of the court clearly showed, we are informed, that it did not regard the confiscation of books like those in question within the intention of the law under which, it was alleged, the seizure had been made. But religious bigotry in Montreal is very strong; and it was hardly to be expected that a decision against a government official, and in favor of a free thinker's rights and the general principles of justice, would be made, if by some technicality it could be avoided. A despatch to the Boston *Herald*, referring to this decision, mentions another case, which brought up the question whether a person can be a witness in court under the statutes of Canada, if he does not believe in future rewards and punishments. A young Hebrew came forward in a commercial case of much interest. He said he believed in an omnipresent and omniscient God who ruled the universe, and meted out rewards and punishments in this life; but that of rewards and punishments after death he had no knowledge, and the subject was beyond his ken. After long deliberation, the court decided that the applicant was not competent to be heard as a witness in Canada. "Great interest," says the despatch to the *Herald*, "was taken in these two cases by members of the Free-thinkers' Club here, which acts as the propaganda of agnosticism, which is rapidly gaining ground."

LUTHER AND THE REFORMATION.

The attention of the whole civilized world is now drawn to Martin Luther. As the four hundredth anniversary of the birth of the great Reformer approaches, his character and career are subjected to fresh review. There is no name in Christian history after Paul's that has such a world-wide renown; and no character, perhaps, in all history that is capable of being more vividly reproduced in mental vision or, after the lapse of so many generations, is able to arouse such vivid personal feelings among those who look back to it. To Roman Catholics, Luther's name is almost as familiar as it is to Protestants; and, even to-day, Catholics are wont to regard him with a personal horror and animosity which could not be very much increased, if he were actually alive and fighting over again the old battle against their Church. He is to them the veritable antichrist of Christendom. To Protestants of all denominations, he is the re-founder of Christianity, the restorer of their historic faith, when that faith was well-nigh buried under the corrupting weight of ecclesiastical machinery and ceremonies and crimes. And, even to those who cannot accept his doctrines nor the Christian faith in any of its forms, he is the most conspicuous figure and vigorous personage in the service of an era that lifted humanity forward to a new civilization. To all who can admire robust sincerity, virile brain work, wholehearted devotion to reforms in behalf of human rights, and a courage of conviction defiant of all obstacles, he is a character of fascinating interest, and one of the heroic leaders of the world's progress who has few superiors.

Luther was, by no means, a perfect character. He was not a saint. He would not be selected as an exemplar of even such specially "Christian" virtues as humility, meekness, gentleness, forbearance. He was more human than Christian in his temper, and he was German to the very core. But, after his character has been discounted for all its defects, there is still left in him such an abounding vigor of virtue as to place him in the short list of large-brained and full-blooded men who had also exceptional moral greatness. Some of the very defects, too, which we might detect in him, if we were to judge him by a standard of absolute moral perfection, doubtless served to enhance his capacity for popular leadership amid the rough conditions of his time. Certainly, neither the gentler Melanchthon nor the more amiable and cautious Erasmus could have accomplished the immense task which Luther achieved. The times demanded, as a rallying point for the awakened learning and the fresh human enthusiasm and the popular craving for larger liberty, just such an incarnate moral energy and daring as Luther might be described to be.

Yet Luther did not make the Reformation. The most conspicuous actor in concentrating its forces into results, its forces were yet in operation before he was born; and he was, in some respects, the product of them. The Reformation really began with the Renaissance, or the Revival of Learning in Europe, in the century preceding Luther's activity. The Renaissance has been defined by its great historian, Symonds, as "the emancipation of reason for the modern world." The emancipation was not completed; but, in that earlier movement, the human mind clearly made its declaration of independence of the claims of scholastic theology and of ecclesiastical con[redacted]. As this movement gathered force, however, [redacted]ised the inevitable opposition of the ecc[redacted]l power, a courageous general was nee[redacted], and this want was supplied in Luther. The key-note of Luther's declaration against Rome, and the war-cry by which he summoned princes and people to his standard, was the emancipation of individual reason from priestly authority. In the protest of Luther and his coadjutors was contained, therefore, the old but momentous principle which the Renaissance had awakened in the European mind, —the rightful independence of man's private judgment. And herein was the affirmation which revolutionized the Christian Church and broke it asunder.

This, of course, was not the whole of the Protestant declaration. Nevertheless, this claim for the right of private judgment was the dominantly active and vital principle of the Protestant movement; the force within and behind all other forces which the Reformation set in motion; the one principle which gave to Protestantism its continuing and self-propagating power, and opened for it its great career in history. This was its one distinctive affirmation,—the only positive thing of great importance which Protestantism had to separate it from Romanism. Rome, as well as the reformers, had the Christ, the Church, the Bible, the sacraments, all the old beliefs and sacred associations. As to these, the Reformation, at the outset, made no great change except in the use of the Bible; and that change was necessitated by the claim which was made for the rights of individual reason. Rome had everything else, or might have conceded everything else, but this. The moral reforms which were demanded might have been secured within the old Church, as afterward, to large extent, they were. The protests against the sale of indulgences, against the *abuses* of authority, against the corrupt practices of the papal court, could have been met without much difficulty. They did not touch any of the foundations of the Church. Even the theological distinction, which Luther so strenuously urged, between justification by faith and justification by religious works, might have been settled by compromise. In the main, Luther followed the theology of Rome's great light, St. Augustine. All of these differences were but side currents and eddies afloat on a deeper stream. And that deeper stream was the newly awakened consciousness of mental independence. These subordinate protests and incidents all together could never have produced the Protestant movement. The motive power behind that movement lay in the one idea that there was something in the human mind, in the mind even of the humblest layman of the Church, that was superior to the authority of the Church itself, and had an inherent right to dispute the decisions of priest or pope.

True, the right of private judgment was not affirmed by Luther or any of the reformers in this absolute and unconditioned form. The entire declaration of their fundamental principle included the supreme authority of the Bible as a supernatural and infallible divine revelation. Their formula ran, "The Bible, and the Bible only, the infallible rule for faith and practice, to be interpreted by individual judgment." The Bible, therefore, they affirmed, was the standard of doctrine and duty, absolute and unquestionable, when once its meaning was ascertained. But the Bible was to be read and its meaning ascertained (under use of the best helps possible) by every person for himself,—that they equally affirmed; and it was by far the most momentous part of their declaration. The tail of their formulas proved itself to be stronger and more vital than the head. Where Rome said the Church is the infallible authority, the reformers said the Bible; and that was no very great change. But where Rome said the pope and bishops are the interpreters of the authority, the reformers said every reader is his own interpreter; and that was a difference that was equivalent to a revolution. It held consequences at which the reformers themselves might have stood aghast, if they could have foreseen them.

The two parts of the Protestant declaration were indeed logically at war with each other. The affirmation of the right of private judgment in interpreting the authoritative standard was destructive of all claims for the practical infallibility of the standard, unless one was ready to affirm infallibility of the human faculties. This contradiction, however, in the Protestant principle was not felt at the time; and the declaration served very well as a popular rallying cry for uniting the various elements that were in motion against Rome. It was not until the Protestant movement began to develop its separate and independent life that the antagonism between the two parts of its declaration appeared. Then, the two parts diverged in separate lines of development. Those of the Reformed Church who were most zealous for the first clause of their formula, and who became alarmed at the already looming consequences of individual liberty of thought, betook themselves to a more stringent view of inspiration. And that side of Protestantism rapidly reached its natural culmination, which came in the decree of the council of Geneva, in 1675,—one hundred and thirty years after Luther's death,—when for the first time was affirmed the doctrine of the literal and plenary infallibility of the Bible, even to every punctuation-mark and vowel-point in the original text and the miraculous supervision of transcription and translation. And, as this was the natural culmination of the first part of the Protestant principle, so it was its natural end. No further development was possible in that direction. That branch of Protestantism began then to die, and left no seed. But the other branch, the assertion of the rights of individual reason, remained vital, and has held the shaping power of Protestant Christendom to the present day. Protestantism has thus been enabled to keep in vital relationship with the forces of modern civilization. It has not yet reached the terminus of its development. To it there can properly be no terminus, for it is the evolution of free, living thought. But its logical, natural issue is unconditioned religious rationalism, or free religion.

WM. J. POTTER.

GERMAN vs. ENGLISH.

The German language has been for the last century the organ of the highest reflective thought and the noblest poetry. In a single word, it has been the language of Humboldt, Kant, Goethe, and Schiller. More in its praise cannot be said. A language which could voice adequately the thoughts of four such minds evidently must possess a capability of expression equal to any emergency. But the Teutonic mother-tongue, from its very purity and primitiveness, is for the purposes of the prose writer (and most writing now is prose) a more or less unwieldy and clumsy instrument. German prose lacks compression and pointedness of statement. It is apt to be involved and unintelligible. "The true German," says De Quincey, with his usual exaggeration, but yet with a grain of truth, "has no sense of grace or deformity in the management of his language. Style, diction, the construction of sentences, are ideas perfectly without meaning to the German writer. If a whole book were made up of a single sentence, all collateral or subordinate ideas being packed into it as parenthetical intercalations,—if this single sentence should even cover an acre of ground,—the true German would see in all that

Digitized by Google

no want of art, would recognize no opportunities thrown away for the display of beauty. . . . Kant was a great man, but he was obtuse and deaf as an antediluvian boulder with regard to language and its capacities. He has sentences which have been measured by a carpenter, and some of them are two feet eight by six inches. Now, a sentence with that enormous span is fit only for the use of a megatherium or a pre-Adamite. Parts so remote as the beginning and end of such a sentence can have no sensible relation to each other." But this is rather caricature than true characterization. But the same De Quincey says that "of his language the German is proud, and with reason, for it is redundantly rich," and capable of dispensing with all outside languages both ancient and modern. It has a German word for everything, and wants no help even from Greek and Latin.

The German newspaper press of this country is, in point of the style of its articles, as a rule, perfectly intelligible, terse, and to the point. It is only occasionally that the reader comes upon a really involved, long-drawn-out, Kantian sentence, which he has to give up as a hopeless conundrum. The French writer's sentences are ordinarily so lucid and clear-cut that one is apt to deem him a shallow and superficial thinker. The English in the matter of style, De Quincey thinks, occupy a middle ground between the French and the Germans. While with the French the style is everything, is the man or the writer, with the Germans it is altogether secondary to the thought. The English neglect neither, but combine beauty of style and profundity of thought in a felicitous union and equal measure. All the above is apropos of the determination of the immense German population of our great Western cities and states to keep the tongue of Fatherland a living speech in this republic. They claim, and their claim is correct, that it ranks second in importance and the extent of its use to English.

But it is hardly the language of a fourth part of the population of the country, as some German speaker, reported in the columns of the Milwaukee *Freidenker*, alleges. It is also claimed that the German element of population in the United States is, after the American element of English descent, the most important factor of our American free civilization. And nobody competent to form an opinion on the subject is likely to deny this claim.

The German population migrating hither at once plant a fixed foot on our soil; and with their solid qualities of all kinds, their reasonableness, steadfastness, and handfastness, and with their prolificness and domesticity and their love of freedom and truth and hatred of humbug and superstition and blarney, they are a guarantee that this Republic has an assured future before it of prosperity and unimpaired liberty.

Meantime, will American civilization require two languages,—namely, the English and German,—or will it not be better for the German element of population in this Republic gracefully to recognize the fact that the English language is already in possession of the ground here, and that it is a hopeless enterprise for any more recently imported speech to attempt either to dislodge it or to hold a divided empire with it? The English language is at bottom a Teutonic or Germanic language, as everybody knows who ever read of Hengist and Horsa, or of Alfred or the Venerable Bede. It is not only the predominant language of North America, but its accents are audible around the entire globe. So that it is likely enough in the near future to be a world-speech, and to reverse the fabled spell of Babel in favor of that social, political, moral, and intellectual unity and solidarity of the entire human race to which current democratic and scientific civilization unmistakably points. Every scholar and person devoted to ideas regards a more or less thorough acquaintance with the German language and the unspeakably rich literature of which that language is the vehicle as altogether indispensable toward a proper mental outfit.

But, at the same time, the man whose native tongue is English is fortunately born in the matter of a speech. He need not go outside the domain of his own language to know all that it is possible to know in the way of ideas, or to give adequate expression to ideas. The human reason and imagination, at their best, can require no finer or richer organ than the English language. It is the speech not only of Great Britain, but of the United States, the Dominion, Australia, New Zealand, etc. For the purposes of the business man and the commercialist and of the thinker, the scientist, the statesman, orator and poet and novelist, and as a medium of ordinary, every-day intercourse, it is unsurpassed. If any language is to hold divided empire with it in this country, it should be the German. But a single language, as composite and with as great a range of expression as the English, is evidently enough for this continental country and for the democratic and world-embracing rational civilization of the near future.

B. W. BALL.

TRAVELS IN FAITH.

V.

After fifteen years of sea life, I settled down to business on shore. A perusal of *Theodore Parker's Experience as a Minister*, at this time, let loose my reason and aroused the old doubtings. My father had obtained the book to assist him in writing a controversial article against Parker's views, but the book rendered an opposite service to his son. Two words had a great effect upon me. He spoke of Moses as a "Hebrew filibuster." I was shocked at his irreverence in thus speaking of the man of God; but, on reflection, I asked, Why did the inroad of the Hebrews upon Canaan differ in principle from the attacks of the American filibusters upon Cuba and Mexico? It opened up a natural view of the Hebrew wars, and brought the Bible down to a common-sense interpretation. For a year, I was in great danger of an abandonment of faith, and rationalistic suggestions often crowded upon my mind.

The delight of a home, after all my wanderings, was intensely enjoyed; and I developed some love for this world and coolness toward the next, which led a good evangelist to warn me that "God would stir up my nest," if I took too much comfort in it. Having made church connections, I soon got to work again in "the Lord's vineyard," became superintendent of a Sunday-school, preached at a mission chapel Sunday evenings, and through the week took part in prayer and temperance meetings, and worked to provide for the maintenance of a sailor's institute. All this, besides an engrossing business, carried on "for Christ," left me no time for reading, reflection, or conversation, except in the line of my religious and business duties.

God "stirred up my nest" most effectually with severe afflictions, though I could not see that they were judgments, unless it was for being too religious, as some of the trials were directly traceable to my pious efforts. If I ever took a vacation or stopped to think, my reason began to attack my theology; and my only escape was to plunge back into the old career, and resolve never to doubt. My Christian friends now assure me these afflictions were "the loving chastisement of the Lord," on account of "the incipient stages of what has now become open rebellion against the Almighty."

A business visit to Europe broke up this mind burial and let loose my reason again, and it never was subdued afterward. I recall a decided mental experience at Hamburg. One Sunday morning, I attended a Lutheran church; and its candles and papist forms of worship illustrated another of the innumerable interpretations by God's people of "God's revealed will." In the afternoon, I visited the Zoölogical Gardens, which were thronged by respectable, orderly people with their families, who studied the rare animals and various interesting and instructive collections, listened to good music, and partook of refreshments. All this was wicked to Puritanism, but it seemed good to common-sense that the working man's day of leisure should be employed in such a manner. Why it could be better to stay at home and read how God slaughtered the Canaanites; how Jael murdered her confiding guest Sisera, and was declared "blessed above women" for it; or study the order of the service of the Jewish tabernacle,—was a puzzle. I recalled that some Christians kept the Jewish Sabbath still,—ate cold dinners, shaved on Saturday, and kept quiet all Sunday except when "walking decently to and from the house of God," as the "blue laws" express it.

Others believed the Sabbath was abrogated by Christ; and the Lord's day, a day of worship and religious joy, had taken its place. Paul said he was afraid of people who observed Sabbaths, and some Christians regard the day wholly in a spiritual light. Some observe Saturday, and others Sunday. And here on the Continent were other Christians deliberately breaking the fourth commandment and desecrating the Sabbath, according to our notions of God's law. The confusion of ideas about the day, its origin, its object, the authority for its change from Saturday to Sunday, impressed me anew with the uncertain nature of God's revelation; and why a God of intelligence could not speak plainly on such a point was past comprehension. The superior benefit to man from this feature of man's way of observing the day in Germany over "God's way" in New England was too evident to reason to be denied; and the whole history of the day through the ages, from all that I could learn by a careful study of Christian writers, only enforced the idea that men in each age had made their own ideas to be God's law. From that day, the conviction never slumbered, though sometimes somewhat suppressed.

The strain of this combined religious and business life proved unfavorable to health, and three years were passed in travel or residence with my family in other cities for the purpose of recuperation. Observation of different nations in Europe supplied fresh illustrations of the great diversity of religious opinions, and the uniform standard of morality and demeanor among all people. In thrift, neatness, courtesy, and good behavior, the inhabitants of Catholic and "infidel" France were, to say the least, not inferior to those of Protestant England and Scotland; nor did free thinking Holland and Germany appear to disadvantage in comparison with Calvinistic Switzerland. An investigation into the various "isms" for which Boston is noted showed numbers of equally good and earnest people engaged in propagating varying views of what to each one was "God's truth." The claim of any one of these differing sects to be the divinely inspired custodians of revelation, while all others were more or less deceived in their equally confident opinions, appeared to me to be a combination of arrogance and ignorance; and my reverence for the idea of a Supreme Being compelled me to believe that, if he undertook to make a revelation, good, intelligent people would understand it alike.

On board a steamer returning from England, I

Digitized by Google

came across Paine's *Age of Reason*. I had avoided reading this or any other sceptical book while my mind was unsettled; but, now that my convictions were clearer as to the human origin of "revelation," I ventured to read it. My astonishment at its lofty sentiment, religious aspiration, and pure morality was intense; for was not this "the worst of books"? Its coarseness consisted in ridiculing what was indecent, immoral, and absurd in the Bible; and its logic and demonstration seemed to my mind unanswerable. Modern scholarship has cleared up a few points among the mass of matter that he criticises; but his book still exists as a convincing demonstration that the Bible is composed of human ideas, and not of the words of God. As Paine's writings cannot be overthrown by learning and reason, scorn and calumny are used as the only remaining weapons. Let each read it for himself. If the Bible is the word of God, it need not fear the criticism of Paine. Criticisms and reviews of all other literature are deemed valuable in proportion to their exposure of defects and falsity, but with the Bible only adulatory criticism is tolerated.

Paine treats the Bible as all books should be treated by common-sense people in an age of reason; and the word of God certainly should be able to bear such examination. But his criticism proves it to be the word of man. I soon after bought a copy, and procured from the American Tract Society Bishop Watson's *Reply to Paine*, said to be a perfect refutation of this attack upon the inspiration of the Bible. I read these two books chapter by chapter alternately, and tried to weigh the arguments fairly. Paine's keen, logical analysis, couched in the most lucid and forcible English, was proof against the Bishop's pompous denunciation and stale argument.

After my return to America, I spent a year in the neighborhood of Boston, and devoted myself to reading the thought of the day, especially what related to the genuineness and authenticity of the Bible, the laws of evolution and political economy, and some social problems.

The proofs of the theory of development, as portrayed in the writings of Darwin, Haeckel, and Spencer, seemed in the main to be unanswerable; and I found that almost every scientist in the world had in a great measure accepted the evolution theory. I paid great respect to the opinions of the eminent exception that exists in Montreal, to whose character and ability we all do honor, and of whom as citizens, we are justly proud. But his objections did not satisfy me, and were overborne by the overwhelming testimony of the great scholars who have left him almost alone to the support of the theories of the past.

I therefore found a scientific foundation for my doubts about revelation; and, in the words of John Fiske, I came to believe in "divine action through natural law, instead of in divine action through supernatural fiat." The Book of Genesis and its creation stories I found to be disproved beyond any possibility of reconciliation, and I could only regard it as the record of Hebrew guesses about nature. The truth of the unfailing succession of cause and effect overthrew all possibility of miracle; and I found it easier to believe in the fallibility of the Bible writers, both of the Old and New Testaments, than in the violation of the order of nature.

The theories of evolution gave me a reasonable conception of the universe, and seemed to put solid ground under my feet. But for their disproof of supernaturalism, I might not have succeeded in shaking off the thraldom of tradition, so strong was the bond of educational and social influences that held me. Every motive of self-interest in life held me to Orthodoxy, and only what seemed to me absolute proof of its falsity could have led me to renounce its connection and associations. The path of worldly advancement now lies through the church. My good father said to me on the eve of my departure for Montreal, "I do not think we should be religious for the sake of gain, but I believe there is no surer means of advancement than to be a reputable member of a respectable church." I found it popular to be a Christian, and experience convinces me that it is he who conscientiously leaves the church who knows what it is to "take up the cross and follow Jesus."

It would be tedious to dwell upon the varied proofs, furnished by evolution, of the orderly development of matter and mind through past ages, without interference from either God or devil; and I presume it is unnecessary to do so, for the highest authorities tell us that every learned man in the world, who is not hampered by conventional theological ties, has accepted the theory of evolution.

Nor can I enlarge upon my consideration of the deep questions of the existence of evil, God's sovereignty and man's free agency, and all the range of Calvinistic dogma. Day by day, I pondered upon these themes; but it is difficult to tell the mental experiences of years in a few pages.

I studied the history of other religions and the character of their sacred books; and I found Christianity to be the natural development out of the dogmas and traditions of India, Persia, Egypt, Palestine, and Greece, just one step, and a great step, in advance on the path of human progress, but destined to lead to the step of the religion of evolution and still onward.

I found all the great doctrines of Christianity, such as trinity, miraculous conception, atonement and resurrection, paralleled or foreshadowed in the beliefs of many lands.

But I resolved to take my stand upon the doctrine of the resurrection of Jesus, as I had done once before, but not to read it in commentaries this time; for this is the foundation stone of the Christian religion.

I wrote out in parallel columns all the testimonies of evangelists and apostles to the resurrection and ascension, and compared each division minutely. I advise others to do this, and judge for themselves. "God's Word" should be able to tell its own story and produce conviction.

To my mind, this story bears all the marks which characterize human legends; and the discrepancies are such that it is impossible to believe that the vital truth of the Christian religion would not have been more impressively stated, if God undertook to reveal it to a world that would perish without it. There is a great array of literature on this subject, if any wish to read human opinions about it. I found also that contemporary history was utterly silent about this marvellous event, and even about the existence of such a man as Jesus.

As I have said, I took great interest in foreign missions during my voyages to Asia; and it seemed unaccountable why God, who wishes all men to come to the knowledge of the truth, should have himself created the principal obstacle to their doing so. The chief difficulty in spreading ideas among heathen nations has been their varying languages. The missionary or teacher has had to spend a lifetime in learning a new language, inventing an alphabet, reducing words to writing, and translating the word of God, as nearly as his ingenuity will enable him to express involved ideas, where no words exist which can convey the sense God has revealed to English-speaking people through several other languages. Meantime, another generation has perished, while the saving truth has been in preparation.

The Bible tells us that God got angry with a few men in the land of Shinar, who were trying to build a tower that would reach to heaven. God was evidently alarmed, and said, "Now, nothing will be restrained from them, which they have imagined to do." So "the Lord did there confound the language of all the earth." He all the time was "not willing any should perish," and had "foreordained" all that should come to pass, or at least knew what would happen. He intended that the gospel should be preached to all men under heaven; and yet, for fear that some men would climb into heaven by means of a brick wall, he destroyed the universal language, and interposed the greatest possible hindrance to the spread of the truth. In order to embarrass these bricklayers, he left millions of heathen to perish, caused countless wars, and delayed the civilization and enlightenment of the world for ages, by preventing men from understanding one another. A good God would not have done this. A wise God would not have given himself such a bad character; and an intelligent God would not have feared that men could build "unto heaven," and jump off into it while the earth was revolving so swiftly on its axis. I perceived this story to be the myth of an ignorant people.

ROBERT C. ADAMS.

RELIGION AND EDUCATION.

As one long and deeply interested in both religion and education, I desire to say a word concerning the position taken at the late annual meeting of the Unitarian Sunday School Society as reported in the *Christian Register*. This position was "*that men never were moralized effectively without religion.*" Now, I am aware that any doubt or question of this fundamental postulate of the Church is looked upon with more or less intolerance, even among liberal thinking Unitarians; and one is in danger of incurring odium by offering the least criticism or dissent. But it is with no bitterness or unfriendliness either toward Unitarians or religion that I now allude to the subject. Truth is of more account than the existence of any church or sect. We want to know if the position taken above be true, and, if so, how and wherein it is so. Even were it true that religion has been, and is, a motive factor in promoting morality, it does not follow therefrom that men are never moral without it, that it is indispensable, that morality may not exist, and is not promoted by other, higher, and better means and motives. Morality may have been associated with false religions. It is often found woven into the most grotesque and unscientific superstitions. Must we keep the superstitions, and encourage and uphold them in order to preserve a certain show of morality? This is often asserted. Men say it is best that the ignorant Canadian or Irishman should be held in the restraint of fear of the priest's plenary power, and propose to leave and risk all the precious interests of human society for future time on this insecure foundation. But is it the best motive, the noblest form of morality, for man as he should be? Is there not something better? So, though religion may be a means, one means of morality of a sort, is it not possible that intelligence, a full knowledge and understanding of the grounds and laws of right conduct, is a higher and better means? Because "emotion is nine-tenths of life," must we therefore hold on to emotion, and cherish and defend it as the *sine qua non* of morality?

The remarks of Mr. E. H. Hall seem the most consistent and rational of any reported on the

Digitized by Google

occasion referred to. He says: "There is much in religion that does not appeal to the common sense or reason, but shapes itself poetically, dealing with what is beyond our investigation, but reaching greater heights and touching lower depths than our probe ever does. The supernatural element is simply the natural working of the human mind upon the mighty themes of life; and we must meet our classes with absolute frankness in this matter, not giving them cause to feel there are some things which we wish to keep concealed because we cannot explain them." It is true we can treat the Bible stories "as we do stories in the Greek and Roman classics"; but is this to teach children that prayer to a God who sends earthquakes and lightenings and pestilence and death is the sole means of promoting and culturing good conduct between man and man, friend and enemy, Greek and Jew, Christian and heathen? I must say I fail to see that the essayist on the above occasion succeeds in making out a single count in favor of his thesis. If it be true that "men never were moralized effectively without religion," and that they cannot be, then I am sorry for the Unitarian Church; for it can hardly be said that it has very much religion, as compared with the Evangelical and Catholic Churches. I would not intimate that there is not a high degree and a noble type of morality among Unitarians. I believe there is, but the clergy of the Unitarian Church will not claim that it is due to the piety of their laymen and people. In common with evangelical people generally, I call that religion which is an adoption in good earnest of the faith in prayer to move supernatural agencies, and to stay the course of nature in the interest of believers. Devotion to the rights and dogmas of the Church is rightly understood to be religion, and belief in the supernatural as some man-like agency cannot be eliminated from religion. Now, if this be religion and indispensable to morality, the more of it we have, the better. The work of Moody and Sankey, if not of the Salvation Army, is of transcendent importance. The indifference to revivals generally is immoral, a public calamity. Men should be required to fall on their knees and pray every hour in the day. Unitarian teaching and influence are pernicious, as Orthodoxy has ever consistently contended. Religion being essential to right conduct, the Evangelical Churches are right to contend for their exclusive claim; and whatever weakens religion weakens morality. But is it true? Do facts show that the most religious people are the best, the most moral, the most intelligent, the most trustworthy, the most benevolent, most charitable, most loving and tender? I appeal to history, and contend that religion has not been the foremost or chief agency in promoting human well-being, the best interests, improvement, and growth of humanity. I am profoundly sensible of the mysteries of life, but I think morality and the higher interests of mankind should rest on a more rational basis than mystery.

A. N. ADAMS.

"MAN A CREATIVE FIRST CAUSE."*

A little volume with the above title, just published, presents the author's views on a number of moral and speculative subjects, such as the utility of metaphysics, and the reasonableness of the hypothesis that material forms and forces, instead of being objective realities, distinct from the mind, are the thoughts and imagery of the mind of God directly impressed upon our own; but the main object of the work is to prove that man is a self-active being, a free agent, and, "in the sphere of his moral nature, a supreme creative first cause."

Mr. Hazard states his positions concisely and clearly, and, in the main, supports them with ability and ingenuity, and in the spirit of an honest and earnest thinker. Although the reasoning is metaphysical, with a theological coloring, the work contains several passages which are decidedly unorthodox from old speculative points of view.

The defence of the doctrine of the freedom of the will consists in part of concessions to the necessitarian, such as we do not remember to have seen in discussions of the subject by any other author, although these are counterbalanced, perhaps, by claims quite as extreme as any that have been made by defenders of free moral agency. Some of the pages are interesting as a possible slight indication that the libertarian and the necessitarian may yet come to a substantial agreement by eliminating misconception and error from both theories, combining the truth of each, and substituting for the old metaphysical and theological phraseology terms more accurate and better suited to a broad and sympathetic view of the subject, in much the same way as adherents of the sensational and intuitional schools have been able to unite in adopting the scientific and philosophic view in which are fused the essential truths of both theories, with errors omitted, in a profounder synthesis than was ever dreamt of by Hobbes, Locke, Leibnitz, or Kant.

A statement of two or three of Mr. Hazard's positions will give some idea of his views and reasonings. He claims that every being, having feeling, knowledge, and power, is "a creative first cause, an independent power in the universe, commensurate with its knowledge, freely putting forth its efforts to change existing conditions." Every such being, however high or low in the scale of life, within the limits of its power and knowledge, is in its action "as free as if it were omniscient and omnipresent." This is as true of the oyster as of man. To those who would limit free agency to man, this statement will seem strange; but it is consistent with the general theory of free agency, so far, at least, as free agency is consistent with itself. If the power of choosing and willing implies independence and freedom, then there is no escape from the conclusion that the worm, within the limits of its knowledge and power, is independent and free. With this view of the subject, the question of the evolutionist, Where, in the development of life and intelligence, does free agency begin? is deprived of its force and rendered irrelevant by a surrender to the necessitarian of what hitherto has been defended, and is now generally regarded as a stronghold of the doctrine of man's free agency, involving a denial, too, of what is commonly believed to be an essential distinction between man and all other living creatures on the globe.

But when this concession is made, as it is by Mr. Hazard, another question immediately arises: If, in the evolution of life, the condition of every period has grown out of pre-existent conditions, how is it possible that in this invariable continuity of phenomena creatures appeared endowed with powers enabling them to sever connection with the converging forces and influences that produced them, and to escape reciprocal relationships with the environment in which they were formed, so that they could be "independent" and "free"? Organisms appeared possessing sensation and the will and power to move themselves. But was not sensation a condition local and circumscribed in its character, determined in its nature, its tendencies, its requirements, its expressions, by influences so universal, so multitudinous, so complex, so subtle, and extending so far back in the abyss of time as to defy all finite powers of calculation? The oyster wills to move its shell; but is not its willing, in this case, dependent upon the possession of a shell, dependent upon an organized structure within the shell with relations between its parts, dependent upon an environment with relations between its parts, dependent, too, upon the connection between these inner and these outer relations, giving rise to certain sensations and wants and the power of effort? Since every creature is a product of innumerable forces that have established its medium and formed and fashioned it, giving it position and character, is connected by myriad threads with the entire universe, and its modes of life and thought, its appetites and passions, the air it breathes, the food it eats, the earth on which it lives, are determined by the constitution of nature, how can we say in truth that it is "independent" and "free"?

The fact that a creature is self-active, that the impelling forces, called the will, are a part of its nature, and therefore *internal*, does not carry with it the implication that the creature is detached from that cosmic order in which all things are bound together by the law of causation. And, unless it be so detached, how can the words "independent" and "free" have, in this case, any logical or philosophical meaning? It seems to us that the libertarian, to prove free agency, must show that a creature has the power of deciding and doing differently from what it does decide to do; not simply that the proximate cause of its movements is internal, not external, but that this cause is not a related, dependent link in the chain of causation; not simply that the creature can exercise choice and will and act in accordance therewith, but that its choice and will are not dependent upon and determined by the constitution of its being and the nature of its environment; that, in short, being independent and free, it cannot only do as it chooses, but that it can choose to do one thing as easily as another.

If an individual, under any given circumstances, could have done the opposite of what it did do, it follows that from the same causes opposite effects could have resulted, which is an absurdity, or that events may occur independently of causation, which is no less an absurdity.

"The advocates of necessity," says Mr. Hazard, often ask "if a man could will contrary to what he does will. I would say that he could, if he so decided; but it would be a contradictory and absurd idea of freedom, which, for its realization, would require that one might try to do what he had determined not to do."

He "could will the contrary of what he does will, . . . if he so decided," undoubtedly. But this is saying only that he could will contrary to what he does will, if he so willed. The question is, *Could he so decide?* The old advocates of free will would have answered unhesitatingly, Yes. But Mr. Hazard sees that this answer involves a conception that is "contradictory and absurd," and endeavors to avoid it in a manner that does little credit to so acute a thinker. The question he raises is not whether "one might try to do what he had determined not to try to do," but whether he could decide contrary to what he does decide, contrary to what his character views and circumstances compel him to decide. If he could, according to our view, he is a free agent. If he could not, he is not a free agent. It is clear from Mr. Hazard's reply that he believes he could not, for he sees that the opposite of this belief leads to contradiction and absurdity.

Mr. Hazard says that "a man habitually holy, who has eradicated the conflicting wants, has annihilated the conditions requisite to his willing what

*Man a Creative First Cause. Two discourses delivered at Concord, Mass., July, 1882. By Rowland G. Hazard, LL.D. Boston: Houghton, Mifflin & Co. 1883. pp. 112.

Digitized by Google

is unholy; and, as he cannot be unholy except by his own voluntary act, he has, then, no power to be unholy. This is, perhaps, a condition to which a finite moral being may forever approximate, but never actually reach, never attain that condition in which it is absolutely unable to will what is impure and ignoble."

What is this but a statement of the doctrine of necessity? The holy man must will what he believes right, because his character and disposition constrain him so to do. He has "no power to be unholy." He is not "free" to lie and rob and murder, because to act thus would be as contrary to his moral nature as to leap from the earth to the moon would be contrary to his physical nature and the laws of his being. The reason and cause of this moral inability to do wrong, in this constraint to do right, exist not simply in the "will" of the individual, but in his character and education, in the life of his ancestors, in the history of his race, in the unrecorded struggles of the past, in the conditions of being, in the constitution of the universe of which man is a part, in the eternal, self-existent power, itself uncaused, by which all things are determined.

To the argument of the necessitarian, that, "if all the circumstances in a thousand cases are alike, and the conditions of the mind also the same, then the willing will be the same, and this uniformity indicates necessity," Mr. Hazard replies: "This assumes, as the basis of the argument, that the same causes must produce the same effects. In the first place, I would remark that an intelligent, self-active first cause is under no necessity, upon a recurrence of the same circumstances, to repeat its action; but, having in the first case increased its knowledge, it may act differently in the second."

A sufficient reply to this statement is that "an intelligent, self-active cause," having increased its knowledge, is no longer the *same* cause, but the same cause *plus* the increase of knowledge and the modifications produced by the acquirement and possession of the additional knowledge.

Although we are obliged to dissent from some of Mr. Hazard's positions and the reasonings by which he attempts to maintain them, we recognize the ability of the writer in dealing with a difficult subject, and doubt not his work will stimulate thought and help earnest minds to understand the merits of the controversy to which this little volume is a contribution. B. F. UNDERWOOD.

EDITORIAL NOTES.

EDWIN D. MEAD is about to publish a little book upon Luther,—*Martin Luther: A Study of Reformation*,—a work of about the size of his *Philosophy of Carlyle*.

THE first entertainment of the Young Men's Union of the Society for Ethical Culture of New York was announced to be held at the Workingman's School, 109 West 54th Street, last Wednesday evening, and was to consist of remarks by the president, Mr. Vredenburg, and a lecture by Henry George on "Property."

A PERSONAL note to the senior editor, from Mr. M. J. Savage, runs as follows: "I have no time this week to write an article on the subject which you and Dr. Newton so ably discuss, 'A Higher Training School for Preachers.' But, from my 'corner,' I wish to send out a hearty *Amen!* to the idea of an utterly free and scientific theological school. It is the one thing needed to put theology in an intellectually respectable position."

SAID Martin Luther: "The story of Jonah is more incredible than any poet's fable. If it were not in the Bible, I should laugh at it. He was three days in the belly of a great fish. Why, the fish would have digested him in three hours, and converted him into its own flesh and blood. The miracle of the Red Sea was nothing to this. The sequel, too, is so foolish,—when he is released, he begins to rave and expostulate, and make himself miserable about a gourd. It is a great mystery."

SAYS the New York *Evening Post*:—

Previous to Mr. George Jacob Holyoake's departure for England last fall, he initiated an Advisory Co-operative Board, of which the following gentlemen are the officers: the Hon. Parke Godwin, President; the Rev. Dr. J. H. Rylance and Justus O. Woods, Vice-Presidents; George S. McWatters, Treasurer; and J. M. Percival, No. 13 Broadway, New York, Secretary. These gentlemen have carefully studied co-operation, and are willing to give all needful information respecting it. Mr. John Gledhill and Mr. Percival are the American representatives of the Manchester Co-operation Store, and buy here annually for it about $2,000,000 worth of provisions. The Board would like to communicate with all Co-operation Associations and persons friendly to the cause.

GEN. BUTLER was once engaged as counsel for the defendant in a case where the prisoner was accused of manslaughter; and in the course of his argument, based on the assumption of self-defence, he informed the jury that "we have it on the highest authority that all that a man hath he will give for his life." Judge Hoar, counsel on the other side, rose and demolished his opponent's argument by quickly saying that he had "long wondered what Gen. Butler considered the highest authority, and was very glad to have the question settled," and proceeded to read to the court from the Book of Job: "And Satan answered the Lord and said, All that a man hath will he give for his life."—*Boston Herald*.

THE following letter (which occurs in *Aspects of Religion*, by Mr. John Fordyce) will be read with interest:—

DOWN, BECKENHAM, KENT.

Dear Sir,—It seems to me absurd to doubt that a man may be an ardent Theist and an Evolutionist. You are right about Kingsley. Asa Gray, the eminent botanist, is another case in point. What my own views may be is a question of no consequence to any one but myself. But, as you ask, I may state that my judgment often fluctuates. Moreover, whether a man deserves to be called a Theist depends on the definition of the term, which is much too large a subject for a note. In my most extreme fluctuations, I have never been an atheist in the sense of denying the existence of a God. I think that generally (and more and more as I grow older), but not always, that an agnostic would be the more correct description of my state of mind. Dear Sir, yours faithfully,

CHARLES DARWIN.

THE following facts and figures we find in the New York *Sun*: "Last year, 45,000 persons were arrested in Paris; and only 6,000 women were included in this sum total. The list of professions and occupations is very miscellaneous. Among the arrested were 3,000 locksmiths, and the police had to take charge of 660 cabmen. The night men form a heavy item in this bill, 1,100 of them having been under arrest in 1882. The figure 20 speaks well for the general good conduct of the various officials employed by the post-office. In the higher walks of life, 52 stockbrokers and 24 men of letters (this term including journalists) are noted as having been in trouble. In the total number of prisoners charged with crime or misdemeanor there were 3,291 foreigners. To this figure, Belgium contributed 959, Italy 759, Germany 379, Switzerland 376, and England 126. The contingent from the little State of Luxemburg reached the high figure of 276."

SAYS the *Sunday School Times*:—

There is hardly anything in religious literature more objectionable than the sensational novel. *Fiery Trials*, a story of an infidel's family, by the Rev. R. H. Clozier, is no exception to the rule. Bombastic, deficient in literary form, and highly improbable in incident and development, it is a difficult volume to read, and one which does not repay the trouble of reading it. The author was undoubtedly animated by a sincere desire to do good, when he produced these diffuse and overwrought pages; but, for all that, his book is not one to be placed in the hands of any intelligent young person. It is more likely to awaken ridicule than to satisfy honest doubt. The vulgarity, coarseness, and wholly superficial character of the volume can scarcely be exaggerated.

We copy the above paragraph, in order to commend the candid and honest sort of criticism it contains to some of our liberal contemporaries who praise indiscriminately all books and pamphlets that appear in the professed interests of Liberalism, some of which, although written from a different stand-point, belong to the same intellectual grade with *Fiery Trials*.

SAYS the Montreal *Herald*:—

No Canadian legislator ever fancied that by the additions of 1879 he was giving the customs officers power to establish a censorship over controversial works, or to exclude from Canada books which Parliament had itself brought in and placed in the Parliamentary Library; and none, except those who were incapable of exercising a sound judgment or desired to magnify the importance of their office, would ever have thought of torturing the law to the purposes to which it has been put by the officials of Toronto and Montreal. As a matter of fact, the books which are now tabooed have always passed through the custom house without challenge, for the excellent reason that there was no law against it. Public opinion and the law have agreed in recognizing them as neither immoral nor indecent within the true meaning of such terms. This matter has been settled by higher authority than that of customs officials,—by that great authority, the public conscience, which has proclaimed religious toleration, the right to think and speak freely, the right to hold just such opinions as to every man seems most proper, the right to read just such controversial books as he pleases, provided he interferes not with the liberty of others. If these books have been introduced into the Parliamentary Library of Canada, into many semi-public libraries, into the libraries of hundreds of clergymen, and of thousands of gentlemen of culture and refinement, and if this has been going on for very many years, how can any collector of customs at this date venture to class them with "immoral and indecent" publications?

POETRY.

RENUNCIATION.

Renounce thyself! the thrill along the nerve
That heeds the call, nor will from duty swerve,
Upholds some latent pressure, though unknown,
That keeps the universal melody in tone:
Poets have died and left their song unsung;
Heroes, whose grand achievements might have rung
Adown the steeps of time, ignobly die,
For lack of field, beneath judicial eye;
Heroic blood, heroic shape, cast in heroic mould,
Now stand at brake, the helm of sterner hold.
Self-sacrificing heroes man the ship,
Self-sacrificing heroes crush the grip
Of railway-brake: men for each other die,
Vicarious in suffering give the lie
To selfishness, and all along the mart
Have reared the symbol of a human heart.
Sublime above all craft, above all creed,
Man feels his sovereign right to every need,—
Right to his plot of earth and sunshine meed:
If God there be, the only God to-day
Asserts through duty an eternal sway:
She whose stern finger points the onward road
Bears on her brow the semblance of a God.

ELIZABETH OAKES SMITH.

The Index.

BOSTON, NOVEMBER 8, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boyston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

SOCIALISM IN ENGLAND.

BY WILLIAM CLARK.

A few years ago, it would have been considered absurd to look for any sign of socialism in England. People had agreed to accept the comfortable doctrine that, by some mysterious law, England was altogether exempted from the tumult and clash of rival social forces which convulsed so many of her neighbors. Some people put this down to the special favor of the Deity, who was supposed to exercise some special protection over England. Others attributed it to the inherent virtues of the British Constitution. But times have changed since then. The fat years of industrial supremacy have given way to lean years of both agricultural and industrial depression, which has led to a depression in the minds of men. It is not that there is less wealth in England, but that there is no adequate means of rightly distributing that wealth. The power of land-owner and capitalist has grown with marvellous rapidity; but the masses of the people in both town and country are very poor, while many are living on mere starvation wages.

It is a mooted point still whether the condition of the people has, on the whole, decidedly improved during the last fifty years. I am inclined to think that there has been a considerable improvement among the majority of our people, but that the reforming agencies at work have not been able to keep pace with the needs of great numbers. However that may be, quite certain it is that in no civilized country is there such a mass of hopeless wretchedness, squalor, and degradation as in England; in no country do the extremes of wealth and poverty force themselves more painfully upon one's notice; and in few countries has law declared itself so unmistakably on the side of wealth and power as against the poor and the weak. Nearly every acre of land in England is walled in, some rich man having the power to say, "This is mine," and to exclude his brother man from any share in the possession of our common inheritance, the earth. And, of late years, those common lands which once abounded in England have been, for the most part, swallowed up, piece after piece, by those who had already more than they knew what to do with. The vast growth of towns has, of course, produced all the miseries of overcrowded populations, along with high rents.

Mr. Bright said, some time ago, that thirty per cent. of the people of Glasgow lived in abodes of one room. Who these unfortunates are is well known. They are the poor people whom landlord greed has driven from their old highland homes, they are the wretched Irish who have not been able to get daily food in their unhappy land,—all left to sink into the hideous depths of these Glasgow slums, and to drift into the downward tracks of pauperism and crime. The condition of things in London is in some respects even worse; for, while Glasgow is a well-governed city, London is a realm of civic anarchy. The condition of the poor in the British capital is indeed past description. Under the very shadow of the houses of Parliament and Westminster Abbey exist dens of filth and misery which have stood unchanged for years. The Archbishop of Canterbury, in his palace at Lambeth, has much the same surroundings as his very reverend brother at Westminster, —a burning satire on the religion of the land. Between the two great thoroughfares of the Strand and Oxford Street have existed, for generations, nameless horrors.

But it is in the East End that the misery culminates. Here are thousands of people, most of whom herd in a single room like so many beasts, with the life crushed out of them by work, the payment for which barely provides the most slender necessaries of life. But there are other thousands worse off still,—those who can get no work at all. Every morning at the London docks, crowds of famishing wretches beg and implore for work enough to keep them from starvation; and, for every one who receives some work, a dozen are turned away in helpless despair. Meanwhile, the "society" journals are informing their readers of the grand ball given by the Duchess of this, and the reception of the Countess of that, and of the splendid garden party of some great millionnaire, and how much the flowers cost, and what firms were employed to furnish the decorations, and who wore the finest jewels, and all the rest of the long tale of empty folly and insolent, flaunting wealth.

We need not wonder that, under these circumstances, the socialism which is so formidable on the Continent should have invaded England also. That invasion has begun, and socialism has now to be taken account of as one of the many factors in English life. I must not be understood as meaning that great masses of people are consciously adopting any definite scheme of socialism. The masses do not reason: they fret; and it is impossible that they should appreciate the economical problem which underlies socialism. What I mean is that some leaders of opinion among the people have become imbued with socialist doctrines, and are taking advantage of the great and growing misery to spread these doctrines; and that in London, at any rate, their teachings are meeting with much acceptance.

During the past few weeks, a weekly meeting has been held in a hall in the east of London to discuss "Poor Men's Politics." A few of the representatives of the respectable, well-to-do classes put in an appearance, hoping that the meeting would indorse their nostrums. These were mainly State-aided emigration, what is vaguely called "thrift," and the acquisition of property by means of banks, building societies, etc. But, at all the meetings, the advocates of these schemes could scarcely get a hearing; while resolutions have almost unanimously been passed, demanding State provision of labor for the unemployed, cultivation of all waste lands by the people, and State assistance for co operative production.

This appears to be the workmen's solution of the existing crisis. And so real a solution is it, as compared with the efforts of the well-meaning upper and middle class people, that a writer in so highly respectable and moderate a paper as the *Daily News* approves of the first of these demands. We may, then, fairly infer that we in England are on the eve of a new departure in social reform, in which the functions of society will be enlarged, and the so-called "rights" of property and of individual accumulation will perhaps be curtailed.

While, therefore, the poverty in striking contrast with great wealth may be taken as the chief cause of the growth of socialism in England,—as it is, indeed, everywhere,—there have been several determining agencies at work during the last few years. First and foremost of these I consider to be Mr. Henry George's *Progress and Poverty*. No book in our times has exerted such an influence in England as this well-known work. In spite of a persistent attempt on the part of the press and of public men to ignore its existence, the book has sold as only the most popular novels sell. Nearly a hundred thousand copies have been disposed of during the last eighteen months, and still the sale goes on. Everywhere, one meets with men who have not only read it, but have been profoundly convinced by it. It is true that Mr. George's book is not socialistic in its intention; and it is equally true that the most thorough-going socialists regard it as a sort of *pis aller*, or vain attempt to keep up the sinking ship of society by throwing overboard the rubbish of landlord monopoly. Nevertheless, no one can doubt that the general tendency of the book is in thorough harmony with the modern social movement, and that in England it has given a powerful impetus to that movement is beyond question.

The next determining factor has undoubtedly been the failure of the United States and of the British colonies to prevent the growth of poverty and even of pauperism. To be candid, I must say that this has acted as a very powerful motive in helping on socialism. The people here have heard of the growth of vast monopolies and of millionnaires richer than those of England, all under the republican institutions of America; and the United States are scarcely regarded with the same warmth of affection as at the close of the Civil War. In the agitation which has been going on, special point has been made of the growth of the capitalist and land-owning power in America. In Australia, too,—though it has only one person to a square mile,—a land question is growing, which threatens to attain formidable proportions. It is felt by many here that republican institutions of themselves will not help the people to a more decent and desirable life, unless organized social pressure is brought to bear on the selfish and predatory instincts of individuals.

Digitized by Google

Nothing is known here of the existence of thousands of comfortable and progressive communities in New England and the Middle States; but much has been made of the colossal wealth of a Vanderbilt or a Jay Gould, and of the growth of monopolies like the Standard Oil Company and the great railroad corporations. The bad deeds committed in the name of the French Republic—the war-like policy and the gambling on the Bourse—have also somewhat discredited the republican experiment here, and have made men fall back on social reform. The French workmen are no better off under the republic than under the empire or monarchy. What we want, therefore, is great social changes. So it is argued with some force. In the next place, there has been a strong reaction against the old political economy, both among the thinkers and the people. The latter have always felt in their hearts that the old doctrines, associated with Malthus and Ricardo, must be false, because they hold out no hope except to the strong and selfish. Ruskin gave expression to that feeling in language of great power and beauty, years ago. He was laughed at then, but the thinkers are coming round to his stand-point. Prof. Fawcett is about the only teacher of the old orthodox economies left. Orthodoxy is as much at a discount in political economy as it is in theology. And, whatever else may be Mr. George's merits or demerits, it is generally admitted that he has dealt a stout blow at the doctrines of Malthus.

It would be short-sighted and misleading if one who is writing on this question were to omit the religious aspect it presents. The new movement is almost as much a protest against the old religious notions as against the old economical doctrines. It is well known that in Germany the socialist movement is thoroughly atheistic. Its two great champions, Lassalle and Marx, were of this complexion; and their followers resemble them. In England, this is, on the whole, the case also; but, within the last few months, a little paper, called the *Christian Socialist*, has been attaining a wide circulation. The object of this paper is to reconcile Christianity with the socialist movement, to show that Christianity itself is essentially socialistic, and, in the words of its founders, "to justify God to the people."

The vague term "Christian" here stands for a very liberal and humanitarian faith, very little concerned with articles of doctrine, and very much with human rights and human brotherhood. The general tone of this little paper is so admirable and courageous that many people who do not entirely agree with it read it with sympathy. It is the organ of a movement of protest against that narrow, commonplace, bourgeois Christianity,—smacking of the shop and the warehouse,—which has hitherto almost monopolized the name of religion in England, and which still dominates the life of our middle classes. Dimly or clearly, its promoters feel that what we need is a great human religion, which shall break down the barriers that sunder spirit from spirit, raise men above the grinding routine of our dull, shop-keeping civilization, and reveal to every man the worth of his fellow. Our churches and chapels do not, and cannot, accomplish this. Hence, they are deserted by our workmen. If we cannot have this religion, they feel, let us have no formulated religion at all. And who will blame them? Whether a new religious movement of a genuinely human kind, which shall reverently respect every man for the worth of his humanity, is possible in this country, it would be hard to say. All classes are deeply tainted with a materialistic view of life, and even the finest minds are more inclined to a stoic fortitude than to an exultant hope. But the great and hopeful fact is that the social question has arisen, that all are compelled to think about it, and that it has arisen never again to sink into oblivion.

For *The Index*.

AN IMAGINARY TALK ON LAKE LEMAN IN 1816 BETWEEN SHELLEY AND BYRON.

BY C. A. OLCOTT.

Shelley.—This is merely a question of temperament, my dear Byron. Try for one day, at least, to look at life by your own unaided vision (even if it be sometimes not of the clearest), without those odious blue goggles with which you are so prone to cover your eyes. We have an ideal afternoon even for Leman. Would you be willing to sacrifice your offering to the god of misery upon the altar of calm enjoyment instead? I am prepared for the worst, however, even should you resolve to gratify me by putting aside your fit of would-be melancholy. I feel that the result will be but a modification of diseases. You will become a victim to that abomination,—a revelry by daylight.

Byron.—You are a heartless optimist, Shelley. Your soaring imagination blinds you as to the real causes of the woes that surround you. Perhaps you are not accountable for this lack of insight into things terrestrial,—the result, I believe, of your small, tough head. While I am an avowed misanthrope, let me tell you, in all confidence, that I have had many a laugh at my own lines and at the sympathy lavished upon me in consequence of them,—

"Our life is a false nature,"

and at others similar to this in my *Childe Harold;* and this very laughter at the expense of those who so pity me, and the revelries in which I indulge at such times, are the most natural antidote for my melancholy. But for to-day, Shelley, if you wish it, I will forget every dispute that has divided us. I will immolate myself, with every tendency, my slightest inclination, upon the altar of the indomitable Shelley,—in other words, upon the altar of calm enjoyment. The result will doubtless be a most insipid afternoon, unless the irresistible Mrs. Shelley appear upon the scene, in which case the surface of my tiresomely untroubled sea may show an occasional ripple (perhaps even a breaker) to vary the monotony. But as Dante said of Virgil, "*Allor si mosse: ed io gli tenni dietro*,"—He leads the way: I follow,—so I submit and follow in your footsteps toward Lake Leman, not so much for the reason that I am flattered by your self-imposed task of prober and healer of my many wounds, but because the suggestion of a day on Leman—for its own sake—charms me. Did you ever see its waters of a more indescribably lovely tint? I defy an artist of color or words adequately to suggest that peculiar shade to a person never having been so fortunate as to have seen a Swiss lake. And that line of blue as the mountains dip into the lake trying to out-do their icy summits in coolness and beauty,—oh, I love this lake! To my mind and imagination, it has not its equal for beauty and suggestiveness the world over. Before I leave it, I will write a poem—in some way connected with the interesting old Castle of Chillon—to commemorate our stay here. Let us take this boat, Shelley,—the nearest one; and, as we float awhile, will you tell me what you meant, two evenings ago, when you said that my latest, most unbearable trouble might be of use to me, and that it suggested to you a disease you had recently investigated, and which had proved a blessing to a community? For, unless I hear a sound argument, I cannot agree that pain is of use in this way. In fact, I cannot believe in pain, except as *mother Church* teaches its uses and proves its uses to herself. At all events,—without touching on the points of my private history (any thought of which disgusts me),—will you explain to me what you meant?

Shelley.—Certainly, Byron. It was simply this. Everything, even the seemingly convulsive, is transitional: the succeeding can be but a continuation in the design of the foregoing. In thought as in nature there can be no overleaping. Consequently, I find an analogy between a sudden and apparently useless torment of the mind, which in its very destructiveness clears away the rubbish of thought, and a disease carrying all before it, leaving what remains purer, perhaps stronger. It seems to me that, unless you admit this, you ally yourself with the multitude against the cause of truth. Until you "lay the axe to the root," and resolve to see that it is because the Church—not as she is, but as she seems to be—appeals to your imagination alone and in no wise to your reasoning faculties, and that this is the cause of a part of the inward struggle you are undergoing, you will be in darkness as far as any real advance in *science* is concerned. In becoming allied to the Church, you may further your cause in a poetical and social way,—on the continent, at least,—but on that grandest high road leading to the palace of the sciences, never! You have taken a by-road that leads to Rome, nothing more. But tell me of the causes that have resulted in your thinking in this way?

Byron.—If you insist upon it, I will give you a retrospection hardly tending to make the day more cheerful. A time in my life untarnished by regret does not live in my memory. The first remorse which really embittered my life, when the meaning of that expressive Polish word *Zal** entered every fibre of my being, was shortly after the publication of my "English Bards and Scotch Reviewers." I felt that I had consumed myself in attacking enemies, when the fire within me should have burned in a better cause; and, for months afterward, I could not enter a drawing-room without first muttering to myself, as a bitter consolation, Where there is human life there is misery! although at the time I was but nineteen years of age. Every pain, mental or physical, reaches out for what it thinks its natural antidote, when it feels a supposed cure to be a chimera (as I found dissipation to be), and takes instead that religion which seems strongest and finds it good, then, I think you will admit that, if I have not found the high road to the sciences, I have found a by-path leading to that high road. What greater sage than Augustine and what mightier words have ever been uttered than *Fecisti nos ad te Domine et inquietum est cor nostrum donec requiescat in te.* What more than these did I require to explain to me my eternal longings and the infernal unsatisfactoriness of all things? This world is your *all.* Therefore, you desire to see nothing but beauty in it, and, thanks to your natural inheritance, you are able to overlook the evil; while, as for me, I have to thank my ancestors for a legacy of unrest and unsatisfied desire, or (as I am partial to the word) for a continual *Zal.*

Shelley.—If this religion really satisfies you, I have nothing further to say. Far from me the work of destruction, unless it be the necessary pruning, to be followed by the fruitful vine. It was only in consequence of your apparent dissatisfaction with your aim in life, as evinced by your expression and language a few evenings ago, that induced me to say as much as I did; and it was then as one friend saying to another, who seems to him to be tottering on the brink of an abyss when a fruitful plain lay behind him: If, beyond the abyss, you see what meets your demands and you think that you can overstep it, and if to do so you need a helping hand from me, it is extended to you most heartily. And still further, after you are over, if you see fit to return to this meadow, in the midst of which I have placed myself again, I will most gladly come to your rescue. Indeed, Byron, I am serious. I feel that later you will join a solidarity which will one day become universal,—to which we all hope to belong, by whatever road we reach it,—the solidarity of those who have furthered the cause of good achieved by noble motives,—not good the result of hazard, but good conceived in nobleness, and advancing onward to become a benefit to all the world. That each day shall add one to this mighty brotherhood is my dream by day and night. As for pain or misery, I agree with you that it is now universal. Every man is a living representation of the fact that pain has been, and that victory has followed. In your look into the depths, does not the release from pain, the glad awakening, impress you too? Can you not believe that pain will eventually be regarded as a blessing, in that the relief at its disappearance tends to make living in the world more joyous than before?

The two men had begun their afternoon amicably; and, after these friendly words from Shelley, accompanied by a mutual glance of understanding, they clasped hands, and silently turned their boat homeward.

* Meaning hatred, regret.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER IX.

Last Days in Canada.—Mr. Charlton's Journal.

One of the allurements to Montreal was to see again Mr. George Iles and the great Windsor Hotel where he resides, which still seems to me distinguished for its fine proportions and grand solidity. In affairs of high progress (there are, I suppose, affairs of high progress as well as of "high politics"), Mr. Iles continues to take no mean interest, and contribute no mean aid by his pen. It was he whose telegram induced me to leave Ottawa against my will. The Grand Trunk train had left the last station where sleeping berths could be engaged before the fatal summons reached me, and my daughter readily agreed to sit up in the cars all night rather than fail in reaching Montreal. The journey to Brockville, where we arrived at midnight, was beguiled by the courtesies of the Hon. Mr. Carling, the Postmaster-General, who travelled with us that far. The carriages, which were built of light-colored Canadian wood, were of perfect workmanship, and presented the cleanest interiors I had seen. I do not say they were more beautiful than the Chicago and Alton carriages,—that would not be allowed. However, they can grow trees in Canada. In one of the romantic walks around the Parliament Houses of Ottawa, you come upon a section of a Douglas fir, eight feet in diameter, sound to-day as a target plate. The tree was three hundred feet high, and was five hundred and sixty-six years old when Columbus discovered America.

At the Windsor, Montreal, we were assigned the chambers considered distinguished by having last been occupied by Mr. Herbert Spencer. Afterward, we were the guests of Mr. and Mrs. William Hall, of University Street, and saw the stately architectural glories of Montreal, its Mountain Park overlooking the mighty St. Lawrence, and the wondrous bridge, nearly two miles long, which spans it,—defying ice, torrents, and storms,—of which the iron tunnel, through which the trains run, which it bears on its broad back, is as marvellous as the bridge itself. Not less, in another way, astounding is the Mount Royal Cemetery, where wondrous shrines cover miles of sacred acres. Of all the diversions of Montreal, eating oysters with Mr. Hall at midday, in the sunshine of Bonsecours Market, is not to be forgotten; nor the pleasant freedom of St. James' Club, accorded me by the President; nor the trip to Quebec up the St. Lawrence, two hundred miles in sunset and moonlight, which we owed to the courtesy of the manager of the Richelieu Company, in the steady steamer where cleanliness and luxury abounded. The mighty expanse of water and the solemn receding banks as the sunset transferred them to the care of the moon was a sight unimaginable in England. We saw only the tamer aspects of the great river, which runs one thousand five hundred miles through a majestic land, where, from the rocks along its sides, the vast steamer appears but as a butterfly upon the water.

Beyond Quebec is the largest and gayest lunatic asylum I saw anywhere. This age has no brighter marks impressed upon it than those made by science and civilization as shown in mercifulness to the mad. We looked into the house where the body of General Montcalm was brought after the battle in which he fell, and were glad to find it, as we were told, unchanged. I hate people who deface or obliterate, or who change, or even "improve," historic things. The new glory of Quebec is Lord Dufferin's terrace. Canadian government is self-supporting, as it should be in that self-helping land; and the Governor-General is like the gilded cupolas and turrets, which are always bright in that dry climate. He is not the structure, but he imparts to it luminousness and richness of finish. How Lord Dufferin fulfilled this ideal needs no telling: his genius is seen in his terrace. From ridges of narrow streets and from scant plateaus alone could the romantic heights before the city be viewed. By building arches along the cliffs of the town, he spanned a useless vacancy, and stretched across it a long, spacious, and delightful terrace, adding to the area of the city like recovering land from the sea. The Hanging Gardens of Babylon —judging from the plan of them—did not present so fine a scene to the spectator upon them as Lord Dufferin's terrace affords to the visitors and people of Quebec. He gave to the grim cliff city a more than Parisian boulevard over the river and the rocks.

The Atchison, Topeka, and Santa Fé Railroad Company held an exhibition in Montreal of the cereal and other wonders of Kansas and New Mexico. My host (Mr. Hall), strolling in, found a pleasant gentleman in charge of it, and invited him to dinner. In the course of conversation, he asked me whom I took him to be. I answered exactly what I thought, which I always assume is what a questioner wants to know, and said, "A Catholic priest with a Mexican face and a Massachusetts accent." I little thought how many pleasant days we were destined to spend together. He had received instructions from Mr. Nugent Townsend to find me out in Canada, and arrange for our journey to New Mexico. By the accidental mention of my name at the exhibition already alluded to, my host discovered the guest for me, and, unknown to me, arranged our meeting. Mr. Cargill was of Massachusetts by birth, and had the accent and the well-chiselled Mexican outline of features; but he was not a priest, though he looked the character. He had a buoyant gravity, if such an expression is intelligible; and an American eagerness, which gave you the impression of alacrity and entire trustworthiness. Of this belief I remain. I had been to Quebec since we last met, when he promised to join me at the Grand Trunk station. But for Mr. Iles and Mr. Hall, I should never have found station or carriage at night, and did not know where I was in the wilderness of people who crowded everywhere; but from out of the mass at the exact moment came my travelling friend, who arranged all things for me during the days and nights of the Grand Trunk journey from Montreal to Chicago.

At Toronto, we were again recipients of the ceaseless attentions of Mr. John Smith, the Canadian agent of Hamilton, and took reluctant farewell in our minds to pleasant Canada, not forgetting the tea and cream of Guelph, the wise talk of the president, James Mills, and the country mansion in which the college began, and to which have been added rooms, halls, lecture theatre, and museums, as needs required and means permitted, so that the college resembles the British Constitution, in which everything has preceded from something which went before, in which nothing was planned, and all has grown. We thought of the brave settlers who make glad the vast and growing Dominion.

> "His surely is a happy lot who dwells
> In pleasant pastures far removed from town,
> Whose life from sunrise till the sun goes down
> The same unchanging, peaceful story tells;
> Deep in the rustic lore of fleecy fells,
> Proud of the harvest he himself has sown,
> The spreading meadows that his hands have mown,
> And the great cattle that he buys and sells;
> For whom the placid night brings slumber sweet,
> Stirred by no sound of any dancing feet,
> Lit by no light of any laughing eyes;
> Whose quiet days, unmoved by vain desire,
> From summer's sunlight to the winter's fire,
> Creep slowly on, until at last he dies."

So Justin H. McCarthy sings; but the Canadian settler has around him "dancing feet" and "laughing eyes," and sees himself many wondrous things before he dies.

At Detroit, at dead of night, when ghosts do appear only on the Grand Trunk, the conductor does not allow them on the train, the curtains of my bed were withdrawn by the Rev. Dr. Bruce, who had conducted Mrs. Leach "on board." They call out at railway stations out there who goes "on board." Mrs. Leach, who had been on a visit in Michigan, rejoined us at that point. On Sunday morning, long before we reached Chicago, we were met by an agent sent from Mr. Charlton's office, who has the faculty of identifying strangers in the cars by some occult art only known on the Chicago and Alton line. And, before the church bells were ringing, we were at Mrs. Charlton's bounteous table, sipping cream punch of a perfection unknown in any other part of the world; eating oysters in milk; chickens and chops, accompanied by white wine, peaches, coffee, and mission grapes, until we really knew we were in Chicago.

CORRESPONDENCE.

CRITICISM OF DR. OSWALD'S VIEWS.

Editors of The Index:—

Dr. Oswald's comments upon "The Secret of the East," though able in a rhetorical point of view, are unfortunate in point of perception. Our critic does not comprehend the *secret of Jesus*.

We read, on the occasion of his handing back to the minister the book, that he stated what was not in the book,—that his mission was "for the restoration of sight to the blind"; and I most earnestly hope that the eyes of such zealous advocates as Dr. Oswald may be opened to see "the truth as it is in Jesus" in its beauty and simplicity. In regard to anti-naturalism, what would this earth produce but for the farmer's art in this respect? His whole effort is given in that direction, not only in the cultivation of the earth, but also in the raising and in the breeding of stock. The finest and most beautiful flowers of the garden and the most luscious fruits of the field are all eminently anti-naturalistic.

Man has been likened to a "garden enclosed." And, like a garden, he naturally throws up brambles and briers and noxious weeds. These need subjugation by tillage. The soil thereof, to receive the heavenly seed, must be of a generous and liberal and of a *responsive* character, else the seed of the kingdom will not increase and bring forth some ten and some one hundred fold.

Now, what is the secret of Jesus? Is it not self-denial? And did any man ever arrive to any degree of perfectedness without living on the watch-tower of the mind? And all men know that Jesus eminently taught these things, and taught them by means of parables, in order to stimulate the minds of his hearers to inquiry and verification. He, however, taught self-denial only as a means to an end; and this wondrous end it is which constitutes his method and his secret.

Humanity is wonderful and fruitful in its suggestions of its origin and of its destiny. Jesus taught that its true destiny was in rightly formulating the Spirit of Truth. And he called this by various names. He called it "salt," and personified it as such. He spoke of being freed by the truth, or by the Son: "If the Son shall make you free, then are ye free indeed." And yet, in the face of such teaching, such men as our critic find that he sought the bondage and servitude of the human mind, and not its emancipation and liberation from useless forms and ceremonies.

He certainly taught faith, and that without faith we could do nothing to effect this very self-same emancipation and liberation. Now, I perceive that Dr. Oswald, instead of being a freeman, is a bondman and a servant to error and to servitude. Disclaiming against anti-naturalistic tendencies, he is himself unredeemed and unemancipated; for the Son has not made him free.

In the first place, in order to discover the secret of Jesus, we must possess faith (fidelity); and that faith must be free. It especially must be liberated from the bondage of the letter, and herein such minds as our critic most grievously err. They largely err in the spiritual æsthetic perception of the mind. Being seduced by the devil, they yield to his seductions. Now, the first temptation of Jesus was on this wise; and he resisted the Satanic influence with the citation, "It is written that man shall not live by bread alone, but by every word that proceedeth out of the mouth of God."

Many have been the formulas as to the origin of the New Testament. I have mine, and some ten years since published a book on the subject, entitled *Indices, Historical and Rational*. And my formula in it was partly right and partly wrong. The truth is the New Testament was written by the Church, whatever that may mean. The early Fathers clearly denote it, Origen hath declared it, and none of them deny it. It is unquestioned that Paul knew nothing of the Four Books, else he would have quoted them. And he, more than any of the rest, fathomed the *mystery*, even "*Christ within, the hope of glory*." Oh, how absurd is the thought that the man who discovers this great idea can be a pessimist! Did not Paul say, "Rejoice, rejoice always, rejoice in the Eternal!"? Did he not say, "We have *not* received the spirit of bondage unto fear, but the spirit of adoption, whereby we cry, Abba Father"? Did he not say, "Because ye are

Digitized by Google

sons, God hath sent the spirit of his Son into your hearts, crying, My dear Father"?

Lucretia Mott once said to me, in view of the fact of the denial by some of the historical Jesus, that it did not matter to her if such denial was founded upon fact; and herein did not Paul say, "We have known Christ after the flesh, henceforth know him no more"? And, again, "No man can call Jesus Lord, except by the Holy Spirit." Clearly, he meant by this that "no man can come unto the Father except by the Son,"—*i.e.*, by *sonship*.

Is the high estimate which Jesus placed upon the character and destiny of man an irrational one? Is he not created but little lower than the angels? Is the estimate in "Hamlet" overdrawn?—"How noble in reason! how infinite in faculties! in form and moving, how express and admirable! in action, how like an angel! in apprehension, how like a god!" Is this all poetry? Well, blot out all the poetry of life and motion, and do we not all become pessimists? But is the formula of Jesus an irrational one? "Ye are all the children of the Most High." "We call them gods to whom the word of God came."

I query of our critic, Can he conceive Infinite Wisdom conferring sonship upon a being more highly endowed than man, when he considers his capacity as involving life eternal? Consider him as the "heir of all the ages," consider his wondrous capacity for enjoyment of sunshine and of starlight, "for summer's stores and winter's healthful snow, for the radiant earth and the solemn sea, for fruits and flowers, brutes and birds, for our own wondrous frames of flesh, for sight and hearing, taste and smell and feeling, for sleep, for language, for human love, for intellect and memory, for all the wondrous powers which permit the child of yesterday to converse with the dead of all the ages, and to soar in thought through the realms of boundless space,—for these blessings, what liturgy pours its long strain of thanksgiving before the throne of the merciful Benefactor?"*

And also, I would add, for that sentiment and capacity of communion and correspondence with the infinite and the eternal Mind. Our critic may deny all this, but he cannot deny that this was the secret and the method of Jesus. He was the most eminent Free Religionist of whom we have any account, supreme among the children of men for spiritual genius and perceptive power. How absurd, then, it is to confound the beautiful religion which he taught with the absurdities which we find in civil and ecclesiastic history, and which have been falsely classified with his system and taught in his name!

DAVID NEWPORT.

ABINGTON, PENN., 9mo., 21st, 1883.

*Frances P. Cobbe, *Religious Duty*.

THEOLOGICAL OPINIONS COMPARED AND CONTRASTED.

Editors of The Index:—

I find in the New York *Herald of to-day* (October 29) a report of the sermons of Messrs. Talmage and Beecher, given on the previous Sabbath at their respective churches in Brooklyn. I submit the following brief synopsis, as offering a most remarkable contrast in theological methods and opinions, contemporaneously expressed, by men so well known throughout the world. Those desirous to compare these discourses at greater length will do well to obtain the *Herald*.

Mr. Talmage, it will be seen, dealt almost exclusively in anthropomorphic symbolism, while his renowned clerical brother took a diametrically opposite view. Mr. Talmage spoke of the "Sensitiveness of Christ." The speaker plunged into his subject in his usual fervent and nervous manner, attacking the citadel of the passions with double-shotted artillery. He cited as specially relevant the inquiry of Christ (Mark v., 31), "Who touched me?" He graphically described the frantic efforts of the sick woman, rendering the whole intensely melodramatic. A throng of highly excited people are grouped, while the central figure is the Saviour. The woman, with an overwhelming desire to touch Christ, "to touch his coat, or the edge of his garment, just on the tip of the blue fringe." She did so; and immediately came the query, "Who touched me?" Christ, feeling the withdrawal of "virtue," asked who had got it.

The speaker here assumed that this subtraction from God was necessary, that the woman be added to. For, continued he, "if God cannot give without depletion, then, certainly, man *must* make sacrifices for his fellow-man." Then followed a reference to the great benefit to be derived by the nervous from contact with the Saviour. [In the analysis of this divine "blind-man's buff," it appears to me that only three conclusions are possible: 1st, Christ knew perfectly who touched him; 2d, He did *not* know; or, 3d, He was in doubt. These views exhaust the subject.] The reverend speaker asserted that Christ was highly nervous. "All those nights spent out of doors in malarial regions must have shattered his nervous system," said Mr. Talmage. Here was sensational symbolism with a vengeance, the range extending all the way from "tag" to "fever and ague."

Beecher's Sermon.

Mr. Beecher upon the absurdity of "Artificial Symbolization." Said he: "Men have asked why God came upon the earth. They have said that he came to establish a way by which foul men might be saved. They have thought that the whole race was lost from the beginning, and that Christ came to *purchase* the remission of sins. First, it was thought that he bought it from the devil; then, that he bought it from God." The speaker referred to the ideal God of the Greeks, adding that he loved nothing except the admirable; and Mr. Beecher emphatically asserted that atheism would never be banished until God be presented as a being entirely lovable and satisfactory at all points. [By the way, *has such a God* ever been outlined by the human mind?] Continuing, he said: "I do not speak disrespectfully. I merely say this: Since God has appointed the heavens above to declare his glory and the earth to manifest his handiwork, why are we reduced to the instrumentalities of the white or the black robe, the mitre or the genuflection, a turning this way or that way, or the cross worn before or behind? *Why* are we referred to these dwarf symbols instead of embracing those grander ones which are supplied for us? Take away your venerable painted faces: our God is a sun! The sun is the builder of the world. He bathes alike the fertile plain and the sterile rock. He finished the great globe in silence: without sound of the hammer, like Solomon's temple, each part fell into place. Take away your initial letters, 'I. H. S.'! *Don't* inculcate that these have some special sanctity, and shut out the sun! I am amazed that men should be so frugal in nature and prodigal in artificial symbolization; for all men cannot but see that the symbols of the Church are for those that go to church, while the symbols of the natural world are for those that live *in* the world. Although we are told that God is a sun, we go to church to look at a little painted god, to look at garments and pictures and all sorts of petty fixings, and think we worship God."

We offer no concluding comments upon these different views of the same subjects, for the obvious reason that those who fail to discriminate regarding their respective values will still remain *in statu quo*.

I. D. J. SWEET.

RELIGIOUS QUACKERY.

Editors of The Index:—

Of all quacks, the religious quack is by far the most oppressive; but what shall be said of him who apparently does not know his own mind for two consecutive weeks, who shifts from one school of thought to another, whom, when you think you have him, you find is not there, and who is best described in the comprehensive language of the thimble-rigger, "Now you see him, and now you don't."

I have recently edified the readers of *The Index* with extracts and comments upon editorials from the New York *Sun*, one exalting Swedenborgianism as "a world of light to a world of cloud" in comparison with Calvinism, another adulatory of Rome, and another advocating the abandonment of the "paternal theory," which unquestionably is the root core, not only of Swedenborgianism, but also of all Christianity.

The puzzled reader of the *Sun* might overlook all this diversity of counsel on the score of negligent or hydra-headed editing; but his patience will be sorely tried by an editorial of to-day (Sunday, October 28), entitled "Newspapers should be Religious," in which, after annihilating the Presbyterian New York *Observer* for criticising secular journalism, the editor says: "In our judgment, the *Sun* is one of the chief religious papers of the United States"; and also, "Suspicion of its moral soundness, of the sincerity of its declared convictions, is fatal to the success of any journal. We want all our newspapers to be religious, governed by religious principles; and we charge that they are false to their duty, if they pursue any other course."

In slang phraseology, "governed by religious principles" is good. As a cant phrase, nothing could be better. But, in view of the agnostic and infidel sentiments referred to above (and I might quote others fully as strange and startling), in view also of the fact that the *Sun* has been for years in its book review department a vehicle for the elegant and polished scepticism of "M. W. H.," and is now every Sunday devoting, not only columns, but whole pages and more, to plainly sympathetic reviews and extracts from Renan's *Les Origines du Christianisme*, which rationalize and fritter away everything that is ordinarily considered vital in Christianity and dear to the hearts of Christians, and which also cannot fail to carry conviction to the minds of thousands of its unlearned readers, one is tempted to ask on what Swedenborgian or Christian religious principles the *Sun* is governed, and how sincere and what are its declared convictions. If its editor would rise and explain his erratic course, and why he lends the columns of his religious paper to a seemingly bad, irreligious, or certainly non-Christian purpose, it would be extremely interesting. How also can this be reconciled with the orthodox, evangelical, and goody-goody editorials which usually grace the Sunday edition, many of which lash the agnostic, the infidel, and the dissenting clergyman, in models of terse and vigorous English? How many editors has the *Sun?* Who is the orthodox, who the heterodox, who the vagarist? Or is its theological head endeavoring to pose as the great religious buffoon of the country? Why not be straightforward and consistent, or make no pretence at all? Science and a religion of some kind will, no doubt, some day find a *modus vivendi;* but he who pulls down with one hand what he builds up with the other makes a sorry spectacle in the present conflict, in which men's souls are tried as never before in the history of this world. The *Sun*, like its great prototype in the heavens, ought never flicker, but should, while "it shines for all," shine steadily.

Can it be that this bright defender of the faith—stalwart at times in defence of that said once to have been delivered to the saints, half-breed occasionally, and independent by fits and starts—is, in reality, no wiser than his brethren, who simply do not know how to combat and resist the *Zeitgeist* (the time-spirit) which is gnawing at the vitals of Paulism, priestcraft, and superstition, and who also, while floundering hopelessly out of their depth, imagine that their feet are on *terra firma?*

Can it be that this Goliath of the religious press, though blustering with brave words to bolster up a structure whose foundations have been undermined, is, in reality, faint at heart, betraying in weak moments that he, too, is on the ragged edge, forgetting even "Our Father who art in the heavens"? Or only in more courageous mood does he fondly imagine that the victorious tide of modern criticism and thought will be stayed by the dogmatic puerilities of that dreamer of strange dreams, that great Christian Buddhist, Swedenborg?

The latter somewhere relates that every man has two attendant spirits, one pulling in one direction, the other in another. If true, this will in a measure explain the theological antics of the *Sun;* or, possibly, its editor is afflicted at last like him whom he has long made the butt of his ridicule—the truly good Deacon Richard Smith—with a young and progressive associate editor who, in the absence of his chief, slyly slips in the heterodox and questionable matter which rouses my curiosity and ire. J. F. M.

BOOK NOTICES.

BEYOND THE GATES. By Elizabeth Stuart Phelps. Boston: Houghton, Mifflin & Co. Price $1.25.

The recent tragic death of her brother, Prof. Stuart Phelps, to whom this latest work of her brain and pen is dedicated by Miss Phelps, lends an additional interest to what we think will be conceded to be her most able production. Those who have read Mrs. Oliphant's *Little Pilgrim* will be strongly reminded of that work by this of Miss Phelps, and it is another of those singular coincidences which so frequently occur

Digitized by Google

in the literary world of similar trains of thought being simultaneously awakened in the minds of two or more writers; for it is said that Miss Phelps' *Beyond the Gates* was partly written before *The Little Pilgrim* was published. This story purports to be the experience of a pure, earnest, thoughtful soul in a more reasonable and possible heaven than orthodox Christianity offers to its believers, and is a natural outcome of a conscientious Christian believer's revolt against the unreasonableness of the old faith by an attempt to harmonize its teachings with reason. It is a strong, a poetic, and earnest work, showing much careful thought on the part of the writer, yet by its very carefulness of treatment disclosing anew many of the weakest points of the old theology. It will be read with interest by all classes of thinkers, and, considered only as a work of fiction, is intensely interesting from beginning to end.

INDIAN IDYLS. From the Sanskrit of the Mahâbhârata. By Edwin Arnold. Boston: Roberts Brothers. Price $1.00.

This is the only authorized edition of this latest work of Mr. Arnold's in this country, and the many delighted readers of his *Light of Asia* will be sure to secure for themselves this new work by the same writer. From the author's preface, we make extracts showing better than we could explain the meaning and purpose of these *Idyls:* "There exist two unparalleled epic poems in the sacred language of India, the Mahâbhârata and the Râmâyana, which were not known to Europe, even by name, until Sir William Jones announced their existence. . . . Yet these most remarkable poems contain almost all the history of ancient India, . . . together with such inexhaustible details of its political, social, and religious life that the antique Hindu world really stands epitomized in them." "The present volume contains such translations as I have from time to time made out of this prodigious epic (the Mahâbhârata), which is sevenfold greater in bulk than the *Iliad* and *Odyssey* taken together. All the stories here extracted are new to English literature, with the exception of a few passages of the Sâvitrî and the Nala and Damayanti."

THE BAY OF SEVEN ISLANDS, and Other Poems. By John Greenleaf Whittier. Boston: Houghton, Mifflin & Co. Price $1.00.

These latest emanations of the genius of the beloved Quaker poet will be as warmly welcomed by those who have previously read them in the magazines, etc., to which they were originally contributed as by the many who will peruse them for the first time in this volume. There are twenty-one poems in addition to that which gives the book its title. They are all good, but none of them exceeding in power or sweetness his earlier efforts, though "How the Women left Dover" is quite equal to the best of those.

OUR LITTLE ONES for November is up to the usual average of this excellent magazine for children. A large proportion of its contents treats of animals and their ways, as "The Pet Lizards," "Insects' Wings," "A Very Funny Colt," "The Wise Cat and the Foolish One," "The Rabbit and the Porcupine," "How Mistress Speckle celebrated Thanksgiving Day," "The Baby Bear," and "Kitty's Tippet."

PERSONAL ITEMS.

MATTHEW ARNOLD'S Boston lecture will be on Emerson's Poetry and Characteristics.

THE daughter of Hon. William D. Kelley, of Pennsylvania, has just been entered in the University of Zürich as a student of logic, ethics, and metaphysics.

THE *Woman's Journal* says that Mrs. Frances Harper, a colored woman, was one of the most eloquent speakers at the recent meeting of the Woman's Congress at Chicago.

THE statue of Harriet Martineau, by Miss Anne Whitney, is now completed, and is daily expected from Europe, where it was sent to be completed in marble. It is proposed for this winter to place it in the Old South Meeting-house.

THE oldest school-teacher in New Haven is Sarah Wilson, a negress, seventy-seven years old, who has been teaching for sixty years. Her father was born a slave in New Haven, but bought his freedom; and Mrs. Wilson has a good education, and teaches a private school of very young children.

QUEEN RANOVOLO II., who succeeded to the throne of Madagascar in 1868, and died on the 13th of last July, was a Christian, and an earnest friend of the missionaries and of the English Government. In 1874, she issued a proclamation ordering the liberation of all the slaves imported into the island since 1865, at which date her predecessor had entered into treaty engagements with Great Britain for the suppression of the slave trade.

MR. CABLE will contribute to an early number of the *Century* the as yet unreported address on "The Lease System in Southern Prisons," which he delivered at the recent Conference of Charities at Louisville, Ky. The reading of this paper is said by persons who were present to have been one of the striking features of that interesting meeting. Mr. Cable has made a careful and dispassionate study of the prison systems in all the Southern States, and the exposition he makes is likely to be of interest to the public of the whole country.

THE wife of the Czar of Russia is slight and tall, but looks mignonne beside her husband. She has less regular features than the Princess of Wales or the Duchess of Cumberland, but has more expression and animation. Her eyes are those of a song-bird. The face is oval, and the nose slightly *rétroussé*. The mouth is pouting, for this illustrious lady has full, rosy lips. She has beautiful silken hair. Her figure looks to advantage in a riding habit, with a fur collar. The Czarina is imbued with grace, amiability, and, it is said, the faculty of divining spirits. Her vulnerable point is a horror of what is vulgar, coarse, unrefined, or democratic.

LIVE THOUGHTS.

BE noble; and the nobleness that lies
In other men, sleeping, but never dead,
Will rise in majesty to meet thine own.
—*J. R. Lowell.*

THERE are persons who think you attack free speech, if you propose to put down foul speech. If you object to assassination, they accuse you of "limiting freedom of action."—*George Jacob Holyoake.*

BUT best befriended of the God
He who, in evil times, . . .
Heeds not the darkness and the dread,
Feeling only the fiery thread
Leading over heroic ground,
To the aim which him allures,
And the sweet heaven his deed secures.
—*Emerson.*

EVERY solitary kind action that is done the whole world over is working briskly in its own sphere to restore the balance between right and wrong. Kindness has converted more sinners than either zeal, eloquence, or learning; and these three never converted any one, unless they were kind also. The continued sense which a kind heart has of its own need of kindness keeps it humble. Perhaps an act of kindness never dies, but extends the invisible undulations of its influence over breadth of centuries.
—*F. W. Faber.*

NOT unbelief nor ignorance nor doubt
Shall keep our heaven out;
But this, and this, indeed, is present hell,—
To see afar a higher wisdom shine
With light from some hid shrine,
And, clogged by the fear of man,
To turn us to the darker faith again,
Lest they who limit God, and bind him with a chain,
Should damn us with their ban.
—*Fanny Parnell.*

AS A rule, the man who is readiest to give an opinion on a subject is least capable of giving an opinion which is worth having. If a man has looked at only one phase of a question, it is natural for *him* to think that there is but one phase of that subject to be looked at; and he is confident in his judgment of it accordingly. But, if a man has looked at a subject from a good many different points of observation, and has found something fresh at each looking, *he* is naturally inclined to want to look a little longer before saying positively which phase of the subject is the truest of all. A modest and an honest distrust of one's abilities and attainments is one of the surest marks of real greatness.—*Sunday School Times.*

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its head quarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

CHAS. H. CODMAN, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

MRS. NEWHALL'S SCHOOL

FOR GIRLS AND YOUNG LADIES

Will reopen Oct. 1, 1883. Besides the regular courses in English studies and languages, there will be some work, each week, in the line of the new or **"creative method"** either with **tools upon wood** or in **modeling.** Another special feature will be a course of **lectures** upon the **great tone-masters,** illustrated with piano and voice. As aids to the study of History, Geography, and Art, **the use of the lantern** will be continued, and the **regular visits to the Art Museum.** For catalogues, address the Principal, 91 Newbury Street, Boston.

West Newton English and Classical School.

The ninetieth term of this Family and Boarding School for Boys and Girls will begin Wednesday, Sept. 19, 1883. For information and catalogue, address

NATH'L T. ALLEN,
WEST NEWTON, MASS.

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

"It seems to me admirable both in matter and in manner, and I hope it will have a wide circulation, as it is the kind of book people need."—*John Fiske.*

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.
For sale at THE INDEX office.

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE name of an Arizona town is "God Forbid."

THE political defeat of Gov. Butler last week is considered by everybody except himself, at least, most unfavorable to his political aspirations.

THROUGH the efforts of the National Sunday League, a London organization, having for its object the promotion of recreation on Sunday, ten thousand people were enabled last summer to take excursions into the country.

BOSTON'S "culture" is sometimes wisely allowed to override its "Puritanism," as indicated by the advanced position it has taken in opening its City Library and Art Museum on Sundays. In this respect, it is in advance of New York, which has not yet a library or art museum open Sundays, and but few reading-rooms.

SAYS the *Christian Advocate:* "In a suit for separation in Canada, brought by a wife against her husband,—a minister,—among other charges it was stated that, at family prayer, 'he would often crawl across the floor on his knees, keeping up his prayer all the while, and administering blows to his children for supposed inattention.' This method can hardly be commended. Better have no prayers than scenes like that."

"IT is a singular fact," says the *Interior*, "that Calvinism is as dead in Geneva as Christianity is in Jerusalem. The Established Church is creedless, without ministerial ordination; and its pulpits are, in part, filled with preachers whose business is not to expound, but to denounce as incredible fables, the verities of the New Testament. While there are a few so-called evangelical ministers, their evangelical teachings would not be accepted as such by any evangelical church out of Switzerland. The Swiss Established Church has gone from Calvinism to infidelity, carrying with it nothing but the title-deeds and the money-box and the old spirit of persecution, which latter they exercise by imprisoning the missionaries of the Salvation Army."

THE following paragraph is from the Springfield *Republican:* "The religious papers do not all like Dr. Arnold's creed, which some one has defined as a 'higher, larger cultivation, and a finer lucidity.' One paper thinks 'finer lucidity' is rich. 'Remove your churches,' it says, 'burn your Bibles, eat with a fork, and obtain a finer lucidity. This gives one an intelligent conception of the great advantages we enjoy in having among us the apostle of sweetness and light, who will show us how much better than the light of God in Christ is the finer lucidity of Mr. Arnold.' This kind of depreciation of distinguished men that come to us known and read by the world is not only discreditable to a family religious paper, but is the real secret of that indifference in religious matters complained of by the church press. Even the most orthodox must be pained to see the names of Christ and Arnold coupled together with a sneer. Arnold can be attacked upon rational grounds, and there is no occasion to lower the tone of religious debate by resorting to the methods of the cynic or the comic papers."

THE Montreal Pioneer Free-thought Club is in a flourishing condition, attracting much attention and doing effective work for liberal thought. Some of the best men of the city belong to it, and it has the sympathy of a large number who are not members. It has a commodious hall, a pleasant reading-room, and a library of nearly a thousand volumes. Mr. George Martin, Capt. R. C. Adams, Mr. George Iles, and Prof. R. W. Boodle are among the citizens of Montreal who have addressed the club. Last year, it had lectures by Mr. Holyoake and Mr. Watts of England. The junior editor of this journal delivered a course of lectures before the club in 1871. The indications of the growth of the organization in numbers and influence and of the diffusion of liberal thought, observed during his visit to Montreal this month, were of a marked and gratifying character. The press of the city now generally treat the views of Liberals with respect, and publish fair and often quite full reports of the meetings of the club. The lectures given by the junior editor of *The Index* last week were well attended; as the Montreal *Herald* said in its reports of one of the meetings: "The club's hall, on St. Catherine Street, opposite the Cathedral, was crowded to excess,—in fact, a large number were unable to obtain admission." And the interest manifested was in keeping with the large attendance.

THE North Cambridge (Mass.) pastors, Baptist, Congregationalist, Universalist, and Episcopalian, have caused a census to be made of families living on those streets lying within a mile of their churches. Questions were asked each family, including domestics and servants, in regard to name, residence, number in family, number in family below the age of fifteen, place of church attendance, place of Sunday-school attendance; if no place of attendance on either church or Sunday-school, natural preference. The undertaking was placed for execution in the hands of a firm in this city well known as publishers of directories, who intrusted the work to a professional canvasser. In about thirty days, the names of two thousand families were entered in the book. About nine-tenths of the entire number affirmed that they had a regular place of church attendance, and nearly all a preference for some church. The Cambridge *Tribune* says that the clergy were gratified to find so large a proportion of the population dwelling about their edifices had a place of church attendance or ecclesiastical preference, but "also more deeply surprised than ever at the irregularity and inconstancy of attendance of no small share of those who declared themselves as members of a particular sheepfold." Church membership in North Cambridge, it seems, is not, more than in other places, certain proof of deep interest in theological matters. Such a census can be of but little value in indicating the religious views of a large minority whose names appear.

THE celebration of the four hundredth anniversary of the birthday of Luther at Eisleben was on a large scale, and a magnificent affair. An immense procession marched through the market-place, and saluted Luther's statue, and afterward the house where the great reformer was born and where he died. The streets were crowded to overflowing, and the roofs of the houses were covered with people whose radiant countenances expressed their joyful interest and pride in the honors shown their great countryman. The evening was given over to music, beer-drinking, and the wildest hilarity. A special beer, called Luther beer, had been brewed for the occasion; and mottoes and texts of Luther engraved on beer glasses and painted on walls and houses abounded everywhere. Eisleben was ablaze with illumination. Protestants and free-thinkers and even Catholics participated in the honors to Luther, not because of his religious belief, for which many cared nothing, but because Luther was the great heroic champion of the right of private judgment, and was one of the people to which they belonged. In Berlin, the school children, numbering eighty thousand, in fifty-three divisions, attended service at the churches. Vast processions of people were formed; and throughout the day there were addresses, concerts, tableaux, banquets, festivals, etc., and at night illuminations in honor of Germany's grandest historic character. The day was observed in all the communities of Italy where Protestantism and liberal thought have a foothold, and also in Spain, by native Protestants, at Madrid, Seville, Barcelona, and other places. A great meeting was held at Exeter Hall, London; and there were processions, decorations, and services in many of the cities and towns in England and the north of Ireland. In Boston, the day was celebrated under the auspices of the Massachusetts Historical Society, Hon. Robert C. Winthrop presiding, and Dr. Hedge giving the address. In New York, Chicago, and other cities and towns of the United States, meetings were held and tributes paid to the memory of the brave man who said, "Hier stehe ich: ich kann nicht anders. Gott helfe. Amen."

A LONG WAY BACK.

We presume that very few of the readers of *The Index* ever see the *Christian Statesman*, the organ of the party that wants the United States Constitution so amended as to include the name of God and a recognition of the special and supreme authority of the Christian religion. But we assure them it is one of the most suggestive journals on our exchange list, and, we believe, too, one of the sincerest. It has a most difficult cause to uphold against the liberal tendencies of the time, but applies itself to the labor with heroic devotion. Not only is the National Constitution to be amended in the way above indicated, but the same amendment is to be made where necessary in all the State constitutions; and then—a labor even greater—public sentiment is to be so amended that political legislation and practice shall be made to conform to the amended constitutions. For the *Statesman* sees that, in States whose constitutions now have essentially the very clauses it desires, the words have largely become a dead letter, and that the tendency is more and more strongly in that direction. Yet, believing itself to be in the right, it enters upon the enormous task it has undertaken with a courage of conviction and a practical zeal which Liberals might well imitate.

And, for most of the time, the *Statesman* appears to be encouraged by the belief that its cause is gaining ground. Its missionary agents report good conventions and an enlarged number of adherents in different parts of the country. Its correspondents speak of an increasing interest in its objects. And, if its premises be once admitted, it has a simple and direct line of logic that is well calculated to make a strong impression on minds so narrowly educated in religious views under bigoted forms of Orthodoxy that they are unable to comprehend the principles of religious tolerance and equity that were infused into the United States Constitution. Yet the *Statesman* also sees that, when the great political emergencies come and the people are deeply stirred in an election campaign, its arguments then make very little impression on the voters, but that the great mass of them vote (as in a country of professed equal religious liberty they should) without regard to the religious beliefs of the candidates. It then appears to realize the greatness of the task it is working at, perceives clearly that wind and tide are decidedly against it, and bewails, in an evident tone of disheartenment, that the way back to what it considers the original foundation of civil government in this country "will be a long and weary one." This tone is conspicuously obvious in a recent article on the election of Judge Hoadly as Governor of Ohio. It is in that article that we find the words just quoted.

We regret, however, to note that the zeal of the *Statesman* has led it into an unfairness in stating Judge Hoadly's religious position. Its article is headed "An Infidel elected Governor." Ohio's newly elected governor may perhaps be called an "infidel" in the old technical sense of that term, as one who denies that Christianity is in any special and miraculous manner a revealed religion, but who may, nevertheless, be a believer in the existence of God,—a deist. The "infidels," in that sense of the word, are now a large body in this country; and some of them may perhaps even be found in orthodox churches. But the word in common use has come to be understood very generally as synonymous with *atheist;* and that, we are quite sure, does not accurately define Judge Hoadly's religious status. Our own opinion is that he is a theist. He has been for years connected with the Unitarian Society in Cincinnati, and, for aught we know, still is so, though probably he has not much sympathy with denominational Unitarianism. Again, the *Statesman* says, "A pronounced unbeliever in the Christian religion is governor-elect of the great State of Ohio"; and it gives as its chief evidence for this statement the fact that Judge Hoadly "has been for years one of the vice-presidents of the Free Religious Association." But the *Statesman* should not have to be informed that to hold office or membership in that Association does not necessarily imply that one is anti-Christian or non-Christian. We do not know whether Judge Hoadly takes the Christian name or not, but we do know that the reason which the *Statesman* gives for declaring that he does not is entirely inadequate. We refer to these points simply because, if it is important to the political public to be instructed as to a prominent official's religious views, it is but justice to both parties that care should be taken to give correct instruction. But, in our opinion, it does not concern the voters of Ohio to know what are the religious beliefs of their governor-elect. Their only proper inquiry was and is, Is he intellectually and morally, as well as by his political principles, competent for the office?

Barring these inaccurate representations of Mr. Hoadly's views, the *Statesman's* article is admirably frank and uncompromisingly honest. Even in discouragement, it seeks to win no favor by abating aught of its peculiar conviction that civil government should be distinctly based on a theological creed, and that only those citizens who accept the constitutionally stated creed should be permitted to hold office. It arraigns the people of Ohio not merely for having elected a governor holding such religious views as it alleges are held by Judge Hoadly, but for the greater sin of not having made it impossible, by a theological proviso in their State constitution, for men like him to be elected to office. It says boldly to the evangelical believers of that State, If you do not wish unbelievers in office, you must make your constitution into a covenant of religious faith which will expressly exclude them from any part in civil administration. It tells them that they were at present estopped by their constitutional compact from objecting to Mr. Hoadly because of his disbeliefs; and, therefore, he is saddled upon them. Alluding to the attacks made upon him at the outset of the campaign, because of his connection with the Free Religious Association, it says, "During the canvass, however, the matter was scarcely alluded to, his political opponents being distinctly conscious of the impolicy of any objection to him on religious grounds." It argues that this line of attack, which otherwise might have been effective, had to be dropped, because in reality the Constitution debarred it. Stating what seems to us the true American doctrine of separation of Church and State so as to guarantee equal liberty of conscience, it reasons thus:—

> Christians and infidels have sat down together in the same political councils, agreeing that representatives of both classes shall be equally eligible to all offices in the gift of the people. It is plain that under such a compact Christians are not morally at liberty to combine and exclude atheists and other infidels from office by voting against them on that ground. To do so would be to violate the spirit, if not the letter, of their political covenant. This is intuitively felt and perceived by the whole American people to be the meaning and effect both of the National Constitution and of the several State constitutions. For this reason, all inquiry into a candidate's religious opinions, except as matter of casual interest,—like his physical proportions or the color of his hair,—is resented as impertinent. All discussion of these opinions before the people is regarded as altogether irrelevant, and is condemned on all sides.

This seems to us very good and true. We only wish it were more consistently acted upon. It is the very essence of that "soul-liberty" which Roger Williams preached in Rhode Island, and which the wise framers of the National Constitution designedly put into that instrument, and which has now become the very safeguard of our free political institutions. But, to the *Christian Statesman*, it is all wrong. Its argument is that, since God is the author and sustainer of all true government, through Christ as his vicegerent on earth, therefore Christian believers had no right to enter into such a compact: they should, on the contrary, have reserved the administration of government solely to themselves. "The blasphemer and the Sabbath-breaker," the *Statesman* says, "and the man who openly denies the being of God or the authority of the Holy Scriptures, cannot be safely or wisely intrusted with the sacred tasks of civil rule." The journey to this position is, indeed, a long way back. It is all the way to the Hebrew theocracy or, at shortest, to Puritan New England. And, to make the position an assured one, the march might have to extend back as far as some of the methods of Torquemada. But the forces of progressive and reformatory thought in this country are, certainly, not moving in that direction. Revolutions may sometimes roll backward, but not so far as that. We advise the *Statesman* to give up its hopeless task, and to face around to the future. Let it cultivate more confidence in the ability of religion to sustain itself without governmental subsidy, and more faith in the superiority of character-religion to parchment-religion, and more trust in the democratic principle of equality of beliefs before the law.

WM. J. POTTER.

WHAT CONSTITUTES PERFECTION?

Henry W. Holland, in the October *Atlantic Monthly*, reviews Mr. Galton's book, and draws from the facts therein developed this conclusion: that the way to perfect the human race is to stamp out its worser and weaker members, not by the Christian method of conversion, but by customs calculated to lessen their number and prevent their increase. "War," he says, "will sometimes be a moral duty"; and, as for the negro and Indian, "the sooner they die quietly out, the better." Mr. Holland does not think the facts of heredity adduced by Galton warrant the determined slaughter of the unfortunate and miserable, but that they indicate the necessity of exercising a persistent pressure upon lower races and classes, which would constantly tend to their destruction. He suggests several methods, some of which relate to marriage, which should have such a tendency, and, as has been said, considers it probable that war would be a proper agent in determining this desired survival of the fittest.

The question which here arises is whether the adoption of such views of life and human relations would result in the growth of such character as would be fittest to survive. It has been the fashion of the last half-century to propound physical, social, and economic theories to show that the balancing against each other of selfish forces in the world of human affairs results in a perfect equilibrium. History might be searched for experience by which to test these theories, of which this one that advocates the concentration of human endeavor upon the object of self-development is the consummate flower; but is it necessary to subject it and its kindred ideas to other than the moral test which is furnished by our own consciousness, and beheld in the drama of individual as well as historical life? Has there been a moral law established in

Digitized by Google

our souls which gives the lie to all other laws directing the affairs and nature of humanity?

Certainly, there can be no perfection of the race which does not include moral perfection. Would that be developed by eliminating mercy and pity and helpfulness from our virtues? These must be eliminated, if we are to devote ourselves to reducing the number of those who need that we should exercise toward them such virtues, not by raising them above the need, but by destroying them off of the earth, relegating their bodies to the grave and sending their souls to God with a broad hint that he may do his wearisome work of patience by himself in eternity. We are too busy to attend to such matters. We are occupied with the development of our precious muscles, not neglecting our brain fibres, or ceasing to enjoy the agreeable titillations of hearts that have been trained to be attracted only by the fascinations of self-perfecting, if not perfected beings.

The enormous influence of heredity must certainly be considered in attempts to advance the race. The statement of its greater power than education upon the individual should not, however, mislead us into despair of education. It is exceedingly probable that hereditary traits are the result of education; that is, of the influences brought to bear upon successive individuals of one line through ages. Very likely, the accumulated strength collected in the inherited impulses and instincts of one person is not to be entirely overcome by the impression that can be made upon his single life. Nevertheless, such impress will affect the future, and will enter into the question of heredity for his descendants, as surely as did any single demonic possession bequeathed from the evil-haunted past, perhaps like a single spirit of good grappling with a dozen devils,—only one, yet still a spirit of good.

To deny this conclusion is to assert that education—by which is meant the result upon each human being of the pressure exerted by all the forces of whatever nature acting upon him from birth till death—had nothing to do in the past with determining what characteristics the present man should manifest as inherited from his progenitors. It is to assert that from the beginning, the unknown beginning,—whence men argue far more than they know,—certain races and certain families were stamped with weakness and set apart for evil. There are historical facts known of the rise and fall of different peoples which have some value in direct opposition to such a theory; and, at any rate, we scarcely know enough of the early history of man and the purpose of his creation to warrant us in a positive assumption of such a nature. Though even if it were true, are we quite sure that it is legitimate to draw from it a moral conclusion in such direct contradiction to what Holland admits to be at present our "purest aspirations"?

In these days, it requires courage to affirm the existence of the Soul as a thing to be considered in connection with any line of thought supposed to be scientific. The name of science awes us into a submission more abject than was produced by the former terrors of theology. Once, men trembled for the salvation of their souls at the bidding of Calvinistic philosophy. Now, they are led captive by another Power, and at its behest are ready to deny they have any souls to be saved or lost. And yet how sure a thing is the science and the materialistic philosophy of to-day? A century ago, men as bright and clever as any to-day were deceived by a different science, and accepted a different philosophy. How can we be so sure that our theories of matter will stand the strain of another hundred years? It is not many years since Col. Higginson spoke in our hearing some wise words of warning to those who were ready to exalt material science over the spiritual affirmations of the soul, saying that he perceived that we were on the eve of a slavery to what might yet be disproved as cruel and degrading as had once been the yoke of superstition.

Is it not the soul of which Plato taught, and the moral law which we may learn as seers have learned it before us, which remains after all the theories come and go? Man's struggle for perfection is not to be fought out on the same brutal plane as the contest for existence among animals. Men may be subject to the law of the survival of the fittest, but the fittest things to survive are the moral virtues. Better the Christian ideal, which made his own soul man's battle-field, where his enemies were the selfish passions, than the materialistic notion that he is to destroy his weaker fellows to make room for the free play of his perfected limbs.

Were Dr. Howe and Laura Bridgman put into the same world, that one might destroy the other? Did not he need her to bring about his full development as much as she needed him? John Weiss has beautifully told the lesson of that relation, translating its hints of God's purposes toward teacher and pupil and its promise of his mercy who cared to make a Dr. Howe to save a Laura Bridgman,—his promise of mercy to those who are morally dark as well as physically bereft.

The intention of the universe is as benevolent toward the strong as toward the weak. To be perfect, man must cultivate the sentiments of pity, forbearance, and helpfulness; and he can only cultivate them by their exercise. Hence, beings must exist whose existence needs the amelioration of their exercise.

Those persons and races who are worthy and would be worthier must seek the miserable, must reach out to them a helping hand, else they would find their worthiness dropping from them in decay begotten of disuse; and the dry rot of egotism would eat away their former beauty, and prevent their desired glory.

In short, it is very unlikely that men would grow perfect under the influence of such a view of life as Mr. Holland suggests as the only legitimate one. Does he himself not admit, finally, that this theory of self-seeking "is bitterly opposed to our most cherished instincts, our purest aspirations"? His error lies in the non-recognition of the fact that the perfection of man must be moral as well as physical, and that in the sphere of morals the perfectest thing man can develop is the spirit that goes not by on the other side, but which upholds the weak, and helps a brother to be good. Hence, never, save from the direst necessity, would the *perfect man* shut out from that brother's life that most powerful agent of salvation, the act of parentage.

Perhaps the purpose of creation is not the symmetry of the race as a whole at any one time, but the development of that highest type of moral character, which can only grow through contact and care for less perfectly developed members of the human family. This would be the same, whether those weaker ones were the result of delayed but possible development, or really belonged to a less noble type of humanity, the predestined objects of care for the higher race, class, and individual.

Holland thinks that the effort to raise the race by elevating its poorer members would cost too much of life and effort. He forgets the patience of the universe. He forgets also how beautiful human souls would grow, while engaged in this divine struggle, so that we should not have to wait for the long years and a cold-blooded system to accomplish what it never would accomplish, the perfect development. The ennobling effect of unselfish aims is seen, when the pursuit is even less worthy than that for the elevation of human souls. It would seem trite to say such a thing as that, did not this materialistic view of perfection deny even so trite a truth as that.

Let us finally contrast the spirit of two paragraphs:—

"To raise the weak to the height of the stronger could only be accomplished by a frightful sacrifice of life in the necessary dark ages of selection; and the process would be terribly wasteful, if necessary." . . .

No fine forces, according to Galton and Holland, which merit our regard, are evolved in the effort to raise the lower.

Now note what says the wife of a man who lost his life in a brave attempt to do a noble work, albeit a less noble one than this effort which materialists condemn to bring human creatures up into the light.

"Is it said that too high a price in the lives of men was paid for this knowledge? Not by such cold calculation is human endeavor measured. Sacrifice is nobler than ease, and unselfish life is consummated in lonely death, and the world is richer by this gift of suffering."

L. C. WYMAN.

TRAVELS IN FAITH.

VI.

I could fill volumes with the record of my study and questioning about Bible doctrines. I had believed that a Christian should be a man of one book. I enjoyed a great deal of leisure when in command of vessels upon long voyages, and my tastes were almost entirely literary. This conviction of the paramount importance of religion led me to concentrate all my reading upon the Bible and theological books. I procured Lange's Commentaries as they were published, and read several of the volumes from beginning to end. One voyage was devoted chiefly to the study of the Greek Testament. I look back with regret upon these years, which, if devoted to the study of the facts of nature, would have made me a learned man; but, instead of this, I was trying to discover the probable course of future events by comparing the obscure rhapsodies of Hebrew prophets and poets, or in trying to learn the mind of God by studying the fragmentary remains of the writings of barbarous, or less enlightened ages than the present. I will not call it wasted time, because it has in the end taught me that the Hebrew Scriptures are to be judged by the same rules as the literature of all other nations, and that they possess no authority beyond what pertains to all other writings of men. I hope I may prove further that this time has not been wasted, by persuading some that it is useless to study the Bible in the hope of discovering how the world was made, or when and how it will end; when Jesus will return to earth; how the ten kingdoms of the Roman Empire are to be restored in Europe; who is to be the antichrist; or, if it be true that the British nation represents the lost ten tribes of Israel, to determine whether it will possess Constantinople, or what its future is to be. As the oldest of books, the best thought of the ancients, the record of the customs and characters of men of other days, the Bible stands peerless in its own sphere, and will always be prized. It is only injured and degraded by the effort to elevate it to a sphere where it has no place.

It may be of interest to mention that my knowledge of sceptical objections to the Bible was first gained from orthodox commentaries, for I never

Digitized by Google

read a sceptical work until long after my doubts had arisen. In searching Lange's Commentaries for explanations of the contradictions and obscurities of "God's Word," I often came upon refutations of the German critics, and sometimes the superiority of their opinions was strongly apparent to me. Attacks upon "heresy" thus often help to spread it; for they make known its nature, and, as "truth is mighty and must prevail," it only needs to be known to win its way. All criticism should be welcome for this reason.

The inconsistencies of Christians, myself included, led me to doubt if any really believed the doctrines they professed. Christ taught his followers not to lay up treasures upon earth, to sell all they had and give to the poor. He said the rich should hardly enter into the kingdom of heaven. The early Christians believed him, and had all things common; and Ananias and Sapphira were killed for hypocrisy in the matter. Now, Christians are foremost in the struggle for riches. They explain away the meaning Jesus evidently attached to his words and the literal sense in which his disciples understood them, and say that only inordinate affection for money is condemned; and no Christian millionnaire ever believes himself guilty of that sin. They give away driblets of their incomes, for which they receive great praise, and hoard up and increase their principal. I do not say it is wrong to do this, but that it is unchristian. An old bachelor, an elder in a Presbyterian church, who had been lauded for his benevolence, lately died; and his estate footed up two millions of dollars. He had given away part of his income yearly, and once about fifty thousand dollars of his principal to found an asylum bearing his name. But in what sense had he followed Christ's teachings? Many excuse themselves in the race for gold by saying they are seeking it to do good with, to use it for Christ; but it is generally used first to do good to themselves, and supply summer and winter palaces and carriages, and to amass a capital.

Paul directs that "women adorn themselves in modest apparel with shamefastness and sobriety, not with braided hair, and gold or pearls or costly raiment"; but the wife and daughters of the Christian millionnaire enter the handsome sanctuary, which has succeeded to the "upper room" of the disciples, wearing glove-fitting dresses of expensive fabric, braided hair purchased of poorer women, barbaric ear-rings and gold bracelets, and many accessories of costly raiment. I do not say that this is wrong, but is it consistent in those who believe the apostle's words to be divinely inspired?

Christians, as a rule, do not give to those that ask of them, and are apt to turn away from borrowers. They do not turn the other cheek to the smiter, nor refrain from going to law with brethren,—and that before unbelievers; and, when the plaintiff is awarded the coat, I never heard that the Christian defendant offered his "cloke" also.

The love of enemies, avoidance of public prayer, concealed alms, no anxiety for the morrow, are maxims which a few follow in intention, but which the multitude of believers wholly disregard.

The explanation given is that these things were good for the time when they were prescribed; but times have changed, and the spirit, not the letter, is to be observed. If the spirit is truly regarded, this is a satisfactory answer, provided Jesus and Paul were merely reformers of their own age; but, it is professed, these divinely inspired maxims were given by the Christ of God and the Holy Ghost through the apostle to the Gentiles for all time. And, if so, they are as binding to-day as when they were uttered. The Bible becomes intelligible and useful, when we see it to be men's best thoughts for the good of the times they lived in; but, when it is made out to be God's universal prescription for men in all ages, and the only compendium of infallible truth, it is as hard to accept it as such as it would be for the medical profession now to receive the works of the surgeon barbers of the Middle Ages as standards for the regulation of their practice.

Prof. Huxley, in *Lay Sermons*, gives Descartes' golden rule: "Give unqualified assent to no propositions but those the truth of which is so clear and distinct that they cannot be doubted." The adoption of this rule will overthrow nearly all dogmatic theology, and it will likewise deter the inquirer from too confident an assumption of the mere *hypotheses* of evolution and the science of the day. The main conclusions which I have reached rest upon a common-sense interpretation of the facts which nature and man present to every eye. Once accept the idea that religion is the record of the aspirations of the human mind and changes from age to age and day to day, as men's capacities and natures alter, there being no infallible revelation from God of one true religion, and it will be found that all the history of human thought is intelligible. Religion, which is now to each man the blind acceptance of incomprehensible ideas, becomes a simple and common-sense affair. Instead of searching the Bible with the Holy Spirit, or swallowing whole the decisions of fathers, councils, and commentators, or surrendering one's mind to the control of ministers and priests, each man may learn for himself from the book of nature all the grand outlines of truth that are necessary to be known as general principles; and the details can be learned from the investigation of live facts by living men, instead of from musty researches by scholars among the obscure and doubtful records made by erring men in dead languages, in dark ages.

Only he who has experienced it can understand the relief that comes to the mind of one who for years has struggled to understand "the Word of God" and its complicated theology for himself, instead of taking it all for granted because his parents believed it, when at last he puts it in its right place, as records of past thought, and comes into the freedom and light of the religion of nature and humanity. He then learns that all events move in the channel of law, that these laws are ever tending in their ultimate results toward the development of good, that good and evil teach their own lessons and alike "work together for good."

The origin of scepticism in my mind was the observation of the differing and sometimes opposing views of Christians, who were studying the Bible prayerfully under the guidance of the Holy Spirit. To avoid the fatal conclusion of the human origin of their religion, which this premise leads to, Christians are accustomed to claim that the differences are upon "non-essentials," and that upon all vital points true Christians agree. They emphasize the word "true," and it means that those who think as they do are the only *true* Christians. The doctrines of the atonement and the deity of Christ they admit to be vital; but, when such godly, prayerful men as Channing and Ezra S. Gannett, with the latter of whom my father engaged in controversy upon these points, find themselves led by study of the Scriptures to the renunciation of these dogmas, they assert that these praying men have abandoned the teaching of the Spirit, each being "vainly puffed up by his fleshly mind." As the Spirit's influence is not a visible or tangible thing, and therefore cannot be demonstrated, there is no arguing with people who assert that all people who are led by the Spirit of God believe as they do, and all who differ from them have forsaken the Spirit's leading for "the vagaries of reason." When an orthodox theologian like Bushnell nearly approaches the Unitarian denial of the vicarious atonement, it furnishes an opportunity for these analyst theologians, with their hair-turning scales, to determine how many grains of ideas are the product of the Spirit and how many are from "the fleshly mind." When one praying searcher of Scripture finds sprinkling, another immersion, and another spiritual influence to be baptism, as this is "not essential to salvation," Christians excuse Jesus for not keeping his promise, "When he, the Spirit of Truth, is come, he shall guide you into all the truth,"—as though any real truth is "unessential," or any error not injurious. One finds in the Bible infant baptism, another believer's baptism; one ordination, another liberty of ministry; one a post-millennial advent, another a pre-millennial advent (a thousand years is of small account in theology); one trinity, another unity; one a personal devil, another an evil influence; one election, another free grace; one perseverance, another falling from grace; one progressive sanctification, another instantaneous sanctification; one eternal punishment, another annihilation, and another universal restoration; one an intermediate state after death, another an immediate heaven; and so on.

All these views are confidently proved from the words of the Bible by each divinely illuminated student; and each inspired believer through the ages has denounced or cursed or murdered the other inspired believer, as Calvin caused the death of Servetus for views now widely held by good men. What wars and atrocities have been caused by this curious method of the Spirit of leading Jesus' followers into all truth! (Read *The Crime and Cruelties of Christianity*, by B. F. Underwood.) And Christians dare tell us they all agree in essentials! These truths may not be essential to the salvation of the soul; but, in the past, they have been very necessary to the existence of the body. They reduce essentials finally to one dogma, salvation by Christ; and, if any one disbelieves that, it only proves he has refused to be guided by the Spirit, being "vainly puffed up" by his fleshly mind." Can the human mind cease to be hindered in its advancement, till the shackles of such illogical, arrogant, and uncharitable assumptions are destroyed?

I am told it is disrespectful to my father to differ from his views, and filial reverence should keep me from proclaiming opposed ideas. What progress would the world have made, if this notion had always prevailed? Look at China's progress in knowledge. Ancestral worship has hindered advancement there. My grandfather was a worthy cabinet-maker in Salem. He decided that his son should be educated in the ideas of a certain theological sect. It is really irreverence to my grandfather that I am guilty of. A previous grandfather probably believed in hanging the Salem witches; and I am certainly irreverent to that one, and am not ashamed of it. One comfort is that, if our deceased friends are in a conscious state, they thoroughly approve of any progress we make in truth in advance of their notions. It would be a pity to find we had been grieving them, because we refused to accept the advance in knowledge since their day, or declined to use the electric light because they read by tallow candles or the light of the fire, as my father did, when a boy, for economy's sake.

Respect for my father requires me to be loyal to the truth as I see it. He never flinched in the maintenance of the facts that hell and slavery are

Digitized by Google

Bible doctrines. They are taught there, and he was consistent. The leading Liberals and Abolitionists gave up the Bible, and then opposed hell and slavery; and they were consistent. But the mass of orthodox clergymen have quietly ignored hell and violently attacked slavery, and they are inconsistent. If the Bible teaches ideas opposed to reason and morals, if it is the infallible word of God, we must be unreasonable and immoral; but all difficulty is cleared away, when we see that not only common sense, but an overwhelming mass of scientific and literary criticism, proves the Bible to be the record of human thought about God. One who sees this and fears to raise his voice against a superstition which he believes to be dishonoring to God and injurious to man, he alone is false to the heritage of an honored name.

During the year that I was in Boston, I endeavored to keep my opinions to myself; for I desired not to give offence, and wished to verify my position. But watchful friends discovered that I had been a few times to a Unitarian church, that I read the Boston *Sunday Herald*, and that I entertained some doubts about the accuracy of the Mosaic story of creation. These dreadful sins brought upon me such remonstrances and exhortations that I was at last compelled to declare my true position in a letter to my friends, which I afterward decided to publish over my initials, as an easy way of informing acquaintances of my change, not supposing it would attract public attention. I had no desire to force my ideas upon them; but, for my own peace of mind, it became necessary for me to avow myself. I constantly met people who treated me with great courtesy on account of my reputation as a Christian. Some of these were friends of my father,—ministers and gentlemen whom I highly honor and esteem. After such interviews, I had so painful a sense of sailing under *false colors* that I preferred to incur what would seem to me undeserved blame rather than receive what I felt to be unmerited praise.

From the foregoing sketch of my religious experiences, it will be seen that my course was first to find the literal teaching of the Bible and reject the sophistries by which theologians of the present day try to make its teaching harmonize with modern ideas. I saw that, treated honestly, the Bible taught a six days' creation, the fall of man, a universal flood, an eternal hell, a vicarious atonement, and the future return of Christ to the earth. But I found Christians all at variance about these doctrines, unable to agree as to what the revelation of God really revealed. I found that many scholars doubted the genuineness and authenticity of the Gospels, and all the probabilities seemed to me to be on their side. The Dutch school of criticism gave a satisfactory explanation of the Bible as a compilation of Hebrew literature. Science, humanity, and reason were opposed to tradition; and I gave up tradition. Honesty and sincerity obliged me to withdraw from membership in the Christian Church.

ROBERT C. ADAMS.

BEFORE LUTHER.

Prof. Egbert C. Smyth, of Andover Seminary, says in regard to Luther: "That the son of a miner, a peasant in a line of peasants, should stand above learned scholars and doctors, cardinals and popes, statesmen and princes, as a leader of thought, a controlling force in human affairs, is an historical fact worthy in our day of profoundest thought. We know of no way to account for it, which can stand a moment's careful scrutiny, that excludes the admission of a divine equipment, a divine call, and a divine mission of particular men now, as truly as in the days of Moses or Paul."

In quoting from men like Prof. Smyth, who are in a state of transition from the old to the new order of thought, we are never quite sure of their meaning; but, if we mistake not, Prof. Smyth still holds to the theory that Moses and Paul had an "equipment," "call," and "mission," involving some kind of a supernatural intervention, and he probably meant to convey in the above passage the idea that Luther, considered as a personal force in history, was without historic antecedents necessary to explain that force as a part of the natural sequent order of events.

No man of education, with a mind unperverted by theology, could in this age of science and philosophy make such a statement. In one sense, of course, everything is inexplicable; but the causes of the Reformation and Luther's part in the great event are as easily accounted for as is the English Revolution of 1688, the French Revolution of 1789, or the American Revolution of 1776, with the parts played by the principal actors in any one of the great historic events mentioned.

Had there not been a serious popular rebellion against the Romish Church in each of the three centuries preceding the Reformation, that of the Albigenses in Southern France in the thirteenth, that of Wycliffe in the fourteenth, and that of Huss in Bohemia in the fifteenth? In each of these rebellions, the Bible was appealed to as an infallible guide in matters of faith, the authority of the Church to interpret the gospel was denied, the right of private judgment was vigorously asserted, indulgences were denounced, and the corruption of the clergy exposed and condemned. Of the extermination of the Albigenses, the most intelligent people of Europe who made common use of the Bible in the Provençal dialect, Milman says that "never in the history of man were the great eternal principles of justice, the faith of treaties, and common humanity so trampled under foot as in the Albigensian War." From the time of the Albigenses, Wycliffites, and Hussites to that of Luther there was progress in popular knowledge, especially in regard to the gross corruptions of the Church; and when Luther, an Augustine monk, attacked the sale of indulgences which had been intrusted to the rival order of the Dominicans, and in his neighborhood to an unpopular and notorious fellow, named Tetzel, who was accused of spending a part of the money he collected in debauchery, he found encouragement among the monks, the clergy, the nobles, and the people. The princes were dissatisfied with the heavy ecclesiastical taxes and the claims of papal authority, the clergy were scandalized by the corruptions of Rome, and the people were in a state of chronic protest against the taxes imposed upon them to increase the vast wealth of the Church. These are a few of the many proximate causes of the wide sympathy with Luther, who at first had no intention of rebelling against the authority of Rome, and help to explain why so many of the Northern Germans, Scandinavians, Southern Germans, and Slavonians in the German Empire became Lutherans before Luther died; also why the Scotch, Swiss, and Dutch, and many of the Flemings, English, and French, became followers of Calvin and Zwinglius; also why the Archduchy of Austria, Alsace, Lorraine, and various large districts in France, which are now Catholic, became predominantly Protestant.

The popular notion is that Luther originated the Reformation, and statements like the one above quoted tend to encourage this error. The fact is we must go back centuries before the Reformation to find the explanation of it. It was, as every great movement must be, the result of a multitude of causes, some of them too subtle of course to be readily apprehended.

As Lecky says: "The influence of theology having for centuries benumbed and paralyzed the whole intellect of Christian Europe, the revival which forms the starting-point of our modern civilization was mainly due to the fact that two spheres of the intellect still remained uncontrolled by the sceptre of Catholicism. The pagan literature of antiquity and the Mohammedan schools of learning were the chief agencies in resuscitating the dormant energies of Christendom." The crusades, as Guizot well observes, "proved a great step in the enfranchisement of mind, great progress toward more extensive and liberal ideas." Brought in contact with a people greatly their superiors in intelligence and culture, Christians could not help receiving benefit from those whose country they invaded. The crusades brought the people of Europe together, stimulated industry, diffused skill in the useful arts, enriched many of the Italian republics, weakened the feudal system, prepared the way for the consolidation of the leading nationalities and for advances in every direction. The tendency of thought was shown later by the literature of the times, such as, among other works, the poetry of Dante, in which several popes were assigned places in hell for their vices; the sonnets of Petrarch, in some of which he characterized the Church of Rome as a harlot; and the tales of Boccaccio, wherein the vices of the monks and priests were freely exposed. The influence of Roger Bacon, who was imprisoned fourteen years and finally died in prison, his good name blasted as that of a magician, helped the cause of science and progress. The invention of rag paper and afterward of printing led to a rapid dissemination of knowledge. Acquaintance with the mariner's compass, by enabling man to make the ocean a highway and to open up commercial relations with distant lands, proved of great value. Portugal doubled the Cape of Good Hope and found a maritime passage to India; Spain explored and established herself in a new world; England, in the person of Drake, circumnavigated the world; Copernicus and, later, Galileo opened to the contemplation of man other worlds than our own; science and philosophy received more and more attention; and the heart of man seemed to beat with a more vigorous pulsation, and his mind, brought from heaven to earth, awakened to a life of activity and adventure. A multitude of magnificent inventions and discoveries thronged upon one another with pressing haste to witness the Reformation, whose leaders but reflected the comparatively advanced thought and sentiment of the age, which had been gradually growing in strength and influence for centuries.

Luther appeared upon the stage of the world's history in a remarkable period. It was the age of "Leo the Magnificent," of Francis I. of France, Charles V. of Germany, Henry VIII. of England, and Gustavus Vasa of Sweden; of Sir Thomas More, Michel Angelo, Rabelais, Montaigne, Erasmus, Leonardo and Titian, Scaliger and Copernicus. The mass of the people, it is true, were ignorant and superstitious; but there were large numbers who sympathized with Luther and supported him privately, when they did not publicly, in his reformatory work. Furthermore, Luther was not far removed from the masses in theological belief. His influence, to a large extent, was due to this fact. He accepted the Bible as the sole source of faith, demanded that it should be placed in the hands of the people in their own language, that they should study it with a devout spirit, with faith in Christ, that men were justified

Digitized by Google

by faith, that reason, when it abandoned the Bible, was "the bride of the devil," and that heresy and infidelity would be punished by eternal torments after death. Luther had the courage of his convictions: he was a man of immense personality, of sympathetic and emotional nature, and natural eloquence combined with physical power and endurance. Had he taken more advanced ground, his direct influence—the kind of influence that can be connected by the people with an individual—would have been less. Others did as much as he did, if not more, in the movement with which his name is identified; but the masses must admire and honor persons rather than principles, and in Luther are unified and simplified, for the popular mind, all the causes of the Reformation. But the student, the thinker, knows that this conception is not the true conception.

Not by Luther's theology, we may add, in conclusion, has the world been benefited, but by his bold enunciation and heroic defence of the right of private judgment. And he is less honored to-day by the majority of orthodox clergymen who eulogize him and worship Jesus than by those men and women who carrying out logically and courageously, the principle he maintained, go as far in protesting against much that he accepted with fullest confidence in its truth as he went in protesting against the authority and the corruption of the Church of Rome.

EDITORIAL NOTES.

THE Unitarian *Transcript*, noticing the liberal utterances in Phillips Brooks' last volume of sermons, remarks: "This is very startling to a sectarian. It is very familiar to a Unitarian. The sectarian, hearing these broad utterances from Mr. Brooks, will stop and think, and perchance widen his mind. The Unitarian, hearing, will thank God that there are sowers of good seed in other fields." Unitarian and sectarian! "The Church and the sects" is the way in which the Episcopalians put these mollifying things.

LUTHER believed, with the Rev. Jasper, that "the sun do move." "Modern astronomers," he said, "pretend that the earth moves and not the sun and the firmament,—as in a carriage or a boat we seem to be motionless ourselves, while the trees and banks sweep past us. These clever fellows will believe nothing old, and must have their own ideas. The holy Scripture says Joshua bade the sun stand still, not the earth." But Luther's incredulity as to this astronomical fact is not so strange as the credulity of the editor of the *Sunday School Times* on this subject, when he affirms, in answer to a correspondent's question in regard to Joshua's remarkable feat: "If God chose to stay planets in their course, we believe that he could do so without harm to the machinery of the universe. On the other hand, we believe that he could have secured a prolongation of the daylight, just then and there, without staying the revolutions of the earth."

IN an article entitled "Our Poor Relations," the *Presbyterian* scathingly rebukes the victims of the Anglomania so prevalent in this country at the present time. It says: "The shipment of the criminal and wretched poor from our mother country is still carried on to an alarming extent, and we have another grievance of the kind at the other extreme of society. We must set up in fortunes England's surplus literary population. . . . They have to be dined, toasted, and supped, as well as sustained by high-priced tickets and free advertisements, for which we receive vapid compliments as to the possibilities of this country a thousand years hence." In conclusion, the writer remarks a little savagely: "There is nothing like encouraging an Englishman to believe in himself, in his superiority, and in the graciousness of his mission to America, to be fed and served, and to take back our surplus resources with him. If he prognosticates as a probability that in a few thousand years we shall rise to a comparative place in brains, we are mercifully remunerated; and, if we shall reach English culture in a geological period, we ought to be eternally grateful. We are inclined to the belief—begging pardon of everybody—that a slight visitation of Asiatic cholera, modified by English æstheticism, dramatism, and criticism, would at least be a grateful variety."

MISS S. L. MORRIS, M.D., read a paper before the Women's Educational Union, on a recent Sunday, on the Women of India. Miss Morris' story was plain and unvarnished; and yet, much as we have heard about India, it seemed almost incredible that such customs as she described could still be actually prevalent in any country. A few women physicians have been sent out to them by American missionary societies; and we cannot but sympathize with their work in this direction, however little we may believe in their creeds. Miss Morris says a healthy woman is scarcely known there. Let those who trace the ill health of American women to public schools and co-education consider this fact. The woman's movement in England and America is thus bearing fruit in this distant land. Higher education for women does not mean painting and embroidery, Greek and Sanskrit for the Back Bay and Beacon Street, but a new chance for health and happiness for the insane, the pauper, the prisoner in our own land, and a dawning of hope and new life for the degraded millions of India. The Brahmo Somaj and kindred associations are taking part in this good work: hospitals, dispensaries, and schools are being opened for women. The English government gives its help and support, and we trust that a single decade will produce a revolution in social customs and manners in India as regards women.

THE *Religio-Philosophical Journal* and the class of Spiritualists represented by that paper insist on the importance of conducting investigations of the so-called spiritual manifestations under conditions that will not admit of fraud on the part of the mediums. These "test conditions," however, are opposed by mediums generally and by several of the spiritualistic journals, among others by the *Spiritual Offering*, from an editorial in which the following is taken:—

Not only are all so-called scientific shams tottering, but the so-called *test condition* sham will soon pass away. If all well-known and worthy mediums, who have hitherto submitted to these conditions because demanded, would absolutely refuse to comply, the war upon mediums would be ended, so far as opposition comes from professed Spiritualists. The laws of mediumship are yet but little understood. Certainly, none are sufficiently acquainted with them to prescribe rules and regulations to those who have passed to spirit life and are governed by spirit laws, with which men and women, still in the material form, should not attempt to interfere. . . . Just imagine Jesus, Socrates, or Galileo humbly waiting *our* pleasure and craving audience with us, and *we* stipulating with them that they may be permitted to approach us, and bestow upon us treasures of light and wisdom, *provided* we are allowed to dictate the manner of approach, and that they shall come in obedience to our command just when, how, and where *we* see fit to demand, and still be expected to bestow upon us beautiful thoughts, inspired teachings, and wise counsel, notwithstanding we cannot trust them sufficiently to allow them to choose their own mode of approach.

REFERRING to the case of the seizure of works by Voltaire and Paine by the Montreal customs authorities, the *Herald* of that city says: "The judge dismissed the case on a technicality, Mr. Lawrence not having given the collector the notice of claim required by law. Judge Johnson had said enough during the proceedings to indicate that, on the merits, his opinion would differ from that of the customs people; but, the point of irregularity in regard to the making of the claim having been raised, the judge was obliged to decide on it, and, on the strength of this little point, he had no alternative but to dismiss the case. It is to be hoped that we shall hear no more of such arbitrary conduct on the part of customs officials. It is not likely that the country is going to stand a custom-house censorship of religious or controversial works, and the Minister of Customs should advise his subordinates accordingly. If the officials wish to distinguish themselves, let them find out how it happens that indecent books and papers, which are really forbidden, find their way in such numbers into Canada under the very noses of the custom-house officials." After the case above-mentioned was disposed of, copies of the works seized by the collector were sent for by a certain individual, in order that a decision might be obtained as to the legality of the seizure; but the collector allowed the books to pass, by the instruction, it is well understood, of the government, and the importers of free-thought books into Canada are not likely to be subjected to any further trouble.

POETRY.

HYMN.

Thou Infinite Majesty,—
  Called of men Nature,
  Called of men Godhead,—
We do adore thee,
Though thou hast sorely
  Tried us and plied us
With doubting of thee!
  Were not life treasured,
  Though it were measured
    But of the grief
Thou hast willed us to see?

Painfully have we
  Toiled in life's trouble,
  Through maze and o'er stubble,
    For days of relief
That are ever of thee!
  Oh, guard us and save us,—
For life if it please thee,
For death if it please thee,—
    And let not our weakness
    Lie lost in false meekness,
  Or vice e'er enslave us!

Thou Infinite Majesty,—
  Called of men Nature,
  Called of men Godhead,—
Low in thine arms at night
Sink we all care and light,
    Sure of the morn,—
    Sure that no scorn
E'er will deny us sight,
    Or save us who mourn,
  When thou feel'st best to send
  Grief by whose stroke we bend!

THE JUDGMENT.

If at the general judgment of the dead
I should see Justice standing stern and high,
And looking down at me with piercing eye,
And hear her say, "Thou goest unpardoned,"
I should not weep nor cry nor bow my head,
But straight to doom I'd go most loftily.
But, oh, if on that day I should descry
Not Justice, but my mother's face instead,
And find her look of sweet compassion gone,
Oh, what a cry should pierce the silence then!
But it cannot be thought! Yet such a one
Is Love. The Lover is the judge of men,
And they whom not the eyes of Justice move
Shall feel the terror of the eyes of Love.

The Index.

BOSTON, NOVEMBER 15, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

Christian Morality in Practice.

A Discourse delivered at New Bedford, Oct. 21, 1883.

BY WM. J. POTTER.

The distinguished Hindu apostle, Mr. Mozoomdar, who is now in this country, comes so near in his theological views to adopting Christianity that the question is not inaptly asked why he does not announce himself as a Christian. Few Christian writers of any sect have written of Jesus with a deeper enthusiasm than has he. With the doctrine of a special divine incarnation in Jesus, he has no trouble; for the doctrine of incarnation has been one of the beliefs of the Hindu religion from time immemorial. He even holds a view of the Trinity which would pass examination in some orthodox councils. He willingly concedes that in Jesus divine incarnation reached its culminating point, and that in the character and life of the Teacher of Nazareth was given the highest and completest revelation of infinite Being that has ever been made in the form of humanity. And yet this Hindu apostle—as morally earnest and as religiously devout as he is learned and eloquent—steadfastly refuses to take the Christian name or to join any branch of the Christian Church.

The question naturally arises, Why this refusal? The answer, in part, is, Because he sees the Christian Church divided into many warring sects and factions disputing over questions of theology. But, chiefly, the answer is, Because of the glaring defects he sees in Christian morality. And so he says, "I accept your Christ, but not your Christianity." I see Christ employed in teaching a religion of simple trust in God and of good-will and loving acts toward men. I see the Christian Church, throughout its history, chiefly employed in teaching certain speculative doctrines which Christ knew nothing of, and practising to-day a morality which, for the most part, directly and openly violates Christ's moral precepts in the Sermon on the Mount. These modern Hindu reformers claim that, as Orientals, they better understand the spirit of Jesus, who was also an Oriental, and live practically more in accordance with his ethical precepts than do the Western nations into whose hands have fallen the fortunes of the Christian Church. And this claim is, doubtless, well founded. But, leaving aside here the question whether some of the ethical precepts of Jesus could hold a place in any absolute system of ethics, or whether some of them, which may have been good and practicable in the conditions of life in his own time and country, are adapted even to the best conditions of existence under modern civilization,—leaving these questions aside, there are certainly practices enough in vogue in modern Christendom—and not in the purlieus of vice merely, but among the prominent supporters of Christianity, and in the very courts of the Church itself—which might well cause any truth-seeking and morally earnest heathen to halt before taking the Christian name. A religion is not merely what it *was* at its fountain-head, but what it *is* in its present practice.

To the Hindu moral and religious reformer, modern Christianity is practically embodied in the great English nation that has assumed the government of his country. He no longer resists the English politically, and he gladly welcomes the civilizing and educational influences which they have brought to India from the progressive life of the Western nations. But, when it comes to accepting them as the teachers and exemplars of religion,—even of the religion of that very Jesus of whom they profess to be disciples,—he hesitates, he studies their lives, he tests their spirit, he examines their customs, he looks into their habits of daily intercourse with their fellow-men, he reads their history and modern publications. And so examining and testing them, he does not find them to be a meek and lowly and humble people, such as Jesus approved,—not even very lowly or spiritually-minded in their worship. He finds them, on the contrary, a proud and haughty people, given to the worship of wealth and power and material prosperity, and, even in their devotions, apt to pass by the poor and wretched as too low for their contact. He finds them a pushing, aggressive, beef eating, beer-drinking, tobacco-smoking, self-seeking, arrogant, domineering people, who have fought their way around the world, made conquests in every land, pushed older and weaker nations to the wall right and left, and planted everywhere not the simple cross of Christ, but the standards of material civilization, wealth, and power. If the cross of Christ has followed, it has yet been in entire subordination to these standards that have grown more naturally out of the innate character of the people. He finds them introducing among his temperate countrymen the means and habits of intemperance, in place of the traditional simplicity of their mode of living setting a standard of self-indulgent luxury, and supplanting the thoughtful and spiritual contemplativeness of the Hindu mind with practical materialism and animalism.

Of course, the Hindu religious and moral reformer sees and acknowledges the many good things which have come to India with British ascendency,—the arts and sciences of Western civilization, the splendid literatures, the popular education, the liberal forms of government, the better views of woman. And he sees also, and acknowledges, many individual examples among the English population of his country of spiritual-mindedness, gentleness, forbearance, temperance and simplicity of life, unselfish devotion to the poor and miserable. But, in the main, Christianity is represented to him practically by the opposite characteristics named above; by moral practices, that is, that seem the very farthest removed from the example and precepts of the Christ he finds in the New Testament.

And, if he looks at England in her own home or looks abroad to other Christian countries, our Hindu searcher for truth does not find a much better showing for Christian morality. He finds that it is in Christian countries, the world over, that the manufacture and use of intoxicating beverages prevail and the greatest amount of drunkenness exists; that it is Christian nations that have carried on most of the wars of the last five hundred years, some of the severest and bloodiest of which have been between nations that were both Christian; that Christian nations, even the best of them, have upheld until very recently the barbarism of slavery, and that some Christian countries still uphold this crime against humanity; that it is the Christian country of the United States, settled largely by a devoutly religious people, that has persistently denied to the aboriginal Indian of the country his rights, pushed him steadily back from his own territories, made a business of cheating him in treaties, hunted him down by musket and bayonet, and done its utmost to exterminate him from the soil; that in Christian countries, notwithstanding all their wealth and power and culture and means of happiness, the poor and ignorant classes are in wretched condition, the grossest injustices and crimes are committed, the passions of men are inflamed by the very incitements of civilization, degenerating vices reign unhindered by law, and theft, lying, bribery, have become a part of the very arts of business and of political enterprise.

Surely, with such a showing as this, it ought not to surprise us if our Hindu brother is slow to take the Christian name and to join the fortunes of his native reform movement in India to any branch of the Christian Church. And, if he be told that these wrongs and vices do not exist because of the Christian Church, but in spite of it, he may aptly answer: Let it be so; and yet, in eighteen hundred years, the Christian Church, it would seem, should have found some more effectual remedy for these wrongs and vices, if it were in earnest to remedy them. Very likely, too, he would ask, Saying nothing of those sporadic vices and crimes that spring from the passions of individual men, how is it that such great national crimes as slave-holding and wars for conquest and the extermination of Indians could be committed without the great majority of the people of your countries consenting to them and being implicated in the guilt for them? Are not the great majority of your people Christians? And if, as you further say, the people in your countries elect the law-makers, and the overwhelming majority of the people are adherents of the Christian religion, how is it that you as nations have so many unjust laws, and do and permit so many unjust things? Must it not be that these Christians themselves are delinquent? And is it not an historical fact that your Christian churches in America, with few exceptions, apologized for and defended the institution of slavery? If all the Christian churches in your land had, with united determination, insisted that mercy should be shown and justice done to the Indians in your borders, must not the wrongs against them have ceased before now? Or, if all your Christian churches should earnestly unite their efforts against the vice of intemperance, is it possible that that great evil could be so overshadowing in its peril to Christendom as it is to-day?

We can but admit our Hindu apostle could thus put some very searching questions to Christendom, and questions not easy to answer so as to break

Digitized by Google

the force of his argument. The trouble is that the Christian churches generally have devoted so much of their energy and attention to instructing in theology and to the proper observance of ritualistic ceremonies that they have neglected moral education. They have done precisely what Jesus said of the Pharisaic upholders of the synagogues in his time,—been careful about questions of mint and anise and cumin, but overlooked the weightier matters of justice and humanity. In part, as has already been suggested, Christian morality is in an unsatisfactory condition, because the churches have been teaching theoretically a moral code in several respects unadapted and unadaptable to the conditions of modern civilization and progress. They have been teaching, therefore, one thing in their organic capacity as churches, while their members, in their more constant and active function as members also of society, have been practising quite another thing. But still more is the unsatisfactory condition of Christian morality due to the fact that the churches have so generally overlaid moral instruction with theological, that they have laid more stress on believing the right creed than on doing the right act, and have led thousands and thousands of people to believe that to go through an emotional experience of piety, called "conversion," is of more account than to cultivate a righteous and loving disposition of the heart.

Sometimes, this excess of zeal for the beliefs and forms of the Church seems actually to have obscured and blunted the moral sense, so that persons, otherwise standing well in the community, are led to do things for the prosperity of their faith and Church which, by any secular standard of moral judgment, would be unhesitatingly condemned. The Protestants have long accused the Catholics, and not without good cause, of directly teaching that a morally wrong act—as falsehood, for instance—may be justified, if committed for the good of the Church. And there has been not a little outcry by Protestants over the failure of the savings banks' schemes of Archbishop Purcell, and later of the Augustinian fathers in Lawrence, because these priests allowed themselves, in their zeal for church extension, to put into church property, and therefore non-dividend paying property, the hard-earned savings which trusting parishioners had confided to their care, with the full expectation of receiving the same back with interest. And I have myself little doubt that that habit of mind by which these priests have been wont to regard the Church as the rightful sovereign of all earthly affairs, and to consider that whatever was given to the Church, though it should come back in neither money nor houses nor lands in this life, yet would yield personally to the donors tenfold better dividends in the life to come,—I have little doubt that this way of regarding the Church in its relation to all the affairs of its members has obscured in many of the priests' minds the perception of common honesty concerning the property rights of their parishioners.

But it will not do for all Protestants, who see clearly enough this point when it concerns the over-zeal of Catholics for *their* Church and doctrines, to throw stones at their Romanist brothers. "Thou that teachest another, teachest thou not thyself? Thou that preachest a man should not steal, dost thou steal?" Possibly, these old questions of Paul, to some of the early Christians who appear to have lived in glass houses and yet stoned their neighbors, may have an application to-day to some of the Protestant sects. For instance, there is Girard College in Philadelphia, intended by its founder to be a monument to the cause of moral and secular learning apart from theology, but, under its present management, converted into a monument of Christian dishonesty. The vast funds of that institution, amounting to many millions of dollars, have been actually stolen from the purpose for which their donor plainly intended them, and given to a purpose to which he expressly prescribed they should not be given. Stephen Girard was a free thinker, a disciple of Voltaire. He was called an infidel in his day. He believed that instruction in theology, especially for young minds, was not merely useless, but positively injurious. It led, he said, to misunderstandings, disputes, sectarian conflicts and animosities. He wished, therefore, to found an educational institution from which theological instruction and all special religious indoctrination should be excluded. These subjects, he said, should be left until the mind was so matured that it could consider freely the different religious views and systems presented, and choose among them without educational bias or prejudice. He directed accordingly in his will that the orphan boys, for whom he intended his college, should be there instructed in all useful secular knowledge and in the "purest morality." They were to be trained to industry, to honesty, to purity, and to good behavior. They were to be educated mentally, morally, physically, but not indoctrinated religiously. And either because he regarded clergymen as specially representing theology, or distrusted them as likely to bring in surreptitiously that which he wished to keep out of the institution, one clause of his will forbade that any clergyman of any denomination should ever enter the precincts of the college.

Now, there may be different opinions as to whether this was a wise will or not. There may be different opinions as to whether it is a good method of education to bring up the young without any attempt at religious indoctrination. But there can be no difference of opinion as to what was Mr. Girard's intention. His will was very explicit. And a famous attempt was made, you know, to break it, on the ground that the institution he intended to found would be antichristian and contrary to the public good. The will, however, was pronounced valid by the courts on the plea that the "purest morality" could not be taught except by teaching the Christian religion, and that it was possible to teach Christianity in its relations to morality without touching any of the controverted points of doctrine on which Christian sects differ. On this ground, the funds were given over to the city of Philadelphia as the appointed trustee, and the institution was established. The managers, however, are of evangelical faith, and narrowly so; and it has thus come to pass that instruction in evangelical doctrines is given in the college, apparently as in any other sectarian institution, except that it is given by laymen instead of ministers. The proscription of clergymen from the college, as directed by the will, is indeed literally obeyed. But in no other respect, in this matter of religious indoctrination, is the founder's intention heeded. It is now said that sermons are regularly given in the college by those who have completed their studies for the evangelical ministry, but have not yet been ordained. And so, by the mere verbal quibble that a man is not a clergyman in the technical sense of the word until he has gone through the ordination ceremony (which may be postponed all his life), these Christian moralists claim that they are strictly keeping the letter of Girard's will, though all the time they are breaking it in its intent and spirit, and know that they are. Some of the most outspoken among them have even publicly boasted that divine Providence has put into their hands the power to wrench this large property from the purposes which the infidel donor had in mind, and to turn it to the service of Christ and the Church. But they have thereby made public confession that the simple light of conscience has become darkened in them by their excess of zeal for the Church and its creeds. They do not see that simple honesty in a question of fulfilling a property trust demands the same fidelity toward a free thinker as toward a believer. They are not obliged to take the trust, if it be against their consciences; but, taking it, they are bound by every consideration of natural honesty and honor to keep it as they believe it was meant to be kept. All fair-minded men, outside of the Church in the business world, would so decide. Shall the standard of church morality be lower than that of the marts of trade and the stock-exchange?

And, if such lessons in Christian honesty be set by the Church, what may we not expect in the practice of smart trickery and overreaching in the world of traders and stock speculators? There is, to be sure, but one law of morality for all classes of people. But, naturally and properly, those who, by their very vocation and position, make a special profession of teaching righteousness, are expected in a special degree to exemplify it in their lives. It is for this reason that the natural consciences of people are justly shocked, if clergymen succumb to the grosser temptations of the flesh, or when Sunday-school superintendents and prominent church-members are exposed as defaulters and forgers, or when one sees, as he may in Italy (or could a few years ago), lotteries advertised in the name of the pope for the benefit of ecclesiastical institutions,—or nearer home, it may be, for the benefit of church fairs,—or when such a fact is brought to light as that recently reported from England, wherein it is alleged that the Church of England derives a large revenue in the city of London from buildings that are leased for drinking-saloons and the degradations of free dance halls. There is, indeed, but one moral standard for the Church and the outside world; and it begins to look as if there were little difference in practice. A simple-hearted, clear-sighted observer from heathen lands may well be perplexed, if he attempts to test Christendom by the ethical precepts of Jesus. In the Church and outside of the Church, he will find the most glaring violation of them. In the Church and outside of the Church, he will find moral crookedness, moral insensibility, insincerities, illy concealed by the assumed garb and usages of piety.

What, then, is the need but to revert—to revert, we may say, with our Hindu brother—to the simple moral principles that are of no one church or religion, but are fundamental in all; that are recognized on the other side of the globe in India as well as on this in America. Derelict and corrupt as are all religions in their historical development, all the great masters in religious teaching, all the great founders of religions, have placed morality above all creeds and ceremonies, and made it the one essential thing in religious life. Confucius, Zoroaster, Buddha, Socrates, Isaiah, Jesus, Epictetus,—they have all said the same thing: Have religious faith and belief, if you can; attend to religious forms as you find them useful helps to right living; but, above all things, attend to the right living; above all things, see to it that you keep the laws of rectitude, of purity, of veracity, of kindness. Morality is of no sect nor special faith. It is human. It is not Hindu, nor Grecian, nor Buddhist, nor Christian, nor Mohammedan. It is of and for mankind. It is the law of equitable and helpful relations between man and his brother man, of all races and colors, in all lands. It is justice. It is love. It is righteousness. It requires no subtlety of metaphysics to understand it, no theologies to enforce it. There it is, written

Digitized by Google

on the heart and conscience of the human race, written in human experience, enforced by the solid history of mankind in all nations and ages. This is the touchstone of all things else,—of all the faiths, of all the creeds. Faith without works is ever dead. Practical righteousness is more than any form of belief. This is the end and object of moral freedom, of intellectual liberty, the end and object of the very world's existence, the end and object and blessedness of human life. In this is the culmination and crown of religion's work on earth,—the root, also, by which religion lays hold of the sources of perennial life, and gives its best assurance of immortality.

AN AGNOSTIC'S CREED.

While B. F. Underwood was in Montreal last week, Rev. Dr. Stevenson, a prominent clergyman, delivered a discourse on "Agnosticism," reports of which appeared in the daily papers. Mr. Underwood, by request, devoted a portion of an evening to a reply to this discourse. The following is an extract from the reply as reported in the Montreal *Star*:—

"Dr. Stevenson says that agnostics have no creed. Creed is a belief. Because there are subjects beyond our ken, and of which we have no knowledge, it does not follow that we are without convictions. I will give my creed, agnostic as I am. I believe the enlightened human reason, and not any one book, is man's highest standard and best guide. I believe that the well-being of man, and not the glory of God, should be the object of our efforts. I believe that intellectual, moral, and physical culture, not piety, is the prime condition of man's well-being. I believe that the means of this condition consist in observation, experience, and reflection, and not in a pretended book revelation or special inspiration. I believe that the untrammelled exercise of human reason is not only an inalienable right, but a duty. I hold that beliefs are neither moral nor immoral in themselves, but that right beliefs in time show their good influence on character and conduct, and wrong beliefs result injuriously; that therefore we have every inducement to seek truth and avoid error without condemning those who have not the truth. I believe doubt is the beginning of wisdom, that without doubt a man never investigates; without investigation, he never learns anything, and will live and die in ignorance; that doubt leads to inquiry, inquiry to knowledge, wisdom, confidence, and happiness. I believe that we have a right to expect unity in things only that can be demonstrated; that in things admitting of doubt there should be free diversity, and in all things charity. I believe in that faith which is conviction based upon evidence. I believe that morality is the science of human relations. I believe that the principle of self-sacrifice admired in Jesus should be glorified in humanity, wherever men have died for country or race, or made sacrifices for the good of others. I believe that the world is worthy our best efforts, that 'one world at a time' is all we can attend to; that, if there be a continuance of life beyond the grave (of which I see no proof), the best way to fit ourselves for such a life is to attend to the interests of this life. I believe that the performance of the duties of life is better than any theological preparation for death. I believe that reliance on ourselves and the inviolableness of law is better than reliance on prayer. I believe that evil is non adjustment, and can be continually lessened. I believe that at birth none are sinners, but that the experiences of ancestors are inherited by all, and exist at birth in the form of constitutional tendencies or aptitudes. I believe that the good tendencies can be strengthened and augmented, and the bad ones diminished by education. I believe the moral sense called conscience has been acquired by the race, and that its decisions depend upon education as to what is right or wrong; that it approves or condemns according to the judgment and views of the individual. I believe that the penalties of violated law are more useful as restraints than childish fears of hell. I believe that working for human happiness on earth is less selfish and more creditable than striving to get to heaven, and that people who are most concerned about their own souls are liable to have the least valuable souls to save. I believe that it is better to build halls and temples and dedicate them to man than to build churches and dedicate them to God. I believe that study of the order of nature is more fruitful of good results than studies regarding the origin of nature. I believe that matter and force are uncreatable and indestructible, that they are the modes in which is revealed in consciousness the eternal power in which we move and live and have our being; in other words, given human consciousness, and what we call matter and force would ever appear substantially as they now do. I believe we have no means of knowing what things are, except by and through consciousness; and hence that the supreme absolute power in itself, uncolored and unmodified by the conditions of knowing, is unknowable. I believe that worlds, life, species, language, society, morality, religion, art, and civilization have been evolved according to law without any miraculous intervention. I believe the Bible is a product and outgrowth of the human mind. I believe the Christian theology is the natural product of ages of speculation concerning the ultimate cause of phenomena. I believe the word God is the letter *x* in an indeterminate equation, and that we have no means of ascertaining what the symbol stands for. I believe science is the providence of man. I believe that agnostics know as much as theologians, and have as much right to have a creed and to express it. I believe that the mistake regarding creeds is in requiring men to conform to them on penalty of punishment here or hereafter."

CORRESPONDENCE.

THE MOOTED QUESTION.

Editors of The Index:—

There are some of us who, with strong religious instincts, still find ourselves in some phases of our experience doubting the efficacy of prayer. Made up as we are, we are forced to exercise our reason and our judgment upon all subjects that present themselves to our mature minds. Now, we say, if it is clearly our duty to apply these to every other act of our lives, why should they be utterly excluded from this most important act of prayer? And so we ask ourselves and each other anxiously, How shall we pray? Is there some God of personal presence and of fixed abode to whom our petitions may be offered? If there is not,—if there is only law,—then our reason tells us that all prayer must be vain. What then? Why, it seems to me that we are thus striving with finite grasp to compass the infinite. My firm belief is this: that with omniscience—*all knowledge*—there can be neither need nor place for *reasoning;* that, therefore, *reason* is a limited quality, existing, as we believe it does, to a greater or less degree throughout the whole animal creation, and bearing only upon things pertaining to the external universe; that it can be in no way applied to our spiritual natures, which comprise the germ of the infinite; and, while we need not and we *cannot* subscribe to aught, oral or written, that is contrary to our reason, we shall surely find, through devoted obedience to the best light that we possess or can procure, knowledge sufficient for the highest spiritual advancement possible to man. Let us, then, rather trust to those powerful intuitions, so firmly fixed in our inmost souls, and leading us as constantly and as naturally into fervent and humble prayer, as is "the hart led to the waterbrooks after which he panteth." In this, we cannot be mistaken: it is the voice of a great need; in other words, of the Creator himself. We may rest assured that prayer (devotional aspiration is a better term, however, for in this there is no suggestion of *begging* for special and possibly undeserved favors),—devotional aspiration, we may depend, is a safe attitude of the soul; and this, together with living and acting worthily and well, will fill the measure, both of our knowledge and our ability, and must be all that is required at our hands, whether we live in the hope of a future existence or only with the thought of elevating humanity.

But, when all is said and done that reason can suggest or judgment sanction, some of us *will* cling to our belief in God. We know that there is a creative Power. The spring reveals this to us in the budding trees, the tender grass, the growing crops, the opening blossoms of the fair young flowers. Summer confirms the blessed revelation, and autumn crowns our faith with the rich rewards of seed-time and harvest. We know it, too, and better still by the daily cravings of our spiritual natures and by their gracious supplies. Who sustains the otherwise fast-failing springs of our hopes and our affections? Whence come our promptings to compassion, to tenderness, to mutual forbearance and love? What fills the world so full of patience, of fortitude, of self-sacrifice, and all charitable deeds? What, but this very germ of God himself *rooted in all things*, and struggling ceaselessly in man after a freer existence, striving continually in every one of us, according to a law of its own development, to quicken and to grow into a life of beauty and harmony! It seems to me that we cannot doubt a benevolent Providence, if we would. Then let us fervently desire to reach day by day a clearer and purer atmosphere, wherein may shine more perfectly about our paths the "light that enlighteneth us all." Such prayer as this all can understand and can subscribe to. It needs no reasoning *pro* or *con*. No logic can refute it, no sceptic can successfully assail it, and no God, wherever his throne may be, in the heart alone or in the highest heavens, can fail of being satisfied with such loving and devoted children.

C. H. Miller.

NIRVANA.

Editors of The Index:—

It is stated by Mr. Rhys Davids, in affirming that the Buddhist Nirvana refers exclusively to a state of psychic serenity in the present life of man on earth, that this philosophy ignores alike God, the soul, and a future state. I cannot read the original whence Mr. Davids derives his views; but, whatever may be said *pro or con* God and the future state, the *negation of soul* seems to me an abuse of language, and essentially inconsistent with the high moral tone and ascendant of the nobler affections over the senses and material interests of this earth life, which Mr. Davids, in common with other historians or commentators, attributes to Buddha's life and teachings. I know not that our language possesses any word so competent as *soul* to express the distinction between true nobility of sentiment and action and the sprawl of surrender to appetites. Without arguing about the letter of texts, which can have but such authority as our reason assigns to them, I will add that reaction against animal resurrection and individual metempsychosis logically conducts to absorption in the collective life of our planet, or of nature, for those who prefer a more indefinite term; but not to extinction, since the collective life is instinct with dynamic affections and intelligent order,—in a word, with God, if this word have not been irretrievably damaged by the proprietary fetichism of sects.

L.

THE NEW ENGLAND CONVENTION.

Editors of The Index:—

The committee appointed by the Boston Liberal Club to originate a plan for the above convention has resolved that it be held in the Paine Memorial on Jan. 27, 28, and 29, 1884, and has appointed Mr. W. S. Bell, its corresponding secretary and representative, for arranging the details of organization.

In order to assure success to the undertaking, I ask, through your courtesy, the readers of your paper, with whom Mr. Bell may be in correspondence, to lose no time in replying to his letters, and others who desire to communicate with him to do so (at No. 18 East Springfield Street) as soon as they can. The thanks of the Liberal Club and all lovers of freedom and progression will be extended to those who will comply with this simple request.

John Storer Cobb, *Pres. of the Club.*

Luther in the Thought of To day.—Dr. Hedge, in his elaborate discourse, though allowing Luther has been an immense force in the history of the world, did not present clearly the significance of Luther in the thought of to-day. He eulogized a dead Luther, not a living teacher, while the very significance of the festival is that Luther is still a leader of the world's thought. The issue which he forced upon the Roman Church, when he nailed his theses to the church door at Wittenberg, is the issue which is to-day foremost in every discussion, and is one of the chief signs which distinguish the middle from the modern age. Luther, in resisting the sale of indulgences, and in demanding that his Church should go back to a higher order of spiritual teaching, put his own convictions against the authority that then ruled in religion, and affirmed that the inward witness of

Digitized by Google

common sense should be listened to with as much respect as the voice of authority. For over one thousand years, the sanctions of common sense had been overruled. The authority of the Church had been everything: the convictions of the individual, the conscience in the mind, went for nothing. Luther affirmed the integrity of the conscience in a local matter, which, under the circumstances, interested all Germany, and became a matter of national importance. The ruling Church had stifled conscience, and gone in the face of reason to the length of casting ridicule upon the faith which it was intended to maintain. Luther did not say that the Church had no authority, nor had he any desire to cease to be a Roman Catholic. He simply affirmed, what the modern world now honors him for affirming, that the integrity of our spiritual nature is not to be violated by ecclesiastical authority. That was the step that Luther took in the German Reformation. It was a question of religious conviction as opposed to religious authority. It was felt at once that Luther was right. The people sustained him. Men had spiritual convictions, and they affirmed the right to exercise them. . . . Honest men everywhere to-day are in Luther's position, whether in the Church or outside of it. They cannot assent to absolute authority in religion, because it compels them to deny the reason that God has given them. Neither can their own intelligence forego the authority that is conceded and established in the world. It would be a thousandfold more easy, if one could go back to the thirteenth century, and have the Church settle all the problems of political and personal life; but, since Luther lived, and partly because he lived, these questions of religion and society and conscience, over which he pored with a resolute mind, have been questions that have come to stay in the thoughts of men, and are only to be settled by the compromise between reason and authority,—best named reasonable common sense,—which is only reached after great debate, great searchings of heart, and the slow reasonings of all mankind.—*Boston Sunday Herald.*

A SPIRITUALISTIC FRAUD.—The Spiritualists of this region, and all others who attended the Lake Pleasant camp-meeting of 1877, will be pleased to hear from their favorite lecturer of that season, the miraculous Frank Baxter. Mr. Baxter's method, it will be remembered, was exposed and pretty generally comprehended at the time. The *Republican* and the Greenfield *Gazette* did their entire duty by the fellow; but that fact did not prevent his devoted friends from upholding him, nor in the least hinder his successful career as a medium. . . . He appeared this fall at a convention of Spiritualists in Georgetown, Madison County. He was in precisely the same line that he was in at Lake Pleasant, when he presented messages from the Williamstown negro who was not dead. He stood up before the people and went deliberately into trances, wherein he would deliver communications, ostensibly from recently deceased residents of that town and adjoining towns, and the people swallowed it all; for was not Baxter a perfect stranger in the place? He never knew "the late lamented," and yet through his lips the late lamented spoke, recalling the main facts of their lives and the circumstances of their departures. It so chanced that he forgot something when he left the place of his entertainment in Georgetown (these mediums are always fed and lodged "free gratis," by the way). An envelope was found on the floor of his chamber, which, in order to ascertain whether it was worth sending after him, his hostess examined. Its contents were nothing except obituary notices of all the persons whose spirits he had professed to speak for at the convention, and of similar notices of persons who had lately died in Saratoga Springs. Most of these obituaries were clipped from newspapers, some were copied in manuscript. This is the familiar operation at Lake Pleasant. Baxter, with his accustomed cheek, returned to the house the evening after his departure and claimed his envelope of scraps, which was given up to him; and he went on to Saratoga to display his wonderful intimacy with the departed spirits of that region the next night. The affidavits of Mr. and Mrs. Whitmore, who entertained Baxter, and of a dozen men and women who saw the obituaries and heard the "messages,"—all, we suppose, Spiritualists,—have been obtained, and are published in the Greenfield *Gazette*. The affiants declare that they desire "to protect the public from further imposition" by Baxter. But this is a futile hope. He will go on from place to place, and he will not have exhausted the dupes of Spiritualism in his natural lifetime. No amount of exposure and publication seems to hurt a medium or a quack doctor, and this because they trade on limitless ignorance and credulity.—*Springfield Republican.*

BOOK NOTICES.

THE NATURAL GENESIS; or, Second Part of a Book of the Beginnings. Containing an Attempt to recover and reconstitute the Lost Origins of the Myths and Mysteries, Types and Symbols, Religion and Language, with Egypt for the Mouthpiece and Africa as the Birthplace. By Gerald Massey. 2 vols. pp. 1087. For sale by Scribner & Welford, 743-745 Broadway, N.Y.

We have here two large volumes, the object of which is to show that "the Aryan hypothesis" is erroneous; that the Egyptians, the oldest known historical race, are an African people of a peculiar type, and not an Asiatic tribe filtered through the Isthmus of Suez; that the transition from the bestial to the lowest human condition (for Mr. Massey is an evolutionist) took place, not in Central Asia or Northern India, but in the interior of Africa; and that the stream of culture flowed along the Nile Valley. Language, he claims, is derived not from abstract roots, but from signs and symbolic actions far antecedent to root words. He opposes that system of comparative philology which has been built up from the Sanskrit,—the supposed oldest representative of the Aryan languages,—to the utter neglect of the older Egyptian, Sumerian, Babylonian, and Chinese. The black race, he thinks, is the oldest; and he finds man's earliest home in Africa, and Egypt the birthplace of the original language and civilization. In discussing this subject, he brings to bear a large amount of knowledge regarding Egyptology and great ingenuity in the use of data. His vast accumulations of fact and statement are made to serve as the basis for theories that are by no means orthodox among philologists and theologians. The work shows an extent of research and an amount of originality that must surprise those who know the author only as a poet and a lecturer. Evolution and the comparative method are applied with great boldness to the study of language, myth, the origin and succession of gods, Jewish anti quities, and other subjects on which only scholars are capable of judging the main results of the author. The work is encyclopedic in its character. That the author has thoroughly digested all the information amassed in these volumes and sustained all the claims he has put forward may be fairly questioned; but such a work as this we are indisposed to criticise without a more careful reading than we have been able to give it.

IN NAZARETH TOWN, a Christmas Fantasy, and Other Poems. By John W. Chadwick. Boston: Roberts Brothers.

This is a collection of thirty-seven poems by one who is well and favorably known by his prose works,—prose enriched with much poetic expression of thought, so much so that one who knows Mr. Chadwick through his published prose writings is not at all surprised to find him figuring as a poet, as in this volume. Yet, though these poems are all of good rhythm and average power of expression, we cannot avoid the conclusion that Mr. Chadwick is not seen at his best when posing as a poet; and, while we own that we find much tender fancy and earnest feeling in this volume, we do not find so much originality of thought and strength of expression as in his prose works. These seem to be mainly poems of the affections, evoked by moments of supremely tender feeling for his wife, his children, and his friends, and, though pleasant reading, are not specially soul-inspiring, elevating, or strengthening. The poems which most partake of these qualities are "A Dedication," "Mugford's Victory," and "The Ineffable Name."

THE November number of *Wide Awake* closes the seventeenth volume of this appropriately named magazine for young folks; and with it closes the three interesting serials, Fred A. Ober's "Cacique John," Mrs. Whitney's "Buttered Crusts," and Mary H. Catherwood's "On Indiana Roads." Mrs. Diaz's "John Spicer Lectures" and Marion Harland's "Cookery for Beginners" also come to an end with the volume. Mrs. Jessie Benton Fremont's story of her "Arizona Class" will be read with interest by every one. Mrs. Norton's "Bingen on the Rhine" is given as the subject of one beautiful full-page illustration, of which there are three. Portraits of John C. and Jessie Benton Fremont, Marie Antoinette of France, and John B. Gough, are given. Celia Thaxter, Dr. Felix L. Oswald, and Sarah K. Bolton are among the contributors to this number. Shelley's "Song of the Cloud" is set to music by J. Rheinberger. The promised attractions for the next volume show that the publishers intend to keep the magazine up to its present high standard during the coming year. D. Lothrop & Co., Boston.

BABYLAND for November, by the publishers of *Wide Awake*, proffers its usual number of attractive pictures, stories, and poems for the younger nursery darlings, and ought to succeed in interesting and instructing the restless little ones when other things fail to do so.

PERSONAL ITEMS.

GENERAL THIBAUDIN, the late French minister of war, has been elected president of the Parisian Free Thinkers' Society.

MRS. MARTHA J. LAMB, the editor of the *Magazine of American History*, has been elected a fellow of the Clarendon Historical Society of Edinburgh. She is now a member of eight historical societies, and she is industriously utilizing her connection with them for the benefit of the public and her magazine.

THE Boston correspondent of the Springfield *Republican* writes: "Matthew Arnold had the cream of Boston audiences at his first lecture and first appearance here the other night. He impresses Boston people more favorably than he seems to have impressed the New Yorkers. His manner is not so novel to Bostonians as to others. They are fond of Englishmen, you know, and cultivate them."

THE second in the winter's course of lectures under the direction of the Moral Education Association of this city was given by Mrs. H. R. Shattuck in Wesleyan Hall, on Friday afternoon, on "A Problem in Ethics," the problem being how best to attain for ourselves and to help others to reach forward to our highest moral ideals. These lectures, given on the second Friday of each month, are free to all; and very instructive discussion follows the essay.

MR. EDWIN D. MEAD begins a course of six lectures, on "The Pilgrim Fathers," in Chicago, November 20, —lectures prepared for the special purpose of exhibiting the essential Puritan spirit and enforcing its importance to-day in our society, politics, and religion. He will also deliver, during his stay in the West, the course of lectures upon "America in the American Poets,"—Whittier, Longfellow, Lowell, and Emerson, —given in many places last winter. Mr. Mead's address while in the West is at the office of *Unity*, Chicago.

AT the unveiling of the statue of Alexandre Dumas, which occurred in Paris a few days since, Edmond About, in the speech made by him on that occasion, said: "This free thinker religiously respected the faith of others; this jovial companion diffused nothing but good principles, preached nothing but sound morality. We therefore see the adherents of all confessions, the philosophers of all schools, absolve the venial deviations of his life and his pen. He never displayed hatred or vengeance: he was merciful and generous toward his worst enemies, and he has therefore left nothing but friends. Such is the moral of this ceremony."

MR. ROWLAND CONNOR is doing good work at East Saginaw, Mich. He has begun a Sunday evening course of scientific lectures, which will be a popular presentation of some of the new scientific discoveries and theories. He will discuss the spectrum analysis, the atomic theory, the new geology, the new biology, the new psychology, anthropology, sociology, and the new ethics. The following persons are also expected to lecture on different subjects, as follows: the Hon. R. G. Horr, on "Individuality"; Col. George A. Flanders, on "Martin Luther"; Miss Ida C. Hultin, of Ann Arbor, on "Woman and her Mission"; George Conway, Esq., on "The Ethics of Patriotism"; J. K. Rose, on "Comparative Mythology"; Charles Ellis, Esq., editor of the *Evening News*, on "Progress a Law of Nature"; the Hon. William L. Webber, on "Education." The lectures are intended for popular instruction. Seats are free, and all persons interested in the subjects are cordially invited to be present. There will be no other exercises, and the lectures will begin punctually at half-past seven.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent cience.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

Sent postpaid, on receipt of price.

MRS. NEWHALL'S SCHOOL

FOR GIRLS AND YOUNG LADIES

Will reopen Oct. 1, 1883. Besides the regular courses in English studies and languages, there will be some work, each week, in the line of the new or **"creative method"** either with **tools upon wood** or in **modeling.** Another special feature will be a course of **lectures** upon the **great tone-masters,** illustrated with piano and voice. As aids to the study of History, Geography, and Art, **the use of the lantern** will be continued, and the **regular visits to the Art Museum.** For catalogues, address the Principal, 91 Newbury Street, Boston.

West Newton English and Classical School.

The ninetieth term of this Family and Boarding School for Boys and Girls will begin Wednesday, Sept. 19, 1883. For information and catalogue, address

NATH'L T. ALLEN,
WEST NEWTON, MASS.

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

"It seems to me admirable both in matter and in manner, and I hope it will have a wide circulation, as it is the kind of book people need."—*John Fiske.*

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.
For sale at THE INDEX office.

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) $1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

THE population of China, including the outlying districts, as shown by the census taken last year, is over 300,000,000.

THIRTY-THREE divorces in five hours, an average of one every nine minutes, were recently granted by a Chicago judge.

A "THIRTEEN CLUB" in France bids defiance to the old superstition which regards that as a fatal number. It is composed of thirteen lawyers, who at their meetings have a dinner of thirteen courses, for which each pays thirteen francs.

TWO HOURS' study of the Bible for every hour spent in reading Matthew Arnold's works is the *Baptist Examiner's* antidote to the pernicious effects of that author's writings, which seems like a confession that the modern poet is twice as powerful in his appeals to the intellect of the reading public as the "inspired" volume.

REV. DR. HAYS, of Denver, during a recent lecture on "Anonymous Letters," exhibited a large package of those he had collected from various sources. Among them was an offer of one thousand dollars from a minister for the degree of D.D.; and another minister wanted a degree, because he thought of publishing a book, and the letters would look well on the title-page.

MARRIAGE and divorce are much simplified by the authorities in Siberia. A prisoner who desires a wife has only to send in his application to the overseer, who sends him one of the overseer's choosing. Three days of probation are then allowed; and, if any incompatibility of temper seems likely to arise, the applicant may receive twenty-five lashes and another wife. This process is continued until he gets a wife to suit him.

A RUSSIAN noble, Prince Bebeloff, has been sentenced to banishment from St. Petersburg, his home, because he was the designer of a floral decoration of a wreath with broken chains, for the funeral of Tourgueneff, the liberal thinking novelist. The emblem was considered by the Russian government too daring a recognition and indorsement of Tourgueneff's revolutionary principles to be allowed to escape condemnation by the authorities.

THE progress of scientific thought develops itself in many new, unexpected, and not always generous ways, as when, at a recent meeting of Poorhouse Guardians in England, one of the Board, a woman, opposed the supplying of paupers with fish dinners on the ground that it contained phosphorus, which, while it was excellent for brain workers, was not needed by paupers, as they did not use their brains. The measure was carried, however.

SAYS the *Nation:* "The decision of the Pennsylvania Supreme Court, that the Pullman Car Company is liable for negligence which results in the robbery of passengers, is very satisfactory. The object of taking passage in such cars, the court very justly says, is to enable the traveller to sleep. Travellers who like to sit up all night and defend themselves against thieves with bull-dog pistols are of course at liberty to do so; but the very fact that the condition of sleep renders a man helpless makes it necessary that a company which invites a man to slumber should not make its 'sleeping facilities' also thieving facilities."

WHILE the Rev. Mr. Kay, a Presbyterian clergyman of Edinburgh, has had the hardihood to tell his shocked congregation that he had spent an evening at the theatre, which was "one of the most delightful, instructing, and entertaining of his life," the Canadian *Baptist* deplores the fact that so much leniency is shown by religious people to theatrical characters, saying: "We have not much sympathy with the tone which the religious press is in some quarters assuming in relation to the stage.... The stage has nothing in common with Christianity. Its whole record is against the teachings of the gospel, and as such the institution is not deserving of the attention from religious men, which it is of late receiving."

SAYS the *Presbyterian*, "The *Independent* seems incapable of learning that the only standard by which a Presbyterian minister can be judged is the Confession of Faith." And by what standard is the "Confession of Faith" to be judged? By the Bible? And the Bible, by what are its claims to be judged? By reason, says the free thinker; and every man has a right to exercise his own judgment in regard to the character and value of the Bible as well as of all other books. Presbyterian ministers profess to believe in the right of private judgment, but they have a confession of faith which is as authoritative with them as the dogmas and decisions announced by the Romish hierarchy are with the faithful adherents of Rome.

OUR pious and orthodox "Governor and Commander-in-Chief" has appointed and proclaimed "Thursday, the twenty-ninth day of November, current, a day of thanksgiving and praise to Almighty God, the giver of all good, and his Son, our Saviour, the Lord Jesus Christ, who has redeemed us from the power of all evil, to be observed as such by all of the good people of the Commonwealth." The proclamation is Scriptural, poetical, evangelical, and rhapsodical. The poetry he quotes is as follows:—

> "He reigns! the Lord, the Saviour, reigns!
> Praise him in evangelic strains:
> Let the whole earth in songs rejoice,
> And distant islands join their voice."

Such a state paper can hardly fail to please the party represented by the *Christian Statesman*.

PROF. ALEXANDER GRAHAM BELL, inventor of the Bell telephone, read a paper last week at New Haven before the National Academy of Science, on "The Formation of a Deaf Variety of the Human Race," in which he said that, if you could make congenital deaf mutes marry congenital deaf mutes for several decades, the result would be the formation of a deaf variety of the human race. He alluded to the fact that there are now deaf mutes in our schools, whose parents and grandparents were both congenitally deaf. He contended that our system of teaching deaf mutes is wrong, that we are separating them from hearing people and locating them together. Hence, they marry among themselves; and, by a system of evolution, the result is the formation of a deaf variety of the human race, with a language peculiarly their own.

AT a Luther memorial held in New York, Phillips Brooks said: "There is a dispute as to whether Luther belonged to the Reformation or the Reformation belonged to Luther,—whether he created the change or led it. It is a useless question. Little indeed and very transitory the Reformation would have been, if it could have been any one man's work. The work of one great man cannot be separated from humanity. Luther himself would have been the last to claim that he ever created the Protestant Reformation; but, if any man's personality was ever prominent in any great crisis, it was Luther's." To the question, Is Protestantism a failure? Mr. Brooks thus replied: "If we think of Protestantism as a power that tried to take the place of Rome and govern mankind in the same cruel fashion,—if for Protestantism to succeed is to bring all men together in loyalty to lengthy creeds,—then certainly Protestantism is a failure. But that Protestantism is not a failure which, for four centuries at least, has held the tyranny of Rome in check and filled the world with so much intelligence and freedom of spirit that, even if Rome should become again the mistress of the world, she could not again be the blind and brutal Rome with which Luther fought. But to have held the power of Rome in check for four centuries would have been a poor recompense. The Protestantism of Luther, Milton, Bunyan, Butler, Wordsworth, and Tennyson, Washington and Lincoln, is not a failure. Perhaps a new Luther is needed for the next great step that humanity is to take, but that step is possible mainly because of what Luther did four hundred years ago. There is no failure there, only one strain in the music of eternal success."

COURAGE OF CONVICTIONS.

The persons who have moved the world are those who have had the courage of their convictions; that is, those who have not only clearly and thoroughly and firmly believed in certain principles and truths, but have also had the disposition and will and vigor to act upon their beliefs, and to endeavor to get them adopted and acted upon by other people. There is a class of persons who, in quiet retirement, like to work at problems of thought or in scientific research, but whose interest in their work seems to be chiefly a theoretical one. They manifest little care whether the truths they discover are made known to the world and adopted by other people or not. They might stand by their convictions, if summoned to do so; but they feel no call to enter upon a voluntary struggle to propagate and maintain them. They enjoy the work of discovery; but the work of propagandism is not to their taste, and they decline it. These persons have a use in the world; for the thought-problems they solve or the discoveries they make are taken up by other people, and are thus thrown into the current of the world's activities and made available for human benefit. But they do not themselves aim at that benefit, nor seek actively to promote it. They do not stand with their hands upon the levers of the world's movements. Their brain-employment is for private luxury rather than for public profit.

But, if we look along the line of the world's progress, we see that the great leaders in that progress have been men of action as well as thought; not by any means the men who have been most boisterous in action, not, certainly, the men — and there are many such — who have rushed noisily into action without the thought,— not the men who have the activity and the dash and the courage but no convictions, but the men who have both the convictions and the courage,— convictions of truth worthy to be contended for, and the courage to stand up against all obstacles to contend for them.

And these qualities are needed in about equal measure to make strong characters. If either be greatly deficient, character is necessarily weak and ineffective. If both be possessed in very large measure, supporting each other, then appear the great leaders of human progress. And where both are possessed in exceptionally large measure, with specially favorable adjustment to each other, there are found the few exceptional leaders of humanity,—the persons of such rare and conspicuous mark on the field of history that not more than a score of them can be counted in all the annals of mankind. In this small class, "at the top,"—where, indeed, in every classification of mankind "there is always plenty of room,"—are the founders of religions, the organizers of States, the thinkers and discoverers who, by the rare profundity and courage of their mental action, have revolutionized entire systems of thought and practice among their fellow-men.

And, in the obscurer fields of human life, both of these qualities of mind are also needed for the successful discharge of life's tasks. A character without convictions is like a vessel sailing aimlessly over the seas without a cargo. A character with convictions, but without the courage to maintain them, is like a vessel lying at wharf after its cargo has been put on board, but having no wind nor steam nor other power to take her across the seas to her intended port.

Of course, convictions and principles may be bad as well as good; and the man who has the courage of thoroughly bad convictions is the scourge of his race. The cruel despots in Church and State, whose personal malignant ambition or hot zeal in the service of a false piety has left a trail of blood across many a page of human history, have been men who had, unhappily, the courage of bad convictions. Better, indeed, would it have been for the world, if they had had no convictions at all than to have been dominated by such false ones. The first duty, therefore, is to store the mind with honest and true convictions, to seek just and beneficent principles, to strive to attain correct views of one's relation to the world in which he lives. This question of what our convictions or principles may be is not a matter merely of chance or fate or inheritance: it is a matter of mental and moral culture. Convictions may be reformed by broadening the mental vision, by enlightening the conscience, by increasing the acquisitions of knowledge, by clarifying the moral perceptions through more active exercise of them, and by cultivating the benevolent dispositions of the heart. What are called convictions, in the sense in which the word is here used, are not intellectual perceptions alone; but they are the product of intellectual perceptions and moral sentiment, or they are intellectual principles suffused with moral feeling. They are warmer and more glowing than are the pure abstractions of mental truth. One may accept without question the demonstrated propositions of geometry, but it is not these mathematical beliefs that are ordinarily called convictions. But when one gets a perception of the relations of justice and veracity and brotherhood in which man should live with his fellow-man, or when one perceives by what subtle and inviolable laws man is related to the life of the invisible power in nature that has fathered and mothered him, then he is in the region of convictions; and the beliefs that he will attain will depend on the breadth and accuracy of his intellectual view, and will also be vitalized by moral emotion. The conditions, then, for attaining convictions that are true and good may be cultivated. Mankind are under obligations to have good convictions instead of bad or indifferent ones. Civilized man may train himself, and may train those whose instruction is confided to him, to look at their relation to other men and to the world in which they live with broad and enlightened vision and with moral susceptibility. The result of such educational training will, in all probability, be mental and moral convictions that are altogether worthy of being carried into action.

And then comes the need of the courage. And, at this point, many otherwise quite good people—at least, well-intentioned people—practically fail, and lead in consequence weak and inefficient lives. They have good principles enough, but they are weak in execution. Their convictions are all right, yet they fail to impress them upon others. They see clearly enough, for instance, the course which truth and right demand, yet perhaps it is an unpopular course: the fashionable or the majority do not go that way; and so they are tempted either to keep their opinions to themselves and remain inactive or else to go with the multitude. In either case, they lack the courage of their convictions. Or, perhaps, it is some enterprise of philanthropy which they are convinced would be of great benefit to the community. They feel moved to enter upon it. They have the time and the means to devote to it. But they see, on closer acquaintance, that there are many obstacles in the way,—that hard labor will be required, that misunderstandings will have to be met and popular odium encountered; and so they withdraw, in cowardly timidity, from the field,—retreat to the enjoyment of cultured retirement instead of pressing on to the higher joy of well-won repose over a conquered wrong. They lack the courage of their convictions.

No great work can be done, unless the worker throws himself into it with the full ardor of enthusiastic belief. But marvellous achievements have been wrought even by one man or one woman, single-handed, who was equipped with the enthusiastic courage of a good conviction, and with the needed practical energy to support it. Such workers are wanted to-day. There are neglected and ostracized truths that need them. Educational reform is waiting for them. The manifold problem of the curse of intemperance cries out for their solution. Wronged and struggling women plead for their aid. Oppressed and discontented labor calls for their leadership. The tenement houses of the poor, reeking in filth and misery and vice, pray for their knowledge and humanity. Corruption in politics demands their most invulnerable conscience in the Herculean task of cleansing its stables. The field is vast, the laborers are few. Yet there are large numbers of men and women, sitting in their parlors and in their libraries, with excellent ideas and sentiments concerning the work that needs to be done. But they do not do it; and they will probably go down to their graves dissatisfied with their success in life, because they have lacked the courage and energy to carry their best convictions into execution.

WM. J. POTTER.

E SPINIS FLOS.

I have heard nothing recently from the field of scientific religion so full of cheer and promise as the possibility of the establishment of a school of the new humanities, a college of social science, ethics, and scientific philosophy. It is precisely what is needed to crystallize the discordant elements of advanced philosophical thought and ethical work. It will be a leaven of organization, a rallying centre; it will take away the reproach of aimless discussion which is with some justice fastened upon the Bostonian branch of the new religious movement. As I understand it, we are endeavoring as gently as possible to convince everybody, who thinks that it will be for his or her happiness and peace, quietly to face the facts of science, and give up the pessimistic mythology of the prevalent creeds. We ourselves have been loyal to the facts in doing this, and it is tragical and harrowing to the feelings to know that others have not yet thought deeply enough to take the same step. We feel that nothing great in thinking or doing can come until the mass of the best people are united and happy in a single line of philosophic thought, until there is uniformity of thinking, and a common acceptance of proved facts and explanations. And we can never in the world accomplish this work by belligerent methods. Fraternal co-operation and kind discussion and diffusion of new knowledge is needed. In this way, you build in new material with one hand, while you gently remove decayed material with the other.

Nothing would do more in the way of liberal fraternization than a secular college of social science and ethics which should feed the lamp of higher culture in these studies, and attract scholars from all the sects. I happen to know that there are always in almost every one of the old-women theological schools a few brilliant minds who would welcome with acclamations a broad and liberal establishment, free from the stigma of hypocrisy and anility, where they could have a few months' leisure to investigate the deep subjects in which they find themselves hopelessly floundering, with no chance of extrication through

Digitized by Google

any aid from the sophistical teachers who so often fill theological chairs. The College of the New Humanities ought to be munificently endowed, and to be so broadly based as to command the respect of the wealthy and scholarly, irrespective of their particular clique or the special niche which they fill in the social fabric. It will command their confidence in only one way, and that is by eschewing theology. But that is just what it would do, says Mr. Potter, in his first admirable article on the subject: the new school would put sociology in the place of theology. In place of discussing how many angels could stand on the point of a needle, it would ask how much more money a poor woman might earn by the point of a needle. Instead of counting the golden paving-stones of an imaginary heaven, it would study the best way of putting men into possession of standing and working room on this earth (the law of land tenure). In short, it would teach how to relate the grander science of the day to "man's sense for conduct and his sense for beauty."

But the school must have a key-note. What is it? It can be stated in one ridiculously long word, *Deanthropocentralization*. The fair weather divinities are all dead, and there is left nothing but the Universe. That is, everything is just as it was before: only a few whigmeleeries are gone out of our silly little heads. The foot-lights are all out, the tinsel scenery has been removed, and daylight creeps in, and shows us the tawdry realism of dust and boards. Illusion has disappeared: we are specks on the rock-rind of a gigantic rushing globe; apparently nothing but a complex of self-developed cells, soon to fall apart. There is a look of sadness in our faces. We stand and gaze mournfully at the gates of death, upon whose valves their stony guardsmen lie with folded arms, *gazing* up into the infinite blue, and uttering no sound forevermore. And beyond the gates are the House of Fire and the House of Death.

But this sadness is only a temporary state of things, due to the suppression and repression of mind-activity in the cultured, and to a loss of hope of personal mind-immortality. But, when the tremendous step of self-abnegation is once taken, this selfish and whimpering sadness disappears.

> "But dauntlessly
> The slug-horn to his lips he set and blew.
> Childe Roland to the Dark Tower came."

Our melancholy all arises out of the idea, so firmly imbedded in our minds, that the universe was made for us, that we are the final cause of creation. But noses were not made to give employment to spectacle-makers, nor was the ocean made that ships might sail upon it. On the contrary, the spectacle-makers adapted themselves to the fact *nose;* and the ship-builder, finding an ocean to his hand, took advantage of that fact and put with it another fact,—that wood would float on water.

So out of the earth sprang man. But what do the solar systems care for that? They existed before he did, before the very earth that produced him. The heliocentric view was the death-knell of religious mythology. We had simply inverted the order of ranks in favor of our own interests and importance. All the philosophies have been too anthropocentric.

The key-note, then, of a school for the new order of preachers must be Deanthropocentralization,—self-renunciation in view of the vastness of Nature and her power. The new basis of faith is simply a cheerful acquiescence in life and death as they are, no matter whether self goes by the board or not. I do not mean that we are going to inaugurate a Buddhistic enthusiasm of annihilation. I do not deny conscious or unconscious immortality, or any kind of immortality. But I simply suspend my decision. I stand by the new-made grave of a friend, and shudder and weep. I am shattered with grief. "My friend, all is over with you now," I say: "you sink down into the fathomless dark, you fade from my sight, and I shall see you no more in this mortal form." Then, I turn to Nature for comfort,—to flowers and the mossy deeps of woods, to the strong and scented trees, the fresh and miraculous grass; and in spite of death, and even on the supposition of annihilation at death, I am forced to admit the healthfulness and sanity of life viewed as the sole arena of thinking existence.

The central idea of Browning's teaching seems to be this,—the soul developing its powers straightforward, not conventionally, but with reference to its aggrandizement in another life. In all of his wonderful dramatic poems, the legend is of those human souls that struggled manfully onward along their own line of ideal rectitude, irrespective of the standards of criticism set up by their fellows. But, in every case, there is a looking beyond, a reference of all striving to another life. Yet we should rather say, in view of the facts, that, with reference to the absolute beauty and ideality of this life, we should launch the great arc of our destinies: to live nobly and sacrifice self, because we find the law of nobility and self-sacrifice embedded in us as the highest law, as the one that gives the purest happiness; not to live with reference to lives that we know nothing about, but to simply *obey* the laws of this life, and trust to the life to come, whatever it is, to take care of itself.

In this day, when there is forming a new science of ethics, a new poetry, new political science, new sociology, when a reconstruction of all cardinal formulas and schemes of philosophy is imperative, and when we see around us groups of young heroes in science and philosophy standing sturdily opposed to the older thinkers, sacrificing bread for truth, and anxiously longing for the light to break and the day of their sore watching and striving to end, how can we help coming to their rescue with the manly and womanly strength that is in us? You rich men that would link your names with the beginnings of great movements,—humanitarian marches, progressions,—how can you sleep with clear consciences, when you think that you are false to your duty in doing nothing to help on the work of reconstruction, readjustment to a happy conclusion? You will live to regret your cowardly sloth, when society sweeps on and leaves you behind. It is moving now. *It is always moving;* and the reason you do not see the change is because it is in the brain, among the ideas. But, when ideas change, all is changed.

WILLIAM SLOANE KENNEDY.

TRAVELS IN FAITH.

VII.

Conclusion.

A thoughtful friend advised me not to publish the foregoing statement of my experience in thought until three years had elapsed, to allow time for consideration and possibly for modification of views, which might be found to be extreme, a natural reaction from an intense and unnatural pietism. I felt this to be wise and prudent. This time has nearly passed, but reperusal suggests no alteration; and experience and reflection confirm the convictions expressed.

During this period, a great many letters have come to me; and numbers of friends, each in his own estimation led by the Spirit and holding the correct views of religious truth, have endeavored to convince me of error. I find, however, that they all differ; and to adopt the degree of supernaturalism which any one holds would still leave me at variance with the majority. I have been able to classify my correspondents into nine classes, each showing an upward step toward rationalism, and the whole forming an admirable demonstration of my assertions as to the human origin of religion. Each follows knowledge as far as his environment will allow, and then holds to "faith." Each minister, in the light of modern science, walks up to his denominational fence, and there stops; but the Congregationalist goes beyond the Plymouth Brother, the Episcopalian distances the Congregationalist, and the Unitarian ventures still nearer to rationalism. For any one to go further would subject him to trouble; and the impression made upon my own mind is that their progress is deterred by the unconscious influence of self-interest, and they demonstrate the fact that ultimate truth lies in the direction toward which each has advanced,—that is, in *Naturalism.* The person nearest to agreement with me is the most travelled of all, the one next to him is the most scientific, and next to him comes the most scholarly; then come the business men; and the farthest off from me and the nearest to supernaturalism are emotional ladies and men who believe in the verbal inspiration and literal meaning of the Bible, and who seldom read anything else.

This gradation of opinion, and the capacities and circumstances of its exponents, strongly convince me that my future path trends forward, and not backward. In the rational study of nature lie the secrets of knowledge, and every admission of the existence of supernatural influences is a barrier to progress.

A Christian asked me, "What have you to live for now?" His tone implied that the loss of a belief in hell removed all impetus to benevolence and philanthropy. I replied: "A thousand-fold more than ever. To benefit men here and now, to promote commerce, to advance society, to influence the future of the race. The world has opened out before me full of possibility and hope, tempting me to effort by its opportunities and affording joy in its prospects. All this is gained in exchange for distressing efforts to save a few men, through emotional experiences, from an imagined impending doom, in the face of which all attempts at worldly improvement would be a hopeless and heartless mockery." It is the consistent Christian who has nothing to live for. Death or the coming of the Lord is his only hope. To depart and be with Jesus is his desired destiny. The more sincere a Christian a man is, the less has he to live for in this world; and the reason that Christianity does so little harm is because it is so little believed. The Dark Ages were the ages of "faith." The religion of nature is what most men practise, and they only espouse Christianity when it is attacked. Practically, but few believe its dogmas; and, when men are no longer paid to preach them and self-interest does not enforce conformity, they will be abandoned in name, as they are already, to a great extent, in fact.

Men have become accustomed to think that Christianity means goodness, whereas all that we prize as good existed and was recognized in the world long before Jesus was born. Orthodox Christianity means the theory that men are all doomed to eternal torment, and can only escape by belief in the merits of the death of a man-god. This creed is fast being relegated to the domain of cast-off superstitions, which have had their day and done their work in the development of those who created them. He who leaves it does not leave faith behind; but he travels in faith to a belief in the inviolable order of nature, the sequence of cause and effect, the reign of law, the upward destiny of the human race, to faith in *good.*

ROBERT C. ADAMS.

WORLD-SORROW.

This is a German phrase (*Weltschmerz*). By it is meant "that sadness which cleaves to all finite existence," and which is deepened of course by the mystery which involves our origin and destiny. In all transition eras, such as humanity is now passing through, this world-sorrow emerges in a special manner in poetry and reflective thought.

> "Achilles ponders in his tent,—
> The kings of modern thought are dumb;
> Silent they are, though not content,
> And wait to see the future come."

Indeed, the more rational, reflective, and enlightened men become, the more deeply impressed are they by

> "The sorrow and the mystery of all
> This unintelligible world."

The contrast of the world as it really is and as it ought to be, or might, could, would, or should be, forever haunts the thoughtful mind, and fills it, in hours of depression, with gloom. Youth, health, immersion in business, and the engrossing pursuit of some intensely coveted object make life during their continuance seem "worth living." But the contemplation both of human society and of the boundless universe which modern science discloses is depressing. Who can look up at the night-heavens with their far-shining light-points, which are so weird and impressive in their beauty, mystery, and utter inaccessibility, without experiencing an ineffable sense of personal littleness and insignificance?

> "Whoever gazed upon them shining,
> Nor turned to earth without repining,
> Nor longed for wings to flee away
> And mix with their eternal ray?"

In those night-heavens, we behold groups of luminous and ineffably distant objects which attracted the gaze of Job and Homer. There they still are shining with unabated radiance, while the generations of men to which Job and Homer belonged are as if they never had been. Humboldt sublimely says that the earnest and solemn thoughts awakened by a communion with nature instinctively arise from a presentiment of the order and harmony pervading the whole universe, and from the contrast we draw between the narrow limits of our own existence and the image of infinity revealed on every side, whether we look upward to the starry vault of heaven, scan the far-stretching plain, or seek to trace the dim horizon across the vast expanse of ocean. But, if we turn away from the vastness and enduring features of the world of nature to the world of man, to human society with its poverty, wretchedness, sin, cruelty, pain, disease, and toil, we grow still sadder and more depressed. A great steepled and domed city, with its stir of life, wealth, and splendor, thoroughly explored and scrutinized, is sure to reveal so much vice, crime, and wretchedness of every description as to make its pomp and architectural grandeur seem mockeries:—

> "The clouds that gather round the setting sun
> Do take a sober coloring from an eye
> That hath kept watch o'er man's mortality."

Xerxes, standing on an eminence while his vast army gathered for the invasion of Europe marched past, felt no exultation at the spectacle, but was saddened to tears by the thought that not one of the immense host would be alive after the lapse of a century. In like manner, who has not felt, when standing on a height contemplating a vast landscape, with its forests, rivers, lakes, and meadows, interspersed with the spires of villages and cities and with solitary farmsteads, with the fathomless and lonely sky overarching it all,—who has not felt, after the first thrill of delight at such a splendid panorama of nature and the works of man, that he himself was but an evanescent figure in the scene, which would continue to excite the same admiration in innumerable generations to appear in fleeting succession on the stage of earthly existence?

B. W. BALL.

AGNOSTICISM AND RELIGION.

Since some of the most distinguished minds of the age, known to be unbelievers in the dogmas of the Christian theology, have declared that they are Agnostics, theologians have endeavored to make the masses believe that Agnosticism is equivalent to a confession of general ignorance on all subjects of a philosophic character. In the long run, misrepresentation, whether ignorant or designed, generally defeats the object of those who employ it; and it is likely to in this case.

Prof. Huxley, who says, "Some twenty years ago or thereabouts, I invented the word 'agnostic' to denote people who, like myself, confess themselves to be hopelessly ignorant concerning a variety of matters, about which metaphysicians and theologians, both orthodox and heterodox, dogmatize with the utmost confidence," thus defines Agnosticism: "Agnosticism is the essence of science, whether ancient or modern. It simply means that a man shall not say he knows or believes that which he has no scientific grounds for professing to know or believe. . . . I have no doubt that scientific criticism will prove destructive to the forms of supernaturalism which enter into the constitution of existing religions. On trial of any so-called miracle, the verdict of science is 'not proven.' But Agnosticism will not forget that existence, motion, and law-abiding operation in nature are more stupendous miracles than any recounted by the mythologies, and that there may be things, not only in the heavens and earth, but beyond the intelligible universe, which 'are not dreamt of in our philosophy.' The theological 'gnosis' would have us believe that the world is a conjurer's house: the anti-theological 'gnosis' talks as if it were a 'dirt-pie' made by two blind children, Law and Force. Agnosticism simply says that we know nothing of what may be beyond phenomena."

In the sense conveyed by these quotations substantially, Mill, Darwin, Spencer, Tyndall, and Lewes, with many other distinguished and undistinguished thinkers, may properly be called Agnostics. That the class thus designated is rapidly increasing, and among the most thoughtful men and women, is generally conceded, even by theologians.

One of the most popular objections to this Agnosticism is that it involves the denial and destruction of religion. Religion is commonly assumed to be belief in, and the worship of, a personal Deity, —a being very much like man, but greater; a being in whose image man was made. But, with the progress of knowledge, men may come to see that the popular notions of religion are narrow, and that they must, in time, be modified and superseded by broader conceptions. We will here give some of the definitions of religion that have been put forward by minds who have not been satisfied to confine religion to the adherents of mere theological dogmas.

Shelley defines religion to be "man's perception of his relation to the universe." Coleridge says it is the union of the "subjective and the objective." According to Schleiermacher, religion is "immediate self-consciousness of the absolute dependence of all the finite on the infinite." "Religion," says James Martineau, "is the culminating meridian of morals." J. S. Hittell says, "Religion is a man's idea of the nature of his existence, the existence of the external universe and of its relations to him." Jeremy Taylor's definition of religion is "the whole duty of man, comprehending in it justice, charity, and sobriety." Mr. F. E. Abbot defines religion as "the effort of man to perfect himself." Himself a theist, he has attempted to show in one of his essays that a new conception of religion which shall not depend even upon belief in God is a necessary condition to the perpetuity of religion among men. Some other writer says, "Religion is the recognition of the ideal."

"Candid persons of all creeds," says Mill, "may be willing to admit that, if a person has an ideal object, his attachment and sense of duty toward which are able to control and discipline all his other sentiments and propensities, and prescribe to him a rule of life, that person has a religion. . . . Many, indeed, may be unable to believe that this object is capable of gathering around it feelings sufficiently strong; but this is exactly the point on which a doubt can hardly remain in an intelligent reader of Comte. And we join him in contemning as equally irrational and mean the conception of human nature as incapable of giving its love and devoting its existence to any object which cannot afford in exchange an eternity of personal enjoyment." Haeckel says, "I believe that my monistic convictions agree in all essential points with that natural philosophy which in England is represented as Agnosticism. . . . I also believe that the monistic natural religion will slowly and gradually, but surely and steadily, supplant the supernatural ecclesiastical religions, at least in the consciousness of the educated classes." "As to atheistic religions," says Max Mueller, "they might seem to be perfectly impossible; and yet the fact cannot be disputed away that the religion of Buddha was from the beginning purely atheistic. The idea of the Godhead, after it had been degraded by endless mythological absurdities, which struck and repelled the heart of Buddha, was for a time, at least, entirely expelled from the sanctuary of the human mind; and the highest morality that was ever taught before the rise of Christianity was taught by men with whom the gods had become mere phantoms, and who had no altars, not even an altar to the Unknown God."

Says Barthélemy Saint-Hilaire: "There is not found even the least trace of the belief in a deity in the whole of Buddhism. . . . He [Buddha] ignores God so completely that he does not once endeavor to explain the origin and the earlier life of man, nor to advance a conjecture concerning his future destiny."

The following additional extracts give an idea of religion as it is understood by some people:—

"Religion she [Miss Nesbit] looked upon in the light of a ticket which, being purchased and snugly laid away in a pocket-book, is to be produced at the celestial gate, and thus secure admission into heaven."—*Mrs. Stowe, "Dred."*

"Fashionable religion visits a man diplomatically three or four times,—when he is born, when he is married, when he falls sick, and when he dies,—and for the rest never interferes with him.' —*Emerson.*

"A man is a Christian if he goes to church, pays his pew-tax, bows to the parson, believes with his sect, and is as good as other people,—that is our religion."—*Parker.*

Our own conviction is that religion is based fundamentally upon the recognition of a Power of which, as Spencer says, "humanity is but a small and fugitive product,—a Power which was in the course of ever-changing manifestations before Humanity was, and will continue through other manifestations when humanity has ceased to be"; a Power of our relations to which all religious dogmas, forms, and ceremonies are expressions containing, with much error, some essential element of

Digitized by Google

truth. The *germinal* conception of religion is that of a mysterious Power behind phenomena. Superstition commences when the mind begins to form and fashion this Power in its own image. But the recognition of the Power will remain, when all existing forms under which it is contemplated shall be regarded as we now regard the mythologies of Greece and Rome. "No one need expect then," says Spencer, "that the religious consciousness will die away or will change the lines of its evolution. Its specialties of form, once strongly marked and becoming less distinct during past mental progress, will continue to fade; but the substance of the consciousness will persist."

"No more in this than in other things will evolution alter its general direction: it will continue along the same lines as hitherto. And, if we wish to see whither it tends, we have but to observe how there has been thus far a decreasing concreteness of the consciousness to which the religious sentiment is related to infer that hereafter this concreteness will further diminish, leaving behind a substance of consciousness for which there is no adequate form, but which is none the less persistent and powerful." As fast as men come to accept, understand, and assimilate this scientific conception of religion, which is logically a part of the theory of evolution, they will see the superficiality and absurdity of every species of theological anthropomorphism and the groundlessness of their foolish fears that iconoclasm will obliterate from the human mind anything that is essential and valuable in the religious systems of the world or in the religious sentiment.

B. F. UNDERWOOD.

EDITORIAL NOTES.

THE *Revue de Belgique* for October contains a good sketch of Tourgueneff and other Russian authors, as well as a remarkably able and learned essay on the development of Christianity and its indebtedness to other religions, especially Buddhism.

THE *Freidenker* for November 11 contains some very interesting and accurate views of Luther, especially in some spirited verses by F. R. Castelhun, whose poems are soon to be published, and deserve the notice of all who are interested in German literature.

AT the great Liberal Conference held recently at Leeds, England, 2,000 delegates, representing 540 Liberal Associations, were present. John Bright made the significant remark that "hereditary and irresponsible legislators could not be a permanent institution in a free country."

FUNERAL ceremonies as at present observed will soon come into disrepute among sensible people, if a few more "dudines" follow the example of a lady in Elgin, Ill., who, on the occasion of the death of a pet canary, invited her friends to its funeral, delivered a discourse over its remains, and had it buried in a cemetery.

THE first of a course of twelve lectures on the American Revolution, by Mr. John Fiske, was given in the Old South Meeting-house last Saturday. The other lectures will be given on successive Saturdays, omitting the Saturday in Christmas week, and will begin promptly at a quarter before twelve o'clock noon, and close before one o'clock.

A CHURCH choir belonging to the Christian Church in Swanzey, Mass., ought to be immortalized. The twelve members who sang at the dedication of the church fifty years ago are all still alive, and most of them in good enough health and voice to be able to sing last Sunday at the bicentennial celebration of that event. And this in spite of the alleged quarrelsomeness of disposition said to be proverbial of church choirs in general.

THE *Congregationalist*, mentioning the hardships of Methodist ministers in Ireland, says of one that he "had been prostrated two years by bronchial trouble. The *twelfth* child had just come into the home, eleven now living, and *five were under five years of age.*" The italics are Mrs. Spurgeon's. Their income was $250 yearly. The wife wrote, "My poor heart is surcharged with grief: while I write these lines, I can scarcely see for tears." We forbear comment.

THE Boston *Herald*, referring to Gov. Butler's Thanksgiving proclamation issued last week, remarks: "If there was any question about Gov. Butler's theology, this ought to settle it; but under the platform of 'equal rights for all,' which he has so extensively advertised, he might have considered the Jews, Unitarians, Buddhists, agnostics, and others who are also inclined to give thanks for the many blessings of the year, political and otherwise. Yes, we all have much to be thankful for."

SAYS the Springfield *Republican*: "The Worcester *Spy* promulgates the theory that his Excellency, who in a former famous proclamation advised the ministers to keep politics out of the pulpit, gets even with 'the sacred desk' this time by advising people to celebrate Thanksgiving day at home. This point might be argued further. The Governor not only ignores the obnoxious parsons, but he also usurps their office. The proclamation supplies all the parts of an orthodox church service. There is the opening address to the Father, a liberal Scripture reading, a sermon, and a closing hymn."

WE learn that a second series of discourses by Frederick A. Hinckley is to be published this winter. Of the first series, Mr. Holyoake, in a letter in *The Index*, wrote: "I will call attention in England to these admirable discourses. It implies assiduous thought to publish regularly discourses of such a quality and of so much interest." And the Boston *Commonwealth* said: "We heartily commend these sermons to the attention of those who delight in having questions pertaining to religious thought and life treated in a free, rational, and reverent manner. Mr. Hinckley's thought is always fresh, and his style always clear." The price for the series of twelve will be $1.00. Parties desiring to subscribe may leave their names at this office or send them to the author at Providence.

WE do not often find among our religious exchanges a paragraph showing so appreciative an estimate of Spencer's psychology as the following from *Unity*:—

Perhaps the most important thing to do at the present time in the interests of clear thought is to show to the popular mind that the methods of Herbert Spencer and Emerson, instead of being antagonistic, complement each other. It is to show that the *intuitions* of to-day are worthy of profound respect, because they represent the accumulated *tuitions* of our ancestors. Our *insight* is the *sight* of those whose lives have been deposited in our own; and inasmuch as the deep subsoil of a Western prairie is infinitely richer in vegetable possibilities than the leaf mould and vegetable deposits of this year, so is the great depth of intangible but *unconscious* subsoil of thought, feeling, and conscience in us, out of which our *conscious* thought, feeling, and conscience ever spring, infinitely richer than any surface harvesting that present sense and experience may bring to us.

THE following passage is from a report of an eloquent discourse on Luther, delivered before the Chicago Ethical Society, by Mr. Edwin D. Mead:—

Never be patient with that common saying that it does not matter what a man believes so long as his heart is right. It does matter. It is of immense importance that a man's creed be right as well as his heart. His creed is going to tell upon his heart most mightily with the years; and, day by day, it is going to determine whether he will deal with this duty to his brother, or this great public interest, in a large way or a small way. No serious man can see how, even in free America, family life is embittered, friends alienated, lovers torn asunder, faithful and able scholars elbowed into attics, that pedants and parrots may teach in colleges, all through the ignorance, the narrow-mindedness, the superstition, and false creed of good people,—people, as you say, whose hearts are right, people of good intentions,—without crying out in agony of anger the old words: "Hell is paved with good intentions." What you need is light and breadth and knowledge,—the eye of a better, larger creed above your blind good intentions.

THE *Catholic Review* says of our Unitarian friends and their faith that "they are, generally speaking, a very intelligent, respectable, and influential body; secondly, that they represent a phase of religious thought that is very popular and very seductive to the natural man; thirdly, that the development of Unitarian religious thought, as witnessed in the public utterances of the leading men of the denomination, is so incongruous, so illogical, so confused, and oftentimes so ludicrous, that the temptation to comment and criticism is well nigh irresistible. . . . Divorced from the Centre of Unity and only infallible authority for interpreting the divine revelation, they are driven in the direction of 'free thought' to the adoption of a system of mere naturalism, which is as utterly incompatible with the supernatural system of Christianity as oil is with water; yet, through the influence of education, the traditions of the 'fathers,' and an intellectual atmosphere not yet entirely antichristian, they still cling, in a greater or less degree, to the language, the style of thought, and even to the rites and customs of Christianity."

POETRY.

For *The Index*.

LIGHT IN DARKNESS.

When the rose-red flush of the setting sun
The western sky with its radiance fills,
And the happy day that is almost done
Retreats from night o'er the far-off hills,
Then the morning's beauties may gild our dreams:
We may light the dark with a new sun's beams.

Heed the lesson, love, that is daily taught
By cloud, by sun, by the pictured sky:
With the hope of good that will soon be wrought
To-day should shine, if to-day's work die.
Who shall say that evening's fatigues you shun,
Though you turn your face toward the rising sun?

WALTER L. SAWYER.

For *The Index*.

CREDO.

"Believe," said the priest. "I believe," said the sinner.
"Believe in the blood of the Lamb to save."
"I believe in salvation, both outer and inner,
But not in a heaven for bloodwashed knave."

"Believe," said the priest, "and never dare doubt
One word that you find in the Book or the creed."
"I believe in the world that's within and without,
And the book that is written by each man's deed."

"Believe," said the priest. "I believe," said the sinner.
"Believe in a heaven, believe in a hell."
"I believe that the good man is always the winner,
And for virtue that all things will turn out well."

"Believe," said the priest. "I believe," said the sinner.
"Believe in the laws of the priest and the church."
"I believe in the laws that give me my dinner,
And never leave honesty out in the lurch."

"Believe, yes, believe from morning till night;
For reason will surely lead you astray."
Said the sinner, "You reason that reason is wrong:
I reason that reason is just the right way."

E. P. POWELL.

The Index.

BOSTON, NOVEMBER 22, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

The Free Thinker's Vision beyond Death.

Delivered before the South Place Religious Society, South Place, London.

BY MONCURE D. CONWAY, M.A.

What is a free thinker? All thought is free. The fettered mind may do many things,—it may perceive, pervert, scheme, outwit; but, when it thinks, it converses with truth, and burns through all bonds to things inferior to truth. The word "free thinker" is an epithet for those whose thoughts were not subordinated to the authority of a traditional "revelation." Those who gave the epithet are beginning to be dissatisfied with it. They do not like the implied confession that their own thoughts are not free under creeds. It is their affair. Meanwhile, those to whom it is applied need not care for the word. It is more important we should take care that our thoughts should be free; that is, genuine thoughts. This is not secured merely by discarding a traditional revelation or an external authority. A mind may be fettered by prejudice or self-interest or timidity. The outward chains are now rusty, and of little importance except as they are reinforced by the inward chains. Last year (1882), an eminent nobleman was laughed out by the peers for proposing to make belief in "an Almighty God" binding on the legislators of this Christian land. He said that he introduced his measure under a sense of what was due to Almighty God. He withdrew it in deference to Lord Salisbury. Even a bishop opposed him, though intimating that he was prepared to exclude from Parliament those who wrote works expressing their disbelief in a God. The door would be left open for hypocrites. This is what holy authority has come down to. In the House of Commons, a knight had had the chivalry to call for persecution of a lady because of her opinions, and to demand prosecution of a newspaper for its criticism on Christianity. The government answered that such prosecutions do more harm than good. (The defence of the faith thus fell from the gentry to the livery. What would the Almighty do but for his London Corporation?)

Where do these zealots come from? Who has been teaching them that they should dangle this skeleton of the Inquisition before England? If they have been brought up in English churches, did they never hear there of such a thing as the right of private judgment? Did they never hear that the seed of every cause is the blood of its martyrs? Have they no eyes to see that already they have raised local radicals into world-wide fame by their persecutions, and have increased the circulation of their "free thought literature" a thousand-fold? But, I remember, these bigots are not free. Like fabled Ixion, they are bound to their wheel. They are contending for their creator; that is, for a system which has created them magnates out of commonplace men. Reason would never have created them such. They owe their all to institutions, based on pious traditions discredited by reason, which maintain their remnant of authority by its power to give place and title to small men and to repress thinking men. There was something sweetly simple in the remark of a peer concerning the proposed test of belief in "an Almighty God." Of what utility is that? Even a heathen believes in that. What we want is belief in the God of this land, the dispenser of rewards and punishments. A deity for the heart and reason is not at all involved in this question. It is the God of this land that is important, —the God who can make bishops, disfranchise radical constituencies, can make his rewards and punishments felt every day. This is the wheel on which these believers are bound: But around them revolves the wheel of the universe. On that have been broken the gods of Egypt and the gods of Greece and the gods of Rome and of Romanism; and on that will be broken the so-called god of England,—an idol which is crushing, not atheism, but theism. Minds that would be free, that would accept truth alone as authority and no authority for truth, should ponder well these contemporary lessons. Do not there remain within us all some relics of this outward power which rewards and punishes opinion? If, for instance, I consider what it is agreeable to believe rather than what is true, I become conscious of a fetter on my thought. Then, I no longer possess thought on the subject. If one slip a magnet near the needle of a compass, he can make it point east or south; but it is no longer a compass. If I believe in immortality because I want to believe in it, then, even if immortality be true, it is no truth to me. It becomes a little "god of my land," my idol, as compared with the God my neighbor has reached by exercise of his reason.

But, it may be asked, is nothing due to the heart, to feeling and sentiment, in this matter? Shall we not incline to the faith that seems fairest, indulge the hope that appears largest and brightest? To this the right answer were in the spirit of Christ's words, "Seek first the kingdom of heaven (that is, pure truth) and its justice, and all these things shall be added unto you." Or, as another sage said: "Follow that which is right, and custom will make it pleasant." It is of the highest importance that we should not adapt truth to our pleasure, but it is a duty to adapt our pleasure to truth. When we rise above considerations of pleasure, which concerns part of a man, to those of true happiness, which concerns the whole man, this conflict between the agreeable and the true disappears. For any large idea of happiness includes the harmony of the intellect with truth. The mind cannot find peace in conscious falsity. Nor can a mind make a thing true by calling it true. Thinkers have been brought to newly discovered truths by currents not under their control.

Once upon a time, an island sank. It had been built over, and seemed an eternal rock; but the waves beat through its cliffs, and submerged it. The inhabitants got upon a great ship, and voyaged till they came to a coast unknown. Here there was a division. Some resolved to wade ashore. Others, seeing no houses like those of their sunken island, and fearful that the new land would sink like the old, resolved to stay on the ship, sleep there, eat there, live there. They had comfortable berths, but they were slaves of the vessel, cabined, cribbed, confined. Those who went ashore got wet, they had to sleep on the earth, they ate berries. The people on the vessel conceived hatred of those on shore, and, when these were building new homes, fired on them till their ammunition gave out. Then, they raved at them. But, gradually, when they saw over on the new coast a pleasant little city, they began to feel their tossing ship uncomfortable, they found it leaky, they hoisted signals of distress, and were all brought ashore.

Such has been the situation whenever an old island of faith has sunk,—pagan, Catholic, Puritan. The human mind has voyaged by necessity to the farther truth, but hesitated to land, seeing it so bare and wild. So from sunken dogmas has our age come to the coast of hard fact. Some occupy the old ark, and enjoy the relics saved from the lost island. They have also persuaded themselves that their brothers who have gone ashore have all turned savages. They think those must become wild who have none of the sacred things kept on the vessel, prayer-books, sacraments, crosses; and that presently they will attack and sink the ship. Therefore, they fire on the free thinkers and curse them. But, meanwhile, the free thinkers, with solid ground under their feet, know perfectly well that the vessel will go to pieces, that they must build homes, not only for themselves, but for those now at sea and for their children. It is their task to build such fair homes and towers and ornaments along truth's new coast that those victims of the vessel shall be tempted over, freed from their delusion, and bring their treasured relics to adorn the new abodes. But this new coast is the new world of *truth*. The falsities under which the old island sank must not be repeated. Thought cannot afford to tempt the unthinking over by building the old shrines and spires. At present, that is the chief difficulty. They who cling to their bit of the past, despite its rocking, half-wrecked as they are, are still repelled from the shore of freedom because they cannot see there any spire pointing to heaven. On the sunken island, heaven was almost their all. So far as this world was concerned, it was, for the majority, small and barren. They lived in cells and huts; but they had fine churches and altars that seemed gates to paradise. They used to say among themselves, "If in this life only we have hope, we are of all men the most miserable." This also they continue to say on the still smaller vessel. They suppose the new coast to be just as small, barren, unsatisfactory, as their island or vessel: they do not see that it is a new world with new resources; and they strain their eyes to see on the new shore just the same old shrines and spires, the same old beliefs and hopes, which they are trying to preserve through the flood of change. But these ancient things they will never find on the new coast. They are irrecoverable. This is the continent of truth we have come to, and only the temples of truth can rise on it.

Nevertheless, now that the pioneers have felled the forest, built their homes, ploughed their fields, built the school, the theatre, the law-court, it becomes urgently necessary for them to explore their continent, to find out its resources of beauty as well as utility, to discover what high summits rise about them, and what visions these command. The free thinker freely concedes that man cannot be satisfied with physical supplies. "Where there is no vision the people perish." He sees with the orthodox that our life is mean and unhappy, unless it can expand beyond the limits of time and space occupied by any mortal. The weakness of the orthodox position is that the old vision has gone down, and that what it defends so furiously is a fading afterglow. Who believes in personal immortality? In words, many; in reality, few. How do these believers weep and wail, when their dear ones go to the bosom of Jesus! How hard they try to escape that speculative bliss!

Not long ago, I was looking at an ancient Egyptian picture of real life. It represented a procession accompanying the dead body of a man to his tomb. There were bands of music, dancers, people dressed in colors, bearing palm-branches, the dead man's relatives radiant with joy; for beneath was a tableau of the man and his wife, seated in a pleasure-barge, passing over to the groves of Amenti. Those people really believed in immortality: they celebrated with festivities the entrance of their beloved in paradise, danced round the dead as if he or she had gained a crown. Where do you find such faith now? If Christianity offered educated people a genuine conviction of the truth of immortality, one that would make us feel happy in the death of a child or friend, more might be said against disturbers of that creed. As a matter of fact, it is a doctrine much overrated in the imagination, and does not take away the sting of death at all. The ancient faith which made men court death was related to the earthly horrors which made them hate this life. As the foreground of earth has brightened, the celestial glory beyond has been less radiant; and, now, we have come upon a time

Digitized by Google

when thought must consider the basis of the hope that survives, and whether it points to any reality.

The theory of conscious survival after death would seem to have been, in some regions and times, based by man upon his shadow, in others upon his dreams, again upon his visions of his beloved after death,—subjective visions which his faith turns to ghosts. In later times, some have founded it upon the unity of the individual mind. Only that is observed to perish which is complex: the combination of elements composing a thing, say a plant, breaks up; the combination dies, but the component elements do not die. The separate atoms are indestructible. They compare the individual consciousness or mind to one of these elements, or to an indivisible atom, and say it is indestructible. But atoms and elements are themselves theories. Were it otherwise, we have not been able to put the mind or consciousness under microscope fine enough to discover whether it be complex or not. Other bases have been advanced for the doctrine of a future life which carried conviction in their time, but are now known to be untrue; while the doctrine associated with them survives and attaches itself to each new theory. The belief in a future life rests upon something in man, in his sentiment, his longing, his affections, all of which rest fundamentally on his love of life. External nature does not teach the doctrine; but man converts this or that appearance in nature into a symbol of his inner world, and then projects it into the universe.

We have no absolute knowledge of nature. We do not know nature in itself, but only the impression it makes on us. But the impression nature makes on man is variable from age to age, as the mind of the race changes by experience. The phenomena remain, the interpretations differ. And among these phenomena are the mental movements of the race itself. The general belief of races in a life beyond death—recorded in their monuments—does not prove such future life; but it shows that there is something in the universe which naturally produces that impression. Nature and our senses do not deceive us. "When," says Stallo, "the traveller in the desert sees before him a lake which continually recedes and finally disappears, proving to be the effect of *mirage*, it is said he is deceived by his senses, inasmuch as the supposed body of water was a mere appearance without reality. But his senses were not deceptive. The lake was as real as the image. The deception lay in the erroneous inferences of the traveller, who did not take into account all the facts, forgetting (or being ignorant of) the refraction of the rays proceeding from the real object, whereby their direction and the apparent position of the object were changed. The true distinction between the apparent and the real is that the former is a partial deliverance of sense, which is mistaken for the whole deliverance. The deception or illusion results from the circumstance that the senses are not properly and exhaustively interrogated, and that their whole story is not heard." (*Mod. Physics*, p. 201.) Progress in knowledge is the more full and exhaustive interrogation of our senses concerning the phenomena of which our ancestors were content with fragmentary impressions on which they formed partial judgments. And, as this is equally true of human phenomena, anthropology and historical criticism are necessarily engaged in so dealing with human beliefs.

Now, it cannot be said that the theory of individual life beyond death is a false interpretation of the phenomena. It can be shown that the various theories as to the conditions of such existence are fictitious. All the Elysian Fields and Gehennas, the hells and heavens, have disappeared under criticism into empirical beliefs resting upon local and temporary incidents. But, as to the duration of the individual consciousness, science has not been able to give any negative or affirmative opinion. That which is called the *ego*—that "I" or "me," which lasts through our changing forms, which identifies me with a child encased in flesh of which no particle remains with me—is something unique in nature. Philosophy has not gone beyond the threshold of its mystery. It seems to be a new-born fact in nature, whose future none can prognosticate. Until more is known, none is able to affirm with certainty that it perishes at death. It may be that this conscious *ego* is seed destined to germinate in another existence. Who knows? As yet, all is speculation, beyond the mysterious fact of the conscious and distinct self in each and the silence of the universe concerning it.

But, assuming that our *ego* will continue after death, could that alone satisfy those human longings and aspirations which have made men hope for immortality? What men have longed for is not mere duration, but certain things with which they have invested it. Here is one who finds that he must leave life just as he has learned how to live. He hopes the future life will give him another chance at existence, when, with an old head on young shoulders, he will redeem all his lost opportunities. But there is no reason to expect that. Like produces like. If he should wake to another existence, remembering that he had survived death, why should he not, in his increased security, find increased indolence? Why should he not go on neglecting his opportunities there as he neglected them here? It is more probable that the energies needed for this life are stimulated by the prospect of death. Jesus said, "Work while it is called to-day, for the night cometh wherein no man can work." All the analogies of nature declare that the opportunities of life cannot be repeated; and we need not expect men and women to make the most and best of their lives here, so long as they defer their work or happiness to another world. But here is a heart which hopes to clasp again its loved and lost in another life. Of all the hopes that cluster around the speculative future, this is the deepest. But Love, too, is partly the child of Death. Heart clings to heart, hand clasps hand more passionately, because they know that they must presently part. Under that shadow, dead love may revive. But were all who have loved awaking to an endless existence, to remember that they had found out death to be unreal, would the same love revive? Would there be any more the leaning of one on another, as now, amid the darkness? Personal love has always suffered, the human affections been weakened, in the ages when people have been most certain of having another life in which to make up for all sacrifices of them in this life.

But if, on the other hand, one says: "Why should I put forth any energies for an existence so brief as this? Why need I care what comes of it? Why should I love and suffer for man, woman, or child who presently will be torn from me forever?" I answer, If you are human, you cannot find happiness otherwise. If you are a brute, no matter. Matthew Arnold has recognized the "Better Part":—

> "Long fed on boundless hopes, O race of man!
> How angrily thou spurn'st all simpler fare!
> 'Christ,' some one says, 'was human as we are.
> No judge eyes us from heaven our sin to scan.
> We live no more when we have done our span.'
> Well, then, for Christ thou answerest, 'Who can care?
> From sin, which heaven records not, why forbear?
> Live we like brutes, our life without a plan!'
> So answerest thou. But why not rather say:
> 'Hath man no second life? *Pitch this one high!*
> Sits there no judge in heaven our sin to see?
> *More strictly, then, the inward judge obey!*
> Was Christ a man like us? Ah! let us try
> *If we then, too, can be such men as he!*'"

I believe the strongest moral force upon a human being would be to convince him of that principle of Marcus Aurelius, that, in a scene of chaos, he could be the source of order. We have read in history of reckless youths sobered by a sceptre placed in their hands; and, in romances of the far West, we find pictures drawn from life of rough miners, gamblers, outlaws, who, in some emergency, when human destinies fall on their shoulders, rise to the stature of heroes. Something like that sense of responsibility is steadily coming upon the real thought and heart of man in the proportion of his liberation from superstition. Having explored the past upon which he stands, the thinker has found moral government in nature practically limited to man's government; and this means that each individual can be a force of order and beauty amid the wildness of nature. Whatever power or mind may be in the depths of the universe, it has veiled itself, and not by any glimpse relieved man of his tremendous responsibility of being the practical god of this planet. Whatever may come after death, no hint has come from beyond the grave to distract a thinker's eye or purpose from the actual task in hand. In the grandeur of a great past, he finds the infallible prophecy of a grander future. From a worm sucking a rock, instinct has raised a race of thinkers; and thought, in turn, shall rear a race of gods. When thought is free to explore the records of the past without prejudice or fear, it tracks a human God in history; and, so far from despairing of man's future, it sees an earthly paradise almost in reach, when there shall be no more pain or sickness or wrong, and when even death may be seen as a friend,—the friend that secures our life, ever saying: "Live out all your days, for life will end! Love with full heart, for hearts must die! Yet know that, as personality ends, life rises above its limitations; and, because hearts die, their love never decays. The dead take their place in the heart, raised out of all defects; and, thenceforth, they pass on as pure and beautiful influences that never end."

The thinker who is free—free from bonds to traditions unrelated to his life, free from casuistry trying to justify mean surrender to conventionalism, free from rebellion against his reason and his task—need not envy any believer who in his Lord is sleeping, and whose works which follow him will bind others to a system that looks to the past. The free thinker also has a Lord in the imperishable life of his species. In that Lord he lives, and his body yields up the spirit of its life to Humanity. His works do follow him. His thought, which appealed to a sure future, is caught up in the great woof of human aspiration, woven into the tissues which shall feed and clothe humanity, developed with growing reason, and made into something far higher than his brain or hand could achieve. He need not dread death. As he lies down in death, he may say with the old saint, "If truth live, I live; if justice live, I live; and these by any man's suffering are enlarged and enthroned."

George Eliot gave a gospel to our time in the *Legend of Jubal*. Jubal listens to the ringing hammer of Tubal Cain. While that hammer is shaping and mastering stubborn metals to use, of its strokes is born a melody in Jubal's ear. In his solitude, he invents a lyre,—the first rude lyre. With it, he brings soothing strains, and sounds for the dance, in the family of Cain. Overjoyed with his success, he goes wandering through the remote world, and carries his new-found art to foreign tribes. Through age after age, he wandered centuries, and then he longed to return home again, and mingle with the descendants of Cain. When the aged man approached the familiar scenes of his youth, he found wondrous change had been there. Where he had left a few rude homes now stood a beautiful city with shining temple. A joyful procession of young men and maidens was passing, with music, not of his rude lyre, but of trumpets, lyres, cymbals, flutes, and psalteries. Such glorious powers had grown out of that lowly lyre he left, which seemed to him a final and perfect thing for the whole world! They all sang in concert, praising one name; and that name was Jubal, the father and god of music. As his rude lyre had flowered to many instruments, so his name had gathered all associations and become that of a god. The poor old man, in primitive garb, with his long white hair and beard, rushed in among the youths and maidens, crying: "I am Jubal! I made the lyre!" To them, he was only a madman, rebuffed, seized, beaten for blaspheming the god Jubal: the real Jubal fled to the thickets.

> "The immortal name of Jubal filled the sky;
> While Jubal, lonely, laid him down to die."

But here, in his lonely last hour, a face bent over him, the angel of his loved Past, sustaining him with the remembrance that it was the very greatness of his heritage that made his outcast age. It was the potential greatness in his gift to man to expand beyond itself and him,—the seed that had produced a forest,—which made himself so small beside its immortal results.

Much of the desire for continuance of our personality resembles this of Jubal, who would bring his rude lyre, his seedling of art, to receive the homage and the glory which it can gain only in the immortality of the race. "Except a grain of wheat fall into the earth and die, it abideth alone: if it die, it bringeth forth much fruit." Every true heart, every sound mind, is a living seed. It is not as a safe kept seed that it can really live. Its death is its liberation. Then, free from stain, its faults forgotten, its limitations passed, all that was vital in it—its aim, its love, its truth—ascends. We are all, this moment, aided, sustained, enlarged in heart, and made happy in life by many whose names we know not. For not to the great more than others is this immortal vision given. It is the assured future life of all who are free,—of all who give their best life, their best thought, to the world. How far extends the influence of all pure and simple life and love, weak though it appear! It may be some little child, whose mother clung to it till it sank in its little grave. The mother bent over

Digitized by Google

its pure face, and it entered her heart. Thenceforth, a Madonna was there. Thenceforth, a tenderness, a thought, a care, which, passing on from life to life, now makes many a heart more true and tender because that child lived and died.

The child, in its simplicity, is a type of human freedom: the mother, in her self-forgetful love, is a type of spiritual freedom. So let us live heart whole in our thought, our work, childlike in our freedom from anxiety for the future, maternal in our devotion to every cause of truth, manly in our toil for man, and be sure death will be swallowed up in the victory we shall foresee for our race by having already won it in our own lives.

"And these men shall forget you. Yea, but we
Shall be a part of the earth and the ancient sea,
And heaven's high air, august and awful fire,
And all things good; and no man's heart shall beat
But somewhat in it of our blood once shed
Shall quiver and quicken, as now in us the dead
Blood of men slain, and the old same life's desire
Plants in their fiery footprints our fresh feet.
Enough of light is this for one life's span,
That all men born are mortal, but not man;
And we men bring death lives by night to sow,
That man may reap and eat and live by day."

CORRESPONDENCE.

THE BELIEF IN GOD AND IMMORTALITY.

Editors of The Index:—

In the last number of *The Index*, you observe, remarking upon my sharing the conviction that the beliefs in God and immortality are fundamental in religion, that, if this be correct, then Mill, George Eliot, etc., must be classed among *un*religious minds. I should not correct a *non sequitur* so startling, and to me absurd, did it not occur to me that, if the astute editorial mind in *The Index* office can draw such a conclusion, so much more might the common layman draw it after you; and, in due process of myth, I might be told, on my own authority, that George Eliot was *ir*religious.

(1) I hold to the view that the doctrine of the republic is fundamental in politics. I believe that a just and enduring State is possible only through the full recognition and realization of the democratic principle. I believe that, so far as existing monarchies and aristocracies are worthy and beneficent, it can be shown to be by virtue of principles and institutions essentially democratic, and which, logically developed and justified, would bring the republic. Holding this view, "popular" in some places—among most Boston Liberals, for instance—and unpopular in others, I am, of course, under obligation to justify it intellectually, upon adequate demand, and to demonstrate the inconsistencies which I allege. But it would never occur to me to say that Gladstone was not a statesman or that Hegel had no high conception of politics or the State, because they believed in constitutional monarchy, as certainly it would not occur to me to say that Kant was not a great political philosopher, because his "federation of the world" consists of monarchies and republics indifferently, while I believe no lasting federation to be possible on that basis, and that our own fathers were sagacious in enacting that every State in the republican United States must also be republican. My belief in the fundamental character of the doctrine of the republic does not at all involve my believing that a monarchist cannot be a statesman; and, I trust, it goes without saying that I very well know that monarchies have attained and manifest to-day a degree of political development which in very much may put republicans to the blush.

I believe in the right of private judgment as fundamental to a correct and permanently beneficent system of thought; but this does not in the least involve my believing that Aquinas and Bossuet were not thinkers, and good thinkers, or that multitudes of disciples of the infallible Roman Church have not attained "a high degree of intellectual development."

I believe, to speak roughly, in the Kantian ethics. I believe that no system of morals can approve itself to the critical judgment which does not recognize explicitly or implicitly the eternal nature of conscience and the mind, and that no practical morality has guarantee of endurance through generations where there is no consciousness, explicit or implicit, that the rational first principle of the universe is in and behind the mind, with absolute command. But this has nothing to do with my believing or disbelieving that ten thousand professed utilitarians, great and small, have attained "a high degree of moral development."

A hundred things co-operate to determine the degree of moral, intellectual, and religious development of a given man, a given society, or a given age, —inheritance, environment, general mental temperament, and direction. In an inquiry like that touched by my remark which you have quoted, we are simply concerned with logic,—logical implication and logical development.

What does indeed seem surprising to me is that you should quote my word as in any way worthy of remark. (2) What you are pleased to speak of as "the popular view"—I do not know how popular it is this year—is certainly, as you are well aware, the philosophical view. (3) No great name in philosophy, with the possible exception in one respect of Spinoza, can be quoted to sustain any other view. To the great modern Germans,—Leibnitz, Kant, and Hegel,—the doctrine of any other genesis and existence of the universe than in Reason, the Idea, Νοῦς, God,—call it by whatever name you will,—is as impossible as it was to Greek Aristotle and Plato two thousand years ago. Equally impossible is any other doctrine to all the great general thinkers of our own age,—thinkers, I mean, of the rank of Goethe, Carlyle, Emerson, and Browning. If it be urged that these are intuitive minds, not positive, not men of exact science, I can only answer that it is a little remarkable that all the great intuitions of the race as well as its great philosophy point in the same direction. Such simple facts would seem to command for the beliefs in God and the eternal nature of mind other adjectives besides "popular."

(4) To my own mind, the doctrine of individual self-consciousness coming from an original unconsciousness—the idea altogether of impersonality and unconsciousness as the first principle of the universe—is a shallow and amazing idea, by howsoever profound men entertained. I am certainly glad of any occasion that leads me to be quoted in disrespect of it, if my opinion is of any weight with any man or woman in the world. The view of the universe as automatic, and not intellectual, is to me a view as dreadful and as dangerous as it is illogical. It is a conception, I believe, which cannot be maintained in any large philosophy, and which, moreover, cannot permanently sustain a deep and satisfying religious life. By which, I do not for a moment assert or think, as I trust it is quite unnecessary for me to say, that there are not deep religious lives where these beliefs are not held. Any man who reads books and knows men and women knows better than that. Yet, saying this, I must also say—I may, of course, be mistaken, but so my thought declares this year—that, wherever I find a deep religious life where these beliefs are not explicitly held, there still I have ever found the beliefs implicit; ever found, that is, principles in thought or action which, justly and logically carried out, would result in this philosophy. This impression I get not only from the lives of men personally known to me who do not explicitly hold a theistic conception,—men whom I value quite as highly as Stuart Mill or Albertus Magnus or any great name,—but also from those utterances of such great souls as George Eliot and Mill, which we all naturally appeal to to condemn him who ventures to speak of them as *un*religious. Holding this view, I hold it, of course, under obligation to justify it intellectually upon adequate demand.

(5) The attempt to establish any idealistic system of thought and the universe, ignoring God and immortality, seems to me especially vain and abortive. I do not believe that the idealistic attitude can be permanently or long maintained without recognition of the ideal ground. Fichte was a young man, in the beginning of his noble course of thought, when he wrote his *Thoughts on Divine Government*. He was an older and much profounder and severer thinker, as well as a man of much deeper experience in life, when he wrote his *Vocation of Man* and his *Way to the Blessed Life*. I am myself yet young, fortunately or unfortunately; but, up to date, I have met no man who, working on idealistic principles and rejecting the beliefs in God and immortality, or counting them unimportant, has given me the impression of maturity of thought or of having attained—I do not say finalities, for I hope nobody ever attains them—but any clear, adequate, consistent grasp of his own mind, or steady, reliable repose in his conclusion. This, however, as I have frankly intimated, may be simply one of the misfortunes of my limited experience.

(6) To the man who holds the belief in the Universal Mind, eternally present to his own mind, answering and commanding, as a factor, not simply of his philosophy, but of his religious life, God is something very different from the "proof" of God—ontological, cosmological, or other—and something infinitely surer. The man is in a poor condition who is living with reference to some "ontological proof," and thinking it reference to God. A man might as well try to feed on ontological proof of his mother. Ever is the word of the old Hebrew true, and ever will it be, whatever intellectual courses we are each destined to, that he that comes to God *must* believe that he *is*. If God is, there can be no proper adequate relation between that Universal Mind and ours while we are in doubt about it, any more than there can be relations with one's mother,—not while one yet simply in dialectics about it. Subjective experience, the consciousness, however begotten, of an eternally answering, commanding Presence, without which life cannot be conceived at all, is what has chief sacredness and power with the man to whom belief in God is a factor of religion as well as of philosophy, although no such subjective experience may properly be urged to the man who does not confess to share it. To such, the theist is, of course, bound to appear with his logic and dialectics, however unpleasant the task may often be.

It is for the sake of saying these things, which seem to me of fundamental importance, and not chiefly for the sake of correcting the possible absurd impression that I or any theist must logically account George Eliot or John Stuart Mill unreligious, that I have ventured to trespass so far upon your valuable space. I may be permitted to add—not, of course, for your own information—that the most influential and important of the names which you catalogue, although not to be invoked in support of a theistic philosophy, are also not to be invoked against it. My own frank opinion is that the "Unknowable" of one like Spencer constantly performs very much the same intellectual service for him that the "Unsearchable" does for one like the writer of the Book of Job or the writers of many of the Hebrew Psalms. The inconsistency of Spencer's metaphysics has been repeatedly pointed out, I think clearly demonstrated; and it constantly happens that what is really potent and controlling with a man is not what he says, but what he would say, if certain of his implications could be logically carried out and better said. I hope that I do not seem arrogant in speaking thus. I certainly do not mean to be so. EDWIN D. MEAD.

[(1) The belief that "a just and enduring State is possible only through the full recognition and realization of the democratic principle" involves the belief that recognition of and acquaintance with the democratic principle are necessary to the "statesman" and to "a high conception of politics or the State" and to "a great political philosopher." According to Mr. Mead, monarchies and aristocracies, so far as they are worthy, are democratic; and Gladstone, Hegel, and Kant, although nominally monarchists, are, in their essential ideas, democratic. It is, then, the recognition and application of the democratic principle, and not belief merely in a republic, which may come later, that are necessary to a wise statesmanship and true political philosophy. Mr. Mead thinks the right of private judgment fundamental to a correct system of thought, but says it does not follow that Aquinas and Bossuet were not good thinkers, or that multitudes of disciples of the Roman Church have not attained "a high degree of intellectual development." But, if the right of private judgment is fundamental to a correct system of thought, no such system is possible without it; and Mr. Mead would probably say the thinkers among those who have denied it have, in fact, to some extent at least, exercised this right. The belief here in the right is not made fundamental. But when he said that faith in "the living God and the immortal soul" was "fundamental in religion," we thought, and still think, that, if the statement was correct, men and women without this faith should be regarded as unreligious. If Mr. Mead had said—what, if we mistake not, he means—that religion in its "logical implication and logical development" is faith in a living God and immortality, he would not have been misunderstood, however much some readers might

Digitized by Google

have differed from him. Our statement was not a *non sequitur*. If a George Eliot without belief in a "living God" could possess religion, then religion is possible in a mind in the absence of this belief. In which case, the belief is not "fundamental in religion," whatever be "the logical implication and logical development" of George Eliot's religious views and feelings.

Humboldt, Darwin, Mill, Spencer, George Eliot, and thousands of others, are unable, after years of careful thinking, to believe in an intelligent being as the ultimate cause of phenomena or in personal immortality; but Mr. Mead thinks he sees that, to be logical, they should accept these doctrines, and therefore their unbelief does not exclude them from the religious class of minds. Whether they are religious would seem to depend upon the correctness of Mr. Mead's opinion as to the logical implication of their beliefs, their characters, and their lives. Since, in our opinion, Mr. Mead cannot show any such implication as he indicates, we should, if we accepted his definition, be compelled to regard many of the greatest and best men and women of the world as unreligious.

(2) We referred to Mr. Mead's statement that "faith in the living God and the immortal soul" is "fundamental in religion" as the popular view, without offering any opinion as to its correctness; but we might have added that there are other conceptions and definitions of religion which do not make either of the doctrines mentioned fundamental or even necessary.

(3) "In science," says Kepler, "we weigh facts; in theology, we balance authorities." The Roman Catholic can quote in favor of the dogmas of his Church many illustrious names. We concede that many great minds have accepted and argued with much ability and ingenuity in favor of the theistic hypothesis; but we have a right to examine their reasonings and to dissent from their conclusions, if they are unsound. And, on that point, each thinker must judge for himself. "I am indeed asked," says Darwin, "to attach a certain amount of weight to the judgment of the large number of intelligent men who have implicitly believed in God; but here, again, I see what an insufficient kind of proof this is. The safest conclusion seems to be that the whole subject lies beyond the range of human understanding. And yet a man can do his duty." Mr. Mead knows that great philosophers in ancient times and great philosophers in modern times, like Comte, Mill, Huxley, and Spencer, have not been able to accept the doctrine which he thinks is so evident. And general thinkers there are, as profound as any he has named and entitled to rank as high, who are agnostics. Very likely, however, a true estimate of the real intellectual greatness of men might modify somewhat the grades and classifications which theology, scholasticism, and transcendentalism have helped establish.

(4) That individual self-consciousness came from an impersonal unconscious source, may be a "shallow and amazing idea," and one for which Mr. Mead feels only "disrespect"; but there are as great men as can be named in the field of science and philosophy today, men who have given the subject years of patient and laborious thought,—and are familiar with all the arguments and proofs Mr. Mead can adduce in support of his view and with all the objections he can urge against theirs,—who yet do not and cannot believe that the ultimate cause of phenomena is personal or conscious. And, since Mr. Mead has so frankly stated his position, we will add that, while we feel no disrespect for the doctrine held by our friend,—that the cause of all things is a personal, conscious Being,—we do not think the doctrine can be shown to be anything more than a mere hypothesis, and do not believe it can be proven to the satisfaction even of the thinkers generally who are inclined to adopt it.

(5) When Mr. Darwin wrote the following, he was a profounder and severer thinker, as well as a man of much deeper experience in life, than when he wrote his first works: "I think that generally (and more and more as I grow older), but not always, an agnostic would be the more correct description of my state of mind."

The names were not invoked in support of any philosophy, but to indicate that either a definition of religion needed amendment, or that religion as defined might be outgrown without any perceptible loss or injury.

(6) This seems to us more like religious exhortation than philosophical reasoning. He that comes to God must believe that he is; and there can be no adequate relation between the universal mind and ours, while we are in doubt about it! But it is chiefly the ignorant, like the great mass of devotees, who are not in doubt more or less regarding the existence of a Universal Mind. The great minds, who, after thinking on the subject for years, believe more or less strongly that there is such a Mind, are yet not free from doubt. Their doubt results from their inability to ignore the many objections with which science and philosophy acquaint them to the theistic hypothesis. Must they lose sight of these objections, in order to have adequate relations with the Universal Mind? But, if Mill and Darwin, if Huxley, Spencer, and George Eliot, and thousands of others, can live grand and noble lives in disbelief or doubt as to the existence of a Universal Mind, the practical importance of the "relation" to which Mr. Mead refers is not apparent. In reply to what is said about "subjective experience" and "consciousness" in regard to God, the following from Mill is sufficient for the present: "The notion that truths external to the mind may be known by intuition or consciousness, independently of observation and experience, is, I am persuaded, in these times, the great support of false doctrines and bad institutions. By the aid of this theory, every inveterate belief and every intense feeling, of which the origin is not remembered, is enabled to dispense with the obligation of justifying itself by reason, and is erected into its own all sufficient voucher and justification. There never was such an instrument devised for consecrating all deep-seated prejudices." Of course, the "Unknowable" must be very much like the "Unsearchable." We do not remember to have seen the demonstrations of the inconsistency of "Spencer's metaphysics." And we are inclined to think that it is not Herbert Spencer who fails to understand the implications of his own philosophy, but rather Mr. Mead, whose German idealism and mysticism render him liable, perhaps, to do injustice unintentionally to a philosophy like the Transfigured Realism of Spencer. Mr. Mead has our thanks for so full a statement of his position.—ED.]

THE CHURCH OF NATURE.

Editors of The Index:—

Negatively, we believe:—

1. All religions claiming supernatural or miraculous origin, and not founded on the known laws of nature, are delusions, and hinder the progress and welfare of mankind.

2. Moses, Jesus, Buddha, Mohammed, and other religious reformers, had no more divine nature or birth than other men of genius.

3. The Talmud, the Bible, the Koran, and other books termed *sacred*, are no better codes for human guidance than the equally inspired writing of modern thinkers, who are more competent to instruct the present age of discovery and enlightenment.

4. Miracles, spiritual visions, and prophecies are contrary to the laws of nature, and impossible to any existing being. Nature never violates nor supersedes the laws of one world by those of another.

5. Therefore, prayer, while it may through the believer's imagination stimulate energy and self-confidence, can of itself produce no actual effect to interrupt the plan and sequence of nature in life or the universe.

Affirmatively, we declare:—

1. Religion is an essential faculty of human nature; and its action is to know what is true, and practise what is good. We, therefore, live for the truth, wherever it may lead, and for the good of one another.

2. The Universal Power of nature creates and governs all things, and its laws are perfect for reward and punishment. The term "God" is inadequate to express this power.

3. The evolution, or development, of life and matter from one form and degree to another is a universal law of creation and eternity.

4. Love and purity should guide the relations of man to man, husband and wife, parent and child, the strong and the helpless, and in all affairs.

5. Action, mental and physical, is a necessity of nature throughout the universe. Therefore, labor is a blessing, and idleness a curse.

A call is hereby extended to the liberal people of the world to organize for the substitution of these and all principles of truth for those of superstition.

RICHARD LEW. DAWSON.

A NOTE FROM MR. HOLYOAKE.

Editors of The Index:—

Upon two recent paragraphs in *The Index*, I ought to send you a line of explanation. One correspondent, whose words are not before me, expresses surprise that I should say I object to the term "Atheist" as connoting immorality. It always does so to the Christian mind. Many years ago, I put the question to Prof. F. W. Newman (whose wide and accurate knowledge is always at the service of inquirers with a purpose of utility), "what the word 'Atheist' really did connote." He answered that with the Greeks it always meant "without God, and also without morality." Regarding the will of the Gods (as Christians still do) as the only source of morality, he who was without the Gods was necessarily without morality. I therefore disused the term, and treated it as insolence in an adversary, who applied the term Atheist to me, if he meant by it the denial of morality. Not seeing how I could correct the impression of two thousand years in literature and the churches, I used the term Neutralist or Cosmist or other that expressed non-participation with Theism. As yet, I have never liked what Goldwin Smith calls the "soft term" Agnostic. The idea that I should say the Atheist was immoral could only be entertained seriously by a writer who had private communication with a lunatic asylum.

With regard to your remark in *The Index* of September 27, I still agree with Col. Ingersoll with respect to the Bible; and if the works of Rabelais, of Shakspere, and of Burns, were used as Bibles, in which every word was taught as binding upon the conscience for instruction, example, and imitation, then I should wish that the ribaldry of Rabelais, the obscenity of Shakspere, and the lasciviousness of Burns were withdrawn from the books. That is why I assented to Col. Ingersoll's remarks that every foolish and immodest thing should be expunged from the Bible. Always yours, notwithstanding,

GEORGE JACOB HOLYOAKE.

34 ALFRED PLACE WEST,
SOUTH KENSINGTON, LONDON, S.W., Oct. 21, 1883.

THE LIBERAL UNION CLUB.

Editors of The Index:—

The Liberal Union Club dined at Young's on Saturday evening, November 3. It was the occasion of its regular monthly meeting. President F. E. Abbot was in the chair. After the dinner, Mr. Abbot gave a very ample and satisfactory address on the principles and objects of the club, taking up in order and explaining the various articles of the constitution in which these principles and objects are fully set forth. On the right of the president sat the venerable Rowland G. Hazard of Rhode Island, Dr. Horsch of New Hampshire, Carl Zerrahn of Boston, and Dr. Wesselhoeft of Cambridge, while on his left were Minot J. Savage, Dr. Wigglesworth, Dr. Oliver, and others. Among those present were Prof. Dolbeare, Charles E. Pratt, John Wilson, Henry W. Holland, Dr. Rust, W. Sloane Kennedy, Cornelius Wellington, Nathaniel T. Allen, John L. Whiting, and Horace Hunt. Charles R. Adams sang superbly several songs, accompanied on the piano by Howard M. Dow; and George B. Ford gave two very amusing dramatic readings. Short speeches were made by J. H. Wiggin, C. E. Pratt, R. G. Hazard, A. W. Stevens, M. J. Savage, John Wilson, Drs. Horsch, Wesselhoeft, and Rust. About fifty sat down to dinner. The membership of the club is now about one hundred and twenty-five, and the interest appears to be steadily increasing. Hope is entertained and expressed that, before long, the club may have permanent head-quarters in the city, where it may hold its meetings, entertain its friends, and devise and carry forward measures promoting a genuine and noble Liberalism. GEORGE H. FOSTER, *Sec'y.*

DARWIN'S PLACE.—However much our knowledge of nature may advance in the future, it will certainly be by following in the pathways he has made clear for us; and, for long years to come, the name of Darwin will stand for the typical example of what the student of nature ought to be. And, if we glance back over the whole domain of science, we shall find none to stand beside him as equals: for in him we find a patient observation and collection of facts, as in Tycho Brahe; the power of using those facts in

Digitized by Google

the determination of laws, as in Kepler; combined with the inspirational genius of a Newton, through which he was able to grasp fundamental principles, and so apply them as to bring order out of chaos, and illuminate the world of life as Newton illuminated the material universe. Paraphrasing the eulogistic words of the poet, we may say, with perhaps a greater approximation to truth:—

"Nature and nature's laws lay hid in night:
God said, 'Let Darwin be,' and all was light."

—*Prof. Wallace.*

FOR any one who reads Luther's story and considers his work, the fact that the great bulk of those who have just celebrated his achievements with pride as those of one of the greatest of Germans have no more faith in his doctrines than he put in Tetzel's, and care no more for his Bible than he cared for the Missal, is pathetic enough. In other words, to put it plainly, the birthday of the great reformer has been honored in his own country mainly by people who never read his Bible, and who sing his hymns rather as old war songs than as expressions of religious devotion. The truth is that there is now but little religious belief of any kind to be found among the educated classes of Protestant Germany, and that Luther's Reformation is in their eyes rather a step in the political and intellectual emancipation of the country than a phase of religious progress. Luther is to them a forerunner of Bismarck, in short, rather than the promulgator of a new creed or the founder of a new church. They care very little about the nature or origin of his quarrel with the Pope. What he managed to save out of the wreck of his old faith is no more valuable in their eyes than what he lost, and his Bible interests them rather as a specimen of old German than as a new spiritual lamp provided by him for the men of his time. Rome could not have wished, and probably has never expected, a more complete failure of Lutheranism, in the sense in which Luther would have wished the term Lutheranism to be taken, than has actually occurred. But the failure is such that the Church profits nothing by it. Not much of his constructive work is left in Germany among the class which reflects on religious problems, but the spirit of free inquiry in which he carried it on has grown stronger than ever. The process which he applied to the papal authority is now applied to all subjects whatever. The Bible itself has to submit to the tests and questionings to which he subjected the Pope and the councils. This, were he to come on earth again, be might soon get to understand and even enjoy, but never that strong and growing disposition of his countrymen to think only of the things of this life, and to dismiss from their attention, as inscrutable and insoluble, those problems of the hereafter with which he and most thinking men of his time were mainly occupied.—*The Nation.*

BOOK NOTICES.

L'EVOLUTION RELIGIEUSE CONTEMPORAINE, chez les Anglais, les Américains, et les Hindous Par le Comte Goblet d'Alviella. Paris: Germer Baillière. Bruxelles: C. Muquardt. New York: F. W. Christern. Londres: D. Nutt, 270 Strand. pp. xix, 431. 8vo. Francs, 7.50. 1884.

This is a history of Free Religion in this country, England, and India, brought down to the present day. Strong in statistics and other details, rich in original generalizations and lucid conceptions, and singularly tolerant, devout, and hopeful in its spirit, it has the additional advantages of being printed in large type and on thick paper, so that, despite a few of those slips of the pen which are unavoidable in a work of such compass,—for instance, putting Mrs. Bisbee in Minnesota instead of Massachusetts,—the book is in every way worthy of its cause. Portions of it have already been translated for *The Index* from the *Revue des Deux Mondes* and *Revue de Belgique*, and a comprehensive review will soon appear in these columns; but the book must be read carefully from beginning to end, in order to gain any fair idea of its rare merit. It opens with a remarkably able account of the progress of free thought in England since the Reformation; and then follow elaborate studies of the Evolutionists, the Broad Church, British Unitarianism, Independent Theism, Comtism, and Secularism. Among other interesting facts here recorded is the advance of the British and Foreign Unitarian Association to the independent position attained more than thirty years ago by F. W. Newman, so that this gifted rationalist is now among its Vice-Presidents. The second part tells us, not only what has been done by Channing, Emerson, Parker, and other Unitarians and Transcendentalists, but also what is now going on in the congregations of Messrs. Potter, Adler, Savage, Schermerhorn, Chadwick, Beecher, Mrs. Bisbee, and other liberal preachers, as well as what is to be learned from the Free Religious Association, the Kansas Conventions, the writings of Abbot, Fiske, Frothingham, Gannett, etc., and *The Index*. This journal may, it says, be "taken as a model by the free thought papers in both hemispheres, on account, not only of the attractiveness of its articles, but of its breadth of views, and especially its elevation of moral tone." The last part gives such an account of the Hindu theists—who recently sent us their missionary, Mozoomdar—as might seem prolix, but is really of great importance, because it shows that pure theism, independent of sacred books or persons, is capable of becoming a national faith. Thus, the author fortifies himself for his final position, which is that a scientific religion, similar to that now preached by Conway, Savage, and Adler, is likely to take possession, ultimately, of the civilized world.

BEYOND THE SUNRISE: Observations by Two Travellers. New York: John W. Lovell & Co. pp. 237. Price 50 cents.

This anonymous work is evidently written from a Spiritualistic stand-point. Appearing nearly simultaneously with Miss Phelps' *Beyond the Gates*, it supplements that work by its record of phenomena, or what by many is accepted as phenomena, which bring us near "the boundary of another world." The style of the writers is refined, pure, and somewhat transcendental, with an undertone of patient pathos as of those who sensitively feel they are enunciating unrecognized and unaccepted doctrines or theories. However much we may differ from the conclusions of these "two travellers," it is impossible not to respect their motives or to refrain from sympathy with their aims so delicately delineated in this work. There are few who would not like to be so assured, as the authors seem to, that "no bar can intervene between this world and that beyond the Sunrise"; but, in spite of all the alleged authentic experiences of living persons brought forward by the select coterie of friends who form the nucleus of this book and give it its purpose, we must still give, as our opinion, the Scotch verdict, "Not proven." But we know there are many who will find, in this interesting story, corroborations of their own acknowledged, or unacknowledged, fancies, dreams, guesses, and hopes.

IN the *North American Review* for December, Gardiner G. Hubbard shows the advantages that would result from the proposed "Government Control of the Telegraph," and the benefits to be derived from the incorporation of the telegraphic with the postal service. Prof. J. Laurence Laughlin, of Harvard University, points out the "Evils of the Sub-Treasury System" in its absorbing and withholding from circulation the specie that is constantly needed to insure stability in the world of finance. "The Day of Judgment," by Gail Hamilton, is a caustic review of the less amiable moral traits of Thomas Carlyle. Henry George writes of "Overproduction," an idea which he declares to be preposterous, unless more wealth is produced than is wanted. Gen. W. B. Franklin sets forth the views of naval and military experts as to what is absolutely needed—in the way of organization, forts, ships, and war material—to insure the "National Defence." An article on "Railroad and Public Time," by Prof. Leonard Waldo, of the Yale College Observatory, explains the system of uniform time standards now being introduced into the railroad service of the United States. Finally, there is a discussion of the question of "Morality without Religion," by F. A. Kider and Prof. A. A. Hodge, of Princeton College.

AMONG the contributors to the November *Century* are Charles Dudley Warner, R. W. Gilder, Alphonse Daudet, George W. Cable, Mrs. Oliphant, John Burroughs, "H. H.," and Henry James. Among its chief attractions are an autograph and portrait of Queen Victoria at the age of nineteen, while Mrs. Oliphant's interesting biographical sketch of Her Majesty is adorned by a portrait of her as she now appears. Burton N. Harrison, formerly Jeff. Davis' private secretary, contributes an important bit of war history in his authentic account of "The Capture of Jefferson Davis." There are portraits and biographical sketches of Tourgueneff and Mme. Modjeska. The anonymous novel, "The Bread Winners," grows dramatic; and its author, in "Open Letters," replies to a criticism of a reader.

PERSONAL ITEMS.

EDWIN BOOTH completed a half century of life one day last week.

MINISTER LOWELL has been elected honorary member by five of the leading London clubs.

MR. EDWARD P. CALL has retired from the position of publisher of the *Daily Advertiser*, and George H. Ellis will succeed him.

THERE is to be a monument erected to Dr. Samuel Johnson at Lichfield, England, on the centennial anniversary of his death, Dec. 13, 1884.

MR. JOHN STORER COBB will lecture at Paine Hall, November 25, at 2.45 P.M., on "The Principles and Persecutions of the Roman Catholic Church."

THE native town of M. Pasteur has done honor to the eminent biologist by placing a plate on the house where he was born, commemorating the fact.

MISS LAURA BRIDGMAN has returned to the Perkins Institution, which has been her home since she was a little girl. She spent the summer with her mother in Hanover, N.H., and had a very pleasant time, but says she is happier at the school.

M. FRANCOIS LENORMANT, the famous Assyriologist, author of the *Manual of Ancient Eastern History*, is lying in a very precarious condition from the re-opening of a wound he received during the Franco-German war. But faint hopes are entertained of his recovery.

LORD COLERIDGE is displaying commendable reticence since he has returned to England. He refuses to give his impressions of America to reporters, saying that, when he has thoroughly assimilated his information concerning America, he intends to print a deliberate expression of his opinions.

GEN. GRANT has written another letter in favor of Fitz-John Porter, restating the positions taken in his former letter, and urging that justice should be done to an officer who has been unjustly treated. The letter is creditable alike to the author and to the man whom he seeks to benefit. Congress ought to repair the injury without longer delay.

GARTH WILKINSON JAMES, a brother of Henry James, Jr., died at Milwaukee on Friday of last week, aged thirty-eight. He was a commissioned officer in the late war, serving under Col. R. G. Shaw in the Fifty-fourth Massachusetts Regiment, and was wounded at Fort Wagner. He was of a genial nature, and had many warm friends.

HENRY GEORGE'S views in reference to the State ownership of land are making great headway in England. Miss Helen Taylor, step-daughter of John Stuart Mill, and a member of the London school board, has adopted them. Thomas Walker, a great Birmingham manufacturer, and J. L. Jaynes, B.A., the Eton master who was arrested with Henry George in Ireland, and subsequently dismissed from Eton on account of his radical sentiments, follow Miss Taylor. The Rev. Stewart D. Headlam, M.A., of London; Rev. J. E. Symes, B.A., of Nottingham; and the Rev. P. H. Wicksteed, M.A., of London,—three clergymen of the Established Church,—are also converts to Mr. George's doctrines.

REV. CHARLES LOYSON (Père Hyacinthe) intends no attack on the pope or Catholic Church in his lectures in this country. He calls himself an independent Catholic. He will simply explain his views on religious matters, and defend his position. All his discourses will be in French, as he speaks very little English. The proceeds of his lectures will be devoted to the religious work he is engaged in in Paris. His Independent Catholic Church has a large congregation in that great city. He was a great friend of Dean Stanley, who in his will left about $5,000 to his boy, a child of ten. Mrs. Loyson came over a short time before her husband, who was detained by a throat disease. She has been in Washington, visiting her son by a former marriage. He is Mr. Merriman, and is in the United States Treasury Department there.

The Brightest, Freshest, Broadest Newspaper

In New England.

The Springfield Republican.

Daily, Sunday, Weekly.

[ESTABLISHED IN 1824 BY SAMUEL BOWLES.]

SOME OF ITS CHARACTERISTICS AND SPECIAL FEATURES.

It is thoroughly independent in politics and all matters of public interest.

It is a live, progressive newspaper, and labors earnestly in behalf of better government and better conditions of society.

It is an enterprising newspaper, and seeks to inform its readers promptly and intelligently of everything important that is transpiring in the world from day to day; not simply of crimes and casualties, but of all the great movements and causes that interest and affect the people.

It is a representative New England newspaper, gathering the news of this section with special care and thoroughness, and presenting in its editorial columns the best thought and most intelligent opinion of the New England people.

It is a literary newspaper of high standing, and numbers among its staff several accomplished critics.

Its special and regular correspondence is of varied and interesting character, embracing regular letters from the leading capitals, and frequent letters of travel, criticism, and observation.

Its miscellaneous reading matter is selected with great care both for entertainment and instruction.

THE SUNDAY REPUBLICAN furnishes an extensive variety of agreeable and valuable reading in addition to its full presentation of local and general news. Each number contains a sermon or other religious article and an original story.

THE WEEKLY REPUBLICAN gives the cream of the seven daily issues, the news being carefully condensed and sifted and the best editorial and special matter from the daily being reproduced. In compact and convenient form, it offers an admirable weekly picture and review of American life.

SUBSCRIPTION RATES.

THE DAILY REPUBLICAN is three cents a copy, 75 cents a month, $9 a year; in clubs of five or more to one address, $8 a year, and an extra copy for every 10.

THE SUNDAY REPUBLICAN is five cents a copy, 50 cents for three months, $2 a year.

THE WEEKLY REPUBLICAN is four cents a copy, 75 cents for six months, $1.50 a year; in clubs of five or more, $1.25 a year, and an extra copy for every 10.

A Liberal Cash Commission allowed Local Agents for the Weekly.

All subscriptions are payable in advance. Specimen copies free.

Address THE REPUBLICAN,
Springfield, Mass.

MRS. NEWHALL'S SCHOOL

FOR GIRLS AND YOUNG LADIES

Will reopen Oct. 1, 1883. Besides the regular courses in English studies and languages, there will be some work, each week, in the line of the new or **"creative method"** either with **tools upon wood** or in **modeling.** Another special feature will be a course of **lectures** upon the **great tone-masters,** illustrated with piano and voice. As aids to the study of History, Geography, and Art, **the use of the lantern** will be continued, and the **regular visits to the Art Museum.** For catalogues, address the Principal, 91 Newbury Street, Boston.

West Newton English and Classical School.

The ninetieth term of this Family and Boarding School for Boys and Girls will begin Wednesday, Sept. 19, 1883. For information and catalogue, address

NATH'L T. ALLEN,
WEST NEWTON, MASS.

The Gospel of Law.

Discourses on Fundamental Church Doctrines

By S. J. STEWART.

"It seems to me admirable both in matter and in manner, and I hope it will have a wide circulation, as it is the kind of book people need."—*John Fiske.*

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.
For sale at THE INDEX office.

THE PRESENT DAY.

A Monthly Journal discussing Agitating Questions without agitation.

EDITED BY

GEORGE JACOB HOLYOAKE.

The *Present Day* is addressed to all who hold the brave and cheersome faith that life according to Reason is the best religion for the world that is, and the best qualification for the world that may be.

"False Ideas may be confuted by argument, but only by True Ideas can they be expelled."—*Cardinal Newman.*

Annual subscription, 2*s.* 6*d.* Single copies, 2*d.* Published by R. H. SQUIRE, 52 Fleet Street, London, E.C.

PUBLICATIONS

Address THE INDEX, 44 Boylston Street, Boston, Mass.

JESUS:

Opinions and Character.

New Testament Studies of a Layman.

Long time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE QUAKER INVASION OF MASSACHUSETTS. By R. P. HALLOWELL.

1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

*** For sale by all booksellers. Sent by mail, postpaid, on receipt of price, by the Publishers,*

THE bill striking out the word "male" from all election laws passed the Council of the Washington Territory Legislature, by a vote of seven to five, on the 16th inst. The Governor has expressed his intention to sign the bill; and it will doubtless become law in sixty days, the allotted time for bills to take effect.

THE Pope has sent a special pontifical benediction to a lady of Lafayette, Ind., who was recently cured, as it is claimed, after a long illness, by the use of the miraculous water of Lourdes. We hear much of the good done by the Pope; but who shall estimate the evil he has done and is doing to encourage ignorance and credulity and to perpetuate and strengthen superstition?

IT is said that Mormon missionaries are extremely active, and are making many converts in England and Wales. An anti-Mormon League lately formed in London has appealed to Mr. Gladstone to prosecute the Mormon missionaries, to prevent their inveigling young persons to Utah; but, through his secretary, Mr. Gladstone has declined to interfere, presuming that the converts go voluntarily.

THE Boston *Transcript* says, "Rev. Minot J. Savage has been commissioned chaplain of the First Infantry, *vice* Cudworth, resigned." If Mr. Savage is in favor of the complete separation of Church and State, we do not see how he can consistently accept a commission from the Commonwealth of Massachusetts for the performance of religious service. But perhaps we were in error in thinking he was in favor of State secularization, as expressed in the Nine Demands of Liberalism.

A LONDON despatch of the 24th inst. says: "William I. Ramsay, proprietor of the *Free Thinker*, who was convicted on the 5th of March last of publishing blasphemous libels and sentenced to nine months' imprisonment, was released to-day. He was escorted from jail by Mr. Bradlaugh and a large crowd of sympathizers, who cheered him, and was given a public breakfast at the Hall of Science. George W. Foote, the editor of the *Free Thinker*, who was convicted of the same crime, has yet to serve three months in prison."

PUBLIC feeling in England is deeply stirred over Egyptian affairs. The London *Spectator* says: "We must defend Egypt to the first cataract. We must hold the valley to Syene. At least, the troops must remain. If we retire, Egypt may be divided by insurrection or accept the Mahdi. That would mean the advance of a Turkish army to defend the Ottoman caliphate, which, if the Mahdi reached Cairo, would not be worth a week's purchase. Until the Madhi is defeated, the delta of the Nile must be garrisoned by British troops."

THE following is a despatch from Albany to the Boston *Herald:* "A well-known Methodist clergyman of this city has begun an active personal canvass among the Republican senators-elect, to secure the position of chaplain of the Senate, worth $500 per annum. He encloses to each member-elect a specimen copy of a prayer and of a sermon, and urges that no other denomination has been as earnest and united in its devotion to the Republican party as have the Methodists. He thinks this fact may be deemed worth recognition in selecting the chaplain of the Senate."

THE *Catholic Citizen* exultingly says that somebody declares in the *North American Review* that the Paine Building in Boston, "erected as a memorial to Thomas Paine, a few years ago, is now used as a church." One of the halls, it is true, is now let for a chapel on Sunday afternoon to a good liberal Christian, as we cannot occupy the whole of the large building. But the *Catholic Citizen*, with which we exchange, must know that Paine Memorial *has not* been changed from its original purpose, as insinuated. Cannot the reverend editor of that paper speak the truth, or does he follow the old Catholic maxim,—"Keep no faith with heretics"? —*Investigator.*

HENRY WARD BEECHER is very pronounced in his opposition to a protective tariff. At Cooper Institute, last Thursday night, he said: "The high tariff almost entirely releases wealth from taxation, and lays most of the burden upon the laboring classes. If there is to be a tariff, no trade should be exempt from its burdens. If there are to be incidental advantages to any class from a tariff, all considerations of good government and of Christian statesmanship are in favor of inclining these advantages to the struggling classes. I am profoundly opposed to a protective tariff, because it is essentially selfish and un-Christian, and because I am profoundly in favor of that unity and common brotherhood which belong to us in common with all the other nations of the world."

OUR Governor's Thanksgiving proclamation is thus referred to by the Boston correspondent of the *Christian Union:* "It is a striking orthodox paper in its recognition of the Trinity, as if its author aimed a shot at Dr. Bartol and James Freeman Clarke. It recommends festive observance of the day, and seems strangely sacrilegious in its application of Christ's sacramental words, 'Drink ye all of it,' to the cup of a feast. But I acquit the Governor of any irreverent intention; for I do not think he is susceptible of spiritual distinctions, does not recognize the difference between a festive supper, commemorative of God's natural bounties, and the Lord's Supper, commemorative of spiritual grace. Yet who shall say that there is not as much true religion in this *outré* effusion as there has been in some which were apparently the outflow of sentimental decorum?"

COMMENTING on a remark in *The Index*, in regard to a mass in a Milwaukee church for three hundred persons who perished in Lake Michigan twenty-three years ago, the *Catholic Review* says: "As to twenty-three years being a long time to dwell in purgative suffering, in one sense it is. A minute there, we are told, would ordinarily exceed all the sufferings of this life, such is the true character of offences against the Divinity and the punishment that they deserve. Is it then any wonder that the Church Militant ends all its solemn prayers with a cry for mercy to the Patient Church? Or is it wonderful that those who understand, as the Boston *Index* certainly does not, the true nature of purgatory and its possible duration, should, year after year, even century after century, pray for the repose of those who have gone before, no matter how high their rank, how great their services, or how apparent their holiness, unless when that is certainly declared by the Church?"

SAYS the Springfield *Republican:* "A fortnight ago, three Baptist ministers refused to visit the bedside of a dying man in St. Louis to administer religious consolation, on the ground that the man had the small-pox, and that they didn't propose to take it. In other words, they believed that he could do them more harm than they could him. Their position was doubtless well taken. But these three Campbellite Baptists have held since then a prominent place on the pages of the local religious press. The *Christian Evangelist* plainly and fearlessly draws the line at small-pox. Ministers may follow a sinner up to the walls of a pest-house and no farther. Beyond that, they have no power to shield a man from the eternal pit. Says the *Evangelist*, 'If men will not repent of their sins and live righteous lives, there is no hope for them through the intercessions of any priest on earth.' The Catholic Father Phelan, in the *Watchman*, just boils at such logic. If a priest is of no use at the death-bed, he is of no use at all. It is just terrible. 'These hireling preachers declare they will not "damage" their work in the city waiting on vile sinners at quarantine. Damage their city work? Damage! Sensible people would be tempted to use a shorter word, and apply it to both the preachers and their work.' It is whispered that Father Phelan has established a disinfectant fund, and will detail a force to do small-pox duty 'in order to further put to shame the Campbellites and all the Protestants."

THE SCHOOL OF "THE NEW HUMANITIES."

Last week, Mr. Kennedy spoke his earnest word in these columns for the new school which we have been advocating for the broader training of public teachers of religion. Mr. Kennedy comes from a recent experience of theological schools, and knows their defects when measured by the demands of modern thought,—their defects, especially, in preparing preachers for meeting the great social problems of the age. He also has a keen realization of the shortcoming of the great majority of the churches in the presence of these problems. Some of our readers may have stumbled over the long word which he coined to express the key-note of the new school that is needed; and some of them, after they had learned to pronounce the word, may have questioned whether it expressed his full meaning,—whether, long as it was, it covered more than half the key-note of a school which would be devoted to the study of "the new humanities," and have for special practical aim the bettering of man's condition in the world he now inhabits. But no reader could fail to be impressed with the earnest vigor with which Mr. Kennedy discussed the theme. And, by the way, his phrase, "College of the New Humanities," would not be a bad name for the proposed school.

This week, Mr. Mead has the floor on the same topic, in the communication which we print below, keeping the epistolary form in which he sent it. His broad culture and special knowledge of school and university systems, both in this country and abroad, give weight to his words. He also presents some facts with regard to Mr. Wade's offer that will be of interest to all who have a hope that that gentleman's generosity may become the basis of the school that is wanted. Mr. Mead has considerable acquaintance with Cleveland, and, we are sure, does not overstate the conditions there which are favorable for the establishment and success of such an institution. We heartily welcome his indorsement. Who next will take up the discussion? These several responses that have been called forth by our articles have been entirely spontaneous, and bear witness to an interest in the subject among persons representing various phases of liberal thought. This is a good omen. We shall be glad to hear from others in the same way. Meantime, we wish to add a couple of remarks, anticipating a possible criticism of the plan of the proposed school.

Of course, a school aiming specially to benefit public teachers of religion, but based on no special system of theology, would not suit sectarians. That is not expected. It would be one of its merits that it should not suit minds that are so narrow as not to see any possibility of religion divorced from a certain theology. But there are other persons, not of sectarian spirit, who may yet have the apprehension that the teaching in such an institution would be so largely given to social and secular subjects that the school would lack the religious and worshipful spirit which all preachers, of whatever sect, need to possess quite as much as they need a knowledge of sociological problems. With reference to such possible criticism, it may be said first that, so far as by "the religious and worshipful spirit" is meant personal earnestness, consecration, devotion to high ideals, this is something that goes into any school more through the character of the teachers than through any system of doctrine or special forms of worship. A whole-souled, single-hearted devotion to truth with enthusiasm for it beyond all things else, on the part of any professor, is a more potent influence over the young men who may come in daily contact with him than any so-called religious exercises. It is to be assumed that such an institution would seek men for its professorial chairs of the highest character as well as of the best ability and learning, and would thus secure this most powerful of all educational agencies.

But, if this criticism were to imply that the institution ought to furnish special religious exercises, yet would be debarred from doing so by its non-theological and non-sectarian character, it may be further replied that, without affirming that no union in such exercises would be feasible, a large city like Cleveland, or any other where such an institution would most naturally be placed, would furnish in its various churches and other religious organizations ample opportunities for services of this kind according to the preferences of the students. The members of the school, as Dr. Newton has pointed out, might be of various denominations. Some might come to it for its special instruction, after passing through their own denominational schools or even after having entered the ministry; and these might prefer to associate and work with churches of their own faith while in the school. For all such there should be full liberty, as also for those who might prefer to devote the same time to some practical philanthropy. The school would be designed, in fact, for men and women, and not for boys and girls; and, hence, it might be safely assumed that the character of the students would be pretty well established before their entering it. We believe that it would draw together a large number of earnest minds, thoroughly imbued already with the spirit of consecration, and only wanting to get hold of a better supply of tools for practical work. There is, indeed, a peculiar personal ability for moving other minds which is needed by every public teacher, and which no school can absolutely impart; but we see not why even this gift should not be fostered and strengthened in such a school as is here contemplated quite as much as in any of the ordinary theological schools.

P.S.—Since writing the above, a letter comes from a lady in New York, who writes as follows: "I was greatly impressed with your article in *The Index* a few weeks ago on the establishment of a scientific college which should supplement the teaching given in ordinary colleges for theological students. It was a proposition to which my reason and sense of a great need at once responded. I said to myself, 'I wish I were rich.' Then came Rev. Heber Newton's warm indorsement of the plan, and I asked myself if it were possible for me to help the project in any way. The matter has been present with me ever since; and, but for severe indisposition, I should have written to you before. I think I can spare $1,000, which I am willing to give to help the enterprise. This is, however, such a mere 'drop in the bucket' that I want to contribute it conditionally, so that it may bring more; and I should like my sex to share in the honor of inaugurating the College of Humanity. So I offer to be one of ten ladies (or fifty, if you please) who will contribute or raise each $1,000 toward the building or endowment of such a college within a specified time."

The woman who makes this generous offer modestly wishes her name withheld from the public, preferring to be designated simply as "a member of the New York Society for Ethical Culture." She adds that, though no longer young, she hopes and expects "to live to see the College of Humanity in full operation," and closes with "Yours for work *for and in this life*."

Who next will show the same faith by the same sort of works?

WM. J. POTTER.

THE WADE SCHOOL AT CLEVELAND.

Dear Mr. Potter:—

I have been exceedingly interested in the warm expressions of feeling concerning the establishment of a higher school of religion and philosophy which have recently appeared in *The Index*,—your own articles, and the words of Mr. Newton and Mr. Savage. I hope that this genuine revival of interest in the matter may not be allowed to cool until a proper assurance is given to Mr. Wade that anything he may choose to do in the matter will meet with the hearty gratitude and the intelligent and substantial co-operation of all the liberal scholars in America. It seems to me that the generous offer which he made, now nearly three years ago, and which he has kept open ever since, has not met with that response which he had a right to expect; and I do not see how any liberal scholar, or any one who has the interests of rational religion in America at heart, can have looked on all this time, seeing a man holding out half a million for the cause and nobody to take it or to act heartily and strongly with him in any way, without sorrow and amazement. I do not believe it has ever been a money matter with Mr. Wade. I believe—indeed, I think I have heard Mr. Wade himself say substantially this—that he would as soon give six hundred thousand dollars as five hundred thousand dollars, if he felt sure that so an institution of the highest order could be successfully established. But he has felt, and I think he is right, that he ought to have the very strongest assurance of support from the Liberals of the country before he acts. That assurance he has certainly never had. I hope that he is now going to get it. And, if he does get it, I do not doubt that his disposition in the matter is as free and forward as it has ever been. One thing, I think, is pretty evident: that, if Mr. Wade ever founds such a school now, it will have nothing whatever of the denominational about it. He will proceed almost as independently as Sir Josiah Mason did in establishing his great scientific school at Birmingham, and his friends will help as they can. As concerns the Unitarians, I think the delay has only done good; that is, if it has not defeated the enterprise altogether. None of the leading or thoughtful Unitarians now wants to see a simple Unitarian theological school established at Cleveland,—a larger Meadville; but that is what very likely would have been established, had definite action been taken when Mr. Wade's first offer was made. Mr. Hale was speaking to me on this point quite at length, before I left Boston. What is wanted, he said, is a school for the highest religious and philosophical studies, "a college for *men*." I think he used the same term (a Johns Hopkins for theology) which Mr. Newton used. He was writing something for the *Tribune* at that time on higher theological studies in America, referring to this very possibility of the Wade school,—an article which, I dare say, has already appeared; and he dwelt upon the importance, in connection with such a school, of lectures like the Hibbert Lectures, commanding men like Max Müller or like Matthew Arnold. If Mr. Hale speaks fairly for the best Eastern Unitarians,—and I do not doubt that he does very largely,—this shows that they have gotten quite beyond anything which the Western Unitarians have been jealous about in relation to the school. The Western Unitarians seem to me to be feeling very earnestly about the matter, never so earnestly as now. I understand that Mr. Batchelor especially is resolved to take energetic action, if there is any outlook; and Mr. Jones, of course, is energetic about everything. Cleveland and Chicago, he said the other day, are going to be for the

Digitized by Google

Middle States what Edinburgh and Glasgow are for Scotland,—Chicago the commercial capital and Cleveland the intellectual capital. All manner of important intellectual interests seem now suddenly to be centring at Cleveland. If the Wade school should really be successfully established there,—a school of religion and philosophy of a higher order than any in the country,—it would do more than anything else now to settle the fact that Cleveland is to be an Edinburgh, and make it one of the great centres of culture and enlightenment for the country.

I am very glad that you have taken this matter up so warmly in *The Index*, and I hope that your words may do much good.

Yours truly, EDWIN D. MEAD.

SUPERSTITIOUS LIBERALISM.

I define a superstition to be a (tacit) belief that an effect can be produced without an adequate natural cause,—*i.e.*, not by the operation of the fixed laws of nature. This definition is comprehensive enough to embrace all sorts of superstitions, from the belief in the personal and dictatorial supervision of Deity over every minutia of human affairs down to the popular faith in the efficacy of patent medicines, or the belief that a poker standing against the fire-place somehow helps the fire to burn.

Since its growth from mere instinct, intelligence has been more or less absorbed in efforts to penetrate the phenomena of nature. In its objective contact with things and its subjective intercourse with itself as a part of nature, the human mind continually has been confronted with mysteries both as to the essence of things and the conditions and laws of their manifestation. The natural history of reasoning is but the mind's struggle correctly to explain facts. These constant contacts and incessant inquiries have resulted in conclusions or rather notions which form the bases of human beliefs. Obviously, beliefs are true or false just in proportion as the conclusions which support them square with facts. For various reasons, furnished by heredity, experience, imagination, etc., inability to detect or comprehend natural causes inevitably gives rise to supernaturalism, as, under the circumstances, the only satisfactory explanation. The mind refuses to rest without some solution. This disposition to be satisfied with apparent explanations and reluctance to be stimulated by aggressive doubt produces a mental stagnation which gives superstitions easy dominance. Superstitions always thrive in that satisfied state of mind, without the fruitful curiosity which insists on knowing "how" and "why." Progress in knowledge (and therefore in beliefs) always follows that unsatisfied state of mind which insists on the constant revision of conclusions. All along the line of mental progress, new and more accurate conclusions have modified old beliefs, substituting new and more rational ones. The ever-increasing recognition of cause and effect in things is doing much toward undermining supernaturalism, which is nothing more than a belief, arising from false conclusions, that effects can happen without adequate natural causes,—is nothing more than superstition.

That the quantity and intensity of superstitions are exactly commensurate with the degree of ignorance is, I presume, a truism; and the fact that this superstitious ignorance is always present where there exists a want of scientific habits of thinking suggests a natural and inevitable antagonism between superstition and science. By "scientific habits of thinking," I mean those mental traits which result from the constant recognition in all the experiences of life of the natural law of cause and effect; for, psychologically viewed, science is nothing more than this recognition persistently made; while, objectively considered, science constitutes the combined products of knowledge resulting therefrom. Accurately to ascertain just what causes produced known effects and how they produce them, and to determine just what effects known or partially known causes produce and how they produce them, is the aim of the whole range of science from astronomy to sociology. No matter, then, what may be the character of the beliefs of an individual,—whether he be Christian or Liberal,—it is safe to make the *a priori* prediction that, in the absence of this habit of scientific thinking, this due recognition of cause and effect, we shall invariably find a certain dominance of superstition.

On a moment's reflection, it is perfectly clear that, while "sanctified" superstitions are a *sine qua non* of all religions of worship, there exists, outside of and independent of any and every theology, a vast array of superstitions of a non-religious kind, such as thirteen at a table, breaking a looking-glass, seeing the new moon over the left shoulder, unlucky Friday, a bird flying into the house, and the like. In most recent times, Liberalism has gained a footing and earned a respectability that was thought scarcely possible one hundred years ago. Of this change, science has been both the direct and indirect cause. A portion of the Liberalists are the scientists themselves, whose investigations have so absolutely demonstrated the ubiquity of the law of cause and effect as to put to flight from their minds all the elements of superstition. By far the larger portion of Liberalists are not scientists. Some know just enough of science—can reason sufficiently—to change their early religious beliefs, and, in others, the reflex influence of science on the popular mind has wrought the change. The continual deposit in their minds in childhood and youth of Biblical lore has produced a settled belief in spiritual personalities, chance happenings, coincidences mysteriously controlled, etc. Many such people have become liberated from their old religious beliefs from a variety of causes, none of which are directly traceable to scientific influences,—as from historic proofs, textual inconsistencies and contradictions of the Bible, reading Paine, Ingersoll, etc., hatred of hypocrisy, or from no known cause. As applied to this class, "free thought" means simply an emancipation from religious superstitions: it by no means signalizes a liberation from all superstitions. A common form which the resulting superstitions take is Spiritualism. The fact that we have many so-called "free-thought" publications, devoting a large portion of space and energy to the advocacy of this form of superstition, is significant of this tendency. In its very nature, Spiritualism is simply supernaturalism non-religionized. It involves the belief that pure spirit can possess intelligence, personal identity, and power over matter; that, through the manipulations of media, the dead converse with friends, relate experiences in spirit-land, make predictions, give warnings, etc. Their existence and manifestations are beyond the scope of nature, as we know nature, and independent of natural laws. That minds which revolt at theologies and to some extent repudiate their early thoughts should still retain and stand committed to such gross superstitions seems at first thought extremely unnatural, and is to be explained only on the basis of the marvellous hold methods of early thinking have on the mind and of the singular failure to comprehend the nature and scope of the universal law of cause and effect. But most children are *taught* to think superstitiously. Answers to their questions are drawn largely from supernaturalism. Persistently to drill children in the manifestations of cause and effect in things around them make Herbert Spencers out of them. That early education takes deep root in memory and powerfully influences subsequent life is one of the most inexorable laws of mind. We spend a considerable portion of our lives unlearning the lessons and unthinking the thoughts of our childhood, and very many utterly fail in the end to eradicate the errors. It lacerates the mind to revolutionize itself.

In view of these facts, it partially appears why superstitions still linger in minds liberated from the restrictions which the gross forms of religion place upon them, but which are not accustomed to recognize the natural cause and effect of things. To say the least, greatly circumscribed is the "liberty" of that mind which, when it repudiates supernaturalism, still fondly hugs a horde of superstitious notions. It has succeeded in making only the first step toward "free thought."

I knew a liberal-minded man, who, doubtless, prided himself that he had plucked the last thread of the root of superstition from his mind, to be thrown into violent alarm at a coincidence, which showed that his pride was false. It was past midnight in a sick-room. His only child, a babe of less than a year, was wild with fever. Its temperature was a hundred and five degrees, indicating dissolution. The physician's face wore a serious look. The mother, who was carrying her delirious offspring in her arms, was weeping. Each was asking in anguish the question, "Will it die?" To distract his mind from the awful thought, the father impulsively picked up a book lying upon a table, entitled *The Microcosm*, by Abraham Coles; and, mechanically opening it, his eye fell upon a line of poetry reading,—

"Impossible! 'Tis fixed. Your child must die."

Was it not an "answer" to his questioning fear? Could it be a mere coincidence without significance? Scarcely had his eye met the verse, when he threw the book into the fire, thus demonstrating its significance to his mind. The child recovered. This shows how ideas that have been eradicated from the brain sometimes linger in the nerves. The only way to emancipate the human mind from the bondage of superstition is by the proclamation of science. The futures of children's minds should not be hampered by teachings which, when they come to reason for themselves, they will find it necessary, but exceedingly difficult, to unlearn. For those who can appreciate the need in this regard, fortunately, the means are at hand. Religion no longer monopolizes morality or knowledge nor exercises censorship over science; and, like most other needed reforms, the most fruitful field for our efforts is with the young. In this particular there is infinitely more to be expected from the cradles than from the gray hairs.

EDWARD KIBLER.

WHERE ARE THE CHRISTIANS?

In a recent communication published in *The Index*, that publication is criticised for the treatment which "Christianity" is said to receive at its hands. The writer of the communication referred to thinks it is an outrage to represent Jesuitism and other "Satanic incarnations" as the outgrowth of the teachings and practice of Jesus. To that, I agree. To that, I think, *The Index* agrees. But the criticism suggests the question, What is there now existing which *has* grown out of the teachings of Jesus, what institutions proclaim, what people believe, those teachings? What position would one who believed those teachings occupy toward the

Digitized by Google

"Christianity" of to-day? Suppose one believes that "resist not evil" is a command given by divine authority to men who, by reason of their fallen nature, are unable, without the aid of revelation, to arrive at moral truth: how can he approve of the institutions of Christian governments, which resist, repress, and punish evil? Could such a believer demand the enactment and enforcement of Sunday laws, for example, which seek to resist a supposed evil founded, if on anything, on the very authority which says to us, "Resist not evil"? It will not do to say that an apostle has written, "Obey your masters," in determining what are the teachings of Jesus. We cannot recognize the right of the followers of Jesus to alter or amend his teachings. It would be a singular proposition, in view of the orthodox theory that he possessed infinite wisdom and power, that he was unable to express himself perfectly, and so that his words would need no amendment. Who believes that we should take no thought for the morrow, even *anxious* thought, when the welfare of family or friends demands it? What ecclesiastical body takes to itself the command, "Judge not, that ye be not judged"? The people who listened to Jesus heard him say, "Blessed are the pure in heart; blessed are the meek; blessed are the merciful." Would not the modern doctrine of atonement have been strange to them, proceeding as it does on the denial of human merit, the uselessness of good works by the "unregenerate," and the sufficiency of the acceptance of the benefits of the sacrifice of another?

"Give to him that asketh," is a proposition not easily misunderstood. Where are the Christians who believe in it? Is not the prevalent "Christian" belief better expressed in an address delivered before the Society for Organizing Charity, in Philadelphia, some years ago, in which occurred the following? "The churches should earnestly discourage all alms-giving, except in harmony with the principles of this charity organization, since giving without adequate inquiry has been proved to be selfish in the giver, hurtful to the receivers, wasteful of sacred resources, and therefore wicked"; and "the objective point to which we must push is to make services of good-will to the needy a part of the common morality, and to make undiscriminating charity seem as discreditable as the careless handling of fire-arms and as absurd as the use of a surgeon's instruments by an idiot."

If this is "Christianity," what is "Give to him that asketh"? "Swear not at all" is another precept violated by every Christian government and community, the pretext being, I suppose, that "profane" swearing was meant. It is hard to believe that the whole Christian world honestly suppose that to swear "by the heavens" or "by the earth" would be profane, but to swear "so help me God" is perfectly innocent. If there is any reconciliation possible between the pretended Christian belief and the actual Christian practice, or between Christ and modern Christianity, the exhortation of the apostles to believers to be diligent in business becomes strikingly prophetic; for diligent we must be, when it is absolutely necessary to have a learned D.D. constantly at our elbow, if we are to be enabled to square our belief in Christ with our belief in Christianity as agreed upon by the Christian world. For, though our revered instructors may be true successors of the apostles in infallibility, the command to carry no scrip in their purses has in some way failed to descend "in an unbroken line" to the present day. That a rich man shall hardly enter into the kingdom of heaven is believed by only poor Christians; and, among them, it is to be feared that doubt is common. "Of him that taketh away thy goods ask them not again," is the teaching of Christ; but the practice of Christians is to ask earnestly, and, if that fails, all Christian governments furnish courts to enforce the demand. "Go, and sin no more," was the admonition of Christ to the repentant sinner; but Christian laws take no notice of repentance, and Christian society gives to the fallen little chance to rise. There is, however, some appearance of a disposition to accept the teaching of Christ in this respect; but belief in it is still not common.

The precepts referred to constitute the body of the *original* teachings of Jesus. One cannot be said to believe in the teachings of Christ because he agrees to those things which he taught, which were in his time and before his time and still continue to be part of the common morality of the people, such as common honesty, the rendering to Cæsar the things which are Cæsar's. If Christianity is belief in the teachings of Christ, where are the men who believe in those teachings in those respects in which they differ from the teachings of all moralists, in all ages, among all people sufficiently civilized to have an organized government? When we come to reflect upon what his (own) teachings were, would we be surprised to find modern "Christians" who did not believe *one word which he ever spoke to the people about him* which could properly be called *his*, and that, too, among those who are willing to accept the benefits of his supposed expiation of their sins? If any considerable belief in his teachings is uncommon, if it is negatived by the creeds of the churches of Christendom, if it is disproved by the institutions and laws of "Christian" governments, how is criticism of "Christianity" inconsistent with reverence for Christ? And, in regard to imitation of the practice or conduct of Christ, can the orthodox claim to be better than others? Viewed from a rationalistic stand-point, his conduct was noble, brave, and honest (supposing him to have claimed no supernatural powers). Viewed from the orthodox stand-point, he is equally entitled to respect.

Considered as man or as God, his love for his fellow-men entitles him to our gratitude and love. Whether man or God, his death was a sacrifice for the good of man; and the contemplation of it ennobles us. To determine whether the orthodox or unorthodox best imitate his conduct would require a complete knowledge of the outer and inner life of every person on earth; but a few suggestions may show the necessity of modesty and charity. The cowardly principle of shunning the *appearance* of evil is totally inconsistent with the conduct of Christ. He shocked, not only the *immoral*, but more especially the *moral* sense of the community in which he lived. He shocked the ideas of the people on the subject of keeping the Sabbath; he spoke disrespectfully of their spiritual guides; he put new constructions on the commands of their sacred book; he offended the priesthood by claiming that he and those who followed him should be the true sons of God, thus depreciating sacrifice and priesthood and temple. He was punished for blasphemy, for speaking against the old and established, and therefore sacred. Who are in most danger of such punishment to-day, the "Christian," who may not believe any of Christ's teachings, or the heretic who may believe, at least, part of them? Suppose he should come again: who are doing best to prepare the world for his coming? I am not supposing that he should come with infinite power producing the total destruction of all existing things, but that he should appear again, a young man of humble parentage, the son of a carpenter, born in a humble station, without the "advantages" of priestly training, not even a "Rev." to his name, and should begin to preach to the common people a doctrine as far from our Orthodoxy as from the Orthodoxy of the Pharisees, a doctrine shocking the "moral sense" of the community of our day as it shocked the moral sense of the chief priests, preaching to the people, for example, the uselessness of churches and missionary societies as now conducted, the errors of orthodox theology, denouncing the ministry and holding up our most esteemed leaders to derision and contempt, what fate is the "Christian" world preparing for him? A prophet without honor in his own country, what would be his reception in Delaware?

In how many of the States of free America could he do this without finding himself in the county jail? How many Christian countries would harbor Christ? One of two things must then be true. If modern Christianity, modern Christian laws and institutions, are founded upon the teachings of Christ, his teachings would result in his own punishment, and thus be proven false. If modern Christianity, modern Christian laws and institutions, are not founded upon the teachings of Christ we have the authority of Christ's teachings for attacking them. If his teachings were false, they deserve attack. If they were true, it is evident that they are not so commonly believed as to have given character to the laws and institutions which now prevail in so-called Christian countries. Those laws and institutions, so far as they give power to Church or State to harass and oppress any bearer of any new truth, we, as Liberals, oppose. As long as such laws exist there can be no presumption that orthodox Christianity is true Christianity. A "Christian" community which does not believe the teachings of Christ has no right to claim exemption from attack either for its "Christianity" or for the teachings of Christ which it itself rejects.

A. L. DAVISON.

EDITORIAL PARAGRAPHS.

THE best army Egypt was capable of putting in the field has been defeated in the upper valley of the Nile by the forces of that shadowy character whom few have seen and few know, the Africo-Arabian El Mahdi, the False Prophet. It is not surprising that the Egyptian authorities now feel concerned as to their safety in the original provinces of the country. The disaster in the Soudan will probably consign that region to the rule of the dervishes and the slave-dealers; and if the Prophet be a natural leader and commander, capable of acting upon a well-defined plan, and shall take up the rôle of an invader, nothing but English interests at stake in Egypt will be likely to save that land from desolating strife. The significance of the success of El Mahdi at El Obeid even extends beyond the confines of Egypt. The Mohammedan century begins with the first of our month of November, dating from the flight of Mohammed from Mecca to Medina; and this is the time that has long been looked to for a messiah, a warrior as well as a priest and prophet, expected to come and reform abuses, enforce the true faith, and regenerate the world. This is a tradition that has been cherished as a part of the religious faith of all true believers of Islam. Should the Prophet, with the start he has obtained, advance down the Nile valley, calling upon all true believers to join his victorious forces, no little inconvenience might be caused those European powers that rule over Mohammedan subjects. But, fortunately, every Moslem government is interested in checking the growth of this reactionary movement, which regards present rulers as the sycophants of European influence. Even were this not so, the army of El

Digitized by Google

Mahdi, the Mohammedan messiah, would be likely to stop considerably short of the conquest of the world; for his army, although successful against the Egyptian troops, would stand a poor chance in a contest with English soldiers, or a force drawn from any of the leading countries of Europe.

A GENTLEMAN paid a dollar to witness some wonders at a Spiritualistic séance in New York city the other evening. "In the spirit land," said the medium, a girl of fourteen, "we have a variety of musical instruments. This young and gifted medium is the only human being who has ever been able to render their sounds audible to mortal ears. She will make you hear any tune that may be called for. Speak!" The medium was securely tied in a chair, the only article of furniture in the cabinet, when the manager of the circle, the father of the girl, announced that the music about to be heard would be that of a church organ. A number of popular tunes were played on what one of those present, at least, concluded was a new kind of miniature organ, worked by pulling through it perforated paper. This gentleman, in a communication to the Boston Sunday *Herald*, says: "I was on the committee against fraud; and, when the door was opened, revealing the medium tied fast in the chair, I was invited to see that the knots were secure. In the performance of that duty, I took occasion to search for the concealed organ. The chair was common, except that its upholstered bottom seemed thicker than its general style warranted. I felt underneath; and there, covered by a removable lower cloth, was fastened the real medium of musical communication between the spirits and the audience. The alert girl was quick to play a part in which, doubtless, she had been carefully instructed. 'What are you doing, sir?' she exclaimed, rising in all the wrath of insulted innocence. Every Spiritualist in that company of forty or so believed that I had taken some outrageous liberty with the tender creature. She completed her task expertly by bursting into hysterical weeping. The fond father came hotly to the front. I grabbed up the chair. He slammed it down. I protested that I wished to investigate. 'You have disturbed the harmony of the circle,' he said, repressing his resentment with a carefully manifest effort; 'and I will cheerfully refund your dollar, if you will kindly go.' I departed, leaving those Spiritualists confident that the medium was a phenomenon, and I an affronting wretch." However much there is occurring under the name of Spiritualism worthy of serious attention and scientific investigation, trickery and fraud like the above, which are practised by hundreds of so-called mediums, can receive no encouragement from intelligent and honest men and women, be they Spiritualists or non-Spiritualists.

OF the able and valuable work noticed in *The Index* last week, *L'Evolution Religieuse Contemporaine chez les Anglais, les Américains, et les Hindous, par le Comte Goblet d'Alviella, membre de la Chambre des Représentants de Belgique*, a writer in the London *Inquirer* says: "The work occupies, I think, a unique position in literature, inasmuch as it presents an elaborate historic and unbiassed view of the various consecutive phases of religious rationalism in England, America, and British India, from the stand-point of sympathetic critical appreciation. It is to be greatly hoped that Mr. Moden (who has just translated M. Hocart's admirable *Conference on Atheism*), or some other equally competent person, may ere long present a translation of *L'Evolution Religieuse* to the general English public. To the various sections of Liberal Christianity—Unitarianism, Theism, and Rationalism—in our country and abroad, the work is of paramount interest, bringing, as it does, the subject-matter of J. J. Tayler's *Retrospect*, but in a more comprehensive mode, up to the present year. The learned and impartial author, writing from intimate personal knowledge, conveys even to the ordinary reader a complete idea of English-speaking Rationalism and its origins."

AT a meeting of the New York Spiritualist Aid Society, held on the 17th, one of the speakers, a lady, was "controlled" by Mr. E. S. Wheeler, who died in this city on the 12th. A correspondent of a Spiritualistic paper says, "His marked characteristics of decision of utterance, freedom of speech, and eloquence, were clearly defined; and all seemed impressed with the reality of his presence in spirit and in truth." But, so far as we have seen, no communication has yet been published from or concerning Prof. Denton, the able, widely known, and highly respected writer and lecturer on Spiritualism, whose death occurred some months ago in a far distant land,—Java, it is thought,—regarding which event, however, no word has been received beyond a telegraphic despatch from one of his sons, stating that his father was dead. Does uncertainty in regard to the place and circumstances of the death of this distinguished advocate of Spiritualism, in the minds of spiritual mediums to whom spirits show themselves, and talk face to face every night in Boston, New York, and Chicago, make the conditions so unfavorable that he cannot send a message to his friends to relieve them of painful doubt and anxiety caused by a meagre despatch, leaving them in ignorance whether he perished at the hands of savages, by the volcanic eruptions, or by disease, whether among strangers or attended by his sons? B. F. U.

EDITORIAL NOTES.

ALL associations or individuals desiring to arrange for lectures by B. F. Underwood the coming winter are requested to address him at an early date, the earlier the better, to enable him to plan his route systematically.

DR. FELIX L. OSWALD'S brilliant papers, published in this journal under the caption of "The Secret of the East," will be issued this week in a handsome volume. Price $1.00.

THE *Christian Register* remarks, "Martin Luther, not believing in the inspiration of the book of James, and disparaging other books of the Bible, could not have been admitted to the Washington City Presbytery."

"THE tales of Virginia Democrats," says the Springfield *Republican*, "about bloodthirsty Danville negroes, remind one of the fellow who was caught killing a sheep in another man's field, and explained the matter by saying: 'When I'm goin' along all peaceable, there can't no dang animal as wears wool run up and bite me! You hear *me!*'"

THE Woman-Suffrage Sociable in this city on the evening of the 21st was a pleasant reunion. Mrs. Julia Ward Howe, with Lucy Stone for her right-hand assistant, presided in her usual graceful manner. A large company was present. A touching allusion was made by Mrs. Howe to the loss sustained by the death of their noble co-worker, Charles H. Codman.

THE wedding presents of a minister's daughter who was married in Westfield, Mass., Oct. 16, 1768, are thus chronicled by her father, Parson Ballentine, "1 gal. rum, 2 qts. do., leg of mutton, 1 qt. rum, 2 do., brandy, flour and suet, some butter, pig, 2 qts. rum, a loyn of mutton and butter, some cranberries, a pig and three fowles, a piece of veal and suet, apples, cabbage and potatoes, 2 fowles, 2 qts. brandy." This reminds us of Falstaff's account,—"one half-pennyworth of bread to this intolerable deal of sack!"

MRS. CLARA M. BISBEE'S Free Religious Society at Dorchester will hold a fair at Lyceum Hall, its usual place of meeting, on Wednesday, December 5, from four to ten P.M. Mrs. Bisbee is a worthy worker in the cause of liberal religious thought; and she and those who are helping her to sustain the excellent society for which she speaks every Sunday deserve, at least, such encouragement and aid from the liberal men and women of Boston as they can render by their presence and patronage at this fair. The "Meeting-house Hill" cars, which leave Temple Place on the hour and half-hour, convey directly to Lyceum Hall. Admission to the fair, fifteen and ten cents.

WE quoted recently from a Spiritualistic paper published in the West, protesting against "test" conditions,—that is, conditions preventing the possibility of fraud at circles for communing with the spirits. The protest seems to have awakened feelings of gratitude among mediums, one of whom thus writes to the journal above referred to:—

> I have read your admirable editorial, . . . and hasten to express my thanks for the position you have taken, and to add a word, hoping to strengthen others who are developing in the various phases of mediumistic work. After sitting some months under test conditions, I became satisfied that I did not, in that way, get the best results possible to be attained; and since that was what I aspired to do, and as my soul rose in hot rebellion against the indignities of the tests proposed, I foreswore them altogether, and for the past two years I have permitted inspection of the cabinet only. The result of the change has been so wholly satisfactory that I feel it a pleasure and a duty to speak of it, for the encouragement of other mediums. There has been and still is a constant gain in the power and variety of manifestations which my increased comfort in release from torture has made possible.

SAYS the *Radical Review:* "The distribution of wealth, it seems to us, will always be unequal in direct correspondence with the natural inequalities of men's capacities for acquiring it honestly. We see no reason, in justice, why such inequality should not obtain. It must obtain, unless we destroy the incentive in man to labor. But communism or socialism will not recognize difference of capacities for work in men. On the ground 'that the time and service of one man is equal to the time and service of any other man,' communism advocates 'equal pay for equal time' 'as the nearest approach to exact justice.' . . . At the recent international conference of workingmen at Paris, the difference between French and German feeling on the labor problem on one side, and of English feeling on the other, was brought to light. German and French workingmen urged pressure upon the government for a solution of the problem. The English workingmen resisted the proposal of any legislation, except such as was needed for the protection of women and children, and referred with pride to the work of their trades unions. Instead of waiting for the government to lift them out of their misery, English workingmen have undertaken the task themselves. In consequence of this, we find little of communism among English workingmen as compared with German and French workingmen. And the fact is that, however short the condition of English workingmen may fall of what it ought to be, it is on the average preferable to that of their continental brethren."

THE SONG OF THE REFORMER.

How can I live in a world like this,
So filled with the base and the evil?
How can I help but believe in my heart,
When I examine it part by part,
That God will be killed by the Devil?

Does not the wrong rule over the land,
Are the poor not sold in the shambles?
Are not the leprous slaves of the cup
By every hearth-fire burning up
The souls for which the fiend gambles?

Up and down through each city's streets
Do not the lost women wander?
Sick unto death with the horrible blight,
The canker and worm of their piteous plight,
On their case can I fail to ponder?

Are not the children crying for bread
In the reeking haunts of the cities,—
Crying for care, for nurture, for love,
With cries which might rend the heavens above,
If there be there a God who pities?

Is not the brute in the busy mart
Sinking 'neath lash and labor,
Standing with great and piteous eyes
Lifted appealingly up to the skies,
'Gainst man, his cruel neighbor?

Are not the weak oppressed by the strong
Through every rank and station?
Do not the liars and hypocrites stand
In the holiest places in all the land,
For pay dealing out salvation?

Oh, how can I live in a world like this,
Unless with a sword I can smite it;
Unless I can clean the wrong with my hand,
Apply to the evil the burning brand,
And aid somehow to right it?

I must tear and rend with a purpose firm
To leave no wrong unrighted;
No peace, no quiet, no idle days
To the man God calls to mend the ways
Of the earth so sad and benighted.

But a mighty faith must bear me up,
Or I faint and fall in blindness.
If zeal and passion and faith unite,
Then wrong itself must yield to right
And the reign of eternal kindness.

HATTIE TYNG GRISWOLD.

For *The Index*.

THE SUNDAY LAW.

I've two neighbors living nigh,
  One is Jones and one is Walker:
Walker is a mechanist,
  Jones a polished pulpit talker.
Both are honest, pleasant men,
  Both have families to work for,
Both stand hand to hand with toil,
  Neither 've lazy souls to shirk for.

But it puzzles me to solve
  How the church-folk view their labor.
Jones on Sunday earns his cash,
  All on week-days must his neighbor.
Let me, in my plain, blunt way,
  Put in shape my homely query.
Help me, reader! Knotty snarls
  Always make my poor head weary.

What I wish to know is this,—
  Why is Jones a petted worker,
Earning, Sunday, clothes and bread,
  Walker but a guilty lurker,
If on Sabbath morn he goes
  To his work-shop, still and quiet?
Jones would have the Christian's praise,
  Walker rouse them to a riot.

Work is work, and cash is cash,
  Men are men, and Sunday Sunday.
Jones and Walker both are right:
  God works Sunday just as Monday.
Why do not his little folk
  Bluster up and serve indictment
That he wheels the earth ahead?
  That would be a rare excitement!

EMMA TUTTLE.

The Index.

BOSTON, NOVEMBER 29, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

Some Characteristics of George Eliot.*

BY R. W. BOODLE.

It is perhaps fortunate for Miss Blind's reputation that her volume upon George Eliot forms one of a "series" ("Famous Women Series"), the readers of which will not demand a high standard of excellence or much originality in their literary guides. And yet, in regard to George Eliot, the time has hardly come for a meagre outline such as that given in the work before us. From the first regular attempt to set forth the life of the great novelist, we naturally expect to get something better than mere clippings from the scattered eulogies that followed her death. Yet, to those who followed the monthlies and quarterlies after George Eliot's death, Miss Blind's little volume has little new information to give. Not to mince matters, our first life of George Eliot is little better than a creation of the scissors. Into the secret history of her life she does not attempt to take us.

The following, for instance, is all that we learn about a step that surprised many of us,—her marriage with Mr. Cross. "One day," we read, "George Eliot not only took the world, but her intimate circle, by surprise, by her marriage with Mr. John Walter Cross, on the 6th of May, 1880. The acquaintance with this gentleman, dating from the year 1867, had long ago grown into the warmest friendship, and his boundless devotion to the great woman, whose society was to him his daily bread, no doubt induced her to take a step which could not fail to startle even those who loved her most. But George Eliot's was a nature that needed some one especially to love. And, though that precious companionship, at once stimulating and sympathetic, which she had so long enjoyed, was taken from her, she could still find comfort during the remainder of her life in the love, the appreciation, and the tender care which was proffered to her by Mr. Cross."

We are thus debarred, in discussing the genius of George Eliot, from many interesting, if possibly uncertain, speculations upon one side of our subject by the fact of our ignorance of the inner life of the great authoress. A hint may here and there be obtained from similarities between her *Poems* and *The Mill on the Floss;* but, until her life has been written and her heart laid bare by one who knew her well, George Eliot herself must be an enigma to most of us. It is impossible, for instance, for us to say how far she drew upon her own experience for the details of disappointing marriages with which her novels are full.

As it is, if we consider the bare outlines of her life, we cannot help finding in her early connection with George Henry Lewes, and still more perhaps in her over-hasty marriage that followed Lewes' death, facts hard to reconcile with the conception of duty and sentiment she has made us familiar with in her books, as well as with the character—a combination of devotion with moral and intellectual firmness—stamped upon the massive outlines of a face recalling the features of Savonarola, of Dante, of Carlyle, and Cardinal Newman. Perhaps there is little more to know, and her inner life merely requires an interpreter of analytical powers hardly inferior to her own. However this may be, any one who might feel inclined to speak harshly of her example should remember, by way of caution, the judgment that the neighborhood of *Middlemarch* passed upon her own heroine, Dorothea, "as a fine girl who married a sickly clergyman, old enough to be her father, and in little more than a year after his death gave up her estate to marry his cousin, young enough to have been his son, with no property, and not well born," and, therefore, as unlikely to have been "a nice woman."

In turning from her life to her work, the student of George Eliot will find much assistance from the volume of *Essays* given us by Messrs. Funk & Wagnalls. The boon is so great that he will forgive them for reprinting the silly essay by Mr. Sheppard, on the Analysis of Motives, that serves as introductory to the volume, though we cannot repress the desire to ask whether these are all, or nearly all, the essays she printed during her literary apprenticeship? The writer of her obituary in the *Academy* (No. 453) at least mentions a paper on "Weimar and its Celebrities" (1859); and Mathilde Blind shows cause to attribute a share to George Eliot in a *Westminster Review* article upon "Realism in Art: Recent German Fiction," as well as the sole authorship of another upon "Margaret Fuller." We must be thankful, meanwhile, for what we have, enabling us, as these Essays do, to see more clearly the qualities that have made her undeniably the greatest Englishwoman in literature; while, as a novelist, she stands in the first rank, with Thackeray, among the successors of Miss Austen and Walter Scott.

The first quality of George Eliot's mind is the high tone of culture that pervades her writings. We can detect no gaps in her mental outfit. Her intellect belongs to that class fitly termed "encyclopedic," that includes such giants as Dante, Ben Jonson, and Milton. It is interesting, from this point of view, to notice the late date at which her first book of decided genius was published. Born in 1819, it was not till the year 1857 that "Amos Barton," the first of the *Scenes of Clerical Life*, appeared in *Blackwood*. Upon this point of culture her *Essays* are illustrative. They enable us to find out the subjects in which she took most interest, the defects she detected in her predecessors, the standard at which she afterward aimed in her novels. In criticising "Silly Novels by Lady Nov-

Digitized by Google

elists," she points out the cause of the failure of so many of her own sex :—

"It must be plain to every one who looks impartially and extensively into feminine literature that its greatest deficiencies are due hardly more to want of intellectual power than to the want of those moral qualities that contribute to literary excellence,—patient diligence, a sense of the responsibility involved in publication, and an appreciation of the sacredness of the writer's art. In the majority of women's books, you see that kind of facility which springs from the absence of any high standard; that fertility in imbecile combination or feeble imitation, which a little self-criticism would check and reduce to barrenness; just as with a total want of musical ear people will sing out of tune, while a degree more melodic sensibility would suffice to render them silent."

A second note of George Eliot's works is the impartiality and absence of prejudice that they show, —a quality that should naturally result from a high tone of culture, but to which, it is easy to see from the *Essays*, she did not attain without effort. It is only right, while noticing this mark of her mind, to call attention to exceptions. She has hardly the supreme impartiality of Homer, Virgil, and Scott. There is always, for instance, a perceptible under-current of satire when she is describing what she would call sarcastically "good society." This is not so obtrusive as in Dickens, but its presence is undeniable. Now, to a fair-minded man, there seems no reason why a commonplace "gentleman" should be more an object of ridicule than a commonplace artisan. In the short but admirable picture which opens Mr. Mallock's late work on *Social Equality*, we find a description of the effects of a large barouche upon the by-standers of an English country town: "The solicitor squints at it. The farmer touches his hat to it. The rector waves his hand to it." George Eliot is one of those that squint at it. She does not seem content to take gentility as a fact of life without repining. Like Carlyle in her extraction, she feels—though she does not weary us with her iteration of it—a contempt for gigmanity. Similarly, and perhaps as a corollary of this, she is hardly fair in the pictures she gives us of the average English ecclesiastic of the day. Dissenters in the present and the Catholic priest of the past are described with perfect fairness. There is always some drawback found in her pictures of the commonplace English churchman. And, while she is unfair to blood and contemporary orthodoxy, unredeemed by eccentricity, she shows a woman's partiality for a type of character unendurable to her male readers, at least,—for Daniel Derondas, with one hand on the flap of their coat, for the feeble Will Ladislaw. "Sometimes," she writes, "when he took off his hat, shaking his head backward and showing his delicate throat as he sang, he looked like an incarnation of the spring whose spirit filled the air,—a bright creature, abundant in uncertain promises."

Culture and impartiality, however, are rather conditions of eminence than qualities that insure it. We must now turn to what seem to be the *differentiae* of her genius. First among these we must rank the success with which she has blended in her best works the ideal with the real. While her studies from the life, such as Celia, Mrs. Poyser, Caleb Garth, and the two old Tullivers, are hardly inferior to those by Miss Austen or Thackeray; in ideal characters, like Tito, Silas Marner, Dorothea, and Gwendolen, we have masterpieces worthy of a place by the side of Homer's Achilles, Æschylus' Prometheus, Hamlet, or the Blind Harper in *Wilhelm Meister*.

To explain the combination of these qualities, it must be remembered that George Eliot wrote just at the turn of the tide. A reaction in literature was beginning from the Pre-Raphaelitism of Wordsworth that had culminated in Thackeray. It is very important to grasp clearly the outline of this side of the literary life of our century, for its influence is important. Let me illustrate it more fully by reference to the poems of Tennyson, extending over the entire period. Realism in poetry is of course different in degree from realism in prose, yet it is obvious that Tennyson's early domestic idylls were written under the influence of the Pre-Raphaelite school of Wordsworth. The turn of the tide is marked among other things by his first volume of the *Idylls of the King*, published in the same year as George Eliot's *Scenes of Clerical Life*. As one of the latest results of this stream of reaction, we may instance Mr. Shorthouse's *John Inglesant*. Our own days have beheld a counter reaction to realism in the writings of Zola and the novels of the American school,—a reaction which corresponds with and is marked by the low-life sketches of Tennyson's *Ballads and Poems*. By this latter reaction George Eliot was uninfluenced. Beginning as a Pre-Raphaelite, as a follower of Wordsworth and Thackeray, her works exhibit as they go on the increasing influence of the idealistic school. Another point should also be remembered in explanation of this twofold side of her literary character. She was a devoted admirer, an acknowledged follower, of the great Sir Walter,—like herself at the same time, as in his Meg Merrilies and his Dandie Dinmont, an artist of the ideal and the real school.

Realism, however, is with George Eliot the primary fact,—realism to which she considers the true antithesis to be, not idealism, but "falsism." Charlotte Brontë had succeeded in arousing our interest for ugly heroes and heroines, while Lawrence had abandoned the ideal of a high moral standard in either case,—indeed, had gone into the other extreme. But George Eliot turned all her characters into heroes and heroines, making them all alike interesting, all human. Another innovation, for which she deserves gratitude, is her determination to view marriage, not as the end, but as the beginning of mental development and of the interest of the story. Positivism, in a practical sense, is the key-note to her literary work.

I will illustrate George Eliot's feelings with regard to the true representation in fiction of the lower classes—a side upon which her transcendent realism is shown at its best—by a passage from her essay upon the "Natural History of German Life":—

"The thing for mankind to know is, not what are the motives and influences which the moralist thinks *ought* to act on the laborer or the artisan, but what are the motives and influences which *do* act on him. We want to be taught to feel, not for the heroic artisan or the sentimental peasant, but for the peasant in all his coarse apathy, and the artisan in all his suspicious selfishness. We have one great novelist, who is gifted with the utmost power of rendering the external traits of our town population; and, if he could give us their psychological character—their conception of life, and their emotions—with the same truth as their idioms and manners, his books would be the greatest contribution Art has ever made to the awakening of social sympathies. But, while he can copy Mrs. Plornish's colloquial style with the delicate accuracy of a sun-picture, while there is the same startling inspiration in his description of the gestures and phrases of 'Boots' as in the speeches of Shakspere's mobs or numskulls, he scarcely ever passes from the humorous and external to the emotional and tragic, without becoming as transcendent in his unreality as he was a moment before in his artistic truthfulness."

From criticising the art of Dickens, she turns to point out the need of a true conception of vulgar life:—

"If we need a true conception of the popular character to guide our sympathies aright, we need it equally to check out theories, and direct us in their application. The tendency created by the splendid conquests of modern generalization, to believe that all social questions are merged in economical science, and that the relations of men to their neighbors may be settled by algebraic equations,—the dream that the uncultured classes are prepared for a condition which appeals principally to their moral sensibilities, —the aristocratic dilettantism which attempts to restore the 'good old times' by a sort of idyllic masquerading, and to grow feudal fidelity and veneration, as we grow prize turnips by an artificial system of culture,—none of these diverging mistakes can coexist with a real knowledge of the people, with a thorough study of their habits, their ideas, their motives."

In this extract, we are brought face to face with another side of George Eliot's genius. If she blends idealistic with realistic art, she is equally a writer with a purpose; and the perfection of her best works lies in the skill with which she has interwoven the moral element as a necessary part of her story,—the lesson being merely suggested by the facts. Though *The Mill on the Floss* and *Romola* are as free from sermonizing and Teutonic displays of tendency as a play of Shakspere or a Waverley novel, they are far more instructive than the moral allegory of Johnson and Goldsmith. Her success in this, we know, was only for a time supreme. In *Felix Holt* and *Daniel Deronda*, perhaps also in *Middlemarch* itself, tendency has at least partially mastered her genius. But in *Silas Marner*, in *The Mill on the Floss*, and *Romola*, the blending of the two motives is as perfect as in Sophocles. The explanation of this fact lies in her conception of life. As a realist, she views life as a whole. The supremacy of conscience, the binding force of morality, is as much a part of our inherited nature as the love of pleasure or the desire of self-preservation. Of the importance of conduct as a part of life, she is as fully convinced as any follower of Matthew Arnold. It is therefore legitimately a subject of art. And her treatment gives a richness and fulness to her themes that we desiderate in Scott or Thackeray, that we do not feel the loss of in Jane Austen, because we judge her much as we should Ben Jonson or Fielding. Let me explain myself more fully.

To Virtue, no great writer has done more servile homage than Sir Walter Scott. In her interest, he has sacrificed all his heroes and heroines, with the exception, perhaps, of Edgar Ravenswood and Di Vernon. Virtue is everywhere triumphant, but triumphant as a goddess; and, therefore, the service that Scott does her is homage, but not appreciation. He welcomes her as Hamlet bids Horatio give welcome to his father's ghost,—as a stranger. The intricacies and shades of moral action, as one feels them with the self-deceived Bulstrode, with the brilliant Tito, with Maggie Tulliver, play no part in his creatures of flesh and blood. I think it is Carlyle who says that Scott paints mankind from the skin inward. I should rather put it that he wrote too much under the influence of the antithesis between the natural and the spiritual. Thackeray again is different from Scott, but he differs as widely from George Eliot. If Sir Walter felt toward virtue and the proprieties and moral feeling, and so on, as the Red Cross Knight does to the Fairy Queen, Thackeray regards them like an artist,—merely as profitable materials for his studies. A deep religious feeling is as appropriate to Col. Newcome as a scientific moral coloring to his old friend Benny, the student of David Hume; and we must own the old Colonel's concluding "*Adsum*" is very effective from the artistic and sentimental point of view. Many men, when they came to it, have doubtless felt deeply affected, just as they have been by the pathetic tags with which Dickens closes a scene or a book. But

Digitized by Google

the art is too apparent; and it does not sensibly affect our estimate of Thackeray, as the admirable stylist, the novelist of fashionable club morality. Give me rather Scott with his distant reverence, than Thackeray with his patronizing familiarity!

The leading conception of our moral life, upon which, it seems to me, George Eliot dwells most constantly, is its final importance, which she views alternately from the humorous and the pathetic side. "To us, it is conceivable," she writes, in her Essay upon Young, "that in some minds the deep pathos lying in the thought of human mortality—that we are here for a little while and then vanish away, that this earthly life is all that is given to our loved ones and to our many suffering fellow-men—lies nearer the fountains of moral emotion than the conception of extended existence." As parts of this doctrine, we find a high conception of duty,—its neglect sometimes leading to lifelong sorrow, as in Godfrey Cass, sometimes to moral ruin, as in Tito, sometimes—and here her realism, and, I had almost said, her humor, is apparent—to nothing in particular, as in Stephen Guest. Maggie, who rejects the cup of pleasure at the promptings of duty, lives to be shunned as an outcast and to perish prematurely. Stephen, who tempted her, survives as the husband of his first love. Similarly, obedience to duty is sometimes, as in the case of Silas Marner, rewarded; at other times, as with Romola, it only leads to peace after long years of sorrow. But the conception is ever present, ever held in high honor. The persistence of evil and good in their effects upon character is but another side of the same doctrine, and illustrated pre-eminently in the characters of Tito and Bulstrode, but no less effectively, though from rather a different point of view, in the sketch of Mr. Gilfil. "The trivial erring life," she writes, echoing the words of Aristotle,* "which we visit with our harsh blame, may be but as the unsteady motion of a man whose best limb is withered." With George Eliot, our life here is ever sacred, too sacred to be misrepresented as necessarily fortunate because virtuous, too sacred to be be-littled by comparison with another hereafter. She is equally opposed to the worldliness and the other-worldliness of the poet Young. Even those, and they are many, who have little sympathy with an agnosticism which relegates a belief in immortality to the rank of a bygone superstition, may learn much from her criticism upon his lines:—

"Far beneath
A soul immortal is a mortal joy."

"Happily for human nature," she writes, "we are sure no man really believes that. Which of us has the impiety not to feel that our souls are only too narrow for the joy of looking into the trusting eyes of our children, of reposing on the love of a husband or a wife—nay, of listening to the divine voice of music, or watching the calm brightness of autumnal afternoons? But Young could utter this falsity without detecting it, because, when he spoke of 'mortal joys,' he rarely had in his mind any object to which he could attach sacredness. He was thinking of bishoprics and benefices, of smiling monarchs, patronizing prime ministers, and a 'much indebted muse.' Of anything between these and eternal bliss he was but rarely and moderately conscious. Often, indeed, he sinks very much below even the bishopric, and seems to have no notion of earthly pleasure but such as breathes gaslight and the fumes of wine." Young "sees Virtue sitting on a mount serene, far above the mists and storms of earth; he sees Religion coming down from the skies, with this world in her left hand, and the other world in her right. But we never find him dwelling on virtue or religion as it really exists,—in the emotions of a man dressed in an ordinary coat, and seated by his fireside of an evening, with his hand resting on his little daughter, in courageous efforts for unselfish ends, in the internal triumph of justice and pity over personal resentment, in all the sublime self-renunciation and sweet charities which are found in the details of ordinary life."

Another side of the sacred importance that George Eliot attaches to life is her sympathy with failure, with baffled hopes and frustrated ideals. "Patience, friend," she writes in her *Minor Prophet*.

"I worship in the temple with the rest
(The centre temple, that is, of beauty);
But, by my hearth, I keep a sacred nook
For gnomes and dwarfs, duck-footed, waddling elves,
Who stitched and hammered for the weary man
In days of old."

There is some pedantry, but more truth, in her motto to a chapter of *Daniel Deronda:* "There be who hold that the deeper tragedy were a Prometheus bound, not *after*, but *before* he had well got the celestial fire into the νάρθηξ, whereby it might be conveyed to mortals: thrust by the Kratos and Bia of instituted methods into a solitude of despised ideas, fastened in throbbing helplessness by the fatal pressure of poverty and disease—a solitude where many pass by, but none regard." No one, probably, has given us a more pathetic study of life-failure than George Eliot in her picture of Lydgate, the hopeful young doctor in *Middlemarch*, ambitious of scientific renown, but bound for life in the sequel to the worldly Rosamond, and gaining at length an excellent practice by having written a treatise on gout,—"a disease what has a good deal of wealth on its side."

In thus passing in review some of the points constituting George Eliot's greatness as an artist in fiction, nothing has been said of her powers as a humorist or as a painter of scenery, equal in accuracy, though hardly in power, to those of Scott himself,—both of them points which are rather accessories to her genius than constitutive qualities. On the former point, much light is thrown by the Essays before us; and we find in their pages many anticipations of characters and philosophic views afterward more fully developed in her novels. Let me quote, in conclusion, her analytical sketch of the "general reader," the first draft of the class of mind which she afterward depicted artistically in the amiable Brooke:—

"For the most part, the general reader of the present day does not exactly know what distance he goes; he only knows that he does not go 'too far.' Of any remarkable thinker, whose writings have excited controversy, he likes to have it said that 'his errors are to be deplored,' leaving it not too certain what those errors are; he is fond of what may be called disembodied opinions, that float in vapory phrases above all systems of thought or action; he likes an undefined Christianity, which opposes itself to nothing in particular, an undefined education of the people, an undefined amelioration of all things: in fact, he likes sound views,—nothing extreme, but something between the excesses of the past and the excesses of the present. This modern type of the general reader may be known in conversation by the cordiality with which he assents to indistinct, blurred statements: say that black is black, he will shake his head, and hardly think it; say that black is not so very black, he will reply, 'Exactly.' He has no hesitation, if you wish it, even to get up at a public meeting and express his conviction that at times, and within certain limits, the radii of a circle have a tendency to be equal; but, on the other hand, he would urge that the spirit of geometry may be carried a little too far. His only bigotry is a bigotry against any clearly defined opinion; not in the least based on scientific scepticism, but belonging to a lack of coherent thought,—a spongy texture of mind, that gravitates strongly to nothing. The one thing he is staunch for is, the utmost liberty of private haziness."

IF you wish to be miserable, you must think about *yourself*,—about what *you* want, what *you* like, what respect people ought to pay *you*, what people think of *you*; and then to *you* nothing will be pure. You will spoil everything you touch. You will make sin and misery for yourself out of everything God sends you. You will be as wretched as you choose.—*Kingsley*.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER IX.

When we were at Strong City, Kansas, I was much interested in the conversation of the famous plainsman, Mr. S. F. Jones, who had more cattle than any patriarch. I had never seen a genuine plainsman. This one was handsome, small-eyed, robust, with the health of a buffalo. His modest, resolute, lucid conversation did seem to me wholesome. The breeze of the prairie was in his speech. His wife told me that she much preferred being on the plains. She said they had a ranch for twenty years on the mountains of Colorado, which gave them a range for many miles around. Yet she felt as though she had not elbow-room there, but on these unlimited prairies it was different. To a person living in London, who thinks a room twelve-feet square a rare possession, it seemed like conversing with people on a new planet to meet a lady with this queenly sense of space and movement. Defoe had no idea of this kind of people. If this plainsman had been in Robinson Crusoe's place, he would have thought a desert island a poor affair, and felt himself crowded upon it. The plainsman in question was entirely without pretension or vanity or swagger often seen in self-made men. He knows precisely what a ranch should have, fertility of grass and accessibility of water. He can tell good ranch land at a glance, and has a quick eye for the points of cattle. He knows what a ranch must produce to feed a thousand cattle in winter. This is precisely the kind of man whom the government should ask to contribute a chapter to their Guide-book. Ranch buyers would be well directed by the guidance which he could give. He sold his Colorado ranch and stock to the Edinburgh Cattle Company for $600,000. Around his new Kansas ranch, he has already thirty miles good stone fence. He, therefore, is one of the men who know all about the subject.

It was at Garden City where we bought eight melons at ten cents each. To a lady who had wandered out in the moonlight, too thinly clad, and had acquired transient malaria, I carried one melon, saying that a homœopathic physician had prescribed that slight globule to be taken. It was not easy to carry, as it weighed forty-four pounds. It cost only 5*d*., and was as delicious as a peach. The green plains of Kansas are the very place for a vegetarian colony. Here, a man might entertain seven friends a whole day, giving each seven pounds of dainty food, at the cost of 5*d*. for the whole company. And as the melons, like the white onions we saw, seemed visibly to grow as we stood by their beds, vegetarians might live in luxury on a quarter of an hour's work a day.

One day, when we had driven some miles across the prairie, we encountered an animated housewife, who said she was born with a love of flowers; and it looked like it, for she had beds of them blooming all around her prairie dwelling. Her husband did not share her taste. But there is no need out there for an agitation in Parliament to pass a bill for conceding civil rights to married women. There is plenty of space in the prairie for a woman to have her own way. What struck me most in her conversation was her remark that their land lot at first was only one-fourth of a square mile. They had since taken a second lot, and she said she thought they should take the other two, and have the whole six hundred and forty acres to themselves; as, otherwise, some one would come and take them, and she did not want to have neighbors too near her. To have no neighbor within a mile of home would seem to English people rather solitary, but this lady felt most at home with neighbors a good distance from her.

The prairie dog, like the buffalo, is destined to extinction, as is the bright-eyed, wonderfully nimble little gopher. My first acquaintance with a prairie dog was made in one of the parks of Chicago. The zoölogical gardens there are all free to the public. Wandering in one day, I came upon an excavation in the sand, in which a number of prairie dogs and a gopher were at play. The prairie dog is about the size of a fat young rabbit. I would one of the merry little fellows were before me to describe. He appeared to me something between a little pig and a cat, with the fleecy skin of a lamb. Certainly, the group were as nimble and playful as kittens. Their manifest de-

Digitized by Google

light was to scratch a considerable hole in the soft sand, push the foremost of the scratchers into it, when the others buried him under the sand, scampering off, leaving him to get out as best he could. I saw no creatures, human or otherwise, in America so droll and merry-hearted as the prairie dogs were.

In Holland, the dog is very serious. He has to draw small carts and barrows along the street, and guard the goods in them while his master is gossiping with the servants at the door. There is no canine trades union to see to shorter hours of labor for poor Pompey in the shafts. In England, the dog, though not in harness, is far from being light-hearted, and has no sense of pleasure save the running after cats or in barking at the wrong person. He has also fine qualities, but he is grave. The prairie dog is a gentleman by nature. He is jocund, unembarrassed. He does not speculate. He has not a care upon his mind. He knows nothing of a "corner," except as a hiding-place. His little soul is all sunshine.

The gopher is much smaller, and is quite a business-like animal. He is half rat and half squirrel, slender, like the stoat, has a sharp-pointed mouth which could deal with a dinner in a keyhole, and brilliant eyes. His tail is long, like a rat's. His pastime is to race round the enclosure with such incredible celerity that no eye, save one as quick as his own, could follow him. Yet, in an instant, he will bring himself up on any little elevation, stand perfectly upright on his hind legs, resting his body on his tail, just as the Manxman might do, who has three legs, according to the heraldic device of the island. The gopher, moving his body round as though his tail were a pivot, glances everywhere, surveying the whole land around him, like an Indian on the lookout, then darts round the entire enclosure with electrical velocity. I never beheld such a bright, observant, nimble creature. On the prairies where irrigation is introduced, both the dog and gopher are drowned in their happy holes. The remainder of the race ought to be pensioned off and kept in zoölogical gardens.

Driving over the prairie presents a strange outlook to an Englishman. The prairie is a sea of verdure. It is as though you were in the midst of an Atlantic of buffalo grass. No tree, no water, only one vast *circular* horizon, on the distant edge of which you may see the lightning play when thunder is about. You drive on forty or fifty miles, and you may ride on for hundreds of miles, and the scene never changes. The horizon behind follows you as the new one opens before you. That is the prairie, where the only live things are the dog and gopher, now the buffalo and Indian are gone.

When we were nearing Las Vegas, we found at one of the new Mexican cities consternation prevailing at the appearance of the comet. It was the same comet which was seen in England; but, in New Mexico, it displayed itself better, probably out of respect to the republican expectation of that country, where the people pride themselves upon having the biggest thing out on view there. I saw it first one morning, just before sunrise, as we were dashing into the great Raton Valley. I had seen no such comet in my time. It lay stretched along the blue vault near the horizon, like a vast, elongated, luminous serpent of the heavens. There are ranchmen, mountaineers, and cowboys about those parts not more advanced in science than we are in England, where Mr. Proctor had agitated many with the prediction that this comet was bent on mischief, and would fall into the sun, when that luminary would be disagreeable and roast us as the Inquisitors did the heretics. The first question put to me by the interviewers who met me at the hotel, where we spent some time, was, what did I think of the comet, and whether or not, in my opinion, it would fall into the sun, and what would the sun do if it did. I answered that, as far as I could judge, it appeared to me a well-behaved comet. We had reason to think that it had been loafing about the skies for two thousand years, and must by this time know its way about pretty well. The regular and methodical way in which comets departed on a journey—in some cases of three or four hundred years, and reappeared at the predicted minute—showed that they kept better time than railways, and knew their business too well to get in the way of the sun; and, if any young, reckless comet did run its head into the sun, that experienced luminary would do as America did by a new colony of settlers,—absorb it into itself and say nothing about it. Mr. Proctor had alarmed us unnecessarily. This opinion was given in the papers of the district, and perturbation ceased in Lower Mexico. Nobody could be more astonished than I was. I was represented as an authority upon comets, and my opinion was considered conclusive upon their behavior and fate.

The effect of the prairie on city classes is notable. Though the city family be an emigrant one, no sooner do they get upon the prairie than the city seems a familiar home compared to the strangeness of the green desert. After five years or so, the family generally go back to the city, leaving a son, or perhaps two, behind. The lad is less wedded to the city, adventure is alive within him, and the first years of prairie life have been mitigated by the family society, and he is for enterprise on his own account. In many instances, the effect of the prairie on the city classes is entirely good. The feeble become robust, the timid brave, the vacillating acquire decision. The settler from the city tries to be man enough for the situation, and succeeds; and he is a stronger and prouder man than he was, besides being independent. Thus, the prairie develops men,—when it does not kill them.

CORRESPONDENCE.

THE SOCIOLOGIC SOCIETY.

Editors of The Index:—

The Sociologic Society, a New York organization whose object is the dissemination of co-operative principles, held an important meeting Monday evening in the parlors of Dr. Pullman's Church, 37th Street, near 8th Avenue. A large audience was present, including among others the Drs. Pullman, Rylance, and Eaton, Prof. Rice of Columbia College, and a number of the leaders of the New York State Labor League. Mrs. Imogene C. Fales, the president, read a letter from E. Vansittart Neale, of England, stating substantially that the social system involved in the conception of co-operation as a system is the transformation, under the guidance of reason, of the natural law of "struggle," to institute a higher moral world, where harmony is the result of individual activity; that a difficulty is to make men realize that by reason the highest improvement can be achieved, and that the same process that Godin has applied to Guise can be successfully employed to civilized life; that, by interesting the laborer pecuniarily in his work, the law of supply and demand can be successfully controlled, and a more equitable distribution of wealth brought about. Co-operation is simple and efficient.

The president explained that Mr. Neale was one of the founders of the co-operative movement in England thirty-five years ago, along with Henry Maurice and Charles Kingsley, and is among its chief representatives to-day.

An eloquent address was delivered by Rev. Charles Eaton, who enlarged upon the responsibilities, the duties, and the rights and wrongs of society, the capitalist, and the laborer. He claimed that the evil of to-day results from the indifference of the more fortunate toward the great masses of the people, and that, unless this indifference be supplanted by practical and active interest, a lamentable condition of affairs is sure to be reached. The application of the Golden Rule to all the relations of social and industrial life was the need of the age.

A statement was then given by Miss Wyer on "The Condition of the Industrial Classes," as shown by the last census and other statistics. The paper revealed glimpses of tenement-house life in New York, that seemed almost incredible. An urgent appeal was made that "profits should be brought to reinforce wages."

The closing number of the programme was an address by Charles Barnard, the well-known author on "Co-operation in England, Distributive and Productive." Mr. Barnard showed that, in the present condition of industrial life, distributive co-operation bore every promise of universal application and development, while, on the other hand, productive co-operation appears to have made no appreciable progress in twenty-five years; that, where the Rochdale Pioneers are represented in England to-day by over two thousand three hundred establishments, productive co-operation is represented by some thirty insignificant institutions; that, in this country, of over three hundred ventures in productive co-operation, only a handful have kept alive. Mr. Barnard ascribes this state of facts partly to the near-sightedness of the working-classes and partly to a lack of a broad moral culture.

Announcement was made of the next meeting in December, when Frederick Hinckley, of Providence, and Courtlandt Palmer, of New York, will deliver addresses upon co-operation.

"THE SUN DO MOVE AND THE EARTH DO STAND STILL."

Editors of The Index:—

In your issue of the 15th inst., you speak of Martin Luther's disbelief in the now generally accepted idea of the globular form of the earth, which you call an "astronomical fact." There are many besides Brother Jasper who believe that "the sun do move and the earth do stand still."

It may interest such of your readers as do not already know it to learn that a very able work, setting forth this view, is published by Day & Son, 17 Paternoster Square, London. The author calls himself "Parallax." The name of the book is *Zetetic Astronomy: Earth not a Globe.* After reading his introduction and a few of his experiments and his analysis of the Newtonian theory, very many people—in fact, all the people I know who have gone thus far—are pretty thoroughly convinced that we have been believing something for which no sound reason or demonstration could be offered.

Respectfully, C. B. WHITEHEAD.

BLOOMFIELD, N.J., Nov. 19, 1883.

BOOK NOTICES.

CHRISTIAN HISTORY IN ITS THREE GREAT PERIODS. Third Period: Modern Phases. By Joseph Henry Allen, late lecturer on Ecclesiastical History in Harvard University. Boston: Roberts Brothers. 1883. pp. 319. Price $1.25.

This third volume of Christian History completes a task that Mr. Allen informs us was planned nearly thirty-five years ago, and has been kept in view ever since. The first volume is devoted to a consideration of "Early Christianity," and its topics are as follows: the Messiah and the Christ, St. Paul, Christian Thought of the Second Century, the Mind of Paganism, the Arian Controversy, St. Augustine, Leo the Great, Monasticism as a Moral Force, Christianity in the East, Conversion of the Barbarians, the Holy Roman Empire, and the Christian Schools. The second volume, devoted to the "Middle Age," discusses the Ecclesiastical System, Feudal Society, the Work of Hildebrand, the Crusades, Chivalry, the Religious Orders, Heretics, Scholastic Theology, Religious Art, Dante and the Pagan Revival.

The third and last volume covers the period extending from the beginning of the Protestant Reformation to the present time, including in its treatment the events we call the Reformation, the Catholic Reaction, Calvinism, the Puritan Commonwealth, Port Royal, Passage from Dogma to Philosophy, English Rationalism, Infidelity in France, the German Critics, Speculative Theology, and the Reign of Law. This volume, like the preceding ones, contains a chronological outline of its period, with a full table of contents, and can be read without referring to the other volumes, although knowledge of all the periods treated is necessary to an intelligent understanding of the progress of religious thought.

Mr. Allen is not simply a scholar of large attainments who has given much study to his subject, but he is a thinker of a discriminating and judicial mind, imbued with the modern scientific spirit and method, which demand that all events and systems be considered with reference to their antecedents and surroundings. He is not satisfied to make his history a mere narrative of what has been said and done. He must show the connections and consequences of beliefs and acts, and group them together so as to indicate to the common reader this relationship. Mr. Allen's analysis of character is keen, and his comments on many of the distinguished men of modern times are especially valuable. Thus, of Carlyle he says, "That his is at once the most powerful and the manliest influence that has gone out upon the English mind of our time." And yet he does not hesitate to say,—"I would not go to Carlyle, so far as I know or care, for a single opinion upon any topic or for sound judgment on any historical person or event. Mere contact with that powerful intelligence is the one thing sufficient. It illustrates better than anything I can call to mind the immortal soul that survives from a body of opinion intellectually dead." The descrip-

Digitized by Google

tion of Calvin and the characteristics of his system, and of Comte, his great genius and services, including his "perhaps the most massive, luminous, and instructive survey ever given of the intellectual development of mankind," and also his limitations, are equally fine in their power of psychological analysis, discrimination, and catholic spirit. Some passages in the work show a little theological bias; but there is no bigotry, no narrowness, even in these. The writer of this notice dissents from some of the theories and conclusions presented in the work, but this does not prevent appreciation of the valuable contribution that Mr. Allen has given us in this and the two preceding volumes.

THE BOYS' AND GIRLS' PLUTARCH. By John S. White, LL.D. With forty-five illustrations. New York: G. P. Putnam's Sons. 1883.

We have here, in a handsome quarto volume of four hundred and fifty-seven pages, parts of the "Lives" of Plutarch, edited for boys and girls. The selections appear to have been made judiciously. The introduction might have been more instructive. Quite a story might have been told of the fortunes of Plutarch. In "the bright lexicon of youth," his name is one of the brightest. His "Lives" have nursed a manly spirit in a great many youthful breasts. Emerson said of him, "I do not know where to find a book—to borrow a phrase of Ben Jonson's—'so rammed with life.'" Emerson's recurrence to him for illustration of his theme was frequent. In Dr. White's edition there is probably about as much as would be serviceable to the adolescent mind. This handsome volume is more likely to prove enticing to the average boy or girl than the many-volumed edition of Clough or the bulky one-volume edition in which the type is small. The illustrations are of real value. So are the chronological tables and the lists of proper names with their pronunciation. Our young people may well forego the travellers who have never travelled for this genuine fragment of the ancient world.

NIGHTS WITH UNCLE REMUS: Myths and Legends of the Old Plantation. By Joel Chandler Harris. Boston: James R. Osgood & Co. Price $2.00.

In these days, when it has been discovered by the close students of mythological lore how much historical meaning may be hidden in the analogical folk-lore of different or similar races and nations, Mr. Harris has rendered a signal service to such research by giving us in this entertaining fashion the heretofore unrecognized folk-lore of the African race as transmitted in traditionary form to its American descendants. Mr. Harris' Introduction to the present work shows how faithfully he has labored to make this collection of seventy-one stories embody "everything or nearly everything of importance in the oral literature of the Southern States." In regard to the negro idiom in which these stories are given, the author says, "The discriminate reader does not need to be told that it would be impossible to separate these stories from the idiom in which they have been recited for generations." The book is handsomely bound and profusely and finely illustrated, and apart from its ethnological value is calculated to entertain the dullest intellect and most superficial of readers.

THE *Popular Science Monthly* for December contains several very readable articles. It opens with an address by Prof. Emil du Bois-Reymond on "Alexander von Humboldt," delivered at the anniversary of the University of Berlin, in which the characteristics and the work of Humboldt are estimated with discrimination. In connection with the address is an admirable portrait of the great author of *Cosmos*. A paper by M. R. Radau, on "The Habitation and the Atmosphere," presents suggestions regarding the construction of houses. Dr. Oswald's paper in "The Remedies of Nature" series on "Enteric Disorders" is one of his best. Mr. Thomas Foster presents a discussion of the "Morality of Happiness," from the stand-point of scientific ethics. M. E. Caro, of the Institute of France, in "Genius and Heredity," points out that there is something unaccountable in the sporadic appearances of genius with which the world is from time to time astonished. In "The Illusion of Chance," Mr. William A. Eddy shows with what regularity the law of averages applies. Dr. T. S. Clouston, of Edinburgh, considers "Female Education from a Medical Point of View." In "The Loess-deposits of Northern China," Mr. Frederick W. Williams describes a most remarkable geological formation, which is at the same time the foundation of a very fertile agricultural district. There is, with other articles, the usual instalment of Mr. Mattieu Williams' series on "The Chemistry of Cookery"; and the editor continues the discussion on the study of the classics, with a lively article on Lord Coleridge's recent address at Yale.

THE *Atlantic Monthly* for December has a fine list of contributors, with a widely varied array of contributions. Among which, Ralph Waldo Emerson's posthumous essay on his aunt, "Mary Moody Emerson," shines like an antique gem in a rare and artistic setting. Richard Grant White sets an exemplary example to American Anglophobists in his chivalrous defence of "Some Alleged Americanisms," which have been held up to scorn as evidence of America's lack of culture, by showing that the "alleged Americanisms" are really of English birth and parentage. There is an article by Rev. F. H. Hedge on "Luther and his Work"; and "H. H." gives one of her interesting descriptions, this time of a mining region in Colorado, where she found a watercourse rejoicing in the name of O-Be-Joyful Creek, and, adjacent to it, a locality named Poverty Gulch. Other articles relating to travel are William C. Langdon's "Recollections of Rome during the Italian Revolution" and Julia C. R. Dorr's "Bermudian Days." Generous instalments are given of Lathrop's "Newport" and Crawford's "Roman Singer." There are two good poems, one by E. C. Stedman. Henry Loomis Nelson gives a sketch of "Social Washington." The review articles are on "Mr. Longfellow and the Artists," "Foreign Lands," "Recollections of a Naval Officer," and "Recent Poetry." "The Contributors' Club" is well represented.

ST. NICHOLAS for November is the beginning of a new volume, the eleventh, and is a brilliant number. We give its list of contents: "The Little Lord of the Manor," by E. S. Brooks; "Benevolent Birds," a pleasant contribution to natural history, by Will Woodman; "Jake's Mistake," by John S. Adams; "A Thanksgiving Dinner that Flew Away," by Hezekiah Butterworth; "The Two Men of Cologne," verses, by Emma C. Dowd; "Winter Fun," by William O. Stoddard; "A Young Seamstress," a poem, by M. L. B. Branch; "Sophie's Secret," the beginning of a new and charming story, by Louisa Alcott; "Wisdom in the Well," by Phil. O'Gelos; "Snow Shoes and No Shoes," by John R. Coryell; "Little Maud's Story," by M. G. Gow; "Capt. Mayne Reid," an interesting biographical sketch of the boys' story-teller, by J. T. Trowbridge; "Nutting," by H. I.; "The Gentleman from China," by Sophie Swett; "The Lamp-Lighter," by Mary A. Lothrop; "The Bee-Man and his Original Form," a delightful fairy tale, by Frank R. Stockton; "Polly's Ragamuffin," by Lucy G. Morse; "Among the Pines," a play, by Ruth Ogden; "The Origin of the Stars and Stripes" is an anecdote of more than ordinary historical interest, by E. W. Tuffley. There are three full-page illustrations, together with many smaller ones, all in the high style of art so characteristic of this magazine.

PERSONAL ITEMS.

MATTHEW ARNOLD will be sixty-one years old on Christmas eve.

CARL SCHURZ, finding the steady grind of editorial labor irksome, has retired from the New York *Evening Post*.

MISS ELAINE GOODALE, the elder of the Sky Farm poets, has become one of the teachers of Indians at the Hampton School.

IT is said that Prof. Huxley's son is the rising young poet of England, and that his friends see in him the future laureate.

MR. JOHN STORER COBB will give a free lecture at Paine Hall, 2.45 P.M., Sunday, December 2, on "The Principles and Persecutions of the Roman Catholic Church."

J. R. LOWELL, our Minister to England, and one of America's best poets, has been elected Rector of the University of St. Andrews, as a compliment to his literary merit.

COUNT VON MOLTKE's mind is failing. His memory is a blank, and he fails to recognize even intimate friends. He is living on his estate at Kreisau, in strict privacy, having ceased all official work.

"DONAL GRANT" will unquestionably be pronounced one of the most fascinating, if not the best, of George MacDonald's remarkably popular stories. The fact that it is published in America from the manuscript, and will be republished from advance sheets in England, is an innovation creditable to the enterprise of the American publishers, D. Lothrop & Co.

ANNA DICKINSON is coming to her senses, if a despatch recently received from Chicago may be credited. It says that she has decided to make a tour through the country to make speeches in behalf of the Knights of Labor till the close of the next presidential election. Anna Dickinson on the lecture platform was an undoubted success; but Anna Dickinson, posing as a poor make-believe Hamlet in hose and doublet on the stage, was a most deplorable failure and pitiable spectacle.

AN article in *Month*, by a Catholic writer, Rev. W. Loughman, concludes thus: "Go to then, Doctor Martin Luther, blasphemer and hypocrite, thou lustful monk and sacrilegious priest, without faith in God or hope in the Redeemer, even in the convent,—take thyself off, begone out of our sight, fly away into space. Papist or Protestant, we will have none of thee; for, with all our sins and unworthiness, yet are we men, and thou art of the earth earthly, of the flesh fleshly, of the devil devilish."

QUEEN MARIA PIA of Portugal recently presented a dress to the image of the Virgin Mary in the Capuchin Church of Guimaraes, Brazil. This proof of the queen's devotion to her faith has given great offence to the pious Catholics of Brazil, for it seems the dress is somewhat the worse for wear. In fact, two journals—*O Thabor* of Sao Paulo and the *Progresso Catholico* of Guimaraes—agree in describing it as badly soiled, as provided with a long train, and altogether unfit for an offering to the Immaculate Virgin.

CHARLES WILLIAM SIEMENS, distinguished as an engineer and electrician, who died in London last week of rupture of the heart, was sixty years old. He was born in Hanover, and educated at Lubeck, Magdeburg, and Göttingen. At twenty years of age, he went to England to introduce an invention, and remained there, becoming an English subject in 1859. He added greatly to the mechanical facilities of the world, and received numerous honors from leading scientific and mechanical societies. He constructed the Indo-telegraph line, the North China cable, the Direct United States Cable, and the Platino Brazileira Cable.

MR. GEORGE WILLIS COOKE, author of the work on Emerson published two years ago, and so well received, and of a critical *Study of George Eliot*, which has just appeared from the press, is prepared to give a short course of lectures on "The Great Women Authors of England." These are Charlotte Brontë, Mrs. Browning, and George Eliot. He can also give a course on "The Great Living English Authors," Tennyson, Ruskin, and Browning. Where desired, he will add two leetures to this course on some of the younger authors, especially Matthew Arnold and Swinburne. These lectures will be helpful in stimulating a love for the best books, and in awakening an interest in the study of English literature. They are more particularly designed for clubs, reading classes, or special parlor gatherings. Mr. Cooke's address is West Dedham, Mass.

SAYS the *Radical Review*: "The two Misses Bradlaugh, daughters of the great reformer, and their friend, Mrs. Annie Besant, are examples of what women can do, when given the opportunities to develop their powers. The activity of these ladies in the lecture-field, the class-room, and the editorial staff of the *National Reformer*, is truly remarkable; and their work bears such marks of ability, scholarship, and maturity of thought as would do credit to even the stronger sex. Mrs. Besant is now engaged in delivering a series of lectures on the French Revolution, which are published in the *National Reformer*, and which belong to the very best that literature has produced on that subject. We can form an idea of the nature of the work of the Misses Bradlaugh, when we see the announcements for their lectures. Miss Alice Bradlaugh, the elder sister, spoke before a branch of the National Secular Society on 'Mind Physiologically Considered'; and Miss Hypatia Bradlaugh has commenced a course of four lectures on 'English Land Tenures,' with a very clear and interesting exposition of the basis of this law. In this course, she proposes to examine the various theories of land nationalization."

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

Sent postpaid, on receipt of price.

MRS. NEWHALL'S SCHOOL

FOR GIRLS AND YOUNG LADIES

Will reopen Oct. 1, 1883. Besides the regular courses in English studies and languages, there will be some work, each week, in the line of the new or **"creative method"** either with **tools upon wood** or in **modeling.** Another special feature will be a course of **lectures** upon the **great tone-masters,** illustrated with piano and voice. As aids to the study of History, Geography, and Art, **the use of the lantern** will be continued, and the **regular visits to the Art Museum.** For catalogues, address the Principal, 91 Newbury Street, Boston.

JESUS

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work titled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

AMONG the indications of progress worthy of note was the passage of a bill in the lower house of the Hungarian Diet, permitting civil marriage between Jews and Christians, and legalizing civil marriages contracted in foreign countries.

SAYS an English exchange: "An interesting illustration of the spread of 'State Socialism' comes from Denmark. The government has introduced a bill providing for the establishment of a fund for insuring workingmen against want in old age."

AT the Revenue Reform held at Cooper Institute recently, Mr. Waterson remarked: "If I wanted to say a mean thing in answer, for example, to the frequent charge that human life is held cheaper in the South and West than in the East,—which is true, I might intimate that men are at least as safe in Kentucky as women seem to be in Connecticut." Of course, everybody present thought of Mary Stannard, Jennie Cramer, and Rose Ambler.

PROF. BROOKS, of Phelps, N.Y., thinks it possible that the peculiar lights attending our sunrises and sunsets are due to our being enveloped in the tail of a gigantic comet. An Albany astronomer says he is satisfied that the illumination is an unusual exhibition of what is called the zodiacal light, a nebulous girdle, having the sun for its centre. There seems to be no certainty or well-defined theory among scientific men as to the cause of the phenomenon.

THE *Sunday School Times* publishes an article from the pen of Prof. Franz Delitzsch, who is justly referred to by that journal as "a foremost champion of evangelical views among the great Biblical scholars of Germany," who "has done stalwart service in defence of Orthodoxy in the critical discussions of the last third of a century." Yet the *Sunday School Times* deems it prudent to say of his article that "it is not without its indications of the chilling influence of that atmosphere of sceptical criticism and of rationalistic doubtings, in which such a reverent and truth loving scholar as its warm-hearted writer has been compelled to breathe in all his life of Biblical study."

MGR. CAPEL says that, where there is the most education, the people are the most immoral. He mentions Scotland, Sweden, and Germany as "the most immoral countries he knows of." This leads the Boston *Herald* to observe: "In stigmatizing Scotland, Sweden, and Germany, 'where the people are well educated,' as 'the most immoral countries he knows of,' has not Mgr. Capel forgotten Italy, where the percentage of illiteracy and of illegitimate births run so high? Or does his knowledge extend to the countries of popular ignorance in Mexico and Central and South America? Intelligence and virtue do not always go together, but they are more nearly related than ignorance and virtue."

THE following eloquent summary of what is implied in heredity is from the discourse delivered over the dead body of Ivan Tourgueneff by Ernest Renan: "His conscience was not that of an individual more or less gifted by nature: it was, in a certain way, the conscience of a people. Before he was born, he had been living for thousands of years: infinite trains of dreams were concentrated deep in his heart. Never a man has been thus an incarnation of a whole race. A world lived in him, and spoke through his mouth. Generations of ancestors, lost without uttering a word in sleep of centuries, were endowed by him with life and language. The silent genius of collective masses is the source of everything grand."

ABRAM S. HEWITT, after a four months' trip abroad, says: "During all the trip, which was made largely in a private steamer, with leisure to study men and manners, I came to the conclusion that the greatest miracle of our time and the most valuable treasure which mankind has ever discovered is the government of the United States, in which the checks and balances are so arranged that, while progress is not only possible, but its results certain, the prejudices of popular passion are kept in check, and only those measures which are best calculated to promote the general welfare can by any possibility receive the sanction of legislation and of permanent public judgment. I come back, not only proud of my country, but conscious more than ever of the duty which rests upon every one of its citizens to preserve constitutional government in the form and according to the spirit of its conception and organization. It is the result not merely of the wisdom of our fathers, but of a fortunate chain of circumstances which never occurred before in the history of the world, and can by no possibility occur again."

SAYS the Springfield *Republican*: "The attitude of condescension held by the English landlords toward the laboring classes may not appear to them undignified, sanctioned as it is by tradition; but the course of trade and the working out of the hard rules of profit and loss are showing more plainly every day that it is very bad business. It is no uncommon thing, after the annual, expensive display upon lord mayor's day in London, for men and women in second-story windows to throw pennies to the street, and enjoy the fun of the general scramble. The whole system of 'boxing day,' the feeing and numberless gratuities from the high to the humble, is too old to be eradicated in a day; but, clearly, the coming conflict of parties will turn in some form upon the rights of the toilers to earn their good fortune rather than to receive gratuitously the deficits in living expenses, which the lack of opportunity now forces upon thousands. Lord Salisbury may throw his pennies to the street, but he will find that there are not enough to go round. The cry is not money, but land to work; not a fee, but a field to plough; not charity in city tenement-houses, but the right to buy a country home, and to break up and plant the mortgage-ridden downs and deer-parks of England."

AT a town meeting held at Winthrop, Mass., last week, a motion was made to the effect that, Gov. Butler's proclamation having been ignored by the churches of the town, it should be read in town meeting that the citizens might have an opportunity to hear it. The moderator declared the motion out of order; but an appeal from his decision resulted in a vote of three to one that the motion was legal, and the reading of the proclamation was ordered. "Then," says the Boston *Herald*, "began a scene of disorder that continued for several hours, the anti-Butler men yelling and howling at every attempt of the clerk to perform his duty of reading the proclamation, several very angry speeches being made. The Governor's friends condemned the bigotry of the churches in refusing to read the proclamation in unmeasured terms, and dwelt long and earnestly on the narrowness and petty hate exhibited in ignoring the proclamation simply because it was written by a chief magistrate politically opposed to the preachers. Various attempts were made by the clerk to read the document, but every attempt was drowned in cries of the anti-Butler men. Finally, the clerk determined that such lawless proceedings should go on no longer, and constables were placed at the doors, with orders to arrest the first man attempting to interrupt the proceedings, after which the proclamation was read through without further interruption, and the meeting adjourned." The clergy have the right with all other citizens to express and defend their views in regard to political parties and public officers; but it has not been customary to omit the reading of Thanksgiving proclamations from personal or political considerations, and it was but natural that the supporters of Gov. Butler should resent this unusual manner of manifesting from the pulpit dislike toward their favorite immediately after a political campaign, marked by great bitterness, which resulted in his defeat for a second term. Should the example of the Winthrop clergy be followed very often in the different States, not many years would pass before Thanksgiving proclamations, which are an anachronism under a secular government, would be discontinued through the ill feeling and contention engendered, without regard to the injustice of the custom and its inconsistency with the principles of State secularization.

AN ENGLISH ESTIMATE OF THEODORE PARKER.

In the graceful speech which Lord Coleridge made at his reception in Boston, he characterized Theodore Parker, among the distinguished persons who had given fame to the city, in a way that gratified Parker's appreciating friends, but was a surprise even to some liberal thinkers. After naming Franklin, Webster, and Story, and adding some descriptive sentence of each, he continued: "And Theodore Parker, perhaps one of your highest and greatest souls." He then gave a word to each of the literary lights, Hawthorne, Emerson, Longfellow, Holmes, and Lowell. It is noteworthy that Parker is the only preacher or theologian named; and also that even the use of the qualifying word "perhaps" in the descriptive clause concerning him, instead of weakening the judgment, adds weight to it as a deliberative one. It shows that the speaker was not hesitating as to whether Parker was entitled to be enumerated in the list of famous persons there referred to, but whether he might not be placed not only in the small number at the head of that list, but among the few exceptional characters that had made the history of Boston and of Massachusetts. And this, we have reason to believe, is the real opinion which Lord Coleridge holds of Mr. Parker. It is a common opinion concerning Parker and his work, held by broad and cultivated thinkers in England.

And, in our view, this will be the judgment of history upon Theodore Parker. He will be placed among "the highest and greatest souls" that America has produced. He will be counted in the brief list of the world's religious reformers and leaders. There is no man in our age who comes so near being the Luther of the age in leading a revolution in the religious thinking of Christendom as does Parker. Of course, as there were behind and with Luther profounder seers and scholars than he, so there have been many workmen in the nineteenth-century revolution against the evangelical theology who, in this or that feature of their work, would rank above Parker. But, as an intellectual soldier of the broad church militant, the preacher in Boston Music Hall stood pre-eminent. In the vigor of his grasp of the conditions of the conflict, in his robust brain-power, in his intellectual and moral courage, in his tenacity of moral purpose and bold defiance of wrong, in his whole-hearted zeal for human rights, he was a born leader of men. Liberal religion has had no advocate who equalled him in the faculty of carrying great truths home to the hearts of common people by a style both plain and picturesque. His Anglo-Saxon English was as terse and strong as Luther's German. He did not produce his era more than Luther his; but, more than any other man working in and for it, he "fired the shot heard round the world." Large as was the circle of his admirers and wide as was his influence in America, there has always appeared to be in Europe a more general appreciation of his work than here. In Germany, twenty-five years ago, we heard Baur of Tübingen characterize him as a veritable intellectual giant who was fighting for the people the battle of religion against superstition on the one hand and scepticism on the other. On the other side of the globe in India, his thought appears in the faith of the Brahmo Somaj. Literally, indeed, all round the world he is recognized as the sturdy champion of a reformed theology and of a practical religion that meant justice and humanity.

Since Parker's death there has been in this country a tendency to depreciate the extent of his influence. He has left, it is said, no permanent system of thought, no great scholarly work. The Unitarians, though they have advanced steadily toward his positions, are not generally disposed to give him the credit of the advance. And even more liberal thinkers, seeing that his special beliefs have been largely outgrown, are querying whether he laid the foundation of a lasting reputation in history. For his books, it is argued, there is very little demand,—so little that no publisher in the United States has been willing for a number of years to issue a new and complete edition of them. Even some who were his most ardent disciples during his lifetime have been nearly ready to concede that, when he died, his mission died with him. The doctrine of evolution, in especial, these persons say, has made such headway since his time that his intuitional philosophy of religious belief is already antiquated, and would have at least to be restated to be acceptable to-day.

Now, it is doubtless true that there is much in Parker's writings on theological topics that is outgrown. And it may also be said that much of the truth in them may now be found absorbed in the works of later authors. But the influence and reputation of historic characters are not measured by the permanence of their special forms of belief. Channing's theology is much more antiquated than Parker's. There are very few who believe to-day as Channing did. Calvin's creed is fast dissolving even in the churches that bear his name. Only a small proportion of the millions of people who honor Luther accept his theological doctrines. Doctrines are conditioned by the special epoch in which they appear. But the great leaders have qualities of mind and spirit independent of their limitations of doctrine; and it is these qualities that mark them as leaders and keep their names memorable and their power a living force long after their creeds may have become obsolete. Chief Justice Coleridge we believe is right in according to Theodore Parker a very high place in this class of great souls whose vital energy survives their beliefs.

And, if it be asked with what particular great step in the progress of religious thought Parker's name will be identified, the answer is ready. He was the apostle, in the history of religious belief, of natural law in opposition to the idea of miracle. It is the gradual acceptance of this view that is revolutionizing the religious thinking of Christendom. But, when Theodore Parker first announced it, it drew upon his head a storm of reproaches and obloquy, even from Unitarian churches. It was really a greater step than Channing took when he attacked the five points of Calvinism. Channing attacked certain doctrines as having no authority in the Bible. Parker attacked the very citadel of authority itself, and effected a change of base for all after religious thinking. And, by and by, people will turn to him and read him again for this great service, as well as for his valiant championship of social and moral reforms, just as in latter years they have turned to Channing with new ardor. His words will be found still to ring not only with liberty, but with life. In our opinion, if a dollar edition of Parker's works were to be issued, as there has been of Channing's, it would find an equal host of readers. The new Orthodoxy has already gone beyond Channing and is looking up to Parker's level. It needs just that doctrine of anti-supernaturalism and of the natural immanence of divine energy in nature and humanity which was the central thought of Parker's preaching. Parker's reputation is not to wane: it is to grow.

WILLIAM J. POTTER.

LUTHER AND LIBERTINISM.

Luther's fundamental doctrinal position was that the way to bring about good living is to bring about correct thinking. "Wiclif and Huss," he said, "assailed the immoral conduct of the papists; but I chiefly oppose and resist their doctrine. . . . When the word remains pure, the manner of life, though something therein be amiss, will be pure also." The truth, that is always the first thing with Luther. And certain it is that, if truth is not goodness in this world, it is the next thing to it. Luther's doctrine of justification by faith is at least a mighty witness to the omnipotence of ideas. Much needs to be said upon this point properly to complement what follows. Here be it said that, whatever the virtue there be in enlightenment, an enlightened creed is only one factor in an excellent life. "Thou believest that there is one God," says St. James, whom Luther decried so much. "Thou doest well: the devils also believe." And, if Luther really believed that if a man once grasped the Protestant doctrine his life would become holy, he was doomed to terrible disappointment. The preaching of Protestantism, all through Luther's life, seemed chiefly to be making the world not better, but worse. The very common idea of the Reformation as a universal revival of religion is a very superficial and untrue idea. The history of the Reformation is like that of every great period of religious transition. The world was full of men whose eyes were open to the glaring sins and superstitions of the old religion, and who were pouring ridicule and satire upon them in every way that might not invite the stake. Europe was honeycombed with scepticism and cynicism and uncleanness, only less general than those of old Rome when Christ and Christianity appeared. Into this comes Luther, with bolder and more outspoken unbelief in the old Church than the boldest sceptic of them all, but with a deep, new truth which they know nothing of. To the old Church, he appears but as one of these, only as the most uneasy and defiant of its assailants,—just as, to the orthodox paganism of old Rome, Christianity seemed only one atheism among the other atheisms which were making men neglect the ritual and desert the temples. To the great mass of malcontents, Luther was welcome, because he spoke out their antagonism and unbelief so much better than they could ever do it; and multitudes caught up his doctrines of private judgment and free thought as the instrument and sanction of abominations. Where the new gospel made one religious man, it simply unsettled ten,—undermining their faith in the priests and sacraments and authority of the old Church, while powerless to give them the new faith, since to most men, and especially in religion, a thing gets sanctity only when it gets age. Luther had to face the chaos which every reformer must expect in a period of religious upheaval. "He had the pain of seeing, one after another, various tendencies in the Reformation prematurely brought out, and exhibited in exaggerated shape and with accompaniments of violence and horror before the world." Iconoclasts and libertines, demagogues and lunatics of every sort, were abroad, haranguing the people and calling him their father. "My friends have done as much to injure me as my enemies," he said. He was held responsible for all the mad doings of Anabaptists and Antinomians; and every crime in the calendar, offspring of the general unsettlement, was charged to his account. "They reproach me with all this," he cried, "me, unhappy Martin Luther. They reproach me, too, with the revolt of the peasants, and with the sacramentarian sects, as though I had been their

Digitized by Google

author." He saw a hard, materialistic spirit manifesting itself all about him; and, among his own pronounced followers, anything but a strong, united, satisfying religious life. There was, undoubtedly, much truth in what Erasmus wrote to Hutten, that Luther's followers were made up of these three classes: first, learned and well-meaning people, who approve of most of his doctrines, and wish to see the power of the pope and bishops restrained; a second class of men, without education or judgment, and of impure lives, who adhere to Luther without accepting his teaching or even knowing what it is; a third class, whose only object is booty and plunder, and who only make a pretext of the gospel. I see, continued Erasmus, many Lutherans, but few evangelicals. If Hutten knew of people who spent their time in reading the Scriptures and pious converse, instead of with women, in drinking and play; who, instead of cheating about debts, freely gave to the needy; who, instead of insulting those who have never harmed them, would give a soft answer to an angry word; who, instead of making disturbances, promote peace and good-will,—if Hutten would show Erasmus Lutherans like these, he would joyfully join himself to them. If there were any such, they were extremely rare.

Luther himself was plunged into deep melancholy by the poor and inadequate results which he saw. It often seemed as though all that he meant for good was turned to evil. "The devil often assaults and perplexes me by objecting that, out of my doctrine, great offences and much evil have proceeded." "The darkness," he said, "grows thicker around us, and godly servants of the Most High become rarer and rarer. Impiety and licentiousness are rampant. I hope the last day will not be long delayed." "Sodom and Gomorrah," he wrote in 1530, "were never one-tenth part so wicked as Germany is now.... It is a strange and grievous thing that the world hath become worse and worse since the revival of the true doctrine of the gospel.... Every one perverts Christian liberty into carnal wantonness.... If I could do it according to my conscience, I would advise and assist to bring back the rule of the pope." Again and again, we find him wishing, in his hours of despondency, that he had "never begun this business with the pope." But this is only in his hours of despondency. His common word is, "This is what was to be expected, this is the way of the world." "I will fight it out. I know my quarrel and cause are just. On, in God's name!"

How deep a lesson there is in all this for the adherent and apostle of the New Faith of our own day! The laws which governed thought in Luther's time rule also in the time of Emerson, and, little changed by changing circumstances, will work inexorably through the centuries. Ever the prophet of new truth will appear, to the establishments and orthodoxies of his time, as the lawless, unbelieving man, like the other unbelievers; and the more earnest and sincere he is, the more dangerous will the orthodoxies count him,—sincere and hypocritical orthodoxies alike,—and the more earnestly will they seek to silence him. The reformer must always appear, in the first place, as the negator of what is established, always as a breaker of idols. "The painful but indispensable first preparative for *true* sovereigns getting place among us," says Carlyle, "I find to be a revolt against *false* sovereigns." This necessary, negative element in new truth wins for it the quick applause of all the restless, the reckless, and the faithless,—all those to whom the criticism of the popular theology is a mere Mephistophelian game, or who are hostile to it,—no more because of its obvious intellectual defects than because it stands, in its way, for what is transcendental, conserving, and religious. The rising new faith of an age will ever draw the faithless to its standard, not because they spiritually apprehend the faith, but because they are tickled by the novelty, the negativeness, and the idol-breaking; and the new faith must ever be prepared to pay the price of disrepute from libertine applause and following, alike in Corinth, in Wittenberg, and Boston. It must also be prepared for what will certainly ensue, and what is hardest for the philanthropic mind to bear,—to see itself, in its own day, the creator, not chiefly of a deeper faith among the masses of mankind, but rather of unfaith,—destroying, as it does, false sanctions, which were, nevertheless, sustaining and commanding, and which only the idealizing influences of time can replace or teach the multitude of mechanic and dependent minds to see in it itself. Such are the birth-throes by which new truth comes into society and into the soul. This is the great law which the reformer must learn to recognize, and before whose operations he must school his heart, how merciful and loving soever, not to shrink. The years shall be his sure justifiers; and upon their potency and their perspective he may peacefully rely, unmoved by any suffering or disorder, if he is sure of his truth, into misgiving or regret for having "begun this business with the pope." "Luther and his Protestantism," says Carlyle, "are not responsible for wars; the false Simulacra that forced him to protest, they are responsible. Luther did what every man that God has made has not only the right, but lies under the sacred duty to do: answered a falsehood when it questioned him,—Dost thou believe me? No! at what cost soever, without counting of costs, this thing behoved to be done. Union, organization, spiritual and material, a far nobler than any popedom or feudalism in their truest days, I never doubt, is coming for the world; sure to come. But on Fact alone, not on Semblance and Simulacrum, will it be able either to come, or to stand when come." To-day is Luther's justification. To-morrow, fearless, faithful soul, shall be your own. To-morrow, the great vision which inspires you, and which men dread to-day, shall be an institution and a universal sacrament.

EDWIN D. MEAD.

THE WADE SCHOOL.

Allow me to express the interest I feel in the proposed Wade School at Cleveland. The time must soon come, if it has not come already, when such a school can find the suitable persons to carry it on and a supply of pupils to employ its advantages. All the existing theological schools exist primarily to feed certain pulpits, and only secondarily to train intellect and character. Even the Harvard Divinity School is not quite extricated from this position; for, though its professors are sufficiently liberal and enlightened to be transferred collectively to the institution proposed by Mr. Wade, they are yet hampered by the traditions of their school, and yet more by the conditions under which most of its beneficiary funds are held. There is abundant room for something which shall be to other schools, as has been suggested, what Johns Hopkins University is to our colleges.

It must be remembered, however, that such an institution will require greater organizing power and maturer wisdom than any educational enterprise ever attempted in America. Precisely in proportion as men are reformers is it usually difficult to organize them and bind them to any systematic co-operation. When we remember the history of London University,—founded expressly to secure the widest liberality, and yet ending by excluding James Martineau on the one side and Miss Bradlaugh on the other,—we see the immense difficulties of such a task. Especially where the "civil war," as it has been called, between the ideal and the scientific aspects of free thought is liable to be brought into the arena, these difficulties would be greatly increased. When we think how hard it has sometimes been to persuade agnostics and transcendentalists to work smoothly together in holding one or two annual meetings and in conducting one small newspaper, how will it be when they become conjointly responsible for the daily lives of a hundred young men and women? How shall they, together or separately, meet and adjust the enormous demands that will be made upon the new institution by every man who has an ideal hobby and by every man who is bent upon some practical project? All this can, I believe, be done; but it will make an unexampled demand upon the judgment and patience of those who shall undertake it.

T. W. HIGGINSON.

MGR. CAPEL.

Men and things are very much mixed in the world of to-day, with its annihilation of distance and lightning-like swiftness of intercommunication. It is not this continental country alone which exhibits a confused and confusing commixture and hotch-potch of races, creeds, and languages. Other leading nationalities are in the same predicament. At last, the various races and nations cannot help being tolerant of each other and of each other's usages and beliefs. Even Rome itself no longer stands for mere Romanism in religion. The infallible Pope, in these days of universal intercourse and of the large mutual forbearance which such intercourse engenders, finds himself not only a subject of the King of Italy, but unable to exclude from the shadow of the very Vatican,—which, by the way, was originally sacred to the pagan deity Apollo, as all readers of the Odes of Horace know,—finds himself unable to exclude, I say, from his own precincts heretical forms of Christian worship. Not but that he still has the will and disposition to do so, but he has been shorn of the power. His is a case of involuntary tolerance, of compulsory liberalism. The infallible Pope also—who in past generations has delighted to be known as the Great Unmoved and Unprogressive—now finds himself environed by a city which is not only putting off the wrinkles of eld, but taking on more and more a modern aspect, and even exhibiting in the matter of growth and expansion the appearance, in portions of it, of a young American city away out in Nebraska or Kansas or, still farther, toward the regions of the sunset. The blood and ideas of the latter part of the nineteenth century are being rapidly injected into the veins and cerebrum of the many-centuried metropolis of Romulus and Remus.

The head-quarters of Romanism are no longer merely ecclesiastical and papal. Rome is becoming industrial, enlightened, sweetly reasonable,—in Matthew-Arnoldian parlance,—tolerant, liberal, democratic, unhierarchal; that is, truly modern and cosmopolitan. Illustrious visitors like the great Spanish idealist, progressive and poet philosopher, Castelar, are no longer ordered to leave the Eternal City abruptly or incur an indefinite period of incarceration in papal dungeons. Roman citizens now have rights which priests are bound to respect. Fathers of families are no longer dragged from their beds at midnight by a priestly police and thrown into prison for being derelict in the matter of going to mass or confession, or for not getting on their knees when the carriage of his Holiness was passing. Such things were

Digitized by Google

once the main features of ecclesiastical Rome, but they are no longer the characteristics of the capital of United Italy. In its earlier centuries, Rome was nourished, or suckled, by "the brazen-imaged dugs" of the wolf of war and conquest. Later along, the cruel, implacable, and world-absorbing Rome of the political Cæsars was transformed into the even more cruel, implacable, and earth-coveting Rome of the ecclesiastical Cæsars such as Hildebrand *et al.*, who substituted for the sword of conquest blazing faggots and engines of torture of the Inquisition. At length, both these whilom Romes have nearly vanished, like hideous dreams; and we have the mitigated Rome to-day of a liberal, constitutional, free-thoughted monarchy, with a free thinker for king. It is a transformation that would have gladdened the heart of the noblest of liberals, Mazzini. But such a fruition was not for him, although he was the greatest promoter and forerunner of it. It is true that the spiritual Cæsar still lives, diligently engaged in studying the folios of St. Thomas Aquinas and claiming to be the spiritual lord of the human race. But, if that claim was always ridiculous, how shall it be characterized at this time of day? These things being so, why should not a papal Monsignor, or my lord, and illustrious member of the Pope's household or family, be engaged in a lecturing crusade against heresy in New England, which has been a nest of heresy from the beginning, so far as a prelatical religion with priests and mitres has been concerned? Moreover, within the last forty years, there has been superimposed upon the original Anglo-Saxon, Plymouth-Rock New England a Celtic, Roman Catholic New England, which votes for Ben Butler and allows itself to be made the foe of common schools, under the leadership of priests, and to make a mock of the ballot-box and of the privileges of free citizenship. Thus, Mgr. Capel is sure of an audience here, in any event, of religionists of his own creed, although he is not a Celt, but an Anglo Saxon who has voluntarily abdicated the independence of his imperial race to become the propagandist of mediæval superstition in the vast English-speaking world, which comprehends so large a portion of both hemispheres, and which is invincibly wedded to free government, individual independence, and freedom of thought, speech, and belief, and implacably hostile to priests and priestly dictation. However, as Mgr. Capel uses no other instrument of conversion of heretics than a plausible tongue, he is fairly entitled to all the converts whom he can win over to his obsolete views.

The writer of this has no intention of attempting to impugn Mgr. Capel's discourses. The day of theological controversy is past and gone, never to return. The world of to-day is no longer interested in theological dogmas or creeds. The discussions of articles of faith are now regarded as mere logomachies, or futile talks about words, which stand, not for any realities either in earth or heaven, but for the mere imaginations and dreams of primitive, barbaric times and primitive, barbaric men. The fair humanities of old religion, with which Mgr. Capel is attempting to conjure in keenly rational, practical, democratic New England, live no longer in the faith of reason anywhere. The genuine, Simon-pure New Englander, to the manner born, was always his own priest and king, an invincible independent in politics and religion, *ab initio;* and such he will remain to the end of the chapter. On this subject, Mgr. Capel should read Emerson's Boston Hymn. It is the confession of faith of all true Yankees:—

"The word of the Lord by night
To the watching Pilgrims came,
As they sat by the seaside,
And filled their hearts with flame.

"God said, I am tired of kings,"
(and of high priests also,)

"I suffer them no more;
Up to my ear the morning brings
The outrage of the poor.

. . . . . .

"My angel,—his name is Freedom,—
Choose him to be your king;
He shall cut pathways east and west,
And fend you with his wing.

"Lo! I uncover the land
Which I hid of old in the West,
As the sculptor uncovers the statue,
When he has wrought his best.

"I show Columbia, of the rocks
Which dip their foot in the seas,
And soar to the air-borne flocks
Of clouds, and the boreal fleece.

. . . . . .

"I will have never a noble,
No lineage counted great;
Fishers and choppers and ploughmen
Shall constitute a State.

. . . . . .

"Call the people together,
The young men and the sires,
The digger in the harvest field,
Hireling and him that hires.

"And here in a pine state-house
They shall choose men to rule
In every needful faculty,
In *church* and *State* and *school*.

. . . . . .

"Come, East and West and North,
By races, as snow-flakes,
And carry my purpose forth,
Which neither halts nor shakes.

"My will fulfilled shall be;
For, in daylight or in dark,
My thunderbolt has eyes to see
His way home to the mark."

B. W. BALL.

THE ATMOSPHERE AS AN AGENT IN MENTAL AND MORAL EDUCATION.

The atmosphere acts as the lungs of our planet, sustaining in correspondent relations with it the respiratory organs of all animals and plants. It inhales from the earth and waters oxygen and hydrogen, in form of aqueous vapor, oxygen and carbon in that of carbonic acid, and hydrogen with azote in form of ammonia. From the sun, it derives electricity. Nay, the thermal, the luminous, the electric, and magnetic forces, four facets of the one solar diamond, conspire in the atmosphere. Superior to the soil in its physical position, it is equally so in the natural hierarchy of powers and their media. Oxygenation of the tissues is the "*open sesame*" of the *organic* forces. These reproduce the *telluri* in subtler variations by the senses, by mentality, and by passion. Predominance of solar powers in the organism over the passive elements of structure emaciates and consumes. This vital fact, so normal in the lives of great thinkers and of ardent lovers, was expressed by the Greeks in the fable of Semele, the mother of Bacchus.

Jove was enamoured of Semele. Jove, the aerial power, whose banner still waves in the "Jupiter" flag of the topmast (corrupted by our sailors into the "Blue Peter"), Jupiter *tonans*, distributed in nature the imponderable forces. He was wont to visit Semele in modest earth-guise, clad in the mild radiance of the dawn or vesper. But she, the vain-glorious beauty, having once wrested from him in a moment of imprudent tenderness that Stygian oath, that no god may gainsay, to grant whatever she should ask, requested he should visit her in full celestial glory. Semele had not divined through the spectroscope that robe of flaming hydrogen, which may enlarge the sun's photosphere by some half a million of miles, and whose rays our atmosphere quietly absorbs. When this protective veil fell away, she perished in the embrace of flame. The lesson is at once moral and physical. It alludes to the electrical combustion of tissues oxidated by excessive innervation, and to the corresponding limitations to which terrestrial beings are subjected in the spiritual activities of thought and passion. The unborn Bacchus, rescued from the womb of genius too aspiring, was sewed up in Jupiter's thigh, whence, in the due revolution of seasons, he issued and reproduced the solar forces, humanized in wine. In the fabled career of Bacchus, his conquests and his trials, in his car drawn by lions,—savage forces of the earth subdued by "Mirth, that humbler harmonist of care,"—we find a coincidence of periods ascending in power and glory, then declining with those of the solar year. It is one of the forms of that great solar allegory in whose myths human actions are blended with those of terra-solar relation through the climatic zones of the air-power.

Man exerts over the air powers equal to his intelligence and needs. It lights his fire, pumps his water, grinds his corn, makes his salt, and dries his sugar, warbles music by the flute or carves it with the violin bow, wafts him across the seas, lifts him above the clouds. The power of man over the elements is a result of his social combinations.

Let us forbear to dwell on those by which society, expending in useful enterprises forces either spiritual or material, which have hitherto been wasted or corrupted in intestine and national conflicts, shall heal the ulcerations of our bared and wounded mother-soil, extending the limits of production, and centupling this by distributive wisdom. Let us first consider the earth king subjected himself to the air-power, a naked infant on his mother's breast.

Voice and hearing are twins in the air-nursery. Voice speaks to ear, ear absorbs and transmits to the throne of conscious thought and emotion the air's rhythmic undulations. In order to unite souls in sympathy, nature bestows on each of us an active and a passive sense; not disassociating them in body, as in her distribution of sex, but connecting both in every individual. Suffering cries out, and intelligent sympathy answers. Such is the first passional symphony, tearful and compassionate. How moving the cry of an infant! What subtile relations have these inarticulate sounds with the fibres of piety subtending the valves of the heart! The new-born animal, which seems to heed no other sounds, quickly distinguishes its mother's voice, even amid the bleatings or mooings of a herd. The ear, which suffices for the young lamb or kid, is complemented for the ewe or nanny by the nasal diagnosis of her uterine propriety; and the senses of beasts are far subtler than ours in this discrimination.

Philosophy, says St. Pierre, may prove to a mother, in the name of physical and moral laws, that she ought to nurse her child. But may she not oppose to such general reasons her particular reasons,—her delicacy of health, exhausting vigils, ceaseless anxiety, social oppression, her country's indifference to her needs, then, the too frequent case that the child, when grown to man's estate, may be her torment? She hears her infant's plaintive wail, and she gives it the breast without reasoning. The parents or teachers who resort to pain and fear in order to supplement their own ignorance of child nature and the inherent vice of their methods of teaching, who arm themselves with rods and extort cries at which savages, the most cruel toward their enemies, would blush, only give the proof of their own incapacity for delicate and sacred functions. The mother to whom is confided the privilege of those first impressions on the plastic brain which mould the moods of temper, and who prostitutes her mission either by violence

Digitized by Google

or paregoric, violates toward her child the first compact of natural piety, and derogates from her ministry of charm between man and humanity. These considerations by no means, however, invalidate the policy of a little moderate and judicious spanking; not with the animus of punishment, but as a convenient method of modifying some existent morbid influence. The switch is especially homœopathic to fits of bawling and crying, apparently causeless, in awaiting the possible discovery and removal of their physiological causes. In quickening reaction from depressive moral states, and diverting sensation *a posteriori*, a child's real comfort may be much promoted.

Air is, next to warmth, the essential stimulus of life. It is not sufficient to breathe pure air: the delicate skin must breathe it also through light fluffy garments. Air of a pleasant summer heat must circulate through the clothing, the cradle, and the chamber,—not the poisonous carbonic oxide of cast iron stove air, nor yet that of coal grates mingled with chilling draughts, but the rational economy of air warmed all around the room by its contact with hot water or hot air pipes, and changed by a well-graduated ventilator from above.

Even with abundance of fresh, well-sunned air infants may blanch and wilt like plants in an ill managed hot-house. Their uneasiness ceases on leaving close rooms: they stop crying to play or go quietly to sleep. Children generally are gay when they are naked: they cry when their clothes are put on, and rejoice when they are taken off. This is not merely because tight or ill-fitting dresses embarrass their movements, but because the air feels pleasant and is tonic to their skins, stimulating circulation and insensible transpiration. The rapid and vigorous growth of savage children is mainly due to the free play of air and sunbeams on their skin. This protects them from our influenzas, catarrhs, and rheumatisms. Wherever climate and season permit, education should be mainly conducted in the open air. The most attractive studies, those of the natural sciences and useful arts, are especially congenial with this free air culture.

The aërial forces play with children in the toy balloon and kite, nay, even in their pop-guns. The descent of the balloon is a lesson in the geometry of gravitation and of parabolic curves. When the boy has raised his kite with an ambitious joy, comment upon the composition of forces, as the wind acts on the inclined plane of its surface. If showers occur, we may, in taking shelter, review the evidences of atmospheric electricity, relate the story of Franklin's so brilliant and dangerous discovery, the imperfect security afforded by non-conducting cords of silk, especially when wet, in limiting the passage and directions of a force so explosive in its cumulative energy, and to which Prof. Richman of St. Petersburg fell a victim, notwithstanding the entire insulation of his apparatus.

It has often been observed that battles attended with much cannonading were presently followed by rain. While it is impossible to know whether or to what extent the *post hoc* in these cases is really a *propter hoc*, they are to be viewed in the light of the fact that, while a substance is burning, positive electricity escapes from it into the air, while the ashes become negatively electrified. Domestic additions to the air-store of positive electricity lead us to expect, *ceteris paribus*, an increase of rains proportional with population and with the wealth of populations, since the exchange of electricities coincides with rains in conditions of maximum intensity or greatest accumulation of opposite electricities in the two bodies of earth and air.

As the air itself treats the solar principles, so treat the mind of the child. Give to principles, not thought alone, but a body and action. Fix attention on interesting facts, and let theory hobble behind: it will catch up soon enough.

The sky is obscured; the sun, veiled in vapors, lets long pale rays pierce through, announcing the storm. A flurry of snow sprinkles the air, like the down of birds; anxious herds low in their pastures. The terrible wind piles mountains of clouds in the heavens; rapid and heavy, it hollows the face of the waters. Its rustle is heard from afar in the bending tops of the forest:—

> "With sudden roar, the aged pine tree falls;
> One crash, the death hymn of the perfect tree,
> Declares the close of its green century.
> Low lies the plant to whose creation went
> Sweet influence from every element,
> Whose living towers the years conspired to build,
> Whose giddy top the morning loved to gild."

And, while these monuments of ages pass, a bird appears fixed against the sky. The hawk battles with the storm, screaming his death note. He espies some gentle victim, never more to welcome the spring. Yet amid these apparent disorders of nature—the tempest and the fall of forests and the wars of animals—reigns providential Law.

But for man and other predatory species, the mild and so fecund frugivora would crowd and starve each other. The chances of life favor the strongest, with steady aim toward perfection in kind; for weakness is not viable. The whirls of the hurricane renew vegetation, scattering the seed of plants afar; they dissipate the brooding miasms; they bear to cold regions the tropical air; and, while rendering milder our middle zones, they hurl upon the polar realms mountains of snow, which, with returning summer, shall give fresh springs to the ocean. M. E. LAZARUS.

WORSHIP.

Many people who accept in a general way the theory of evolution are unwilling to admit that religion—especially the religious nature of man, which, some hold, distinguishes him from the brute—is a product of evolution.

But, if man has risen from the condition of creatures incapable of religious thought and devoid of a religious nature, his disposition to worship as well as his belief in regard to the objects of his worship must have been acquired, must have come into existence naturally with the development of the race. The statement of Lubbock, that there are tribes devoid of religion—unless, indeed, we no "longer regard religion as peculiar to man"—indicates that to-day, even, there is no sharp dividing line between religious and unreligious creatures, and of itself is sufficient to suggest that, as the higher religions have been evolved from the lower ones, so the lowest religions have grown out of conditions with which we are accustomed to associate nothing of a religious character. Certain it is there are tribes still existing in which the intellectual faculties are so feeble that the phenomena of nature have as yet scarcely become an object of thought. Who can doubt that the men who lived in the earlier ages of human existence were as destitute of religion as are the Bechuanas or Arafuras of to-day. Of the low intellectual condition of man in a very remote past, we know something from the rough implements of stone which have outlasted the bones of the rude men who made them. And there must have been yet earlier ages in which man lived and was able to leave no memorial of his existence, and during which, in a religious point of view, he was still more like the brute mentally than at the time he is first brought to our notice by prehistoric archæology. Occupied for ages in contests with wild beasts and obtaining food, his life was of a kind not adapted to favor the contemplation of natural phenomena; and when, after ages of mental development under exceptionally favorable circumstances, he began to form ideas and to frame hypotheses, they must have been very simple, crude, and indistinct.

There is "a twilight stage of intelligence" in which, as in fetichism, there is confusion between living and non-living things; and, with all that Spencer has written on the subject fully in mind, we believe with McLennan that "the simplest hypothesis and the first to occur to men seems to have been that natural phenomena are ascribable to the presence in animals, plants, and things, and in the forces of nature, of such spirits prompting to action as men are conscious they themselves possess." "Man," says Goethe, "is a true Narcissus: he delights to see his own image everywhere; and he spreads himself underneath the universe like the amalgam behind the glass." Projecting himself out upon the field of natural phenomena, man invests with his own thoughts and feelings the objects around him, and tries to win their favor and secure their aid. "We still say," says Mill, "the sun rises and sets and comes to the meridian, the sea ebbs and flows. Languages were formed by men who believed these objects to have life and active power in themselves." "Man paints himself in his gods," says Schiller. The character of his gods is determined by his own; for he worships, unconsciously to himself, his own qualities abstracted from himself and contemplated objectively, whether in a piece of wood or mineral, the passing clouds, the flowing stream, the changing moon, the quiet stars, the life-giving sun, or in an invisible king with a crown on his head and a sceptre in his hand, with ministering angels around him.

But how came man to have a tendency to worship which in the individual is antecedent to experience, which now depends not upon any observation of nature, which depends not upon experiences such as those through which our savage ancestors passed? The answer, in the light of modern psychology, is not difficult to give, at least in a general way. In the course of ages, states of mind produced by the outward world have become organized in the race in the form of tendencies. That which is learned, whether from a personal teacher or by contact with nature, and is repeated through centuries, may produce states of mind which by heredity appear in the descendants in the form of aptitudes or predispositions. Although we are not born with innate ideas, it is unquestionable that we come into the world with organisms whose actions and reactions are largely determined by the form and quality of structure; and they include all those results of generations which appear in us as aptitudes and intuitions.

It is reasonable to conclude, that the contemplation of nature and the practice of worship induced by ages of experience, during which fear, admiration, wonder, gratitude, and reverence have been constantly excited, have resulted in a predisposition to worship, which, although due to experience in the race, is now, wherever it is found, *a priori* in the individual. Thus much as to the natural genesis of religion considered as a part of man's nature.

Outside of the human mind, it presupposes, not a personal being who implanted it in man, and the worship of whom is man's highest and noblest duty, but that world of phenomena, with all its wealth and variety, with all its beauty and deformity, which confronted our earliest ancestors as it confronts us to-day. The instinctive fear of man exhibited by wild animals implies the exist-

Digitized by Google

ence of man and those destructive acts which excited their dread and terror. And, if the religious tendencies of man have been acquired in the manner indicated, they presuppose, in addition to the susceptible mind, not a supernatural being who endowed man with a religious nature when he appeared on the earth, but the natural world that impressed him and produced those mental states which have been repeated and the results of which have been transmitted in the form of a predisposition to worship. There is nothing in the religious instinct that determines the particular form or character of the object of worship. That depends upon the intellectual and moral condition of the worshipper and the instruction he has received from parents and teachers.

Since worship had its origin in man's contemplation of his own nature, in observing himself reflected from the mirror of his own thoughts, in fearing and reverencing his own qualities seen illusively in the objective world, the conclusion seems unavoidable that the continuance of worship (in the common meaning of the word) must depend upon the continued recognition of a personality like himself behind or immanent in the world of phenomena. A god has no significance or value for an ardent worshipper, unless he can contemplate him as a being like himself, who approves and disapproves human actions, who sees man's movements, who hears his words, who sympathizes with him in misfortune and distress, to whom he can appeal when in need of aid, and from whom blessings come in response to prayer. What cares the devotee for the "absolute," the "unconditioned," the "unknowable," a god without any of those human qualities with the contemplation of which in fear, in reverence, in love, worship commenced and worship has been sustained through all the ages of man's existence as a religious being? No doubt, as Mr. John Fiske maintains, the purification and refinement of Theism consists in a continuous process of "deanthropomorphization," discarding the human qualities with which man has invested deity. But, as Theism commenced by ascribing natural phenomena to personality and intelligence, and has always recognized them as the essential attributes of deity, when they are discarded, the essential element of Theism is abandoned, and worship is no longer possible. When Mr. Fiske purifies and refines Theism by the total abolition of every anthropomorphic element, he simply purifies and refines God until he deprives him of every quality that has had or can have any interest for the worshipper.

Imagine the devotee attempting to reconcile the duty and delight of prayer, praise, and thanksgiving with sentences like these from *Cosmic Philosophy:* "For to represent the deity as a person who thinks, contrives, and legislates, is simply to represent him as a product of evolution. . . . To represent the deity as intelligent is to surround deity with an environment, and thus to destroy its infinity and its self-existence." "As Spinoza somewhere says, 'Determinatio negatio est,'—to define God is to deny him; and, such being the case, what can be more unnatural than to insist upon thought and volition, phenomena only known to exist within quite narrow limitations, as the very nature and essence of the infinite deity?"

Mr. Fiske says that what men have worshipped from the earliest times has been, "not the known, but the unknown." But we must not overlook the fact that that which is an object of worship is that which the worshipper believes he understands, so far as it has interest for him. Just so far as he ascribes his own qualities to God, he loves him; and, so far as his God is regarded as bad, he fears him. The devotee believes his religion solves the mystery of the world. As Spencer says, "For, though every religion, setting out as it does with the tacit assertion of mystery, forthwith proceeds to give some solution of this mystery, and so asserts that it is not a mystery passing human comprehension." That which is mysterious to the philosopher seems perfectly clear to the devotee. The mysteries that arise in connection with deities with the growth of intelligence are the result of speculation, and are unessential accompaniments, not the objective basis of worship. It is true that, when an object becomes actually known to the worshipper, "it ceases," as Fiske says, "to be an object of worship." But this is for the very obvious reason that it ceases to be what it had appeared to be, what it was believed to be when it was worshipped. And, when it is seen that the qualities with which the unknowable is invested cannot properly be ascribed to it, and that it is inscrutable, it can have worshippers only among those who, although they have on purely intellectual grounds rejected anthropomorphism, are yet under religious influences which have been inherited and strengthened by education and surroundings.

By worship, we mean that mental attitude, with its corresponding expressions, which results from the conception of personality and volition behind phenomena. But the religious sentiment which is based primarily upon the idea of cause and origin will persist. For, as Spencer says: "No more in this than in other things will evolution alter its general direction. It will continue along the same lines as hitherto. And, if we wish to see whither it tends, we have but to observe how there has been thus far a decreasing concreteness of the consciousness to which the religious sentiment is related, to infer that hereafter the concreteness will further diminish, leaving behind a substance of consciousness for which there is no adequate form, but which is none the less persistent and powerful. Without seeming so, the development of the religious sentiment has been continued from the beginning; and its nature when a germ was the same as its nature when fully developed." Its essential nature is the awe with which the savage and the saint alike contemplate the display of a power greater than their own. It continues when worship as a system founded upon the conception of personality as the cause of all phenomena has lost all interest for the mind, and when "communion with nature" is its only worship.

B. F. UNDERWOOD.

EDITORIAL NOTES.

ALL associations or individuals desiring to arrange for lectures by B. F. Underwood the coming winter are requested to address him at an early date, the earlier the better, to enable him to plan his route systematically.

"THE question of allowing students the option of substituting modern languages for Greek," says the Springfield *Republican*, "is approaching a decision at Harvard. The battle appears to be between the Faculty and Overseers, and in the anti-Greek party are President Eliot, Rev. Dr. James Freeman Clarke, Superintendent Seaver of the Boston public schools, and of course Charles Francis Adams, Jr. Prof. Agassiz favors the reform party."

THE injustice of exempting from the burdens of government the enormous wealth locked up in church edifices and grounds is so manifest that the evil will be corrected, when the question can be got squarely before the American people. We cannot afford to foster favoritism in a democratic government. All people must stand upon an equality before the law, all property before the tax collector. One man's religion is only on a par with another's infidelity, so far as exemption from burdens is concerned. Religion is not a State institution. The State can in no way patronize it. The public money cannot be used to build churches, neither is there power in the government legally to support indirectly religion by exempting from taxation the wealth invested in it.—*Iron-Clad Age.*

REV. MR. WOODS, of Trinity Church, Springfield, Mass., on Thanksgiving day, read the President's proclamation, not intending to read our Governor's with its, "Drink ye all of it," etc.; but, while contributions for debt-raising were being taken, a prominent Democrat said to one of the collectors that he would give $50 if the pastor would read the Governor's proclamation. Mr. Woods, after some hesitation, having been handed a copy of the proclamation, "read it," says the Springfield *Republican*, "like chain lightning." The same paper adds: "When the good Republican brethren saw that their pastor was, as it seemed to them, selling his conscience for $50, four of them 'chipped in' and offered, through another collector, to buy it back for $100; but Mr. Woods had already begun reading, and a 'scene' was prevented by keeping still." Wonder, if Jesus had been present, if he would not have applied his whip of small cords!

THE Boston *Transcript* says of Emerson:—

His gentle yet sturdy intellectual personality, which was so conspicuous while he remained on earth, and which by a law of its being repelled everything impure, clinging to everything noble and that would assist in the toilsome ascent to heights of contemplation where only the finest natures can abide. His influence upon the world of letters, subtle yet powerful, has been seen and felt like a benediction, and did not require even Arnold's attestation. Emerson tried to lead his countrymen up to higher mental altitudes than was their wont, but he evinced not the least anxiety to found a school or enlist followers. He taught here and there, leaving whatever truth he propounded to make its way without further concern on his part. His teachings were chiefly a protest against current ideas, whether in political economy, philosophy, or religion. Emerson's precise belief he probably never knew himself. There is where he stands on common ground with Arnold. He was less of an intellectual guerilla than the living Englishman, whose irregular, destructive fire on very many established customs and institutions has rendered his name famous in both hemispheres. Emerson, however, never failed to combat wrong, however firmly intrenched.

POETRY.

For *The Index.*

A HOLY DAY.

What is a holy day? Not that, I know,
When priest goes down beneath the ashen vow;
And starched peasant, silent, solemn, slow,
Beneath the frescoed saints files in below.

Not that when myth with myth the preachers weave,
And all men "Credo" cry,—I do believe;
For all my sins leave Christ on cross to grieve,
That I from hell deserved may find reprieve.

Not that when rings in solemn tones the bell,
High hung in belfry, God's sweet love to tell,
Whereby one-tenth in death may say 'tis well;
And all the rest, o'erripe, drop into hell.

But this, when, matched from out the wealth of time,
Man brings a day of toil with love to chime;
His hand begrimed, his soul uplift, sublime,
His work with worship comes to sweetest rhyme.

The upward look, from anvil or the press,
Doth every-day with truth and honor bless;
And he who frees his soul from foul duress
Most holy keeps the Sabbath's rich largess.

The Index.

BOSTON, DECEMBER 6, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

The Lower and Higher Laws of Nature.

An Address delivered before the Educational Meeting of the Sociolog'o Society.

BY MRS. I. C. FALES.

There are in nature lower and higher laws. The lower law in the economy of the individual appears as selfishness, and has its root in the instinct of self-preservation. The higher law is unselfishness, and includes regard for the welfare of others. One is egoistic, the other altruistic. These are the centripetal and centrifugal forces of social life. In individual and social growth, movement is from the base to the summit, from the lower to the higher, from the simple to the complex; and the centripetal principle has been the moving force. There is, however, no conflict between lower and higher laws. They are wholly supplementary one to the other. A true regard for our own welfare requires that we should also consider the welfare of others.

When unenlightened, the natural instinct of self-love leads us to concentrate our care upon ourselves, irrespective of the happiness of others. This, it will readily be seen, is productive of warring interests,—hatred, struggle, conflict. "Each for himself," etc., is an adage too well known to be repeated. The growth of society has, however, largely subordinated selfish feelings to kindly ones. Progress is only another name for the closer affiliation of mankind. Whatever retards that affiliation retards progress. Social growth is toward that aggregation of individuals where, by a natural process, the good of one becomes the good of all.

Matthew Arnold has said: "An individual or a class concentrating their efforts upon their individual well-being exclusively do beget troubles, both for others and themselves also. No individual life can be truly prosperous and happy passed in the midst of those who suffer. To the noble soul, it cannot be happy: to the ignoble, it cannot be secure." Matthew Arnold, with his fine insight, enunciates a law not generally recognized,—that of the unity of mankind, the inter-dependence of all the parts of social life. Emerson expresses the same idea when he says: "Secret retributions are always restoring the level of divine justice. It is impossible to tilt the beam. All the tyrants, proprietors, and monopolists of the world in vain set their shoulders to heave the bar. Settles forevermore the ponderous equator to its line; and man and mote and star and sun must range with it, or be pulverized by the recoil."

It is impossible for any social and economic system to be permanent where the good of one is purchased at the expense of another. It must, in process of time, give birth to another and higher system, where the rights of all are acknowledged, and where an equation of values takes the place of inequality.

"The great idea of federation," says Mr. Neale, of England, "between worker and consumer for their mutual benefit, is on the point of replacing that ill-starred scheme, the plan of exploiting the worker for the benefit of the consumer, which has masqueraded under the very inappropriate name of the Federal system. For federation, as we see by the striking instance of the United States, means not a system where a central body affects to direct at its will limbs which do not enter into the organization, but a system where every limb has an independent sphere of action, subordinate only to a common rule resting on their joint assent, and governing for its common benefit." This is federation in the political system: it is co-operation in the industrial system.

It cannot be too strongly insisted upon that, under the competitive system, where one man's gain is another's loss, wealth concentration inevitably carries with it poverty and pauperism, and that this poverty and pauperism are in exact ratio to the extent of the concentrated wealth. This can only end in one thing,—revolution. If competition is allowed to pursue its course unchecked, producing vast wealth and vaster poverty, then nature's terrible law of reaction, in the shape of revolution, comes in. If, however, co-operative action is instituted,—if the forces of labor combine, and thus arrest the further action of competition, making a lower law subordinate to a higher, —then, in place of a revolution, there is an evolution of a higher form of social life.

These are the issues before us,—increasing centralization of wealth and power with increasing poverty and suffering, ending in the effort to restore the social balance in revolution, and organized action ending in industrial co-operation.

In advocating co-operation, we do not advocate a principle that is in antagonism to nature's lower law of competition, but one that supplements and crowns its deficiencies. Competition, as a dominant element, can never institute orderly relations. It can only advance the interests of mankind through perpetual struggle and conflict, and even there its power is limited; for, eventually, a condition is reached where the action of a "higher law" becomes indispensable.

It is necessary that we should recognize that, in the development of life, there are principles evolved as well as organic forms, and that, in both instances, their production is the result of ages of growth. For countless years, mankind has developed along the line of opposing interests. This stage of growth has been necessary, in order that the poorer elements of life might be eliminated and the better retained; but the very nature, action, and soul of competition is finally to induce a state where progress is retarded by disunited action, and where the best interests of the community at large can only be subserved by the interests of men becoming identical, where the good of one becomes the good of all. This is nature's higher law, the law of correlated forces in the realm of industrial economy; and, because it is the *higher law*, it must dominate the lower.

In forming centres whence these principles are to be propagated, we are not working in advance of the need of the times. We are only seeking to explain laws which through the ages have been evolving. Co-operation can never be successful, until the thoughts of men are changed. Life has its genesis in thought. Whether it is upward or downward, the starting point of action is in thought. Elevate man's ideal, and character will insensibly and gradually undergo modification, and tend to shape itself in conformity with that ideal. Lower the ideal, and, by the same persistent law, insensibly character is lowered.

Hence, the need of an educational system to show the moral and economic advantages of industrial co-operation. In the presentation of the pirnciple, those twin forces, morality and economy, cannot be separated. If we present only the economic side of co-operation, then all that would result would be only an improved form of our present industrial system. We would simply have a low form of utilitarianism. The voice would be the "voice of Jacob," albeit "the hands are the hands of Esau." Present only the moral advantages, and we would indeed be "a voice crying in the wilderness": we would repeat what is now the glaring evil of our civilization,—theoretical, and not practical, ethics.

Co-operation must be shown to be a great moral and economic law.

Since nature has placed the emphasis of greater economic value upon the moral law of regard for the rights of others, we need not shrink from appealing to the selfish instincts of men. Those instincts, when held in check, are right. The higher law does not destroy, but only fulfils the lower.

It is interesting to look back at the prehistoric past, and observe by present evidences how higher forms of life have gradually arisen from lower ones; to observe how, through periods, it may be, of devastation, destruction, and oscillation, the law of growth has held its steady course, endlessly working toward the production of good. It is infinitely more interesting to realize that we are living in the very centre of vast and world-wide changes, that we are in a period of transition from a lower to a higher state of existence, and that we are conscious workers in this evolution of the ages. Nature's forces working in the past are equally active in the present: they are working in us. And it should ever be borne in mind that, although the operation of natural law is as independent of human volition to-day as in dead eras, and that an altruistic civilization is the inevitable result of that law, despite any and all antagonism, yet that human intelligence and human activity are powerful factors in the process, and that, when applied in the normal direction, accelerate and aid social growth, and make nearer the coming of that altruistic condition referred to.

Although we cannot discern the full scope and sweep of the movement that is bearing society onward and upward, we do know that it is toward the evolution of a moral status in which all things are brought into harmony.

When, through the application of co-operative principles, the interests of men are made identical, and all work for a common purpose; when we fully realize the unity of life, and that our neighbor's welfare is indeed essential to our own; when we know that human relations are to become uni-

Digitized by Google

fied, and, like the solar system, act as a whole,—then life takes on new meaning. Selfishness is redeemed of its ugly attributes, and stands hand in hand with unselfishness; and this industrial co-operation will do. It is no dream, no illusion, no mere theory: it is a fact.

We can help on the process of transforming one industrial system into another by united effort in assisting and directing the organization of labor, in the preliminary work of the classification of industries, until that stage is reached when competition is arrested by the moral force of united, intelligent action.

CORRESPONDENCE.

THE RELIGION OF THE FUTURE.—A TEMPLE TO THE SUN.

Editors of The Index:—

The religious element in man is central, giving tone alike to affirmation and negation; and, as a result of its culture, there comes a demand for ceremonial expression. The history of all religions attests to this fact. This demand for ceremonial expression has always had its result in a formalism under which the religious element has lost its force; and worship has become a ceremonial display, concealing all manner of hypocrisy and imposture. The tendency of ceremonial worship has ever been in the direction of materialism,—to lose sight of the spiritual reality, and rest satisfied with shams and shadows. The religion of this day, misnamed "Christian," has followed in the footsteps of its illustrious predecessors, and has now arrived at this point materialistic. Church effort in all its tendencies has become mercenary, the amount of money it can command, the standard of its influence, and the passing of the contribution basket, the pivot upon which it turns. To this, it has, of necessity, come at last in its sectarial rivalries,—to excel in the magnificence of its churches, the height of its cupolas, and in its pulpit and platform exhibitions. The Church has formed an adulterous union with a corrupt social State, receiving as the price of her virtue the replenishing of her coffers. For the redemption of society, she has nothing better to offer than ceremonial observances, while standing ready to denounce all effort to strike at the causes of our social evils by the reorganization of society upon the only true basis of industrial co-operation, as infidel in its tendencies and atheistic in all its proposed aims. To counteract these materialistic tendencies of the Church ecclesiastic demands a new departure from the stand-point of industrial co-operation, as presenting the foundation for a true, spiritual, moral, educational, and thence social superstructure. Conference among honest, earnest seekers after the right way must precede practical effort. Before laying the foundation in view of the superstructure, the proposed plans must be submitted and held under review, to be accepted, modified, or rejected. The very idea of a church presupposes teaching and administering; and this calls for a temple with its halls of assembly and courts for varied uses, under the control of teachers and administrators. The nature of the proposed teachings and the varied uses designated will determine the character of the prospective structure. The only creed which will receive unquestioned and unqualified acceptance will be "Excelsior!"—onward and upward forever. Nature's revelations, under the ministrations of science, point unerringly to the sun as the embodiment of the creative and sustaining activities proceeding from the Great Fountain Source of all life. The religious sentiment in man intuitively turns to the sun with feelings akin to adoration. The temple of the coming religion of humanity will be dedicated to the sun, its halls of assembly devoted to instruction in the mysteries of nature, and its courts to varied uses, including exhibitions of the products of man's co-operation with the solar and planetary forces. Work will be worship; and, therefore, the devotional exercises of the temple will consist in a preparation for all the practical uses of our daily life; its prayers, an honest aspiration to excel in all activities involving the common good, with a ceremonial exhibit of the products of individual and corporative energy and industry. All the orders of its priesthood will be open to men of science divinely authorized, because qualified by their scientific attainments, to instruct in nature's mysteries, and to administer the varied processes of her unfoldings. The sacerdotal order will include male and female educators of childhood and youth, whose qualifications must give evidence of direct apostolic succession from the first great apostles, Pestalozzi and Froebel, in the only true line of educational advance; and to the kindergarten will be assigned the chief court in the temple. Here, too, all the reform movements will find their long-sought-for solution. The temperance question will find its solution in the temperate use of all nature's bounteous gifts conducive to a healthy physical growth, the scientific use furnishing all needed safeguards against abuse. Woman will take her position on the broad platform of equality with man, all positions and occupations being designated and determined by attractions and qualifications. Our atheistic friends, for whose truth-loving sincerity we have the most sincere respect while differing with them in their conclusions, will take their stand upon the common platform, with the privilege of halting at any station within the special domain of nature's forces until the watchword "Excelsior" makes clear to them the pathway of advance. Our fellow-citizen, Col. Ingersoll, whose brilliant oratorical talents are now devoted to the contract of clearing away the mass of rubbish which has accumulated as the outcome of the efforts of the Church ecclesiastic to build from the top downward, after finishing up his contract, will be found among the foremost architects and builders. The Rev. H. W. Beecher, who, since his late utterances, has by many of his Christian brethren been pronounced "a worse man than Ingersoll," will here find room for his progressive tendencies and varied talents, with many hundred more reverend gentlemen who are silently thinking in the same direction with Mr. Beecher.

Our Swedenborgian friends should be prepared to come over in a body under the teachings of their "illumined Seer," who tells them that in the angelic heavens the Divine Man presents himself to the open vision and adoration of the angels in the sun of the spiritual world as the symbol of the divinely human energies proceeding from his perfect manhood. To the initiated, this temple of the sun will be viewed from the stand-point of its mystic teachings,—its ceremonials, the symbols of interior unfoldings from centre to circumference, with way stations where all may rest until, through their reasoning faculties, they hear the call to come up higher. The substance of nature's teachings is the revelation of hidden truth, commencing with the literal scientific rendering, advancing under successive forms of expression, and accepted according to the state of mental unfolding. So that for all there will be room with space ever expanding. From this temple of the sun will be proclaimed a free gospel, "without money and without price." Its revenues will come from the free-will offerings of self-appointed trustees of their own surplus capital, pledging its expenditure to the furtherance of the best interests of their fellow-men, with no salaries guaranteed or contribution baskets tolerated. It will become the nucleus of all effort in the direct line of industrial co-operation as the only foundation giving hope of a social redemption from the wrongs and injustices with all the social infamies now on the increase under virtual patronage of Church and State.

In view of all these considerations, and as a point of departure for practical effort, let us have a temple dedicated to the sun.

W. H. G.

SAN JOSE, CAL.

DOGMATISM.

Editors of The Index:—

An article in a recent number of *The Index*, appearing over the signature of the senior editor, contains the statement that, in the realm of possible existence open to human imagination, research, and attainment, "only the most irrational dogmatism can deny the existence of a Power, however dimly comprehended, that may be called divine,—a Power anterior to and greater than humanity,—anterior to and greater than the material nature which man's senses reveal to him. . . . The averments of materialistic philosophy that Nature is all the deity which the universe needs, and of Comtism, that the supremest being is humanity itself, . . . are assertions of a narrow dogmatism."

Now, setting aside the verbal question whether the word "nature" may properly be used to designate *all there is*, it seems to me that the paragraph quoted is not written in Mr. Potter's usually thoughtful and kindly spirit. Does not the charge of dogmatism rest quite as heavily upon the shoulders of the asserter of a supernatural Power—big P—as with the denier? And why is the assertion that Nature is the greatest or only deity any "narrower" than the assertion that Nature is itself dominated by an undominated something else?

For my own part, I see and hear so much "irrational dogmatism" which rests upon no stronger foundations than tradition, Bibliolatry, and mere anthropomorphism, that I like to see, now and then, a good, sturdy, dogmatic denier of dogmas. He seems to keep up a kind of equilibrium in the field of dogmatism, and, I doubt not, often does a good work.

Human imagination may create a thousand fancies which human knowledge cannot deny. The witchcraft delusion was one of this class, one which, perhaps, denial, dogmatic or otherwise, could not have removed or alleviated. We have simply outgrown that, as we are outgrowing other lunacies, notwithstanding ancient precept and example and the authority of great and honored names. But, though denial might not avail to abate a belief in witchcraft, it may serve, in this later age, to loosen the bonds of delusions equally groundless and hurtful, even if men be foreordained to them before birth, and carry them with unabated injury beyond death. To rid the human mind of its inherited follies and terrors requires great knowledge and wisdom and unbounded patience. "Mother-wit," says Emerson, "is the sure cure for false theology." But the great majority of us are so checked and hampered by evil tendencies of mind, traceable through ages of superstition away back to savage ancestors, by childish fears and timidity of thought, by false ideas of duty and reverence, and by mistrained conscience, that mother-wit seldom gets a fair chance to work its cure.

To the child who, frightened by villanous nursery tale and ancient fable, clings fearfully to the hand when in the dark, we speak words of courage and cheer; and, if he timidly whispers of "something in the dark," we laugh and deny it. We do not know his spooks are non-existent: we do know the evil effects on his mind of a belief in them, of even a suspicion of them, and we quietly, even if dogmatically, *deny*. So the healthier human mind, groping in the darkness of human life, keeping always in view the terrible history of the martyrdom and crucifixion of Man—O veritable Christ—at the altar of so-called religion, speaks to its comrades in the dark cheerful words, laughs at whispered terrors, and denies, however dogmatically, the reality of the bugbears of primitive imagination and the tangibleness of the reflection of man's self in the mirror of nature.

If the appalling fact of existence overwhelms us, let us not fly to a dead and damned theology for refuge. To erect the image of Man over Nature does not explain, but mystifies and degrades it.

G. M. W.

[There are false dogmas and superstitions in abundance, against which, on clearest grounds of reason, our correspondent may hurl the most vigorous denials; and we heartily join him in that work. But we do not think the universe is all shut up in that little corner which comes within the range of human senses and human knowledge. And to deny the existence of any possible powers or power beyond the limit of man's knowledge is contrary to reason and without any warrant from science. In view of what science itself is yearly discovering as it extends its researches into the realm of the unknown, it behooves man to be very modest both in denial and assertion. In the article referred to, we said no more than Herbert Spencer says in the sentence: "The religion of humanity can never exclude the sentiment awakened by that which is behind humanity and behind all other things,—a Power of which humanity is but a small and fugitive product." One may believe in this Power and even in the possibility of attaining a more definite and rational conception of it and of man's relation to it than Herbert Spencer thinks admissible, and yet not erect any anthropomorphic image of it over nature.—W. J. P.]

WHETHER happiness may come or not, one should try and prepare one's self to do without it.—*George Eliot.*

MATTHEW ARNOLD ON EMERSON.

Some idea of Matthew Arnold's estimate of Emerson may be obtained from the following extracts from his lecture on "Emerson" delivered in this city last week:—

"Milton says that poetry ought to be simple, sensuous, impassioned. Well, Emerson's poetry is seldom either simple or sensuous or impassioned. In general, it lacks directness; it lacks correctness; it lacks energy. . . .

"That poem, which shall be a plain, forcible, inevitable whole, he hardly ever produces. Such good work as the famous stanzas on the Concord monument is the exception with him: such ineffective work as the 'Fourth of July Ode' or the 'Boston Hymn' is the rule. . . .

"I do not, then, place Emerson among the great poets. But I go further and say that I do not place him among the great men of letters. Who are the great men of letters? They are men like Cicero, Plato, Swift, Voltaire,—writers with, in the first place, a genius and instinct for style, whose prose is by a kind of native necessity true and sound. . . .

"Emerson has passages of noble and pathetic eloquence; he has passages of shrewd and felicitous wit; he has crisp epigrams; he has passages of exquisitely touched observations of nature. Yet he is not a great writer: his style has not the requisite wholeness of good tissue. . . .

"You will think I deal in nothing but negatives. I have been saying that Emerson is not one of the great men of letters, the great writers. He has not their quality of style. He is, however, the propounder of a philosophy. . . .

"Emerson cannot, I think, be called with justice a great philosophical writer. He cannot build; his arrangement of philosophical ideas has no progress in it, no evolution; he does not construct a philosophy. . . .

"Not with the Miltons and Grays, not with the Platos and Spinozas, not with the Swifts and Voltaires, not with the Montaignes and Addisons, can we rank Emerson. His work of different kinds, when one compares it with the work done in a corresponding kind by these masters, fails to stand the comparison. No man could see this clearer than Emerson himself. . . .

"We have not in Emerson a great poet, a great writer, a great philosophy maker. His relation to us is not that of one of those personages: his relation to us is more like that of the Emperor Marcus Aurelius. Marcus Aurelius is not a great philosophy maker: he is the friend and aider of those who would live in the spirit. Emerson is the same: he is the friend and aider of those who would live in the spirit. All the points in them which are necessary for this purpose he takes, but he does not combine them into a system or present them as a regular philosophy. Combined in a system by a man with the requisite talent for this kind of thing, they would be less useful than as Emerson gives them to us; and the man with the talent so to systematize them would be less impressive than Emerson. They do very well as they now stand—like 'boulders,' as he says—in 'paragraphs incompressible, each sentence an infinitely repellent particle.' In such sentences, his main points recur again and again, and become fixed in the memory. . . .

"Yes, surely, his insight is admirable; his truth is precious. Yet the secret of his effect is not these: it is in his temper. It is in the hopeful, serene, beautiful temper wherewith these, in Emerson, are indissolubly joined, in which they work and have their being. He says himself, 'We judge of a man's wisdom by his hope, knowing that the perception of the inexhaustibleness of nature is an immortal youth!' . . .

"One cannot well overrate the importance of so holding fast to happiness and hope. It gives to Emerson's work an invaluable virtue. As Wordsworth's poetry is, in my judgment, the most important work done in verse in our language during the century, so Emerson's essays are the most important work done in prose. His work is much more important than Carlyle's. . . .

"Happiness in labor, righteousness, and veracity in the life of the spirit; happiness and eternal hope,—that was Emerson's gospel. . . .

"Many of your writers are over-sanguine, and on the wrong grounds. But you have two men who in what they have written show this sanguineness in a case where courage and hope are just, where they are also infinitely important, but where they are not easy. The two men are Franklin and Emerson. These two are the most distinctively and honorably American of your writers. They are the most original and the most valuable. Franklin's confidence in the happiness with which diligence, honesty, and economy will crown the life of this workday world is such that he runs over with felicity. With a like felicity does Emerson run over, when he contemplates the happiness eternally attached to the true life in the spirit. You cannot prize him too much nor heed him too diligently. He has lessons for both the branches of our race. I figure him to my mind as visible upon the earth still, as standing here by Boston Bay, or at his own Concord, in his habit as he lived, but of heightened stature and shining feature, one hand stretched out toward the east,—toward our laden and laboring England,—the other toward the ever-growing west, toward his own dearly loved America,—great, intelligent, sensual, avaricious America. To us, he shows for guidance his lucid freedom, his cheerfulness and hope; to you, his dignity, delicacy, serenity, elevation."

LORD COLERIDGE ON THE CLASSICS AT YALE.—But for the gravity of the occasion and the dignity of those who figured in its proceedings, we should say that this was a little funny, and might query whether the noble lord had not been misreported in citing the greatest orator of England in connection with classical education. But there can be no mistake; for his lordship again remarks, "The man who has influenced his contemporaries the most is, generally speaking, the man of highest education"; and he had previously said, "If John Bright comes here, you will know what English speaking is, you will know what English oratory is." Since the celebrated case of Balaam, who was sent for to prophesy one way, and, when it came to the pinch, went back on his employers, and prophesied in exactly the opposite way, there has been no more conspicuous instance of incalculable waywardness in mental operations than was here furnished by the Chief Justice of England. He might as well have broken into a eulogy of Napoleon Bonaparte before the Peace Society as to have named John Bright in Yale College in connection with dead language studies. He was expected to applaud the ancient classical scholarship as the supreme incomparable means of bringing the human mind up to its highest power; and he did this by quoting a man as the most commanding orator of England, who knew nothing about ancient scholarship, and who has achieved his distinction entirely by the study of the English classics. He came to eulogize the dead languages, and gave super-eminence to a man who knew nothing of either, and had devoted himself exclusively to the mastery of his vernacular speech. Lord Coleridge represented the intellectual accomplishments that give the highest advantage in the bar and the senate as fourfold. The highest education is exemplified by (1) "the man who can state anything best"; (2) "who can pursue an argument more closely"; (3) "who can give the richest and most felicitous illustrations"; and (4) "who can command some beauty of diction"; and he then pointed to the man of all England who possesses the traits in the highest degree, and who is confessedly only a smatterer in Latin and Greek. He commended classical education; but he referred to another education, not classical, which yields still higher results. Certainly, if the Yale boys turn this memorable occasion to its highest uses, they will be incited to tread in the path followed by the most distinguished orator of England, and, wasting little time upon the dead languages, will concentrate their main efforts in gaining a skilful and powerful control of the living language in which all their work is to be done.—*Prof. E. L. Youmans, in Popular Science Monthly for December.*

SOCIAL EVOLUTION.—Of the myriads of languages once existing, and of many of which we now have but mere glimpses, few remain; and, of these few, a very small number are rapidly predominating. The many have become few; and the few will be completely unified, for such is the course of philologic evolution. Of the myriads of tribes scattered by the shores of the seas, on the margins of the lakes, and along the streams of all the habitable earth, but few remain. They have been gradually integrated into larger tribes, and finally, with the most advanced, into nations; and the time will come when there will be but one body politic, for such is the course of sociologic evolution. Every tribe of the myriads that have spoken distinct languages has each for itself developed a mythologic philosophy. These mythologic philosophies are rapidly disappearing, and now are comparatively but few; and the time will come when but one philosophy will remain,—the philosophy of science, the truth,—for such is the course of philosophic evolution. The fourth stage of society—the cosmopolitan or pantarchic—is a legitimate induction, a qualitative but not a quantitative prophecy; for who shall say when it shall come?—*Science.*

BOOK NOTICES.

MEMOIR OF ELIZABETH NEWPORT. Compiled by Ann A. Townsend. Philadelphia: Friends' Book Association, 706 Arch Street. 1878. pp. 310.

We have here a memoir of one of the many earnest-hearted women preachers to whom the Quaker faith has given encouragement, scope, and opportunity of congenial labor. The face which greets us in the frontispiece wins our regard before we have read the record of its owner's work from its winning look of genuine humanitarianism, the utter sincerity of the fine eyes, the uncompromising honesty betokened in every lineament. But this memoir shows more prominently than any work we have heretofore read the strong faith in the supernatural, which is part of the Quaker faith. Here was a woman of pure morals, modesty, earnestness, and sincerity, who really believed that her every action was directed by an unseen power higher and far holier than herself, and who, all her life, obeyed those fanciful promptings which she called "the Inner Light," and rebuked, encouraged, condemned, and praised persons to whom she was a stranger in obedience to those alleged spiritual impressions. A mother, housekeeper, and wife, she yet spent much of her life in travelling within a certain circuit, and preaching to those whom she felt called upon to benefit by her ministrations, and this in spite of the fact that she was during her long life of fragile constitution. She was certainly a remarkable personage, if all the stories related in this book of her clairvoyance and prevision are true. But it strikes us that, although incident after incident is related of the happy hits she made in her intuitive study in the cases of numerous individuals, the cases which must have occurred of mistaken intuitions in regard to others have failed to be recorded. Her experience in the South, "testifying" in the presence and under the roof of slave-holders against the sin of slavery, is very interesting reading; the more so since she does full justice to the spirit of noble hospitality with which she was met by many of these, who treated her politely and cordially in spite of her outspoken anti-slavery opinions. Elizabeth Newport, born at Ellison, first saw the light in 1796, and died in 1872, aged nearly seventy-six.

ROLFE'S SHAKESPEARE. Henry VI. Three Parts. Troilus and Cressida. Timon of Athens. New York: Harper & Brothers.

This admirable series has now arrived at its conclusion, some of the doubtful plays and two volumes of the poems bringing up the rear of the imposing column. The volumes have sustained throughout the high character which belonged to the earliest in the series, established its reputation, and made it a success. The idea of the series was admirably conceived,—for each play, a separate volume; a text sufficiently expurgated to make it proper reading for the school or social circle; a history of each play, with an account of its sources and a selection of the most admirable critical comments; and, finally, an abundance of critical and explanatory notes. What more could be desired? Paper and print are so excellent, and the ornamentation of the plays is so tasteful and appropriate, that, if one desired an elegant edition of Shakspere, he could not do better than to have these volumes—the ordinary binding of which is merely neat and serviceable—bound in some elegant style. "Timon of Athens" and "Troilus and Cressida," not being suitable for school use or for social reading, are printed without expurgation. This seems to us a matter for regret. It would have been better had the entire edition been freed from the more gross offences of the original text. It is conceivable that a social club might wish to read every one of Shakspere's plays, and an edition in which they could do this without too serious embarrassment from the dramatic freedom of expression was a real desideratum.

THE EXPANSION OF ENGLAND. Two Courses of Lectures. By J. R. Seeley, M.A. Boston: Roberts Brothers. 1883.

The author of *Ecce Homo* and of *Natural Religion* is not apt to write without a fruitful theme; and, because those parts of *Natural Religion* which treated of political morality were those in which he showed the firmest hand, we approached his latest volume expecting to be greatly pleased. It has proved fully equal to our expectation. The lectures of the volume are sixteen in number, two courses, eight in each. In the first course, Prof. Seeley elucidates his method, describes the old colonial system, the effect of the New World on the Old, and finally the "Schism in Greater Britain," caused by our own war for independence,—a war which was the natural result of the old colonial system, under which the colonies were regarded as "possessions," held for the profit of the mother country. The second course of lectures deals almost entirely with the relations of England and India. The lecture "How we conquered India" is particularly instructive. The object of the book in its entirety is to show that there is no reason why the colonies of England should drop off from the parent-stem as soon as they are ripe for self-government. That they will drop off, unless England endeavors to make them part and parcel of herself as she has not yet done, he makes no doubt. But he contends that "the Empire" is a delusive phantom; that it is possible for England and her colonies to form a vast confederacy of equal powers. He urges this with all his usual force of style, and with magnificent breadth of illustration. Since Bagehot's *British Constitution*, we have had no work on English politics so good and strong as this.

GUENN: A Wave on the Breton Coast. By Blanche Willis Howard. Boston: James R. Osgood & Co. 1884. Price $1.25.

To the habitual novel-reader, this book will be a pleasant surprise. In it, Miss Howard has surpassed her previous and successful efforts in novel-writing, *One Summer* and *Aunt Serena*. Moreover, she introduces us in this book to a new, sincere, and strong, if narrow, world "on the Breton coast." This work, in spite of its sad ending, is deeply interesting from its careful and artistic delineation and study of unique and original characters. Guenn, the fisherman's daughter, beautiful, saucy, healthful, sincere, passionate alike in love and hate; Hamor, the sunny-tempered, handsome enthusiast in art; Thymert, the manly, noble, yet passion-tossed priest; Rodellec, the handsome, unprincipled, brutal villain; Nannie, the weird, malicious, yet loving and inspired little hunchback,—these are all original creations, or studies, whose characteristics dawn upon the reader gradually. The work indicates careful study, yet is breezy, strong, never tiresome, and intensely interesting from beginning to end. The reading public, after this effort, will not be content until Miss Howard gives it an American story as realistic as this.

THE opening article in the *Unitarian Review* for November is "Man's Unity with God," by Rev. John W. Chadwick. Something of its reconciliative method and spirit may be inferred from the following sentences: "Did Paul know a man who was in the seventh heaven? There are not a few of us who have known as much. What are the limits of imagination?" "We are told in the New Testament that, if the personal history of Jesus should be fully written, the world itself would not contain the books composing it. Could we not say as much of the personal history of any human being, taken with its remotest implications? For such a history, 'writ large,' would be no less than a history of the complete and boundless universe and a biography of God. But the infinity wherein man is at one with God is temporal, no less than spatial. Did Jesus say, 'I was before Abraham'? Who cannot say as much, and in no trivial sense? Before Abraham? Millions of years before! Before the singing of the morning stars, ere yet the fiery nebulous cloud began to sway hither and thither, and anon to circle into suns that, wheeling, cast the planets. Our lives have taken color from that awful rose of dawn. We bear within ourselves the traces of that great primeval pain. We are a Living Past." "Protestantism in India," the second article, is an address by Mr. Mozoomdar, delivered at the Ministers' Institute in Lowell, Mass., and is interesting as an exposition of the course of liberal religious thought in India. "Dead and Living Truth" by Rev. R. A. Griffin, "Some Absent Spokes of the Unitarian Wheel" by Rev. Roland A. Wood, and "Martin Luther" by Prof. E. Emerton, are the other leading contributions, in addition to which are "Things at Home and Abroad" by Mrs. Martha P. Lowe, "Notes from England" by Rev. John Page Hopps, and "Review of Current Literature."

WE find, from a Catalogue of the Foreign Exhibition which we have received, that in all there are forty-five different nations represented,—a larger number than has appeared at any former International Exhibition. Among the exhibits, special attention is invited to the Japanese collection, which excels in beauty and variety any previous exhibit ever made from that country. From China, Siam, Calcutta, Bombay, and other Eastern nations, the exhibits are of a most attractive character. The porcelain exhibit from France is specially valuable. Visitors to the Art Gallery express themselves highly pleased with the beautiful specimens of art from France, Germany, Spain, and Italy; and the statues from Italy deserve special mention. The Catalogue contains much useful information in reference to the history and statistics of the various nations, and is illustrated with portraits of the reigning sovereigns. It is compiled by the Secretary, Gen. C. B. Norton, published by George Coolidge, Foreign Exhibition, Boston, Mass., and sent postpaid by the publisher on receipt of price (25 cents).

PERSONAL ITEMS.

THE receipts at Matthew Arnold's three lectures in this city amounted to $2,000.

MISS BLANCHE HOWARD, the author of *One Summer*, *Aunt Serena*, and *Guenn*, is now living in Germany, editing a periodical and writing a novel.

REV. W. H. CUDWORTH, of East Boston, who fell dead suddenly in the pulpit while engaged in prayer on Thanksgiving morning, was much esteemed not only by his own congregation, but by the entire community for his active benevolent work.

SAYS the *Investigator*: "Jonathan M. Roberts, editor of *Mind and Matter*, a Spiritual paper, has been found guilty of libelling Messrs. Wm. R. and T. S. Tice, and sentenced to pay $3,000.06 in each case. The six cents were for damage done the characters of the plaintiffs, and the $3,000 for the malice of the libel, as we learn from the *Religio-Philosophical Journal*."

THE *pros* and *cons* of the question of Woman Suffrage will be discussed at a parlor meeting to be held at Mrs. Adeline Locke's, 285 North Avenue, Cambridge, Wednesday evening, December 12. Mrs. H. R. Shattuck, president of the Massachusetts branch of the National Woman's Suffrage Association, and Mrs. H. H. Robinson, with others, will take part in the discussion.

MR. CROSS has almost finished the Life of George Eliot, and it will be published by Messrs. Blackwood in the course of next year. The work will contain a great deal of correspondence of the very highest interest. Mr. Cross has luckily been able to recover almost the whole of his wife's letters, among them being a series, extending over several years, written to some of the friends of her younger days.

SWEN NILSON, the distinguished Swedish naturalist, is dead, at the age of ninety-six. His principal work, *The Scandinavian Fauna*, was published in 1820 and the succeeding years. He also wrote a treatise on the birds of Sweden, and numerous zoölogical works. During most of his career, Prof. Nilson was attached to the University of Lund, first as director of the museum, and later as professor.

PROF. HUXLEY delivered, last Saturday, his first address as president of the Royal Society. It was occupied with a review of the scientific history of the year. Perhaps the most remarkable passage relates to Mr. Gardiner's researches respecting the continuity of protoplasm through walls of vegetable cells, which means, says Prof. Huxley, nothing less than an approach to a demonstration of the essential unity of plants and animals.

A FUNNY but thoroughly enjoyable feature of the attentions paid at Ramsgate recently to Sir Moses Montefiore, the Jewish philanthropist, was the singing under his window in the early morning by an admirably trained choir of children. First they sang in Hebrew the famous Jewish hymn of Moses, and then "Rule Britannia," which closed the programme, as intended by the teachers who had drilled the choir. But the little fellows had not got their blood up and their voices in tune for nothing; and so, as a finale, they burst out with "For he's a jolly good fellow, Which nobody can deny!"

GEORGE W. CABLE, the Southern novelist, now giving a series of readings from his own writings in this city, has been the recipient of many flattering attentions from the leading literary men of Boston,—attentions due to the generous recognition by his fellow-workers of Mr. Cable's modest but genuine and original genius in story-telling. Whittier and others have called on him, W. D. Howells gave him a charming reception; and Howells, T. B. Aldrich, E. P. Whipple, John Boyle O'Reilly, and O. W. Holmes united in a published testimonial, asking that the Boston literary public give him a generous hearing and full attendance at his readings.

SAYS the London *Inquirer*: "As an instance of how the Japanese are assimilating Western civilization, we may mention that several of Mr. Herbert Spencer's works have already been rendered into their language. A translation of the *Data of Ethics*, made by Tamaguchi Matsugoro, was published in 1882. The *Education* was translated and published by the Educational Department in 1880, sundry of the *Essays* as early as 1878, *Social Statics* in 1881, and the *Study of Sociology*, in 1883. 'The Leader of Young Japan' is having translations made of the rest of Mr. Spencer's works. In the University of Tokio, they, along with other European works, are studied in the originals."

WALT WHITMAN, in the *Critic*, on "Our Eminent Visitors, Past, Present, and Future," exclaims: "Visits like theirs and hospitalities and hand-shaking and face meeting face and the distant brought near, what divine solvents they are! Travel, reciprocity, 'interviewing,' intercommunion of lands,—what are they but Democracy's and the highest Law's best aids? Oh that our own country—that every land in the world—could annually, continually, receive the poets, thinkers, scientists, even the official magnates, of other lands as honored guests! Oh that the United States, especially the West, could have had a good, long visit and explorative jaunt from the noble and melancholy Tourguénief before he died, or from Thomas Carlyle! Castelar, Tennyson, Victor Hugo, were they and we to come face to face, how is it possible but that the right and amicable understanding would ensue?"

PROF. J. H. TICE, the weather prophet, well known at the West, died yesterday morning at Chiltopham, Mo. Prof. Tice, in early life, attained eminence in his chosen profession as an astronomer. He gave to the world many interesting discoveries in regard to electricity. He made cyclones a study, and was a pioneer in the theory that they were electric disturbances, totally dissimilar to the wind storms known as hurricanes. He also claimed to have discovered an inter-Mercurial planet, which he named Vulcan, and from the movements of which he based his weather predictions. The existence of this planet has been denied by other astronomers. Many of the professor's predictions were unfortunate. A grand meteoric display for November, 1880, failed to show up. Prof. Tice was superintendent and secretary of the public schools in St. Louis up to 1857. At that time, he was succeeded by Mr. Davoll. Later, he was appointed principal of the old Laclede School, which position he held several years.

SOJOURNER TRUTH, the well-known negro lecturess and anti-slavery and woman's rights' agitator, died at Battle Creek, Mich., on the 26th of November, at the advanced age of one hundred and six years. She was born a slave in Ulster County, N.Y., and became free in 1828 under the emancipation act passed by the New York Legislature. Her parents were brought in a slaver from the coast of Guinea to this country. As a slave, her name was Isabella Hardenburg; and she professed to have been given the name of Sojourner Truth from a supernatural source. She had considerable natural talent as a speaker, was quick at repartee, and utterly sincere in her utterances. During her later life or for the past ten years, her avowed object in travelling around was to obtain names to a petition which she intended presenting to the government, asking that a portion of the public lands in the West be set apart for the establishment of a negro colony, where she proposed that the negro youth should be educated. She claimed among her personal friends many distinguished abolitionists.

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

AN elaborate statement of the political and social attitude of the Latter-day Saints from the pen of President John Taylor, the official head of the Mormon Church, will appear in the January number of the *North American Review*.

SAYS the Boston *Transcript*: "It is the workmen on the Clyde who suggest a reduction of five per cent. in their wages to keep the ship-yards going. This is the result of workingmen having some voice in the fixing of their wages, as they do in many trades in England, and is a practical vindication of the new political economy."

"IT would be a thousand pities," says the London *Inquirer*, "if it should turn out that there has been exaggeration, of a very gross nature, in relation to the outcry about the poor." But it would be something worse than "a thousand pities," if "the bitter cry of outcast London" should go unheeded, and call forth no effort to relieve distress in that great city.

MGR. CAPEL, in his lecture in this city, said, deploringly, but with truth: "Is it not notorious that there has been a great growth of rationalism and agnosticism, which has grown to infidelity? Men of liberal education, brought under the influence of private judgment, will tell you this is the case; and I venture to say it is the logical output of private judgment."

THE *Christian Union* is disturbed because more people go to theatres than to churches Sunday evenings. It says: "On Sunday nights, the theaters are full and the churches thin. Absentees from all public worship abound, and the evils resulting are a dark cloud in our bright sky. How shall we bring in the people? Gather in the children. The youths of to-day will be the masses in 1910; and, if we get them for Christ, we shall soon have the masses. Children will hear and come, if they are really wanted and sought for. It is an easy thing to win a child, when you put your heart to it." The remedy proposed is the same as that employed by the Roman Catholic Church to add to its membership,—"Gather in the children."

THE Salt Lake City *News* of December 6, in a leading article on the President's message, says: "It is not shown in what way the destruction of our local government would affect the question of polygamy. The plural marriages of the Mormons are not recognized by the Territorial laws, and could not be dissolved by commissions, by edicts, by armies or other earthly power. They are ecclesiastical, perpetual, and eternal. Until the Mormons become recreant to their faith with high heaven, these unions will be recognized by the Almighty Being who established them for the benefit of his people and the fulness of his glory. The President's remarks on Utah polygamy will not add force to his message nor credit to his statesmanship. They are a sop to bigots and breath to the flame of popular passion. It is doubtful if it will have a practical bearing on Congress. It will certainly create no commotion among the God-fearing people of Utah."

THE Boston *Herald*, having stated that foremost among the good features of Senator Edmunds' new anti-polygamy bill is the provision abolishing woman suffrage in Utah, that "this right of the slaves and dupes of the Mormons has proved a bulwark of defence for the defence of polygamy, and it should be withdrawn," Miss Alice Stone Blackwell, in a very sensible letter to that journal, asks: "Will you kindly explain on what principle of abstract justice, or even of common fair play, the 'dupes and slaves of the Mormons' should be deprived of their political rights, while the dupe-makers and slave-drivers—the Mormon men—continue to vote? And, after showing that the proposed measure is fair and just, and deals equally with criminals of both sexes, will you further explain what good it is likely to do? The male population of Utah is overwhelmingly Mormon. The disfranchisement of women, therefore, could not avail to break the political power of the Church. Attention has been repeatedly called to this fact by senators who are anything but Mormon sympathizers. Senator Edmunds himself does not claim that the abolition of woman suf frage in Utah would give the Gentiles a majority. Then, what is the object of that part of his bill?"

IN a communication to the Boston *Herald* on Mgr. Capel's recent lecture in this city, Hon. Elizur Wright gives expression to his views in the following language: "To come into a country whose government was founded by infidels, in which every man and every woman is free to have any religion or none, and undertake to deal with people who reject all sorts of theology and never use the word God except as a poetical figure of speech, would have argued a want of good sense. He confined himself to an argument with Protestant Christians, in which really he seemed to have the best of it. They are lost sheep—at least to his Church—the moment they trust to 'private judgment.' There must be an infallible revelation or there is no revelation at all. Among the multitude of interpreters there must be an infallible one somewhere, or interpretation is of no use. My Lord Capel, according to your reporter, reconciles infallibility with history by saying, 'A man may be an honorable man, or be the biggest scoundrel going and yet be infallible; for God Almighty can compel wicked men to say that which is true.' Now, it is certainly true that an Irish servant girl in America had better save her wages for herself and her starving relatives in Ireland than to give even a tithe of them to priests who are able to earn their own living. Why does not God Almighty compel the pope to say that?"

REV. J. G. WOOD delivered a very interesting lecture at the Institute of Technology a few evenings since on "Ants." He said in substance that, like many others of the insect tribe, ants in various ways anticipated the ingenious but usually long studied devices of men. An ant-hill, carefully examined, is seen to resemble very closely in its interior construction, as respects shafts and galleries, that of a modern coal mine. The ant community has two principal divisions, the military and the civil. The latter are the working ants. When night approaches, the ants close or bar up the apertures of ingress to their nest or habitation, and place sentinels at each entrance. The civil class is subdivided into nurses, food-carriers, artisans, and laborers. It is the business of the nurses to care for the cocoons, and the male and female ants when they first emerge therefrom, wing-clad, but not strong enough yet for flight. While they are waiting for their wings to grow, the food-carriers bring for them the means of sustenance. These male and female ants have wings only for three or four weeks, and use them in flight only about half an hour. After migration and mating, they break off their wings. The working ants are females, but such as do not reach full development. The artisans among them are the skilled workers: the laborers are such as bring material for the artisans, and are never permitted to take a share in handling it for construction. The military division of the ant community discovered by instinct, what men arrived at by long experience, that it is well to have companies consist of about one hundred privates, and that each company should have four officers. As the column moves forward for the battle-ground, the officers walk beside the companies, and prevent straggling on the part of the rank and file. Official rank is indicated among them, not by differences of uniform or color, but by size of head. A captain has a much larger head than a private; and a general has a head as big as the head, body, and wings of a private. Ants are long-lived. He had kept a queen ant alive for eight or nine years. The male ants are harmless creatures: it is the females that bite. So it is with mosquitoes and with bees and hornets. The largest and most intelligent ants are found in tropical lands, but those which live in our climate display great skill and capacity; and the study of their characteristics and habits of life is an inexhaustible one, presenting many yet unsolved problems.

MORAL DOUBT.

Intellectual doubt is one of the conditions of human progress. So far from destroying truth, it opens the way to larger and better conceptions of it. It leads to the removal of false and harmful beliefs, in order that more correct and wholesome ones may be put in their place.

But there is a kind of doubt that is a most mischievous element in the human mind, wherever it gets possession, and a formidable obstacle to progressive effort. It is moral doubt. Mental scepticism may be a sign of healthful movement. Moral scepticism is a sign of corrupting and dangerous disease at the most vital centre of character. It is a sad day for any mind when it loses faith in human goodness. A heartless cynicism takes the place of heathful, moral belief. The very nerves of moral endeavor are paralyzed. All generous enthusiasms are starved and killed, and the spur of hope is broken.

To the evil eye of this practical scepticism, when the disease is at its worst, society is hollow all through. To its view there is no true metal, but only everywhere base counterfeit. It sees politics to be so corrupt that it will not believe that any man can enter them and come out undefiled; trade so dishonest that it doubts whether a strictly honest man can live by it; the courts so venal that it asserts that only rich men can get a favorable judgment from them; fashionable society such a mockery and vice that it affects to believe that no true man or true woman can mingle in it; the very philanthropies and humanities so honey-combed with self-seeking and hypocrisy that it questions whether any good gets through them to the wretchedness that needs the help. It sneers at claims that may be made for man's honor or woman's virtue; is ready, on no evidence but that of *a priori* probability, to trust and circulate any stories which may be started to the prejudice of persons whose reputations have hitherto been unblemished; and, worst of all, is compelled to receive, with a self complacent, gleeful smile and a triumphant "I told you so" air, any convincing testimony of the moral fall of men and women of good repute as confirming its own theories. Persons with whom moral scepticism has gone to the full depth of all these characteristics may not often be met with, but it is not infrequent to see those who are at various stages in the gradation of this evil on the way thither.

Now, there are bad things enough in the world, but they are not so bad as the moral sceptic would have us believe. In spite of the corruption on all sides, the majority of people are sound at heart, and, whatever the faults and temptations against which they have to struggle, are yet striving to keep an honest name and to lead tolerably virtuous lives. It is true also that a sufficient proportion of them succeed in this effort to keep the standard of morality advancing from age to age, and human society, notwithstanding all drawbacks, steadily progressing in the attainment of a purer virtue and a finer humanity. This indisputable historical fact of the moral progress of mankind is, indeed, a difficult one for the moral doubter to deal with. There is, it is true, no cause for self-satisfied ease in view of the moral condition of human society, nor for the optimistic illusion that things, however wrong they may seem, are all going to right themselves without any care or effort on man's part. But, on the other hand, there is no occasion for the mood of moral scepticism that breeds moral indifferentism and despair. The natural forces of the world are set toward right, but man himself must work with and for them. And one of the strongest planks in the platform of moral faith is that so large a portion of mankind do recognize and endeavor to meet this obligation. It is the vice of moral doubt that it sows distrust of this important fact on which ethical progress so largely depends. It tends to destroy the very springs of the effort from which must come the reformation of the wrongs which are seen and lamented.

One practical phase in which moral scepticism appears is the habit of looking on the dark moral side of things,—of imputing, for instance, bad motives to people where it would be quite as reasonable to impute good motives; of interpreting conduct, where different interpretations are equally admissible, in the worst rather than in the best light; of expecting bad conduct in cases where it would be just as easy to expect correct conduct. Teachers and parents who have this habit may do great harm to the children that come under their care. Children of strong moral natures may stand up against it uninjured. But those of less virile moral temperament are sure to be depressed by it. Led to understand that their motives, without regard to evidence, are habitually suspected, and that they have no good opinion on the part of their teachers or parents to forfeit, they will, most likely, adapt themselves to the low standard of behavior set for them; while the same children, if induced to believe that good things were expected of them, would make an effort to fulfil the expectation.

Another very common phase of moral scepticism appears in the magnifying of difficulties which oppose the performance of duty. These difficulties are often great enough, but there is no need so to array them as to make them seem insurmountable. It is from this habit that many disastrous moral compromises ensue. When young men or young women have an exceptionally high moral ideal of life and are burning with fresh enthusiasm to set out for the attainment of it, it is of the nature of moral treachery to dilate to them of obstacles which, with all their youthful courage and enthusiasm, they will not be able to overcome; to tell them that fashion will frown upon them, to warn them that wealth and social position are not found that way, to caution them overmuch on the side of prudence and conventionality. If their ideal be a moral one, let them, by all means, give themselves with whole mind and soul to the pursuit of it. Why dampen their enthusiasm? Why chill their heroic ardor? Possibly, they may fail. But, at least, they will reach higher than if they lowered their aim by a compromise at the start. And, possibly, they will not fail. Heroic resolution and persistent earnest courage are capable of accomplishing things that seem miraculous impossibilities to more prudent and timid minds. Persons often prevent themselves from doing their best by excusing themselves in advance from attempting a high aim on the ground that it is impracticable.

The mischief of this kind of moral doubt appears especially in public matters. It is the arch enemy of social and political reform. It was the apology for slavery, it is the apology for intemperance and other social evils to-day. In the anti-slavery conflict, the timid and prudent said: "Oh, yes, slavery is a great evil! But it is so great, and has become so embedded in the institutions of the country, that emancipation is impracticable. The difficulties are too vast for any remedy but that of time." Garrison only thundered back from the citadel of his moral ideal, "Immediate emancipation a duty!" So, now, men are saying, "Intemperance is a dreadful curse,—a curse to the home, to the individual, to the nation. But the obstacles to its removal are gigantic, insurmountable; we can only wait for time and a higher civilization to work a cure." But, again, the earnest reformer cries from the citadel of his moral ideal, "Shut up the grog-shops!" So long as people stop to explain and dwell upon the difficulties of carrying a reform, the enemy is intrenching. There are difficulties that beset every kind of warfare with evil; but the battles must, nevertheless, be fought, if moral progress is to be continued. In the contest with the liquor-saloons, the difficulties are, doubtless, enormous. But it is a fatally weak policy that excuses itself from the contest on account of them. This leaves the saloon-keepers in open possession of the field. They should, on the contrary, be made clearly to understand that, however hard it may be legally to convict them and to break up their traffic, they will, nevertheless, be worried with restrictive laws and harassed with searches and seizures and arrests, until at last they slink into holes out of sight.

The same moral scepticism has stood in the way of the proper settlement of the Indian question in this country. "The Indian cannot be civilized: he is doomed to extermination," has been the national assumption; and the national action has been in entire keeping with this assumption. The Indian has been practically an outlaw, an object of standing abuse and swindling and outrage. Yet, all the time, the still, small voice of here and there an ideal conscience has been whispering, "Do the Indian justice." And these whisperings are now breaking into open voice together, and a better national faith in the Indian's capacity for civilization begins to dawn. When the moral scepticism of the white race concerning him has vanished, he will be found far on the road to civilization.

Thus, in various ways, private and public, are seen the disastrous effects of moral doubt. There is no doubt that is really deadly but this. To lose an intellectual belief may be only a preparation for another and grander belief. But to lose faith in goodness, either as actual or potential, is to lose the foundation on which solid character is built, and the pillars of public righteousness must rest. If the Christian Church had spent in combating moral doubt even half the energy which it has applied to the suppression of theological doubt, mankind would now have been very much farther advanced in practical morality. Liberal thinkers have to let go many beliefs which they were once taught to hold as all important; but, so long as they keep their faith in virtue, they have nothing to fear. Let them hold fast to that, whatever else has to go. The law of virtue is the advancing standard of an ideal humanity. Only by holding firmly to that can the ideal humanity become actual.

WM. J. POTTER.

HOMOCENTRALITY.

The "humility of science" is a grand phrase; and the acknowledgment of agnosticism, so far as it is real and apparently inevitable, is a virtue. Only One can ever justly claim omniscience. Intellectual modesty and self-circumspection will never be outworn or outgrown. But these virtues may be misapprehended, and an ignorant self-degradation may take the place of true reverence for science. A negro, who went to hear Whitefield, rolled in the dust with uncontrollable delight at the eloquence of the great orator. But it so happened that it was not Whitefield who preached; and, being told of it, the negro rose from the ground, remarking, "Then, I've dirtied myself for nothing." Not an uncommon practice among white people. What better is it to divest ourselves of our manhood before science than before religion? Nay, it is surely far better to perish beneath

Digitized by Google

the car of Juggernaut than the car of Materialism. One crushes chiefly the body. The other crushes chiefly the soul, and withers and destroys all immortal hopes, all anticipations and aspirations of the very noblest order. Undoubtedly, it is always best "to face the facts of science," when we know what they are, or may know; and we ought to determine their import so far as possible. And, while "pessimistic mythology" ought, as we think, to be abandoned, it may yet appear that pessimistic materiology ought to be abandoned also. For one, I cultivate a reverence for truth; and I bow to known facts more readily than the refractory elephant to the approaching cannon. But I also respect the ancient oracle, "Reverence thyself"; and the argument which dishonors me, discrowns me, decapitates me, must be very strong before it can conquer my aversion and unbelief. *A priori*, its improbability is next to infinite, and its verity requires a corresponding support. For a better and endless life, I have a longing and a conviction strong as the heart and faith of all mankind (with noteless exceptions); and I discern in every quality of my conscious being an evidence that I am made for immortality and eternal progress. And what are material phenomena as an argument against this? They are a pure impertinence. They know nothing about it. They are brute forces, whose only significance is given them by the inner, conscious power.

I am in favor of everything by which the knowledge and power of man may be advanced. By all means let us have the College of New Humanities. Let the liberal men of wealth at once found and endow this school of highest and yet broadest specialty; and, if they cannot spare enough themselves, let them enforce a larger, though unwilling, liberality on their heirs. But let us not imagine that the new school must be all new. The old was of nature, and whatever succeeds must have the same source. The old, therefore, was once just as true and legitimate as anything in the future can be, though it was of a lower grade than future developments may become. We must always retain enough of the old to preserve continuity. No cataclysmic gulfs must be created between any two successive periods. We are bound to observe an order of progress, and respect the past, which is our most venerable parent, less wise than we, but necessary to our superior wisdom. Treat it reverently, while surmounting its limitations.

Above all things, let us, on the other hand, not be guilty of incorporating into the new what we especially complain of in the old as effete, and thence injurious. Let not the new school be started with a creed which is to be made a law, and supported by favors and penalties. If it is religious, let it be a free religion, and just as liberal in its science; and, from accepted facts, let the inferences be as free to pupils as to teachers, else what better is the new than the old school? It may be but a repetition in another form of what Milton complained of, when he said, "Presbyter was Old Priest writ large."

It must, therefore, not have any dogma whatever for a "key-note." In such a connection, the idea of "deanthropocentralization," suggested by Mr. Kennedy, is as repulsive as is the word. It is a tyrant creed. It stands at the gates, and says, "Worship me, all who enter here!" The creed may be true. That's no argument in favor of its tyranny. No man is under obligation to believe it, and every pupil and professor should be free of its enforced dominion. Nor is it as an idea or a truth sufficiently broad and regnant to make its elucidation "the chief end of man" in his higher education. That end is better expressed in the symbol of the Free Religious Association,—"to promote the *practical interests of pure religion*, and to encourage the *scientific study of man's religious nature and history*."

As such a creed would be illiberal, its enforcement would be impossible, I trust, on all but a very few. Men will not readily surrender their hope of immortality at the bidding of a small coterie of youth, because they are bold enough to style themselves "The School of Advanced Science." Abrupt and vast is the descent down which, in obedience to alleged modern material science, man is now commanded to plunge. Nine days and nights, according to Milton, it took Satan and his impious crew to fall from their empyreum to Pandemonium; and a far longer time will it take good men to fall from their immortalities down to the low estate which makes the whole duration of human existence shorter than the life of a carp which serves a man for a dinner. It is not reasonable to expect that men who reverence themselves in the higher significances will readily take the plunge down into this nether world, until they are forced to it by some higher power than brute matter.

If there is any one word which should symbolize the spirit of the new school, it would be HOMOCENTRALITY. This is in accord with Positivism, which knows nothing higher than man. It is philanthropic, since it seeks supremely man's honor and welfare. It is scientific and philosophic, because man is nature's last and highest known product or form of energy. It may be allowed that "the fair weather divinities," whatever that may mean, "are all dead, and there remains nothing but the universe." We want nothing but the universe, and what the universe teaches by scientific interpretation and philosophic exposition. But, if the universe teaches anything very clearly, it is the centrality of man as the highest known form of the universal force, to whose generation all previous forces conspire; and we know not as yet that they will ever generate anything better and nobler. The heliocentric theory of the universe, instead of relatively repressing, relatively exalts, man. It shows how many more and greater forces contribute to the existence and happiness of man. So far as nature has exhibited to us the action and effect of her power, it is all subsidiary to man, except what is wasted or injurious. For the evolution of man, nature has labored long, and approached it by an incalculable number of successive steps; and, without this result, all her previous actions were comparatively insignificant and worthless. What are roses which bloom unseen, or suns which blaze without a mind to know it? Their chief or only significance is beyond themselves in a mind which recognizes their beauty and power. The old philosopher spoke truth, when he said, "In the universe there is nothing great but man; and, in man, nothing great but mind,"—whatever mind may be beyond the conscious power which it is known to be. Nay, the very universe called material, so far as it is known to us, is itself mind, a complexus of conscious states. Man is thus not only the central figure, the latest and highest issue of nature's action, but he is the very forms and glories and powers of all nature, so far as it is known or knowable.

But, great as is man relative to nature, I would not have even this erected into a creed to be imposed as a yoke upon all who entered our grand high school for the world's teachers. Homocentrality would have no more right to such a place and office than the false and centipedal word previously mentioned.

To believe in the mortality of this mind, this vast personality, this mighty conscious agency of unimaginable capabilities and boundless hope, is perhaps for some conceived as a sublime self-renunciation. To others, such a mental state is not even a step from the ridiculous. To say the least, it is altogether too superfine. Common men will never be able to rise to that superlative elevation. Men of genius who live in the aura of an immortal fame may do it, but the unhappy masses will hope for a better life beyond; and we rejoice that they can.

WM. I. GILL.

AN ENGLISH CRITICISM OF AN AMERICAN EXPERIENCE.

Mrs. Harriet H. Robinson's contribution to the Fourteenth Annual Report of the Massachusetts Bureau of Labor Statistics, entitled "Early Factory Labor in New England" (recently noticed in the columns of *The Index*), giving as it does the history of a unique and thoroughly American development of the labor question, has attracted the attention of a number of European journals, and has been translated into two foreign languages. The London *Saturday Review* of November 3 devotes over two columns to a review of it, under the heading of "A Lost Eden," and calls it "a most curious chapter in the history of labor in the New World," which it endeavors to account for after a fashion in consonance with Old World notions of inbred class distinctions. There is a little contemptuous self-complacency in the half-patronizing tone assumed in speaking of the culture exhibited by the factory girls who edited and contributed to the *Lowell Offering*, nearly half a century ago, which Dickens (who the *Saturday Review* confesses was "certainly not prepossessed in favor of American institutions") said would "compare advantageously with a great many English annuals."

"These mill girls," says the *Review's* reviewer, "after work read metaphysics, wrote poetry, and, when they had nothing better to do, yearned after the Infinite. It is true that the transcendental problems which they discussed in their 'Improvement Circles' seem to us, looking back on them after the lapse of nearly half a century, to have been often as pertinent and practical as that with which the wicked young man of Harvard posed poor Bronson Alcott, when he asked his opinion on 'the latest theory of Verdantius Grün,—to wit, that the moon is a mass of sweitzer-ocaseous matter, congealed from the uberous glands of the lacteal nebula.' Looking also at the poetry they wrote, it strikes one now either as being as 'spasmodic' as Aytoun's burlesque, *Fermilian*, or as belonging to the vague and sentimentally mystical school of those who warble about the 'Vedas of the violet.'" The national prejudices of the *Review* writer having been apparently considerably upset by Mrs. Robinson's portrayal of a cultured working class of American women, he goes on to explain what he is pleased to call "a unique outgrowth of wholly exceptional conditions," after a theory of his own. "The plain truth is," he declares, "that the Lowell mill girls formed a cultured community simply because it chanced that they were drawn from a class infinitely superior to that which usually furnishes factories with their labor. Fifty years ago, in New England there were very few occupations open to middle-class women. In fact, in 1840, there were, besides home life, only seven vocations open to them: whereas, in New England, according to the last census, women are now engaged in two hundred and eighty-four branches of industry. The great West was not, in those rough and perilous times, accessible to women of gentle upbringing. A great many highly respectable families were suffering from poverty into which the Civil War had driven them, or rather had not recovered from the effects of their losses during the war, and the unmarried ladies of these families were fain to go out into the world and earn their livelihood.... The old Puritan blood and high personal character,

Digitized by Google

founded on a firm substratum of earnest religious feeling, formed the heritage of most of the women who were attracted to Lowell fifty years ago. They not only, therefore, had an inherited taste for culture, but an inherited capacity for winning it."

This theory is very satisfactory to the Old World caste feeling, is rather romantic, is, in a few cases, the truth; but nearer the truth is the admission by the *Review* that "there is one sentence in this official report which speaks volumes,—'Help was too valuable to be ill-treated.'" In that fact, combined with the true spirit of American democracy, which considers one well-behaved person in the community, whatever his or her social position, as good as any other well-behaved person,—a spirit which was more prevalent in those early days of Lowell than it is to-day,—was the secret of the Lowell mill-girls' aspirations and achievements. And, though the conclusion of the *Review* is that "the moral is not that under a democratic system it is easier than in the Old World to organize an Arcadia of labor, it is that, under any system, blood and breeding must tell," from that conclusion, we of the New World, more conversant with the outcome of the democratic idea carried out in the treatment of laborers in this country, must in a good measure differ. For, although Lowell, as a representative community of workers, owing largely to the enormous influx of the overplus laboring population of Europe, which has lowered the price of goods and cheapened labor, is no longer anything like an "Arcadia," yet all over New England, in what are called factory villages, may be found a class of native workers, and also many of foreign descent, who, encouraged and aided by democratic treatment and ideas, are by no means the soulless drudgers who "live barren and hopeless lives amid unlovely surroundings," such as the *Review* imagines the most of the mill-hands of to-day are; and it is no surprise to those who are acquainted with facts as they are to find among the factory girls of to-day practised players on the pianos earned by their own labor in the mills; and, thanks to our free schools and compulsory education laws, there are very few mill-hands, even among the children of emigrants, who are not in possession of at least the rudiments of a good common school education, such as forms a firm basis on which to upbuild a higher culture.

When we contrast the laboring classes in America, who from their birth have been under the influence of democratic treatment and independent ideas, with the imported laborers which Europe sends us, we cannot fail, in spite of such critics as the one who so glibly explains our industrial status in the *Saturday Review*, to see that it *is* easier under a democratic than under an aristocratic system, not to build "Arcadias of labor," but to make labor respectable, and laborers self-respecting, self-supporting, ambitious, and even cultured.

SARA A. UNDERWOOD.

"LITERATURE AND DOGMA."*

A popular edition of the famous work, *Literature and Dogma*, which was first published ten years ago, has just been issued in conformity with the wishes of the author, who says in the preface that the book admitted of considerable condensation and probable improvement thereby for the general public. The main reason, however, for selecting this book for the experiment of a popular edition, is that he thinks it the most important of all his prose works and "most capable of being useful."

Many who have never read *Literature and Dogma* may be induced to do so now by Mr. Arnold's presence in this country and the references to him and discussions of his rank as a critic and of the value of his judgments seen in the leading American journals.

"The object of *Literature and Dogma*," Mr. Arnold tells us in the preface to this new edition, "is to reassure those who feel attachment to Christianity, to the Bible, but who recognize the growing discredit befalling miracles and the supernatural. Such persons are to be reassured, not by disguising or extenuating the discredit which has befallen miracles and the supernatural, but by insisting on the natural truth of Christianity. That miracles have fallen into discredit is to be frankly admitted; that they have fallen into discredit justly and necessarily, and through the very same natural and salutary process which had previously extinguished our belief in witchcraft, is to be frankly admitted also. Even ten years ago, when *Literature and Dogma* was first published, lucidity on this matter was, on the whole, not dangerous, but expedient: it is yet more expedient to-day. It has become even yet more manifest that by the sanction of miracles Christianity can no longer stand: it can stand only by its natural truth."

Mr. Arnold acknowledges that "to pass from a Christianity relying on its miracles to a Christianity relying on its natural truth is a great change." To assist in this change is the object of his work. "Miracles have to go the same way as clericalism and tradition; and the important thing is not that the world should be acute enough to see this (there needs, indeed, no remarkable acuteness to see it), but that a great and progressive part of the world should be capable of seeing this and yet holding fast to Christianity." "Christianity is immortal. It has eternal truth, inexhaustible value, a boundless future. But our popular religion at present conceives the birth, ministry, and death of Christ as altogether steeped in prodigy, brimful of miracle,— *and miracles do not happen.*"

While men are losing faith in the supernatural origin and character of the Bible, Mr. Arnold aims to show that it contains moral and religious truths of transcendent value, which in no way depend upon belief in the legends and miracles of the book or the dogmas of theology. Whatever is to stand must rest upon something that can be verified. "Now, the assumption with which all the churches and sects set out, that there is 'a Great Personal First Cause, the moral and intelligent Governor of the universe,' and that from him the Bible derives its authority, cannot at present, at any rate, be verified."

Mr. Arnold's definition of religion is well known, —"not simply *morality*, but *morality touched by emotion.*" "'By the dispensation of Providence to mankind,' says Quintilian, 'goodness gives men most satisfaction,'—that is morality. 'The path of the just is as the shining light which shineth more and more unto the perfect day,'—that is morality touched with emotion or religion. . . . 'If thou givest thy soul the desires that please her, she will make thee a laughing-stock to thine enemies,'—that is morality. 'He that resisteth pleasure crowneth his life,'—that is morality with the tone heightened, passing, or trying to pass, into religion." Belief in neither a personal deity nor the immortality of the soul is regarded as essential to religion. Those familiar with the work may remember the following sentence from the preface of the first edition: "Our mechanical and materializing theology, with its insane license of affirmation about God, its insane license of affirmation about a future state, is really the result of the poverty and inanition of our minds." In the body of the work, he says: "Let us announce not: 'There rules a Great Personal First Cause who thinks and loves, the moral and intelligent Governor of the universe, and *therefore* study your Bible and learn to obey this.' No, let us announce, 'There rules an enduring Power not ourselves, which makes for righteousness, and *therefore* study your Bible and learn to obey this.'" That there is a "Great Personal First Cause who thinks and loves, the intelligent and moral Governor of the universe," cannot, he says, be verified; but that there is "an enduring Power not ourselves, which makes for righteousness," is verified by the experience of every individual. This Power, whatever it be, has so formed and fashioned man that right conduct is necessary to his well being; and he would have the Bible read, because it contains in a pre-eminent degree those requirements in regard to conduct, obedience to which is all-important.

It is not strange that he is not in favor among orthodox theologians, when passages like the following occur in this work: "For the total man, therefore, the truer conception of God is as 'the Eternal Power, not ourselves, by which all things fulfil the law of their being'; by which, therefore, we fulfil the law of our being so far as our being is æsthetic and intellective, as well as so far as it is moral. And it is evident, as we have before now remarked, that in this wider sense God is displeased and disserved by many things which cannot be said, except by putting a strain upon words, to displease and disserve him as the God of righteousness. He is displeased and disserved by men uttering such doggerel hymns as: *Sing glory, glory, glory to the great God Triune!* and *Out of my stony grief Bethels I'll raise!* and *My Jesus to know, and feel his blood flow, 'tis life everlasting, 'tis heaven below!* or by theologians uttering such pseudo-science as their *blessed truth that the God of the universe is a* PERSON."

One other extract is given, to show how he replies to those who apply to him and other free thinkers the term "infidel": —

"And no man is to be called 'infidel' for his literary and scientific criticism of the Bible; but, if he were, how dreadful would the state of our orthodox theologians be! They themselves freely fling about this word *infidel* at all those who reject their literary and scientific criticism, which turns out to be quite false. It would be but just to mete to them with their own measure, and to condemn them by their own rule; and, when they air their unsound criticism in public, to cry indignantly: *The Bishop of So-and-so, the Dean of So-and-so, and other infidel lecturers of the present day!* or, *That rampant infidel, the Arch deacon of So-and-so, in his recent letter on the Athanasian Creed!* or, *'The Rock,' 'The Church Times,' and the rest of the infidel press!* or, *The torrrent of infidelity which pours every Sunday from our pulpits!* Just would this be, and by no means inurbane, but hardly perhaps Christian. Therefore, we will not permit ourselves to say it; but it is only kind to point out in passing, to these loud and rash people, to what they expose themselves at the hands of adversaries less scrupulous than we are."

No attempt is made in this article to give anything like a *résumé* of the work, much less to discuss the views advanced, but simply to indicate some of its main positions for the information of those who have never read it. It is the work of an acute thinker and graceful writer, who does not believe in Christianity as a supernaturally revealed and miraculously attested religion or as a theological system, who is indeed an agnostic, but who is for gradualism and accommodation in the interests of the continuity of religious life, who would put new meanings into old phrases, and would have Christianity, founded upon a purely

* *Literature and Dogma.* An Essay toward the better apprehension of the Bible. By Matthew Arnold. Popular edition. New York: Macmillan & Co. 1883. pp. 232. Price 75 cts. For sale by Clarke & Carruth. Boston.

Digitized by Google

natural basis, divested of miracle and legend, sustained and perpetuated. Whatever may be thought of some of Mr. Arnold's views, it must be admitted by all readers of *Literature and Dogma* that the work is marked by a charming style, fine discrimination, an admirable spirit, and contains a great deal of "sweet reasonableness."

B. F. UNDERWOOD.

TO MEMBERS AND FRIENDS OF THE FREE RELIGIOUS ASSOCIATION.

The Free Religious Association has an empty pocket, and it hereby holds out its hand to its constituency for a Christmas and New Year's gift. It is four years since the Association, aside from collections taken at its annual meetings, has made a public appeal for funds for its own treasury. The responses made to the circular issued in December, 1879, together with the yearly collections and membership fees, have sufficed to supply its modest wants up to this time. The needs of *The Index*, as reported at the last annual meeting, have been provided for without making a general or public appeal. But, now, the Association must provide for its own needs; and, to this end, it confidently asks the help of all its friends. Renew your membership fees, if you have not paid the one dollar fee within the last year, and cannot do more than that. Become, if you can, a "patron member" by sending five dollars. Or send still more, if the spirit and your purse will let you. We set no limit to your generosity.

The Association is under certain pecuniary obligations for office rent and service which must be met. But the Executive Committee wish to hold before the next annual meeting several conventions, and to be ready for any other work for which the way may open. To do these things, money is wanted. We are sure we can count upon your aid. Please direct your donations to "Free Religious Association," 44 Boylston Street, Boston, Mass. (stating that they are for the Association) or to the Secretary, F. A. Hinckley, No. 120 Congdon Street, Providence, R.I.

WILLIAM J. POTTER, *Pres't.*
FREDERIC A. HINCKLEY, *Sec'y.*

EDITORIAL NOTES.

ATTENTION is called to the pamphlets issued by the Sociologic Society of New York, *First Principles of Co-operation*, *Short Studies in Co-operation*, and *The Lower and Higher Laws of Nature*, the last reprinted from *The Index*. These pamphlets can be obtained of the President of the Society, Mrs. I. C. Fales, 52 7th Avenue, Brooklyn. Price five cents.

MATTHEW ARNOLD borrowed his phrase "sweetness and light" from Swift. The passage occurs in the famous apologue of the Bee and the Spider, in the *Battle of the Books:* "Whatever we have got has been by infinite labor and research, and ranging through every corner of nature. The difference is that, instead of dirt and poison, we have rather chosen to fill our lives with honey and wax, thus furnishing mankind with the two noblest of things, sweetness and light."—*Exchange.*

A PAPER named *Lucifer* finds fault with the *Investigator*, because it publishes poetry "most terribly mixed with piety," and says we should "encourage the poet of nature, and thus get God out of our poetry as well as out of our prose." This leads our neighbor to say, and very pertinently, we think: "The *Investigator* acknowledges liberality wherever it is seen, and does not ask the question whether its teacher believes in a God or not. If we are not mistaken, we have known people who, notwithstanding their belief in a God, had more genuine liberality than some people who did not have that belief."

"JUSTICE," in the *Christian Register*, states the "object of the National Conference of Unitarian and other Christian Churches" and adds:—

Article X., added at the last Conference, says, "The previous articles are not intended to exclude from our fellowship any who, while differing from us in belief, are in general sympathy with our purposes and practical aims." That is, not only Methodists and Presbyterians and Episcopalians and Baptists and Universalists, included in the phrase "Other Christian Churches," can join us and aid us Unitarians in our work of "building up the kingdom of his [God's] Son," and aiding our "exertions in the cause of *Christian faith and work*," but atheists, theists, deists, free religionists, agnostics, materialists, spiritists,—indeed, any one, though not a Christian, who wishes to help us in *that* work, is welcome to do so."

IN his Thanksgiving sermon, Mr. Beecher said of Mormonism: "It was a spiritual despotism, founded on absolute ignorance. It was the literal acceptance of the Old Testament. A man who believed in the verbal inspiration of the Bible could fling no stones at Mormonism. It had polygamy: so did the old saints. There was Solomon: what sort of a man was he? In all his glory, was he not arrayed like one of these? In the Bible, men talked face to face with God: so the Mormons believe they have revelations now. Mormonism was the reintroduction of the Mosaic institutions and belief. They believed in the Bible more than church members—many of them—do here. In an argument with them, how could an old-fashioned, regular Presbyterian combat their arguments?"

ACCORDING to the *Lancet:* "Brain tension is not a proof of strength, but of weakness. The knit brow, straining eyes, and fixed attention of the scholar are not tokens of power, but of effort. The intellectual man with a strong mind does his brain work easily. Tension is friction; and, the moment the toil of a growing brain becomes laborious, it should cease. We are, unfortunately, so accustomed to see brain work done with effort that we have come to associate effort with work, and to regard tension as something tolerable, if not natural. As a matter of fact, no man should ever knit his brow as he thinks or in any way evince effort as he works. The best brain work is done easily, with a calm spirit, an equable temper, and in a jaunty mood. All else is the toil of a weak or ill developed brain straining to accomplish a task which is relatively too great for it."

THE Seventh Day Baptists have not been, we believe, a very progressive sect; but the following from a discourse at the dedication of a church in Wisconsin, by Rev. A. H. Lewis, indicates that this sect is like others in the line of progress. He said:—

1. This pulpit should be dedicated to BROAD-VIEWED DOCTRINES AND A PROGRESSIVE ORTHODOXY. Truth is as infinite in its extent as it is eternal in its nature. God could not reveal it all at once to us, because we could not understand it. Each age that does its duty unearths its share of truth, and passes the tools with which it delves to those who come after.

The pulpit should be mindful of three things:—

(*a*) That the Bible should be tested the same as any other book, and that all honest, intelligent questioning and criticism should be honestly and openly met.

(*b*) As to science, accept all truths brought to light by it, and have no fear of its guesses.

(*c*) Creeds grow and change, each age having one different from that of preceding ages.

2. In its organic capacity, this church should rededicate itself to THE DOING OF GOD'S WORK IN THE WORLD.

CAPEL has certainly the virtue of frankness. In his Porter lecture he met the charge that Alexander VI. was a libertine and a murderer by arguing that this could not be quoted as an argument against the infallible word of God. "A man," he said, "may be the greatest scoundrel living, and yet be infallible." Says the *Christian Leader* in reply: "If Catholicism gives the true theory, it had been just as well if Felix instead of Jesus had been selected for Christ." It is very curious that so close a reasoner as Capel did not see that he was giving the best possible argument for Protestantism. He is perfectly right in holding that a man of evil habits can talk the best Christian philosophy, and in this sense can be infallible. The Bible may be right, and yet the organization formed to promulgate it utterly corrupt and venal. When Capel admits that the great papal delegate of the Word is corrupt, is he not utterly giving his organization away, to use a street expression? We do not remember to have met an admission of a Romanist so utterly fatal to the claims of popery.—*Springfield Republican.*

REV. HENRY W. MONK, the faith-cure healer, who of late has been the object of considerable attention in Brooklyn, N.Y., was last week mulcted in $75 in a suit brought by his secretary and organist to recover payment for services rendered. Those in attendance, mostly women and adherents of Monk, manifested great interest in the case. From a report of the cross-examination, we give the following questions and answers:—

"State the process by which you heal."

"I cannot, for I do not heal."

"State how you exercise the power which you have."

"I lay my hands on the sick person, that is all I do. I have no healing power of my own. I do nothing. I am a cipher."

"Do you invoke the Almighty?"

"Most certainly, I invoke the Almighty."

"Did you cure the sick?"

"Thousands will testify in court, if permitted. I do not mean to be understood, when I say that I cured sick, that I did it myself; but I put on my hands, and the Lord cured."

"Was it not for performing some such acts that you were sent to jail in England?"

"No, sir."

"Was it not for some miraculous performance like that?"

"No, sir: I do not perform them. I am simply an instrument of the Lord."

"About the payment,—was that for you?"

"I always use this formula. When they ask me, What is there to pay? I say, You can offer whatever you like, and it will be accepted to enable me to carry on my work in helping and healing the sick poor, to whom my life is devoted."

"Was not this money for your own purposes?"

"I am simply a servant of God, and this is a cruel attempt to persecute and put down my work of healing the sick. This man is trying to drive me out of Brooklyn, but he cannot do it. Mine is the cause of God. The Lord of hosts is with me. The God of Jacob is my refuge."

"What is the principle of your healing?"

"The healing is made by faith. The healer puts his soul in communication with the Almighty, and rests his hands on the sick, who is cured."

"What do you mean in your answer, when you swear that you heal by vital force?"

"I mean the great primary force of the universe, the vital force. It is a force given in answer to devout prayer. It is the divine work lifting people from vicious habits and bringing them to intelligence."

Monk stated farther that he had been a medium in England, that he had been in prison there three months, that he was of a noble family, that he had been worth $50,000, and was still worth considerable money. Extracts were read from the remarks of the English judge, on appeal, who said that Monk "was properly convicted as a rogue and a vagabond." The wife of the plaintiff swore that she had been in his employ, and had left because she found him a humbug and a libertine.

The Index.

BOSTON, DECEMBER 13, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

TRUTH vs. FAITH.

"Time is wisest, because, having already solved many mysteries, it will yet solve all."—*Thales.*

The Law was watchword of the Jew;
The Beautiful the Hellene taught;
How realms are ruled the Roman knew;
Dogma and creed Dark Ages taught;
The veil of Nature, Isis grand,
At length the modern man withdraws,
Space strown with stars like beach with sand
Yields to his search its secrets, laws.

Art, dogma, creed, imperial sway
The foretime's thoughts alone beguiled;
At length in reason's noontide ray
Man truth demands, no more a child.
Full-grown he stands, and knowledge craves;
The dreams of faith will lull no more;
Doubts' anguish keen he boldly braves
In quest of a maturer lore.

The cloud, which aye has wrapt his fate,
He yet will penetrate, dispel:
If reason is the inlet, gate
Of truth etern, all endeth well.
Free of his planet bonds of space,
To shackle him full soon will cease,—
Dweller-at-large,—of climate, place
He takes his choice, where'er he please.

The whole round earth his home will be,—
Thus dwelling naught will him content
But knowledge full, when eye can see
All round of space the starlit tent.
When Southern Cross and Northern Wain
Their stellar fire for all shall shed,
Full insight then will reason gain,
The open secret clear be read.

B. W. BALL.

WHAT is defeat? Nothing but education, nothing but the first step to do something better.—*Wendell Phillips.*

For *The Index.*

D'Alviella's History of Free Religion.

BY F. M. HOLLAND.

Copious extracts from this recent work have already been translated for *The Index*, where it has also received some notice, but not to the length it deserves, especially as some of the most important chapters have not yet appeared in English.

The Count begins by describing himself as "a stranger to every church, but in communion of ideas and sentiments with whoever is trying, whether inside or outside of ecclesiastical organizations, to reconcile religion and reason," and as "almost ready to feel myself in turn Unitarian in England with Martineau and with Savage in the United States, theist at London with Voysey, transcendentalist at Boston with Parker, cosmic at New Bedford with Potter, and humanitarian at New York with Adler,—nay, even Brahmaist at Calcutta with the leaders of the Brahmo Somaj." He also tells us that he has no intention of propagandism, but only of supplying materials for the history of religious rationalism in the latter part of the nineteenth century. His study of liberal literature, both English and American, has been extensive; and his visits to this country, Great Britain, and India, have enabled him to hear the principal speakers of whom he writes. His result is that "with every day grows the conviction, on one side, that our intelligence cannot grasp the supreme Reality, except by means of imperfect symbols, and, on the other, that all religions are products of natural causes, contain amid inevitable errors an element of truth, and remain subject to the law of progress."

The first chapter, entitled "The Progress of Free Inquiry in England," extends as far as the persecution of Bradlaugh, and speaks with especial sympathy of Coleridge, Newman, and Miss Cobbe, the last of whom is praised for "knowing how to join a power of philosophic reasoning—rare enough in her sex—to a vivacity of imagination and a warmth of sentiment, which give a peculiar savor to her style." The second chapter, on Evolutionism, represents Darwin as applying his theory to mankind in the *Origin of Species* in 1859, though in fact he did not do so until 1871, in the *Descent of Man*, but shows such an admirable knowledge of his real meaning as to remark: "The alternative he presented was not between creation and evolution, but between an organic creation by means of evolution and one by successive interventions of an exterior power. Thus, he did not hesitate to declare that his doctrine, far from banishing the idea of a first cause, supplied a more rational and lofty conception of one, because, instead of a capricious, arbitrary, or impotent God, forced to correct himself often in order to perfect his work, it permits the substitution of a supreme Being who has endowed his creation from the beginning with the forces and laws necessary to insure a regular and advancing march." A page later, he says: "The philosophic system of Herbert Spencer marks the point of convergence between the scientific current I have just analyzed and the positivist psychology of Stuart Mill. From the first, he took the materials for constructing his synthesis of the universe; and, from the second, his categories, not only of the knowable, which includes all phenomena and their relations, but also of the unknowable, which term is applied to the noumenon, the absolute, being in itself, the inner nature of force, movement, time, space, and even conscience. But he goes farther, in that on one hand he extends to all phenomena the theory of transformation used by Darwin to explain the development of organic nature; and, on the other hand, he does away with the necessity of a first cause, in rejecting all limit of time to the action of the forces at work in the universe. The importance assumed by this doctrine makes it worth while to stop to consider it. Spencer shows, in continuation of Kant, Mill, and Hamilton, that the human mind is powerless to pass the bounds of space and time, and, consequently, to know anything about substance or first cause. It should undoubtedly be admitted that the objects of thought correspond to the images which we make of them. But this correspondence can never give us anything more than symbols of the reality; that is to say, images which represent the objects imperfectly. Hence, a scientific explanation of all that is observable in the universe must be sought for without going beyond the phenomenal and relative." It is then shown how Spencer advances from his fundamental idea of the persistency of force, with the corollaries of the indestructibility of matter and the continuity of motion, to his complete definition of evolution, which, however, is said, by a slip of the pen, to end in homogeneity instead of heterogeneity. Spencer's attempts to invest the Unknowable Reality with religious attributes are said to have provoked many continental evolutionists into denouncing them as results of the influence unconsciously exerted on him by his Protestant environment. But it is justly observed: "Vainly do these views offer a new field for the religious sentiment in bringing out the mystery of the Unknowable, the grandeur of its manifestations, the inflexible might of its laws, and the eternal rhythm of its forces. None the less, they substitute for the personal and conscious God of the traditional mythology a Being who is deaf, blind, and indifferent to human miseries, or at least is removed so far from men that no direct relation could be imagined between the two terms of the religious equation, and thus would seem to disappear that sentiment of direct communion of the conscience with its Author, which forms not only the central principle of Protestantism, but the necessary foundation for recent theism. Does not the reconciliation announced by Spencer between science and religion resemble, as Gladstone has remarked in a university address, the proposition made to a bore by a man, who said: 'My house has two sides. Let us divide them. Will you be good enough to take the outside?' Without doubt, the doctrine of Herbert Spencer would give room for the two great factors of all religion,—belief in a mysterious Power and consciousness of dependence. But, while maintaining dependence, would it not suppress obligation and ruin the idea of Duty, which has become an element of religious feeling henceforth inseparable?"

To the latter question, I answer, No. I believe that there can be no true religion without morality; but I am sure that there can be a high and sound morality without religion. Witness the lives of John Stuart Mill, Harriet Martineau, and Robert Owen. Herbert Spencer's best work has been in showing that there is foundation enough for morality in the necessary relations of man to man, and independent of any relations of man to God. These latter have become so much the sport of controversy that virtue needs a firmer basis. Actions are not right or wrong because God has called them so, but because of intrinsic properties, according to which they are necessarily productive or destructive of social welfare and progress. The more fully and freely we give our hearts to the human beings around us, the stronger and clearer our idea of Duty will be.

Emerson says: "The mind of this age has fallen away from theology to morals. I conceive it an advance."

D'Alviella quotes Voltaire's remark,—"If there were but one religion in England, its tyranny would be terrible; if there were two, they would cut each other's throats; but there are thirty, and they live in peace and happiness,"—at the beginning of the chapter on the English sects, whose number may, he thinks, be reduced to that just given, if nominal differences are disregarded. Much space is given to the Broad Church, and it is justly urged that "it would be wrong to see in their inconsistency only prepossession by material interests or lack of moral courage. Such weaknesses may be found, without doubt, in the Church of England as in all the rest; but no suspicion of this kind can be breathed against men like Stanley, Temple, Rowland Williams, Kingsley, Colenso, and their peers. The truth is that, among the Broad Church adepts, the sentiment of religious communion is superior to all questions of dogma. Their dream is of an ecclesiastical organization broad enough to take in every form of Christianity." The fifth chapter tells, not only the history and recent statistics of British Unitarianism, but the hospitality accorded to advanced opinions like those of P. H. Wicksteed of London, Frank Walters of Glasgow, J. Taylor of Preston, Peter Deane of Clerkenwell, and F. W. Newman, the veteran champion of pure theism. The next chapter opens thus: "Logical people have complained that Unitarians do not carry their efforts at religious synthesis far enough, and that to preserve the name of Christian and at the same time deny the supernatural origin of Christianity involves taking delight in an equivocation, and making vain attempts to exclude from religious communion the Jews, Moslems, Buddhists, and even theists who will not acknowledge the divine authority or infallibility of the Bible. Why, again, make a dogma out of precepts, even purely moral ones, while professing to found fellowship on simply agreement in religious feelings, and not on identity of belief? The Church Universal is not a liberal Christian Church, but a free Church open to all who admit the existence of God, and feel the need of uniting with others for his worship. . . . It is such principles that form the platform on which rests the important congregation in London led by the Rev. Charles Voysey. Mr. Voysey was an eminent clergyman in the Anglican Church, who had attracted notice, ever since he took orders, by the extreme independence of his religious views. The publication of a work called *The Sling and the Stone*, in which he questioned the deity of Christ and the doctrine of original sin, excited such indignation in the ranks of the High Church and Low Church that the English Church Union and the Church Association each offered five hundred pounds for paying the expenses of prosecution in the courts. Voysey was deprived of his benefice; but, without even passing through the halting-place of Unitarianism, he founded, on Oct. 1, 1871, the independent congregation which he still directs. Saint George's Hall, where I heard Mr. Voysey for the first time in 1874, is a little *salle de théâtre*, whose arrangement recalls exactly the image of our café concerts. In front of the stage is a red curtain, meant to conceal the choir. There is no altar or pulpit; but above the stairs there is a kind of platform, also covered with red cloth. At the time of my visit, the congregation consisted of two or three hundred superior-looking people. A circular, scattered profusely over the seats, told me that the society was gathering money to build a church. . . . At present, the subscription exceeds two thousand pounds sterling. . . . On the list, I noticed officers in the army, baronets, many men of science, such as the late Sir Charles Lyell, Sir John Bowring, etc. The Rev. Charles Voysey represents a type of clergyman common enough in England, stature low, a slight tendency to corpulence, hair black and smooth, face carefully shaved. As in the Unitarian churches, I found on the seat where I was placed a ritual composed especially for the congregation. As Dr. Martineau's service abridges the Anglican liturgy by suppressing every trinitarian formula, so the Revised Prayer-Book of the Rev. Charles Voysey seems to be an abridgment of the Unitarian liturgy stripped of every Christian formula. For the first time, I saw in a liturgy the ceremonies proper for cremation. Thus far, however, the law has not permitted them to be used. When the Rev. Charles Voysey mounted, during the playing of the organ, on the platform which serves at once for reading-desk and pulpit, I noticed that he had kept the surplice and stole of the Anglican Church. At first, one cannot but be surprised at hearing, under these vestments of a Christian priest, and after a service copied from the liturgies of Christian churches and interspersed with readings from the Bible, the most vehement attacks made, not only on the practices of certain sects, but on the doctrines and traditions of Christ himself. Thus, in his sermon, entitled 'Christianity versus Universal Brotherhood,' after denying the right of the Unitarians to make a distinction between the moral and the doctrinal part of their religion, the orator reproaches Christianity for never accepting, except for defence, the great principles of charity and tolerance so often invoked by its heretics and adversaries. This apparent contradiction is explained by Voysey's conviction that new ideas should be introduced under ancient forms, especially in matter of worship." After giving a full translation of the declaration of faith in God, immortality, and the authority of the religious sentiment, adopted in 1880, when what had called itself the "Congregation of the Rev. Mr. Voysey" changed this title at his own suggestion for that of the "Theist Church," our historian says: "Whatever care Mr. Voysey had taken to emphasize his distinction of dogmas, which are unchangeable by nature, from beliefs which remain open to all progress, this official adoption of theism, attributing to the congregation the views which had hitherto been kept personal by the minister, necessarily drove away the secularist and agnostic elements which had sustained Voysey in his struggle against the Anglican Church, but which did not in the least mean to accept his profession of faith. It must be added that Mr. Voysey had no more hesitation in striking to the left than to the right, and that, contrary to the usage of the Unitarians, who strive to avoid polemics, he devotes a great many of his sermons to refuting sometimes the defenders of Orthodoxy and sometimes the apologists for unbelief. However, the vacancies which he had made among his original supporters have been rapidly filled, it seems, by the accession of new elements; and I must say that, on a second visit in 1882, I thought I noticed among his hearers much more interest and zeal than eight years before. This is not the only crisis through which the theistic congregation has had to pass. One fine morning, it found the doors of its hall closed. An evangelical congregation had agreed surreptitiously with the proprietor of Saint George's Hall, on the principle that money has no creed, to consecrate to the God of Calvin and Wesley this den of infidels which had scandalized the devout. Fortunately, Voysey was able to establish himself near by in Langham Hall, which he occupies to-day. According to information, which he was kind enough to give me, his congregation now numbers five or six hundred members, subscribers, or adherents. Its assessments, besides the building fund, have exceeded one thousand three hundred pounds in these eleven years. Its charities have amounted to more than twenty-seven million five hundred thousand francs. It has no special organ; but it has printed Mr. Voysey's sermons every week and circulated them freely, and the total number of pamphlets which it has distributed has recently reached four hundred and fifty thousand. In short, the Voysey congregation has passed victoriously through the principal trials incident to the founding of any new church; and it is probable that even the loss of its founder would not now cause the dispersion of its members. If, as everything permits us to hope, it succeeds in realizing the money necessary for building a church in the centre of London, this experience will be a decisive answer to those who dispute the possibility of establishing public worship firmly on the simple formulas of theism."

It is further remarked that Mr. Voysey owes much of his success to his having made "a continuous and logical development of his spiritual vocation," instead of coolly inventing religious rites, as did the unsuccessful Society of Independent Religious Reformers, and that his movement might become very powerful, if it were not for that absence of the spirit of proselytism which characterizes theists generally, and which leads them either to remain with indifference in the churches where they have been, or else quit them only to shut themselves up in individualism. Brief notices follow of the Humanitarians, or followers of the socialistic mystic, Leroux, and of the Progressive Hebrews, whose synagogue in London can accommodate a thousand worshippers, but whose plans are too narrow to promise a universal religion. The accounts of Conway, the Comtists, and the Secularists, recently given with some abridgment in *The Index*, conclude what is said of England.

The second part of the work is on the United States, and has been translated so fully and ably for these columns by Miss Arethusa Hall, from the *Revue des Deux Mondes*, that I need only notice the most important additions made by Count d'Alviella in this final form of his work.

The colonization of Rhode Island he calls the starting-point of religious liberty in the United States. Mr. Gannett's memoir of his father is said to contain "records of religious progress in North America, which are made especially instructive by the ability with which the author has grouped around the sympathetically drawn figure of his hero the events and personages of the whole period"; and it is recommended that the work be translated into French, "for it would be difficult to find a more animated apology of Unitarianism and its men." The notice of Emerson is enlarged not only by quotations in both French and English, but by remarks like these: "Despite the eight generations of clergymen whose blood runs in his veins, he is anything but a theologian and a controversialist. The imagination and the heart are his ruling faculties. We might almost call him one of the illuminati of rationalism. . . . It is in the human mind that he seeks the explanation of nature and the secret of history. . . . Another point where he shows himself a man of his age is his extreme respect for scientific truth, which he regards as a revelation from God. . . . As was shown shortly after his death, by Rev. Heber Newton, in a sermon which made a sensation in New York, Emerson has professed the philosophy and religion of nature, but of nature idealized; and this is the secret of his influence over his contemporaries."

Digitized by Google

Of Theodore Parker, we read: "All subjects were equally familiar to him; and, whether in regard to religion or politics, floods of public opinion or private scandals, nothing intimidated him, when conscience bade him speak. . . . Slavery had no adversary more vehement; and he took a leading part in the abolitionist agitation, whose final triumph he predicted. When the pro-slavery party, then master of the government, passed in 1851 the Fugitive Slave Bill,—which ordered that runaway negroes be arrested everywhere, — Parker announced that he should open his house to them, and even defend them, arms in hand. He kept his word. And, when reproached for putting himself above his legal obligations, he reminded his congregation how a lawful decree of the high priest had commanded the arrest of a certain stirrer-up of discord, named Jesus of Nazareth, and how Judas Iscariot alone had the courage to fulfil his constitutional obligations." Then follows the eulogy closing with *Sancte Iscariote, ora pro nobis.* "Parker started with the method of Kant's successors, abstained thenceforth from discussing its foundations, and contented himself with applying it to the discovery and development of religious truths." He is further said to have shown not only the transcendentalism of the Declaration of Independence, but the idealistic character of the French Revolution. The formation, under Mr. Salter's direction, of the Chicago branch of the Society for Ethical Culture does not escape notice. Neither do the Freie Religiose Gemeinde of our German brethren, who are said to have reopened the door for the Deity they had shut out, as they declared, in 1870, their belief in a constant development toward perfection. The liberality of those denominations who call themselves "Christians" and "Disciples" is shown to be on the increase. A visit of the author to Beecher's tabernacle is told at some length. Copious quotations are made from Abbot, Gannett, Frothingham, and Potter. And it is remarked that "all the advance guards of the American religions have been duly represented on the Executive Committee of the Free Religious Association,—the Unitarians by the Revs. Minot J. Savage, W. C. Gannett, John Weiss, John J. Sargent, etc.; the Transcendentalists by Emerson and Col. Higginson; the Quakers by Lucretia Mott, who died last year at the age of eighty; the German materialists by Mr. Schuenemann-Pott; the Reformed Jews by Rabbi Isaac Wise, etc. In this mosaic of religious opinions is seen how far the action of the organization extends. Let us add that it has often received through Keshub Chunder Sen the sympathy and encouragement of the Hindu Brahmaists."

To these followers of Rammohun Roy, nearly a third part of the volume is devoted. We must all remember gratefully their success in advancing popular education, emancipating women, and resisting the tyranny of the priests; but it is very plain that the Brahmo Somaj rests on a foundation on which we cannot build. D'Alviella states that Keshub Chunder Sen became so absorbed in mystical dreams of personal union with God and constant enjoyment of direct inspiration that in 1876 he gave up preaching, and spent the time in praying and meditating with his disciples. Mozoomdar complained in the *Theistic Quarterly*, in 1877, that the leaders of the sect were abandoning practical work; and, during that year, its principal normal school was given up. At the same time, Keshub made such concessions to the old religion, in order to marry his little daughter to a rajah, as caused such a general secession that he had to ask for help from the police in order to keep possession of his pulpit; and the Brahmo Somaj is now broken up into five distinct groups of societies. The whole number of the latter is one hundred and seventy-three, but only comparatively few have followed Keshub into the New Dispensation. This was announced on Jan. 22, 1880, and is to consist in forming a new religion by uniting all the previous ones, which Keshub calls "the pearls which are to form his necklace, the colors blended together in a ray of light, the various instruments which together produce a symphony," etc. This sounds well at first, but is likely to result in mixing up error and truth inextricably. If all the old religions are true, then we must keep up their ceremonies. Accordingly, Keshub has honored Vishnu with processions before which crowds bow their faces to the dust, with pouring butter on the sacred fires in the temples, and with taking the lead in such dances of young disciples, clad in symbolic colors, as have been customary before Hindu idols. At the same time, he has had himself baptized in the name not only of the Christian, but of the Brahmin Trinity. Recently, he showed the public a cross, a crescent, the trident of Vishnu, and other emblems, first displayed separately and then united as the symbol of the New Dispensation. Another time, a dead dove was held up as that which descended from heaven eighteen centuries ago, but has recently been slain by human reason. Suddenly, the dead bird disappeared, and a live one flew down with a paper round its neck, saying, "Victory of the New Dispensation, harmony of all the religions." This sort of thing may become very popular in India, but it is not going to influence England or America. Nothing is plainer from D'Alviella's account of Hindu theism than that it is not likely to teach us anything we need to know. The most advanced section is that which calls itself the Sadhâran Somaj, and publishes the *Brahmo Public Opinion;* but its congregations number but twenty-nine. One of the most curious facts in this part of the book is that the *Theosophical Society* of New York, which devotes itself to spiritualistic investigations, and does not admit the personality of God, has sent Col. Olcott and other missionaries to India to proclaim the grandeur of the old national religions, and warn the people against all new faiths, the result being that thousands who had been converted to Christianity in Ceylon have been brought back to Buddhism.

In the Conclusion, the author takes up the question how far "the existence of religion is endangered by the general repudiation of theocracy," and calls attention to his having shown that, "while some Protestants delight in ignoring the aspirations and discoveries of their age, and others persist in trying to reconcile the results of science with faith in miracles by some specious compromise, a large part, not only of the believers, but of the congregations, have been able to conform to all the demands of the modern spirit without breaking the continuity of religious tradition. This enlargement of the theological horizon, which shows itself more or less among all the Christian sects capable of change, is especially marked among those whose communion rests not on uniformity of creed, but on harmony in sentiment. Perhaps it is Unitarianism that has shown us the most perfect type. Anglo-Saxon Protestantism may be compared to an advancing army. Day after day, the main body plants its tents on the point which the advance-guard occupied the night before, and the march goes on until the rear-guard finishes by taking possession of the positions but recently evacuated by the centre. Each division loses a few laggards and foragers, some of whom disappear from the field of battle, while others merely enlarge the ranks that follow on. Thus, the relative positions remain the same, while the whole army finds itself ever nearer and nearer to its goal."

He next shows how it is the elimination of dogmatism that has led to such a separation of religious belief from religious feeling as gives a basis for Free Religion, and how the rejection of biblical supernaturalism has made it possible for Christian theists to join with emancipated Jews and Hindus. The number of theistic congregations seems to him strangely small, considering that theism is the preponderant faith of the cultivated classes in England and America. His explanation is that pure theism is so individualistic in its character as not strongly to favor social worship, except among such ardent mystics as the Hindus. "Transcendental theism, which nearly succeeded in endowing America with a new religion half a century ago, would have been worthy of such a glorious triumph, if we may judge from the elevation of its principles and the suggestiveness of its teachings. But like German idealism, whose most mystical tendencies it represents, this movement, which Parker and Emerson have made famous, fell a victim to its own extravagances the day when it came into conflict with its ancient adversary, Positivism, now supported by the wonderful discoveries of science. It is difficult to see where the victory will remain in this conflict of the two philosophies which have continually divided the rule of human thought. Both have been made more circumspect by their reciprocal vicissitudes, so that they seem to-day drawing nearer together on some common ground, and perhaps seeking to make a permanent compromise by accepting some system which shall pro claim at once the limitation of our positive knowledge to the world of phenomena and the absolute existence of a transcendent Reality." No scepticism has, he thinks, shaken the existence of these four principles: "1. The positive existence of a transcendent Reality which reveals itself in conscience, but is above all definition; 2. Our continual dependence on this Reality, in which we live and move and have our being; 3. The certainty that it acts through fixed and general laws; and, 4. Some sort of connection between this action and the tendency which leads us to do right." More, he thinks, than this will ultimately be accepted by all scientific men, especially in regard to future life. Very much more must be, in my own opinion, before we can have a scientific religion; for I agree with Count d'Alviella, as he says in a passage already cited, that Herbert Spencer's great Unknowable has not such attributes as can attract strong and permanent religious feeling. Neither can I believe that our modern scepticism is likely to be checked, like the classical, by the advent of some new religion, which may be already born "in some spiritualistic circle in the recesses of the Rocky Mountains, in some club of illuminated socialists in a back-shop in London, or in some company of ascetics, meditating, like the ancient Essenes, on the miseries of this world in a jungle in India." He who writes thus does not consider that scepticism has now the great advantages, over its condition fifteen centuries ago, of being supported by fully developed science, of having permeated the middle as well as the upper class, of being protected by democratic institutions, and of being propagated by means of popular education. No unscientific form of religion, whether old or new, can possibly become supreme in such a country as this.

But we can all approve cordially of our historian's closing words: "Powerless as we are to foresee the name or even the form of the future religion, can we not at least state the needs which it ought to satisfy and the tendencies to which it

Digitized by Google

should adapt itself? In the first of the Christian centuries, an impartial observer could have confidently predicted that the coming faith would have to justify the sentiments of humanity, fraternity, and universal charity, to preach meekness, humility, chastity, and scorn of wealth or pleasure, to insist on the promise of a future life, atoning for the evils and iniquities of the present, and finally to revolt against the old anthropomorphic religions in giving for men's worship a God who should be Spirit, Purity, and Love. To-day, that side of the divine which should especially attract us is called Science, Law, Harmony, and, as their result, Justice. The future faith will have to take account of the movement which has triumphed in scientific circles; and its theology must be adapted to the ideas, immanence, continuity, and regularity in the development of the universe. But a religion is not merely a dramatized version of a cosmogonic theory. It is a reflection of the ideal, and this is a sufficient reason why it should also represent a moral reaction against the transgressions of the society in which it develops itself. Thus, Christianity has exaggerated scorn of the material; and the future faith will have to restore beauty to reverence, sanction all rational pleasures, and re-establish the communion of men with nature. Our most eminent and earnest thinkers have long been turned away from social problems by metaphysical speculations. The coming faith will have to reduce preoccupation with supra-sensible things to the second rank, in order to concentrate our principal attention on the improvement of this world. Our positive science has led more and more toward the crushing of the weak by the strong in the struggle for existence. The coming faith will have to protest against this apotheosis of force, and plant the rights of the individual on a religious basis. Our political economy has not fulfilled the hopes in which our fathers were rocked to sleep. The coming faith will have to give us, not only a solution of the problem of suffering and evil, but also a means to introduce greater justice into the relations of man to man. If, while developing these indispensable elements of progressive and harmonious culture, this faith succeeds in preserving that state of sincerity, spirituality, fidelity to duty, self-devotion, and enthusiasm which caused the glory and success of its predecessor, of what importance will be the name and symbol under which it will present itself to work for the peace of all consciences and the regeneration of the world?"

CORRESPONDENCE.

MORAL FREEDOM.

Editors of The Index:—

So wide and embracing in its bearings is the subject of "moral freedom" that its true solution is a question of the greatest importance, and the attention of the readers of *The Index* has been called to its consideration by editorial and other articles which have of late appeared in its columns.

One of the main arguments advanced in its favor in these essays is that without "moral freedom" there can be no "moral responsibility." But *can* there be any such thing as "moral responsibility" *with* "moral freedom"? I cannot be absolutely free to choose between two or more courses of action, unless I am under no obligations to act in one way more than in another. The very idea of "moral responsibility" is diametrically opposed to any absolute "moral freedom"; for it implies that I am under some constraint to act in a certain manner. Another reason often assigned for "moral freedom" is that, without it, there would be no more merit in a good act than in a bad one. On the contrary, if, in any given case, the person could as easily have done the bad action as the good one,—which is the free-will hypothesis,—it would show that the moral sense of the individual impelling to the right was no stronger than that impelling to the wrong: otherwise, there could be no free agency in the matter.

Let us make this point plain as possible. The motive impelling to a good act must consist in a sense of the relations involved between the subjects of the act; that is, a sense of its beneficence and justice must be sufficiently strong in the agent to impel him to put forth his efforts to perform it. Now, if, instead of doing the good action, he does its opposite, it is morally certain that his impelling sense of right was weaker than the selfish impulse impelling to the wrong. The absolute conditions necessary to the exercise of a free will are that these opposing forces must be exactly equal, so that the person is no more *impelled* to the one course than the other.

The old metaphysical and theological idea that the soul, or thinking and willing power, was a simple, indivisible entity, is contradicted by all the facts and by every discovery in the science of human nature. On the contrary, all the facts demonstrate that the personal will power is made up of all the impelling forces that *constitute* the person, and that these opposing impulses are equilibrated and balanced, one with another, like all the forces of nature. Any stimulus from outside that disturbs these equilibrations, this static balance of powers, potential mind, forthwith sets them in commotion spontaneously to readjust themselves in new equilibrations to accord with the change initiated by the forces of the environment. This spontaneous action of the potential powers (equilibrated forces) which make up the person constitute all feeling, desire, passion, impulse, and action. But let it be borne in mind that these impulses constituting the personal will are not any direct reaction of external forces, not the mere transformation of these forces, but they are the action of internal powers which *constitute* the person. Hence, it is not disputed that the personal will is a self-determining power, but that this determining power can be exercised independent of the conditions which constitute it, and that it is in any sense absolutely free. As has been so well and forcibly stated by a writer, in alluding to this question of free agency: "The possibility that one of the inseparable parts of an infinite whole could express its attributes and qualities otherwise than in accordance with the conditions by which it exists as such *is utterly unthinkable.*" The character of our desires and motives are the resultants of whatever peculiar combinations of forces, constituting our ruling impulses, predominate in our constitution.

The final solution of the question of "free moral agency" must ultimately depend on the truth of either the theological or the scientific view of the universe. If the principles which underlie and constitute all true scientific thought are *universal* in their application, then there can be no actions on the part of *any* portion of the constituents of the universe but what are bound up in a continuous and endless chain with all other actions,—the principles of cause and effect, action and reaction, in logical sequence, include in their embrace the whole history of individuals, societies, and nations; and man, including all his relations, motives, and actions, is as completely a subject for scientific inquiry and investigation as any other department of being and existence. But it is only on conditions which utterly preclude free moral agency that any science of human relations and actions is possible. Otherwise, no principles of evolution, no scientific principles whatever, are applicable to him, considered as a mental or moral factor in the processes of universal being.

But, if man is the result of a *free*, determining power (which means nothing else but an effect without any cause), who also endowed him with the same power, then no scientific principles apply either to man or his Creator; and God and man are only other names for caprice and chance.

But it is when we turn to the pages of human history in the past, and witness the results of this idea of "moral freedom" in its influence on individuals and nations, that the soul sickens at the terrible recital of its sway over the human mind. The hatreds, persecutions, cruelties, oppressions, massacres, and bloodsheds that have grown out of a belief that man possessed the freedom to think and act contrary to the will of an *Omnipotent* Deity is most appalling to contemplate. Religious devotees of nearly every sect, believing that all others who differed from them did so of their own free wills, considered them under the ban of this omnipotent ruler, and deserving of nothing but the divine curse for *voluntarily* going counter to his wishes, could feel no sentiment but blame and hatred toward them, and manifested it by atrocious cruelties and oppressions whenever they had the opportunity and power.

These diverse sects of religious belief held that the human mind was as free in what it accepted and rejected in thought as it was in its acts. And why should it not be? Inasmuch as our feelings and thoughts govern our acts, if we are free agents in action, then we must be in those sentient states upon which all human action depends. They were logically consistent in blaming persons for their thoughts and beliefs as well as their acts, on the free-will hypothesis.

The human mind has had a vague, instinctive sense that charity toward *all* was a law inherent in our constitutions and relations; and science verifies and demonstrates the truthfulness of these intuitions by showing how intimate and close are the relations and connections of man with the universe. But theology, with its surface view of the real constitution and nature of the human sentient organism, and failing to realize its inseparable connections with all beings and things, declares it to be a free and independent agent, with power to think and act or not, in accord with a sovereign and separate ruler. Hence, blame and hatred. Hence, denunciation and persecution. Hence, the reason why the Christian Church, while in consonance with the soul's instincts it has preached the utmost charity, in obedience to its idea of the nature of man's voluntary powers has practised the utmost malignity toward all who differed from its arbitrary teachings and dictations. The dungeon, the cross, the gibbet, the stake, the rack, and all the institutions and implements of torture, cruelty, and hatred which the ingenuity of man has ever invented, are external expressions, symbols, and manifestations of the idea that man is a free moral agent. The gross injustice of society toward its criminal and unfortunate classes is a necessary result of the same idea. The states, conditions, and acts of the human mind are controlled by rigidly inflexible and unvarying laws; and, however much you may believe in charity in the abstract and sentimentally, you cannot *practically* feel this charity toward those whom you believe to have done wrong and injured yourself or others, when they might *just as well* have done the right.

Some writers upon the question of "moral freedom" have asserted that "without freedom of the will there could be no morality." If this is true, then, on their own theological grounds, those who make this assertion must deny any morality to God; for it is a fundamental principle in theology that "it is *impossible* for him to do wrong." The truth is that all and any morality deserving the name consists in a conviction that we are not free to act contrary to immutable principles of justice and right, and in proportion to the strength of this conviction will be the moral character of our acts. The fact is plain that the person who persistently violates the moral laws is one in whom this sense of justice has not been developed in his constitution sufficiently to convince him of the necessity of being controlled and coerced by them. He imagines his will is free to act contrary to their dictations, and only learns his mistake by the degradation and suffering which these omnipotent laws entail upon him for attempting their infraction.

The conceptions of the human mind have symbolized the highest, deepest, widest principle known to our intelligence by a pair of scales as an emblem, signifying that all justice consists in a balance and equipoise of opposite but concurrent forces. This tendency to balance on the part of opposite forces constitutes all Justice, which is another name for Love, which is but another name for Harmony. And, if any manifestations of this one principle of all tendency and action ultimate in evil and wrong, the cause thereof is to be sought in the *conditions* that *compelled* the manifestation.

No rational, nor even intelligible, view of human volition and acts can be attained otherwise than as linked in the universal *chain* of causation. Any other view of human character and conduct relegates it to the realm of the incalculable and "unknowable," and renders our philosophy of mind and sentience an incongruous mass of empty, barren, and meaningless abstractions.

FRANKLIN SMITH.

DEDHAM, MASS.

INFORMATION WANTED.

Editors of The Index:—

The library of Harvard University contains an English translation of D'Holbach's *System of Nature*, made by H. D. Robinson, and published in 1835 by G. W. and A. J. Matsell, 94 Chatham Street, New York, for the Free Inquirers' Family Library. There is a frontispiece drawn expressly for this library by J. H. Bufford, and called "Reason Enlightening the Nations." Reason, dressed in white and with flowing locks, is at the left on a platform which rests on sphinxes, under whom is a massive pedestal inscribed "Nature." Behind her is an eagle who bears in his beak a scroll, on which is written, "Free Discussion." In her hands is a placard, saying, "Truth is Eternal," with the Greek motto meaning, "Know thyself." From her form stream forth rays of light. Before her, and in the centre, stand men and women of various countries, looking up to her with delight; and in the dim background are figures of kings and popes in front of churches and mosques.

Can any reader of *The Index* furnish any information about Robinson, Bufford, the Matsells, or the Free Inquirers' Family Library?

F. M. HOLLAND.

CONCORD, MASS.

"OPEN CONFESSION IS GOOD FOR THE SOUL."

Editors of The Index:—

The confession here following is made by Theodore T. Munger, on page three hundred of his recently published work, entitled *The Freedom of Faith*, a book enthusiastically praised by the *Independent* and the *Congregationalist*:—

"We still assert in words a literal resurrection of the body, but none of us believe it. Our hymns, our prayers, our epitaphs, and too often our sermons imply that the dust of our bodies shall be reanimated in some far-off future, and joined to the waiting soul. At the same time, we know that science declares it to be impossible; our reason revolts from it; it is sustained by no analogy; it is an outworn and nearly discarded opinion."

Perhaps, after Mr. Munger has routed the agnostics, he will have time to remonstrate with his brother preachers against continuance in the course of dishonesty which he here imputes to them. C. K. W.

BOOK NOTICES.

HEROES OF ISRAEL. By Richard Bartram. London: Sunday School Association, 37 Norfolk Street, Strand, W.C. Cloth. 1 shilling.

The purpose of this neatly bound little volume of one hundred and thirteen pages is best expressed in the following words from the author's preface: "I have not hesitated, where it seemed to me called for, to apply the same kind of moral criticism to these old-time (Bible) narratives that most of us would to similar occurrences in the present day. One knows, alas! too well, that the mere fact of a thing having been done by such men as Joshua or Samson or David is enough in the eyes of some to justify deeds which would otherwise be regarded as evil. By all means let us not too hastily condemn these men for acts which, according to the ideas of their time, were not reprehensible; but we ought not to let our little ones imagine that *we* regard such acts as grateful to God, or that there was any special sanctity in men simply because their doings are recorded with approbation in the pages of the Old Testament." The "heroes" treated of in this volume are Joshua, Samson, Samuel, Saul, David, Solomon, and others.

LAYS OF ROMANCE AND CHIVALRY. By W. Stewart Ross. London: W. Stewart & Co., the Holborn Viaduct Steps, E.C.

This daintily gotten up volume of sixty-nine pages is from the pen of the co-editor of the London *Secular Review* ("Saladin"); and, though the days of which he sings are long since past, no one of whatever age can lay aside the book after perusal without having been consciously thrilled into sympathy with that now nearly forgotten age of chivalry by the old-time vigor and rhythmic cadence of "Saladin's" verse. Mr. Ross has a fine poetic talent, and seems to be thoroughly saturated with the romantic spirit of the age of which he writes. The bits of Saxon history he weaves into rhyme are, even when divested of the poetic setting which gives them added charms, very interesting and instructive. Among these we especially note the following: "Caractacus, the Briton," "Hereward," "The Ampulla, a Legend of Thomas à Becket," "Richard, Lion-heart," "Death of Edward the First," and "The Choice of Sigismund."

INNSBRUCKER SPAZIERGAENGE. Von Balthasar Hunold. Innsbruck: Gassner & Co. 1883.

This is a little volume of German poems by a gentleman whose advanced views of theology and politics show themselves plainly, for instance, in that lively satire on the course of study in the university, entitled "Hohe Schulen." His pictures of Tyrolese life are vigorously drawn, and his work is in all respects what would have been looked for from a friend of Longfellow.

THE *Century* for December offers in biography some interesting "Recollections of Peter Cooper," by Susan N. Carter, which are accompanied by a new portrait of that practical philanthropist from a photograph from life, and a sketch of the life and works of George Fuller, the artist, by Mrs. Schuyler van Rensselaer. Of travel, we have "The Fairest County of England," a description of some Devonshire scenery by F. G. Heath, and "Echoes in the City of the Angels," by H. H., which treats of Los Angeles, Cal. Other articles are "The Frieze of the Parthenon: A Discovery in Connection with the Athene," by Charles Waldstien; "The Pretenders to the Throne of France," by Anna Bicknell; and "Original Documents of the New Testament," by J. R. Harris. George W. Cable's serial story, "Dr. Sevier," deepens in interest; "The Bread-Winners" has a dramatic instalment; Henry James' short sketch, "The Impressions of a Cousin," is concluded; and Robert Grant, the author of *The Little Tin God on Wheels*, etc., begins a new story, entitled "An Average Man." The "Open Letters" deal with various current topics. The illustrations of this number are, as usual, numerous, pertinent, and of the highest style of art. For sale by Cupples, Upham & Co., "Old Corner Bookstore," School and Washington Streets.

THE *Catholic World* for December is a brilliant number, and its contents are of interest to all classes of believers. There is first an entertaining sketch of a Flemish writer, "Hendrik Conscience," written by Rev. Camillus P. Maes. Another interesting biographical article treats of "Benjamin Banneker, the Negro Astronomer," by Rev. John R. Slattery. In "A Poet of the Reformation," Goethe is criticised and reviewed by R. M. Johnston. Rev. Walter Elliot sharply criticises Leslie Ward's "Dynamic Sociology," S. Hubert Burke writes of "Ireland under Elizabeth," Arthur H. Cullen of "Infallibility and Private Judgment," and Orby Shapley of "English Catholics and Public Life." There is a strongly told short story, entitled "The Four Sons of Jael," by Rev. John Talbot Smith, and two long chapters of the serial story, "Armine." The book review for the month is very full and varied.

AMONG the many attractions of the Christmas number of *Wide Awake*, we have only space to notice a story, "Facing the World," by Dinah Mulock Craik, which is illustrated by Miss Dowie, a grand-daughter of Robert Chambers, the famous Scotch publisher; a charming poem by George MacDonald; the beginning of a serial story for girls by Elizabeth Stuart Phelps; a description of last winter's carnival in Montreal, by Dr. Beers; and a Christmas poem by Lucy Larcom. There are over fourscore illustrations, eight of which are full-page. The whole number is a refined and beautiful one, which ought to be treasured in the family for years; and no better gift from Santa Claus could be offered.

TO SAY that the December number of *St. Nicholas* is more than usually rich in lovely pictures, and that it gives articles from the following distinguished writers, is but to give a hint of the treasures it offers to the young people for the holidays. These are only a sample of its contributors, whose names are sufficient guarantee of the worth of their articles: Whittier, Prof. Boyesen, Julian Hawthorne, Capt. Mayne Reid, Charles Dudley Warner, Mrs. S. M. B. Piatt, Louisa Alcott, Frank R. Stockton, Mrs. Lizzie W. Champney, and Dora Read Goodale.

WITH the December number of *Pansy*, the children's Sunday magazine, comes a lovely picture, suitable for framing, of the talented editress, Mrs. G. R. Alden ("Pansy"), whose delightful stories are appreciated alike by old and young. This magazine gives much excellent and moral reading-matter, accompanied by suitable illustration, for the small sum of seventy-five cents per year. It is published by the same firm which issues *Wide Awake* and *Baby-land*, D. Lothrop & Co., Franklin Street, Boston.

"OUR LITTLE ONES" for December is a charming number. There is more than one lovely picture to a page of reading-matter; and the "little ones" who are so fortunate as to receive it will, we feel sure, be unable to decide as to which gives them most pleasure, the stories in prose and verse or the beautiful pictures which illustrate them. The best writers for children are employed by the Russell Publishing Co., which issues this model juvenile monthly.

"BABYLAND" for December is bright and sparkling, as usual. Its contents include, in prose, a new version of "Cinderella," "A Good Christmas Gift," "Painter Peterkin's Cats," and "Blue Eyes and Black Eyes at Home"; and, in poetry, "Papa's Coming!" and "A Little Boy's Treasures."

WE learn that the next issue of the *Popular Science Monthly* will contain an elaborate article on "The Classics in Germany," designed as an answer to President Porter and others who have appealed to the celebrated "Berlin Report" against Charles Francis Adams on the Greek question. The article is by Prof. E. J. James, of the University of Pennsylvania, who has recently returned from Germany, where he carefully investigated the whole subject. He maintains that the inferences drawn from German experience of classical and scientific studies are of not the slightest value for the dead-language party in this country.

PERSONAL ITEMS.

MR. SAMUEL MORLEY has contributed $25,000 for the relief of the poor of London.

INFORMATION has been received, it is stated, that William Denton died of fever at Berigabadi, New Guinea, August 26.

THE exercise of the Parker Memorial Science Class next Sunday will be conducted by B. F. Underwood. Subject, "The Body and Will," by Maudsley. The meetings of this class are held immediately after the morning lecture.

THE *Commonwealth* says: "A gentleman in Cambridge, who says that in his youth Sojourner Truth was a servant in his uncle's family, and subsequently often an inmate of his father's house, writes that she did not then know her own age; but, some twenty or thirty years ago, it was decided, from what she could tell and from what those who had long known her said, that she was born between 1795 and 1800. This would make her considerably under the age she has of late years claimed for herself, and there are other circumstances going to sustain this gentleman's assertion."

FREEMAN of Pocasset, who killed his little daughter in 1879, believing God commanded him to do so, and that the girl would be raised to life, has been acquitted of the charge of murder, and sent to the Danvers Insane Asylum for life. An exchange says: "Freeman himself testified that he killed the child because Abraham's faith overpowered him. Alvin Wing, a neighbor, testified to Freeman's summoning the selectmen and some twenty-five of the neighbors to the house the day after the killing, holding forth to them on the Bible, and telling them that Edith lay dead in the next room and would rise on the third day. Mrs. Freeman testified to her husband's temperate and affectionate character. He was sun-struck in 1876, but was not confined to his bed. He was devoted to Christianity, his devotion increasing year by year, until it conflicted with his business. His nervous system was very much weakened; and, in the end, he slept but little. He attended prayer-meeting on the night before the murder, and said he had three visions. They affected him greatly. He told her that God had required something of him. She saw him for hours previous to the murder walking the floor with his child, and weeping. The witness's feelings were the same as her husband's at the time of the tragedy; but, after that, they entirely changed."

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883, by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

AN English exchange says: "A department for women has been opened at Owens College, which counts eighty students, two or three of whom are reading for degrees, and are allowed to attend the senior graduating classes of the college."

A NEW Radical Club, said to be somewhat like that which once had its meetings in Mrs. Sargent's parlors in this city, has been formed in South Boston. It meets in the parlors of Mrs. Anagnos, a daughter of Mrs. Julia Ward Howe. The subject of the essay and discussion last week was Emerson.

AT the hearing of the special legislative committee on Convict Contract Labor in this city last week, Mrs. Nahum Brigham recommended that fountains of hot coffee be provided for drunkards and poor people; and she thought that, instead of ten days' sentences, drunkards should be made to work, their families receiving pay for the same.

THE *Christian Socialist* remarks: "It was not to be wondered at that the German Socialists, who have been banished by Bismarck from the Fatherland and are condemned to live in the less congenial atmosphere of smoky London, mustered in force at the meeting in the Memorial Hall at which Herr Stöcker was announced to lecture, and gave the Court Chaplain a very warm reception."

WE take the following from an exchange: "The detectives are again telling the story of the revival that occurred in the jail in Hartford, Conn. The prisoners held their religious meetings in a room given them for that purpose. The zeal ran especially to music, and the songs were of the shouting kind. Great progress was made, and an abundant harvest seemed certain; but it accidentally was discovered that the sick absentees were busily sawing the bars in another cell."

IN defence of eight sisters who came over from Europe with the vicar-general of the St. Louis diocese (said to belong to a guild of only a semi-religious character), and who were arrested for smuggling, a St. Louis priest says, "These women who seem to have been doing a little smuggling (which, after all, is no great crime) are no more than any sodality." "That is to say," observes the Springfield *Republican*, "that any sodality sanctioned by the Church is expected to do a little smuggling, 'which is, after all, no great crime.'"

ACCORDING to a letter from a Nihilist confined in the Troubletskol bastion at St. Petersburg, published in the London *Times*, the condition of the prisoners is terrible, and the treatment they receive most brutal. Dysentery and scurvy are prevalent, and many of the prisoners rot away and exhale the odors of dead bodies before life is extinct. Not a few go mad from their sufferings. Men are whipped with the knout and tortured, and the prison resounds with the yells of the victims throughout the night. Suicides are frequent. The cases of the violation of women are numerous. The prisoners are covered with vermin, and have to be constantly on guard against the rats. The condition of the women is described as far worse than that of the men, and in their behalf the writer of the letter appeals to the civilized world.

AUSTIN BIERBOWER in the *Weekly Magazine* says: "Mgr. Capel has boasted that the Catholic Church, by merely giving the word of command,—sharp as the click of a trigger,—could take out all the Catholic children of America from the public schools. He intimated that the Church would yet do this; and that, unless the State should release Catholics from school tax, and pay them back a rebate for what they have already paid, there would be a fight. . . . If the Roman Catholic Church made as great efforts to keep its people out of the saloons as it does to keep them out of the schools, there would be less drunkenness and more intelligence in the country. Here, we have a great denomination engaged, at a Herculean expense, in preventing its children from acquiring a common school education, while it fills the saloons with perhaps three-fourths of all their victims. The schools it regards as a danger, while saloons it patronizes as harmless."

PERE HYACINTHE, whose mission to this country, in part at least, is to enlist moral support and obtain financial aid for his church, spoke twice in this city last week. All who heard him were stirred and thrilled by his eloquence. He is a master of French and a great orator, and has a reputation that is world-wide. He is somewhat in advance of the Roman Catholic Church. These facts are sufficient to secure for him not only a hearing, but more or less sympathy among Protestants; but it must be confessed that his eloquence and his great name have failed to make any perceptible impression upon the Church of Rome, or to awaken any considerable interest in his new departure among the progressive people of France. He pleases neither the Roman Catholics nor the Protestants, much less the free thinkers; and consequently, while he receives from the first nothing but opposition in his effort to revive Gallicanism, from the last two he receives only a lukewarm sympathy. Yet he is a religious reformer, a Catholic striving to reform his Church, and opposing Ultramontanism which is plotting against the Republic. We are pleased, therefore, to see the welcome and encouragement he has received in this country.

AN article in the *Nineteenth Century* on Walt Whitman says: "Whitman has been the object of a good deal of enthusiastic and undiscriminating admiration, and also of a certain amount of furious and equally undiscriminating abuse. Neither is deserved; but he lays himself open, it must be said, equally to both." The article is a mixture of praise and criticism of the writer; "for," it says, "we need not be zealous to claim for him the title of poet." The common objection to Whitman is thus stated: "In the first place, he is indecent; and that, too, not accidentally, but on principle. Whatever may be thought of his morality,—and that I hold to be essentially sound and healthy,—it cannot be denied that in one section of his work, and occasionally throughout the poems and prose, he outrages every ordinary rule of decency. There is nothing impure in this kind of exposure: it is indeed the direct antithesis to prurient suggestion, and the intention of it is unquestionably honest; but, from an artistic point of view, it is the gravest of faults: it is essentially and irremediably ugly and repulsive. We are most of us agreed that there is and ought to be a region of reticence; and into this region the writer has rushed himself, and dragged us unwillingly after him."

MAYOR PALMER, in introducing Mr. Matthew Arnold at Tremont Temple last Friday evening, said: "The dominion of literature is universal and eternal. Empires rise and fall, but the republic of letters stands through the ages; and we hail its successive rulers from Plato to Emerson, an unbroken line of the monarchs of thought, to whom the homage of mankind is ever due and will continually be paid." At the conclusion of the lecture, Wendell Phillips conveyed his sentiments in the following words: "Our honored guest leaves New England to-morrow. I know you will join me in thanking him for the wise suggestions he has offered and for the searching criticism to which we have listened. Our great master of Concord taught us one thing, at least,—that no generous criticism was ever too searching, and that, in the matter of truth, we must hew to the lines, no matter how many chips fly in our faces. We should be false to his memory, if we did not welcome a generous critique like that.. We will promise you, sir, to read, mark, learn, and inwardly digest it, proving all things, and holding at last to that which is not sham. We see you amid the crowds that will greet you under the dome of the Capitol and on the banks of the Mississippi, but be sure, sir, that none will watch your career with a keener interest or hear of your triumph with a fuller joy than your Boston friends."

MATTHEW ARNOLD ON EMERSON.

We did not hear Mr. Arnold's lecture on Emerson, and can only judge it by the brief abstract that has been printed. As Matthew Arnold is a writer who deals in niceties of discrimination, and uses many qualifying phrases in order to give the true light and shade to his main propositions, it is possible that the printed abstract, even if made up, as it appears to have been, of literal extracts, does not give all of these modifying touches in his estimate of Emerson which came into his lecture as written and spoken. We heard his lecture on Literature and Science; and, though it was a strong vindication of the dominant place of literature in all methods of large education, yet it had so much of this quality of nice and fair adjustment in the treatment of the joint theme that the most earnest devotees of science would hardly complain of it. We know at least one such among his hearers who was enthusiastic in praise of it as a vindication of the claims of science by a man of letters.

But, even making our judgment of the Emerson lecture entirely from the published partial report of it, we see no occasion for the great ado concerning it which some of the newspaper critics have made. We are among those who think that Emerson's celebrity is to be lasting. His literary work, we believe, will remain among the permanent feeders of human thought and virtue. He will have a place in that small band of select souls to whom through all time thoughtful men and women continue to repair for mental and moral nourishment. Nor does his right to this place need to be vindicated by the indiscriminate praise of his admirers any more than it can be withheld from him by the inadequate estimates which unappreciative criticism may make of his work. But, holding this opinion of the perpetuity of Emerson's reputation and influence, we by no means class Matthew Arnold among his unappreciative and disparaging critics. When he places Emerson by the side of one of his most favorite historical characters, Marcus Aurelius, Arnold concedes the essential rightness of the claim that is made for the continuance of Emerson's kingly power in the realm of pure intellect and morals. In the details of his estimate there are two or three points that need to be further explained or modified, but of its general conclusion Emerson's most ardent disciples have little or no occasion to complain.

We are not aware, for instance, that Emerson's greatest admirers ever claimed that he was a constructer of systems of philosophy. His mind did not move in the grooves of logical syllogisms. He said of himself that he could not argue for his beliefs if they were attacked, for he did not come to them by a process of reasoning. He only stated what his mind saw. He was a seer, not a logician. Nevertheless, there may have been an harmonious, logical system of thought beneath his utterances. In our opinion there was. A system-maker might now come with logical plummet and line and apply them to Emerson's writings, and compile therefrom the Emersonian philosophy. Nor has it been generally claimed that Emerson's chief place was in the front rank of poets. Perfect as are some of his poems (as Mr. Arnold admits), he did not have great facility in versification, and does not appear to have much cultivated this talent. His poetry has, in fact, always been overshadowed by his prose to the mass of his readers. It was rather, in the common view, an incident in his literary career than a necessary part of it. He was a prose writer who occasionally wrote poetry, and very genuine poetry, rather than a poet who could also write good prose. We should demur to Mr. Arnold's statement that Emerson's poetry "lacks energy." Vigor of thought seems to us a special characteristic of it, even where the metre limps and the verse is rugged. But, in the main, on these two points, that Emerson was not a philosophy builder and did not stand among the chiefs in poetry, Mr. Arnold's judgment does not much vary from that which has been the common judgment in the circle of Emerson's friends: though not a few would protest, and with good reason, on the latter point.

But Mr. Arnold goes further, and says that he does not even place Emerson among "the great men of letters,"—he is not even "a great writer." And this is what has most surprised people, and is the real *gravamen* of Mr. Arnold's critical offence. It has been the custom to put Emerson at the head of American literature; and, since he was only known to the public as a writer and lecturer, if he was not great there, the question is naturally asked, In what, pray, does his greatness consist? On this point, we think, Mr. Arnold's usual lucidity leaves him. He sacrifices substantial truth to verbal classification. He is guilty, in fact, of using the terms "writers" and "literature" in two senses; and hence there come into his estimate of Emerson a confusion and fallacy of statement which startle at the first reading. On a second and more careful reading, however, his meaning becomes evident; and it is not a meaning which degrades Emerson, but elevates him to a niche of greatness higher than that in which the lecturer places the "great men of letters."

By "great men of letters" in the earlier part of his lecture, Mr. Arnold means those writers who have a special "genius and instinct for style," writers who may or may not have much solidity or virtue of thought, but who have the faculty of saying things in a clear, fascinating, and artistic way. There are writers whose style alone affects people like a work of art; and such writers continue to be read without much regard to the truth or the error, the good or the evil, of their thought. Now there need be no great anxiety to determine whether Emerson can rightly be placed in this list or not. His genuine admirers will have no eagerness to prove that he will stand in history by the side of Cicero and Swift and Addison and Voltaire, writers named by Mr. Arnold as specially illustrative of the class of "great men of letters." Placed alongside of them, it is felt at once that his greatness is of a different type from theirs. And this difference Mr. Arnold finely indicates when he defines Emerson as "the friend and aider of those who would live in the spirit." Emerson was more than a master of style: he was a master of thought. His style exactly matched his thought and his mode of thinking. It is the style of the seer, the prophet. Though his essays may not be written according to the rules of artistic creation and development, there have been few writers capable of putting so much pith and vigor into single sentences; and few, we believe, who will be longer read for the truth of their thought and their purity and elevation of spirit. And, surely, it is a higher distinction for an author to continue to be read for what he says than for his way of saying it.

The question, therefore, arises whether there is not a class of authors who are really greater, even as writers, than those whom Mr. Arnold classifies as "the great men of letters," or whether those writers who perform for us the elevating service which he attributes to such authors as Marcus Aurelius and Emerson are not *the* great writers above all others. Since literary art is for the expression of thought, are not those persons who infuse into their writings such a power of elevated thought and ennobling inspiration that they continue ever after to uplift the world thereby, deserving to be put into the highest class of literary workers? And, in the latter part of his lecture, Mr. Arnold appears to be compelled to use the words in this larger and less artificial sense. He says that "Emerson's essays are the most important work done in prose during the present century"; and, again, that, of all American writers, Franklin and Emerson are "the most original and the most valuable." He even says that Emerson would be "less impressive," "less useful," if his style were to be logically systematized. It is plain, therefore, that in Mr. Arnold's view there are writers and writers. The so-called "great men of letters" are style-mongers. They may have good thought, but they *must* have good style. But there are other writers who write and are read because they have thought to give for the nourishing of the mental and spiritual life of mankind. For our part, we are content to have Emerson placed in this latter class. But, if placing him there takes him out of the list of "great writers," then we venture to suggest that both the lucidity and the ethics of literary classification might be improved by a new nomenclature. Shakspere has been charged by the critics with habitually violating the dramatic unities. Many a French author has written artistically correcter plays, yet Shakspere continues to stand the incomparable dramatist of the modern world.

WILLIAM J. POTTER.

A PLAN FOR A NEW SCHOOL OF RELIGION.

There can be little question as to the desirableness of a new school of religion. It may be premature to suggest a particular plan, yet an attempt in this direction may not be altogether unprofitable, if it call forth other plans and lead to a comparison of views. The new school could not be, of course, under denominational auspices. If it were, it would not be new, but only a numerical addition to the theological schools already in existence. It may be regarded as providential, in the rationalistic sense, that the Unitarians have responded with no more alacrity to Mr. Wade's project; for there is no need of a slightly more liberal Cambridge or Meadville. It is no new particular views that need advocacy, but a new stand-point, a new method needs to be taken. Unitarians may be found to adopt this stand-point, and there may be narrow-minded Liberals who would find it too colorless and non-committal. But what is wanted is, I am persuaded, not an organ for so-called Christian or "liberal" opinions, but a field where profound thought and thorough scholarship, working on the simple basis of reason and history, can express themselves, quite independently of their relation to particular views or current opinion. I would have only this negative proviso,—that none should teach whose opinions in philosophy or judgments of history are affected, not to say formed, by preliminary theological assumptions. It must be a simply and entirely rational stand-point that is taken. But, this being taken for granted, to refuse to appoint a man because he was a Kantian or an Hegelian, or to appoint one because he was a Spencerian, to refuse to accept the services of an historical critic like Dr. Ezra Abbot because he held to the Johannic authorship of the Fourth Gospel, or to appoint any one simply because he held so-called "radical" views about this or any other Biblical question, would be narrowness. I take it that there is such a thing as vigor of mind independently of the question of particular opinions, and that there are certain habits of the scholar—thoroughness, accuracy, impartiality—of more significance, and even value, to those who are influenced

Digitized by Google

by him than any of his special critical judgments. I do not think it impracticable to base the appointment to professorships on the possession of such qualities and habits. If the most vigorous and searching mind that is known is a Spencerian, let him be appointed to the professorship of philosophy; but, if it be an Hegelian, let the Hegelian be appointed. In time there might be two or three professorships, or at least lectureships, of philosophy. But if, in the mean time, the appointing board is not itself partisan, or made up of varying partisans, but of those able to recognize strength and vigor and depth under any form, they will have no insuperable difficulty in deciding.

And this leads me to speak of the importance of selecting a suitable board at the start. The insuperable difficulty, if there is any, is here. But I believe, if the aim is recognized, it can with a fair measure of success be accomplished. If Mr. Wade is fortunate in one or two counsellors, he would probably do best to take the matter quite into his own hands. Any board that sought to represent different religious or free religious bodies would be a failure. It must be *men*, large-brained men, who compose it; and where they come from is a matter of slight moment.

It would seem to be necessary to have at least four professorships. First, philosophy and ethics in their fundamental questions and general principles. Second, the history of religion, covering what is known as primitive (moral and religious) culture, comparative religion, and particularly the history of Judaism and Christianity, not necessarily because these are truer, but simply historically nearer to us than any other religions. Whatever attention the Bible has, it should have simply as the literatures of the Jewish and Christian religions, even as the Brahmin Vedas or the Koran; though it should, of course, have more attention than the other literatures, for the reason already given. In time, the professorship, as indeed the preceding and the succeeding ones I shall mention, might be subdivided. Third, applied ethics, where would be treated the problems of political economy, social and political science. Fourth, pedagogics (for lack of another word), which would include psychology, theories of education and their history, methods of writing and public speaking and of instructing the young.

The question arises, Where are suitable persons for such chairs to be had? They might not be found immediately. A professor of philosophy and ethics might perhaps easiest be found. Few students or teachers of ecclesiastical history have or think of having the wide culture necessary for properly assuming the duties of the second chair. Probably, no one at present is competent for the third chair; for the task of the occupant would not be to treat of this or that special reform, but to view the whole field of human life and society in the light and from the stand-point of morality. Happily, increased attention is being paid now to the science of education and to the moral and religious training of the young; and it would probably not be difficult—at least in a short time—to fill the fourth chair. In the mean time, the endowments for the professorships might be used for supporting a number of fellowships, with the aim and hope of finding from among the holders of them, after extended courses of study in this country or abroad, fit candidates for professorial chairs. Why might not a Wade Fund be established, like the Hibbert Fund in England, the interest to go to the support of eight fellowships,—two of philosophy and ethics, two of the history of religion, two of applied ethics, and two of pedagogics,—the holders to be appointed after examination, to present satisfactory evidence of the character of their work at the end of each year, and, at the end of three years, an exhaustive thesis on some special department of their field? A board, such as I have already spoken of, would of course be necessary here. This, or something like this, might be done immediately, and make a real and effectual beginning of the later Wade School of Religion. The school can afford to wait four or five years for the sake of beginning well. Buildings are not necessary for a school, a library and other equipments may follow in their time. Of the first importance are only men; and they, I suspect, will have to be prepared in some such way as this.

Such a school, headed by masters in their departments, by trained specialists, would be likely to attract students from the denominational schools for at least a part of their course of study, and would nowise preclude their returning to these schools for special denominational studies. It would not aim so much to take the place of other schools as to give to its students a broader foundation of culture than they would elsewhere receive and a training in some special studies which other schools neglect. It might well dispense with a prescribed course of study, and give a degree—say of doctor of philosophy—to those who are able to pass certain examinations and to present a satisfactory thesis. The young men of this country need such a school, the higher interests of religion call for it; and proud might any man well be who has the chance, as Mr. Wade now has, of laying its foundations.

W. M. SALTER.

CHRISTMAS ILLUSTRATIONS.

Every work of art, to be a permanent acquisition to civilization and fill a want of the human heart, must be an illustration of truth and beauty. The Messrs. Harper call for an "illustration appropriate for Christmas."

What is the truth and what is the beauty in the midwinter festival? In Europe, for a thousand years Rome has dictated the illustration for this celebration. America invites the world to her shores, she calls for a representation that the hearts of all people can respond to, as all rejoice at this time. Europe's representation has been the birth of a child in a stable, born outside civil and material laws,—the supernatural child, which is not a celebration of God's natural laws of generation or man's civil law of marriage. Every intelligent person knows that the twenty-fifth day of December —the cessation of short days, the return of longer, warmer days—was not, in truth, the birthday of Jesus. Christian Rome saw fit to announce it as such; to rename the universal festival of Creator's laws after a Person; to turn a Sunfest into a Sonfest; to turn from the celebration of a principle to a Person she was to stand as the representative of and she was to conquer by. When Rome was the home for the then known world, she was cosmopolitan,—her festivals world festivals, as true for the Egyptians as the Teutons or Franks. When she wished to rule the world, then she renamed the world festivals after her heroes. All saved by believing in me and my creed, not all saved by being true to themselves and to earth's laws. But the world is in fact a cosmos, not a machine. It is sustained in space by the regularity and velocity of its own motion; not on any Atlas' shoulders, but by its own laws, acquires equilibrium and permanence and life. The festival at midwinter is a time to rejoice and be joyful in the goodness of law and order in the universe. The Power that created is Preserver. In every race, in every zone on the globe, for many thousand years has the regular turning of the earth toward the sun for the gift of a new year of possibility, of bud, blossom, and harvest, incited to the giving of gifts to one another.

God is good, and no respecter of persons or countries. The new year comes as surely to China as to Italy. Age after age, the earth has turned so far and no farther, and then returned to bless the other side. Law does the best for all. Well may Greenland, Norway, China, and France, Germany, and America rejoice. The Japanese mother rises to kiss her babe, and give it the symbolic bonbon, emblem of "God is good." The gift of a new year is given to us, rejoice and be glad. In Africa, the ebony mother takes her children to celebrate the goodness that gives to them cooler, shorter days, and builds her festival fires as we do in June, our shortest day.

Every bird, every living root, even the preserved juice of every vine and berry, note the festival with rejoicing. Man alone is dumb to the universal joy, and lisps the Roman legend. America is cosmopolitan. The Republic is based on the law of the stars: each State true to itself secures safety to all. Her art must harmonize in spirit and method, and not be an imitation of Roman Europe.

All nations and peoples can find a home on the newly discovered hemisphere, which proved the earth a sphere, which confirmed Copernicus' discovered law in the heavens, which has made a reality the classical ideal held before Rome clinched the world and held it on its knees, praying to persons.

America's festivals must rest, not on persons, but principles and laws, on truth and beauty; for these are universal, and secure respect and reverence wherever the human heart thinks and loves.

Reverence, success, science, all call for obedience of the first commandment,—"Thou shalt have no other gods beside me," no image or person. By celebrating the laws of creation by festivals, we put ourselves into harmony with his works worshipfully and the organization of the globe. The midwinter festival, the sunfest, celebrates the goodness of earth's laws in preserving, not only humanity, but all vegetable and animal life. When earth turns toward sun for the gift of a new year, well may all people rejoice.

The American artist that is to speak and receive response from the heart of the world will not be imitator of Europe's festival ideal, but with open eye see the far horizon, and with heart think sympathetically around the world: then will the word be spoken and the picture painted that shall appeal to the universal human heart, to all enjoying earth's blessings, whether in Japan or England. America receives the world; her festivals must be cosmopolitan; her artists represent her spirit.

M. N. A.

MYTHOLOGY.

IV.

The second stage in the transformation of nature-myth is marked in the Nursery Tale. This fact is one of the discoveries, a signal and important discovery of our time.

All peoples have such tales. The mind naturally delights in them, dwells in this wonderland: they were the charm and tuition of our childhood. Emerson says a good story easily crosses all frontiers; a good tale, a pithy telling proverb, is much affected, travels far and lives long. There are many told among savage races that seem as apt, have as much salt and quaint humor often, as those we find in civilized lands. But, probably, no people have been so fruitful in this regard as the Aryan race. The stories told to childhood, remembered, cherished, carried down by oral transmission alone through innumerable generations by

Digitized by Google

every one of the tribes of this stock, are almost without number. Within our own time, or say at most within thirty or forty years, these have been sedulously gathered, studied by scholars, and carefully compared together. They have been picked up in the cotters' huts of Norway, the spinning-rooms of Germany, the hovels of the Scottish Highlands, in the peasants' homes, in fact all over Europe, and somewhat in Asia, never having been committed to writing, but preserved and transmitted with a wonderful fidelity by the old nurses and the venerable grand-dames and grandsires, from generation to generation, through thousands of years. Here is a feat like, if not equal to, that of the supposed transmission of Homer's *Iliad* or the Hindu *Vedas* by memory and oral communication, and in this case of the tales not merely to the time of writing, but all along through that, through printing, to the present hour.

The amount of matter collected by Grimm, Campbell, Norwegian scholars, Russian scholars, etc., in their several fields, is very great; and it has brought new surprise to Europe. For it was found that these tales, carefully compared among the different peoples, were substantially alike, one and the same thing, all the nationalities here speaking language differenced hardly so much as dialects of a common mother tongue; and, inasmuch as they were found to have their analogues and counterparts, close correspondence, in tales that we learn were told among the Greeks and Romans, nay, are still living and told to-day in India, it was seen that the community and identity could not sufficiently be accounted for on any hypothesis of lateral diffusion: they must have been part of the original heirloom possessed by the remote ancestry, and carried with them as they separated for their several homes, Greek, Hindu, Teuton, Celt, etc. This, too, brought new light upon some questions in ethnology and matters belonging to the history of culture.

Furthermore, it was soon seen that these nursery tales have a meaning little suspected before. They are not mere sports of the wild and capricious fancy, *jeux* of the imagination, stories invented for fun, plays of caprice, bits of amusing nonsense. They have a history behind them. The tales tell a tale of themselves that is full of strange and curious interest. They have a high ancestry, are the direct children of the heroic legends, and their grand-parents are the divine myths. Nay, they are the heroic legends told in the patois, and adapted to the plane of children, and so have become plebeian, rustic, and almost lost the look and remembrance of their noble birth. The maiden sits now in the ashes in the kitchen; but she is, nevertheless, indubitably the king's daughter.

A wide field full of rich fruits is opened up here. It is like finding a new meaning in an old and familiar face to learn that these nursery stories have such a remarkable significance other and far more than we had ever dreamed before.

There is a quaint expressiveness and an apt symbolism often in the tales that we shall find in no other department of literature; and the folk-lore, nursery stories, etc., constitute in themselves a field for study that may well occupy the time of an entire life. The realm in fact is unlimited, practically: new discoveries and fresh surprises come constantly.

Every one is familiar with the story of Jack and his Bean. It has amused and entertained the childhood of us all, and has doubtless seemed very interesting, simply as a sport of the free imagination. "It is found," says Prof. John Fiske, "all over the world, is told among the Zulus in South Africa, and among the Red Indians of our own continent. But it brings fresh surprise to find that Jack and the Giant reproduce for us Indra and Ahi of the Hindu mythology, Apollo and the Python in the Greek; then, coming down farther, St. George and the Dragon in the Christian hagiology. Here in the bean-stalk is in all probability the world-tree, Ygdrasil, of the Norse, that stupendous ash, whose roots go down deep into the kingdoms of Hela,—death,—whose trunk reaches the highest heaven, whose boughs cover the world. Under its branches, the gods hold their meetings. Jack ascended this tree, penetrated the giant's castle and slew him, as Herakles strangled the serpents of night and brought the day."

Jack, withal, stole, the story says, the giant's harp: he had besides bags of gold and diamonds, and a hen which daily laid a golden egg. "The harp," says Mr. Baring-Gould, "is the wind,"—the breeze of the morning described as musical; it is the lyre of Apollo. "The bags are the clouds dropping the sparkling rain, and the golden egg laid every morning by the red hen is the dawn-produced sun. I have not space here to establish these two latter points, but they are repeated in so many cosmogonies that there can be little doubt as to my interpretation being correct."* By a similar figure, in the Arabian tale, or rather Indian, the roc's egg is the sun; the roc here, however, being the rushing storm-cloud.

So the story of Little Red Riding Hood is the tale of the dawn or the gloaming swallowed by the wolf, night. The German nurses have preserved it more complete than the English; for they say that a hunter met and ripped up the sleeping wolf, and the little maiden came forth from his maw, in her red satin cloak, unharmed. Another form of the same thing is the tale of Tom Thumb, who was swallowed by the cow and came out unhurt. In the Hindu, it is Saktideva, who was swallowed by the fish. The fish was cut open by the servants of the king, and Saktideva came out again. The same, doubtless, was the original purport of the story of Jonah and the whale,—Jonah ejected after a time safe and sound upon dry land. This was told before the story was modified so as to be made to answer a moral requirement, like tales we find in South Africa among the Zulus and Basutos, in New Guinea, and in North America among the Ojibwas, the Algonquins, and the Greenlanders.

Cinderella—*i.e.*, Cinder-lass—and her Slipper seems originally a myth of the dawn, the presenting of the fair maiden, and the loss of her by the prince, reproducing here in a degree the story of Eurydike and Orpheus, of Ushas and Indra, the same we have in the Hindu tale of Urvasi and Pururavas, so charmingly told by one of the Hindu poets, and rendered in English by Dr. H. H. Wilson. Cinderella appears in the Greek in the story of Rhodopis and her sandal conveyed by the eagle to Psammetichus. Similar purport lies in the tale of Boots and the Princess.

The Sleeping Beauty reproduces again the tale of Brynhild, and of so many another maiden benumbed and imprisoned, awaiting the arrival of the prince who alone by a kiss can restore to life. In the palace of the Beauty, all is like her locked in icy repose; and naught thrives save the ivy, a sufficient indication of the winter holding the earth in his embrace.

Jack and Gill represent to us a very old story; and probably, in a modified and somewhat degenerated form, it has become that of the Man in the Moon. In the old Norse myth, Maui, the moon, stole two children from their parents, and carried them to heaven. Hjuki and Bil were their names, signifying, in Baring-Gould's opinion, waxing and waning, and so being originally personifications of these phases of the moon. They were carrying water that they had just drawn from a well in a bucket suspended by a pole from their shoulders. Children, pole, and bucket were all transferred to the moon, and there they may be seen to this day. Thus were the moon spots explained, and thus is the explanation given to-day by the Swedish peasants.

The Norse superstition attributed theft to the moon; and, erewhile, it came to be believed that the figure seen in the moon was the thief. The girl dropped out of the mythology, the boy oldened to a man, the pole remained on his shoulders, but the bucket transmuted to a bundle of sticks, and by and by he was fabled to have been guilty of theft or of Sabbath-breaking, and so to this day he is set in the moon where he cannot die. There is an ancient pictorial representation of this old offender in Griffin Church, near Conway, England.

The story of the master thief is told almost everywhere. It has played a conspicuous part in the folk-lore of Europe and Central Asia. It has ancient origin; for it is in fact the myth of Hermes, the breeze of the morning, the child so strong, agile, and artful, when but an hour old stealing the cattle of Apollo, slinking back through a key-hole to his cradle, and gravely denying the theft. Under many variations, it has been told in Asia, in Europe; and we see it finally in Paul Pry and Peeping Tom of Coventry.

The Wandering Jew, Rip Van Winkle, the Babes in the Wood, the Two Brothers in German, Beauty and the Beast, Dornröschen, or Briar Rose, Snow White and Rosy Red, Blue Beard in some of its essential features,—all are of mythologic origin. There has been strange transformation in many cases. The fancy has revelled and run riot, and we are treated to multitudes of incredible characters, and shown no end of impossible situations. Such a growth as is presented us in these tales could not be accounted for except on the ground of their having their original material in the creations of mythology. So "puck," "bugaboo," "hobgoblin," etc., carry back to the same source, and stand to day as witnesses to what was once, and for a very long time continued, matter of gravest belief. And Maitland's impious and ill-natured remark, that God was but "a Bogie of the nursery," bears, when we consider "Bogie" etymologically, a suggestion of truth much nearer than he knew; for it is the same name with the Slavonic "Bog" and the "Bhaga" of cuneiform inscriptions, both being designations for the Supreme Being. Max Müller says of the German goddess Hela, or Hell, that she had once seen better days. A great change, one not less radical, came to the word "brag," standing now, as it does, for a vain, boastful, empty fellow, or his swaggering talk; for originally it was Bragi, god of the heavens, the brilliant, and then the god of eloquence and poetry. Very much so Trismegistus, we are told, applied to Hermes, "thrice great," has degenerated into our word "termagant," the name of a supposed Saracenic idol.

The nursery tales show something of this change, the mind getting a little liberated, and daring to deal somewhat cheerily and sportively with the old superstitions. It is marked still more in the saws, proverbial expressions, etc. So "Remember to pay the piper," "Devil never so near as when you are thinking of him," "To sow the wild oats," "To raise the wind," "To get out of bed wrong foot first in the morning," "A noise loud enough to wake the seven sleepers," "To find a mare's nest," "To set the cap for one," and numberless other like expressions, carry mythological allusion. And so epilepsy, ecstasy, genius, spirits (as spirits of hartshorn, of nitre, etc.), nightmare, witch-hazel,

* *Curious Myths*, 2d Series, 169.

Digitized by Google

sassafras (rock-breaking), and many other terms in common use, bear the same reminiscence.

The serious use precedes the sportive, says Mr. Tylor, speaking of the history of much that we find in culture. What answered an end for service, after that function in a particular case has been superseded, is preserved for ornament, or more frequently kept as reminiscence purely through tradition and by use and wont. So the buttons on the back of our coats, notches in the collar, studs in the shirt bosom, etc., all simply repeat bits of past history. And our language to-day, especially in the familiar and constant modes of proverbial expression, is penetrated through and through with the record of mythology. Some of this has been in the main outgrown, cast aside, and the forms of speech are used now simply for pleasant reminiscence, or apt, sprightly statement of some truth far larger and more than had been embodied in the old conceptions. Mr. Emerson somewhere says of jokes that, inestimable for sauce, they are for food intolerable. It holds with still stronger emphasis here. A phrase, mythologic proverb, or the like, invaluable perhaps for sparkling hint or symbol, may be a snare and a blight taken for a verity of fact, believed as many even among the most intelligent do dimly but very really believe it to have some real meaning of truth, and to convey monition worthy of respect and careful, practical heeding.

In Germany, they say that in December you must not speak of the wolf by name, lest the werewolves tear you. And the faith in omens, presages, portents, etc., is all but universal among ourselves. Napoleon was fearfully superstitious in regard to the breaking of a glass that stood over Josephine's picture; and the late President Garfield, 'tis said, had a feeling of dread touching a certain fateful number. The shadows linger long and project far, even amid the light of present risen day.

CHARLES D. B. MILLS.

WAS EMERSON A GREAT WRITER?

Matthew Arnold is himself in part a literary progeny of the genius and spiritual teaching of Emerson, who was one of the chief "prophets of the soul" of his century. As for the question of Emerson's rank as a mere *littérateur* or writer, it is not of much importance. He was infinitely more than a mere writer. And the greater includes the less. He had a *daimon* behind him, like Socrates; that is, he was in such intimate and habitual relation with eternal truth and beauty as to be capable of such utterances as none of his contemporaries could voice. His writings are like a beach strewn with riches: —

> "On that deep, retiring shore,
> Frequent pearls of beauty lie."

He was the poet of poets, a poet of the old Oriental sort. His poetry has found a lodgement in the deepest minds of the century, in the mind of a great scientist and *littérateur* combined, who denounces the most popular poetry of the day as mere sensual caterwauling. As mystical interpretations and voices of the mystical spirit of the universe, Emerson's "Monadnoc," "Woodnotes," "Threnody," "Problem," and "Sphinx" outweigh all that Tennyson, Browning, and Arnold have written. As a delicious "sensuous" drop of Heliconian honey, the lines entitled "The Humblebee" are simply unequalled, excelling even Milton's "L'Allegro" and "Il Penseroso." As for Addison, Swift, and Voltaire, they were purely literary men, though the two latter were actuated by such a fierce indignation as gave to them occasionally a sort of prophetic elevation. But how is it with their writings in the light of to-day? They are scarcely readable except by the curious student of the past and an historian of English and French literature. How arid Voltaire's dramatic works! The essays of Montaigne are on altogether a lower plane than Emerson's. Cicero, although a great *littérateur* and essayist as well as orator, was not a dæmonic writer at all like Emerson, but only a gossipy reporter and would-be interpreter of Greek thought and the great Greek thinkers, but conspicuously incapable in that direction with all his fine writing. The publication of Emerson's great earlier essays constituted a new era. Matthew Arnold himself is one of the children and lights of that era. As for Emerson's *English Traits* and Hawthorne's *Our Old Home*, they are unequalled works in the department of what is called national psychology. Hawthorne wrote not from "chagrin," but from the fulness of a genius with an analytical subtlety all its own. Marcus Aurelius was a prophet of the soul, like Emerson, but a minor prophet in comparison with the latter. No other mystical writer and interpreter of the soul exercises such a fasoination over his readers as Emerson,—not St. Augustine or Chrysostom. For Emerson was a mystic, and that is really Matthew Arnold's objection to him on literary grounds. He is not measurable by a literary mete-wand at all. Emerson drank daily at the fountain of inspiration at which the historic prophets and saviors drank. Hence, he knew that none of them, nor all of them together, were finalities. He teaches that every man has a better and universal self. It is a curious idea to couple the author of the penny-wisdom of Poor Richard's Almanac with the author of the mystical essay on "Nature." The world could no more spare Emerson's writings, whether in prose or verse, than it could the example of "dignity, delicacy, cheerfulness, hope, serenity, and elevation" in which they were written. Matthew Arnold has "vacated no pedestal" by his critical strictures on Emerson. Indeed, he figures him as "visible upon the earth still, in his habit as he lived, but of heightened stature and shining feature"; and he will continue to be a far, shining light to both hemispheres to the remotest future.

TO MEMBERS AND FRIENDS OF THE FREE RELIGIOUS ASSOCIATION.

The Free Religious Association has an empty pocket, and it hereby holds out its hand to its constituency for a Christmas and New Year's gift. It is four years since the Association, aside from collections taken at its annual meetings, has made a public appeal for funds for its own treasury. The responses made to the circular issued in December, 1879, together with the yearly collections and membership fees, have sufficed to supply its modest wants up to this time. The needs of *The Index*, as reported at the last annual meeting, have been provided for without making a general or public appeal. But, now, the Association must provide for its own needs; and, to this end, it confidently asks the help of all its friends. Renew your membership fees, if you have not paid the one dollar fee within the last year, and cannot do more than that. Become, if you can, a "patron member" by sending five dollars. Or send still more, if the spirit and your purse will let you. We set no limit to your generosity.

The Association is under certain pecuniary obligations for office rent and service which must be met. But the Executive Committee wish to hold before the next annual meeting several conventions, and to be ready for any other work for which the way may open. To do these things, money is wanted. We are sure we can count upon your aid. Please direct your donations to "Free Religious Association," 44 Boylston Street, Boston, Mass. (stating that they are for the Association) or to the Secretary, F. A. Hinckley, No. 120 Congdon Street, Providence, R.I.

WILLIAM J. POTTER, *Pres't.*
FREDERIC A. HINCKLEY, *Sec'y.*

EDITORIAL NOTES.

B. F. UNDERWOOD will start on a lecture trip next month. His engagements will take him as far West as Denver. He is still open to applications.

"THOROUGHNESS and accuracy" are the words which the *Advance* applies to Joseph Cook's treatment of the subjects of the day! The *Advance* needs a new dictionary, or these maligned words need a new definition.—*Christian Register.*

"THE SECRET OF THE EAST"; *or, The Origin of the Christian Religion, and the Significance of its Rise and Decline*, by Felix L. Oswald, M.D., just published by *The Index* Association, is for sale at this office, and will be sent by mail on receipt of $1.

THE *Popular Science Monthly* for January contains an article from the pen of Herbert Spencer on "The Past and Future of Religion," in which the distinguished thinker takes the ground that religion is not destined to pass away, but that it will be purified and exalted with the further evolution of the race.

DR. LAZARUS desires us to say that in the manuscript title, as sent by him to his article in *The Index* of December 6, he used the words "according to Saint-Pierre." He thus desired to indicate that, though the article was not a translation, it was, in "thought, spirit, and method," founded upon Bernardin de Saint-Pierre's *Les Harmonies de la Nature*. As Dr. Lazarus is sensitive lest he shall be charged with plagiarism, we willingly testify that the article did come so entitled. We will add also that it was a portion of an unpublished work on *The Living Earth*.

GEORGE H. ELLIS will publish immediately *Martin Luther: A Study of Reformation*, by Edwin D. Mead,—a volume of about two hundred pages, uniform with Mr. Mead's *Philosophy of Carlyle*, discussing the Reformation with special reference to the problems of reform in our own time. The work will be in about a dozen sections, devoted to the significant phases of Luther's life and character, to the principles of Individualism, Intellectualism, and Rationalism for which he stood, and the Libertinism, the Roman Church or Old Orthodoxy, and the Erasmusism or New Orthodoxy with which he came into conflict.

SAYS Herbert Spencer, in the January number of the *Science Monthly*: "The visiting on Adam's descendants through hundreds of generations dreadful penalties for a small transgression which they did not commit; the damning of all men who do not avail themselves of an alleged mode of obtaining forgiveness, which most men have never heard of; and the effecting a reconciliation by sacrifice of one who was perfectly innocent,—are modes of action which, ascribed to a human ruler, would call forth expressions of abhorrence; and the ascription of them to the ultimate Cause of Things, even now felt to be full of difficulties, must become impossible. So, too, must die out the belief that a Power present in innumerable worlds throughout infinite space, and who, during millions of years of the earth's earlier existence needed no honoring by its inhabitants, should be seized with a craving for praise, and, having created mankind, should be angry with them, if they do not perpetually tell him how great he is. Men will by and by refuse to imply a trait of character which is the reverse of worshipful."

The Index.

BOSTON, DECEMBER 20, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

THE ABSOLUTE AND RELATIVE.

BY WILLIAM I. GILL.

VII.

Our further progress is here obstructed by some prevalent and subtle errors on the nature of absolute and relative and the relativity of knowledge. All nature, all existence which is a living substantial reality, metaphysicians have anatomized and sublimated into a ghost called the "absolute," and to this ghost they have given a shadow called the "relative"; and, then, they are unable to tell which is which or what is either. They follow closely the directions of Mephistopheles to the student: "See that you conceive profoundly what is not meant for human brains. A fine word will stand you in stead for what enters and what does not enter there. . . . Generally speaking, stick to words: you will then pass through the safe gate into the temple of certainty. . . . It is precisely where meaning fails that words come in most opportunely." A system may be built with words, the devil truly adds. And systems have been built with the terms "absolute" and "relative," and kindred terms, used without real and definite meaning, such as substance and noumena as opposed to quality and phenomena.

This false method of philosophizing was first in modern times made conspicuous by Locke by the emphasis which he put upon the old distinction between substance and attribute and between essence and quality. Substance and essence, being discriminated from attribute and quality, are void of them; and they are, therefore, a nihility alike to knowledge and conception, empty words. So that substance and essence are really ruled out of existence, though nominally retained. Berkeley battled earnestly, but with inadequate light, and therefore ineffectively, against this distinction. Hume took it up, and properly affirmed that all our knowledge is hence comprised in impressions and ideas, which Locke himself had explicitly affirmed in saying that essence and substance are unknown. So that nothing but impressions and ideas remained to be known; and these two Locke includes under the one term, "ideas," and he expressly and frequently affirms that these are all we know.

Kant adopts the distinction under the terms "phenomena" and "noumena"; and he is therefore obliged to confess that he cannot furnish in logical unity an ultimate speculative system. Fichte and Schelling substitute the term "absolute" for the term "noumenon," and vainly attempt what Kant held to be beyond human power,—the reduction of the absolute and relative to a logical unity. Here, Hegel burst in and boldly took the bull by the horns, declaring that the impossible logical unity is not necessary, and that to seek it is fundamentally wrong; that contradictories may both be true, and are true, since being and nothing are one, because the universally accepted definitions of being—essence, substance—are defined as qualityless, which, to conception, is just the same as nothing. Thus, the great primal logical law of noncontradiction is discarded; and a new logic is invented, which consists only in showing the orderly concatenation of phenomena or phenomenology.

Sir William Hamilton reimports the ill-starred distinction under the terms conditioned and unconditioned. But, as he does not follow Hegel, he alternates back to Kant and ultimate mystery, or Agnosticism; and he is followed, with a slight modification in the dogmatic direction, by Mr. Spencer in his *First Principles*, only he uses the terms absolute and relative, instead of unconditioned and conditioned.

The absolute should be considered as numerically different from the relative, else the two terms are merely synonymes; and much of what all these philosophers say of them implies their duality. On the other hand, they all really—and, except Hamilton, all expressly—make all things an ultimate unity. On this theory, the difference between absolute and relative is only modal, and yet to the absolute there are, it is alleged, no modes; and, if they are ultimately one, the unknown absolute is very closely and vitally related to the known relative, though incapable of relation. This kind of writing in the name of philosophy makes its way and maintains its authority, because it is too incomprehensible to be refuted like the mummeries of witches and gypsy fortune-tellers; for, as Goethe's Mephistopheles says again, "A downright contradiction remains equally mysterious to wise folks and fools." I allow that his utterances are not always immaculate, but on some spirits they are not without power; and, of their pertinence and probable influence here, the reader must judge.

The paralogism in this lofty conceit of the absolute is more conspicuously flagrant in sensist or objective evolution than in connection with preceding theories, because this professes to be simpler, and even at times affects to despise metaphysics. Mr. Spencer affirms that the absolute is unknown and incogitable; that yet it exists and is proved by the known existence of the relative; that, if we suppose the absolute annihilated, the relative itself becomes the absolute, in which case the phenomenal becomes unphenomenal, since this is the character of the absolute. But since he makes the absolute and relative together to constitute the universe, the one grand totality of force and action, the vast and labored distinction between the two is without a difference. They are both forces and causes, and as such they are mutually related in an endless series of changes; and so the absolute is as much a relative as the relative itself; and it *is* the relative, for the two are intrinsically one and the same. In short, this high dialectic absolute is not only an intrinsic absurdity, but it is especially foreign to the theory of evolution.

This style of pseudo-thinking has generated a false theory of cognition concerning the relative as the known. Our positive experience and thought have made it necessary for us to speak often of subject and object, of *ego* and *non-ego*, of outer and sensible forms and inner and supersensible experiences; and, now, this class of philosophers assail us with a perpetual clatter about our knowledge of these things not being absolute, but only relative; and, with an empty verbal ingenuity, they bewilder equally themselves and others, and erect a fabric miscalled philosophy, less substantial as well as less charming than the palace of Kubla Khan of Coleridge's dream. Our first task, therefore, now is to sweep the air clear of these phantasms; but it is their unsubstantial character which makes the difficulty of the task, for they do not obey the laws and forces of the real world, and the motion or stroke of solid things has no power to drive or crush and destroy them. Go through them, and trample them and roll over them, and they rise again or reappear as large as before, like a parted fog.

Vast is the flood of words which has been poured out on the high metaphysical conceit of the Absolute, pure and simple, as the alleged unrelated; and the utmost degree of misled subtlety, in wandering mazes lost, has been exercised only to render a dark and formless topic still more obscure and perplexed. The main proposition is intrinsically self-contradictory, and should thence be considered as self-nullified. But logic has no rights which this *a priori* metaphysics is bound to respect. A little reflection will make it apparent to any one that nothing that we know or can conceive is perfectly simple. Every atom contains or constitutes a plurality of qualities. It has locality, extension, weight, and chemical force, and what else I know not. But of all these, or all but one, we cannot conceive it to be divested. A more profound analysis will show that everything, whether considered as object or subject, must include in the conception of it a set of logical categories. For instance, it must be of some quality, some quantity, some duration; must be either cause or effect, or both; must be of some number, one or more: must be whole or part, and have some degree of worth; and there must be a degree of relation and community between all these.

If there were only one being, it would have no external relations. But, as such a being would include all things, its internal relations would be infinitely or indefinitely multifarious. But, if there is a plurality of beings, these have various relations to one another. In any case, therefore, the unrelative absolute is an impossibility. Relativity belongs to all real existence, by whatever name we call it.

The absolute as related is a reality and a genuine concept, because it is a thing of positive qualities which have various relations to each other; while each complex reality is related to all others, so that it is relative as well as absolute. It is absolute only in the sense of having a real existence as a thing of such or such a quality or intrinsic force or nature, and would be such though it were the only existence. Relations spring from the existence of things, not their existence from their relations. Something there must be as an *a priori* condition of relation. In this sense, the relative not only presupposes the absolute, but also that the absolute is the very thing which is related, and is therefore also the relative. Any other absolute than this is an illusion, a void form of thought, which has imposed on many.

An Erroneous Notion of Relativity.

In a region less aerial, we are also presented with a false metaphysical doctrine of relativity concerning the senses and supersensible matter. This doctrine is that, as all subjective phenomena vary with organic condition and constitution, though outward things are the same, our experience is never a direct cognition of outward things or extra-organic realities, and no just expression of truth, except as relative to the conscious subject and the connection of its various experiences with each other. Flavors and odors of various viands are imperceptible to some, while very powerful to others. Savages receive impressions through eye and ear which are impossible to Europeans. Abnormal conditions as to health beget sensations of smell, taste, sight, and sound, and even of the muscles, which in the same circumstances in health are impossible. In normal conditions, we all have different sensations from the same object, if it is only changed in its position relative to the different parts of the organism; as, for instance, snuff, pepper, and ammonia have very different effects, according as they are applied to the hand, tongue, eyes, or nostrils. The hand is sensitive to heat, but not to light; while the eye is sensitive to light, but not to heat. In the language of Spencer, "We are thus driven to the conclusion that what we conceive as space-relations cannot be either in their nature or degrees like those connections among external things to which they are due." In plainer terms, sensations are not like their external causes, because they vary not only according to the variations of external phenomena, but also according to organic subjective variations; and that, hence, known sensible objects are not ultimate realities, but symbols of such which are beyond our reach. Thus, it turns out that we know only subjective states in experience, and that these states or phenomena represent transcendental realities, which answer to

Digitized by Google

the noumena of Kant, at least in a good degree; and Mr. Spencer is a transcendentalist as well as an agnostic, which was true also of Kant.

Source of this Error,—Fossil Metaphysics on Matter and Mind.

This is a relict of scholasticism, which was excusable in the earlier times, when they knew not the scientific compass, which should teach us how to escape these dark and vacuous regions, where empty words are the only stars. All this barren show of reasoning and profound ulterior conclusion is based on the assumption of a supersensible world, whence a comparison is drawn between the sensible and the supersensible connections; the latter being described as "those connections among external things to which they [sensations] are due." The confusion is augmented by an oblivion of the oft admitted fact that all phenomena are subjective, and the consequent institution of a blind comparison between sensations and external realities, so called, extra-organic phenomena being thus assumed to be *non-ego*. Herbert Spencer (*Principles of Psychology*, § 77) says, "Having contemplated feelings in their relations to one another as components of our consciousness, we have now to contemplate them in relation to things by which they are produced." He then proceeds through the chapter to carry this out, on the assumption that whatever is beyond the organism is beyond consciousness, and thence to explain the variations of sensation relative to extra-organic objects as *non-ego*.

The whole truth in the expression of facts of the relativity of sensations is as follows: Sensations vary uniformly, according to a simple law of forces in mutual relation. So that, if all the related terms are the same, the sensation is the same; and, if any of the related terms are changed or their relations changed, the sensation is changed. This law, instead of being a mystery and pointing to a spectral world, whether called noumenon or the unknown,—and these are one,—is, when the facts are duly apprehended, seen to be the simplest possible expression of the necessary facts,—a logical truism, in fact,—because the variation of the related terms is itself a variation of sensations as well as of the forces of the related group, since all the known terms are nothing else than sensations (with their implicated forces). Some of the terms may be sometimes more or less unknown (but never unknowable entirely); and yet, relatively to the changes of these, sensations will change, because we are always the subject of the action of forces which are only partially disclosed in consciousness. But it is only for phenomena or the forms of consciousness that we seek a law. This shows our knowledge to be real, direct, and perfect. These phenomena or sensible objects being sensations only,—or conscious forces in said form,—to know them is to know everything involved in the case, and that so thoroughly that nothing more remains to be known. Sensations are always known as they are, precisely and absolutely.

The term "relative," so far as it has any real meaning, *does not refer to the nature or forms* of sensible objects, but only to their temporal and spatial order and connection. They are variously related to each other in space and time and as cause and effect. As objects of sense, they are always perfectly and absolutely known, else they are so far not sensible objects; and this knowledge is not vitiated in the slightest degree by the fact that we have another knowledge,—the knowledge of their relation to each other in space and time, and their relation to the *ego* as their common subject, which may be wholly conscious or partly unconscious. One knowledge does not nullify another. And it is entirely certain that we have indubitable knowledge of certain sensible objects, and that these are lexically related to each other, and that they are all the modes of a common, conscious subject, which we call I, or *ego*. This is all there is to be known or surmised. There is no logical necessity or possibility of going any further, and there is no room for the introduction of the old relativity. The relativity which I have admitted as the only possible one does not in the least detract from the knowledge or the value and verity of the facts as known. Facts are facts; and sensible objects are what they are, notwithstanding their relations, which do not annihilate or obscure or alter the nature of the facts or objects. It is only a false ontology and psychology which have led to the adoption of any doctrine of relativity which implies that we are shut off from a real and direct knowledge of things as they are. It is preposterous to suppose that things can be known otherwise than as they are, for else they are not so far known at all. So far as we know or can conceive, nothing exists but experiences and their subjects; and these are one, and directly known. Here, therefore, there is no possible room for any unknowable background, no fathomless and vacuous gulf of the absolute discontinuous from the known, nor an unknown, bewildering something—nothing called the material world beyond the senses.

As a further exemplification of dementation caused by the dualism of a sensible and supersensible material world, I will quote a passage from a representative author of France and then of Germany,—one from M. Janet's much-praised work on *Final Causes*, the other from an article of Lotze in *Contemporary Review*, January, 1880. Janet says: "Despite the warnings of the greatest minds and of all great minds, are we not ceaselessly tempted to yield to the automatic instinct which makes us believe things to *be as we see them*, makes us suppose the existence of a *matter, sonorous, cold, or hot, such as the senses acquaint us with?* No doubt, nothing external to ourselves can be known internally by us; but, if the exterior be the expression of the interior, is not the one equivalent to the other? And to ask more would amount to asking to be more than men. Science teaches us that all appearances have a fixed and precise relation to reality. *The visible, apparent sky is strictly what it ought to be to express the real sky.* The deeper our knowledge goes, the more we see the perfect conformity of the apparent to the real, the more do phenomena translate noumena." A strange scientific sin it is to "believe things to be as we see them." Surely, there *is* "a matter, sonorous, cold, or hot, such as the senses acquaint us with," else the senses do not acquaint us with it. It is a matter for deep regret that the distinguished academician has not described to us more fully the two skies, which he designates respectively as the apparent and real skies, or tell us where we may find them, in order that we may be able to verify or test his assertion that they are equivalent to each other and conform to each other, so that one is an expression of the other. We have never known but one sky, which is apparent to our senses, and which we have confounded with the real sky in spite of all warnings from great minds; and because we have no proof of any other sky, and because the assertion involves many logical difficulties, besides being unscientific, we are content with this one sky,—the sky which daily floods our world with light and at the same time constitutes for it a variegated, fleecy canopy, the sky which by night looks down upon us in deeper colors and with myriads of eyes more brilliant than diamonds.

The promised passage from Lotze is as follows: "Whencesoever our knowledge of the world, of its contents as well as of its great fundamental principles, may come, it remains always our representation of its object, and not that object itself." To the initiated, this means that the world itself is unknown, but represented by certain sensible experiences. This passage does not shed a brilliant light on its own darkness, like stars on a dark sky. In this only it differs from Janet, and it is the general difference between an erring Frenchman and German. How Lotze knows that sensible phenomena represent a thing he does not know and never can know, as he confesses, or how there is anything representable, he does not inform us.

These extracts exhibit the Kantian notion of relativity (which here is Spencerian) and its paralysis of ultimate speculative power. It affirms that what everywhere uniformly appears as real is not real, but only a representation of an unknowable real; and that what appears to our intelligence as an ultimate necessary truth, and which we are obliged to act upon in that light, is not such, but may be a reflection from such a truth. It proclaims philosophy proper (ultimate) an impossibility, and stultifies all intelligence, and by consequence its own statement. These are dark clouds which are yet exhaling from the primeval metaphysical world, and they will gradually roll away before the light of a true analysis. We do not, with Janet, hold to any instinct which makes us believe a lie. We not only *believe* that we see things as they are, but we *know* it, else we do not see them at all, since these things exist only as they are seen or are sensibly manifest. For them, *esse* is *percipi* and *percipi* is *esse*. It is no false faith nor even a faith at all, but a knowledge that the solid and sensible material world exists. All the darkness and mystery here, all the philosophical difficulty, limitation, and confusion, arise from the baseless and persistent assumption of dualism that there is a non-egoistic world, non-egoistic to me and all men and common to all, which world, it is reluctantly allowed, is unknown, since the known is *ego*.

It were to be expected that they who affirm that a false and misleading instinct dominates our sensible judgments will exhibit a similar principle concerning supersensible judgments. Whoever affirms that "there is never any sensible object, but only a representation of an object," may with equal reason say that there is never any mental object, but only a representation of such object, so that we have no logical protection against utter philosophical scepticism. This is the present and ultimate result of all existing forms of relativism, intellectual as well as sensible.

Confusion of Identity and Similarity.

Our attention is now claimed for another oversight in the common analysis of sensible phenomena concerning relativism. It is that the word "same" is constantly and unwittingly used in a false connection and with a meaning which implies identity, where in truth we should have a word which denotes *similarity of relations*. Thus, Mr. Spencer says that a fox, a man, and a snail, *going over the same ground*, will have very different experiences. The fact is that no two living things ever do go over the *same ground*. Each of them as known to me is a mode of myself, as is the ground over which they pass. These cannot have any sensations or experiences at all, being themselves only sensations. If these moving phenomena are taken as symbols of living beings, thus correspondingly like or unlike each other, then we must carry out the symbolism to all their environment. Thus, no two beings can see or feel the same thing nor be in the same world or the same space. Each is a universe to itself and of itself, said universe, organic and inorganic, being its various modes, a grand complexus of sensations. Whence, again, it follows that all experiences are true absolutely and not merely relatively, and are conformable always to facts and relations, because they constitute all the facts and all the relations. The only sources of error consist in a false analysis or a false inference beyond experience, and these present no logical or philosophical difficulty. The possibility of such errors is a consequence of our finite limitations, and the possibility of progress till we are able to correct our error has the same root. All the dense shadows and cavernous obscurities and philosophical nullifications of relativism thus pass away, and "there is found no place for them."

Cause of Relative Sensitive Variation.

Our analysis and exposition must now take another step. Psychologically, we have already reached the ultimatum; but a logical procedure is still possible and called for. We have seen what is the ultimate psychological law governing the facts, which are couched in the general statement that there is a variation of experience corresponding with organic constitution and condition, though there are no extra-organic changes. We will now state the ultimate reason and cause for this law. *It is found in the intrinsic nature of all being as a force.* These phenomena are necessary facts as the expression of the various existing and therefore operating forces. Things cannot be different without operating differently in producing different effects, which are the causes of other effects correspondingly different. So the effects will vary according to the connection of the forces in mutual operation. A spark dropped on water and a spark dropped on powder is expected to be followed by different effects. These are absolute facts and absolute perceptions. So, if the spark drops on my organism, the effect will be again different, and in different parts of the body the effect will still be different; and, so far as my knowledge extends of either the causes or effects and their relations in the case, it is absolute,—that is, it is direct and real and ultimate. Antecedents will be followed, and must be followed, by different consequents, whenever the relations are varied, and only then, whether any of these related terms include an animal organism or not. Hence, it is an absolute necessity, according to the known general law and the essential conception of force, that, if in any respect my organism is different from another, my experience must be different

Digitized by Google

in the same connections, and the experience must vary in different parts of the body.

It may be thought that this leaves us just where we began, with the knowledge of things in their relations to each other only, so that we have only relativity at the last as before. This is a misconception. It is true that we know only things in their relations to each other. But the point I make is that that is just the way to know them, because that is the way they are. Since they are related to each other, our knowledge cannot be real and correct, if it does not embrace these relations in all their forms and variations and effects. We know things in themselves *and* in their relations, and these are different and the knowledge of them is different; and these include *everything*. Before it falls, I know that spark in itself irrespective of all its antecedents and consequences as an object of sight or a visual sensation, which is all it is, brilliant, transient, mobile; and this knowledge is real, absolute, and ultimate. And I also know that spark in its origin and cause, or its preassociation with other sensations, which is another real and absolute (though not unrelative) knowledge or set of knowledges; and, then, I afterward know it in its subsequent relations or effects or its post-associations with other sensations, which is another knowledge or set of knowledges, real, direct, and as absolute as anything can be. Nothing more remains to be known, because everything is known as such or such, and as in such and such relations, and always as sensations or modes of the conscious *ego*, which is just what they are and all they are; and here our ultimate, logical, as well as psychological goal is attained, so far as it affects the doctrine of sense perception; and, as concerns the ontology of the *ego*, that must be left to be treated in its proper connections.

No Unknowable Absolute.

Relativists next unite all phenomena into a grand totality, and say that, when we have traced them up to their highest unity, there is implied beyond them all an unknown, if not unknowable and even inconceivable, something as their explanation by way of substantive base or cause or we know not what. All schools and parties (except positivists) have agreed on this in general; but they have differed in the attempted determination in detail as to what constitutes that implicated transphenomenal reality and the amount of our knowledge and proof of it. Phenomena, it is said, are known only in relation to this, and this is only conceivable in relation to phenomena; and the conception and knowledge of both are relative only, relative to each other as well as relative to the conscious subject. So that all our alleged knowledges and conceptions are indirect, a *mere* alternate reflection of things unknown, like double or treble echoes responsive to each other, only the echoes are in kind like the original, while these are not. A very little labor now in the line of our previous expositions will here winnow the chaff from the wheat. The phenomena, because phenomena, are perfectly and absolutely known in themselves, and they are also known as being related to a self-conscious egoistic reality as modes thereof; *and this reality or ego is definitely conceived simply as a force causative of these phenomena*, in which phrase the nature of the force is described with accuracy, though not necessarily with perfect fulness. We have thus an absolute knowledge of phenomena, and of their ultimate relation as modes and effects of the conscious subject or *ego*, the force which is their cause. Thus, again, the mystery of relativism disappears; and, to the utmost of our inquiry, our knowledge is real and direct or absolute.

REPLY TO A CANADIAN CRITIC.

"Historicus" desires free thinkers to contemplate "such terrible results as must arise from unbelief," if revelation is true. The Mohammedan in defence of his faith employs the same kind of argument (?), which is merely an appeal to men's superstitious fears. The Catholic speaks of the "terrible results" of rejecting the authority and teachings of his Church, if its claims be true.

When an individual, after careful study and thought, has come to a certain conclusion, must he disregard his reason and common sense because theologians, who know as little in regard to the matter as himself, declare that adherence to the conclusion he has reached makes him criminal in the sight of God, and will call down upon his head the wrath of heaven? The rejection of Christianity is compatible with great intellectual worth, noble moral qualities, and probably a fair share of enjoyment (when not prevented by Christian intolerance) in this life. Such men and women as John Stuart Mill, Charles Darwin, Ralph Waldo Emerson, and Theodore Parker, George Eliot and Harriet Martineau, William Lloyd Garrison, Buckle, and Grote, Haeckel, Huxley, Tyndall, and Spencer—to mention only a few of the long list of "infidels" that could be given—will compare favorably, perhaps, with any equal number of Christians of this generation. But the penalty of rejecting Christ, theologians declare, will be inflicted upon us in another state of being. This, however, is a priestly assumption and threat that can intimidate no man whom science and the scientific method of thought or the exercise of common sense has emancipated from the cruel thraldom of superstition. The clergy who repeat this "believe-or-be-damned" nonsense cannot sustain their claims by an appeal to reason: they have a professional interest in preaching it sufficient, at least, to bias their judgment. Many who no longer believe in the doctrine of eternal torment, from professional and prudential considerations conceal their sentiments, if indeed they do not, like the priests of Egypt, have an esoteric and an exoteric doctrine,—one for themselves and one for the people. The decay of the belief in arbitrary divine punishment, either here or hereafter, has, like the belief in witchcraft and Satanic influence, corresponded with the progress of knowledge and independence of thought; and the "better-be-on-the-safe-side" argument—which is effective in the ratio of the narrowness and intolerance of those who employ it and the ignorance and credulity of those upon whom it is employed—is not likely to have any weight with the members of the Montreal Pioneer Free-thought Club.

If the Bible were a "revelation," its truth would be beyond doubt. To reveal is to make known. What kind of a "revelation" is that which dogmatizes regarding matters beyond the range of experience and makes statements which do not admit of verification, and yet is attested only by "miracles," which make no impression whatever upon scientific minds,—the "miracles" belonging to a class of marvels which abound in the history of all religions, which disappear "like the baseless fabric of a vision" the moment we apply to them those canons of historical criticism by which we test the miraculous occurrences recorded in Grecian and Roman history? Learned men, after centuries of study and discussion, are unable to agree even as to the teachings of the Bible. An infallible revelation implies an infallible standard of interpretation. Is the Catholic Church that standard? No, says the Protestant: every one must use his own private judgment in reading the Bible. Seriously, has God given an infallible revelation, belief in and knowledge of which are necessary to our eternal well-being, endowed us with fallible judgment, given us the right and imposed upon us the duty of exercising it, and yet ordained to punish us for ever, to make our escape from the most excruciating and unremitting as well as eternal torment impossible, if, in the use of our reason and common sense, we fail to reach correct conclusions as to the authority and origin of this book-revelation which is attested by "miracles" related by writers whose testimony in relation to any supernatural event would to-day be regarded by sane men as evidence only of their own mental derangement?

"Historicus" wants information from those who would "destroy" the Christian faith, why and how they do it, and what they would substitute for its "motive power"? Evidently, they would replace whatever error there is in the Christian system—retaining the truth, of course—by those principles and precepts of which the error is a denial and contradiction, *because*, as all experience demonstrates, error is the foe and truth is the friend of man. They would do this by criticism and discussion, by the diffusion of knowledge,—such knowledge as the clergy since the establishment of Christianity have employed their position and power to oppose and suppress. The "enthusiasm of humanity," the philanthropic desire to diminish suffering and to augment the happiness of the race, is the highest and the noblest "motive power" of which we can conceive, being infinitely above that of the Christian, who tries to believe absurd dogmas and performs foolish and frivolous ceremonies to please an invisible Being; or who in all his acts keeps in mind the idea of future rewards and punishments, and believes in a scheme of redemption by which the natural consequences of evil-doing can be avoided, by which a link in the chain of causation can be destroyed, by which cause and effect can be disjoined, by which the "vilest sinner" may attain to eternal bliss, while the noblest men and women—like Humboldt and Harriet Martineau—may suffer torment more horrible than can be conceived and as endless as eternity....

I have no "followers" in the Montreal Pioneer Free-thought Club. Free thought has no popes nor priests, no creed to which any one can be called upon to subscribe. Every free thinker exercises the right of private judgment, carries out the Protestant principle enunciated by Luther, and which neither he nor Protestants generally extend to its legitimate results. That there are members of the Montreal Club who concur mainly in the views I advanced is possible; but, if so, it is because the views commend themselves to their reason, and not because there is any authoritative obligation to accept them. "Historicus" seems to think that every *agnostic* must accept the views I presented. This leads us to inquire what agnosticism is.

Prof. Huxley—who says, "Some twenty years ago, or thereabouts, I invented the word 'agnostic' to denote people who, like myself, confess themselves to be hopelessly ignorant concerning a variety of matters about which metaphysicians and theologians, both orthodox and heterodox, dogmatize with the utmost confidence," and who adds that he thinks, therefore, that he "can state authentically what was originally meant by agnosticism"—thus defines the word: "Agnosticism is of the essence of science, whether ancient or modern. It simply means that a man shall not say he knows or believes that which he has no grounds for professing to know or believe.... Agnosticism simply says that we know nothing of what may be beyond phenomena."

Thus, an agnostic is one who claims to know nothing "beyond phenomena." At the same time there may be a diversity of views among agnostics in regard to the phenomenal world,—the only world of which we have or can have any knowledge. In the report of a portion of my lecture published in the *Star*, I stated some of the propositions that I believe, to show that one who is an agnostic, one who claims no knowledge of the *noumenon*, may yet have convictions regarding those things that belong to the province of phenomena.—*B. F. Underwood, in the Montreal Daily Star of December 8.*

MR. J. A. HALLOCK writes from Exira, Ia.: "I ordered your paper, *The Index*, some time ago on trial, and have read it with more satisfaction than any publication of a similar character I ever had the pleasure of reading. Your issues are all good and instructive, but I found more in *The Index* of the 15th inst. to admire than in any liberal paper I have ever read. Mr. Underwood's 'Agnostic's Creed' expressed so fully the convictions that I have been trying to teach for the last thirty years that I read it and reread it with delight. And Capt. Adams' 'Travels in Faith' express so fully my own struggles and experiences in years past that it seems almost like a retrospective view of my own life. A lawyer can study his case and bring out with brilliancy all the points both great and small in his favor and hide all the truths and facts against him, but how an honest searcher after truth and a teacher of righteousness can expound from the so-called sacred desk as truths the mythologies of Palestine is beyond my comprehension."

EARLY errors make late arrows that poison and jag the flesh.—*J. R. Monroe.*

> SOME of your griefs you have cured,
> And the sharpest you still have survived;
> But what torments of pain you endured
> From evils that never arrived!
>
> —*Emerson.*

IT is the want of appreciation of what we have that makes our life poor and often so uninteresting as it is, so devoid of inspiration. There is the delusion that has befallen many people, that *life to be of any* real value must be attended with extraordinary array of circumstances. Unusual and signal occurrences must conspire to create great days, and *then* life will

Digitized by Google

be worth living. But no greater delusion comes to mortals. Great lives are great and rich and of transcendent interest, not because of signal and crowning circumstances in themselves considered, but rather because a genuine soul has been thrust *into* the circumstances, and so they have become signal and extraordinary.—*Rev. E. L. Rexford.*

TERRA TO THE STAR.

Star, whose wondrous lustre o'er my soul is beaming,
Whither wert thou gleaming e'er thy eyes met mine?
Star, whose untold radiance sets my heart a-dreaming,
Shine into my darkness, and there forever shine!

Bright amid the glories of heaven's constellations,
Thou wert gracious ever ere thy light to earth
Found its way and sweetly reached for adoration,
And my inmost being wakened into birth.

Star of love, whose richness fills a life of sadness,
Star of purity and truth, forever with me dwell!
Let thy coruscations warm my heart to gladness,
Let their tender rays enfold me safe and sure and well.

So shall I, enraptured, bathe me in thy beauty;
Loving, still grow lovely, and nearer heaven and thee;
In my soul's completeness recognizing duty,
As thy powers magnetic exalt me to be free.

Star of hope, my pathway, once thou art arisen,
Guide in loving wisdom toward the Gates of Day,
O Illuminator! till the fields elysian
Open to our vision forever and for aye!

NEW YORK. LITA BARNEY SAYLES.

For *The Index.*

SONNETS.

TO WALT WHITMAN.

O rich fulfilment of the Prophecies,
By God's own finger writ on every hand,
In plain and mountain of thy native land,
Its boundless prairies, rivers, lakes, and seas;
O Bard! with thought and speech befitting these,
And soul in all as generously planned!
Present in thee, by Nature's largess, stand
And voice themselves the world's democracies.
All Powers that wait on freedom thee attend,
And breathe in every cadence of thy song;
And every impulse that doth work the Will
That shapes the world forever to the end
That heaven in man shall yet itself fulfil,
Is thine ally, and shall thy verse prolong.

IN TENEBRIS.

A cunning not their own our hands makes wise.
And Powers there be that are unguessed of men
That build their faiths beyond the utmost ken
Of earthly wisdom. Spirits in disguise
Lead our feet daily under fairer skies
Than those our eyes behold. Hands guide the pen
Of bard and prophet and of statesman, when
They wot not of their presence. Stars arise
We dream not of, to light o'er perilous seas
The drifting barks of years that journey on,
Bearing the seeds of far-off centuries.
Though unperceived, there blows a breath through ill
Towards heavenly shores, and a propitious moon
Sways all the ocean tides of human will.

G. WALTER R. THOMAS.

EMERSON ON THE DEAD LANGUAGES.—The protest against the dead languages as a college fetich is not new this year. Ralph Waldo Emerson gave the sum of this protest in a lecture read in Boston on the 3d of March, 1844. He said: "The ancient languages, with great beauty of structure, contain wonderful remains of genius, which draw, and always will draw, certain like-minded men—Greek men and Roman men—in all countries to their study; but, by a wonderful drowsiness of usage, they had exacted the study of *all* men. Once (say two centuries ago), Latin and Greek had a strict relation to all the science and culture there was in Europe, and mathematics had a momentary importance at some era of activity in physical science. These things became stereotyed as *education*, as the manner of men is. But the good spirit never cared for colleges; and, though all men and boys were now drilled in Latin, Greek, and mathematics, it had quite left these shells high and dry on the beach, and was now creating and feeding other matters at other ends of the world. But, in a hundred high schools and colleges, this warfare against common sense still goes on. Four or six or ten years the pupil is parsing Greek and Latin; and as soon as he leaves the university, as it is ludicrously styled, he shuts those books for the last time. Some thousands of young men are graduated at our colleges in this country every year, and the persons who at forty years still read Greek can all be counted on your hand. I never met with ten. Four or five persons I have seen who read Plato. But is not this absurd that the whole liberal talent of this country should be directed in its best years on studies which lead to nothing?"

COL. HIGGINSON TAKES ISSUE WITH MATTHEW ARNOLD.—It is here and here only that I should take issue, were I entitled to do so, with Mr. Arnold. The quantity of his final praise vindicated Emerson, if he needed vindication; but the quality of it did not vindicate Mr. Arnold. The very points he made, the very standard he set up, drew the lines of his own limitation as distinctly as Voltaire drew his own in criticising Shakspere. His standard of poetry excluded Browning as effectually as it excluded Emerson. His standard of prose composition, "the requisite wholeness of good tissue," would exclude Milton and Barrow. The preference that would set the smooth and rather commonplace sentiment of Longfellow's "Bridge" above the magnificent swell of Emerson's "Problem" simply records a verdict upon him who expresses that preference. Think of those superb stanzas:—

"Not from a vain or shallow thought
His awful Jove young Phidias wrought;
Never from lips of cunning fell
The thrilling Delphic oracle;
Out from the heart of nature rolled
The burdens of the Bible old;
The litanies of nations came,
Like the volcano's tongue of flame,
Up from the burning core below,—
The canticles of love and woe;
The hand that rounded Peter's dome
And groined the aisles of Christian Rome
Wrought in a sad sincerity;
Himself from God he could not free;
He builded better than he knew;—
The conscious stone to beauty grew."

The criticism that would put "the whole body of Emerson's poetry," these lines included, below Longfellow's little poem, would, if consistent, put Barry Cornwall or Mrs. Hemans above Milton. They have written poems as tender and melodious as "The Bridge," while nothing in "Il Penseroso" or "L'Allegro" is finer than the lines just quoted from Emerson. Recognizing this, I do not feel that Emerson's position as a poet—a position which rests, like every poet's, upon his best work—was in the least degree touched by Mr. Arnold's criticism; but, as a reader and admirer of Mr. Arnold's own works, I felt a pang of regret.—*T. W. Higginson, in the Woman's Journal.*

SAMPLES OF PRAYERS.—The Milwaukee *Sentinel*, referring to the alleged distribution of samples of his prayers by a candidate for the chaplaincy of the New York Senate, says: "It is certainly a very good thing in these civil service reform days to insist upon merit in the appointment of a Senate chaplain. Not that it is of much consequence whether the Senate is well prayed for, since it may be regarded as beyond the region of hope, but because the appointment of a praying man without any regard for the quality of his prayers is contrary to the principles of the Pendleton bill. The chaplain gets $5 a prayer, and that amount ought certainly to secure a first-class article. That the Methodist applicant believes his article is first-class and worth the money is evident from his putting it in print and using it as an electioneering argument. But there is still a better way than this, if the salary is to be a fixed one. Of course, if economy were in question, it would be well to invite proposals for prayers with samples appropriately labelled, —as, for instance; 'This style, quiet and gentlemanly, two for $1.' Or, 'This fervid appeal, $2.50 each,' etc. However, as the generous State has fixed the salary, a competitive examination ought to be held. We are not sure that it is not made imperative under the New York civil service law. Even if it were not important to have the most effective preacher for the Senate itself, the fact that all other non-elective positions are filled after competitive examination should enforce the rule in this case. A set of rules might easily be drawn up to test the powers of the applicants. For instance, in a prayer for rain, there should be a rule to determine how much of a sprinkle constitutes a rain. This question is still undecided, though it is now before the Supreme Court of Massachusetts. An unbelieving man told a believing woman that he would give her $50, if she would bring a rain by prayer within twenty-four hours. She did it; but he declared it was only a sprinkle and refused to pay, whereupon she brought suit to recover the amount. With a distinct understanding as to what is to be prayed for, the applicants may be subjected to a fair test of their respective talents."

BOOK NOTICES.

EXCURSIONS OF AN EVOLUTIONIST. By John Fiske. Boston: Houghton, Mifflin & Co. 1884. pp. 379. Price $2.00.

This volume contains thirteen essays which appeared originally in different magazines from 1876 to 1882, together with the address which the author delivered at the farewell dinner given to Herbert Spencer in New York last year. These essays are "Europe before the Arrival of Man," "The Arrival of Man in Europe," "Our Aryan Forefathers," "What we learn from Old Aryan Words," "Was there a Primeval Mother Tongue?" "Sociology and Hero-Worship," "Heroes of Industry," "The Causes of Persecution," "The Origins of Protestantism," "The True Lessons of Protestantism," "Evolution and Religion" (the address), "The Meaning of Infancy," "A Universe of Mind-Stuff," "In Memoriam: Charles Darwin." We are pleased to see these essays issued in book form; for they are all full of thought and worthy of preservation, while several of them are entitled to rank among the very best essays of American writers. For depth of thought, scholarship, literary taste, critical ability, and the power of clear and vigorous exposition *combined*, Mr. Fiske has no equal in this country and but few equals among European writers. He does not write on a subject until he has acquainted himself with it; and then he presents his thought, which often has the merit of originality, with a lucidness and attractiveness of style which make it easy to follow him in his treatment of even difficult topics. It is a pleasure to turn from our merely literary writers to the essays of Mr. Fiske, whose clear thought, discriminating judgment, and philosophic spirit, together with his fine taste and perspicuity of style, make his writings both instructive and entertaining. No wonder George Ripley wrote a few years ago, "Mr. Fiske is himself a thinker of rare acuteness and depth: his affluent store of knowledge is exhibited on every page, and his mastery of expression is equal to his subtlety of speculation." His *Outlines of Cosmic Philosophy, Myths and Myth-makers, The Unseen World, and Other Essays*, and *Darwinism, and Other Essays*, were noteworthy additions to the philosophy and literature of America; and this new volume indicates undiminished vigor and versatility of mind, and leads us to look for even more valuable work from the same pen in the future.

AN AUTOBIOGRAPHY BY ANTHONY TROLLOPE. New York: Harper & Brothers.

Those who desire a more substantial edition of this book than the "Franklin Square," in which it was originally published, will find it here, and greatly to their mind. And, indeed, the book is good enough to keep, deserving of its tasteful covers and its handsome page. It is a singularly interesting book. It is written with exceeding frankness. It is full of encouragement. The youth of Trollope, without being so sordid as the youth of Dickens in its environment, was, if possible, more miserable. His school-days were a long unhappiness. And yet our sympathy with him is not so keen as our disgust with his mean-spirited, arrogant schoolmates, forever bent on making him feel his inferiority to them, because he had not their pecuniary resources. The victories of Trollope's later life never made it pleasant for him to remember those things. He could never think of them without bitter pain. His account of his literary

Digitized by Google

life, of his methods of work, his opinions of his own novels and of other men's,—all these things are interesting to a remarkable degree. So, too, are his details concerning his labors in the postal service. Our civil service reformers will have to count him out. The story of his mother's happy discovery of her literary gifts and her marvellous industry is the most romantic feature of the book. In this volume of self-revelation, Trollope makes a very creditable appearance on the whole. He is not fine, and he is even sordid. But he is industrious and manly; he is sincere and generous and kind. For those who have enjoyed his novels, his autobiography will have a peculiar interest; and it will secure for them some fresh readers.

AUTOBIOGRAPHY AND LETTERS OF ORVILLE DEWEY, D.D. Edited by his daughter, Mary E. Dewey. Boston: Roberts Brothers. 1883. Price $1.75.

"It is about twenty-five years since," writes the daughter of Dr. Dewey, "at my earnest desire, my father began to write some of the memories of his own life, of the friends whom he loved, and of the noteworthy people he had known." Those "memories" embraced something of the history of the rise and progression of liberal ideas in the religious world in the eighty-eight years of life granted him, and with which to a certain extent he had much sympathy. The "friends he loved" included Ralph Waldo Emerson, Henry W. Bellows, W. H. Channing, William and Henry Ware, Catherine Sedgwick, William Cullen Bryant, John W. Chadwick, and others. To these, many of his most interesting letters are addressed. Among "the noteworthy people he had known" were Daniel Webster, Josiah Quincy, Harriet Martineau, Prof. Audubon, Washington Irving, Prof. Moses Stuart, John C. Calhoun, Tom Corwin, and Thackeray. Independent of the pleasant, restful, yet breezy style in which his autobiography and letters are written, his personal reminiscences and fresh anecdotes of these notable men and women give this book of three hundred and sixty-six pages an interest to all classes of readers.

HEALTH IN THE HOUSEHOLD; or, Hygienic Cookery. By Susanna W. Dodds, M.D. New York: Fowler & Wells, 753 Broadway. 1884. pp 601, extra cloth. Price $2.90. Sold by Lee & Shepard, Boston, Mass.

This book, whose motto from Dr. Felix Oswald, is "No spice but hunger, no stimulant but exercise," apart from its peculiar hygienic theories, contains a considerable amount of information, and excellent ideas suited to the requirements of readers of all kinds. Although it is, of course, specially adapted to the needs of housewives who are in sympathy with the author's vegetarian views, it will be found of great benefit to all others in the varied bill of fare it gives of simply cooked, health-giving food, suitable for all varieties of invalids. The author, in spite of her personal proclivities, has sensibly considered the needs of those who, while desiring to avoid highly seasoned dishes and live on simple and natural food, are not willing to subscribe to a strict vegetarian diet, and for such has prepared a department under the title of "Compromise," giving recipes for the healthful preparation of animal food. The book is divided into three parts, designated respectively "The Reason Why," "Hygienic Dietary," and the "Compromise," which titles explain themselves.

IN the *Art Amateur* for December, we find an interesting notice of a late gift to the Metropolitan Museum of "a curious collection of American iconography." It consists of fifteen hundred engravings, prints, etc., and over three hundred busts, statuettes, and miniatures. While this collection probably possesses little artistic merit, it must have great value for the antiquarian. The dramatic and musical feuilletons occupy a good deal of space in this number. The most attractive long article, however, is the sketch of the life of our own fellow-citizen, Mr. Charles Sprague Pearce, the grandson of the poet, Charles Sprague, whose pictures have often been exhibited at the Art Club and Art Museum. The engravings illustrating the article give a very pleasant idea of his work, giving an impression of more simplicity and feeling than the pictures we have seen, which are rather violent and repulsive in color. Exhibitions in Philadelphia and Paris are carefully analyzed, as well as an exhibition of sketches and studies at the American Art Gallery. Thoughtful and impartial criticism of all works shown to the public is what is most needed for the advancement of art. The critic may not be finally sustained in his judgment of a picture, but at least he calls attention to it and helps people to think about it: and a thoughtful reception is what the artist needs, not blind admiration. The coloring of theatres and public buildings is an interesting subject, suggested by the new Opera House in New York. Those interested in the Feuardent-Cesnola trial will find a report of the most important testimony brought forward in the libel suit now in progress.

THE November number of the *Revue de Belgique* contains articles on the "Audacity of Modern Surgery" and on the Panama Railroad and Suez Canal, which are placed among the "Seven Wonders of the Modern World," the other five being the tunnels under Mont Cénis and Mont St. Gothard, the Pacific Railroad, that across the Andes, and the Panama Canal. The magazine is mainly devoted, however, to Belgian politics; and one of the editors, Laveleye, protests against the project of making all the men voters, as likely not only to divide the liberal party ruinously, but to give irresistible power to the Roman Catholic clergy, whose influence over the mass of the population is manifest in such facts as that almost every one goes to church in Belgium, whereas there are few worshippers but females in France, Portugal, and most parts of Italy. The success of the clerical schools in obtaining more pupils in Belgium than those carried on by the State is also cited as a proof that the priests need only universal suffrage in order to be able to crush out Liberalism.

HOUGHTON, MIFFLIN & Co., of Boston, have just published a new edition of the Portrait Catalogue of their publications. It embraces a list of the thousands of books they publish, under the names of the authors arranged alphabetically, and in many instances describes the books or gives their contents. It contains portraits of several of their distinguished authors,—Aldrich, Hans Christian Andersen, Björnson, John Burroughs, Cooper, Dickens, Emerson, Fields, Bret Harte, Hawthorne, Holmes, Howells, James, Longfellow, Lowell, Owen Meredith, Scott, Scudder, Stedman, Mrs. Stowe, Bayard Taylor, Tennyson, Charles Dudley Warner, Mrs. Whitney, and Whittier.

FROM the Unitarian Sunday School Association, 37 Norfolk Street, Strand, London, comes a bound copy of the eighth volume of their children's magazine, *Young Days*. It is full of interesting reading matter and charming pictures for "children up and growing." We are glad to find among its biographical articles notes of the lives of such thinkers as Channing, Thoreau, Fichte, Caroline Herschel, Whittier, Walter Scott, and Dickens. London Hospitals are carefully and interestingly described, and will be likely to interest young people in their philanthropic work, and imbue them with the "enthusiasm of humanity."

WE have received from John B. Alden, 18 Vesey Street, New York, two numbers of his cheap "Irving Library," including "The Legend of Sleepy Hollow," "Thoughts on Books," and Dr. John Brown's "Rab and his Friends," together with the December number of *Choice Literature*, which contains sixteen choice and solid articles on current topics excerpted from the leading magazines and reviews of the day. Price $1.00 per year.

PERSONAL ITEMS.

CAPT. ROBERT C. ADAMS will lecture before the Montreal Free-thought Club, Sunday, December 23, on "The Resurrection of Christ."

HENRY MARTIN, the French historian, Julius Payer, the Austrian arctic explorer, and Richard de Laprade, the poet, are among the honored dead of last week.

PERE HYACINTHE solicits money to build a chapel in Paris. His church, after five years, has a membership of two hundred only. It satisfies neither Catholic nor Protestant.

A DAUGHTER of John Bright and a daughter of Richard Cobden were each a delegate to the great liberal conference in Leeds, in October, at which over five hundred organizations were represented by twenty-five hundred delegates. The two mentioned spoke in favor of woman suffrage.

RICHARD WATSON GILDER, editor of the *Century*, is described as a slender young man with black eyes, straight features, and a thoughtful face. He talks quietly in a softly modulated voice, but the reporter further adds that "the *Century* owes its position at this time to his untiring industry and literary discrimination."

THE checkered career of the pretty young treasury clerk, whose marriage to Senator Christiancy created such a sensation in Washington society circles a few years ago, and which resulted so unhappily to both parties, came to a sad ending a few days ago. She died in Brooklyn on the 10th inst., while visiting some friends in that city, from the effects of an overdose of chloral, taken to quiet her overtaxed nerves.

OUR poet minister to England seems to inspire poetic thought in the usually prosaic London editors by his geniality and fine manners. The London *World* says of him that "he reminds you of nothing so much as a beautiful Indian summer of his native land." And then the writer tells that the poet-diplomat "took from its rack a well-colored little meerschaum, and proceeded to smoke." An apt comparison,—our Indian summers are always calm, mild, and smoky.

IN a letter to *Unity*, Mrs. Caroline Healey Dall writes: "I am reading now the Life of Daniel Webster, by Henry Cabot Lodge. I am glad to owe one other debt to the young man who has done so much to redeem the honor of Massachusetts. But I, who sat on Daniel Webster's knee as a child, who had my heart broken by his failures,—not so much, at first, in politics as in virtue,—am sorry that Mr. Lodge did not see that the key to his virtues and his vices, to his triumphs and his failures, the key to the magnificent presence which made every passer-by turn to look at him in the street, was to be found in the mixed blood which he inherited. The problem will never be completely solved till some one has the courage to show this." Has not Mrs. Dall "the courage to show this"?

AT the recent pleasant and well-deserved reception given by his numerous friends to Mr. Theodore D. Weld in this city, the following appropriate sonnet was read by Rev. A. Judson Rich:—

"Hail, noble soul! with eighty annuals crowned,
Youth sweetly lingers as the years go round.
Thy checkered life and golden westward way
Has been one rich, abundant harvest day.
For justice, truth, and right thou e'er hast stood,
And sought for humankind one brotherhood.
A lion's courage with a woman's heart,
By love to conquer is thy matchless art.
Thy gracious presence and thy beaming face
Have been the power to mould to finer grace.
Thy charity, embracing as the sky,
Covereth sins as heaven's benignant eye.
May all our lives transfigured be as thine,
And with the glow of good deeds ever shine!"

AT a recent private dinner party, Wendell Phillips, recalling the days when Fanny Kemble was the leading actress and he a law student, said: "Such audiences as she had, too! If you'd put a cap-sheaf down over the theatre, you would have covered about all Boston had to boast of in the way of culture and learning,—Webster and Everett and Story. Judge Story used to be so enthusiastic that he'd talk about her all the time of the lecture. Next morning, he'd say, 'Phillips,'—or somebody else, as the case might be,—'were you at the theatre last night? Well, what did you think of the performance?' I said to him once: 'Judge Story, you come of Puritan ancestors. How do you reconcile all this theatre-going with their teaching?' 'I don't try to reconcile it,' he answered, striking his hands together: 'I only thank God I'm alive in the same era with such a woman!'"

"WE went to Denver to attend the Old Soldiers' Reunion," the Troy *Times* makes Gen. Sherman say, speaking of his Western trip with Justice Gray, of the United States Supreme Court, and others, last summer. "The boys came down to the station with a big crowd of people. John Sullivan, the prize-fighter, was expected the same day; and half the crowd came to see him, and half to see us. Well, you know, Gray is a big fellow, and of course no one knew him out there. When he got off the cars, the 'sports' thought it was the other man, and set up a shout, 'Hurrah for Sullivan, the slugger!' I got in one carriage and Gray in another, and they followed Gray more than they did me; and a justice of the Supreme Court rode through Denver with all the sporting characters in the city at his heels. An hour afterward, Sullivan came into town without any demonstration at all."

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JESUS:

His Opinions Character.

The New Testament S. Layman.

"Much time and pro[illegible]study have been needed for the thou[illegible]tful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1 50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,
by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Ad[illegible]

CURRENT TOPICS.

A CORRESPONDENT of the Chicago *Tribune*, calling on Mgr. Capel for interviewing purposes, thought it somewhat incongruous to find him writing a new lecture on "The Poverty of Jesus" in a superb ten-dollar-a-day room, at the Brunswick, in New York.

WE hope Matthew Arnold's recent reception at Yale will have an inspiring effect upon the students there, since only six essays were sent in to compete for the "literary" prize this year; and they were all of such inferior merit that the medal was withheld from all.

A NEW religious society, called the Oahspe Society of Faithists, held a convention recently in New York City, at which delegates from eleven States were present. Their Bible, known as the Oahspe, is composed of extracts from the Bible, the Koran, and the writings of Confucius, Buddha, and other religious leaders. The sect is Unitarian in its theistic belief. Over one hundred and fifty delegates were present.

THE *Christian Register*, which has a keen appreciation of the characteristic of his Lectureship, says: "Mr. Joseph Cook is still vending his crude criticisms upon Channing and Emerson throughout the country. At Syracuse, lately, he spoke of Emerson as a ruined cathedral in a marsh! The only part of a cathedral which Mr. Cook succeeds in resembling is the brazen effrontery of the bell, and the tone suggests that it is somewhat cracked."

THE Executive Committee of the Loan Exhibition for the benefit of the Bartholdi statue voted last week to keep the exhibition open on Sundays at a reduced price of admission for the benefit of working men and women who are unable to attend during the week. This sensible action of the committee will be appreciated by the working people of New York city and vicinity, even though it should furnish orthodox ministers an occasion for preaching against the desecration of the Sabbath.

THE Institute of Heredity held three meetings in this city last Tuesday. Among the speakers were Dr. E. V. Wright, Mrs. Clara Bisbee, Dr. Wright, Mrs. Lydia Warner, J. S. Cobb, Mrs. Dr. Smith, Dr. George Dutton, and Prof. Rhodes Buchanan. The subject was treated generally with good taste, and some of the addresses were of marked ability. There was some irrelevant talk; but, on the whole, the character and tone of the speeches did credit to the Institute. A number of letters from prominent gentlemen were read, a few of which we are able by the courtesy of the officers of the Association to print in this number of *The Index*.

A WRITER in the *Catholic Review*, to whose communication special attention is called in its editorial columns, suggests that an effort be made to have Good Friday added to the list of legal holidays. He thinks Catholics and Protestants should unite in petitions for this natural commemoration of the Saviour's death. He asks what "prevents the members of each church urging upon their pastors to sign in their behalf a petition, and send it to the member of Congress representing the district in which his church is located, urging him to do all in his power to have Good Friday added to the list of legal holidays? Can it be supposed for a moment such applications would meet with a refusal? Even an infidel member dare not refuse; if Justice, and the almost universal desire of the people are not sufficient to influence him, what hope for re-election could that member have, if he set at naught such petitions?"

A WRITER for the San Francisco *Chronicle* describes Honolulu, the last stronghold of evangelical missionaries, as it appears on Sunday. His letter suggests what the orthodox clergy would bring about in this country, if the progress of liberal thought had not limited their authority and influence. This writer says that, having landed in Honolulu on Sunday, he found all the houses closed and the streets deserted. Although the thermometer marked 101°, he could not buy a glass of soda. "A photographer," he says, "who had travelled with us, had proposed to show a few of his new acquaintances some pictures of the island in his studio, but now he expressed his regret that it could not be done. 'But why not?' 'Oh, you could not see them without light.' 'But there is plenty of light.' 'Ah, you do not know Honolulu,' said the photographer. 'If a window of my place were to be seen open on Sunday, we should all get into trouble; and mine would not end soon.'"

AT a recent meeting of the Council of the University College of South Wales and Monmouthshire, the Archdeacon of Llandaff called attention to a published statement that Prof. Lloyd Tanner was a member of the Natural Secular Society. Lord Aberdare read a clause of the Constitution which declares that no tests shall be applied; but the Dean off Llandaff moved that Prof. Tanner's engagement terminate in three months. The motion, we are glad to note, did not prevail. Mr. Henry Richard, M.P., in a letter stating his inability to be present, wrote: "If the question relates to a matter of speculative belief, it seems to be that Article 4 of our Constitution is so explicit and emphatic as not to admit of a doubt as to the course we should take. According to my view, we are bound to adhere to the principle there laid down. If we depart from it in one instance, where shall we stop? for objection may be next raised to a Roman Catholic, a Jew, or a Unitarian, and we may be landed in endless sectarian conflicts. If it be said that this is an extreme case, it is extreme cases that test principles." In the course of the discussion that preceded the vote, it was pointed out that the appointment of Prof. Tanner had not been made solely upon his high mathematical and scientific attainments, but also upon the testimony of a bishop, two distinguished clergymen, and an eminent nonconformist minister, who all spoke of the unblemished purity of his life and character.

THE case of John M. Barker, of Worcester, Mass., which was an action for tort, brought on account of injuries received by the plaintiff by reason of a fall on an icy sidewalk last winter, came up in the Superior Civil Court last Thursday. The judge ruled by request of the city solicitor that Mr. Baker had no case, since, when he received his injuries, he was violating the public statutes by travelling on "the Lord's day." The jury at once rendered a verdict for the defendant. The case was appealed to the Supreme Court. This journal has had occasion before to note miscarriages of justice similar to the above, under the old law of this State, forbidding travel on Sunday except on works of necessity or for purposes of charity. The law is universally disregarded, and rarely ever thought of except when some corporation wishes to defraud a person, who through its criminal carelessness has sustained injuries and is in justice entitled to damages. Every attempt to abolish this law has failed. Every such attempt is opposed by the orthodox clergy and orthodox people generally. A wrong done to a Christian missionary in a heathen country excites their sympathy at once; but a citizen of Massachusetts may be injured and fairly entitled to such reparation as is possible from those through whose carelessness the injury was done, and yet his failure to obtain it in consequence of an old statute which originated and has been sustained in the interests of the clergy and the theology they preach receives not one word of condemnation from the orthodox pulpit which is supposed to denounce all kinds of wrong-doing. Indeed, many of the clergy and their followers would have this statute rigidly enforced, and deprive the people of all pleasure on Sunday,—deprive them even of access to public libraries, deprive them of Sunday papers, and of about everything else except the liberty of going to church; and some of them would make this compulsory. And yet there is no Scriptural authority whatever for the observance of what they call "the Lord's day."

CHRISTMAS LEGEND AND CHRISTMAS FACT.

The legend and poetry of religion are often as instructive and inspiring as its sober facts and actual history. Some of the most fundamental religious truths owe their preservation and their influence upon the popular mind to the dramatic form in which they have been clothed. There is a large share of this dramatic element mingled with the early history of Christianity. But only when it is claimed to be a literal chronicle of what happened need it offend our sense of historical veracity. Regarded as the primitive work of the poetic faculty in the human mind, it may no more disturb our sense of truth than does the theology of *Paradise Lost*. Yet the religious imagination did not work upon mere *nothings* in Judea more than in Greece or India.

No rational thinker to-day, certainly, can accept the legendary narrative in the New Testament concerning the birth of Jesus as literal truth. But with quite as much certainty may it be affirmed that no rational student of human history will throw such legends away as worthless trash. How legends start and grow, and what is the meaning of myths, are now among the questions that have a deep interest to historical investigators. That the story of the supernatural advent of Jesus, with all its accessories, as related in the New Testament, was deliberately concocted and consciously imposed as a falsehood upon the world, is an opinion that will be advanced by only the most superficial critics. Rather in this story may be seen the pious imagination of the early Christian believers endeavoring honestly to construct for their already idealized Messiah a fitting dramatic entrance into the world.

In other words, the primitive disciples of Jesus found the sober garb of prose entirely inadequate to express the emotions of the new life and hopes which had been begotten in their hearts, and the ordinary methods of nature inadequate to account for this new experience. Their very life was poetry, drama,—a sudden transition from the prosaic occupations of fishermen and tax-gatherers into discipleship to a fascinating religious teacher and prophet, whom day after day and month after month they followed about in town and country, over lake and hill, to catch his minutest words of instruction, and to be ready for the Messianic kingdom of happiness and glory which they believed he was speedily to inaugurate. Even after his tragic death, their new faith and hope triumphed over such hard, natural facts as the cross and the tomb; and they still looked for him from the skies to establish his kingdom. As their life was itself dramatic, so did they naturally choose dramatic and poetic forms of speech in which to clothe its experiences; and just as their childlike, spiritual hope, after the crucifixion of Jesus, painted a vision of his second coming in the clouds of heaven, attended by the angelic host, to close the old dispensation and usher in the millennial era, so did the religious imagination of their primitive faith throw itself backward and around the infancy and birth of Jesus, which were mainly free from historical data, picture scenes which they deemed befitting the earthly advent of a being so beneficent and morally majestic.

In all probability there were shepherds on the fields of Bethlehem tending their flocks when Jesus was born. That would have been a natural fact. Most probably, too, these shepherds shared the common belief of their time and race that the Messiah was soon to come. That, also, would have been a natural fact. But can any rational mind now believe that an angel announced to these shepherds that the Messiah was that day born in a manger at Bethlehem, and that then the heavens opened, disclosing a multitude of celestial beings who literally sang in chorus, audible to the outward ear of the shepherds, "Glory to God in the highest, on earth peace, good will toward men"? Thus treated, all the poetry would be crushed out of this exquisite legend, and its fine moral meaning would be lost. Translated into a bald statement of outward facts,—the usual method of Christian theologians,—historical criticism and science will forever protest against the story, and the plain sense of common people will suspect and disbelieve it. But let it be read as dramatic legend, as the unconscious poetry of a primitive and childlike religious imagination, and we may see how the "opened heavens" were not the literal parting of the skies to the shepherds at Bethlehem, but the lifted and transfigured spiritual vision of the disciples of Jesus a full generation and more after his birth. The "opened heavens" were their own illuminated minds and hearts. The angelic presence was the courage and faith and hope and trust which had somehow come to them from the teachings and life of Jesus. The anthem, whose sublime notes still sound through the generations and all round the world, was the echo, from their own hearts, of the beatitudes and parables which they had heard from his lips. It was the triumphant song of rejoicing which sung itself out of the new life and hope and power that had come into all their natural faculties. In fine, it was the natural utterance of their new religious faith. But, since these primitive Christian believers were not philosophers, tracing conditions of mind to their natural causes, nor rigid historians, narrating events only for the sake of historical truth, but zealous religious teachers, eager to impress upon others in the most forcible way their own happy religious experience, the legendary and poetical faculty of the age readily seized upon the central truth of their experience, carried it back to the birth of Jesus as the most fitting time for its origin, and represented it, with all the accompaniments of the New Testament story, as proclaimed by angelic chorus from the skies.

By this poetic mode of interpretation of what is in itself essentially poetic, we may preserve the inner truth, while rejecting the form of many of the old legends and myths and beliefs in Hebrew and Christian as well as in other religions. Poetry and music have a significance apart from the literal meaning of the words that may be associated with them. It is thus that poems like Homer's and Dante's and Milton's keep their place in the world; thus that the great oratorios, like the "Creation" and "Messiah," do not lose their impressive sublimity, though the theological dogmas in which they are verbally clothed be utterly rejected. The dogmas are only temporary material for the clothing of thoughts which never become obsolete. In the work of these masters there is something that continues to speak to the struggling, creative, and Messianic spirit, perpetual in its nature, that exists in man himself.

And so, at the annual return of the Christmas season, though no one can now tell just when Jesus was born,—the festival in the earliest age of the Church was a movable one,—and though we may not believe, with those who first instituted the celebration, that it commemorates the advent of a miraculous personage upon the earth, yet the festival, notwithstanding the excesses into which it periodically runs, appeals to something in the human heart that never loses its vital power. And this is because it has never been made an historic so much as a poetic and dramatic commemoration of Jesus; not so much an attempt to revive his memory by certain ordinances and speeches on a set day as to put for one day something of the kindness and good will that are associated with his name into the actual conduct and relations of people with each other. There is evidently an increasing disposition among all sects and classes of people in some way to observe the festival. This cannot be from an increasing sense of its being an actual historical commemoration, which has come down by pure ecclesiastical tradition from the primitive days of Christianity; for historical investigation leads the other way. Even the most rigid class of free thinkers, since it has been discovered that there was an older and pagan sun-festival which Christianity adopted and combined with its Christmas celebration, readily find a reason for not standing aloof from their Christian neighbors in the observance of some of the most prominent features of the day.

The real reason for the increasing observance of Christmas is that people of all sects, strict and liberal, and of all classes, religious and unreligious, are coming to feel the poetic significance of the festival without regard to its literal and historical basis. It is enough that it is a season of mutual good wishes and good deeds, of friendly remembrance, of family enjoyment, and the strengthening of family ties, of the children's glee, of neighborly greeting and fraternity; enough that material and sordid enterprises for a brief interval remit their pressure, that the wrangling of parties, the strifes of politics, the selfish greeds and ambitions of people, have at least a momentary chance to be laid aside and forgotten; enough that the season brings "the holidays," during which people's hearts are open to gentle thoughts, tender affections, and gracious charities, while they take each other more warmly by the hand and try a little harder for a little time each to make some other more happy by his presence. And all this is a living commemoration of a religion whose nativity began with a song of "good will to men," and of every religion which has the spirit of that song at its heart.

It may, indeed, even be claimed with a good deal of truth that this general celebration of the Christmas season is doing more in this age for the preservation of the Christian Church than are all its creeds. But, with the preservation, the same cause is working a transformation. Metaphysical dogmas and artificial observances with reference to Deity are giving way to natural helpful action between man and man. Even the mythical St. Nicholas is for children a more impressive representative of religion than the historical and dogmatical St. Paul; and the loaded stocking on Christmas morning, which has been mysteriously filled during the night with the treasures that appeal to a child's heart, contains more practical religious lessons than the catechism. As the little hands draw the bounty from those wondrous depths, a lesson is learned of an exhaustless sheltering love and generosity and of a religion of actual good will, which not even the teaching of the catechisms nor the false creeds and more wretchedly false practices can ever quite obliterate. The child is really "experiencing" the religion of good will, though his consciousness is yet utterly innocent of all theologies and even of the word "religion." And the glee that sings in his heart and utters itself all day long in his prattle and laughter is his rendering of the old anthem, "Peace on earth, good will toward men."

COSMICAL SPACE.

Forces which are active throughout infinite space and infinite time, without manifesting the least diminution of that activity at any point of space or time, are cases of omnipotence and almightiness. Such are the forces which pervade cosmos. We soon grow weary, and feel the shadows of age and decay falling on our hearts, even before we have reached the end of the threescore and ten years which are allotted only to the most vigorous moiety of the human race. At last, we can scarcely uplift the weight of the superincumbent hour. Our vitality finally succumbs to gravitation, and we lie prostrate, our suffering clay being paralyzed by the chill of death. Meantime, the forces of nature are as fresh and unwearied as ever. Nature may well exclaim, in the language of her greatest American interpreter:—

> "No ray is dimmed, no atom worn,
> My oldest force is good as new,
> And the fresh rose on yonder thorn
> Gives back the bending heavens in dew."

Of course, omnipotent and unceasingly active forces, which know not rest or weariness, require for the field of their operation nothing short of boundless space or limitless room, wherein a projectile, moving under the impetus of a single and unabated force, could rush on forever in a straight line without reaching any final goal or ultimate Thule, beyond which is mere nonentity. When we have reached the utmost scope of natural or telescopic vision, it is only a new point of departure in space for an equally remote *beyond;* and so on and on, until even "those thoughts" which, in Miltonic phrase, "wander through eternity," begin at last to flag, and to confess their inability to cope with the ineffable mystery of cosmic space.

Long years ago, or as long ago as the period of the Commonwealth in England, the ocean-world—which constitutes, superficially, two-thirds of our planet—was over the greater part of its extent but little frequented, so that a fleet of the merchantmen of the period seemed lonesome in the vast oceanic solitudes, through which it sailed for weeks or months without encountering any human object. Milton describes such a fleet:—

> "By equinoctial winds
> Close sailing from Bengala, or the isles
> Of Ternate and Tidore, whence merchants bring
> Their spicy drugs, they on the trading flood
> Through the wide Ethiopian to the Cape
> Ply, stemming nightly toward the pole."

Our sun, with its retinue of subordinate planets, may be regarded as such a lonely fleet in boundless space. From the suburbs or confines of our solar system, it is a million million miles to the nearest fixed star, to our nearest stellar neighbor. But such a distance forbids the use of the word "neighborhood" as descriptive of it. Such is our isolation in cosmic space with reference to the outside stellar universe. A distinguished astronomer says: "The solar system is a very small object when viewed in comparison with the dimensions of the sidereal system. The planets form a group nestled up closely around the sun. This little group is separated from its nearest visible neighbors in space by the most appalling distances." A vessel in the middle of the Atlantic Ocean is not more completely isolated from the shores of Europe and America than is our solar system from the stars and other bodies which surround it in space. Space is mere capacity to hold things, objects, bulks. It is, in the language of transcendental metaphysics, a necessary and universal idea or notion. It is the condition of extension and thought both, out of which they cannot escape any more than an eagle can escape from the upbuoying atmosphere, which is the condition of his flight. Time and space are, in a word, the elements in which events and thoughts and extended substances float, so to speak.

There is always house-room in cosmos for any object, however bulky, an infinite roominess, affording the amplest accommodations for those vast masses of fire and splendor called suns, with their planetary satellites, to move in without collision or crowding, although the night-heaven occasionally, with its innumerable light-points, looks as though it was densely thronged. But it is not. There is a vast interspace even between the planets of our solar system that isolates them from each other.

As there is space enough, so there is time enough for all kinds of evolutions, consummations, and ripenings and decadences. The old Zoroastrians named their supreme being Zarvan Akarana, or Boundless Time. The immeasurable expansion of space and time, in our conception of them by current astronomy and geology, constitutes a revelation more startling than any ever before made,—a revelation which brings us face to face, as it were, with infinity and eternity. By comparison, how our little historic past is shrivelled up into a mere lapse of a few moments, more or less! Against the background of astronomic and geologic times, Moses and Job and Homer and Sesostris and Semiramis were our contemporaries. B. W. B.

MR. FISKE'S MORAL THEORIES.

I have been reading Fiske's *Cosmic Philosophy* lately, with renewed interest and much instruction. I seem to find here and there that Mr. Fiske, like all true philosophers, is better—or broader—than some of his own theories would seem to show, when it comes to practice. To illustrate, I will copy out a passage or two, which occur near the end of the book.

1. *Of Moral Freedom.* "The closed circuit of motion remains just what it was before. No conceivable advance in physical discovery can get us out of this closed circuit; and into this circuit psychical phenomena do not enter." Vol. ii., p. 442. The "psychical phenomena," as is shown before, include thought, emotion, and volition; and, as is here shown, none of these come within the "closed circuit" of physical necessity, or are provided for by the "persistency of force."

2. *Of the Divine Personality.* "In so far as the exigencies of finite thinking require us to symbolize the Infinite Power manifested in the world of phenomena, we are clearly bound to symbolize it as quasi-spiritual rather than as quasi-material. . . . We can never get entirely rid of all terms of anthropomorphism. . . . We need not shrink from the scarcely greater anthropomorphism involved in speaking of the unknown Cause as a Spirit manifested in phenomena." *Id.*, 449. A "Spirit," I suppose, if it means anything, means a *thinking intelligence;* and, if so, Mr. Fiske has here gone farther in the direction of what we may call *re*-anthropomorphization than some "Christian" theologians would consent to follow him.

3. *Of the Conviction of Sin.* "Religion further declares that sin has been done, and there ensues a painful state of consciousness which is not due to selfish dread of suffering (since similar suffering in a righteous cause would be met with a feeling of self-approval), but is made up chiefly of self-condemnation for inexcusable infraction of nature's ordinance." *Id.*, 456. If "inexcusable," this infraction is certainly not *necessitated.* And here Mr. Fiske is in perfect accord with the advocates of "free-will" in human actions, whom before he has labored to confute. J. H. ALLEN.

THE D.D. SYSTEM OF EDUCATION.

HAMLET.—Is not parchment made of sheep-skins?
HORATIO.—Ay, my lord, and of calf-skins too.
HAMLET.—They are sheep and calves which seek out assurance in that.

In our recent discussion about the need of a non-ecclesiastical school for preachers, I believe we have torn up with the coulter a piece of the old Upas tap-root that conveys the liquor of death into our national life. "When sinners were too obdurate, too sluggish in responding to our exhortations," said Father Taylor, "we used to open the door a little, and let them smell hell." There is an ecclesiastico-educational hell in America; but the horns of the gentlemen in charge are carefully sawed off, and their hoofs concealed in calf-skin. Their victims are young men and women, despondent tutors, and cowed and repressed professors. Not long ago, the hatches were lifted a little (see the *Nation*), and a few anonymous groans were heard from young German-trained instructors, who then sank back again into the old despair.

Ah, canting, arch-canting Americans! Leave your commerce but for a moment, and see your shame! Your secondary and higher education captured (all of it, from sole-leather to hat-band) by hard truculent ecclesiasticism.* Look at the German gymnasia and universities, and then look at yours,—German educational institutions the nurse of independent thinkers, searchers, heroes; yours, largely of brain-sickly pietists and time servers. Our priests have unkinged our young men: they lesson their pupils well in mythology and in dead tongues, but their progress in logic and philosophy is mostly that of the crab, backwards. Would you put your finger upon the very quick of the intellectual pusillanimity and frivolity of the age, touch here, and here, and here,—these colleges, Yale, Princeton, Brown, Amherst, Oberlin; *strike there!* There are your mildewed castles of twilight, your vested interests, your mortmain obscurantisms, your haughty D.D.s with golden rings in their noses, holding falsities aloft in the right hand, falsities in the left hand, and breathing out falsities with every breath, purring with the self-complacency of fat sinecurists, swelled out with the elephantiasis of pride,—cunning, cunning in the profundity of their self-sophistication. Are these the noble leaders of our youth, our gladiators of God, our broad-minded truth-seekers? Are the grandest men in this nation the teachers of its youth?—that is the question. If they are not, then woe to us!

But, then, you run over in your mind certain educators whom you know, and you find them to be sweet-souled men, "antique evangelists and gentlemen of Christ," blameless in life and thought. True, it is gladly admitted. These and all other educators do much good. Better to have education at a Jesuits' college than not at all. But why not have the best? Harmlessness is but a weak negative qualification for a leader of young men in a great moral crisis. We thought we had carefully excluded religious intolerance from our national compact; and yet a whirl of the ascending spiral of thought, and we are mortified to find a cluster of bigoted sects firmly intrenched in almost every educational and social stronghold in the land.

*From Steiger's valuable *Year Book of Education* for 1879, I quarry by actual count the following statistics: Out of 520 collegiate, scientific, and theological schools in the United States, 285 are presided over by Doctors of Divinity. And, as all but 90 of the total number of institutions are registered as sectarian, it is easy to see that those not governed by D.D.s must be governed by those equally narrow in religion. Indeed, even the 90 registered as non-sectarian are really most of them under religious police surveillance. Do you apprehend the deadly implication of these facts as bearing upon the national glory? *Five hundred* hot-beds of educational error opposed to half a dozen mildly neutral institutions devoted to truth!

Digitized by Google

Well, however they got there, certain it is that there they are, and are not to be unseated for centuries. How to pass them by, lessen their influence, and lead on the youth of the nation to loftier heights and to a grand unity of intellectual life? The man who has struck the deepest and truest note in response to this query is Prof. Felix Adler, of New York. He begins his teachings with little children, some of them, I believe, the wastrels of society. His kindergarten is the most historically interesting institution since Swiss Pestalozzi and German Froebel. It is to be hoped that Mr. Salter may establish another such in Chicago. Perhaps another Mrs. Quincy Shaw will appear and establish a large number of such schools in each great city,—Milwaukee, St. Louis, San Francisco, St. Paul, etc. But, even in academies and colleges, it is not too late to provide some antidote to the current religious nursery-lore. As it is now, the D.D.s have it all their own way. Give them the school, the college, and the church, give them the ears of the young and their confiding trust, and they ask no more for the moulding of the national character: they laugh then at your Jeffersonian Constitution and its broad-based religious tolerance. Is it not pitiful to see them turning out the poor lambs into the cold and darkness of doubt, so poorly weaponed? Is it not execrable that they should be instrumental in causing such a jangle of conflicting hopes and fears and beliefs in the minds of the young? We poorly realize how many thousands of young men and women there are at this moment suffering acute torture on account of the lies told them by those sweet and gracious D.D.s at college, and by the small pedants employed by those D.D.s.

Dear old Yale,—my own Alma Mater,—there she sits in her Egyptian darkness of farmer-Puritanism, and the two or three struggling rays of literary light thrown out by her little literary candle during two centuries only serve to make the gloom more conspicuous. The creative spirit of literature is incompatible with religious intolerance. Yale's greatness has all been won in the law, in philology, and in natural science. Her instructors are all pretty thoroughly gagged and throttled by the Connecticut farmers.

Oberlin is the typical Papa-college,—great morally, but nothing intellectually, because shackled hand and foot by religious bigotry. The college has made the village; and so the village, too, is tyrannized over as by an over-neat Dutch housewife. Absolutely, no religious freedom is tolerated. If a student or professor at Oberlin tremblingly ventures to read Darwin or Spencer and adopt any of their views, he would never dare to confide the fact to his best friend. To be an instructor at Oberlin, you have *got to* pray and snuffle, or out you go. The tutor who can get up a revival is sure of a salary for life. I speak of these things by personal observation. I know a young man now living in Oberlin who was completely ostracised by the college officials and spotted as a dangerous character, because he took *The Index* and tried to circulate it. The gentleman is educated and refined and blameless in life, but is not connected with the college.

As for Amherst, I have been told, by students who attended it, of some of the most disgraceful and petty acts of religious tyranny that I ever heard of anywhere. Founded as a counter-irritant to Harvard's pernicious poison, it of course attracts religious students. But the college is so antiquated that a liberal student is marked, prayed for, vituperated, and generally oppressed. The head of the college considered it a great condescension, and a very dangerous thing withal, to allow such awful heretics as Father Alcott (!) and Ralph Waldo Emerson to lecture at Amherst. And they never lectured there at all by invitation of any college official, but by invitation of a few liberal students.

Of the disgraceful action of Cornell in the matter of Prof. Adler, everybody knows. And there are a thousand and one colleges vastly more bigoted than even Cornell. In view of these facts, I say that there ought to be not only one Johns Hopkins, one Harvard College, in the country, but colleges of like and even greater liberality in *every State*. It will come to that. The people are thinking. They are groping their way to the light. The instinct may be voiceless at present, but the real purports of a nation's life often are so. Long slumbering, the giant at length awakes, and scatters destruction around him. There are too many enlightened scientists in America, too many rich men cognizant of the truth, for this state of things to last much longer. I believe the time is ripe for a great simultaneous movement. I believe the giant is ready to rise; that a wave of organized effort for mental liberation will soon spread beyond the comparatively narrow limits of Liberal Leagues, Philosophical Clubs, and Free Religious Associations into the great field of general society. There is need of another Luther; some one to peal a trumpet in the ear of sloth; some one to sting the consciences of silent men of science, who know well enough the vast gain that would come to them in their work, if there were but a partial exchange in the schools and colleges of nursery philosophy for scientific philosophy. I suggest the sending of a committee to the next meeting of the American Social Science Association to stir them up on the question of new schools of science, and of teh grander religion of science, and to secure their co-operation in the work. Ah! you men of science, you know your duty. You know that silence is guilty. We are all guilty, alas! The glory of the nation is dying out, and we do nothing to retain it. Do you not believe this? Then, you have read history to little purpose. It is the madness of infatuation to dream that grand sculpture, grand architecture, grand literature, grand national life, can grow out of *doubt*, out of faithlessness, out of irresoluteness and frivolity. The art of Greece culminated just at the moment when she was most earnestly seeking the highest truth in philosophy. The dream-like French cathedrals of the thirteenth century sprang out of undoubting belief. The glory of Venice was the result of her intense religious life: her fate was sealed with the loss of her faith. By the doom of Rome and Venice, let London and New York be warned.

It is because I love my country so deeply that I grieve over the loosened grip of her people on eternal truths. In religious dissolution, I see the germ of national death; but, in unity of faith, I see the seed of indestructible life.

"But what are your eternal truths, young man?" a frowning company of ecclesiastics exclaim. "Do you know what you are doing? You are bringing anarchy, you are leading people to despair" [and, above all, I am endangering your salaries].

Well, I thought as you do until recently; and that is why I have kept still for years, and have only thought. My profounder study now shows me that you are, and that I was, wrong. I see the sunken piers of a vaster and better foundation, even the universe itself. Its muniments and spinal supports are the eternal laws of life. In the light of the unimaginable splendor of the mystical universe that arches above us its fretted gold,—this grander God, the universe,—your petty baby-prattlings and picture-book stories pale away, and become as tinsel and trash. And I see now very clearly that even a rough-cast, splendid materialism would be better than your puling ecclesiasticism, your lily-handed clericalism, your sombre, funereal despair, and the wormy pessimism that puts so many degrees of longitude into your faces. What! Miserable doubters, do you think that there will be no more religion because you can no more drone you ancient tales? Out of every world, hands are reached and waved to testify to you of the solemn grandeur of a living universe, which is God. What more would you have? You want the perpetuity of that human mind of yours for twenty or thirty million years. You want to be a harp-twanger in the sky. So did the Egyptians, and they preserved their offensive mummies for the nineteenth century to feed its locomotives with. Yet there may be a more sublime immortality awaiting us than that of the body or the brain-born mind.

But the point is this: whether we see the sufficiency of the unimagined universe as the goal of ideality and aspiration or not, certain it is that the mass of men will see it, and have got to come to see it all together before we can have any great living again or any great thinking again. I believe that the retrospect and the prospect and the aspect of life at this moment are great and satisfying, and that the contemplation of the starry universe is and always will be (however deep man's spirit may dive) an unfathomed fount of religious suggestiveness, inspiration, and hope. But we have got to do some plain heroic thinking, suppress that petty egotism of ours, and not be in haste to imagine that we hold in our microscopical hands the vast key of eternity. The new commandment is: Thou shalt not whimper.

If these words should be scanned by true scientists (knowers, seers), let us implore them, if they are *men*, to lend a hand in the reorganization of institutions, and the placing of them on a basis of knowledge commensurate with the facts. Without unity of belief, there can be absolutely no great social or political life. "Master Ridley, play the man." And make assay at once:—

> "For this *would* changes,
> And hath abatements and delays as many
> As there are tongues, are hands, are instruments."

WILLIAM SLOANE KENNEDY.

P.S.—The above being in type, comes Mr. Gill's strong article. I am glad that he has had the time (which I had not) to complement my former article on the philosophic feature of our hoped-for college. If it is of any importance, I may say that I am not a jot behind anybody in my desire to allow to the *genus homo* the place of highest honor in creation. What sane man would not? The bubbles and spray of the ocean partake of the nature of the whole, and are *in essence* as admirable as that out of which they spring. But it is an Hegelian axiom that a difference in quantity may sometimes create a difference in quality, and a drop of water and a drop of intelligence and love might become infinitely ridiculous by *undue* assumptions as to their place and rank in the system of things. It is only a greater spur and incentive to the noble man to realize the grandeurs of the universe external to himself. And his consciousness of these abates not, but keenly whets, his undying ideal aspiration and daring ambition.

It won't hurt you to give your mind a good stretch occasionally. No danger of getting very far away from ourselves. I never dreamed of making a key-note of philosophy a creed or condition to impose upon anybody. I still maintain, however, with firmness that the idea rolled up in my Latin-Greek cinnamon roll of a word is the central idea of modern times; and, taken along with the ancient idea expressed by Mr. Gill's

Digitized by Google

word, epitomizes the intellectual attitude of good thinkers of this age toward theoretical and practical life philosophy. We have had vaporing enough about angels' feathers. Now, we shall assume nothing, begin at the bottom, and transfer to the department of noble hope and lofty desire those thoughts which are incapable of present proof. Looking at life from this angle of disinterestedness and cool suspension of judgment, we shall by gradual increments of inductions arrive at a truer explanation of our destiny.

Let me add that, if what has been said above about our system of higher education may seem harsh, I cannot help it. It is all true, so far as it goes. Of course, such schools as the Harvard Divinity School and the Meadville School are not to be classed with the intolerant institutions. They are each entirely catholic and tolerant. But, as Mr. Higginson says, they are hampered by traditions. They are also antiquated in their curriculum, and yet do a work of great and almost inestimable value in furnishing opportunity to their students for thinking and reading, and in the fine discipline they impart. We do not quarrel with the disciplinary feature of any American college.

W. S. K.

HEREDITY.

Heredity is a law of biology,—a term under which we generalize a class of phenomena differing in degrees of complexity, but common to all living things. It is the law by which organisms tend to repeat themselves in their descendants, and the phenomena are fundamentally the same throughout the domain of life. In the low organisms in which reproduction is effected by division, the divided individual differs from the parent form only in bulk; and, when it is produced by budding, the process is still so comparatively simple and the dower of the offspring so large that the likeness of the progeny in form and function to the progenitor is never doubted. The reproduction of the higher organisms is but a continuation of the simple process which begins with fission and gemmation.

Every animal inherits the characteristics of the species to which it belongs. Mental heredity is just as much a fact of science as physical heredity, and nobody would ever think of calling this in question to-day but for the pernicious influence of certain *a priori* theological and theologico-metaphysical hypotheses which have not one fact upon which to rest. Animals inherit the psychical as well as the physiological characteristics of the genus, species, and variety to which they belong. Even atavism, resembling somewhat alternate generation in the lower forms, serves to show the tenacity with which heredity preserves and transmits what has been acquired, even when it has been suppressed for generations.

Men and nations form no exception to the law of heredity. An individual inherits the traits of his race, his people, and his family. A State inherits its national character. Anything worthy to be called a psychology of nations, we do not yet possess. Yet historians have not failed to notice the essential identity of the character of a nation through all the periods of its history. Cæsar, in describing the Gauls, used language which describes nearly as well the French of this century. One sentence from his *Commentaries* will suffice: "The Gauls," he says, "have a love of revolution. They allow themselves to be led by false reports into acts they afterward regret, and into decisions on the most important events. They are depressed by reverses. They are as ready to go to war without cause as they are weak and powerless in the hour of defeat."

Thus, heredity is seen to be a law of conservation. And yet it is only under this law that development and progress are possible. Changes in environment—climate, soil, food, etc.—must produce changes, however slight, in the organism. Offspring cannot be wholly like both parents. The law of heredity, by which paternal and maternal characteristics are united, necessitates variations from both the father and mother. Variations occur, which, because we cannot discover their antecedents, we call "spontaneous." These unexplained deviations, when they are of a physical character, are conceded by all, or nearly all, to have natural causes; but, when they appear in the mental order, a multitude of writers are ready to point to them as evidence of some sort of an extraneous inspirational influence, without antecedents in ancestral character or environment.

But we mention these variations here only to indicate the necessity of heredity to preserve and perpetuate beneficial changes, and to promote that progress which heredity at first appears to render impossible. The newer modifications are neces sarily fluctuating, because not fully correlated with the reproductive system, and only when they are sustained from without as well as within can they acquire stability and take their place among the conservative inheritances. For those who imagine that to meet the demands of evolution there should be perceptible modifications going on under their eyes, and that in the historic period great changes should be seen in the physical and mental character of man, the above facts will have but little, perhaps no significance.

But there is an important practical side to the study of this subject of heredity, to which it may be worth while to call attention. Since by conscious selection man produces varieties of animals adapted to his wants, is it possible for him by similar methods to improve his own race? Ribot presents the question thus: "The goal is a race quick of comprehension and expert in action, well disciplined, of gentle manners, and easily adapting itself to the complicated forms of civilization. The problem is how we are to raise the masses to the level of those who, at the outset, were greatly above them. Can this be done? We would observe, first of all, that so far is this aspiration from being chimerical that every effort of civilization has it, and it alone, in view. But the end is attained by means of education, an external agency, different from heredity, which acts from within. As we view it, education is unequal to the task. There remains in some natures a substratum of unintelligent savagery, which may be overlaid by civilization, but never done away. Hereditary transmission alone could modify them."

Mr. Darwin, in his concluding remarks in *The Descent of Man*, says, with much truth, man "might by selection do something not only for the bodily constitution and frame of his offspring, but for their intellectual and moral qualities. Both sexes ought to refrain from marriage, if in any marked degree inferior in body or mind; but such hopes are Utopian, and will never be even partially realized until the laws of inheritance are thoroughly known. All do good service who aid toward this end. When the principles of breeding and of inheritance are better understood, we shall not hear ignorant members of our legislature rejecting with scorn a plan for ascertaining by an easy method whether or not consanguineous marriages are injurious to man."

It is certain that the nobility of every country in which it has existed is founded on the idea of heredity, and the conviction that the worth which gave it distinction or which it claims to possess is transmissible, and that by perpetuating itself from its own resources it can make this worth continuous and permanent. But the degeneracy of noble families and the history of nobilities in general are not encouraging as to the results of heredity in aristocracies or exclusive orders.

The knowledge now possessed in regard to the laws of heredity, were it diffused, would probably contribute something to prevent the transmission of physical, mental, and moral deformities and weaknesses; but deep-rooted prejudices, time-honored customs, and hoary superstitions are obstacles to the practical application as well as the diffusion of this knowledge, not to be overcome easily nor in a short time.

The improvement of men certainly cannot be effected by methods, in all respects, like those employed to change animals in adaptation to our necessities or tastes. The varieties we have carefully bred for our own purposes, if returned to a state of nature, would perish, or by reversional heredity go back to the original type. And only a race of slaves would submit to the control of another class of men for improvement by selection; and, the more they were "improved," the more slavish they would become, and the greater their need of constant care. A class of men, improved, we will suppose, by their own selective efforts in accordance with a lofty moral ideal, with the altruistic sentiments predominant, and with an extremely refined and sensitive nature, would, left to themselves, have but a poor chance in the present competitive pursuits of civilized life. Should they, in this experiment, endeavor to combine all the qualities in the proportion necessary to qualify themselves for success in the present social state, would they succeed better than nature has in producing through centuries of struggle and strife, in which the fittest have survived, the men of to-day? The views of those who claim that "the improvement of the race by heredity is as feasible as the improvement of our domestic animals" need considerable revision. Nevertheless, the subject is one of great importance, and well worthy the study of intelligent men and women. The fact that ignorant cranks and charlatans associate with it all sorts of extravagant notions, and present certain aspects of it in a way designed to pander to a prurient taste, is additional reason for intelligent discussion of the subject, and making the people better acquainted with it.

B. F. UNDERWOOD.

EDITORIAL NOTES.

OF Dr. Oswald's *Secret of the East*, the *Investigator* says: "This book, written by a very able scholar and an independent thinker, is worthy of a place in the library of every Liberal and inquirer in the country. The character of the book is indicated by its title; and, from the first to the last page, it is exceedingly interesting in its texts and the historical knowledge given in its notes."

THE Dunedin (New Zealand) *Echo* gives us an idea of the exercises of a liberal society in that distant region. It says:—

The hall was well filled on Sunday, October 7. The lesson was upon the "Life of Sixtus." The reading was from the Boston *Index*, on "Mythology." Mr. Sparks gave a recitation from "Richard III." The company, assisted by the choir, sang "The Vesper Song." Several members again spoke on the unjust sentence of Foote and Ramsay, when it was resolved to send home a petition to the government asking for their release from prison. The band played several selections. The secretary reported that a ball took place on Friday last, attended by the members, their wives, daughters, and sons, which was in every way a success; that fifty-four children attended the morning Lyceum. The address was by Mr. Webber, on "Sympathy."

The Index.

BOSTON, DECEMBER 27, 1883.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

TO MEMBERS AND FRIENDS OF THE FREE RELIGIOUS ASSOCIATION.

The Free Religious Association has an empty pocket, and it hereby holds out its hand to its constituency for a Christmas and New Year's gift. It is four years since the Association, aside from collections taken at its annual meetings, has made a public appeal for funds for its own treasury. The responses made to the circular issued in December, 1879, together with the yearly collections and membership fees, have sufficed to supply its modest wants up to this time. The needs of *The Index*, as reported at the last annual meeting, have been provided for without making a general or public appeal. But, now, the Association must provide for its own needs; and, to this end, it confidently asks the help of all its friends. Renew your membership fees, if you have not paid the one dollar fee within the last year, and cannot do more than that. Become, if you can, a "patron member" by sending five dollars. Or send still more, if the spirit and your purse will let you. We set no limit to your generosity.

The Association is under certain pecuniary obligations for office rent and service which must be met. But the Executive Committee wish to hold before the next annual meeting several conventions, and to be ready for any other work for which the way may open. To do these things, money is wanted. We are sure we can count upon your aid. Please direct your donations to "Free Religious Association," 44 Boylston Street, Boston, Mass. (stating that they are for the Association) or to the Secretary, F. A. Hinckley, No. 120 Congdon Street, Providence, R.I.

POETRY AS A MORAL FORCE.

An Address delivered before the Montreal Pioneer Free-Thought Club, Oct. 28, 1883.

BY GEORGE MARTIN.

The nature and function of poetry have received various definitions from the most noted writers. Some have maintained that it is not to be held to any purpose or exactions beyond the pleasure it affords to its author,—a narrow and altogether insufficient conception. Carlyle says: "It is one of those mysterious things whose origin and developments never can be what we call explained. Often, it seems to us like the wind, blowing where it lists, coming and departing with little or no regard to any the most cunning theory that has yet been devised for it." This utterance of the Scottish sage is vague enough to suit a Swedenborgian or a transcendentalist of the Alcott school. Plato held that poetry comes nearer the vital truth than history. Macaulay and Emerson lean to a like opinion. Macaulay, in his essay on the Athenian Orators, affirms that "the merit of poetry, in its wildest forms, still consists in truth,—truth conveyed to the understanding not directly by the words, but circuitously by means of imaginative associations, which serve as its conductors." Emerson says, "Rhyme, being a kind of music, shares this advantage with music, that it has a privilege of speaking truth which all philosophy is unable to challenge." In his essay on Inspiration, he gives a definition of poetry in these words, "Only that is poetry which cleanses and mans me." The conciseness of this saying is its only merit; but, if it is too bald and epigrammatic to convey the whole truth, it serves to indicate the pure and elevated character of its author. Coleridge's definition is more comprehensive. He says, "Poetry is the blossom and the fragrance of all human knowledge, human thoughts, human passions, emotion, language." Leigh Hunt gives a similar idea. He tells us, "Poetry is the breath of beauty flowing around the spiritual world as the winds that wake up the flowers do about the material." Dr. Johnson says, "The essence of poetry is invention,—such invention as, by producing something unexpected, surprises and delights." Authorities might be quoted to any extent; but, if the examples cited be well shaken together and placed under sufficient pressure, we may obtain, I think, the "essential oil" that inheres in the questions raised.

When logic shall have gauged the charms of music and mastered the mystery that glows and lightens in the heart of maiden and of youth,—a mystery whose sufficient vocabulary is a bare monosyllable,—then may we expect to find exact definitions of all the elements that go to make up a perfect poem. It seems to be the general verdict, however, that all true poetry is based on truth and purity. To one who is void of any feeling for the spiritual breathings of music, to a heart that has always been proof against the delirium of the tender passion, disquisitions on and exemplifications of these subjects are as tapers that burn to no purpose. In like manner, the soul that is void of the poetic instinct will never be able to discriminate between the veriest doggerel and the most exquisite verse. Happily, few individuals bear these infirmities. Music, twin sister of Poesy, is a universal deity to whom all peoples bow in spontaneous adoration; and there is no rebel against human nature so bold as dare deny that the sovereignty of love is boundless and supreme.

Music, love, and poetry constitute a better trinity than ever was hatched under the wings of theology. Better rear temples to these divinities and serve at their altars than waste the fragrance of the soul on doubtful and remote majesties, who seem altogether indifferent to our worship or our wants.

Poetry is articulate music, adapted to delight the emotions while it instructs the intellect. There is high authority for the belief that it is older than prose, but whether this claim for precedence and antiquity holds good or not is of minor account. Certain it is that, if the prehistoric man did not "lisp in numbers," he must have felt a severe want for the expression of the mighty emotions that shook his soul when consciousness first awoke him to the wonders of this magnificent universe. He must have apostrophized in some manner—mute and gesticulate, if not vocal—the luminous orbs that shed their beneficent lustre upon his daily and nightly wanderings; and the rhythm of winds and waves must have begotten responsive rhythm in his listening heart. We may be allowed, then, at least to conjecture that the prehistoric savage was a truer poet than many a modern college-bred celebrity on whom the crown of Apollo has been bestowed.

But we can well afford to dismiss the prehistoric man from our retrospection. If he ever composed a sonnet to his mistress' eyebrow, the eyebrow must have felt the happier therefor. If the terror of reverberating thunders and vivid lightnings exploded in speech, that speech was pregnant with a regal element of poetry, passion subdued to awe, tremulous with the excess of its own mystery.

In the earliest dawn of historic thought, to poetry was assigned the post of honor. Songs were sung, we may be sure, before books were written. The tender yearnings of disconsolate hearts, the exploits of warriors, the wonder-waking legends of far-off times,—all these experiences of primitive races found expression in the mournful or exultant cadences of the bards.

The germs of knowledge, nurtured and stimulated by all the forces of nature as man advanced toward civilization, blossomed into song, inspiring and sustaining humanity in its fierce struggle for existence.

One admirable feature in the Biblical history of the Hebrew race is the poetry we find therein. Poet and prophet in early Jewish times meant one and the same thing,—a fact which the well-abused Paine demonstrates in his *Age of Reason.* And we find that the prophets were in the habit of rebuking the overbearing insolence and torpid formalism of the priesthood, a certain proof of their superior enlightenment. The Psalms of David, if we eliminate a casual supplication for the destruction of his enemies, the poetical productions credited to Solomon, with all their Oriental extravagance of hyperbolic imagery, the dramatic story of Job,—a fine poem,—and other portions originally cast in the poetic mould, diffuse a mellow light over many portions of the sacred volume that require a mantle. Like flowers that conceal a rank soil, their beauties overspread and mitigate the repulsiveness of passages that, seen in their nudity, shock and confound our modern sense of propriety.

Who can fully estimate the moral force exerted by that master genius of all antiquity, "the blind bard of Chios," as Homer has been styled? Having no knowledge of the original language, I can only judge from our English translations; and, governed by these, I hold that no man of culture who reads the *Iliad* and *Odyssey* can arise from their perusal, and not feel an elevation of all his mental faculties and his amazement gratified at the capabilities of the human mind. And yet Homer has not escaped detraction. While the su-

Digitized by Google

premacy of his genius is admitted,—because it cannot be denied,—morality has been denied him, in one notable instance at least. In the Encyclopædia Britannica, latest edition, the writer of the article on Homer uses these words, "As there is no law in Homer, so there is no morality." He immediately qualifies this startling allegation by conceding that "moral feeling indeed existed." Now, I venture to submit that "moral feeling" is the source of moral action. If Homer's heroes, as the writer cited has it, "are hardly more moral agents than the giants and enchanters of a fairy tale," as much may be said with equal relevancy of the Christian heroes of modern battle-fields. The roar of battle and the clash of arms admit but little practice of the amenities pertaining to the social state. I fear that three thousand years, the gap that separates the age of Homer from our own day, have not effected sufficient reformation in the art of killing our fellow-beings to excuse us in casting stones at the ancients. It can be pleaded in behalf of ancient warriors that foe met foe face to face and hand to hand, and the heat of passion engendered by such direct conflict stands as an apology for the inhumanities practised by the combatants. More shameful it is that we, having the civilizations and refinements of all past ages added to our own, should use our superior knowledge in inventing and using such diabolical engines of destruction as render the battle-fields of Christendom superlative in wickedness.

If examples of bravery, of fidelity to cause and country, of friendship between brothers in arms, as between Achilles and Patroclus; if scornful and vehement denunciation of injustice, treachery, cowardice, and falsehood,—all of which examples abound in Homer,—if these virtues show not a "stream of tendency" for moral development, I fail to perceive their import. In the *Iliad*, frequent passages are met of the most moving pathos, toned with nobility of thought. The venerable Chryses, the father of the beautiful captive Chryseis, and priest of Apollo, suing to Agamemnon, for the release of his daughter, and the interview between Hector and his wife, Andromache, are incidents in the great epic that tax the eyes of a stern reader to retain their moisture. It would be an affront to and a crime against art to detach and exhibit fragments of these precious pictures. Quotation would be mutilation. Let them be seen in their symmetrical completeness in their proper place.

As an offset to the depreciatory comment of the article referred to, a few words from Heeren's *Ancient Greece* will finish this hasty glance at Homer. "The history of this poet," says Heeren, "is lost in doubtful obscurity, as is the history of many of the minds who have done honor to humanity, because they rose amid darkness. The majestic stream of his song, blessing and fertilizing, flows like the Nile through many lands and many nations." This tribute to Homer, bearing as it does on the moral scope of his writings, is sufficient for my purpose. The verse that does honor to humanity, blessing and fertilizing where it flows, is entitled as much to our gratitude as to our admiration.

It is not from epic poetry, however, that the widest and most persistent moral force is evolved, but from the more genial and gentle breathings of the lyric muse. The choicest productions that fall under this head charm alike the learned and the unlearned, and by consequence contribute toward hastening the realization of what has always been the vision and the prophecy of hopeful and loving souls,—the common brotherhood of man.

Dante's epic, or satire, as the *Divina Commedia* has been variously ranked, and Milton's *Paradise Lost* have but little interest for the ordinary reader of to-day. Very little, I fear, can be placed to the famous Florentine on the score of moral advancement. There is reasonable ground for the following reproach on his character, rendered by a late historian: "His [Dante's] works owe their origin to his misfortunes and revengeful spirit. His great object seems to have been to pierce his enemies with the shafts of satire. The rancor of his feelings mingled itself with the sweetness and graces of his poetry."

This severe stricture is justified by the ruthless gloating of the poet over the *post-mortem* sufferings of his enemies, whom he consigns to his fabled Hell. It seems like an insult to Virgil, the greatest of the Roman poets, to be made the guide of Dante to his infamous Hell and Purgatory. This is not poetry, however honeyed: it is the eruptive virulence of an evil spirit ambitious to emulate the malice of the arch-fiend himself. Poetry is alien to such hatred and revenge. And the reader is poorly requited for the outrage done to his feelings of pity, in witnessing the horrors of the infernal regions through which he has been dragged, by being conducted at last by the poet and his Beatrice to his radiant Paradise. Let what is really poetry be determined by the effect produced. If the heart is not filled with pleasurable emotion,—shaded with sorrow, it may be,—and the imagination lifted to a happy realization of

"The light that never was on sea or land,"

it may be concluded that the essential element of poetry is wanting. The author has only succeeded in modelling the image of Poesy without being able to breathe into it a living soul.

There is a radical difference between Dante and Milton. Dante was relentless and revengeful. Milton was sympathetic and forgiving. He lived in stormy times. The struggle for political ascendency between the desperate factions of his day acted as a constant menace toward any one who chanced to stand in opposition to the successful rival of the hour. But Milton's courage was equal to his genius. His eloquent pen was wielded for freedom,—freedom of the press and of the multitude. A republican by nature and in modes of thought, he had no sympathy with crowns and sceptres. No one, I think, who reads the *Paradise Lost* reflectively, knowing Milton's political leanings,—if he is free from the glamour of Christian theology,—can fail to detect more sympathy manifested for Satan and his rebel host than sincere regard for the celestial Monarch against whom they rose. Satan is the hero of the poem,—a superb Power battling against tremendous odds; discomfited, but not subdued; fearless and defiant in the midst of overwhelming darkness and disaster; a sublime patriot, in short, wronged and exiled by the obsequious myrmidons of a despotic ruler. This is the impression which the reading of the poem has always produced on me.

Johnson, in his *Lives of the Poets*, cannot avoid stigmatizing Milton as a "rebel." Few at this hour will deny that it adds to the glory of Milton, instead of detracting from it, that he was a rebel to such a ruler as Charles I. Had he been a loyalist, he could not have been a true poet; for loyalty to authority assumed, and not based on the will of the people, is inconsistent with poetic genius. The sturdy old Tory, who thought to obscure the fame of Milton by holding him up as a rebel, is compelled, in reviewing *Paradise Lost*, to describe him as "this mighty poet." Mighty poet and mighty rebel may unite in the same person, and benefit the world the more by the union. The moral force projected from such a work as *Paradise Lost* is too palpable to be seriously questioned. True, it may be charged that it has aided in perpetuating the orthodox belief in a literal hell of fire and brimstone. But this presumption, if fairly weighed, will be found to rest on "airy nothing." The reading of the work, instead of confirming the heretofore popular notions concerning that sultry region, produces a reaction, and suggests the absurdity of the fable on which it is founded. No intelligent person can suppose that Milton had any belief in the reality of the parent story. He took the legend as he found it, and, endowing it with the wealth of his marvellous intellect, expanded it into a splendid vision.

A perusal of the work raises the mind of the appreciative reader to an altitude of sublime discernment, of intensified vigor, promotive of all its nobler instincts. In contrasting the petty ills that vex common humanity with the enormous chastisements that pursued and clung to the rebel angels, and finding that neither utter ruin nor agonies unparalleled could conquer their fortitude, that in their consummate misery they indulged in no cowardly repinings, one is ashamed to murmur at the calamities that may chance to fall to one's own experience. An impulsion is given to stand erect, equal to whatever may happen, and to give aid to the unfortunate, the fallen, the forsaken.

With this mere glimpse, and without any reference to others, we must part company with the epics. They stand out in the world of poetry as high mountains that attract more, perhaps, by their bulk than their beauty. But, if climbing their alluring and dizzy heights usually ends in fatigue, the air on their summits is exhilarating, and force the lungs of our moral being into healthy action.

For my own part, I confess to a decided preference for the flowery valleys and breezy uplands, the quiet woods and smiling streams, of what is known as lyric poetry. The opinion held by Edgar A. Poe, that a veritable poem cannot exceed a certain length, that it must not weary, but hold the attention of the reader, fascinated and unflagging, from the beginning to the end, is more than plausible. In his lecture entitled "The Poetic Principle," he says: "I hold that a long poem does not exist. I maintain that the phrase 'a long poem' is a flat contradiction in terms." He supports this dictum by able argument, and fixes the utmost limit of a poem at half an hour's reading, at the end of which time, he maintains, the pleasurable excitement "fails,—flags,—a revulsion ensues, and then the poem is in effect and in fact no longer such." Poe, in my humble opinion, deserves to be ranked as the prince of American poets. He invariably practised what he taught. None of his poems exceed the limit prescribed in his lecture; and, as if in confirmation of his rule, his longest poems are found to be the least and his shortest the most entertaining. "The Raven," "The Bells," "Ulalume," "Annabel Lee," "To Helen," all comparatively brief compositions, are the credentials that gave Poe a ready admission to the temple of fame. I venture the opinion that these delightful creations have given more happiness to the readers of American poetry than all that Longfellow, learned as he was, and Whittier good as he is, have produced. I am not unmindful of the claim advanced by Walt Whitman for supremacy. He styles himself "the poet of the future,"—a happy thought, indeed; for, as the "future" allows any number of centuries, Walt can wait for the fulfilment of his modest prophecy till a new heaven and a new earth are ushered in.

It may be urged that, if the chief purpose of poetry be simply to please, a canon held by sound judges, its moral force cannot be very extensive. Granting the correctness of the premise, I deny

Digitized by Google

the inference. Pure and innocent pleasure is the blossom of heathful content. Pleasure is the opposite of pain, and those who contribute to its increase must be reckoned among the world's benefactors. This disparagement of pleasure is a theological scowl. In the happy days of Greece, it was unknown. It is a canker that crept into the gloomy caverns of monkish brains. Wretches, incapable and unworthy of pleasure, insanely supplemented the inevitable ills of life with others of their own contrivance. This dreary heresy against human nature has been perpetuated by ascetic minds, and is preached in the pulpits of our own time. Note the assaults made on the theatre, on dancing, on Sunday recreations.

I once heard an elder of a church declare that he considered it a sin to laugh. He was an honest and amiable man, and his peculiar scruple on this head could well be excused on the ground of his religious belief. He was thinking, when he deprecated laughter, of those who were "weeping and wailing and gnashing their teeth"; and certainly, for all who are bowed down with such uncomfortable notions, mirth of any sort is wholly out of place.

But, if to impart pleasure be the chief function of poetry, it is not its only office. The rhythmic denunciations, quivering with righteous indignation, aimed directly at oppression; the patriotic songs of all nations, and the lofty tribute so often paid to noble deeds and worthy men, testify to the wider range native to the muse.

The immortal song of the French Revolution, the "Marseillaise," by Rouget de Lisle, and "Bruce's Address to his Army," by the poet of all hearts, Robert Burns, will occur to you all. The history of the "Marseillaise" attests the moral force that a single inspired lyric can exert.

French rulers, enamoured of crowns,—men who climbed to power regardless of justice, spurning the dead bodies of brave citizens who fell in striving to obstruct their merciless course,—found it necessary to issue edicts, from time to time, for the suppression of the "Marseillaise Hymn of Liberty," so potent did they find it in rousing the people to a sense of their wrongs, and to resistance of usurped authority. While a Frenchman exists to ring out that trumpet peal in the ears of his countrymen, no despot need ever hope to reign long in France, under any circumstances. It may be safely affirmed that this glorious song has done more for the achievement of political freedom in France, culminating in the present happy republic, than all other influences combined. In estimating the full power of the "Marseillaise," we must keep in mind the character of the people for whom it was created. Logical and elaborate disquisitions on political rights will do for a Briton or a Teuton, but the Gaul requires more stimulating stuff to impel him to front danger and death in behalf of outraged justice. Cool reason and deliberation are indispensable to the leaders of reformations; but the bulk of the people, who must be moved, are required to act rather than think, and for them emotion and imagination are the springs to be touched. The first Napoleon knew well the value of such methods. "Play upon the imagination" was his motto. His philosophy was shrewd: he knew his business and his men.

A significant line, left by one of our own Canadian poets, the amiable Heavysege, occurs to my mind, and is worth quoting:—

> "Too much reflection would arrest the world."

This sentiment points my meaning touching the agencies most effectual in urging the masses to great and perilous enterprise.

"Bruce's Address," if it does not equal, ranks second in order of excellence to the "Marseillaise." And, while it survives in the memory of Scotchmen, Scotland cannot be made the vassal of any power under heaven. She is a voluntary ally of England, not an unwilling partner, as Ireland is.

Had Moore given to his countrymen a "Marseillaise" or a "Bruce's Address," England would have been forced ere now either to have annihilated the whole race in their uncontrollable resistance to her rule or to have yielded independence to Erin. His national lyrics are more provocative of tears than of daring, patriotic hostility to a foreign foe. They are lamentations. He wrote, perhaps, with some fear of English vengeance hanging over him, and felt it safer to plead for liberty than to demand it. Yet who can doubt that his inimitable melodies have gone far to keep alive the sparks of national aspiration in the hearts of the people, from which flash forth with alarming frequency the lurid lights that trouble the eyes of England at this moment? Very sweet and precious are these melodies. They have helped largely, through their subduing influence, to secure for Irish subjects the ameliorations that were granted after Moore's demise,—removal of religious disabilities, and other reforms of a later date.

What English ruler could read or listen to such lines as those commencing,

> "The harp that once through Tara's halls,"

and not feel a shudder of remorse?

The words of the second stanza of this melody have haunted me for years, like the wail of an injured spirit:—

> "No more to chiefs and ladies bright
> The harp of Tara swells:
> The chord alone that breaks at night
> Its tale of ruin tells.
> Thus Freedom now so seldom wakes:
> The only throb she gives
> Is when some heart indignant breaks,
> To show that still she lives."

The lines in memory of young Emmet are, if possible, even more affecting. Robert Emmet, when condemned as a rebel and sentenced to die for having loved his country too well, enjoined that no one should write his epitaph till his country was free. Moore, mindful of the injunction and moved to do honor to the sentiment expressed by the dying patriot, has fused into eight lines the compressed sorrow and sweetness of Ireland's mourning heart:—

> "Oh! breathe not his name, let it sleep in the shade,
> Where, cold and unhonored, his relics are laid.
> Sad, silent, and dark be the tears that we shed,
> As the night-dews that fall on the grass o'er his head.
> But the night-dew that falls, though in silence it weeps,
> Will brighten with verdure the grave where he sleeps.
> And the tear that we shed, though in secret it rolls,
> Will long keep his memory green in our souls."

In lingering over such lines as these, one can fully understand Ossian's apparently paradoxical phrase, "the joy of grief,"—joy awakened by the rare beauty of the lines, and grief at the burden which they bear.

Returning to Burns. If we look at the character of his poems as a whole, we perceive that he generally wrote with some moral or reformatory purpose in view, not always directly, but indirectly, in accordance with the canons of verse. His satires are the most mirthful satires ever penned. "Death and Doctor Hornbook," "The Holy Fair," and the cap-sheaf of all, "Holy Willie's Prayer," are unrivalled in their way. He executed his victims in such a comical fashion that the victims themselves, if they had a particle of fun in their composition, must have laughed in the midst of their death-struggles. "Holy Willie's Prayer" is the most unique bit of satire in all satirical literature. It knocked Scottish Calvinism blind, if not senseless. It never recovered from that stunning surprise. Like the terrible Cyclop, Polypheme, after Ulysses had destroyed his one glaring eye, it has stumbled and groped about among the glens and crags of Scotland ever since, helpless, forlorn, if indeed it did not yield up its miserable ghost many years ago.

Entertaining as such contributions to utilitarian literature are, it is always more agreeable to bend over the softer portions of the poet's pages.

But time will not permit further reference to the many enticing things bequeathed us by the Ayrshire bard,—bestowals too beautiful not to be familiar to everybody.

Too literally did he experience the force of his own apothegm,—

> "Man was made to mourn."

And so full of sympathy was he for all living things, from man to the poor little unhoused field-mouse, that his constant wish was to lessen the sorrows of others.

The feeling tribute paid to his genius by Moore is not, I think, sufficiently appreciated; and its recital will close these hurried remarks on Burns:—

> "Swan of the Nith! thy wing was light,
> Thy plumes the whitest of the white,
> And wild and wayward was thy flight
> From wave to wave.
> Thy course was one headstrong and bright,
> Even to thy grave.
>
> "Swan of the Nith! if aught in thee
> Sullied thy whiteness, none should see
> The blemish: men should view, like me,
> Thy life's short dream;
> And let thy faults like swans' feet be
> Hid in the stream."

Byron, Shelley, and Wordsworth—you see, I am obliged to group my favorites—have left their ineffaceable impress on the mind of Europe, and made it possible for a later poet to give England the flattering name "a crowned republic." The electric force of Byron was death to kingcraft and dismay to priestcraft. The ethereal witchery of Shelley charmed the devotees of these impostures away from their idols. And the rhythmic philosophy of Wordsworth encouraged the friends of democracy.

It was the fashion at one time to stigmatize Byron as a misanthrope and Shelley as a lunatic. But that time is long past. No one can be a hater of his kind who rouses his fellow-men to the knowledge and assertion of their rights. Byron's efforts tended largely that way. His enthusiastic devotion to freedom not only inspired his pen, but led him to unsheathe his sword in the cause of Greece, hoping to see her restored to something of her ancient glory. His last breath mingled with her atmosphere. The Greeks are not forgetful of his services. They are now preparing to erect a monument on the spot where he died, worthy the greatness of the noble poet soldier. Chief among his poems, "Childe Harold" and "The Prisoner of Chillon" reflect the attitude that Byron maintained toward the world. History speaks of the Prisoner of Chillon, Francesco de Bonnivard, as a man of transcendent ability, learned in the sciences and in the classics, and an ardent republican. From his twenty-fifth year, in 1519, till his forty-second, he suffered persecution from the enemies of Geneva, which country he had adopted as his own, on account of its struggles for popular government. The Duke of Savoy and the Bishop of Geneva united their malice to crush him. He was seized and confined in the Chateau of Chillon, where he pined in extreme wretchedness for six years, when he was set at liberty by the Bernois, the people of a department of Switzerland. Such was the man whom Byron chose as the hero of his most worthy poem. The introductory sonnet sounds the key-note of his

Digitized by Google

character, and proclaims the poet's sympathy with his hero. Allow me to recite it:—

"Eternal spirit of the chainless mind!
Brightest in dungeons, Liberty, thou art!
For there thy habitation is the heart,—
The heart that love of thee alone can bind;
And, when thy sons to fetters are consigned,
To fetters and the damp vault's dayless gloom,
Their country conquers with their martyrdom,
And Freedom's fame finds wings on every wind.
Chillon, thy prison is a holy place,
And thy sad floor an altar; for 'twas trod,
Until his very steps have left a trace
Worn, as if thy cold pavement were a sod,
By Bonnivard. May none those marks efface,
For they appeal from tyranny to God."

We must bid Byron adieu, and press to a close. Pope, Goldsmith, Keats, and many others, whose names shine in the firmament of song, illumining the highways and by-ways of the world, conducting the nations to that summit of happiness which is the birthright of humanity, must be left untouched. The necessary brevity of such an address as this precludes the possibility of doing more than barely glancing at a few of the salient points in support of the contention that poetry is one of the principal moral forces of the world.

Its peculiar advantages over prose in fixing facts and principles in the memory may be hinted at: (*a*) condensation of thought; (*b*) greater nicety in choice of words; (*c*) rhythm,—the melody resultant from the special mixture and balance of syllables, conformatory to the art; (*d*) rhyme,—the most effectual instrument in aid of memory. Blank verse loses much efficiency and popular favor for lack of these neighborly, mutually responsive terminals, fixing the ends of lines.

These are a few of the advantages that distinguish poetry from prose. No education can be justly regarded as finished that ignores or neglects the poets. To them emphatically belongs the *honor* of adding warmth and grace and beauty and sweetness to all philosophy and all science.

"The scientific method" is the rage of the day. In our feverish hunt for the primal egg from which everything has been evolved, there is some danger that many beautiful growths will be passed by unnoticed or trampled wholly out of sight. Poetry, music, and art are by many absurdly subordinated, and the deepest sources of all that is gladsome and tender in the heart of man are in process of shrinkage. If science lays the foundations of the temple of knowledge, and philosophy rears the walls and places the rafters, poetry comes in to finish the structure, adding the interior decorations. Let who will seek comfort in always poking about in the basement, or in keeping their eyes constantly fixed on the hard, cold walls, others may be excused for preferring to look at the frescos, the stained glass windows, and associate ornamentations.

Let me urge, in concluding, that it is hardly possible to exaggerate the services rendered to humanity by the inspirations borne abroad on the wings of poesy. She may be accounted the patron saint of the affections, of noble thoughts and heroic deeds, of self-sacrifice for the benefit of others, of truth, of virtue, of freedom. If prose acts as the masculine agency in leading the march of progress, poetry serves as the feminine, a bright and beautiful companion, cheering and blessing the barren ways and wilderness of life.

Not alone nor chiefly in gorgeous palaces and vast cathedrals is her voice heard and her presence felt. Impartial and vivifying as the light of heaven, she enters the squalid homes of the poor, and mingles the sweetness of her message with their sobs and sorrows; their tears are dried, or gleam through the dawn of happiness; the light of hope plays upon their faces once more, and the gloomy shadows on the walls become as gossamer curtains, soft and silken. She journeys with the exiled wanderer through solitary places, and chants deep down in his longing heart "home, sweet home." She rocks the cradle of the widowed or forsaken mother, and whispers consolation. Like an angel of mercy, she passes through dungeon bars and speaks to the chained captive in his cell: his eyes brighten, and his lonely heart throbs with hope of freedom and happy days to come.

Banish poetry from the world, and man would lapse into his primitive barbarism, without hope of rising again from savagery to civilization. Let due reverence, then, be paid the nymph. Let us give her gladsome greeting and cordial welcome to our homes, to our social gatherings, to our free-thought halls; for in honoring her we do honor to ourselves and to humanity.

LETTERS TO THE INSTITUTE OF HEREDITY.

From Hon. Daniel Needham.

BOSTON, Dec. 15, 1883.

My dear Sir,—If possible, I shall be with you. My most earnest desires are for the success of the great work we have in hand. There is no greater work. In fact, as I look upon it from day to day, it seems to be the work of all human work, underlying all the advance of civilization.

Very truly yours, DANIEL NEEDHAM.

From Wendell Phillips.

Dec. 14, 1883.

Gentlemen,—I cannot be present at your convention, but desire to recognize the vast importance of the subject you meet to discuss. It lies at the root of all real education, and, once opened and understood, affects all judgments of crime, measures responsibility by a new standard, and throws a new light on all theories of disease. A subject with wide relations and such profound influence certainly claims the most thorough and exhaustive discussion. It need not meet any very bitter opposition. But ignorance and prejudice are elements very incalculable of mood and action. Hence, you must not expect an easy success for your movement, but close up your ranks for a long and stern struggle. Respectfully,

WENDELL PHILLIPS.

From F. M. Holland.

MR. E. V. WRIGHT, 47 Dover Street, Boston:

Dear Sir,—I am greatly obliged to you for inviting me to speak at the meeting of the Institute of Heredity on December 18, and am strongly inclined to do so. The subject is so important and so little understood that I would gladly do something to assist the able speakers whom you have already engaged. Unfortunately, I am now so much out of the habit of making addresses in public that I do not think I had better do so at present. So I must confine myself to writing a few words which I should be glad to have read at the meeting, if you think them appropriate.

My studies lead me to doubt the advisability and feasibility of making any distinction between parental influence before birth and the same influence afterwards. It is only as we take the whole amount of influence from both parents, not only directly but through elder brothers and sisters, into account that the full value of being born and bred in a virtuous and intelligent family becomes manifest. If we would know what a young man or woman is likely to become, one of the first things we should consider is what sort of influences surrounded the child. Two young men may be living equally moral and religious lives at present, because the inherited tendencies are not yet developed which will ultimately make one of them a criminal and the other a saint. I therefore think, with Galton and Trollope, that parentage ought to be considered in competitive examinations for public office. My own plan would be to give no appointments to applicants under forty who should not produce satisfactory testimonials that their parents, brothers, and sisters are of unblemished reputation, and that no near relative has ever been convicted of crime. I think that our country has a right to ask for an exceptionally good record among those who ask her to place them in offices of trust. This may come hard on individuals, but public offices ought to be given with a view to public interests. Politics are in such need of purification that we can scarcely look too carefully at the antecedents of all candidates for office.

Hoping your meeting will be a success, and promising to try to attend, though only as a listener, I am

Respectfully yours, FRED. MAY HOLLAND.

CONCORD, Mass., Dec. 7, 1883.

From M. J. Savage.

Dec. 17, 1883.

MR. E. V. WRIGHT:

Dear Sir,—I regret exceedingly that I have time to do no more than express, in the briefest way, my hearty sympathy with the work proposed by the Institute of Heredity.

I cannot now enter into the subject further than to say that science is teaching us that not *poets* only, but *all men* must be "*born, not made.*" Education can only bring out what faculty and power one is endowed with: it cannot furnish brains. And this is also largely true with the essentials of character.

If, then, the race can ever be brought to that point where people are properly born they will not need to be "born again."

This would perhaps take away the business of many of the preachers; but I, for one, should be glad to know that men were wise enough and good enough to render my vocation no longer necessary.

Most sincerely yours, M. J. SAVAGE.

From M. L. Holbrook.

NEW YORK, Dec. 17, 1883.

Gentlemen of the Institute of Heredity,—I have your notice of the next meeting of the Institute of Heredity, and am sorry I cannot attend. I hope you will bring out some good points in favor of a better race of men and women and children. The thought is slowly percolating through society, and it will not be long before the battle is won. The books on this topic alone in French, English, and German are very voluminous, as I had reason to find out when preparing my work on sanitary marriage and parentage. I pray you stick to scientific methods: mere fulminations against unsanitary marriages are next to useless, and so are lectures and speeches advocating fanciful theories created in the brains of enthusiasts. The ancient Greeks had the best system of sanitary marriage yet practised; and, if I were to come to your meeting, I should tell you about it. It was founded on perfect health and rational physical culture for youth of both sexes. There can be no sanitary marriage of any other kind. Preach this wisely and well, and you will do good, and in no other way. Truly, M. L. HOLBROOK.

From David Thayer, M.D.

Dec. 17, 1883.

MR. L. M. WARNER, *Secretary of the Institute of Heredity:*

Dear Sir,—Please accept my thanks for the invitation to be present at the first meeting for the organization of this Institute of Heredity.

Being at that time on the other side of the Atlantic, I could not be with you. But, now, I most cordially avail myself of the opportunity to express my hearty concurrence with the noble efforts which you and other brave men and women are putting forth to shape American civilization and to give it form and character for usefulness, and to relieve it of all the elements of destruction which have led to the overthrow of the great nations of antiquity, whose social and political systems were not founded on the eternal laws of God, and which did not recognize what Americans call the rights and the liberties of the people.

Civilization may be defined as the law of the social and political system of a people who have started on the career of progress.

If the American system is left to drift in the direction of its present tending, uncontrolled by wisdom and goodness, or misguided by selfishness, who can say that the dark and rayless curtain of Egyptian night may not cover *us* too, and that our fair inheritance may not be numbered with Babylon and Carthage and Egypt and Greece?

Let our civilization be ever quickened by the warm inspiration of the motto of this Institute of Heredity,—*Science, love, and goodness,*—and it will open to the coming generations a new heaven and a new earth, and usher in that golden age of which poets have sung and sages have taught, and which believers call millennium.

The opportunity for observation, which nearly half a century of active professional life has given me, results in the strongest conviction that there are no causes on which the weal or the woe of a people may depend of more momentous importance than those contemplated in the purposes of the organization of this Institute of Heredity.

And may it live! May it live till there shall be no need of jails and asylums for the insane! May it live, and its benign influence be felt till the prison and the gibbet shall be remembered as things of the past!

The good which this institution will do begins with those who form it; and all who belong to it, and cultivate the sentiments helpful to the reforms we aim at, are blessed already.

Hoping that the greatest blessings to the largest number may come from the workings of this institution,

I am very respectfully yours, DAVID THAYER.

CORRESPONDENCE.

ETHICS OF THE SOIL.

Editors of The Index:—

The soil is the organ intermediary between the special work of man and the general work of planetary or terra-solar forces. There is the foundation of the religion of agriculture. This is why the distribution of the soil is the ethical focus of national wisdom. This is why the natural method of associating human forces should have an agricultural basis. This is why the future of society reposes on the education and virtue of the farmer. It will be conceded without hesitation by civilized peoples, and even by barbarous and patriarchal, that agriculture (consid-

Digitized by Google

ered as integrant of pasturage) is the true basis of human society. Its industries, more complex than those of the savage state, afford to woman the opportunity of rising from that lowest stage of oppression in which she is generally crushed among savages. Religions are practically judged by their social fruits. We should not combat the most absurd doctrines, if we found them connected with amiable, social formations; and we do not know whether, by their social coincidents, divers mythologies may not subserve spiritual uses, even after death. The happiest religious syntheses are such as associate their doctrines and ceremonials with agriculture. Thus, they are more easily consistent in harmonic expression. It is but too true that agriculture in its ruder phases is anything but beneficial to the soil. And so it may be said of the rudimental forms of society, with regard to spiritual development or happiness. But, without a beginning, no progress. For legitimate results, we must look only to the most advanced degrees of art, either in the old world or the older settlements of America, and almost exclusively in our Nothern States.

When ancient Persia and Peru were happy gardens, long before the modern liberties of misery had been discovered by philosophy, their religious customs were carefully inwoven with agriculture, and the harmonies of human with the terra-solar forces. It is true that a one-sided study of these forces may learn from the tiger and the cobra the doctrine of the Thug, which is certainly as logical as that of our Christian filiation under the "paternal God." Saturn. who devoured his children, was a father much nearer akin to Nature such as she has been hitherto known to us.

But what we are to look for in religions is their social expediency. Thuggery may be logical: it is but a phase of the fashionable struggle for, in a doubt of, existence; but it is not viable for progress. Christian fraternity is a postulate that has to begin by declaring that "God's ways are not our ways," and by accepting all sorts of affliction as good moral training in direct contravention to common sense; but in so far as the phases of Christianity, however fantastic, are auspicious to associative progress, they are viable, and may one day be harmonized with natural or agricultural religion.

In order the better to appreciate the physiological value of that unconscious and unformalized religion which is born of the direct co-action of human with terra-solar forces, let us consider the generally healthful spirit of farmers and gardeners and mechanics, when not perverted by malaria, and compare it with the uneasy and discontented disposition of classes more advantaged by fortune, freer of movement, and more cultured in mind, but who lack that necessary and fundamental relation with the earth, through which the former earn their bread. Then think how it would be with them if, for such labor, mere gymnastics and allowance of provisions were substituted. What proletary, even, would accept subsistence on condition of walking in a treadmill or digging and covering up pits?

This article is an extract from the section Soil, in an unpublished work by me, entitled *The Living Earth*.

M. E. LAZARUS, M.D.

CREMATION.

Editors of The Index:—

In consequence of my having projected and founded the New York Cremation Society and the United States Cremation Company, many friends are urging me to do similar work in this city. As the time appears ripe for such a movement, I ask the courtesy of your columns to convey to your readers the request that I may be furnished with the names and addresses of those who are in favor of substituting incineration for inhumation as the method of disposing of the dead. After the receipt of these names, I will call a meeting to consider the best way of carrying into effect the promotion of such change.

JOHN STORER COBB.

HOTEL UNION, BOSTON, Dec. 20, 1883.

For *The Index*.

TRUSTING SORROW.

Is earth not sweeter yet,
Framed life-like in regret,
  Than when the soul could go
Where suns seemed ne'er to set
  On hearts untouched by woe?

Are hands not true as gold,
Lips dear not as of old,
  And dearer for the years
Which loss and doubt unfold
  Through indecisive tears?

Shall hearts now idly scorn
Hearts ours when we mourn,
  Lives ours when we need
Strong hopes to lift our worn
  And bleeding forms, and feed?

What voice dares falsely say
Life passed another way,
  When so much life remains,
And love and wisdom play
  The newly hallowed strains?

Who once hath by one hand
On grief's so sterile land
  Held cup of joy to man,
By so much hath love's band
  Spread to a wider span.

The old world still is here
To shame the one-time fear;
  The waters glisten still
Upon the shore, to cheer
  The homestead on the hill.

Oh! list as fits an ear
Tuned with the lordly sphere,
  Knowing that what seem far
Are like our dreamings near,
  If we but think they are.

HORACE L. TRAUBEL.

BOOK NOTICES.

MEMOIR OF CHARLES LOWE. By his wife, Martha Perry Lowe. Boston: Cupples, Upham & Co., Old Corner Bookstore. 1884. pp. 596. Price $1.75.

This book, "written at the request of his wisest friends, and encouraged by his brethren in the ministry," is the record of the life of a well-known Massachusetts Unitarian clergyman, originator and editor of the *Unitarian Review*. It shows him to have been a man of sincere, earnest nature and of a lovable disposition and manners. In the copious extracts from his journal and letters, we get transient glimpses of the inner life of many of his Unitarian brethren; and these memoirs will be of great interest to all who are interested in the history of Unitarianism in New England.

A ROUND DOZEN OF STORIES. By Susan Coolidge. Boston: Roberts Brothers.

Susan Coolidge has long since proved her ability to write such stories as children will delight to read and their parents will be pleased to read to them. There are too many children's books that appeal to the tastes of grown people at the children's expense; but Miss Coolidge does not seem to sin in this respect. If a story can by its substantial elements interest a child, and at the same time by its artistic grace make itself acceptable to older people, there can be no objection to this double quality. We find this in Miss Coolidge's stories. They are bright and tender, imaginative and fanciful. The "Round Dozen" here collected will sustain the writer's previous reputation.

IN the *North American Review* for January, the question of "Ecclesiastical Control in Utah" is ably discussed from opposite sides by John Taylor, the present official head of the Mormon Church, and Hon. Eli H. Murray, Governor of Utah. Senator John I. Mitchell writes of "The Tribulations of the American Dollar"; Rev. J. H. Rylance writes, in the interests of science and common sense, of "Theological Readjustments"; Senator H. W. Blair has an article on "Alcohol in Politics"; Gail Hamilton finishes her trenchant overhauling of Carlyle's deficiencies as a husband in part second of "The Day of Judgment"; Edward Self treats of "The Evils Incident to Immigration"; and "Bribery by Railway Passes" is made the subject of a discussion between Charles Aldrich and Judge N. M. Hubbard.

THE two articles in the *Popular Science Monthly* for January that will attract the most attention are "The Classical Question in Germany," by Prof. E. J. James, with which the number opens, and "Religious Retrospect and Prospect," by Herbert Spencer. Prof. James, having just returned from Germany, where he has investigated the subject, takes up the now famous "Berlin Report," so often quoted, to show that, according to the experience of the German universities, the classics afford a better preparation than the sciences, and shows that the report is one-sided and its conclusions unwarranted. His article throws a new and somewhat startling light on the policy of the higher education in the German Empire. Herbert Spencer's article is a clear and forcible statement of the ultimate ground that science must occupy on the relation of evolution to religion. The religious element is demonstrated to be indestructible in human nature; but, as it has hitherto undergone extensive development and purification in the long course of human unfolding, it is destined to be still further purified and exalted by the progress of science and enlargement of the human intellect, until all conflict disappears and religion and science are completely harmonized. Among the other contributions are "The Colonists of the Swiss Lakes," by F. A. Forel; "Female Education from a Medical Point of View," by T. S. Clouston, M.D.; "Defective Eye-sight," by Samuel Yorke At Lee; "Idiosyncrasy," by Prof. Grant Allen; and an editorial on "Church and State Function of Dead Languages." This able monthly commences the new year with a very strong number.

THE *Catholic World* for January gives unusual space to the story-teller's department, five of its nine contributed articles being stories, finished or serial. The remaining articles treat of the following subjects: "The Protestant Episcopal Convention," "The First Christmas Eve," "Reminiscences of Bethlehem," and the "Turk in Ireland."

"OUR LITTLE ONES" for January has these holiday contributions: "Santa Claus at Sea," "Christmas Carol," "Christmas Hymn," "Mysterious Santa Claus," "A Christmas Surprise," "The Morning Glory Pitcher," and "The Christmas Tree." These, with the accompanying illustrations, are but a small part of the *Little Ones*, treasury.

PERSONAL ITEMS.

REV. O. B. FROTHINGHAM and family will spend the winter in Washington, D.C.

SALMI MORSE, having made a failure and a fizzle of the Passion Play in New York, now makes a new bid for notoriety in the religious world by offering to give one hundred lectures over the country in reply to Col. Ingersoll for ten thousand dollars.

THE Life and Letters of Queen Victoria's daughter, the Princess Alice, recently published, show her as a very charming, amiable, and intellectual woman. She was the friend of David Friedrich Strauss, who dedicated to her his work on Voltaire. Louis Büchner was another of her friends. She was very charitable and the devoted friend of her own sex.

THE Providence *Press* of the 11th inst. gave the opinions of several of the professors of Brown University in regard to Matthew Arnold's lecture in that city on "Literature and Science." Prof. Bancroft, of the Department of Rhetoric, said Mr. Arnold did not represent the views of the majority of literary men. Prof. Appleton, of the Department of Chemistry, regretted Mr. Arnold's misrepresentation of science, as a friend both to the speaker and to literature. The lecturer's treatment of the subject was an unexpected disappointment. He belittled science in a way unworthy so great a *littérateur*. Prof. Blake said Mr. Arnold assumed a definition of literature which gives it everything and science nothing. Prof. Williams, of the Department of Modern Languages, expressed disappointment. Science and literature, he said, should not be divorced.

MRS. HARRIETTE R. SHATTUCK, of Malden, is receiving many complimentary testimonials to her efficiency as a public speaker on woman's suffrage, among which we note the following from the Cambridge *Tribune* anent a recent address given by her at a parlor meeting: "This fair lecturer has a widespread reputation throughout the United States on account of her many personal qualifications. Being easy of access, attractive in appearance, fluent, and possessed of a high degree of oratorical proficiency, she is well deserving of the cause in which she has unreservedly centred all her energies. Her address, though lengthy, was so ripe with interest, ease, and so free from the jagged, jarring sensation so commonly experienced by the audience of the ordinary speaker of the times that, apart from the subject under discussion, her delivery was really refreshing."

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. New Testament Studies of a Layman.* However the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,
by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

THE Toronto Secular Society has a reading-room at No. 9 Grand Opera House, which is open every evening and Sundays.

AN exchange sensibly remarks that "the Philadelphia jury, which awarded $10,000 damages to a girl crippled by jumping from a burning mill not properly provided with fire escapes, did more to insure compliance with the law in future than all the papers and all the officials could do."

THERE seems to be a general opinion among intelligent men in all branches of trade that the tariff question is now of paramount importance, and that, in the interests of business and the welfare of the general public, the revenue should be reduced to the legitimate needs of the country.

SAYS the Hamilton (Ont.) *Tribune:* "The anti-tithe movement is gaining strength in rural England; and the day is near when a state-pampered clergyman will not be able in the name of Christianity to compel a man to contribute toward a church which he does not attend. Forced tithe sales, accompanied by riotous proceedings, are of almost weekly occurrence. The existence of a State Church is an infamy which England will not tolerate many years longer."

THE Society under the direction of Mr. Babcock, which meets at Paine Hall, has now nearly three hundred members. Independent and free in its religion and active in its efforts for the enjoyment and culture of the young, it deserves generous support from the liberal public. At the late Santa Claus celebration, Mr. Babcock, whose services at present are gratuitous, was presented with one hundred dollars by the board of energetic directors, who are making ready also for a patriotic observance of Washington's Birthday at Odd Fellows' Hall. As soon as a good instructor can be obtained, a large class of adult persons will be formed.

THERE was the old-time clarion ring in the voice of the patriarch, Wendell Phillips, at the Harriet Martineau meeting, when he said that in 1835, when she was invited to attend a secret meeting of the abolitionists in this city, and "the only hall in which they were allowed to hold that meeting—veil your faces, Christians!—was one owned by an *infidel*, though," continued Mr. Phillips, "the infidelity of that day is the Christianity of to-day!" It was the hall of Abner Kneeland, the originator of the *Investigator*, who was soon after imprisoned for blasphemy by reason of careless punctuation, which was the only place in Boston where a word for the enslaved black man could then be freely spoken.

UNABLE to prevent the opening on Sunday of the Bartholdi Art Loan Exhibition, the "Law and Order" Society in New York, composed of ministers and church members, notified the managers that, if catalogues were sold, complaint would be made against them, and they would be prosecuted under the penal code. No catalogues were sold; but a large number were distributed about the rooms, with a note on the cover of each asking visitors not to take it away. Thirty-five hundred attended the first Sunday, at the reduced admission price of twenty-five cents; and the papers state that not a catalogue, at the close of the day, was missing. What shall we say of an attempt to close an art gallery on Sunday against people like these?

THE Boston correspondent of the *Christian Union* writes: "I have inquired of clergymen and of laymen whether they find now a marked distinction between those who are in church and those who are out, in their congregations, on the score of moral life. Of the respectable portions of the congregations they say they cannot. I do not think it goes far in the business circles of Boston now simply to say of a man, 'He belongs to the Church.' Not that there are not as true and pure men in churches as ever lived, but the popular distinction on ethical lines is not drawn parallel with church lines.... Has not the theory of reconciliation, as it has been preached, had to do with matters in the air more than with the every-day matters on earth? Has there not been a great deal of vague and impassioned preaching on the spiritual life as distinct from the ethical life?"

THE ceremonies attendant upon the unveiling of the statue of Harriet Martineau in the Old South Church in this city, on Wednesday afternoon of last week, were very appropriate and impressive. Mrs. Livermore presided, and made the opening address. Wm. Lloyd Garrison, the son of the old anti-slavery agitator, gave some interesting reminiscences of Harriet Martineau's visit to this city in 1835, at the time the senior Garrison was mobbed for his anti-slavery work. An address from Wendell Phillips closed the speaking. The statue was unveiled before the addresses were made, and the audience sat for five minutes in reverential yet critical silence, then a unanimous burst of applause testified to the hearty approval by the audience of the sculptress' (Miss Anne Whitney's) success in giving a life-like and characteristic expression to the marble figure. The figure is somewhat larger than life-size, and is seated in a straight-backed garden chair, such as Miss Martineau, it is said, habitually occupied on a terrace at her home in Ambleside. The position is dignified, the expression of the face thoughtful, and the statue bears a close resemblance to the noble woman it commemorates. The money for the statue has been contributed by friends in New England, New York, England, and Scotland. The final disposition of it is as yet unknown; but, for the present, it will remain in the Old South.

THE New York *Herald* says that the Republican party has outlived its original purpose; that the issues with which it was its mission to deal have been settled, and have gone into history; that it shows no disposition to meet the issues of the present as it once met and successfully dealt with those of the past; and that its work is done. The Democratic party, the *Herald* declares, has been, since the Republicans have been in power, but a negative party, with no higher purpose than to oppose the Republican policy; that, as one party is still advocating dead issues, the other is simply opposing dead issues; and that the contest has degenerated to a scramble for office. It is time, therefore, it is claimed, for the formation of a *new* party, that will deal with the question that looms above all others; namely, that of revenue reform. The revenue raised is, it is affirmed, far beyond the needs of the government, and goes to swell an enormous surplus, which is not simply useless, but is mischievous, being a continual encouragement of extravagance and corruption; that the abnormally rapid payment of the public debt and calling in of the government bonds threatens banks, saving institutions, trust companies, and commercial interests in general, affecting the price of food, clothing, and all the necessaries of life, and the domestic welfare and prosperity of the country. The article the gist of which we have given concludes as follows: "A part of the Democratic party and a part of the Republican party are in favor of protection. These two elements ought to combine, and frankly declare for protection. A great many Republicans, a large number of Democrats, and a vast body of independent voters are strongly in favor of revenue reform. Let these follow the leaders who represent their principles. Let two parties thus form on the tariff question. Let this be made the uppermost issue in the legislation of the coming session of Congress. Let each party go before the country next year squarely and uncompromisingly on this issue. The people will then have an opportunity to choose between the two. If they want protection, they will vote the protection ticket. If they believe that the welfare of the country demands revenue reform, they will elect the men who represent that principle."

MODERN CIVILIZATION AND CHRISTIANITY.

That the Christian religion has been one of the important promoters of human progress may be readily and rightfully conceded. And this we say, notwithstanding the moral corruptions which have crept into the Christian Church and sometimes been tolerated in it against its better conscience, and notwithstanding the long list of crimes against mental liberty which it has committed in the name of conscience. In spite of these dark blots on its history, we willingly admit that the Christian Church as a whole has been the conservator of morals; and that, after the collapse of the Roman Empire, it performed the very great service, by keeping its own organization intact, of furnishing both a governmental and social bond for the shattered States and the undisciplined barbarian tribes of Europe. In this way, doubtless, even better than it knew, it helped to lay the foundations of modern civilization; though, when the real forces of the new era began to appear, it resisted and tried in vain to destroy them.

But, when zealous Christian writers and preachers make the boastful claim, as they not infrequently do, that Christianity is the sole parent of modern civilization, their zeal evidently gets the better of their discretion. The extravagance of such a claim is well parodied by Dr. Monroe, editor of the *Iron-Clad Age*, in an article commenting on the newspaper reports of sermons recently preached on Luther and the Protestant Reformation. Reformed Christianity, according to these preachers, says Dr. Monroe, has brought everything that the modern world prizes. "Caveats were filed for whatever of value the world has. The world owes everything to Christianity. Painting, printing, all improvements in the science of war, the art of killing, the art of distilling, the discovery of America, of tobacco, of the north pole, Stanley's discoveries in Africa, sewing-machines, needle-guns, revolvers, railroads, telegraphs, telephones, lightning-rods, reapers, mowers, Egyptian mummies, and Keeley motors,—all owe their existence to our Christian civilization. And to these must be added gunpowder, gun-cotton, nitro-glycerine, dynamite, and Siberian dungeons; also the gallows and the guillotine. To Christian progress are we indebted for all. But for religion, people would still go naked and be living on roots and barks; men would still be dwellers in caves, and be killing each other with the slings and arrows of outrageous ignorance, instead of the more swiftly destructive Parrot guns, pocket artillery, and Cincinnati whiskey. But for the Christian religion, we should never have gotten the Jews out of Spain, never have gotten rid of the turbulent Albigenses, nor the plethora of population that the Massacre of St. Bartholomew's thinned out. . . . But for the Reformation, we should still be navigating the oceans in dug-outs, dancing to the music of rattling gourds, and devouring our ground-hogs with the hides on."

To some of our readers, these extracts may seem a little rough; but the satire in them is as well deserved as it is witty. The claim that Christianity produced modern civilization becomes, indeed, sometimes simply ridiculous in its extravagance and ridicule is then its proper answer. We once heard, for instance, an Orthodox preacher—and he was a man not without the usual denominational learning—make the statement that out of the Bible had come everything good in modern life, —our homes and their comforts, commerce, discoveries in the arts, enterprise, and science, as well as all the schools, philanthropies, and charities Except that he did not go so minutely into particulars, his claim was hardly exceeded in extravagance by Dr. Monroe's parody. Such Falstaffian boasting we have not supposed, however, would be countenanced by the more judicious and scholarly of Orthodox writers. Some of them, we imagined, have felt humiliated by arguments of this kind from their brethren. But here comes the *Independent* in its Christmas issue, breaking out in a rhapsody which almost outdoes Dr. Monroe. We quote here the main portion of its short leading editorial: "Happy were those simple shepherds who first heard the news of peace on earth, good will to men. But they only blindly knew that a better age had dawned on the earth. We know what the new age has brought to man. The helplessness of Jew and Roman, sinking into the despair of the Sadducee and the Epicurean, has passed away; and the world is full of faith and joy. . . . The world now sees in Jesus its Saviour from death and sin. That first Christmas day is the turning-point in the world's history. Philosophy and civilization had done their utmost, and had developed only wealth, poverty, materialism, and despair. . . . What has renovated the earth? Nothing but Christianity. What gives hope to the living and the dying? Nothing but Christianity. What is beating down oppressions, overthrowing tyrannies, sanctifying governments, uplifting democracies, sweeping away superstitions, disseminating education, magnifying justice and love? Nothing but Christianity. What makes every morn glow brighter, every sun shine clearer, every century more grand? Only Christianity."

We are quite sure that writing like this does not help the cause of the Christian religion. If the *Independent* had added that the rapid spread of Christianity accounts for the recent sunset-glows, the assertion would hardly have been more absurdly extravagant than is the general tenor of its boast of what Christianity has done and is doing. One would suppose that the millennium were clearly in sight, if, indeed, it were not already inaugurated, to justify such claims. But what are the facts? Are not the social problems that confront Christendom to-day quite as formidable and quite as perplexing as were any that confronted the Judean and Roman world nineteen centuries ago? Is the problem of "wealth" and "poverty" settled? If so, how happens it that there is such an increasing discontent among the laboring classes, and that in the minds of many thoughtful people there is a growing apprehension of trouble ahead, because of the widening gulf between the rich and the poor, especially in the great "Christian" city of New York? Not far from the *Independent's* office in that city there is printed a newspaper, for the express purpose of showing up the wrong and suffering that ensue from a form of social organization which permits certain "Christians" to amass "wealth" by the hundred millions, while other "Christians," close by their side, are pressed down by "poverty" to the verge of starvation, and to a very tangible kind of "materialism and despair." And *is* "the world full of faith and joy"? The blackened columns of reports of vice and crime in the daily press tell a different story. And does "the world" yet "see in Jesus its Saviour"? The missionaries do not say so. And, for every pagan they report "converted," the home churches might have to report ten Christians "backsliding" into simple natural religion or into agnosticism. Something may be pardoned to the cheery feeling of the Christmas season, but we submit that the *Independent* has drawn altogether too largely upon its imagination for its facts. And, if it were true that Christianity is the parent of modern civilization, then it would follow, too, that Christianity must father the evils of modern civilization—of which there are not a few—as well as its good things.

But it cannot be admitted that Christianity, as an organized religion, has done or is doing the good things which the *Independent* attributes to it in its final paragraph. What is "oppressing" the people of Russia to-day? Christianity, as organized in the powerful Greek Church. What was the bulwark of slavery in the United States? The Christian Church. What "governments" have waged the most destructive wars in the present century? Christian governments. What has opposed the modern rising spirit of "democracy"? The great Catholic branch of the Christian Church. Where, within the era of modern civilization, does history show that "superstitions" have been adhered to longest? In Christian churches. What power has sought to restrict the spread of science and to narrow "education" to sectarian standards? The ecclesiastical power of Christianity. Where have some of the most distinguished philanthropists of modern times been obliged to plant themselves, in order to proclaim and execute their works of "justice and love"? *Outside* of the Christian Church.

In truth, modern civilization has found Christianity standing in its way as a part of the thing to be reformed; and, to-day, Christianity owes quite as much to modern civilization as modern civilization owes to Christianity. The three main forces which produced modern civilization were the reawakening of the human mind in Europe in the fourteenth century, the temper of the Anglo-Saxon brain with its inherent gravitation to independence and self-assertion, and the spirit of science. With neither of these forces did Christianity readily assimilate. It contested them. But now that they bid fair to carry the day, now that under their sway the creeds of the churches are being wiped out, and the old standards of ecclesiastical authority are being overturned, and time-honored ordinances are giving way to the demands of humanity, behold, these same churches, touched by the modern spirit, come forward and cry, "See what a great work we have accomplished!"

WILLIAM J. POTTER.

A GLANCE AT REMEDIES.

There are about us at this time the symptoms of a financial condition which is sure to result in material distress and moral agitation. It is natural to suppose that every social organization that has ever existed has in great measure grown out of the efforts of men to satisfy the needs of their nature, and has therefore some power to satisfy such needs. Hence there are times when each form of society seems prosperous, and no one then stops long to inquire whether there be weaknesses and misfitting parts in the social machine which are slowly preparing for disaster; but, when disaster comes, questions are on every tongue and theories seethe in every brain. Much wild thinking and frantic declaiming is done at such hours, but even fanaticism is a school where the student may learn to choose and reject till he has grasped the secret of the future.

We are now in an uncomfortable state, pinched here and griped there like Caliban by forces that we do not see, yet with which we must grapple for life. It is a serious struggle to many: to some, it is tragic. It is fearful to think of the increase of suffering which those times known as hard times inflict on creatures already much burdened. It is an hour to search out causes and listen to the proposing of remedies, those called radical and those called conservative.

Henry George has an article on "Over-production" in the *North American Review*. It is com-

Digitized by Google

mon to refer our present financial trouble to over-production. Manufacturers are closing and preparing to close their mills in this busy New England, in order to lessen the product of certain classes of goods, hoping thus to increase the demand for them.

There can be no doubt that there have been times when too many goods of some particular kind were made to meet the wants of the market. A clever manufacturer of cotton goods once told us that a branch of his business had been seriously affected by a sudden change of fashion which stopped men from wearing colored shirts. Is it anything analogous to this from which manufacturers are now suffering? Are cotton mills closing, because all over the world the vast peoples have more cotton clothing than they want? Or are they closing, because all over the world vast numbers of people are in some way hindered from producing, or, if they have produced, from bringing to market goods which they can exchange for the cotton cloths, which in New England are filling storehouses, weighing on manufacturers' minds, and serving as a barrier between the laborer and the food and fuel that he needs to keep his heart cheerful and his body strong for the healthful maintenance of himself and his order?

Henry George thinks that the cause of the present difficulty is under-production somewhere, and the hindrance in some way of free competition in the market; and his closing paragraphs suggest the remedy which is becoming associated with his name. It may be that the change in the system of land tenure referred to in this article, and which he has elsewhere ably argued, which would make the people in their corporate capacity as the State the sole land-holder, would not be so desirable as he thinks. It may be that, if tried, his system would cause some painful pressure on some spot in human nature which he has not divined. Yet it is only by having the courage to risk making a mistake that men and nations move forward. Many Protestants, even in this year of Luther's celebration, openly or in secret confess that Protestantism has not proved wholly adequate to the need of man; yet who among them wishes that Martin Luther had forseen the inadequacy, and had not dared to challenge the papacy? Should we be afraid even to consider Henry George because of his radicalism, because he strikes at Roman jurisprudence in regard to land, as Luther struck at the ecclesiasticism of a later Rome?

M. de Laveleye says: "There is a marked contrast between the positions of men's minds at the end of this century and at the end of the last. Then, men of all classes were eager for reform and full of hope.... Now, also, we speak of reforms; but it is with a gloomy heart, for we have but a feeble trust in the final efficacy of our endeavors.... We thought we had but the difficulties of the political order to solve, and now the social question arises with its gloomy abysses." And again: "Economists reiterate that all property is the result of labor; and yet as before, under the empire of existing institutions, those who labor have no property, and with difficulty gain the bare means of existence, while those who do not labor live in opulence and own the soil.... The destiny of modern democracies is already written in the history of ancient democracies. It was the struggle between the rich and the poor which destroyed them, just as it will destroy modern societies, unless they guard against it."

If we are entering upon even a temporary era of money distress, it almost goes without saying that we are also entering upon renewed agitation of the labor question, that Banquo spectre, which will not be mistaken by any anointed eyes for a mediæval ghost of Duncan which should no more "be thought on." It is a fresh ghost, specially appointed to our modern feast. The old selfish evil in the human heart, which bred old wrongs and old errors in former eras, has begotten of its carnal embrace this new phantom; but new it is, and we have not yet found the spell by which to lay it. Justice? Yes, but justice how expressed and embodied in what institutions?

Prof. Sumner offers his remedy in his very clever book on *What Social Classes owe Each Other*,—a sort of "hands off" theory, brilliant advice to each man to touch no one else, and let no one touch him, but to stand as completely individualized as possible, bolt upright, amid a complicated civilization. There is no bond between classes, only some individual duty to be kind to another, lest each one some time be in the other's sad predicament,—a duty based thus on a sort of selfishness.

Prof. Ely has written a history of socialism, showing how entirely modern this labor question is, so modern that we may not indulge ourselves with dreaming in some moment of ease that the thing is settled. It is only begun; and, however wrong-headed may seem many of the theories advanced on either side, it has to do with our whole social structure. Opposed to Prof. Sumner are the Christian socialists, who maintain the altruistic theory of life, and would draw the social bond closer. They think that, as men have always been found willing to die for their country, it is not impossible to hope they may yet be morally educated, so that they would be willing to live for the good of their people. Others, like Henry George and M. de Laveleye, would gladly strengthen the tie that binds men to their native soil by giving each one a direct interest in its ownership. Then there is the large body of those who, when they think about the matter at all, believe that the present organization of society, superior to all past organizations, will prove elastic enough to adapt itself to whatever strain is put upon it. But many of those who thus think have not reflected sufficiently upon history to consider how much superior to past social forms ours must be, to insure such a result. And finally comes the formidable array of those who believe that destruction is to supersede growth, and our next step is to lead us out of the pleasant, prosperous sunshine that lights up familiar paths into the darkness and horror of revolution. Must not all these ideas be even more than glanced at?

L. C. WYMAN.

THE PAPACY.

Since the Latin nations have sunk to second-rate and third-rate powers in the political scale, the papacy finds itself without a single first-class nation to back it and give it countenance; and yet it abates none of its arrogance and pretentiousness. It is thus like a decayed family, which cannot forget its lost importance. Thus, the papacy is discussing the propriety of having its canon law recognized by this free secular government, and of sending a papal nuncio to Washington. The four great nationalities of to-day are Germany, Great Britain, the United States, and Russia. Not but that France is still a leader of civilization; but it is in virtue of her spiritually emancipated, liberal, de-Romanized class that she is so, in virtue of her great free-thoughted writers, thinkers, and statesmen, such as Littré, Gambetta, Renan, Taine, etc., that she is so. In Russia, Romanism finds itself overshadowed in the presence of a puissant State Church, which is mistress of the situation; namely, the Greek, Byzantine, or Eastern, Church, which, as an organized superstition, is even older than Romanism itself. In all the four imperial nationalities which I have enumerated, the *soi-disant* Catholic Church is an alien social element or factor, except in the southern part of Germany. It is an alien element, a hostile encampment within their borders, which not only takes no pride in their mighty growth and predominance, but which is constantly decrying their institutions; and, by way of return for the hospitality and tolerance which it enjoys at the hands of their governments and people, is waging a more or less open war against them,—against German unity, for instance, and the common-school system of education here in the United States, by undermining which it sees that it can effectually undermine popular self-government here, which is only possible through the prevalence of popular intelligence.

In Russia, the papacy has behind it the insurrectionary and hopelessly factious Poles, as it has behind it in the vast English-speaking world the Irish of Western and Southern Ireland,—a people who still remain at a primitive point of social and moral development, and who have kept themselves abjectly poor and ignorant and in a state of chronic rebellion and conspiracy against free Anglo-Saxon civilization in both hemispheres, and in all quarters of the world wherever Anglo-Saxon colonization has gone, in order to fight the battles of the papacy against that civilization. And still the fight goes on, but with symptoms of a final crisis not far ahead.

Germany, Russia, Great Britain, and the United States are modern countries. Their civilization is not Roman at all. Russia is Slavonic; and it is the proud boast of the Slav that he stands on the threshold of morning,—that is, by comparison with the maturer nations of the West at the beginning of his racial career. The Germany that is worthy to be called by the name is Northern Germany, the fatherland of Luther and Frederic the Great. The Great Britain that is truly such is not the Great Britain of its privileged orders and hereditary landlords, who are rapidly reverting to Romanism, where they belong. It is not the Great Britain of queen, nobility, and the Established Church, but the Great Britain of John Bright, Gladstone, and the liberal element of the British population which they represent. It is the Great Britain which Hampden and Cromwell and Milton represented long ago—from whose loins Puritan New England and American freedom issued—that deserves the name and has a future in the modern world.

These four imperial and earth-dominating nationalities such as I have described can, from the nature of the case, afford no permanent *nidus* for Romanism in its hour of extremity. Such a guest can have no permanent abiding-place in their borders, where it only exists in a state of more or less flagrant conflict with the political and social environment in which it finds a temporary refuge from the storms of fate.

And yet it is a singular historic fact that the papacy would hardly have been in existence to-day, had it not been for the intervention of Prussia, England, and Russia in its behalf after the battle of Waterloo. The above three non-Catholic powers bore back on the points of their bayonets, as it were, to Rome and to his throne in the Vatican poor old Pius VII., the pope of the period, whom Napoleon I. had dragged about for years as a captive bound to his chariot wheels, to be used whenever his projects required papal sanction. The *status quo*, as it existed before the French Revolution and the great Corsican chief, was thus restored by the re-enthronement of the pope. It was the intention of the first, or great, Napoleon, had his star continued in the ascendant, to have absorbed the papacy as well as the functions of civil Cæsar

Digitized by Google

into himself, and thus to have reigned as Pope-Emperor. But Waterloo quieted him and his exorbitant ambition, as Sedan, later along, quieted Napoleon the Little, as Victor Hugo nicknamed Napoleon III.

The fall of Napoleonic Cæsarism meant the fall also of Latin high-priestism. For it is now moribund, being kept in a semi-animate state of existence by the sufferance of the hereditary personal rulers of Western Europe, because they feel that they are embarked in the same boat with the pope, and must suffer wreck finally with him. For the pope is undoubtedly the incarnation and personification of the old social and political order in Europe, the anointed head and front of the *régime* of kings, emperors, and nobilities, which is nearing more and more a revolutionary Niagara, or, in Byronic phrase, "a hell of waters," in which it must at last disappear for good.

Could the Liberals of France, Italy, and Spain have their way, or could such Liberals as Gambetta, Garibaldi, *et id omne genus*, have had their way, not one stone would be left upon another of the Leonine City. For French, Italian, and Spanish Liberals feel that their countries have been dragged down and humiliated by the papacy, and relegated to the rear in the march of modern civilization. Thus, they are bitter against it with a sense of personal and national grievance. Spain exhausted herself in her days of power, in the fifteenth and sixteenth centuries, in a fierce and bloody endeavor to make the Roman Church truly universal. For her pains and her infernal *autos-da fé*, she is now existing in a semi-civilized state of national inanition and decrepitude beyond the barrier of the Pyrenees, more Oriental than European. The eyes of all intelligent and modernized Italians are open to the fact that Italy is not now a foremost nation, because of the papacy. So leading French thinkers acknowledge that France's repudiation of the spiritual emancipation of Luther in the fifteenth century was the cause of her present decline and of all her woes of the last hundred years.

Meantime, what shall be said of such human anachronisms and phenomena as Messrs. Newman, Manning, and Capel, the famous Englishmen who have not only reverted to Romanism, but become its ablest lights, champions, and propagandists with tongue and pen? Cases like theirs are not without their historic parallels, when the fascinating paganism of Greece was evidently "going" before the insidious advance of the *then* new Christian religion. Such profound scholars and lovers of the splendid Grecian past as the Emperor Julian and the rhetorician Libanius, and others of like intellectual power, culture, and proclivities, rallied to the support of the old religion, and made a final desperate effort for its preservation. But their effort was vain and futile, for they were fighting against the *Zeitgeist* and the course of events. The Galilean faith was in the air of the Roman world, as the democratic, scientific, rational modern spirit is everywhere in the air of the world of to-day. Thus, Messrs. Manning, Newman, and Capel are merely eccentrics, such as a time of radical change and crisis never fails to bring to the front.

Before closing, let it be said that the student of the social and political phenomena of to-day in Western Europe and the United States is sure to find out early in his investigations that the implacable spirit of decaying Romanism is, through the presence everywhere of more or less of its benighted and reactionary adherents, the one great and chief obstruction to the perfect realization of a law-regulated, popular liberty and self-government and the spread of popular intelligence in the regions indicated. In particular, the scandals of municipal government in our great, heterogeneous American cities are due almost solely to this great disturbing element in modern civilization, with which it refuses to get into line itself or to suffer its blinded adherents to do so. Thus, it will not allow itself to be let alone; and thus, to clear the atmosphere of the modern world of its miasma, there must occur sooner or later a day of crisis, in which its priesthood and temples will meet with a violent overthrow. For it is true, as the French philosopher Cousin affirmed, that a new social, political, and moral era cannot be fully realized without violence and bloodshed. B. W. BALL.

THE GOSPEL OF DEVILS.

My little grand-daughter Elizabeth had been playing with a small girl in the neighborhood,—walking their dolls across the green, playing "go to see," etc.,—when a sudden stop seemed put to their amusement. The air was soft, the twilight most lovely. The whole west was draped in gold and purple, glinting across the lake in opaline hues, where were reflected also every tree and shrub upon the bank, as

> "The swan on still St. Mary's Lake
> Floats double, swan and shadow."

There was a low hum of the insect tribe, invaded by the bat skimming among them. The undertone of the great sea in the distance came up, and mingled itself with the faint stir of forest trees in a soft, soothing monotone.

I sat in my library, enjoying these sweet voices of nature, when to my surprise the two children entered, pale and silent, and seated themselves. I left them to explain matters in their own way and in their own time, till, perceiving Carrie on the verge of tears, I asked:—

"Is anything the matter, children?"

At this, our little neighbor gave way to an hysteric burst of tears, which I found difficult to soothe. She seemed in great terror, and trembled violently.

My grand-daughter, of the same age, rebuked her with a grim "Shut up!" as children will, and then proceeded to explain the difficulty by asking:—

"Mamma, do you think Carrie is a wicked girl?"

"I should be very sorry to think that of her? Why do you ask?"

"Do you think I am a wicked girl?"

"By no means: sometimes a little irritable, but, on the whole, an exceedingly good child."

"Well, then, mamma," and her lip quivered, "why should the wicked man come to me, and chatter at me?"

"It was the devil,—the real devil," cried Carrie, with a fresh burst of sobs and tears.

"Oh, shut up," cried her young friend, "and don't use wicked words."

The case was growing interesting by this time, and I called them both to my knee, and asked for more information.

"What makes you think it was the wicked man or devil? How did he look?"

"I know it was the bad man," both cried. "He had great staring eyes and such a big head; and he showed his teeth, and gritted them. And we ran off as fast as we could, for fear he would catch us."

"I do not understand," I said, "why anything bad should be round in such a lovely twilight as this is. The birds are still, to be sure; but all the katydids and crickets and grasshoppers are singing a pretty song, and the bats are taking their play in the dusky light. If there is a devil"—

"Oh, madam, there are devils! And they go about with pitchforks to take off bad children."

"Did this one that you saw have a pitchfork?"

"I didn't see any, but his great eyes and big teeth were full as bad."

"Well, let us go out, and see if I can see him," I said, and took a hand of each, and sallied out in pursuit of the devil. Carrie rather held back; but Elizabeth, not being so firmly fixed in diabolic belief, went forward quite bravely. We went across the lawn to the fence by the side of the barn.

"There he is,—there he is," the children whispered, drawing back.

Sure enough, there he was in the shape of a large, beautiful owl, soft brown and rose-tinted white, the delicate feathers fluffed out, suggesting the line of Keats:—

> "The owl, for all his feathers, was a-cold."

Thus it is that superstition transforms what children are unfamiliar with into objects of dread to them, and thus do parents weaken the force of moral beauty by enforcing obedience to right through the element of terror instead of love, making them to feel that all the sweet mysteries of nature are shrouded in gloom, that behind all this aspect of lovely bloom and tranquil star-light rove nocturnal imps, ready to pounce upon their innocent heads and snatch them away to darkness and unknown horrors. It is no wonder that men are cowards, trained as they are by fear, believing themselves subject to powers malign, vindictive, and pernicious, always on the alert to entrap and mislead them. This belief in a dual ruler, even more potent than its opposite one of beneficence, becomes the apology for a thousand enormities. Men think they are beset by an irresistible influence, and yield to crime, tempted thereto "by the devil."

I remember, after the cruel assassination of President Lincoln, there was, for a space of time represented in the shop windows a likeness of Wilkes Booth, behind whom was a terrible demon, blowing upon the back of his head a stream of sulphurous, red-hot breath. Now, a man, thus impelled, would cease to be a criminal: he would simply be one *sore beset*, urged on by an irresistible power of evil, against whom reason and conscience struggle in vain, and the simple "Get thee behind me, Satan!" of a morally free man would be no more than a straw with which to dam up Niagara.

While the popular belief is *that a man is surrounded* by these supernatural, malignant tempters to crime, he can always find an excuse for wrong, doing. Banish the whole from the sphere of educational and pulpit teaching, and then every man, woman, and child would learn that every act of malignity and the slightest dereliction from duty was testimony to his own bad blood and lack of a high moral sense. There is so much less of what is humanly manful about them. We should have less of this snivelling Sunday-school teaching and these goody-good story books and novels fraternizing with crime. The plausible casuistry of the Eugene Arams of the race would stand rebuked before the innate majesty of a better morality.

ELIZABETH OAKES SMITH.

BLUE POINT, L.I., Dec. 14, 1883.

THE UNVEILING OF THE HARRIET MARTINEAU STATUE.

There are those to day who, perceiving clearly the pressing need of earnest, concerted action on the part of the world's workers to overcome, abate, or ameliorate the abounding ignorance and misery incident to humanity, and feeling keenly the apparent superficiality and apathy of the majority of those who pose as, and are really capable of being, helpers to others less favorably situated, are often sorrowfully angered against the age in which they live, and grievously discouraged from any

Digitized by Google

hope of progress being made in the work they have set themselves to do. Such, even if in hopeless fashion they doggedly work on companionless, as they imagine, are apt to sink into a pessimism which embitters their spirit and mars their usefulness by making their chosen work a drudgery instead of, as it should be, an abiding joy.

But occasionally an event occurs, of no great apparent moment in itself, which yet effectually serves as a mark of advance, a milestone in the onward path showing that progress has really been made; that, however slowly accomplished, work has been done; that the world is advancing and not retrograding in knowledge and justice. Such an event was that which occurred last week in the public unveiling of the statue of Harriet Martineau on the 26th of December in the Old South Church in this city.

To be sure, the daily press, which reported very finely and pretty fully the proceeding on that occasion, did not look upon it in that light. Very likely, the majority of the ladies and gentlemen who were present gave no thought to that aspect of the large and decorous gathering. Indeed, it is barely possible that the three distinguished speakers, who paid eloquent tribute to the woman thus immortalized, may not have caught the full purport of the sincere homage to genuine worth so earnestly offered by them; and (though it seems impossible) it may be that even the talented artist who so wonderfully caught and embodied in marble the true spirit of the sister woman, whom she must have fully understood before she could thus embody, did not realize all that her statue and its cordial reception by the people of Boston implied.

But to the thousands of isolated, unrecognized, disheartened, yet unfaltering workers for humanity in this and other lands, this spontaneous, popular exhibition of reverential, individual interest in this alien, undevout, heretical, strong-minded, unhandsome, and plain-spoken woman meant a thousandfold more than a mere tribute to the merits of the one individual presumed to be thus honored. It attested that, in spite of the lethargic surface aspect of society in regard to the humanitarian work so earnestly demanded, there is a strong undercurrent of appreciation of the needs and of sympathy with the progressive tendencies of the age. The message of that large and quietly enthusiastic gathering in the Old South Church to these waiting thinkers was a many-sided one, and full of hope and courage. I venture to point out a few of its lessons.

Deep in the hearts of the people, though unspoken, is a fine and just appreciation of sincerity of purpose as exhibited by this woman in her unswerving loyalty to whatever she held to be true. "Feeling, as I do, daily comfort in the knowledge of some things which I should once have shrunk from supposing," she writes to Henry Atkinson, "it would be weak—as foolish as cowardly—ever again to shrink from knowing anything that is true, or to have any preferences whatever among unascertained matters of speculation or fact." Mrs. Livermore, who appropriately presided at the unveiling ceremonies, declared of her that "she had an unpurchasable love of moral freedom and an uncompromising adherence to the inner voice of her being. She forgave no sham in others, as she allowed none in herself; nor could she sympathize with that politic timidity which palters and equivocates in the face of wrong and injustice from considerations of self and safety." "Magnificent woman!" apostrophized the "silver-tongued" Wendell Phillips on that occasion, "you spoke alone, when you saw the truth, in the face of the highest authority." "Never," said of her the son and namesake of Lloyd Garrison, "were flesh and blood less influenced by praise or censure." Thus through her are all loyal adherents of truth encouraged and honored.

That here in conservative Boston, once the hotbed of that narrow Know-nothingism which saw nothing worthy, creditable, or desirable outside of America, and little outside of New England, a statue of an undoubted Englishwoman could be so cordially greeted and fraternally welcomed, spoke volumes in regard to the growth of that grander sentiment of wider world citizenship embodied in the term "the brotherhood of man." "The world's great countrywoman" she is called by the committee having the statue in charge; and Mrs. Livermore, in her opening address, said, "Harriet Martineau belongs not alone to England, but to all English-speaking people, to the whole world, since right and justice and truth are not of any nationality, but are of God, and are ultimately to be incorporated into all lives,—individual and national." "No single nation," exclaimed the younger Garrison, "shall claim you wholly; for, with Lafayette, Mazzini, and George Thompson, your country is the world, your countrymen all mankind." "I ask you, Americans," said Phillips, "to welcome to Boston the statue of an abolitionist!"

That one who was a pronounced agnostic, not blatant, not coarse, but only true to her strongest intellectual convictions, should be thus heartily done justice to, by those who strongly dissent from her religious conclusions, shows an encouraging advance in that genuine liberalism so essential to all progress and breadth of thought. Harriet Martineau was as outspoken in her scepticism as in everything else. "There is no theory of a God, of an Author of Nature, of an origin of the universe," she wrote, "which is not utterly repugnant to my faculties, which is not (to my feelings) so irreverent as to make me blush, so misleading as to make me mourn. I can now hardly believe that it was I who once read Milton with scarcely any recoil from the theology, or Paley's *Natural Theology* with pleasure at the Mechanic-God he thought he was recommending to the admiration of his readers." And yet, of the woman who dared say this, Mrs. Livermore, who doubtless has no sympathy with her in her religious views, had the courage to declare that "she was so nobly planned that she towered up into the clear air and commanding heights of pure reason, one among a million." "I bow with reverence," said Mr. Garrison, "to that exalted probity and that veracious faith which hesitated not to proclaim a change of theological belief which was to make her an outcast from Christian sects."

That the woman thus apotheosized was a thoroughly brave and independent thinker gives new encouragement to those who to-day, in spite of social ostracism, dare to think for themselves, and express their convictions, untrammelled by authority or precedent; for some time, it may be, justice will be done to them as to-day it is done to her. Says the writer of the committee report, "All this long lifetime of devoted service has been given, in the earlier stages of progress, to enterprises which were met, as such undertakings always are, with strenuous opposition on the part of those they were to benefit, to be hailed afterward with thanks and blessings through all coming time." "Genius and intellect are worthy of perpetuation in bronze and marble," said Mr. Garrison; "but Miss Martineau typifies what is most often divorced from both,—the highest moral courage to make conviction paramount to all else."

And, above all, to women does the unveiling of this statue and honoring of the memory of Harriet Martineau bring gladness and promise. The subject of all this praise, deemed worthy of being chiselled in marble, and welcomed by the best of Boston's intellect, birth, and culture, was an earnest and outspoken believer in woman's capacity, progressiveness, and political as well as all other "rights"; and that the sculptor whose genius wrought so noble a conception of a grand woman is also a woman, and that the welcoming of the statue should be confided mainly to another of the sex, are facts replete with promise of the speedy dawning of the day when all women shall be recognized as Harriet Martineau wished them to be recognized,—at their true individual worth, and, independent of sex, given equal chances, equal encouragement, and equal privileges with men in all that pertains to their happiness and well-being. Miss Martineau did not fear boldly to contend for her rights as a woman, even at a time when so to do brought much more of intellectual obloquy and social ostracism than are possible to-day. "I declare," she says, in the second volume of *Society in America*, published in 1836, "that whatever obedience I yield to the laws of the society in which I live is a matter between, not the community and myself, but my judgment and my will. Any punishment inflicted on me for a breach of those laws I should regard as so much gratuitous injury, for to those laws I have never actually or virtually assented. I know there are women in England who agree with me in this. I know there are women in America who agree with me in this. The plea of acquiescence is invalidated by us."

So, discouraged but faithful workers for what you believe to be true and needful and uplifting, take heart of grace, and mark with a white stone the day when Boston, welcoming Harriet Martineau's marble counterfeit, spoke in unmistakable tones words of hail to liberty of thought, purity of purpose, loyalty to conviction, woman's enfranchisement, and cosmopolitan fraternity.

SARA A. UNDERWOOD.

EDITORIAL NOTES.

A HAPPY New Year to the contributors and readers of *The Index!*

THE Sociologic Society of New York will hold a mass meeting in that city in support of industrial co-operation on the evening of January 14, at Steinway Hall. Prof. Isaac L. Rice, of Columbia College, Rev. William I. Gill, of Madison, N.J., and Louis F. Post, Esq., will address the meeting.

THE use of the Bible and the performance of religious exercises in our public schools, sustained and enforced by State authority and public appropriations for religious institutions, are utterly inconsistent with that complete separation of Church and State which is so often declared to exist in this country.

HE who deserts or stands aloof from a good cause because the advocacy of it brings him in contact with erratic and offensive characters should acquaint himself with the early history of the Reformation, the anti-slavery reform in this country, and every other movement the wisdom of which time has vindicated, and the heroes of which, like Luther and Garrison, are now honored in all lands wherein liberty dwells.

BY keeping in the background the teachings of the Bible which have been outgrown, by giving prominence to the precepts of morality which are attached to all systems of religion, by *stamping them all as Christian*, although they were known and practised before Christianity was ever heard of, theologians impress the masses with the con-

Digitized by Google

viction that the Bible and the Christian religion are the foundation of all virtue and the only hope of the world.

THIS number of *The Index*, the first of the new year, with contributions from Mrs. L. C. Wyman, B. W. Ball, Mrs. Elizabeth Oakes Smith, Mrs. Sara A. Underwood, Mrs. Annie Olcott Commelin, Dr. L. E. Lazarus, Prof. W. D. Gunning, Allen Pringle, and others, speaks for itself. Next week, we shall present to our readers articles from Moncure D. Conway, Robert C. Adams, George Jacob Holyoake, Hudson Tuttle, William I. Gill, and other able writers.

THE Science Class of the Parker Memorial Society will begin a course of practical talks on "Anthropology" next Sunday, January 6, at 12.15 P.M. Dr. J. R. Buchanan will give the introductory lecture on the general subject. The more specific subjects of "Anatomy," "Physiology," "Hygiene," "Temperament," "Longevity," "Marriage," "Body and Mind," "Infant Education," "Sociology," "Language," etc., will follow on successive Sundays, by other speakers.

A POSTHUMOUS paper by Mr. Darwin on "Instinct," recently read before the Linnæan Society in England, concludes with the following sentence: "It may not be logical, but to my imagination it is far more satisfactory, to look at the young cuckoo ejecting its foster brothers, ants making slaves, the larvæ of the Ichneumonidæ feeding within the live bodies of their prey, cats playing with mice, otters and cormorants with living fish, not as instincts specially given by the Creator, but as very small parts of one general law leading to the advancement of all organic bodies,—multiply, vary, let the strongest live and the weakest die."

WE do not print all the compliments that come to us for *The Index*. But we think it may be pardonable, at this beginning of a new year, to let our readers share with us a good word which has recently come across the Atlantic. Rev. Dr. Samuel Davidson, LL.D., the distinguished Biblical scholar of England, to whom one of our Western subscribers is in the habit of sending various liberal journals of this country, denominational and otherwise, writes to this friend that he has noticed "more marked ability in *The Index* than in any other American papers" that have been sent to him. We tell this in the hope that others of our subscribers may be encouraged by such an indorsement to help *The Index* to a larger circulation.

MONROE'S *Iron-clad Age* drops from its subscription list the names of a certain class of delinquents, and expresses its opinion of them in the following direct and forcible language: "We here correct our hopeful estimate of the crowd that goes overboard with this issue. . . . We have no hope of receiving anything from those thrown overboard. The man that will take a paper from two to ten years without paying for it, or giving notice that he wants it stopped, is not going to get spunky and pay up, when dumped." There are a few persons, whose names we notice on our books, likely to get "dumped," if we do not hear from them this month. We refer to those in arrears for several years, and abundantly able to pay, who withhold from us our just dues,—money needed to enable us to meet expenses,—and disregard all appeals made in this journal and all bills sent them from this office. A printed list of such delinquents might be of advantage to other papers which are liable to be imposed upon by the same persons.

THE Boston *Daily Advertiser* gives a fair and admirable outline of Dr. Oswald's *Secret of the East*, and adds: "It is a strong statement of the views held by many earnest thinkers and workers, and it cannot be set aside indignantly because it wounds or irritates Christian believers. Dr. Oswald believes in a religion for this world,—in a natural religion: there is no common ground for him and for those who believe in a supernatural religion, and who throw all the hopes and joys of life forward into another state of existence. Dr. Oswald believes that, if Paradise can be regained, it should be regained here, and enjoyed on this side of the grave. His religion of the future is a religion of happiness. He judges Christianity, not by its claims of divine origin, but by its fruits in this world; his charges against it are founded in history, and have little or nothing to do with the interpretation of the Bible. His book will not be welcome to the majority of readers; but it is a vigorous, ardent, minority report, made for the sake of those who have honestly and thoughtfully rejected Christianity—made, not as an apology, but in a manly spirit."

THOSE who unite in forcing all tax-payers to pay taxes which religious societies only should pay, in excluding from the courts the testimony of citizens who differ from them on speculative subjects, in keeping in our schools a religious service that is objectionable to a large and respectable portion of the patrons of these schools, who are taxed equally with others for their support, *go no farther, simply because they lack the power.* If they could, they would force Jews, Spiritualists, and free thinkers of every phase of thought to attend churches and help pay the salary of the clergy, and prevent all gatherings and prohibit all expressions of belief not in accordance with their own belief, as was done in New England by the Puritans. Whatever those who petition Congress for an amendment to our Constitution that shall recognize "God as the source of all authority, Jesus Christ as the ruler among nations, and the Bible as the supreme authority" may disclaim now, it is plain that they purpose to make belief in Christianity a test of office and of citizenship, and thereby disfranchise all Liberals, Jews, Buddhists, Mohammedans, and others who cannot accept Christianity as a supernatural religion. The incorporation of their dogmas in the Constitution means the legislative and executive enforcement of them by governmental authority. To be consistent, the government would have to give directions in regard to the worship of God, and see that the citizens make their conduct conform to the "revealed will of God."

LAST Saturday evening, the Boston Union Liberal Club held its second meeting at Young's Hotel. An address on "The Moral Law of Heredity" was delivered by Mr. Henry W. Holland. A few sentences from an abstract report published in the *Sunday Herald*, which we are informed is a fair summary of the lecture, will convey some idea of the position taken:—

> The moral law of heredity is squarely at variance with ascetic Christianity. Christianity says, Surrender self, live for others. Evolution says, Let everything give way to the race: war, struggle, sin, are the means by which the best is eliminated and survives. The old idealism of Christianity is incompatible with the ruthless utilitarianism of evolutionary heredity. The new ethics will not hear of communistic equality or of co-operation. . . . We must arrest the multiplication of the deficient brains and misshapen skulls that mark the criminal and doom him from birth to his sad career. The death-penalty must be revived, and eternal law allowed its course. . . . The law of evolution also makes it imperative to let competition have its course between employer and laborer. . . . The lecturer closed with the proposition that the idea of self-surrender and self-abnegation is a weakness to be supplanted in the future by a manly self-culture.

If Mr. Holland is fairly reported in the *Herald*, much advanced in his address in the name of evolution is not, in our opinion, fairly deducible from the theory, and certainly is not taught by its leading representatives. It is, rather, what the orthodox clergy have, during the past dozen years, been persistently claiming must necessarily result, theoretically, *from* Darwinism, which Mr. Holland makes the basis of his conclusions. But Mr. Darwin, whose great mind fully considered the implications of his theory in the domain of morals, said: "Important as the struggle for existence has been and even still is, yet, as far as the highest part of man's nature is concerned, there are other agencies more important. For the moral qualities are advanced, either directly or indirectly, much more through the effects of habit, the reasoning powers, religion, etc., than through natural selection; though, to this latter agency, the social instincts which afforded the basis for the development of the moral sense may be safely attributed." A general belief in evolution as interpreted by Mr. Holland, of which happily there is no danger, would, in a few generations, blunt the moral sense and take us back to savagery. We shall have something to say on this subject at greater length next week.

UNDINE.

In all Romance's fairy land,
No brighter form, I ween,
Created is by Poet's wand
Than thine, O sweet Undine,
With hair of gold, with airy grace,
With girlish shape and winsome face.

Thou'rt kin to every living thing
By nature given birth,
To birds with glad song carolling,
To varying shapes of earth.
Thyself a form all joy and light
Art near to wood and water sprite.

And though the Poet's fond ideal
Has given thee living form,
Thou art a type of all things real
In life aglow and warm.
Each human form, each human heart,
In Nature's All is but a part,
And kin to all things here are we,
To bird and fawn and plant and tree.

And like a faun or water sprite
Or idle wind that blows,
With merry prank and spirits light
Thy happiness o'erflows.
At one with Nature's every mood,
Thou findest friends in stream and wood.

But when a soul in thee is born
With care and thought opprest,
Then Love and Life mysterious dawn
With sadness and unrest.
And kin to bird and plant, I ween,
Akin thou art to forms unseen.

ANNIE OLCOTT COMMELIN.

SONNET.

TO THE SEA.

By tokens such as those that lovers wear
On breast or sleeve, meant only for their eyes,
At masquerade, and whose sweet meaning lies
Unguessed of others; or, as bards declare,
The signs by which th' Immortals everywhere
Each other know, when wandering in disguise,
My soul in thee, O Sea, doth recognize
Its deathless brother, who with it doth share
This temporal heritage of shine and shower,
This strife of winds and storms, this endless fret
And fever of existence. And, too, hast
With it that inward calm that mocks the power
Of outward changes which the years beget,
Called birth and death, and smiles as they go past.

WALTER R. THOMAS.

The Index.

BOSTON, JANUARY 3, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

TO MEMBERS AND FRIENDS OF THE FREE RELIGIOUS ASSOCIATION.

The Free Religious Association has an empty pocket, and it hereby holds out its hand to its constituency for a Christmas and New Year's gift. It is four years since the Association, aside from collections taken at its annual meetings, has made a public appeal for funds for its own treasury. The responses made to the circular issued in December, 1879, together with the yearly collections and membership fees, have sufficed to supply its modest wants up to this time. The needs of *The Index*, as reported at the last annual meeting, have been provided for without making a general or public appeal. But, now, the Association must provide for its own needs; and, to this end, it confidently asks the help of all its friends. Renew your membership fees, if you have not paid the one dollar fee within the last year, and cannot do more than that. Become, if you can, a "patron member" by sending five dollars. Or send still more, if the spirit and your purse will let you. We set no limit to your generosity.

The Association is under certain pecuniary obligations for office rent and service which must be met. But the Executive Committee wish to hold before the next annual meeting several conventions, and to be ready for any other work for which the way may open. To do these things, money is wanted. We are sure we can count upon your aid. Please direct your donations to "Free Religious Association," 44 Boylston Street, Boston, Mass. (stating that they are for the Association) or to the Secretary, F. A. Hinckley, No. 120 Congdon Street, Providence, R.I.

PIETISM AND MORALITY:

A PICTURE OF LIFE IN THE SOUTH.

BY M. E. LAZARUS, M.D.

I have been resident ten years in a primitive country, whose population, of the Anglo-Saxon type in its rudimental phase, is very slightly modified by the school master or the newspaper. Reading is indeed a rare accomplishment. The germ of arts and trades exists in the hand-loom, the tanner's vat, the carpenter's bench, and the blacksmith's forge; and we see here and there a real plough instead of a scratcher. The young people meet to sing hymns, and that is the best that can be said for culture. Political questions do not ruffle the surface of this tranquil ignorance. Chapels abound, and are the only places or modes of excitement, instruction, or amusement. In the absence of the Roman Catholic and Episcopal forms, the Methodists, Baptists, and Presbyterians must represent Orthodoxy in the Christian Church. This premised, church membership is the rule: some are more zealous, some more indifferent. Scepticism, if it exist, is mute. It is then interesting to note the moral tone of a people abstracted from the complex and perplexing influences of more advanced civilization, and surrendered to the teachings of the pulpit and its catechisms.

The opportunity seems fair to make a diagnosis of the average influence of modern Christianity upon the masses, unalloyed by legislation or the æsthetics of conventional etiquette. We are less concerned, remarks Mr. Davison in *The Index*, with what Christianity was at its origin than with its outcome in our own time and country. Its origin, indeed, is for us but a luminous mist, picturesque with miracles, the *fata morgana* of a transcendent philosophy. Its outcome, or what bears its name at least, is open to observation and afflictive to experience. A characteristic feature of our Christian sects, and especially of those which in England are called *dissenting*, is the prayer-meeting and communication of "spiritual experiences." I am impressed with the useful effect of this democratic method as applied by Mr. Robert C. Adams, in his series of "Travels in Faith." In corroboration of his estimates, I would cite not a subjective experience, but some local observations. I would be the first to remark that these observations, while they fairly bear upon the morality of doctrinal teaching, are without importance as local statistics, for the reason that the local sphere in question is rapidly changing its state by emigration and immigration. The removal of obstructions in the Tennessee River and the completion of a railroad will naturally co-operate very powerfully in promoting such a change in constituent elements during the next decade.

The first year of my local experience, although I did not advertise nor make any professional demonstrations, I was continually distracted from my farm work by medical applications. I have been obliged to refuse my services and renounce practice in general by the almost universal bad faith of my patients. And I was soon forced to realize that this bad faith, embracing all grades and particulars of falsehood and dishonesty, prevailed alike among those in comfortable circumstances as among the very poor, and that it extended to all relations of social intercourse in the exchange of values. For example, a prominent church member, whose family I attended, came to me, proposing that I should import seed-wheat, to be sown on ten acres of his farm, the costs of culture and the crop to be equally divided between us. I acceded, and drew up a contract which he signed. I performed my part. The crop was estimated by neighbors as a fair average for this country. When it was harvested, he sent me one bushel. I first remonstrated with him in presence of his family. He answered me coolly that he did not consider himself bound by any contract the fulfilment of which was inconvenient to him. He knew, what I did not at that time, that the laws of Alabama allowed him full discretion. In fact, I sued him, and got damages; but the judge informed me that nothing could be collected, because of the stay and exemption laws, which invalidated the judgments of courts.

This case is exemplary, because the farmer was a pious religionist, a pillar of the church, generally respected, sedulous in family prayers, in comfortable circumstances, and who made his avowal of contempt for contracts openly in presence of his wife and children. I have no reason to suppose he suffered at all in reputation because of his behavior to me. To test this matter, I applied to another prominent member of the same congregation, inquiring what was their method of procedure regarding flagrant immoralities of this sort upon which the law had pronounced its theoretic condemnation. He named a minister before whom I should state the case, and who, if he found my statement justified by the facts, would bring it up for discussion among the members, and publicly reprove the person found guilty,—a reprobation which might amount to expulsion. I followed this course, but obtained no action. A year or more afterward, I learned that the parson referred to had nothing to do with the congregation in question, and even belonged to a different sect. This style of evading the issue is significant. An educated man who behaves like the farmer pre-cited can hardly escape the imputation of hypocrisy; but this does not necessarily hold of one who cannot read, and whose knowledge is confined to a few rural topics, and whose social intercourse rarely brings him into contact with minds above his own level. The neighbor who evasively protected him from moral judgment was one of the most intelligent and reputable persons in this neighborhood, and also a pious church member.

Another catch among this pious peasantry, and equally favored by the laws, to which I fell a victim, is to borrow goods, and, without any contract, say on taking them, I will either return these or pay for them. This simple promise, of which the lender may take no notice, constitutes the borrower the indefeasible and irresponsible possessor of said goods. If he had not promised to pay, said the lawyer whom I consulted, you might have recovered the goods; but this promise constitutes them a *debt*, and debars your recovery by the stay and exemption laws. These remarkable laws, which harmonize so well with the doctrine of vicarious atonement in annulling personal responsibility, bear with democratic virulence against the learned professions. Debts for "mechanical labor" are judicially recoverable from anybody who has seizable property; but add to the same amount of mechanical labor—as in case of medical visits at a distance, preparation of drugs, or surgical apparatus—the element of intellectual labor, and the debt is invalidated.

The only practical method of dealing with these people, in whom pietism has supplanted and nullified the fundamental sentiment of honesty and moral obligation, is the "wave" note or formal lien on certain articles of property; and even these they can pledge deceptively, after having made previous disposition of them. The consequence of credit under these risks, and where public opinion is silent, is to render business men exacting and

Digitized by Google

remorseless usurers. Use of money or money's worth is not obtainable at less than twenty to twenty-five per cent. interest, which no farm profits can pay here. Thus, merchants in the neighboring village, among whom are counted physicians, have come in one generation to own thousands of the farms surrounding them. To the superficial observer, it may appear here, as elsewhere in the South, that society and industry are making progress; but, on closer analysis, we find that this pretended progress consists in a series of displacements,—in capitals and characters coming from abroad, while, with the exception of a merchant here and there, the original population melts away either by misery or emigration.

How far their tincture of Christianity co-operates with the tendency to communism natural to rudimental societies I know not; but in fact there is no such thing as property here in the sense that it is understood at the North or in Europe. The sense of it is limited to corn, cotton, kine, hogs, and household goods. Pastures and orchards are unscrupulously made public spoil. Hence, neither fruit nor fine stock can be raised out of sight of one's dwelling. My fences have been continually taken down, and the increase of my stock has but fed thieves. My house has been broken into and robbed. I had probable evidence against the burglar; but no grand jury here would find a bill for trial, nor State solicitor take up the case, although the burglar was a man of notoriously bad character and without social influence. The same lenient spirit of "Judge not, that ye be not judged," is carried into questions of punishing murderers. They habitually escape. In one very flagrant case, in which, after a year of known malice, a young lawyer walked into a shop with his gun and deliberately shot his enemy, the jury found a verdict of insanity, and sent the murderer to an asylum. The physician in charge averred that he was perfectly sane, the asylum discharged him, and no farther notice was taken of the matter. I might multiply illustrations *ad infinitum*, but space is limited.

The moral status which I here regretfully attest contrasts most unfavorably with other mountainous districts of the South that I have formerly visited, and where the pietist sentiment was not remarkable, but where a richer soil and abundant game insured to moderate industry an abundance of this world's goods. Here, I have been forcibly reminded of that abrupt schism between piety and morality of which I had read as existing among the Catholics of Southern Europe, where robbers share their spoils with the shrine of the Virgin. In fact, there is no other relation between the two orders of ideas, principles and feelings, than such as education may introduce.

In most countries, the law undertakes to supply the defect; but, in my present sphere of observation, the law, holding aloof, allows the immorality of religion, or of what these people take for religion, to be the more sensible. Between the sale of indulgences among the Catholics of Luther's day and the condoning of sins by pietistic observances among the Protestant sects of our own day, the difference is morally evil to the people. Commercially, there is this difference,—that the profits of the sale of indulgences supported an organization of clerical privilege, aristocratic in the bishops and imperial in the pope; while the profits of vicarious atonement in our democratic society are distributed among the rank and file of parsons who live by their pulpits,—*i.e.*, by inculcating the fear of hell and showing up a path of evasion through the merits of Christ. Christians of refined culture, repudiating mysticism, may explain the "atonement" as sympathy, which everywhere compels the better to suffer for the worse and work for their improvement, operating as a barrier to the isolation of superiorities, and vindicating the as yet inchoate principle of human solidarity. But such ideas are the whipped syllabub of philosophy which the vulgar never taste. For the masses of Christendom, the atonement is simply a bargain between God and devil, by virtue of which, under certain conditions, some souls may escape hell. Now, these conditions substitute for social virtues ceremonial pietism. And thus humanity is cheated. Plucky sinners, prodigal in their confessions and liberal toward the Church, such are the beloved of Christendom. 'Twas for sinners that Christ died, and 'twere churlish to refrain from enjoying the full benefits of his devotion by punctiliously straining for some little personal merit.

Lie and cheat all the week, if you can: that only shows how smart you are. To outwit your neighbor is a feather in your cap. Only confess yourself on Sunday a miserable sinner; for that is the normal state of man, and the humility of self-deprecation his only title to divine grace. In the glory of this presence, differences in human goodness or desert become imperceptible. This is what people in the mass find or make of Christianity. In Catholic and Protestant countries alike, we find pietism undermining self-respect and the personal responsibility of conscience. The doctrine of vicarious atonement is the arch-traitor to be gibbeted in the place of Jesus, and swung before humanity between two thieves.

CORRESPONDENCE.

THE SMITHSONIAN.

Editors of The Index:—

It is said that the only man who is known over all the United States is Barnum, the showman; and the only living Bostonian of true national reputation is Sullivan, the slugger. I would have said that we have one institution which is known by name and character to every man and woman who is high enough on the scale of life to read a newspaper. It is the Smithsonian. The name of Joseph Henry, its first secretary, is a household word. The name of Spencer F. Baird, the present secretary, should be known as widely as that of the showman or the slugger.

The Smithsonian receives about thirty thousand letters a month. It was my fortune to look through the archives of correspondence. Here was a letter addressed "To the Secretary of the Smith Swing Institute, Washington, D.C." It came from a druggist of Helena, Ark. What strange compounds must come from his alembic whose mental alembic resolves Smithsonian into Smith Swing? Here is a letter from the editor of a country paper. It is addressed "Prof. Spencer, (?) agent of the Tenth Census." The able editor writes "Spencer,"—a pause, memory does not give up the name,—he calls the foreman, he never heard of it; the "devil," and even the devil cannot help him. A teacher wants to know something about grasshoppers. He directs to "Prof. Henry Baird." The Germans have a saying, "He has heard bells," meaning a noise and only a noise. As a jingle on the distant air, this teacher had heard the names of Henry and Baird.

Some "mute, inglorious" Wiggins sends observations on the weather. He directs "To the Smith Onion Institute." He thinks he can discriminate between a cloud and a weather vane, but he is sadly befogged on the Smithsonian. A man who has found the bones of De Soto would like to sell them to the "Smith Institute." Another who has opened an Indian mound sends an inventory of the bones and trinkets to the "Smith Made Institute." Still another, who has found a petrified snake, would like to send it to "The Smithingtonian Society." James Swain has collected some rare birds' eggs, which he can furnish for a consideration to the "Smithingtonian Institute." Robert M. Nay wants to learn something about meteoric stones from "The Director of the Thompsonian Institute." John Day, another apothecary, writes to "The Secretary of the Smith Masonian Institution." One of the most distinguished men of science in America writes often, and always directs to "The Secretary of the Smithsonian Institution." The French Academy sends all its papers, and always to the address "A. O. M. Smith Sonian Institute." An Englishman writes to "The Henry Smithson Institute, Washington, Province of New Jersey, in the United States of America." A young American naturalist directs "To the President of the Smith Union Association of Bird's Eggs, Indian Mounds, and So Forth." A showman in Canada writes to "The Manager of the Smithsonian" that he has the greatest acrobats in the world, and he would like to bring his show to Washington. If Baird, "the manager," will "work it up in the papers," he, the showman, will "go halves" with the Smithsonian.

All this would seem trivial; and it should have no place in the columns of *The Index*, but for the law and the morals. Here, where least expected, is the law of chance. What so unlikely as that any human being, out of our fifty millions, should address the Smithsonian under the name of "Thompsonian"? And yet it is almost certain that, within the coming year, twelve men will write this address. It is equally certain that fifty men will direct to the "Smith Sonian," thirty to the "Smith Union," twenty-five to the "Henry Smithson," fifty will direct to Prof. Henry, and as many more will ask Prof. Baird, in the name of the Smithsonian, to take the management of their shows. The last two quantities, whose *rationale* is more obvious, are less constant. Every year since the decease of Prof. Henry, the number of letters addressed to him as secretary has diminished. Every year since the National Museum was partially differentiated from the Smithsonian, the number of letters from showmen has increased.

The word "museum" carries into many minds no other idea than that of amusement. It is not a matter of surprise that many showmen should mistake our National Museum for a sort of variety theatre. My sympathies are partly with the showman. I imagine him strolling through the museum. He passes the case holding General Washington's old breeches, then an old quilt made in 1788 by Dorothy Davis, and stops before a stork put up in the attitude of seizing a turtle which had just escaped from the egg, and which bears the inscription, "Does your mother know you are out?" "This," he might say, "is the very place for my acrobats."

Shade of Henry, how changed! The first secretary held the Smithsonian up to the functions imposed by the founder, the discovery of truth and its diffusion among men. No part of the museum, under him, could become an "Old Curiosity Shop" or an advertising medium. No subordinate would have been allowed to attach a foolish label to a young turtle, or to put on exhibition an old quilt, or to advertise the Mason & Hamlin organ. The department of the Smithsonian, differentiated as a museum, is in crying need of reform. The Smithsonian proper sustains the high rank it won under Henry.

In its function of diffusing knowledge among men, our Smithsonian has introduced to the English-speaking world the researches of Plateau on the forms assumed by a liquid mass withdrawn from the action of gravity. Olive oil in a mixture of alcohol and water breaks into molecules which lie suspended in the fluid, as world-mist of a nebula is suspended in space. Give spiral motion to the fluid, and the molecules of oil gather themselves into a globe, and you have the beginning of a system epitomizing the solar system. The sphere spins on its axis, becomes oblate like the earth, and then detaches a ring from the equator. It is now a mimic Saturn. The ring breaks, and each fragment becomes a secondary sphere, revolving around the primary. We have only to hypothecate a nebulous mass diffused through space, and then such motion as we give to the fluid, and we have accounted for the genesis of a solar system. Not quite. Clifford subjected this experiment to his powerful analysis, and showed that a hypothetical "experimenter" would have to twirl the world-mist, and do many other things.

The Plateau experiment foreshadows other and deeper truths. The molecules of oil come together in aggregations of five forms. Only one form is finite. It is the sphere. The other figures have infinite dimensions in certain directions. Only the sphere can be realized in a finite mass. The other figures are in-

Digitized by Google

complete. Not one could be realized to completion except in an infinite universe of matter. Heine called nature "the unseen thought." What unseen builder is this who

"Wreaks his thought upon expression,"

and lays the foundation of structures so vast in conception that each would fill a universe, so infinitesimal in realization that a thousand are contained within the compass of a cubic inch! The completed sphere, spinning on its axis and casting rings that form other spheres, may type the genesis of the great sphere which, "wheeling, cast the planets." Its analogue is the material universe. Where is the analogue of these forms unfinished because they imply infinitudes? If anywhere, it is in the spiritual. May they not type the lives of men? As the figure in oil is a segment whose contours imply, for completion, an infinitude of matter, so a human life, with

"Thoughts that wander through eternity,"

is a segment which eternity alone may complete.

W. D. GUNNING.

WASHINGTON, D.C., December, 1883.

REV. DR. WILSON AND THE SALVATION ARMY.

Editors of The Index:—

The Anglican church of Ontario is at present much exercised over the case of Rev. Dr. Wilson of St. George's Cathedral at Kingston. The Doctor is publicly fraternizing with the Salvation Army, and the church is greatly scandalized thereby. The newspapers have given the reverend gentleman's experience among the Salvationists, as related by himself recently in one of their meetings at Kingston. He referred to his experience with them during an "all night of prayer," on which occasion the reverend gentleman felt so "perfectly happy" that he remained the whole night with the Salvationists, and betimes prostrated himself on his face in the dust on the floor. At such anomalous and unseemly conduct on the part of a highly esteemed and intelligent Episcopalian clergyman, Dr. Wilson's clerical brethren are sorely puzzled as well as pained. They are at a great loss to account for it, as it is so flagrantly out of all keeping with the staid spirit of devotional decorum so signally characterizing the Anglican Church. The Doctor's sincerity in the matter is so evident from his past life and so obvious from his present action that no one questions it, for he has much to lose and little to gain by such a course.

Now, what is the explanation of this and similar psychological phenomena? Science must answer, the science of mind; for psychological rather than supernatural in origin these mental manifestations undoubtedly are. Dr. Wilson says, and doubtless sincerely believes, that these pleasurable subjective experiences are really the result of the "Spirit of God" operating upon his mind. And, under the influence of this inspiring belief and the magnetic environments, he prostrates himself in the dust on the dirty floor of the tobacco-stained and polluted "barracks." But is this really the spirit of God, or is Dr. Wilson temporarily the subject of psychological ecstasy proximately arising from the nervous *ganglia*, and purely natural in its origin and manifestations?

At present, for the purposes of the argument, I will grant or assume that there exists a personal God, and that his spirit operates upon the human mind as believed by Christians generally. This God is said to be omnipotent, and he is alleged to have promised to answer *any* Christian's sincere prayer of faith. Well, if this be so, he can surely answer prayer and operate upon the mind at any time and in any place. He would not require any special, profane, or vulgar machinery through the medium of which to vouchsafe his spirit. This much must surely be admitted. But the facts diametrically contradict this. From the facts as they are, it would seem to be only under certain special conditions that this so-called Holy Spirit can manifest itself. There must be certain secular machinery to evolve it. The psychological conditions must be present,—purely natural conditions, mark you. The machinery of revivalism, in some of its forms, must be put in motion, in order to bring down with "power" this capricious "spirit of God." There must be one or more positive minds to stir the magnetism of the negative and passive subjects, and get duly *en rapport* with them. There must be the inspiring music and devotional song still further to thrill the nervous centres and complete the circle. With strong belief and intensive faith superadded to all this "childlike faith," as Dr. Wilson puts it, is it any cause of wonder to the rational or philosophic mind that the magnetized subjects of all this nervous action and interaction should feel "perfectly happy," and go off into cerebral ecstasies, believing all the while that this is really the spirit of God? Let a person with a well-balanced and enlightened intellect—an unbeliever, if you please—go into a first-class revival meeting, with all its mesmeric appliances, and passively place himself under its influences, and what will be the result? If he but gently and passively yield to the influences surrounding him, he will in due time, by the law of sympathy, be like the others entranced with nervous delight, and lost in "perfect happiness," rationalistic though he be. This is no imaginary case. We have tried it. And, if not carried to enervating excess and to the ridiculous extent of soiling one's person on the dirty floor, it is a "spiritual" food not bad to take. The unbelieving philosopher, under such circumstances, yields to the influences, because they are pleasant, and for purposes of experiment, knowing they are purely natural, and, when reasonably indulged, beneficial both mentally and physically.

When, however, it is possible for so enlightened a man as Dr. Wilson to be carried to such a length by such influences, how can we wonder that the ignorant and unenlightened—being creatures of emotion rather than reason—go still further, and bring up raving maniacs, as frequently happens in the wake of professional revivalists, such as Moody, Hammond, and others? Nearly every week, we read in the newspapers of some religious lunatic, who, professedly under the guidance of the "spirit of God," wants to offer up as a sacrifice some of his family or somebody else, frequently murdering his victim before his sacrificial hand is stayed. If there be a God at all, it hardly looks reasonable; nor is it very creditable to his character that he should move his creatures by his spirit to such absurd and brutal excesses.

The Salvationists at Kingston, as a part of the "divine service" and exercises held in their "barracks," engage in a general and promiscuous jig-dance after midnight. Now, to the dancing, *per se*, no agnostic utilitarian can object. Dancing is a first-class physical exercise and excellent mental recreation, if properly carried out. But the physiologist and moralist may fairly question the propriety of a promiscuous dance in a heated and poisonous atmosphere, and after midnight, by a crowd of enervated and half-crazy fanatics.

A Methodist minister once related to the writer how, on one occasion, while in Plymouth Church in Brooklyn, listening to H. W. Beecher, a lady in the pew immediately in front of him, as soon as the eloquent preacher had nicely warmed up to his work, began to follow him in all his movements in the pulpit. Whatever gesture the preacher made the lady made, and she kept this up till he finished. Was this the spirit of God, or was it Beecher's personal magnetism?

When the ancient orators of Greece and Rome were able by the magic and magnetism of their burning eloquence to inspire the vast assemblage to rise as one man and shout, "On against the invader!" what was this but the same psychological, not divine, power which has manifested itself through all the ages?

ALLEN PRINGLE.

SELBY, LENNOX CO., ONT., Dec. 15, 1883.

P.S.—It is now announced that Rev. Dr. Wilson has been dismissed by the Dean of Ontario, approved by the Bishop of Ontario, for the prominent part he has taken with the Salvation Army. Dr. Wilson was the Bishop's chaplain, and he speaks very highly of his earnestness and zeal in the work of the Church.

A. P.

BRITISH AND FOREIGN UNITARIAN ASSOCIATION AT LEEDS.

Editors of The Index:—

Recently, the British and Foreign Unitarian Association held a provincial conference in Leeds. Doubtless, you will have full accounts of the meetings from English papers and English correspondents; but an extra letter, if it is very brief, may not be unacceptable. In addition to a religious service in Mill Hill Chapel on the previous evening, there were also a luncheon and a tea, and a discussion after each meal. In the afternoon, the discussion was opened by the Rev. C. Hargrove, M.A., of Leeds, who read a paper on the "Means of Extending Liberal Christianity." Some fifteen or sixteen laymen and ministers took part in the discussion. There was remarkably little novelty in the suggestion of "means." The plans suggested—controversy, dissemination of Unitarian literature, greater earnestness, deeper spirituality, co-operation with temperance and political reformers—are all as old as Unitarianism, at least. But, if there was little novelty of plan for spreading liberal Christianity, there was what is really better. All the best speakers, and notably the reader of the paper, evinced an earnest desire to make liberal Christianity worth spreading. Whatever be the state of things in America, in England assuredly the tendency among Unitarians is to greater boldness, outspokenness, and, with these, *accuracy*. This was really the main point in Mr. Hargrove's valuable paper. Carefulness in learning and frankness in speaking what they have learned must characterize the Unitarians of the future. In reply to adverse criticisms, Mr. Hargrove disclaimed any wish to dig up buried controversies, but urged with fresh vigor his first contention,—that Unitarian ministers should know for themselves, and state boldly and frankly to the people, their own thoughts on the questions which are forced upon all religious inquirers. What do you believe of God, of Christ, of the general character of the New Testament? Do you accept or reject the dogmatism of the Fourth Gospel, and why? What credence do you give to the three first Gospels? How do you justify the position you accord to them? Accepting the results of modern science, how do you find your religion modified by them? The *means* for finding answers to these questions, and the courage to speak those answers out frankly and intelligibly, are the only means, he thinks, of extending liberal Christianity. "And it would be our bounden duty to answer these questions for God's sake and the truth's, even if popular Christianity had already redeemed every soul from vice and made practical piety universal."

Nothing better was said either in the afternoon or evening. Indeed, it may be said that every really helpful speech was a comment on or a confirmation of the above sentiments; and these remained as the real work of the day. And it was not a bad day's work. It showed where we are going. Unitarians have caught the spirit of science: they are beginning to love the truth for its own sake and to despise random assertions, whether made in the interests of belief or unbelief. Let *The Index* take courage. "Light, liberty, right," is the motto of Unitarianism. Whoso sins against these three will find himself out of order among the English liberal Christians.

Yours truly, UNITARIAN.

LEEDS, ENG., December, 1883.

HEREDITY.

The Daniel Webster Problem.

Editors of The Index:—

Mrs. Caroline Healey Dall, writing of Daniel Webster, remarks, as quoted in *The Index* of December 20: "The key to his virtues and his vices, to his triumphs and his failures,—the key to the magnificent presence which made every passer-by turn to look at him in the street,—was to be found in the mixed blood which he inherited. The problem will never be completely solved till some one has the courage to show this."

Perhaps the reader may remember that Andrew Jackson Davis, in *Spirit Mysteries Explained*, page 163, mentions the name of Daniel Webster as a member of the committee of spirits who, in the Spiritual Congress, addressed the sons of Africa. That Daniel Webster should have been a delegate to that spiritual congress was not impossible, for his abilities admirably qualified him to aid any cause with which he allied himself. But why was Daniel Webster in the *African* delegation? Why should he, honored and honorable, co-operate with and in behalf of Africans, then among the most despised and abject of earth's inhabitants? Such questions would readily suggest themselves to readers who remember that Daniel Webster had not in his earth life been prominent as an opponent to the extension in the United States of the domain of slavery, or as a friend to the colored race. Similar queries occurred to Mr. Davis; and he inquired, as Daniel Webster's name appeared on the roll of the African delegation, "What does this mean?" "Because," was the reply, "there is a law

Digitized by Google

of justice, which evermore overcomes evil with good. He selects his own field of labor. He comprehends the extent of the ground, is in harmony with the workmen already engaged, and sees where the institution is vulnerable and its advocates accessible."

But a puzzled inquirer might again question, Though Daniel Webster selects his own field of labor, why should he in spirit-life choose to work for and with Africans? Upon this question, as well as upon the problem proposed by Mrs. Dall, the following short article from the *Merrimac Journal*, Amesbury, Mass., which I chanced to see about thirteen years ago, may shed some light:—

Ancestors of Daniel Webster.

On his paternal side, as is given in full in his Life by Curtis, he came from the Websters of Hampton, among the earliest settlers of that town. Of his maternal ancestry, less is said. We are told that his mother's maiden name was Abigail Eastman, a tailoress of Salisbury. But whence came she? The late Dr. Nye, of Salisbury, was much interested in the history of that town, and has left papers detailing the genealogy of some of the families. From one of these papers, we quote: "A Miss Eastman, a young lady of Welsh descent, living in Salisbury, was courted and had a natural son by a mulatto man, who ran off or died before the birth of her child, who bore the name of his mother. The boy grew up to manhood, and married a half-Indian girl, whose father was a white man, and reared up a family of Eastmans, from whom Miss Abigail Eastman, the mother of Daniel and Ezekiel Webster, and all the Eastmans of Salisbury had their origin. It was very common in the early settlement of Salisbury and Amesbury for the inhabitants to marry Indian girls. The characteristics are very visible to this day among their descendants." We supply this omission to keep history good. It is in favor of miscegenation more than any other fact within our knowledge. Dr. Nye will be remembered by some of the older people; and nobody will doubt his authority, which possibly even now would be capable of proof from the old records. It will account for the complexion of "Black Dan."

If Daniel Webster had negro blood in his veins, as the *Merrimac Journal* plainly intimates, that fact of mixed blood tends to solve Mrs. Dall's problem, accounts for the complexion of "Black Dan," and shows why in spirit-life he was a member of the African delegation in the Spiritual Congress.

"Their cause I plead, plead it with heart and mind,
A fellow-feeling makes us wondrous kind."

A. E. G.

HYDE PARK, MASS.

[The main objection to the above "solution" is that one statement; namely, that Webster was a member of a "Spiritual Congress" and in the "African Delegation," which is open to doubt, is explained by another statement quoted from the Merrimac *Journal*, which is wholly unauthenticated.—ED.]

THE CAUSE OF ALL THINGS.

The following extract from an article in the *Popular Science Monthly* for January, entitled "Religious Retrospect and Prospect," by Herbert Spencer, may help those who are satisfied to apply to God terms which express their own qualities to be patient with those who make no attempt to describe or define the Ultimate Reality:—

Every emotion has its antecedent ideas, and antecedent ideas are habitually supposed to occur in God: he is represented as seeing and hearing this or the other, and as being emotionally affected thereby. That is to say, the conception of a divinity possessing these traits of character necessarily continues anthropomorphic,—not only in the sense that the emotions ascribed are like those of human beings, but also in the sense that they form parts of a consciousness which, like the human consciousness, is formed of successive states. And such a conception of the divine consciousness is irreconcilable both with the unchangeableness otherwise alleged and with the omniscience otherwise alleged. For a consciousness constituted of ideas and feelings caused by objects and occurrences cannot be simultaneously occupied with all objects and all occurrences throughout the universe. To believe in a divine consciousness, men must refrain from thinking what is meant by consciousness,—must stop short with verbal propositions; and propositions which they are debarred from rendering into thoughts will more and more fail to satisfy them. Of course, like difficulties present themselves when the will of God is spoken of. So long as we refrain from giving a definite meaning to the word "will," we may say that it is possessed by the Cause of All Things, as readily as we may say that love of approbation is possessed by a circle; but, when from the words we pass to the thoughts they stand for, we find that we can no more unite in consciousness the terms of the one proposition than we can those of the other. Whoever conceives any other will than his own must do so in terms of his own will, which is the sole will directly known to him, all other wills being only inferred. But will, as each is conscious of it, presupposes a motive, a prompting desire of some kind: absolute indifference excludes the conception of will. Moreover, will, as implying a prompting desire, connotes some end contemplated as one to be achieved, and ceases with the achievement of it; some other will, referring to some other end, taking its place. That is to say, will, like emotion, necessarily supposes a series of states of consciousness. The conception of a divine will, derived from that of the human will, involves, like it, localization in space and time; the willing of each end excluding from consciousness for an interval the willing of other ends, and therefore being inconsistent with that omnipresent activity which simultaneously works out an infinity of ends. It is the same with the ascription of intelligence. Not to dwell on the seriality and limitation implied as before, we may note that intelligence, as alone conceivable by us, presupposes existences independent of it and objective to it. It is carried on in terms of changes primarily wrought by alien activities,—the impressions generated by things beyond consciousness, and the ideas derived from such impressions. To speak of an intelligence which exists in the absence of all such alien activities is to use a meaningless word. If, to the corollary that the First Cause, considered as intelligent, must be continually affected by independent objective activities, it is replied that these have become such by act of creation, and were previously included in the First Cause, then the reply is that in such case the First Cause could, before this creation, have had nothing to generate in it such changes as those constituting what we call intelligence, and must therefore have been unintelligent at the time when intelligence was most called for. Hence, it is clear that the intelligence ascribed answers in no respect to that which we know by the name. It is intelligence out of which all the characters constituting it have vanished.

These and other difficulties, some of which are often discussed, but never disposed of, must force men hereafter to drop the higher anthropomorphic characters given to the First Cause, as they have long since dropped the lower. The conception which has been enlarging from the beginning must go on enlarging, until, by disappearance of its limit, it becomes a consciousness which transcends the forms of distinct thought, though it forever remains a consciousness.

THE MORMON PROBLEM.—The Mormon problem now before Congress attracts much attention, and is a subject of deep interest and animated discussion throughout the country. It furnishes topics for the daily paper, the magazine, the pulpit, and the platform. The Milwaukee *Sentinel* publishes "interviews," representing the opinions and feelings of prominent men of that city as to the advisability of "force or Christian influence in putting down the Mormon rebellion," and other questions relating to the Mormon problem. The ministers of the city generally seem to have little, if any, faith in "Christian influence" to abolish polygamy, and among them are the most ardent advocates of employing military force to "wipe out Mormonism at once and forever." But one minister relies on neither Christian influence nor force. He says: "Christian influence, which has been suggested, would be utterly futile. To resort to force would be to return to barbarism, and to reestablish, in the land of freedom, something like the Holy Roman Inquisition. No: we can neither shoot Mormons nor preach to them; but the United States can assert and maintain the dignity of law from now on. The only reasonable course to pursue would be to recognize the present status, but to prevent the growth of Mormonism by prosecuting in the civil courts any one, after a certain date, who should contract a plural marriage." The views of Mr. R. C. Spencer, one of the most prominent Liberals of Wisconsin, are thus presented in his own words by the *Sentinel* reporter: "Our government knows and provides no way to suppress rebellions (religious or otherwise) against its lawful authority but by force, which it is in duty bound to use when necessary. Since Mormonism is based upon and embodies the dogma of Christianity, with the addition of a new revelation from God, from which comes polygamy as a part of their religion, I fail to see how 'Christian influence' can consistently oppose Mormon institutions and rebellions. It would, I judge, be much more consistent and vastly more effective to turn Col. Ingersoll loose among the Mormons, under armed protection if necessary, to talk their religious superstitions out of them, and by the power of his eloquence win them to the dominant idea of modern civilization,—the founding of the family and the State on the marriage, by civil contract simply, of one man with one woman. Unless expressly sanctioned by statute, polygamy is unlawful within the boundaries of the United States, because against common law. However, the first amendment to the Constitution limits the power of the federal government by declaring that 'Congress shall enact no law respecting the establishment of religion or prohibiting the free exercise thereof'; but no such limitation is imposed on the States, which are therefore free to establish any religion they please, and to prohibit the free exercise of religion. The Mormons deny that the national government has constitutional power to prohibit polygamy, because it is part of their religion. The Mormons evidently intend to make out of the territories in which they are establishing themselves several States in which, by the will of the majority, their religion, polygamy included, shall be engrafted into the organic law, thus uniting their Church with the State on the same principle and by the same right that Christians propose to amend the Federal Constitution, incorporating into it God, Jesus Christ, and the Bible. As legal safeguards against all such schemes of religious fanatics and persecutors, amendments to the National Constitution should be adopted as follows: abolishing every vestige and forever prohibiting all and every form of union, however slight, between Church and State throughout the nation in every ramification and subdivision of the government, federal, state, and municipal; requiring Congress to enact uniform laws on the subject of marriage and divorce, prohibiting religious or ecclesiastical intermeddling therewith, and compelling parents to provide for the support of children and send them to school; allowing no one to vote, after a certain time, who does not possess the requisite secular education, including a knowledge of government and means of support. The first will be opposed by some good Christians (including also the Mormon and Roman Catholic Churches) who imagine that God is under their special protection, because it makes government and public schools godless and infidel. All will, of course, be opposed by those good, old-fashioned Democrats, who place State rights above the rights of American citizenship. It seems probable, therefore, that, by uniting Mormons, fanatical Christians, the Roman Catholic Church, and State-right Democrats, religious polygamy will succeed in legally and permanently establishing itself in several new States hereafter to be formed. It can only be defeated by carrying out promptly and vigorously the principle of complete secular government, which alone can consistently suppress crimes and remove vices practised in the name of God and religion by Mormons and others who are guided by so-called revelation, and not by natural reason and rights."

FREDERICK THE GREAT.—The man who really founded liberty of thought in Germany was Frederick the Great. In the history of his race there is no character more attractive, for there is none more human. His idea was not the narrow idea of Arminius, nor the national passion of Luther: it was the idea and the passion of humanity. The crowned philosopher, persecuted by the great, assailed by Russians, Tartars, Croats, Hungarians, Frenchmen, abandoned by friends and allies, he yet created a power in the centre of Germany which was destined to be in respect of liberty of thought what the Oranges and England were in respect of political liberty. If he had no other glory, it would be enough that he broke down that redoubt, the terrible power of Austria, the Goliath of Absolutism, the terror of the nations, the enemy of William Tell, the assassin of Padilla, the executioner of John Huss, the poisoner of the Latin races; that power of Austria which, had it triumphed, would have burned to the marrow of our bones, reduced our conscience to ashes, and

Digitized by Google

made of Europe what it made of Spain, a desert. He opened the frontiers of his kingdom, the gates of his palace, the arms of his friendship, to all who had any thought, who worked for any idea.—*Emilio Castelar.*

BOOK NOTICES.

HARPER'S YOUNG PEOPLE. 1883. New York: Harper & Brothers, Publishers, Franklin Square.

The separate numbers of *Harper's Young People*, containing sixteen pages each, are not particularly impressive; but they come once a week, and, when the fifty-two numbers of a year are gathered up into a single volume, we begin to realize how much we have been getting for our money. What beautiful pictures are here, what charming stories, what chapters of instruction, and what pleasant games! We have found our eyes getting a little dim over the handsome pages just from the sense of contrast with the books we had to read when we were "young people," but not "Harper's." Or were not even then the Harper's Rollo books the best that could be had? They are still good, but how they pale in comparison with the variety and richness of this volume of eight hundred and forty pages! The pictures cannot but educate the sense of beauty in the child; and, in the text, the proportion of fiction to more solid matter is not excessive. *Harper's Young People* has won its way to popular success by sheer dint of its inherent excellence, without any resort to the costly tricks on which some of our young people's literature relies,—tricks which take something from our reverence for authors who are willing to trade upon their fame, and add but little to the enjoyment of our boys and girls.

MONEY AND THE MECHANISM OF EXCHANGE. By Prof. W. Stanley Jevons, F.R.S. Complete in two parts, 15 cents each, post free. J. Fitzgerald, publisher, 20 Lafayette Place, New York.

This valuable and most timely treatise, from the pen of one of the foremost contemporary writers on finance, throws a flood of light upon every one of the great questions of finance, such as metallic money, gold coinage, bi-metallism, bank issues, and bank reserves, which are likely to receive thorough discussion in Congress this winter. The account of the mechanism of exchange here given is singularly full and instructive.

NAN. By Lucy C. Lilly. New York: Harper & Brothers. 1883.

This little story has already done good service in the columns of *Harper's Young People*. It relates the fortunes of a little girl who was taken away from certain poorer relatives by certain richer ones, who did their best to kill out her affection for her early friends, but without any success. Her natural affections triumph over the allurements of her purse-proud cousins. The story is pleasantly and simply told. The moral is not obtruded, but it is not likely to be missed by any boy or girl of good intelligence.

Life at Puget Sound, by Mrs. Leighton, deserves a good notice. We have seldom read so charming a book of travel. Mrs. Leighton narrates pleasant and painful experiences in unexaggerated style, with such transparent truthfulness and freedom from egotism that we listen to her story with the same confiding interest as to the unstudied conversation of a friend. Her descriptions of the wild, beautiful, magnificent scenery in the far North-west are delightful from their thorough simplicity. A tender fancy runs through them all, but does not color the truth. The fortitude amid the agonies of shipwreck on a reef in the Caribbean Sea, the calm courage with which they passed through the perils of the forests and of the voyaging on the Columbia River, the sweet and wise humanity which marked their friendly intercourse with Indians, Chinese, and frontiersmen,—all are evident in her modest story. Many readers of *The Index* will be interested, too, when they know that the author is the wife of Rufus Leighton, one of Theodore Parker's well-beloved youths, who for ten or more years made phonographic record of every word in sermon and prayer uttered on Sunday by the great preacher, and so was prepared to give us that noble collection of "Prayers,"—strong and tender words, which would else have passed away unrecorded,—a book of which George Ripley said, "There has been no expression of devotional feeling equal to this since the days of the Hebrew poets."

WE have before us the *Art Amateur* for January, 1884. If this popular magazine continues to improve steadily for the coming year as it has for the last two years, it will do a great deal to extend knowledge of art and to improve the taste of the community. It has become more and more thoughtful, and taken a higher range both in its subjects and its treatment of them; and its biographical notices especially have a permanent interest, as introducing us to the leading artists of the day. The most important article in this number is a sketch of Auguste Bartholdi, the sculptor of the great statue of Liberty to be placed on Bedloe's Island in New York Harbor, with spirited sketches of his grand Lion at Belfort and others of his works. There is an article on the "Opening of Museums on Sunday," giving an account of a recent discussion at the recent Social Science Congress at Huddersfield, Eng. The well-known arguments in favor of opening museums on Sunday are given in the abstract of a speech by Mr. Judge. The Rev. John Gritton answers by the rather specious and weak plea that the great evil of the working classes is intemperance, and that England is improving in this respect, while her museums are not open on Sunday, while Italy and France are growing worse. He also lays stress on the loss of Sunday to the attendants at museums. This is a subject which requires larger considerations, to be decided. The first step is to do away with the superstitious idea of the Sunday, and then to consider how it can be best utilized for the good of all.

THE *Century* for January is an excellent number; and, among its most striking articles, we note the profusely illustrated one on "Edinboro' Old Town," by Andrew Lang, and "The Forty Immortals," by Y. D., the author of the striking biographical sketch of "Gambetta," in the March number. This is illustrated by portraits of Alexander Dumas, Jr., Ernest Renan, Henri Martin, Duc d'Aumale, Duc de Broglie, Jules Simon, Octave Feuillet, Victorien Sardou, Louis Pasteur, Victor Cherbuliez, and others. "Tom Dutt', is a charming sketch, with portrait, of a remarkably talented young Brahmin girl. "Garfield in London" gives extracts from a journal of a trip to Europe, in 1867, by the late President Garfield. "The Bread-Winners" ends somewhat disagreeably and sensationally. The poetry of the number is contributed by Henry Tyrrell, Miss Caroline May, Henry Gillman, Mrs. Elizabeth R. Bianciardi, James Herbert Morse, and Miss Eliza Calvert Hall; and the "Bric-à-brac" verse by John Vance Cheney, Samuel Minturn Peck, Miss Grace Denio Litchfield, R. W. G., and others. From Cupples, Upham & Co., Old Corner Bookstore.

THE opening article in the January number of the *Atlantic Monthly* is the commencement of a serial story, "In War Time," a story of the war for the Union, by Dr. S. Weir Mitchell. Mr. Crawford's serial, "A Roman Singer," is continued, and will run through several more numbers. Henry James, who knew Turgénieff and greatly admired him, writes of him as an author and a man. Dr. Holmes has a poem, "At the Saturday Club," in which he pays tributes to Longfellow, Agassiz, Hawthorne, and Emerson. Rev. Dr. A. P. Peabody contributes an article on "The Study of Greek," apropos of the famous address of C. F. Adams, Jr. Octave Thanet tells a very interesting story, "The Bishop's Vagabond"; H. H. writes entertainingly of "Chester Streets"; Richard Grant White adds "A Sequel to Mr. Washington Adams, in a Letter from Mr. Mansfield Humphreys"; Prof. E. P. Evans has a learned paper on "Hafiz of Shiraz"; E. V. Smalley surveys "The Political Field" from an unpartisan stand-point; and there is an unusually full department of reviews and a varied Contributors' Club.

"ST. NICHOLAS" for January makes its New Year's call with a bright table of contents and a brilliant list of contributors. Among whom are Louise Alcott, H. H., Mary Hallock Foote, Mayne Reid, H. H. Boyesen, Joel Benton, W. O. Stoddard, and Julian Hawthorne, and his sister, Mrs. Rose Hawthorne Lathrop. An entirely new feature, inaugurated in this number and to continue throughout the year, is the *St. Nicholas* Almanac, which will give to young folk, in simple and popular form, the more important phenomena of our earth's relations to the heavenly bodies; and, in addition, some entertaining bits of fun, fable, and allegory relating to the various months and seasons.

PERSONAL ITEMS.

AMONG the names of the signers to the protest against opening the Bartholdi Loan Exhibition on Sunday is that of Cornelius Vanderbilt, who is a prominent officer of a railroad that runs Sunday trains.

W. D. HOWELLS, the novelist, and Prof. Charles Eliot Norton, of Cambridge, are out in a card appealing for aid in rebuilding the Armenian Monastery of San Lazzaro in Venice, which was destroyed by fire last summer.

THE German Rothschilds refused to have anything to do with the Russian loan, unless the government first pledged itself to a certain line of defence of the persecuted Jews,—a fact that should be put to the credit of that famous house.

JAMES BAYLIES writes from Massillon, Ohio: "I have been taking liberal papers many years,—the first, *Ecce Homo*, published by Mr. Houston in New York in 1827, then the *New Harmony Gazette*, then the Boston *Investigator*, then *The Index*, and others. I heard Robert Owen deliver his first address in Philadelphia on his favorite system of reform, and became a convert. I belonged to the congregation of Abner Kneeland in New York in 1826-27, and now cannot be without *The Index*."

NO AMERICAN will write or read or hear of "Lord Tennyson" without a sense of a cheapening of great honors. It lessens a great man to have an honorary title conferred upon him, and a baronage to the poet-laureate is a derogation not to be expressed. Alfred Tennyson comes of a gentle family, one of the oldest in England; but it never before had a title, although it possesses a coat of arms, with the impressive motto, "*Cor unum, via una*" (One heart, one way). It is honor enough in the worldly way to belong to an ancestry that leaves such a noble epigraph and path-mark. But Alfred Tennyson's title of poet is higher than that, for it is of his own earning. The office of poet-laureate has added nothing to his lasting fame: it is a mere incident of his life.—*Springfield Republican.*

THE Princess Alice, who was a Liberal in religion, was warmly attached to Strauss, who dedicated to her his *Voltaire*. On receiving a copy of the book, she wrote: "I have not been able to thank you till to-day for the *Voltaire* that I received yesterday. The book is itself the cause of the delay, as I immediately devoted my spare time to it, gladly reading over again what you had read me last winter so beautifully. Your voice and all your observations seemed again before me, and I must again thank you a thousand times for the enjoyment, and for your much too kind dedication. ALICE." The London *Inquirer* says that, although she did not accept all the views advanced in *The Old Faith and New*, she "yet clung with undiminished esteem and gratitude to the memory of a man in whom she encountered one of the most beautiful sides of German learning,—namely, unyielding sense of truth, connected with a rare gift of engaging power of representation and winning modesty of personal manners."

"ON the steamer 'Cephalonia' this fall," says the Boston correspondent of the Philadelphia *Press*, telling the story, "the Rev. Brooke Herford, the Rev. Dr. Rufus Ellis, and the Rev. Phillips Brooks came home from Europe together. On the first Sunday out from Queenstown, the captain, on pious thoughts intent, endeavored to make arrangements for religious services, asking the clergymen to decide among themselves which one would preach. Mr. Herford excused himself upon the ground that he had been preaching steadily throughout his vacation, and wanted to rest. He therefore suggested that, as Dr. Ellis was the oldest, he ought to speak. 'Oh, no,' Dr. Ellis responded, 'it would be nonsense for me to preach when everybody wants to hear you.' And so, with disclaimers and compliments, the matter was turned over and discussed until it ended in there being no service whatever. 'Well,' sighed the captain to a sympathetic passenger, 'I did what I could. But isn't it confoundedly singular,' he continued confidentially, 'three fire-escapes on board, and nobody saved from the burning!'"

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

JESU[illegible]

His Opinions and [illegible]acter.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

OUR Paine Hall friends are arranging for a New England Free-thinkers' Convention, to be held in that building January 27 and 28. Horace Seaver, Elizur Wright, and James Parton are announced among the speakers.

A WRITER in the Boston *Herald*, who apparently wants to find some fault with Miss Clara Barton, late superintendent of the women's prison in this State, mentions "that the prisoners fairly idolized Miss Barton," and says this fact would seem to imply "undue sympathy" on the part of the superintendent; for "sympathy is the last thing that should enter a prison." We should not like to see our prisons in charge of men without sympathy for those in their care. It is, as Galton remarks, the ideal criminal who "has neither sympathy for others nor the sense of duty, both of which lie at the base of conscience."

THE following is from Emerson's sketch of Dr. Ripley in the *Atlantic Monthly:* "Some of those around me will remember one occasion of severe drought in this vicinity, when the late Rev. Mr. Goodwin offered to relieve the doctor of the duty of leading in prayer; but the doctor, suddenly remembering the season, rejected his offer with some humor, as with an air that said to all the congregation: 'This is no time for you young Cambridge men: the affair, sir, is getting serious. I will pray myself.'. . . Sage and savage strove harder in him than in any of my acquaintances, each getting the mastery by turns, and pretty sudden turns. 'Save us from the extremity of cold and those violent sudden changes'; 'The society will meet after the Lyceum, as it is difficult to bring people together in the evening—and no moon.' 'Mr. N. F. is dead, and I expect to hear of the death of Mr. B. It is cruel to separate old people from their wives in this cold weather.'"

A GOOD idea of the kind of education furnished to the young men of this day may be inferred from the creed embodied in the constitution of the Andover Theological Seminary. Every person elected a professor in that institution must not only publicly, on the day of his inauguration, subscribe to a declaration of his faith in the doctrines of the Westminster Assembly Shorter Catechism, but is also obliged to affirm a long creed, concocted by the founders of the seminary. One clause of this creed reads as follows: "I believe that the souls of believers are at their death made perfect in holiness, and do immediately pass into glory; that their bodies, being still united to Christ, will at the resurrection be raised up to glory, and that the saints will be made perfectly blessed in the full enjoyment of God to all eternity; *but that the wicked will awake to shame and everlasting contempt, and with devils be plunged into the lake that burneth with fire and brimstone forever and ever.*" (See John L. Taylor's *Memoir of Samuel Phillips*, Appendix, p. 389.) There is a good deal more of this nightmare stuff in the creed, but a specimen will suffice.

THE London *Inquirer* says of the attempt to oust Prof. Tanner from his position in University College: "If ever there was a case of attempted persecution for the sake of opinion, this is undoubtedly an instance; and it is all the more extraordinary that it occurs in connection with an institution founded upon the purely secular principle. We had hitherto imagined that the Dean of Llandaff, better known as Dr. Vaughan, Master of the Temple, had some pretensions to liberality of thought, and at least some slight appreciation of the principles of religious liberty. After the signal defeat of his discreditable attempt to persecute a scientific teacher who differs from himself on religious subjects, it is to be hoped that he will see fit to withdraw from the Council of the South Wales College. It is gratifying to find that the President and the nonconformist members of the council were resolutely faithful to the principles on which the college is founded,—setting a laudable example to the council of the older institution in Gower Street,—and that they received the support of one of the local clergy. . . . Once, it was our fate to suffer persecution and obloquy. Now, it is the fate of secularists and agnostics; and we should be unfaithful to the noblest traditions of religious liberty, if we did not vindicate at all hazards their claim to equal justice. *Proximus Ucalegon ardet.* If Dean Vaughan had succeeded in ousting Prof. Tanner, he might next have tried his hand at persecuting a Unitarian. These things show that religious liberty is still endangered, and needs unflinching advocates."

ON the 13th of December, 1883, in the city of Brooklyn, N.Y., a unique banquet was held by the Thirteen Club, which consists of thirteen members who have undertaken to break down an old-time superstition. Although its aim is excellent, it could not we think have been a very jolly affair, with skulls and crossbones ornamenting the walls, a big coffin in the centre of the room serving as a dining table, with human bones strewn around as decorations, and a skeleton dangling from an invisible wire behind the President's chair. On the coffin lay a wooden figure supposed to represent the giant Superstition. Its head was a mask with gaping mouth. At 9.30 P.M., the Club, arrayed in black robes with crossbones worked in white in front, marched in to the music of a funeral dirge. The bill of fare was in the shape of a tombstone, and the *menu* included "Oysters in the last gasp," "Fillet de tombstone," "Expiring duck," "Macaroni de la Morgue," "Resurrection sauce," and "Coroner's cream." The President's gavel was a human bone, which he announced had been forwarded from Tewksbury by Gov. Butler. Among the songs sung after supper were such as "See that my grave's kept green." And yet the affair, which was conducted by young and healthy-looking men, was said to be very hilarious, as their object was the death and funeral of Superstition. At midnight, after various superstition-defying ceremonies, such as spilling salt, etc., the coffin lid was nailed on, and Superstition was supposed to be forever dead in Brooklyn; but the Thirteen Club will doubtless find that their buried friend has at least as many ives as a cat is reported to possess.

REV. J. S. BLACK, a prominent orthodox minister of Montreal, in a recent discourse in that city, as reported in the Montreal *Witness*, in reply to the question, Why has the Church never taken the lead of great moral movements in their infancy? said: "The Church was a huge body, and as such moved slowly. By the very necessity laid upon her to preserve the peace within her own borders and to do no injury to the consciences of her members, a new moral movement must be well under way before the Church, with united and harmonious front, could join in the grand march of progress. The Church, too, was an aged body, and as such was inclined to be conservative, and was a censor and not a caterer. . . . Again, the Church's true work was not so much to inculcate particular items in moral reform as to inculcate the principles which lie at the root of all reforms. In this respect, the Church was not a knight errant, running a-tilt at particular abuses, but a sage teacher of those things which lead to sound moral life. All moral movement, too, had a social or political environment, or both; and it was only right that every innovation should reach an assured vitality before it was accepted. . . . The Church, in every age, has enough to do in enforcing moral truths about which all agree, instead of championing those things which are undergoing a probation. She was not the motive power in the engine of social progress. God is the living fire, and his Church is the controlling balance-wheel." That is to say, a newly discovered truth or a reform in its infancy and unpopularity need expect no encouragement from the Church. When it has reached an "assured vitality," when its triumph is no longer doubtful, the Church graciously condescends to smile upon it. This is what the free thinker is abused for claiming. Why should God, "the living fire," need "a huge body" like the Church for a "controlling balance-wheel"? Great is the mystery of the orthodox theology as expounded by its representatives!

Digitized by Google

A GOOD STEP FORWARD.

The question among the Unitarians as to what names should be inserted in their *Year-Book* list of ministers has this year been advanced to a new and important phase. Without any public discussion or announcement before the publication of the *Year-Book* itself, a new rule has been adopted in making up the list. This rule is stated at the head of the list in the following explanatory note: "This list is intended to give the names of all persons who have charge of Unitarian societies in the United States and Canada, whether as pastors or stated supplies; of all ministers now living, not in fellowship with some other denomination, who have been pastors of such societies and have not withdrawn from the profession; and of ordained ministers from other denominations, who have been approved by the Committee on Fellowship of the National Conference. In some instances, the person in charge of a society has not been ordained, or is a clergyman in fellowship with some other denomination." The preface to the *Year-Book* refers to the new rule thus: "In the preparation of the *Year-Book* for 1884, this change has been made: the additional list of ministers, which last year succeeded the usual list, has been omitted, experience having shown that it is best to include all names in one list. By reference to the heading, it will be seen that this is simply a directory, giving the facts as they actually exist."

Heretofore, the heading to the list has begun with the sentence: "This list is intended to give the names of all the Unitarian ministers in America." And the question in controversy was whether in this heading the term "Unitarian" necessarily connoted the term "Christian"; or, more particularly, whether those who had been regularly recognized and settled as Unitarian ministers, and had afterwards come to feel that they had no logical right to retain the Christian name, could still rightfully have their names included in the list. This question was raised ten years ago in our own case. The compilers of the *Year-Book* then decided that by Unitarian minister was meant a Unitarian Christian minister; and they dropped, accordingly, our name from the list. The heading of the list was not changed; but, in the preface to the *Year-Book* for that year (1874), this interpretation of it was clearly stated. This action, however, of the compilers of the *Year-Book* gave dissatisfaction to a very considerable number of Unitarians, who rightly saw that it was hostile to that principle of mental liberty for which the Unitarian denomination had always claimed to stand. An attempt was made at the following annual meeting of the Unitarian Association to rescind the action. But the attempt failed. The interpretation which the compilers had given of the meaning of the list, and their act in dropping a name from it, were both expressly indorsed by a large majority.

But the question, though thus settled for a time, has not been permitted to rest. One immediate consequence was that several other ministers requested to have their names withdrawn from the list, either because they could not conscientiously keep them there now that the list was officially declared to include only Christian ministers, or because they did not think there should have been any official excision of a name from it on the grounds given. For this latter reason, Rev. Dr. Bartol withdrew his name. Western Unitarians have been particularly active in protesting against what they have called a "mutilated" *Year-Book;* and *Unity*, their organ, has been persistent in contending for a repeal of the action of 1874 and 1875, and for a "complete directory." The question remained, therefore, as a kind of thorn in the side of the denomination. And the thorn evidently has been working to good effect. Last year, an attempt was made to conciliate the protesting party by publishing a supplementary list of those ministers of Unitarian societies, whose names, for any reason, were not included in the regular list. But this, so far from satisfying objectors, only served to keep alive the question, with regard to some of the names, why they had ever been separated from the regular list. This expedient has now been abandoned after a year's experiment, and the more generous rule adopted that is above cited. By the new rule, all the names go back into one list, and this without consulting their owner's wishes or asking their doctrinal views. As stated, the list now gives "the facts as they actually exist"; and the compilers do not attempt to make themselves responsible for the denominational soundness of any names included in it.

But, it will be noticed, the old question is not so much settled as removed. The change in the heading entirely alters the conditions of the list. If the present heading had been used ten years ago, no question could have arisen. There is no attempt now to make a list of "Unitarian ministers"; and, therefore, the question, whether "Unitarian" necessarily means "Christian" or not, has, so far as this list is concerned, no pertinency. The compilers have put into it, and knowingly, the names of some who do not style themselves "Christians." But if asked, Do you mean to say that Unitarian ministers may be "non-Christians" as well as "Christians"? they may answer, We have not touched that point: we have simply given the names of those whom Unitarian societies have chosen for their ministers. They are, we believe, in some instances non-Christians, as in others they are Universalists or Christian Baptists; but we do not go behind the returns.

And this rule, we believe, will be found to be a good one. Though it may seem, at first sight, to be an ingenious evasion of the old question, we do not think it was adopted for that reason, but rather because it is really demanded by the best spirit and traditions of Unitarianism. It respects the liberty and independence of the individual societies, and does not attempt, as did the old rule, to arrogate for any central board of power the right to say who are Unitarian ministers and who not. It is in the interest, therefore, of a larger liberty and a wider fellowship. It will remove a temptation and a stumbling-block from the paths of young men who are studying for the Unitarian ministry, or who may be already in Unitarian pulpits. It will help to lift a burden from sensitive consciences. And for this we hail it with sincere satisfaction.

The question of the list of ministers in the Unitarian *Year-Book* seems to be thus happily disposed of. There is no longer any printed official list of "Unitarian ministers." If any such list exist,—as in popular nomenclature, as also to the historic judgment, there doubtless will,—it will be henceforth, like the British constitution, unwritten. But behind this there lies another question,—What are "Unitarian Societies"? This, at present, may not be a question of much practical perplexity. But, by and by, it will come to the front. And with it will then return the old question, in its proper place, Does Unitarianism necessarily mean Christianity?

On this point, we may have something to say in a subsequent issue. For the present, we extend our sincere congratulations to the Directors of the Unitarian Association for their happy settlement of one vexing question. Some questions are legitimately settled by taking them out of the way.

WM J. POTTER.

A LETTER FROM MONCURE D. CONWAY.

A Sunday in Tasmania.

Beautiful for situation is Hobart, where I am writing this; and round about it are the mountains on whose snow we look from a plain clothed with blossoms of an opening spring. The great majority of the inhabitants, as is usual with Scotch and English people, went on their usual pilgrimage to Palestine, in groups that glare or turn up their noses at each other; and I resolved to observe one of these groups. As I am hoping to examine Oriental sects, it would be hardly sensible not to know all about those of my own native land; and one of these was remaining on my conscience,—to wit, the "Campbellites." So, hearing that there was a Campbellite chapel in Hobart, I went to its morning service. It was barn-like in plainness, so homely that I rather liked it, the only decoration being two yards by a half-yard deep of scarlet cloth framed in tin, which, from the wall above the pulpit, proclaimed, "Praise ye the Lord." Three men sat with the ordinary arrangements of the communion before them, which they proceeded to administer, passing the bread and wine through the congregation, but carefully omitting our party of three. (This precaution was not observed later on, when the offertory plate was passed round.) A boy of about seventeen was signalled in the congregation, and went up to read the first lesson,—a Psalm, "a canticle of love and woe," which the poor lad read in a tone suggestive of a school task, with droll monotony. Another person, considerably older, was summoned from his seat to read from the New Testament, but did so with a bashful and almost inaudible voice. The prayers, also, were by different people, seated on the cushionless benches. The sermon was by a shipwright of the place, and there were two things in his talk which I found striking. One was his remark on the saying that God would not suffer his children to be tempted beyond what they are able to bear,—"this will sustain us in almost all the trials of life." There was something about that "almost" which made me lay it up for future reflection. The other thing was this: he said: "'Dead in trespasses and sins.' Some people think that a man must commit some crime or great immorality to be thus 'dead'; but a man who lives a careless and indifferent life is as dead in trespasses and sins as the vilest criminal in the world." I had heard this same sentiment before; but it never made me shudder so much as now, possibly because it was uttered on a spot haunted with weird traditions of a penal colony, and around which are numbers of people who left their country for their country's good. However, amid all this humble shipwright's bad grammar and ignorance, and in all the services, there was a touching sincerity. It has been many years since I have attended an orthodox church or chapel in which the words sung and spoken were physiognomically represented in the faces and voices of those who uttered them. I had become so accustomed to words of penitence and grief from rosy faces, to dogmas strained to impossible meanings, that this atmosphere of perfect sincerity was surprising and refreshing. The hymns were mainly those of Charles Wesley. In one, I noted a verbal change not without significance. The old Methodist hymn began:—

> "Come on, my partners in distress,
> My comrades through this wilderness,
> Who still your bodies feel."

In the Campbellite version, "sorrows" takes the place of "bodies." The hymns were all about the future, about resurrection and heaven, with the usual background of earthly misery. There was no choir or instrument; and they were sung

Digitized by Google

with shrill and querulous voices,—no harmony, no bass and contraltos or second trebles, but an undrilled unison of sharp high voices. It was all an unconscious rite and service of pessimism by a hundred of the illiterate people of Tasmania.

I was somewhat surprised at there being a Campbellite chapel at all in this region, and was told that it was founded a few years ago by the Rev. A. O. Carr, of Kentucky. He came over here, obtained some adherents, preached fluently, and gradually gained a strange hold upon his converts. It is said that they almost worshipped this A. O. Carr, and that they could hardly bear it when he returned to America. They would not let him go until he had promised to return to them again, and ever since they have been feeding their hearts on that hope. He writes them letters saying that he cannot return so long as his father and mother are alive; and it is to be feared that, if the lives of the elder Carrs depended on the prayers of Tasmanian Campbellites, they would not long be in the land of the living. They have built their tabernacle for him since he left, but have no minister, and are simply keeping alive the fire he left by rubbing together such sticks as appeared last Sunday.

This is the great trouble in these distant regions,—so many come and dwell for a time, and go away again. When such have been superior men, teachers who have called friends around them, they are constrained to make promises of return which can never be fulfilled. Just now, the finest church in Australia is parting with its minister, an eloquent Emersonian, whom the champions of Calvinism have laid low. His congregation—whom he has taught to sing the hymns of Longfellow, Adelaide Procter, and other liberal spirits—are broken-hearted. They have undertaken a war to free their church from the Presbyterian Union; and all their efforts have for a watchword, "He will come again!" The other day, I expressed to one of his friends a doubt whether Mr. Strong would ever see Australia again, and soon discovered that I had uttered an exceptionally painful heresy. The Bishop of Melbourne, too,—a brilliant Broad-Churchman,—has given a hint about retreating from the perpetual tempest which Hard-and-High Churchmen keep up around him; and his warm admirers are trying to believe that he only means to take a furlough. "He will come again."

How long has this been going on? When I was in the Sandwich Islands, I reread the story of Capt. Cook who was buried there. When he arrived, the natives hailed him as one whom their tribe had been traditionally expecting,—a sort of white Messiah. After a time, they found he was no Messiah; and no doubt it was partly under the bitterness of disappointment that they were so ready to kill him. Since I left those islands, I have explored their traditions farther, and find that they ascribed their temples and their priesthood to a white man who visited them many years ago, then left. When the whites from this town, Hobart, went over to what is now Victoria, and founded Melbourne in 1835, they found there an Englishman dressed in skins. He had escaped from a convict ship in 1804, and remained all that time among the aborigines. He related that, before he had met any native, he came to a grave with a spear stuck upright in it. He took this spear; and, when the aborigines beheld him, they recognized the spear, and at once believed that a beloved chief had returned to them from that grave. They all treated him with solemn and ceremonious homage, and took extreme care that he should not be injured in any of their tribal wars.

This man said that it was the faith of the Australian aborigines that their dead would all return to them with white complexions. Their anticipations have in a way been strangely fulfilled. The aborigines have nearly all died,—in Tasmania all,—and the whites who fill their places have established as a religion fables and dogmas beneath whose white complexions the aboriginal characters may be detected. A powerful creator, Pund-jel, much feared, but who may be soothed, who keeps in his employ a huge serpent, Myndie, whose ravages, when let loose, only members of one family line can stay,—that is the foundation of the late Australian "religion." The system that has succeeded to it, so far as its dogma and mythology are concerned, fit into the shell of the departed one with remarkable precision. I have before me, as I write, a strange plant of this region, which seems to be a natural symbol of the way in which one mythology may build on the lines of another. This plant the aborigines called *Aweti-Hotete*, and the whites call it the "bulrush caterpillar." The grub of a huge moth—that before me is nearly three inches long—buries itself in the ground at a certain season. The seed of a certain fungus (*Sphæria Robertsii*) lodges in a space on its head, kills the grub, then turns it into its own root, yet preserving the exact shape of the chrysalis in every minutest detail. Dissected, this animal shape is found to be solid wood. The *Sphæria* does not break through the shell anywhere except at the forehead, whence it grows into the air some six inches, a single leafless thing, coiling at the top like a snake, with a brown coating of seed ready to fall off and fix their fang in the next little worm that buries itself, dreaming of far-off wings.

MONCURE D. CONWAY.

"THE ETHICAL CONSEQUENCES OF DARWIN'S THEORY."

In another column is printed a summary of a paper by Mr. H. W. Holland, kindly prepared by him for *The Index* by our request, in which the author gives an outline of his views as to the ethical consequences of Darwin's theory. The paper, as read, doubtless contained qualifying phrases which could not be put into a brief summary, and some of which, very likely, are necessary to convey the author's meaning with fulness and precision. Making allowance for this fact, Mr. Holland's reasoning, nevertheless, seems to us open to criticism, and his conclusions unwarranted by the theory the moral implications of which he endeavors to explain. He emphasizes one class of facts and presents one aspect of evolution; but another class of facts and other aspects of evolution, which are quite as important to consider in order to understand "the ethical consequences of Darwin's theory," are, so far as one can judge from the summary, wholly ignored.

Certainly, natural selection must have played an important part in the development of man in the early periods of his existence; but, happily, with his departure from the point of his animal origin, the struggle for existence has acquired a milder form, and among the most advanced peoples today is largely a competition in useful arts and pursuits. Civilized man has emancipated himself from those conditions under which his ancestors struggled, and has been able to substitute his own rational spontaneity for the blind forces of nature. He now contemplates his relations and surroundings, and seeks to improve them by means of political and social institutions. He has a *moral* nature, and is interested in the well-being of his fellowmen. He has a conception of equal rights and reciprocal duties and obligations, together with extended sympathies and altruistic feelings, which awaken his interest in the welfare of the race to which he belongs. "Moral life," says Lewes, "is based on sympathy: it is feeling for others, working for others, aiding others quite irrespective of any personal good beyond the satisfaction of the social impulse. Enlightened by the intuition of our common unity of weakness, we share ideally the universal sorrows. Suffering humanizes. Feeling the need of mutual help, we are prompted by it to labor for others. The egoistic impulses are directed toward objects simply so far as these are the *means* of satisfying a desire. The altruistic impulses, on the contrary, have greater need of intelligence to understand the object itself in all its relations. Hence, so much immorality is sheer stupidity."

Now, when the brutal struggle for life is replaced by social conditions in which the conduct of men is more and more governed by fixed moral principles, and in which the tendency is to work together for the general improvement, the influence of natural selection is small and continually becoming less. "With civilized nations," says Darwin, "as far as an advanced standard of morality and an increased number of fairly endowed men are concerned, natural selection apparently effects but little, though the fundamental social instincts were originally thus gained. But I have already said enough, while treating of the lower races, on the causes which lead to the advance of morality,—namely, the approbation of our fellow-men, the strengthening of our sympathies by habit, example and imitation, reason, experience, and even self-interest, instruction during youth, and religious feelings."

"While," says Büchner, "the struggle between peoples was formerly a contest of weapons, strength of body, courage, and ferocity, it now consists in an emulation in good and useful arts, in discoveries, contrivances, and sciences. The time is past in which one people subjugated another, or exterminated it to take its place. It is not by destruction, but by peaceful competition, that one can attain a superiority over another. But, by this means, that uniformity of culture and that intermixture of races are brought about which so powerfully oppose the separation of new species. The advancing development of the human race will not therefore in future occur solely or chiefly in particular races destined eventually to subject or displace the others as has hitherto been the case, but it will constitute a uniform acquisition of the whole species."

Of the same purport is the following passage from Strauss: "The wild, savage struggle for existence has already had abundant play in the brute world. Man cannot entirely avoid it, in so far as he is still a mere product of nature; but, in the measure of his higher faculties, he should know how to ennoble it, and in regard to his fellow-men should mitigate it, especially by the consciousness of their kindred and the mutual obligation of race. The wild turbulence of nature must be appeased in mankind: man must be, so to speak, the *placidum caput*, the Virgil's Neptune reared above the tumultuous waves in order to calm them."

There is danger of ascribing too much to heredity. Although heredity is a law by which beings tend to produce beings like themselves, in the processes of reproduction there are in operation so many laws, known or unknown, there are so many subtle relations, so many intervening causes, that an approximate resemblance only of offspring to parents is possible; and we are never surprised if there is even in some respects striking dissimilarities. The continuous repetition of the same forms and functions would be possible only under ideal conditions. In this case as in all others, the

Digitized by Google

term law is a formula expressing general facts, with all resistance set aside, all perturbations removed. The first law of motion, that any body will pursue a uniform movement in a straight line, means, not that there is any such phenomenon in nature, but that no change in the velocity or direction of a body would occur, if its motion were not accelerated, retarded, or changed by another body. In the domain of life, the requisite conditions of the ideal law of heredity are no more realizable than in the domain of astronomy. Indeed, the resisting and perturbing influences in the former are far greater in number and variety, ever increasing with increased complexity of organisms, until, in man, the "exceptions" are so numerous that the majority of people, even to-day, dispute or doubt the law itself. If we study heredity without considering fully the conditions and circumstances which modify and neutralize inheritance, the results of our investigation will be one-sided, our conclusions fallacious, and the results without practical value.

Notwithstanding heredity, we must remember the lower forms of life are subject to continual modifications due to causes but little understood, and that many of these modifications, by transmission, are incorporated into the constitution of the species. But man is susceptible of immensely greater mental and moral modification. He is born in a social medium in which are registered the accumulated results of centuries of labor,—language, knowledge, beliefs, institutions, literature, customs, conventionalities, etc.,—which determine his action not less, perhaps more, than heredity. The more he advances, the more complex becomes this social medium, pressing upon him continually and in a thousand ways. "Education," says Ribot, "is a sum of habits: among civilized nations, it builds up an edifice so skilfully contrived, so complicated, so laboriously raised that we are astonished, if we examine it in detail. The fact is, six thousand years and more stand between the two. Many of the habits which we construct through education have cost the race centuries of effort. . . . Education, after centuries of effort, has made us what we are."

The Greeks, pre-eminently the intellectual aristocracy of the ancient world, retrograded; and the most enlightened nation of to-day, whose progenitors a few hundred years ago were savages, owe but little, if anything, to that nation by direct inheritance. But who can estimate the educational value of Greek literature, to the study of which was due largely the revival of learning, and which profoundly influences the thought of to-day?

The attempt to keep "a close tie of family and race," and "a modified selfishness setting up one's own blood as the object to which one's self and everything else is to give way," so far as it has been made, has given no results of an encouraging nature. "The citizens of the ancient republics," says Littré, "were never able to maintain themselves by reproduction. The nine thousand Spartans of Lycurgus' time were reduced to nineteen hundred in the time of Aristotle. The people of Athens were often compelled to recruit their numbers by the admission of foreigners. Nor has the course of things been different in modern times. All aristocracies, all close corporations that fill up their ranks solely from among themselves, have suffered gradual losses, which would have caused a certain reduction, were it not for the additions made from time to time. There is not in Europe a single natural nobility the majority of which dates from considerable antiquity."

Referring to the institution of caste, hereditary professions, and that of classes, Ribot says "that heredity is a law of nature from which a people frees itself as it grows in civilization." History justified Bentham in saying to this country: "Beware of an hereditary nobility. The patrimony of merit soon comes to be one of birth. Bestow honor, erect statues, confer titles, but let these distinctions be personal. Preserve all the force and all the purity of honors in the State, and never part with this precious capital in favor of any proud class that would quickly turn their advantage against you."

The liberty allowed by the system explained by Mr. Holland "includes the liberty of the strong to conquer the weak." The system "favors endless competition even to the extent of wars," is "opposed to making our land the refuge of poorer foreign blood," "involves much severer measures against criminals," "forbids all out-door relief," is opposed to all trades-unions, etc., "favors the farming class more than the manufacturing," and develops men "self-assertive, but patriotic and domestic."

Such a system as this would show its pernicious tendency first in the "region of moral feeling," which, says Maudsley, "representing the highest reach of evolution, is the consummate efflorescence of human culture," and, by narrowing our sympathies, making us indifferent to the sufferings of the weak and poor, and encouraging exclusiveness, aristocracy, and caste, would lead to general and rapid demoralization.

"The aid which we feel impelled to give," says Darwin, "to the helpless is mainly an incidental result of the instinct of sympathy, which was originally acquired as part of the social instincts, but subsequently rendered, in the manner previously indicated, more tender and more widely diffused. Nor could we check our sympathy, if so urged by hard reason, without deterioration in the noblest part of our nature. The surgeon may harden himself while performing an operation, for he knows that he is acting for the good of the patient; but, if he were intentionally to neglect the weak and helpless, it could only be for a contingent benefit, with a certain and great present evil. Hence, we must bear without complaining the undoubtedly bad effects of the weak surviving and propagating their kind. But there appears to be at least one check in steady action,—namely, the weaker and inferior members of society not marrying so freely as the sound; and this check might be indefinitely increased, though this is more to be hoped for than expected, by the weak in body or mind refraining from marriage."

Mr. Holland does not suggest that the example of the Spartans, who killed all newly born children who had any bodily infirmity, be followed; but his theory implies that the strongest and bravest men should be sacrificed by thousands on the field of battle. Even to-day, as Haeckel says, "the stronger, healthier, and more spirited a youth is, the greater his prospect of being killed by needle-gun, cannon, and other similar instruments of civilization. . . . The more useless, the weaker, or infirmer the youth is, the greater is his prospect of escaping the recruiting officer and of founding a family." Mr. Holland's system would add to this enervation of nations through war by stimulating the war spirit. The savage tendencies acquired in the brutal struggle for life would be revived and strengthened. But we hold, with Ribot, that "these warlike instincts, preserved and accumulated by heredity, have become a true cause of destruction, of carnage, and of ruin. After having served to create social life, they are no longer of any use but to destroy it. After having assured the triumph of civilization, they now only contribute toward its overthrow. Even when these instincts do not bring two nations into conflict, they manifest themselves in ordinary life in certain individuals by a quarrelsome, contentious disposition, which leads often to revenge, to duels, and to murder."

Those whom unfavorable circumstances repress would stand no chance under the system proposed. If consistently carried out, all aid societies would be abolished, and all assistance in the education of the poor and the weak would be discouraged. Would it not be more humane and useful to remove the pressure, which, as Büchner says, "can only be operated against by lightening, as much as possible, the struggle for existence by means of such arrangements as will present space and the possibility of development to every aspiring talent, and prevent in future the weal of millions from being sacrificed to the glory of a few? In the greatest possible equalization of the means by which the struggle for existence is fought out by each individual lies the problem of the whole future of the human race."

Equality of ability, education, or happiness among men is not to be expected; but every civilization, in proportion as it becomes infused with the moral spirit, must strive to equalize as far as possible the *conditions* under which each may achieve the full possibilities of his being. Efforts in this direction are more in harmony with our highest nature and more likely to be fruitful of good results than attempts to extinguish the families of the less favored and less fortunate of our fellow-beings; for the conditions of life go far to determine its success or failure. "Had Cæsar come of a proletarian family," says Henry George, "had Napoleon entered the world a few years earlier, had Columbus gone into the Church instead of going to sea, had Shakspere been apprenticed to a cobbler or chimney-sweep, had Sir Isaac Newton been assigned by fate the education and the toil of an agricultural laborer, had Dr. Adam Smith been born in the coal hews, or Herbert Spencer forced to get his living as a factory operative, what would their talents have availed? . . . As the common worker is on need transformed into queen bee, so, when circumstances favor his development, what might otherwise pass for a common man rises into a hero or leader, discoverer or teacher, sage or saint. So widely has the sower scattered the seed, so strong is the germinative force that bids it bud and blossom. But alas for the stony ground and the birds and the tares! For one who attains his full stature, how many are stunted and deformed!"

The approximate equalization of the conditions under which men may pursue happiness will be more effective, in our opinion, in preventing crime than "severer measures against criminals." However many criminals are annually executed, the number will not be reduced, but increased under such a system as the one proposed, which has been sufficiently tested, as, for instance, in the reign of Henry VIII. and in later as well as in earlier periods. A large proportion of those who commit crimes are no more badly organized than multitudes who, in more fortunate circumstances, live and die respected by their fellow-men. Measures directed against the increase of a certain class of criminals by propagation would serve somewhat as a preventive of crime, but a more general and radical preventive must be sought in such social reforms as will diminish the causes of criminal acts.

Doubtless there is valid ground for objection to much in the policy and practice of labor combinations, but it results chiefly from the very antagonism which is fundamental in the system outlined by Mr. Holland. "Selfishness on the one side resisting selfishness on the other," says Spencer, "inevitably commits sins akin to those it complains of, cannot effectually check harsh dealings without itself using harsh measures. Further, it

Digitized by Google

may be fully admitted that the evils of working class combinations, great as they are, go along with certain benefits, and will hereafter be followed by greater benefits,—are evils involved by the transition to better arrangements." These evils should be contemplated with some considerations of the good accompanying them by those who hold that war, with all it implies—wholesale slaughter, orphanage, poverty, oppression in the form of taxation, and moral retrogression—should be encouraged in the interests of an aristocratic race.

Of course, under a system requiring war for its success, a large number of offspring are necessary constantly to take the place of those killed off; but, under an advanced industrial system, as Spencer says, "the highest constitution of the family is reached when there is such a conciliation between the needs of society and those of its members, old and young, that the mortality between birth and the reproductive age falls to a minimum, while the lives of adults have their subordination to the rearing of children reduced to the smallest degree. The diminution of this subordination takes place in three ways: first, by elongation of that period which precedes reproduction; second, by decrease in the number of offspring born and reared, as well as by increase of the pleasures taken in the care of them; and, third, by lengthening of the life that follows cessation of reproduction."

We have quoted passages from well-known writers to show not only that no such ethical consequences as Mr. Holland imagines result from Darwinism, but that his conclusions are in direct opposition to the views of the ablest advocates of evolution,—those who, like Darwin, have given to the subject years of patient and laborious thought. It would be easy to show, we think, by going more deeply into the subject, that the "new ethics" outlined by Mr. Holland embodied in individual and social life, and recognized as the highest standard of conduct, would in a few centuries produce a type of human character as selfish, as cruel, and as vicious as has ever existed on this globe. Even the type, so far as indicated in the summary, is one attempts at the production of which are not likely to evoke much enthusiasm among the best men and women of this age, and for others the subject is without interest.

We say this of course with no disrespect to the author of the essay we have frankly criticised, who is a gentleman of much ability, of generous disposition, and whose interest in human progress is no less than our own.

B. F. UNDERWOOD.

EDITORIAL NOTES.

SAYS Darwin, "The moral nature of man has reached the highest standard as yet attained, partly through the advancement of the reasoning powers, and consequently of a just public opinion, but especially through the sympathies being rendered more tender, and widely diffused through the effects of habit, example, instruction, and reflection."

THE exemption of churches, church property, and religious institutions from taxation, thereby forcing indirectly into their support persons who do not believe in their utility, is an outrage on the rights of all such persons, and a remnant of that religious despotism which once treated mankind as slaves, and robbed its victims, in the name of God, to build costly cathedrals and enable ecclesiastics to live in luxury and ease.

SAYS the *Sunday School Times*:—

The more polished the phase of infidelity, the greater its influence for evil. Paul found it harder to reach the cultured Athenians than the sensual Corinthians. And, to-day, the smooth-spoken and cold-blooded Matthew Arnold will attract to his infidel teachings many readers and hearers who would recoil from the coarse blasphemies of the Bradlaughs and the Ingersolls. Just now, while Matthew Arnold is lecturing on our American shores, his publishers have issued a new and cheaper edition of his *Literature and Dogma*, a book of which the general spirit may be understood by the closing words of the author's preface to this edition: "Our popular religion at present conceives the birth, ministry, and death of Christ as altogether steeped in prodigy, brimful of miracle; *and miracles do nothappen.*"

SAYS Lange, in the concluding chapter of his *History of Materialism:* "We lay aside the pen of criticism at a moment when the Social Question stirs all Europe,—a question on whose wide domain all the revolutionary elements of science, of religion, and of politics, seem to have found the battle-field for a great and decisive contest. Whether this battle remains a bloodless conflict of minds, or whether, like an earthquake, it throws down the ruins of a past epoch with thunder in the dust, and buries millions beneath the wreck, certain it is the new epoch will not conquer, unless it be under the banner of a great idea, which sweeps away egoism, and sets human perfection in human fellowship as a new aim in the place of restless toil, which looks only to the personal gain."

THERE is no such horror of the "infidel" in Christian society as there used to be. Only the very narrowest and blindest sort of religionists stigmatize so the man or woman who lives a good life, loving and helping their fellows. It is recognized more and more that belief cannot be forced. A man who thinks cannot make his faith against his thought. As this is seen, even the Church comes nearer and nearer to the simple position of Paul,—tribulation and anguish upon every soul of man that doeth evil, but glory and honor and peace to every man that worketh good. Notwithstanding all Paul's elaborate dogma and dialectic in the building of the Christian Church, that utterance remains the fit expression of an absolute truth.—*Springfield Republican.*

THE *Christian Register* thinks that if Joseph, the father of Jesus, could revisit the earth, a thing that would "awaken regret and indignation in his heart would be the fact that, in the eyes of all Christendom, he is not the real, but only the *reputed* father of his own son! . . . He would doubtless be content with the testimony of Matthew that he was a righteous man. But, as a righteous man, with what indignation must he view that unrighteous mythology which robs him of the joy and honor of being the father of the Christ-child? God had called him to this holy and exalted privilege, why should man deny to him its rewards? Joseph would hasten to assure us that this denial of his fatherhood was not the work of his own age. . . . Strange that, in seeking to honor Jesus, it should affix a stigma of dishonor to his natural birth." Verily, the *Register's* Christianity is very much like Paine's "infidelity."

MR. EDWIN D. MEAD concluded his lecture in Chicago recently on "New England in Holland" as follows:—

From Old England, through Holland, to New England! It is to me a parable and prophecy of the experience of the English race in the creation of this great New World commonwealth. As the Pilgrim Fathers were schooled and disciplined by those long years of life in a foreign land, amid new thoughts, strange manners, and strange speech, and came out of Holland broader, stronger, and better men than when they went into it, so the English race is being educated and enriched in this America by daily contact, by neighborhood and brotherhood with the men of every nation and of every race. Not Holland only, but Germany, with her deep religious heart, Italy, with her love of beauty, France, with her energizing aspirations after social justice and perfection, Africa and Asia with all their mysterious possibilities,—these have all taken up their abode with us, and are offering—nay, inevitably urging—each its different gospel and its different warning. For good or evil, the English race here in America is appointed to take upon itself and into itself all other races of mankind. God grant that, as our Pilgrim Fathers, in their life among a foreign people, had wisdom and virtue to appropriate their excellences and resist their vices, so we may take from these various peoples, who have come to be forever with us and of us, all and only that which can make our English nature larger and nobler. God grant that all of us, each race purging other and each enriching other, may emerge from each national experience a broader, a deeper, and a more united whole, and that the whole body, fitly joined together, and compacted by that which every joint supplieth, may go steadily and surely on unto a perfect state, unto the measure of the fulness of the City of God.

THE Boston *Herald* has the largest circulation of any daily paper in Massachusetts. One reason of its large circulation is that it prints what the people like to read. When, therefore, we find in its columns special despatches giving detailed accounts of prize-fights, dog-fights, and other brutal sports which are read with avidity by people who would feel insulted, should their faith in Christianity be called in question, we wonder that intelligent men and women do not see that something more than belief in theological dogmas is necessary to morality. We give an extract from one of the *Herald's* "specials" of last week, to show the sort of news that is placed before the readers of the most popular daily in this State:—

The dogs were led into the pit, and at once began to fight. Ladd had the advantage in the attack, and got a good hold on Billy's neck, which he kept for some time, Billy meanwhile doing his best with his feet to free himself. They tumbled around the pit for some time, and Billy succeeded in shaking Ladd off, and caught a good hold on Ladd's nose. After a few minutes, he let go, to get a better hold. They again got fast, and tumbled about the pit, biting each other severely. They were separated, and taken to their corners, had their mouths washed out, and received other necessary attentions from their handlers. The betting now changed in favor of Ladd. When they were let go again, they faced each other in a savage manner. Ladd got a hold on Billy's throat, and held it for some time, Billy struggling with all his might to free himself. He succeeded, and got Ladd's leg in his mouth. They tore each other, and tumbled around the pit for half an hour, to the great delight of the roughs present. They were again separated. Ladd's backers now offered to bet two to one on their dog, but Billy's backers could not be induced to accept the odds. When they were let go for the third scratch, Ladd hopped across the pit on three legs; but Billy failed to respond, and Ladd was declared the winner in 2 h. 7 m. Ladd received the worst punishment, having his leg broken and his neck and head terribly lacerated.

THE F. R. A. FUND.

Donations and membership fees for the Free Religious Association, in response to its recent appeal for funds for the holding of conventions and for meeting other expenses of the Association:—

The Index.

BOSTON, JANUARY 10, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

SUBTILTIES.—"DEAR FRIEND."

Sweetly and silently, these two plain words
Glide through the crimson chambers of my heart;
And white thoughts fly, swift-winged as mountain birds,
To haunt your soul with subtilties of art.

When, like a chain formed from the souls of flowers,
Fine, fair, invisible, but real in its force,
You feel my love fetter your quiet hours,
And turn you hitherward from some far course;

When, with a pensive smile, you pause and say,
Hushing all speech and harking with your soul,
"Some one who loves me thinks on me to-day,"
You hint at laws most potent to control.

Not best with speaking lips or soulful eyes
Reach we the real lives of those most dear,
But by the force of unnamed mysteries,
Felt but unseen in the soul's atmosphere.

This magic power stops not to measure space,
But conquers distance like an angel free:
We feel a presence, sense a shadowy face,
And know a soul bears our soul company.

I do believe these longings reach as far
As paradise, and woo the sainted dead
From holier ways to where we groping are,
With lonesome hearts, and sad prayers all unsaid.

Believing this, I fain would do my best
In righteous living, making small complaint
To break the sweetness of their sacred rest,
Who can but sorrow when we moan and faint.

For their dear sakes, and for my earthly friends
Whom I do light or shadow unaware,
My life shall never sink to sordid ends,
Nor make one soul who loves me grow less fair.

So bid me welcome when with viewless feet
I tread the flowery meadows of your thought,
For only what is white and pure and sweet
Shall be by me upon your being wrought.

EMMA TUTTLE.

IF you would lift me, you must be on higher ground. If you would liberate me, you must be free. If you would correct my false view of facts, hold up to me the same facts in the true order of thought.—*Emerson.*

For *The Index.*

Orthodox Commiseration for the Heretic Dead.

BY GEORGE JACOB HOLYOAKE.

[The finest secular hall in England, excelling in taste and brightness and as complete as the Cosmian Hall at Florence, Mass., owes its existence to Councillor Josiah Gimson, of Leicester, who was president of the Secular Society in that town. At his funeral, the following argument was maintained by me. It arose from an impression being diffused through the town that, though secular principles might do to live by, they were not so well to die by as those supplied by preachers or officially provided at railway stations. Besides, complacent persons did not scruple to say, of a man of high character and great secular usefulness: "We are not quite sure as to his future. We, however, who have done nothing equal to him, shall, because of our belief,—which costs us nothing and gives us no trouble,—march into heaven with cymbals playing, while the secularist, on account of his good intentions, may perhaps, if God is not very particular, be allowed to come in after us." The nobler sort of Christians say this and do not mean it: the baser sort both say it and mean it. We should entirely lack self-respect, did we not respectfully suggest that this patronage of pity is not necessary. Others intimated that the piety of life, according to reason and duty, must have a melancholy outlook. Professional "spirituality" imposes upon many honest people. Such is the argument of the following address.]

Secularism is a form of opinion which looks for light by studying the order of the universe. It asks from members of its society no declaration as to the origin of the world. Each forms his own view. Some are theists, some are agnostics, some believe in immortality, some are doubtful of it. An agnostic is a non-asserter of a future life, and silent concerning God and immortality as beyond our knowledge. It is asked, What will become of a man who thinks thus? We will answer the question. Look around! You see—if, happily, not here, what is to be seen in great towns—ruffianism, inebriation, and debauchery breeding souls. Are immortal souls created thus? Are the quarters of fever and crime the breeding-ground of heaven and hell? Is God concerned in that? Look on this earth! Is there a creature but another creature is following it to devour it? Not a being swims the ocean but sees an open mouth of death before it. Not a wild animal on the earth, nor a bird in the air, but lives in terror of a deadly enemy. Is God behind all that uncertainty and alarm? Why is the very insect so wondrously made with nerves and brain? Why are the fish fashioned so beautiful in hue and action? Why are the birds so gorgeous and the animals so full of strength and grace, and all to be devoured? Is that the design of God? Why do the great battalions of five nations in Europe stand to-day ready armed to blast the chivalry of each realm with shot and shell? Does God permit and incite this? Is not that man, who says, I will not charge God with being the cause of this, more reverential than the theist who says that the carnage of creation is the manifestation of God's love? Is not the thought awful? Is not silence worship, compared with this appalling religion?

Whence is this black and ponderous world, which for one hundred millions of years has rolled through the etheric void? What is this huge universe which has been self-acting through eternal ages, before we, specks of an hour, emerged into life upon its mysterious surface? What was before it? what is behind it? what is within it? Did Job know? Did David know? Did Christ tell? What insanity of conceit must dwell in him who says he knows! If the great Existence takes note of our ways, how tender it must be to that man who has the piety of silence, while with what despising amazement he must look on those who, not knowing their ignorance and not feeling their presumption, babble of knowing him! Few have the rare reverence of reticence or feel that God is too big for the churches to measure by the profaning and finite tape of any preacher. And is not immortality as inscrutable as Deity? By the side of the grave, the theist has nothing more than hope: the atheist has nothing less. Neither has knowledge, and both have one prospect of possibility. If Christians were *sure* of future life, and men believed them, who would linger here, when those we love and honor have gone before? Ere we reach the middle of our days, the joy of every heart lies in some tomb. If the Christian actually believed that the future was real, would he hang black plumes over the hearse and speak of death as darkness? No. The cemeteries would be hung with joyful lights: the grave would be the gate of paradise. Pestilence would not unpeople the world like this giant gladness. No. We know we know nothing, yet still we have the cheer of hope. There is no proof that the future is impossible, and there the secularist has the advantage of the Christian. The Christian has but the doubtful qualification of faith: the secularist relies on the surer desert of works. The Christian *begs* paradise, the secularist *earns* it.

There are some persons who have a shabby theory of free thought; namely, that it is mere reaction against repulsive Christianity, and that disbelief is founded upon passion. There are sceptics of this class; but, having no vigor of conviction in them, they are unstable and uninstructive. You know them by their excitement and their shrieking imputations. After a time, they overdo it, and are frightened back into Christianity as they were frightened out of it.

But there is another class who reject Christianity from seeing that it is not true,—from finding that it includes propositions that make men intolerant; and, though it has good features, it, on the whole, brings terror, shame, and loss on millions of men. It is a terror; for, if there be a hell open, and men fully believed it, there would never be a laugh heard in the whole world. The doomed would be dumb, and the elect—unless they were brutes—would be stricken speechless with horror at the thought of the damned. When we know that those under this dread regard art and science as criminal diversions from sanctity, it makes progress itself seem a shame and a crime. Those who teach that God answers prayers for help make self-trust a form of sin, and betray men to their destruction. To see this is to be a sceptic from conviction. This is what Mr. Gimson was. Could a man waver who saw these evils? Who could withhold a generous pity for those who perish in the purlieus of error or cease to make earnest efforts to bring before the people methods of secular deliverance? And, in the silent hours, when every man of conscience asks himself if he has done his duty according to his light, he finds abiding gladness in what he has thus attempted.

Is this "wandering in the wilderness"? Does this generosity need the compassion of the Creator? Is this the latest theory of Christianity, that a man could possibly be an "outcast" or be liable to "punishment" because he has seen the truth, has acted up to his belief, and rejected dishonoring doctrines? Is this to lose hope of the future? May men close libraries and museums, shut up the works of nature and art, and convert Sunday into the Dead Day of God? May *they* have "hope of the future," and not those who seek to make the world cheerful and sensible? Are the Salva-

Digitized by Google

tion Army going to heaven? Every respectable Christian can see that there was no sense in expelling Satan, if the sourness and ruffianism of Christianity have hope of the future.

The creed of the gentleman inculcates duty and courtesy, and leaves thought and wise recreation free,—a creed which entitles a man to what of good heaven has to give. The pity of God will be—so far as we can speak of it—for those who have not the courage of sincerity, and who linger in error and gloom from want of trust in truth.

Now, let us turn to the secularist, who, leaving the secret of the universe and the future alone, works for the good of this world. Is it true that the life of such a one is, as some say, unspiritual? Surely, they judge by the barren, church-bred quality which goes by that name. There is a nobler spirituality than that of the Bible and creeds and prayer, however sincere it may be. The voyage of Columbus over unknown seas, bringing unknown lands and men to light, was spirituality. Watts' invention of the steam-engine, giving a new power to men, was spirituality. Fulton's steam-vessel, making a highway between two worlds, Stephenson's locomotive, breaking down the insularity of towns, were works of spirituality. Garrison and Clarkson's forgetting their own souls in freeing the slave was spirituality. Newton's demonstrating gravitation, Darwin's tracing evolution, unfolding the unseen methods of nature, was spirituality. Every act of mercy and duty is spirituality. Good work and honest pride in it are spirituality. He who lives within his income, who provides for the happiness of his family, who has tenderness and sense in his household, teaching his children industrial self-dependence, has more spirituality than is to be found in all the creeds of all the churches. There are coffee-houses in Leicester which do us more good to see than a prayer-meeting; and Abbey Park preaches nobler sermons than all the churches, though I do not say the sermons may not be good in their way. But the park is always spiritual, the sermon is not always so. Secularism, which teaches the duty of thinking and the wise use of material means for human improvement, is the higher spiritualism of truth and of nature.

Will this theory bear the test of practice? Let the life of him of whom these words are said answer? Was he not a good husband, a good father, a good workman, a good master, and a good citizen? Did he not desire that all in his employ should prosper, and study means to effect it? Did he not help any who strove to help himself? Had he not business capacity,—that genius which makes honest principle practicable in daily life? Was he not a man of probity, of good counsel, of good faith? Was he supine in public duty? Did he not give strong aid in all public work within his reach? Was he a philosopher selfishly content with his own wisdom, leaving others to pine or perish in their ignorance? Had he not that finest of all arts of advocacy which is only born of a wise and generous spirit, —I mean constant consideration for the feelings of others? What could Christianity do for him which his own principles did not? Could it make him more tolerant, more fair, more honorable, more truthful, more cheerful? There are those who never felt the passion for truth, and who imagine, like the Mohammedan or the Christian, that there is no happiness outside the Koran or the Bible. Is Christianity so cheerful a faith? Is the idea of hell exhilarating? Is the Devil a pleasant acquaintance? Is the crucifixion a fact to make the heart glad or to exalt our ideas of the kindness of God? Is the doctrine of natural depravity one to inspire the holy ideas of self-trust and self-effort? I do not argue against these views here. Many good and honest men hold them, and wonder how we can be happy without them; while, on our part, we cannot help wondering how humane men can be happy with them. However, if men of those sad-minded views do not apologize for holding them, it is not for us to apologize for rejecting them.

Surely, humanity may go further and fare better. Though secularism is as yet but in its infancy, even now it escapes the close atmosphere of superstition, and catches fresh breezes from the uplands of nature. Confining itself to human work, secularism is content without a spurious belief in the inscrutable and therefore prohibited secret of its origin. It accuses not God. It brings no charge against him, because life is not what we think it ought to be. The secularist does not outrage God by apologizing for the mysteries of his creation. We do not aver that God is all-powerful and all-good, and set up a contradiction between God and nature where pain and evil are seen. We are silent, because speech is conceit or effrontery; and, being silent, we are void of offence. We do not say with Paul, If the dead rise not, what profit have we? God is under no obligation to extend our life to another world. He has made no contract with us to do it. Because he has given this life which we value, is it not insolence to hold that he is bound to give us immortality? Because we give a friend one favor, that confers upon him no right to exact or expect another. The secularist does not sink into the presuming beggar of heaven. We have the common means of life and happiness accorded to us in the gifts of sagacity and uses of nature for our profit; while our interest and self-protection are bound up in industry and courage, in kindness, in truth and justice to others. In these mighty gifts, morality and happiness are placed within our reach. There may be no limit to the unforeseen gifts which await us. Future life may be granted to those who have made an honest use of this. Those who have done nothing in this world but care for themselves would bring resurrection into contempt, if they were suffered to encumber another world. The secularist has therefore no foreboding as to the future. The melancholy are they who are always expecting too much, and whom honest happiness does not content.

The heart of him of whom we speak was always in public affairs. (And that is the one mark of a citizen above the common crowd, that he does take part in public affairs, not for personal, but for public service.) He was for the Liberal representation of the borough, for open parks, for sanitation of the town, for open libraries, for open museums. (These are all forms of the sanitation of the mind.) He was for bright coffee-taverns for the people, for co-operative devices which tend to establish equality without revolution and equalize fortunes without dynamite. In these and similar ways, material improvement was to him religion, the only religion which has ever yet brought good to man. Had Mr. Gimson entered your town council earlier, or had his life been extended, it would have been largely seen that he held working principles. We may apply to him what was said of one of mighty name, but who owed everything to the personal qualities common to all men of original power:—

> "His voice is silent in your council-hall
> Forever; and whatever tempest lour,
> Forever silent; even if they broke
> In thunder, silent. Yet remember all
> He spoke among you, and the Man who spoke;
> Who never sold the truth to serve the hour,
> Nor paltered with eternal God for power;
> Who let the turbid streams of rumor flow
> Through either babbling world of high and low;
> Whose life was work, whose language rife
> With rugged maxims hewn from life."

There are persons who tell us that no man is really missed; that men fall as pebbles into the ocean, and society closes over them like the waves of the sea. This is not true. Men are missed. Cavour's loss was never supplied to Italy. The Conservative party has found no successor to Peel. When shall be seen another in the place of Cobden? We do well to value any one who does unusual service, for there will be vacancy when he is no more. One of the forces of local progress has gone from among us. Though there is none of like power to step into his place, there is reason to believe that worthy successors will arise among those in whom his hopes lay, and in the sons of colleagues whom he prized. Reared in the school which taught that as material facility was a cause of sin, he believed that wise and well-devised facilities might be a means of virtue. Else no Secular Hall had arisen. No one knows better than I do that women and men exist holding the Christian faith who are noble, helpful, and honorable. I do not say that secularists are necessarily above them. Neither are they below them. Those who succeed me as speakers in this hall, for eight weeks, will be clergymen who will reason against the principles this society holds. The hall will be given them, the advertisements of their discourses will be paid for them. What church or chapel, either Unitarian or Quaker,—the fairest of all sects,—ever showed this toleration, this courtesy and confidence in the truth? If the words of Christ are still true, if we may know a tree by its fruit, it is not the secular tree which cumbereth the ground.

THE ETHICAL CONSEQUENCES OF DARWIN'S THEORY.

Summary of a Paper read before the Liberal Union Club of Boston, at Young's Hotel, Saturday Evening, Dec. 29, 1883.

BY HENRY W. HOLLAND.

There has been as yet no thorough examination of the ethical consequences of Darwin's theory, but those consequences are very important. The most vital points are that progress takes place by selection of the fittest in the struggle for life, and the transmission of the selected qualities by inheritance to a larger number of descendants; and, unless these two elements of selection and heredity act together, there can be no progress. Education is of comparatively little value, if we do not breed the raw material.

A close tie of family and race is the necessary inference,—a modified selfishness, setting up one's own blood as the object to which one's self and everything else is to give way.

. This extended form of selfishness, or limited altruism, keeps up competition not only between individuals, but families and races, while it preserves the home relations, by means of which the powers of the best portion of the community are revived in the next generation. And steady progress of civilization is impossible, unless the mode of living favors the success of the best part of the community, and greater fertility in it than in the poorer part. This law of growth, through competition and inheritance, is opposed to universal brotherhood, and has an aristocratic tendency. It is not a law of equality, and the liberty that it allows includes the liberty of the strong to conquer the weak; but we must be sure that the right kind of strength wins. It is inconsistent with both the universal brotherhood and the utter self-surrender of Christianity, for it limits both to one's own blood. It is a utilitarian examination of the practical way to strengthen future generations by social habits in accord with science. In order to proceed scientifically in the study of such physical facts, it is necessary to disregard both the religious and the sentimental bearing, for the purposes of thorough examination; but, when the conclusions are reached, it is well to look at both with regard to our feelings and our conduct. And these new ethics agree much better with our practice than with our sympathies, which they often shock, or our faith, with which they can hardly be reconciled. It favors endless competition,

Digitized by Google

even to the extent of wars, by which the higher races gain room for growth at the expense of the lower. It is opposed to making our land the refuge of poorer foreign blood. In the treatment of criminals, it involves much severer measures, either of capital punishment or life-long imprisonment where crime is ingrained, and is opposed to freeing criminals on the ground of insanity. The class must be prevented from multiplying at any cost.

In the treatment of paupers, it forbids all out-door relief, because it encourages undesirable fertility, and requires an extended poor-house system with separated sexes.

In the laboring class, it is opposed to all limitations on competitions in the shape of trades-union rules for equal wages, forbidding apprentices, and the like, and favors the farming class more than the manufacturing, because that class produces better blood, while manufactures sterilize a valuable part of our community, and attract an undesirable foreign element. It is the production of men, not dry goods, that is important.

In the better portion of the community, the danger is in its infertility. We marry too late, and avoid having many children.

The paper closed with a description of the type such a system would produce,—self-assertive, but patriotic and domestic.

For *The Index*.

IS LIFE WORTH LIVING?

BY HUDSON TUTTLE.

The question, Is this life worth the living? is as old as history; and the saddest effect of a sad and mistaken theology has been to cast such a shadow and gloom over existence as to make the crushed heart moan a negative response. The answer is from weakness and defeat; and the melancholy view of the world it expresses culminated in the beginning of the Christian religion, from which it is reflected on our time.

Christianity came to the Jews in the hour of their decline, when they were environed by war and threatened by famine. It gained ascendency by their defeat and the destruction of the holy city. Its kingdom was not of this world; for its founder, the incarnate God, perished with malefactors on the ignominious cross, and its early apostles suffered martyrdom. Dungeons and stripes, contumely and scorn, were for its believers; and its fundamental doctrine was that the kingdom of heaven was gained through tears and suffering. It came at length to be believed that only through the crucifixion of the flesh could heaven be gained. Poverty and filth were praised, and thriftlessness became equivalent to godliness. The Old Bible pointed to the ant as a worthy example of industry and forethought; the New, to the lilies of the valley, toiling not, and said: Take no thought for the morrow. Give to the poor all you have, and depend not on your own exertions, but on God.

The old religions had taught this doctrine; and in some it had taken almost as wild a course, yet in none were its evil consequences so far reaching. The Eastern myth of the union of the flesh with the spirit, and the crucifixion of the former for the purification of the latter, became fixed as a fundamental dogma on which the scheme of salvation rested. The flesh, *i.e.*, matter, was of itself essentially evil; and, hence, physical pain became a means of spiritual purification. The hermit flying from the allurements of life, the flagellant, the ascetic, became the type of religious excellence. It was a terrible view of the world, justified by the imputed sayings of Christ. He was never known to laugh: he wept. The good Christian should be known by his solemn face and streaming eyes. Whatever gave amusement or joy was of evil. Life was only to be endured because death liberated the enslaved spirit. Jesus had said: "Blessed are they that mourn. . . . Blessed are ye when men shall revile you, and persecute you, and shall say all manner of evil against you falsely for my sake. Rejoice and be exceeding glad; for great is your reward in heaven." "Lay not up for yourselves treasures upon earth, where moth and rust doth corrupt, and where thieves break through and steal; but lay up your treasures in heaven," etc. "But seek ye first the kingdom of heaven and his righteousness, and all these things shall be added unto you." "Take, therefore, no thought for the morrow; for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof." This doctrine of the times being evil and the body sinful, that the present was only of value as it hurried us to the next life, was fraught with momentous consequences, and moulded the thought of nineteen centuries, and from its sway we are just escaping. Under its sway, men became wild with religious frenzy. They retired to the wilderness to escape the temptations they could not resist. They trampled under their feet the most delicate sentiments of the heart as instigations of Satan. They looked on woman in her loveliness as a snare of the arch-deceiver, and spurned her gentle influence with unutterable loathing. Physical comfort was a sin, and self-inflicted pain a merit. Sackcloth, abrading with every motion of the wearer, was adopted as raiment, knives and thorns thrust into the flesh, and the inclemency of heat and cold, rain and snow, eagerly courted. What strange characters come in view, when we go back a century or two in history, produced by this mistaken belief regarding objects of life,—the wild-eyed flagellant lashing himself until the blood ran in streams, the Stylite on the summit of lofty pillar, the monk counting beads, the nun kneeling day after day on the cold, hard stones to propitiate the Infinite! A great mistake, which transmitted a legacy of evil to the present. There lingers a prejudice against pleasure which yet makes enjoyment next to a sin, and constantly asserts that God made a failure and blunder in the character of man. The kingdom of God is to come, and man's being on earth is a mistake. He must endure it as best he may until death releases him.

When all the sunshine and joy are taken out of life, it is not strange men think it not worth the having. When a monster is placed on the throne of the universe, and man made a puppet to dance to his supreme whim, the earth becomes a gloomy prison house and life a horrible farce.

We may have a strong conviction of the reality of a future life, yet not perceive any antagonism between that life and the present. The materialistic school that cries, "One world at a time," receives its bias from the old ideas against which it is a reaction. There is no necessity of sacrificing earth to gain heaven. The true and abiding love of husband and wife for each other, or for the children in whom their united lives commingling flow, is as holy and sacred as the love borne to God himself, and as much a part of religion. The contrary would make the adaptation of man to his environments a failure, and the infinite qualities of the Maker otherwise than infinite. These gloomy views of life are rapidly disappearing, and a reaction has come. Instead of placing the objects of life in the future, the future is ignored, and the present made supreme. Not sufficient for the day is the *evil* thereof, but sufficient for the day is all the day produces: the morrow is unknown. Hence, as life is only a succession of sensations of various character, some pleasing, others painful, the more of the pleasurable sensations which can be crowded into the few years of its continuance, the better. This materialistic view would be complete, had not life a morrow, and a morrow intimately related with to-day. After the full satisfaction of present wants there comes the immeasurable aspirations of the spirit. The physical world, bodily enjoyment, or mental culture are not all; and, when so regarded, the mistake entails misery where happiness was sought.

Freeing ourselves from these erroneous ideas inherited from our ancestors, we are prepared to answer the question of what true happiness consists and how best it may be gained. It is the primal desire of the heart, and our constant efforts are to gain it.

True happiness is a result of our being in accord with the laws of the world. When all the physical forces of nature and the spiritual energies move in harmonious rhythm through our being, there is no jar or conflict as we are wafted onward, and the soul feels the delight of perfect happiness. To arrive at this desired condition, we must understand the fundamental principles of creation and the relations of God thereto and of ourselves to both. We may accept as granted that the plan of nature, whatever idea be received of God, is perfect, and man as a part of nature is a unit therewith. There can be no break in the continuity of being, and hence his adaptation to the physical world must be regarded in the same light as the adaptation of his spiritual faculties for a spiritual life. Man as a dual being, a physical and spiritual, faces two worlds, and is amenable to the laws of both. As such, he must conform his life so that it will accord with both these states. He must understand that obedience to the laws of physical health is as obligatory and as much a part of religion as obedience to moral laws. Perfect health is a primary element of moral excellence.

Hence, it is that men, laboring under the mistaken theory which left the physical life out of its scheme, have fallen into grievous blunders. Had not Calvin been physically diseased, he would not have burned Servetus. A jaundiced theology was the offspring of a jaundiced preacher. Gall in the blood embittered the mind, and bred intolerance and hate. There was a gospel these teachers knew not of, the gospel of health. The teachers of the world have taught that happiness was not to be sought in this life, which at best is a vale of tears, and only came as a reflection from the perfect peace which comes from abject contentment with the decrees of fate, after assurance of having gained a passport to the future. We are assured that the world was not created nor is sustained by any such artificial or arbitrary plan; and abjectness and contentment, growing out of dwarfishness, are not in nature's creed.

"Give us health!" cries Nature. No puny sicklings, but the bounding pulse of fresh blood, the firm muscle, the quick nerve. When the songsters come up from the South to greet the spring, their voices gladdening hill and dale, there is no weak note, no feeble wail, but the fulness of strength. The pride of the forest, the sleek denizens of the wild, have no refined pleasures; but all they have flow from the perfection of physical being.

One lacerated nerve makes life a martyrdom. The luxuries of wealth are indifferent, the softest down a bed of nettles, the costliest viands tasteless to one diseased. And yet, ignorant of the primary conditions of happiness, how many lose their hope of gaining it in their attempt to grasp it!

Is it through the appetite, the delicate food which tempts the palate, the seasoned dishes, the blendings of many flavors? The time soon comes when the taste refuses to be pleased, and dyspepsia takes the place of digestion. The crust is sweeter to the hungry than richest viands to the palled tongue.

Rare wines, distilled by the sun, with delicate flavors, are sipped with mirth and gossip of fair lips; but at the bottom of the ruby cup is a serpent whose sting creates unquenchable thirst. How many go that way! They mistake the means of happiness, and drift insensibly into the resistless tide. The hungry nor the thirsty man cannot be happy. We must have food, and that of the proper kind, else our effort to appease our hunger will end in disease.

As happiness springs from the full and perfect expression of the laws of our being, and as such expression is in accord with the plan of nature, it follows that happiness is the natural estate and misery or pain the unnatural. Talk of the saving power of pain! Pain has no saving power. Happiness is not built on misery. People talk as though they expected a reward for suffering. Why, the very suffering shows a wrong, which, if righted, changes pain to joy. Yet they count their pains, disappointments, and measure their tears as treasures laid up in heaven, which are good at sight with heavy interest for answering joy. A man may be a victim of chronic sickness for a score of years and daily racked with physical torture, is it not his loss? How can he be repaid? Crowd his after years with all the heart may desire, and this loss cannot be made good; for life should be replete with its just demands fully met, and its cup cannot overflow. Why should he be rewarded for a sin against the laws of health? When we walk in accord with the laws of our being, the very fulfilment of these requirements brings delight. We are athirst, and with what exquisite delight we drink the crystal water! We hunger, and how delicious the plainest food! We desire to breathe, and what joy to inflate fully the lungs with the pure air! Health is next to heaven, and with it we are in unison with the material world. The beat of its pulse vibrates through our being, chord responding to chord. Thus have we felt when on some lofty mountain top, the world at our feet, the blue sky overhead, fading and melting into the distant mountain ridges, the crisp air like wine, and to the beauties everywhere around us our being responding. Then, life was a song of joy, and to *exist* the supreme delight.

But how shall we keep ourselves in accord with the

Digitized by Google

laws of our being? Ah! true, most momentous question; for we are ignorant of those laws and conditions, and we inherit the results of the ignorance of our ancestors. We are the results of all the actions of our parents, and the conditions by which they were surrounded, of their parents and of theirs, back to remotest time. All these through them have flowed down to and become embodied in us. We drag the results of their transgressions after us, and cannot escape them.

It is this ignorance, this mass of festering, inherited wrong-doing that makes us lose faith in the goodness of God, and become pessimists, cravenly submitting to the inevitable. This ignorance must be replaced by knowledge. To know is the birthright of the soul. The limits of the Infinite are its boundaries. Whatever intelligence has planned man has the right to know. There is no patent on knowledge. Whatever intelligence has planned man, as an intelligent being, has the capability of knowing. When the sun of knowledge shines from the zenith of the cloudless heavens, and there remains no dark shadow of ignorance behind which superstition can conceal itself, then man will find that restful peace in the certainty of law and order the devotee now receives from his blind faith in salvation by the Cross.

CORRESPONDENCE.

THE RELATION OF CO-OPERATION TO COMPETITION.

Editors of The Index:—

It has been repeatedly shown that competition is a natural law. It represents natural tendencies and expresses self-love, the desire for self-preservation. Because society is in a growing state, with all its forces undeveloped and to a great extent unrelated, this instinct of self-preservation leads to struggle and conflict. Mankind, not having learned to correlate its interests, not realizing that in unity there is strength, growth is the result of opposing forces,—the destruction of the weaker, whatever it may be, and the survival of the stronger. There is gain in competition, but there is also loss. The final outcome of competition is a condition of equilibrium. When the principle is at work in industrial life, it reduces profits until a minimum of prices is reached; that is, the tradesman or manufacturer competes, until the margin of profits is reduced so low that further reduction is impossible. In the process, the weaker industry perishes: the strong survives. The result, however, is to bring about a certain natural equilibrium of prices. In the larger industries, combination of interests precludes further competition; and, from a purely selfish stand-point, associated action begins more closely to unite men. As with the competition of industries so is it with wage-earners. Here, the action of competition, inasmuch as it deals with the means of life, exercises a more marked effect. Wages, being regarded in the light of a marketable commodity, are subject to the law of demand and supply. When the supply largely exceeds the demand, competition acts with increasing severity upon labor. It reduces wages until the terrible equilibrium is reached below which human beings cannot go, and live. The next and indispensable step is for wage-earners to unite, combine their interests, and prevent further competition.
