Another claim of the woman suffragists, Mrs. Leonard says, is "that women are taxed, but not represented, contrary to the principles of free government." In reply to this, she brings forward again the discrepant analogy of injustice done to male minors, but declares it "untrue to say that either class is not represented," and repeats the old oft-refuted argument of representation by proxy, which, while it may be in a measure true as regards male minors, is not valid in regard to women whose so-called representatives are of a different sex, and a sex to whose surface interest it is to keep women as a class in a subjective attitude. Why did not Mrs. Leonard, in her last summer's controversy with the Governor of her State, allow her husband, father, brother, or next male kin to represent her opinions on the Tewksbury matter, instead of defining her own views and position so publicly, so boldly, and so clearly as she did? I doubt very much if she could have been prevailed upon to do so by any argument as to the possible unwomanliness of her course of action, knowing as she did, that no one else, however much his interest might be one with hers, *could* state her meaning so well as she could state it for herself; that is to say, that no other person could in so vital a matter represent her.

"There is not a subject," Mrs. Leonard goes on to say, "in which she [woman] takes an intelligent interest, in which she cannot exert an influence in the community proportioned to her character and ability." Allowing this asseveration to be true (of which I am by no means convinced), yet it leaves her capacity for influence dependent on her extraordinary character or ability. Yet a *man* without *any* character or ability is able to influence public opinion and legislative action by his vote. And by so much is the stronger better equipped than the weaker, by so much is the man given extra advantages by law in addition to the advantages given him by nature. A most unfair arrangement, it seems to me.

And, lastly, she says that woman suffragists claim "that society would gain by the participation of women in government, because women are purer and more conscientious than men, and especially that the cause of temperance would be promoted by women's votes." That many women suffragists earnestly believe this and urge it as an additional reason for yielding to the sex their right to vote is undeniable. But it is also true that many others doubt this as strongly as does Mrs. Leonard. Any thoughtful observer of our imperfect human nature cannot remain blind to the fact that, whether acknowledged or not, in virtue or vice men and women are obliged by the laws of their being to keep equal pace. "They rise or sink together, dwarfed or god-like, bond or free." And that, forced as the sexes are, in spite of all artificial barriers and discriminations erected by man himself, to mingle constantly in daily life, men cannot be impure and women associate with them intact from the taint of their sin. To the pure woman wedded to a husband of gross nature, the words of Tennyson cannot fail to be applicable:—

> "Thou shalt lower to his level day by day,
> What is fine within thee growing coarse to sympathize with clay.
> As the husband is, the wife is: thou art mated with a clown,
> And the grossness of his nature will have weight to drag thee down."

Nor can the daughter fail to inherit somewhat of the vices as well as the virtues of her father, nor the sister associate for years with the brother, joint heir with her of parental morality or immorality, and yet by some strange method of nature escape the effect of association. The thoughtful woman suffragist does not then ask for suffrage particularly on the plea of purification of the polls by her presence; nor does she think that, as Dr. Horace Bushnell puts it, "when the polls shall have

Digitized by Google

unrefined the refiner, where away goes the refinement?" She knows that the association of the sexes in any good work is always of mutual benefit; and that both men and women grow more polite and respectable in conduct when thrown into each other's society than when in communities or work or associations by themselves.

Only in so far, then, does she expect the presence of women to purify politics, and not because woman is so particularly man's superior in virtue. But she does ask for the ballot on the ground of simple *justice*, because men have no just right to deny woman any privilege which they demand for themselves, because woman should be given "a fair field," whether she is shown any "favor" or not. "Equality of rights," said Charles Sumner, "is the first of rights." "Equity," says Herbert Spencer, "knows no sex."

Mrs. Leonard says that women "in this land have the softer side of life, the best of everything." I think it could be proven easily, if one had the time at command, that this is not the case. It may be and probably is the case with the majority of those who signed—understandingly—the Remonstrants' petition; but it is not the case with the women of the toiling millions, *the people*. Laws are made to protect the weak, not to bolster up the strong; to secure justice from the unjust, not merely to flatter the just by being on the side of justice and right. For those who "have all the rights they want," no legal guarantees are needed, although human nature is such and circumstances are so likely to change that no human being can foresee for himself or herself that the day may not come when legal security for those rights may not be needed. While Mrs. Leonard intimates that women already possess much influence in these United States, she apparently forgets that many of those privileges she owes to the persistent efforts, through years of abuse, misrepresentation, and discouragement, of the friends of woman suffrage, both male and female. Many of the laws on our statute books, she herself confesses, have been the work of women. If they do such good work without the ballot and in spite of hindrances so strong, is it not reasonable to suppose that they would be capable of better work with its aid?

Mrs. Leonard shares with many less refined reasoners the fallacy that she—though only a woman—understands pretty thoroughly the subtle workings of the Sublime Intellect behind the universe, and piously tells us that women should be "content to sway and govern" men, not by the ballot or by greater numbers, "but by those gentle influences designed by the Creator to soften and subdue man's ruder nature." A very prettily worded and fine-sounding sentence; but it strikes me that, if that *was* the design of the Creator, it would have been the better and easier way to have made men in the first instance sufficiently softened and subdued to do what was right and just without having to be "governed and swayed" after any such fashion. By the way, that is another fallacy of the Remonstrants,—that woman suffragists desire "to govern men." It is *self*-government we ask for, not power over others.

Because my time is limited, and because Mrs. Leonard's paper was the most temperate in tone and sensible in argument, and because it goes over so much more ground than any other address or speech listened to at the Remonstrants' hearing, I have chosen to devote my considerations of the "Fallacies of the Remonstrants" mainly to that paper. The remonstrance of Mr. Francis Parkman, heard at the same time, is beneath contempt, and so beneath reply. I think the hearing of the Remonstrants would be more successfully dignified, if hereafter they trusted their cause to their own sex wholly. Among the gentlemanly compliments Mr. Parkman tenders us as a class are these. He declares our methods "have been neither direct nor ingenuous." He accuses us of "misrepresentations," "intrigue," "calumny," "abuse," "lobbying," "wire-pulling," "ingenious and petty tricks, and all the devices of conscious weakness." He calls us "over-excitable reformers," and says "we have thrown to the winds every political, not to say moral, principle," "that we have no mercy on our sex"; declares that "women of sense differ most widely from the suffragists," and that "political women could not command respect." All this slanderous accusation, without one particle of proof brought forward to make good his reckless statements! Now, who are the women suffragists whom he thus maligns? Let me mention here the names of a *few* of the best known of these men and women, for I am glad and grateful to acknowledge that thinking and wise men have been among our best helpers in this cause.

First, let me speak reverently the name of Boston's most eloquent son, of him whose genius was devoted to the cause of the lowly, the oppressed, the down-trodden everywhere, of him who left us a few days ago in spite of our tears and grief, but whose memory will live forevermore, wherever liberty or the love of liberty lives,—the name of Wendell Phillips, whose voice was last raised in honor of one of the "political women" who *did* command the respect of every thinking man,—Harriet Martineau, another suffragist.

And to these we can add such names as those of George Eliot, George Sand, Margaret Fuller, Frances Wright, Mrs. Somerville, Lucretia Mott, Lydia Maria Child, Alice and Phœbe Cary, Frances Power Cobbe, Ernestine L. Rose, Clara Barton, Florence Nightingale, Dorothea Dix, Julia Ward Howe, Elizabeth Cady Stanton, Lucy Stone, Susan B. Anthony, Mrs. Livermore, Mrs. H. H. Robinson, Mrs. Shattuck our president, Anna Dickinson, Sarah Helen Whitman, Elizabeth Stuart Phelps, Louise Alcott, Grace Greenwood, the Crown Princess of Prussia, Lady Amberley, Mrs. Millicent Fawcett, the brilliant wife of the Postmaster-General and member of the Parliament of Great Britain, Helen Taylor, the beloved step-daughter of John Stuart Mill, with many other names among women as familiar as these; and, among men, John Stuart Mill, Richard Cobden, Herbert Spencer, Prof. Huxley, Prof. Louis Büchner, Canon Charles Kingsley, Henry Kingsley, the novelist, Jacob Bright, member of Parliament and brother of John Bright, Postmaster-General Fawcett of England, Emerson, Longfellow, Whittier, Bronson Alcott, George William Curtis, W. H. Channing, Henry Ward Beecher, James T. Fields, Col. Higginson, "Warrington," Col. Ingersoll, Charles Bradlaugh, Senators Henry Wilson, Hoar, Matt Carpenter, Julian, Pomeroy, and others, with the six governors of Massachusetts who preceded the present incumbent of that office,—Claflin, Washburn, Rice, Talbot, Long, and Butler. *These* women and men, dead and living, were and are a few of the women suffragists whom Francis Parkman gratuitously insults for daring to take broader political views than he is capable of. I would like to see a Remonstrants' petition which could gain the signatures of even half a dozen names equally famous with these.

The appeal of the Remonstrants shows most clearly the benumbing effect upon the reason of ages of enforced subjection. The chains at first so galling and burdensome are at last through habit hugged as necessary to life and happiness. Yet the lesson is by no means a new one. "The strangest peculiarity exhibited by those deficient in sense of rights," says Herbert Spencer, "or rather that which looks the strangest to us, is their inability to recognize their own claims. We are told, for instance, by Lieut. Barnard that, in the Portuguese settlements on the African Coast, the free negroes are taunted by the slaves as having no white man to look after them, and see them righted when oppressed. And it is said that in America the slaves themselves look down upon the free blacks, and call them rubbish. Which anomalous looking facts are, however, easily conceivable, when we remember that here in England in this nineteenth century most women defend that state of servitude in which they are held by men."

While thousands of slave mothers and wives were compelled to suffer the torture of separation from those dear to them as life itself; while hundreds of black men dared the lash, starvation, and even death itself, to escape from the slavery that was worse than all these,—there was also a large minority of slaves who were blessed with tender-hearted and indulgent masters and mistresses, who, though they possessed the legal power to torture, beat, and render miserable the lives of their chattels, had no desire and disdained to use such power. But what would have been thought by reasonable people if those slaves, pampered into indolent, careless groveling, had gone as far as these Remonstrants in kissing the hand which held the weapon of their destruction, if, when liberty and independence were offered them, they had not only refused them for themselves, but joined in signing a petition that freedom should be forever denied to *all* colored people on earth!

Was there ever a more *cowardly* petition circulated than this of the Remonstrants? Will it be believed, when related by future historians, that in this year of 1884, and under the shadow of Bunker Hill, in a land dedicated to liberty and intellectual culture, whose school houses are its pride and glory, there existed so many responsible human beings willing publicly to sign their names to a petition "against the *imposition* of any further political duties"! When in fact there had been no "imposition," and very few and easy "political duties" allowed. The children and grand-children of these petitioners will have cause to blush, when they find the name of their maternal ancestors rendered conspicuous in history only through such a document as this.

CORRESPONDENCE.

SOME QUESTIONS BEARING ON THE MORMON PROBLEM.

Editors of The Index:—

I am extremely glad to see the various articles which have lately appeared in *The Index* on the Mormon question. It is one of the most important and most threatening problems in our political life. Agitation on the subject is necessary, but still more desirable is information. There is a great deal of self-interest and political expediency and religious bigotry mixed with the righteous disapproval of Mormon institutions. I think the liberal thinkers of America are especially bound to consider this question, because, being fettered by neither political nor ecclesiastical ties, they ought to be able to do so without heat and solely in the interests of truth, morality, and good government. I should like to have some information from Mr. Curtis or some other person acquainted with the matter on some points.

1. As to laws in regard to marriage. Is there any United States law on the subject? What is the law in the several States? What is the criminal law on the subject?

2. What is the practice in regard to a case of polygamy in the States, if such has ever occurred? What is the distinction between polygamy and bigamy? Does not bigamy imply deceit, the husband conceal-

Digitized by Google

ing from one wife his relations with another; while, in polygamy, both relations are open and avowed? Has such a case ever occurred in our country, in any but a Mormon community? and, if so, was the offender punished by the criminal courts, and how?

3. I should also be very glad to learn from some one versed in church history when and how either the Jewish or Christian Church established monogamy and abolished polygamy. Was it by direct statute against an evil still existing and powerful, or was it only a recognition of a moral feeling which had already destroyed the custom?

4. I am very much interested in the different statements in regard to education in Utah, and hope we may have all possible light thrown upon the subject; for I believe that it is mainly upon the education of the young people of Utah that we must rely to overthrow the delusions and tyranny of their theocracy. I have little personal knowledge of the matter; but, when for a few days in Salt Lake City, I was told that other than Mormon teachers were employed in the schools, and that the relation of such teachers to the pupils and their parents was free and friendly.

The Report of the National Bureau of Education for 1881 (the latest issued), does not touch upon this point directly, but we may draw some inferences from the facts given.

The University of Deseret appears to be legally recognized as an authority in education, and it is fair to suppose that this institution is under strict Mormon influence. The president of this university, in convention with the territorial and country superintendents, determines what text books shall be used in the district schools; and books thus adopted cannot be changed within five years. The normal certificate of graduation from the University of Deseret, indorsed by the Board of Examiners as to the moral character of the applicant, entitles the holder to be chosen as a teacher in any of the district schools. The law appropriates $5,000 a year to this university, provided forty pupils shall be instructed free in the normal department. Under these conditions, this university must certainly exercise a great influence upon the people of Utah, and it is very desirable to know whether it is giving them an impartial liberal education or one wholly in the interests of a church hierarchy. There are sixty anti-Mormon schools in the Territory, in most cases supported by, and under the control of Protestant and Roman Catholic churches.

Would it not be wise in the National Bureau to issue a special circular of information in regard to education in Utah? And, in the present plan of national aid for education in the different States, might not there be introduced some provision by which the schools of Utah should be released from ecclesiastical control? Two other points in the report are worth noting: first, the increase in the number of pupils; and, second, an increase in the proportion of women teachers as compared with men.

I will not now lengthen this communication by touching upon other very important points, but shall look with interest for further communications in *The Index* from the able correspondents who have already written on the subject. E. D. CHENEY.

THE PREVALENCE OF AGNOSTICISM.

Editors of The Index:—

With your permission, I beg to direct the special attention of your readers to the *Popular Science Monthly* for April. In it appears a paper by W. D. Le Sueur, B.A., of Ottawa, Ont., entitled "A Defence of Modern Thought," being a reply to a recent pamphlet by the Bishop of Ontario on "Agnosticism."

The fact is, the spread of heresy is so rapid, even among church members, that the Church finds it imperative to assume the defensive. A decade ago, no Episcopalian bishop would have thought of entering into public controversy with agnostics. But the times have changed; and the urgent necessity for such a course has now arisen, as the Bishop himself plainly sets forth, which we shall presently see.

A few months ago, the Bishop of Ontario delivered a lecture on "Agnosticism" before the synod of his diocese. By request of the synod, the lecture was published in pamphlet form. The Bishop opens his lecture with this language:—

"Religion is at the present time confronted with a very real as well as a very subtle danger. It is not Christianity or any particular system of religion that is attacked, but religion itself at its very root. This danger arises from the prevalence of agnosticism, which is so subtly diffused that its influence is felt, not only in the writings of agnostics, but in conversation, magazines, and newspapers. It occupies the attention and affects the minds of multitudes who dare not avow it. It has crept into our churches, and heads of families who are church-goers and outwardly believers are at heart agnostics."

The writer of this has often affirmed this state of things to exist in this Province, not always, however, convincingly. But, now that the same thing is reaffirmed by so high a church dignitary, there need be no more doubt about the matter. The Church is riddled through and through with doubt, and the clergy at last reluctantly confess the fact.

In this strait, the Anglican Bishop of Ontario comes to the front, and in his lecture deals as best he can with agnosticism. Upon reading the lecture, seeing the tempting openings for criticism therein contained, I at once resolved to write a reply to the Bishop the first opportunity. But I am very glad to say that Mr. Le Sueur's more vigorous pen has come in ahead of mine in this timely work; and I wish here to point out to your readers Mr. Le Sueur's able reply in the current number of the *Popular Science Monthly* (April). The reply is also published in Canada in pamphlet form, and has already had the good effect of stirring up the Bishop to a rejoinder, which, in the shape of a second lecture on "Agnosticism," he delivered in Ottawa a short time ago, and here in Napanee last week. The roads and weather were so bad I was unable to get to the lecture, and cannot therefore speak as to its merits or demerits; but the newspapers announce that it also is to be published in pamphlet form. "The agitation of thought is the beginning of wisdom."

ALLEN PRINGLE.

SELBY, LENNOX CO., ONTARIO, April 1, 1884.

THE ATTITUDE OF TWO ORTHODOX MINISTERS.

Editors of The Index:—

The attitude of Mr. Joseph Cook and of Rev. Henry M. Dexter, of the *Congregationalist*, toward each other in the matter of the new creed proposed for Orthodox Congregationalists, and the habitual attitude of them both toward "the way which men call heresy" and the persons considered heretics, are well suited to remind the observer of the eulogy on Mr. Bill Sykes' dog, as follows:—

"'He's a rum dog. Won't he growl at all when he hears a fiddle playing? And don't he hate other dogs as ain't of his breed?'

"'He's an out-and-out Christian,' said Charley.

"This was merely intended as a tribute to the animal's abilities; but it was an appropriate remark in another sense, if Master Bates had but known it; for there are many ladies and gentlemen claiming to be out-and-out Christians, between whom and Mr. Sykes' dog there exist very strong and singular points of resemblance." C. K. W.

A PETITION FOR STATE SECULARIZATION.

To the Honorable Senators and Members of the House of Representatives of the United States Congress:—

A republican form of government being based on liberty, equality, and fraternity, as both means and end, involves the separation of Church and State, whose union is the worst form of class legislation and the most infallible sign of arbitrary power. A house divided against itself cannot stand. The institutions of this commonwealth should be made homogeneous throughout. Impartial protection of all citizens in their equal rights and liberties, by encouraging the free movement of mind, promotes the establishment of truth in whatever direction. Any infringement by government of this absolute equality of its citizens is the parent of manifold evil, a national crime committed against that natural "justice," which, as the Constitution declares, this government was founded to "establish."

And yet, though the first amendment to the Constitution of the United States says, "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof," there does exist a union of Church and State, which gives to Christianity moral and material aid, and so proscribes other religions and forms of belief and unbelief, while taxing these also for the support of that special religion.

The ways in which this old alliance between Church and State still survive among us are:—

1. Recognition of God and Christianity in State Constitutions.

2. Exemption of church property from taxation.

3. Appropriations of public money for sectarian purposes.

4. Religious exercises, as the reading of the Bible, etc., in the public schools.

5. Laws enforcing the observance of the Sabbath on the authority of the Bible.

6. Religious test-oaths in courts of justice and on instalment into office.

7. Chaplaincies in the Legislature, the Army, and the Navy.

8. Fast and Thanksgiving Proclamations, which contain theological ideas that may or may not be acceptable to the citizen.

The necessity for this separation of Church and State is more apparent now than ever before, because of the still greater diversity of religious beliefs, the many forms of dissent from the religion which receives State patronage, and the growing signs of sectarian strife and ambition in the arena of politics. And emphasis needs to be given to the fact that the union of Church and State is *a great hindrance to the employment of right methods* in dealing with many questions of reform now demanding attention. And most essential is it, at all times, and especially in the present, in order to secure for the law its due respect and observance, that the people's representatives should exhibit the strictest fidelity to their trusts by following the law in its letter and spirit.

Your petitioners, therefore, pray that immediate action be taken by the law-making power to bring into harmony the theory and practice of our government in making the following principles a part of the fundamental law of the land by amendment to the United States Constitution:—

1. The total separation of Church and State, by prohibiting Congress or any State or municipality from enacting any law that favors religion or prohibits the free exercise thereof in any of the ways already specified in this petition.

2. National protection for national citizens, without regard to race, color, or sex in their full and equal rights.

3. Co-operation between the national and State governments for the maintenance of a thoroughly secularized public school system.

The above Petition on State Secularization, now offered to the public for its signature, has been prepared with a view to enlist in its support the friends of freedom and equal rights among all parties and classes of people. And the problem is to do this without compromise of any principle. A petition should voice a great principle; and, if ever a petition did, it is this one. It is believed to express the deeper sentiment and latent convictions of all who love their country, who look to its flag for protection, and believe in the truths of which it is the symbol. It may not be improper to state that representative men in the various walks of life have, with singular unanimity, declared this petition to be, in itself, most desirable, and the time for it most opportune. Then let us work; and let each feel that on him or her depends, in a measure, the success of this movement. Such a feeling it has been, and must ever be, that plants the flag of victory on the heights of the world's reprieve. T. W. CURTIS.

THE ETHICAL CONSEQUENCES OF DARWIN'S THEORY.

The Boston *Index* of January 10 contains an extract from a paper on "The Ethical Consequences of Darwin's Theory," by H. W. Holland, and an able reply to the same by B. F. Underwood. Mr. Holland—holding that, unless heredity and selection act together, there can be no progress—advocates "a modified selfishness, setting up one's own blood as the object to which one's self and everything else is to give way." He says: "This law of growth, through competition and inheritance, is opposed to universal brotherhood, and has an aristocratic tendency. It is not a law of equality, and the liberty that it allows includes the liberty of the strong to conquer the weak; but we must be sure that the right kind of strength wins."

In his reply, Mr. Underwood quotes freely from prominent writers, English and German, to prove the

Digitized by Google

insufficiency of Mr. Holland's stand-point. It seems to us that Mr. Underwood does not sufficiently appreciate the force of heredity; but, when he says that "the new ethics, outlined by Mr. Holland, embodied in individual and social life, and recognized as the highest standard of conduct, would in a few centuries produce a type of human character as selfish, as cruel, and as vicious as ever existed on this globe," we fully agree with him.

It is true enough that the operation of the unconscious forces of nature always results in the conquest of the weak by the strong, and it is to this law that we owe all progress in the material universe. In all the changes we see going on about us, we notice the survival of the fittest. But, if we come to consider human progress by itself, the terms "strong" and "weak" must be greatly modified, and their meaning clearly understood, before we may venture the assertion that the law of the survival of the fittest holds good here also, and even raise it to the dignity of an ethical principle. "But we must be sure that the right kind of strength wins." This much Mr. Holland admits; but when, further on, he says, "These new ethics agree much better with our practice than with our sympathies, which they often shock, or with our faith, with which they can hardly be reconciled," we feel sure that Mr. Holland does not know what is the right kind of strength which ought to win.

Into the elements of human progress there enter, not only the unconscious forces of nature, but also human reason and sympathy. Whatever they are and wherever they came from, they are here, and have evolved out of themselves—either because of, or in spite of, the law of the survival of the fittest—a moral sense, the fact of whose existence we can no more deny than the existence of reason and sympathy. Ask your reason, Have I—strong, healthy, born of prosperous parents not addicted to vicious and unhealthful habits—not a better right to live than this weak, incompetent offspring of ignorance and disease? and reason will answer: You have indeed a better chance to live and be useful, but have you also a better right? Is this unfortunate one responsible for his ancestry? Does he not also love his life as well as you do yours? You are silenced, and your warm heart prompts you at once to alleviate the wretched lot of the being whose right to existence you had but just doubted. Forthwith, whatever nature's method of working with her unconscious forces may teach you, reason and sympathy have revealed to you the fundamental principle upon which you, a rational being, have to work,—justice; and the ideal of a universal brotherhood of man is established, never again to be shaken. You are now a better man, better fitted to win in the race of progress.

Reason, moreover, bids you look into the past and future, observe the sequence of cause and effect, and if by so doing you are unable to see that by selfishly grasping and hoarding all the good things of life for yourself, your blood and your race, you will eventually produce a condition of things in the civilized world for which no savage can envy you, and at the thought of which your own better impulses recoil in horror, you are then surely not the fittest who ought to survive.

We cannot now enter into the subject more deeply, and only repeat that, the elements reason and sympathy entering into human forces, the word "strong" as applied to them does not mean mere physical and intellectual strength; and human progress pictures something more to our imagination than a race of fine human animals. Our ideal man is just and good, as well as healthy, strong, and clever; and, if he is well housed and well fed, he is also sympathetic and charitable. To gain this end, Darwin's theory need not abate one jot of its truth. The ethical consequences of the theory as outlined by Mr. H. W. Holland are simply false and pernicious, however honestly conceived; and, being false, they cannot long withstand the truth, although advocated by some mistaken philosophers.—*Radical Review.*

BOOK NOTICES.

HISTORY OF THE KINGDOM OF GOD. By Jonathan Cummings, editor of the *Age-to-come Herald and Jerusalem Pioneer*. 540 Washington Street, Boston. 1884. pp. 200. Price $1.00.

This is a work written, evidently, by an honest and devout reader of the Scriptures, and is the result, the author states, of "a life experience of over fifty years' study, meditation, and preaching" upon Bible themes. Mr. Cummings, in common with theologians generally, attaches great importance to a correct doctrinal interpretation of the Scriptures; and he writes like a man who is confident that he has arrived at a theory of "the kingdom of God and man's salvation" that is "in accord with the word of God," and will stand the most rigid scrutiny. The author says it is the first effort, so far as he knows, "to set forth succinctly before the public in their true light the real locality, rise, changes, progress, and final establishment of that kingdom called throughout the Bible 'the kingdom of God.'" He maintains that this kingdom is "an organized body of the human family, raised up in twelve distinct divisions or tribes," under two distinct covenants; that "the history of the twelve tribes of Israel is the history of the kingdom of God," which commenced with Jacob and his twelve sons, and has been subjected to strange vicissitudes; and that the gathering of the children of Israel to their own land, and the "inauguration of the kingdom upon the basis of this new covenant, the personal glorious coming of the material Christ in his literal heavenly tabernacle, reigning in Mount Zion, in Jerusalem, over the house of Jacob, and likewise over all nations," is among the great events about to occur. "Jerusalem is the place to which the nations will flow to see Jesus." There, he will sit upon the throne of David, ruling over the twelve tribes, to whom all peoples shall be gathered. Of a kingdom beyond the stars Mr. Cummings knows nothing. The true kingdom will lie between "the river of Egypt and the great river Euphrates." This kingdom will be set up just as soon as a sufficient number are made free from sin, and become new creatures in Christ. "They will not need to frame a code of laws. They will not need to write a constitution." "Nothing will be necessary but for them to become genuine Christians in the right locality, that is all." "And this will be the kingdom of God, set up upon the earth, while the wicked kingdoms of men are in existence." There is to be in "the last days of this wicked age, and the ushering in of the age to come," "troubles such as never was since there was a nation." The "storms, tornadoes, and tidal waves," the volcanoes that "belch forth their hot lava and inundate cities," and all the other dreadful calamities already experienced, are "only as the buds of a bloody bloom, and gentle showers to the terrific tempest." But "the Saviour will conduct his people [who are they?] safely through the storm to behold the dawn of an endless day of glory," when Jerusalem "shall rise and shine in her robes of dazzling light," "the residence of the Lord Jesus Christ." According to this expounder's view, the mass of Christians stand but little, if any, better chance of getting into "the kingdom of God" than unbelievers. False theology is as bad as infidelity. "If he [a man] is deceived by a false theology to believe that he is a Christian in fact and a saved man, he will feel happy at times; but it is the happiness of ignorance." Practical people, we think, will wait till they see some more evidence than that based upon interpretations of the Bible of the events which Mr. Cummings believes near at hand, before starting for so uninviting a place as the Jerusalem of to-day.

THE CHINESE CLASSICS. A Translation by James Legge, D.D., of the London Missionary Society. Parts 1 and 2: Confucius and Mencius. New York: John B. Alden. 1883. pp. 382. Price $1.00.

In this work, we have a reprint of two volumes of the Chinese Classics, translated and edited by Dr. Legge, which contain "Analects," "Great Learning," and "Doctrines of the Mean," by Confucius, and the works of Mencius, with complete indexes of subjects and proper names of each. Added to each part is an introduction by the publisher, giving a sketch of the author, with critical or supplementary references to some of Dr. Legge's statements. In this volume at a low price, the common reader can get the teachings of two great Chinese philosophers,—Confucius, who lived from 551 to 478 B.C., and Mencius, who lived from 371 to 288 B.C. The Chinese keep sacred the eighteenth day of the second moon as the anniversary of the death of the former. Of the latter, Dr. Legge says: "The first twenty-three years of his life thus synchronized with the last twenty-three of Plato's. Aristotle, Zeno, Epicurus, Demosthenes, and other great men of the West were also his contemporaries. When we place Mencius among them, he can look them in the face. He does not need to hide a diminished head."

PERSONAL ITEMS.

THE wife of Hon. George W. Julian, who died recently of heart disease at her residence in Irvington, a suburb of Indianapolis, was the eldest daughter of the late Joshua R. Giddings, the famous Ohio abolitionist.

ACCORDING to the *Presbyterian*, "The Rev. John Jasper, D.D., LL.D., who upholds the theory that 'de sun do move,'" is one of those celebrities who has had his day even among the colored people of his own city. He "writes to a friend in New York that his congregation has dwindled from nearly two thousand to less than twenty members."

FROM an exchange, we clip the following: "Mrs. Kate N. Doggett, whose death in Cuba was recently announced, was one of the most cultivated women of our Western States, and will be remembered both as a writer and a lecturer. She was the translator of Charles Blanc's *Grammar of Painting and Engraving* (1873)." Mrs. Doggett was an agnostic, and deeply interested in the progress of radical thought.

A MONUMENT is to be erected in Paris in honor of Admiral Coligny, the illustrious Huguenot. A site for the monument has been provided by the municipality of Paris in the Rue de Rivoli, near the spot where the distinguished victim of the St. Bartholomew massacre fell, Aug. 24, 1572. This honor to a Protestant martyr in France indicates appreciation of his noble character and of his valuable services to his country.

IT is now said that the death of Prince Leopold was hastened by the fast pace of his life at Nice and Monaco. The day before his death, he spent four hours at the Monaco gaming tables, where he suffered heavy losses. The atmosphere was stifling, the crowd dense and excited. The Duke was pressed upon and shoved about by the throng, and became greatly excited. Social dissipation of this nature was new to him. The reaction set in in the evening of the night in which the fatal attack occurred.

THE Paris *Figaro's* correspondent at Cairo says: "Gen. Gordon, before the sortie of the 16th inst., sent the following proclamation to the rebel sheiks: 'Come to me without fear, as I have come to you in all confidence. I came not to fight, but alone with the help of God; and God is with me.' The sheiks replied: 'We have read your letter. You say you are with God. If you are with God, you are with us, because God is with us. If you are not with us, then God is against thee; and we shall do with thee as we have done with Hicks Pasha.'"

AN audience of more than two thousand, fully one half colored people, assembled in Tremont Temple on the evening of the 9th, in response to a call for a memorial meeting by the colored citizens of Boston. On the platform were many distinguished persons, chiefly Mr. Phillips' co-workers in the anti-slavery movement. Mr. Archibald H. Grimké pronounced a eulogy upon the man whose voice had pleaded with such eloquence for his race, "who surrendered," the orator said, "all that he really loved that we might be free. He bore our wrongs on his conscience and our woes on his heart."

THREE hundred English ladies have signed a petition for the restoration of Baker Pasha to his former rank in the British army. When it is considered that the offence for which he was dismissed was an attempted outrage upon a young lady in an English railway carriage, during his trial for which he did his best, in defence of himself, to ruin the reputation of the person he had assaulted, a lady of spotless purity, and that this Baker had been one of the pets of the Prince of Wales, who is, evidently, the originator of this latest movement in behalf of his unscrupulous friend, the petition reflects no credit upon its signers. An exchange says: "Since the death of the Prince Consort, the Queen's children rather than the Queen have given tone to English society. The result has been morally disastrous. An era of self-indulgence, extravagant outlay, and moral laxity, has succeeded to that in which Prince Albert was the first gentleman in the kingdom. In such a condition of things, the moral indifference that cares little about right or wrong is apt to think itself the generosity that inclines to mercy."

DORÉ GALLERY

Of BIBLE ILLUSTRATIONS and Stories. Including 52 cartoons, and a portrait of Doré. New and finer edition, large quarto, bevelled boards, fine cloth, richly ornamented. Price reduced from $5.00 to $2.00.

The unrivalled cartoons of the most widely famous artist of modern times; the most graphic illustrations of the sublime events and truths of the Bible ever drawn by an artist's pencil.

The battles of *The Literary Revolution* have been fought principally in the interests of choice literature for the masses. It is proposed to win also for them the best works of the great masters illustrating literature.

Wonderful Offer.

Notwithstanding the marvelously low price, I offer the following discounts to agents and clubs:—

5 or more copies, each $1.50.
10 or more copies, each $1.25.

ON CONDITION: First, That the addresses of all members of the club are sent with the orders. *Second*, That not more than one name in a club shall be that of a customer who has previously purchased books from me. Specimen for club agent, $1.50.

The point to this "wonderful offer" is that I want *new customers*, which, as experience proves, means permanently increased trade.

Health by Exercise.

By GEORGE H. TAYLOR, M.D. Large 12mo, Long Primer type, 462 pages, with numerous illustrations. Cloth, 50 cts.

A new, enlarged edition of this greatest authority on the topics treated. A book for both healthy people and invalids,—adapted to home use as well as for the skilful physician. What specific exercise is appropriate for specific ailments, how to *prevent* as well as cure disease, are the practical questions solved.

"Blessed, say I, is the man who has a good doctor, but more blessed he who can do without him. To enable my readers so to do has been my aim."—*From Author's Preface.*

500,000 Volumes

CHOICE BOOKS—descriptive catalogue free. Books for examination before payment on evidence of good faith. NOT sold by dealers: prices too low. Books by mail 20 per cent. extra, for mailing.

JOHN B. ALDEN, Publisher,
P.O. Box 1227. 18 Vesey St., New York.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25 "	. . .	8c.	" "
" 26 " 51 "	. . .	6c.	" "
" 52 "	. . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

Modern Thinkers,

Principally on Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Mystic, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Reformists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued.

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith.*

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago *Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—*Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.*

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. ... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

THE New York *Sun* thinks that the Society for the Prevention of Crime "had better go into some more creditable business than trying to get little girls arrested because they offer flowers for sale in the street on Sundays."

WE notice in one of the Spiritualistic papers a communication from Wendell Phillips, or "Spirit Phillips," as he is called, who is made to say, "No more cares and anxieties, no more sorrows or pain, but bright, beautiful life among friends whom you had been taught by false teachings had been forever lost." The great orator and agitator, it would seem, has become extremely optimistic in his views and very lamb-like in his disposition!

THE *Pall Mall Gazette* represents Mr. M. D. Conway as saying: "The best Hindus with whom I came in contact, men cultivated, profound, clear-seeing, are free thinkers to a man. They have no hope of anything coming out of the popular religions. We can only trust to the dissolving influence of the scientific spirit that will gradually eat its way through all these creeds, and restore man once more to the possession of that liberty of which he has been robbed by his creeds."

LAST Thursday night there was a joint debate before a large audience in Brooklyn, under the auspices of the Revenue Reform Club, on the question of Protection versus Free Trade, between Prof. Van Buren Denslow, tariff editor of the Chicago *Inter-Ocean*, who argued for protection, and Prof. A. F. Perry, of Williams College, who defended free trade. Both disputants showed marked ability and acquaintance with the subject, and the audience manifested deep interest in the discussion.

THE *Catholic Chronicle* does not disguise its convictions. It says: "It may be said that the will of the people who sent Bradlaugh to Parliament should be obeyed by the House of Commons, that they are the best judges of the kind of men they want there. We say, No: the people of Northampton have not the right to send an avowed atheist to Parliament, and, if they send one, the House of Commons have the right to keep him from taking a seat." We agree with the *Chronicle*, when it remarks: "To an atheist, this may sound like bigotry; but we cannot see how it can sound like bigotry to a Catholic."

THE New York *Tribune* says, in favor of uniform divorce laws: "It is in fact the duty and interest alike of the nation to surround the family relation with every safeguard; to give to it all the solidity and permanence wise and uniform laws can furnish; and to discourage by every possible method the restless, fickle, immoral, and unstable conditions which spring from facile divorce laws, and which exercise corrupting and depraving influences upon the community in many directions. The demand for a Constitutional Amendment permitting uniform divorce legislation might well be inserted in the platforms of both parties in the coming campaign; for it is not a partisan question, but one emphatically of national concern."

LAST Friday, Boston paid her formal tribute to her distinguished and lamented son, Wendell Phillips. The eulogy pronounced in Tremont Temple by George William Curtis was worthy of the orator and the occasion, being without doubt the most able and eloquent tribute to the character of the great agitator that has yet been spoken. "In its generous enthusiasm and in the discrimination with which this enthusiasm was tempered," says the Boston *Journal*, "and by the aid of which the orator, while recognizing the occasional errors of judgment which diminished the usefulness of Phillips, separated sharply between these and the unflagging devotion, the unquestioning sacrifice, and the stainless integrity of his character, the address foreshadowed what will doubtless be the verdict of posterity. More and more, the memory of mistaken judgments and of overharshness of speech will fade, and the grandeur of the character of Phillips and the greatness of the results accomplished by his unflinching courage and fervid eloquence will be recognized."

MR. M. J. SAVAGE, in his discourse last Sunday, said: "Women certainly take an interest in the government under which they live; for it touches their interests, whether they are weak or not. Men are perpetually making laws dealing with the property of women without asking their leave. We are taking away from the women of Massachusetts $2,000,000 a year without asking their leave or giving them an opportunity to say what shall be done with it. If there were sixty thousand men taxed in this State without their being able to say something in regard to what should be done with it, there would be screaming of the American eagle, and an agitation throughout this country until there was a reform. I do not know of any reason why a woman should not vote as a man. I would give her precisely the same liberty as a man. I call upon all the world, if there is any one in it who has a respectable reason to give why women should not vote, to give it. I have not found it yet, although I have read almost everything that has been written on the subject on both sides."

THE INDEX is no advocate of Spiritualism, but it has often mentioned in commendatory terms the efforts of the *Religio-Philosophical Journal* to expose the immorality and fraud practised in the name of Spiritualism to secure in its favor the judgment of intelligent men and women, based upon the observation and examination of genuine phenomena; and we are glad to see that secular journals generally in this country, and even Spiritualistic papers in England, have words of approval and praise for the course the *Journal* has pursued. The following is taken from *Light*, a London journal devoted to Spiritualism: "That the indefatigable and fearless editor of the *Journal* is doing a much needed and good work in his unflinching exposure of fraudulent mediumship cannot be denied. Were we inclined to doubt it, the continuous succession of secular journals from the other side of the Atlantic, which reach us, containing nothing but words of praise for the line of action he has carved out for himself, would place the matter beyond all question. Although to English notions, the policy of the *Journal* may be too drastic in its *methods*, we cannot but admit that Col. Bundy is scoring point after point, and that the spiritual atmosphere is all the clearer for it. We wish him continued success. We are in full sympathy with the aim he has in view."

THE bill providing that disbelief in Deity shall not affect the credibility of a witness was defeated in the Massachusetts House of Representatives last week, by a vote of 62 to 75. Mr. Kendrick, of Springfield, said, as reported in the papers, that "so long as this is a Christian State, and the vast majority do believe in a God, it is not right to allow the testimony of those who do not so believe to have as much weight as those who believe in the pains and penalties of perjury." Mr. O'Sullivan, of Lawrence, "in the name of Christianity protested against the bill." Mr. Wilson, of Salem, in a speech defending the bill, claimed that it was in the interest of sincerity and honesty; that educated agnostics were among the most honest and moral people in the world, and among the most reliable as witnesses. The change was asked for, he said, by some of the most reverent Christians. Mr. Millett of Malden and Mr. Bracket of Boston spoke in favor of the bill, pointing out the absurdity of allowing men of undoubted rectitude of character to be liable to attack on account of their disbelief in Deity. Bigotry and intolerance are strongly intrenched and hard to overcome; but "the harder the conflict, the more glorious the victory." The attempt to do justice to atheists defeated this year may also be defeated next year; but it should be renewed annually until it succeeds, as it certainly must succeed, and at no distant period. The bill allowing atheists to give testimony in the courts of this State was, we remember, defeated many times before it became a law.

SOCIAL RIGHTEOUSNESS.

Whatever else Jesus may have taught or failed to teach, he certainly taught a gospel of social righteousness. It is evident that his idea of the Messianic kingdom was quite different from that which prevailed among his countrymen. They were looking for a restoration of the ancient theocracy, with a king at its head, and all the accompanying royal prosperity and splendor that belonged to the reigns of David and Solomon. He appears to have had in mind a perfected human society on earth of celestial type, of which equity, love, and brotherhood were to be the ruling principles. Each member was to love his neighbor as himself, and care for his neighbor's interests as his own. How this new social order was to be established and maintained Jesus probably did not make clear even to his disciples. They, certainly, did not make it clear in their interpretation of his teachings as embodied in the New Testament. Yet there seems little doubt that he expected that the inauguration of this Messianic kingdom would begin in some critical and miraculous change in the world's affairs, by which wickedness was to be summarily disposed of, and only the righteous left for entering the new mode of society. But, whatever unphilosophical and vain expectations thus mingled with his teaching, this doctrine of social righteousness which Jesus preached and which was so central in his view of religion must surely be admitted to be a sublime ideal.

The Christian Church, however, disappointed because this miraculous crisis did not come, soon transferred the ideal of a perfected human society from the earth to the skies; and, what is worse, it made the earthly life, not a possible good in itself, but a scene of artificial probationary preparation for the life to come. The Christian Church has, in truth, done very little toward the realization of that ideal of social righteousness on earth of which Jesus had a vision. Organized Christianity, indeed, has become a part of the thing to be reformed. Social distinctions, fashions, and even oppressions rule in the Church as in the world outside. The Christian Church has come to that pass that it takes its law from "society" instead of giving the law to "society." It is affected by the false and superficial standards of conduct which prevail in the community generally. It has been so long accustomed to concern itself with the affairs of another world that it has forgotten how to do its duty to the present world. Church people, as a rule, do not comprehend the methods of taking efficient hold of the pressing problems of social amelioration and reform more than do the unchurched. The churches are not educated for such work. The theological schools do not train their candidates for the ministry in this kind of study.

In the recent council called for installing a new minister over the Old South Church in Boston,—a church of immense corporate and individual wealth, by which a world of philanthropic good might be done,—throughout the long and close discussion of the candidate's qualifications, going into all the metaphysical niceties of distinction between the Old School and New School of Orthodoxy, not one question was asked by the Doctors of Divinity who conducted the examination, nor one word uttered by the candidate himself, concerning his qualifications for dealing with any of the practical problems of social ethics and philanthropy which now press for solution. Jesus was invoked there as "the great Head of the Church." If he had actually come, what part can we imagine him to have taken in such a discussion? We think he would have broken out in indignant rebuke of the metaphysical hair-splitting over dogmas of theology, and been tempted to ply again his whip of small cords, and have driven these learned doctors and the young minister out from the costly Back Bay church together and over to the North End, and there pointed them to Boston's dram-shops, drunkenness, debauchery, crime, poverty, wretched tenement-houses, youthful burglars' dens, starvation wages for sewing-women, and have asked these Christians who had invoked his presence what they proposed to do for abating these and kindred social evils of their city.

The Christian Church, indeed, in its historical development has to large extent transformed Jesus' gospel of social righteousness—his good news of healing and redemption for the actual miseries and wrongs of human life—into speculative dogma and ceremonial observance. The simple methods of Jesus might not, it is true, be available to-day. His social ethics belonged to a primitive order of intellectual and social development. Nineteen centuries have placed them in the irrevocable past. The modern problems of sociology are much more complex than any which he contemplated. The permanent value of his social teaching lies not so much in his special precepts as in the motive behind them. But if the Christian Church had been less solicitous concerning doctrines about Jesus, and had kept its heart near to the root principle of his social ideal,—namely, the caring for one's neighbor's welfare as one's own,—it must certainly have helped humanity forward immeasurably farther than it has ever done.

The mistakes of the past, however, cannot be recalled. They can only be used for correcting the habits of the present. This is an age that begins to judge religious doctrines by their efficacy in producing social well-being. Not a few Christian churches are beginning to awake to this fact; and the churches, generally, will recover their old influential position in the community in proportion to the faithfulness and generosity with which they apply the principles of justice and beneficence to the social relations of mankind.

Let the brute animals, if they must, live under the law of competitive struggle for existence, with "survival of the fittest." But why should man, who is endowed with a moral sense which declares that there are such things as equity and pity and philanthropy, live only under that animal law of competitive strife? Let the principle of competition be followed as far as needed to give healthful incentive to effort, but not to the extent of pitting class against class and individual against individual in a life and death struggle for bread on one side and all the luxuries and power of wealth on the other. Competition should be supplemented with the noble principle of co-operation, and regulated by the law of justice and the sympathies of a common humanity. By the possession of moral intelligence, mankind should be lifted above the brute struggle of physical instincts for self-preservation and self-aggrandizement to the plane of mutual interests and helpfulness. Capital should be ready to offer labor, not "starvation wages," nor wages that mean only bread for the body, but such wages, or such equitable share in the profits of a joint enterprise, as shall mean a fair opportunity for education and for steady improvement in physical and moral condition. And the culture, comfort, and intelligence that are generally on the side of wealth—that may, at least, be its dower—should be only eager to share their advantages for the elevation of those who are deprived of them. Religious organizations, whether Christian or extra-Christian, whatever else they may seek to accomplish, will prove their right to existence, if they keep steadily before humanity this ideal of social righteousness, and work for its realization. A church may possibly have little or no creed to propagate. But, if it propagate justice, equity, sympathy, generosity, fraternal love, unselfish helpfulness, disinterested devotion to truth and human rights, it need ask for no higher credentials.

WM. J. POTTER.

THE WORLDLY GOD.

When I was walking amid the temples and shrines of India, witnessing their degradations and idolatries, I felt like a Rip Van Winkle whose nap had been extended, but in a reverse direction. Surely, I had waked up three or four thousand years ago. The world as it was before Christ, before Buddha, was spread out before me. I was making excursions into bronze and stone ages. I asked myself, How did this vast Hindu world remain prehistoric, while the Western world has made progress? And I concluded that it was by systematic extinction or expulsion of the best brains. The priestly motto in all ages has been that of Donnybrook, "Wherever you see a head, hit it." "Religious diversities have divided the world into seventy-two nations," said Omar Kheyam. I believe it. The germs of them all were flying pilgrims, like those who planted New England. None of them had a god who "loved the world so"—much as himself; but each nation lifted the gods a little more off the breast and brain of man. One morning, about sunrise, I saw a Brahman priest enter a Rajah's garden, and relieve the prayerful watch and ward of another. The relieved one had been praying since daybreak, when he had relieved another, and so on. The Rajah's garden is never for one minute without a priest sanctifying his sleep, his food, his clothing. And, where people cannot afford a family priest, they unite to have one or more in common,—a kind of omnibus watchers and prayers, without whose continuous providence they would not dare to sleep or eat. That is where piety began. Step by step, it advanced westward; and every step meant a link of this daily chain broken, a link of freedom and self-reliance inserted. In Persia, man ventured to till and improve the soil which the gods had provided, without fearing the curse of Cain. In Greece, man went so far as to improve the gods themselves, without heeding any defence of rude idols or Semitic hatred of graven images. In Germany, man began to master the secrets of nature, though the gods called it a Black Art. In Rome, man undertook to be his own providence in the government of the world. And so it went on, till England made a revolution in heaven itself, relegated Christian beliefs to Catholics and Salvationists, and established a church of "the god of this world," with whom Paul wrestled under a belief that he was Satan. The actuality of that subversion is not so visible in England, where the worldly ideal is framed round with ancient phrases, forms, and symbols; but the little pantomime and fictitious grace before substantial meat will not easily deceive any one who has observed English Christianity in India. This nation, the farthest outcome of the progression lined with ruined altars, has now come back to the source from which its ceremonies sprung, and where they are still alive; and it comes as a worldly power, recognizing no supreme authority but the god of this world. Amid all the religions, sects, churches of the world, it rules,—*a Gallio*. It has interfered with religions only so far as they bore on social and political order. It forbids widow-burning, pious suicide, absolute fakir nudity, dangerous car-dragging. But this is all for man. It never interferes in the interest of any

Digitized by Google

deity, Hindu or Christian. Gallio's indifference is fatal to the propagandism of alien religions. Were Allah amiable and attractive, were Jehovah altogether lovely, these creeds might appeal to the Hindu heart; but the representatives of these religions have found sword and fire, or social advantages, so much more effective that their deities are in rather pitiable plight, where their legal and social powers are taken away. England says to all the reformers who used to fly: "You may stay. None shall molest you. You Buddha may return, you Moses and you Zoroaster, and Mohammed, and Xavier,—you are all welcome, only keep order!" So here the Happy Family are, their fangs and claws drawn. I walk along the brilliant bazaars of Bombay, and hear twenty-eight languages spoken, and recognize the symbols of still more different religions. I can see that some of them would relish once more the other's blood, but England says: "No! My God is an Englishman, my Christ is a man of the world. They and we care for no dogma or ceremony which costs a drop of human blood or a pound sterling."

Considered as religions, Christianity and Mohammedanism are at once the drollest and most pathetic figures in India. They still have the hunger for propagandism, but are doomed to sit with folded arms amid the freedom of all they ever oppressed, and also in full view of the tombs of the systems to whose powers they succeeded. All around them are Jewish, Parsee, Jain (Buddhist), and other communities which began as propagandists, but will now not even admit a proselyte. They have ceased to be religious and become rather Mutual Benefit Societies, with masonic secrets and ceremonies. Their temples say to the mosque and the cathedral, in the words of the funeral hymn,—

> "Ye tall, ye wise, ye reverend heads
> Shall lie as low as ours."

But now let me say that I find the English Christian missionary in India subserving a purpose for which I had not given him credit. It is not a directly religious purpose, but only negatively such. As a man of the world, he is liberating educated Young India from its Ixion-wheel of devout routine. There may be a few Catholics and ritualists here and there who introduce pious devotions into daily life somewhat after the Hindu fashion, but the mass of missionaries are in the eyes of the Brahmans godless and profane men; while the Hindu youth are learning from them how to substitute a few bows and words for austerities, and how to shelve their piety for six days of the week. The honorable W. W. Hunter, Member of the Viceroy's Council, the ablest writer on affairs in India, has the following passage in his admirable little book, *England's Work in India*:—

> It is not from any lack of the religious instinct in India that Christianity fails to make progress. The Mohammedan ideal of a missionary is a lean old man with a staff and a couple of ragged disciples. Among the Hindus, for the past twenty-four hundred years, every preacher who could appeal to the popular heart must fulfil two conditions, and conform to a certain type: he must cut himself off from the world by a solemn act, like the Great Renunciation of Buddha; and he must come forth from his solitary self-communings with a simple message. This message need not be original, for it must consist of a reassertion, in some form, of the unity of God and the equality of man. One poor low-caste, who issued, haggard and naked, from the jungles of the Central Provinces, with only a broken cry of "Satnam, Satnam, Satnam," "The true God, the true God, the true God," and a message not to drink ardent spirits, made over a quarter of a million of followers before his death in 1850. Our missionaries do not seem to the natives to belong to this type. ... To the natives, the missionary seems to be a charitable Englishman, who keeps an excellent cheap school, speaks the language well, preaches a European form of their old incarnations, and drives out his wife and little ones in a pony carriage. The missionary has neither the personal sanctity nor the simple message of the visionary, who comes forth from his fastings and temptation in the forest. Instead, he has a dogmatic theology, which, when he discusses it with the Brahmans, seems to the unprepared populace to resolve itself into a wrangle as to the comparative merits of the Hindu triad and the European Trinity, and the comparative evidence for the incarnation of Krishna and the incarnation of Christ. The uneducated native prefers, if he is to have a triad and an incarnation, to keep his own ones. The educated native thinks that triads and incarnations belong to a stage of mental development which he has passed.

Among the 255,000,000 of India, Roman Catholicism counts 1,000,000, after laboring there 374 years. After working 178 years, the Protestant missions count half a million souls (or bodies, which are often Christian, when they can get better fed by it). Since the religious neutrality of the English government has been made real, Christian work in India has every year a poorer prospect; yet, indirectly, it is doing the service of a secular propaganda. This is well enough, as far as it goes; but there is a greater work to be done for India than can be achieved by the new Gallio, or his worldly deity. And it will be begun when England at home has a religion,—not a mere importation or mere anachronism, but a religion which can believe and love, growing out of its own conditions and answering its own needs.

MONCURE D. CONWAY.

ORTHODOX DISINGENUOUSNESS.

The theological weekly papers, commonly advertised as "religious" by the orthodox ministers who conduct them, of course try to resist innovation, because innovation imperils the creeds which they have covenanted to support and maintain. The theology of those creeds is the main constituent of their religion. They represent morality as derived from religion, and seem really to think that their theological form of religion gives the only security for the development of sound morality. Yet, curiously enough, they accuse the Unitarians of teaching "*mere* morality," meaning that such religion as they teach is destitute of that peculiar theology which, as I have said above, is the main constituent of their own religion.

Nevertheless, these clerical editors, in their exhortations, insist as strongly on morality as on religion. Yet, as every general rule is said to have its exception, these leaders of the vanguard of Orthodoxy make one exception to the stringency of their morality. Their creed, and the notions and customs associated with that creed, must be upheld, vindicated, fought for, stuck to, as long as life and breath remains to them. This they will do honestly, if possible. They not only disapprove of lying as immoral, but they have a genuine and hearty dislike of resorting to such means. But circumstances alter cases. When the ark of God is in danger,—that is to say, when the assumptions of the creed are assailed by the investigations of science or criticism,—then martial law is declared, and morality must stand aside. Then, self-defence is recognized as the first law of "grace" as well as of nature. Then, their citadel must be defended *per fas aut nefas*, right or wrong, through thick and thin. The Jesuits (wicked wretches), as Pascal has shown in his *Provincial Letters*, defend and justify falsehood for the glory of God. Our orthodox friends carefully avoid justifying it: they only practise it. Joseph Cook is not the only one who persistently misrepresents the idea or the person he means to confute. He has a long line of illustrious ancestors in this work,* and no end of present clerical coadjutors. When their church creeds or church customs are shown to be unsound, by criticism, however candid, or facts, however obvious, they no more hesitate to defend them by misrepresentation or falsehood than St. David did to use the same means in his negotiations with Abimelech, the priest, and with Achish, the king.

To give one notorious and long-standing instance of the falsehoods alluded to, orthodox literature, from the Westminster Assembly's Catechism to the present issues of the American Tract Society, is full of assertions that Christ and the apostles enjoined the observance of Sunday as a Sabbath, and that this injunction is plainly given in the Bible. The attention of those false witnesses has often been called to the fact that no such injunction is there. But they continue to repeat it. Why do they repeat it? What reason can be given save that Sunday observance is one of their church customs, and that belief in its appointment by Christ is esteemed needful as a means of promoting attendance on their church services?

These reflections have been suggested, and are well illustrated by the following editorial notice, clipped from the *Independent*:—

> *Jesus: his Opinions and Character* introduces to us "the New Testament Studies of a Layman" (Boston: Geo. H. Ellis), in which we fail to find anything new nor anything old said in a better way. It is a worthless examination, carried forward with mechanical dogmatism, and without regard to the conclusions forced on the attention of the serious student by the impression which Jesus Christ has made on the moral history of the race. Impartiality means, with this author, icy indifference, and permits him to introduce insinuations into his chapters which have the savor of malice, and that of a mean kind; as, for example, where, in discussing the resurrection of Jesus, he taunts him with having betrayed a very uncelestial eagerness for food. The whole inquiry is conducted on a radically bad method, which indicates very imperfect acquaintance with the elements of the question, and is not worth serious attention.

Perhaps it would be a sufficient reply to the above effusion of sectarian spite to copy from this "worthless examination" one of the conclusions to which the author comes (page 378) as follows:—

> Nor need the crown even of this kingdom be refused to Jesus. Best of all who have yet lived in the world, he is worthy to wear it. Spite of the insignificant blemishes by which his relationship to us is confessed, he still leads the van in the march of man from the plain of bestial instincts to the high tablelands of spiritual discernment and power. By his purity, by the heroism of his self-consecration to the noblest aims, by the dazzling splendor of that standard of righteousness which he portrayed and exemplified, he is as yet enthroned king of humanity.

As the *Independent* declares the whole inquiry of the book to be "conducted on a radically bad method," it may be well to quote the author's introductory statement (pages 6, 7) of what his method really was:—

> The writer of these papers—beginning with the assumption that the Christian documents are authentic and a *bona fide* setting forth of the career of Jesus, as it was believed by the writers of them to have occurred—has set himself to the task of ascertaining what the documents themselves seem fairly to prove.
>
> His method of procedure was to draw up, by reference to the original texts of the Synoptical Gospels, every declaration reported to have been made by Jesus during his life, together with such of the *res gestæ* as might be considered, along with his language, as expository of his thought. After an exhaustive list of these had been accumulated in the order of their narration, an attempt was made to classify

* Here, for instance, is what the Rev. Dr. Cotton Mather wrote, in 1694, of the Providence Colony and of Roger Williams, its founder: "This colony is a lot of antinomians, familists, anti-sabbatarians, Socinians, Quakers, convulsionaries,—in a word, of everything except true Christians."

Digitized by Google

and arrange them by subjects, placing in the same category whatever Jesus was believed to have said upon each special subject, or that might seem legitimately to relate to it. Finally, a finding or summing up—such as is imposed on the judicial mind in determining, from a mass of notes of oral testimony or of documents and papers, what are the facts upon which, under the proper rules of law, the rights of litigants are to be determined—was undertaken, and a statement drawn up of what Jesus seemed to have believed and taught.

If the "method" thus described be a bad one, what, in the *Independent's* judgment, would be a good one?

As to the critic's closing remark that the book "indicates very imperfect acquaintance with the elements of the question," I will say only that whoever faithfully reads it will have cause to admire the author's thorough and accurate acquaintance with the Old and New Testaments, as well as the skill and candor and *truthfulness* which he has shown in making his conclusions.

C. K. W.

DR. MAUDSLEY ON SPONTANEOUS GENERATION AGAIN.

While the learned doctor has made a most thorough and profound analysis of nature's processes, and explained by continuous and inherent forces the transformations of matter which are usually termed organic, leaving the great mystery of a primal cause unresolved, he yet argues in a candid and comprehensive manner the sufficiency and completeness of the universe considered in and by itself as *involving* whatever products of life and form it *evolves*. "No addition," he says, "takes place to the whole sum of matter and energy in the universe: the new thing which is the product of the old, but not the old, having its own properties or functions, is obtained by the transformation of lower kinds of force and matter."

"Intrusions from on high should not be wondered at as supernatural, but studied as the events of a higher natural domain." He would, however, avoid applying the known laws of the lower domain as a full explanation of the phenomena of the higher. He allows the existence, apparently within nature, of a region "beyond all forms or modes of man's apprehension, . . . which has not undergone, and cannot undergo, form or mode in his consciousness," which, it would seem, must be back of and distinguished from phenomena, after the manner of Herbert Spencer's "absolute," though he rightly repudiates any possible conception of the absolute, as thereby bringing it into the category of the relative.

"In this vague and vast region of unlimited and unrelational, which the very recognition of a relative and limited world of knowledge compels us to postulate, and which we may please ourselves to talk of as the 'thing-in-itself,' or the absolute, though both expressions are meaningless, there is room enough for an unlimited play of the imagination." He holds that imagination has played a large part, to some extent legitimately as well as unlegitimately, with constructions in this region; but he would have all its constructions tested and verified by the understanding, by facts and their relations.

We ought to make clear to ourselves, he thinks, what we can affirm positively, what deny, and what leave unaffirmed and undenied. "We are sure and can affirm that a fundamental impulse of evolution is felt in the higher functions of mind; . . that the impulse comes from afar, and is more than personal in any proper sense of the word. . . . We are entirely in doubt what it is essentially, whence it comes, and whither it tends; and we are sure that any positive and definite answers must be fables of the imagination."

He calls it a necessity of thought that man should "posit somewhere at the back of known causation at the beginning, that is to say, of the series of causes upon causes which he could trace backwards in endless regress; a self-existing cause —God, substance, nature—to which no antecedent cause was conceivable." But "it is the mark of our limitation," he says, "not the warrant of objective truth, that we cannot do otherwise than represent the power outside ourselves in terms of ourselves."

So all theologies, and philosophies as well, pertaining to the origination or primal cause of things, are of necessity subjective, "reflecting the stages of human culture in which they are made." "The tendency is day by day more and more to abandon predications concerning God, and to make the conception more and more abstract, vague, remote, undefined, nebulous. How in any way define,—that is, mark out from all else, when there is no else?"

"To bring God at all within the compass of human predication, and above all to give to him a magnified human personality, a character and a name, is sheer blasphemy and nonsense."

As an illustration of the contradictory conceptions into which religious emotion may run uncontrolled by reason, he makes a prayer from the utterances of St. Augustine, as follows: "O Thou who wast before every before, and wilt be after every after; most hidden, yet most present; unchangeable, yet all-changing; never new, never old; ever working, ever at rest; still gathering, yet lacking nothing; who lovest without passion; art jealous without anxiety; repentest, yet grievest not; art angry, yet serene."

He regards the imputation of design to Deity as not only irrational, but as simply anthropomorphic; design "being a term that derives its sole meaning from and is solely applicable to human conceptions, and is meaningless, pure nonsense when applied, or misapplied, to what transcends human conceptions."

Thus, from all I can find, I conclude that, while Dr. Maudsley admits the existence as real and actual, but within the realm of nature, of "energy from outside knowledge," "giving impulses and aspirations which we cannot otherwise account for," which we "may feel without being able to fathom its source, as a man would feel the moon in the tides, though he were blind and never saw it," he yet holds that "to attempt to comprehend or even to name the inscrutable is the grossest absurdity."

The mystery remains, the energy exists and acts, but is not God in the common acceptation and understanding of the term; and it is simply a subjective gymnastic to think or speak of it as "he" or "she." This may be "nescience" or "agnosticism": it is scarcely "materialism" or "atheism," and it may not be "dualism."

A. N. ADAMS.

CONVENTION OF THE FREE RELIGIOUS ASSOCIATION.

The Free Religious Association will hold a Convention in the Unitarian church, New Bedford, Tuesday evening, April 29, and Wednesday afternoon and evening, April 30. The evening sessions will begin at 7.30, and the afternoon session at 3 o'clock. Tuesday evening, opening address by the President, William J. Potter; essay by Minot J. Savage, on "The Change of Front of the Universe"; and address by the Secretary, F. A. Hinckley. Wednesday afternoon, essay by Mrs. Abby Morton Diaz,—subject, "Spiritual Strength"; to be followed with addresses by Miss Mary F. Eastman and Mr. H. W. Robinson, and others. Wednesday evening, essay by William H. Spencer on "Immortality," with addresses by Mrs. Ednah D. Cheney and B. F. Underwood.

F. A. HINCKLEY, *Secretary.*

IT will be seen by an editorial article, which we reprint from the *Congregationalist* this week, that one of the subscribers of that journal prefers to take his theology with an infusion of heterodoxy in it rather than pure and simple. He takes *The Index* to get a breath of the fresh air of the present and a draught out of the fountains of the living thought of to-day. He might have interrogated the editor of the *Congregationalist* as Faust interrogates the bore and pedant, Wagner:—

> "Is *parchment*, then, the holy well-spring, thinkest,
> A draught from which thy thirst forever slakes?
> No quickening element thou drinkest,
> Till up from thine own soul the fountain breaks."

The editor of the *Congregationalist*—whom we have no intention, in making the above quotation, to liken to Faust's friend, Wagner—believes in all seriousness that the "parchment" of the Hebrew Bible and Greek Testament is, in reality, the only well-spring of salvation. And so he diligently lets down his bucket from week to week into the dead Hebrew past of two or three thousand years ago, and brings up the primitive ideas and fantastic beliefs of the minds of that remote time, and fondly imagines that he is irrigating his subscribers' souls with the water of life by such a process. "We do surely try," he solemnly asseverates, "to sink the bucket of our journal into the deep, cool, pure, wholesome, and life-giving waters of the wells of salvation which are fed from

> "'Siloa's brook that flowed
> Fast by the oracle of God.'"

It seems that the live nations of to-day have no God, but must go back to the old Hebrew Jehovah, or to the mouldy "parchment" which contains a record of his alleged sayings and doings in behalf of a small tribal community of shepherds in Syria two or three thousand years ago, for divine refreshment and guidance. So far as brooks are concerned, we will back any given brook, that sings along its sinuous bed through the verdure and beneath the foliage of New England, against "Siloa's brook" aforesaid or any other brook of that heat-stricken land of drought, crumbling walls, fleas, and arid sand,—namely, Palestine. No: "the modern pump" of *The Index*, to borrow the highly figurative language of the *Congregationalist's* subscriber, who is ours as well, is not restricted to the old Hebrew "well of salvation" but is adapted to bring up water from any well, be it old or new, in Greece, Judea, India or the lands of modern science. We submit that it is the editor of the *Congregationalist*, and not we, who thumps his "bucket" down upon sand; for the sterilized soil of Palestine—which, according to him, is the special country of truth and divinity—is mostly an arid, moistureless desolation, and is thus a genuine physical type of the obsolete mythological and theological lore which originated on its surface in early times. Quoting Carlyle, the editor of the *Congregationalist* says that the religion of *The Index* is, "at best, an anxious wish, a great Perhaps." We thank him for reminding us of Carlyle who says that all history, and not simply old Jewish history, is a Bible; that, if "we had any vivacity of soul and could get the old Hebrew spectacles off our nose, we should not run to Judea to look at the doings of the Supreme." Unfortunately, too many still survey the modern world the cosmos, as current science opens it up to our view, through a mythologic, theologic lens. It is amusing to find the *Congregationalist* using the language of modern chemistry in describing its old Hebrew water of

Digitized by Google

salvation. We submit that such language is un-Mosaic, untheological, and unorthodox, and unbecoming a champion of the Westminster Catechism.

EDITORIAL NOTES.

PRANG has now in course of preparation two landscapes by Benjamin Champney, one representing Spring, the other Fall. In both, charming effects of sunlight are shown; while the children playing on the hillside and in the meadows give the enduring human interest which is so invaluable.

C. P. FARREL, of Washington, D.C., has just published *Prose Poems and Selections*, by Robert G. Ingersoll. It contains, besides the "Decoration Day Oration," all the famous "tributes" heretofore printed in the papers, but never brought together till now, and many other gems selected from the speeches, letters, table-talks, and day-to-day conversations of the author.

WE see so much in the *Banner of Light* from which we dissent that it is with pleasure we find one paragraph which we can quote with hearty approval. It is as follows: "There is nothing meaner than Mr. Anonymous, whether a man who writes for the newspapers, abusing decent people in the dark, or a man who undertakes to accomplish in this underhanded method what he is afraid to undertake openly and over his own proper signature."

WE clip this from the Boston *Transcript:* "Two men were talking in a horse-car the other day. 'Whenever,' remarked one, 'you mention the name of Darwin, and somebody hops up to inquire, "Do you believe man has descended from monkeys?" you may be sure that man never read Darwin.' 'Then what a number of people must talk about him who have never read him!' was the reply. 'Just so. It's the people who know things by hearsay that are always most ready to talk about them.'"

WHERE money-getting is looked upon as a means and not an end, it is possible to find men who make use of their opportunities for the intellectual and moral advancement of the world. We have Crœsuses who build magnificent palaces to live in; but how many rich men have we who, like Mr. Darwin or Sir John Lubbock, devote the leisure which wealth provides them with to scientific study? It may safely be said that there are both in England and in France fifty rich men who make their wealth procure for them the time and means needed for study and public work to every one instance of a similar disposition of wealth that can be found in this country. As we have in America no aristocracy of blood, the old proverb of *noblesse oblige* should be rendered *richesse oblige.*—*Boston Herald.*

WHEN Henry Irving was in Boston, he was somewhat surprised that "The Merchant of Venice" was received so coldly. Afterward, in a private conversation, he defended not only the play, but the character which it is orthodox to detest,—the character of the Jew, Shylock. "Positively," said Mr. Irving, "Shylock is the only gentleman in the piece. What are Antonio and his friends but a set of roystering knaves, after all?" And this remark of Mr. Irving's brings out the question of how many there really are among us who can honestly say that we abhor the villains of the stage and of literature. Bloodthirsty and grasping miser as Shylock is, who can refuse him pity when, bereft of character, child, and fortune, he replies to Portia's rather untimely question, "I am content."—*Boston Courier.*

REFERRING to a shallow article *in the Weekly Magazine* by Rev. David Swing on "The Philosophy of Herbert Spencer," *Unity* says: "Our Music Hall orator is troubled because Herbert Spencer uses hard words; and he gives a list, among which are found the troublesome words 'synthesis,' 'persistent force,' 'thinkable,' 'recurrent,' etc. Those who are frightened by such words as these will next want a Shakspere in words of one syllable, Goethe in easy lessons, and an edition of Dante with the obscurities expurgated. They will enjoy that religion only that has no cause, avoids all issues, and exacts no sacrifices. If so many of the thoughtful people of this age have been deceived into believing that Herbert Spencer's words have in them thought-provoking and mind-expanding power, there still remains in Herbert Spencer's life a singleness of purpose, an intensity of aim, and a consecration to the moralities and the humanities that we earnestly commend to the serious consideration of those readers of our contemporary who may still be alarmed by their preacher's ominous suggestion of the 'oyster and the monkey.'"

A MEMBER of the bar in a communication to the Cincinnati *Commercial Gazette* says:—

My impression is there is a law enforced in Paris, prohibiting the publishing by newspapers of the fact and circumstance of suicide. The reason, pray? Why, such publications provoke more suicides, hence the interdiction. A graphic account of a suicide by drowning is followed by a dozen such in a week. It becomes epidemic. The rule applicable to self-murder applies to all murder. A terrible crime is committed. Every newspaper is filled with lengthened accounts of each sickening and atrocious circumstance. The best and most graphic hand is detailed to make report of it, and to spare none of its hideousness. These pen pictures are much the more apt to be over than under realistic. For the nonce, the morning newspaper becomes a police gazette. Wood-cut illustrations are added, making the resemblance the more complete. Think you of the effect of all this?

IT is much to the discredit of our Commonwealth, observes the Springfield *Republican*, "that the bill to remove the disability of atheists in the courts should have failed in the House yesterday. Religion got in the way of the legislators, and blinded their eyes to honest judgment. The men who defeated the bill know that the religious opinion of men does not affect their credibility in any of the transactions of business; but, when the traditional sacredness of the oath comes in, they weaken and give up the case. Truth-telling is, in reality, never conditioned on religious belief. Every one who has watched the proceedings of the police court has seen witnesses 'kiss the book,' and proceed to tell the most outrageous lies. The exclusion of those who do not profess belief in a God is against all the experience of every-day life. The amendment of our practice is only a question of time, but it is a pity it should wait in a State so proud as ours of its enlightenment."

MANY of our readers will recall the unjust and scandalous charges made by Joseph Cook against the character of prominent liberal and radical thinkers of high standing and unblemished reputation a few years ago during the painful Liberal League controversy. There is no doubt that many of the statements made by Mr. Cook at that time, gross and cowardly as they were, produced the intended effect, and did much to strengthen the average orthodox consciousness in its native distrust of all advanced opinions. But many of the popular lecturers, theological admirers, who stand ready to applaud and repeat his false accusations against certain liberal leaders, are now smarting and wincing under the application of the same method to themselves. . . . The spirit of conceit and imposture is as dangerous to consort with in the guise of friend as of enemy, since its ends are always of a self-seeking order, for the accomplishment of which honor and principle are sure to be sacrificed sooner or later.—*Unity.*

THE *Banner of Light* very ill-naturedly charges us with having copied from it an advertisement, assumed it to be an editorial, and made it the basis of an insinuation that that journal defends fraud. The paragraph stated that a medium, accounts of whose exposure had appeared in the papers, "has received so many letters from all parts of the country, expressing sympathy in regard to the assault upon her while she was sitting in her cabinet Friday evening, March 7, that she finds it impossible to answer them except by this method." These words were quoted, not to make any insinuation against our Spiritualistic neighbor,—for we did nothing of the kind,—but to show that, after the most thorough exposure of their trickery, mediums still have the confidence and sympathy of a large number of people. We certainly thought the statement quoted was made by the editor for and in behalf of the medium. It appeared to be an editorial note. The next paragraph was an editorial selection. If our contemporary prints advertisements in a way that makes it impossible to distinguish them from editorials, it has only itself to blame when one is mistaken for the other.

For *The Index.*

MOODS.

I've seen the sun beam radiant from the skies,
  And the next moment heard the raindrops fall,—
The dark'ning tempest suddenly arise,—
  And soon the "bow of promise" arching all!
Chide not, O friend, my ever-changing moods,
  Or go to Nature, if you must complain,
For I but follow as she leads; and you
  Must query her to know her meaning plain.

The day-god bathes in roseate hues the west,
  While pale-cheeked Luna in cloud-veil is found;
And when, at length, she sadly goes to rest,
  He gayly mounts with kingly guerdon crowned!
So age and youth commingle day by day,
  And joy and sorrow blend their common wing,
And the chill winter that should pass away
  Too often lingers through the opening spring.

So, when you ask, with thoughtful, loving eye,
  If e'er I "fully act" my "real self,"
I answer, "In my ever-varying sky,
  I copy nature, and must own the pelf!"
And, if my face in smiles this day is dressed,
  Deem not that all impossible are tears,
Though now a-slumbering in their fonts they rest,
  They've shared the honors through the passing years!

Unto the world I may seem light and gay,
  And, if it deem me trifling, 'twere not strange;
But you, the friend of years, must never say
  That there alone my soul delights to range.
Read me in what I write; for to this end
  I clothe my inner in the outward sign,
That you my aim may fullest comprehend,
  To grasp the higher and the more divine!

LITA BARNEY SAYLES.

For *The Index.*

THE NEW "CHRIST."

Come to the cradle, and bow:
Knowledge is the Saviour now.
And the airs that blow,
And the waters that flow,—
The Forces of Nature
Increasing man's stature,—
Are the modern Angels
That murmur Evangels.

Seize on them while you may!
Be blest in the life of to-day!

The Index.

BOSTON, APRIL 24, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

The Mormon Question from a New Standpoint.

BY T. W. CURTIS.

The Mormon question appears to me to involve issues of the deepest gravity and the greatest practical moment.

Congress, in its wisdom, has denied to Utah the right of becoming a State while it retains the practice of polygamy, which has been declared a crime; and, the efforts of government for its suppression having been thus far apparently without success, more vigorous measures are being discussed, which are in part based on the assumption of a union of Church and State in Utah.

On the other hand, Utah, with a large and thrifty population, more than twice that of Nevada, and exceeding that of Kansas and Nebraska combined, when formed into States, has long been applying for admission into the Union. It denies that there is any connection between Church and State. Its plea is that polygamy is a custom of its people, having the approval of both sexes, who alike possess the right of suffrage; and, also, that it is a church sacrament, besides being specially enjoined by their religion. And, marriage being a domestic institution, it is unwilling to surrender that control over it which the Constitution, as hitherto interpreted, has guaranteed to the States in their separate capacity. A protest is made also against the confounding of bigamy and polygamy, as the former involves an element of criminality, which the latter doesnot. Then the complaint is made that the power assumed by Congress over the Territories is of so general and undefined a nature as to place the people of Utah at an immense disadvantage in the defence of their rights. And an appeal is made to the moral and intellectual status of the people of Utah as compared with other communities, and to the far greater industrial and agricultural development as compared with surrounding States.

Mormonism was begotten of this generation, its tenets being in the main those of the Christian world. Its chief doctrine, revelation, in the Biblical sense, is more to be commended perhaps for its consistency than its progressiveness. Polygamy, it is assumed, has the sanction of Scripture, which to the Mormons, as to Christians generally, is the Word of God. And God, Christianity, and the Bible are in various ways recognized by both the State and national government. Marriage, too, is held by the Church as a sacrament, the larger half of Christendom assuming absolute lordship over it; and its institutions and sanctions are even derived from this same ecclesiastical source by the statutes of some of the States, and by implication also in much of the legislation on the subject. And it is well known how various and conflicting are the marriage laws of the different States, owing to the exclusive control which each State assumes over marriage as its rightful prerogative. Consecutive polygamy, through easy divorce, is becoming quite common throughout the country, having the sanction of law. The social evil is licensed in some quarters, having the protection of the law. And many nameless evils are increasing, in spite of law and public sentiment.

Thus, the difficulties of the Mormon question appear to be closely allied to questions with which we are confronted outside of Utah, and that call for faithful study and an early settlement by the American people.

1. Is there not in the practice of our government a recognized relation between Church and State, that antagonizes the theory on which it rests, and causes confusion of thought and a compromise of principle on matters of the most vital concern to the commonwealth?

2. Does not the status of marriage need to be more clearly defined, in order to do away with any possibility of a conflict between the civil and ecclesiastical powers?

3. Should marriage as a subject-matter of legislation belong to the State or the nation?

4. Would a national utterance on marriage and divorce, with a view to furnishing a basis for State legislation, be in keeping with the democratic idea?

5. Is the relation of the government to its Territories capable of any more exact definition than it now has in the clause which reads, "Congress shall have power to make all needful rules and regulations for the Territories and other property of the United States"?

6. May it not be possible even, that, when the average results are weighed, the tendency to family integration, on which social self-preservation depends, is greater in Utah than in the outside world.

I advise not that this question be dropped or postponed, but that a more resolute purpose and searching inquest be applied to its solution. In no sense do I favor Utah's admission as a State, *excepting on conditions that apply alike to every State of the Union.*

The greatest danger is that people will not give their best thought to this question, and that statesmen even will fail in responding to the appeals of conscience and reason. This habit of connivance among politicians, for instance, at the encroachments of the Church on every hand, may render possible a political combination on the eve of some presidential election that will secure the admission of Utah, without anything at all having been settled. How many there are ready to uphold government in its dealings with Utah, who know really little or nothing of the facts and the law! And how many who would support any measure, no matter what the facts or the law presented, on the principle that the end justifies the means!

There are three indictments against the Mormons,—treason, blasphemy, and immorality. And so strong is the popular feeling in this direction that any counter-statement, backed by facts and figures, avails little or nothing. And one of the most marked features of this discussion is the disposition to judge the Mormon people by ideal tests and standards, and to go behind law and fact even, and let our prejudices and *a priori* conceptions have full play, but to deny to the Mormon the right to go back of the law in his estimate of us, and scan the secret springs of our governmental machinery and social life. How much is said about Church and State, despotic hierarchy, ecclesiastical control of education, of ignorance and superstition in Utah! But every fact adduced in support of these charges can be met by several in support of the same charges against the accuser. This I have in part already shown. There is more connection between Church and State in Massachusetts and Vermont, which produced respectively Senators Hoar and Edmunds, the two knights-errant in the attack on polygamy, than in Utah. Why, it was this Vermont senator who reported that famous Bible amendment to the Constitution, which lacked but two votes of passing the Senate! And, mark you, the same voices said "aye" which voted for the anti-polygamy bill, and both measures were backed by the ecclesiastical power! Why, in the keystone State of the Union, the statute on the very subject of marriage itself begins with such words as, "All marriages not contrary to the revealed Word of God"! And the Supreme Court of Pennsylvania decided even that Christianity was a part of the common law of the State, the common law of which we hear so much. And the Supreme Court of the United States winked at the decision. Then, the Mormon Church is democracy, pure and simple, compared with the Roman Catholic and several Protestant churches. There is less of religion in the Mormon schools than in the Gentile schools, in or out of Utah; and statistics show that the average daily school attendance, and the amount of taxation per capita for educational purposes, is much higher than the average of the Union, and higher than in some of our leading States. This talk of ecclesiastical control of education in Utah, by the Christians especially, is hypocritical through and through. Why, here in Boston, and this very day, the 6th of April, 1884 (just fifty-four years to a day since Mormonism was organized into a church), I heard a gentleman of the liberal faith, who is on the outlook for a place to teach or preach, say to another person in my presence (not heeding me at all), "I experience the same difficulty in trying to find a school that I do in trying to find a society: my religion doesn't suit." And he added, "There seemed to be a good prospect in a town of considerable size in Vermont; but it turned out they required prayer and Bible-reading, and wanted a Presbyterian, a Baptist, or an evangelical." And Vermont is the State where Joseph Smith was born, and where Senator Edmunds resides! Go West, young man; go to Utah! And, as to the Mormon theology, it has ages the start of Orthodoxy. Said Joseph Smith, from the public platform in Nauvoo, "The lowest, most degraded man now on earth will some time be where Jesus Christ is at this moment, who will have progressed in proportion." From such utterances date revolutions in theology. And this utterance of over forty years ago made a rift in the orthodox heavens, and the light that flashed

Digitized by Google

through did indeed seem like the light of revelation.

It is supposed that Mormonism was polygamic from the start, whereas it had attained to almost its present dimensions before this practice was introduced, and was driven from State to State as well, while the national government declared it was beyond its power to afford protection or redress. It is supposed every Mormon is a polygamist and muchly married, whereas not more than one in fourteen is a practical polygamist; and but a small proportion of these has more than two wives. Mormon polygamy is compared to Oriental polygamy; but the latter is avowedly for the convenience and gratification of the male, while the former by religious guards and sanctions aims at ends the very opposite. Nowhere does the problem of the relation of the sexes evoke more thought and study among the people at large than in Utah. And there are facts which tend to show that the Mormon woman cherishes even an exceptionally high ideal of purity, chastity, and womanhood. Then, no distinction is made between polygamy and bigamy; while there is a distinction, and a great one. Bigamy implies deception and betrayal, an infraction of moral and statutory law. Polygamy has the assent and approval of all the parties, and is right in the sight of the community, and its law. Very common is it to hear polygamy compared to slavery. That political device, "the twin-relic," aimed to precipitate against polygamy the moral force slavery had aroused by linking it to the popular hatred and prejudice already existing against the Mormons. But that very aim is a relic of barbarism which out-relics the "twin-relic" a thousand times. Now we do not know, perhaps, that nowhere, not even in monogamic countries, is divorce so easy for the woman or so difficult for the man; while the divorced wife and her children have still a claim on the husband for support. Polygamy was entered into voluntarily by these women, and, remember, they have *the ballot in their hand!* or did have until the Edmunds law took it out of their hand; and now the Hoar bill proposes to disfranchise the whole sex! "But purely in the interests of the anti-polygamic legislation," says a liberal editor. That assertion I would not dispute for one moment. There are other senses also in which this parallel between polygamy and slavery fails,—*the material prosperity and moral status* of the whole Mormon community, even when compared with the most advanced in the nation. "By their fruits ye shall know them." That black, horrible shadow, which has hung spectre-like above the home of the saints, and from which the world has shrunk aghast, where is it?

Polygamy I would neither palliate nor excuse. At its best, I believe it to be regressive, unnatural, and wrong. It could never have engrafted itself on modern life but for what I would term a superstitious regard for the Bible, and a belief that its noxious features could be counteracted by wedding it to a religious purpose and ideal, borrowed from the truer light and aspirations of our own time. And the partial success with which the system has met is the more easily accredited to its intrinsic worth, because of the laxity of the world's morals, which has the appearance to some of a miscarriage of the monogamic relation of the sexes. And, then, the character of the opposition which has been made to polygamy, often allied to the spirit of persecution, and seldom or never condescending to reason, and contenting itself with the iteration of what civilization has settled, while totally ignoring one of its grandest lessons,—that *the spirit in which any truth is held is of as much consequence as the truth itself.* And, if any principle needs emphasizing in these times, it is this very principle; for it is the essence of liberty, the darling truth of science. No: in this discussion, *two principles must not* be lost sight of,—the actual tendency of a system and the right of self-government. But for these two standards there would not be a man, in this country or any other, who dare stand up and own himself a Liberal or a Free Religionist. But for them, Rationalism would not yet have been born, but have been slumbering in that dark profound, where no thought-ray ever penetrated and no life-pulse ever throbbed!

To seek the extirpation of polygamy by every lawful means I believe to be the duty of the citizen at this hour; but I conceive it to be the duty of the reformer, of the high-minded and patriotic, to strive to bring out into bold relief the issues involved, lest the evil you think to suppress shall reappear in some form, and the spirit in which you have dealt with it shall be meted out to you again in return. It is true the first law against polygamy was enacted in 1862; but the manner in which the subject is treated even now, by the press, the pulpit, the legal fraternity, the law-makers, is proof of the small heed given to the merits of the case at that period. Last year, the Edmunds law was passed, which inflicted wholesale punishments on polygamists, and without trial, and the country was silent; and now, under the prestige of the success and the failure of that law, its success in Congress and its failure in Utah, it is proposed to adopt more extreme measures still, and the country, led by the Church, says, "*Amen.*" Congress cannot err: it is infallible. I, for one, shall not emulate or abet such a course, though I be ground between the upper and nether millstones of Mormon and anti-Mormon sentiment.

Though there are theories and practices rife in society that greatly retard the complete and general realization of the monogamic ideal, it is true law may assist in holding the advance civilization has made. But, in its administration, I would have an equal regard to the rights of the individual and of society, keeping ever the principle of justice and fair play in the ascendant, and finding in a general law that criterion of action which renders all legislation at once impartial and effective.

The sum of these observation is:—

1. The question is not simple but complex; the issue is not one but several.

2. The method of dealing with Utah, has been illiberal in spirit, anti-republican in principle.

3. The anti-polygamy legislation lacks the requisite moral force at the back of it.

4. The real merits of the controversy have yet to be developed.

5. Liberalism has a special duty to perform, in emphasizing the moral aspects of the discussion and in upholding rational modes of action.

For *The Index.*

ADDRESSING THE DEITY.

Remarks at the Appleton Street Chapel.

BY REV. W. G. BABCOCK.

In every age and nation, mankind have instinctively worshipped. The objects of worship have been of great variety. We have heard and read of thousands of deities, but will the coming generations worship any deity? As the world grows in knowledge, many old opinions and phraseologies drop out. Is religion wholly a relic of ignorance, fear, and superstition? Is there no such reality as God? There may be no such God as people imagine, but does it follow that there is no real God? By the word God, some people understand one thing and others understand another. Perhaps no one yet has the right views of God, but that does not prove that there is no God. If, by the word God, we mean the infinite forces and capacities of nature, which explain the perpetual life and growth of plants and animals, who is there that can deny the existence of such a God? If, by the word God, we mean the source and energy of the beauty and utility of the world of matter and of mind, who can doubt there is a God? If, by the word God, we mean the absolute power, wisdom, and goodness inherent in the laws of nature, can we help acknowledging God in all our ways? I am acquainted with people, some of whom call themselves atheists, and others agnostics, and others pantheists, and others materialists, and others infidels; but I do not think a single one of them denies the reality of infinite power, infinite beauty, infinite wisdom, infinite goodness. They may say there is no one personal being in whom is united these all-perfect qualities to be called God. They may refuse to address the laws and forces of nature by the name of "God"; but they would all admit the existence of infinite and superhuman life, flowing through all minerals, plants, animals, and mankind, and through all the evolutions and changes and events of the universe. They do not feel like addressing such a power, calling it a person, a central entity, a Father in heaven; for they think of it as diffused and omnipresent, and having no will or option of its own. They think it is idle to cry out for God's help, to say, "Lord! Lord!" at every little or great affliction. They use no vain repetitions or long prayers, as if they could be heard by loud speaking. They take not the name of Deity upon vain and unmeaning lips. They turn their attention to the discovery and following of natural laws, and not to the support of public worship. They do not care to express any opinion upon the existence or character of the Deity, but are very sure they can make the world a better place to live in. There are ministers of pure and undefiled religion, like Felix Adler, who speak in public to large congregations, and who omit all addresses to the Deity. Emerson, who lately died with tributes of honor from the finest people in the world, left his pulpit partly because he did not feel like making addresses to the Deity at a fixed time and place. He never had any doubt about the existence of God, living and moving in all the works and ways of nature and of man. He was full of humility and reverence, God-like love and aspiration; but he did not like the *forms* of worship, and he no doubt had more advanced views of the nature and relations of God than those around him. It must needs be that people should differ very widely in their views and convictions. The great mass of mankind take their religion on trust, without any investigation or thinking for themselves; and yet thoughts and doubts keep creeping in and dividing denominations into fractions. Though the creed just published by the orthodox sects is generally acceptable, there are thousands who go to meeting, and tens of thousands who do not, who regard that creed entirely behind the times, and open to adverse criticism from beginning to end; and among Liberals there is great diversity of opinions and methods. Some societies are revising their hymn-books to obtain hymns more in harmony with modern discoveries of truth and good taste. Tunes even as well as hymns may be adapted to truer views of religion. We have devotional feelings, and always shall have, but they are affected by our intellectual convictions; and anthems, oratorios, chants, and chorals are susceptible of improvements to correspond with the spirit of the age. We are sometimes compelled to wear our old clothes longer than we love to, for want of means of procuring new ones; and so with our prayers and hymns and tunes and other outward customs. It is not a bad sign of the times that prayer-meetings and revival meetings are languishing. Educating the body, mind, and community is the *best* worship of God there is. But I still believe we have other duties than these, and that our best thinkers and most advanced philosophers will find out that God is not only the sum total of impersonal forces and eternal laws of motion and morality, but a being of infinite personality, having thoughts, feelings, purposes, infinitely superior to ours, and enabling him to love us and care for us better than we can imagine our human philanthropists can love and serve us. I think so, not because I would be blind to all the modern contributions on this great subject of religion, but because we have a devotional or worshipping faculty,—a capacity to

Digitized by Google

adore the ideal perfect, a want of something above and beyond us which nothing in the kingdoms of nature except the infinite and absolute can satisfy.

The best specimens of nature and art that have ever come under our cognizance only increase our adoration and our want of something higher. We may never be able to understand the relation of the Infinite to the finite, or of the finite to the Infinite; but that both exist and are interrelated, who can doubt? I believe that public and private worship can be formulated to meet the demands of nature, reason, science, and reality. I believe the love of God does not consist wholly in the love of man, though they may be very similar. I believe in silent and audible addresses to the Deity, though beyond my ability to make proper ones. While I know that addressing the Deity is often a sign of weakness and indolence, and of a low stage of ability and character, and is done in a manner and with words which are anything but reverential, uplifting, or refining, I do yet believe it can be done and should be done to fulfil all the demands of human nature, and to carry out the best ideas of human happiness and the world's progress. Reverence, and all that reverence implies and includes, will find adequate objects for its exercise and gratification, by whatever name those objects may be addressed.

CORRESPONDENCE.

"THE NATURAL GENESIS."

Editors of The Index:—

Fresh from reading this book by Gerald Massey, I wish to call attention of those interested in the subject to the work. It is written by an evolutionist for evolutionists, and carries the evolutionary contention into the citadel and sanctuary of supernaturalism. It accomplishes in that regard, for mythology, philology, and religious opinions, what Darwin did in zoölogy. The doctrine of animal descent from a common ancestor would easily have carried the popular consent, as it has that of the competent, had it not implied a human origin repugnant to our religious beliefs. Mr. Massey has offended a thousand-fold more than Darwin; for, while the latter left some footing for the popular beliefs, the former has by his demonstrations cut up by the roots, not leaving a vestige of historic truth in the whole Bible story, by tracing it with immense detail to its rude beginnings as myth and allegory,—intended by the writers, and well understood by the early readers, to be only allegory. Like Darwin's again, Mr. Massey's main conclusions are not striking so much for their novelty as for the immense array of facts not capable of any rational explanation on the commonly accepted theory.

Of course, the work is too voluminous (1,000 pp., imp. 8vo.) and detailed for the popular taste,—a work like its predecessor "The Book of the Beginnings," of which Mr. Wallace feared lest there might not be "a score of people in England who by previous education were prepared to understand it"; of which the author very truly says, "From the peculiar nature of the work, it is almost inevitable that its critics will have to learn the rudiments of the subject from the volumes offered for review." Still, every one only a little interested in the discussion, and only a little familiar with the naturalistic mental method, will be well repaid for the reading. Moreover, it so abounds in felicities of thought and expression and happy illustrations, evinces such an "unrestrained thirst for discovery" and such sustained enthusiasm, he must be a dull reader indeed who can resist the infection of its thought.

Philologists like Max Müller trace words back to "Aryan roots," and, finding at that stage of linguistic development proofs of elevation of thought and poetic insight of a high order, infer primitive, supernatural "Glimpses of the Infinite," etc. Our author shows these so-called roots to be, in fact, trunks and branches rather, bearing foliage high above the soil, and traces them back through Egypt into inner Africa, and shows us the *real* roots with the onomatopoetic dirt still clinging to them. Our numerals and names of familiar objects and processes, our vulgar and obscene words, are shown to have originated there.

The very first movement from mere bestiality, the first checks and restraints upon animal impulse rising slowly into a moral and religious sentiment and code, and crystallizing into a system of belief and a cult, was within the sexual relation. Animism, the primitive philosophy, peopled the sky with animate beings; and all the operations of nature were conceived of,—could only in rudimentary thinking be conceived of,—and expressed in terms of the familiar bodily functions and processes. All the periodicities of the earth and sky, the recurrences of flood and drouth, light and dark, wind and frost, were thought of and named as periodicities closely within human experience, conspicuously those belonging to the sexual and generative functions. The first profanations and sacrilegious acts were violations of the growing properties arising in those relations, rendered sacred and religious by being carried into the sky and identified with the periodicities in the astronomic myth. So, in their remote beginnings, law, morals, manners, and civility rooted in, as they still find their chief stimulus and support in, the relations of the sexes.

The earliest parent, or, as we should say, Creator, was a divine genetrix, implying a time when descent was traced only through the mother. The primitive celestial family, exactly reflecting the mundane, consisted of the mother and son, the *paternity* being only a vague, ghostly, male element,—vague, because by reason of sexual promiscuity there could be no identifiable or individualized father: so that the primitive family unit was a trinity of mother, son, and an impersonal male element,—impersonal and ghostly until the son grows to manhood, when, being the first identifiable and namable male, he becomes his own father, or is identified with him. When the *paternity* became determinate by the institution of marriage, descent was traced through the father, who took the place of the mother as the head of the family; and the celestial three in one became all male. The immaculate conception of the son was a necessity of the primitive sociology, as indeed also was that of the mother; and the modern papal promulgation of the immaculate conception of Mary is a restoration of the early doctrine, and a necessity of it.

Now, offensive as is this theory of the origin of our current sacred mysteries, the author has traced them to this source, and followed them along that line of development by an array of facts, linguistic, hieroglyphic, monumental, mythic, and traditional, that carries all before it, and astounds with an irresistible conviction one who, with some previous practice in the evolutionary intellectual method, for the first time sets himself seriously to study the subject.

Of especial interest is the discussion of the gospel narrative. Parallels more or less exact of all the principal characters and incidents are produced from the older scriptures of India, Greece, Persia, and especially Egypt,—parallels and rude models that refuse to be explained by the familiar, unnatural theory of "prophetic types" of the fathers, adopted by the modern apologists. For example, the Christ has a multitude of models and parallels; but the one most closely copied in the chief outlines of his history is the Egyptian Horus in his double character of child at twelve and man at thirty years of age. And the same absolute hiatus of eighteen years is in the histories of each. Histories of the child Christ up to twelve years abounded in the early centuries, getting the same credit as the history afterward labelled "Canonical." "The Shepherd of Hermas," written with the same serious intent as the Gospels, was held in higher regard by the primitive Christians than the four evangels, and was not more absurd and extravagant than Revelation. Matthew, who comes down to us in tradition and art as "The Scribe," and is said by Papias to have written down in Hebrew an original collection of the "Sayings of the Lord," is identical with the *Matiu* of Egyptian mythology, who is called by that name in his character of Recorder or Registrar of the divine wisdom,—wise sayings or *logia* of the Ritual. For the missing links between the Egyptian Ritual and the Canonical Gospels, we must turn to the *Gnostics*, who comprised all the culture and learning of the early centuries of our era; but, unfortunately, almost every vestige of that great literature has been destroyed by the Church, and we are left to such information as we can gather from their opponents and detractors.

All the religions before Christianity were polytheistic. The first commandment is an implicit affirmation of polytheism. The reduction of the known world to the Roman power made monotheism inevitable. The celestial sociology and politics follow the mundane. The tribal deities that could not be worked into an harmonious subordination as angels were cast into outer darkness as diabolisms. The gospel was an honest effort by cultivated men to gather up the sayings, wisdom, the *logia* of all the past, give them a unity and a new setting, embodying them all in an ideal character who should gather into himself all the divine perfections scattered and fragmentary in the sacred writings, myths, and folk-lore of the world. With serious persons, then as now, the inner life is built up by the accumulated wisdom of the ages, by *words;* and those words were made alive and moving by dramatization. And the *personæ*, incidents, and speeches are as easily traced back to their sources in ruder and simpler forms as are the plays of "Hamlet" and "Lear." Gnosticism was the original form and author of Christianity, and it embraced all the learning and culture in Christendom in those first centuries. It *knew* the Christ was purely an idealism derived and compounded from previous idealisms in the natural mode of all human growth and advancement; and Gnosticism from the first denounced the carnalization of the gospel characters by the "Salvation Army"—the ignorant rabble, with the zeal of ignorance, to whom Christ must be flesh and blood or nothing—as a "pestilent and blasphemous superstition." The papal power became allied with the ignorant mob, succeeded by a relentless persecution through five centuries in totally obliterating the entire gnostic literature, anathematized the doctrine, and drove it into Esotericism and the Cabala. So that to this day Christianity calls it "a fantastic combination of Oriental theology, Greek philosophy, and Christianity,—a mixture of human philosophy with Christian doctrine." Paul, the only unquestioned personality who contributed to the canonical writings, is in many expressions clearly gnostic, and is believed to have been made to support the doctrine of a *Christ after the flesh* by glosses, suppression, and interpolations in the interest of the Papacy.

An imposture or error on so grand a scale, perpetuated for eighteen centuries, might seem incredible; but, to the better thought of our time, all the corollaries of such a fraud are patent enough. The learning, culture, and civilization of the world all went down before the established Christianity; and Europe sank into a millennium of degradation the most contemptible in history. The doctrine of a carnalized Christ corrupted the sentiment of natural justice by its penances and imputed righteousness. It degraded sexual morality by exalting celibacy and virginity above properly regulated sex relation, and accounting paternity outside of wedlock divine. It stultified the intellect by disparaging learning. It has debauched language itself by perverting the natural secular meaning of some of our noblest words, as in vacating *fides* of the sterling nobility implied in its derivatives *fidelity*, *faithful*, etc., and ecclesiasticizing it into an equivalent of servile credulity and superstition, and in that base form foisting it into the foremost rank of human excellence. "The truth" it would make synonymous with an historic Christ. It decries human reason, putting in its place "divine" reason, as though human reason could have any other antithesis than human folly, garnish the latter with whatever ecclesiastical frippery or title it with whatever divine names you will. It has put absurd fasts and asceticism in the place of a rational temperance, and degraded the healing art into miracle, shrine, and faith cure.

Mr. Massey claims to have recovered the "Gnosis," which is no more nor less than the theory of the natural as against the supernatural origin and growth of the current Christology. There is no breach of continuity between the old religions of Egypt, Greece, Persia, and India on the one hand and modern Christianity. The latter is a natural human outgrowth of the antecedent mythologies, and by this theory much is made clear that has hitherto passed as unfathomable mystery. The motive of Cabala and Esotericism is made clear, and its character and method understandable.

The author claims to have submitted all his fundamental facts for verification to Dr. Samuel Birch the foremost English authority in Egyptology. For myself, who profess no wide knowledge of the subject, the whole discussion has, in the light of this work, changed front; and believers are now called upon to explain away this damaging mass of proof. I challenge any intelligent reader with only moderately liberal leanings to rise from the perusal of this book with any belief left in the current Christology or the historical basis of the gospel. Up to this read-

Digitized by Google

ing, I have been of those who gladly believed in an historical Jesus,—a man of rare sweetness and spiritual insight, about whose personality gathered myth, marvel, and miracle. I am now convinced the story is allegory from the core out, which has been corrupted by stupidity, credulity, and fraud into a spurious history. The central figure is a mental model of a divine man, elaborated from material gathered by the entire race. He is an ideal hero who was never intended by the authors in the beginning nor understood by the early believers to be human, but a model into whose making, like the Apollo of sculpture, all the fragmentary perfections of the human race up to that time entered. To treat it as fact and history is as if one should study the habits of the beasts and birds of fable or the geography of England in the *Pilgrim's Progress*. I cannot believe that Æsop or Bunyan would account him a "miscreant" and a "scoffer" who should assault such a natural history and such a geography with denunciation and ridicule.

CLEVELAND, OHIO.

WHAT IS THE TRUTH ABOUT SPIRITUALISM?

Editors of The Index:—

The Index has, as a rule, been very fair toward Spiritualists, at the same time ranging itself, as is its right, unmistakably on the side of the disbelievers in spiritual phenomena. In accord with this view are nearly all the correspondents and contributors to its columns. It has been assumed by some, and I think not a few of the contributors to *The Index*, that the scientific method of investigation either exposes fraud in the mediums or mental or optical illusions.

What are the facts in the case? What is the truth with regard to the alleged spiritualistic phenomena? No rightly constituted mind desires to be itself deceived, or that the minds of others be led astray.

The disinclination of some prominent scientists to investigate is not an argument either for or against; and a sneer which comes without knowledge, even though it be from a scientist, is of no more weight as an argument than a sneer from a certain other source is of weight against the doctrine of evolution. What is the truth? This is the only legitimate question. Every other is contraband in all honest investigation.

I write this article, not as a propagandist, but as one seeking himself to know,—as one seeking to place his own feet on the solid rock foundation. I am free to confess, however, that I have had my scepticism severely shaken, and that, as a purely logical question, my mind strongly inclines to the side of the Spiritualist. With the consent of the editors, I shall state in *The Index* a few facts of which I was personally cognizant, and in the manifestation of which the possibility of imposture seems to have been excluded.

In the spring of last year, I was at San Francisco. After having transacted the business which took me there, I had a few days of leisure. A philosophical friend of mine told me, if I would visit a certain medium,—Mrs. Fay,—I would be likely to hear something that would astonish as well as interest me. According to his instructions, I wrote on separate bits of paper the names of about a dozen of my deceased friends and relatives. After having folded these very closely, I sallied forth for the medium. I had no introduction. The medium—a lady—had certainly no knowledge of me, nor I of her. We sat down on opposite sides of a table. I dropped in the middle of the table between us the pieces of folded paper. She picked up one and then another billet, dropping them without remark. Taking the third one, she wrote immediately the name —— ——, a brother of mine who was killed in the late war. Opening the billet, I found it contained this name. Pretty soon, she began writing the names without touching the papers, —the names of my father, mother, brothers, sisters, and those of several others, relatives and friends, some of whose names I had written on the paper billets, and some not, and one a name I had never heard, though the relation indicated I have since found to be true. In addition, several communications were addressed to me, one commencing with "My dear Son," and closing by signing my father's name. Another began in the same way, ending with the name of my mother. Another communication was signed with the name of my wife. She had a Scotch name, and during her life on earth she spelled her name after the Scotch style. It was spelled the same way in the communication. I once had a very gifted student for whom I had a great affection. I had written his name on the paper, speaking of him as my student. A communication, purporting to be from him, was signed "Your student, —— ——." He wrote, "—— ——" (the name of his father) "is with me"; and presently a communication, with the name of his father signed, was written by the medium.

A very singular fact was a communication addressing me "My dear Brother," and signing it "Your sister, ——." This sister had died an infant more than forty years ago; and, excepting myself, it is not probable that any one in this State ever knew that I had a sister by that name. As a reasonable being, wishing to be governed by the severest rules of logic, to what conclusion, with these facts before me, should I arrive? "Mind-reading," say some. But mind-reading itself implies the existence of a mental entity outside of, and higher than, the physical organism. Besides, there was one name which I had never known; and yet it was the correct one. The communications, too, were not such as were in my own mind. Every one was a surprise to me.

LOS ANGELES, CAL.

A BRIEF REPLY.

Editors of The Index:—

With your permission, I will answer very briefly Mr. Mitchell's misbased account of my inconsistency, as it may be of some interest to others as well as to him and myself,—all the more because my critic sees only the superficies, not the depth, the fundamental meaning, of the writings he so easily refutes. From his stand-point, he is just; but his stand-point is his fault, not mine.

With Emerson, Spencer, and all the great thinkers of our time, I hold that mind and matter are fundamentally one, that the phenomena or modes of this great grand unity are divided into two great classes, which, by an accommodation of old terms, are called matter and mind, and, finally, that these two great classes of phenomena are known only as subjective states. Hence, I may truly say that "the universe called matter, so far as it is known to us, is itself mind, so far as mind designates a complexus of conscious states," and that the conscious power gives to what are called material phenomena their only significance. On the other hand, I may also say, with equal consistency: "Matter is a force sufficient to itself and its own action. There is no need of any extra-material force to explain this action, and to supply it with a cause," because matter is a complexus of the modes of the one great and only one known force, which includes all that is known directly of either matter or mind, of whose extent and limitations we know nothing except from experience.

Hence, I do not say that black and white are the same colors, but that they and all other phenomena are subjective states, whether they are classed as matter or mind, some of which states are commonly called matter, and others are called mind.

On this basis, it is perfectly proper to say of matter that it can exist and operate without mind and evolve mind, and that we have no knowledge of the existence of mind apart from matter and the evolved product of matter. On the other hand there remains the more profound and general fact, which I do not, like my interesting critic, overlook, that material phenomena, so called, are known only as subjective states,—that is, as mind, which gives to matter, as known to us, not only all its significance, but constitutes its very existence.

Sincerely yours,

WILLIAM ICRIN GILL.

LAWRENCE, MASS., April 15, 1884.

MORAL COWARDICE OF IOWA LEGISLATORS.

Editors of The Index:—

The readers of *The Index* would probably like to know what was done by the legislature of Iowa with the bill for the taxation of church property, the passage of which in the Senate was reported in *The Index* of April 3. Transferred to the Lower House, it was confronted by fully a thousand remonstrances, as I have been informed by a member of that body, and was referred to a committee who reported that it be voted upon for indefinite postponement, which was done. Not a single dissenting vote was recorded, —a circumstance that clearly shows great moral cowardice, when it is remembered that the next election was soon to take place, and that members who were in favor of the bill evidently feared that, by standing firm to their convictions, they would fail of re-election. Never in the State of Iowa has before adjourned an assembly that achieved so little good and gave the people so much bad legislation as the one that adjourned April 2, 1884.

CARL C. SCHARFENBERG.

DAVENPORT, IOWA, April 15, 1884.

AUTOCRATIC DISTRICT ATTORNEYS.

Editors of The Index:—

How many of the legal voters hereabouts to-day realize that the powers given to district attorneys are autocratic, and can be used for much evil without ready redress? Practically, there is no use for judges except in the lower courts in unappealed cases and in matters of law in the supreme courts; for the several district attorneys are the sole judges of the cases, and can prosecute or not as pleases themselves, independent of judge, jury, or what not else.

Is such power consistent with our form of government? Is such power right to be given to such men as having no more extensive practice are willing to accept such small salaries as pertain to such offices?

It would not help matters materially, probably, to exchange the present form of election of district attorneys by the people for appointment by the governor, as personal or party influence would always rule. It would help, however, to remove at once and permanently all power "to put on file or settle cases" from the district attorneys' hands, and also to prevent such officers from so acting in regard to grand jury findings that justice is delayed or frustrated, all cases on their merits being submitted without suggestions from such district attorneys for consideration.

Curiously enough, to date, all attempts at this State House to lessen this fast-growing evil have failed signally.

JOHN DIXWELL.

THE MODERN PUMP.

One of our subscribers, some time since, in remitting his annual due, remarked that he at the same time forwarded his subscription to *The Index*, and added: "I find it useless to attempt to get the whole truth from one paper without the other. As between the two, however, I rely on *The Index*. Your orthodox writers are too zealous in preserving the old, and too blind to discover the new. The old oaken bucket is sweet in poetry, but the modern pump is the more useful."

To make this moist and pleasing figure true, both machines must attach to the same well, and only furnish different modes of lifting the same water from the level of the nether springs to the level of the lips, and we respectfully take leave to doubt if this comparison be not inadequate to the needs of the exact case in hand. We do surely try to sink the bucket of our journal into the deep, cool, pure, wholesome, and life-giving waters of the wells of salvation, which are fed from

> "Siloa's brook that flowed
> Fast by the oracle of God."

And we confess, among all the discoveries of ages of invention, we never have heard of any new water which has been by men contrived, and by men accepted as better than the old God-made article,

> "Whose draught
> Of cool refreshment, drained by fevered lips,
> Can give a shock of pleasure to the frame
> More exquisite than when nectarean juice
> Renews the life of joy in happiest hours."

And we doubt if, as to this, it be possible to be too "zealous in preserving the old." It has long been among our weekly endeavors to profit by the pages of our friends of *The Index*, and we will not say that we have learned nothing from them. But we will say that we have often laid that journal down, after diligent endeavor to fatten on it as on the east wind, conscious of some slight weariness

> "From reveries so airy, and the toil
> Of dropping buckets into empty wells,
> And growing old in drawing nothing up."

Its affirmations are apt to be so negative, and its negations so affirmative, that, as Carlyle said, its religion "at best is an anxious wish, like that of Rabelais,—a great Perhaps." Its hatred of shams surely is wholesome, and its keen scent for hypocrites useful. On the whole, we think it is very much like that "modern pump," which cleverly does without a

Digitized by Google

well altogether. That style of pump is pointed and drivable, and they thump it down anywhere in the sand until it taps a moist place, and then it is soon ready; a little hesitant and muddy at first, but after that, especially in wet weather, very good for small occasions,—for boiling the teakettle and the dinner-pot, for washing one's face and hands, for his horse's legs and a buggy: nay, for sprinkling a flower garden and the like it does well. But, when the house is on fire, or some great arid and sweltering emergency precipitates itself, it soon sucks air, wheezes, and becomes as dry

"As the remainder biscuit
After a voyage."

We prefer big wells and old oaken buckets. And, if the water be of that pure and ancient kind,—one-third oxygen and two-thirds hydrogen by measure, and eight-ninths oxygen and one-ninth hydrogen by weight,—which Adam drank unanalyzed, but found no less refreshing for that circumstance, so much the better. With joy will we keep on drawing water out of the wells of salvation.—*The Congregationalist.*

THE INFLUENCE OF ART.—When I was in Paris a year ago, I visited one Sunday the ancient and magnificent Palace of the Louvre, filled through all its vast halls with the most resplendent works of art that can be found in the world. During that gala Sunday there passed through these glorious halls, which are free to everybody, not less than one hundred thousand of the people of Paris, common and uncommon, who enjoyed the indescribable array of pictures, statuary, and wonders wrought by the great masters and artists of the world through all the ages of time. The spectacle was elevating and purifying; and the multitudes of spectators were orderly, polite, deeply interested, and studious. Every Sunday of the year, and almost every other day, the Louvre is freely open to all mankind; and its influence upon Parisian life and manners is such as cannot be estimated.—*John Swinton's Paper.*

BOOK NOTICES.

CLEAR LIGHT FROM THE SPIRIT WORLD. By Kate Irving. New York: C. W. Carleton & Co. 1884. pp. 201.

In this volume, the author narrates her experience in investigating Spiritualism and receiving communications from spirits. From the middle of the book, we take a few sentences to indicate the style of the work and the sort of proof that satisfied the lady who wrote it of the existence and communion of spirits:. "The next scene thrilled and delighted us all; for, as the curtains opened, there stood the majestic form with which art has made the whole world so familiar, and the entire circle exclaimed as with one voice, 'Dr. Franklin.' The proverbial dress in every particular detail, as well as the grand and benignant countenance and graceful gesture of head, gently bowed, and extended arm, all bespoke the unmistakable presence of the immortal philosopher, statesman, and philanthropist. After a few moments of dignified and pleasant recognition of his reception, to my great surprise he turned and beckoned me to approach, which I did with strange feelings of reverence and awe, and, looking beamingly with his large, benevolent eyes as he moved up still closer to me, said, in a clear voice: 'Tell the old lady of this place that we appreciate all that she and her deceased husband have done, and all that she herself is now doing, for the cause of Spiritualism. Tell her this. . . . I am here to prove the truth of spirit return. When I was in mortal life, I was a medium. God bless you all.'" The author adds, "It were vain to try to impart to the reader any adequate conception of the feelings of those who witnessed this scene and heard Franklin's words." At another séance, Garibaldi appeared. "I asked him if he remembered when we parted. 'Oh, yes, how well!' And, putting his long arm around my waist, he said, in a voice loud enough for the entire circle to hear, and in full sight of all, 'Yes, at Caprera, and with my arm around your waist as I have it now.' And then, like so many dear ones, he vanished from my sight." The work from a literary point of view is somewhat above the average of such books. The author is evidently sincere, and seems to have found consolation in the teachings of Spiritualism; but her work cannot be of much value or interest to any mind not already convinced that the illustrious dead communicate through "materializing" and other kinds of mediums.

THE HISTORICAL EVIDENCES OF THE TRUTH OF THE SCRIPTURE RECORDS. Stated anew with Special Reference to the Doubts and Discoveries of Modern Times in Eight Lectures, delivered in the Oxford University Pulpit in the year 1859, on the Bampton Foundation, by George Rawlinson, M.A. From the London edition, with the notes translated by Rev. A. N. Arnold. New York: John B. Alden. 1883. pp. 454. Price 50 cents.

The publisher has given to the public in this volume a cheap edition of eight Bampton lectures, delivered a quarter of a century ago to "meet that latest phase of modern unbelief which, professing a reverence for the name and person of Christ, and a real regard for the Scriptures as embodiments of what is purest and holiest in religious feeling, lowers Christ to a mere name, and empties the Scriptures of all their force and practical efficacy by denying the historical character of the Biblical narrative." They helped to meet at the time they were given the demand for a defence of the Bible from an orthodox stand-point against the criticism of De Wette, Strauss, and others, whose scholarship could not be denied, and whose unorthodox conclusions could not be ignored. The lectures contain much historical information independently of the use which the author attempts to make of the facts in supporting a view of the Bible which some of the ablest orthodox scholars, in common with those who regard the entire book as a collection of uninspired writings, have now abandoned.

THE National Bureau of Education has recently issued a circular No. 4, 1883, containing recent law decisions, compiled by Lyndon A. Smith. This compendium of recent decisions in regard to questions affecting the management of schools, such as the power to employ and dismiss teachers, to control school funds and property, etc., is of great value to all who take a practical interest in school matters. Ignorance of the law is at the bottom of many quarrels and difficulties, and any help to a popular knowledge of its provisions on this important subject is very welcome.

THE *Popular Science Monthly* for May begins with "The Sins of Legislators," which is the third article in the author's series on the political tendencies of the times, contributed to this able and useful periodical. These papers are attracting much attention in England as well as in this country, and it is said that one of the effects was the call of Leicester upon Mr. Spencer to take a seat in Parliament. The present article exposes the bad consequences of intrusting legislation to incompetent men, to ignoramuses and mountebanks. And this is shown with the author's usual inexhaustible command of pertinent facts. This number contains also Robert Giffen's address on "The Progress of the Working Classes in the Last Half-century." "Christian Agnosticism," by Canon Curteis, is a reply to Spencer's recent article on religion. "The Milk in the Cocoanut" is another of Grant Allen's charming science stories. There is a sketch with a portrait of Mary Somerville, and an illustrated article explaining "How Flies hang on." The other articles are: "The Beaver and his Works," by Dr. G. A. Stockwell, illustrated; "An Experiment in Prohibition," by Edward Johnson; "Longevity of Astronomers," by D. A. B. M. Lancaster; "Where did Life begin?" by G. H. Scribner; "The Beginnings of Metallurgy," by Dr. E. Reyer; "Our New Skin and Cancer Hospital," by W. J. Youmans, M.D.; "Was he an Idiot?" by Rev. W. A. Cram; and continuations of W. M. Williams's "Chemistry of Cookery" and Thomas Foster's "Morality of Happiness." The subjects of the editorials are "Progress and Social Improvement," "Yale Professors on College Studies," and "Spencer on Parliamentary Influence."

THE May number of the *North American Review* opens with an able paper by Justice William Strong on "Defective Naturalization Laws." The second article, "Matthew Arnold," by Edwin P. Whipple, offers a candid and, we think, a correct judgment of the apostle of "sweetness and light" considered as a thinker and a man of letters. Richard A. Proctor, under the title of "Zone of Worlds," writes of the vast multitude of the pigmy kindred of the earth, known as the asteroids. In "The Railway and the State," Gerrit L. Lansing essays to prove that the multiplication and extension of railroad lines and the establishment of low rates of transportation are hindered rather than helped by government interference. Prof. Henry F. Osborn, of Princeton College, has a highly interesting article on "Illusions of Memory." Helen Kendrick Johnson contributes an essay on "The Meaning of Song." Finally there is a joint discussion of "Workingmen's Grievances," by William Godwin Moody and Prof. J. Laurence Laughlin, of Havard University.

PERSONAL ITEMS.

MR. JOHN STORER COBB will lecture in Paine Hall next Sunday at 2.30 P.M., on "Christianity and Liberalism contrasted."

SAYS the Boston *Courier:* "In his admirable criticism upon Matthew Arnold, Mr. Edwin P. Whipple appears in a somewhat new light. Always an acute critic, a lucid and conspicuously discriminating writer, he adds here a gentle and well-restrained power of satire, which adds a delightful piquancy to the essay. The monograph is one of the most able and satisfactory contributions to American criticism which have appeared in a long time."

FROM the *Radical Review*, we take the following good word for a worthy worker: "Mr. Salter has been eminently successful in imbuing the minds of his hearers, and especially the minds of the youth intrusted to his care, with nobler conceptions of life than those commonly received in the churches and on the exchange. However we may disagree with Mr. Salter on some points,—andwe do, for, unlike him, we believe that the foundations of the future philosophy will be laid in Materialism,—we cheerfully recognize the importance of the work he is doing, and rejoice in the fact that he is here to do it."

ONE who knew Mrs. Kate Doggett, whose death we mentioned last week, writes of her thus in the Cleveland *Herald:* "Widely known, she will be as widely lamented; and her place among the gifted women of America will not be easily filled. Endowed by nature with more than ordinary brilliancy of mind, she early developed that distinguishing feature of her life, a taste for study. With rare opportunities for culture, which she improved as few have ever done, she very soon took high rank among the eminent women of our country; and among them all, while intensely womanly, there was no more eloquent vindicator of the rights of women or an educator of a higher order. As a writer and lecturer, Kate N. Doggett will be long remembered. But the writer of this poor tribute to her many excellences loves most to remember her in her earlier days, the centre of a loved circle of friends, where she was ever the life and the charm. The sunlight of memory has left a beautiful photograph of her face and manner; and many who read this will call to mind her sparkling eye, her ready wit, and merry ways."

MRS. OSWALD OTTENDORFER, whose death and largely attended funeral in New York have been announced, was a remarkable woman. Her first husband was Jacob Uhl, a printer, whom she married in Germany, and with whom she came to this country in 1844. They opened a printing office, and in 1845 purchased the New York *Staats-Zeitung*, then a weekly paper of small circulation. They soon expanded it into a daily; and, when Mr. Uhl died in 1852, it was giving flattering promise of prosperity. It was after her husband's death that Mrs. Uhl developed that business capacity which has been the admiration of the country, and to which our German-speaking citizens are indebted for a paper in their own language equal in size, character, and ability to the leading dailies of New York. She at once took charge of the business, spent her entire time at the office, became chief editor and manager, and refused numerous offers to sell the property. Wealth began to pour in upon her, and the paper became one of the most famous and influential in the country. In 1850, she married Oswald Ottendorfer, a member of the paper's editorial staff, to whom she resigned the chief editorship. From that time, she gave much attention to charitable work. Her public benefactions foot up a half million dollars, and include the founding of some of the noblest benevolent institutions in the country. Her estate amounts to $3,000,000.

DORÉ GALLERY

Of BIBLE ILLUSTRATIONS and Stories. Including 52 cartoons, and a portrait of Doré. New and finer edition, large quarto, bevelled boards, fine cloth, richly ornamented. Price reduced from $5.00 to $2.00.

The unrivalled cartoons of the most widely famous artist of modern times; the most graphic illustrations of the sublime events and truths of the Bible ever drawn by an artist's pencil.

The battles of *The Literary Revolution* have been fought principally in the interests of choice literature for the masses. It is proposed to win also for them the best works of the great masters illustrating literature.

Wonderful Offer.

Notwithstanding the marvelously low price, I offer the following discounts to agents and clubs:—

5 or more copies, each $1.50.
10 or more copies, each $1.25.

ON CONDITION: First, That the addresses of all members of the club are sent with the orders. *Second*, That not more than one name in a club shall be that of a customer who has previously purchased books from me. Specimen for club agent, $1.50.

The point to this "wonderful offer" is that I want *new customers*, which, as experience proves, means permanently increased trade.

Health by Exercise.

By GEORGE H. TAYLOR, M.D. Large 12mo, Long Primer type, 462 pages, with numerous illustrations. Cloth, 50 cts.

A new, enlarged edition of this greatest authority on the topics treated. A book for both healthy people and invalids,—adapted to home use as well as for the skilful physician. What specific exercise is appropriate for specific ailments, how to *prevent* as well as cure disease, are the practical questions solved.

"Blessed, say I, is the man who has a good doctor, but more blessed he who can do without him. To enable my readers so to do has been my aim."—*From Author's Preface.*

500,000 Volumes

CHOICE BOOKS—descriptive catalogue free. Books for examination before payment on evidence of good faith. NOT sold by dealers: prices too low. Books by mail 20 per cent. extra, for mailing.

JOHN B. ALDEN, Publisher,
P.O. Box 1227. 18 Vesey St., New York.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	" . . .	8c.	" "
" 26 " 51	" . . .	6c.	" "
" 52	" . . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

NEW BOOKS

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are ccessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

THE free thinkers of Paris are making preparations to commemorate the hundredth anniversary of the death of the philosopher Diderot, which occurred July 30, 1784.

REV. C. H. HARRISON, of Belmont, N.Y., having been expelled from his charge and deposed from the ministry by the Methodist Episcopal Conference, to which he belonged, because he had preached a sermon against the doctrine of "immediate sanctification," has become a raving maniac, and is now an inmate of the Buffalo Insane Asylum. It is said that he is a robust man, and that there was no indication of mental unsoundness prior to the decision of the conference. Some of his friends have commenced legal proceedings against the conference, backed by a guaranteed subscription of $10,000.

THE irreverent Springfield *Republican* thinks that the severe earthquake in England last week "was one of those humorous dispensations of Providence which prove that the government of the universe is not without recreations. That the chief sufferer from the dynamite, after having freely charged the most terrible and explosive crimes upon the two great republics of the world in succession and without proof, should have an earthquake of such shock as to overthrow church steeples and chimneys can only be looked at by the cynical outside world in the light of a prodigious joke at the expense of Great Britain, and without any cost to that other land agitator, Henry George, or of the Irish dynamiters."

THE following suggestive paragraph is from an article by "A. S. B.," in the *Woman's Journal*: "Sir Samuel Baker, in the Soudan, found his native troops, through immemorial tradition, imbued with the idea that grinding corn was distinctively women's work, and that men could not perform it without loss of dignity. So strong was this feeling that he set men who were guilty of military offences to grinding corn, as an humiliating punishment. Yet an American woman who should make grinding corn her occupation would undoubtedly be thought to have invaded man's sphere. Is it not evident, on reflection, that any useful and innocent work may properly be done by anybody who can do it well?"

LAST Saturday evening, Prof. W. G. Sumner, of Yale College, delivered an address of marked ability at Young's Hotel before the Boston Liberal Union Club, on "The Ethical Aspects of the Protective System," in which he condemned the policy of protection, and argued that it produces social misgrowths and perverts and distorts our whole social development and miseducates the people in regard to the most fundamental views which should be held by good men and honest citizens. Prof. F. A. Walker and Charles Francis Adams, Jr., followed with remarks in support of the lecturer of the evening. Mr. John L. Hayes replied in defence of protection, claiming that the free trade school ignores the existence of nations, and contemplates wealth in the abstract without its relations to human welfare or national necessities. The attendance was unusually large.

AT a recent meeting of the Liberal League of Chicago, a Mr. Sloan lectured on "The Ends and Aims of Socialism." We have seen no report of the lecture, but are sorry to learn from the *Radical Review* that, in the debate which followed, "the dynamite remedy for our wrongs was advocated by most of the speakers, and was loudly approved." "Every speaker," this journal adds, "who promised to employ dynamite as the argument of last resort was vigorously applauded. The reformation of society could only be accomplished by first blowing society into smithereens. General Trumbull repudiated the whole 'dynamite' theory and doctrine. He denounced it as the gospel of murder, cowardly, savage, and revengeful. He was willing to fight, he said, but not to assassinate. His remarks were not well received, nearly the whole meeting being against him. Mr. Sloan, in reply, ridiculed the sentiments of General Trumbull, and referred to the blood shed in France by the guillotine to destroy tyrants and establish liberty. It might be necessary to erect a guillotine here, and run it by steam. This also was rapturously applauded, the meeting having forgotten that the victims of the guillotine were put to death at least under the forms of law."

THE Society for Ethical Culture of Boston, to which allusion was made in *The Index* recently, is an outgrowth of the Free Society, Dorchester, Mass., which was founded by Mrs. Clara M. Bisbee, July, 1881, in the interest of Free Religion. From the beginning, it has made steady growth in intellectual culture and character. Some months ago, Mrs. Bisbee became conscious that her opening service of prayer and hymn was inconsistent with the freest platform; and, to accommodate the extremes of naturalism and supernaturalism, she introduced in place of prayer "a silent aspiration," and, instead of the regular hymns, a collection and arrangement of her own, designed to express the common feeling of humanity. Further, with a view to increasing growth, financially and otherwise, she invited her people to the kindly proffered Church of the Unity, and at the same time called for a new organization under the title named. Her Children's Society, Mrs. Bisbee informs us, will remain in Dorchester for the promulgation of free thought there. The distinctive features of the Society for Ethical Culture are, first, a pronounced ethical basis; second, the use of worship as a means to ethical culture; third, a platform so free that no "ism" can represent it. All interested to aid the movement by pecuniary subscription or attendance on the meetings are requested to address Mrs. Bisbee at Clark Street, Dorchester, Mass.

IN regard to Wendell Phillips' advocacy of the woman suffrage cause, George William Curtis, in his recent oration in this city, said: "His comprehensive philanthropy had made him, even during the anti-slavery contest, the advocate of other great reforms. His powerful presentation of the justice and reason of the political equality of women at Worcester, in 1851, more than any other single impulse, launched that question upon the sea of popular controversy. In the general statement of principle, nothing has been added to that discourse; in vivid and effective eloquence of advocacy, it has never been surpassed. All the arguments for independence echoed John Adams in the Continental Congress. All the pleas for applying the American principle of representation to the wives and mothers of American citizens echo the eloquence of Wendell Phillips at Worcester." Of the great agitator's devotion to other reforms, Mr. Curtis spoke most fittingly in the following passage: "His, also, was the voice that summoned the temperance voters of the Commonwealth to stand up and be counted; the voice which resolutely and definitely exposed the crime to which the busy American mind and conscience are at last turning,—the American crime against the Indians. Through him, the sorrow of Crete, the tragedy of Ireland, pleaded with America. In the terrible experience of the early anti-slavery debate, when the Church and refined society seemed to be the rampart of slavery, he had learned profound distrust of that conservatism of prosperity which chills human sympathy and narrows the conscience. So the vast combinations of capital in these later days, with their immense monopolies and imperial power, seemed to him sure to corrupt the government, and to obstruct and threaten the real welfare of the people. He felt, therefore, that what is called the respectable class is often really, but unconsciously and with a generous purpose, not justly estimating its own tendency, the dangerous class."

THE PROPOSED NEW LIBERAL COLLEGE.

With regard to the project of Mr. J. H. Wade, of Cleveland, for inaugurating a new institution of learning in that city, and of the hopes among persons of liberal thought and culture that the proposed new college might be specially adapted to the training of a new order of public teachers of religion, the readers of *The Index* have been kept informed. Mr. Wade, it will be remembered, at the last National Conference of Unitarians made an offer of an endowment of $350,000 and an eligible site of land for a building, provided the Unitarians would secure an additional $150,000, and guarantee a free, unsectarian school for the education of ministers. The project was referred to a committee for due consideration, with the expectation that they would report at the next conference, if not before, to the public. A small pamphlet has just been printed (presumably with the sanction of that committee), and sent to persons supposed to be intrusted in the projected institution. The pamphlet is prepared by Rev. Edward E. Hale, and is signed by him as "chairman of the Council of Unitarian Churches."

This pamphlet consists of two parts: first, a brief but clear statement of the purpose of the new school, as to which, it is said, "Mr. Wade and the Council of Unitarian Churches are in full accord"; second, extracts from letters and published articles concerning the plan and need of such a school, some of the latter being taken from writers in *The Index*. Under the first head, it is declared that it is "not to be a school for boys and girls," but "is designed to supply, as far as possible, opportunities for study for men and women who are mature enough to know what they need and to welcome assistance from the most competent teachers." The free and unsectarian character of the college is described as follows: "No dogmatic restriction of creed will be imposed, directly or indirectly, on any teacher or pupil. Its teachers and lecturers must be men best fitted for the special service assigned, without reference to their religious communion or opinion." It is proposed that, while there shall be a small number of resident officers and professors, the principal instruction will be given by courses of lectures from "the most capable men of either hemisphere, who can be attracted to Cleveland to deliver them." And it is "hoped and expected that the officers of the school shall be as largely interested in learning as in teaching. They are to enlarge the present range of knowledge by every means in their power."

The special object of the institution as a means for the broader and better education of preachers is only indicated by the name that is given to it in the pamphlet, "The Wade College of Religious Philosophy," and by a general description of the departments of study to be pursued. These are stated thus: "The physical sciences and the languages do not fall within the direct sphere of the institute, as at first established. Its foundation is for the enlargement in America of what, a hundred years ago, would have been called moral science. It will include, therefore, theological science, the philosophy of history, ethical science with all its practical applications, metaphysics in all their relations, every subject, indeed, which, in popular language, is connected with what can be known of the heart or soul or mind of man."

This, certainly, is a very broad and free basis. It indicates that the scientific method, in distinction from the dogmatic method, is to be applied to the several lines of study included in the plan of the college. We, it is true, should prefer, in accordance with views expressed in previous articles on the subject, to see the various branches of sociology given the chief place, and theology relegated still further into the background. Yet we do not understand that this sketch definitely proportions the scheme of study. It probably is only meant to give a general outline, admitting of much interior modification. And we are willing to assume that the phrase, "theological science," was intended rather to denote the general philosophy of man's religious nature and history than any dogmatic conception of theism. Theology, in this broad sense and scientifically studied, should have a place in such an institution. Only let not it nor "metaphysics" in any shape push into a corner those "practical applications of ethical science" to social problems which are coming to the front in modern thought and philanthropy. Religion in such a school should have a meaning so broad as immediately and profoundly to concern itself with all questions of social welfare. The story of the failure of the Christian Church to solve any of the problems of social ethics was illustrated in a melancholy fashion at the recent examination of the Rev. Mr. Gordon by the Council of Installation summoned to induct him into the pastorate of the Boston Old South Church. Question after question, as we noted last week, was pressed upon him in the metaphysical niceties of theological opinion, but not the smallest inquiry was raised in respect to his knowledge of social ethics or his ability to deal with the practical evils of society. It is to be hoped that the students of the Wade School, when they graduate, though not a question may be asked them concerning those subtleties of theological speculation in which Mr. Gordon's inquisitors were such adepts, will be required, before receiving a diploma, to show a reasonable degree of knowledge on the most important problems that concern the well-being and progress of human society.

In the second part of Mr. Hale's pamphlet, he has printed two especially noteworthy statements concerning the general plan of the college studies from two practical educators. The first is from President Bascom, of Wisconsin University. He enters heartily into the broad liberality of the project. He does not even name Christianity as set apart for any special study, but lets it take its chance with other forms of faith under the general department of the philosophy of religious development. As Dr. Bascom is understood to be Orthodox in belief, his scheme is significant, as indicating that the school, though on the broadest foundation, might draw some students from the evangelical ranks. The other statement is from Dr. Samuel Hopkins, of the Auburn Presbyterian Theological Seminary. His scheme of study, considering his point of view, is also quite broad in its scope, making Christianity apparently a related part of the larger field of religion. To these suggestions from orthodox believers, Rev. Mr. Gill's plan, as presented in *The Index* of last January 17, might well have been added as the voice of a scholarly and liberal-minded Methodist.

Nothing is said in the pamphlet of the prospect of raising the additional endowment needed to meet Mr. Wade's generous offer. But the publication is doubtless intended to awaken an interest which shall before long concentrate in a subscription paper. The promise is held out that other pamphlets may follow. It is well that the committee should thus take the public, or such portion of it as is likely to manifest any interest in the project, into their confidence. If they keep in the line indicated by this first publication, eschewing all sectarian limits and results, they will deserve success.

We do not know whether or not the name given to the school in this pamphlet is the one fixed upon in case the college should be established; but it strikes us as, on the whole, a good one,—"The Wade College of Religious Philosophy."

WM. J. POTTER.

A LESSON FROM CINCINNATI.

What are we to learn from those blazing ruins and bloody streets? What was the meaning, again, of the fact that during the year 1883 one hundred and eighteen men were lynched in the United States? Behind these horrors stands such injustice as that there has been but one legal execution in Cincinnati since 1866, and that there were only ninety-three in this country during the past year, when 1,517 murders were reported by the telegraph. Some crimes were doubtless exaggerated, and many criminals escaped detection; but, if the sheriffs and juries had done their duty, the executions, both by the law and against the law, would probably not have numbered less than one-seventh as many as the reputed murders. Nor would Judge Lynch have been called in so often, if people had felt sure that justice would be done anywhere else. Imprisoning criminals for life would be more acceptable as a substitute for hanging, if they were not so likely to be pardoned out. Governors who refuse such requests are in danger of making themselves unpopular; and the highest of social and political honors have been given here in Massachusetts to lawyers, whose success in getting off their guilty clients has been so notorious that the burglar was wont to ask about their health before he dared to enter a house. Cincinnati was not the only city where the criminal on trial could have said, "I am in the hands of my friends." Thus, it is hard to see whether security of life has been more endangered by taking it without due process of law than by perverting the course of law into giving immunity to crime. Enough has not yet been done to reform criminals, and many of our prisons and jails still need to be remodelled so as to become nurseries of virtue instead of vice. Philanthropy has a great work to do in making this reformation more frequent and successful. But to shield a criminal from being punished for his crimes is no kindness to him any more than it is to the community. Nothing worse can happen to the sinner than to be allowed to go on sinking deeper and deeper into iniquity. Such mercy to the robber or murderer is cruelty to him as well as to his future victims. As the sick need a wise physician, so does the criminal need a just judge. I have no right to avenge myself, but neither have I any right to pardon sins dangerous to the community. Scientific study of human nature shows that what a man has done once he is likely to do again; and the public safety requires that the worst criminals be prevented not only from repeating their crimes, but from propagating their type of character. Let us be merciful by all means, and especially to future generations. It is not enough to say, "Judge not, that ye be not judged," "Forgive, and ye shall be forgiven," "He that is without sin among you, let him first cast a stone," etc. Ought we to close our courts, open our prisons, and discharge our police? The time is come to say plainly that this gospel teaching is simply vicious. Crime dangerous to the community is not to be forgiven until it has been made harmless. If a man tries to rob or murder me, I ought to do my best not to let him go on robbing and murdering other people. Robert Browning teaches a higher morality than the sermon on the Mount, when the Bishop in "Pippa Passes" tells the murderer who asks him how he dares to say, "Forgive us our trespasses," "My friend, it is because I avow myself a very worm, sinful beyond measure, that

Digitized by Google

I reject a line of conduct you would applaud. . . . No, I do trespass, but will not double that by allowing you to trespass." If the best men and women in Cincinnati had felt more plainly that our first duty toward crime is not to forgive it, but to put it down, her court-house might still be standing unharmed and a hundred of her citizens have been saved from bloody graves. It is true that the immunity from crime which called forth that horrible outburst of indignation is largely due to the venality of jurymen and officials in the courts. But such corruption could not have gone on for so many years, if honest men had been willing to use proper means to make it cease? Who put these bad men into office and kept them there after their iniquity had become notorious? Who elected the "jury-fixers"? The great peculiarity of our system of government is that the people have the power in their own hands of peaceably righting every wrong. It is for the people to say what sort of men shall sit in the jury-box and on the bench. The judge in Berner's case seems to have done his duty. That the jury violated theirs is a fault for which blame rests not only on them, but on the community which sanctioned the system according to which they were picked out. To allow jury-fixing to become an institution and then try to cure the evils so created by calling out lynchers is simply heaping mistake upon mistake and outrage upon outrage. No jury ever did so much mischief as that Cincinnati mob. The worst verdict possible would not have ordered that court-house burnt or all those men, women, and children shot down. Never was there clearer proof given of the utter wickedness and folly of mobs. We want no more lynching, and we want to have every possible excuse for it taken away.

F. M. HOLLAND.

THE COST OF MY SILVER DOLLAR.

Malaguti and Du Rochet have shown that the oceans hold in solution about two thousand times as much silver as the annual product of all the mines of the globe. Sonstadt has shown that a ton of sea water holds a grain of gold. According to this analysis there floats, suspended in the oceans, about eleven million times as much gold as men, through all the ages, have taken from the globe's crust. Gold, in nature's currency, is vastly more abundant than silver. Silver, in greater measure, has been withdrawn from circulation in the oceans, and "banked away" in the rocks. The reason is obvious. Turn to any work on metallurgy, and see the range of affinities of silver and gold. The likings for gold are few, for silver many. Chlorine wants it, and the molecules seize a naked atom of silver, make it silver chloride, and withdraw it from circulation. Sulphur wants it, and withdraws it from the ocean, and lays it to rest as silver sulphide. Tellurium, an element akin to sulphur, unites with it, and forms a silver telluride, which is not "current" in nature. Silver has many suitors, gold but few.

It was Emerson who said that a crab by the seaside is commonplace, but a crab idealized and made a sign in the zodiac is sublime. Silver or gold in the mine or the mint is commonplace. Our task in this paper is to idealize it, and make it a sign in the zodiac through which creation has moved. In the heaven it is. And, with this demonstration under her feet, that no element is local, that whatever is here is anywhere, that whatever is anywhere is here, that the laws above are one with the laws below, that

"The dewdrop and the star shine sisterly,"

Science is sublime.

Our starting-point in the cosmic history of silver is the nebulous world mist. Our starting-point in its telluric history is the ocean. One of the most abundant fossils is sea water. We find it even in the archæan granite. The drops imprisoned in this ancient rock were drops of an ocean on whose floor this, which is now granite, was sediment. Analysis has shown that oceans in the globe's youth were richer in the salts and metals than the oceans of to-day. The silver or gold stored away in the rocks is a measure of the excess held in the ancient seas over that held in the living.

How have the metals been withdrawn from the seas and introduced into the rocks? In his report on the "Lead Region" of the North-west, Prof. Whitney called attention to the fact that metals, at least lead, copper, and zinc, began to appear in the rocks in the same geologic age that life began to appear in the oceans. The inference is that life, or the death and decay which followed life, had to do in withdrawing metals from the sea, and precipitating them into the sediment on its bottom.

Among the first of living things was the seaweed. Suppose now that, as Thoreau cornered life in a cabin to wrest from it its deepest meaning, we corner nature in a little nook of ocean. Let it be cut off from the tides and currents of the great deep. It holds in solution all the metals. If it is lifeless, these metals remain in solution. If it is stocked with seaweed, the metals are withdrawn. In the ash of seaweed, we find silver, gold, copper, and lead. The humblest of plants is the highest of vegetal chemists. It breaks the bond which holds the metal to chlorine or sulphuric acid, and takes the metallic atoms into its own fibre. The sea was the earliest mine, and the weed the earliest miner. What we see passing in our little nook of ocean has been going on in every ocean since the dawn of life. And, as weed-peopled seas have rolled over almost every acre of earth, the sedimentary rocks should hold the metals withdrawn by the weed from circulation in the water.

Death has been a mightier agent in the history of metals than life.

"A gilded halo hovers round decay."

We recur again to our nook of ocean. A fish dies. The dead body lies there obstructive. Every drop of ocean which enswathes it may hold a molecule of silver sulphate. The visible body of the dead must pass into the invisible. The invisible molecule of silver must become visible. The fixed body must become fluent. The fluent molecule must become fixed. See, now, the relations, beautiful and far-reaching, between silver and death. The molecules of sulphate give up to the dead their atoms of oxygen, and pass into sulphides which are insoluble. The vital air which enswathed the metal has embraced the dead and broken it into atomies. The organic molecules enter again the circulation of nature. The inorganic metal, now silver sulphide, is withdrawn from circulation. It drops into the sediment on the ocean's floor.

On the table before me is an orthoceras not petrified, but "plumbified." It is lead. The dead cephalopod lay in some quiet nook of a Silurian ocean. The body of flesh was torn down, molecule by molecule; and the lead sulphate, reduced by deoxidation to sulphide, was dropped, molecule by molecule, in its place.

In Bingham Canyon, Utah, I have seen the cropping of a vein of copper sulphide. Following the stream down the canyon, I have found in a "flat" where the water had stood dead snails and roots encrusted with copper sulphide. Here was one of the most instructive facts which ever came before my eyes. The sulphide on the canyon wall, exposed to air and rain, had oxidized and passed into sulphate. In this form, the metal is soluble. The pelting rain took it up and carried it into the Jordan. If this river had found the sea, it would have carried down the copper in the soluble form in which it dwelt in the primeval ocean. There it would have come in contact with decaying organisms, which would have reduced it to sulphide and precipitated it into the sediment. After a geologic cycle, that sediment might appear as the rocky face of a continent veined by the copper which now veins our own. In Utah, the cycle was interrupted. Every dead and decaying thing on the Jordan was as a sheriff to arrest the vagrant metal.

Our facts will lift us to the level of one of the grandest generalizations of science. All metals have been withdrawn from the oceans by the life of seaweeds or by the decay which follows death. Many deaths were the cost of the silver for my dollar. Death is not a shadow cast over the globe by the sin of a man. Its trappings are not the sombre hues of woe. Its footprints through the deep are inlaid with patens of silver and gold. My silver dollar was first diffused in atoms through space. It was next diffused in molecules through an ocean. From the ocean, it passed into the sediment; and, before the process of mine-making began, it lay diffused through sedimentary rocks. Nature must take another step. She must bring the molecules together in a vein. This is mine-making. Her success has been indifferent.

Mill has done much to dispel the illusion that Nature is wise and beneficent. But the superstition lingers, even in the illuminated. She does nothing perfectly, and many things necessary for man she does not do at all. Civilized man needs iodine more than gold. It is abundant in the first mine of all the metals, the ocean. But Nature had no way of withdrawing it and bringing it to rest. We must take it from that primeval miner, the seaweed. The decay of the weed gives it back to the ocean.

The step Nature must take in segregating the metals she cannot take at all except under certain conditions. If you will fix your attention on the *position* of silver mines, you will note that, with very rare exceptions, they occur at levels more than five thousand feet above the sea. If you will fix your attention on the *rocks* of a silver belt, you will find them sedimentary, metamorphic, and eruptive. If you will give special attention to the eruptive rocks, you will find almost every silver lode either in contact with or proximity to a dike of porphyry. The explanation of the first is that mountain chains occur on areas that were heavily freighted with marine sediments, and that fissures are formed in the folding of the crust into mountains. The explanation of the second is that heat, in the form of thermal waters, was the agent which leached the molecules of silver from the sea-made rocks, and brought them together in open fissures. The explanation of the third is that porphyry, for reasons which are not obvious, influenced more profoundly than any other eruptive rock the segregation of silver.

The crumpled crust of New England has opened in but few fissures, and most of these have been filled by eruptions of molten rock other than porphyry. The geologic history of New England has not favored the formation of metallic veins. When Maine and New Hampshire can show an output of silver and gold which tells on the side of profit, I will try to forget what books and mountains have taught me, and begin my studies anew.

While passing from cosmic into telluric history, the silver of my dollar has cost, in time and force, what we cannot know. While passing from circu-

Digitized by Google

lation in the sea to rest in the sediment, it has cost the life-toil of many a seaweed or the chemic forces which followed many a death. In passing from a state of diffusion in the rock to segregation in a vein, it has cost the rending of the globe by throes of mountain-birth and the percolation of its crust by waters at white heat. If I could give adequate voice to the history of this silver in all its wanderings, from the beaded mist of a milky way till it came to rest in a mine, not the wanderings of Ulysses, sung by Homer, would be a poem of grander sweep and compass. I would sing of metallic loves as well as labors. Above all else, I would sing, constant through the eternal years, the love of silver and gold. Not a fleck of gold is ever found that does not hold in its embrace a companion of silver. "And Ruth said to Naomi"— No, in the elder Scripture which I am trying to interpret the reading is, "And silver said to gold, Whither thou goest, I will go; where thou lodgest, I will lodge; thy people shall be my people; where thou diest, I will die, and there will I be buried." What God has joined together the time has come for man to put asunder. Side by side from the morning of time till now, silver and gold have pulsed through the veins of nature. Side by side long enough they have pulsed through the veins of trade.

W. D. GUNNING.

THE PERMANENCE OF RELIGION.

A Liberal should recognize patience as a cardinal virtue, but how hard it is sometimes! Will churchmen never learn by experience, and cease to denounce innovators as atheists? Of course, every new truth tends to modify conviction. Will these croakers at progress at once and for all be consistent with themselves, and denounce the spirit of inquiry and the increase of knowledge? Then, they would stand clearly revealed in their true colors, and doubt not many, even of themselves, will be disgusted with the figures they thus reveal.

Although often decried as such, the Free Religious Association is not an *anti*-religious organization. Religion is as really an accident of the mind as color is of the body. Bodily peculiarities are chiefly the outcome of physical circumstances, and religious peculiarities the result chiefly of mental operations. The reaction between these two sets of facts makes human progress, and this reaction intensifies as mental facts accumulate. Through mental activity, men come to understand at first some of the more obvious laws of nature, and restrict the number of their fetiches, until in the process of time they discard their gods altogether, and rise to the sublime height of a purely spiritual religion. Then, through the decay of mental activity, the same people sinks into the basest idolatry, the objects of which betray a waning art, while in their language occur words, they know not how or whence, the evidences of "a nobler but lost heritage." Through all these social phenomena, the thing itself, religion, persists; but its aspects, how they change!

To speak of religions is confusing. There are systems, not of religion, but of religious faith and worship. Religion, like memory, is a mental quality, the existence of which makes receptive to all orders of mankind ideas of a nature that without this faculty could not exist,—ideas for the conception of which the Polynesian requires aid of his mud gods, and which the Transcendentalist expresses in such vague language as to escape the mental grasp of less beatified mortals.

Often and earnestly, it is said that the power of the imagination is becoming weak. This is not true. Imagination no longer sweeps low over gorgeous fields beyond the range of common vision. Humanity has sent aloft her sentries; and, from a thousand points, they survey with calculating eyes the horizon of the universe. There is no longer a beyond that fascinates; but above and within, to her higher laws and her intricacies, nature invites the imagination. Inspired by the majesty and beauty here revealed, her wings pierce the empyrean of thought, and unfolds that grand *ποίνμα*, the nebular hypothesis, thrills the heart and fills the mind with thoughts of the awful majesty of the universe and the glorious privilege of man. So, in the world of morals, from the ethereal that issues from the improved heart of man, the imagination forms pictures that chasten and elevate.

It is also said that scientific speculation is destroying religion. This likewise is untrue. Whoever rises to a comprehensive view of social events must perceive that the bearing of the mental movement of our time is not against religion, but against forms of religious faith and worship. Mental activity is breaking up the crustations of Christian Orthodoxy. Buckle said, and I believe truly, that there is no other civilized country where there are so few eminent scholars and so few ignorant people as in the United States. This means for one thing that intelligence is widely diffused among us. Buckle made the above assertion in the decade preceding the Rebellion. Within the past thirty years, popular intelligence has made wonderful strides, if we may rely upon educational statistics. Indeed, if, in this generation, any one should make a similar declaration implying the paucity of American scholars of eminence, there would be earnest protest and denial.

The anti-clerical movement in the United States is not hastened by unusual circumstances, by political or social necessity. In truth, it can hardly be called a movement; for our national complacency has been so great that toleration for opinion has sufficed. The time, however, is near at hand, and the conviction is profound and universal that any institution, which by its nature cannot yield to the impetus of intelligence, shall go. Nothing short of perfect independence in religion will satisfy the rapidly advancing intelligence of the nineteenth century, Albeit, the religious principle must suffer in the transition, and the moral balance of society remain long in a quivering condition.

All this is inevitable; but, when the tumult clears, the face of society will wear the expression of harmonious individualism, and the word "toleration" have been dropped from the vocabulary of ethics.

F. H. BERNARD.

CO-OPERATION THE LAW OF THE NEW CIVILIZATION.

What the Sociologic Society Teaches.

That law governs everything in life.

That society is an organism, and, like all organisms, is subject to the law of growth.

That, inasmuch as the social organism is composed of individual units, and these units are forever changing,—old ones dropping off and new and better ones taking their place,—the growth of society is always toward a higher, finer, and more complete expression of life.

That all development is by differentiation, variation, and the introduction of new types and orders, and is toward stable equilibrium.

That this is a sociological as well as biological law.

That society has reached a stage in which the transition from a lower to a higher industrial system must occur, and that this transition involves danger to the extent of the non-adjustment of social forces to the requirements of a new civilization.

IMOGENE C. FALES.
52 SEVENTH AVENUE, BROOKLYN, N.Y.

THE "NEW DEAL" PROPOSED.

The President and the Secretary of the National Liberal League announce that they "will not be candidates for any office of the League at the next Congress." They say that they are reminded of the propriety of giving timely notice of their desire for a "new deal" by a statement of Hon. A. B. Bradford, of Enon Valley, Pa., printed in their organ *Man*, that "there are men in the land who are not identified either with the Liberal League or its opponents and who, if they would invite a National Convention to meet, might, from their high character, close up our ranks," and by a remark in a recent number of *The Index* that thousands of Liberals decline to work with the League, because of its demand for the repeal of certain postal laws. They say: "There is nothing so desirable as unity and co-operation among Liberals for the purpose of defence, propaganda, and constructive effect upon society, politically and socially"; and they "think it best that a 'new deal' should be then made, so that, if possible, the elements referred to by Mr. Bradford and *The Index* should be brought forward and harmonized with the League." They call for suggestions as to their successors, and add: "Every league and liberal society of any kind in the country should be represented at the next Congress, *whether they have been able to agree with the course of the League or not.* There will be the amplest opportunity for the realization of Mr. Bradford's suggestion by having the Liberals who have not acted with the League join in a call of their own to meet in a free, uncommitted, and common Congress, to select new officers and inaugurate a new policy adapted to present conditions and issues." The article continues: "We take this course: (1) Because we fear that past issues and differences cannot be removed from the minds of many Liberals except by a decided change of the *personnel* of the management of the League, and we would not stand in the way of its unity and welfare a moment by reason of past issues. (2) Then, again, as we explained in our last paper, the Comstock issues, which have been a cause of difference, have been largely tried out; and their right decision can be perhaps better secured without giving to them what seems to many exceptional prominence." The article concludes thus: "Then let all those who believe in any kind of organization or co-operation of liberal people in the United States consider who, as President and Secretary, would best further that purpose. And whoever may be selected shall have our hearty support."

Unity and co-operation among Liberals are without doubt very desirable; and a national liberal organization, formed upon a broad and wise basis for a definite, practical purpose, such as should commend itself to all who really believe in perfect religious liberty and equality before the law, and pledged to a firm and consistent policy that would raise the work of the organization above all petty schemes and personal considerations, might accomplish a vast amount of good. It might do effective work by combined and concerted action in neutralizing the influence of the orthodox churches on the legislation of the country, so far as that influence is directed against the principles of a secular government or is inimical to religious liberty and equality. It might do much by sustaining public speakers, and by circulating the right kind of literature, to educate the public

Digitized by Google

in the principles of State secularization; and, by petitions and through committees, it might exert a powerful direct influence upon the law-makers of the country. It might contest the unjust decisions of courts, and make them respect the wills of free thinkers, whether their provisions are agreeable to orthodox Christians or not.

But an organization of this kind, to be successful, must confine itself to the purpose for which it was formed. Events have justified what we said in an address before the National Liberal League at Syracuse, Oct. 27, 1878, which we may be pardoned for here quoting:—

> And here I deem it proper to emphasize the fact that, to insure success, the Liberal League must confine itself to the objects for which it was organized. It must keep constantly in view State secularization; and, to this end, every other consideration must be subordinate. It is now, and in the future still more will be, composed of somewhat heterogeneous elements. One great danger that is a standing menace to all such organizations is the liability of giving undue prominence to questions which have no direct bearing on their objects, and concerning which there is the same difference inside as there is outside of their membership,—questions which, at certain times, owing to some circumstance absorb public attention, and which seem to many, under the influence of temporary excitement, of more importance than the objects which called the organization into existence; and thus they are often the cause of dissension, and not unfrequently destroy the harmony and unity of organizations whose aims and objects at the beginning were clear, definite, and well-understood. Let the Liberal League avoid this rock on which so many organizations have been dashed to pieces. Its members as individuals are at liberty to advocate what they choose on all subjects, and to join any party or association pledged to other reforms; but, as members of the Liberal League, it is all-important that they keep constantly in mind the purposes for which the organization was formed.

This friendly advice was disregarded by those who subsequently took charge of the League, and the result of the policy they have pursued is well known. It is referred to here only for the purpose of illustrating the necessity of guarding against a similar mistake, if another effort shall be made to unite the Liberals of this country in a national organization.

We do not see why every "Liberal Society of any kind in the country" should be represented at the next convention of the National Liberal League. That organization has been unequivocally committed and pledged by resolutions adopted and reaffirmed, as well as by the work of successive administrations, to the policy of "repeal." In that policy, the great majority of the Liberals of the country do not believe. The members of the League who could not see the wisdom of this policy have long since withdrawn from the organization, leaving it wholly in the hands of the party that were in the majority at Syracuse. The last three conventions of the League, held at Chicago, St. Louis, and Milwaukee, demonstrated, to all impartial observers acquainted with the facts, that the League was without much vitality or influence, that it lacked harmony and consistency of purpose, and was ready for an adventure in almost any direction which gave promise of adherents.

Under the circumstances, we do not see the propriety of calling upon all the liberal societies in the country to send representatives to the next congress of the National Liberal League. Let those who believe in the policy of the League continue to support it; but, if there is to be a convention for the purpose of organizing a National Liberal organization, let the call be made without reference to the National Liberal League or any other existing organization, and let the convention, called to effect a union of Liberals on a broad and comprehensive basis, be unhampered by the past. Whether an attempt to form such an organization at the present time, at the beginning of an exciting political campaign, even though the harmony and co-operation of the best liberal elements were assured, may fairly be doubted.

The question, Who shall be the next president and secretary of the National Liberal League? is of interest only to the members of that organization. It does not concern the Liberals at large, whose objection to the League would in no way be removed simply by a change of officers.

THE following paragraph which we transfer to our columns from the *Radical Review* may be read with profit by our Spiritualist neighbor of this city:—

> One of our Boston readers challenges the use by us of the phrase "Religion of Humanity." He denies the propriety of the word "religion" in the columns of the *Radical Review*. "Why not," asks this man from the Hub, "why not drop the name as well as the game of superstition?" We beg leave to take exception to the implication that religion is synonymous with superstition. We do not deny that all the historical religions that our correspondent may name are deeply tinctured with superstition, if indeed this term does not entirely cover them. But, while Judaism, Christianity, Mohammedanism, etc., are at this period of the world's history essentially identical with superstition, we would remind our correspondent that each is but one of the many religious systems of the world, neither of which satisfies the full content of the word "religion." Etymologically, the word "religion" has nothing to do with men's beliefs in God and the supernatural, whatever these terms may mean, but signifies primarily conscientiousness, fidelity to principle, loyalty to truth, devotion to some ideal which has become the mastering passion of one's life. As the great positivist, Mr. Frederic Harrison, well defines it: "Religion is any system which binds masses of men into common beliefs, stimulates them to common action, and softens their hearts in one worship. That body of ideas by which a race of men are moved, which they believe as one man, and by which they live and die, is a religion always. It is a mere accident," says Mr. Harrison, "whether this body of ideas includes the idea of God or not.... To harmonize the soul, to draw men together, to regulate their whole lives, is the real business of religion." In this sense, we free thinkers may justly claim to be religious, and our religion is the Religion of Humanity. We use the phrase because we know none other to express our idea. If anybody is misled by it, whose fault is it?

ONE of the best among brief statements of the cause of woman suffragists is the recent address of Mrs. Underwood in reply to Mrs. Leonard and her sister "remonstrants," so called. We were led by it into much reflection. It has been a growing habit to bring the question of ballot down to the desire, one way or the other, of those to whom it is to be offered. This is false reason. Either the right to vote exists or it does not. If it does, it exists beyond denial and despite individual disinclination to use it. If it does not, no desire for its possession weighs the lightness of a feather. We took it that this point was argued and settled long ago. Woman under the present system is artificially pushed below her plane. It is bad enough that man ever should have had either the power of denial or of giving in this matter; and it is far more grievous that the power, once possessed, should, at this late age, be so frightfully abused; for we take it to be an abuse, even if it be an unconscious one. Men do not start out with any murderous intentions against woman's rights: the evil is ingrained, and conscientiously believed to be virtue, from which cause it is harder overthrown than if it were but an open-eyed, momentary exercise of passion or selfish temper. We do not, of course, believe things will, in human events, "right themselves"; but we believe that time and human labor can work wonders in conspiracy, and therefore we are sure this long-fought-for cause of woman is soon to be transformed into victory.—*Boston Commonwealth.*

THE *Banner of Light* evidently thinks it makes a point against *The Index* by referring to it as "that professedly 'religious' paper," "edited by an avowedly Infidel writer and believer," mentioning by name one of the editors. The term "infidel," which we have never liked and rarely use except in quotation marks, has been bestowed upon so many great and worthy men that it has ceased, among intelligent and fair-minded people, to be a term of reproach, when applied as it is to us by our contemporary; but its old classical meaning, its current use in law and literature to indicate unfaithfulness, its negative character, and its lack of definiteness necessary to connote any distinctive beliefs or even disbeliefs with exactitude, make it inapplicable to any thinker or class of thinkers. The word "religion," too, has different definitions, from that which limits it to orthodox Christianity, which itself is now differently defined, to those definitions which make religion include among its adherents agnostics like Comte, Mill, Spencer, Huxley, George Eliot, Clifford, Fiske, Adler, and Holyoake. Will our contemporary give clear definitions of what it means by the words "religious" and "Infidel"?

ANNUAL MEETING.

The annual meeting of the Free Religious Association is to be held at the Parker Memorial Hall, Boston, as follows: Thursday, May 29, at 7.45 P.M., business meeting for hearing of reports, election of officers, etc.; Friday, May 30, convention, with sessions at 10.30 A.M. and 3.00 P.M., and a festival in the evening. More complete notice hereafter.

F. A. HINCKLEY, *Sec'y.*

EDITORIAL NOTES.

MR. KIMBALL has the floor on the Mormon question this week. It will be admitted that he brings a strong array of witnesses for his side. So far as his article refers to views we have advanced in *The Index*, we may have something further to say next week. W. J. P.

IN a lecture at Kensington, Eng., last Friday, says a despatch, Max Müller declared that the soul of Buddhism is charity, that indeed it is the true religion of humanity.

JOHN B. ALDEN, New York, has published a handsome edition of "The Teaching of the Twelve Apostles," with the Greek text and the English translation on opposite pages, in cloth binding, for the low price of twenty-five cents.

AN exchange says that the advocates of cremation in New York are soon to have a public meeting, at which Prof. Felix Adler, Prof. Boyesen, and others will speak. It is stated that $11,000 have been raised with which to build a crematory.

"THEODORE PARKER said thirty years ago [Letter, to S. P. Chase, *Works*, ii., 226]:—

> "'I have studied this matter of the divine origin of the Bible and the divine nature of Jesus of Nazareth all my life. If I understand anything, it is that. And I say there is no evidence—external or internal—to show that the Bible or Jesus had anything miraculous in their origin or nature, or anything divine, in the sense of that word as commonly used.'"

The *Congregationalist* quotes the above passage, and adds: "Mr. Parker was at least honest, and his whole life lay honestly behind his utterance. But what are men to think of teachers uttering doctrines logically inseparable from his, while at the same time occupying the seats of the champions of old-fashioned Orthodoxy?"

The Index.

BOSTON, MAY 1, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

Gentile Testimony to Mormon Worth.

BY REV. JOHN C. KIMBALL,

HARTFORD, CONN.

It is a great satisfaction to find *The Index*, at this test point of the Mormon question, acting in complete harmony with its professions as the organ of free thought, by giving to each side of it a fair and equal hearing. A few years ago, it was almost impossible to get a word into an Eastern journal aiming to solve it on any broad and generous principles, even our well-known Unitarian paper, pre-eminent for its general fairness, refusing, after printing columns against the Mormons, to give on the other side the testimony of the United States Census and of such men as Bishop Tuttle, Chief Justice White, and the Hon. Hugh McCullough, simply correcting its own mistakes. It is not by any means the greatest question before the public, but it is one which touches some points of religious freedom and of its relation to moral judgments more deeply than any other. And it is one which, not only on its own account, but in the interest of all religion, needs full and frank discussion.

The first step in this, as in all such questions, is to do justice to the Mormons themselves, recognize all that is worthy and good among them, and then, from the vantage-ground of this justice, assail what is wrong and bad. Mr. Potter speaks of the difficulty of getting at the exact facts with regard to their condition, such contradictory stories are told about them, and ascribes the good said of them to the circumstance that visitors in Utah for a short time see only the surface of things, and are so dazed with its material prosperity as to make their testimony of but little worth. This may be true in some cases; but, on the other hand, it is to be remembered that the bad which is told of them is quite as likely to rise from the prejudice, narrowness, and conflicting interests of those who are at their very doors. Nearness of residence, where these qualities exist, is very far from increasing the value of a person's testimony. Who has implicit confidence in a Californian's denunciation of the Chinese, or in a Western squatter's diatribe against the Indians, or in a Protestant theologian's strictures on Roman Catholicism? So with the criticisms of Utah Gentiles on their Mormon neighbors. The religious prejudice against them is immense,—a prejudice which is aggravated still more by the sight of their material prosperity, and also, it must be confessed, by their aristocratic bearing and their social exclusiveness. And it is wonderful how this prejudice blinds the eyes of otherwise sensible people to some of the most common things about them, one writer from Salt Lake City to the *Christian Register* betraying an ignorance of their family customs that every most casual visitor is sure to see, another testifying to a prevalence of ignorance and drunkenness among their young that the slightest examination of local records would at once have disproved, and another being apparently unacquainted with the fact of a trial which must have taken place under her very ears.

Then, where this prejudice does not exist among the observers themselves, the fear of it in others is often a cause of the difficulty there is in getting at the exact facts. Shortly after my own visit to Salt Lake City, I fell in with a Baptist minister who had spent several months there for the benefit of his health. We naturally compared notes about our experiences; and he told me of the dislike and misconception, gathered up at home, with which he had gone to the place, and how little by little they had been melted away, and his dislike turned to admiration. I asked him why, for the sake of justice, he did not publish in some Eastern newspaper the result of his observations. "Oh," he exclaimed, "it would not do. I should only ruin my own reputation, and nobody would believe me. I should either be accused of having become a convert to polygamy or else of being a credulous fool whose eyes a little Mormon flattery had blinded to its enormities." The editor of a popular magazine, returning to its writer an article on Utah that, from the literary stand-point, gave a genial description of Mormon social life, said, "I have no doubt that what you say is all true, but it would ruin us to publish it." And two ladies awhile ago, travelling all the way from Salt Lake City to attend a Woman's Suffrage Convention, were not allowed to present the result of the suffrage experiment in Utah, because their recognition, as they were told, would compromise its friends too much here at the East.

But, in spite of all these difficulties, there are Gentiles who have had the largeness of vision to look at Mormonism as they would at any other religion, and the courage to present what they have seen fairly to the public. Some of them are men who have lived in Utah for years in daily contact with its people, so as to know for certainty whereof they speak; while others, though visitors, were travellers and public men of that world-wide experience which precludes all thought of their having been dazzled or fooled by any flattery or outside glitter. And, as helping to throw reliable light on this question of what the Mormons really are and to sustain what Mr. Curtis and others of us less known have said from our own observations, let me quote briefly the testimony of these indisputable authorities.

Rev. D. S. Tuttle, bishop of the Episcopal church in the Utah Diocese, and a resident for twenty-five or thirty years in Salt Lake City, a man whose opportunity and capacity for fair judgment no one can question, says of them in a lecture delivered in New York and published in the *Sun* of November, 1877: "*I know that the people of the East have judged them unjustly.* We are accustomed to look on them as either a licentious, arrogant, or rebellious mob, bent only on defying the United States government and as deriding the faith of Christians. This is not so. *I know them to be honest, faithful, prayerful workers.*"

Hon. Hugh McCullough, ex-Secretary of the United States Treasury, writes in the New York *Tribune*, of March 29, 1877: "The people of the United States are under obligations to the Mormons. One can hardly repress a feeling of admiration for their courage, patience, and power of endurance. They have opened and improved a region which, but for them, would have been neglected. They have brought to the country many thousands of industrious, peaceable, and skilful people, and added largely to its wealth. Good judges and honest officials should be sent them; and, in other respects, the federal government should let them severely alone. Their history will afford abundant materials for philosophical speculation, but there is no danger of their being a political or social disturbance."

Bayard Taylor says: "We must admit that Salt Lake City is *one of the most quiet, orderly, and moral* places in the world. The Mormons, as a people, are the most temperate of Americans. They are chaste, laborious, and generally cheerful."

Dr. Miller, editor of the Omaha *Herald*, says: "To the lasting honor of the Mormon people and system, for twenty-five years such machines of moral infamy as whiskey-shops, harlotries, faro-banks, and all the attendants of vice and iniquity, were totally unknown in Utah. But, now, these hydra-headed monsters are gaining foothold in Salt Lake City; and the damning fact is that it is only by the surreptitious evasion and overthrow of Mormon authority that these and kindred curses now invade it."

Mrs. Emily Pitt Stevens, editor of the *Pioneer*, a woman's journal, says, "In Salt Lake City there is less rowdyism, drunkenness, gambling, idleness, theft, conspiracy against the peace of society, and crime generally than in any other city of the same population in the country, if not on the globe."

Elder Miles Grant, the well-known Adventist preacher, says, "There is *less licentiousness* in Salt Lake City than in any other of the same size in the United States; and, were we to bring up a family of children in these last days of wickedness, we should have less fear of their moral corruption in that city than in any other."

Gen. Thomas L. Kane, of Pennsylvania, Governor, after four years' experience among them, says: "I have not heard a single charge made against them as a community—against their habitual purity of life, their willing integrity, their toleration of religious differences, their regard for the laws, their devotion to the constitutional government under which we live—that I do not from my own observation or from the testimony of others *know to be false.*"

R. N. Bashan, Esq., United States Prosecuting Attorney in Utah, and a strong anti-Mormon, testified before the Committee on Territories of the United States House of Representatives: "I have been for five years past a resident of Utah. I must do the Mormons the justice to say that the question of religion does not enter into their courts in ordinary cases. I have never detected any bias on the part of jurors there in this respect, as I at first expected. I have appeared in cases where Mormons and Gentiles were opposing parties, and saw,

Digitized by Google

much to my surprise, the jury do what was right,"—a sworn statement of a United States officer, which may well offset the assertion of a recent writer in a religious newspaper that "nine-tenths of the people of the Territory are pledged to defeat the ends of justice," yet one which as a reply that newspaper refused to print.

A special committee of the Nevada State Senate, appointed to report on the question of annexing Utah to Nevada, say: "Utah is without a territorial or county debt. The traffic in spirituous liquors is under complete control. Gambling and houses of ill-fame are not tolerated. *Its school system is unsurpassed* in its adaptation to the wants of the masses,"—an official document which surely is of more weight than the assertion of Prof. Marden in the *Christian Union* "that non-Mormon teachers are excluded from their system of schools, and that Mormon doctrines are assiduously taught."

Chief Justice White, of the United States Bench, in charging the grand jury, February, 1876, in the famous Mountain Meadow Massacre trial, says: "No matter how much I differ from them [the Mormons] in belief, nor how widely they differ from the American people in matters of religion, yet testing them and it by a standard which the world recognizes as just, they deserve higher consideration than has ever been accorded to them. Industry, frugality, temperance, honesty, and, in every respect but one,—the legislation against polygamy,—obedience to law are with them the common practices of life. This land they have redeemed from sterility and made the habitation of a numerous people, where a beggar is never seen and where alms-houses are neither needed nor known."

With regard to the complicity of the Mormons in the Mountain Meadow Massacre,—a crime with which even now they are continually charged at the East,—the United States district attorney who had charge of the case said, in his plea at the trial: "I have been engaged constantly during the last three months in sifting facts and everything related to or connected with the massacre; and I have given the jury *unanswerable documentary evidence, proving that the authorities of the Mormon Church knew nothing of the butchery* till after it was committed. I have had all the assistance—from the Mormons—any official could ask on earth in any case." (See report of the trial.) How could any testimony be more explicit or authoritative? And yet I could not get these words inserted in a professedly liberal religious paper at the East as an answer to a charge already made in its columns that the Mormons were guilty of the outrage, the exclusion being as peremptory and complete as any facts bearing on the anti-slavery side in a case before a United States court would have been from the most one-sided pro-slavery journal at the South before the war.

Capt. Burton, in his *City of the Saints*, published by the Harpers in 1862, a very minute and impartial work, says, among a multitude of the other things: "Mormonism is emphatically the faith of the poor." "I cannot help thinking that morally and spiritually as well as physically its *protégés* gain by their transfer from Europe to Utah." "In point of mere morality, the Mormon community is perhaps purer than any other of equal numbers." "The penalties against chastity, morality, and decency are exceptionally severe." "I was much pleased with their religious tolerance. The Mormons are certainly the *least fanatical* of our faiths, owning, like the Hindus, that every man should walk his own way, while claiming for themselves superiority in belief and practice."

Among the more recent testimonies in the same direction is that of James W. Barclay, M.P., an English visitor of fair and temperate judgment, who says in his article, "A New View of Mormonism," published in the January number of the *National Quarterly Review:* "The Mormon community is an enlarged family bound together by privileges and duties, one principal duty being to care for the helpless and needy. At the same time, every individual has full freedom of action. There is no compulsion on any Mormon beyond the public opinion of his fellows, and none is possible. All are equal. There is no special or privileged class or caste. The people in the fullest sense govern themselves,"—statements especially to be commended to the attention of those who, in default of anything else, charge Mormonism with being a vast and rigid hierarchy, under which no one is free. "I apprehend that the animosity to Mormonism is principally due to the efforts of the hosts of hungry office-seekers who would find lucrative posts in Utah, were the Mormons disfranchised; and to the missionaries from the Eastern States, who come to turn the Mormons from the error of their ways, and whose income depends on the strength of the feeling they can excite. If the Mormons could be disfranchised in a body, five hundred lucrative posts in Utah would be open to Gentile office-seekers,"—and does Free Religion want to play into such hands? "It is a mistake to suppose there are no educated Mormon women. Some of them have written with ability in defence of polygamy. The young ladies appeared as free and independent as in other parts of the United States." "The men of position correspond favorably with the same class in the Eastern States. I was much impressed by their ability, courtesy, and general intelligence. They have a quiet, self-reliant, gentlemanly bearing." "In morality, the Mormons *greatly excel the Gentiles* in their midst. The figures conclusively prove that the Mormons are a sober, law-abiding people, and singularly free from the grosser forms of vice, whatever may be alleged to the contrary by ignorant or prejudiced enemies." "Let me say in conclusion that I went to Utah prejudiced against the Mormons; but, after seeing and investigating them myself, I came to the conclusion that apart from polygamy there is much in the Mormon organization to admire and respect, and that the Mormons are the subjects of a greater amount of misrepresentation and unjust abuse than any other community with which I am acquainted."

Equally explicit and favorable is the testimony of Mr. Phil Robinson, of the London *Telegraph*, an English traveller of wide experience all over the world, and of unquestioned reliability, who in 1882 spent three months in Utah. He says in his *Sinners and Saints*, a very readable book: "I have seen and spoken to and lived with Mormon men and women of every class, and never in my life in any Christian country have I come in contact with more consistent piety, sobriety, and neighborly charity. I say this deliberately. Without a particle of odious sanctimony, these folks are in their words and actions as Christian as I have ever thought to see men and women." "The Mormons are a peasant people with many of the faults of peasant life, but with many of the best human virtues as well." "The demeanor of the women in Utah, as compared with, say Brighton or Washington, is modesty itself; and the children are just such healthy, vigorous, pretty children as one sees in the country or by the seaside in England." "Utah-born girls, the offspring of plural wives, have figures that would make Paris envious; and they carry themselves with almost Oriental dignity. There is nothing, so far as I have seen, in the manners of Salt Lake City to make me suspect the existence of that licentiousness of which so much has been written, but a great deal on the contrary to convince me of a perfectly exceptional reserve and self-respect. It is only a blockhead who could mistake the natural gayety of the country for anything other than it is. I know, too, from medical assurance, that Utah has the practical argument of healthy nurseries to oppose to the theories of those who attack its domestic relations on physiological grounds." "*A healthier and more stalwart community* I have never seen; while, among the women, I saw many refined faces, and remarked that robust health seemed the rule." "Mutual charity is one of the bonds of Mormon union. It is published officially that 'the bishops of every ward are to see that there are no persons going hungry.' What a contrast to turn from this text of universal charity to the infinite meanness of those who can write of the whole community of Mormons as 'the villanous spawn of polygamy!'" "Instead of the Mormons being as a class profane, they are as a class singularly sober in their language, and indeed in this respect resemble the Quakers." "The Mormons have always struggled hard to prevent the sale of liquor; and it is not only the Mormon leaders, but the Mormon people that refuse to have drunkards among them."

Equally strong is the testimony of Mr. Robinson against the charge so often made by those who are obliged to admit their virtues in all other respects that the people are priest-ridden, the fact being that each one of them is himself a priest, and that it is about as absurd to speak of Utah as priest-ridden as it would be to speak of the rest of the country as voter-ridden. "The payment of tithings is as nearly voluntary as the collection of a revenue necessary for carrying on a government can possibly be allowed to be." "*If the women of Utah are slaves, their bonds are loving ones and dearly prized.* They are to-day in the free and unrestricted exercise of more political and social rights than are the women of any other part of the United States." "It is not true that the Church interferes with the domestic relations of the people. When I remember what classes of people their men and women are chiefly drawn from, and the utter poverty in which most of them arrive, I cannot in sincerity do otherwise than admire and respect the system which has fused such unpromising material of so many nationalities into one homogeneous whole."

With regard to the misrepresentations of Mormonism, he says: "Whence have the public derived their opinions about it? From anti-Mormons only. I have ransacked the literature of the subject, yet I really could not tell any one where to go for an impartial book about it later in date than Burton's *City of the Saints*, published in 1862. There is not, to my knowledge, a single Gentile work before the public that is not utterly unreliable from its distortion of facts. How can any one have respect for the literature or the men who, without knowing anything of the lives of Mormons, stigmatize them as profane, adulterous, and drunken? These men write of the squalid poverty of the Mormons, of their obscene brutality, of their unceasing treason toward the United States, of their blasphemous repudiation of the Bible, without one particle of information on the subject except such as they gather from the books and writings of men whom they ought to know are utterly unworthy of credit, or from the verbal calumnies of apostates; and what the evidence of apostates is worth history has long ago told us." "I am now stating facts; and I, who have lived among the Mormons and with them, can assure my readers that every day of my residence in-

Digitized by Google

creased my *regret at the misrepresentation these people have suffered.*

Still stronger is the evidence derived from official statistics as to their intelligence and virtues. In Salt Lake City in 1881, the published reports show that the arrests for crime were *fourteen times* as many among the Gentiles in proportion to their numbers as among the Mormons; and, taking the Territory as a whole, the Gentile population furnished *forty-six* convicts in the penitentiary where the Mormon population, number for number, furnished one! According to the United States census, Massachusetts has four times as many convicts to the same population as Utah, four and a half times as many idiotic and insane, and nine times as many paupers. Utah, in school attendance, according to the same authority, is ahead of Massachusetts; and, with all that has been said about the ignorance of its people and its immense foreign immigration, its proportion of people who cannot read or write is put down as less than that of New England. And, still more striking, the women there, instead of being kept in ignorance and subjection, are educated in the same studies and to the same extent as the boys and men, and are equally fitted to earn their own living out in the world and to maintain an independent career, —a very significant fact, in view of Mr. Potter's statement that polygamy "could gain no foothold to-day among a people where woman should be educated as man's equal."

Most recent of all is an article by "H. H.,"—Mrs. Helen Hunt Jackson,—in the May number of the *Century*, on "The Women of The Beehive," not at all in sympathy with the Mormon religion, and very strongly against polygamy, but giving such testimony as the following to the virtues and character of the Mormon people: "The more honest, industrious, simple-minded, and upright a man is, the better Mormon he will be, if he be a Mormon at all. How these old-fashioned virtues thrive on a diet of fanatical religion the prosperous farms of Utah give proof. The Mormon gospel is a gospel of labor. Industry and simplicity of living are its strongest precepts." "But it is the woman's view of it, her position and belief with regard to it, which are most misrepresented and misunderstood by the world." "A true understanding of the conscientious, religious Mormon woman's position and belief would work a revolution in the general sentiment of the outside world toward her." "There never was a class or sect of women since the world began who have endured for religion's sake a tithe of what has been and is and forever must be endured by the women of the Mormon Church. It has become customary to hold them as disreputable women, light and loose, unfit to associate with the virtuous, undeserving of esteem. *Never was a greater injustice committed.*" "The passage of the Edmunds anti-polygamy bill, disfranchising all persons living in polygamy and making the practice of it a penitentiary offence, has, so far as can at present be judged, only kindled new flames of self-sacrifice in the hearts of Mormon women." "This sort of spirit in the Mormon women was not reckoned on, probably, by those who thought polygamy could be greatly affected by legislation." "It is entirely within the power of the Mormon women to turn any anti-polygamy bill into a farce. There would not be penitentiaries enough to hold them, nor funds to feed them at the United States expense; and it is not easy to see what further device the baffled authorities would employ." "But true signs of the times no wise leaders will disregard. The Mormon people as a people are too upright, industrious, and moral, have worked too long and well, and achieved too splendid a success, to have their future again imperilled by being brought into active hostility with the majority of their fellow-countrymen."

Now, what community on earth can present higher, stronger, or more conclusive testimony as to its virtues and intelligence than this? Ought it not to outweigh any amount of statements made by narrow, bitter, prejudiced, partisan leaders at home and abroad? It covers almost every possible point of good citizenship,—those of education, patriotism, liberty, domestic life, morals, and religion, as well as of industry, thrift, and material well-being. And, in view of it, was there ever a greater outrage atttempted against a people on earth, even under the most tyrannical government, than the Edmunds Bill, already passed, and the Hoar Bill, now before Congress? Compare the state of things in Utah revealed by these accounts with what exists in our monogamous communities at the East. Why, I live in a New England State which in every one of these respects is inferior to Utah,—a State where actually a larger proportion of the Protestant men have more than one wife living than in Utah, the only difference being that there they are all supported by their husbands and made a part of the home, while here the first ones have been driven out into the world to shift for themselves.

What does this difference show? Not indeed, as Mr. Potter says, that polygamy in itself or for the country at large is better than monogamy,—for in itself and elsewhere it is not regarded as a religious principle, a view which makes all the difference in the world,—but only that, for Utah and in connection with the Mormon religion, it is producing no such evils as to call for the interference of the general government. It may be "a crime," but it is a crime legally, and not morally, —a crime only as the breaking of the Lord's day is one in Connecticut, and not as theft, slavery, and murder are everywhere. Marriage, in itself, whether monogamic or polygamous, is intrinsically without moral character. It is simply a social regulation; is, like Sunday, something which is made for man, and not man for that. It is a means to an end,—a means to promote purity, domestic happiness, the proper care of children, the elevation of the sexes, and the general well-being of society. And which form of it is best, or whether any form of it is best, and how and by whom it *shall* be performed, is to be determined by its results in each community; for it is a community interest, and of course by the will of each community. I believe in monogamy as our proper form of it, because it is our free choice, meets our hearts' need, and, in spite of some great evils rising out of it, has proved itself best adapted to promote our social welfare. Why should not the Mormons be allowed in the same way and on the same grounds to decide what form of it is best for them, exposed only to such moral influences from without as all communities give each other, the test being simply its results in their own case? To be sure, polygamy in the past and in other communities "has been connected with a low state of civilization," has served, as Mr. Potter says, "to pander to and strengthen man's animal passions, and to keep woman in a state of subjection"; and, theoretically, it seems to me, as it does to him, that it must now inevitably do the same wherever it is. But the question is not what it did in a past age and in other communities, or what it ought theoretically to do everywhere now, but what it does to-day actually in Utah. Government is concerned not in upholding or putting down some special institution on its own account and in accordance with some ideal of society, but in promoting and guarding the well-being of its citizens under such ones as they themselves have chosen, it being especially the fundamental principle of our own government that each community large enough to become a State shall regulate all its own domestic affairs. And, if Utah shows practically—and here is where the force of the testimony quoted comes in—that polygamy, guarded and penetrated by the Mormon religion, produces as much happiness, intelligence, morality, freedom, and of all the virtues, prosperities, and satisfactions of life for its citizens as monogamy does in other communities for theirs, shows especially that woman, instead of being "in a state of subjugation to man," is freer, better paid, and has more civil rights than elsewhere, then surely Free Religion and Christianity both, with their emphasis on the spirit rather than on the letter, ought to be the last ones to advocate, for the mere sake of upholding an institution, that monogamy with its attendant evils, now shown by statistics to be so much greater among the Gentiles there, should be arbitrarily thrust on it by the federal government.

A while ago, at a Woman's Suffrage Convention here in New England, I heard a Baptist brother tell the ladies that they ought to be willing to fail of getting their rights on Bible grounds rather than to succeed in securing them by any arguments outside of and contrary to Scripture. And once an Orthodox believer, disputing with his Unitarian neighbor about the value of their two systems, on being hard pressed with facts, shouted at last in desperation: "Well, I don't care! I had rather be damned in Orthodoxy than saved by Unitarianism." It is a loyalty to the means rather than to the end which sounds ludicrous in their cases; and yet what is much of the discussion about enforcing monogamy on Utah, whatever virtues polygamy may show, but a use of the same principle? What but a saying it is better to have society fail of its great ends on Gentile grounds than to succeed on those of Mormonism; better to have it damned with a monogamy which by actual count furnishes ninety-eight per cent. of the criminals in its penitentiary rather than saved by a polygamy which furnishes only two!

CORRESPONDENCE.

FROM "ONE OF THE REMONSTRANTS."

Editors of The Index:—

Will you allow one of the much berated Remonstrants, "whose children and grand-children will," as Mrs. Underwood anxiously assures us, "have cause to blush for their signatures to that *cowardly* petition" against woman suffrage, to express her own motives, acting from what Mrs. Underwood calls her "limited light"? That woman will ultimately vote I have no doubt. It will simply be an outcome of the necessary emancipation of women that they assume many duties foreign to their present condition; and this emancipation will be one of slow but positive growth. The requisites for it exist in the nature of woman herself. When she does vote, it will not be because it is an inherent right or even a privilege, but because it has become her duty,—a duty she cannot forego and must not perform ignorantly. I do not agree with Mrs. Leonard that "women in this land have the softer side of life, the best of everything"; and a woman with any breadth of view who can make this assertion has had an exceptional experience. The "best of everything" is what fits us for the largest use; and that is just what women do not have now and cannot, until responsibility in the control of money and sound, thorough education shall give it to her. Voting appears to many of us Remonstrants as a very little thing in its effect on the individual woman or as a factor in the growth of the race. It is made prominent now from its dangerous possibilities in a government like our own, for statistics plainly show that the illiterate vote would be largely increased proportionally by the votes of our women. The suffrage is far too extensive for safety now; and the relative proportion of increase would be one of quantity, not quality.

Digitized by Google

Rev. James Freeman Clarke, who writes so temperately and wisely on this question, considers voting an important step in woman's development; but I do not see that a whole century of voting has done much for men, many of whom vote ignorantly, from narrow motives, and with apparently no conception of abstract principles. I know advocates of suffrage who are among the most estimable of women. I should like to give their names, if only for the pleasure of seeing them as I write. Their votes, as are all their utterances, would be golden. They are comparatively conspicuous by their fewness. My cook, admirable as she is for her soups and of average intelligence, would vote to please "Mike," in whom her confidence is absolute; and her vote would mean nothing, as does his, while unfortunately both would be numerically powerful at the polls. What the world now demands of woman, be she a voter or not, is that she be large-natured, clear-headed, well taught, and active in duty. She will be no less unselfish and loving, when she is thus equipped for her "heavily weighted life." Education and responsibility, responsibility and education, are the means and the only means. She must study, as the best boys study, everything that braces and gives tone to her sensitive organization. She must have money to keep strict accounts of, and entire responsibility for its use and its preservation. That she is not more absolutely enfeebled by her long centuries of minority shows her native power and elasticity.

When she has reached this point, and not till then, will she be equal to man as a political force. Then she will vote, not because it is her privilege, but because it is a duty which she is bound to perform. She will have become constrained to habits of mental accuracy, and in some degree have regained the advantages which men, even the ordinary specimens, have over her now from the patient drill of their business life and of their subordinated activities.

Women will be less vituperative when this new era is initiated, and will then do more justice to the cause they have so warmly at heart.

ONE OF THE REMONSTRANTS.

A GOOD MAN AND A TRUE LIBERAL GONE.

B. F. UNDERWOOD, Esq.:

Dear Sir,—I desire to notify you of the death of our friend, J. C. Michener, M.D. He died on the 14th inst. on his cotton plantation near Hutchins, Texas. His remains were brought home, accompanied by his wife; and yesterday, the 18th, we buried him in the cemetery at Adel, Iowa, by the side of his father, at whose funeral services you officiated only a few years ago. The Doctor had been afflicted for a number of years with Bright's disease of the kidneys, but finally died of pneumonia, which may have been only a culmination of the former disease.

His funeral was largely attended by the people of Adel and surrounding neighborhood; and a long procession of friends, irrespective of creed, followed him to his grave. Mr. B. F. Greene made a very appropriate address, followed by remarks from Mr. S. R. North and the reading of Bryant's *Thanatopsis*. He died in his fifty-eighth year. I am not acquainted with his early history and education. As you are so well acquainted with his character and with these few facts of his death and burial, it would be gratifying to his wife and friends, if you would prepare a short obituary notice for your paper. Mrs. Michener wished me to send you word of her affliction, which bears now so heavily upon her; for, as you know, the Doctor was a most kind and affectionate husband and father.

> "His life was gentle; and the elements
> So mixed in him that Nature might stand up
> And say to all the world, 'This was a man!'"

The respect shown by the people of Adel in their attendance at his funeral is evidence that the liberal truths and ideas, which he had done so much to propagate in his long residence there, are bearing good fruit; for, if his death had occurred at the same place twenty years ago, hardly a Christian would have ventured to assist at his burial.

Yours truly,

J. H. STRONG.

DES MOINES, April 19, 1884.

[The above letter, from one who was for several years a neighbor of Dr. J. C. Michener, is so just and comprehensive a tribute to his character that we have taken the liberty to print it. Many of our readers will learn with deep regret of Dr. Michener's death. Some of our Eastern readers will remember his pleasant face and modest bearing at the Congress of the National Liberal League, held in Philadelphia, July, 1876. He was a man of vigorous intellect and sterling moral worth. His heart was as tender as a woman's, and his hand was ever ready to help where help was really needed. His sympathy and kindness in a sick-room, which we witnessed many times, were remarkable in one so resolute and firm when heroic treatment was demanded. He was well-read in modern science. He believed in nothing of a supernatural character. He was positive in his convictions, but a broad thinker, and conciliatory to those from whom he differed. What he believed he advocated, whether it was popular or not; and he was ready to contribute to its support. His interest in the Liberal League, the first two years of its existence, was manifested in various ways; and, but for the unfortunate course that was taken, he would have given time and money to establish auxiliaries in Iowa. He retired from a successful practice at Adel, Iowa, a few years ago, and has since lived, with health somewhat impaired, at Hutchins, Texas, where he died.—ED.]

EXTRACTS FROM LETTERS.

From Sydney, N.S.W., comes a letter from Mr. William Shaw, from which the following paragraph is taken: "I may mention, while writing, that one of the oldest subscribers in this city has passed away; namely, Mr. William McDonnell. He was the father of the Unitarian church in this city, and foremost in every liberal movement here. His life was a blameless and beautiful one; and his memory will be long revered by those he came in contact with, especially the inhabitants of the suburb of Balmain, who will not soon forget his scientific lectures to the people in the School of Arts. He was buried in Balmain Cemetery without any religious service, according to his last wish, Mr. Camm (Unitarian minister) merely delivering an address to those who followed his remains to the grave; and these comprised a large number of the most respected citizens of Sydney."

To the junior editor, Prof. J. E. Oliver, of Ithaca, N.Y., writes the following thoughtful words: "I am delighted that your lecture work so prospers this year. I hope it emphasizes the ethical side of things as well as the purely philosophic; for perhaps only by the earnestness of Liberals of the Free Religious Association and kindred types can a general (though temporary) collapse of morals, and even of free institutions, be averted. We must arouse what is noblest in men,—conscience, justice, humanity, moral idealism. We must do what the best Christian preachers would fain do, but cannot, because their appeal is backed rather by flimsy and discredited 'authorities' than by science and reason, and because the precise methods whereby they would serve humanity are so often merely traditional. In the new religion that will save us there has got to enter the moral warmth of early Christianity with the intellectual coolness of modern science."

E. D. Burleigh writes from Philadelphia, "Of all the papers we take, *The Index* is the one we value the most."

Another Unitarian minister writes, "I wish *The Index*, the most up-to-the-time paper I know, all possible success."

A Unitarian minister writes from a Western city: "*The Index* is provokingly brilliant and delightfully good-tempered. It supplies a good mental tonic."

Robert Moore, of St. Louis, Mo., writes, "I have been a subscriber for *The Index* from the first number, but never got so much for my money as now."

From J. G. Whyte, Ontario: "I am well pleased with *The Index*, and hope it is thriving financially as well as it deserves. It has the cleverest female contributors of any paper I know."

Thomas Burk, from Bozeman, Montana, sends a letter from which one sentence is copied, "*The Index* is certainly a most excellent paper: I presume I shall take it till either one or the other of us shall expire."

This sentence is from D. M. Laren, Warren, Ohio: "I am more and more satisfied with the paper, and shall make an effort to extend its subscription list. *The Index* and the *Nation* are papers that an American may be proud of."

From Rabbi Isaac S. Moses comes this encouraging word: "I take this opportunity to tell you of the extreme pleasure your valuable paper affords me. Though not agreeing with all of its tendencies, I admire the earnest spirit in which it is directed and the able hands that edit it."

In a business letter, Mr. Richard Cogor, of London, England, says: "I do all in my power to induce my English friends to become annual subscribers, as I have been for the last ten years. The articles are so good, and I find the paper is becoming increasingly interesting and more valuable to me every year."

WENDELL PHILLIPS' RELIGION.—We know what Mr. Phillips' opinions were on religion; for, in a conversation that we once had with him on the subject, he informed us, and his religion came as near to that of Thomas Paine's as any of which we ever read or heard. It was simply "to do good," and that was what Paine said was his religion. We suggested to Mr. Phillips, in the conversation to which we allude, that his friends would like to have him give a lecture expressive of his views of Christianity. He said that he would, and he did. The lecture was given in the Indiana Place Chapel (formerly Rev. J. F. Clarke's). We were present, and heard Mr. Phillips say that Christianity, as he understood and believed it, did not consist in joining a church, nor in subscribing to a creed, nor saying prayers, nor hearing preaching, nor belonging to any sect, but that it meant an upright and useful life, and in being kind to the poor, the unfortunate, the outcast, and the oppressed; and, in this connection, he mentioned the benevolence of the Good Samaritan, whose conduct Jesus approved, though, said Mr. Phillips (with a twinkle in his eye), as that philanthropist was travelling on Sunday, some people probably called him an infidel! The religion of Wendell Phillips was in no sense theological, but entirely philanthropical; and, whether he is called a Christian or by any other name, his whole career illustrated the truth of the familiar couplet of Alexander Pope:—

> "For modes of faith let graceless zealots fight:
> He can't be wrong whose life is in the right."

—*Investigator*.

CREEDS AND DEEDS.

I asked my neighbor what he thought
Of God. He looked me o'er and o'er,
Then answered, God I must esteem
Unknowable forevermore.

I saw my neighbor in the dusk
Steal forth and stand with upturned face:
The glinting stars showed me a soul
That worshipped, though but empty space.

I asked my neighbor what he thought
Of Christ. He said Christ was a man
Like to the rest of us; no God I see
Forth shadowed in his life's brief span.

I saw my neighbor in the haunts
With vice and shame and misery fraught,
With spotless hands and holy zeal
Doing the things which Christ had taught.

I asked my neighbor what he thought
Of heaven. He said, heaven is a dream:
As the mere foolishness of man
Thoughts of another world I deem.

I saw my neighbor planning out
Large charities, from whose success
The coming years had most to gain,
When he was dead the world to bless.

Then said I, Neighbor, what you think
With your cool head I know in part,
But care not; for I now have found
What you think of them with your heart.

And you may foster as you will
Your unbelief in all the creeds,
So that you keep your faith still strong
In the Great Gospel of Good Deeds.

And out of this, perchance, at length
A higher hope and joy may spring,
Of your life's work the glorious end,
Its crowning growth and blossoming.

HATTIE TYNG GRISWOLD.

BOOK NOTICES.

BODY AND WILL. By Henry Maudsley, M.D., Prof. of Medical Jurisprudence in University College, London. Republished by D. Appleton & Co. 1884.

This is the fifth book by Dr. Maudsley, treating of mental or psychological themes from the new standpoint of modern physiology. He says of it: "Its justification from my stand-point is that I have been engaged all my life in dealing with mind in its concrete human embodiments, and that, in order to find out why individuals feel, think, and do as they do, how they may be actuated to feel, think, and do differently, and in what way best to deal with them so as to do one's duty to one's self and to them, I have had no choice but to leave the barren heights of speculation for the plains on which men live and move and have their being. It is not enough to think and talk about abstract minds and their qualities, when you have to do with concrete minds that must be observed, studied, and managed." His long experience and study have led him to discard the metaphysical doctrine of free will, as it is commonly held and taught, as a thing positively absurd and impossible. "The freedom of an energy from any mode of determination is not intelligible to human apprehension, which apprehends only under the category of causation" (p. 5). "Men have lived and acted in all places and at all times and on all occasions as if the will were governed by natural motives, and as if its operations could be reckoned upon with some assurance" (p. 8). "Laws have been made from the earliest times, and punishments inflicted systematically upon law-breakers under the tacit implication that will is not an undetermined power, but that it may be influenced by motive to act in this way or that" (p. 8).

The testimony of consciousness, so called, is thoroughly examined, and shown, he thinks, to be illusive. "There is no such existence as a general or abstract consciousness in the individual." Consciousness is only a state of the man, organism, or person who wills, there being no independent existence or entity, called will, apart from the particular act of willing. Hence, will, in the abstract, can be no freer than the human person, body or soul, who wills. We are conscious that we act, but entirely ignorant of the conditions which determine our particular consciousness. Dr. Maudsley, holding to the law of the conservation of energy as of universal application,—that the sum of energy in the universe is a constant quantity, and that nothing takes place or can happen outside of the law of causation,—does not hesitate to affirm that no mental act ever transcends its antecedents; the antecedents having an existence in the sum of things which we call nature, embodying no less the mental and moral history of humanity than the so-called impersonal, chemical, and physical forces of matter. "Consciousness only illumines directly the mental state of the mind; reveals nothing of the long train of antecedent states, of which the present state is the outcome." The long chain of antecedents, reaching back through ages of imperfect experiences, and all linked together by the law of heredity, is the principal factor in the making of the present life, both conscious and reflex. The facility to act in any particular way, through the will, as we speak, is an acquisition, not perhaps of any one time or one individual, but of all the race experience; and, in many instances, this facility passes into reflex and unconscious action. The keenest self-inspection can never make plain "all the component motives" of a particular act of will. "It is not possible to seize and measure each minute and operative thrill of energy, to bring all the co-efficient factors into the light of consciousness" (p. 29).

Consciousness can have no more authority than the ego which gives it. Beginning with the ego, we must end with it. Objective truth requires objective criteria. Dr. Maudsley thinks that consciousness has no authority to say whether mental action is correlated with brain action or not; but, from other facts and objective reasons, he argues that the nervous brain structure is the foundation of mental life, and registers in memory the different states and processes of mental action. This appears to be his dominating thought, and the thesis of his book. That this view is contrary to the prevailing and traditional theory of the will, every one can see; and yet that it is the position toward which all modern study in science and psychology is drifting, who will deny? The new facts of physiology and nervous life go to prove that human life and thought, and animal life and thought, are substantially one and the same; and this no more degrades the human than it exalts the animal. The contents of consciousness bear the same relation to law, to natural causation and the body, that unconscious or reflex action bears; and it is illogical to draw a line of absolute demarcation between conscious and unconscious life, as between "two entirely separate orders of existence." Where the popular belief predicates a mysterious "soul," Dr. Maudsley sees the equally mysterious nerve-centres as sources of both conscious and unconscious purposive action. He seeks simply to find out how, if he may, this automatic, mechanical, or spontaneous energy acts, not why, nor yet even what it is. "It is vain to ask why it is so: we must observe what has taken place, accept this as ultimate, and be satisfied to trace how it is so" (p. 132). His idea is that the mind "is not an independent, perfectly distinct, self-sufficing being, any more than the body; that it is continuous and dependent; that it is a becoming from the basis of all human past, through the means of an essential co-operation of surroundings; that it can be adequately studied and thoroughly known only in connection with and as part of another and larger organism, the social body, humanity, which is as essential to the existence and unfoldment of mind as is the presence of the individual physical body, or as thought is to the progress of knowledge and art.

So far as this book is concerned, it would be manifestly unjust to say Dr. Maudsley is a materialist, even though there were no *odium theologicum* attached to the word; for, so far as herein appears, he is working only in the interest of true science and useful knowledge, aiming mainly to push back the barriers of ignorance and to reveal by the aid of law and the oneness of universal force the how or manner of mental activities,—a discovery which will be of great importance in the establishment of a correct science of education as well as of philosophy. I do not see that it will abolish all mystery, explaining away the supposed divine and preternatural origin of human life and thought which is so widely held to be a sacred article of belief. It simply pushes out a little further the bounds of knowledge, and reclaims to science what has been thought to be beyond science.

A. N. A.

MANUAL OF UNITARIAN BELIEF. By James Freeman Clarke. Boston: Unitarian Sunday School Society, 7 Tremont Place. 1884. pp. 64.

In the preface to this work, Dr. Clarke says that the "Unitarians have no creed; and, as their union is one of sympathy and co-operation and not of formulas, no one among them has any right to define the views of others. A manual such as this is meant simply to express what, in the opinion of the writer, is the general belief of the majority of Unitarians. Every proposition contained in it is liable to discussion, correction, and revision. No one is bound by it; and it does not attempt to limit thought, but rather to stimulate and rouse inquiry." Questions on each lesson, prepared by Mrs. Kate Gannett Wells, contain suggestions for conversation, and add to the value of the work.

THE principal article in the *Art Amateur* for April is a sketch of a young French artist, only thirty-four years of age, named Habert Days. Although M. Days does not yet seem to have achieved any very important work, yet it is interesting to see what the young men of to-day are doing, and how largely they find their best means of support from the popular illustrated papers instead of the personal favor of rich patrons. M. Days has a lively and somewhat grotesque fancy, and is constantly engaged in decorative work for the French illustrated journal *L'Art*. His drawing is good, and his designs for "encadrements de page" and tail-pieces often striking and original; but, judging from the reproductions offered, we should not rank him as high as "Theodore Child" does, for his designs have not the grace of line and delicacy and play of fancy, revealing a knowledge of the subtle charms of nature, which make the delight of the best decorative work. Lovers of old furniture will be interested to read how it can be prepared to order, and amateurs will find much information in regard to brass work and the principles of house furnishing. A design for wall paper by Walter Crane, if harmoniously colored, would be very effective. A carved wood balustrade of the time of Louis XIV. is very bold. Even the art of the toilette is not slighted, but suggestive hints are given as to the employment of colors in dress. The *Art Amateur* is doing good service in many ways. We wish it would employ some competent critic to give us an account of the art schools of the country, that the many young people seeking instruction may learn where they can study with most advantage.

IN the *Atlantic Monthly* for May, a most attractive number, are continued the serials "A Roman Singer," by Mr. Crawford, and "In War Time," by S. Weir Mitchell. "The Anatomizing of William Shakespeare," by Richard Grant White, is an interesting study of the writings of the great poet; and it dissipates some illusions in regard to him. Henry James continues his French studies of travel. Prof. E. P. Evans has an article which, although its title "Linguistic Palæontology" would seem to indicate that it is for scholars only, will be found of deep interest to all intelligent readers. Dr. George E. Ellis contributes a very interesting paper on Gov. Thomas Hutchinson, who was in authority in the Colony of Massachusetts Bay just before the Revolution. Henry Cabot Lodge writes of William H. Seward, and Miss Harriet W. Preston has an admirable essay on "Matthew Arnold as a Poet." The short story of the number is by E. W. Bellamy, and is entitled "At Bent's Hotel." Articles of public national interest are "The Silver Danger," by J. Laurence Laughlin, and "The Progress of Nationalism," by Edward Stanwood. The poems of the number are by T. B. Aldrich, H. H., and Edith M. Thomas.

PERSONAL ITEMS.

THE project to build in London an expensive memorial monument to Charles Dickens has been nipped in the bud by the citation of this passage from his will: "I conjure my friends on no account to make me the subject of any monument, memorial, or testimonial whatever. I rest my claim to the remembrance of my country upon my published works."

SOME time ago, in commenting upon an editorial in *The Index* on "The Ethical Consequences of Darwinism," the *Radical Review*, while indorsing the main conclusions, expressed the opinion "that Mr. Underwood does not sufficiently appreciate the force of heredity." Last week, the *Review* reprinted from *The Index* an article on "Heredity" by the same writer, and says with characteristic candor that "it proves we were mistaken in our estimate of his views on that subject."

A CORRESPONDENT of the Philadelphia *Times* writes thus of Gen. Robert Toombs: "The General has long been a Methodist in conviction, but only recently has he become a communicant of the church. His determination to connect himself with the church was expressed in his usual style. Meeting his old friend Bishop Pierce one day, he said: 'George, I want you to baptize me. I have no religion; but I am afraid some of these young fools who prate about infidelity will say when I am dead I did not believe in Jesus Christ, and I wish to avow my faith.'"

THIS is what *Nature* says of the death of Prince Leopold: "In the death of the youngest and one of the most accomplished of the Queen's sons, the cause of education has sustained a loss. The Duke of Albany knew well what science meant, and on several occasions publicly expressed his sense of its value in respect of the nation's welfare, and the necessity for its introduction into our systems of education. There can be no doubt that, had he lived, he would have rendered service to the best interests of the country. It is so rarely that princes have the tastes and leanings of the late Royal Duke that we could ill afford to lose him."

THE *Independent* advises the people of Northampton to continue to elect Mr. Bradlaugh, "if necessary, as long as he lives, until his rights and their rights are fully recognized and respected by the House of Commons. The course pursued by the House is alike ludicrous and outrageous; and, in the end, it will and must be abandoned, if the issue is persistently forced upon it. We cannot for a moment believe that the public sentiment of England will permanently tolerate so grievous an outrage upon the representative rights of the people. Let it be settled that the elective constituency is the supreme and final judge of a representative's fitness for office, when exercising its judgment in a legal way, and so long as he is subject to no legal disabilities, no free government can afford to give up this principle."

DORÉ GALLERY

Of BIBLE ILLUSTRATIONS and Stories. Including 52 cartoons, and a portrait of Doré. New and finer edition, large quarto, bevelled boards, fine cloth, richly ornamented. Price reduced from $5.00 to $2.00.

The unrivalled cartoons of the most widely famous artist of modern times; the most graphic illustrations of the sublime events and truths of the Bible ever drawn by an artist's pencil.

The battles of *The Literary Revolution* have been fought principally in the interests of choice literature for the masses. It is proposed to win also for them the best works of the great masters illustrating literature.

Wonderful Offer.

Notwithstanding the marvelously low price, I offer the following discounts to agents and clubs:—

5 or more copies, each $1.50.
10 or more copies, each $1.25.

ON CONDITION: First, That the addresses of all members of the club are sent with the orders. *Second*, That not more than one name in a club shall be that of a customer who has previously purchased books from me. Specimen for club agent, $1.50.

The point to this "wonderful offer" is that I want *new customers*, which, as experience proves, means permanently increased trade.

Health by Exercise.

By GEORGE H. TAYLOR, M.D. Large 12mo, Long Primer type, 462 pages, with numerous illustrations. Cloth, 50 cts.

A new, enlarged edition of this greatest authority on the topics treated. A book for both healthy people and invalids,—adapted to home use as well as for the skilful physician. What specific exercise is appropriate for specific ailments, how to *prevent* as well as cure disease, are the practical questions solved.

"Blessed, say I, is the man who has a good doctor, but more blessed he who can do without him. To enable my readers so to do has been my aim."—*From Author's Preface.*

P.O. Box 1227. 393 Pearl St., New York.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

The Society for Ethical Culture, Boston, have been presented by their speaker, Clara M. Bisbee, with a number of hymns collected and arranged by herself, and designed to express the common aspirations of humanity. Societies representing the extremes of Naturalism and Supernaturalism may alike enjoy them. Terms, $2.00 per hundred. Address C. M. BISBEE,
Clark Street, Dorchester.

J. HART & CO.,

BANKERS,

Doylestown, Pa.

Draw Bills of Exchange on England, Ireland, and other points in Europe. Agency for the American Line of Steamers.

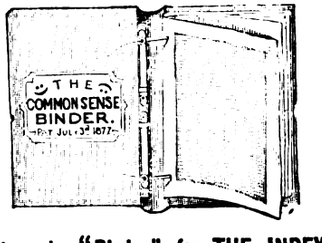
Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued.

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).



"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith.*

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago *Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—*Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.*

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

BELFORD CLARKE & CO., Publishers,
CHICAGO, ILL.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis,

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

TWO OF the candidates for nomination as Overseers of Harvard College, Francis W. Palfrey and Henry Cabot Lodge, have expressed themselves against having attendance at morning prayers and Sunday sermon remain compulsory. The same ground would undoubtedly be taken by Col. Higginson, whose name is not on the regular list, but has been proposed independently.

ON the 1st inst., a resolution was introduced in the House of Commons "that the House considers that largely to increase the electoral privileges of Irishmen at a time when many are bitterly opposed to the English connection, and when the openly avowed object of their leaders is to sever that connection, is dangerous to the welfare of the State, and cannot fail to strengthen the aims of the separist party." Mr. Gladstone in an earnest speech in opposition to the resolution declared that it would be impossible to maintain the union between England and Ireland, except by giving equal rights to both; that England was strong in wealth and population as compared with Ireland, and she should show that she was equally strong in right and justice. The words of Mr. Gladstone were, under the circumstances, noble and courageous. The motion for the adoption of the resolution was not pressed.

THE first number of a new Italian quarterly, entitled *La Nuova Scienza Rivista dell' Instruzione Superiore*, has been issued. It is edited by Prof. Enrico Caporali, of Todi, Umbria. *Nature* says: "As implied by the title, the aim of this periodical is to popularize scientific subjects, and to chronicle the progress of discovery in Italy and abroad. The editor invites communications in the chief European languages, and declares that his efforts will be mainly directed to promoting the unification of the sciences with a view to the ultimate constitution of an exact philosophy. To the present number, he contributes two spirited and learned papers on 'Modern Thought in Italy' and on 'The Pythagorical Formula of Cosmic Evolution.' The appearance of such a publication in a small provincial town is itself a striking illustration of the general revival of serious studies since the establishment of political unity in Italy."

LAST week, the Relief Work branch of the Chicago Society for Ethical Culture held its first meeting. Mr. Salter, in his report as president, took a hopeful view of the first year's work. The aim of the society, he said, was "to show the public how work can be done and to set an example." From the Chicago *Tribune's* report, we quote the following paragraph: "F. H. Tobey, the treasurer, reported the annual receipts at $2,102, and the disbursements at $1,818, leaving a balance with which to begin the new year of $284. The report of Henry N. Mann, the secretary, showed one hundred and seventy cases treated and fifteen hundred and eighty-four calls made. Of the number treated, eight had died. Mrs. Ernest Prussing, President of the Ladies' Auxiliary Union, made an encouraging report of the assistance rendered in furnishing supplies and clothing to the destitute in the care of the society. It was decided, in response to the request of Miss Dr. Waite, of Hyde Park, to establish a branch in that place."

JAMES PAYN, in an article in the *Independent*, says: "It is five and twenty years since I lived in Edinburgh, and no doubt great changes have since taken place there in social matters; but what struck a stranger most, at that time, was the extraordinary disregard of the precept that the Sabbath was made for man, and not man for the Sabbath. A man might do many things much worse, and be regarded with much charity; but, if he broke the Sabbath, no one had a good word to say for him. The only parallel to such a state of things occurs in a certain narrative of a pious stockbroker, who about that time was taken by Italian brigands. They were thieves and murderers of the deepest dye, superstitious to the last degree, and speaking a language of which he understood nothing; yet a great deal of his captivity was spent in the attempt to teach them to observe Sunday. He made no other missionary effort, but at that he worked away, until he was ransomed, with the greatest perseverance; and I have no doubt he was a native of Edinburgh."

A NEW edition is announced of *Vestiges of the Natural History of Creation*, a remarkable work which was published anonymously forty years ago; and although bitterly attacked, especially on religious grounds, it made no small impression upon scientific thinkers and contributed not a little to prepare the way for the acceptance of the views of other expounders of evolution whose writings are read to-day. Four editions of the work were published within four months; and, since its first publication, twenty-four thousand copies have been sold. The new edition will have an introduction by Alexander Ireland, who will give the name of the author, Dr. Robert Chambers, editor of *Chambers's Journal*, and author of numerous biographical, historical, and archæological works. An exchange says: "Only four persons have known the secret of the authorship, two of these being the author's brother, the late Dr. William Chambers, and Mr. Ireland. Up to the end of his life, in May last, the former was unwilling that the secret should ever be divulged; and he urged Mr. Ireland, as the surviving holder of it, to allow it to fall into oblivion,—a request with which the latter could not comply." For many years, Robert Chambers has been regarded as the probable author of the *Vestiges*.

"CREMATION," says the Springfield *Republican*, "has received an undeniable set-back in England by the refusal of Parliament to license cremation. This course has seemed not unlikely, since Sir William Harcourt took occasion several weeks ago to express himself in the Commons as stoutly opposed to incineration, and determined to obstruct it in every possible way. This ground was the purely sentimental one of personal dislike for the innovation. That of the government was about as much so upon the final vote,—the alleged public feeling against cremation. This action leaves the matter in a peculiar and, on the whole, rather ridiculous position. The law says that the burning of a corpse is perfectly legal, if it is not so done as to outrage decency: even the incineration of an infant by a half-crazed father who indulges in wild Druidical rites, so called, is to be permitted. The decent burning of a body, however, in a furnace built for the purpose and with every safeguard recommended by science, Parliament forbids. The cremation society's crematory, which has never yet been put to its proper use, must therefore still remain idle. But only for a time: the growth of public sentiment in England is undeniably in the direction of this wise reform in the method of sepulture."

THE Convention of the Free Religious Association held at New Bedford last week proved a successful and interesting occasion. It was held in the handsome church of Mr. Potter's society, which was cordially offered for the purpose. A very fine audience, almost filling the house, greeted the speakers at the opening evening session. Mr. Potter presided, and made an opening address on the historic significance and aims of the Association. Mr. Savage followed with his superb discourse on "The Change of Front of the Universe," and Mr. F. A. Hinckley closed the session with a brief address on "The Coming Church." On the following day, two sessions were held, with somewhat diminished, but still good attendance. Mrs. A. M. Diaz opened the afternoon session with a thoughtful paper on "Spiritual Strength." Miss M. F. Eastman followed with bright remarks on the same topic, and Mr. H. W. Robinson spoke at some length of his recent observation on the religious condition of Germany. In the evening, Messrs. W. H. Spencer and B. F. Underwood and Mrs. E. D. Cheney made the literary feast, speaking respectively on immortality, the ethical aspects of evolution, and the ability of Free Religion to satisfy the heart-side of life. Much public interest was manifested in the meetings, and a considerable number of new members joined the Association.

MR. KIMBALL'S PLEA FOR THE MORMONS.

We not only willingly but gladly gave room last week to Mr. Kimball's essay on "Gentile Testimony to Mormon Worth." *The Index* seeks to do full justice to every form of faith. This array of evidence which Mr. Kimball presented to certain good qualities which may be found in the Mormon community is a much needed reply to the altogether too prevalent wholesale denunciation of Mormonism as nothing but a sink of iniquity. In that denunciation we have never joined. We have always given the Mormon community credit for certain social and economical virtues. We have been aware of the existence of the kind of evidence which Mr. Kimball has collated, though sometimes making allowance, as he admits to be right, for the rose-colored view of a too optimistic observer, but ready to make even more allowance for the bigoted eyes that could see only evil. It is entirely from this free and impartial point of view that we would now examine Mr. Kimball's paper, admitting in general the force of the testimony he has gathered, but questioning certain inferences he appears to have drawn from it.

1. Mr. Kimball seems to assume that all the good things about Mormonism, to which his witnesses testify, are the result of its having instituted polygamy. He says marriage is an institution whose form is "to be determined by its results in each community"; and he adds, "If Utah shows practically—*and here is where the force of the testimony quoted comes in*—that polygamy, guarded and penetrated by the Mormon religion, produces as much happiness, intelligence, morality, freedom, and of all the virtues, prosperities, and satisfactions of life for its citizens as monogamy does in other communities for theirs," etc. The part of this quotation which we have italicized appears to indicate that Mr. Kimball regards the general happiness and prosperity to which the testimony refers as due to polygamy. But this, we think, is a fallacy. Virtues of a similar order may generally be found in Shaker communities. Shall we say that they are there due to the non-marriage tenet of such communities? Besides, only a comparatively small number of Mormons live in polygamous relations; and the institution itself was not included in the original Mormon revelation, but was an afterthought, and one which many of the Mormons think may be abrogated without substantially affecting the condition of their church. Mr. Kimball, to be sure, may say that he was only comparing, in respect to their moral and social conditions, a polygamous community with monogamous communities, meaning simply to assert that, *so far as these conditions are affected* in each case by the marriage institution, the advantage is shown to be on the side of the polygamous community. But even such a comparison is invalid as a defence of polygamy in Utah. The Mormon population, for the most part, is a picked community of simple people, bound together and to certain rules of conduct by a fervent religious faith, and guided by a very astute leadership. The conditions of life, as to the temptations, ambitions, and vices that beset mankind, are very different from what they are in the great miscellaneous, struggling world outside. To secure a valid, logical comparison for his argument, Mr. Kimball should have another religious community of similar faith and ecclesiastical government to that of Mormonism, but differing from it in maintaining monogamy instead of polygamy. Then, and then only, could legitimate inferences be drawn concerning the general social and moral influence of the two orders of marriage. Moreover, if, as Mr. Kimball says, it is "monogamy which by actual count furnishes ninety-eight per cent. of the criminals in its [Utah's] penitentiary," while "polygamy furnishes only two," the wonder is that he should stop with only a protest against enforcing monogamy on Utah. If this vast difference in criminality be owing *wholly and solely* to the difference of marriage institutions, and if, as our friend thinks, marriage be "simply a social regulation," why should he not heroically smother his feeling that monogamy best "meets our hearts' need" in the East, and move at once for the conversion of his fellow-citizens in Connecticut to polygamy as the surest means of emptying their prisons?

2. Inferring from the general condition of the Mormon population that polygamy is producing no evil that calls for the interference of national law, Mr. Kimball says that polygamy must be regarded as only technically and legally "a crime," not morally; and that "marriage in itself, whether monogamic or polygamous, is intrinsically without moral character," and "simply a social regulation." There is, of course, a distinction between a legal "crime" and a moral "crime." But it is one of the marks of advancing civilization that the statute law defining crime gradually harmonizes with the demands of the enlightened moral sense. A few years ago, in this country, slavery was not legally a crime in the Southern States, while harboring and aiding a fugitive slave was a legal crime in the Northern States. By moral law, the position was just the reverse. And now the statute law both North and South has been made to conform to the moral law. Morality itself both in its requirements and its practice is subject to growth and advancement. It is a realm that enlarges with man's progress. And no part of human life, perhaps, better indicates the general moral progress of mankind than the gradual improvement of the institution of marriage. Marriage, of course, did not originate in a sense of moral obligation. But more and more, as mankind has advanced, have moral ideas been infused into the marriage institution, until now to characterize it in its highest forms as even intrinsically without moral character seems marvellously to miss its most essential principles. In our view, all genuine marriage to-day rests upon *absolute equity* in all those relations, affectional, mental, physical, between husband and wife, which the marital union involves. Here, then, is equal moral obligation between the parties at the very foundation of their union. But this equity of relations cannot exist where the wife has to share the husband's affection and regard with several other wives. True, it by no means always exists where the legal form of marriage is monogamic. But equality is the ideal toward which civilized society is climbing; and statute law and public opinion behind it should be made stricter rather than more lax, in order to maintain the advance. To defend or excuse polygamy among the Mormons, no matter what virtues in other directions they may show, is to be false to this moral ideal of equal marriage, which civilization has won in theory, though still needing all the helps of the press, the pulpit, the platform, and the statute book to hold it in practice.

3. The power of religious fanaticism to break down those natural instincts and aspirations which, especially in women, tend toward this fine idea of equity in the marriage relation, is vividly depicted by Mrs. Helen Hunt Jackson, in the article in the *Century* of the current month, from which Mr. Kimball quotes her testimony to certain good points in the moral condition of the Mormons. She shows how the natural idea of marriage, with all its genuine sacredness of human affection and its infinite capabilities of ministration to individual and social culture, has been transformed by irrational and superstitious dogmas into a monstrous act of religious sacrifice,—abhorrent to the natural sentiment of the human heart, a terrible torture and cross, but to be endured, because religiously commanded. After saying that the most intelligent of the Mormon women no longer profess to be happy in the plural marriage system, she quotes what one of the best educated and most devout among them said to her, as follows: "I implored my own daughters, and I do the same to all young women over whom I have any influence, 'Do not marry into polygamy, never think for one moment of marrying into polygamy, unless you are sure that religion is more to you than all else in this world. Nothing else can enable a woman to endure the torture of it, or to live up to the precepts of the church.' One of my daughters especially I wept and prayed over to keep her out of it. I feared it was beyond the power of grace to so modify her natural temperament as to make the life endurable to her. Of course it is nothing but selfishness in us which makes this torture. And, if we were wholly Christians and good Mormons, we should rise above that selfishness, and never have any jealousy or pain; but it is born in all of us, and there is no getting free from it." This is testimony from an educated, devout, New England born woman, a Mormon wife and mother, who, from religious conviction, shares her wifehood with five other women, and knows, from many years' experience, what polygamy means. How can any one read such words without feeling a new and even indignant protest rising within him against a form of marriage into which a pure and noble-minded woman can enter only by crushing out the deepest natural sentiments of her heart at the dictate of a false faith? Where is there a greater crime against nature than this which thus transforms the holy instinct of wedded love and motherhood into a life-long torture? And, when we consider that this function of woman's nature is thus debased from its possible pure felicity through appeals which take advantage of woman's religious susceptibilities and of her high capacity for unselfish devotion and sacrifice, one can but feel indignation also toward the ecclesiastical system which thus seeks to build up its power. This witness whom Mrs. Jackson brings forward gives us an interior view of one of the direct "results" of polygamy which Mr. Kimball appears to have passed by without notice. And, so long as such a cry as this comes out of a Mormon woman's heart, let not the Mormons be led to think that any general condition of social order and prosperity which they can exhibit is going to justify or excuse their crime against marriage before the judgment of the civilized world.

4. Mr. Kimball twice hints in his paper that "Free Religion" is specially obligated by its principles to defend the Mormons against any attempt by the national government to suppress polygamy. But one of the special objects of "Free Religion" is to emancipate the religious sentiment from bondage to ecclesiastical dogmatism and superstition. And we have nowhere seen of late a more forcible illustration of the need of such emancipation than in the cruel perversion of the natural idea of marriage which the superstitious dogmas of Mormonism have forced upon the mind of this intelligent woman whose pathetic sentences Mrs. Jackson prints. And, since this actual crime against woman's nature is made a legal crime by the general legislation of the country, it is not for "Free Religion," which pleads for natural human rights against despotic superstitions, to call for a stay of the law in Utah, provided only the law concerns itself with conduct and not with religious

Digitized by Google

belief. If, however, Mormon polygamy be a crime so strongly entrenched in religious fanaticism that it will not be easy for any law to reach it peaceably, then all the more reason is there why public opinion should persistently declare against it, and not be enticed into covering it with the palliating plea that, though monogamy may be the best form of marriage for the rest of the country, polygamy has been proved to be the best system for Utah.

WM. J. POTTER.

AMERICA.

America, as the United States are emphatically called in Europe, is rapidly becoming the world-overshadowing nationality which the Fourth of July orators of forty and fifty years ago seem to have had in their minds as the subject of their inflated rhetoric. Its greatness has ceased to be a matter of prophecy and grandiose declamation. It is a fact which is becoming more and more palpable to all the world. The tone of condescension and occasional contempt which used to characterize the strictures of European critics upon America and men and things American is no longer indulged in. Even the arbitrary militarist, Bismarck, the man of blood and iron, is anxious to impress us with the fact of his kindly feelings toward this country. Even the Parisian *littérateur*, laying aside his usual style of banter and persiflage, begins to speak of America with respect, awed by the shadow of its coming supremacy. We ourselves, well assured of the commanding position on the face of the earth which we even now occupy, have lost our whilom absurd sensitiveness to European criticism, and are in a state of apathy and indifference to it, as Mr. Matthew Arnold learned. We ought to be the grandest of nationalities from the very fact that we are the last which civilization has evolved in its circuit of the globe. As Bishop Berkeley wrote in a spirit of prophecy in the early part of the eighteenth century,—

"Westward the course of empire takes its way;
The first four acts already past,
A fifth shall close the drama with the day:
Time's noblest offspring is the last."

We, as a nation, are free from rubbish, except that which is dumped on our shores from Old World countries. Above all, we are wholly and purely *modern*. Human life is lived here in a freer, more cheerful, hopeful, and better environment, social and physical both, than ever conditioned it elsewhere in any past age. If a single century has placed us at the head of existing nations, what will another century do? And our growth is not in the interest of ourselves merely, but of mankind at large, is not at all exclusive or aggressive or a menace to the outside world. The greatest military empire of Europe, with the most successful of Old World statesmen at its head, as I have said, is anxious to impress us with a sense of its friendship for us, although we are not at all a militarism, but are generally unarmed and defenceless, both by sea and land,—that is, against a sudden attack. What a motley gathering of all races, tongues, and creeds is there at our hospitable national board! The most ignorant and destitute of these guests from the outside world make themselves the most at home here, and boast that they are going to take possession of Uncle Samuel's domain erelong. Already, some of these guests are anxious to exclude other outsiders who are as good or better than themselves. This of course is amusing.

Meantime, our progress and growth have been no accidents or mere results of place and time, although place and time have been our auxiliaries. They have been the products of American genius, of an activity, shrewdness, inventiveness, calculation, foresight, and daring altogether American, which have furnished employment, bread, and comfort to myriads of helpless European peasants, who in their own countries lived down on the level almost of cattle. Meantime, our energies have been directed solely to pacific ends and aims. As a result, the average American has more means than the average man of any other nationality ever had. What other country ever had such hosts of people with the power as well as the wish to travel extensively? Our Vanderbilts are not half so noteworthy as the millions of our average population who are living in abundance and affluence. This is the first country in fact to have a thoroughly well-to-do average population, with millions of elegant average homes. Walt Whitman is right in making the average man the hero of his metreless poetry. The fact that Americans are now the most munificent patrons of French art and artists and that the leading Parisian painters, such as Meissonier, for instance, can live in elegance and splendor, because of the patronage of American millionnaires, is freely allowed by Parisian writers. At the same time, these writers prophesy that we shall soon have a host of artists ourselves, who will place us above the necessity of going abroad for works of art. For they see that we are not merely rich, like the Lydians of old, whose gold the Greeks took while they sneered at their barbarism. In all the great art centres of Europe there are hosts of young Americans who are making Europeans aware that we are not merely stupid materialists given up purely to business and money-getting. We abound already in enthusiastic scholars, who prefer "the student's bower" to the mart of traffic, who are loyal to the dictates of the soul or of their higher nature.

"They bide their time, and well can prove,
If need were, their line from Jove."

Our money-getting population rose easily to heroic heights of fortitude and self-denial during the War of the Rebellion. Myriads of heroic boys

"Forsook their comrades gay,
And left proud homes and youthful dames
For famine, toil, and fray."

How prompt is the best part of our population to rally to meet an emergency of political demoralization, and to overthrow the brazen demagogue and his following of roughs and rowdies, as soon as public attention is sufficiently concentrated upon their misdoings! Already, it is clear that the abominations of municipal misrule are to cease in New York and elsewhere. Wretches who take advantage of American good-nature and preoccupation are in the end brought to summary account. Meantime, the gigantic success of America means in the long run the Americanization of the rest of the world. As all the primitive world became Romanized under the martial supremacy of the Roman republic and empire, so all the modern world is destined to be Americanized under the pacific supremacy of America.

B. W. BALL.

MARRIAGE.

"Wedlock is the holy union of two souls in the common search for truth."—*Spinoza.*

However the custom of marriage grew into the habits of the race, it became the foundation of our best moral ideas,—chastity, fidelity, sincerity, self-abnegation, consecration. It lifted the race out of mere physical necessity, above brute force; out of sensualism and unrestrained passion into a sphere of purity and sanctity, wholesome sympathy, elective moral rights, religious reverence.

It threw the race securely into the arena of reason; separated peaceful families from the irresponsible mass, the barbarisms of tribe, and the contest for possession, thus laying the root of justice deep in the mind. Marriage became the basis of secular claims. The rights of property grew out of it, hereditary privileges and distinctions, the sense of honor, the recognition of pure blood, till one great family boasted upon their escutcheon that "all their men were brave and all their women chaste."

It is said women are governed by their intuitions. So be it. So was the Christ, so is the prophet, the poet, all the finer developments of the mind. The intuition of women is as much needed in the world as the logic of the other sex.

All through the slow development of the race, woman has instinctively exercised the right of *choice*. Her *will* has been the basis of the intercourse of the sexes. She *accepts* and she *rejects* according to her will and pleasure, and not infrequently rejects the better man for the worse, and is punished accordingly. All mistakes are punished with the same severity as wilful evil-doing from the law of consequences. It is likely that ideas grew slowly into her mind as they did into the mind of man; but, as intuition is more pronounced in the woman than in the man, I think we must refer some ideas nearly, if not quite, to her mind alone.

Thus, let us for the time being, for the sake of argument, go outside of our commonly received authority,—the Bible,—and go back to a period before Zoroaster or Confucius or Buddha or Moses or Plato lived, when the earth was peopled with nomadic tribes, with multitudes of herds, sheep and oxen and camels and horses; let us go still back,—for we find in Abraham's time marriage was little understood and practised,—and let us picture to ourselves *what might have been* in some palm-tree oasis beside some sweetly flowing water, before cities were built or schools of logic existed; before the great Pyramid of Cheops rose up under human toil and the action of unrestrained power; before the Sphinx suggested, but answered no questioning, back to the time when man had emerged from the cave, and his white tents slept in the moonlight, and there picture to ourselves two beings stirred by that holiest of human emotions, love. Both are beautiful as the primal Adam and Eve of the Garden of Eden. He has the strong arm to protect, she has grown into a sublime intuition of *self-consecration*. And there by the gentle music of the stream, in the stillness of the everlasting stars, they separate themselves from all others,—from father and mother and brother and sister,—and, with a dim but fine poetic sense of a higher, purer, more consecrated life, they erect a tent to themselves, and it becomes the sacred nucleus of a household.

This may sound like romance; but all that is best and holiest in the human mind leans to the poetic side, rises above the claims of the body into the pure light of reason and the imagination. You repel this. You say you will have nothing but scientific truth. Why, the scientist enters into the very temple sacred to truth; and she is allied to that poetic spirit which is fitly called Urania, the soul of sublime unity, harmony, love, which creates the music of the universe. When the man of science dissects the wing of a butterfly, he analyzes a lyric: the blossom is an idyl, and the mighty oaks wrestling in the tempest are Lear-like dramas and sublime epics. You cannot escape a poem in the whole of the great universe, and man is himself the most wonderful poem of all. When these two lovers, as I have suggested, consecrated themselves to this divine oneness, they struck the keynote to the sweetest drama that has blest the human heart. "They builded better than they knew." They founded law, they embraced the

Digitized by Google

ideal, they established order and beauty where had been only contest and violence; they took the helpless child from the terrors of cruelty, and he became the precursor of the household sanctities to all time.

In this self-abnegation, in this self-consecration, from the nature of things I am compelled to believe that the organizing of a better life to the world came from the *intuitions* of woman. Her innate right of *choice* impelled her to devotion to its object. Man, allured by beauty, had from the first been checked by the will of what it has pleased him to call the "weaker sex"; and his natural disposition to woo and win the best prevented him from perceiving the significancy of that *repellent, elective power* existing in my sex. Hence, self-consecration was less likely to be the product of one privileged to forage in all green pastures, than of one who, from the first, folded her arms, and turned her back upon whomsoever she would. Having done this and having selected her companion, she would naturally adhere to him, and strive to hold him to herself by bonds and pledges; and thus to the primal man grew the institution of marriage, before temples were built or priests stood at the altar: a purely elective act, a holy consecration of life, and, as I solemnly believe, entirely the outgrowth of the woman mind.

Others, seeing the serene life which blessed the devotion of these two that I have described, entered into a like contract, and thus society was built up. Man ceased to be forever at war with his neighbor, and learned that the strong arm must be restricted, and human passion be subjected to a sense of right. Man began to feel the power of moral ideas, which are the only permanent ones in the constitution of man; and here comes in from the beginning of society that ostracism of woman by her own sex, of which we hear so much. It is the natural outgrowth of the sanctity of marriage.

Woman, perceiving the sweetness of this consecrated life and the wholesomeness of the family union, regarded with severity those who, from weakness or animal passion, were incapable of this singleness and purity of life; and she has done this from the earliest ages, exacting chastity as the marriage condition and as the condition allied to the higher interests of society. If unable to impress upon the minds of the other sex the sanctities of the marriage relation, woman intuitively saw the excellence of asserting them as the rule of life in her own sex.

I do not think, as some scientists assert, that woman has been coerced and punished into the idea of chastity by the arrogance of man. I believe that she reached the virtue from the intuitions of her own mind, and has been all along striving to instil the like idea into the minds of man,—to teach him the sacredness implied in the human constitution, and to show him what may rightfully be demanded of a creature endowed with the divine gift of reason. The exactions of woman have preserved what is left to us of this wholesome and beautiful relation of the sexes.

When civilization shall have so far advanced that man and woman, conjoined in marriage, shall neither be subordinated by the other, but the individualism of each shall be respected, notwithstanding the implied oneness of the relation,—then we may hope that marriage will become, what Spinoza saw in and through it, the tenderness of love, the elevation of mind, and the supremacy of moral obligation, in the holiness of wedlock. It must not be a chain to gall nor a bond to belittle. Neither should be coerced in opinion or abridged of freedom, but both thinking their own thoughts; intellectually unshackled, except as modified by the affections and influenced by moral considerations; most bound and yet most free by reason of that holiness of relation that enables them to unite in a holier purpose for mental and moral growth; seeking for those higher truths which are the golden chain that links together two souls in the present, and which we must believe take hold of eternal issues and forecast an inseparable, eternal union.

Women are remorselessly cruel to the erring of the sex. So be it, if in no other way they can rebuke the wickedness of man. From the earliest genesis of the race, she gave her testimony to personal sanctity, to self-consecration, thereby laying the foundations of society in a chaste marriage bed and a consecrated family, out of which has grown all that has given to civilization an onwardness and moral purpose. Civilization will decline with the growing desecration of the household.

Men must be brought to see this matter of licentiousness through the eyes of those who suffer most from it. A libidinous old man is a spectacle for the gods to weep over; and yet writers are to be found and a public opinion found that upholds and applauds this savageness as something grand in a man, but nauseous in a woman. It is *nauseous* in both sexes; and the sooner women meet this subject with brave womanly reprehension, the sooner will our weak sisters be emancipated from the bondage of vice. The reform of abandoned women is neutralized by the existence of abandoned men. Why do not men organize themselves into a new order of knighthood, in which chastity will be required of them as it was in the knights of old in the days of chivalry?

The Roman Catholic Church itself struck a fatal blow at the institution of marriage when it denied it to the priesthood, implying that a priest was too holy to be either a husband or a father; and it is easy to understand the excesses that may exist. That Church also makes marriage a sacrament, and denies divorce; but the literature of all Catholic countries shows that an utter contempt for its bonds existed among the people, despite the stringency of the Church. And the thousands of works, from Boccaccio through all the mass of Italian, Spanish, French, and English literature, whose staple of wit is the license of man, the infidelity of husbands, and the weakness and treachery of wives, testify to corruption.

From the earliest ages, the Jews have been the nation of all others that has recognized the sacredness of the marriage bond, and the entire sacredness of the household. In all the calamities of that nation, in all their dispersions and persecutions, they have adhered to this great moral aspect of life. They have preserved the genealogies of families, and children born to them have inherited the wealth of their fathers. And thus, in the midst of all their exiles, they have been what their prophets foretold, a "sanctuary amid the nations." A people without a country, they are the most distinct nation on the face of the earth. They have given ideas to all peoples, and are still a great power in the world of thought.

I believe that one great element of their existence and permanency is to be traced to the institution of the family through marriage. By it, they are free from disease; by it, they are financially clear-headed; by it, they preserve brains adapted to the most vigorous and prolonged intellectual effort; and they are now, in the growth of modern civilization, found to occupy the vanguard in all political and financial as well as progressive developments.

Marriage is a necessity of the race in its highest, noblest aspect. Believe it, there is a sacred, mystic sanctity adhering to this relation of the sexes. It is the source and guarantee of moral ideas. Do not sink it to a consideration involving only the perpetuity of the species, though even there it is holy and divine; but remember, at the flush of life, of youth, of beauty, of chaste blushes, and innocent dreams, love comes upon us, and we are lifted into companionship with the gods. The dull girl is transformed into a creature of taste and beauty. The awkward boor that "whistled as he went for lack of thought" becomes self-reliant and manly Know, then, the divine within you, and honor yourself through this divine spirit of love, which is designed to make you truly a son of man, a son of God.

ELIZABETH OAKES SMITH.

"CHRISTIAN AGNOSTICISM."

In the interesting and suggestive paper on "Christian Agnosticism," by the Rev. Canon Curteis, republished in the May number of the *Popular Science Monthly* from the *Nineteenth Century*, certain common and apparently candid questions are raised; and a call is made on Mr. Herbert Spencer for his opinion, if not his help, to establish the Christian symbolism of religion.

There are many persons who, like the Rev. Canon Curteis, have come to admit the general propositions of science as set forth by Mr. Spencer, who yet think that it is not wise, good, or necessary to stop short with the simple affirmation of "energy" or "everlasting force" behind phenomena, denying all "popular assertions about religion," but that we may properly, and must necessarily and philosophically, make the ordinary assumptions or religious affirmations adjunctive thereto, the weakness and need of human nature for religious symbolism being a fundamental, final fact.

The same value is claimed for the common, inherited, and cultivated religious consciousness which Mr. Spencer attaches to the logical induction of the existence of objective energy or force, the "conception" of force being, as it is claimed, only a "conception" *representative* of a synthetic mental process or faith, and analogy requiring the extension of this mental synthesis to the complex conception of "purpose" and "will" in combination with "power," forming personal "wisdom." It is asked, "Can Mr. Spencer or any one else deny that, whatever sanction the human and relative conception of power draws from the inner certainties of our own sensations, that same, or a still higher, sanction can also be claimed for the conception of an infinite and eternal 'Wisdom'?" Goodness, it is claimed, must also be added to the other two factors of Power and Wisdom.

It would be gratifying to many to hear what Mr. Spencer would say to this extension of his reasoning, which is just now so common, and by which many excellent thinkers are justifying to themselves and the public their adherence to the elaborate and costly symbolism and even coarse symbols of many forms of religion, which they insist are essential to the masses of mankind, though they may be outgrown by the scientist and philosopher.

Is it true that all the processes of nature are wise and good, that the forces, even in the physical realm of things, are always combined, and directed by wisdom and will for a purpose that is good and only good?

Is it divine wisdom that sends the excessive drought of summer, killing out and defeating the wisdom and labor and struggles of mankind for comfortable subsistence? Is it divine wisdom and love and goodness that sends the freezing, blasting storms and snows of winter, and then the terrible, devastating inundations of spring time? If so, it certainly cannot be said to have regard for

Digitized by Google

mankind; and, if it have no kindly regard or care for man, by what logic or consistency do we call it by human appellations? Does not the appeal to it by rites and symbols among the lower races always indicate a low state of intellectual enlightenment and a want of self-reliant ability to cope with emergencies?

But does science find any evidence that the forces of nature, so called, do have primary regard or reference to man? Or is it that man has assimilated himself to his conditions? If the affairs of the physical world are personally ordered or directed, is it possible to show that the person ordering is absolutely good? It is not enough that the assumptions of theology should be agreeable to feelings which have grown into conformity with the assumptions: they must be brought to the test of facts, and stand or be rejected by objective, not by subjective criteria.

A. N. ADAMS.

A FRIEND inquires: "What is the difference between a bill providing that disbelief in Deity shall not affect the credibility of a witness and one 'allowing atheists to give testimony in the courts'? One of the former kind, you say in the last *Index* (first page), has been defeated in Massachusetts, and yet the latter 'became a law' at some previous time." Formerly, "disbelief in Deity" disqualified a person as a witness in this State. A few years ago, after many petitions had been sent to the legislature, and bills had several times been introduced for the removal of this disqualification, a law was passed allowing atheists to testify in the courts, but providing that their disbelief might be held to affect the credibility of their testimony. The law, even with this provision, was severely denounced by orthodox people, and without it could not have been passed, unjust and absurd as the provision was seen to be by any unprejudiced mind. The object of the bill just defeated in the Massachusetts legislature was to put atheists as witnesses upon the same footing with those who believe in Deity. The testimony of atheists, in fact, probably carries with it generally, in the more enlightened communities, as much weight as the testimony of Christians; and this fact tends to make many in favor of the legislative reform proposed by the recently defeated bill less active than they might be, if cases of injustice on account of the law were frequent. They say that the passage of the bill is only a question of a few years, and that the course of events and the temper of the times are fast preparing all classes of religionists for it. But there is yet in Massachusetts a large native population controlled by narrow creeds and a large foreign Catholic population with no conception of equal rights and impartial religious liberty. Of course, Puritanism and Catholicism can unite in opposition to any legislation designed to do justice to atheists; and these elements, represented as they are in the legislature of the State, will continue to oppose every measure introduced to secure to atheists the same legal rights which Puritans and Catholics in Massachusetts enjoy in common. Men of influence who acknowledge the injustice of any discrimination against witnesses on account of religious beliefs should therefore, like Col. Higginson, make their influence felt on the right side.

FROM an article in the *Presbyterian* on "Spiritual Mensuration," by Henry C. Cook, D.D., we take the following paragraph:—

Isaiah once taught the impotency of man as compared with God by challenging him to weigh the world. "Who hath measured the waters in the hollow of his hand, and meted out heaven with the span, and comprehended the dust of the earth in a measure, and weighed the mountains in scales and the hills in a balance?" (Isaiah xl., 12.) There is a sense in which this challenge can be taken up by the men of our generation with the confident reply, "*We* can do that!" Nor would this be presumption. Man has put his intellectual yardstick upon all stellar spaces, and told the distance from earth to sun and from star to star. He has put the big round earth into scales and counted its bulk and weight. As to mountains and hills, he knows a system of mensuration which soon and easily enough gauges their solid contents.

"But it should be remembered," the writer adds, "that Isaiah spoke of the physical, not the intellectual powers of man; and, from that stand-point, the challenge is and forever must be unanswered." He then quotes from Delitzsch to help the reader realize in thought "how very little a man can hold in the hollow of his hand." "But," he exclaims, "what Jehovah measures with the hollow of his hand and with his span is nothing less than the waters beneath and the heavens above." The words of the old Hebrew poet are strong and beautiful, and, when read, must impress "the men of our generation," and the men of every generation capable of understanding them, with man's littleness and weakness in comparison with the Eternal Power of which he is but a product and manifestation. But, after the words have been commented upon in the above pedantic and prosaic manner by an orthodox theologian whose science, poetry, and theology combined are "a' a muddle," one feels like treating the "challenge" as the boastful language of a large-fisted, small-brained giant to a man of "intellectual powers" who in size and muscle is the giant's inferior, and replying in the language of Watts,—

"Were I so tall to reach the pole
Or grasp the ocean with my span,
I must be measured by my soul:
The *mind's* the standard of the man."

A CONTRIBUTOR to the *Standard* states that he has been to New York, and by diligent inquiry ascertained that the new theology, as understood in that city, is "simply a restatement of the old fundamental doctrines of the gospel and new definitions of old theological terms." Of these "new definitions" he gives the following:—

The Holy Scriptures: A useful book to be read discriminatingly,—an authority when it accords with our reason,—to be believed when it pleases us.

Man: A creature whose antecedents are somewhat doubtful, who perhaps descended from Adam, and perhaps not.

Depravity: Something in man to be got rid of, but nothing serious.

Atonement: A moral influence or sentiment that makes us think less horridly of God than we otherwise would, and that gives us the highest idea possible of self-abnegation and sacrificing love.

The Future Life: A state after death in which every fellow can have another chance.

The *Standard's* contributor returned home and explained to his wife the new theology just as he "got it in New York, where it came direct from New England." The wife said it was "a crude conglomeration of the heresies of three-quarters of a century ago put forth by Hosea Ballou, Thomas Belsham, and William Ellery Channing," "the old dog that we whipped back to his kennel in the early part of the century." "Its authors," she continued, "have stolen the thunder of greater and better men, and are foisting upon the religious world old exploded opinions as a new theology. Don't take any stock in it, Donald; for it is the same false, self-opinionated theology that spread over New England, corrupted the churches, stole Harvard College from Trinitarianism, denied the faith in the grand old historic churches of Boston, and pranced before the public until it was exposed, since which it has descended into a mutual admiration society, composed of silver-gray religionists that worship culture instead of Christ, spell the word philosophy with three letters, 'm-u-d,' and dream every night that they have turned the world upside down."

TO "THE INDEX": We fully indorse the mediumship of Mrs. Bliss. That settles the question, so far as we are concerned, your superficial quibbling to the contrary notwithstanding.—*Banner of Light.*

What is "the question"? In *The Index* of April 3, we alluded, not unfairly we thought, to an exposure of a medium by a party composed of some of the best citizens of Boston, three of whom were and are Spiritualists, who discovered, they declared, the medium's method of performing her "materializations," and captured the very articles which she had used in personating particular spirits. We mentioned that the *Religio-Philosophical Journal*, which is certainly a representative Spiritualistic paper, did not hesitate to admit the fraudulent character of the performances mentioned. But, doubtful whether this latest exposure would have much effect upon those generally who believe in "materializations," we quoted a few words from the *Banner of Light*, to the effect that the medium referred to was receiving numerous letters of sympathy on account of the late "assault" upon her. The next week, to our surprise, we were charged by our Spiritualistic neighbor with copying from its columns an advertisement, assuming it to be an editorial, and making it the basis of insinuations against that journal. To this, we replied that there was nothing to indicate that the words quoted were an advertisement or to distinguish them from an editorial paragraph, which we certainly thought they were, and that no insinuations whatever had been made. Instead of correcting the false impression in regard to *The Index* it has conveyed to its readers, and gracefully apologizing for its bad temper, our Spiritualistic neighbor now accuses us of "superficial quibbling." We forbear making any comment.

IN introducing the discussion of the Ethical Aspects of the Protective System at the last meeting of the Liberal Union Club, Mr. F. E. Abbot the President, concisely defined the objects of the club as follows:—

A few words explanatory of the objects of the Liberal Union Club will be permitted as preliminary to the main discussion of the evening. The purpose of this club is not convivial, nor even mainly social. Its purpose is serious and earnest; namely, to secure, as far as possible, consideration of that generally neglected side of public questions,—the moral side,—and to seek thereby the settlement of all such questions on the basis of equity. The club had its origin in a profound faith that the one paramount ethical idea, justice, is practically applicable to all human affairs, and that no issue can ever be permanently settled until rightly settled. All laws, measures, policies, institutions, must be brought at last to the moral test; that is, to the test of equal rights and even-handed justice to all classes of the community. To bring about this result, the club aims to enlist the co-operation of the ablest minds of the country in directing public thought to the necessity of public righteousness as the inexorable condition of public prosperity. It believes that every reform movement, in whatever direction, must remain insignificant and weak until it has won to its side those great, invisible, but omnipotent moral forces whose conceded supremacy is the highest possible test of civilization itself. With this faith and this purpose our club occupies a hitherto unoccupied place among its sister clubs; and it is entitled to the sympathy of all who understand that ethics are, or rather ought to be, a science, and can only be promoted in the long run by the scientific method of utter fearlessness and freedom of thought.

AN editorial in the *Andover Review*, entitled "The Response to the New Creed," says:—

It is sheer ignorance which asserts that certain men are introducing new views, are causing unrest, are

Digitized by Google

disturbing those who would gladly be let alone in the faith of their fathers. They are merely expressing and explaining the deeper conceptions of spiritual truth which are taking possession of the churches. The creed does the very same thing. The new theology did not produce the new creed, for both are borne along on the same deep under-currents. Least of all should the creed be condemned because it is satisfactory to the friends of progressiveness in religious thinking. It is too late in the day to decide on important matters by calling names. The creed meets a hearty response, but let us not, therefore, set too high a value on that which is only a statement. It is but a credo after all. It only formulates what the mass of evangelical Christians already believe. Its uses are limited by the very fact that it is a creed. It has not even the authority which their creeds have for other great bodies of believers. It is an index of the best religious thought of an untrammelled denomination. It merely summarizes the conclusions which have been reached by many minds thinking and working independently of each other in the one great kingdom of the Lord. As such, it has no small value. But it is only indicative, not creative nor authoritative. It does not tell Christian men what they ought to believe, nor what they must believe. It merely states what Christian men, looking honestly into each other's faces, do believe. It has its response because, for the most part, it says so well what the many had been believing, but what no one alone would have been able so adequately to express.

ANNUAL MEETING.

The annual meeting of the Free Religious Association is to be held at the Parker Memorial Hall, Boston, as follows: Thursday, May 29, at 7.45 P.M., business meeting for hearing of reports, election of officers, etc.; Friday, May 30, convention, with sessions at 10.30 A.M. and 3.00 P.M., and a festival in the evening. More complete notice hereafter.

F. A. HINCKLEY, *Sec'y.*

ANNUAL FESTIVAL.

The annual festival of the Free Religious Association will be held in the Meionaon, Tremont Temple, Boston, Friday evening, May 30, commencing at 6.30 P.M. Tickets with reserved seats at tables, at $1.00 each, may be had at *The Index* office, 44 Boylston Street, Boston, and of the Secretary at Providence. Fuller particulars hereafter.

F. A. HINCKLEY, *Secretary.*

ADDITIONAL DONATIONS TO THE F. R. A.

Contributions and Membership Fees at the New Bedford Convention	$95.50
A voice from Australia, "R. B."	10.00
THOMAS DUGAN, Albany	1.00

IT is true that a lie is nimble and has many knavish friends who help it on its way, when found in a limping state, so that truth often needs an express train to overtake it. But, when it does catch it, it kills it. Truth gives the impostor no quarter; and they who knowingly abet falsehood, and afford it aid and comfort in its distress, have a bad time of it, too. As Josh Billings says in his sagacious way, "A bad character may be repaired, but mankind keep an eye upon the place where the crack was."—*J. G. Holyoake.*

THE WAY OF SALVATION.

If a man himself would save,
Then he will be lost we say.
Nay, he is already lost:
Selfishness is damned to-day.

But, if he his life would lose
For another's sake we say,
Then, though dying, he shall live,
Such a soul is saved to-day.

HATTIE TYNG GRISWOLD.

The Index.

BOSTON, MAY 8, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

A Study of Primitive Christianity.

BY LEWIS G. JANES.

Introduction.

The questions involved in the study of the origins of Christianity and the earliest phases of its development are ordinarily supposed to lie within the exclusive province of the professional theologian. It is freely intimated that a layman has no business to meddle with them. The theologian, having thus monopolized the treatment of these important subjects, is generally careful to avoid any such discussion of them as may tend to throw doubt upon the currently accepted doctrines of the divine origin and infallible truth of the Christian system.

When, by chance, a Christian minister, having a mind unwarped by theological bias and a sublimer confidence in the sacredness of truth and the method of free discussion than, unhappily, is usual, dares to transgress the bounds of custom, and gives to the public the plain facts of history and the results of the critical judgment of the best and most reverent scholars upon these topics, he does but demonstrate by his experience that intellectual liberty is rarely possible within sectarian boundaries, even though the body with which he communes may be the most cultured and liberal of all the sects,—may assume indeed to be no sect, but the church universal.

As far as the enlightenment of the public is involved in the event, it does not seem to matter much whether the voice of truth is silenced by the rack and thumb-screw, as of yore, or by the friendly request of an assistant bishop, as at the present day. Silenced it is for the moment, and that effectually; while in the ears of the eagerly waiting people rings the old-time query, never more forceful or pertinent than to-day, Why seek ye not, even of yourselves, what is true?

In this spirit of single-minded search for the truth, it is proposed to investigate the origins of Christianity, the character and validity of the New Testament literature, and the different phases of custom and belief which existed in the earliest Christian communities. The writer perhaps owes it to his readers to inform them that his work was commenced and prosecuted with no original purpose or expectation of publication, and that it embodies the results of some years of careful study in connection with his duties as teacher of an advanced class of Sunday-school pupils. The papers herein collected were originally prepared and delivered as a course of lectures before an Association* engaged in the systematic study of the world's great religions. Their publication is due solely to the cordial appreciation and earnestly expressed desire of those who listened to their delivery. Their original form will not be essentially modified; but sub-titles and explanatory notes will be inserted for the convenience of the general reader, and a carefully prepared topical index will, it is believed, add to the usefulness of the lectures.

It is hoped that the reader will unite with us in the attempt to hold our educational and inherited prejudices and prepossessions, as far as possible, in abeyance, bearing in mind that maxim of Confucius which affirms that "the superior man, in the world, does not set himself either for anything or against anything: what is *right* he will follow." The sense of this maxim is rendered more tersely, if less unequivocally, by Paul, in the text which may be rendered: "Test all things thoroughly, and hold fast to that which is morally beautiful."

Commencing our investigation with an examination of the local environment of the earliest phase of Christianity, involved in the political, social, and religious condition of Palestine in the Roman period, we will next consider the state of society and religion in the Roman Empire outside of Palestine,—that fruitful ground into which the earliest seeds of Christian thought and life were transplanted. Thereafter, we will investigate the sources of our information concerning the life and teachings of Jesus, and the different stages of the evolution of the new religion, up to the time of its secular triumph.

The literature bearing upon these topics is already enormous, and is expanding with every added year. The work involved in the preparation of these lectures has therefore not been inconsiderable: it is much greater, indeed, than the somewhat meagre results may appear to indicate. The greatest care has been taken to insure accuracy in regard to all statements of fact, reliance having been placed only on authorities of recognized weight and impartiality. For the conclusions and deductions from ascertained historical facts, herein set forth, no one is responsible save the writer, who commits them to the candid judgment of the unbiassed reader, trusting that they may serve a good, if humble, purpose toward the discovery of truth and the consequent enfranchisement of mankind from superstition and theological bondage.

I.

PALESTINE IN THE ROMAN PERIOD.

A trite subject, but one of supreme interest and importance, is that to which we are to devote our attention,—the Origin and Growth of Christianity. Of making books upon this topic there has been no end. It can hardly be anticipated that the present effort will add anything to the information of those unprejudiced investigators whose inclination and leisure have permitted them to make

*The Association for Moral and Spiritual Education, Brooklyn, N.Y.

Digitized by Google

acquaintance with the current literature bearing upon this question in all its different relations. These, however, are of necessity the few: the present lectures are intended for others,—for those whom lack of time has prevented from keeping pace with the growth of a literature whose bulk is already portentous.

Treating the topics involved in this study from the stand-point of sympathetic rationalism, and, in accordance with the latest results of critical and exegetical research, regarding Christianity as a product of natural evolution from the existing environment, with its inheritance of past influences and traditions, the attempt will be made to group together and present as clearly and consistently as possible the salient points in each division of the subject in such a brief and succinct form that the reader may readily retain them in his memory, and find the theme, notwithstanding its familiarity, not devoid of interest or unworthy of his serious attention.

From the Captivity to the Roman Period.*

Palestine, in the generations immediately preceding the birth of Jesus,—a land less in extent than the State of New Hampshire,—from its location, the character of its people, and the peculiarities of their national religion, became the seat of a remarkable series of political and social events. The period of the ancient Hebraism, interrupted in its development by the dispersion of the Northern tribes and the Babylonian captivity of the Southern tribes, had long since passed. Persia and Chaldea had bestowed upon Israel their gifts of the belief in a future life and a bodily resurrection. The Persian conception of the speedy destruction of the world by fire and the coming of a supernatural saviour had penetrated the popular mind of Judaism, and modified its growing Messianic expectation. Satan, the old-time messenger and servant of Yahweh, had been endowed with the attributes of the Persian Ahriman, thus becoming the devil of the New Testament;† and the Chaldean superstition of active demoniacal influences in human affairs, while it was rejected by the cultivated classes, had obtained a strong hold upon the credulity of the common people.

The Persian protectorate, cut short by the conquests of Alexander the Great, had been succeeded by the period of Greek domination, which in turn was interrupted by the successful issue of the Maccabæan struggle for freedom, followed by a century of independence and comparative prosperity under the leadership of the descendants of Judas Maccabæus. Success, however, as often happens, brought corruption in its wake; and the later Asmonean leaders were no longer animated by the resolute and incorruptible patriotism which spurred on their ancestors in the struggle for liberty. For many years, the country was disturbed by political dissensions, which finally wrought the overthrow of the independent Commonwealth.

During all this period of strife, the more faithful adherents of Judaism, who held to the old theocratic conception of Israel, kept aloof from political strife, acknowledging Yahweh‡ as their only King and Ruler, and submitting to the authority of their superiors with silent but indignant protest. They left the petty dissensions of politics to the holders and seekers for office, who then, as now, were abundantly able to create a popular commotion with little assistance from the substantial and thinking classes of the people.

Occasions of Roman Interference.

About the year 69 B.C., a contest for the throne arose between two Asmonean pretenders, John Hyrcanus and Aristobulus. To decide the dispute, five years later, Scaulus, the Roman commander in Syria, was appealed to as an arbitrator. He assigned the throne to Aristobulus; but, in the following year, Pompey the Great, who was then at the head of affairs in Rome, annulled the act of Scaulus, transferred the regal office to Hyrcanus, and carried Aristobulus a captive to Rome, where, with his two daughters and his son Absalom, he graced the public triumph of the great Roman general, in the year 61 B.C. Four years later, Alexander, another son of Aristobulus, raised an insurrection in Palestine; and, in the year 54 B.C., Crassus, then the Roman commander in Syria, taking advantage of the turbulence incited by these dissensions, took possession of the city of Jerusalem with his army, and shocked the entire religious community by committing the sacrilege of entering and plundering the temple.

On the advent of Julius Cæsar to supreme power, soon after this event, the fortunes of the Jews improved. He granted them many privileges, and relieved them from oppressive exactions, both in Rome, where a colony had existed since the time of Pompey, and in their native country. Aristobulus having been poisoned in Rome at the instigation of the party of Pompey, and his son Alexander having been beheaded, Cæsar recognized Hyrcanus as High Priest and bestowed upon him the title of Prince, making him ruler of Palestine under the protection of the empire. A few years later, in 44 B.C., Herod, a prince of Idumea or Edom,—the ancient hereditary rival and foe of Israel,—having married the daughter of Hyrcanus, was made tetrarch or governor of the country under his father-in-law.

In the year 40 B.C., the Parthians, who had revolted and overthrown the Seleucidæ,—the successors of Alexander the Great in the eastern provinces,—and had maintained thus far an effective resistance against the Roman power, invaded Judea in alliance with Antigonus, a son of Aristobulus, and seated him upon the throne, carrying Hyrcanus to Persia, a prisoner. About the same time, the Roman Senate bestowed the kingdom upon Herod; and in the year 37 B.C., by the aid of Mark Antony, he stormed Jerusalem, captured the Holy City, expelled the Parthian invaders, and assumed the regal power. Thus, the patriotic Jews were at last subjected to the unexampled degradation and ignominy of beholding an accursed Edomite seated upon the throne of David.

The Sects: the Pharisees and Sadducees.

During this period of political dissension, the people were also rent by religious disputes between the rival sects, the Pharisees and Sadducees. The latter have sometimes erroneously been termed the Liberals of Judaism. They have been regarded as innovators upon the ancient customs and beliefs of their people. In their leading doctrines, on the contrary, they were pre-eminently the representatives of the historic life and thought of Israel. They were the traditional custodians of the priestly office and emoluments; constituting, as it were, an ancient order of hereditary nobility.

The Asmonean rulers were originally in sympathy with the growing religious life of the people. They had attained their leadership through their pre-eminent merits and patriotism and with the popular support. But, not unnaturally, they were rejoiced when they began to find favor in the eyes of the ancient order of nobility. Mutual interests, apart from the life and thought of the people, cemented a cordial bond of sympathy between them. The Sadducees, holding themselves superior to the masses by reason of their priestly functions, and puffed up by their alliance with the ruling house, grew more and more conservative and narrow-minded. They sought to build up a hierarchy, to identify the entire range of religious duties with themselves and their official position. "Thus gradually," says Rabbi Geiger, a learned Jewish historian, "they changed their position. Instead of remaining the servants and ministers of religion, they made religion their servant."*

The germs of a priestly order which formed the nucleus of this sect doubtless existed from a period long antedating the Babylonian captivity, but the sect as it appeared in the generations approaching the advent of Christianity was unknown to the Old Testament writings. Its origin is obscure, and the meaning of its designation uncertain.† The sect of the Pharisees was unknown prior to the Maccabæan era, about 165 B.C. In opposition to the priestly assumptions of the Sadducees, their opponents held that all the people should be regarded as sanctified in the service of Yahweh, all alike should be elevated to a condition of priestly holiness. Accordingly, they adopted strict rules of life, and insisted upon the formal observance of the rites of their religion in order to approximate as nearly as possible to the special requirements of the priestly office.

The Sadducees naturally magnified the temple worship, in which they were chiefly interested, and advocated strict conformity to the letter of the law,—the *Thorah*. The Pharisees were the leading supporters of the synagogue, an institution which arose during the Maccabæan period. They proclaimed the superior sanctity of the oral law or tradition, which they attributed also to Moses, and advocated the right of all to be teachers and interpreters of the *Thorah*. Public prayers, daily ablutions, the consecration of the daily meals, were characteristic Pharisaic observances, the intent of which was to render every man, as nearly as possible, a priest. The scribes, who traced their origin to the time of Ezra,‡ were the copyists, readers, and commentators on the law in the synagogues, and were almost exclusively drawn from the sect of the Pharisees. They have sometimes erroneously been regarded as constituting a separate sect by themselves.

The Sadducees adopted the aristocratic designations of "sons of the families of rank" and "sons of the high priests." The Pharisees were known as "separatists," "the learned," sometimes even "the people." Fraternizing with the main body of the populace, they accepted the popular doctrines of a future life, a bodily resurrection, and the coming of a personal Messiah. They declared that the exclusive priesthood would go down, the people would be emancipated, a descendant of the house of David would arise and reign over them, the servant and representative of Yahweh. Many of them anticipated the miraculous destruction of the existing world and society, and the establishment of a perpetual kingdom of God, a regenerated world in the glories and joys of which all true believers would participate. The Sadducees, on the contrary, including, it is said, twenty thousand priests living in gluttony and luxury in

*As it is our purpose hereafter to show the natural relation of the thought and life of Jesus to his social and intellectual environment, the material for this lecture has accordingly been drawn wholly from other than New Testament sources.

†The word "devil" is of Aryan origin, and is not found at all in the Old Testament.

‡The name "Yahweh" will be used throughout these lectures instead of the familiar "Jehovah," as expressing more accurately the correct orthography and pronunciation of the word.

**Judaism and its History*, by Rabbi Geiger, which see for an admirable account of the Jewish sects.

†Some derive the word *Sadducee* from the name of one Zadok or Sadoq, a priest; others, from a word said to mean "the wise."

‡*Circum* 444 B.C.

Digitized by Google

Jerusalem alone, satisfied with their power and emoluments, contented with the present life, wishing for no change, repudiated the notions of a resurrection and a future existence as unwarranted by the teachings of the law, and rejected the doctrine of the personal Messiahship.

Jewish Monasticism: the Essenes.

About a century before the Christian era there arose in Palestine the small monastic sect of the Essenes.* During the reign of Herod, it is estimated that they numbered about four thousand ascetics or "come-outers," withdrawn from among the Pharisees, and carrying to an extreme the Pharisaic doctrine of separatism. Members were received into this order by a solemn ceremonial of initiation, which included the rite of immersion. They took vows of chastity and seclusion, performed frequent ceremonial ablutions, refused to make sacrificial offerings at the temple, were prohibited from taking oaths, and held all their property in common. They had no fixed dwelling-places, but appointed some of their members or sympathizers in every considerable town or city to entertain them as they journeyed through in the course of their itinerant wanderings. They had certain conventual establishments in the wilderness near the Jordan, in the neighborhood of which they practised husbandry during the intervals of their journeyings and religious exercises. They were extreme formalists, placing greater importance even than the Pharisees upon the performance of all the minutiæ of their religious observances. They wore a peculiar white costume and a sacred girdle. They carefully preserved and often repeated the names of the angels. They venerated as sacred the rays of light, and turned toward the sun to pray.

The Essenes were as fatalistic in their beliefs as the Mohammedans. Unlike the Pharisees, they rejected the doctrine of a bodily resurrection, and believed in a spiritual immortality for both the righteous and evil-doers. They interpreted many passages of Scripture allegorically in defence of their peculiar doctrines. By the poor, they were known as skilful physicians; and they were popularly reputed to be remarkable prophets. Many of their customs and beliefs, as well as those of the Pharisees, bear marked evidences of Persian or Zoroastrian origin. Some modern writers have attempted to trace their monastic habits and ascetic tendencies to the influence of Buddhism, but no certain or probable contact of this sect with the religion of Sakya-Muni has yet been clearly demonstrated. They appear, on the contrary, to have originated in Palestine by a natural evolution out of Pharisaic Judaism. Some writers have attempted to identify them with the Therapeutæ, represented to have been a monastic sect or order of itinerant physicians which arose in Egypt at about this period; but our information concerning them is not sufficiently trustworthy to enable us to affirm even their existence as a fact beyond dispute.†

Though we cannot assert any probable connection between the doctrines of any of the Jewish sects and those of Buddhism, it is manifest that other Eastern notions, chiefly of Zoroastrian origin, were gradually creeping into the thought and faith of the people of Israel. Besides the more prominent beliefs of this character, to which allusion has already been made, ideas were probably already working in the Hebrew mind, which subsequently took form in the mystical and esoteric doctrines of the Kabbala,* the earliest account of which we find in a work attributed by current Jewish tradition to Rabbi Akiba, who wrote about 120 A.D., but which, in reality, was probably written several centuries later. The Oriental doctrine of creation by Emanation was certainly current at this time; and the Aramaic version of the Scriptures, which was commonly used in the synagogues, designated God by the term *Memra*, or the "Word," whenever it was desired to separate him in thought from the visible creation.†

(To be continued.)

*Our information concerning the Essenes is derived mainly from the works of Flavius Josephus.

†The earliest accounts of the Therapeutæ appear in a work attributed to Philo, but which is of doubtful authenticity. It is probably of much later date, and its testimony must be regarded as untrustworthy. See Kuenen, *Religion of Israel*, Vol. III.

*Hebrew "tradition," often spelled "Cabbala."

†The "Targums," or Aramaic versions of the Old Testament writings, were at this time probably oral. The Targum of Onkelos, the first to the written Targums, dates from the second century of our era. See the able discussion of this question in "Quotations in the New Testament," by Prof. Crawford Howell Toy, of Harvard University.

CORRESPONDENCE.

THE NEW YORK SOCIOLOGIC SOCIETY.

Editors of The Index:—

The Sociologic Society of New York City of late elected its officers for the coming year as follows: Mrs. Imogene C. Fales, President; Mrs. Clara Neymann and Mr. Henry A. Beckmeyer, Vice-Presidents; Miss Mary T. Crowell, Secretary; William E. S. Fales, General and Foreign Secretary; Mrs. Lita Barney Sayles, Assistant General Secretary; Henry A. Beckmeyer, Newark, N.J., Chairman of Advisory Council.

It will hold public anniversary exercises the last of May, and will enter upon its third year with good assurances of success and with accession of numbers and interest. A sister society has been formed in Brooklyn this spring, which is also well officered, and composed of energetic and capable men and women. It is proposed in the fall to commence an earnest campaign by holding public meetings once in two weeks at least, to establish head-quarters in each city, at which shall be found the publications of the Society and the nucleus of a library of sociologic literature, and also to disseminate information concerning the objects of the Society as widely as possible.

The membership of the Society is extended, though not large. Upon its committees are found the names of many outside of New York City, among whom are Hon. James Bishop, Chief of Bureau of Statistics and Labor, New Jersey, Rev. Frederick A. Hinckley, of Providence, and Rev. William Icrin Gill, now of Lawrence, Mass.

It is not to be supposed that a society which has for its motto co-operation—the law of the new civilization—would at first embrace a large following of politicians and capitalists. Hardly even can the laborer be made to see that its principles cover all the ground of his trades-unions and his struggles for an approach to an equality in the acquisition of the necessities of physical existence. The membership comes mostly from the middle or intermediate class of our people, if our people may be said to be divided into *classes*. Those who are fighting their hand to hand battles for bread have no time to stop and talk of principles and how to apply them; and those who hold the capital of the country in their hands will not look down from their lofty pedestals and see that the cry of the poor is beating upon their foundations like the unceasing surging of the sea upon the base of some immense edifice, and that it is surely, though slowly, undermining, and will as surely tumble it down to irretrievable ruin, if something is not soon done to appease its reasonable hunger and its demands for future guarantees. It remains for those who stand between these two extremes to recognize the needs and claims of both, and to set about the best way to prevent chaotic ruin and devastation. Therefore, the object of the Society is the adoption of such educational methods as shall lead to a knowledge of the law of correlated interests as a *religious and economic* principle governing human development, whereby this law may be practically expressed in all the relations of life. It believes that this is essential to individual, social, and national progress, that a new social system is at present making its appearance with us, and that its basis should be formed upon this law, which may in other words be formulated as "Thou shalt make thy neighbor's interests identical with thine own,"—the law of justice to all.

It will be glad to come in correspondence with any and all who are interested in the relations of capital and labor, which is the division of sociology now pressing upon its immediate attention. There is need for the wisdom of the wisest and the unwearied work of all to bring light out of the darkness which is gathering about us.

LITA BARNEY SAYLES,
Assistant General Secretary.

KILLINGLY, CT.

LATEST ADVICES FROM UTAH ON THE EDUCATION QUESTION.

Editors of The Index:—

Though I did not myself come from Utah by the last express, I chanced to meet on Monday last, April 21, persons who did. I give their testimony for what it is worth. They were Mormons. It was in the Grand Central Hotel, New York City. As I entered, they were entering their names on the register. I conversed with some five or six on the subject, each separately, some elders in the church, others quite young men. The answers to my questions were substantially as follows: "There is no religion taught in the Mormon schools, none whatever. It is against our principles. The schools are supported by public taxation, and the trustees are chosen at the polls, the same as other civil officers. For this reason, it would be wrong to teach any one's religion. The schools are open to Mormon and outsider alike, and are in fact patronized by both. The teacher is frequently a Gentile. There is not, and never was, any religion taught in the Deseret University. The text-books in use are the same as elsewhere: we always aim for the best. In the outside schools in Utah there are some kind of religious exercises, such as prayer, reading of Scriptures, etc. There is one Mormon school in Utah, at Provo, called the Brigham Young Academy, which has a theological department where church history and doctrine are taught, including those of the Mormon Church." One person said to me: "I have a son born in the church and now grown to man's estate, is married, has a trade, and is very prosperous. Though he never went to other than the Mormon schools, he never attended one where religion was taught, for the reason that there were no such schools." Another, a young man somewhere between twenty and thirty, and full six feet in stature, said to me, "Didn't you use to teach school in Salt Lake?" "I did." "Well, I went to school to you when I was a mere boy." I looked up astonished. "But we used to think you were pretty young then for a teacher." "Oh, thank you; but we didn't have any religion in the schools in those days." "No, and we don't now: you don't hear of such a thing in the Mormon schools." "Oh, yes we do." "Well, I never did." "But wait until you have been East awhile." I learned from these elders, who were on their way to England, where they were sent as missionaries, that a former schoolmate of mine, now in Liverpool, was president of the European Mission. He is also one of the Twelve Apostles! I do not know of his attending a school that I did not; and in none of those schools was a Mormon text-book ever seen. Had it been, he no less than myself would have sneered at such a bigoted proceeding. I am satisfied of this, though his name was Smith, and his father a cousin to the prophet.

So the suggestion made by Mrs. E. D. Cheney in a late number of *The Index* would not be amiss: "Would it not be wise in the National Bureau to issue a special circular of information in regard to education in Utah?" And the further suggestion is also good: "In the present plan of national aid for education in the different States, might not there be introduced some provision by which the schools of Utah should be released from ecclesiastical control?" How curious it would be if that "provision" was found to apply only to the Gentile schools! I quite agree with Mrs. Cheney when she says, "I believe that it is mainly upon the education of the young people of Utah that we must rely to overthrow the delusions and tyranny of their theocracy." But what if the schools, under the control of that very theocracy, do now furnish as good an opportunity, all things considered, for such an education as any schools in the land? The spirit of this lady's article, as a whole, I greatly admire: it is very candid, and wise in its remark.

T. W. CURTIS.

MISCELLANEOUS.

FALLACIES OF THE REMONSTRANTS.—The last issue of *The Index* publishes Mrs. Sara A. Underwood's address before the Second Annual Meeting of the National Woman Suffrage Association at Massachusetts on the "Fallacies of the Remonstrants against Woman Suffrage." This address is a specimen of close reasoning couched in strong language, such as we should like to recommend to those opponents of the enfranchisement of woman who continually disparage her capacity for mental work. That intelligent women, such as many of the Remonstrants undoubtedly are, should take it upon themselves to protest against the complete political equalization of their sex with men is discouraging in the extreme. Think of a slave imploring his master not to deprive him of his chains! But the action of the female Remonstrants, whose fallacies Mrs. Underwood so thoroughly exposes, is not only slavishly abject, it is also in utter violation of the doctrine they proclaim and would have their sex observe,—the doctrine that woman should not meddle with the affairs of State. We suspect these Remonstrants of being tainted with a good deal of false aristocracy. They probably reason that the right of suffrage would be a good thing for themselves, but that it would be a very bad thing if bestowed on the mass of women. The "best people" always have a high opinion of their own virtues, and greatly mistrust the evil propensities of all persons outside their narrow circle. They will never abuse rights and privileges, but Tom, Dick, and Harry! Why, Tom, Dick, and Harry would not only themselves go to perdition (which would not matter much), but they would bring ruin on the whole country, if they were given the same opportunities and franchises with the "best people." No, no, no, you must not unchain the tiger, but keep the people tied down. They are not to be trusted, the depraved, low-minded, viciously inclined people! But let us be just to the female Remonstrants against the enfranchisement of their sex. They are eminently patriotic women, and some day a grateful nation will erect a monument to their memory.—*The Radical Review.*

THE following is an extract from the report of the Executive Committee of the Free Congregational Society of Florence, Mass., for the year ending April 7, 1884: "It has long been the opinion and desire of your committee and other friends of the Free Congregational Society of Florence that the necessary steps should be taken to insure the perpetuity of the organization, and to hand down intact for its benefit the valuable property now held in its interest. Your committee are now happy to announce that a plan has been matured that will effect the above-named objects, so far as it is in the power of the present officers and members to accomplish the desired results. This plan will be submitted to the property society at its next annual meeting, and it is hoped the business will then be consummated. The importance of this step will be realized, when we remember how many times liberal and philanthropic movements have been frustrated or perverted by the mistaken zeal or selfish motives of religious bigots. The Girard College is a case, in point. The founder provided for the support and education of orphans of all classes. He also provided for the moral training of the benficiaries; but, wishing to save them from the pernicious influences of sectarian and superstitious ideas, he forbade the intrusion of clergymen into the college. By a cunning evasion, trained theological teachers have been smuggled into the institution, thus wantonly violating the sacred injunctions of the testator. In their greed to make everything redound to the glory of Christianity, these zealous church people surreptitiously seize the institutions which Liberals have founded. After opposing the anti-slavery movement throughout the whole conflict, and although it was notorious that the Church had been the bulwark of slavery, they very coolly claimed that the emancipation was all their work. Now, like the anti-slavery reform, the Cosmian movement, being in the line of truth and equity, and led by that spirit of liberty whose torch enlightens the world, is destined to a glorious triumph; and, when its principles shall have become general and popular, it is not improbable that religious leaders will claim that the churches have brought about the abolition of mental bondage, just as they now claim that Christianity abolished American slavery. And it is not impossible that, in the future, it will be said and believed that this Free Congregational Society of Florence originated in the old orthodox church of Northampton; that the Forbes library was merely a branch of the old church Sunday-school; and that Judge Forbes was a devout Christian, who desired that none but clergymen should manage the library and select the books." It will be remembered that Judge Forbes, in his will, enjoined that clergymen should be excluded from the management of the library.

MR. GEORGE JACOB HOLYOAKE'S name was lately placed before the Leicester Liberal Association as a candidate for the House of Commons. In a printed circular,—a copy of which has reached us,—Mr. Holyoake says: "This question of the validity of an unsworn word has been before the country some time in a very serious form. Leicester has expressed seemingly sincere concern at Northampton's being denied full representation, because the House of Commons does not receive an honest secular pledge of loyalty, but demands instead an ecclesiastical promise. . . . There is only one way in which more than lip sympathy can be given to Northampton, and that is by Leicester sending some member who will practically represent the principle of affirmation. I shall take no oath either by speech or pantomime. I would not profane the oath in the opinion of men of Christian conviction by solemnly repeating words which indicated no corresponding belief in my mind; nor would I, like the late Emperor Napoleon, demoralize public faith and public trust by taking the oath as a 'formality.' If, therefore, you think it worth while to assist in opening a door in Parliament through which a gentleman having an honest mind can enter without shame or humiliation, I offer you my services." In defining his position, Mr. Holyoake says: "I follow in the path of the great minister who last week brought in our New Franchise Bill. All other ministers bringing in reform bills have studied how many they could exclude from it. Mr. Gladstone has been the first minister who has studied how many he could include in it. I am for trusting the minister who trusts the people, and for supporting with my vote his foreign policy, which is just without sentimentality, brave without swagger, which keeps faith with treaties adversaries have made, fights with English courage for English honor, and does not knowingly murder for prestige."

AN article in a recent number of the *Woman's Journal*, by Col. Higginson, under the caption of "A Singular Coalition," thus refers to the defeat of Woman Suffrage in Massachusetts: "Its annual defeat, thus far, is due in Massachusetts to a coalition for this purpose between what may be called the Federalist half of the Republican party and the Roman Catholic half of the Democratic party. . . . By Federalists, at the present time, the writer means simply those who do not regard suffrage as in any sense a right or popular government as resting on anything but expediency. On the other hand, the fact is plain that the Democratic party, sustaining Woman Suffrage in word, fails to support it in act, through the ecclesiastical traditions that control so many of its supporters. . . . The one thing that makes the whole Woman Suffrage movement terrific to 'society women' is not so much the fact that it would require them to vote, —for in voting, if thus limited, there would be something rather well-bred and English,—but the fact that Bridget and Norah will, in this country, have to vote also. And the oddest thing of all is that, in order to prevent this undesirable result, the religious prejudices of Bridget's husband and Norah's brother are called into recognition to keep her out. Through fear of the Irishwoman, they ally themselves, politically speaking, with the Irishman. His party, consistently and manfully, favors Woman Suffrage; but our modern Federalism gets hold of him, through his ecclesiastical traditions, and keeps him for the time being in coalition with itself and against his party. It is a curious complication."

THE Boston correspondent of the *Christian Union* writes of Joseph Cook: "His audiences have not been as large as in former years, neither has enthusiasm been up to its aforetime pitch. The applause has been as popguns to parks of artillery as compared with other years. . . . As an exponent of science, philosophy, theology, he has lost his hold even upon the man of average thought. He holds his own with dogmatists and those who take opinions at second hand." The Chicago correspondent of the same journal, thinks if his recent misrepresentation "serves to open the eyes of the public to the untrustworthiness of other assertions of the Monday lecturer, it will not be without its compensation. . . . In the judgment of some, a single paragraph from the careful pen of Dr. Ezra Abbot, whose untimely death we greatly mourn, is of more value as a contribution to Christian scholarship than all the lectures which Mr. Cook has delivered. For what assurance have we that he has quoted his authors correctly, that he understands their meaning, that he knows the real opinions of the men in the Old World whom he calls his friends, that it is even safe to trust his figures or his conclusions?" These writers and others may now be able to see the force of John Fiske's article, published in the *North American Review* a few years ago, which concluded as follows: "If we were to go through with Mr. Cook's volumes in detail, we should find little else than misrepresentations of facts, and misconceptions of principles, and floods of tawdry rhetoric, of which the specimens here quoted are quite sufficient to illustrate his 'fundamental method of procedure.' I have not treated him seriously or with courtesy, because there is nothing in his manner that would justify or even excuse a serious method of treatment. The only aspect of his career which really affords matter for grave reflection is the ease in which he succeeded for the moment in imposing on the credulity and in appealing to the prejudices of the public."

PATHETIC accounts are published of a meeting of the relatives and friends of those who perished in the Pocahontas mine, held soon after the terrible disaster occurred. William Forster, an old and disabled miner, who was asked to preside, said, with a trembling voice, "Men, I for one am here to see if I can get the bodies of my two boys, who, as far as I can calculate, are almost underneath our feet, surrounded by a hell of fire." The report says, "A sob seemed to pass through the assembly, every member of which wore some badge of mourning. Women commenced to wail loudly for lost husbands, sons, and brothers, but were ordered with rough kindness to stop crying." Peter Smith, whose brother was one of the victims of the disaster, asked permission to pray, which being accorded, he made the following strong and touching appeal:—

O God Almighty, we ask that you will give us some comfort in this hour of affliction. We pray you to let us have back the bodies of our poor relatives, and not to refuse us the chance of burying them. O Lord God Almighty, put out the fires, and help us so that we can give back the bodies to that earth from which we came. Help us so our action to-night may be wise, and that we may not be reckless, or do things which the law don't allow. O Great God, let your pity come to these here poor widows and children who now have no man to get them bread. Let this great and rich country give a few dollars, so that we will not see them starving. Pray, God, don't let them go down under their troubles. If some poor fellow down below is yet alive, O God, kill him quick, or show us how to help him. In the name of a merciful Jesus, we beseech you to show pity on this town, and help us bear the burden you have given us to bear. God, help us and teach us to live your life, so we can die in peace, when our time comes to die. If, as some say, our dead go to purgatory, then we pray you to be merciful to our dead. Let their agony in this deadly mine help to square their accounts. God help and comfort all in Pocahontas, for the sweet sake of Jesus Christ. Amen.

"During the roughly spoken invocation," the report continues, "the crying of the women, at first almost inaudible, rose in unison until the volume nearly drowned the speaker's voice. As he sat down, tears were flowing from every eye; and great confusion prevailed, as several of the women had become unmanageable. The 'keening' of the Irish women mingled with the frenzied lamentations of the colored women. The scene was distressing in the extreme to the few strangers who witnessed it."

MR. CEPHAS B. LYNN, who has been known for several years as a popular advocate of Spiritualism, has been licensed for one year by the Committee of Fellowship of the Connecticut Universalist Convention. The *Religio-Philosophical Journal* says: "It is not probable that this eloquent, logical speaker has changed his views in exchanging the Spiritualist rostrum for the Universalist pulpit. . . . Mr. Lynn has the best wishes of the *Journal* in his new field of labor, and it is to be hoped the new bonds of fellowship will never cramp or retard his progressive spirit. The good of humanity as a whole and not merely of a

Digitized by Google

sect or party should be the object of life. Hence, if Mr. Lynn feels he can be more useful in his new field of labor, the *Journal* bids him God-speed."

BOOK NOTICES.

PROSE-POEMS AND SELECTIONS FROM THE WRITINGS AND SAYINGS OF ROBERT G. INGERSOLL. Washington, D.C.: C. P. Farrell. 1884. pp. 248. Price $2.50.

This handsome volume, compiled by the publisher from the published and unpublished writings, orations, and sayings of Col. Ingersoll, is full of selections of rare beauty and eloquence. In addition to the oration delivered on Decoration Day, 1882, before the Grand Army of the Republic at the Academy of Music, New York, published now for the first time, it contains "tributes," heretofore printed in various shapes, to Ebon C. Ingersoll and John G. Mills; "Words at a Child's Grave"; "A Vision of War," an extract from a speech delivered at the Soldiers' Reunion at Indianapolis, Sept. 21, 1870; an Address at the Grant Banquet in Chicago, Nov. 30, 1879; together with beautiful passages from "The Gods," "Paine," "Humboldt," "The Liberty of Man, Woman, and Child," among other lectures, and choice extracts from the author's letters, table-talks, conversations, etc., all together forming a cluster of brilliant gems. The selections have been made with excellent judgment and skill. Some of these "Prose-Poems" for beauty of expression combined with tenderness and pathos are entitled to rank among the finest passages in literature. The volume is a quarto in size, printed on heavy paper in large type, beautifully bound, and contains a fine steel portrait of Col. Ingersoll with autograph fac-simile, prepared especially for this work, which is designed for a personal souvenir, and will be valued as such by many of the author's friends and admirers.

THE DORE GALLERY OF BIBLE STORIES. Illustrating the principal events in the Old and New Testaments, with Descriptive Text. By Josephine Pollard. New York: John B. Alden, publisher. 1884. Price $2.00.

This is another of those reprints of standard works which Mr. Alden makes a specialty, and one which will help cultivate a taste for the best in art among those who otherwise would not have access to the works of Doré or other artists of similar genius. In Mr. Alden's handsome edition, the illustrations of fifty-two of the most familiar events in Old and New Testament history have been selected, and will be found to include the most artistic and powerful ones. They have been reproduced upon thick and fine paper, and retain the qualities of the original impressions. Each engraving is accompanied by a text describing what is pictured. They are gathered in a handsome volume strongly bound in decorated linen covers. This book is one of the cheapest and most valuable of all of this publisher's cheap and valuable books.

LIFE IN PALESTINE WHEN JESUS LIVED. A Short Hand-book to the Synoptical Gospels. By J. Estlin Carpenter, M.A. London: Sunday School Association, 37 Norfolk Street, Strand, W.C. 1884. pp. 178. Price 1s.

This little volume is a sort of introduction to the study of the life and teachings of Jesus. It presents in a condensed form an account of the people from whom Jesus sprang, that will enable those who have not access to larger works to form some idea of the society in which he labored and the ideas and institutions with which he had to deal. The author has drawn from the best sources of information, and the book is as valuable for its references to larger works to be read by those who wish to make further inquiry into this field of investigation as for the very considerable information, well arranged and classified, which it contains. The style is clear and concise, the spirit fair and candid, and the work is abreast of the most advanced thought and research.

INGENIOUS boys will be glad to know that D. Lothrop & Co. have nearly ready for them an illustrated book entitled "A Boy's Workshop," by A Boy and his Friends, with an Introduction by Henry Randall Waite. It will have chapters on the use of tools and how to make numberless things, useful and ornamental.

AMONG Prang's forthcoming publications are four charming landscapes from the brush of the late A. F. Bellows, who was unrivalled in the delineation of landscape. They are in his happiest manner, with the tender, poetic treatment which distinguished his work. Mr. Bellows' choice of subjects was always of quiet home scenes, among quiet meadows and in pastoral districts, in preference to the wilder mountain views that tempt so many of our American artists.

THE *Century* begins its twenty-eighth volume with the May number, which is one of unusual interest. Of special value among the six illustrated papers of this number is Julian Hawthorne's "The Salem of Hawthorne." Helen Hunt Jackson's "Women of the Beehive" is a remarkably impartial statement of some of the problems of Mormonism. There is also a timely article on "Trades-unionism" in England, by Thomas Hughes. Henry James begins a new international story, entitled "Lady Barberina." George W. Cable's "Dr. Sevier" and Robert Grant's "An Average Man" seem to be nearing their conclusions. "Chief Joseph, the Nez Percé," is the subject of a sketch by Lieut. Wood; and the frontispiece of the number is a spirited portrait of the dusky warrior. The poetry is contributed by Austin Dobson, Rose Hawthorne Lathrop, Christina G. Rossetti, Edmund Gosse, Andrew Lang, Lucretia P. Hale, Richard Watson Gilder, John Vance Cheney, Robert Underwood Johnson, Frank Dempster Sherman, and others.

AMONG the notable articles in the May number of *St. Nicholas* is one by Elizabeth Stuart Phelps entitled "Supporting Herself," a clear, concise statement of the obligation of girls to support themselves, with hints as to ways and means by which they can do so. E. S. Brooks tells of "Olaf of Norway, the Boy Viking," in the "Historic Boys" series; and Julia C. R. Dorr's charming poem, "The Doves at Mendon," has three beautiful full-page illustrations by G. F. Barnes. The serial stories by J. T. Trowbridge, Maurice Thompson, and Mayne Reid are mainly for boys' reading; while Louise Alcott and other writers devote their powers toward the entertainment and instruction of the girls. The "Jack-in-the-Pulpit" papers, the "Letter-box," "Agassiz Association," and "Riddle-box" departments are overflowing with entertaining matter for all young people.

IN addition to about fifty beautiful illustrations, several of them full-page, the May number of *Wide Awake* is rich in excellent reading matter by good writers. "The Alps and their Avalanches," by C. E. Andrews, E. E. Hale's talk about Chinese Gordon in his "To-day" paper, and "The Dog-Carts of Antwerp," by Robert Lewis, are among the most instructive articles, while Imogen Louise Guiney's "Fairy-folk," Clara Doty Bates' versified Æsop's fable of "The Town and County Mouse," are the most delightful among the many charming poems. There are short biographies of a New Hampshire antiquarian, Silas Ketchum, and of Elias Howe, the inventor of the sewing-machine. The story and other departments are full and interesting as usual.

A SERIES of especially valuable articles on educational subjects will begin in the June *Century* with a discussion by President Eliot, of Harvard, of "What is a Liberal Education?" The July number of the *Century* will have an exhaustive paper by ex-President Woolsey, of Yale, on the much-mooted subject of "Honorary Degrees." Other articles will follow these on the study of Greek, on Co-education, and on "The Collegiate Study of Women." This last paper is by Mr. Arthur Gilman, of Cambridge, the manager of the Harvard Annex for women.

THE *Andover Review* for May is a solid number. It opens with an article on "The Christian Conception of Man," by Prof. Stearns. "Arnold of Rugby," by E. D. Mead; "Prohibition in Kansas," by Rev. J. T. Dougherty; "Baptism in the 'Teaching' and in Early Christian Art," by Prof. Smyth; with editorials on "The Responses to the New Creed," "The Personality of a City: A Lesson from Cincinnati," "Dr. Ezra Abbot," and "Satisfactory—but,"—are among the articles that will be read generally with the most interest.

WIDE AWAKE for June opens a new venture in serial work, the illustration of Wordsworth's masterpiece, "The Intimations of Immortality from Recollections of Early Childhood." The first two stanzas are given with exquisite drawings by Miss L. B. Humphrey and F. Child Hassam.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

———.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 44 BOYLSTON ST., BOSTON (next door east of the Public Library), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

Modern Thinkers,

Principally upon Social Science.

Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as Economist, of Jeremy Bentham as a Legal Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued.

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith.*

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago *Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—*Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.*

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

BELFORD CLARKE & CO., Publishers,
CHICAGO, ILL.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

THE *Grand Orient* of Italy, in an ironical reply to the Pope's Encyclical in regard to Freemasonry, says that the Vatican is free to lament that it is deprived of the temporal power to oppose the Divine Providence which has decreed its downfall, and that it may rave over what it regards as the abasement of human dignity.

THE very prevalent opinion that the recent decision of the United States Supreme Court, in the legal tender case, vindicates the position of those who want the government to issue paper money never to be redeemed is not correct. The Court simply decided the constitutional right of the government to issue legal tender notes, without any statement whatever as to the wisdom of such a course.

"UNITY" quotes from a contemporary that Joseph Cook "lacks literary veracity," that his lectures are "as unreliable as assertive," that he "professes a professed doctrine of love in language that would fit a doctrine of hate," that he misrepresents opponents, etc., and then adds that, notwithstanding all this, "he would have held his place supported by almost the full strength of the orthodox church, had he not attacked the new creed. The attack seems likely to be the death of him, unless he makes an 'immediate, total, affectionate self-surrender.'"

THE following paragraph from the *Woman's Journal* propounds a question worthy the consideration of the "champion" referred to: "The British House of Commons has at length passed the Deceased Wife's Sister Bill. If the Upper House passes it also, an Englishman will be allowed to marry his deceased wife's sister, but an Englishwoman will still be forbidden to marry her deceased husband's brother. It is said that the most active champions of the 'deceased wife's sister' hold that for a woman to marry her deceased husband's brother would be 'disgusting.' One of the most effective arguments of the opposition has been the question, to American ears unanswerable, 'Why is it not just as bad for a man to marry his deceased wife's sister as for a woman to marry her deceased husband's brother?'"

THE Boston *Advertiser* says: "We expend far more money for schools than does any other country; and, if we advance in the next twenty years as we have done in the past, we shall probably represent a higher average education on the part of the people than do Scotland and Switzerland. England, France, and Germany may surpass us in the number of their supremely well-trained people,—their aristocracy of learning and letters; but the time is approaching when the average education of our entire population will be the admiration of all thoughtful investigators. In the matter of illiteracy, we have less to complain of than have England and France, though we may not have reached the standard of Scotland, Switzerland, and Germany. It is estimated that about one-fourth of the French people above the age of sixteen can neither read nor write."

SAYS *Puck*: "Our beloved old friend, the Pope of Rome, is once more troubled in his aged mind. It is the Freemasons this time. He has fulminated against them, and we trust that he feels relieved. He says that they are base believers in reason,—a charge which has the distinguished merit of originality. He likewise says that they are opening the way to natural science, which, he further remarks, is a bad thing for virtue. He says that the Freemasons are paving the way for communism; and, generally, he thinks that they are in a parlous state. And, having delivered himself, he relapses into dignified silence, and leaves the daily journals of this misguided world to cut his communication down to a stick and a half, and to make irreverent comments on it at that. Of course, the Freemasons have their own opinion of the Pope; and it is one to make St. Peter turn in his grave."

SAYS the Boston *Transcript*: "Tornadoes are now made a subject of especial study in various parts of the United States. Accurate observations of the anterior conditions, as well as of the course of these destructive storms, are made, recorded, and published. Critical comparison of the charts on which the tracks of the tornadoes are laid down, and of the data which are furnished by trustworthy watchers, will possibly have for a result the establishment of a formula by which the coming on of cyclones and tornadoes may be detected, and warnings issued to people in their way. When it is remembered that by the tornadoes of February in the Southern States a thousand lives were lost, two thousand people were wounded, fifteen to twenty thousand people deprived of their homes, and property valued at from three to four million dollars destroyed, the importance of a scientific study of these storms is made apparent without further argument."

THE National Temperance Women's Union have arranged for a day of prayer "in view of the presidential campaign," with an hour for pastors and editors, "that they may lead the people away from dead issues and toward that of a national constitutional amendment prohibiting the traffic in intoxicating liquors as a drink," and with another hour for the leaders of the political parties, "that their platform may recognize this issue, and their candidate be one whose habits shall be an example to young men." This leads the Boston *Herald* to say that "these good women are exposing themselves to ridicule, and doing no good to the cause they have at heart. The editors and pastors may wish them well, though they may not favor their proposed constitutional amendment; but the politicians are a hard set, who care nothing for prayers or anything else but votes." According to the *Herald*, then, prayers for a "hard set" are a waste of time and breath. The *Herald's* theology, like its politics, is mixed.

THE New York *Tribune* says that "the Boston 'Mind Cure' is neither more nor less than an irrational and extravagant extension of this well-known principle of association and reflex influence between mind and body. The Boston fanatics pretend that mental influence will cure all diseases. This is where they part company with science. They have erected a transcendental edifice upon a basis of fact. For a time, the delusion will no doubt be supported apparently by evidence. That is to say, people who really do not stand in need of any medicine will occasionally be cured by believing that they are benefited by a supposititious mental current directed upon them from without or from within, as they may choose to think. But when people are seriously ill, and when organic lesion and morbid action are present, medical science, whether or not it be materialistic, will have to be invoked, or the Boston bills of mortality will be unduly increased, and that, too, among the most restless intelligences of the Athens of America."

"NATURE" of April 24 says: "The brilliant celebration of its three hundredth anniversary by the University of Edinburgh, last week, suggests some reflections on the connection between university progress and the growth of science. One of the most remarkable features in these festive proceedings has been the preponderance given to the recognition of the claims of scientific research to university distinction. A hundred years ago and less, had such a gathering been thought of, the great men who would have been invited to receive the highest academic honors would have been learned scholars, eminent professors of the mediæval branches of education, with, perhaps, a few distinguished medical men, and, doubtless, a good many candidates whose only claim would have been the possession of a hereditary title of nobility. But, now, a new host of competitors has arisen; and upon them have the laurels of the University been mainly bestowed. Physicists, chemists, physiologists, botanists, geologists, and other representatives of modern science have almost elbowed the older philosophies out of the field. In the pæan sung at every meeting of the festival, the brilliance of scientific discovery, the prowess of scientific discoverers, and the glory shed on the University by its connection with both have been the chief themes. This great change in the objects of university recognition has been silently in progress for several generations, but it has never been so openly and strikingly proclaimed as during these recent meetings at Edinburgh."

THE NEW LIBERAL COLLEGE AGAIN.

We have received the subjoined thoughtfully earnest letter from Mrs. Anna Garlin Spencer for our personal perusal, and then to do with as we think fit. We are sure we cannot do a fitter thing than to let our readers have it just as the words came flowing from her pen. And this we do, indorsing its sentiments wholly, and gladly putting them in place of any extended article of our own in this issue. The danger, which Mrs. Spencer points out, of a too narrow schedule of study in the proposed new Liberal College, even though its basis be broad and its method free, is one that should indeed be carefully guarded against. It is with this view that we have urged in all that we have said on the subject that all the departments of Social Science should be made specially prominent in the work of the college. In suggesting that the name used in Mr. Hale's pamphlet, "Wade College of Religious Philosophy," might be a good permanent appellation, we had in mind that wide range which the word Philosophy covers in our own thought, and which includes a knowledge of the social and individual conditions of right living no less than of right thinking. If the word *Philosophy* be defined in any narrower sense than this, it would not be a good name. And the same might be said of the word *Religious*.

By all means, whatever be the name of the college, and whatever else it may include in its scheme of study, let it be unique in the opportunity it shall offer for a thorough study of the great social sciences. Whatever it may teach of the theoretical philosophy of ethics and religion and human history, let it have for special object the application of ethics and religion and a knowledge of human experience to those various social problems on whose right solution depends man's better future. As Mrs. Spencer suggests, it cannot be better designed as a school for the new order of preachers that is needed than by being also designed to attract as students those persons of earnest minds who wish to devote themselves to good work in practical politics and philanthropy. We will add another class who might find great benefit from such a school and seek its advantages,—those who propose to devote themselves to the growing and influential profession of journalism. What might not a college, wisely and liberally organized to meet the needs of these four classes of workers, acomplish for the good of mankind!

W. J. P.

FLORENCE, MASS., May 2, 1884.

My dear Mr. Potter,—Although I have not found opportunity to write upon the subject to *The Index* or other paper, I have been intensely interested in the scheme of "the proposed new Liberal College" treated of in your editorial, May 1. And your account of the contents of the pamphlet sent out by Rev. E. E. Hale on behalf of the "Council of Unitarian Churches" makes me feel that I must write you personally a few words, to be used just as you think fit. I cannot write carefully or at length just now, but have a burning desire to say a little of my say.

The *name* suggested by its use in the pamphlet alluded to—namely, "College of Religious Philosophy"—frightens me a little in the midst of my rejoicing that the scheme has grown so strong as to be written of with distinctness. My fear is that the name covers a tendency of thought, in those most likely to be influential in shaping the course of study in the new college, which will give us another *one-sided* institution, even if broader-based and wider-reaching than any other.

I believe that the new college should fit, not only for the preacher's work, but for two other departments of moral effort soon to rise to the dignity of life professions, and for which no existing school, that I know of, gives adequate preparation. I mean the work of the statesman and that of the social reformer, or philanthropist. There are some cheering indications (the most prominent being young Mr. Roosevelt's career in New York) that we are to produce in this country a crop of men who will look upon politics as a field for devoted and wise effort toward high ideals of bettering human life and its conditions. The exceptional man entering this career can, like Charles Sumner and other giants, pick his training from many fields of knowledge, just as the exceptional preacher—born, not made—now gains from a thousand sources the stimulus and direction which the new college will, we hope, condense and offer to medium devotion and talent. But we must have not alone the one giant in state-craft, capable of hewing out his own and the people's way. We must have thousands of high-minded and earnest men of less conspicuous ability, trained to deal with the relations of the individual to the state by broader and more critical study than they could lay out for themselves. We must not have the politics of our country, touching as they do upon every question of morals in more or less direct action, left in the hands of those who have no conception of the past of human progress involved in present problems, nor of that future which may be, if we are faithful to-day.

The lawyer class now contributes an undue share of workers to the political ranks. The average lawyer is bound intellectually to narrow precedent and formalism, and is morally limited, if not warped, by his training in special pleading. And our average legislation (even when sincerely honest and free from the baser elements of our present political conditions) shows these mental and moral limitations to a marked degree. To lift the science and art of state-craft into a department of knowledge and practice distinct from the mere trade of a lawyer or the idle and amateur amusement of the business man is the great political need of our country. And a course of study carefully laid down, and arranged with wise reference to those general laws of social progress of which political science is a small part, would help to lift the profession of statesmanship into its legitimate place, and at the same time attract to it those young men (and some time those young women) who have the natural tastes and abilities for good work in this line.

The other profession for which our new college should, I believe, give wise and adequate training, is, as I said, that of the social reformer or philanthropist. It does not seem to many that reform and charity are fields for professional life-work. But, if we need thorough and accurate training for the application of accepted principles to the political organism, we need quite as much that thorough and accurate training for the mastery of those more fluid social forces which must be set in shape before political action is possible or wise. A genius of charity, like Octavia Hill, or of reform, like Garrison, may not need what is ordinarily called training. But the thousands who must carry out and make universal by patient and mediocre labor the unique dream or practice of such geniuses need every help of garnered knowledge and concentrated stimulus possible. Our Social Science Associations give us something of this needed training; but a hurried meeting, piled full to mental dyspepsia of condensed papers by experts, is not that opportunity for careful, calm, and persistent study which is wanted. Our Associated Charity Organizations (the most hopeful movements, in some aspects, of our time, because attempting to unite brotherly love and scientific knowledge in wise methods of helping) are opening up life professions of practical work for humanity. But because a man has been a minister and failed, or a business man and wants to do more ideal work, is no sign that he is fitted even for "ward superintendent," even if he has a love for his fellows and some little experience in charity. And that a woman is full of the divine passion of succor, and tender of all human ills, is no guarantee that she will not complicate the tremendous problems of poverty and vice, if she touches them. Knowledge, well sifted and brought to their hands, knowledge of the historical aspects of their work, and especially of the relation of their work to other great departments of moral effort,—this is what is needed by the reformer and philanthropist. Without it, the former is narrow, and the latter weak enough to be mastered by the very conditions he seeks to remove.

And we want this training for statesmanship and philanthropy given in the "new school for preachers" for the sake of all three professions, and, not least, the preachers.' The preacher, especially, needs to know something of the other two fields of knowledge to fit him for intelligent direction of that general moral impulse and religious sentiment which must support the special worker in politics and in benevolent social action. And the political and social worker needs to catch in his days of training something of that wide intellectual outlook and spiritual uplook which must inevitably be found in a school for the teaching of those who are to voice the Ideal. Too long have the teachers and the doers of the Word been separated in their training. The wiser the teacher, the more he has of the spirit of that which shall be, but is not now, the fewer, it is likely, will be his true hearers. The great mass of mankind, stupid, unresponsive, and bound in the prison-house of adverse circumstance, must be lifted by changed and bettered *conditions* to higher possibilities of living before they can make conscious response to the highest appeals. Hence, we must have (as we are coming to see more and more clearly) workers in the *practical detail* of moral reform,—men and women whose lives are given to making the bodies more clean and wholesome, the homes more decent, the schooling more effective for good, the laws and social and industrial conditions better fitted to develop the best of this common life.

By all means, let us have the training for the ideal prophet. By all means, let us have the best possible stimulus and direction for those who are to declare the Divine Purpose which is in our hearts and minds and lives, and woo us to its truer worship! Many who have failed to find in any theological school course such help as they needed will gladly sacrifice all else for such aids. But let us have also the best possible training for those who are to fit that lower life (now acted upon by that Divine Purpose only in unconscious pressure toward ends it knows not of) to more complete acceptance and obedience. Give us a school not only of the "philosophy," but also of the *art* of "religion," which latter, I take it, is that true "conduct of life" in all human relations which alone makes true worship and a true mental attitude possible.

The minister or preacher of the future will hold his rightful place of command of the moral forces of human progress only by an intelligent devotion to the *whole* of human interests. And I thank you for emphasizing as you did in your editorial the "practical applications of ethical science." Pray, Mr. Potter, speak again and more strongly still on this point. And, if you hold with me on

Digitized by Google

the points I have spoken of, preach in *The Index*, and get persuasive and earnest tongues to plead with you, the advantage of arranging such a course or courses of study in the "proposed new college" as shall attract both the preachers of the Ideal, and those who are to work in special and routine ways to realize the Ideal. The attrition of minds that would spring from the union in teachers' and scholars' ranks of those who would *speak* and those who would *do* the word of salvation would be of inestimable value, I believe, to both.

We need—oh, how much!—the poet's dream made vocal to our ears, to charm us who *really wish* to learn and follow the higher life from the lower aims. But let us not forget those to whom the poet's dream, though voiced in the whole gamut of religious thought and feeling, is as idle and useless as the wind, until translated into the dialect of common life. It is this vast *clientèle* of those who do not much wish to be led on to the better future whose interests, I fear, will be somewhat forgotten in the new school. Their interests will be forgotten, unless the men and women who are at work upon the *conditions which surround and mould* the weaker and more ignorant and debased of humankind are sought and prepared for among its recf ognized students, as well as those men and women who are trying to affect the individual life itselthrough the direct appeals of the preacher's office.

Yours, in the hope that the whole of religious thought, being, and action may be recognized in the new school.

ANNA GARLIN SPENCER.

THE PROPAGANDA.

It is obvious to the most careless observer that the so-called Democratic party here in New England and in New York is becoming more and more, so far as its rank and file are concerned, a Roman Catholic, or, to borrow the European designation of the time, an ultramontane party, just as before the war in the days of Southern rule at Washington it was a pro-slavery party or a party co-operative with the Southern slave-owners for the preservation and even extension of slavery. And this fact it is, in connection with the continuous and chronic failure of the Democratic party to get into power at Washington, which explains why young American voters, on entering into politics as electors or leaders, give that party the cold shoulder. They do not like the associations into which it brings its members, and they are sure that it cannot offer an opportunity for a successful political career. As in the days before the war the Democratic politician in the free States had to bow the knee to the close corporation of slaveholders, who were running the Federal Government in the interest of their peculiar institution, so the Democratic politician of to-day hereabouts in this industrial region has to be ready with a good word for the Pope on occasion of mass meetings of his enthusiastic and devoted Irish sympathizers,—here, in any emergency in the declining fortunes of their holy father, in comparison with whom all other magnates, whether kings, emperors, or presidents, are as dust in the balance in their view. Thus, we had last week the spectacle of a Democratic ex-governor of this Commonwealth presiding over a mass meeting of Catholics at Music Hall, held as a vent for their indignation on account of the "Spoliation of the Propaganda by the Government of Italy." Said Democratic ex-governor, in introducing the speakers, took occasion to arraign the liberal government of united Italy, of the united and modernized Italy of Cavour, Victor Emanuel, Garibaldi, Mazzini, and the liberal king Humbert, "in the name of Justice as guilty of an untimely act of wrong, of oppression, and *robbery* in the name of law,"—government exercising its right of eminent domain in the city of Rome, which is the capital of Italy. And what has the wicked Italian government been specially doing, thus to incur the wrath and indignant denunciation of Protestant American politicians of the Democratic persuasion? It has taken at its own appraisal, to be sure, the buildings of the Congregation of the Propaganda, so called, at Rome, and secularized them. But when ex-governor Gaston, who really can entertain no hostility on his own account, and, aside from his political and party associations to the free and enlightened government of King Humbert, charged that government with gross injustice and robbery, in the matter of the Propaganda, he evidently did it in a Pickwickian sense, and with an eye to some future emergency of his own as a candidate for high office. At any rate, the facts of the case do not at all justify his wholesale allegations. Again and again have the civil authorities of the Roman Catholic countries of Europe been obliged during the last hundred years to secularize the enormous possessions held by the *dead-hand* of the Roman priesthood in their limits, and summarily to suppress the religious orders themselves at the imperious demand of the public sentiment of their subjects, and in the interest of popular progress, a fair distribution of their soils and the exigencies of modern civilization. And this is what the Italian government has been obliged to do in Rome since its installation there. It found everything in its capital in the hands of the Roman priesthood; and thus, in order to acquire a pou sto, or stand-point, there, it was obliged to enforce its right of eminent domain, and to take such buildings and lands as it needed for its use, or as it deemed in excess of a fair ownership on the part of the priests, and to take them at its own appraisal. And right here occurs the inquiry, What are outsiders on this side of the Atlantic or elsewhere going to do about it? Or what can they do about it? Hold up to the execration of mankind, they say, the Italian authorities, the Court of Cassation, king and parliament. But just now mankind have no "execration" to expend in behalf of Jesuits or priesthoods or boards of missions, whether papal or Protestant.

Mankind, as a whole, in these days, do not like Jesuits or religious orders or missionary propagandists of any sort. The vast populations of China and India do not want to be annoyed by them or intruded upon. The great Mohammedan world feels ditto toward all sorts of Christian missionaries, who can in these days make no more impression upon the people of the above regions than could Dame Partington with her mop upon the Atlantic Ocean. But to return to "the spoliation of the Propaganda." Everybody with any historic knowledge knows that there has been no instance in which a modern State has successfully thrown off the incubus of Jesuit or papal rule in its borders, without having been obliged at the same time to reclaim a vast fraction of its territory from the *dead hand* of priestly and ecclesiastical ownership, as an indispensable preliminary step to the restoration of its autonomy and civic freedom. The City of Mexico, after all its revolutions and confiscations of church property, is still mostly owned by Roman Catholic religious orders, who in a course of years, wherever they are left free to operate, never fail, insidiously and gradually but surely, to become the chief real estate owners in any region open to their machinations. The France of the old *régime* was largely in the hands of the Church; and so was the soil of England, when Henry VIII. made an implacable and exterminating war upon it. The Roman priesthood in this country are beginning to exhibit and to gratify their immemorial earth-hunger, and to take their place with the most rapacious lay monopolists. But the popular, fair-play, current civilization counts all monopolies, whether lay or priestly, as intolerable nuisances, to be endured no longer than a remedy can be devised. An absorbing priestly ownership of the soil of a country might be borne in the days of feudal ignorance and oppression; but it is wholly out of order in the democratic civilization of to-day, which recognizes every intelligent man, at least, as his own priest and king.

The average American will perhaps ask, What is The Propaganda about which there has been such an outcry on the part of our Roman Catholic population, and by the humble servants of that population, our Democratic politicians? And, by the way, it would seem to be an exceedingly inopportune time for Archbishop Williams and his oratorical friends and coadjutors to make the noise and stir they did at Music Hall, and not to give to an anxious public the least word of palliation or explanation of the wholesale spoliations and embezzlements perpetrated at the expense of hundreds and thousands of poor mill operatives and day laborers by the Augustinian Fathers at Lawrence and the late Archbishop Purcell and his brother at Cincinnati. The Italian government, in taking the buildings of the Propaganda for secular uses, agreed to indemnify the Church of Rome; and it will keep its agreement, making such compensation as it deems fit under the circumstances. But how about the poor mill operatives and laborers in Lawrence and Cincinnati, the victims of an excess of confidence in priestly honor, solvency, and trustworthiness? Will their deposits, which had been laboriously gathered against a rainy day and old age, and which were used by their depositaries, the Roman Hierarchy, for their own aggrandizement in the erection of needlessly expensive churches and religious houses, ever be returned to them, even in part? Is it not one of the most notorious scandals of the time and country that not one dollar of these trust funds will ever be returned? Spoliation, forsooth! It is a fact as old as history that priesthoods of all religions, whether pagan or Christian, have always been insatiable and remorseless cormorants, absorbing everything within their reach, under a pretence of devoting it to consecrated and holy uses. Their chief temples, shrines, and churches, in all lands and ages, have always blazed with gold and silver and jewels, the votive offerings of superstition and a theomaniacal servility and stupidity. Their absorptions and wholesale appropriations have never ceased, until secularization of their spoils became a duty and necessity for the civil rulers. In this country, to-day, the spiritual sway of bishops, archbishops, and cardinals is as great an innovation on our free popular institutions as would be the civil sway of imported European dukes and kings in our various States. Let the American politicians and demagogues who are now so sycophantic to the papacy make a note of the fact that our politics will very shortly hinge on this innovation, which is becoming more and more a salient and offensive fact.

To return to the Propaganda. It is an institution, or has been, for spreading Roman Catholicism in both hemispheres, or for reducing mankind at large to a spiritual subjection to the "God of the Vatican," as Castelar, the great Spanish liberal, orator, and *littérateur*, denominates the Pope in his *Old and New Rome*. For there is a New Rome; namely, the Rome of Victor Emanuel and Garibaldi, a modern Rome, which is growing like one of our

Digitized by Google

young Western cities, the creation of the two great liberators above named, whose memories will be held in reverence by all true Italians, when the papacy shall have become a mere tradition of the past. The Pope may leave Rome, and go to Avignon or New York or elsewhere; but it will still continue to be frequented by pilgrims from all climes, for its relics of the great old Roman past of pre-papal days, and because it is the metropolis of a rejuvenated, regenerated, and modernized Italy. With the exception of its contributions to philology, the Propaganda has been a centre of diffusion of bigotry and superstition. It is in vain to invoke the free, tolerant, enlightened modern spirit in its behalf in its hour of extremity. This great missionary institution was established in 1617–23 by Gregory XV., in whose pontificate began the great Catholic reaction against the Reformation. We are told by Ranke, the German historian of the Popes, who is really an apologist for and admirer of the papacy, that the first care of Pope Gregory's Nuncio in Bohemia, which had been deeply inoculated with Protestantism by Huss, was to remove the Protestant preachers and *schoolmasters* as being guilty of treason against human and divine majesty. The Propaganda was run from the start by Jesuits, who have always hated schoolmasters as "godless" intruders on their special function of teaching the young.

Hume, in his history of the reign of Queen Elizabeth, in speaking of the rise of the order of Jesuits, says that that order, seeing that knowledge could no longer be kept from the people, specially exercised the functions of teachers, in order that they might drug the knowledge taught with the due spice of superstition to keep their pupils loyal to Romanism. In 1618, about the time of the establishment of the Propaganda, broke out the Thirty Years' War, which the illustrious poet Schiller has so graphically described in his history of it, and also in his great Wallenstein Trilogy. The war in question was the most devastating and implacable as well as the last of theological wars. It was a war fomented by Jesuits against Protestant Germany and Protestant Europe generally, in which Sweden and her great king of the period came so gloriously to the front on the Protestant side.

"The star-beguiled Wallenstein," the great military leader on the side of the Kaiser and the Papacy, after years of resultless fighting became weary at length, and was even suspected of a determination to desert to the Protestant side. At any rate, he was assassinated by a couple of Irish Romanists. When the war broke out, Protestant Germany was the leading country in Europe, the leader of the civilization of the period in commerce, manufactures, art, learning, enterprise, and intelligence. Nuremberg's hand then went through every land, and the Fuggers of Augsburg were the Rothschilds of the time. When the war was ended, Germany was a waste, and France and England had left her far in the rear in all the belongings of civilization, so that it is only in the present century that the land of Luther, the unveiling of whose statue is shortly to be celebrated at Washington, has recovered the intellectual and political supremacy which naturally belongs to her among the group of European nations.

According to Heine, the political and social revolution is yet to come in Germany; and, when it comes, the French Revolution will be utterly eclipsed. For the great Teutonic race is yet to complete the work begun by Arminius and Luther by sweeping the last vestige of Romanism from the face of the earth.

B. W. BALL.

MYTHOLOGY.

VI.

One lesson clearly and impressively taught by the studies of our time—in the history of culture, mythology, etc.—is the solidarity of the race, the oneness of humanity. Man is like, and much the same the world over. There is a continuity in history, no break or fissure anywhere: all is of one piece. No hard or fast line can be drawn dividing the different stages of culture from each other. Barbarism shades into civilization, civilization bears, in whatever most favored conditions, birthmarks and rudiments everywhere of the ancestral barbarism.

We have seen something (*Index*, February 21) of the reminders current in our every-day speech of the mythologic stage, once so tenaciously held and still of potent effect among ourselves. Volumes might be filled with them, they are so numerous; and every one of them tells an interesting tale of past history, and sheds withal a strong light upon the relations that bind us to the ruder races. In some cases, yes, many, we note clear and manifest survivals; in others, mainly reminiscence,—a reminiscence accompanied still by a partial though dim and shadowy belief.

All over the world, with savage and barbaric peoples, the belief prevails that a cure of maladies may be effected by the sorcerer or the medicine-man sucking out the evil; and this is pretendedly exhibited in a stick or stone, sometimes a ball of hair or grains of corn or a lizard, produced from the sorcerer's mouth. In the north of Ireland, the wizards still extract elf-bolts—that is, stone arrow-heads—from the bodies of bewitched cattle. Sir John Lubbock suggests that this old method of cure may linger in survival among ourselves in the universal nursery remedy of "Kiss it, and make it well."

The Tyrolese peasant to-day still wears tufts of eagle's down in his hat to impart to him the eagle's keen sight and courage. So the Dakota Indians eat the liver of the dog, in order to have his sagacity and bravery. And a European tourist in China tells us that, during the war in that country not long since, his Chinese servant was detected in eating the heart of a rebel. The reason given by the servant was that he hoped thus to obtain the enemy's bravery. Possibly, our proverbial phrase of "part strengthening part" is a relic of the same belief.

It may sound strange to say it; but it is, nevertheless, probably true that the custom observed in the Christian eucharist, which we call the sacramental supper, originates remotely in this source, the belief in the virtue of "eating the flesh and drinking the blood" coming down from the savagery of cannibals. Certainly, the superstition generally attendant upon the observance of that rite is of the same kind, and not much less gross than that we find among barbarians.

Our pagan ancestors had the custom of devoting meats to their deities, and this chiefly at Yule tide. Our Christmas banquets appear as the successor and representative of this observance. Fasting, Mr. Conway tells us, is a survival from the savage notion that man may secure benefits from invisible beings by leaving them food; and grace before meat, according to the same writer, is "a remnant of the sacrifices made to the half-starved, gobbling ghosts."

The belief widely prevails in the civilized world, as well as the barbaric, in the power of charms, spells, and incantations. Diseases are cured by such magic. An ague or a fever is transferred to some object, as a crawfish or a bird, a willow or a tree. "Ash tree, ashen tree, pray buy this wart of me," is a frequent formula. An ailment has sometimes been plugged into a tree trunk, or conveyed away through some lock of hair or nail-parings, and so buried. The ash tree has long been thought to have peculiar virtue; and, in Cornwall, to-day children are drawn through holes in ash trees for the cure of hernia. Wens may be taken off by wishing and a charm repeated over them. Warts may be transferred to pebbles by touching, and the pebbles left by the road to impart their maladies to the unfortunate wight that finds them. In Thuringia (Germany), it is believed that a string of rowan berries, a rag, or any small article, touched by a sick person, will receive his ailment.

The miraculous virtues ascribed to the witch-hazel are well known. In England, and also to some extent certainly in this country, it is believed that a bush like a bramble, which arches over and has root at both ends, is potent to cure a child of whooping cough, if he is drawn a certain number of times through it.

Looking into the history of the Jews, we find much of the same belief in spells, the magic transfer of maladies, sins, etc., from their proper subject to another. The brazen serpent set up in the wilderness is one example: the scapegoat which received and carried the sins of the people into the desert is another. And what is the belief now and for long widely current through Christendom in the magic virtue of Jesus' blood to take away all sin, to extinguish both the guilt and its consequences, but the belief in one omnipotent charm,—a spell powerful as that which carries off warts or ague, or a fever in the blood, transferring them wholly to some other, only operating here upon a far deeper and infinitely more intractable disease? Like Spaulding's glue which "mends everything," it is effective to cleanse all stains, all penalty away, and relieve the offender of every burden of his transgression. Thus is this great transaction on Calvary, which, justly seen, is of sublime significance in human history, made a comprehensive juggle, one monster incantation and sorcery.

A correspondent of the *Notes and Queries*, in 1873, tells us that he found upon the road one day a piece of paper, bearing this inscription, "Jesus Christ that died upon the cross, put my warts away." Upon inquiry, he found that it had been given to a young girl, who had been afflicted with warts, by an old Irish servant in the family. He had passed his hand over the warts, made the sign of the cross over them, and offered an invocation. As the paper, which was to be dropped by the road-side, should waste, so would the warts disappear; and this was actually taking place. We have a new element introduced here in regard to the perishing of the paper, imported from an old pagan superstition, already noted. But this of the virtue of Jesus' blood is but an extension of the prevailing doctrine. And who shall say that it was either illogical or unnatural?

On Walpurgis night, the witches are thought to hold their convocation, particularly on the Brocken. Fires of straw are still kindled in the neighborhood to ward off their fell influence. The Tyrolese on that night, the Bohemians on the Pentecost, hunt the witches from house and stall. The Carinthian boor "fodders" the flame, will throw lard or dripping to it that it may not burn his house. He will also fodder the wind, setting up a bowl of various meats on a tree near by, that he may mollify its spirit. In Swabia, Tyrol, etc., when the storm rages they fling a spoonful or a handful of meal in the face of the gale, bidding it take that, eat, and cease its violence. In Russia, Lyeshy, the wood demon, is invoked with an offering of bread and salt and an uttered prayer. In

Digitized by Google

Franconia, a baker, before putting any dough of his biscuits into the oven, will throw half a dozen of them into the fire, prompted thereto, as he will admit, by the fear that otherwise his biscuits will be burnt in the oven. In Wales, the good housewife will religiously make the sign of the cross over the dough she is kneading, lest the witches infesting shall prevent its rising. In Brandenburg, omens are taken from a pig's spleen. If the spleen is found turned over, there will be another overthrow,—namely, a death in the family within a year This belief is, I am told, not unknown among ourselves. In Cornwall, they throw crooked pins, rags, nails, into the old sacred wells, that they may draw from the bubbles that rise omens in regard to marriage, and drink healing for their maladies from the waters.

The breaking of a cow into a yard, howling of a dog under a window, breaking of a glass, etc., are widely regarded among ourselves of fatal omen. It is a frequent, if not general custom in our own country, I understand, to veil the mirrors in a house at time of a funeral,—a custom, I conjecture, that comes from the old superstition in regard to the image in a glass. The ticking of the death-watch, as it is termed, the appearance in dream of the figure of some acquaintance, enveloped at greater or less height on the body in a shroud (thus indicating the length of time that will elapse before death), the appearance of wraiths, fetches, etc., are widely believed in.

There is probably not one of us that is thoroughly free from all superstition. The disease is too old, inveterate, persistent, to have been completely extirpated in any. Few will be quite unmindful of the old belief in regard to Friday, if they have occasion to start upon a journey or begin a job of work; and there are many intelligent persons who shrink from sitting at a table where thirteen is the number. This last superstition comes down to us, by the by, from the Norse mythology, thirteen being the number of the gods and goddesses sitting at table in Valhalla, of whom one, Baldur, must die within the twelvemonth. A friend of mine, a person of great intelligence and full mental liberation, said to me recently that never did he break a glass without dimly feeling that it boded misfortune, as told in the old saw.

And those vague, haunting forebodings, shadowing apprehensions of ill, some calamity impending, that come at times perhaps in the experience of all, unaccounted for and unaccountable, purely gratuitous, yet casting sombre shade over the whole horizon of life, paralyzing the strength and depressing the spirit,—what are they but rudiments, birth-marks that have travelled down from a distant savage ancestry, and which the growth thus far attained has not availed to efface? They are the registered record of a long, dark past. They are the lingering ghosts of old fancies and beliefs, not yet exorcised from the mind.

CHARLES D. B. MILLS.

THE BRAHMO SOMAJ.

Another schism seems to be imminent in the Brahmo Somaj of India. The hope that was entertained that the death of the eminent leader, Keshub Chunder Sen, might prove a means of healing the divisions into which the movement had unhappily broken, is not likely to be fulfilled. On the contrary, it threatens to precipitate a new division. The family of Chunder Sen, supported by his more devoted adherents and by the majority of an apostolic body of twenty-one members whom he had organized, resolved that his pulpit should be kept vacant (it is not said for how long), as also his place in the apostolic body and his seat in the sanctuary. Their purpose, they say, is "to establish a permanent relationship with their minister and leader," and to "realize his spirit as ever hovering before the eye of faith." One of the more enthusiastic of them styles their departed leader "the incarnation of the New Dispensation," and, following the Christian beliefs about Jesus, exhorts the faithful to "eat his flesh and drink his blood," so that "he may enter into them and they into him, and thus the master and the disciples be one." This devotee even declares that he sees Keshub Chunder Sen "at the right hand of Jehovah, the Most High, in the midst of the heavenly host," whence "he shall come again, and live with the world a second time in all his celestial glory."

On the other hand, Mr. Mozoomdar, who has been elected secretary of the General Conference of the Brahmo Somaj in Mr. Sen's place, thinks himself entitled thereby to occupy the vacant pulpit, and also deprecates this excess of reverence for the memory of a man, however great, as partaking of idolatry, and as really violating the Brahmo principle of theistic spiritual worship. But, as the deed of the building where Mr. Sen's congregation meets was taken in his name, his family and friends now hold it; and Mr. Mozoomdar and his adherents meet for the present in his own house. There is evidently a good deal of excited feeling between the two parties, and one attempt at arbitration has failed. The extravagant mysticism into which Keshub Chunder Sen fell in his later years is now producing its fruit. If one of the results of the present trouble shall be to open the eyes of Mr. Mozoomdar and his more moderate party to the danger of this tendency, and lead them into fellowship again with the original Brahmo Somaj, which, because it was too rationalistic to accept all his fancies, separated from Chunder Sen in 1878, a genuine good will be effected. And of such a reunion there is some sign.

W. J. P.

THE course of lectures on "Primitive Christianity," by Lewis G. Janes, of Brooklyn, N.Y., the publication of which was commenced last week in *The Index*, is intended to present in popular form the results of the latest critical and historical research respecting the origin and growth of Christianity, and the characteristic features of the earlier phases of its development. The positions therein maintained will be that the internal evidence of the Gospels and the testimony of the earliest witnesses, both pagan and Christian, rationally regarded, vindicate conclusively the verity of Jesus as an historical personage; that the "newer criticism" enables us, without arbitrariness, to separate the later accretion of myth and legend in the gospel stories from the historical facts around which they have gathered, and to reveal the essential features of his character and teaching; that, contrary to the views of some recent writers, the thought and expression of Jesus are seen to be essentially Jewish rather than of Egyptian or Buddhist origin; that the mythical and miraculous elements in the New Testament stories may be traced with considerable certainty to their natural sources in current ideas and superstitions; and that the subsequent history of the evolution of Christian doctrine and ritual proves that they also grew naturally out of the circumstances of the temporal and intellectual environment of the earliest Christian communities. The influence of Paul and of the Gnostic and Ebionitic controversies of the second and third centuries upon the development of Christian doctrine will be duly considered; and it will be maintained, incidentally, that the commonly received notions of the extent of the persecutions of the Christians by the Roman emperors are unjust and exaggerated. The general conclusions from the historical facts will be that Christianity, though no mere priestly invention or wholly mythical system, yet needs no supernatural hypothesis to explain its origin and growth. It stands upon the same human ground as do the ethnic and other systemic religions, and must submit with them to the judgments of enlightened reason.

THE reckless and unscrupulous management of the firm of Grant, Ward & Co., as disclosed by the failure of that concern last week, cannot be too severely condemned. Says the Springfield *Republican:* "Grant, Ward & Co. claimed to be operating in enterprises of such magnificence that they could pay from two to five per cent. a month for money. They bid off city revenue bonds at prices nobody else could pay. They took great loans to the pauper railroads on collateral of stock, and then rehypothecated the collateral for more ready cash. They made checks on banks where they had no funds and got them paid. They took every advantage of the free and easy methods of business to swindle, right and left. The three partners, Fish, Ward, and young Grant, drew out $3,000 a month each for living expenses, and played their game to the last limit of human humbugibility." The New York *Times* observes: "So far as anybody actively and knowingly engaged in the transactions by which this insolvency has been brought about is concerned, any sympathy would be absurdly misplaced. Such a person is simply a public robber; and his case calls for nothing short of an administration of justice, which shall be at once exemplary and punitive. There is ample room for sympathy when we come to consider his victims, the most unfortunate and pitiable of whom, as the case now seems to stand, have been his own nominal associates in business." The New York *Sun* points out the resemblance between the methods of this firm and those of Mrs. Howe's celebrated bank in Boston. Everything that Gen. Grant had in his own possession has been swept away. In regard to his connection with the firm, the New York *Herald* probably expresses the general feeling of the country, when it says: "We do not wish to blame Gen. Grant: he has been the victim of circumstance; but, had it not been for his name and the influence it gave, the operations of the firm would have been very restricted as compared with what they actually prove to have been. He has our sympathy, and we cannot but wish that his name were not mixed up with this affair."

REV. ARTHUR SLOAN, rector of Christ's Church, Stratford, Conn., has gained some local notoriety by undertaking the practice of faith cures. Wonderful stories are told of his success. His parish was not agreed as to the efficacy of his manner of treatment or even as to his mental soundness; and last week he resigned his rectorship, declaring his design to bestow undivided attention on his miraculous cures. Many persons believe in his marvellous powers, and he has received so many letters of inquiry that he replies by a printed circular explanatory of his methods. No doubt, the alleged astonishing cures, through Mr. Sloan's instrumentality, will continue to increase, and will give a new impulse to the business of faith-curing, belief in which quacks and swindlers find of great advantage to themselves. The New York *Sun*, referring to the case of Mr. Sloan, remarks: "Various diseases have always been more or less cured by the exercise of the imagination. Faith in the physician is often a first essential for the patient. Nervous disorders especially, and more particularly hysteria, are frequently cured by moral influences brought to bear by the physician rather than

Digitized by Google

by the use of the drugs he administers. Every wise doctor treats the imagination of the patient as a factor in bringing about recovery from many diseases. We, however, advise people who are suffering from bodily ailments to send for their doctors rather than for their clergymen, when they seek physical restoration. The function of the parsons is to look after their spiritual health purely. As to Mr. Sloan, he may not be a humbug. He is more probably only deluded; and, instead of trying to cure other people by prayer, he ought at once to put himself under medical treatment, lest his malady get beyond the possibility of cure or alleviation."

MRS. H. R. SHATTUCK in the Boston evening *Transcript* quotes from the address on "The Fallacies of the Remonstrants" recently published in *The Index*, and adds a number of words from several distinguished men in favor of woman suffrage, a few of which we copy:—

"The claim now pressed by woman is a claim for nothing less than all, than her share in all. She asks for her property, she asks for her rights, for her vote; she asks for her share in education, for her share in all the institutions of society, for her half of the whole world; and to this she is entitled."—*Emerson.*

"I go for all sharing the privileges of the government who assist in bearing its burdens, by no means excluding women."—*Abraham Lincoln.*

"Because suffrage is a right and not a grace, it should be extended to women, who bear their share of the public cost, and who have the same interest that I have in the selection of its officials and the making of its laws, which affect their lives, their property, and their happiness."—*Ex-Gov. Long.*

"To have a voice in choosing those by whom one is governed is a means of self-protection due to every one. Under whatever conditions and within whatever limits men are admitted to the suffrage, there is not a shadow of justification for not admitting women under the same."—*John Stuart Mill.*

"Those persons who think that free government has anywhere failed can only claim that this tends to prove, not the failure of universal suffrage, but the failure of masculine suffrage."—*Senator Geo. F. Hoar.*

"I ask if the American government, as now organized, is a government based on the consent of the governed, when at least one-half the people are disfranchised and treated as political nonentities."—*Garrison.*

"The first of rights is the right of suffrage, and this must be settled on knowledge and on the principle of equality. The true ground of principle is equality of rights with man. Humanity is a unit, one glory and one shame."—*Warrington.*

COMMENTING on the meeting held in this city last Thursday evening, to protest against the action of the Italian government respecting the property of the Congregatio de Propaganda Fide at Rome, the Boston *Herald* calls attention to the fact that the Italians have always considered the Roman Catholic Church a peculiarly national institution, with which they have a right to deal without consulting the Catholics of other countries, and that the Church itself has done much to favor this view of the matter. The fact that all the popes have been Italians for the last three hundred and fifty years is mentioned, and also that at the present time more than half of the sacred college is composed of Italian cardinals, thus giving to the Church a national coloring, and leading to results different from those which might have been looked for, had the church administration been broader. The *Herald* observes: "The Italian people have come by long usage to consider that they have the same right to seize upon church property that was asserted by the Spanish, Austrian, and English people when the governments of these various countries took possession of the church property. They cannot well understand that in one case the seizures were of a national and in the other of an international character. The question at issue is but one phase of the perplexing Roman problem,—a problem which does not seem to be any nearer its solution now than it did in 1870. The fact was not sufficiently brought out at the meeting on Thursday night that the Italian government does not take the property without paying for it. It has agreed to indemnify the church for the buildings it has taken, though it takes good care to fix its own prices and its own methods of payment."

IN an address last week in this city before the Woman's Educational and Industrial Union, Mrs. Mary A. Livermore said:—

Here in Boston there are twenty thousand more women than men, and a large proportion of them young women homeless. Where there is such a large majority of women, the moral standard is always lower. Now, if this Union only had its workers and the money, I could put into its hands all such cases as the above; and we could save the girls from moral ruin. If this Union had its library, reading-rooms, parlors, and other means of legitimate amusement free to all young women, how many could we not save? A person cannot, in my opinion, be a Christian who does not work for others. The standard of a person's Christianity used to be embodied in his answer to the question, "What think ye of Christ?" Now, it is, "What are you doing for your fellowmen?" Not a woman falls but a score go down with her. A home is simply what many of the young women need to turn the whole course of their lives. We must get rid of that old notion of Christianity, to the effect that the minute we are received inside the Church we are saved. Now, I never ask what a person believes, but look at their works and character, which are the only real tests of life.

According to the view above expressed, an agnostic or an atheist may be a Christian, which strikes us as somewhat absurd; but the spirit of the passage is admirable, and we quote it only to remark that it would be wise to devote to the good work proposed a portion of the money so lavishly spent in this city in teaching and supporting theological creeds.

IN his encyclical against the Freemasons, the Pope says:—

The sect of Masons aim unanimously, and steadily also, at the possession of the education of children. They understand that a tender age is easily bent, and that there is no more useful way of preparing for the State such citizens as they wish. Hence, in the instruction and education of children, they do not leave to the ministers of the Church any part, either in directing or watching them. In many places, they have gone so far that children's education is all in the hands of laymen; and from moral teaching every idea is banished of those holy and great duties which bind together man and God. The principles of social science follow. Here, naturalists teach that men have all the same rights, and are perfectly equal in condition; that every man is naturally independent; that no one has a right to command others; that it is tyranny to keep men subject to any other authority than that which emanates from themselves. Hence, the people are sovereign; those who rule have no authority but by the commission and concession of the people. So that they can be deposed, willing or unwilling, according to the wishes of the people. The origin of all rights and civil duties is in the people or in the State, which is ruled according to the new principles of liberty. The State must be godless; no reason why one religion ought to be preferred to another; all to be held in the same esteem.

THE Chicago *Tribune* wants the national capital removed to Chicago. It says: "So far as the Father of his Country is concerned, he had the misfortune to be born nearly a century before Chicago was heard of. Had he known what was going to grow up at the head of Lake Michigan, he would unquestionably have bequeathed the capital to Chicago. As it was, he had a pretty poor lot of material to choose from; and one place was about as good as another. The unanswerable argument for Chicago is the absolute certainty that, as the country grows and develops and absorbs surrounding areas, like Canada, for instance, she will be the centre of the country, not only geographically, but politically, commercially, socially, vitally, and every other way. She will be the place where things are done and where great movements originate, and the centre whence their influences radiate. The great forces of the country will be set in motion here. The sentiments of the country will crystallize here. These are the real qualifications which will determine the future location of the national capital. It will come here without any effort on Chicago's part, naturally and inevitably, and in consonance with the eternal fitness of things. All the forces and energies and actions of the country will tend here, just as grains of metal are drawn to the magnet."

ANNUAL MEETING.

The annual meeting of the Free Religious Association is to be held at the Parker Memorial Hall, Boston, as follows: Thursday, May 29, at 7.45 P.M., business meeting for hearing of reports, election of officers, etc.; Friday, May 30, convention, with sessions at 10.30 A.M. and 3.00 P.M., and a festival in the evening.

At the Friday A.M. session, the "Ethical Culture" movement will be presented in Addresses by Wm. M. Salter, of Chicago and Messrs. W. L. Sheldon and S. B. Weston of New York, who will speak respectively of the Philosophical Basis of the Movement, of its Practical Aims, and of its Relations to other Organizations.

More complete notice hereafter.

F. A. HINCKLEY, *Sec'y.*

ANNUAL FESTIVAL.

The annual festival of the Free Religious Association will be held in the Meionaon, Tremont Temple, Boston, Friday evening, May 30, commencing at 6.30 P.M. Tickets with reserved seats at tables, at $1.00 each, may be had at *The Index* office, 44 Boylston Street, Boston, and of the Secretary at Providence. Music, including quartet, duet, and solo singing, will be furnished by the choir of the Church of the Unity, under the direction of Mr. Howard M. Dow. Mrs. L. F. C. Richardson, soprano; Mrs. H. R. Paige, contralto; Mr. Charles R. Adams, tenor; Mr. H. L. Cornell, Basso; Mr. Howard M. Dow, pianist. Fuller particulars hereafter as to speakers.

F. A. HINCKLEY, *Sec'y.*

ADDITIONAL DONATIONS TO THE F. R. A.

Contributions and Membership Fees at the New Bedford Convention	$95.50
A voice from Australia, "R. B."	10.00
THOMAS DUGAN, Albany	1.00
New Bedford Convention, additional	5.00

TRUTH.

No power on earth shall sever
My soul from Truth forever.
In whate'er path she wander,
I'll follow my Commander.
All hail! all hail! beloved Truth!

Whate'er the foe before me,
Where'er her flag flies o'er me,
I'll stand, and never falter:
No bribe my faith shall alter.
Lead on! lead on! thou mighty Truth!

And when the fight is over,
Look down upon thy lover:
He asks, for well done duty,
To see thy heav'nly beauty.
Reveal thy face, celestial Truth!

MINOT J. SAVAGE.

The Index.

BOSTON, MAY 15, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

I.

PALESTINE IN THE ROMAN PERIOD.

(*Continued.*)

The Kannim, or Zealots.

Out of the long oppression of the Jews by foreign rulers and the indignities offered to their religion, culminating in the desecration of the sacred temple of Yahweh, grew the party of the Kanaim, or Zealots. Its members were patriots whose zeal for their ancestral faith impelled them to renounce all foreign domination, and to strive to break the bonds of the oppressor by the force of arms. The Kanaim held unswervingly to the ancient theocratic character of the Commonwealth. "There is but one kingdom: it is the heavenly kingdom,—the kingdom of God." This was the motto of the Zealot. "Thou shalt make no graven image" was the command of the *Thorah.* To touch a piece of money with the image of the Roman emperor on it was therefore a sin in his eyes. Yahweh only was king. To pay taxes to a foreigner, the representative of false gods and an alien religion, was therefore a crime. To make contracts under the seal of the Roman officials was blasphemy. "How can you pretend to be pious?" said one of this sect to a leading Pharisee. "You write in contracts the name of the ruler by the side of that of Moses, beginning 'In the year of the Emperor,' and concluding 'According to the Law of Moses and Israel.' If the name of the unbeliever is in this way incorporated into contracts, can you call that piety?"

This uncompromising patriotism and resolute adherence to the old faith of Israel did not fail to meet with a response in the hearts of the people. Associations were formed, which had for their object the delivery of the people from the foreign yoke; and insurrections were frequent from the time of Judah of Gaulonitis, in the generation before Christ, to that of Bar-Cochba, more than a century later, who was accepted as the true Messiah by a large number of the people, including some of the leading Rabbis of the day. During this period, it is said that more than fifty leaders arose among the Jews, claiming the Messianic office, each of whom had a considerable popular following.

Sectional Characteristics: Galilee, Samaria, and Judea.

Galilee appears to have been the fountain-head of these insurrectionary movements. The Galileans were a mixed race, having intermarried with the inhabitants of the surrounding neighborhood after the deportation of the northern tribes by the Assyrians. They were regarded with suspicion and contempt by the more conservative classes who inhabited Judea, and came under the direct influence of the government and the priestly party of the Sadducees who gathered around the temple as the centre of their worship and the chief citadel of their faith. This region was often called "Galilee of the Gentiles" by the blue-blooded Jews of Jerusalem. Nevertheless, the Galileans strenuously maintained their rights as children of Abraham, and were strict in their allegiance to the law and the temple at Jerusalem. Like the Jews of Judea, they despised their neighbors, the Samaritans, whose blood was even less pure than their own, and who had established a new temple on Mt. Gerizim, breaking loose entirely from all allegiance to the aristocratic element of Jerusalem and Judea. So bitter was the feeling against the Samaritans that it was customary for travellers between Galilee and Judea to avoid Samaria, which lay in the direct route, by crossing over to the east of the Jordan.

Judah of Gaulonitis, himself a native of Galilee or an adjacent district, may be regarded as the founder of the sect of the Zealots. He taught that to obey the foreign ruler, or in any way depart from the original theocratic constitution of Israel or to compromise in the least degree with the secular power, was rebellion against the sacred law of Yahweh. Rising in insurrection with a considerable following in the generation before the birth of Jesus, after a severe struggle he was defeated, captured, and crucified. His followers were scattered and disarmed, but the spirit which animated them was not thereby quelled. A generation later, John of Giscala, a descendant of Judah, became the leader of another rebellion which likewise came to a disastrous end. Theudas, a third sectarian leader, mentioned in the Acts of the Apostles, also hailed from Galilee. He met with some local and temporary success, and had many enthusiastic followers, but finally succumbed to the fate of his predecessors. The martyrdom of these leaders of the Kanaim by crucifixion only served to perpetuate their memories and give currency to their revolutionary sentiments, and thus added fuel to the patriotic flame which was glowing in the hearts of the people.

The Revival of Prophecy: John the Baptist.

From among the less cultivated classes there also arose certain religious enthusiasts claiming the office and assuming the characteristic garb of the Hebrew prophets. They announced the speedy destruction of the existing order of society, and the coming of the kingdom of heaven through supernatural intervention. The popular conception of the heavenly kingdom involved the universal triumph and control of the Jewish theocracy, the annihilation of its enemies, and the re-establishment of united Israel, with a descendant of the house of David to rule over them as the servant and representative of Yahweh. Many anticipated the return of the prophet Isaiah in person, as the herald of Israel's better day. John the Baptist, the most noteworthy of the latter-day prophets, was undoubtedly an historical personage. A brief sketch of his career is given us by Josephus, in passages of unchallenged authenticity. The account harmonizes in the main with the conception of the man which we derive from the familiar New Testament description, and presents a graphic suggestion of the effect of his impassioned exhortations upon his followers. Josephus also alludes to one Banus, possibly a leader of the Essenes, who immersed his disciples in the Jordan river. At a later day, one Jesus, a Judean Jew, uttered stern warnings and foreboding prophecies of evil to Jerusalem during its investment by Titus, prior to its final destruction in the year 70 B.C. These leaders drew to themselves chiefly the less educated Pharisees and the so-called "people of the land," a large class of mixed parentage, whose poverty and menial occupations forbade a strict observance of the minutiæ of Pharisaic ritualism, though their sympathies and associations were generally with this most numerous and popular sect.

Growth of the Messianic Idea.

Out of all this turmoil and conflict of the sects, these disputes about idle formalities of ritualistic observance and textual interpretations, one doctrine grew steadily into ever greater prominence in the hearts and hopes of the people,—the belief in a coming Deliverer, "the anointed of Yahweh," —the Messiah. Out of the vague natural hope of the earlier time for the reunion of a scattered and divided people under a prince of the house of David had grown a strong belief that a leader would be raised up to them, sustained by the supernatural power of Yahweh, who would put an end to the existing social order, and establish anew the kingdom of God on earth. The Persian notions of a bodily resurrection and a millennial era of earthly prosperity, to be heralded by the coming of Sosiosch, "the conquering Saviour," had penetrated the faith of Judaism, and intensified and transformed the popular conception of the Messianic character. We would doubtless err greatly, if we supposed that any single, consistent picture of the coming Saviour was present to the minds of all classes. The better educated of the Pharisees probably still held the faith of the great prophets of the captivity, which regarded Israel itself as the Messiah of the nations, the leader of the world out of polytheism and idolatry to a knowledge of Yahweh as the one true God, and the conception of righteousness as his most faithful and acceptable service. The popular expectation, however, looked for a personal deliverer, either in the character of a great military chieftain like David, who would destroy the enemies of Israel with the weapons of natural warfare, or in that of a chosen servant of Yahweh, endowed with supernatural powers, who would overcome the nations by the might of the Eternal, and herald the appearance of the everlasting kingdom.

Liberal and Conservative Pharisees.—Hillel.

In times like these there appear not only men like these fanatical chieftains who fomented insurrection, but also leaders by right of moral and intellectual superiority, who voice the higher conceptions of truth as they appear to the more intelligent classes, and who are yet free from that purblind conservatism and time-serving subservience to rulers, which characterized the educated

Digitized by Google

Sadducees. Such a man was Rabbi Hillel, born about ninety years before Jesus, and dying, it is said, at the full age of one hundred years, when the founder of Christianity was about ten years old. Hillel was a liberal Pharisee, the leader of one of the two great parties into which the popular sect was divided. Such were his services to Judaism that the Talmud declares, "After the time of Ezra, the law came into oblivion; but Hillel established it anew."

Hillel was a very poor youth, but ardently ambitious to learn. It is related of him that, being unable to pay the small fee for admission to the lecture-room of Shammaya and Abtalyon, he climbed up to the window in order to hear the discourses of these eminent teachers. The night was unusually cold; and he lay there, benumbed, until the snowflakes, which were falling thick and fast, covered him entirely. Stiffened with cold and sleet, he passed the whole night in this perilous position. In the morning, when the obstruction to the window was perceived, he was discovered almost dead from exposure. He was taken into the house, restored to consciousness with great difficulty, and thenceforth, to reward his ardor for learning, instruction was bestowed upon him gratuitously.

The Character of Hillel's Teaching: the Golden Rule.

A proselyte once came to Shammai, a distinguished leader of the more conservative party of the Pharisees,—the contemporary and rival of Hillel,—and desired to be initiated into Judaism, provided he could be instructed in its precepts within the time during which he could stand upon one foot. Shammai repulsed him harshly as a trifler unworthy of a serious response. On making a similar application to Hillel, however, he received this reply: "My son, listen. The essence of Judaism is, Whatever is displeasing unto thee do not do unto others.* This is the foundation and root of Judaism: all else is commentary. Go, and learn." Won by the paternal kindness and "sweet reasonableness" of the teacher, this man speedily became a convert to the faith.

Hillel inculcated the belief in the merciful and fatherly character of God, encouraged the cultivation of an unselfish desire for the welfare of others, taught the necessity and honorable nature of useful labor, and advocated a wise liberality in adjusting the harsher features of the law to the existing requirements of society. He believed that the irreclaimably evil would suffer eternal punishment; but, in regard to those whose conduct was an intermixture of good and evil, he said, "He who is abundant in mercy will sink the scale unto mercy."

Shammai and his disciples were the Mallocks of their day, preachers of the pessimistic philosophy that life is not worth living. "It is far better for men not to be born than to be born," they said. But Hillel replied: "Well, we *are* born. Therefore, let us be thoroughly alive, and examine well our actions." "Energetically seize life," was his motto. "Why do you make changes and innovations?" his opponents asked. "If I work not myself," he replied, "who will work for me? But, if I work for myself alone, what am I then? Is it for myself that I desire what is good, or is it not rather the whole people who require to be quickened?"

The old Jewish law made every seventh year a year of release, and all debts previously contracted and not paid were then cancelled and forgiven. When trade increased and men borrowed money, not merely from personal necessity, but for business purposes, this provision caused much hardship and inconvenience. Hillel declared that this must be remedied, and that thereafter contracts might be made with the express provision that the year of release should not cancel the debt. "But this is in violation of Holy Writ," said his opponents. "It may be," said Hillel; "but, if we cling to the letter, all morality will be lost. Whether anything be written or not, the life decides." In rebuke of ascetics like the Essenes, and of extreme formalists among the Pharisees, he said: "Do not seclude thyself from thy fellow-men. Do not pretend to be pre-eminently pious. To forsake others as renegades and bask in the sunlight of exclusive piety is immoral." It is evident that the great rabbi was no advocate of a merely superficial system of morality or religious observance.

Hillel was wont to spend much time in meditation and study, and was regular in his attendance at the synagogue. One day he left the sacred edifice hastily after the lesson for the day, excusing himself by the plea that he must attend upon a dear guest at his home. His disciples asked him, "Who is this dear guest whom thou entertainest?" "That guest," he replied, "is my own soul. During my intercourse with the world, it must be pushed back; but, nevertheless, it claims its right." Although liberal in his interpretation of the law, Hillel was, nevertheless, a Pharisee, advocating strict adherence to the usual formalities of religion, unless they were in manifest conflict with the welfare and happiness of man, whom they were intended to serve. He kept the seventh day as commanded in the law, but also taught that all days should be deemed equally holy, and consecrated to God's service by clean and righteous actions. When Shammai found anything particularly excellent in his studies, he said, "Let it be preserved for the Sabbath." Hillel said: "Praised be God from day to day. *This* is a day on which I may rejoice in God's goodness: another also will afford it."

Such was the teaching of this reformer among the Pharisees, the most eminent Jew of the generation before the birth of Jesus. Possibly, the young Galilean peasant may have sat at the feet of the aged teacher, and learned lessons of liberality and wisdom. In all probability, he often listened to these teachings as they passed from one to another, and were repeated in the synagogues, where they constituted at length a part of that oral law which was ultimately recorded and preserved to us in the Talmud.* We may well believe that these doctrines of Hillel helped to inspire the humane and tender counsels of the founder of Christianity.

The Languages of Palestine.

The popular language of Palestine at the advent of Christianity was the Syro-Chaldaic, or Aramaic, a mixed Semitic tongue which superseded the ancient Hebrew in which the Old Testament was written, subsequent to the Babylonian captivity. It is probable that neither Jesus nor any of his immediate disciples could speak or write in any other language. Greek had become the language of polite society and the official tongue throughout the Roman Empire, and was probably known to the leading scholars in Jerusalem; although Josephus, who spoke and wrote in Greek nearly a century after the birth of Jesus, refers to it as "an alien and strange tongue," and affirms that, during the siege of Jerusalem, he alone was able to act as interpreter between the besieged inhabitants and the Greek-speaking commanders of the Roman army. The study of Greek or any foreign tongue was discouraged by the rabbis, who desired to preserve the minds of the people as free as possible from the contamination of foreign religious and philosophical ideas. "It is written," said one of these Hebrew teachers, "'Thou shalt meditate on the law day and night.' Find me an hour which is neither day nor night, and in that you may study Greek."*

Education among the Jews.

Josephus declares that the education of the young was the first object of solicitude among the Jews. The Talmud re-echoes this sentiment, and preserves to us the fine saying, "The world is saved by the breath of school-children." We would greatly err, however, if we supposed that the education of the Jewish youth at this period embraced any general or comprehensive course of studies. Neither science nor letters formed any part of their curriculum. By education was understood, simply, instruction in the law of Moses and the learning by heart of the Psalms and certain passages from the prophetical writings. To this was added the oral commentary of the rabbis, which often tended to obscure rather than to illuminate the real meaning of the Scriptures. The opposition to anything like what we understand by the term secular education, or even to a system as universal and comprehensive as that which the Greek and Roman youth enjoyed, was universal and exceedingly bitter. Strikingly similar prejudices in regard to education still prevail in the East, even among scholarly and thinking minds, as we have recently seen illustrated in the attitude of the eloquent teacher of the Brahmo-Somaj of India, Babu Protap Chunder Mozoomdar.

The Jewish prejudice against graven images, embodied in a commandment of the decalogue, operated to prevent any general education of the people in painting, sculpture, and the fine arts. This prejudice doubtless arose naturally out of the perception of the immoralities connected with many forms of idolatrous worship among the heathen. The erection of the Roman standards, with the eagles and insignia of the Emperor, at the gates of Jerusalem and before the sacred temple, was the occasion of violent outbursts of popular fury; and the current worship of the emperor or his statues enforced throughout the other Roman provinces was steadily and fearlessly repelled by all classes of the Jews.

Current Peculiarities of the Synagogue Service.

In the services of the synagogue, the Psalms were chanted, and their language was familiar to all the people. The prophets, especially Isaiah, and the Apocalypse of Daniel, were frequently read; and many passages were interpreted, as in the current Christian exegesis, to refer to the coming of the Messianic kingdom. With the lapse of time, the services in the synagogue and temple were becoming somewhat less free and spontaneous than they had formerly been. A stated ritual, in accordance with the tendency of the Pharisaic formalism of the time, took the place of the original simplicity and spontaneity of the synagogue service. Some of the prayers in use in the synagogues in these early periods have been preserved to us in the writings of the rabbis. They contain such familiar expressions as these,—as familiar, doubtless, to the ears of the youthful Jesus as to our own:—

"Our Father, who art in heaven, proclaim the unity of thy name, and establish thy kingdom perpetually."

"Let us not fall into the power of sin, transgression, or iniquity, and lead us not into temptation." . . .

"Thine, O Lord, is the greatness, the power, the glory, and the majesty."

* It is noteworthy that the golden rule is given negatively in the recently discovered "Teaching of the Twelve Apostles," a document of very early date, perhaps older than either of our canonical Gospels. Confucius also gave it in this negative form.

* See article on the Talmud by Emanuel Deutsch (*Literary Remains*).

* Greek words, however, were entering into the corrupt Aramaic which constituted the popular dialect. Several such are found in the Book of Daniel, written about 165 B.C. The word *Synagogue* is also of Greek origin.

Digitized by Google

"Our Father who art in heaven: thy will be done on high. . . . Do whatsoever seemeth good in thy sight. Give me only bread to eat, and raiment to put on. Forgive, O Lord, those who have this day offended thee."

Prof. Toy, in his interesting study* recently published, has shown us how deeply the thought and phraseology of Jesus were rooted in the language of the Old Testament. The careful student can hardly fail to recognize the fact that it is not necessary to go beyond the boundaries of Palestine to account for the entire groundwork of the teaching of the Prophet of Nazareth, as it is embodied in the Triple Tradition of the Synoptical Gospels.

Summary and Conclusion.

A land barren by nature save the long, green meadows between the highlands and the sea-coast, and save also the northern province of Galilee at certain seasons, whose fields and meadows were brightened with a myriad flowers,—redeemed in part from its natural sterility under the impulse of the potent necessities of its inhabitants, until its terraced hill-sides were beautified by groves of olive-trees, pomegranates, and clustering vineyards, —a little land, isolated by nature, yet by its position made the highway between the great nations of antiquity; a peóple of warm southern temperament and Semitic intensity of religious devotion, cherishing in their hearts the lofty conception of the unity of God, though narrowed by the exclusiveness of their education and life; a people divided into various sects upon the great problems of the reality of a future life, and of duty in reference to obedience to the mandates of a foreign ruler; a people cherishing the memories of a former greatness due, as they thought, to the might and favor of Yahweh their God, whose chosen nation they regarded themselves, and hoping for, believing in, a coming Deliverer anointed to do his work; a people full of lofty sentiment, of narrow but intense religious aspirations, writhing under the oppression of a hated alien ruler whose power they were impotent to undermine,— such a land, such a people, were Palestine and the Jews nineteen hundred years ago. To such an environment and heritage of social and religious ideas was born the peasant boy of Galilee whom Christendom to-day worships as the incarnate Deity. Bearing in mind these facts in contemporaneous history, and that wonderful provision of nature whereby the finer elements of a hundred generations sometimes combine in a single fortunate organization, born in the fulness of time, may we not expect to discover that the fruit upon the vine in autumn is not a more natural and inevitable result of that universal providence which is manifested in the working of all eternal and immutable laws than was the appearance, character, and teaching of the Nazarene Prophet in his time and among these, his people? Such, I believe, will be your unbiassed verdict, when we have considered together the nature of his teaching and the circumstances of his environment.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER XVIII.

There is, undoubtedly, a dash of dare-devilism in the air of America. Its ozone does excite somewhat the bucolic imagination of damp Europe. If Montezuma's fires burned now in the silent recesses of Mexico, a speculator would run up against it and upset it. Travellers get to think less of danger, they see so many people running into it for amusement. The air inflates the mind, nothing else accounts for the expansion of the truth, so manifest in popular speech; yet artists in exaggerations and incongruities, like Artemas Ward and Josh Billings, never mislead you. The sparkles of their extravagances are like the tail of the comet,—you never mistake it for the head. It merely makes you look at the head all the more, while the unskilled observer so confuses fact and fancy that you never know where fact ends and fancy begins.

One day, I had a communication from the treasurer of *Frank Leslie's Paper*, saying that, shortly after I left America, in 1879, they had received two registered parcels from San Francisco. Supposing they might contain some valuables (at least some gold nuggets), they hesitated to forward them to Europe lest they should be lost, and kindly kept them locked up for me until my return. When the precious and portentous parcels were obtained and opened with suppressed trepidation, they were found to contain particulars of some land in California the writer wanted to dispose of. My friends had spoken to me of the existence of this mysterious deposit, kept so honorably and so long in store for me. They surmised that good fortune had at length befallen me, and that I ought to have come over earlier to get it. I cannot say that the parcels were really opened with palpitating heart. Experience has saved me from tumults of expectancy. Never having had occasion for excitement of that nature, I had less curiosity than my friend (who procured the packets for me) as to what they contained. But the sterility of its enclosure was far below even my anticipation, and we were all rewarded by laughter.

As a rule, speculative inquirers do not lose things for want of asking for. An agent, of whom I knew nothing, engaged my attention by apparently taking a friendly interest in me, and ending by asking me to be good enough to give him five hundred addresses of friends of mine, to whom he might send an important communication he had to make. I could not remember five hundred friends at once. He is a lucky man who can remember fifty; and it would take me a day to write out the names and addresses of the five hundred friends, if I had them. It is all very well to ask when need warrants, but not to overask. Whether this was an American or imported habit, I did not discern; and it would be silly to impute to a people what might be but a peculiarity of a few, and they, peradventure, not indigenous inquisitors and acquisitors.

America has honest people in it, as honest and self-denying as any in England. Still, among those who have flocked to its shores are many who never gave honesty a fair trial in Europe, and have gone there under the impression that they can do entirely without it in that country. Among those who, with generous negligence, America permits to debauch upon their shores are escaped convicts, forgers, or murderers. There is assassination in the blood of many of the children and in grown-up people. You often hear the accent of petit larceny in the phrases of what are called "smart" men.

Of protection I said nothing, save to express my respect for the forbearance of manufacturers and merchants, who might double their charges, since there is a general belief among the working class that the more they pay for the commodities they require, the richer they get. With this virgin soil of credulity to work upon, all tariffs might be doubled. The Rev. Henry Ward Beecher, who has fine, piercing, secular eyes, says that the high tariff almost entirely releases wealth from taxation, and lays most of the burden on the laboring classes. But this is no concern of Englishmen. It is indeed a compliment to us that they who fear no soldier and covet no monarchy fear competition with English workmen, who, though trained under the crown, are more than a match for these sons of the Republic. Experience and thought among working people can alone reform the theory of protection. It will be sustained so long as the masses believe that the country "can be taxed into prosperity," as Goldwin Smith puts it. They cannot under that opinion do better than keep protection up. Manufacturers and dealers have no motive and no interest to teach them better. Free trade can make no impression on masters of production: the persons to be addressed are the toiling consumers. Mr. T. B. Potter and the Cobden Club should give their attention to them. Protection increases their wages ten per cent., and charges them three hundred per cent. more for things of comfort. They are as bad or worse in point of sense than the English workmen in the old days, who were always ready to cheer their "betters" who robbed them of a pound and gave them twopence back. Nevertheless, the protectionists are generous; for they might give only a penny back, and the American and Canadian workmen would still feel under enthusiastic obligation to them for the two cents in exchange for the three hundred clandestinely extracted from their earnings.

When in Boston, I went to the best Bible store I could find or be directed to to purchase a copy of the apocryphal books of the Old Testament. In a church where I had to make a discourse, I wanted to read the dialogue between the prophet Esdras and the angel Uriel. The only copy I could obtain was on poor, thin paper, of small, almost invisible print, and meanly bound. The price was 4*s*. 2*d*. "How is it," I inquired, "that you ask so much in the Hub of the universe for even this indifferent portion of Scripture, seeing that at the house of the Society for the Promotion of Christian Knowledge, in Northumberland Avenue, London,—a house ten times handsomer than yours, in a much more costly situation,—I can buy the same book on good, strong paper, in large type, in a bright, substantial cover, for exactly 3*s*. less than you ask me?" "You see, sir," said the manager of the store, "we have duty to pay." "Duty!" I exclaimed. "Do you mean me to understand that, in this land of Puritan Christians, you tax the means of salvation?" He did not like to admit that, and could not deny it. So, after a confused moment, he answered, "All books imported have to pay twenty-five per cent. duty." All I could say was that "it seemed to me that their protective duties protected sin; and, being interested in the welfare of emigrants, I must make a note counselling them who wish to be converted to get that done before coming out; for, if they arrived in America in an unconverted state, they could not afford to be converted here." I was quite unprepared to find the Bible protected from being read in Boston.

It must, in justice to the working class, be confessed that there are three men of mark among the educated class who have their faith in the virtues of protection. On Feb. 17, 1883, a petition was presented to the Senate, praying that the duty upon books imported should remain at twenty-five per cent., which petition bore the signatures of Oliver Wendell Holmes, John G. Whittier, and T. B. Aldrich. Their reasons for taxing books were (1) that America should not be flooded with cheap books, (2) that the minds of Americans, and especially of American children, should not be perverted by foreign ideas. It seems incredible that such a document as this could bear such honored signatures. We honor in England Whittier and Holmes and Aldrich. Do they think it would be well that we should protect the "minds of Englishmen, and especially of English children, from being perverted by [their] foreign ideas"? We have as large a stock of native ideas on hand as America has, and can as well subsist without importing theirs as they can without importing ours.

Yet these eminent terrorists, who take alarm at our "perverting" ideas are not without generous sentiments of regard for us. One of them, Mr. T. B. Aldrich, has lately published the following lines on England, which echoes the disinterested regard which reverberates in millions of American hearts:—

> "While men pay reverence to mighty things,
> They must revere thee, thou blue-cinctured isle
> Of England,—not to-day, but this long while
> In the front of nations, mother of great kings,
> Soldiers, and poets. Round thee the sea flings
> His steel-bright arm, and shields thee from the guile
> And hurt of France. Secure, with august smile,
> Thou sittest, and the East its tribute brings.
> Some say thy old-time power is on the wane,
> Thy moon of grandeur, filled, contracts at length,—
> They see it darkening down from less to less.
> Let but a hostile hand make threat again,
> And they shall see thee in thy ancient strength,
> Each iron sinew quivering, lioness!"

When Mr. Dickens was last in America, the Boston *Advertiser* printed the following intimation from Mr. George Dolby, Mr. Dickens' agent: "It is Mr. Dickens' invariable custom, when giving public readings, to devote himself entirely to it as a business, and to accept no friendly invitations which would tend to take up his time and distract his attention. It is quite likely that he will feel compelled to pursue the same course in America, and to decline without exception the offers of hospitality which will undoubtedly be extended to him from all sides. This

Digitized by Google

is, perhaps, unfortunate, for—not to speak of private disappointments—Mr. Dickens is an acute observer at all times, and our hotels are not the best places to study American character." When this was brought to my notice, it seemed instructive. Then, I was glad that I was not a lecturer seeking engagements, or I should have known as little of the United States and its people as Mr. Dickens. Such a notice was an affront to American courtesy to strangers for whom respect had been conceived. Mr. Dickens' fate was to be taken from platform to platform, like Jumbo or a giant or a midge of remarkable proportion,—clandestinely; and, when he had shown himself to persons who had paid to see him, he was withdrawn into a committee-room, his face wiped, and his hair combed, a little egg and sherry beaten up and administered to him, and then he was secretly transferred to a sleeping-car, and no more seen till he rose through the trapdoor of the next stage on which he had to appear. If Mr. Dolby's unblushing notice had never appeared, he would have been quite safe from intrusions of hospitality. As soon as it is known that a visitor's business is to make money, American gentlemen look upon him from a purely commercial point of view, and would regard an invitation given to him as interfering with the receipts of the agents who owned him, since many who would see him privately might be content with that pleasure, and not take seats for his readings. As Mr. Dickens was already rich, it does not seem worth while that he should appear before a great people, who had genuine admiration for him, as a mere collector of dollars. He would not have lost a thousand dollars, if he had gone among them as an English gentleman. It is true that the American nation is no great friend of authors, since it "nationalizes" their copyrights, to use the new Georgian jargon. Still, one could wish that, since our favorite novelist had published for circulation *Notes* on American Manners, he did not present them with a sample of English quality which they might look upon with respect.

CORRESPONDENCE.

THE SOCIOLOGIC SOCIETY.

Editors of The Index:—

I regret that, in my report printed in *The Index* of May 8, I omitted to mention the fact that the Sociologic Society became this spring an incorporated body under the statutes of the State of New York which control such formation, and is therefore now prepared to hold property and be responsible therefor. It is hoped that men and women of means will not wait till they can no longer make use of the moneys in their possession, but that while they live, and now, they will become members of this association, and commence their work for humanity while they are still in the body, and can assist in directing the use to be made of the property they invest for the good of their kind.

The Sociologic Society is incorporated in the names of Mrs. Imogene C. Fales, Mrs. Lita Barney Sayles, Joseph La Fumée, William E. S. Fales, Henry A. Beckmeyer, William Icrin Gill, Mrs. J. Beatty, Miss Mary T. Crowell, and Miss Lizzie Wyer.

LITA BARNEY SAYLES,
Ass't Gen'l Secretary.

KILLINGY, CT.

Thomas Dugan writes from Albany, N.Y.: "I am so pleased with your admirable article upon the *proposed* 'New Deal' of the Liberal League that I want several copies of the paper to distribute among some of the members of our society, in order to educate them in the real objects of our movement. Some people have false conceptions in regard to what we mean by *Liberalism;* and, for my part, I think it would be a good thing, if there could be some other word substituted for it. In case there should ever be another national society formed, it should be called by some other name than the National Liberal League."

A SOPHISM.—We are pleased to give from the *Sabbath Sentinel*, a Christian journal published at Battle Creek, Mich., the following sensible words, which are respectfully commended to the thoughtful consideration of the *Christian Statesman:* "Some of the speakers at the late National Reform Association at Cleveland, Ohio, made a specious plea on this wise, reiterating it to give it emphasis: 'Some have fears that we are seeking for legislation in behalf of some particular article of religious belief or dogma of the Church. But this is not so. We only seek for a recognition of the Bible as the fountain and source of all laws, and Christ as the ruler of the nation. What the Bible teaches and requires is to be decided afterward. All we want is a simple recognition, in the Constitution, of God and Christ and the Bible.' This may be sufficient to deceive some. It certainly could not have deceived men of such intelligence as the speakers themselves, nor will it deceive any one who will bestow a moment's thought on the situation. They certainly know, as we know, that, if such a recognition of the Bible as they call for is ever inserted in the Constitution, it will be by the votes of a majority of the people of this nation. They know also that, when this is secured, the interpretation of the Scriptures will rest in the hands of the same majority or their ecclesiastical leaders; and these, both priests and people, are already committed to the doctrine that the first day of the week is the Christian Sabbath, and should be kept as such by all the people. It is easy to see what the legislation will be at once on this point,—the main point on which the issue turns. The road to this conclusion is a short and open one, and he must be near-sighted indeed who cannot see through it to the end. Then of what avail is it to urge the plea that they do not seek legislation on any particular doctrine of the Church? Very innocent it looks at first sight, but it contains not the first element of truth."

WHEN Anthony Comstock says, as he did in this city before an association of ministers last Monday, that "the infidel and so-called liberal class, headed by Col. Ingersoll," have "espoused the cause of obscene literature," and that Col. Ingersoll "is a fitting champion of nastiness," he makes a false and slanderous statement, which of itself affords just reasons for doubting the correctness of any statement by him pertaining to matters in which his interest or prejudice is enlisted. No man has spoken more eloquent words in defence of the purity of the home or denounced more unsparingly the business of circulating indecent literature than Col. Ingersoll. Furthermore, it will be remembered that he left the National Liberal League because it had adopted resolutions demanding the repeal of certain postal laws against the transmission of obscene literature through the mails, laws which Col. Ingersoll thought right in the main, although defective and needing modification. Those generally who have joined in the demand for the repeal of the so-called Comstock laws are no more than Comstock himself desirous of aiding the circulation of indecent literature. *The Index* certainly never has had any partiality for "repeal" nor for the "repealers," whose policy it has persistently opposed, and still opposes, as most unwise; but when Joseph Cook or Comstock endeavors to make the public believe that those who have asked for "repeal," among whom are men like Frothingham, Parton, and Elizur Wright, have done so because they are in love with obscenity, *The Index* must characterize the authors of such statements as perverters of the truth and unscrupulous calumniators.

PERSONAL ITEMS.

B. F. UNDERWOOD will speak in the lecture course of the Parker Memorial Science Class next Sunday on "Sociology."

MR. FREDERICK A. HINCKLEY, of Providence, is to occupy the pulpit of Unity Church, Denver, Col., the first three Sundays in June.

A UNIQUE contribution to the history of the war in Egypt in 1882 will appear in the June *Century*. It is the diary of a young daughter of Gen. Stone, Chief of the Khédival staff (who himself contributes an introductory note, in which he sharply criticises the British for the precipitancy of the bombardment of Alexandria). The family of Gen. Stone were in Cairo during the bombardment, and were in constant danger of massacre by the Arabs, from which the tact and courage of Mrs. Stone alone delivered them, her husband being on duty at Alexandria.

MRS. CARRIE B. KILGORE'S persistence has won. Last week, she was admitted to the county bar in Philadelphia. She had been refused by three common pleas courts in the city. Judge Thayer, in his decree of admission, declared that, "if there is any longer such a thing as what old-fashioned philosophers and essayists used to call 'the sphere of woman,' it is, it must be admitted, a sphere with an infinite and indeterminable radius." "Are we," he asked, "to set ourselves to the vain task of attempting to turn backward the wheel of time, to convince history that it is all wrong, and to say at this time of day that a woman shall not be permitted to pursue the avocation to which her tastes lead her?"

A WASHINGTON correspondent gives the following account of Judah P. Benjamin, whose death was announced last week: "His father was a small, dark-skinned Spanish Jew, who kept a little fruit shop on Market Street, Charleston, S.C. Benjamin's early life was spent in that shop. He was educated by the Hebrew Orphan Society of Charleston, graduating under their care at Charleston College. He was a grass orphan by that time. His mother, disagreeing with his father, had left her home and gone to Beaufort, where she opened a general country store. Forty years ago, she was conducting it successfully. Both Mr. and Mrs. Benjamin were devoted adherents to the grand, old religion of their fathers; and Judah P. Benjamin was educated in it. He always retained his respect for his race, although he married a Gentile and was never identified with the Jewish Church. You remember his fine reply in the Senate, when he was taunted in a hot debate with being a Jew. 'The senator,' he said, rising gracefully, and speaking in his usual silvery way, 'will please remember that, when his half-civilized ancestors were hunting the wild boar in the forests of Silesia, mine were the princes of the earth.' The Senate was electrified, and the carping senator was silenced."

LAST Sunday evening, R. G. Ingersoll repeated his lecture on "Orthodoxy" before a large audience at the Boston Theatre. It was amusing, but not equal in thought to some of his earlier efforts. This is the way the Boston *Herald* comments upon it: "It cannot be questioned that Col. Bob Ingersoll interests a large number of persons, and yet it is somewhat hard to understand the mental characteristics of individuals whose interest can be aroused by this rethrashing of old theological chaff. Col. Ingersoll plants the stuffed and grinning fetich of his boyhood days upon the stage before his auditors, and for a consideration per head batters at this scarecrow as though it were a veritable monster. As to the later processes of religious thought and religious development, the Colonel is apparently as ignorant as though there had been no change since the days when he attended Sunday-school. As a matter of fact, the world has moved, and moved at a decidedly rapid pace, although Col. Ingersoll has not kept track of the movement. These changes have been brought about, not by such tirades as he is wont to deliver, but by the calm, judicious statements of men of the stamp of Huxley, Darwin, Tyndall, and Spencer." It must be admitted, however, that large numbers even in Boston yet believe the doctrines, which Col. Ingersoll spends his strength in assailing.

MRS. ETHEL LEACH, who accompanied Mr. Holyoake and his daughter to this country last year, contributes to a Yarmouth (England) paper an article on Wendell Phillips, from which the following is an extract: "He kept his simplicity of manner and single-heartedness of purpose to the end. His wife has been an invalid for more than twenty years, during which time he has nursed her with unwearying assiduity, declining all engagements that would detain him beyond a few hours from her bedside I count it among my most treasured memories that I was permitted to spend a couple of hours in his presence, listening to his discourse of times gone by, of peril and bitter anxiety, in which he had acted so noble a part. I was surprised in my simplicity to find so great a man amid such humble surroundings. If I thought at all, I expected to find him in a stately mansion with all the environments of social distinction; and it is with the deepest reverence I recall him now, with his gentle, noble face in his modest home, one of the kings of earth, to whom the splendor of the world was as nothing, if any class of human beings were excluded from its enjoyment. All America was eager to honor him, but he was content with the reward of his own conscience, and lived in almost complete seclusion. The last lecture he delivered, about two years prior to his death, breathed the same spirit of love of right and hatred of wrong that characterized his whole life, and the same grand, enduring belief that truth and justice must triumph over wrong."

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

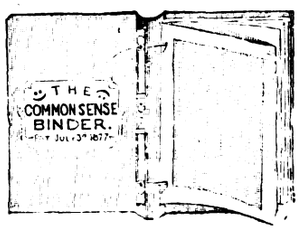
Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

SEVEN GREAT

MONARCHIES of the Ancient Eastern World. By GEORGE RAWLINSON. Best American edition. Complete in three volumes of over 2,000 pages, and over 700 illustrations and maps. Price reduced from $18 to *$2.40. Now ready.* Specimen pages free. NOT sold by dealers.



"One of the best historical works of the Nineteenth Century. It covers the ground as that ground is covered by no other publication in the English language, and shows splendid critical ability, as well as profound scholarship and laborious research. Marvellously cheap as it is, this classic work should now find its way into every library in the land."—*The Herald*, Syracuse, N.Y.

"'The Seven Great Monarchies of the Eastern World' ranks with the greatest historical works of modern times, with Gibbon's 'Roman Empire,' Grote's 'Greece,' Green's 'England,' and Bancroft's 'United States.' In some respects, it is a greater work, displaying more labor, more scholarship, and more critical ability. It is, perhaps, not so well known, because it is so expensive that it has not been within the reach of people of moderate means. But John B. Alden, the well-known New York publisher, appreciating the importance of a cheap edition, has begun to republish such an edition in three volumes. There is now no excuse for any one to be without one of the greatest historical works of the century."—*Democrat and Chronicle*, Rochester, N.Y.

500,000 VOLUMES Choice Books, 84-page catalogue free. Books for examination before payment on evidence of good faith. NOT sold by dealers: prices too low. Books by mail 20 per cent. extra, for mailing.

REMOVAL.—*On May 1, "The* Literary Revolution" head-quarters were transferred from No. 18 Vesey Street to 393 Pearl Street, near Franklin Square, and a few rods distant from the Great Bridge. The entire building, 30x115 feet in size, six stories high, is occupied by the offices, store, and book-bindery: the printing, engraving, and editorial rooms are located conveniently elsewhere. The capacity and convenience of the new quarters largely exceed all previous facilities.

JOHN B. ALDEN, Publisher,
P.O. Box 1227. 393 Pearl St., New York.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	" . . .	8c.	" "
" 26 " 51	" . . .	6c.	" "
" 52	" . . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

PROGRESSIVE taxation has proved a practical success in Zürich, according to the *Freidenker* for April 27, from which we learn that on the list of taxable incomes stand one-fifth of the first $300, two-fifths of the second $300, three-fifths of the next $600, four-fifths of the next $800, and all the income above $2,000; while there is also a list of taxable property, a dollar in which is assessed for one-half as much as one in the other list; and in this list are included one-half of the first $4,000, six-tenths of the next $6,000, seven-tenths of the next $10,000, eight-tenths of the next $20,000, nine-tenths of the next $40,000, and all property in excess of $80,000.

REFERRING to recent failures and the reckless disregard of financial obligations shown by managers of large business institutions, the Boston *Transcript* observes: "Corporate swindling is again becoming altogether too common. Some of these misappropriators of other people's funds—who build up their own private fortunes with the money confided to their keeping for another purpose, and sometimes bankrupt the companies they manage—ought not to be able to live in any respectable community on their ill-gotten gains. They should be shunned as men 'forbid.' If there are no statutes to meet their crimes, legal ingenuity should set to work to devise them without delay. Breaches of trust, involving the loss of hundreds of thousands of dollars, ought to receive a far severer punishment than ordinary stealing. And the law inflicting this penalty should be so strongly put together that no offender could escape incarceration because his crimes have given him an abundance of money with which to work."

THE *Indian Messenger* notices with regret that the most ardent disciples of Babu Keshub Chunder Sen are fast developing a new system of faith, which may appropriately be styled "Keshubitism," of which Chunder Sen will ever be regarded as the prophet, the forms introduced by him the religious observances, and the "New Samhita" the infallible scriptures. In a resolution recently passed by the Apostolic Dunbar of the New Dispensation occurs the following: "We believe our Minister was living in the bosom of God, as the Minister of the New Dispensation, before the beginning of creation. And our relationship with him is not for time, but for eternity." And, again, "None can accept this Dispensation except through him. True, to be like him in spirit is to accept the Dispensation, yet it must be owned that the same (the idea of the Dispensation) cannot be developed in life, without establishing direct relationship with him (the Minister)." And, further, "Hence, when preaching the New Dispensation, it is needful to proclaim his eternal relationship with the same." These vagaries in regard to a man who died but a few months ago afford an illustration of the evolution of a myth which the worshippers of Jesus might study with profit.

THE thirteenth edition of *Vestiges of the Natural History of Creation*, to which we referred last week, has appeared in London, with the name of the late Robert Chambers, LL.D., on the title-page, and an introduction by Mr. Alexander Ireland, containing a statement of the circumstances under which the work was written. "The motives for the original secrecy," says an English exchange, "which was remarkably well kept, are obvious. 'To escape strife,' says the author in one of his letters, 'at the expense of losing any honor which may arise from my work, is to me a most advantageous exchange.' He also, Mr. Ireland tells us, thought that his theory of development would be more likely to meet with fair treatment, if left to stand or fall simply by its own merits. There was, however, a more pressing consideration,—the fact that he was a partner in his brother's publishing business, in which the rule had been laid down, from the beginning, to avoid mixing themselves up with debatable questions in politics and theology. It is amusing to go back to the time of the original publication of the *Vestiges* and note the various authors to whom it was attributed,—Thackeray, Lady Lovelace (daughter of Lord Byron), Sir R. Vyvyan, Sir Charles Lyell, and even Prince Albert. In the British Museum Catalogue, as late as 1877, the book was credited to Mr. George Combe, though with a qualifying note of interrogation."

DURING the past fortnight, the papers have contained accounts of "an infant phenomenon" at Felicity, Ohio. A little girl named Lizzie Duncan, who according to the published statements had never attended school nor received private instruction, recently surprised her grandparents, with whom she lived and their neighbors by reading "a book from end to end." "So astonished and alarmed were her grandparents when she began to read, that they burst into tears, supposing her possessed of some supernatural agency." The accounts conclude with the statement that "no one pretends to account for her faculty of reading without ever having learned to do so." The name of Prof. Ulrey, principal of the public schools, was published among the names of those who had examined the girl, and were satisfied as to the truth of the foregoing statements. Last week, we addressed a letter of inquiry to Prof. Ulrey, and have received from him the following answer, which indicates only that Lizzie is a bright, precocious little girl, who learned to read easily and quickly: "In reply to yours of the 8th inst., I will say that, while the newspaper reports concerning little Lizzie Duncan have been overdrawn, she is a remarkable child. She is four and one-half years old. She and her little brother, who is two years older than Lizzie, live with their grandparents, neither of whom reads or writes. Last September, the little boy started to school, taking as a text book a primer, which he brought home with him at night to study his lessons for the next day. As he studied, his sister studied with him, and in a few days was reading the primer better than her little brother. She has been reading newspapers, books, etc., from that time on; and her pronunciation is remarkably correct, being far above the average pupils of the higher grammar grades. She reads script as well as print. I am thoroughly satisfied that she had no instruction save what she received from her little brother, and that she was reading before her grandparents knew of it."

THE *Irish World*, in an article in favor of industrial education, remarks that "even so late as the last generation, say thirty or forty years ago, parents, after giving their children a fair school education, would have been deemed lacking in the discharge of their duties, if they did not, by apprenticeship or otherwise, see to their full accomplishment in some occupation, trade, or profession. Now, such conscientious and prudent care seems to be the exception, and not the rule. . . . It is needless for us to say that we are neither 'a Know-nothing' nor the son of 'a Know-nothing'; but we can hardly restrain a blush of shame at the fact that the best paid artisans in this country are foreign-born and trained, especially those from France and Germany, whose governments, however remiss in most other matters, have recognized the vital need of industrial education. Senator Blair's bill to extirpate illiteracy by teaching all to read, write, and cipher, is a big thing and a good thing; but it would have been bigger and better if it had provided for at least elementary instruction in mechanics and agriculture." How far the Government, without more harm than good, can take charge of or direct the education of the people is an open question; but there can be no doubt whatever as to the great importance of industrial education. Education, such as our schools give, is not enough for the majority of the people, who must depend upon their labor for a living. There are multitudes of young men in this country who, although "educated," are without any trade, profession, occupation, or "visible means of support," and who are therefore utterly dependent upon others or "living upon their wits," which often means swindling those who are engaged in honest employment. Many of them would accept "genteel positions," if they could secure them; but for every such position there are half a dozen or more applicants. If their education had included preparation for earning a livelihood by some useful work, they would have been saved from the humiliation of dependence, from habits of indolence, loss of self-respect, and in many cases from crime and ruin.

SOCIAL ETHICS.

At the recent meeting of the Liberal Union Club, Prof. W. G. Sumner, in his brief address which closed the discussion following his very able and instructive paper on "The Ethical Aspects of the Protective System," is reported to have said, "With regard to the survival of the fittest, it is a hard doctrine; but the only one which can be put in its place is the survival of the unfittest." This is a neat epigrammatic statement; but, as applied to human society,—and the context shows that Prof. Sumner meant thus to apply it,—is it true? Is there not another alternative,—namely, that the fittest shall strive to transform the unfit into a fitness to survive? This at least is the doctrine which has been made prominent by the great moral teachers of mankind, and we have not yet seen any new discoveries of knowledge which controvert it. Nor does the argument of Mr. Sumner's essay, as we understand it, necessitate any such statement as he made in this closing remark. Indeed, he accurately describes the growth of civilization as a progressive "adjustment of rights which supersedes the old antagonism of selfish force." And what is this but the admission that, with the advance of the moral sentiments among mankind, a new and powerful element came into the evolution of human society, entirely unlike that which dominated the animal and barbarian struggle for existence?

There is, in our view, a fallacy of logic in the attempt made by some recent writers to apply this principle of "the survival of the fittest," as it obtains in the vegetable and brute worlds and in low orders of mankind, to the solution of problems of social ethics. The fallacy arises from an ambiguity in the use of the word "fitness." As it stands in the familiar statement of the principle of evolution in nature, the word "fitness" means simply such an adaptation to environment on the part of an individual organism or a class of individuals as to favor their existence. The scientist simply says that those individuals or species which *have* survived in any case were the fittest to survive. The fact of existence is the test of their fitness, and the question of desirability does not necessarily enter the problem. But, when we come to man, we invest the word "fitness" with moral qualities. The fittest for existence are the noblest and best. Yet it is not always these classes that by natural selection actually survive. The principle of evolution has itself undergone a change in the evolving process. Natural selection gives way to neighborly sympathy and moral sense. And this fact the most distinguished representatives of the doctrine of evolution have expressly recognized. The vast world-process of evolution is, indeed, ennobled, when the selfish struggle for existence is thus transformed into that power of moral personality which is able purposely to shape results for general benefit.

There is a lesson, however, which philanthropy and charity are to learn from nature's law of struggle; and it is the truth in this lesson which gives plausibility to some of the statements of those who affirm that the doctrine of evolution is to put social ethics on an entirely new basis. Hardship and suffering are nature's penalty for violation of her laws of life. The penalty is no arbitrary appointment, but the natural consequence of the violation. Vice, crime, pauperism, are social disorders in which naturally inhere the seeds of misery, sorrow, and mortality. Their victims, left to themselves in the struggle for existence, tend toward self-elimination. They are cut off prematurely by violence, by disease as the effect of vicious indulgence, by the slower process of inanition. Nature means to make the way of the transgressor hard. And this she does, whether he transgress ignorantly or wilfully. It is her only means of insuring that her laws of life, growth, and progress, will be observed.

Now, philanthropy and charity, in extending help to any of these classes that are a weight upon humanity, must beware of injurious interference with the natural law of just retribution. Sympathy is a beautiful trait; but there are plenty of proper objects for it, so that it need not spend itself on the undeserving. Laziness should not be fed with a silver spoon: better that it should be left to feel nature's spur of the pangs of hunger. It is not often a wise sympathy that sends sweetmeats and soft pillows to criminals in prison. Let them rather realize the hardness of their way, while sympathy turns to devising instrumentalities for enabling them to walk in a better way when their imprisonment expires, and for saving others from their fate. Almsgiving is often the easiest charity, but as often it is the poorest method for giving genuine help. There is such a thing, doubtless, as bestowing too much direct aid by money, goods, or care, so that the needy come to depend unduly upon what the public purse or charitable organizations may do for them, and thus lose or fail to acquire the all-important quality of self-reliance and the noble ambition to make their own way. Here are dangers that philanthropy should earnestly study to avoid. They are features that have too often appeared in connection with the kind of charity which has been commonly cultivated in the Christian Church. The modern more scientific study of the problems of social disorder leads back of mere appliances for temporary relief to a cure of the causes of the disorder. It would teach philanthropy to open industries for the unemployed, and to train the ignorant to a better capacity for industry. It would teach sympathy to carry not so much comfort and solace to vice and crime as inducements to reform. *Prevention* of social disorder and suffering rather than *medicine*,—here is the great field which the doctrine of evolution, as applied to human society, points out for the modern work of benevolence and philanthropy.

But, though better knowledge of the conditions of social progress should now give this new direction to the sentiments of human sympathy and benevolence, the demand for human sympathy and benevolence is not in the least abated. Man comes into this great world-process of evolution bringing a new power. Where nature's forces work but blindly, he sees a right and a wrong. He may work not merely by unconscious natural selection, but by conscious rational and moral selection. He is a being capable of foresight and designed adaptation of actions so as to produce a certain wished-for result. With him, the supreme motive is not simply the preservation of life, and the victory going to the strongest or the most cunning; but it is the preservation of the best and the most beautiful in life, and the carrying of the victory to these by purposed choice and effort. Man, at his best, does not say, Let the weak and vicious and miserable perish, but let them be lifted up, transformed, and saved. He sees that the conditions of life are unequal, that the opportunities with which people begin the battle of life are not the same; and his sense of justice bids him strive for the amendment and better equalization of these conditions. He would not annul the old law that the way of transgression is hard; but he would seek so to improve the elements of life at the outset,—the conditions of birth, of early education and home, of moral, intellectual, and industrial training,—that the way of righteousness shall be more easily found and kept.

Nature, as it were, is an experimenter. In her realm are many wasted and blasted lives. A thousand seeds rot where one germinates and comes to growth and fruit. Disease consumes and tempests uproot even the flourishing grain. Through material inheritance, the human race is subject to the same law of antagonistic force and waste. But man, through his moral ideal and his ability of moral selection, has also power to resist and overcome this law which inheres in his material nature. This is his distinctive prerogative as man. Let there be, he says, no wasted life, no abortion of personal character, no unfulfilled moral hope or purpose. And hence he lifts up the feeble and strengthens the weak, teaches the deaf mute to converse, gives to the blind another sense to take the place of sightless eyes, creates intelligence in the imbecile brain, cures and prevents disease, converts the vicious to virtue, enlightens the ignorant, relieves the helpless distressed, strives to destroy the seeds of crime, and to save even the red-handed criminal to newness of life. This is what man *may* do, what he is impelled by enlightened conscience and sympathy to do, and what in a measure he is striving to do for the amelioration of his race. And the new science, which has come in with the doctrine of evolution, so far from forbidding this effort, indorses it, and bids him speed onward.

WILLIAM J. POTTER.

INDUSTRIAL EDUCATION IN THE UNITED STATES.

The April number of the *Revue de Belgique* gives, under the infelicitous title, "*L'Organisation de l'Apprentissage aux Etats-Unis*," an interesting account of some of the most useful of our public institutions, by P. Wynen, who has already described them more at length in his *Revue des Etablissements de Bienfaisance aux Etats-Unis d'Amérique*, published at Antwerp in 1876. He praises our country for having avoided the error of using manual labor solely as punishment for crime, and given it the place due to the benefactor of the people. These encomiums would be more just, if there were not large sections, especially in the North-west, where the words "industrial school" mean simply a juvenile penitentiary. Still, it is pleasant to find our brethren in Europe aware of facts not sufficiently known to many Americans. For instance, the orphans of soldiers and sailors have a home in Mansfield, Ohio, consisting of twenty cottages, where farming and gardening are taught to the boys, who are allowed to work plots of land for their own individual profit, while the girls are trained to cooking, dress-making, etc., and where all the inmates learn one of the most important of all lessons,—namely, how honorable it is to have skilful and busy hands. Girard College at Philadelphia is teaching printing, book-binding, cabinet-making, carpentry, telegraphy, photography, watch-making, etc., with a thoroughness which would entitle this institution to high praise, if it did not also teach pious fraud. There is no such offset to the merit of the industrial school for orphans which is carried on by the Hebrews of New York City, and which includes a shoe factory and a complete printing establishment. Among the metropolitan charities duly noticed is one by which plants in pots have been distributed among poor children, who are taught their care. Mention is also made of institutions in Hartford, New Haven, and Cincinnati for training poor children to self-support. Unfortunately, the statistics of the

Digitized by Google

Belgian author are by no means the freshest; and he seems to have taken no notice of Massachusetts. What would he have said of our institution at Lancaster which has, year after year, mingled innocent orphan girls with juvenile criminals of the lowest grade, so as to be really a school of crime? Could he even now find any place in this State where the practical knowledge most needed by everybody is taught as thoroughly as in Dr. Adler's workingmen's school or in the work schools at Charleston and St. Louis? These institutions are given due praise by a recent writer in *The Index*, "R. F. B.," who also mentions that the use of carpenters' tools is taught in the Girls' Normal School at Salem. How grateful many a poor teacher will feel for being thus enabled to put up her book-shelves and curtain fixtures without having to pay a mechanic, and how much less likely the pupils of such teachers will be to think manual labor degrading, than if they had been taught to consider no knowledge worth having except what is given in books! We have too many lawyers, doctors, ministers, and school-teachers, but not enough skilful farmers and mechanics; and these practical callings are being carried on more intelligently and successfully by foreigners than by native-born Americans. The typical Yankee, who knew how to use any tool and make money at any handicraft, is already becoming obsolete. Our boys do not even know how to whittle as their forefathers did. The sturdy, handy race that felled forests and built cities has left few survivals in New England. What else could we expect, when our schools are limited to substantially such culture as was originally set apart for the few who expected to live either by some learned profession or else in wealthy leisure? Now, the scholars are of all classes, both rich and poor; and the vast majority will have to get their living by their knowledge of real things which can be seen and handled. Our schools are largely filled with children who will have more need to understand facts than books. Nothing could be more for their happiness and usefulness than to be taught to honor manual skill and industry as worthy of their utmost effort. Why, then, educate them as if book-learning was the only knowledge worth trying to get? Why give in our whole system of education, from primary school to university, exactly the sort of special training most needed by lawyers, ministers, and school-teachers, but none of that required by housekeepers, merchants, mechanics, and farmers? We are in other respects the most practical and progressive of nations. Why keep up an old-fashioned and unpractical system in our schools?

Wide-awake teachers and committee men have found out this mistake, and are rapidly introducing kindergarten methods, object lessons, drawing, needlework, etc. But we have not yet, according to "R. F. B.," given the American girl as good a chance to learn how to earn her living or to take care of a family as is enjoyed by her sisters in France or Sweden or even Mexico. Nor can our boys attend special schools, such as enable Besançon to hold her high place as a maker of watches, and have given Creuzot the largest iron-works in France, now employing ten thousand men and turning out millions of dollars worth of products annually, while the population has increased tenfold since industrial education was introduced. It is well to insist on such facts. When the first International Exposition was held in 1851, English workmen excelled in ninety departments out of one hundred; but, in that of 1867, England carried off only ten per cent. of the honors. France, Germany, Switzerland, and Austria had taken the alarm, introduced drawing into the public schools, and opened special technical institutes. European countries are now trying to see which can train up the most skilful artisans. Shall America neglect to give her children all the education they need? It is not so much new schools we want, as to have the existing ones made more practical. An hour a day of drawing and handling of tools would be a good preparation for any industrial calling, would keep the children from despising any useful occupation, and would give them mental relief and recreation enough to enable them easily to study as much as at present. Drawing is of especial value for teaching that closeness in observation equally necessary for the mechanic, the merchant, the farmer, the artist, and the scientist. Nothing else does so much to teach us to see things as they are. The mechanic who can work by a drawing earns more money than he who cannot. Draft your order, and you can have it filled as you wish. Drawing is the language of all the arts. Sewing, too, should have a place in every primary and grammar school. So urgent is this need that, in one village near Boston, the ladies take possession of a school-house every Saturday morning, and teach the little girls how to use their needles. This has gone on year after year with great success, and half of the holiday is readily given to gaining such useful education. The only strange thing is that the school committee have not yet found out that here is a want which it is their business to supply. Sewing is taught as a matter of necessity to the school-children in the school-house. Why is it not taught during school hours instead of on the day when the children ought to be at play, and by regular teachers instead of rather irregular volunteers? Not only does this school committee make no reply to the plainest possible demand for practical instruction, but the superintendent, a highly esteemed lecturer on poetry and metaphysics, has recently published a report against industrial education, in which he takes no notice of its successful practice in one of the buildings under his care, and argues against it thus: "The age of invention continually supplants the old trades by the introduction of labor-saving machinery. Man ascends from hand labor, requiring long practice, knacks, or special manipulation, to the more intellectual work of directing and supervising machinery. Brain work replaces hand work." Is the average mill-hand working more intellectually than the average mechanic? At all events, they both need dexterity of hand and ambition for success in manual labor. In the progress of invention, those workmen who lack industrial training will be left behind. The eminent author, already quoted, urges further that it is only a few boys in any school who are going to take up any single trade, like that of a carpenter, a blacksmith, a tinner, a cabinet-maker, or a cooper. "So, in the other branches of the arts and trades, we come to still greater differences,—cotton-mill operatives, tailors, shoemakers, bakers, butchers, painters, masons, household servants, clerks, engineers, teamsters,—what different knacks are needed in their several industries! And yet how necessary it is in this modern world of the daily newspaper and popular suffrage that they shall all know how to read and write and reckon with figures." Of course, this is necessary. But is it not also necessary that every girl should learn to sew and to cook? And is it not absolutely necessary that every child should have eye and hand trained, so as to be ready for entering any trade or calling and learning any kind of knack? Learning to use one tool makes it easier to learn to use another. Giving any tool a place of honor in the school-room teaches the children to pay due honor to all the rest. Nobody opposes instruction in reading, writing, and arithmetic. The only question is what should be taught besides, and how the children are to be best trained for a world full of things that have to be looked at and handled properly to make life a success. The old-fashioned system seems to have been meant to send its graduates straight to heaven, for it utterly ignored the possibility of their ever having to use their hands or feet. Fifty years ago, this deficiency was little felt, because the boys and girls got such industrial training at home and on their holidays as is now seldom to be had. Work-shops are less safe and attractive than formerly, for they are becoming filled with illiterate foreigners. The children's time is engrossed by all sorts of studies and accomplishments. Many articles formerly constructed at home are bought ready-made. The sewing-machine often seems to make dexterity of hand useless. Servants are hired to do the work which used to be intrusted to the sons and daughters of the family; and false pride makes the poor father and mother wish that their children should live as genteelly as those of their rich neighbors. This false pride that scorns manual labor has been much encouraged by the narrow pedantry of our schools. They should enlarge their course, so as to prepare their scholars equally well for any calling. Above all, they should give enough practical instruction to make the whole community understand that all useful occupations are honorable.

F. M. HOLLAND.

MORE ORTHODOX DISINGENUOUSNESS.

Speaking of recent gross misrepresentation by the *Independent* of the book entitled *Jesus, his Opinions and Character*, I characterized it, in *The Index* of April 24, as "Orthodox Disingenuousness." I have now to thank the Rev. Dr. Austin Phelps for giving, in the *Congregationalist* of April 24 and May 1, additional evidence of the truth and accuracy of my description of his tribe.

The purpose of Dr. Phelps, in the two long articles in question, is to persuade his readers, first that the abolitionists did no good, but on the contrary much harm, by their action concerning slavery; and, next, that the opposition to slavery, which was growing in the North between thirty and fifty years ago, was aroused and maintained by "our churches and their ministry."

Dr. Phelps understands the importance of selecting epithets adapted to the accomplishment of his object, so he begins by calling the abolitionists "destructives" and the clergy "reformers."

He defines "destructives" as "men who would break up society itself to get rid of its abuses"; and he further describes the abolitionists as "men of one idea," who "made no secret of their aim to destroy the union of these States. . . . In debate, their habit was abusive as opposed to suasive. . . . Avowedly and on principle, they flung the chief weight of their cause upon the power of invective. . . . The dissolution of the Union was the avowed object of agitation by the destructives. This was their supreme aim. . . . For forty years, Wendell Phillips and his colleagues lived for the disruption of the Republic."

Defining "reformers" as "men of balanced ideas, who look before and after, tolerant of evils which are curing themselves, laboring patiently for bloodless revolutions," Dr. Phelps claims "the genuine reformers" in the matter of slavery to have been "the vast majority of the clergy north of New York City, and foremost of these the clergy of New England. . . . In the forefront of the warfare of anti-slavery opinion . . . stood our churches and their ministry. . . . The New England churches and

Digitized by Google

their ministry represented the vital and regenerative forces of reform."

Seeming to have some latent doubt as to the prudence of assuming that slavery was one of the "evils which are curing themselves," Dr. Phelps adds this modification in behalf of his colleagues, the clergy of the anti-slavery period: "They believed in the rectitude of tolerating organic evils till a Christian civilization had an opportunity to undermine them."

Contrasting his clerical brethren with the destructive abolitionists, and especially with Wendell Phillips, who "had been a Nihilist all his life," Dr. Phelps says of "the genuine reformers" that "they believed that sanguinary revolutions are *not* the normal method of organic changes in social order," and he further affirms that "theirs was a mission of peace."

Having thus set forth in Dr. Phelps' own words the substance of his articles in the *Congregationalist*, I proceed to comment on some of his positions, passing by the curious inconsistency of his claim that the clerical missionaries of peace "stood in the forefront of the warfare of anti-slavery opinion"!

It is well known that, from Benjamin Franklin downwards, individuals had spoken and written against slavery; but the organized *movement* for the abolition of that atrocious system, which grew year by year until it culminated in the emancipation proclamation of President Lincoln, was begun by William Lloyd Garrison in 1829. Being a very young man, and a man of small external opportunities of education, Garrison knew no better way of bringing about the abolition of slavery than plainly setting forth its thorough antagonism to human rights, to free civil institutions, and to religious principle, and bringing these facts and arguments to the notice of as many people as possible. This he did energetically for a short time in the *Genius of Universal Emancipation* in Baltimore, and afterwards in the *Liberator* in Boston; and he continued this work without intermission, aided by a constantly increasing number of like-minded coadjutors, until slavery was abolished.

But now comes a clergyman, representing high intellectual culture, professional education in theology, morals, and religion, and maturity of mind, and having, moreover, the great advantage of a bird's-eye view of the whole long contest of freedom against slavery, and tells us how that contest should have been conducted, and, presumably, what very different course Garrison ought to have taken. Let us hear the counsel of wisdom!

"They [the Northern clergy of 1829 and afterward] believed in the rectitude of tolerating organic evils till a Christian civilization *had an opportunity* TO UNDERMINE THEM."

That which Garrison *attacked* because it was *sin*, and a sin highly aggravated, both from the civil and religious point of view, this Reverend Doctor thinks ought to have been *tolerated* because it was only an *organic* sin, and tolerated until some *opportunity* occurred which might enable the reverend gentlemen, who had a monopoly of the moral and religious instruction of the whole population from week to week, to begin to *undermine* it!

"Here's richness!" as Wackford Squeers said of the "milk for three," which he was watering to make it serve for five.

Those who remember (as the present writer does) the attitude of the clergy of Massachusetts toward slavery in 1829, when Garrison began his work, know that they gave not the slightest indication of attempting even to *undermine slavery*. Dr. Phelps boasts, as if it were a merit, that they were wont to pray for the bondman; and it is a fact that on Fast and Thanksgiving days, when the traditions of the elders allowed them to speak of *secular* matters in the pulpit, some of them did humbly beseech the Lord, "in his own good time," to do away with the yoke of bondage, just as the wagoner, in Æsop's fable, prayed to Hercules to lift his wheel out of the mire. But, as to the ministers of all denominations in New England, there is no reason to believe that one in twenty of them ever spontaneously thought of the "bondman" again till the next Fast or Thanksgiving day came round; and, then, *da capo*,—only this, and nothing more.

Garrison was unfeignedly astonished at the silence of the clergy on such a subject. Predisposed to great reverence for them by his orthodox education in ultra-orthodox Newburyport, he attributed this neglect to preoccupation with other matters, and made personal appeal to eminent ministers in Boston, confident that, when the awful facts of slavery were brought to their notice, they would promptly testify against a sin so enormous, and do vastly more than the poor young printer could do toward breaking the yoke and letting the oppressed go free.

The first minister to whom he went was Rev. Dr. Lyman Beecher, the recognized head of Orthodox Congregationalism in Boston, and one who was then insisting in the pulpit on the imperative duty of *immediate* abandonment of sin. He said, in answer to Mr. Garrison's request that he would call the attention of his congregation to the evils and the guilt involved in slavery, "I have too many irons in the fire already." But his whole conversation on the subject showed utter indifference to it. So was it also with Jeremiah Evarts, Secretary of the American Board of Commissioners for Foreign Missions. So was it with all the ministers and all the prominent church members to whom Garrison at that time appealed. They did not care about slavery, they had no disposition even to undermine it.

In short, Garrison's personal interviews with clergymen and church members proved to him just what was afterwards asserted by James G. Birney, "The American churches are the bulwarks of American slavery"; and by Rev. Albert Barnes, "that there was no power out of the Church that would sustain slavery an hour, if it were not sustained in it."

Garrison constantly addressed the sense of religious duty in his hearers, and constantly expressed it in the language of Scripture: "Loose the bonds of wickedness; undo the heavy burdens; let the oppressed go free; break every yoke." He was fully convinced of the truth of what had been said by some rarely exceptional persons among the ministry in regard to slaveholding, as this by Jonathan Edwards: "To hold any man in slavery is to be every day guilty of *robbing* him of his liberty or of *man-stealing*." And this by John Wesley: "Slavery is the sum of all villanies." "*Men-buyers* are exactly on a level with *men-stealers*." And the similar statements of Samuel Hopkins, of Newport, R.I., at a time when the slave-trade was flourishing there. Yet these same expressions in the mouth of Garrison are called "abusive"; and it is for uttering just such sentiments as these and quoting Scripture to back them that Rev. Dr. Phelps now calls Garrison and his friends "destructives."

But may this epithet perhaps be due to another reason? Dr. Phelps tells us that his clerical friends the "reformers" were "laboring for *bloodless* revolutions"; were convinced "that sanguinary revolutions are *not* the normal method of organic changes in social order,"—as if Garrison, whom he is now controverting, taught and used violent measures.

Dr. Phelps practises a serene disregard of such facts as do not favor his theories; but the notorious fact in this case is that Mr. Garrison was an ultra peace-man and non-resistant, that his exhortation was always for the *peaceful* abolition of slavery, and that the preamble to the Constitution of the New England Anti-slavery Society in 1832, the first one formed under his leadership, closed with this sentence: "While we advance these opinions as the principles on which we intend to act, we declare that we will not operate on the existing relations of society by other than peaceful and lawful means, and that we will give no countenance to violence or insurrection."

But may it possibly be that the whole career of Garrison and Phillips is now summed up in the word "destructive," because for a certain period they advocated secession of the North from the American Union? Let us look at the facts regarding that matter.

In 1844, under the lead of Mr. Garrison, the American Anti-slavery Society voted to take the ground of disunion; and the New England Anti-slavery Convention shortly took the same step, then adopting the motto, "No Union with Slaveholders." In 1860, when the slaveholding States had seceded, Garrison removed this motto from the *Liberator*, as no longer appropriate, and applied himself to the work of developing a public opinion which might encourage President Lincoln to proclaim freedom to the slaves. To those who questioned his consistency in taking this course, he replied, substantially, that, when he pledged himself to lifelong opposition to the "covenant with death and the agreement with hell," he had not thought he should live to see death and hell secede from the Union. This sixteen years' advocacy of disunion as better than participation in slaveholding is the basis of fact upon which Dr. Phelps has built this superstructure: "The destructives were men of one idea; the dissolution of the Union was the avowed object of their agitation; this was their supreme aim; for forty years, Wendell Phillips and his colleagues lived for the disruption of the Republic"!

Dr. Phelps seems to think that his case, as self-elected counsel for his clerical brethren, is helped by the statement that "the pulpits were few which ventured to proclaim pro-slavery opinions." This is literally true. There were but few ministers who took pains, year after year, to preach and publish their belief that slavery was right and beneficent, and better for both master and slave than universal freedom, as Dr. Lord of Dartmouth College and Nehemiah Adams, of Boston, did; but the important point in that matter is that neither the Christian character of those men nor their fitness for the Christian ministry was at all impeached in the estimation of their brother ministers by this line of conduct.

It is perfectly true that the New England clergy did not love slavery, nor make active efforts to sustain it: they preferred to let it alone, without interference or energetic remonstrance; but a majority of them, from 1835 to 1845, heartily hated anti-slavery, and exerted themselves to oppose it, especially the clerical editors of the papers called "religious."

Finally, the claims of Dr. Phelps—that, from thirty to fifty years ago, the clergy and churches of the Eastern States showed by systematic action a belief that slavery was wrong, and that any such action was prompted by "the almost universal tone of the religious press"—are so utterly confuted by documentary evidence in the files of those papers and the doings of ecclesiastical bodies that they may be appropriately characterized as not only false, but impudent.

THE London correspondent of the Boston *Sunday Herald* writes that the presence in London of certain prominent theosophists is creating no little interest, and that "the drawing-rooms of the intellectually alert systems of society are all abuzz with the marvellous doings of Mme. Blavatsky, Mr. Padishah, and Colonel Olcott." "These disciples of supernaturalism, as we should call it," the letter continues, "are not Spiritualists. They discourage its pretences, and disallow all its claims. They only claim to know and use certain spiritual laws, the knowledge and advantage of which can only be acquired through long and rigid purity of life and spiritual introspection. From what I can learn, they are a sect of intellectual quietists. They claim to abolish space, and send letters to Siam and Tonquin from London, as they would from one room to another. After long spiritual training, they come into what they call their 'astral' bodies, in which they move about all over the earth as freely as the air itself. . . . These esoteric Buddhists get letters from India written only an hour before, giving information on matters occurring in the spiritual realm in all parts of the earth. It is perfectly true that one hardly knows whether to treat this whole matter seriously or jocularly. Here is a friend of mine, with no nonsense in him, a great, big, unsentimental, hard-working literary man, who tells me he was sitting in the room of Mme. Blavatsky, when a letter dropped down upon the table before her as if out of the clouds: she opened the letter with as little surprise as if it had been handed her by a servant, and found it was from a Theosophist in Thibet, and had been written only a few minutes before. . . . This unsentimental friend of mine is not the man to be deceived; and he relates this story about the letter from Thibet, and such like stories, with an assurance that is impressive, if not convincing." The above is quoted to show what wild fancies may be accepted as realities among men and women who, under the influence of mysticism and superstition, disregard the methods of science, and try to discover truth by returning to the methods of half-civilized ages and races. The claims of these Theosophists, which have been before the world several years, have never been submitted to any competent minds for verification, and are utterly absurd; and the amount of attention they receive is an indication only of the large amount of credulity and superstition which exists in the public mind. Many things there are not dreamt of in our philosophies; but that is no reason that we should discard common sense and give credit to statements like those of the Theosophists, when they are intrinsically incredible, and supported by no evidence whatever.

MR. JUSTICE STEPHEN, in a learned and elaborate essay on "Blasphemy and Blasphemous Libel," printed in the *Fortnightly Review*, expresses the opinion that under the present blasphemy law a large part of the most serious and important current literature is illegal; "that, for instance, every bookseller who sells, every one who lends to his friend, a copy of Comte's *Positive Philosophy* or Renan's *Vie de Jésus*, commits a crime punishable with fine and imprisonment"; and that the late William Rathbone Greg, who "was not only a distinguished author, but an eminent and useful member of the civil service," if convicted of "publishing his opinion or even expressing them to a friend in private conversation," might have been "adjudged incapable and disabled in law to hold any office or employment whatever," and might on a second conviction have been imprisoned for three years, and practically outlawed. "No one," Mr. Justice Stephen writes, "can dislike this law, as I believe it to be, more profoundly than I do; no one can be more firmly convinced of its unfitness for these times,—if, indeed, it was ever fit for any time. But, because I so thoroughly dislike it, I prefer stating it in its natural naked deformity to explaining it away in such a manner as to prolong its existence, and give it an air of plausibility and humanity. . . . You must either forbid or permit all attacks on Christianity. You cannot in practice send a man to gaol for not writing like a scholar and a gentleman, when he is neither one nor the other, and when he is writing on a subject which excites him strongly." He claims that the blasphemy law involves persecution; that "if the law were really impartial and punished blasphemy only because it offends the feelings of believers, it ought also to punish such preaching as offends the feelings of unbelievers." Mr. Justice Stephen thinks "blasphemy and blasphemous libel should cease to be offences at common law at all, and the statute of William III. should be repealed."

A LEADING topic in the Presbyterian General Assembly held at Saratoga last week was Sunday Newspapers. According to the Boston *Herald's* report of the meetings, Rev. Dr. Jessup introduced a resolution condemning the purchasing and the reading of secular papers on "the Lord's day." In a speech, he said: "The thunder of railroad trains and the cries of newsboys seemed to proclaim that we should have no more Sabbath. The Sunday editions are the largest of the whole week, and it takes all day to read them through. He would like to stand on the Hudson River Railroad while a Sunday train was passing, and wave a red danger signal. If asked what the danger was, he would answer they were running over the fourth commandment." Rev. Dr. Edison, who took a somewhat broader view of the subject, inquired whether the resolution was intended to include "the 'Pharisee's trumpet,' as Dr. Prime had facetiously styled the religious journals." He was in favor of excluding all or none. The late William E. Dodge, he said, would not have even a "Pharisee's trumpet" opened in his house on Sunday. Dr. Edison thought it not best to single out newspaper men and cudgel them. "There was a bigger question involved than affording rest to employés. What would we do with the United States Government, which distributes mails and requires post-office employés to work on Sunday? What should be done with the stockholders in Sabbath-breaking railroads? He would like a committee appointed to prepare a minute upon Sabbath observance, not in one thing only, but in all things, and made a motion to that effect." The motion prevailed. How much trouble the rational use and enjoyment of Sunday by the people do cause the orthodox clergy!

IN his article in the May number of the *Unitarian Review*, on "Christ in the East and West," Mr. J. H. Allen, alluding to *Jesus: His Opinions and Character*, by a "Layman," remarks that "the judicial criticism of the sacred books—a phrase easily and currently employed—has not even been possible until a very recent day. The jurist mind has rarely had the leisure or the opportunity, even if it had the motive, after once getting the requisite training, to deal thoroughly with any line of topics quite out of its beat. . . . It is a matter of congratulation and should be heartily welcomed by every theologian that this task has at least been attempted and has been carried out with skill, conscience, and painstaking integrity by the 'Layman' whose book we have set as antithesis over against the eloquent exposition of *The Oriental Christ*. The debt is none the less, whatever we may think of the results. The merit is in the effort having been made at all. The merit is also in the seemingly quite unflinching and unwavering way in which the task has been carried through. Many of us whose training has been in other schools have talked fluently of 'judicial' investigation and exposition of the evangelists, and it is possible that we have been so far aware of what our words meant that we have felt, or even expressed the wish that we might see those documents subjected to exactly the process which an intricate will or deed of trust would be subjected to by a trained lawyer who had a heavy interest at stake in ascertaining the exact meaning, no more nor less." Without pronouncing on the accuracy of the conclusions of the work, Mr. Allen says, "The impression it leaves, however, is that of a singularly skilful and thorough piece of work."

SAYS the Springfield *Republican*: "The Mormon Church claims that it has as many missionaries as the American Board, and that they are well scattered over the eastern hemisphere, even to the Holy Land itself. Apostle Cannon, who is by far the shrewdest leader in Utah, suggests a curious solution of the polygamy question, when he says 'polygamy is essential to salvation according to our belief, but the rite of the Church may be met by marriage to the dead, and our marriage covenant is for eternity as well as time.' This solution would be a confession and a vindication at the same time. The duty of the women particularly to be 'sealed' has been too long and earnestly urged to be suddenly abandoned. If now the devout sisters wish to make their salvation assured, and if at the same time they shrink from defying the laws, they can indulge in constructive nuptials with a saint in heaven, who, by the way, would have no voice in the matter. To be prosecuted in this life, and then after death to be continually married to brides in the flesh, is a degree of martyrdom not greatly to be desired."

IN an editorial on "Priesthoods," the ingenious and learned writer says: "The distinction between sacred and profane is a badge of primitive barbarism, and it is in free force only in communities sunk in ignorance and superstition. Although they may be living in and breathing the atmosphere of to-day, they belong morally and mentally to primitive barbaric times." There is, then, nothing in the world that is sacred! The infallible *Index* man has said so. Of course, he is an honorable man,—are they not all honorable men?—but please let us know when we come in contact with him, that we may keep our hand on our pocket-book.—*The Catholic Review.*

The *Review's* intimation that the "infallible *Index* man" is a pickpocket does not disturb us, since the same journal, one of the most courteous of all the Catholic journals in this country, is in the habit of applying such pet words as "thief" and "robber" to the foremost statesmen and reformers of Europe. The force of the statement we made is in its truth, which no priestly arrogance can affect. Our contemporary understood, of course, the sense in which we used the words sacred and profane. "There is, then, nothing in all the world that is sacred!" We answer that all truth should be regarded as sacred. The distinction between sacred truth and profane truth, implied by the terms "sacred history" and "profane history," has no foundation in science or reason; and, with the advancement of knowledge and rational thought, it is being divested of its original meaning, and as a distinction becoming merely technical and nominal.

"WHAT was cats made for, mother?" asked a Somerville little boy, who had been scratched by a household tabby. "Cats made for? Well, I suppose, to kill mice." "Who made 'em?" "God

Digitized by Google

made them." "What was mice made for?" "What were mice made for? For some purpose, I suppose. For cats to catch, perhaps." "Did God make the mice, too?" "He did. He made all things." "Well, if the cats is made for catchin' mice, God wouldn't needed to make cats, if he hadn't made any mice, would he?" "No, I suppose not." "What did he make 'em for, then?" "Make what?" "The mice." "Child, it's time for you to go to school. Hurry, or you'll be late."—*Somerville Journal.*

A MEMBER of Prof. Adler's Society writes: "The tenement house reform movement has by far exceeded our expectations. A Tenement House Building Association has been formed, with an almost unlimited capital, some of the wealthiest gentlemen in New York being at the head of the company. The association is not connected with our society, but still is an outcome of Prof. Adler's lectures on this subject."

ANNUAL MEETING.

The annual meeting of the Free Religious Association is to be held at the Parker Memorial Hall, Boston, as follows: Thursday, May 29, at 7.45 P.M., business meeting for hearing of reports, election of officers, etc.; Friday, May 30, convention, with sessions at 10.30 A.M. and 3.00 P.M., and a festival in the evening.

At the Friday A.M. session, the "Ethical Culture" movement will be presented in addresses by Wm. M. Salter of Chicago, and Messrs. W. L. Sheldon and S. B. Weston of New York, who will speak respectively of the Philosophical Basis of the Movement, of its Practical Aims, and of its Relations to other Organizations.

The subject for the P.M. session of Friday will be "The Philosophy of Religion." Opening essay by Prof. Wm. T. Harris of Concord, and addresses by Charles D. B. Mills of Syracuse, Capt. Robert C. Adams of Montreal, and others to be announced next week.

The Annual Festival will be held in the Meionaon, Tremont Temple, Boston, Friday evening, May 30, commencing at 6.30 P.M. William J. Potter will preside. Short speeches by Mrs. E. D. Cheney, Mr. H. B. Blackwell, Capt. R. C. Adams, Mr. B. F. Underwood, and others, to be announced hereafter.

Music, including quartet, duet, and solo singing, will be furnished by the choir of the Church of the Unity, under the direction of Mr. Howard M. Dow. Mrs. L. F. C. Richardson, soprano; Mrs. H. R. Paige, contralto; Mr. Charles R. Adams, tenor; Mr. H. L. Cornell, basso; Mr. Howard M. Dow, pianist.

Tickets with reserved seats at tables, at $1 each, may be had at *The Index* office, 44 Boylston Street, Boston.

F. A. HINCKLEY, *Sec'y.*

UTOPIAS.

The breeze of hope forever blows: afar
Through vistas of the future ever shine
Cities of God and commonwealths divine,
Happy Utopias with gates ajar,
Where all men free and equal brothers are,
And life is easy without aught to mar
Its hours of bliss, and love and friendship twine
Immortal wreaths, and nectar flows for wine.

There grace and beauty are each woman's dower;
And brains and wealth are lavished upon all,
So that no citizen to want is thrall.
Perpetual spring with dewy grass and flower
There paves the Elysian soil; and sun and shower
Weave rainbows, while no tempests ever lower.

B. W. BALL.

The Index.

BOSTON, MAY 22, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

JAMES AND LUCRETIA MOTT.*

BY W. C. CRAIGE.

We all remember Matthew Arnold's beautiful and true saying that "Poetry is a criticism of Life." The soul of the seer touching the lips of the poet may indeed kindle the heart with a divine fire, and shed upon life the glow and the freshness of ideal beauty and ideal grace, separating the true from the false by deeper insight and truer sense. But, after all, Life criticises itself. Life is its own measure and its own law. And where can the analysis and judgment of the great Art of Living be better studied than in the memorials of the Art's masters, those proud servitors of Duty whose paths perpetually invite us to high endeavor, bidding us walk in the dear company of those blessed ones who strove for Right "when God himself seemed dumb." There we find lessons of gentleness, lessons of repressed pain, lessons of strenuous effort which shame us and revive us. We are humiliated, yet cheered, stung with the vague unrest of thought until we are finally led to see that it is Duty which redeems the sordidness of daily toil and makes our weary lives endurable,—the great principle of Duty, so hard to find, so hard to follow. And through the whole of the lately published *Life and Letters of James and Lucretia Mott* we see this constant adherence to the purity of ethical teaching, finding expression in long years of beauty and usefulness.

The life of Lucretia Mott spanned a momentous period in the world's history, a period of awakening from the sleep of conservatism, a period during which far-reaching reforms agitated men's minds,—the abolition of slavery, the demand for due recognition of the rights of women, the cause of universal peace, the advancement of sound thought in true religion; and with all these movements Lucretia Mott was active in labor and earnest in sympathy. Her heart was filled with the fervor of a quenchless enthusiasm; her voice was never silent in the cause of Right. She was born in 1793 on the Island of Nantucket, where her ancestors had lived and been "people of standing" since 1662. Child of a hardy and religious race, it is not necessary to seek far for the source of her dauntless courage and persevering strength. When thirteen years old, she was sent to the Friends' Boarding School at Nine Partners, near Poughkeepsie, N.Y., where she remained two years without returning to her Nantucket home, such was the difficulty of travelling in those days. At the end of these two years, she was made an assistant teacher; and the next year she became a regular teacher, with a salary of $100, and the added privilege of educational facilities for a younger sister. In 1809, she left school and joined her father's family in Philadelphia, to which place they had removed; and there also, in 1810, James Mott, who had likewise been a teacher at the Nine Partners School, followed them. While at the school, a strong attachment had sprung up between these two young people, which resulted in their marriage in 1811, in Pine Street Meeting-house, according to the order of Friends, "with a gravity and weight becoming the occasion." James at this time was almost twenty-three years old, Lucretia slightly past eighteen. "James was a tall, pleasant-looking youth, with sandy hair and kindly blue eyes. In manner, he was shy and grave. As can be inferred from his letters, he took serious views of life, and was much given to religious contemplation. Lucretia was a sprightly girl of more than ordinary comeliness and uncommon intellectual promise. In strong contrast with James Mott, she was short of stature, quick in her movements, and, notwithstanding the repression of Quaker training, impulsive and vivacious in manner." She was also keenly appreciative of humor, and was early distinguished for those elements of deep spirituality which subsequently gave her such remarkable influence. During the first years of their married life, necessity as well as inclination led them to observe the closest economy; and Lucretia, in conjunction with a relative, opened a school, under the care of Pine Street Meeting, which met with such success that in a short time it numbered forty scholars. But James Mott finding an increased measure of prosperity in his business, Lucretia was soon able to give up her teacher's position more fully to devote herself to the increasing needs of her own family; meanwhile living that life of purity and inquiry which qualified her to become an "approved minister" among Friends, and opened the way to larger fields in after years. It was during this period of her life, when family cares doubtless pressed somewhat heavily upon her, that Lucretia was in the habit of holding one of her children in her lap, while she drew her chair close to the foot of her bed on which she would place a ponderous folio volume of the works of William Penn, and then, while soothing the child on her knee, with rapid-moving eye and glowing heart, she would read and ponder, and read again the words of the great Quaker, until her memory had them printed in it forever. Ah, mothers! ye weary ones! here is your lesson, take it and learn it. And so her life went on, growing in usefulness and broadening in wide-expanded thought, full of zealous purpose and earnest toil. When the division occurred among Friends in 1827, Lucretia Mott was among those who separated from the so-called Orthodox body, under the influence of the teachings of Elias Hicks, who strove to introduce a more liberal and inquiring spirit, while in no way departing from what he conceived to be the truth in the doctrines of the founders of the sect. In 1840, Lucretia was chosen one of the American delegates to the World's Anti-slavery Convention in London, to which convention she was refused admittance because she was a woman. She was already well known abroad; but this surprising instance of narrow-mindedness in a representative assembly of professedly clear thinkers, friends of justice and aiders of humanitarian progress, drew upon her an additional share of public notice, and during her English visit she was the recipient of much attention, and made many careful observations on subjects deepest in her thoughts. Among many other well-known persons, she several times met Lady Byron, who, in conversation relative to religious matters, said that she was "not quite satisfied with any sect, but had often thought that Quaker and Unitarian would suit her, and that an advantage would arise from visits to other places of worship." On returning home, Lucretia continued her active reform work, speaking at anti-slavery meetings, peace meetings, woman's suffrage meetings, and religious meetings of Friends, until at last the family's city home became such a resort for invited and uninvited visitors, and the cares of self-imposed and involuntary

* JAMES AND LUCRETIA MOTT. Life and Letters. Edited by their granddaughter, Anna Davis Hallowell. With Portraits. Boston: Houghton, Mifflin & Co. 1884.

Digitized by Google

labor became so burdensome that Lucretia's health suffered under the constant strain to such a degree that it was deemed best, in 1857, to remove a short distance from the city. The Arch Street house was accordingly sold, and "Roadside" purchased; and at this new home, eight miles out of town on the Old York Road, James and Lucretia Mott spent the rest of their lives.

Trained from early childhood to a life of thoughtful self-reliance, Lucretia Mott early became impressed with the manifest injustice of woman's legal, business, and educational position. While at the Nine Partners School, she was first led to reflect on this matter. To quote her words: "The unequal condition of woman impressed my mind. Learning that the charge for the tuition of girls was the same as that for boys, and that, when they became teachers, women received only half as much as men for their services, the injustice of this distinction was so apparent that I early resolved to claim for myself all that an impartial Creator had bestowed." During her English visit in 1840, we find entered in her diary: "Visited the Borough Road School. . . . The boys are well-instructed, but the girls too much confined to sewing." A few weeks afterward, we find the further entry, on the occasion of a visit to a Unitarian Charity School for Girls: "The girls too much confined to sewing, and not taught enough beyond reading, writing, and a little figuring." And again, on a visit to "Thomas Irwin's School," "Commented on girls' education as contrasted with boys',—the latter forward in arithmetic, while girls are kept at sampler work, stitching, and other nonsense. No blackboard drawings or problems for them." These observations were mentioned in the admirable "Discourse on Woman," which Lucretia delivered at Philadelphia in 1849, in reply to a very narrow lecture by Richard H. Dana, ridiculing the new views of woman's sphere. The "Discourse" is appended to the *Life and Letters*, and is a very excellent presentation of the subject, admirably written, full of sound thought clearly expressed. The style, in parts, rises to a certain degree of nervous force; and, among many very noticeable sayings, the essay has the following beautiful prophecy of the perfectness and grace of the true and ideal marriage: "Then [when woman's rights shall be fully recognized] the independence of the husband and wife will be equal, their dependence mutual, and their obligations reciprocal."

From numerous passages in Mrs. Hallowell's most interesting volume, we are enabled to gather that Lucretia Mott recognized fully the broad distinction between religion and theology, the one relating to that spiritual uplifting which finds expression in the ethics of daily life, while the other relates to logic-built systems of belief based on premises which lie entirely without the domain of positive knowledge,—pure speculation, profitless as the mediæval question, "How many angels can stand on the point of one needle?" As early as 1841, she remarked that "all orthodox sects have modified their faith or their creeds with the advance of rational principles of religion"; and, in 1842, she writes, "To my understanding, we shall not make much progress as Christians until we dare read and examine the Jewish Scriptures as we would any other of the ancient records." In the same letter, she remarks, "I have never given my faith a name." She considered "that atonement study is the veriest waste of time and energy"; and she speaks of "the absurdity of the whole scheme," while the doctrines of the Trinity, the divinity of Christ, and bibliolatry generally, found with her no favor or acceptance. On one occasion, she exhorted her hearers to "be not afraid of the reputation of infidels or the approbrium of the religious world. . . . Our fruits and not our opinions will finally judge us"; and, in the excellent "Discourse at Friends' Meeting, Fifteenth Street, New York," delivered in 1866, she again speaks of "scepticism as a religious duty," while her humility of spirit in this matter is well shown by her breakfast-table remark, "Let us have unbelief, but let it be a reverent unbelief." At an address delivered at the Anti-Sabbath Convention, held in Boston in 1848, she said, "The standard of creeds and forms must be lowered, while that of justice, peace, and love one to another must be raised higher and higher." In the same year, she writes: "I have accustomed myself to examine them [the Scriptures] as I would any other book, as nearly as early education and veneration would permit. I have now no difficulty in deciding upon the human and ignorant origin of such parts as conflict with the known and eternal laws of Deity in the physical creation, be the claim to the miraculous ever so high and the assumption of the pathetic and God-inspired ever so strong." Still less did she recognize any of those passages permitting or palliating, as she expressed it, "murder in any of its forms, slavery in any of its degrees, or priestcraft in its various phases as palmed upon the religious world." Again, on another occasion, she said, "The popular system of faith is fast yielding to a more enlightened theology." Lucretia Mott believed in "obedience to known duty, repentance for disobedience, and amendment of life," and considered that "the credulity displayed in the account of the evangelists [as to the resurrection], and other sacred (?) [*sic*] writers, is the natural accompaniment of ignorance and the more childish state of society." The prayer of aspiration she regarded "as natural to man as the air he breathes"; but, in relation to application for divine intercession in material matters, she said, "But when it comes to praying for rain in dry weather, or for the removal of evils which have been brought upon us by our own violations of the laws of health and nature, then it is most absurd and superstitious." She apparently had belief in the doctrine of a future life, though of what nature she presumed not to speculate, content, as she said, with the Apostle's saying, "It doth not yet appear what we shall be." To use her words again, she rested "satisfied with the consciousness that *now* are we the children of God"; and, in her last illness, she said: "I am willing to acknowledge all ignorance of the future, and there leave it. It does not trouble me."

There is nothing more beautiful and instructive in Mrs. Hallowell's book than the account of Lucretia Mott's well-ordered domestic life,—a life so severe in its simplicity, so deep, so true, yet withal so cheerful, that, having it well in mind, we should certainly hear no more of "the prevailing fallacy that a woman cannot attend to public service except at the sacrifice of household duties." That we may never again hear of this "prevailing fallacy" is probably too much to hope, though the time is fast coming when it will be "prevailing" no longer, but will be quietly laid away out of men's minds among the rubbish of dead prejudices and vain notions once mighty for oppression, but shorn of their ill strength forever,—notions and ideas so foolish indeed that the future antiquary will search out the musty pages where they are inscribed in all the pomp of learned phrase, and will wonder how his ancestors could have been so utterly devoid of reason as to entertain views so alien to the first principles of human freedom.

Lucretia Mott "was an early riser and an indefatigable worker, never sparing herself. It was one of her rules to be willing to do herself any work that she required of another." She had the happy faculty of distinguishing between "essentials and non-essentials" in household management, the former always receiving careful attention, while the latter, those "self-imposed labors under which so many women struggle, were left to look after themselves." She said: "Being fond of reading, I omitted much unnecessary stitching and ornamental work in the sewing for my family, so that I might have more time for this indulgence and the improvement of the mind." Her biographer tells us that "from youth to old age she always cut and made her own clothes" and "never varied the style," though she never "felt that there was any principle involved in the peculiar cut beyond that of simplicity and moderation." She was also "an excellent cook, and rather prided herself on this accomplishment," reminding one of Harriet Martineau, who took such delight in her dairy management; and George Eliot, who loved to show how one hand was larger than the other by reason of the many pounds of excellent butter she had made in her youth, when, as a country girl full of passion and sweet action, she managed her father's house. It is not in these high-thoughted women that we find the bitterness of pride which scoffs at joyous duty done and humble labor well accomplished. Far from them must we go to seek the ignoble mind that scorns the tasks which fill our daily lives. On one occasion, the *United States Gazette* printed a receipt for "corn pudding," with this comment: "The half-cooked corn and melted butter must be glorious stimulants to a dyspeptic stomach." Here was an opportunity not to be lost. So Lucretia Mott sent to the editor of the *Gazette*, Mr. Joseph R. Chandler, a leading citizen, her own Nantucket receipt, "accompanied by a pudding of her own make," which elicited the following reply from the recipient: "Mr. Chandler, in acknowledging the receipt of the corn pudding from Mrs. Lucretia Mott, is compelled to confess his error in regard to the wholesomeness of such a combination of ingredients. Mr. Chandler, as well as many others, has learned that much (moral as well as physical) which seemed repulsive, or at least of doubtful benefit in itself, has, when presented by Mrs. Mott, been found palatable and nutritious. It is the gift of thousands to *collect* with industry and care, but of few, very few indeed, to *combine* with judgment and present with delicacy and grace." The actual household labor personally performed by Lucretia Mott is indeed surprising, when we consider the constant demands on her time and thought by outside duties; and the general account of family life at the Arch Street house is of the most engaging character. In its parlors so plainly furnished, yet cheerful with a bright carpet and air of general comfort, a boundless welcome was extended; and the coming of guests at odd times and all times was a regular part of the routine of daily life. In 1850, at yearly meeting time, Lucretia writes, "We had nine or ten Friends lodging with us, and some forty or fifty at meals daily"; and many more similar instances could be quoted. A very interesting account is given of the manner in which Lucretia Mott helped, all through her life, "clear the breakfast table and wash the silver, china, and glass belonging in the dining-room." The occasion was somewhat of a household conversational gathering. Guests were present, and sometimes assisted in the work, which, we are told, "was not a disagreeable task. The well scrubbed little cedar tub, with its steaming water, was placed at one end of the table, and article after article was washed and burnished in a systematic manner from which no deviations were permitted." Here is a wholesome picture of a kind of diligence which seems to be sorrowfully growing rarer and rarer. Not that every woman should necessarily do as Lucretia Mott did in these matters, but every woman charged with such care should have the ability and the cheerful will to aid and minister in the simple duties of household life. She should dignify and adorn them, carrying into their execution grace to refine their pettiness. A refined and intellectual woman can so wash dishes that the critical on-looker will be disarmed of all his carping, and be brought to say that the humble task is a beautiful work of art, as the sheen of the silver softly shows, and the gleam of the glass mingles with it, and the eye is filled with the sinuous motion of lithe fingers passing in their blue-veined whiteness from the water to the glass and from the glass to the silver, and so back and forth until the end comes, while pleasant words of a musical voice touch with lightness yet depth some question of the hour or some truth for all time.

Lucretia Mott was somewhat noted for what her biographer calls "her rather striking lack of imagination." She cared but little for natural scenery or what otherwise usually delights the eye. "A drive was to her little more than a rather uncomfortable kind of locomotion, which pleasant company might make endurable." She was generous in an unusual degree, on one occasion entertaining in her house for two weeks a mother and seven children who had met with no success in the West, and were about returning to their home in England. "It would do thee good to see their gratitude," she writes. And this was ample reward to her kindly soul,—"to see their gratitude." On one occasion, she wrote to her husband her belief in "making the best of life." She was self-reliant, independent in spirit. In 1855, she writes: "It was no great disappointment to me to give up the meetings thou mentions. When a thing can't be done, there is a happy property in our nature that accommodates itself to circumstances." Frail in body, she was strong in soul; and it was her habit to find relief in labor when touched with sad thought, "as my mother," to use her own words, "often told us it was a good plan to go to work . . . rather than sit down and brood over lonely feelings." Ah, the misery of the world might find some slight palliation, if all its lonely ones were but able courageously to carry out this simple precept! But this is indeed a vain wish. So the interest of Mrs. Hallowell's book does not arise solely from its portrayal of Lucretia Mott's connection with the great movements which distinguished her life. The volume gathers its charm from the revelation of a beautiful character, womanly

Digitized by Google

in the highest sense, strong and true, filled with resolute purpose and an immitigable love of justice.

It is curious to note the temperamental differences between James and Lucretia Mott. He was "reserved and silent," though a clear and forcible writer; she was "impulsive and vivacious," in public speech "unusually fluent," and in conversation "easy and unembarrassed." Like many other great and sympathetic speakers, she was not so facile with the pen. In formal composition, the charm of her graceful manner was apt to be lost in a certain stiffness or constraint very different from the incisive force with which she used her own fit instrument,—the spoken word. James was somewhat prone to depression and discouragement, while Lucretia "was a sunbeam of hopefulness." He was gentle and yielding, she energetic and resolute. And none understood their differences better than themselves. Yet so helpful were they to each other, so harmonious was their common life, so united were they in sentiment, so well did they agree in thought, that, in 1853, James Mott feelingly wrote: "I have lived in that state [marriage] for more than forty years, and it has been one of harmony and love, though we have had our trials and difficulties in life. As age advances, our love, if possible, increases." And this true marriage so continued with all its solemn wealth of meaning until the death of James Mott in 1868,—fifty-six years of wedded life, fifty-six years of a home filled with a moral atmosphere, a school of instruction to children and grandchildren and friends and visitors in that grand art of living well, whereof mention was made in the beginning.

Lucretia Mott survived her husband nearly thirteen years, passing away in 1880. Her grave was made in Fair Hill Cemetery, where she was laid in solemn silence, amid a vast concourse of hushed and reverent mourners. Overcome by feeling, "as all were standing by the open grave, a low voice impulsively said, 'Will no one say anything?' and another near by responded: 'Who can speak? The preacher is dead!'" Ah, those were tender and touching words! The beautiful and melodious voice of the preacher would be never more lifted up for the dumb and suffering. The pure and tender heart would be never more touched with the pain of the weary and oppressed. Yet her deep seriousness and charm of character gave an impulse to the spirit of humanitarian reform, and stirred the souls of those who came within the sphere of her influence to thoughts never to be stilled and deeds to bear rich fruit in after time. She lived a life of dignified simplicity in an age of growing vanity. Her life taught above all things the lesson which at this day most needs to be learned,—the great lesson of the need for Plainness and Worth.

CORRESPONDENCE.

THE REAL POINTS AT ISSUE IN THE MORMON QUESTION.

Editors of The Index:—

It was meant that the article about the Mormons in *The Index* of May 1 should be so well worded and well aimed that no one could fail to understand that its object was, not to defend polygamy or the Mormon religion as such, but only to present the facts with regard to the virtues and worth of the Mormon people as citizens, and to show by them that no such evils are rising from their institutions and beliefs as to call for the interference of the federal government. But, as it seems to have missed of its design in the mind even of so fair an observer as my friend, Mr. Potter, let me take another shot, aiming to show more clearly what the points at issue really are, and to correct the mistakes about them into which he has manifestly fallen.

I. Instead of its being assumed by the article, as Mr. Potter thinks, that all the good things testified to about Mormonism are the result of polygamy, its very title, "Gentile Testimony," not to *polygamic*, but "to *Mormon* Worth," shows it is Mormonism as a whole, and not one of its parts, of which they are said. The expressions used in it,—"What *community* can present stronger testimony to its virtues," not what *institution*, "*Polygamy guarded and penetrated by the Mormon religion*"—and not polygamy alone—"produces as much happiness for its citizens as monogamy does,"—not produces the whole of it,—all point in the same direction. And, in those places where polygamy and monogamy are spoken of by themselves as doing certain things, it is so manifestly to avoid repeating the words "Mormon" and "Gentile," and so in accordance with a well-known figure of speech, putting the part of a thing for the whole, that it seems hardly possible for it to be misunderstood. Polygamy is indeed only a single feature of Mormonism. The real power of the system is not in that, but in its religious ideas,—these which produce its virtues, these which uphold and uplift its polygamy, these, if anything, which make it dangerous. And it is this fact—the fact that it is all through a religion—which ought to, and which by our Constitution does, place it beyond the interference of legislation, and which makes the argument all the stronger that it must be dealt with, if at all, by simply religious methods.

II. Mr. Potter says that, "to secure a valid, logical comparison" for the argument in behalf of Mormonism derived from its moral superiority, its other term should be "a religious community of similar faith and ecclesiastical government to that of Mormonism, but different from it in maintaining monogamy instead of polygamy." This, however, is necessary only on the supposition that the comparison is between polygamy and monogamy, to see which is best. As it is not between them, but between Mormonism as a whole and the Gentile party as a whole to see which of them, if either, most needs interference with, the state of things that we do have in the problem,—each of the two parties side by side with each other in the same community and under the same territorial laws,—is all that is necessary for the work. Comparing them thus, the statistics show that the Gentile population of Salt Lake City furnishes fourteen times as many arrests for crime in proportion to its numbers as the Mormon population, and, in the Territory as a whole, forty-eight times as many criminals for the penitentiary as in a like ratio the Mormons; while the testimony of scores of accurate observers is in the same direction. And this, I contend, is a perfectly valid and logical comparison to help prove what is my carefully stated object,—not that polygamy in itself is better than monogamy, but that "polygamy in Utah and in connection with the Mormon religion is producing no such evils as to call for the interference of the general government."

III. Mr. Potter ascribes the virtues claimed for the Mormons to the fact that "the Mormon population for the most part is a picked community of simple people bound together and to certain rules of conduct by a fervent religious faith, and guided by a very astute leadership." Very good. But how does this harmonize with the assertion so often heard, that they are made up of the lowest, vilest, and most ignorant classes of Europe, deluded here by crafty leaders, and that on this account they ought to be suppressed? And, if a picked community in a Territory redeemed and built up out of the wilderness by their own hard toil see fit to adopt a special religion and institution, and by their help bring forth a better civil condition than their neighbors without them, what sort of logic is it that the unpicked communities in the rest of the country should sit in judgment on their conduct, and suppress them because of their immorality? In admitting that they are a "picked community," is not the whole case against them given up? Who shall say what the institutions of a picked community shall be, more properly than its own men and women?

IV. Mr. Potter asks, "If this vast difference in criminality between them and others be owing *wholly* and *solely* to the difference of marriage institutions, and if marriage is simply a social institution, why not heroically smother the feeling that monogamy 'best meets the heart's need' at the East, and move at once for the conversion of citizens in Connecticut to polygamy as the surest means of emptying its prisons?" Now, if my friend will look at what was really said, he will see at once how little ground there is for such a question. The words are: "What does this difference show? *Not, indeed, that polygamy in itself and for the country at large* is better than monogamy; for, in itself and elsewhere, it is not regarded as a religious principle,—a view which makes all the difference in the world,—but only that for Utah and in connection with the Mormon religion it is producing no such evils as to call for the interference of the general government." The whole thing is made to turn on its connection with the Mormon religion, on its being "penetrated and guarded" by it, and on the state of things in Utah. And, because a person does not believe it should be interfered with in this form and under these circumstances, is it a very brilliant piece of logic to argue that therefore he ought to advocate its adoption in another form and under entirely different circumstances? If I should say that, in Florida and in connection with the Florida climate, oranges are the best crop a farmer can raise, and that their culture there ought not to be interfered with by the government at Washington, what would be thought of a person's mental condition who should turn round and ask, Why, then, do you not smother your liking for apples and wheat, and advise all Connecticut farmers to go to raising oranges as the best way of getting out of debt? Yet what is the argument about advocating polygamy everywhere, because it is to be tolerated in Utah, but a principle of precisely the same calibre?

V. Mr. Potter, like many others, compares polygamy with slavery, and thinks that, as the one has been abolished by United States law as morally wrong, the other on the same grounds ought to be also. But slavery was recognized as morally wrong, because its subjects had no voice in its establishment, and were held in it against their own wills, because it deprived them of all their great natural rights as to education, property, self-control, and the pursuit of happiness, and because it brought forth evil fruits to society at large,—though even then the nation did not feel it had any right to legislate it away till its friends had risen in rebellion against the national authority. Suppose now that slavery had been guilty of none of these acts, suppose it had been established by the negroes themselves, that they wished its continuance, that each one was free to leave it when he would, that it provided schools and ballot-boxes for them equally with the whites, that it gave them the fullest rights of property, and that it produced for the South more prosperity, wealth, intelligence, and virtue than anti-slavery did at the North, and forty-eight per cent. less crime among its advocates than freedom did among its opponents: who would have held that the general government ought to spend—as it did—millions of money and five hundred thousand lives in putting it down? But all these liberties, rights, and privileges Mormon polygamy does allow to its subjects: all these good fruits it does show in connection with its religion. There is not a single point of resemblance between the two things. And yet, because somebody has called them "the twin relics of barbarism," it is argued that they are equally wrong, and that what was done to the one it is right to do to the other! Was there ever a more glaring instance of how sensible people can have their minds darkened by the "shadow of a name"?

VI. Mr. Potter's article declares that "it is one of the marks of advancing civilization that the statute law defining crime harmonizes gradually with the demands of the enlightened moral sense." Very true. But it is still more a mark of advancing civilization that less and less stress is laid on the letter of a law or institution as a test of its moral worth, and more and more on its spirit and results. The elevation of marriage, like that of Sunday and worship, has been produced and marked, not by increasing legal enactments with regard to it, but by the new appreciation among the best people of its spirit and of its great purpose. And this is true of all marriage, polygamous as well as monogamic. It is just as unfair to judge of the one by what it was in past ages as to do so with the other. We must compare them both as they are now, judge them, not by their letter and form, but by their spirit and results,—see which in these respects is penetrated most with religion, and has felt most the influence of our advancing civilization. Take Mr. Potter's own test, that of "absolute equity" between the parties. With every monogamous State in the Union denying to wives the right of suffrage, taking away very largely the control of their property and children, and in some cases utterly suppressing their individuality, making the married twain one and that one the husband, and with polygamous Utah allowing them all of these rights equally with their husbands, which side, on the whole, has "advancing civilization" done the most for?

VII. What Mrs. Jackson says about religious fanaticism as the influence which prompts some Mormon women to plural marriages and about their unhappiness and self-sacrifice in this estate is true beyond question. But cannot stories equally bad be told of the motives which prompt some women to marry under monogamy, and about the unhappiness and self-sacrifice of their condition? What is the

Digitized by Google

standard argument against all marriage and in favor of free love? Is it not the miseries of married life? What the motives which notoriously, in a vast number of cases, at the East lead to unions? Are they not the desire of wealth, position, and sometimes of a mere living, rather than true love,—a desire for whose gratification all manner of sacrifices are endured? An account has just been given, in the New York newspapers, of a woman who came into court pleading for the release of her husband, who was about to be imprisoned for cruelly beating her. "But," said the judge, "if I do, he will only beat you again." "I know it," said this poor victim of monogamy, "*but I would rather be beaten than starve.*" Which, now, is the higher motive,—that of Mrs. Jackson's Mormon woman, who clings to marriage for religion's sake, or that of her New York sister, who clings to it for the sake of bread? If such an incident had occurred in a Utah court, how the whole land would have rung with it, as an illustration of the horrors of polygamy! And, as it is, will not Mr. Potter's exclamation over the one case apply equally well to the other?—"How can one read such words, without feeling a new and even indignant protest rising within him against a form of marriage into which a pure and noble-minded woman can enter only by crushing out the deepest natural sentiments of her heart? Where is there a greater crime against nature than this which thus transforms the holy instinct of wedded love and motherhood into a life-long torture? And one can but feel indignation also toward the ecclesiastical system which seeks to build up its power."

Nor is the New York incident the only illustration of what is possible under monogamy. Look at the divorce records of our courts. Look at the matrimonial scandals society is full of. Look at the efforts made, not in Utah, but in Massachusetts, to revive whipping as a needed punishment for wife-beating. Look at the sorrowful faces of too many wives at the East, and see whether the monogamous world is yet in a condition to say very much about the unhappiness of the plural wives in Utah. Nor is it a condition of things which is confined to the vicious, ignorant, and poor. I know of a mother hardly outside of Boston who, all through her last years and on her death-bed, implored her young daughter not to marry a man of good family and education, because of the absolute brutality she had known so many wives to suffer from like husbands. Ask any physician what he knows about the matter; and, were it allowable, he could give repeated instances of a like character, give some especially which arose from the very fact that the marriage was monogamous. And again, to quote, with a slight change, Mr. Potter's words: "This witness gives an interior view of one of the direct results of monogamy, which is often passed by without notice; and, so long as such a cry as this comes out of an Eastern woman's heart, let not Eastern men be led to think that any general condition of social order and prosperity which they can exhibit is going to justify or excuse their crime against marriage before the judgment of the civilized world."

But, in view of these undeniable facts against it, how is monogamy really justified as a blessing by its friends? Why, we say that they show only one side of it; that on the other side there is a still greater amount of happiness, of virtue, of kindness, and of entering into it through motives of the purest love; and that we should take both sides together, not one alone, to get at its true character. And the same reasoning will apply to Mormon polygamy. Mrs. Jackson gives one side, a true one, but no more the whole than the story of the beaten New York woman is the whole of monogamy. Against it there are a multitude of testimonies as to the fair degree of happiness experienced in Mormon families. An educated lady, originally with her husband a Free Religionist, told me that one of the things which helped convert her to Mormonism, after living for two years as a Gentile in Salt Lake City, was what she saw of the Mormon women in their sweet, peaceful home life. Another woman, a teacher in one of their schools and herself a Gentile, testified that, after living in many families both at the East and in Utah, she "had found just about the same happiness in the one as in the other,—little quarrels, jealousies, and heart-burnings among Mormon wives, but no more than in families of New England sisters." Mr. Phil Robinson, the experienced English traveller, says: "I was sitting one day with two Mormon ladies, plural wives, when the conversation turned upon marriage. 'Do you mean to say,' I asked one of them, 'that you and your friends are voluntary agents, when you go into plurality?' 'Certainly I do,' was the reply. 'If I had the last seven years of my life to live over again, I should do exactly what I did seven years ago.' 'And what was that?' I asked. 'Refuse to marry a Gentile to please my friends, and marry a polygamist to please myself. I had two offers from unmarried men, either of which my family were very anxious I should accept. But I did not care for either. But when my husband, who had already two wives, proposed to me, I accepted him, in spite of my friends' protests. And I would marry him again, if the choice came over again.' 'Then yours must be an exceptional case; for I cannot bring myself to believe that those who have been first wives would ever consent to their husbands' remarriage, if the past could be recalled.' 'But I *was* his first wife,' said the elder lady; 'and, if my past were recalled, I would give my consent to a second marriage just as willingly as I did twelve years ago. Perhaps,' said she, laughing, 'you will call mine an exceptional case, too. But, if you go through the Mormon families individually, I am afraid you will find the exceptional cases are very large.'" It is a conversation which indicates anything but that condition of "torture," "self-sacrifice," and "fanaticism" which Mrs. Jackson has so much to say about; and, unquestionably, it expresses the views and feelings of very many Mormon women. They have a newspaper of their own; and, very strangely to us, it is quite as much filled with the romance and sentiment of marriage as any at the East; defends plurality, too, on the grounds, not of religion alone, but equally on those of affection and happiness; nay, even commiserates Gentile women for their forlorn condition under monogamy. Their happiness, however, as Mr. Robinson says, is doubtless that of peace and content rather than of rapture and ecstasy, not the highest ideal; and, apart from any religious motives, some rejoice in plurality as relieving them largely from household drudgery, the sisterhood of wives rendering the work light, and as affording them more leisure and strength for society, self-culture, and individual development than singleness,—rather humble motives, it may be, but, in contrast with those of the starving and beaten single wife of New York, hardly indicating a torture which calls for the interference of the United States government.

VIII. Mr. Potter thinks that the real duty of Free Religion toward the Mormons is, not to defend them against any attempt of the national government to suppress polygamy, but to "emancipate the religious sentiment among them from bondage to ecclesiastical dogmatism and superstition."* But, admitting the need of this emancipation, how is it to be brought about? By the use of arbitrary law? By the agency of the United States Congress and the American army? By taking away from a whole community their right of deciding by a majority vote what shall be their institutions? Is not this the method of all persecution, one of the very things Free Religion was organized to protest against? Was there ever anywhere a worse superstition than the idea that superstition can be legislated away? ever a worse dogmatism than to tell a people at the end of a bayonet that they shan't dogmatize? ever a worse tyranny than that of compelling women to be free of what to them are solemn marriage bonds? As I read the constitution of the Free Religious Association, its method of emancipating the religious sentiment is directly the opposite of all this,—is a reliance, not on force and law, but on "liberty of thought," on "scientific culture and study," and on "appeals to impartial reason." It is the method, in other things, of all our best civilization. Women, under the bondage of religious sentiment, are everywhere sacrificing themselves to something,—some to their husbands and children, some to dress and fashion, some to fanatical temperance crusades, and some, as in the Roman Catholic Church, to a life of celibacy quite as "abhorrent to the natural sentiments" as polygamy. How do we seek to cure them? Not by force; not by Hoar and Edmunds laws; not by breaking up their homes and shutting them up in prison, as the United States officers have actually done in Utah; but by education, by a better religion, by other things as objects of sacrifice, by all the sweet and refining influences of society. How did we make Kansas a free State? Not by legislation at Washington, but by pouring into it a majority of free men, building up in it free institutions, and showing in it side by side with slavery that freedom could give people more prosperity, more happiness, more virtue, more of all the higher things of life than bondage could. Why now should we not do the same with Utah? It is a method of opposing polygamy and Mormonism, and of emancipating its people from ecclesiastical bondage, if there is any there, in which I fully believe. The whole question is one of means, is whether we shall employ the old, worn-out, persecuting methods of outside force and law, which never did succeed anywhere, or the modern, civilized, Christian ones of justice, love, persuasion, education, and a larger, better truth; and I am amazed that any Free Religionist should hesitate for an instant which to advocate. Utah is as open as Massachusetts to schools, churches, newspapers, free discussion, free thought, free trade, monogamy, monogamists, and all the influences of civilization; and the Mormons are willing and eager to compare their arguments, their virtues, their civilization side by side with ours. These are what we have been long contending are the only weapons that truth wants: these have been proclaimed as our infallible reliance in this age of the world against error. What now can be more cowardly, what more false to our own principles, what more a showing that our boasting of them was all bombast, than for us, the moment a chance comes for their trial, to drop them all and fall back on the old weapons of force and law, merely because they are on our side and not on theirs! Suppose that David, after accepting the challenge of Goliath to settle their difficulty at single combat, and going forth to meet him with the boast to his friends that a sling and pebbles were all he wished for the fight, had turned pale at the sight of the monster, and rushed back, asking for the whole might of the Israelitish host to aid him, while Goliath stood alone: would any one, even a Sunday-school boy, ever have thought David was much of a hero? Yet, after taking in hand our sling and pebbles of free schools, free churches, and free thought with which to kill Mormonism, what is our falling back on the United States government for help but a piece of the same heroism? Why, our conduct is enough to make the very stones of the soil cry out against us. Surely, Free Religion "*is* obligated" to resist such moral cowardice. Let us be true to our better nature. Let us not be ashamed to measure our logic, truth, life, virtue, all our moral weapons point to point with theirs on a fair and equal field, asking and giving no favors. And, if they in the end can show a stronger and better civilization than ours, show that their polygamic and Mormon tree can bring forth richer fruits than our monogamic and Gentile one, ought we not graciously and gladly to yield it place, rejoicing that what is fittest for that part of the country is to survive, just as what is fittest for this part of it does here, and feeling that, as the law of nature, it is also somehow the law of progress and the will of God?

JOHN C. KIMBALL.

HARTFORD, CT.

*A word about "the bondage of the Mormons to ecclesiastical dogmatism" and about "the outrages and tyrannies of the Mormon priesthood." The last resort of those who are obliged to admit the virtues of the Mormon people is to throw all the burden of iniquity on the Mormon priesthood, and to speak of that as a tyranny holding the people in bondage. It is a part of the general misrepresentation to which they are subject, and shows in itself how ignorant of their system the accusers are. The fact is there is no distinction between priest and people. Every Mormon is a priest. It is like talking about the tyranny of the American voter over the American people. The Hon. J. W. Barclay well says, "There is no compulsion on any Mormon beyond the public opinion of his fellows, and none is possible. All are equal. There is no special or privileged class or caste. The people in the fullest sense govern themselves." Mr. Phil Robinson says, "It is not true that the church interferes with the domestic relations of the people." "The payment of tithes is as nearly voluntary as the collection of a revenue necessary for carrying on a government can possibly be allowed to be." And Capt. Burton says, 'I was much pleased with their religious tolerance." "The Mormons are certainly the least fanatical of our faiths." It is well for those who so constantly make the charge of ecclesiastical tyranny to remember these statements made by careful and responsible observers. The old proverb, "Like priest, like people," is as true in Utah as elsewhere; and, whatever may be the sins or the virtues of the Mormons, they are shared by both parties alike.

[Our friend has come down upon us with an avalanche. Did he shrewdly design so to fill our columns that there would be no room for a reply? If so, he has almost accomplished it. But we shall try to squeeze in a few words. (1) We are glad to know that Mr. Kimball did not mean all that he said about

Digitized by Google

polygamy,—that he was speaking in a figure and not literally. We well understood that his subject in no wise required such an argument. But his zeal seemed to have carried him away; and, through a large part of his article, he spoke of polygamy without any of the modifying clauses he quotes. Others besides ourselves were deceived by his trope. (2) We must deny the relevancy of the comparison of Florida oranges and Connecticut apples. Were the Mormons an Asiatic people, with the traditions and habits of centuries of polygamous faith and practice clinging to them, then the argument might be of some avail that polygamy is specially adapted to their natures, as monogamy is to other American communities. But the Mormons were born and bred in monogamous countries. A large part of them are Americans,—genuine Yankees. There is nothing, certainly, in the soil, climate, latitude, or longitude of Utah which is specially favorable to the growth of polygamous religion. Give the *same* people a free chance in Connecticut, and why should they not have the *same* success there? We mentioned Connecticut, because Mr. Kimball had specially contrasted its vices with the virtues of Mormon Utah. (3) We deny also the parallelism between the testimony of the Mormon wife, whom Mrs. Jackson quotes, and the plea of the poor abused monogamous wife whom Mr. Kimball brings forward from New York. The Mormon woman's testimony was of polygamous marriage *as a system*; and she was as intelligent and high-minded a witness as could be found,—the editress of a newspaper. The poor dispirited New York woman only illustrated *one of the abuses* of monogamy. And draw out the list of these abuses as black as you may, it still remains true that monogamy is the only *form* of marriage which permits perfect equity between husband and wife. Polygamy forever makes the highest ideal of marriage impossible. (4) As to the obligations of "Free Religion," we trust that we appreciate as fully as Mr. Kimball that supreme reliance is to be placed on discussion, persuasion, education, etc. But we also believe, as we *suppose* he does, that government and law have their place, too; and we believe that the principle of religious freedom may invoke the civil law to protect people in their just rights from the oppressions of religious authority. It is for this purpose, and this only, that we have claimed that the national government might properly exercise its right to legislate, with just discrimination, against Mormon polygamy. We have said nothing about the use of military force. Between the propounding of a law and the sending of an army to enforce it, there is a long way, upon which wise statesmanship may win the battle peacefully. But it will not win, if it yield its principle at the start.—W. J. P.]

BOOK NOTICES.

MARGARET FULLER OSSOLI. By Thomas Wentworth Higginson. Boston: Houghton, Mifflin & Co. 1884. pp. 323. Price $1.25.

The women of America owe an immense debt of gratitude to Col. Higginson for the brave, persistent, and excellent work he has done in their behalf in past years, and still continues to do to-day. He has been one of the bravest knights in the new order of chivalry,—the chivalry which defends, not only woman's claim to beauty, honor, virtue, and love, but to political rights and equal justice with men in all things as well. And he has now crowned his years of knightly warfare, offensive and defensive, in aid of the "weaker sex," by giving to the public a more realistic portraiture than has ever been given by any other biographer of the life of one of the most original and characteristic types of intellectual womanhood which this country has ever yet produced,—Margaret Fuller. How well fitted Col. Higginson is to be the best biographer of this unique woman, some phases of whose many-sided character had previously been considered worthy of public note by such men as Emerson, Channing, Frothingham, Holmes, Hedge, Greeley, and Mrs. Howe, is best explained in his own words: "It so happened that Margaret Fuller was associated with me, not closely, but definitely, by various personal ties. She was born and bred in the same town, though more than thirteen years older. She was the friend of my older sisters, and I was the playmate of her younger brothers. Her only sister was afterward closely connected with me by marriage, and came for special reasons, with her children, peculiarly under my charge. . . . It moreover happened that Margaret Fuller had upon me through her writings a more immediate intellectual influence than any one except Emerson and possibly Parker." Thus, it will be seen that, by intimate relations with those who knew her most thoroughly in her private life and consequent access to manuscripts and letters not attainable by other biographers, he has been able to place before us an almost new life of this eminent woman, whose work, however, was, unconsciously to herself, more pioneer work, fixing the intellectual status of the women who were to succeed her, than carving, as she probably hoped, a definite niche for herself in the history of American literature. Her work, as Higginson confesses, was inconsecutive and fragmentary; but it was strong, original, and, if she had lived, might have developed into that more finished intellectual completeness and harmony which might have given her works a place as classics. As it was, the work she did was most needed and beneficial. Her strong self-assertion was hereditary,—and so characteristic of her family that Horace Mann once remarked to Col. Higginson that, "if Margaret Fuller was unpopular, it was not *from* any prejudice against her as a woman, but because she probably combined the disagreeableness of forty Fullers,"—and was doubtless one of the best points of her character, which made her regardless of the opinions of others so long as she kept intact her own self-esteem, and thus made her a leader where a less self-reliant, but as original a thinker of her own sex might have made no impression. Higginson gives several good reasons for the impression Margaret Fuller made on the American literature of that period. One of these reasons was that she was, at the age when she lived, the only woman who seemed to associate with intellectual men on terms of equality. She was especially fortunate in the education enforced upon her by her father, who, like the father of John Stuart Mill, experimented upon his first-born child, giving her a severe classical training, which, while beneficial in its results, made her, like Mill, always feel that she had been by this severe training defrauded of her youth and rightful girlish joys. But, thus trained, she understood her power, and kept her place among educated men of genius as their peer. Another reason given in explanation of the place she occupies in literature is that, "apart from every word she ever wrote, Margaret Fuller will always be an important figure in American history for this plain reason: that she was the organizer and executive force of the first thoroughly American literary enterprise," since she was the leading instigator and moving spirit as well as editor of the *Dial*, the first distinct organ and utterance of that school of philosophy called Transcendentalism, which Col. Higginson claims to be a purely indigenous product of American thought. In the chapter entitled "A Literary Club and its Organ," in which he gives a brief exposition and explanation of the causes which led to the so-called Transcendental movement, he affirms that "the *Dial* was the embodiment of this movement, and without Margaret Fuller it is doubtful whether the *Dial* would ever have been born." This new life of Margaret Fuller is so interesting from the first page to the last that we hardly know where to break off in our notice of it. The fresh light thrown by means of the original documents, to which her biographer had access, on her love-life, her motherhood, and other domestic ties, is especially interesting as bringing her in more immediate *rapport* with humanity at large; and her character shines no less radiantly intellectual for its newly discovered womanly weakness and tenderness. The fine portrait of her which adorns the first page of the book shows a face which, though it might never be called beautiful, and though a less ideal face than is shown in the portrait given of her in the *Eminent Women of the Age*, is yet strongly indicative of purpose, energy, thought, and will. Mr. Higginson did well boldly to proclaim a place for Margaret Fuller among "American Men of Letters."

TEACHING OF THE TWELVE APOSTLES. The Greek Text, with Translation by J. Fitzgerald, M.A. New York: John B. Alden, Publisher. 1884.

This is a neat and useful edition of the newly discovered little work supposed to have been written in the first half of the second century by one of the early Christian believers, who possibly may have been a hearer of some of the first apostles of Jesus. The work was described and commented on at length in an article by Mr. Janes in *The Index* of April 10. Mr. Alden's edition has the Greek and the English translation in parallel columns. It is a little book of only twenty-nine pages, and costs only twenty-five cents.

THE *Catholic World* for June has these, among other articles: "Darwin's Mistake," by Rev. Fr. S. Chatard; "The New Flagellants," by Inigo Deane; the "'Leading Article' in English Journalism," by A. F. Marshall; "The Very Last Centenary of Protestantisms," by Rev. Thomas J. Jenkins; "The Wisdom and Truth of Wordsworth's Poetry," by Aubrey DeVere; "Religious Liberty as understood by the Evangelical Alliance," by Rev. George M. Searle; and "Honest Protestants and the Public Schools," by Rev. Walter Elliott. Among the books noticed are "Mental Evolution in Animals," "The Vicar of Wakefield," and "Memoir of Charles Lowe."

IN the *Atlantic Monthly* for June, F. Marion Crawford concludes his story of "A Roman Singer" in a legitimate and pleasing fashion. Among the most instructive essays of the number, we note the following: "Penury not Pauperism," by D. O. Kellogg; "An Old War Horse and a Young Politician," by William H. McElroy; "The Anatomizing of William Shakspere," by Richard Grant White; "The New Party," by J. L. Laughlin; and "Washington as it should be," by O. B. Frothingham.

PERSONAL ITEMS.

PROF. LEANDER WEATHERELL will speak for the Parker Memorial Science Class next Sunday on "Scientific Agriculture, or Agricultural Practice with Science."

JOHN F. SLATER, the great manufacturer, best known by his gift of $1,000,000 for the education of the negroes, died at Norwich, Conn., on April 17. His life was remarkable for constant attention to business and the accumulation of money. He was worth probably over ten million dollars.

CHARLES O'CONOR, one of the greatest jurists of the age, who for sixty years had shed lustre upon the legal profession in this country, died at Nantucket, May 12, at the age of eighty years. He was a man of singular purity in private as well as professional life. In politics, he was a Democrat of the Bourbon type; and, in religion, a Catholic.

GEORGE WILLIAM CURTIS has written to the Mayor of Boston, saying: "For the service to the memory of a friend greatly beloved, I could not possibly accept any pecuniary compensation. The city of Boston, in asking me to speak of Wendell Phillips, conferred upon me one of the greatest of honors, for which I shall be always grateful."

THE eightieth birthday of Miss Elizabeth P. Peabody was observed on Saturday by a dinner tendered to her by about sixty of her friends. Mrs. Julia Ward Howe presided and made an address of welcome, which was replied to by Mrs. Ednah D. Cheney for Miss Peabody, who was suffering from a severe cold. Several other speeches were made; and, on parting, "Auld Lang Syne" was sung.

REV. P. C. MOZOOMDAR meets with bitter opposition in his aspiration to become the successor of the late Keshub Chunder Sen as leader of the Brahmo Somaj of India. A strong faction holds that the deceased Babu is still perceptibly present in spirit, and will always remain so; and hence they refuse to admit the possibility of there being a "successor" to him. Mr. Mozoomdar unqualifiedly rejects this notion, and is supported in his position by an equally strong faction.

THE *Congregationalist* thinks there is more sentiment than sense in much of the current talk about Gen. Grant, "Without depreciating in the least," it says, "his invaluable services to the country, or failing in sincere sympathy for him in the loss of so much of his property through the recent failure of his sons, we cannot help feeling it to be in bad taste to talk about his 'poverty' in view of his acknowledged income of (say) $15,000 annually from the fund raised a few years ago for him, and placed in the hands of trustees. This fund is not affected by the failure of Messrs. Grant & Ward; and a man of even expensive habits can hardly be called poor or need pity very much when he has $15,000 a year, especially after all his children have ceased to be dependent upon him."

GUIZOT'S

HISTORY OF

FRANCE.

From the Earliest Times to 1848. Eight volumes, small octavo, large type, over 400 fine illustrations. Price reduced from nearly $50 to only ***$6.00 per set, 75 cents per volume. Volume 1. now ready; others at intervals of ten days.*** Sample volume sent postpaid, with privilege to return, ***65 cents.***

This is the only *complete* American edition of this magnificent work, which is known as the best popular history of France. The cost of importation is $36 00, and the only other American edition (which is *incomplete*, covering only five of the eight volumes here given, and not including even the French Revolution), is, at this time, $33.00. The present edition is unabridged, and includes the more than four hundred really superb illustrations of the English edition; and its convenience of form, for reading and the library shelves, is superior to any other edition published.

Guizot is one of the most brilliant writers whose pen has ever pictured the events of history. His pages fairly glow with eloquent fire. One thrills, as he reads, and follows on, page after page, as he would an entrancing romance of Scott or Dickens. And what more inviting subject could be chosen for such a writer than the history of France?—France, the home of Chevalier Bayard and the great Napoleon; of Joan of Arc and Lafayette; of the Huguenots and the execrable monsters of St. Bartholomew's Day; of Voltaire and Bossuet; of Fénelon, Racine, and St. Pierre.

And probably never was historical work more graphically and sumptuously,—*fittingly* illustrated. My first announcement was planned to include only 100 illustrations; but I found it so difficult to select, or rather to omit, that I was compelled to yield to the temptation to include the *more than FOUR HUNDRED original pictures.*

Accordingly, in keeping with the brilliant text and magnificent illustrations, I have undertaken to give, in this edition, the handsomest and best work which has ever issued from my presses; and I present it with real pride and unquestioned confidence that my patrons will approve.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

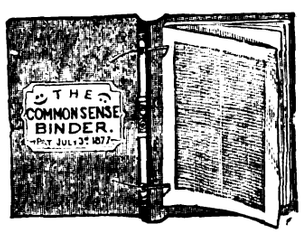
SEVEN GREAT

MONARCHIES of the A[illegible]nt

Eastern World. By GEORGE RAWLINSON. Best American edition. Complete in three volumes of over 2,000 pages, and over 700 illustrations and maps. Price reduced from $18 to ***$2.40. Now ready.*** Specimen pages free. NOT sold by dealers.

"One of the best historical works of the Nineteenth Century. It covers the ground as that ground is covered by no other publication in the English language, and shows splendid critical ability, as well as profound scholarship and laborious research. Marvellously cheap as it is, this classic work should now find its way into every library in the land."—*The Herald*, Syracuse, N.Y.

"'The Seven Great Monarchies of the Eastern World' ranks with the greatest historical works of modern times, with Gibbon's 'Roman Empire,' Grote's 'Greece,' Green's 'England,' and Bancroft's 'United States.' In some respects, it is a greater work, displaying more labor, more scholarship, and more critical ability. It is, perhaps, not so well known, because it is so expensive that it has not been within the reach of people of moderate means. But John B. Alden, the well-known New York publisher, appreciating the importance of a cheap edition, has begun to republish such an edition in three volumes. There is now no excuse for any one to be without one of the greatest historical works of the century."—*Democrat and Chronicle*, Rochester, N.Y.



500,000 VOLUMES Choice

Books, 84-page catalogue free. Books for examination before payment on evidence of good faith. NOT sold by dealers: prices too low. Books by mail 20 per cent. extra, for mailing.

REMOVAL.—*On May 1, "The* Literary Revolution" head-quarters were transferred from No. 18 Vesey Street to 393 Pearl Street, near Franklin Square, and a few rods distant from the Great Bridge. The entire building, 30x115 feet in size, six stories high, is occupied by the offices, store, and book-bindery: the printing, engraving, and editorial rooms are located conveniently elsewhere. The capacity and convenience of the new quarters largely exceed all previous facilities.

JOHN B. ALDEN, Publisher,

P.O. Box 1227. 393 Pearl St., New York.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	" . . .	8c.	" "
" 26 " 51	" . . .	6c.	" "
" 52	" . . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

THE BY ALL ODDS BEST EQUIPPED

RAILROAD IN THE WORLD.

t it be forever remembered that the

Ch[illegible]go & North-Western

RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. *It costs no more to* travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

THE Methodist General Conference at Philadelphia, last week, declared it inexpedient to take action on the licensing and ordaining of women by a vote of 222 to 126.

AMONG the changes proposed in the bill for the revision of the constitution introduced in the Chamber of Deputies by M. Ferry last Saturday is the abolition of prayers at the opening of the legislature.

THE thirty-second yearly meeting of the Progressive Friends will be held in Longwood, Pa., on the 5th, 6th, and 7th of June next. Col. T. W. Higginson, Mrs. Ednah D. Cheney, Revs. C. C. Hussey, Charles G. Ames, and J. H. Clifford are expected to address the meeting. A general invitation is extended to all who are interested in free and progressive thought to attend.

THE Institute of Heredity will hold its second semi-annual Convention at the Meionaon (Tremont Temple), Thursday, May 29. The opening address at 10 A.M. will be given by Hon. Daniel Needham, the president, which will be followed by an essay from Dr. Mary Dods, of St. Louis. At the second session (2.30 P.M.), Rev. M. J. Savage, Rev. Jesse H. Jones, and Mrs. C. S. Lozier, M.D., will speak. Mr. J. K. Applebee and Parker Pillsbury are announced to give addresses in the evening.

JOHN B. ALDEN has reissued in three volumes of over two thousand pages Rawlinson's work, *The Seven Great Monarchies of the Ancient Eastern World*, with all the notes, maps, and illustrations of the English edition and of that hitherto published here, at $18. Mr. Alden's edition is of good size, clearly printed and neatly bound, and is sold at the marvellously cheap price of eighty cents a volume, $2.40 for the entire work. It is unnecessary to say that this is one of the greatest historical works of the century.

WE take this paragraph from the *Woman's Journal:* "The irrepressible woman question comes up in new and unexpected places. A woman suffrage bill was introduced for the first time in the Parliament of Sweden on the 5th ult. In the Upper Chamber, it fell without discussion, and did not even come to a vote. In the Second Chamber (equivalent to our House of Representatives), it was debated for an hour and a half, and defeated by a close vote, fifty-three to forty-four. The bill was introduced in the Second Chamber by Mr. Frederik Borg, and was opposed by two speakers only, one of whom, Count Erik Spowe, is said to be the most conservative man in the House."

THE *Radical Review* advocates national organization based upon State secularization. "We should," it says, "rejoice over nothing more than the unification of the body of the American Liberals on a platform embodying the principles of social and political reform as well as those of free thought specifically. But, as that is a matter of impossibility, remembering that some Liberals are Greenbackers while others are Hard-Money Men, some Prohibitionists and others Anti-Prohibitionists, some Free Traders and others Protectionists, some Socialists and others Democrats, etc., we deem it desirable that there should still be at least one strong organization in the United States that will valiantly battle for universal mental liberty."

THE increase in the number of drinking saloons, and in the consumption of beer and spirits in Prussia, and the fact that forty-one per cent. of the crimes committed in five years are shown to have been committed under the influence of liquor, and that fifty per cent. of the pauperism is caused by intemperance, have awakened considerable interest in the temperance reform, as indicated by the formation of temperance societies, and recent discussions in the Prussian House of Representatives. The conviction has been gaining that drunkenness is increased by the multiplication of saloons, and there is now a strong feeling in favor of a law fixing a maximum number of saloons per capita of the population for places of various dimensions. German opinion, it is said, favors the Dutch system, which allows to places with less than 10,000 inhabitants one saloon to every 250; in cities from 10,000 to 20,000, one to 300; in cities from 20,000 to 50,000, one to 400; in cities of 50,000 people or more, one to 500.

LAST week, the Chicago Congregational Club held a meeting under the auspices of the Chicago City Missionary Society, which has for its object evangelization of the representatives of foreign nationalities in that city. The principal speaker said that there were not fewer than thirty thousand Bohemians and a population of not less than forty thousand, all told, in that section of Chicago known as "Pilsen," while the church facilities of the same district would accommodate, sitting and standing, only twenty-five hundred. A report which was read stated that "what missionary work has been done among them [the Bohemians] has been done by the disciples of Robert Ingersoll. His writings they have in their own language." The impression seemed to be that a devout Christian, anxious to heed the injunction, "Go ye into all the world and preach the gospel," could find mission field without going away to the uttermost parts of the earth into the domain of paganism, without even going beyond the charter limits of Chicago.

IN the *Indian Messenger*, published at Calcutta, we find mention made of a Hindu widow remarriage at Naldanga, a village where English education has not yet penetrated, and where superstition is largely prevalent. The bridegroom and the bride, the former twenty-four, the latter seventeen years old, were persons of high caste. But for the exertions and influence of their relatives, the celebration of a widow remarriage would have been impossible. The most prominent of those who were active in preparing the public mind for so great an innovation was a Raja, of whose efforts the account says: "This young Raja is an unostentatious gentleman, deeply interested in the welfare of his country. To the Hindus around, he has persistently explained the urgent necessity of widow remarriage, partly by quoting from the Hindu *Shastra* and partly by appealing to their better nature. Many Hindus have responded to his call; and, on the occasion of the marriage in question, all the Brahmins of the neighboring villages attended. The Hindu *Shastra* was rigidly observed in celebrating the marriage, all the forms prescribed by the *Veda* and the *Smriti* having been adhered to. There were fireworks, music, and feasting; and the proceedings went off with great *èclat*."

THE English newspapers generally now take broad and liberal views of the question of Woman's Suffrage. As an instance of this, we quote the following editorial paragraph taken from the Newcastle *Daily Chronicle* of April 22, 1884, the day following the occasion of an immense meeting held at Newcastle in behalf of giving the franchise to women, at which the Mayor of the city presided and in which many distinguished people took part: "It is a good omen in even the most advanced of England's political crusades that their votaries invariably disclaim all sectional aims. In seeking justice for women, the ladies who spoke with so much force last night sought to give a healthier and nobler tone to our social relations. Almost coincident with the general agitation for an extended franchise did the special agitation, to which so many of our citizens are now pledged, begin. *The Vindication of the Rights of Woman* by Mary Wollstonecraft appealed to the same generation that Paine's *Rights of Man* addressed. Mary Wollstonecraft's work is the *Principia* of the woman's rights agitation. Nothing that has been written since goes so thoroughly to the root of the matter. Her exposure of the sophistry which renders Rousseau's *Emile* so defective as an educational treatise is complete. It is but comparatively recently that justice has been done to the high-souled woman who wedded the author of *Political Justice*, and was the mother of Mary Shelley. The principles which with so much magic of style and intrepidity of spirit Mary Wollstonecraft advocated nearly a century ago are now received with enthusiasm by masses of the people, and are at no distant day destined to mould the State decrees."

INDIVIDUAL LIBERTY AND SOCIAL RESPONSIBILITY.

The creation of personal effectiveness of character depends on the principle of self-reliant individual liberty. The general welfare of human society depends on the principle of mutual obligations and co-operative interests. And the condition of normal, heathful growth for humanity is the well-balanced action of these two principles. On the one hand is needed the utmost possible development of personal faculty and capacity in each individual; on the other hand is equally needed a combination of these freely acting individuals in a form of mutually helpful organic activity for the good of the whole. The harmonious alliance of individual liberty and social responsibility is the goal of human society.

But this aim, like most of the good objects that are sought in this world, is not to be reached except by a series of sharp struggles and slow conquests. And the line of advance thus far has been rather by a zigzag movement than by a direct course, or by the principle of action and reaction; at times, one of the forces getting the mastery and running to excess, and then, by a counter resistance to that excess, the other force resuming sway and going in its turn to excess in the other direction. And so the happy equilibrium still waits to be consummated. Let us look at some illustrations of this statement in the history of Christendom.

In the primitive conditions of Christianity, it might seem to a superficial observer as if the two forces of individual liberty and social obligation were about equally active; and that then, in fact, the model of human society came very near being set. It is indeed one of the familiar exhortations of the newly forming Christian theology that the Church should return to its primitive state. The exhortations seem to have little practical effect, and must necessarily be futile. It is as vain to argue that Christianity should return to what it is represented to have been in the era of the Gospels as it would be to exhort active American citizens of to-day to return to the style of social and business life current in Palestine nineteen hundred years ago. And, when the conditions of the problem are investigated more closely, it is discovered that in the primitive Christian Church there was really very little of what is understood by individual rational liberty in modern times. Jesus himself had a good measure of it, as every great prophet has, though with him liberty was more a principle of conscience than of the intellect. Paul, too, had a measure of it. But beyond these there was little manifestation of the principle of mental liberty in the planting of Christianity. The kind of liberty that was manifest in the primitive Christian Church was the liberty of enthusiasm, of spiritual zeal and devotion,—a liberty that sometimes took very irrational forms. Of the principle of *intellectual liberty* there was little or no genuine comprehension. How could there be, when the doctrine of the Messiahship and authority of Jesus was so all-powerful?

But, while the principle of individual mental liberty was thus in abeyance, the principle of social obligation was developed in an exaggerated degree. The primitive Christians were practical communists. All the temporal property they believed in, which was not much, they held in common. They subordinated the very idea of property and all industrial and temporal pursuits whatsoever to their hope of sharing in the common joys of the coming messianic kingdom. All individual desires and aspirations, even the sacred ties of family and impulses of natural instinct, as well as religious beliefs, were brought to the bar of this hope to be approved or condemned by it. This made them good propagandists of the new faith; it made them zealots and often fanatics. But it left undeveloped that faculty of individual liberty of thought which was greatly needed in the after work of Christianity.

And hence, when the Christian Church, after a few centuries, had grown into a vast multitude of people, and came into temporal alliance with the Roman Empire, this multitude had really no mental strength to resist the one-man sovereignty which the organizing genius of that powerful empire placed over them. Christianity became a vast brotherhood of souls, but a brotherhood of souls held together by a wonderful network of governmental machinery running in convergent lines from the smallest missionary station at the farthest corner of the earth to one imperial Head in Rome, the Messianic vicegerent of God on earth,—a brotherhood of souls to be treated and kept as children. Papal Christianity repressed all liberty, allied itself to mental ignorance and darkness, treated individual independence as a sin, punished awakening science as a heretic, and did its utmost to hide every reviving spark of knowledge in dungeons or quench it in blood. The primitive idea of communistic possession of temporal goods prevailed still so far as it could in such an enormous and heterogeneous society. There were orders, fraternities, sisterhoods, numerous and powerful, in which this principle was strictly enforced; and, as far as possible, the Church inculcated the idea that all temporal possessions, as spiritual, should be held at its command. The Church, the *ecclesia*, was everything: the individual, except as a limb of the Church, was nothing.

When the Protestant Reformation came, it was really the outcry of these suppressed and trampled individual rights in the form of an ecclesiastical rebellion. The outcry came from a people—the Germanic nations—with a quality of blood that could ill brook any kind of suppression of individual liberties. Here was a people with a consciousness that they had achieved manhood; that they were no longer children to be tethered to the leading-strings of any papal dominion. Then began a long struggle for individual mental independence, at first against the papacy, and then against churches and creeds of less pretentious infallibilities, and then against claims made for Scriptures and prophets and supernatural revelations,—a struggle of varying fortunes, with periods of rapid triumphs, intermingled with seasons of reaction and temporary defeat, and not yet attaining its final victory. In the course of the conflict there have been local triumphs where liberty has completely won the day, but has won it, perhaps, in an outburst of frenzied independence, as in France in the latter part of the last century. Liberty for the individual was won, but it was unbalanced by any corresponding principle of social obligation. It spurned alike what tyrants decreed in the name of God and what the experience of the whole human race had been teaching in all the generations of its existence on earth. And so liberty, for the want of its balancing principle of social duty, fell to indulgence in the wildest excesses, and finally went down in its own blood. A reactionary reign of personal autocracy followed for the recovery of the lost balance.

Look, again, at Russia to-day. There, the principle of individual liberty has become in a large class of people an intense passion, and is in bitter conflict with State and Church authority for the mastery,—a conflict at close quarters with ungloved hands. On the one side, government (which is at one with Church) allows no representative parliament, guarantees no constitutional rights, permits no freedom of speech nor press, hunts down its critics with a secret police, tries them by jury or without as it pleases, and hurries them without appeal to the gallows or to Siberia,—on that side, utter suppression of the individual, without justice, without a hearing, without mercy. On the other side, with many ideas and aims that are only just and righteous, there is open proclamation of defiance of all government and all governmental laws, of all social order and institutions, of all laws of morality and sanctities of religion, with a network of secret societies threading the whole empire, and organized assassination, as the weapons for enforcing the claims of liberty,—on this side, the wildest demands of frenzied individualism, with no thought or care for any law of man or above man. On the one side, we may say, therefore, that Russia will never learn the true science and art of human society until she learns ways of trusting and giving voice to individual liberty; and, on the other side, that individual liberty will never achieve its true destiny in Russia until it learns the law of obligation by which liberty is to work in a common organism for the public good.

In more peaceful fields, the Protestant effort for personal liberty of thought and action has consummated itself in a form of philosophical individualism, which has proclaimed for its central principle that every individual consciousness is in immediate contact with the divine energy, and carries in itself the authority of divine law. There is, therefore, no need of the miraculous mediation of book or priesthoods, of Mt. Sinai revelations, or of Galilean incarnations. The revelation is as universal as the human mind, the incarnation is in the human race. This philosophy has been vastly effective against the oppressions of ecclesiastical and governmental authority, and has done a greatly needed work. But, naturally, its constructive ability has been much less marked. Of its most aggressive leader, Carlyle, one of his disciples once said, "He has led us all out of Egypt into the desert, and left us there." That was enough, perhaps, for one leader. Yet none the less does the criticism, if criticism it was meant to be, indicate the non-completeness of this philosophy of individualism. To finish its work, it needs now to open into another movement, by which these individual wanderers in the desert, these Bedouins in the realms of thought, shall gather into an army to find the promised land of a juster and happier society.

And there are certain signs astir that this supplementary movement is to come; signs that the emphasis, which now for a half-century by the advanced minds of Christendom has been placed on the liberty of individual faculty and culture, is to be transferred to the idea of consecrating individual liberty to public and social service. It is beginning to be felt that, after a generation or two, the philosophy of individualism may degenerate into indifferentism; that the culture of personal faculty is in danger of becoming refined into a personal luxury bordering on moral selfishness; that with the broader and more liberal views there is yet often a lack of that enthusiasm and zeal which went along with the narrower theology and nerved the old churches to valiant deeds for the salvation of souls. Not infrequently, too, the doctrine of individual liberty is pushed to the extreme of denying all rights and institutions of government, and of affirming the moral law to be only the unauthoritative voice of a collection of individual opinions that happen to have a local and temporary majority on their side.

Fortunately, at this juncture, as a corrective against these extremes of the philosophy of individualism, science comes in to modify its central

Digitized by Google

idea. The scientific method applied to human history does not favor the theories of the theosophists, ancient or modern. Intuition is now explained not as a special gift of personal vision, but as a natural intellectual power organized in the human race. This modification sets the moral law, though it rest on an intuitive perception, solidly in the developing organism of human thought and in humanity's natural experience; it makes religion to be no flight of personal ecstasy, but a sense of trust in the order and of practical allegiance to the aim, of the universe; and in place of the old ecclesiastical zeal for saving souls for heaven, for which the individualistic philosophy found no permanent substitute, the new scientific philosophy puts a rational motive for redeeming and educating humanity to its truest service and happiness here on earth, assured that this will be the best preparation for whatever career may be in store for mankind hereafter.

WM. J. POTTER.

"THE SURVIVAL OF THE FITTEST."

At the meeting of the Liberal Union Club at which I read a paper, it seemed to me that there was some misapprehension in regard to the doctrine of the survival of the fittest. Such misapprehension is very common in spite of many efforts of the leading evolutionists to correct it. It is supposed that the doctrine is that the *best* survive. This is an error, and it forms the basis for all the disputes about evolution and ethics. For the word "best" implies moral standards, a moral stand-point, etc.; and, if the doctrine were affirmed in that form, it would not be scientific at all, but would be theological, for it would involve the notion that man is the end of creation and that his notions of things are the standard to which things must conform. The doctrine is that those survive who are fittest to survive. Hence, rattlesnakes may survive where horses perish, or a highly cultivated white man may die where Hottentots flourish.

Mr. Potter quotes my remark that the only alternative to the survival of the fittest is the survival of the unfittest, and objects that there is a third possibility,—namely, "that the fittest shall strive to transform the unfit into a fitness to survive." This is not a third thing, but a restatement of the survival of the unfittest. A moralist preaches to John and William that they "ought" to do so and so. Why? Because, as he tells them, life, health, happiness, etc., depend on doing as he says. "Well," says William, "I do not believe you. Your doctrine is untrue, and you are a bore. Life, health, and happiness come for pleasure. I choose that course." "I," says John, "believe you, and will do as you teach. As I understand you, I shall, by obeying you, enjoy a long youth and a green old age; I shall acquire a competence; I shall have healthy and intelligent offspring; I shall be able to start them well in life; I shall, with others who likewise obey you, form a peaceful and prosperous commonwealth, in which they and I will enjoy the social advantages which such a commonwealth can secure to all its members. If I understand your doctrine, William here will, on his plan of life, acquire no capital, found no prosperous family, contribute to no sound commonwealth, win no true friends, but, becoming less and less fit to survive in a modern civilized and industrial society as time goes on, he will be cut off by disease, poverty, vice, or crime. I shall acquire capital, health, friends, and other resources and guarantees by which men arm themselves against the hardships of life. I shall be one of the fittest to survive, and shall survive accordingly. Have I understood you correctly?" "No," says the teacher. "You will be one of the fittest to survive, and William will become one of the unfittest; but the outcome of your faithful obedience to me will be that you will *ipso facto* fall under an obligation to 'transform' William by the use of the resources which you will have acquired into a fitness to survive."

Plainly, if this doctrine is true, the resources by which survival is assured being diverted from John, his survival is imperilled and curtailed, and the same resources being applied in favor of William his survival is secured; that is, Mr. Potter's third possibility is only the second branch of my alternative, and he has only furnished a proof that, if we do not like the survival of the fittest, we can only substitute for it the survival of the unfittest.

Mr. Potter goes on to say that there is a fallacy of logic in applying the doctrine of the survival of the fittest to men. There certainly is such a fallacy, if, "when we come to man, we invest the word 'fitness' with moral qualities"; for we have then arbitrarily altered a definition, while trying to carry on the same line of reasoning.

W. G. SUMNER.

NEW HAVEN, CONN.

PANIC LESSONS.

One of them is that the passion for accumulation is, *par excellence*, the passion of the time. If the moral configuration of our planet could be seen from the moon's surface, as we can see the physical configuration of the moon, this passion would be our highest mountain range. The law of inertia is a law that manifests itself in all spiritual as well as in all material things. To him that hath shall be given. But the desire for more increases faster than the gain. The stupendous fortunes that have been amassed by many of our railroad kings and other capitalists have a boundless fascination. The young man just starting out in life may not from the outset fix the mark of his high calling at a hundred millions or at half that sum, but the fact that a few have reached the former niche and not a few the latter insensibly affects his standard in no small degree.

What was accounted wealth not more than thirty years ago is now accounted a mere competency or not even that. "I tell you," said a boy in Pinkham Notch, who walked beside me in the Ellis meadows one summer day of days, "I tell *yeu*, the man who used to own this place is a rich man now. They says he's got a thousand dollars in the bank." You laugh at his simplicity, and so do I. But is there not room for question whether such a modest standard is not preferable to such exaggerated ones as dominate the imaginations of many of the youth in our great cities? With their imaginations so dominated, it is hard for them to keep the plodding, patient ways that may never lead to anything magnificent, but are pretty sure to lead to honor, decency, and self-respect. But it is not our youth alone who get enamoured of the quick methods and the large results that characterize the fortune-making of the time in its most aggravated form. Nothing is sadder in the commercial aspect of the time than the growing tendency of men who have attained to moderate or even ample fortune by the methods of legitimate business to get impatient of these methods, and embark on some aeronautic expedition which promises magnificent results, and sometimes delivers them before the inflating gas gives out and the great air-ship hastens to become a grievous wreck. It pleases our dramatic sense when there is any great catastrophe in the commercial world to single out some individual as the scapegoat that we drive with various execration into the social wilderness. But to our more thoughtful moments will not infrequently recur the question,

> "Strange and sad,
> If good men were only better,
> Would the wicked be so bad?"

If we could trace the operation of our latest troubles to its remotest bounds of personal responsibility, we should find that many who are generally accounted quite immaculate are not so spotless as they would fain believe themselves, but cannot altogether. The insatiable and lawless greed of the most reckless and insane adventurer is the exponent of an incalculable but still unquestionable unknown quantity of envious impatience on the part of many "honorable men," high stepping, in the best society, church members, and all that. Indict the conspicuous offender by all means. Send him to prison, if you can; but, if justice were completely done, would he not have an outing now and then, while this or that respectability incarnate put on his convict clothes, slept in his narrow cell, and drudged at his mechanic toil?

The passion for accumulation cannot be so rampant as it is without begetting an increasing and most lamentable indifference to the methods by which the end so much desired is gained. And this indifference has an alarming tendency to diffuse itself through the entire commercial body. We hear men distinguish every day between legitimate and illegitimate business, but the distinction is like the popular one between sanity and insanity. Maudsley, the most distinguished living student of these things, assures us that they shade into each other by quite imperceptible degrees, that between the brain of the most stupid idiot and the brain of Tennyson or Huxley there is no difference of kind, only a difference of infinitesimal degrees. So gradually and imperceptibly the cleanest morals of the market exchange snade into the most doubtful practices. "The wicked stand on slippery places." The good, I think, no less, and with an insuperable proclivity on the part of many to an ever lower deep. To know, as every man in active business must, that these things are so, is, or should be, to put him on his guard. Let him learn the patience and the self-denial without which the best in the commercial order tends to the level of the worst.

Another lesson of the situation is that official honors lightly worn without official duties faithfully fulfilled are a delusion and a snare. But this lesson has been so many times repeated, and so badly learned or utterly ignored, that its repetition is not calculated to inspire us with any large degree of hope. Directors that do not direct, that do nothing but contribute their august and honored names to the advertisement of institutions of whose actual affairs they are in simple ignorance,—the phenomenon is one that long since ceased to be phenomenal. But it is a phenomenon that takes on no more engaging aspect as it gets to be more common. When Gen. Dodge was offered $10,000 to allow cotton to go through at Memphis, during the Civil War, he wrote to Gen. Grant,—so goes the tale,—that he must get another man for his position, "$10,000 being pretty near my price." It is a very meagre price compared with that which many a high official in our banks and other corporations has tacitly offered to him every day by the opportunities of his position for the sacrifice of his commercial honor, thanks to the complete neglect of oversight on the part of those who ought to be his overseers. We detest the saying of Sir Robert Walpole, "Every

Digitized by Google

man has his price," and we do not believe it. Nevertheless, we know that human virtue is a relative affair, that the temptation of the licensed dealer in great sums of money to abuse his trust is frequently immense. Difficult duty is never so far off that men should render it more difficult by their neglect of obvious cautions that diminish the intolerable strain. By such neglect, they make themselves participants of the crime, which could not have proceeded from desire to act without their negative encouragement. Land-owning absentees precipitated the French Revolution. Our absentees may yet precipitate another, less serious than that, but serious enough. When here and there the unguarded victim of their criminal complacency goes to the wall, some Jesus might stoop down and write upon the sand, "He that is without sin among you let him first cast a stone at him"; and he would go unstoned.

Another lesson of the existing situation is that we cannot insist too urgently that the limits of responsibility for commercial crime and misadventure must not be circumscribed too narrowly, so, for example, as to include only the principal agent in a co-partnership, while those associated with him are reserved for an unstinted tide of pity, without a particle of blame. The blame deserved may range through infinite degrees. In cases of acute and sudden seizure of commercial madness, it may attach to this person or to that, and leave all others legally associated with him free of stain. But when men of large experience and great repute associate themselves with others of but limited experience and no repute, and after a time find themselves utterly victimized with many others who have been drawn in by the attraction of their name and fame, it is to ask too much of us to ask that we shall allow their innocence of all complicity in the high-handed outrage that has been perpetrated on the community at large. We may not suspect that our illustrious victims knew to what base uses they had come at length. We may say, "Impossible!" to this. But there is a negative complicity in such a case which is almost as reprehensible as the most positive. Men whose five talents bring them ten, not "after a long time," as in the parable, but "in less than no time," should certainly demand a very definite and detailed account of the investments and the operations which have produced such fabulous results. I say these things not in the hope of dimming in men's eyes the lustre of a great and honored name. But, in our tenderness for that and our desire to shield it to the uttermost from malign assault, we must not ignore the obvious and aggressive moral of its sad eclipse.

It is that, in commercial enterprises, enormous gains which are to our advantage are too often a temptation, and a successful one, to an incurious mood and a complacent disposition, when they should be a summons to the most rigorous and vigorous investigation, down to the bed-rock, of the means and methods that have brought such sudden store. If no such summons comes from such events, surely our moral sensibility has lost its finest edge. If it comes and is unheeded, when the catastrophe arrives, we shall vainly plead our ignorance. We *should* have known, if we have not, on what foundations rested the spindling tower into which our good repute has attracted a confident and happy crowd. We have no right to great advantages of any sort whose sources and whose tributary streams are not apparent and unquestionably clean. And our right is even less, when our advantages, or what appear to be such, are an enticement to others to come in and share our happy fortune and its possible collapse.

JOHN W. CHADWICK.

INGERSOLL.

One of our subscribers asks, "Why don't *The Index* publish some of Ingersoll's lectures against Orthodoxy?" and another thinks we should "protest strongly against Ingersoll's unscientific, superficial, and frivolous treatment of religious matters." We do not see the need of doing either one or the other. *The Index* has its own method, and Col. Ingersoll has his. Both, we trust, are doing good work in their different ways. Another friend wants we should give our "estimate of Col. Ingersoll as a representative of free thought." This we have no objection to doing, although our estimate is not one likely to please all his admirers or those who wish *The Index* to "protest strongly" against Ingersoll's views or methods.

Ingersoll we regard as the eloquent platform orator of popular protest against theological creeds, and the herald to the crowd of the great revolutionizing changes which science and rationalism are producing. His lectures, abounding in wittiicisms and homely but graphic illustrations and anecdotes, and rising ever and anon into genuine eloquence, into a lyrical enthusiasm which shows that his heart is in what he says, are especially adapted to stir the masses. He has a vivid, poetical mind, and some of his short addresses are among the most beautiful prose-poems in the English language. He has no faculty nor taste for abstract or abstruse subjects. He thinks in images and talks in word-pictures. He keeps always within the comprehension of the multitude, and by his eloquence imbues and magnetizes, as it were with the idea of mental freedom, thousands who have neither the time nor the inclination to investigate for themselves. Even those who are not instructed by his lectures are entertained by his wonderful wit and eloquence, which one must be extremely pious and prejudiced not to enjoy. He has considerable acquaintance with modern thought, although his knowledge of scientific and philosophic subjects is fragmentary, and his views are not always well thought out. His spirit and manner of criticising theology are of the past, those of Voltaire and Paine.

In the heat and excitement of his declamation, he sometimes talks as though he had stormed the redoubts of intolerance, and given the world the liberty of thought it now enjoys, when, in fact, he simply presents in a manner peculiarly his own the views of thousands at a time when decay of the creeds he denounces, due to a multitude of causes, makes his denunciation acceptable to large crowds. No such fluent eloquent declaimer was ever other than a conductor of ideas. He is really a poet and an orator rather than a deep thinker or great reasoner.

As an oratorical idol of the multitude, he must be an indiscriminate assailant of what he opposes; for a caterer for the crowd cannot have a judicial mind and is not likely to have much sense of the historic perspective. The same was hardly less true even of Wendell Phillips, although different from Ingersoll in almost every respect. As a lawyer, an advocate, an iconoclast, Ingersoll is essentially *ex parte*.

The mass of Americans are not familiar with modern thought in any form: indeed, they are less familiar with modern thought and the undermining of Orthodoxy by modern science than are the masses of Europeans even of the common class. Orthodoxy has not been so progressive here as it has been across the water. Matthew Arnold said in his "Word about America" that the religion of the American people is less invaded by the *modern spirit* than is the religion of the middle class in England. British clergymen visiting their evangelical brethren here have been surprised to find "that orthodox Christian people in America are less troubled by attacks on the orthodox creed than the like people in England, that they seemed to feel sure of their ground, and to show no alarm." And it is true that a large number of our orthodox clergymen talk and act as if the world, instead of being in a state of transition from the Old to the New, were moving or rather standing still in the ruts and grooves of the old theology. And how many people still flock to hear exhorters like Moody and declaimers like Talmage! When these facts are considered, one can see important work yet to be done by iconoclasts.

If Ingersoll had the ability to present the positive side of the best modern thought, and to do constructive work in the liberal field, the quality of his services would be greatly improved. But, with this ability, he could not be the popular orator he now is, and would fail to reach the crowds he now addresses. In this period of transition, he is doing important work, even though there is much in his lectures more witty than wise. He has made no original contribution to liberal thought or criticism; but he has brought to the aid of the liberal movement in this country what it greatly needed,—sentiment, poetry, and eloquence,—and awakened more or less interest in free thought in the minds of large numbers who could never have been reached by hard logical reasoning. The majority of men have not accepted opinions because they were reasoned into them; and, when they abandon them, it is not because they have been reasoned out of them. People generally are moved through their emotions; and the man who is himself emotional, and at the same time a man of genius, a wit and orator like Ingersoll, will ever have a direct influence upon the masses, which the Darwins, the Huxleys, and the Spencers of the world would strive in vain to exert.

We cannot resist the temptation to quote a few passages from Ingersoll at his best to show the vividness of his mind, and the poetical beauty of his style: —

> We live on an atom called Earth, and what we know of the infinite is almost infinitely limited; but, little as we know, all have an equal right to give their honest thought. Life is a shadowy, strange, and winding road on which we travel for a little way,—a few short steps,—just from the cradle with its lullaby of love to the low and quiet wayside inn, where all must sleep and where the only salutation is good-night.
>
> The withered banners of the corn are still, and gathered fields are growing strangely wan, while death, poetic death, with hands that color what they touch, weaves in autumn wood their tapestries of brown and gold.
>
> Love is the only bow on life's dark cloud. It is the morning and the evening star. It shines upon the babe, and sheds its radiance on the quiet tomb. It is the mother of art, inspirer of poet, patriot, and philosopher. It is the air and light of every heart, builder of every home, kindler of every fire on every hearth. It was the first to dream of immortality. It fills the world with melody, for music is the voice of love. Love is the magician, the enchanter that changes worthless things to joy, and makes right royal kings and queens of common clay. It is the perfume of that wondrous flower, the heart; and without that sacred passion, that divine swoon, we are less than beasts; but, with it, earth is heaven and we are gods.
>
> George Eliot tenderly carried in her heart the burdens of our race. She looked through pity's tears upon the faults and frailties of mankind. She knew the springs and seeds of thought and deed, and saw with cloudless eyes through all the winding ways of greed, ambition, and deceit, where folly vainly plucks with thorn-pierced hands the fading flowers of selfish joy, the highway of eternal right. Whatever her relations may have been,—no matter what I think or others say, or how much all regret the one mistake in

Digitized by Google

all her self-denying, loving life,—I feel and know that, in the court where her own conscience sat as judge, she stood acquitted, pure as light and stainless as a star.

I would rather go to the forest, far away, and build me a little cabin,—build it myself,—and daub it with clay, live there with my wife and children; and have a winding path leading down to the spring where the water bubbles out, day and night, whispering a poem to the white pebbles, from the heart of the earth; a little hut with some hollyhocks at the corner with bannered bosoms open to the sun, and a thrush in the air like a winged joy,—I would rather live there, and have some lattice-work across the window, so that the sunlight would fall checkered on the babe in the cradle,—I would rather live there, with my soul erect and free, than in a palace of gold, and wear a crown of imperial power, and feel that I was a superstition's cringing slave, and dare not speak my honest thoughts.

And now let us drink to the volunteers, to those who sleep in unknown, sunken graves, whose names are only in the hearts of those they loved and left, of those who only hear in happy dreams the footsteps of return. Let us drink to those who died where lifeless famine mocked at want; to all the maimed whose scars give modesty a tongue; to all who dared and gave to chance the care and keeping of their lives; to all the living and to all the dead,—to Sherman, to Sheridan, and to Grant, the laureled soldier of the world, and last, to Lincoln, whose loving life, like a bow of peace, spans and arches all the clouds of war.

All wish for happiness beyond this life. All hope to meet again the loved and lost. In every heart there grows this sacred flower. Immortality is a word that Hope through all the ages has been whispering to Love. The miracle of thought we cannot understand. The mystery of life and death we cannot comprehend. The chaos called the world has never been explained. The golden bridge of life from gloom emerges, and on shadow rests. Beyond this we do not know. Fate is speechless, death is dumb, and the secret of the future has never yet been told. We love; we wait; we hope. The more we love, the more we fear. Upon the tenderest heart, the deepest shadows fall. All paths, whether filled with thorns or flowers, end here. Here, success and failure are the same. The rag of wretchedness and the purple robe of power all difference and distinction lose in the democracy of death. Character survives; goodness lives; love is immortal. And yet to all a time may come when the fevered lips of life will long for the cool, delicious kiss of death,—when, tired of the dust and glare of day, we all shall hear with joy the rustling garments of the night. What can we say of death? What can we say of the dead? Where they have gone reason cannot go, and from thence revelation has not come. But let us believe that over the cradle nature bends and smiles, and lovingly above the dead in benediction holds her outstretched hands.

A FRIEND writes: "Do you think man has a moral sense or something innate, which tells him what is right and what is wrong? I infer this from some of your published lectures and writings. But it seems to me that man has no ideas of justice and goodness or the opposite qualities, except such as he has acquired by education." Man unquestionably has a moral sense, which is as directly hurt by what he believes to be a wrong act as the tactile sense is hurt by the sting of a bee. This moral sense, we hold, is intuitive in different degrees among men, but the result of experience in the race. While it has become developed in civilized man, leading him to approve and condemn with the quickness of lightning, to feel shame and remorse or self-approbation without stopping to think of the results of each particular act, yet it does not tell us "what is right and what is wrong," our conceptions of which depend upon the instruction we have received and the influences which have been brought to bear upon us in our individual education. The moral sense intuitively approves what we believe right, and condemns what we believe wrong. Imperfect moral codes gradually give way to those that are more true, that are more in accordance with the ideal moral law in proportion as man becomes acquainted with himself and the highly complex relations he sustains to his fellow-beings. If our friend, who holds to the old materialistic sensational school of thought, will devote a little time to the study of modern psychology, he will see, we think, that the experiential philosophy does not require him to ignore the existence of intuitions that are *a priori* in the individual,—intuitions that are antecedent to individual experience, although they be the product of the experiences of ancestors, organized and consolidated in the race, so that

> "All experience past became
> Consolidate in mind and frame."

DECORATION DAY.—The flag for which the heroes fought, for which they died, is the symbol of all we are, of all we hope to be. . . . This day is sacred to the great heroic host who kept this flag above our heads,—sacred to the living and the dead,—sacred to the scarred and maimed,—sacred to the wives who gave their husbands, to the mothers who gave their sons. Here in this peaceful land of ours,—here where the sun shines, where flowers grow, where children play,—millions of armed men battled for the right, and breasted on a thousand fields the iron storms of war. These brave men, these incomparable men, founded the first republic. They fulfilled the prophecies, they brought to pass the dreams, they realized the hopes that all the great and good and wise and just have made and had since man was man. But what of those who fell? There is no language to express the debt we owe, the love we bear, to all the dead who died for us. Words are but barren sounds. We can but stand beside their graves, and in the hush and silence feel what speech has never told. They fought, they died; and, for the first time since man has kept a record of events, the heavens bent above and domed a land without a serf, a servant, or a slave.—*Ingersoll.*

ANNUAL MEETING.

The annual meeting of the Free Religious Association is to be held at the Parker Memorial Hall, Boston, as follows: Thursday, May 29, at 7.45 P.M., business meeting for hearing of reports, election of officers, etc.; Friday, May 30, convention, with sessions at 10.30 A.M. and 3.00 P.M., and a festival in the evening.

At the Friday A.M. session, the "Ethical Culture" movement will be presented in addresses by Wm. M. Salter of Chicago, and Messrs. W. L. Sheldon and S. B. Weston of New York, who will speak respectively of the Philosophical Basis of the Movement, of its Practical Aims, and of Christianity and Certain Forms of Liberalism.

The subject for the P.M. session of Friday will be "The Philosophy of Religion." Opening essay by Prof. Wm. T. Harris of Concord, and addresses by Charles D. B. Mills of Syracuse, Capt. Robert C. Adams of Montreal, and others.

The Annual Festival will be held in the Meionaon, Tremont Temple, Boston, Friday evening, May 30, commencing at 6.30 P.M. William J. Potter will preside. Short speeches by Mrs. E. D. Cheney, Mr. H. B. Blackwell, Capt. R. C. Adams, Mr. B. F. Underwood, F. M. Holland (a poem), and others.

Music, including quartet, duet, and solo singing, will be furnished by the choir of the Church of the Unity, under the direction of Mr. Howard M. Dow. Mrs. L. F. C. Richardson, soprano; Mrs. H. R. Paige, contralto; Mr. Charles R. Adams, tenor; Mr. H. L. Cornell, basso; Mr. Howard M. Dow, pianist.

Tickets with reserved seats at tables, at $1 each, may be had at *The Index* office, 44 Boylston Street, Boston.

PENTHEUS.*

(CHORAL ODE TRANSLATED FROM "THE BACCHAE" OF EURIPIDES.)

Goddess holy, venerated,
O'er the earth as thou art flying,
Speeding on thy golden pinions,
Hearest thou the words of Pentheus,
How he mocks the God of banquets,
Bacchus, with his Theban mother,
God of festal joy, whose worship
Fragrant is with beauteous garlands?

Fly the cares before his presence,
When, with sound of flutes and laughter,
Joins he, ivy-wreathed, the dancers,
When the genial, purple grape-juice
Flows at banquets of the immortals,
Giving sleep to human eyelids.

Lo, the end of mouths unbridled,
And of folly scorning usage,
Sure misfortune is and sorrow;
But the life of peace and wisdom
Undisturbed by evil chance is;
For the heavenly powers, though distant,
Still are dwelling in the ether,
Noting all the deeds of mortals.

Sceptic cavil is not wisdom,
Nor audacity essaying
Themes beyond our narrow reason.

Life is brief; and who enjoyment
Of the hour that passes scorneth,
It to vain pursuits postponing,
Him a madman justly deem we.

Would I might to Cyprus journey,
Where the Loves, the heart-appeasing,
Have their dwelling; would to Paphos,
By its stream of hundred outlets
Fertilized, though rainless, showerless,
I might also fare a pilgrim!

To the homestead of the Muses,
To the holy hill, Olympos,
Lead me, Bromius, god of genius,
Of the fervid, deep emotion.
There the Graces dwell with Eros.
Thither lead me: there are lawful
Orgies of the frantic Mænads.

Bromius, son of Zeus, rejoices
In the banquet. Peace he loveth,—
Peace of riches, bounteous giver,
Nurse of youths, as well as plenty.

He to rich and poor has granted
Equal gladness through the wine cup,
Respite from their griefs and sorrows.

He who scorns the gifts of Bacchus
Cares not for a glad existence,
Wooes it not by dark or daylight,
Is a joyless, grim ascetic.
Shun the caviller and sceptic:
With the multitude accordant,
We subscribe to custom, usage.

B. W. B.

*Euripides, the Athenian dramatic poet, who was known as the scenic philosopher or free thinker of the stage, held the popular polytheistic beliefs of his time and country in little regard. But in his tragedy entitled "The Bacchae," written in the solitudes of Macedonia, he suddenly changes his tone from that of the habitual sceptic, free thinker, and poetical rationalist to one of unquestioning piety, orthodoxy, and deep reverence for the mob of deities worshipped by the multitude of his contemporaries. He makes the chorus in the play, from which the above extract is translated, the mouth-piece of his suddenly assumed piety. A devout feeling toward the god of wine—namely, Bacchus or Dionysus—would hardly be regarded in these days of Law and Order Leagues and Neal Dowism as piety at all, but rather the reverse. But the god of wine, in the estimation of the Greek polytheist of the times of Euripides, was one of the most potent of deities, the inspirer of genius, the giver of a sacred enthusiasm, and the assuager and soother of human misery, care, and sorrow. Euripides was a contemporary and friend of Socrates, of Aspasia, Pericles, and Anaxagoras. It was a period of revolutionary thought. But orthodoxy was too powerful for the rationalism and rationalists of the time; for paganism or polytheism was once an orthodoxy, as much so as ever Calvinism or Romanism has been in later times. Socrates was made a martyr of free thought by this old polytheistic orthodoxy of the Athens of the days of Euripides. The philosopher Anaxagoras had to fly before it to Lampsakos and the splendid Ionian *hetaira*, Aspasia, who was the good genius of her lover Pericles, came near falling a victim to it. Pentheus, the famous mythic king of Thebes, who figures in the "Bacchae" of Euripides, and whose impiety is the subject of severe comment in the above choral ode, opposed the introduction of the Bacchic worship or Mysteries into Thebes, although the god of wine was the son of a Theban woman, Semele. The Bacchic orgies were introduced into Greece from the sensual land of Lydia in Western Asia. Pentheus furiously antagonized the young-eyed Lydian deity with his golden curls, florid cheeks, serpent-twined thyrsus, and seductive influence over young maidens, when he made his advent into Thebes. Finally, Pentheus was torn limb from limb by his own mother, Agave, and a wild rout of Mænads, or wine-infuriated women, who were holding their revels in the mountains whither Pentheus had gone as a spy upon their orgies. His mother Agave entered Thebes with the blood-dripping head of her son in her clutch, supposing that it was the head of a lion. The impious conduct of Pentheus was attributed to madness. He was represented as constantly beholding objects double. In the "Bacchae," or Drunken Women, of Euripides, we have a most picturesque account of religious rites, which once prevailed over the whole ethnic foreworld; for the intoxicating influence of wine was believed to be the direct inspiration of a supernatural personage or god.*

The Index.

BOSTON, MAY 29, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

MYTHOLOGY AND RELIGION.

Address before the Young Men's Union of the Society for Ethical Culture, New York, March 25, 1884.

BY C. E. VREDENBURG, PRESIDENT.

Few words in our language are so often used with so little appreciation of the critically exact meaning that belongs to them as are the words "myth" and "mythology." To a large number of people, perhaps to a majority, mythology is simply a collective name for the stories of the gods and goddesses of Rome, Greece, India, and other polytheistic nations. But, even if one knew all these by heart, he would not thereby have gained a knowledge of mythology at all. The mythical meaning might still be hidden from his eyes; and he would be like one who commits to memory a page of an unknown language,—perfect in the letter, but blind to the spirit. Especially is this the case with him who exempts an entire set of myths from the mythological classification,—ranges them apart, thinks them to be not only historically true, but of peculiar sanctity. When he meets the same stories elsewhere in more or less varying forms, he either fails to recognize the identity, or, if that be too plain to be overlooked, he supposes the foreign myth to be an imperfect reminiscence of the inspired record, and so takes it, too, out of the mythical category. No mental attitude is capable of so effectually resisting anything like an intelligent understanding of the basic facts of mythology or even a just appreciation of its beauties as this. The Christian who relates to his Sunday-school class the story of Cain and Abel smiles, in his superior wisdom, at the simplicity of the old Romans who believed the account of Romulus and Remus. With an undoubting confidence in the narrative of the Tower of Babel, he wonders how so intelligent a people as the Greeks could have devised so childish a fable as that of the piling of Mount Ossa upon Mount Pelion by the giants. He reprobates the immorality of the inhabitants of Olympos, but excuses the same trait in the personages of his own unsuspected mythology by saying that mankind were then under a different dispensation. On the other hand, the complacency with which Herakles is given a place in history by being identified with Samson, and the prototype of the dragon of the Hesperides is discovered in the serpent of Eden, or the voyage of the "Argo" supposed to be a corrupt version of the story of Noah,—have we not heard all this *ad nauseam*?

But, to those who have emerged from the blinding mist of traditional belief into the bright sunlight of reason, what a prospect is unfolded in these strange stories of a bygone age! For them there is no secret corner of the landscape into which it is forbidden to look: they may range at will over the entire scene; they may break open the rocky masses, sometimes rude and repulsive in appearance, and find the cluster of jewels that lies concealed within. We possess in the mythical lore that has come down to us through so many centuries a treasure of priceless value. Here, we may study the first attempts of the dawning reason to deal with the great problems of the universe; we may trace in the successive transformations undergone by a myth the gradual expansion of the childlike thought, ever widening in its progress toward the richer culture of to-day. For we must remember that these fantastic stories have descended from an age far beyond the dawn of history, that they have gradually gathered about themselves the accretions of the epochs through which they have passed, and that, by stripping these off one by one, we may reach and place before us the earliest results of the human mind. There is no study more fascinating than this; and it will not, perhaps, be wholly profitless to spend a few minutes this evening in merely glancing over the field in the very hasty and imperfect manner that so short a time allows. I shall attempt to deal with the subject, after this fragmentary method, under three divisions: first, what is mythology? secondly, what is the nature of its connection with religion? and, finally, is there an underlying truth in this relationship that is of value to us to-day?

The words "myth," "legend," and "allegory" are often loosely used as synonymous; and yet there is a very wide distinction between them. And, in order to reach a clear understanding of the nature of myth, and be able to detect it when we meet with it, we must set this distinction sharply before our minds. An allegory is an extended metaphor,—a story told for a moral purpose, the actors in which are abstract qualities personified. Thus, Bunyan's *Pilgrim's Progress* is an allegory in which hope, despair, worldliness, and so on, are given human form, and made to act out a drama as if they were men and women. A legend is simply a piece of spurious history, which may contain a marvellous element, though not necessarily. Thus, the story of the rescue of Captain John Smith by Pocahontas is a legend, though there is nothing in the story itself to render it incredible. That most legends embody supernatural features is true; but these are not essential, in order to class a story as legendary. But a myth is something very different from either of these. In a myth, the actors are the phenomena and forces of nature,—all those objects, in short, which are at the present day treated of under the head of physical science. There is in the first stage of the existence of a myth, however brief or long that stage may be, no moral character whatever. It is simply a story devised by the primitive man, in order to bring some fact or occurrence of the external world within the grasp of his mind by classifying it with other facts with which he is familiar. It is the childhood science of the race. Whatever transmutations it may afterward undergo, it is nearly always possible to separate the legitimate mythical element from its later additions; and, when this is done, we have before us in every instance an attempt to explain some phenomenon of the physical world.

But how shall we make this separation, how detect and recognize the genuine myth which is the object of our search? Is there any mark by means of which we may know that part or all of any particular story belongs within the category of myth, and not within that of legend, between which two classifications whatever confusion may arise is likely to lie? Yes, there is a clear and decided characteristic of myths, which does not belong to the pure legend, however similar in marvellous features the two may be. In a pure legend, however much supernatural machinery may be employed either to aid or injure the hero, he himself remains simply a human being. He acts as a human being would act under such circumstances, knowing that supernal agencies were arrayed for or against him. But the mythical hero transcends humanity; he possesses within himself that power which in the legend must be supplied from without. A mere description of him is often sufficient to place him outside of human kinship. Let me make this point clearer by an illustration, as it is an important one at the very outset. It is related of the Apostle Peter that upon one occasion he was placed in prison by Herod, who intended in a few days to deliver him over to the violence of the populace. But, on the night before this design was to have been executed, an angel of the Lord appeared within the prison, filling the place with a great light. Addressing himself to Peter, the angel commands him to rise and follow him. Immediately the chains with which Peter has been bound fall from his limbs; and he does as he is told, though distrusting the reality of what he sees, and believing that it is all a vision. Arrived at the iron gate that guards the entrance to the prison, it opens before them; and Peter and his guide find themselves in the street. Here, the angel suddenly vanishes; and the apostle, convinced at last that he is really free, seeks the house of friends with whom he obtains shelter.

This is a typical marvellous legend. Given the miraculous surroundings, and the conduct of the apostle is natural and human. Far different, however, is the behavior of a mythical personage in a like predicament, of which we find an instance in the story of Samson. Once, the Philistines had shut Samson up in the city of Gaza, promising themselves that on the morrow they would take his life. What did the hero do? Did he wait for an angel to come and effect his release? Not at all: he merely rose while his enemies were sleeping, tore up the heavy gate of the city, with its massive posts and lintel, carried the whole bodily to the top of a neighboring hill, and went on his way. No man can have such acts as this attributed to him, and it *is* no man whose prowess is here celebrated. It is the victory of the sun over the powers of darkness that have imprisoned him during the night. When they are confident that they have him securely surrounded, he will arise, break through the heavy cloud-gates of his prison, carrying them away completely, as he mounts the hill of the sky in triumph.

Digitized by Google

I have used these stories to illustrate the distinction that I wish to point out, because they are striking examples of pure legend on one hand, and almost pure myth on the other. But, in a very large class of stories, we have the two elements mingled in the utmost confusion. This is not, indeed, difficult to account for. There comes a time in the history of a myth, when its original significance is entirely lost, though its form still remains. When that point is reached, there ensues what is critically known as the degradation of the myth. The mythical hero or heroine is recast into a pseudo-historical personage; and, that being done, legends will gather about them as around the individuals of veritable history. So intimately are these legendary threads woven into the structure of the myth that it often becomes a matter of extreme difficulty completely to detach them. The myths of different nations have suffered in this way in varying degrees,—the Teutonic myths perhaps the least, the Hebrew probably the most. In the latter case, we have only the ruins of what was evidently once a complete mythological system, and these so overgrown with the moss of legend that we can in many instances discern but the imperfect outline of the hidden myth, while only here and there does some sharp fragment protrude, and allow its true form to be seen. But, however disguised a myth may be, the fact of its presence may always be detected by the test I have mentioned. Whenever in any of these old stories we meet with personages whose powers, whether of strength, wisdom, skill, swiftness, or what not, exceed the limitations of human nature, we may be sure that the mythical element enters into the composition of that story. We may not always be able to unravel the myth, it may be hopelessly involved; but of its existence we may be certain. This principle holds good also in reference to what we might call the properties of a myth. Arrows that never miss their mark, lances that unseat every antagonist, swords that will cut even through rocks and yet be uninjured, horses of incredible speed or which cannot be wounded by any weapon, purses or meal-tubs or cruses of oil that cannot be exhausted, tents or ships that will accommodate an army, and yet can be folded up so small that a man may hold them in his hand, —all these articles, and many more of the same sort, betray their mythical ownership clearly and distinctly.

If we wish to do justice to the fictions of mythology, we must place before our minds the mental condition of those among whom they originated. At first sight, this would seem to be hopeless. How shall we enter into the thoughts of the men who lived and died so long ago that the most ancient history is modern compared with such an antiquity as theirs? Fortunately, we do not have to reach back into the past to find the solution of the problem: it lies before our own eyes every day. I have said that mythology is the childhood science of the race. This is no figure of speech, but expresses a literal and prosaic fact. It is a scientific truth that the mental progress of a human being to-day, from the first dawning consciousness in infancy to the ripe culture of adult manhood, is an epitome of the history of humanity itself. The force of evolution, accumulated for ages, hurries the individual rapidly through the lower stages of development to the higher plane that is his destination; but, though he does not linger in any of them, he must pass through every one. Watch a child which has as yet no language, but only inarticulate sounds for the expression of simple emotions. See how the destructive tendencies are as yet unchecked by a disciplined will, how the child pulls to pieces whatever it can lay its hands on, if it is strong enough to do so, how its desires are entirely selfish. Now suppose the mental development of the child to stop at that point, while its bodily growth goes on to maturity, you would have the primitive savage. But let us take the child at a more advanced period, when its savage condition is a thing of the past. Let it have acquired language and be capable of constructing simple ideas, have reached, in short, the age when it wonders at the phenomena of nature. Arrest the progress of its mind here, and you will get the myth-maker. In the mental processes of a child at that age, we see repeated the conditions to which mythology owes its origin. The young myth-maker who said that the stars were winking at him was but repeating the idea held by the ancestors of the Greeks, who spoke of the starry sky as Argos, with his hundred eyes, keeping sleepless watch over Io, the moon. In fact, if we notice the sayings of young children who are at all imaginative, we shall find them continually constructing myths; and to understand the nature of myth itself, and do justice to the spirit that originated it, we must study that spirit as it exists in the incomplete mind of childhood to-day. In this way only can we place ourselves in communion with that age when the mind of man had not advanced beyond the childhood period.

What, then, are the characteristics of the myth-making age, and what the process of reasoning by which a myth is constructed? Approaching the subject in the manner that we have done, we shall avoid an error into which some have fallen; the error, namely, of crediting the myth-maker with too elevated or complex an intellectual condition. His mind is the mind of a child; and all its processes are simple, its reasoning is rudimentary, its conclusions are rapidly reached. It is entirely erroneous to suppose that the primitive man built up beautiful poetic fancies about nature, conscious all the while that they were poetic, and that the physical facts existed as things apart from them. We shall never penetrate into the labyrinth of mythology by means of any such false clew as that. The poetic significance and use of myths belong to a period far later than that in which the myths themselves originated, and were no more present to the primitive man than they are to the four-year-old myth-maker of to-day. We must, if we wish to find the true explanation of a myth, always distinguish between it and the literary environment which has grown up around it, but from which it was at first entirely free. We must remember that it is the thought of a child that we are seeking to penetrate, not the imagery of a poet. Hence, we shall not look for complexity, or attempt to throw back the ideas of later times into an age in which they have no place.

How, then, does the unaided childlike mind of primitive man interpret the phenomena of nature? He sees the earth flat, immovable, circular in outline; he sees the sun rise, travel across the heavens, and set. As it rises again to-morrow in the opposite quarter from that in which it set, it must have passed under the earth through the region of darkness. Or, since in whatever direction man may travel, he comes finally to the ocean, it may be that the earth floats on water. Then, the sun must pass through that water to get from the west back to the east. Above is the sky, transparent, but solid, resting on the earth. There are the stars, grouped into strange figures, which, like the sun, move from the east to the west. Sometimes, clouds sail across the sky, and lightning flashes out, and the sound of thunder is heard. Then, the rain that is kept above the sky falls through little openings upon the earth. On the earth itself, too, there is much to awaken wonder. During part of the year, it is held in subjection by cold and darkness: the long nights come on, and everything seems dead. Then, life begins anew, and all is bright again. The rivers resume their journey to the sea, the trees put forth leaves, the frozen ground becomes soft once more. Everything on earth or in the sky, sun, moon, stars, clouds, rain, lightning, trees, ocean, winds, volcanoes, all are in some way active, move, do something. How shall all this ceaseless energy be explained? What keeps the physical world in activity? The primitive man knows of but one force capable of efficient action upon matter, his own will. There must then, he unconsciously reasons, be a will similar to his residing in all these moving objects around him. The various moods of nature, so suggestive of those of man, confirm him in this belief. Here, then, we have the key to the whole subject of mythology. It is simply an explanation of the material world by ascribing personality to the objects and forces of nature. If such an explanation seems strange to us, let us remember how very slowly and painfully the knowledge has been accumulated that makes it seem strange, and that the mythical conclusion is the simple and obvious one to man in his childhood stage,—is, in fact, forced upon him by everything he sees and hears. The conception of an impersonal, self-sustaining universe is one which the mind is very slow to form, as may be seen in the tenacity with which the alternative belief in a personal God is retained. So strongly is the inference that all things have souls borne in upon the uncultivated mind that it requires no inconsiderable amount of reasoning to dispel it. This also, like every other characteristic of the mythical age, we may see illustrated in the child of to-day. He will beat the object against which he has fallen and hurt himself, and it is difficult to convince him of the folly of his conduct. His action in such a case plainly shows his belief that he was hurt intentionally, and had a right to revenge himself,—a true animistic idea. So reasoned that king of Nepaul, who cannonaded his gods because they had allowed the queen to fall sick.

One point in reference to the mythological interpretation of nature must not be lost sight of; and that is, that it is as truly scientific, so far as the method by which it is reached is concerned, as is the most advanced generalization of the present day. We are apt to think of the theories of science as explaining why things are as they are, as setting forth the causes of phenomena. But this is an entire mistake. All that is accomplished by a scientific theory is the classification of similar things together, bringing the less familiar within the compass of thought by ranging it beside the more familiar. This the ancient Aryan did equally with Von Humboldt. It is the wider experience, the more complete data at Humboldt's command, that make his generalizations of the greater value. We explain the rays of the sun by saying that they consist of waves like those of water. When fewer facts had been collected than we now know, the sun's rays were considered to be solid particles shot out from his surface. Contracting the lines of experience more and more, we at last reach a time when men speak of the arrows of a celestial archer, or the long streaming hair of Phoibos or Samson, or the golden shower that falls in the prison of Danaë. These explanations, fantastic as they appear, owe their origin to the same process of reasoning that guided Thomas Young to the undulatory theory,—the process of unification, by which is understood the grouping together of phenomena in which the mind traces a similarity, and assigning to them similar causes. If I have made this clear, the definition of mythology

Digitized by Google

as the childhood science of man will be seen to be fully justified.

In tracing out the meaning of myths, the assistance rendered by philology has been of inestimable value. In many cases, a knowledge of the significance of names used in a mythical story has enabled the student to dig out the myth from the mass of foreign material by which it had been hidden from sight. This has been especially true of the mythology of the various nations descended from the ancient Aryan stock. The seven grand divisions of the Aryan family—the Persians, Hindus, Greeks, Romans, Teutons, Kelts, and Slavs—carried with them after the great migrations, not only a common language, but a common mythology as well, both of which survive in the varying speech and folk-lore of their descendants. The labors of philologists have resulted in reconstructing the original mother tongue; and comparative mythology, making use of their discoveries, has succeeded in doing the same, in great part at least, for the original mythology. Stories like that of the Trojan War, William Tell, Tannhäuser, and many others, are found to recur, with exceedingly interesting variations, in the folk-lore of nations widely separated from each other, but owning a descent from this one parent source, the Aryan race. The further back we can trace a myth, the nearer we can get by the help of philology to its fountain-head, the less involved and more intelligible it appears. It seems a fantastic idea, for example, to have supposed, as the Greeks did, that Athene sprang from the forehead of Zeus; or, as in the Roman story, Minerva from that of Jupiter. But when we have traced the names in the story back to their Aryan originals, and have found Zeus to be a personification of the bright sky and Athene of the dawn, the grotesqueness disappears. Sometimes, indeed, we do not need to go beyond the language in which a myth is given, in order to find the key to its meaning. Thus, in the Greek story of the solar hero Oidipous, we are not obliged to leave the Greek language to discover that the name Antigone means "she who is born opposite." This hint is sufficient to establish her identity as being the glow of the sunset reflected, as it often is in the east; and it becomes at once apparent why she is called the daughter of Oidipous, the sun, and Iokaste, the purple twilight, and is said to watch over her father as he is dying. So with the name Samson, which simply means "the sun," and the story of whom is akin to the Aryan sun-myths, though probably of independent origin. In ways like these, the science of words lends its aid to the science of myths, and not infrequently enables the student to trace and unravel a myth that, in the absence of such help, would be almost, if not quite, unintelligible.

Another point in this connection deserves to be spoken of; and that is, that a knowledge of the mythical character of a story, or at least that mythical elements enter into its composition, is often of the greatest value in exculpating the framers of the story from the charge of immorality. That the Romans spoke of Saturn as having devoured his own children does not prove that they considered cannibalism to be a divine virtue. For Saturn is no other than the Greek deity Chronos, a personification of time, which may justly be said to devour what it has itself produced. The same reasoning applies to many of the stories in the Old Testament, and right here is where the strictures of that school of criticism of which Col. Ingersoll is so distinguished an exponent fall completely to the ground. The actors in a number of the Old Testament narratives, though spoken of as actual men, and though legends have gathered about them as such, are not primarily men at all, but true mythical heroes and heroines. I cannot enter into this subject more particularly; but it is sufficient to say that there is nothing in the story of Lot inconsistent with its being told understandingly by a people whose morality is pure and good, that Abraham broke no moral commandment in marrying his sister, and that his conduct in twice denying his wife, as was afterward also done by Isaac, was quite justifiable. For these stories are but mythological representations of physical phenomena; and, while thickly overlaid with legend, still the central incidents are mythical, and it is a very shallow criticism which deals with them as if they were as literal as a newspaper report. Those who hold these stories to be real history, and who yet justify the acts therein related, may properly be charged with palliating immorality; but the old Semite who personified the night sky as Abraham, and the moon, with its periodic disappearances, as Sarah, must be acquitted. It is not fair to hold the mythical age responsible for the ignorance of the nineteenth century.

It would well repay us, if we were to analyze a few of the deductions of primitive science, as we have them presented in mythical tales; but time would not permit. It would not be right, however, to leave this division of our subject without mentioning some of the more striking forms in which the myth-making age interpreted certain leading phenomena of nature. Glancing rapidly at these, we find that we can classify them according to the phenomena they embody, without much difficulty. Thus, we have myths of the storm-cloud, of the lightning, of the wind, of light and darkness, of volcanoes and earthquakes, of the rain, and so on. But by far the most numerous class, as well as the noblest in conception, are the myths relating to the sun. These deserve separate and especial mention, not only for their intrinsic merit, but for the use that has been made of them by different systems of religion, of which I will presently speak. The storm-cloud and the lightning have given rise to a group of myths, some of which have been strangely metamorphosed in their travels through space and time. In the Teutonic mythology, the storm-cloud is Odin, from whose other name, Guodan, we get our English word "God." The lightning is Thor, whose resistless hammer breaks asunder whatever it strikes. In the Greek, Ares is the storm-cloud; and the Hebrew Yahweh must admit a similar origin. The lightning flash that cleaves the clouds, and for a moment reveals a dazzling splendor within, followed by the downfall of the rain, appears in a great variety of forms. Now, it is the hammer of Thor, rending the cloud-rocks; now, the forked springwort, by the aid of which the shepherd of the Ilsenstein caused the mountain to open and display its treasures. It is the bolt of Zeus, and the lance of the Welsh Kilwich and Bedwyr which wounded the wind; the trident of Neptune, and the staff with which Moses smote the rock. Sometimes it is a plant, sometimes a serpent or a worm, sometimes a bird like the robin, sometimes a ring like that of Aladdin, that opened a way for him into the cavern of jewels. But, under whatever shape we find it, it always has the power either of pointing out treasure or causing water to flow; and by these signs it may be recognized.

The conflict of light and darkness, or day and night, or summer and winter, all of which were closely allied in the mind of the primitive man, is another fruitful source of mythical representation. We find day and night contending under the forms of Romulus and Remus, or Cain and Abel, or, in more dramatic form, on the plain of Troy. Sometimes the day is victorious, sometimes the night, according as one aspect or another of the phenomenon is presented in the story; but, in most cases, the powers of light prevail.

It would take too long to speak of all the other classes of myths; but the most important of all, the sun-myths, must not be passed over. The grandest object upon which man can look has given rise to the finest conceptions of the myth-making age, — those in which its richest thought is to be found embodied. The men of that time seemed never to tire of embodying every attribute, every noticeable feature of the sun, in mythical forms. A single impersonation could not satisfy the demands of the primitive intellect; and so we find, among nearly every people of antiquity, the sun represented over and over again, in so many forms that it is almost bewildering to attempt to keep them all in mind. The myths are not all elevated in conception, it is true,— they range from extreme simplicity to great complexity; but they include among their number some that have furnished the nucleus around which the greatest thoughts of a later period have gathered. In studying them, we first encounter the more simple conceptions, such as that in the story of Sisyphus, who to all eternity rolls a great stone to the top of a hill, which is no sooner reached than the stone rolls back again,— a description of the daily course of the sun. We have also the story of Tantalus, the scorching sun of summer, before whom the water dries up and fruits wither; and we find the sun worshipped by the Phœnicians as the fish-god Dagon, who swims under the earth each night. Passing beyond rudimentary ideas like these, we find the sun personified as a beautiful youth or as a mighty hero, before whose prowess all things yield. He is the prince in the story of Cinderella, and the dawn-maiden is beautiful only when she is near him. He is Herakles, strangling the serpents of winter in his infancy, and triumphantly performing his twelve zodiacal labors. He is the golden-haired prince in the story of the Sleeping Beauty, who forces an entrance into the ivy-grown castle, and wakes the earth-princess from her winter sleep. He is Sigurd, fighting his way through the bickering flame to rescue the dawn-maiden, Brynhild. He is Samson, whose strength lies in his hair of rays, and who, falling asleep at last in the lap of the waning year, is shorn of his power, and brings down all nature with him in his fall. He is Odysseus, journeying to his western home, where his wife Penelope, the twilight, awaits him; and it is more than probable that there is a reminiscence of this solar journey to be found in the wanderings of Moses and his followers in the desert. The list of these solar heroes is long. It includes Orlando and Charlemagne, Bacchus, Apollo, William Tell, King Arthur, and many more. But the sun is not always a hero with whom we can sympathize. Sometimes, his influence is baleful, producing drought and fever, and bringing death to men. Then he figures as the devil, or shining one, the enemy of mankind. Occasionally, this evil sun was thought of as entirely distinct from the beneficent, life-giving sun: it was his wicked brother who had slain him and usurped his place, as in the Egyptian myth in which Osiris is killed by Set, both being solar impersonations.

But there is a higher class of sun-myths than any of these; namely, those in which the solar hero is depicted as mild and gentle, kind and good, harassed and sometimes done to death by his enemies, the powers of darkness and winter, but triumphing, nevertheless, by the force of his own inner nature. To this class belong the Teutonic Balder, the Greek Adonis, the Hindu Rama, and the North American Michabo, or Hiawatha. But by far the most noteworthy of all is the myth of the Christ.

(To be concluded next week.)

RELIGION AND MORALITY.

BY LITA BARNEY SAYLES.

I have of late been reading an essay, or a lecture, by a scholar, the subject of which is the "Utility of Religion"; and, as no other utility is put forward except morality and its consequent effect upon mankind, the essayist seems to be endeavoring to prove that its "utility" consists in morality, and that the merit of religion, so far as he seeks to show, is only in its origination of morality. And it may naturally be inferred by the reader that morality and religion are so nearly synonymous that the first is the only outgrowth of the latter worth dwelling upon, the difference between this and its claimed cause, religion, being not explained.

It would seem desirable, if we are to learn of the "utility" of a thing, and, certainly in this case, of a subject so contradictorily explained by various authors and persons as is religion, that the essayist should give us his own definition, from which position he is arguing. I find nothing, however, which I can call such, except an instance he gives of an islander in the lowest state of barbarism "who adores a crooked stick because it cannot lie still, and discerns in it the signs of an invisible and mysterious power," who, he says, "by this very act proves himself to be immensely nobler than the beast who has no such thought or feeling, and *so has no religion*, because his whole life is confined to the phenomena of the sensible world." Thus, I gather that the author's definition of religion would be the worship of occult forces above and beyond our comprehension, whose phenomena are not seen "in the sensible world," or at least are not confined there. I cannot think that this is all he actually intends when he talks of "religion" and its "utilities," but it is all I have a right to infer from the phraseology of his essay. Of course, I understand him to mean that, as the spirit of man grows from a state of barbarism, the scope of his worship enlarges in proportion; and he adores, not "a crooked stick," which was merely used as an example of the lowest form of worship, but that which is to him, in his advanced state, just as incomprehensible as the mysterious action of the crooked stick was to the savage.

There is no doubt that the author has really given us, in the example quoted of the savage, the origin of the religions of mankind, which commenced in the worship of natural phenomena, not cognizable by the low order of intellect then upon the earth, and so feared and to be propitiated by praises and offerings. Self-preservation is the strongest law of our being even now, when so much top and side brain has been added by time to the lower back brain which must at first have been the sole possession of our forefathers, who could not comprehend the natural law that prevented a crooked stick from lying still. How much more animal grasp they must have had then upon the only life of which they had the slightest instinct, and in which the selfish loves must have entirely predominated! Phenomena of nature, which we well understand, filled them with misgivings for their own safety physically; and they invested all forces whose effects they perceived with an individuality which was liable to be destructive to them, at its own option, and to which the most abject submission alone seemed to promise safety. How morality could have been an outgrowth of this low conception of religion puzzles me exceedingly.

I define morality, primarily, after the manner of Confucius, the Eastern philosopher, as doing unto others what you would have them do to you, and will adopt Samuel Johnson's addenda, "This must be regulated by a law higher than itself," and "nothing will suffice as a rule of judgment for the treatment of others but a wise insight, the fruit of sympathy and study, discerning real conditions, and reverencing clear principles as a higher law than personal tastes or wishes." I think my friend will not take exception to my appropriation of this definition of morality in distinction to some future one which he may feel called upon to make of his prominent subject in this criticism,—religion. It is a good and fair description of what I mean when I speak of morality, and covers the relations of man to man.

The religious nature, rising as it does from the instinct of self-preservation, is the strongest motive of the untutored man, and for a time must necessarily control all his acts. This nature may be his while dwelling in isolation, but the perception of the moral relations can only come by an experience gained by commingling with his kind. He finds there are certain requirements of his own nature in which he is not happy if denied, and that other natures are like his; and, in order to obtain the good he desires, he must make equal concessions to those with whom he comes in contact. Thus, his own selfishness teaches him to be unselfish, and to do as he would be done by. Certainly, the process was a long and tedious one,—as is all growth from the lower to the higher,—and conviction had to be beaten into his nature by the experience of many stripes before he would freely acknowledge that others had the same rights as himself. But mankind has, in the slow but sure attrition of the ages, developed a high standard of morality, which I cannot trace as eliminated from his first or continued ideals of religion, but see that it has grown side by side with these, and become a part of himself not conflicting with the equal development of his religious nature.

And, even if it is thought by some that morality is the legitimate product of religion, there exists no reason why it should, even by them, be included in it and named with its name longer, any more than the apple should be included in the title of the tree that bore it. It is now an independent, perfected fruit; and, if it can be proved that it was produced by religion, and is therefore its "utility," we still have no reason for perpetuating the old mother in connection with it, unless she can show us further "utility." The mothers die when they have produced their best gifts, and their offspring become mothers and bless the world with an improved race.

I believe in the religious nature of man, and that much more can be said for religion than is given us by this author at this time; namely, that it has been the originator of morality, and by its own innate power has sustained and forced the same to take its place in the world. My essayist, in objecting to the claims that those he chooses to term "infidel writers" have put forward,—namely, that religion "has attributed to its own intrinsic force what is only incidental and adventitious, and that the force of education without religion would make morality equally powerful, if it only early and with sufficient vigor took charge of the human mind,"—replies that "irreligious morality has never had the power to do that." This is because the religious nature has the first and strongest hold upon the man through his fear, as I have previously shown. It controls him personally, both before and after his conception of a continued existence, and therefore of continued rewards and punishments; while the impetus to morality comes from another selfish department which is only called into action upon his relation with others, and over the violation of which no mysterious punishment is liable to fall, its transgressions being immediately visited in the visible world, and not invested with the terror of the invisible.

In all this claim for the precedence of the religious power, my writer can only be understood to use the term religion in its generic sense, and not to refer specifically to its phases of the last eighteen hundred years; for morality held its assured place in the order of things previous to that time. Certainly, I cannot claim so high a morality for those olden times, neither can he claim so high a development of true religion, as will be conceded for each at the present; but there was a morality which was on its way to the development of to-day, just as there was a religious nature also on its way toward its present status, and which acquired new impetus by the life of the Teacher. These divisions of man's nature grow side by side, but because they harmonize is no proof that they are mother and child. To name them sisters, is more correct.

CORRESPONDENCE.

OBJECTIONS TO MR. KIMBALL'S ARGUMENT.

Editors of The Index:—

The Rev. Mr. Kimball's argument in defence of Mormonism seems to me as narrow or even more narrow than the criticisms of Mormonism and proposed measures for the government of Utah he condemns. It seems to me that any man should know that, because Massachusetts has more paupers than Utah in proportion to population, it is not because she has a worse system of government. Nevada, Colorado, and Kansas also have fewer paupers in proportion to population than Massachusetts. So has any new State, and we need not here seek the causes. Because there are fourteen Gentiles in the penitentiary in Utah to one Mormon in proportion to the number of each, it does not prove that Mormons are more honest and virtuous than Gentiles; for everybody knows, from conversations with those who have lived in Utah and from evidence from different sources, how difficult it has been to get a jury to convict a Mormon of any offence in Utah. Because there are twenty negroes in the penitentiary in Mississippi to one white man,—say the whites and blacks are nearly equal,—it does not prove that there are nineteen negro law-breakers to one white. If a Memphis jury acquits a white man for killing a colored man in cold blood, as it did recently, and sends a colored man to the penitentiary for stealing a chicken, the statistics of the penitentiary will not show the true moral status of the community.

It has rarely occurred that a great crime has been committed against an individual or against society but some one has defended it or palliated it. Mormonism is as much a crime against society, to my mind, as slavery was. Any organization, religious or social, that undertakes or proposes to make it legally impossible for me to be wifed sins against society and against me. As the sexes are on the average about equal, if some of the men have a plurality of wives, the others must of course go unwived, and it would be legally impossible for them to become wived. The shortcomings of a few men, living in monogamous relations, do not justify polygamy. Its supporters must be men of extreme selfishness,—men who are willing to take more than their share of that which contributes to the happiness of life. I have talked with several negroes who said they would yet be willing slaves. But it is our duty to prevent any one from being a slave. So in Mormonism there may be women who voluntarily enter into the polygamous relation. But we should prevent them. We ought not to struggle for the *number* of females, but for only one. It should be legally possible for every man to get one wife or every woman one husband.

Very respectfully,

WILEY BRITTON.

MEMPHIS, TENN., May 10, 1884.

A PROPOSITION FOR PRACTICAL CO-OPERATION.

Editors of The Index:—

Fifty-seven years ago, I was a member of a Co-operative Society in Red Lion Square, London, composed mostly of intelligent business men. I took much interest in the conversations and discussions there introduced, which related in a great measure to Robert Owen's new system of society and the publication of the *Co-operative Magazine;* and, with the views I there acquired, I have never since failed to hope that I might have an opportunity to do something toward bringing about a better social state. I left London in 1828 for this place, which has been my home ever since, expecting to join the community supposed to have been established here by Robert Owen. On coming up the Mississippi, I first learned from persons who had come to New Orleans from the Wabash that the attempt to form a community at New Harmony had proved a failure; and, after my arrival here, I soon found that the whole affair had been a farce.

Whatever Mr. Owen may have done at Lanark, the failure here was entirely due to his want of knowledge of men and things and lack of business management. If Robert Owen had been the man we all thought him to be, "he might here have rung a peal to wake all people." Here was a very rare opportunity to try, not the visionary scheme of communism with adults brought up under the present vicious system, but co-operation. Here was a town capable of accommodating comfortably one thousand persons, with gardens, orchards, and vineyards all in their prime, with mills run by steam and water power, and the latter capable of being made available with half the force of the Wabash, which is here one thousand feet in width. There were also cotton and woollen factories and tanneries, and twenty-five thousand acres of land, hard to beat even in this Western Garden of Eden, all of which, bought by Mr. Owen for $150,000, is now worth millions.

I, as you are aware, was one of the original stockholders of *The Index*, and, in casting my bread upon

Digitized by Google

the waters, expected no returns but such as I have received in the pleasurable feelings for the good it may have done. I now wish to propose a scheme to you and other liberal friends. I am the owner of about seventeen hundred acres of land, one thousand of which are in cultivation, four hundred acres of which are in wheat and good, and one hundred and fifty acres more are seriously injured by the overflow from the Wabash. Two hundred and forty acres are sown in clover on the wheat ground, and fifty in grass. Eight hundred acres of the land in cultivation are in Bethel Township in this county, through which runs the Peoria, Decatur, and Evansville Railroad. Griffin's Station on this road is only eighty rods from the nearest point of one tract of five hundred and fifty acres of my land, and the remainder from one to one and a half miles distant situated in Bethel Township. Griffin's Station is six miles from New Harmony, in a direct line; by railroad, ten. From Evansville, twenty-eight miles, with a population of forty thousand; and five miles from Greyville, on the Peoria, Decatur, and Evansville road, and which intersects the Vincennes and Cairo road at that place.

I offer any or all of these lands for the purpose of establishing a co-operative association and industrial school. I will sell them for a definite sum now on time with legal interest, or give a lease with the privilege of purchase at any time upon such terms as may be agreed upon. It is not in a material, but in an educational point of view that I look at an experiment of this kind. As the results of experiments are uncertain and liable to entail loss, those who undertake them should be made aware of this. Besides furnishing the land upon such terms as may be agreed upon, I will also advance jointly with others the necessary sum or sums to build and to furnish the necessary implements and stock. I will also pay a certain portion of the expenses of a committee who might be appointed to visit the location and New Harmony. Lumber is cheap here, from a dollar to a dollar and fifty cents per hundred; and the necessary buildings for an experiment could be put up in such a manner that they could be taken down and the materials sold without much loss. New Harmony would be a more desirable place on account of the larger number of children to be taught, and the excellent library we have of some five thousand volumes.

Very respectfully,

THOMAS MUMFORD, Sen.

NEW HARMONY, IND., May, 1884.

MARRIAGE.

Editors of The Index:—

In the discussion of the evolution of marriage now going on in *The Index*, I take issue with some of your contributors. Instead of the view that *monogamic* marriage was developed by feminine instinct, I should say it had its origin in masculine necessity; for men cannot logically claim polygamy without granting polyandry, its counterpart. But, in the latter institution, the certainty of fatherhood is destroyed.

Now, it is probable that this fact was realized at an early stage of civilization. Inferring that so obvious a condition forced itself early upon the human mind, simple justice is sufficient to account for the growth of the sanctity of marriage.

Considering parentage, we see that motherhood from its very nature can never be uncertain; but this is not true of fatherhood. Chastity, fidelity, and consecration on the part of woman are necessary to preserve to man the greatest gift bestowed on him,—that of fatherhood.

If the moral idea is higher in women than men, is it not because it has been required of them by the laws of Church and State? As all legislation has been in the control of men only, they have framed laws which would insure the certainty of parentage to themselves. To-day there is a strong and growing conviction that there should be *absolute* equality in all relations which a marital union involves. Those men who advocate other social conditions than the monogamic marriage should be confronted with the question, "Who would be the losers?" Are not such men blind to the interests of their own sex?

Is it probable that in the future, when the authority of the Bible and the fanaticism of religion have lost their hold on the human mind, women will consent to give what they do not receive?

LOUISA SOUTHWORTH.

CLEVELAND, OHIO.

BOOK NOTICES.

THE LIFE AND TIMES OF FREDERICK DOUGLASS. Written by himself. With an introduction by Mr. George L. Ruffin of Boston. Hartford, Conn.: Park Publishing Co. 1883. pp. 618.

This valuable contribution to the history of the United States is as unique in literature as the author himself is among men. No one can arise from the perusal of its intensely interesting and fascinating pages without a feeling of satisfaction that Mr. Douglass was induced to commence this autobiography, and that he lived to complete it. We learn from it, what we knew only partly before, that Fred Douglass has lived a romance as exciting and adventurous as the most daring novelist would venture to conjure up or invent for the hero of his tale; while many of the *dénouements* are as sensational as any romancist could desire, though given in a direct, terse, matter-of-fact way, which leaves no doubt as to their genuineness in the mind of the most questioning reader. Though related in a simple, earnest style, and mainly in short though strong Saxon words, with no attempt at fine writing, his story is told in full with orderly sequence, while the involved history of the abolition of slavery in this country is carefully and impartially given. Few readers can fail to be impressed with the author's tact, caution, large-heartedness, and mental breadth, his high moral tone, his freedom from cant, his modesty, even where he is obliged by the requirements of his recital to give credit to himself, his impartial justice, his generosity, and also with his frequently grim humor, his scarcely concealed enjoyment of some of time's revenges, and his quick sense of the ludicrous, even on the most pathetic occasions. This book is intensely interesting as a record of the varied phases in the life of one who worked his way, in spite of the impediments of bondage, of race prejudice, of direst poverty, of ignorance and friendlessness, from the untaught, half-clad, ill-fed, beaten, and abused "field hand" of a cotton plantation, to take his place at length as the honored guest of millionnaires, the recognized peer in manhood of college graduates, the counsellor of statesmen, the standard bearer of his own race, and a high official in the government of the United States, whose name must necessarily be forever enrolled in the annals of history because of the part circumstances forced him to take in one of the momentous periods of a great nation's history, much of the "true inwardness" of which is for the first time revealed in this work. When we observe the handsome penmanship of Douglass' signature which accompanies the fine portrait of the dusky orator that graces the first page, we can scarcely bring ourselves to believe that the foundations of such a handwriting were laid by stealth and gained by stratagem, that ship carpenters' hieroglyphics and emulous school-boys' pavement scrawls were his only writing-master's "copies." In addition to its value as a biography, this book is a necessary chapter in the history of our own times, and besides is full of delightful anecdotes and reminiscences of distinguished men, of apothegms, of broad and wise deductions from experience and observation, and much quotable matter for which we wish we had room. It is handsomely bound, only fairly printed, and is accompanied by eighteen illustrations, which, except the portraits, it would be better without, as they are mostly woodcuts of inferior merit. The portraits given are of Sumner, Lincoln, Phillips, Garrison, John Brown, and Douglass himself. Those of Lincoln and Douglass are steel engravings.

WE fancied a little flavor of spring east winds in the severity of some of the criticisms in the *Art Amateur* for May; but it is a readable and good number, nevertheless. Theodore Child has a brief notice of a very interesting collection of drawings at L'Ecole des Beaux Arts in Paris. Nothing could be more instructive than a thorough examination of this collection, which comprised the works of all the great names in French art in our own time. One has only to read the names of the draughtsmen there represented, Millet Gerome, Gavarni Corot, Decamps, Rousseau, Scheffer, Ingres, Delaroche, etc., to recognize what a great and varied power the French art of our century is. and how well it has represented all the different phases of our time, from the intense ideal realism of Millet to the tender sentiment of Ary Scheffer, from Gericault, the impassioned melo-dramatist, to Messionier, the prince of exquisite littleness. Anything which will fix the attention of our young students on the importance of thorough drawing is a blessing. By this is not meant superficial finish and mechanical accuracy, but the power of rendering justly the proportions and outlines of every subject, whether by a few lines or a thoroughly shaded drawing in which shadow helps to give the fulness of form. The notice of George Fuller is appreciative, but brief. The late exhibition has afforded a fuller opportunity for study of his works. We cannot accept the comparison with Hawthorne as very suggestive. The rarest charm in Mr. Fuller's work is the exquisite naturalness, purity, and truth of his maidenly portraits. We do not find in them the unreal, slightly morbid traits of Hilda or many other of Hawthorne's women. They are fresh as spring in the country.

ESPECIALLY adapted to advanced students in art is Miss Greatorex's recently completed study of Chrysanthemums for Mr. L. Prang, as companion to the Hollyhocks which he purchased after the last Water Color Exhibition. Miss Greatorex as a painter of flowers possesses rare talent.

PERSONAL ITEMS.

THE bust of Wendell Phillips, by Joseph Milmore, now on exhibition at the store of Doll & Richards, is not to be presented to George William Curtis, as has been reported; but it is the intention of the friends of Mr. Phillips to purchase the bust and present it to the Metropolitan Museum in Central Park, New York, to be placed by the side of Charles Sumner.

SAYS the Boston *Post:* "The State Senate has formally thanked Mr. James Wormley for his gift of the portrait of Charles Sumner. Less than twelve years ago, the Massachusetts Legislature, J. B. D. Coggswell leader, formally censured Charles Sumner for daring to be honest and independent. To-day, it were better to be Charles Sumner than J. B. D. Coggswell."

THE Mahdi is a radical total abstinence man, even to coffee and tobacco, which he won't even allow in his camp. In fact, he lately gave a refugee one hundred and fifty lashes for smoking a cigaret. But he makes up for this by having thirty-nine wives, and keeps within the letter of the Mohammedan law, which allows only four wives at a time, by an ingenious system of temporary divorce, by which he always has thirty-five spare wives in waiting.

IN 1868, George Eliot wrote a friend in regard to herself and Mr. Lewes: "We love too much our associated studies and solitude to let the world have more than one day a week. Society here is, moreover, what it everywhere is,—empty. The English world is extremely like what it was when you left, conversation more or less trivial and little sincere, the literature of the moment scarcely better, and politics worse than either one or the other."

JUDGE LOWELL, who retired recently from the United States Circuit Court, was complimented one evening last week by a banquet at the Hotel Vendome. Among the speakers was Oliver Wendell Holmes, who, after referring to Judge Lowell's learning, fairness, and devotion to duty, said: "I will not say more of the living: I wish to speak of the dead. In respectfully proposing the memory of his great-great-grandmother, I am speaking of one whom few, if any, of you can remember. Yet her face is as familiar to me as that of any member of my own household. She looks upon me as I sit at my writing-table; she never smiles; she never speaks; even the parrot on her hand has never opened his beak; but there she sits, calm, unchanging, as when the rude, untutored artist fixed her features on the canvas. To think that one little word from the lips of Dorothy Quincy, your great-great-grandmother, my great-grandmother, decided the question whether you and I should be here to-night, whether we should be anywhere or remain two bodiless dreams of Nature! But it was Dorothy Quincy's yes or no to Edward Jackson which was to settle that important matter, important to you and to me, certainly; yes, your honor, and I can say truly, as I look at you and remember your career, important to this and the whole American community." Dr. Holmes concluded by offering the following: "The memory of Dorothy Jackson, born Dorothy Quincy, to whose choice of the right monosyllable we owe the presence of our honored guest and all that his life has achieved for the welfare of the community."

For sale at THE INDEX office, 44 Boylston Street, Boston.

GUIZOT'S HISTORY OF FRANCE.

Copiously Illustrated.

From the Earliest Times to 1848. Eight volumes, small octavo, large type, over 400 fine illustrations. Price reduced from nearly $50 to only ***$6.00 per set, 75 cents per volume. Volume I. now ready; others at intervals of ten days.*** Sample volume sent postpaid, with privilege to return, ***65 cents.***

This is the only *complete* American edition of this magnificent work, which is known as the best popular history of France. The cost of importation is $36 00, and the only other American edition (which is *incomplete*, covering only five of the eight volumes here given, and not including even the French Revolution), is, at this time, $33.00. The present edition is unabridged, and includes the more than four hundred really superb illustrations of the English edition; and its convenience of form, for reading and the library shelves, is superior to any other edition published.

Guizot is one of the most brilliant writers whose pen has ever pictured the events of history. His pages fairly glow with eloquent fire. One thrills, as he reads, and follows on, page after page, as he would an entrancing romance of Scott or Dickens. And what more inviting subject could be chosen for such a writer than the history of France?—France, the home of Chevalier Bayard and the great Napoleon; of Joan of Arc and Lafayette; of the Huguenots and the execrable monsters of St. Bartholomew's Day; of Voltaire and Bossuet; of Fénelon, Racine, and St. Pierre.

And probably never was historical work more graphically and sumptuously,—*fittingly* illustrated. My first announcement was planned to include only 100 illustrations; but I found it so difficult to select, or rather to omit, that I was compelled to yield to the temptation to include the *more than FOUR HUNDRED original pictures.*

Accordingly, in keeping with the brilliant text and magnificent illustrations, I have undertaken to give, in this edition, the handsomest and best work which has ever issued from my presses; and I present it with real pride and unquestioned confidence that my patrons will approve.

500,000 VOLUMES Choice

27 HAMMOND ST., Boston (Roxbury), Mass.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

WONDER-BOOK

of HISTORY—Illustrated.

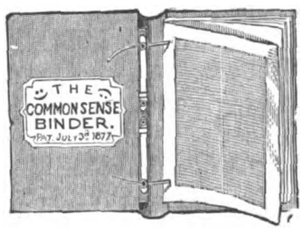
A SURPRISE even for the old steadfast friends and champions of *The Literary Revolution*, and a delightful "*chunk*" of literary "*dynamite*" for the foes of choice books for the millions. *"WHAT IS IT?"* A new, enlarged, beautifully *ILLUSTRATED*, and *RICHLY BOUND* edition of my heretofore published Historical Wonder-Book, which contains, *UNABRIDGED:*

GREEN'S Larger HISTORY of the ENGLISH PEOPLE.

CARLYLE'S HISTORY of the FRENCH REVOLUTION.

CREASY'S Fifteen DECISIVE BATTLES of the WORLD.

SCHILLER'S HISTORY of the THIRTY YEARS' WAR.



HERETOFORE, it has been a "'Wonder-Book' in the amount and (literary) quality of its contents,—the cheapest well-made historical volume ever published." *NOW*, it is that, and more: very large and valuable indexes have been added to each of the four works; heavier and better paper is used in printing, and the printing is greatly improved in quality; nearly a hundred *ILLUSTRATIONS*, by famous artists, have been added; the *BINDING* is so unique, striking, and appropriate as to be considered almost *"an inspiration"*—whoso sees the cover will be tempted to think he has found the *gate* to the "royal road to learning," and will surely open and look within. *"WHAT IS THE COST?"* Amazing as it may seem, *TO YOU* the price is only *$2.50* per copy; and, even beyond this, the most extraordinary inducements are offered to energetic **AGENTS** who will thoroughly canvass the *exclusive* territory assigned to them. My object is to make this work the means of advertising and introducing my numerous other books, which are not sold by agents or the trade, but to buyers direct only. To secure *your choice of territory* (and exclusive agency), whether village, township, or county, write *immediately*, stating your experience, what you want, and what you will undertake to do.

500,000 VOLUMES Choice

Books,—100-page catalogue free. Books for examination before payment, on evidence of good faith. *NOT* sold by dealers: prices too low. By mail 20 per cent. extra.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c. per line.
" 13 " 25 "	. . .	8c. " "
" 26 " 51 "	. . .	6c. " "
" 52 "	. . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY

CURRENT TOPICS.

BISHOP FREPPEL'S amendment to the army recruiting bill before the French Chambers of Deputies, exempting from military service young men training for holy orders, was rejected last Saturday by a vote of 395 to 92.

THE London *Daily News*, commenting on a convocation of Freemasons in which were such dignitaries as Lord Carnarvon, Lord John Manners, and the Bishop of Peterborough, thinks these names suggest a laugh at the alarm of the Pope and the language of his recent encyclical against Freemasonry.

SAYS the Boston *Sunday Herald:* "The effect of the short-sighted policy of Congress in putting a high duty on foreign art is shown in Paris, where many American art students are instructed by the great French masters. It is rather hard on the American artists who protest against the policy of protection to be obliged to bear the brunt of the ill will occasioned by this worse than Chinese policy."

THE jury that acquitted Wheeler, who murdered Matthews in Copiah County, Miss., have published a letter in defence of their action, in which they state, in proof that they acted in accordance with the principles of justice, that their deliberations in the jury room were opened and closed with prayer. An exchange remarks, "It is a well-known fact that Russian outlaws always ask the divine blessing before committing a robbery or murder."

STRANGE ideas of justice seem to prevail in some of the courts of Connecticut, judging from the manner criminals are often dealt with, or not dealt with at all, in that State. We do not here refer to the cases of Mary Stannard, Jennie Cramer, or Rose Clark, but to the sentence of an offender in New Haven last week, mentioned in the following news item: "Charles Derby, formerly treasurer of Riverside Lodge, Good Templars, who some time ago abandoned his wife and eloped with a married woman and appropriated the funds of the lodge, was to-day sentenced to jail for thirty days, and fined one dollar. The penalty was made light, as his friends propose making up the amount of his defalcation."

THE Chicago *Inter-Ocean* mentions one of the signs of the times as follows: "There is at this time now being played upon the stage in Chicago an opera bouffe, in which the gods and goddesses of Olympus figure, the fun of which turns upon the ridicule heaped upon all which the devout Greeks of two thousand years ago held most sacred. Great Jove himself, with his slang and telephone, is the most mundane of characters. The audience may be offended by some of the jokes or by the scantiness of the attire, but no religious sensibilities are shocked. There is not a vestige of reverence left for the gods of the people whose literature and art we still adore. What transformation scene will another two thousand years present? It well becomes the church of to-day to be warned by the signs of the times, and meet the rising tide of unbelief by a policy which shall be defensive by being aggressive."

THE Philadelphia *Times* thinks that in a year or two more women doctors will be admitted to full fellowship in the County Medical Society: "Like all questions of progress, prejudice is awfully obstinate, and it is often the more obstinate among intelligent organizations; but, when women have their medical college and have fully and fairly established themselves in the profession, the regular Medical Society can't long bar its doors against the sex. The one profession in which women are most needed is the medical profession, and the regulation hindrance of her admission to full fellowship in that important calling will only awaken deeper interest in the cause. There is not only no good reason why women should not make better physicians than men in some lines of practice, but there is an obvious necessity for the best possible aid and encouragement to her advancement. There are many ailments for which women need women physicians, and for which, with equal intelligence and skill, women physicians would be better fitted for successful practice than men; and the sooner the Medical Society appreciates the whole truth, the better it will be for the profession and for the afflicted."

A NOTICE in the *Christian Register* of last week of Col. Higginson's *Margaret Fuller Ossoli*, by Mr. John W. Chadwick, concludes as follows: "The delicate criticism of these closing chapters, at once so sympathetic and so just, show Mr. Higginson where he is most perfectly at home. It was as a woman of letters that he set out to speak of Miss Fuller, and he has done this, and done it well; but the bias of his admiration has declared itself, and after all it is as a woman—loving, hoping, helping, daring much—that he has left her standing in the cool spaces of our reverence and delight. We must thank him for an instructive, charming, and inspiring book, perfect in its style, noble in its reserves, abounding in quiet humor and rare bits of personal reminiscence. The heroine *par excellence* of the Transcendental movement has been depicted for us by a Transcendentalist who has not lost the ardor of his early faith, and whose life illustrates the completeness of the bond between the high thinking of the Transcendentalists and the plain living of our week-day politics and social life."

THE Concord School of Philosophy will open this year July 23, and will continue ten weeks. Six or seven days will be devoted to a discussion of Emerson's genius and character, which is announced in a circular under the following heads: "Emerson's View of Nature," by Prof. W. T. Harris; "Emerson's Religion," by Rev. C. A. Bartol; "Emerson's Ethics," by Prof. G. W. Howison; "Emerson's Manners and Relation to Society," by Mrs. Julia Ward Howe; "Emerson as seen from India," by Protap Chunder Mozoomdar, of Calcutta; "Emerson as an American," by Mr. Julian Hawthorne; "Emerson's Friendships," by Miss E. P. Peabody; "A French View of Emerson," by M. René de Poyen Belleisle, of Paris; "Emerson in Boston," by Mrs. E. D. Cheney; "Emerson as an Essayist," by Mr. John Albee; "Emerson and Thoreau," by Walt Whitman; "Emerson's View of Nationality," by Rev. G. W. Cooke; "Emerson among the Poets," by Mr. F. B. Sanborn; "Emerson's Relation to Goethe and Carlyle," by Mr. Denton J. Snider; "The Genius of Emerson," by Mr. W. E. Channing. Two days will be devoted to a discussion on "Immortality," to be opened July 31, by Prof. John Fiske, and continued by Rev. A. P. Peabody, Rev. R. A. Holland, and Dr. W. T. Harris.

THE Seventeenth Annual Meeting of the Free Religious Association, held in this city last Friday, according to announcement, was well attended, and was, as in former years, a most pleasant reunion of active and earnest workers in the cause of liberal religious thought. The morning session on Friday, at which the President made the opening address, was rendered memorable by the addresses of Messrs. W. M. Salter, W. L. Sheldon, and S. B. Weston, who presented with ability, earnestness, and eloquence the aims and purposes of the Society for Ethical Culture. We hope to be able to print these addresses next week. The afternoon session afforded a good illustration of the breadth of the Free Religious platform. The first speaker, Prof. W. T. Harris, read a carefully written and elaborate paper, the main object of which was to show that Christianity rests upon a natural scientific basis. Mr. C. D. B. Mills followed with a speech, in which he treated Christianity as but one of many forms and manifestations of the religious sentiment. Mrs. Clara Bisbee gave some account of her work in forming and sustaining a society in which character instead of creed is the basis of union. Capt. Robert C. Adams closed the afternoon session with a vigorous and witty speech, criticising orthodox conceptions of the world, life, religion, etc. The festival in the evening, at which nearly three hundred were present, was all that could be wished. Mr. W. J. Potter presided. Five-minute speeches were made by Mr. Henry B. Blackwell, Mrs. E. D. Cheney, Mr. James K. Applebee, Rev. J. Lloyd Jones, Mr. John P. Wyman, Capt. Robert C. Adams, and B. F. Underwood. The quartette choir of the Unity Church, under the direction of Howard M. Dow, furnished a rare musical treat.

PROF. SUMNER ON THE SURVIVAL OF THE FITTEST.

With special pleasure, we printed last week Prof. Sumner's statement in reply to our comments on his epigram, that the only alternative to the hard doctrine of the survival of the fittest is that of the survival of the unfittest. In his evident desire to study brevity and conciseness,—qualities which editors especially appreciate,—he has in this case been almost too brief for clearness; and we wish that he might find time to explain his views more fully on one or two points.

In his first paragraph, Prof. Sumner confirmed the opinion we had expressed that the law of the survival of the fittest in the vegetable and brute worlds does not mean the survival of the best or most desirable according to human judgment. But to our remark that, among mankind, there is another alternative to the survival of the fittest than the survival of the unfittest,—namely, that the fittest shall strive to transform the unfit into a fitness to survive,—he objects that "this is not a third thing, but only a restatement of the survival of the unfittest." And he seeks to maintain his objection by an illustration. He supposes two men, John and William, to be instructed by a moralist that, in order to secure life, health, prosperity, happiness, a good social order, and all other guarantees against the destructive hardships of human experience, they must pursue a certain course of conduct. One of the men, William, says he does not believe this doctrine, and that he is going to live for pleasure. But John says that he believes it, and that, if he understands it, he and those like him will thereby be rendered fittest to survive, and will survive accordingly; while William and his class will erelong be cut off by disease, poverty, vice, and crime. To this interpretation, however, the supposed moralist does not assent, but tells John that he must use his resources to transform William into a fitness to survive. And thus, Prof. Sumner adds, "the resources by which survival is assured being diverted from John, his survival is imperilled and curtailed, and the same resources being applied in favor of William, his survival is secured"; that is, the attempt to transform William only secures the survival of the unfittest.

To this, we rejoin that, though we have given this illustration careful thought and tried to imagine what Mr. Sumner's more fully expressed argument might be, there still seems to us the same obvious fallacy in it as at our first reading. *Our* "moralist" would not rest his instruction to William and John on such purely utilitarian grounds as does Mr. Sumner's supposed "moralist." But we let this pass, and for the moment accept the illustration just as he puts it. We should wholly deny, however, that the resources for assuring survival which the illustration names are diverted from John so as at all to imperil or curtail his survival by his effort to transform William. Prof. Sumner says this conclusion "plainly" follows. To us, it is far from plain. Even if these resources were wholly material, it would not necessarily imperil John's survival, were he to apply a part of them for William's improvement,—not, indeed, for supporting him in idleness and vicious pleasure, but for so bettering his condition and reforming his inclinations that he may turn to industry and virtue. It is not difficult, indeed, to think of many men of enormous wealth who might spend a moiety of their income in judicious projects for the improvement of human society around them, not only without at all imperilling their own survival, but even with hope of making it more sure. But the resources that assure human survival are by no means all material. The illustration makes William a victim of disease, vice, and crime as well as of poverty. He needs knowledge, education, industrial instruction, moral incitement, and culture. John may help him to these intellectual and moral resources without diverting anything from his own. A teacher does not lose his knowledge by imparting it to another. And it is the peculiar property of moral strength, in particular, that to bestow it upon one in need is not so much to halve as to double it. Intellectual and moral wealth is not curtailed, but grows with judicious spending.

Moreover, Prof. Sumner's illustration seems to us to deny the highest considerations of even the utilitarian philosophy. If we understand him, he would let the "William" class of people and the "John" class of people remain in hostility and conflict until the former, unaided by the latter, perish of their own vicious and ignorant waywardness. That the latter class should come to see that society is such a complex organism that their own best interests are endangered by the former class and should seek therefore to improve them, and that thus altruism might arise on utilitarian grounds, he does not appear to allow. He leaves entirely out of sight the fact which utilitarians generally make much account of,—that, in the natural evolution of human society, man has come to see that even his individual interests are best secured, not by selfishly pushing them against the interests of all others, but by securing the welfare of all others.

We hope that on these points Prof. Sumner will explain his meaning more fully, and also tell us whether that "adjustment of rights which supersedes the old antagonism of selfish force," of which he spoke in his essay, is not a *moral* adjustment. Was not the effect of it to uphold the weak against the strong? that is, to give the weak, who might otherwise have been crushed out, a chance to survive? And was not this to transform them into a fitness to survive,—not thereby displacing the fittest, but adding to their number? Indeed, this and several passages of his essay led us to suppose that, like Darwin, Spencer, and other leading evolutionists, Mr. Sumner believed that the law of the survival of the fittest was, in man, either in great measure annulled or its character greatly changed by moral and rational considerations; and, therefore, the epigram with which he closed seemed to be opposed by much of his own argument.

WM. J. POTTER.

SOCIAL EVOLUTION.

While capital and labor in all their productive operations are so related that they are essentially one, they are brought into a state of opposition and even hostility through the imperfect distribution of the wealth they create. "The wages system," said Horace Greeley, "is commendable only when placed in contrast with absolute bondage. It foments hostility between capital and labor, employer and employed." The system of wages followed the emancipation of labor from slavery and serfdom, and rests upon a similar basis. In the one case, the individual is owned; in the other, his labor. Society has outgrown the first: it is in the process of outgrowing the second.

The wages system exists because labor is unorganized, because society has not reached that stage of growth where organization of all its parts has been possible. Growth proceeds from the few to the many, from the stronger to the weaker, until the entire social organism is knit together, and closely united by the complete inter-dependence of all its parts.

The capitalized strength of the world is the organized power of certain parts of social life, which dominate the rest. It may be the power of autocracy, aristocracy, ecclesiasticism, or of money; but, whatever it may be, it is organized functional activity. Here, in this country, the power of organized wealth comes into opposition with the rights and happiness of the people, and with the principles upon which the nation was founded. Capital, through the outworking of the competitive principle, through the increased productiveness of labor, has grown consolidated, become highly organized, and is constantly tending to greater and greater concentration. It represents the rule of the minority *versus* that of the majority.

The social system is governed by a law which recognizes labor as a marketable commodity to be obtained at the lowest rates. Under the action of this law, the wealth of society, which is simply the result of aggregated labor, flows by an irresistible impulse to capital, thus increasing and centralizing wealth; while the award to labor through concurrent influences becomes less and less. Wealth and poverty increase because of a wrong system of distribution. Progress and poverty cannot coexist for any length of time.

"Competition," said Louis Blanc, "is the perpetual and progressive increase of poverty. It is a source of general impoverishment, because it induces an immense and continual loss of human labor; because every day, every hour, it reveals its empire by the annihilation of capital, of raw material, of time, of labor employed. The mass of wealth thus devoured is so great that any one who would at a glance measure it would recoil with horror." The absorption of the profits of labor by capital belongs to the competitive system, and must continue so long as that principle governs in industrial life. The very fact of employing labor at its lowest market value necessarily gives to capital all profits over and above wages, and the rate of wages is constantly being lowered by the law of competition.

"A vicious system," said Greeley, "has placed the interests of employer and employed in seeming, if not real, antagonism; weakens and disorganizes not that trade merely, but production in general." While the direct tendency of advancing civilization is to increase the productive power of labor, the resulting profits of that increased production do not go to labor, but to capital. Capital and labor are the two factors in the production of wealth. The aggregated wealth of the world is the aggregated labor of the world, and rests upon the foundation whence all wealth was derived, namely, land: hence, it is utterly impossible to separate land from capital and make it an independent factor in the production of wealth. The facts in the case forbid it.

The capitalist, the employer of labor, invests his money in land, as the first step toward the production of wealth; and it becomes as much a part of his capital, of his stock in trade, as the building he erects and the tools and implements he uses.

In the infancy of the race, the value of land was merely nominal; and it was regarded as the common property of the community. Only the wealth derived from its use by labor was considered as belonging by right to the individual. This state of collective land ownership was not, however, lasting. The development of agriculture, along with an increasing sense of the right of private property, imposed the necessity of individual land ownership, in order that it might be possible for the individual to secure the fruit of his toil. The change, however, was slow. Portions of the soil became the joint property of tribes, families, and individuals; while other portions, such as pasture

Digitized by Google

and forest lands, were still held in common. The practice of stated distribution and redivision of the land among various nations also tended to keep alive the communistic state. Yet the general course of development—especially since the feudal period—has been from the collective to the individual ownership of land. The causes which have operated to change the primitive condition to that of modern civilization were at work in social relations from their beginning. The division of land between tribes, families, joint families, and individuals was but the beginning of that process of social differentiation and individualization which separates the civilized from the savage state, and which in its growth gives rise to the formation of privileged classes, concentrates power in the hands of military chiefs, autocrats, both kingly and ecclesiastic, and places the majority of the people in the hands of the minority. Social differentiation and integration still go on; for the growth of society is from an indeterminate, communistic state to that of a highly specialized, individualized character, with an increasing recognition of the right of private property, and an increasing division, subdivision, and individual ownership of the land.

Democracy is the goal toward which autocracy unconsciously tends.

It must be borne in mind that the law under which society has progressed is that of competition, and that the tribal and communistic state was not one of peace, but perpetual warfare; that out of the reign of brute force, where men, like animals, fought for supremacy, came the system of slavery; that, as the struggle for existence went on, and as the rights of men were more clearly appreciated, slavery slowly disappeared, leaving in its place the system of wages,—the ownership of the labor in place of the person of the laborer.

There has been one steady, slow, but persistent advance in social relations through endless struggle; but the right of the individual to the product of his labor is not yet recognized, and, if recognized, cannot be obtained under the competitive system. The cause of social troubles—of the great inequalities of life, whereby wealth is the heritage of the few and poverty of the many—does not lie in the individual ownership of the land.

The cause lies deeper. It lies in a great natural law, which, in the immaturity of the race, engenders struggle, suffering, the destruction of the weaker, and the survival of those best adapted to their environment,—the law of self-preservation. The final outcome of this law of self-preservation will be the freedom of the individual, the full development of all his powers, and the recognition of the moral law,—that the welfare of one is dependent upon that of all. The knowledge of this truth will mark a new epoch in social life.

Competition was and is in human relations what the law of "struggle" is in the animal world, and it is to this principle that we are to look to find the cause of the unequal conditions of mankind to-day. When land is regarded as a controlling force, apart from capital, with power to regulate interest upon capital and the rate of wages, the facts in the case are not correctly stated, and the mind is diverted from the main issue. In the majority of instances, the capitalist is the landowner; and where he is not, and pays rent to the landlord, there is no direct relation between the value of the land and the rate of wages. The profits of all industrial enterprises, whether great or small, go to capital; for, labor being owned by capital, its wage is a necessary part of the cost of production.

If the land has not increased greatly in value, then the award to capital in the shape of profits or exchangeable wealth is all the greater. The law of supply and demand governs the rate of wages, and not the increased or decreased value of the land. There is no ratio, no sequence, no law of cause and effect connecting the two. The value of land has no more power in determining the rate of wages than it had in determining the market value of the slave.

The enslavement of the laborer and now of labor is the result of a law which holds in subjection the weak by the strong, and is rooted in the selfish propensities of men: the monopoly of the land by the few and its divestment from the many is also the result of the action of the same law,—the law of competition. Labor, because of the wage system, because it is not allowed to participate in profits, because it is purchased at the lowest market price irrespective of the value of land, because of the stress of competition, is constantly tending to a minimum of wages which yields only a bare subsistence. If the land were released from individual ownership to-morrow, and was in the hands of the government or the community, the condition of labor, so far as the rate of wages was concerned, would remain unchanged. The land would doubtless be rented or farmed out at lesser rates than it can now be obtained, and to that extent the cost of living would be diminished. But, unless bodies of men engaged in agricultural pursuits and shared among themselves profits and unless co-operative production were instituted, there could be no essential change in the relations of employer and employed. Where labor was hired as it now is, where the law of supply and demand governed its value, the increased profits derived from the diminished cost of production would still revert to capital, and the gulf between capital and labor would go on widening. There would still be greater wealth on one side, greater poverty on the other.

The essential nature of slavery and "that which fundamentally distinguishes the slave," is, as Herbert Spencer has clearly shown, "that the slave labors under coercion to satisfy the desires of another." In other words, he labors primarily for his master or employer, and not for himself. This the present wage system, which is only a modified and lesser form of slavery, necessitates. It is to capital in all its forms that the profits of labor go; and until a restriction is placed upon capital by holding it to a fixed rate of interest, and labor is allowed to receive all surplus profits, there can be no decided amelioration of the social system.

To abolish slavery, we must abolish the ownership of man's labor. The enslavement of the working classes is, as has been stated, the result of the action of natural laws whereby capital has obtained the control of labor: its freedom can only result from the introduction in industrial life of a higher law, which restricts the action of capital and increases that of labor,—the law of co-operation. This law can only be instituted through the action of the workers. So long as workmen compete will labor be obtained at the lowest market price, and capital will absorb profits. The pressure of competition is forcing workers to combine in order to resist its further action. This is the first step toward industrial co-operation.

The very nature and soul of competition is to cut down and destroy the weaker and conserve the stronger, until a point is reached below which it cannot go.

Inasmuch as labor is to a great extent unorganized, inasmuch as the supply of labor in all the great industrial centres is greater than the demand, and inasmuch as the law of demand and supply governs the rate of wages, the terrible equilibrium is being reached below which human beings cannot go and live.

To arrest the action of this law of competition by the combination of the workers, and to insist that over and above wages there shall be participation in profits, and in order to secure this participation a restriction must be placed upon capital, is to bring in co-operation as a universal system, the law of the new civilization and the next stage of social evolution.

IMOGENE C. FALES.

GREAT MEN AND THEIR ANTECEDENTS.

It is often said, and with truth, that the greatness of a race is shown in its ability to produce a succession of great men gifted with power over their contemporaries, and thus competent to advance civilization from age to age and give a forward impulse to the world,—men of genius, capable of making new discoveries, or reaching the hearts and profoundly influencing the masses. Alexander, Cæsar, and Napoleon were alone competent to do the work which they did. Archimedes, Newton, Galileo, and Darwin were alone competent to make the epoch-making revelations which they made. And what an incalculable influence has been exerted in the domain of religion by Moses, Plato, Pythagoras, Buddha, Jesus, Paul, Augustine, Luther, Calvin, and the rest of that category! Without the inventive brains of Watt, Fulton, Stephenson, Howe, Fields, and Edison, would the face of the earth and the ocean wear the aspect that it wears to-day? It is no impiety to say that the heavens do indeed declare the glory of Copernicus and Galileo, of Newton and Laplace.

But great men are themselves natural products, the resultants of forces co-operating through ages to produce them. "If it be a fact that the great man may modify his nation in its structure and actions, it is also a fact that there must have been those antecedent modifications constituting national progress before he could have been evolved. Before he can remake his society, his society must make him. So that all those changes of which he is the proximate imitator have their chief causes in the generations he descended from. If there is to be anything like a real explanation of these changes, it must be sought in that aggregate of conditions out of which both he and they have arisen."

Supposing the birth of the great man does not depend on antecedents furnished by the society in which he appears,—a most absurd supposition,—what would he amount to without the institutions, language, arts, appliances, social arrangements, and all the material, mental, and moral accumulations which his society has inherited from its past? "Given a Shakspere, and what dramas could have been written without the multitudinous traditions of civilized life; without the various experience which, descending to him from the past, gave wealth to his thought, and without the language which a hundred generations had developed and enriched by use? Suppose a Watt, with all his inventive power, living in a tribe ignorant of iron, or in a tribe that could get only as much iron as a fire blown by hand-bellows will smelt; or suppose him born among ourselves before lathes existed,—what chance would there have been of the steam engine? Imagine a Laplace unaided by that slowly developed system of mathematics which we trace back to its beginnings among the Egyptians,—how far would he have got with the *Méchanique Céleste*? . . . Were any one to marvel over the potency of a grain of detonating powder, which explodes a cannon, propels the shell, and sinks a vessel hit,—were he to enlarge on the transcend-

Digitized by Google

ent virtues of this detonating powder not mentioning the ignited charge, the shell, the cannon, and all that enormous aggregate of appliances by which these have severally been produced, detonating powder included, we should not regard his interpretation as very natural. But it would fairly compare in rationality with this interpretati n of social phenomena which, dwelling on the important changes the great man works, ignores that vast pre-existing supply of latent power he unlocks, and that immeasurable accumulation of antecedents to which both he and his power are due."

ACCORDING to the daily press of the city, the anniversary meetings held this year were generally less successful in attendance and enthusiasm than in former years. This may be partly owing to the greater number of societies which now observe "Anniversary Week" as a season for reviewing their annual work, and imparting and receiving new inspiration for the work before them, thus dividing the former large audiences for a few associations into smaller ones for many branches of reformatory and religious work. Yet, to those who have attended several of the many anniversary meetings during the past week, it must seem that sufficient enthusiasm was manifested by the members of each society, and sufficient inspiration given for further good work through their reports and addresses to make it certain that most of the anniversary-observing associations had each, like beauty, "its own excuse for being." Among the anniversaries observed, we note briefly the following in the order in which they were held. The Associated New England and Massachusetts Woman Suffrage Societies convened Monday evening and all day Tuesday. Excellent addresses and reports were made to full houses by the following among other well-known speakers: Lucy Stone, H. B. Blackwell, Mrs. E. D. Cheney, Mary F. Eastman, M. J. Savage, Mrs. Livermore, Miss Emily J. Leonard, and Mrs. A. A. Claflin. The Ladies' Moral Reform Society held its anniversary meeting on Wednesday, and reports were made showing the usefulness of the work in the reform of fallen women. Mrs. C. F. Eastman, president, in the chair. The Unitarian Anniversary, commencing Tuesday evening and closing with a festival and supper on Thursday, brought together a goodly number of the best known ministers and laymen of that denomination, such as Rev. James Freeman Clarke, Rev. Robert Collyer, Rev. E. E. Hale, Rev. John W. Chadwick, Rev. A. P. Peabody, Rev. J. Ll. Jones, Hon. Carroll D. Wright, Hon. Leverett Saltonstall, Mayor Martin. On Thursday was held the anniversary of the Moral Educational Society, at which stirring addresses were made by Wm. Lloyd Garrison, C. W. Ernst, and Rev. Ada C. Bowles; and encouraging reports of the good done by the association were made by the president, Mrs. Kate Gannett Wells, and the secretary, Mrs. H. R. Shattuck. Thursday morning and afternoon, the Institute of Heredity celebrated its fourth annual meeting; and addresses were made by Hon. Daniel Needham, its president, Minot J. Savage, Rev. James K. Applebee, Mrs. Lydia Warner, Dr. E. V. Wright, and others. Singing by the Hutchinsons was a pleasant feature of these meetings. On Thursday P.M., at the anniversary exercises of the Ladies' Physiological Institute, the principal speakers were Dr. O'Leary, Minot J. Savage, Mary F. Eastman, Mrs. E. D. Cheney, Dr. Dudley A. Sargent, and Prof. C. W. Emerson.

MR. RUGGLES, New York State Superintendent of Public Instruction, upon an application by the Board of Education of a free school district in Rockland County, representing that the Board wished "to move unerringly but firmly in the matter of sustaining the reading of Scriptures and prayers as a part of the exercise in opening the daily sessions of our public schools," has decided that all religious instruction and exercises must be excluded from the schoolroom during school hours. The decision seems to be a great disappointment to the applicants, who stated to the Superintendent that the Board had "not required the children of non-Protestant families to participate in repeating Scripture or the Lord's Prayer, but have simply required them to behave with decorum," that a number of Catholic families had asked "that their children be allowed to remain outside until the devotional exercises are concluded," and that this "interference causes much disorder outside of the room, and the subsequent entrance of these pupils causes a loss of time and disturbance to class work." In his decision, the Superintendent says: "Under our public school system, within the legal limitations of age and residence, instruction is free. Material resources necessary for the maintenance of this immense and complicated system are drawn at large from a population characterized by dissimilar religious beliefs, observances, modes of worship, and preferences. With such a public furnishing of the money to support the schools, supplying them with the children in attendance, and having equal rights to the full and equal enjoyment of all the benefits of the schools, if it were possible to devise some limited measure of religious instruction for adoption in schools in which these diverse classes could harmonize, it would be a gratifying result. But this is manifestly impracticable and impossible. The only alternative, therefore, to preserve the benefits of the constitutional guaranties in letter and in spirit and to secure to all absolute equality of right in the matter of religious predilection, must be, however reluctantly the conclusion is arrived at, to exclude religious instruction and exercises from the public schools during school hours." Quotations are made to show that in separate and distinct appeals Scripture reading and prayers form no legitimate part of the business of the public schools.

THE Boston *Advertiser* cannot join in the denunciation of the Italian government for what has been characterized as spoliation in dealing with the Propaganda. The following is copied from an editorial article, in reply to a correspondent, which we find in that journal:—

The Propaganda is, indeed, an international institution, but in the same sense as the American Board of Foreign Missions. As the board is subject to American laws, so the Propaganda is subject to Italian laws. It is an afterthought that the Propaganda property has been confiscated. From 1874 to 1880, the Propaganda officials consenting, ninety-four estates of the congregation were converted into rents, which are not taxed and are controlled by the Propaganda. They produce a larger income than do American or English government bonds; and, if the Propaganda had so preferred, it could have received mortgages on real estate. The Italian government has no pecuniary interest in these sales, as its budgets show; and there is no evidence for the statement that the government "proposes to pocket about a third" of the Propaganda property, or its value. If the Italian government confiscated $100 not its own, a suit in the courts would offer immediate relief; for the Italian government can be sued in its own courts, not only by Italians, but also by American citizens. The conversion of the Propaganda estates into rents has increased rather than diminished the income of the congregation. The Villa Montarto, for instance, was estimated at $21,400, and sold for $65,400, counting five lire as one dollar. Out of ninety-four estates, sixty-two brought a higher price than the assessors' valuation; and the benefit of this goes to the Propaganda. Not only has no confiscation or spoliation occurred, but the wealth of the Propaganda has been enlarged by the conversion; and the legal rights of the Propaganda, both in temporal and spiritual matters, are intact. To charge the Italian government with confiscation or spoliation is a fancy like that of the late Pope, who used to call himself a prisoner in the Vatican. The decision of February 9 last simply decided that the Propaganda is, under the laws of Italy, a religious corporation, to which the laws of 1866, 1867, and 1873 apply. From 1874 to 1880, the Propaganda itself acted under these laws in co-operation with the officers of the Italian government.

AT the celebration of the five hundredth anniversary of the death of Wycliffe, at Exeter Hall, London, Lord Shaftesbury said:—

Of the three great reformers,—Wycliffe, Luther, and Tyndale,—Wycliffe was perhaps the greatest. This great Wycliffe movement will diffuse information and knowledge among the common people which hitherto only the learned have possessed. Wycliffe's correct title is the Morning Star of the Reformation. In translating the Holy Scriptures, Wycliffe was the first, the greatest, and the most direct reformer. England, after his time, was never again subject to the rule of the Pope. Wycliffe has been slandered: he has been called a worthless fellow, an apostate, a rascal. But these clouds of contumely are now vanishing, disclosing the brilliancy of the man's character and the nobleness of his heart. He is a standing proof that God has never left an age without a witness of himself. The people of England to-day owe Wycliffe a debt of gratitude which they can never repay. They can only show their thankful appreciation of his life and labors by testifying to the world of the work which he performed by cherishing his precepts, and by blessing God for the translation of the Scriptures which he made.

LEWIS MORRIS, the father of Gouverneur Morris, who, it will be remembered, was one of the committee of five who drafted the Constitution of the United States, as well as Minister to France and United States Senator, seems to have held the people of Connecticut in great contempt. In his will, which bears date of Nov. 19, 1760, occurs the following passage:—

It is my will that my son Gouverneur may have the best education that can be had in England and America; but my express will and directions are that he be never sent for that purpose to the colony of Connecticut, lest he shall imbibe in his youth that low craft and cunning so incident to the people of that country, which is so interwoven in their constitutions that their art cannot disguise it from the world, though many of them under the sanctified garb of religion have endeavored to impose themselves on the world as honest men.

THESE heroes are dead. They died for liberty: they died for us. They are at rest. They sleep in the land they made free, under the flag they rendered stainless, under the solemn pines, the sad hemlocks, the tearful willows, and the embracing vines. They sleep beneath the shadows of the clouds, careless alike of sunshine or of storm, each in the windowless palace of Rest. Earth may run red with other wars: they are at peace. In the midst of battle, in the roar of conflict, they found the serenity of death. I have one sentiment for soldiers living and dead,—cheers for the living, tears for the dead.—*Ingersoll.*

THE men whose minds move faster than their age,
And faster than society's dull flight,
Must bear the ribald railings and the rage
Of those who lag behind it. As the light
Plays on the horizon's verge before night
Can penetrate life's dark and murky stage;
As the tired hadgi, on his pilgrimage,
Hears, ere he sees, the fountain bubbling bright;
As the sweet smiles of infants promise youth,
And martyr sufferings herald sacred truth,—
So thought flung forward is the prophecy
Of truth's majestic march, and shows the way
Where future time shall lead the proud array
Of peace, of power, and love of liberty.

—*Sir John Bowring.*

The Index.

BOSTON, JUNE 5, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for MR. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

MYTHOLOGY AND RELIGION.

Address before the Young Men's Union of the Society for Ethical Culture, New York, March 25, 1884.

BY C. E. VREDENBURG, PRESIDENT.

(*Concluded from last week.*)

The story of the Christ is by no means peculiar to Christianity. It was told in different parts of the East centuries before Jesus of Nazareth was born. It enters either wholly or in part into the mytho-theological basis of an entire group of religious systems. In the Persian religion, we have it related of the divine being Mithra, who was born of a virgin in a cave on or about the 25th of December, grew to man's estate despite the conspiracy of the evil powers against him, was attended by twelve disciples, was finally killed and descended to the underworld, but rose again from the dead, ascended to heaven, and thereby became the redeemer of mankind. Mithra is spoken of as the Lamb of God who takes away the sin of the world. The religion of his followers contained the sacraments of baptism and the eucharist, and the doctrines of the fall of man, incarnation, atonement, and final resurrection.

Passing from Persia to India, the Christ myth recurs in the story of Krishna. Krishna, the Redeemer, the Son of God, was born of the holy virgin Devaki, who had been imprisoned in a tower by Kansa, the tyrant of Madura, from which situation she was rescued by divine agency after the birth of Krishna, and transported to the fields, where shepherds came and made adoration to the holy child. Kansa, the tyrant, fearing that Krishna would finally be the cause of his overthrow, but not being able to find him when he wished to put him to death, ordered a general massacre of all the children in the surrounding country. Krishna, however, miraculously escaped the fate intended for him, as well as the subsequent dangers and temptations to which he was exposed, and lived to become a miracle-worker and a teacher of righteousness. Finally, he was killed, and his body hung upon a tree, with the symbol of the cross suspended around his neck. When, however, his disciples came to remove the body, it was not to be found. He had risen from the dead and ascended into heaven, but he will come again in glory at the end of the world.

It would be merely repetition to give the stories of Osiris, of Adonis, and the rest, the accounts of whom reproduce, more or less completely, the same incidents. All these stories are hundreds, some of them, perhaps, thousands, of years older than Christianity; and yet their fundamental identity with the main incidents of the life of Jesus, as given in the New Testament and tradition, is at once apparent.

And, now, what is the meaning of this story, so often repeated, in so many widely separated localities? It is simply another, and the most complex, form assumed by the sun-myth. If we examine the details of it, one by one, we shall see this clearly. The solar divinity is always born within a day or two of December 25, or, in other words, just after the winter solstice, when the sun begins its journey northward. He is born of a virgin, and at night, and in a cave, stable, tower, or some other dark place, because in the middle of the night, at that time of the year, the zodiacal constellation which in every part of the old world is called the Virgin, or the Woman, is just emerging above the eastern horizon, where the sun will soon after appear. The festivals that are held to celebrate the birth of the solar divinity lose the greater part of their aptness in modern times. With comfortable houses to shelter us, fires to keep us warm, and lights to prolong the day, it is impossible for us to appreciate what the long dark nights and the cold of winter meant to the primitive man. Cold and darkness were real enemies to him, and the birth of the sun-god was the event of all others most worthy to be marked by demonstrations of unrestrained joy.

But, although the sun is born, winter still reigns; and the days increase in length slowly and imperceptibly at first. So the Christ, under whatever name he figures, is depicted as an infant in arms. Egyptian temples contained frescos of Isis holding the infant Horus, exactly resembling Christian figures of the Madonna, who, like Isis, was at first represented as veiled. This identity ceases to excite wonder, when it is considered that both the Egyptian and the Christian symbolism were impersonations of the same physical fact.

During this period of infancy, the powers of darkness and cold are seeking to destroy the newly born divinity, knowing that, if he lives, they themselves are doomed. Hence, we have the massacre of the Innocents in the stories of Krishna and Jesus. This is also one of the features of the solar myth retained in the account of Moses. In the Christian version, it is thrust in, in defiance of history, because the exigency of the myth requires it. The Herod of the Gospels is a mythical creation representing the anti-solar forces, and is identical with Kansa in the Hindu story or Laios in the myth of Oidipous. The Herod of history, on the contrary, appears to have been a very fair sort of prince, as princes went in those times, and certainly would not have dared to commit an act which would have subjected him as a Roman vassal to the severest punishment. But it is necessary that the sun-god shall have been in the most extreme peril and shall have escaped unscathed; hence, the slaughter of the Innocents.

Having passed this critical period, the sun grows apace, the power of light gradually subduing that of darkness as we progress toward the vernal equinox, when the strength of the combatants is equal. Now is to ensue the final struggle: the demons of cold will make their supreme effort. It appears for a time as if the solar hero had succumbed. The stormy season that usually sets in at the equinox causes the sun to disappear, and he is mourned as dead. The imagery under which the cold of winter is represented is always that of some sharp weapon. Adonis is killed by a boar's tusk, Krishna is wounded by an arrow, Jesus is pierced with a spear. The sun-god is now in the underworld, and his enemies enjoy a brief triumph. But they are speedily discomfited; and the lamentation of mankind gives place to joy when, the equinox being past, the god of light reappears. He has risen from the dead, death could not hold him; and he ascends to the highest point of heaven, redeeming the world from the bondage of darkness and cold, bringing back the summer, and giving life and happiness to all.

This, briefly told, is the meaning of the Christ myth. There are numerous minor points belonging to it, especially those that concern its relation to the equally wide-spread story of Paradise, upon which it is not necessary to dwell. Nor can I here touch upon the significance of the symbol of the cross, though it is a subject of the deepest interest. The curious fact may be noted in passing, however, that the crucifix, bearing an emaciated figure crowned with thorns, was, in ancient Egypt, a scientific instrument. A discussion of all the various side-issues of the main story would be almost interminable, and would be apart from my present purpose. It is sufficient to have indicated the principal features of the myth, which are common to all versions, leaving those characteristics of less present importance unconsidered.

We began by speaking of myths, in regard to which the appropriateness of our definition was clear. But, when we reach so involved an example as the Christ myth, its classification among primitive scientific theories is by no means so obvious. So thoroughly does the spirit of religion permeate the story as it comes to us, so completely is it clothed with the form of religious dogma, that it is only by the closest inspection that the skeleton of the original myth declares itself to our eyes. We have reached the point, therefore, when a consideration of our second topic, the connection between religion and mythology, naturally suggests itself. How is it that that which was in its inception associated with purely physical ideas has been preserved, and handed down to us, associated with moral ideas? The process by which this result has been reached is both curious and interesting. At first, as I have said, the moral element is absent from a mythical story, its significance being purely physical. But, from the peculiar nature of myths, they cannot long remain in this condition, if they are the property of a people who are intellectually advancing. The first step toward a more spiritual conception seems to have been taken by means of the practice of prayer. We must remember that to the original myth-maker there did not exist what theologians call a hypostatic distinction between the mythical impersonation and the object impersonated. Zeus was not the god of the sky, the sky itself was Zeus. Hermes was not the deity who had charge of the wind, he *was* the wind. The objects and forces of nature being thus thought

Digitized by Google

of as personal beings, possessed of a will like that of man, it was natural that petitions should be addressed to them, that their wrath should be deprecated, their favor implored. Supplications would be made to the storm-cloud, the sea, the wind, or the sun, in the same spirit that they would be made to a tribal chief, and with about the same amount of reverence. The sense of awe in the presence of the powers of nature is a product of culture. It exists, if at all, in a very limited degree in the primitive man, to whose mental vision the world appears upon a very much smaller scale than to him of later times, who has learned to distrust the immediate impressions of his senses. It was as natural to implore the lightning to spare his life as to beg the same boon from an offended chief. From such simple beginnings as these, all prayer takes its origin. The character of the benefits prayed for advances with the advancing intelligence and morality of the suppliants; but the act of prayer itself always presupposes a personality somewhere in nature, and this underlying idea is simply a survival of the mythical interpretation of nature.

In these early days of which I speak there was no separate class to whom was intrusted the making of intercession with the heavenly powers. Every man was then his own priest. The Aryan cottager each evening poured out his libation of soma-juice, and offered his prayer to Agni or Indra, for himself and his family. But there gradually arose a set of men who assumed these duties for the entire community. Various qualities might fit one to take his place in this favored caste. It might be that superior intelligence raised him above his fellows or that constitutional indolence unfitted him for more laborious work. But whatever may have been the immediate causes that led to the formation of a distinct priestly class, such a class did arise, and very soon came to be considered as enjoying in a marked degree the favor of the higher powers, which rendered intercession by a priest more effectual than if made by any other. This belief the priests would, from motives of self-interest, do all in their power to encourage, until at last they had interposed themselves completely between the people and the divine beings above them, until there could be no access to the latter except through priestly agency. About this time began th process known as the degradation of myths, by which is meant the gradual loss of their original meaning. As the experience of mankind widened, the more obvious phenomena of nature were o longer explained upon the theory of personality. But the priestly class—always interested for selfish reasons, in keeping things as they are, without advancing—tenaciously retained the old mythical stories. Hence it was that the deities came to be regarded as existing apart from the natural objects with which they were once identical, a transition which the personal form of the myths rendered perfectly easy. There was now a god ruling over the sea, another who resided in the sky, and so on. In this manner, the priests could maintain their own position, by clothing the old forms with new interpretations. It was the original conflict between religion and science, and it marked out the methods that have been employed ever since. But the inevitable result of this divergence between the myth and its original meaning was to cause the latter to become more and more obscure, until it was finally completely lost. The new meanings that were attached to the old stories often rendered it necessary to modify these materially. In some cases their heroes would be retained in the rank of gods, in others they would be reduced to that of men. The stories themselves would be recast, in order to adapt them to their new function of sacred history. Legendary accretions would gather about them, and local additions and changes would be made in different places. Often, parts of totally distinct myths would become interchanged, to the great perplexity of the modern student. Our mythological material, therefore, comes to us in this garbled, fragmentary condition, from the hands of men who were totally ignorant of the real primitive meaning of what they wrote. Every one has seen pictures painted on the inner surface of sea-shells, in which the artist has taken advantage of the colors of the shell, and used them in his work. Of a patch of blue he makes a sky; by skilfully introducing a few lines he makes the ridges of the surface look like mountains; and so, by putting in a touch here and there, and adding a few artificial features, he produces a landscape. The delusion is complete, and it requires close inspection to discover that what the artist has interpreted as sky and cloud and mountain is in itself simply the iridescence of a shell. Such a picture is a very fair emblem of the condition of mythology. We have to look below the surface of the legend to discern the myth upon which it is based, and often we find the strangest use made of mythical material. An amusing instance of this occurs in the story of the Tower of Babel, which deserves a moment's consideration. The word "Babel" means "God's gate," and was the name given to the immense temple of Bel at Babylon, the ruins of which still remain. The Hebrew writer who framed the story, however, erroneously derived the word from another of somewhat similar sound, which means "to confuse," and so supposed the name to signify "confusion." But what was the relevancy of such a name as that? An answer to this question was not long in presenting itself. The desire to account for the strange fact of the variety of human language suggested that at this place the original uniform speech of men had been confounded, and divided into separate tongues. But why should this have been done? At this point, and not before, the writer found a fugitive myth which could be used as a motive; and he at once adapted it to his purpose, and made his story complete. The builders of this structure, so vast that it excited the wonder of all beholders, had intended that it should reach to heaven itself. They advanced so rapidly with their work that Yahweh, after coming down to see the building, became alarmed lest they should succeed, and confused their speech in order to frustrate their design. For this reason, the building was called Babel. Let us examine the mythical element in this story a little more closely. The essential features of it are the piling up of something for the purpose of scaling heaven, the alarm of the celestial inhabitants, and the final bringing to naught of the attempt. In other versions of the myth, we find fuller details. In one, it is said that the winds aided the gods, and overthrew the tower. In the Greek, the builders are giants instead of men; and they heap Mount Ossa upon Mount Pelion, causing the gods to take to flight in dismay. Zeus at length rallies his courage, launches a thunderbolt at the giants, and destroys both them and their work. In the Teutonic form, it is a frost giant who offers to build a castle for the gods, upon consideration of being given the sun and moon, if he finishes it within a specified time. As the day draws near when the contract is to expire, the gods, in consternation, consult together how they may avoid losing the sun and moon. The result of their conference is the planning of a trick by which the giant is made to exceed his limit of time, whereupon Thor, the lightning-god, strikes him with the fatal hammer, and hurls him down to the ninth world.

As we thus trace the myth from one country to another, it becomes gradually clearer and more complete. The builders cease to be human and assume Titanic proportions, while the original means of punishment appears as a lightning stroke. In fact, we have in this story one of the many forms in which the myth of the thunder-storm recurs. The heaped-up mountains, the tower, the castle at Asgard, are the thunder-clouds; the builders are the demons of darkness and cold, to whom all antagonism to the forces of light is ascribed; the terror of the gods typifies the obscuring of the sky by the storm. In one Greek version, Zeus, the bright sky, takes refuge in Egypt, a rainless country. The meaning of the conclusion of the story is too obvious to need explanation. This myth our Hebrew author has appropriated, being entirely ignorant of its true character, changed the conclusion, and, in consequence of a philological error, located it at the temple of Bel, presenting us with the strange anomaly of the myth of the thunder-storm being used to explain the diversity of human speech. It is the landscape on the sea-shell once more.

In ways such as this, the mythical material has been worked over to suit the exigencies of instituted religion. But a far higher use has been made of some of the stories and impersonations of mythology than can be explained by the mere conservative impulse or by the desire to account for recondite facts. I mean the reading into these old sagas of a purely moral meaning, and their transfer from the physical to the ethical domain. It is this reinterpretation of the natural in terms of the spiritual that is the most significant fact in the checkered history of the myths. The facility with which the change is effected is often remarkable. The Greek Erinyes were once the impersonation of the dawn, the counterpart of the Vedic Saranyu. But, under the moral transformation, they became the avenging Furies, who bring to light the evil acts of men, as the dawn makes manifest the deeds of the night. The analogy is perfect. The physical meaning falls away, and the myth comes to signify that wickedness cannot escape retribution. So the fading away of summer and the advent of winter is made, in the Persian and Hebrew myth of Paradise, to explain the introduction of evil into the world and the grim facts of suffering and death. Light and darkness, contending as Ormuzd and Ahriman, signify the struggle between good and evil. The story of the sun, crystallizing about the exalted personality of Krishna or Jesus, conveys the sublime lessons of self-sacrifice and purity; while the last attenuation of the mythical conception, the idea of a personal God,—a personality driven from one embodiment after another, and floating formlessly in thought,—becomes synonymous with the ideal of moral perfection.

I do not wish to be understood as claiming that religion is a mere development of mythology. This position, which some have assumed, I hold to be absolutely false. I am not sketching the origin of religion at all: that is an entirely different matter. I am merely attempting to show the use which organized religion, in the course of its evolution, has made of the material transmitted to it from the myth-making age. The conservative priestly spirit led to the retention of these relics of a by-gone time; but it was another spirit, it was the moral impulse of mankind, priest and people alike, that breathed new life into them, that made them the medium through which higher truth was brought home to the hearts of men.

We are therefore warranted in asking our final question, Was such a use of myths justified? Was there a truth underlying the connection be-

Digitized by Google

tween mythology and religion which we would do well to heed?

At first sight, the data of mythology and the data of religion seem entirely unrelated. What resemblance is there between the physical fact of the daybreak and the moral precept that crime brings its punishment with it? How can we classify together such widely diverse things as the succession of day and night or summer and winter and the spiritual conflict between the forces of good and those of evil? Why does the progress of the sun from tropic to tropic suggest the redemption of man from the bondage of his lower nature and his ultimate perfectibility? How is it possible to deduce the idea of a spirit of truth from the summer breeze, or that of a moral government of the world from the storm-cloud or the outspread sky? The terms of the equation appear to bear no reference to one another: they are facts of quite different orders. And yet that there is a possible relation of analogy between them is demonstrated by the fact that they have been thus brought into such intimate association, and that the mind instinctively recognizes a latent resemblance between them. Is there, then, some point of contact between the material and the spiritual worlds, some centre of divergence at which the radiating lines of both intersect? If we can find such a point, the former incongruity will disappear, the translation of the physical into terms of the moral will lose its otherwise arbitrary character, and we shall have reached at least the threshold of a broader generalization, a higher analysis, which will include in its scope the data of science and of ethics alike. Let us, with this thought in mind, retrace our steps, in the hope that we may find a clew that will lead to the goal we seek. Turn, then, once more to the myth-maker of old. What is it that he really does, when he infuses a personal will into sky and sea, rock and river, storm-cloud and sunlight? The very idea of will is unknown and unthinkable, apart from the purely human will. It is a human will which he supposes to be working in the objects of nature around and above him,—a will transcending his own in power, it is true, but the same in kind. He knows and can know no other. He is like the traveller on the Brocken, who sees an image of tremendous magnitude projected against the mountain mist. It seems like some Titan, some being of another race, and yet it is only the shadow of the beholder himself: it is the distance and the background that make it look so vast. So did the man of olden time project an image of his inner self upon the physical world. Like the spectre of the Brocken, it was colossal in its proportions. It was the distance and the background that made it so, yet it was but a shadow. The bright light of a more perfect science dispelled the mist, the shadow faded away; but that which had cast the shadow still remained. It was the physical will of man.

When the moral nature of men had gained sufficient power to make its demands felt, when the superiority of the good began to be recognized, once again the human image was seen reflected from the surface of the universe. Now, however, it was the moral self that had stamped its likeness on the external world. It chose the old forms of expression; but it filled them out, and made them its own. That which had been before interpreted in terms of man's lower, animal nature was reinterpreted in terms of his higher, moral nature. It was still a human shadow, but it was a shadow this time of the conscience and the soul.

Here, then, we find the point of departure that we sought. It is in man that the spiritual and the material touch each other, it is in the human consciousness that the possibility exists of passing from the one to the other. External nature must be translated into the forms of that consciousness, in order to come within the range of human knowledge. It is the light from within the human soul that illumines the face of the universe, and comes back reflected from far and near. We discern a moral order in the directing forces of the world, because we see them irradiated by the brightness that streams from the moral nature of man. There was, then, a truth of the most profound significance, dimly recognized in the reconstruction of the obsolete conceptions of a mythical age, in accordance with the demand of man's religious impulse. Rather, it would be more correct to say that there was a necessity compelling such a reconstruction, though the principle involved might have eluded observation and analysis. Just as the solar hero existed because human heroism existed, so the Christ became possible, because the transcendent beauty of righteousness, purity, and self-sacrifice was deeply felt,—so God reigned in heaven, because there was a spark of divinity in the human soul. The highest philosophy can lead us no further than this. What that more subtle unity may be, wherein all discrepancy shall disappear, we cannot say. But it is something to have come thus far; it is something to stand before the citadel, though we may, perhaps, never gain an entrance. All that we need to attain we may attain: regarding what lies beyond, we are as helpless, as earth-bound, as the childlike myth-maker who told his quaint stories so long ago.

Looking at the problem from this point of view, it is clear that the symbolism under which religious thought has cloaked itself in the past is but an accessory, a non-essential to the central fact of religion itself. A time may come when it will be imperatively necessary to lay aside the one, in order that the other may have room for expansion, that it may no longer be cramped and confined by forms which it has outgrown. When that time does arrive, as it has already, it is all important to keep in mind the distinction. Once again the light of a more perfect knowledge is dispelling the mist, once again the pictures on that mist are seen to be but shadows, and like shadows are fading away. But the substance will remain, it will array itself in new forms as science has done before, it will seek and find a higher, a nobler expression than any it has yet attained. The twilight of the gods is but the prelude to a brighter and more glorious day. What the poet of olden time said of God and the works of nature may be applied with added force to the moral ideal and its material imagery: "They shall perish, but thou remainest; they shall all grow old as doth a garment; as a vesture shalt thou fold them up, and they shall be changed: but thou art the same, and thy years shall not fail."

They who discern this truth, and labor for the emancipation of the soul from the fetters of an outworn materialism, have no light task before them. The conservative spirit, as of old, will cling tenaciously to every relic of the past, will raise the cry of atheism and blasphemy against the reformer and the liberator. So it has ever been, so it will be now. Among the myths of Western Europe there is a story of an enchanted castle, in which an evil magician had ensnared many of the bravest knights of the kingdom. They wandered about within its walls, forgetful of their knighthood, powerless to pass the threshold of their prison. At length there came that way a champion, who determined to break the spell that bound them, and set them free. But, when he reached the gateway of the castle, and summoned the enchanter to yield, he was beset on all sides by armed men. They were the captives whom he had come to rescue and who saw in him only an enemy. To each of them, he appeared under some horrid aspect, some hideous form, such was the power of the enchantment. But the hero was undismayed: he persevered in spite of the odds against him, and at last succeeded in reversing the spell. That instant, everything was changed: the castle melted into air; and those who had sought the champion's life, restored to their right mind, crowded about him, and hailed him as their deliverer.

The application of this story is so plain that it does not need to be made. It is the history of the reformer in every age, the religious reformer above all. He, too, like the knight in the myth, will meet with bitter opposition from those for whose liberation he is striving; like him, he will appear to them only as an enemy; and, like him, at length, when the enchantment is broken and their eyes are opened, he will receive honor and gratitude from the hands that were once lifted to crush and destroy him.

And so our final question receives its answer. Not without, but within, must we seek the union of the physical and the spiritual, the temporal and the eternal. The human mind and the human soul have given us the problems over which we ponder: only by tracing them back to that source can we hope to find their solution. We may expand the celebrated aphorism of Protagoras, and say once more that man is the measure of all things. Man as he is, of the actual; man as he ought to be, of the possible and the ideal.

The voice of the myth-maker has long been silent. Its echoes reach our ears like whispers from some far-off ghost-land. But he will not have spoken in vain, if he makes us see the limitations of our knowledge, if he tells us of the first tottering footsteps of humanity on that pathway which, if faithfully followed, leads to the sublime heights of philosophy and religion.

HERBERT SPENCER, in the chapter on "The Domestic Relations" in *Principles of Sociology*, maintains that, while polygamy is adapted to certain low stages of social evolution, "it repeats within the household the barbarism characterizing the life outside the household." "In proportion," he says, "as war becomes less frequent, and in proportion as an increasing part of the male population is occupied in industry, the mortality of males diminishes and the spreading of monogamy is furthered. For polygyny now meets with positive resistance. Where there is an approximate balance of men and women, plurality of wives cannot prevail widely without leaving many men wifeless; and from them must come a public opinion adverse to polygyny, tending to restrain and diminish it." We quote one sentence in reference to the relations of the sexes in civilized societies as a deep source of æsthetic interest: "On recalling the many and keen pleasures derived from music, poetry, fiction, the drama, etc., and on remembering that their predominant theme is the passion of love, we shall see that to monogamy, which has developed this passion, we owe a large part of the gratifications which fill our leisure hours." Mr. Spencer, after considering the various forms of marriage that have prevailed in the ruder social conditions, says, "It is manifest that monogamy has long been growing innate in the civilized man; all the ideas and sentiments that have become associated with marriage having, as their necessary implication, the singleness of the union."

LET no man be disheartened, because he is misunderstood and abused: this has been true of greater men, stronger men, better men than you. —*Domestic Journal.*

REPORT OF THE ANNUAL MEETING

OF THE

FREE RELIGIOUS ASSOCIATION.

The Annual Meeting of the Free Religious Association for 1884 opened with a session for business, Thursday evening, May 29, in the Parker Memorial Hall, Boston. The President, Wm. J. Potter, occupied the chair, and in the enforced absence of the Secretary, Mr. F. M. Holland served as Secretary *pro tem.* The record of the last meeting was read by him, and approved.

The Treasurer, John C. Haynes, presented his report as follows:—

Report of Treasurer.

Receipts.

1883.		
May 31.	Balance on hand as per last year's report	$25.64
June 1.	Membership and patrons' fees, and donations collected at annual meeting and Festival	161.25
1884.		
May 29.	From sale of reports and tracts at office during year	16.64
" 29.	Membership and patrons' fees, and donations received during the year	609.48
" 26.	From Wm. J. Potter, the receipts of Convention at New Bedford, after paying expenses for speakers, advertising, etc.	50.90
	Total	$863.91

Disbursements.

1883.		
June 4.	Rent of Woman's Club Parlor	$2.00
" 11.	Rent of Horticultural Hall, for Festival	60.00
July 3.	Convention expenses for speakers, singers, etc	12.62
" 3.	Rent of Parker Memorial, for Convention meetings	50.00
" 7.	J. M. W. Yerrinton, for reporting	21.00
Aug. 7.	Proportion of expense in moving and fitting up new office on Boylston Street	20.44
1884.		
Jan. 25.	Rent of Woman's Club Parlor	2.00
Feb. 4.	Expenses of Chunder Sen Memorial Meeting	8.50
" 15.	J. M. W. Yerrinton, for reporting	10.00
May 17.	S. M. Twombly, for use of plants at last Festival	5.00
" 22.	F. A. Hinckley, Secretary's expenses for stamps, postals, telegrams, etc	7.30
" 22.	J. A. & R. A. Reid, for printing and envelopes	9.50
" 27.	Geo. H. Ellis, for printing one thousand tracts, "Sympathy of Religion"	26.50
" 29.	Rent of office thirteen months, to June 1, 1884	170.84
" 29.	Geo. H. Foster, thirteen months' salary for office work (in part *Index* work), to April 1, 1884	433.33
	Total	$839.03
	Balance on hand May 29, 1884	$24.88

JOHN C. HAYNES, *Treasurer.*

BOSTON, May 29, 1884.

Voted, That the report be accepted.

The report of the Executive Committee was then read by the Secretary *pro tem.*

REPORT OF THE EXECUTIVE COMMITTEE.

The year which closes with this annual meeting has been, on the whole, a somewhat disappointing one, in that it has witnessed a lessening rather than an increase of our work as an Association.

Surrender of the Paid Agency.

The annual meeting of 1882 adopted a definite plan of action for the Secretary, which looked to the gathering of statistics concerning Liberalism in its various forms; the making up of complete lists of the members and reliable friends of the Association; the acquiring of information concerning local liberal organizations; and the holding of conventions and lectures as a means of agitation. All this, in what it actually undertook, and still more in what it implied, necessitated a Paid Agency, which was accordingly established. Under the charge of this agency, a beginning was made in the proposed direction. An alphabetical list of members by States and also by towns was drawn up; a similar list of friends, not members, was made; the returns of twenty State correspondents were carefully tabulated; four conventions besides the annual meeting were held; and five addresses delivered by the Secretary at various points outside of his convention-speaking and work. All this was simply a hint of what, in the minds of some, appeared an essential task for the Association, looking toward a more persistent propagation of liberal ideas, and the establishment of centres of local influence in their name. None claimed that much had been done; but some thought it a beginning in the right direction, and one which should be followed up. The last annual meeting, however, revealed two things: 1st, that the exigencies of *The Index* were such as to require a special effort to raise funds in its behalf; 2d, that the agency plan had not aroused sufficient response in our ranks to make it other than a failure. Although it was provided by resolution that, next to *The Index*, whose maintenance all considered vital, the agency should receive the attention of your committee, those who had urged it most strenuously as a last attempt to develop the missionary spirit in Free Religion became satisfied that the thing could not be done, and the trial was accordingly abandoned. There has been, therefore, during the past year, no paid agency; and most of the work originally undertaken by it has been dropped.

Membership.

The list of members arranged by States and towns, and indexed for ready reference, has, however, been maintained. By it, it appears that the whole number of names on the books from the annual meeting in 1882 to the present time is 389. The membership at the time of the last annual meeting was 250, representing 16 States, from Maine to Kansas and the Dominion of Canada. Of these, 80 have renewed their memberships, and 170 have failed to renew. There have been added to the list during the year the names of 139 new members, making a total actual membership at the present time of 219, representing 20 States and Territories, the District of Columbia, Canada, Nova Scotia, England, New South Wales, and New Providence.

It should be said in relation to the large number of names which have dropped out of the list, that some of them represent persons warmly interested in the cause, persons who would probably be greatly surprised to learn that they had ceased to be members of the Association. If it were our custom to ask each person for a renewal of his membership instead of giving him the laboring oar in seeking or writing the Treasurer or Secretary, doubtless our roll would be much larger than it is.

The Raising of Funds.

In accordance with the vote of the last annual meeting, an appeal of a private nature was made to individuals of means for the fund needed to insure the continued publication of *The Index* for at least two years. This appeal was successful, as will appear from the report of *The Index* trustees. One of the two years, however, is already a thing of the past; and it will not be long before the other will have followed it. It is simply reading correctly the history of all radical movements to infer that constant and repeated efforts will be necessary in the future as in the past to keep this, the now central work of our movement, alive and on its feet. Immediately after the amount deemed necessary for *The Index* had been secured, a call was issued by the President and Secretary for funds for the general treasury of the Association. This was in December. The returns have not been sufficiently large to warrant the undertaking of any new work involving expense. Indeed, the feeling concerning the impracticability of trying to enlarge the operations of the Association is of itself sufficient explanation of the leanness of our treasury.

Publications.

Aside from *The Index*, we would here call attention also to a work that is going on, not extensively, but quietly and constantly, through the tract publications of the Association. We have now a series of seven tracts, which are valuable contributions on the subjects they treat; the seventh, which was added a year ago, being an address by John Fiske on "Evolution and Religion." Some of these are elaborate pamphlets. The two most steadily in demand are "Taxation of Church Property," by James Parton, and "The Sympathy of Religions," by T. W. Higginson. Of the latter, a new edition has just been printed. Two of these publications, "The Public School Question," in reference to sectarian influence, discussed by the Catholic Bishop McQuaid and Francis E. Abbot, and "How Shall we Keep Sunday?" written in four parts by Messrs. C. K. Whipple, M. J. Savage, Charles E. Pratt, and William C. Gannett, are as thorough a treatment of their respective topics as can be found anywhere. By a little more of systematic effort, the spread of these publications might be much increased.

Conventions.

There have been two Conventions held during the year, one at Providence, February 21 and 22, and one at New Bedford, April 29 and 30. Both were well attended and in every way successful. The Free Religious Society of Providence assumed all financial responsibility for the Convention in that city, and the friends in New Bedford voluntarily contributed more than enough to cover all expenses there. The speakers at Providence were Messrs. Potter, Slicer, Savage, Higginson, Spencer, Lynn, Robinson, Chadwick, Wendte, and Hinckley, and Mrs. Cheney. Those at New Bedford were Messrs. Savage, Potter, Robinson, Spencer, Underwood, and Hinckley, and Mrs. Cheney, Mrs. Diaz, and Miss Eastman. For want of funds, an invitation to hold a Convention at a more distant point was declined early in the season.

In addition to these Conventions there was held on Sunday evening, February 3, in Parker Memorial Hall, Boston, kindly tendered by the trustees for the occasion, a meeting in commemoration of the reformatory work of Keshub Chunder Sen and of the Brahmo Somaj of India. The speakers were Messrs. Potter, Higginson, Applebee, and Hale, and Mrs. Cheney and Mrs. Howe. Letters were received from Messrs. Phillips Brooks, M. J. Savage, Joseph T. Duryea, and Charles D. B. Mills. This meeting was a large one and proved an interesting occasion.

Death of Mr. Codman.

The Association met with an irreparable loss in the sad and sudden death of one of the Executive Committee and its Assistant Secretary, Mr. Charles H. Codman. He died September 18, from the effects of accidentally inhaling nitric acid the preceding day. What he was doing, what he would have done had he lived, for our movement, only those who knew him best realized. We miss him more and more as the months go by. He was so unostentatious and yet so thoroughly reliable in every emergency! The constant desire to do the right thing and to lend a helping hand; the unfailing service of great principles of justice and sobriety; the longing for a time when there shall be less of friction in the world, and men shall dwell together as brothers in unity,—these things constituted this man's worship and made him a place in everybody's heart. There was no qualification to his approval of Free Religion, and yet the Orthodox Church in his neighborhood passed resolutions recognizing in his death a public loss. It was because he lived the truth he professed. It was because Free Religion, in its best estate, became in him that

"One touch of nature [which] makes the whole world kin."

The Future of the Association.

For the first time in its history, the friends of the Association are probably agreed in assigning it a somewhat limited though still important sphere of work. The liberalizing process which has been going on, and is still going on, in all the sects, has rendered it plain beyond dispute that the union of freedom and religion is advancing in the Church of to-day. "To promote the practical interests of pure religion, to increase fellowship in the spirit, to encourage the scientific study of man's religious nature and history," are recognized objects of the most advanced thought and feeling in the old communions as well as in our own. Indeed, he must be an uncommonly critical man who can find much essential difference at the present time between what are known as the most Liberal Unitarian and the Free Religious Movements. Viewed from the constructive side, they are fast becoming, in spirit and purpose, practically one.

The question then arises, Has Free Religion as a separate movement said its last word, and is the occupation of the Free Religious Association gone? We do not think such a conclusion follows, and for two reasons: 1. Because Free Religion has been a pioneer force; and, though its work in this respect may now be shared by others, it is by no means done. It is a part of the great propulsion toward liberty, not one particle of which can be spared. 2. Because there is in every large community a class of vigorous, thoughtful, practical men and women to whom even the most liberal churches do not appeal, who will watch and largely follow the leadership of this movement. Among *them*, we have still a work to do.

Practically, this amounts at present to our maintenance of *The Index*, the holding of our annual

Digitized by Google

meeting in Boston, and an occasional convention for agitation in other places, if the condition of the treasury permits. That these objects are worthy our continued and united efforts no thoughtful student of the times can question. The hour has not yet come for dropping our word, in its distinctive form, from Anniversary Week; and, though *The Index* might live without us, it can live much better with us.

It may well be cause for congratulation, if we find ourselves standing less alone than in the years that are gone; and it certainly does not signify that there is no work to be done because there are more to do it.

Let, then, every new advance, wherever made, be to us a fresh inspiration; let the signs of human fellowship cropping out in all sects and systems fire us with a new enthusiasm, and "bind us with new strength to the old eternal duties."

Respectfully submitted in behalf of the Executive Committee.

F. A. HINCKLEY, *Secretary.*

The Report was accepted, and its subject-matter opened for discussion. No one seemed disposed to speak upon the matter, except that the question was raised why it should be the custom, as the Report had stated, not to notify members when their annual membership fees become due. The President said that in some years it had been done, and he knew of no reason why it should not always be done; and it was voted that hereafter such notification be given.

For the Trustees of *The Index*, Mr. Potter gave an encouraging account of the success of raising the Fund for the paper, which it was hoped might last longer than the time named in the Report. But he urged members to interest themselves personally in extending the circulation of the paper.

The Committee on nominating officers reported through B. F. Underwood, and the officers named were elected as follows: President, William J. Potter, New Bedford, Mass. Vice-Presidents, Octavius B. Frothingham, Boston, Mass.; Felix Adler, New York City; George W. Curtis, Staten Island, N.Y.; Edward L. Youmans, New York City; Frederick Schuenemann-Pott, San Francisco, Cal.; Thomas Wentworth Higginson, Cambridge, Mass.; Elizabeth B. Chace, Providence, R.I.; George Hoadley, Cincinnati, Ohio; Nathaniel Holmes, Cambridge, Mass.; Rowland G. Hazard, Peacedale, R.I.; Bernhard Felsenthal, Chicago, Ill.; Annie L. Diggs, Lawrence, Kansas. Secretary, Frederic A. Hinckley, Providence, R.I. Assistant-Secretary, F. M. Holland, Concord, Mass. Treasurer, John C. Haynes, 451 Washington Street, Boston, Mass. Directors, *Four Years:* Cornelius Wellington, Boston; Mrs. Rebecca N. Buffum, Melrose, Mass.; Wm. Lloyd Garrison, Boston. *Three Years:* Mrs. Clara M. Bisbee, Dorchester; J. A. J. Wilcox, Chelsea; Miss Abbie Buffum, Lynn. *Two Years:* B. A. Ballou, Providence, R.I.; Seth Hunt, Springfield; Mrs. Anna Garlin Spencer, Florence, Mass. *One Year:* Mrs. Ednah D. Cheney, Jamaica Plain, Mass.; Arthur G. Hill, Florence, Mass.; Richard P. Hallowell, Boston.

The Secretary then read a special communication, which had been referred from the Executive Committee to the meeting for consideration, concerning a plan for social instruction and entertainment. This evoked considerable discussion, participated in by Mrs. Bisbee, Mr. C. D. B. Mills, Mr. Underwood, Miss E. J. Leonard, Mr. Holland, and others. After some verbal amendment, the plan was adopted and referred back to the Executive Committee, with the recommendation that it be carried into effect in such way and to such extent as they may deem advisable. It is as follows:

Resolved, That, in order to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history, a series of four meetings shall be held in Boston under the auspices of this Association, and near the first of the approaching months, October, December, February, and April.

Resolved, That the programme for these meetings consist: first, of a simple repast, seven to eight P.M.; second, of a half-hour's dissertation, followed by five-minute addresses by chosen speakers, eight to nine P.M.; third, of informal conversation, nine to ten P.M.

Resolved, That, finally, if favorable to such a plan, the Association formally announce it at each one of its approaching anniversary services.

On motion of Mr. Holland, the following resolution was passed:—

Resolved, That the Executive Committee be recommended to labor in protecting witnesses in court from molestation on account of theological disbelief, as well as in otherwise secularizing the State.

A Finance Committee for all the sessions of the convention was named; and Mr. J. L. Whiting, Mrs. L. B. Sayles, and Mr. G. W. Stevens were appointed a committee to select a committee for nominating officers next year.

Adjourned at ten o'clock, to meet in Parker Memorial Hall at half-past ten Friday morning.

CORRESPONDENCE.

FIGURES AND FACTS.

Editors of The Index:—

It may seem almost like cruelty to demolish the new structure Mr. Potter has raised out of the remnants of a field which has been swept over by "an avalanche"; but I cannot allow in it any such statements as "that Mr. Kimball does not mean all he said about polygamy; that he was speaking in a figure, and not literally"; and that, "through a large part of his article, he spoke of polygamy without any of the modifying clauses he quotes." I did mean honestly and fairly all that I said about it. There is not the slightest intimation in my second article that I did not. And is it quite the proper thing to represent me as not meaning it, when all my language in defending what I said is directly the other way? I always mean a thing just as truly when using a figure of speech as when stating it literally. I have always supposed everybody else did the same; always supposed that such words as "the pen is mightier than the sword" are as exactly true as the words, the literary force and agencies of which the pen is a part are mightier than the military force and agencies of which the sword is the representative. And, if Mr. Potter, or any one else, acts, in writing, on a different principle, if he does not mean to have it understood that he speaks as truthfully in his figures of speech as in his literal statements, it would seem desirable to put up over his columns a permanent warning to that effect, and also some rule by which the one form of language is to be distinguished from the other.

But, avoiding for the present all figures of speech,—if such a thing is possible,—let me, in reply to his other statement, give simply the figures of arithmetic. Instead of its being true that through a large part of my first article I speak of polygamy as producing all the good things in Mormonism without any of the modifying clauses afterward quoted by me, the fact is I speak of it thus only twice in the whole article, in one case conditionally,—namely, "whatever virtues polygamy may show,"—and in the other negatively,—namely, "a polygamy which furnishes only two per cent. of the criminals in the penitentiary." On the other hand, as showing that it is to the Mormon religion as a whole that I refer, and not to polygamy alone as producing the good things testified to, I use such expressions as "the Mormons," "the Mormon people," "what the Mormons really are," "Utah," "the whole community of Mormons," "the Mormon question," "the Mormon population," "the Mormon Church," "the Mormon religion," and the like, *thirty-five* times, ten in my own brief remarks, and twenty-five in quotations from other writers. Moreover, I state explicitly that the testimony given shows, "not, indeed, that polygamy in itself and for the country at large is better than monogamy; for in itself and elsewhere it is not regarded as a religious principle,—a view which makes all the difference in the world,—but only that for Utah *and in connection with the Mormon religion* it is producing no such evils as to call for the interference of the general government"; and that, "if polygamy, *guarded and penetrated by the Mormon religion*, produces *as much happiness*, etc., as monogamy does,—not *all* the happiness, etc., in Utah,—then certain consequences follow, making it all conditional and comparative." And, in giving the testimony of the persons quoted to Mormon worth, I carefully speak of one writer as "*strongly against polygamy*," and of another as saying, "I came to the conclusion that, *apart from polygamy*, there is much in the Mormon organization to admire." Now, in view of these many places where Mormonism as a whole is plainly meant, and of the others in which the special phrase used is carefully guarded, is it right to say that "through a large part of my article I spoke of polygamy without any of the modifying clauses quoted"? Is there any poetic license ever allowed even to a school-boy's imagination by which *two* can be made a *large* part of *thirty-seven*? And, in the assertion to that effect, is it not Mr. Potter's "zeal," rather than mine, which "has carried him away"?

I will not go over all the other points taken up by my friend, as a careful examination of what I really said will be on these, equally with the others, my best vindication. But I must dwell for a moment on one bit of fresh matter introduced in his remarks, that about the principle of "invoking civil law to protect people in their just rights from the oppressions of religious authority." What does this mean? Is there the slightest evidence of any such oppression in Utah on the part of the Mormons? And, if so, has any one ever denied the principle of invoking the civil law to protect the oppressed? As the case really stands, is it not the wolf invoking the help of the civil law to protect him from the ravages of the lamb? The eleventh article of the Mormon creed reads: "*We claim the privilege of worshipping Almighty God according to the dictates of our own consciences, and allow all men the same privilege, let them worship how, where, or what they may.*" Is that oppression? Is it not rather the very life principle of free religion? Even with regard to their institution of polygamy, no one is compelled to it against his own will. Nine-tenths of them never choose it; and the whole question at issue is as to whether the compulsion shall not be the other way and on the part of the United States. It is amazing to find *The Index* assuming that a religious system, believed in and adopted by more than a hundred thousand people, men and women, all invested with the ballot, except so far as deprived of it by the general government, is an oppression, and that it must be judged and dealt with on a principle widely different from that used in reference to all ancient and foreign religions. It illustrates how hard it is for any of us to be tolerant and liberal all around,—illustrates the shrewdness and perhaps satire of the divine command, "Thou shalt love thy *neighbor* as thyself." Why should not Free Religion put Mormonism on the same basis as all other beliefs? Why not accept with regard to it, as it does with regard to all the others, Max Müller's *dictum* that there "never was a really false religion"? It is what I have tried to do. This past winter I have been giving a course of lectures on "Other Religions than Ours," aiming to take up the so-called heathen faiths as a scientist does the various forms of animal life,—not to ridicule or denounce any of them, but to get at and emphasize their essential truth and value as real and honest steps in the world's religious progress; and all my "zeal" with regard to Mormonism has been to study it in precisely the same way, and to apply to it precisely the same fairness. Ought I not, in doing so, to have had the approbation of *The Index* rather than its reprobation?

JOHN C. KIMBALL.

P.S.—Not to have this letter taken up too much with merely personal issues, let me add in full the Mormon creed alluded to above,—a document often denounced, but seldom published. As will be seen, it combines in a remarkable degree the doctrines both of Orthodoxy and of Liberalism; is really broader and better than nine-tenths of all the other creeds in Christendom, not excepting the last one of Orthodoxy; and the wonder is how anything so utterly innocent and sweet-spirited could ever have excited in both of its progenitors such bitter hatred.

Articles of Faith of the Church of the Latter Day Saints.

1. We believe in God the Eternal Father, and in his Son Jesus Christ, and in the Holy Ghost.

Digitized by Google

2. We believe that men will be punished for their own sins, and not for Adam's transgression.

3. We believe that through the atonement of Christ all mankind may be saved by obedience to the laws and ordinances of the gospel.

4. We believe that these ordinances are: first, faith in the Lord Jesus Christ; second, repentance; third, baptism by immersion for the remission of sins; fourth, laying on of hands for the gift of the Holy Ghost.

5. We believe that a man must be called of God by prophecy and by the laying on of hands by those who are in authority, to preach the gospel and administer in the ordinances thereof.

6. We believe in the same organization that existed in the primitive Church; namely, apostles, prophets, pastors, teachers, evangelists, etc.

7. We believe in the gift of tongues, prophecy, revelation, visions, healing, interpretation of tongues, etc.

8. We believe the Bible to be the Word of God, as far as it is translated correctly. We also believe the Book of Mormon to be the Word of God.

9. We believe all that God has revealed, all that he does now reveal. And we believe that he will yet reveal many great and important things pertaining to the kingdom of God.

10. We believe in the literal gathering of Israel and in the restoration of the ten tribes; that Zion will be built upon this continent; that Christ will reign personally upon the earth; and that the earth will be renewed and receive its paradisaic glory.

11. We claim the privilege of worshipping Almighty God according to the dictates of our own consciences, and allow all men the same privilege, let them worship how, where, or what they may.

12. We believe in being subject to kings, presidents, rulers, and magistrates, in obeying, honoring, and sustaining the law.

13. We believe in being honest, true, chaste, benevolent, virtuous, and in doing good to all men: indeed, we may say that we follow the admonition of Paul,—We believe all things, we hope all things, we have endured many things, and hope to be able to endure all things. If there is anything virtuous, lovely, or of good report, or praiseworthy, we seek after these things.

[(1) We had not the slightest thought of imputing any insincerity to Mr. Kimball, but supposed that we were only restating in essence his own explanation that, where he used the word "polygamy," it was not always polygamy that he meant, but Mormonism. (2) As to the count, we presume it is entirely accurate. We were speaking, however, of Mr. Kimball's part of the article, and not of his quotations. Moreover, we are accustomed to judge the force of words, not by the number of times they may occur in a paragraph, but by the general weight they give to a paragraph; and, so judging, it seemed to us that Mr. Kimball was led in his own two or three paragraphs to an illogical exoneration of polygamy. (3) We speak of the "oppressions of religious authority" in connection with Mormonism, as we do in connection with Catholicism. The milder type does not change the essence. "Free Religion" does put Mormonism on the same basis as other beliefs. But when any belief, in the name of religious authority, commits such acts as widow-burning or human sacrifices or the bloody tortures of the Penitentes, or such a crime against the nature of woman and the equality of the sexes as is polygamy, what is "Free Religion" good for, if it does not then make an appeal for humanity and moral right against the claims of religious authority?—W. J. P.]

OUR recent article on "The 'New Deal' Proposed," in approval of which we have received many letters from prominent Liberals from Massachusetts to Minnesota, seems to have excited the ire of the Secretary of the National Liberal League, who indulges in abuse and vituperation too silly to disturb us, and falsehood too palpable to call for reply. We care to notice that portion of his comments only which may convey to those unacquainted with the early history of the National Liberal League a wrong impression as to the date and authorship of the movement for the repeal of the postal laws of 1873 against obscenity, which resulted in a division of the League. The Secretary of the National Liberal League says that the resolutions were originally introduced by us, at which time "everybody accepted them, and the movers and projectors themselves deemed them all right," and that they afterwards "adopted the very Comstock and his law which they had denounced two years before, and went to Syracuse brazenly demanding to be re-elected to their official positions in the League." The writer of this paragraph never wanted an office in the League, and can prove by living witnesses that he declined to accept a nomination for the presidency, when asked whether he would accept it by prominent representatives of both factions. The resolutions introduced by us and adopted by the Liberal League at Philadelphia, in 1876, were as follows:—

Resolved, That this League, while it recognizes the great importance and the absolute necessity of guarding by proper legislation against obscene and indecent publications, whatever sect, party, order, or class such publications claim to favor, disapproves and protests against all laws which, by reason of indefiniteness or ambiguity, shall permit the prosecution and punishment of honest and conscientious men for presenting to the public what they deem essential to the public welfare, when the views thus presented do not violate in thought or language the acknowledged rules of decency; and that we demand that all laws against obscenity and indecency shall be so clear and explicit that none but actual offenders against the recognized principles of purity shall be liable to suffer therefrom.

Resolved, That we cannot but regard the appointment and authorization by the government of a single individual to inspect our mails, with power to exclude therefrom whatever he deems objectionable, as a delegation of authority dangerous to public and personal liberty, and utterly inconsistent with the genius of free institutions.

The only comment we desire to make on the above resolutions in connection with the statements of the Secretary of the National Liberal League are contained in the following extract from our speech at the Congress of the Liberal League, held at Syracuse, Oct. 27, 1878: "From the first, I have insisted that the question as to the constitutionality of the law of 1873 is a question with which the Liberal League has nothing to do; and the difference of opinion on this subject has been given a prominence to which in this body it is not entitled. Because there were reasons for believing that persons had been unjustly convicted of circulating obscene literature, owing to the loose and defective character of the law under which they were tried, the National Liberal League at Philadelphia, in 1876, passed a resolution demanding, in the interests of justice, that all laws against obscenity should be so clear and definite as to allow only the conviction and punishment of guilty persons; and, lest the resolution should be uncharitably construed by anybody to intimate sympathy with any who were engaged in circulating moral filth, it added that it was in favor of proper legislation against obscene literature. That resolution was, I believe, right and timely. Both the contending parties can concur in it now. It was simply a protest against what seemed to be a wrong to individuals in consequence of *loose* legislation. In no way did *that* resolution lead to the discussion that has been going on respecting the Comstock law or the scenes we have witnessed at the sessions of this congress." The resolutions quoted were, we still think, "right and timely" and no act or word of ours has been inconsistent with them.

BOOK NOTICES.

GRUNDZUEGE DER MORAL. Von Dr. Georg von Gizycki. Leipzig: Wilhelm Friedrich. pp. 140.

This handsomely printed pamphlet on the outlines of ethics has received a prize from the Verein-Lessing of Berlin, the committee consisting of Herman Grimm, Edward Lasker, and William Scherer. The author, a member of the university staff, begins by showing how completely independent morality is of religion. He next remarks that various nations and ages have differed too much about what is right and what is wrong to justify the theory that any such knowledge is given us by intuition or instinct, though this disagreement is not so great as to prevent general recognition of some fundamental principles, which become more and more firmly established as humanity moves onward. The distinction of right from wrong is not merely a matter of opinion, but has its origin in the essential characteristics of human actions and thoughts. Men agree to call those actions right which are generally beneficial, while actions known to do harm are pronounced wrong by everybody. Actual usage of the words "right" and "wrong" shows that the true moral standard is tendency to increase or diminish the happiness, not only of the agent, but of the whole community. Benefiting one's self at the expense of one's neighbors is not considered virtuous. All men agree to recognize a moral standard which is above either scepticism or egoism. Thus, the moral laws rest on plain facts whose existence is proved by our habits of thought and speech. On this solid basis are established the great duties to ourselves and our neighbors. Prominent in the latter class are justice, fidelity, truthfulness, and benevolence. The sanctity of marriage is asserted earnestly. The high place given to justice is one of the features of this little book, which is thoroughly practical and comprehensible, and admirably fitted for use as a text book, especially in an ethical society.

ILLUSIONS: A Psychological Study. By James Sully. Complete in two parts. Part first. Price 15 cents. New York: J. Fitzgerald, publisher, 20 Lafayette Place.

The aberrations of the mind always possess a very deep interest, whether they assume the form of insanity or only indicate a departure more or less wide from the assumed normal mental constitution. The present work is strictly popular in its character, and gives a very clear insight into the curious phenomena which occupy the disputed borderland lying between entire sanity of mind and insanity. Illusions of the senses and the illusions of dreaming are here traced to their physiological causes, and many of their most difficult problems solved. The many narratives of singular cases of illusion contained in this book, while strictly authentic, are "stranger than fiction."

THE *Popular Science Monthly* for June, which is a very interesting and instructive number, contains a second paper from Herbert Spencer on "The Sins of Legislators," which treats of the kind of mental training the law-maker should have both to act upon social questions and to let them alone. "Evolution and Dissolution of the Nervous System," by Dr. J. Hughlings Jackson, presents some rather novel physiological views, which are discussed elaborately by the editor of the *Monthly*, while an allied subject is considered by Walter H. Walshe, M.D., in an article entitled "Physiology and Metaphysics." The other articles are: "The Pole and Wire Evil," by Oliver E. Lyman; "Stethoscopy," by Samuel Hart, M.D. (illustrated); "Coal and the Coal-tar Colors," by M. Denys Cochin; "The Chemistry of Cookery," by W. Mattieu Williams; "Ensilage and Fermentation," by Manly Miles, M.D.; "Geography and the Railroads," by Dr. J. Jastrow; "The Life-work of Pasteur," by his son-in-law; "Clean Drinking-water," by Edwin J. Howe, M.D.; "Physiology *versus* Metaphysics," by Dr. Walter H. Walshe; "Prof. Dvorák's Sound-mills" (illustrated); "Arnold Henry Guyot," by Prof. W. B. Scott (with portrait); "Editor's Table"; "The Progress of Mental Science"; "A Model Benefaction."

IN the June number of the *North American Review*, Prof. Henry Wade Rogers, in the opening article on "Harboring Conspiracy," examines in the light of International law, the Constitution, and diplomatic history of the United States, the question how far our government may and must go in suppressing plots against governments with which we are at peace. Henry D. Lloyd, in the same number of the *Review*, shows how every branch of production is coming under the control of "Lords of Industry," corporations and monopolies. Elizabeth Stuart Phelps has an article marked by rare philosophic force upon the "Struggle for Immortality." Other articles of not less importance are: "Sociological Fallacies," by Prof. W. G. Sumner; "The Rise and Fall of Authority," by President J. C. Welling; "Walt Whitman," by Walker Kennedy; and a symposium on "Expert Testimony," by Rossiter Johnson, Dr. W. W. Godding, T. O'Conor Sloane, and Dr. Charles L. Dana.

F. S. CHURCH'S picture, "Retaliation," which attracted so much attention at the recent Academy Exhibition in New York, has been purchased by Mr. Prang, with a view to its reproduction by lithography. It represents Cupid caged, at the mercy of one of his many victims, who stirs him up with evident zest and amusement. The coloring is good, and the execution an advance upon former productions of the artist.

GUIZOT'S

HISTORY OF

FRANCE.

From the Earliest Times to 1848. Eight volumes, small octavo, large type, over 400 fine illustrations. Price reduced from nearly $50 to only $6.00 per set. *Volumes I. and II. now ready; others at intervals of ten days.* Sample volume sent postpaid, with privilege to return, 65 cents.

"This is another wonder of the publishing business. It is well printed, substantially bound, and abundantly illustrated with spirited pictures. The price is astonishing. Guizot was a writer too well known to need praise from us."—*Episcopal Recorder*, Philadelphia, Pa.

"The marvellous cheapness of these profusely illustrated and handsomely bound volumes must provoke comment everywhere."—*Journal*, Indianapolis.

"The only really good and complete history of France ever written."—*Christian Leader*, Boston.

SEVEN GREAT

MONARCHIES of the Ancient Eastern World. By GEORGE RAWLINSON. Best American edition. Complete in three volumes of over 2,000 pages, and over 700 illustrations and maps. Price reduced from $18 to $2.40. *Now ready.*

"Its position is well established as one of the greatest of modern histories, a monument to the erudition and capacity for work possessed by its author. The edition is in every way a satisfactory one, while its cheapness is something marvellous."—*Episcopal Recorder*, Philadelphia.

"It is amazing to see what valuable books he is now publishing at prices which are within the reach of the poorest. The best work he has yet done is that great and notable work by Prof. Rawlinson."—*Golden Rule*, Boston, Mass.

"It is, of course, the publisher's risk, and not the purchaser's, when a book like this is offered for the price of this one. We can only hope and believe, since he knows what he is about, that the publisher will get his money back."—*Standard*, Chicago, Ill.

500,000 VOLUMES Choice Books. 100-page catalogue free. Books for examination before payment on evidence of good faith. *NOT* sold by dealers: prices too low. By mail 20 per cent. extra.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

WONDER-BOOK

of HISTORY—Illustrated.

A SURPRISE even for the old steadfast friends and champions of *The Literary Revolution*, and a delightful "*chunk*" of literary "*dynamite*" for the foes of choice books for the millions. "*WHAT IS IT?*" A new, enlarged, beautifully *ILLUSTRATED*, and *RICHLY BOUND* edition of my heretofore published Historical Wonder-Book, which contains, *UNABRIDGED:*

GREEN'S Larger HISTORY of the ENGLISH PEOPLE.

CARLYLE'S HISTORY of the FRENCH REVOLUTION.

CREASY'S Fifteen DECISIVE BATTLES of the WORLD.

SCHILLER'S HISTORY of the THIRTY YEARS' WAR.

HERETOFORE, it has been a "'Wonder-Book' in the amount and (literary) quality of its contents,—the cheapest well-made historical volume ever published." *NOW*, it is that, and more: very large and valuable indexes have been added to each of the four works; heavier and better paper is used in printing, and the printing is greatly improved in quality; nearly a hundred *ILLUSTRATIONS*, by famous artists, have been added; the *BINDING* is so unique, striking, and appropriate as to be considered almost "*an inspiration*"—whoso sees the cover will be tempted to think he has found the *gate* to the "royal road to learning," and will surely open and look within. "*WHAT IS THE COST?*" Amazing as it may seem, *TO YOU* the price is only *$2.50* per copy; and, even beyond this, the most extraordinary inducements are offered to energetic **AGENTS** who will thoroughly canvass the *exclusive* territory assigned to them. My object is to make this work the means of advertising and introducing my numerous other books, which are not sold by agents or the trade, but to buyers direct only. To secure *your choice of territory* (and exclusive agency), whether village, township, or county, write *immediately*, stating your experience, what you want, and what you will undertake to do.

500,000 VOLUMES Choice Books,—100-page catalogue free. Books for examination before payment, on evidence of good faith. *NOT* sold by dealers: prices too low. By mail 20 per cent. extra.

P.O. Box 1227. 393 Pearl St., New York.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c. per line.
" 13 " 25	" . . .	8c. " "
" 26 " 51	" . . .	6c. " "
" 52	" . . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

GOV. CLEVELAND, of New York, has signed a bill which prohibits the open exhibition on newsstands and in shop windows of papers of the class of the *Police Gazette*, which owe their sale largely to the manner in which their pictorial illustrations are displayed in conspicuous places.

ON the 2d inst., the anniversary of the death of Garibaldi was commemorated throughout Italy. Statues of the dead hero were unveiled in various parts of the country; and, in Rome, a large procession of anti-clericals marched to the capitol, and laid wreaths of flowers upon his bust.

THE Chief Justice of Washington Territory, in opening his term recently at Tacoma with a grand jury made up equally of men and women, said that he had held six terms of court in which women served on both grand and petit juries, and that no juries in the Territory had ever performed their duty with more promptness and good sense than these.

COUNT GOBLET D'ALVIELLA has been hard at work in the Belgian legislature, exposing the illegal artifices by which convents and monasteries continue to acquire property. Perjury in court has been formally sanctioned by high ecclesiastical authority in order to cover up the pious fraud by which individuals pretend to be actual owners of real estate, when they are only trustees employed by religious organizations to help them violate the laws.

THE London *Inquirer* thinks the English blasphemy laws "require considerable modification," and that it "would be well if a society like the British and Foreign Unitarian Association, which has no sympathy whatever with atheism, and can command the services of accomplished lawyers, would take the lead in bringing about a reform. We are glad to notice that the Council of the Association, at its recent meeting, instructed the Executive Committee to inquire into the operation of the laws against blasphemy as affecting the rights of free thought and its expression on religious matters."

A RECENT number of the *Freidenker* says that at the third annual convention of the German League of Free Thinkers, which opened at Mannheim, April 27, with the President, Büchner, in the chair, it was announced that, out of eight hundred nominal members, only four hundred and nineteen had kept up their dues. During the past year, eleven hundred and thirteen persons had corresponded with the Secretary about the objects of this Association, but only one hundred and thirty-four had joined it. Some of the rest offered to do so, if lucrative places could be given them. Others were afraid of not being able to get their children properly educated, or of not themselves receiving honorable burial, or of offending their employers and wealthy relatives, or of making discord in their own households. In short, there seems to be substantially the same call for self-sacrifice in Germany as in America. So long as any one is afraid to join such associations, they have still a vitally necessary work to do in establishing liberty of thought.

WE mentioned last week the decision of Mr. Ruggles, New York State Superintendent of Public Instruction, that all religious instruction and exercises must be excluded from the school room during school hours. This decision was made upon the application of a school board that stated a number of Catholic families had asked "that their children be allowed to remain outside until the devotional exercises are concluded," and that this "interference causes much disorder outside of the room, and the subsequent entrance of these pupils causes a loss of time and disturbance to class work." The following paragraph from the *Catholic Examiner* shows that the efforts of the New York authorities to make the public schools acceptable to Catholics are not very successful: "State Superintendent Ruggles has decided that the only proper course for the school authorities to pursue is to exclude all religious teaching, whether Protestant or Catholic, from our schools. From this, we infer that Mr. Ruggles has drunk of the teachings of Paul Bert deep and to some purpose. Even Protestants will now admit the schools to be godless." Evidently, the *Examiner* desires the public schools to be neither "Protestant" nor "godless," but Catholic.

THE *Christian Register* asks whether the Free Religious Association, though it "exerted a needed influence in the early days of its history," has not accomplished its mission. The *Register* answers its question in the affirmative, and gives as one of its reasons for so answering that "Unitarianism furnishes a platform as free as that of the Free Religious Association itself." There has been great advance, we readily admit, among Unitarians in respect to freedom of thought since the Free Religious Association was organized; but the special cause which led to that organization—the theological preamble to the constitution of the National Unitarian Conference—still exists. Unitarianism, as expressed in some of its individual utterances, and in the articles of organization of some of its individual societies, furnishes indeed all possible freedom; but, in the forefront of the constitution of this great representative body, the National Conference, Unitarianism adheres to certain theological dogmas. Even then, though the Free Religious Association had no other reason for existence—a question we need not here raise—than to lead the march of Unitarianism toward perfect liberty, its work will not be finished until the National Conference expunges that creed from its platform.

THE *Radical Review*, one of the ablest and fairest liberal journals in this country, places us under obligation for its correction of an allusion by one of its contributors to the position of *The Index* on a subject concerning which the leaders of the National Liberal League, through such publications as they can command, persistently and, we believe, purposely misrepresent this journal. We quote from the paragraph in the *Review* referred to: "But, while they oppose 'Comstockism,' the editors of *The Index* believe in the necessity of United States laws for the suppression of obscenity, while the opinion of the present managers of the National Liberal League is that the States as such should be left to deal with obscenity. *The Index* holds that the 'repeal' as well as the 'modification' of the national obscenity laws is a matter aside from the original purpose of the National Liberal League, which is the secularization of the State; and, since this organization has placed itself on record as in favor of the repeal of the national obscenity laws, *The Index* declines to cooperate with it. The *Review* has no faith in national laws against obscenity, but is inclined to agree with *The Index* that the National Liberal League ought to have contented itself with condemning the misapplication of the present law by Anthony Comstock, in the precited cases, instead of committing itself in favor of its repeal, and thus crippling its power for State secularization."

THOSE Republicans who had hoped to see nominated at Chicago last week men representing the progressive element in their party, men at least in favor of revenue reform and civil service reform, cannot derive much comfort from the nomination of James G. Blaine and John A. Logan. The former is an able and adroit political leader, with, we regret to say, a cloud upon his integrity; and the latter is a man of force, who during our civil war distinguished himself as a fighting general, and who is an honest man of narrow views. But neither represents anything higher than the old party methods and purposes, and neither has any sympathy with the reform sentiment of his party. It is not too much to say that the choice of the Chicago Convention was a most unwise one, because, if for no other reason, it was in defiance of the convictions and the conscience of the large minority of the party that objected to Mr. Blaine, because they believed he represented all that is evil and corrupt in party politics. Thousands of Republicans will now feel the deepest interest in the nomination of the Democratic party, with but little hope perhaps that it will be one they can honestly support; while others are already considering the advisability of forming an independent party. Of course, a large number who regard Blaine as personally objectionable will nevertheless support him, in the belief that previous party associations impose upon them the duty of standing by the nominee of their party; while multitudes will vote for him with the fullest confidence in his entire fitness for the highest office in the gift of the American people.

The Index.

BOSTON, JUNE 12, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

REPORT OF ANNUAL MEETING

OF THE

FREE RELIGIOUS ASSOCIATION.

FRIDAY A.M. SESSION, MAY 30.

The Convention was called to order by the President, Mr. Potter, at 10.40 A.M. There was a good attendance present, and the exercises began with the following introductory address:—

Address of the President, Wm. J. Potter.

Ladies and Gentlemen,—Again, I have the honor of presiding over this Convention of the Free Religious Association,—its seventeenth Annual Convention. And, in the revolution of the years, again it is our turn to meet on Decoration Day,—a circumstance which somewhat interferes with the attendance at our meetings, but which adds also a tender interest to our proceedings. We, too, have our soldiers. As it has been my privilege to face this Convention from the platform either as Secretary or President for these seventeen years, some of your faces have become very familiar to me, even though I may not always know the names that belong to them. And I miss, too, some of these familiar faces from our ranks. Year by year, they silently drop away, not a few of them for the silent land of death. We, too, have our *fallen* soldiers; and we would reverently place upon their graves to-day the flowers of grateful memory.

But we must not and do not begin this day's meetings with a note of sadness. As soldiers on the field of battle, though their comrades fall from their side, close up their thinned ranks, and march on again, shoulder to shoulder, to do the needed work of the hour, so would we not forget to-day's duties nor miss to-day's hope and courage in vain lamentations, but rather, by our faith and our zeal, win the fresh recruits that shall fill the vacant places and help our movement on to its victory. We expect in this Convention to listen to high thoughts and to hear the clarion voice of summons to noble deeds.

This year, as in previous years, our platform is a broad one. Neither in the membership of the Association nor in regard to speakers at its Conventions is there any discrimination on account of modes of belief or systems of philosophy. Evangelical Protestant, radical Protestant, Catholic, Jew and Gentile, believers in churches and come-outers from all churches, Materialist and Spiritualist, Agnostic and Gnostic, Intuitionalist and Experientialist, Theist and Atheist, have all spoken with equal freedom on the platform of the Free Religious Association.

"Ah, yes," says perhaps a critic, "I see. The Association is a free platform, where every sort of opinion can be uttered; but it has no opinions nor convictions of its own. It is merely a parliament of free discussion, but in itself it has no views; or it says one view, one form of belief, is as good as another. It is a *know-nothing* organization, and a know-nothing organization is practically a *do-nothing* organization." No, my friend, I reply, you *don't see*, if that is all you think you see. And this touches the one point which I wish to emphasize in my brief introductory word this morning. The Free Religious Association stands for a great deal more than a platform for free discussion, though it does stand for that; and even that is much. But there might be a meeting where there should be equal freedom and courtesy of discussion among the speakers, and yet the basic principle of the Free Religious Association might not be touched or recognized there in the least degree. For each speaker might strive to make good his position that his own form of belief had some authoritative revelation behind it. But the Free Religious Association, *as an Association*, in its constitution, declares first and last and all throuhg for the freedom of human thought in religion as against any kind of authority, whether of creed or church or prophet or book. It declares for the freedom of the human reason as against any authority save that of enlightened human reason itself. Is that a mere "know-nothing" principle? Is it a bare negation only? Can it be characterized as a "do-nothing" principle? It is a grand affirmation. It is the most positive and creative principle of the modern world. From it have sprung the science, the inventions, the noblest literature and philosophy and philanthropy of modern civilization. And this principle is growing and strengthening in the *religious* world. It is the distinctively vital element of Protestant Christendom. Yet is there anywhere any denomination, even the most liberal, that enunciates this principle in all its inclusiveness, and stands by it in all its results, without any reservations or drawbacks? I know not one. Individuals you may find in several of the denominations who do it; but they are likely, too, to get into trouble with their denominations for doing it. You may find some individual churches, especially on the liberal wing of Unitarianism, that may be faithful to this principle. But where is the *denomination* that has yet come squarely and consistently, in word and deed, to the height and breadth of this great principle? It is not to be found.

There, then, is the first and fundamental principle of the Free Religious Association,—absolute freedom of the human mind in all the problems and work of religion. And flowing from this are other principles or declared objects which are distinctly stated in the constitution and are logically implicated in this primary declaration. Put the practical, ethical, humanitarian interests of religion above all theology, or character and good works before creed,—that is one. Is that to say nothing? When the Association says that, does it announce no conviction of its own? Union and fellowship in spirit, or in general aim, purpose, aspiration, hope, rather than division by lines of sectarian belief,—that is another thing which the Association says. Is that to say nothing? Application of the scientific method of inquiry and study to all religious problems,—is that to say nothing? Yet that, too, the Association says in its constitution, thereby putting itself in perfect accord with the spirit and scholarship of the modern age. Here are several definite, affirmative, positive principles or purposes which the Free Religious Association, *as an Association*, distinctly sets forth as the very basis of its existence.

But perhaps our supposed critic may continue, "All these are, indeed, very good objects; but the Association establishes no practical methods for carrying them into effect: it stops with discussion." If by this is meant that the Association does not itself organize local societies for the attainment of these objects, nor itself establish philanthropic institutions for improving the conditions of human life, thus much is true; yet it by no means follows that the Association can count no practical results and does not aim at them. As to establishing local societies, it is sufficient here to say, without raising any question of principle in the matter, that the Association has either not had the facilities for inaugurating such work or has not deemed it wise to take the initiative in starting local organizations. And, in respect to philan thropic institutions, it should be remembered that the Association is not a local, but a national organization. Though it has its head-quarters in Boston, its members and friends are scattered through many cities and States; and there seems no strong reason why it should establish special institutions for benevolent and educational objects in this city more than in New York or Cincinnati or San Francisco. But it says to its members, and to all adherents of its principles, wherever they are: Keep foremost and uppermost in all your work these practical objects of human welfare. If you can find a place where you can work freely, with good conscience, in some liberal church, Unitarian, Universalist, Quaker, why work there, and carry these principles of the Free Religious Association into effect there. If you have found your place of work outside of all churches, in connection with some free, independent society, then there is your place for putting these principles into practice. If, again, you have carried your enthusiasm into a society distinctly organized as ethical, there it is your privilege to work for these high objects of moral and social benefit unhampered by any ecclesiastical traditions. And, even if you live in a community where there is no liberal organization with which you can work, do not rest content in your silent isolation until you have at least made an effort to find out whether you have any neighbors like-minded with yourself, and to draw together even the two or three whom you may thus find into some common work for mutual improvement and the public good. Wherever you are, whatsoever your place, work,—urges this Association,—work, not for denominational success, not for the triumph of a creed or the building up of a theology, but for clearer thinking, for deeper and truer character-building, for wiser and broader projects of philanthropy, for higher ideals of personal conduct, for a juster and purer social order. This is the practical outcome which the Free Religious Association urges upon its members. For

Digitized by Google

this, it pleads with them. With nothing less than this can it or ought it to be content. And it is believed that a large number of its members would not be found wanting, if tried by this test. At their various posts of service they are engaged in this practical work.

But, friends, I must not keep you longer from the special discussion of this morning's session. Many of us have watched with great interest and admiration the work of Prof. Felix Adler in New York. We have seen what zeal, what moral enthusiasm, what consecration of purpose, what inspiring eloquence, what rare talent for organization, what noble thoughts and humane ideals he has brought to his task. Now, for several years, he has labored there, faithfully, patiently, working out from a central ethical idea for ethical culture,—the work growing year by year under his hands, his organization strengthening in numbers and influence, his moral magnetism drawing new workers to his side and opening the purses of wealthy supporters to supply the needed funds, until, though still a young man, he has the well-deserved reward of seeing that his cause has already won a substantial triumph. And the movement for establishing ethical societies is now spreading. Chicago has one that has just celebrated, in good hope for the future, its first anniversary. Its leader is Mr. William M. Salter, well known to many of us here in Boston. And he and these other young men upon the platform, Mr. Sheldon and Mr. Weston, are to speak to us this morning of the Ethical Society movement. They have divided the subject among them in their own way, and have been invited here to give us their views, freely and fully, of what has won the fealty of their thoughts and their hearts. I have now the honor and pleasure of introducing to you Mr. Salter, who will first address you.

ETHICAL RELIGION.

ADDRESS OF WILLIAM M. SALTER.

The statesman Cavour is said to have remarked shortly before his death that he envied the men of a younger generation, since before the close of the century they would witness that grandest of historical events, the birth of a new religion. There are a few of us who believe that the secret of the new religion lies in the culture of the moral nature. We have no new cultus to propose, no new rites and forms. We are entirely innocent of any notion of imposing a brand-new, full-blown religion on the world. We have simply a profound inner conviction of our own; and, in truth, what in detail will come of it, either to ourselves or the world, we do not know. With the liberality characteristic of this Association, two or three of us have been asked to speak before you. I see that I am announced to speak of the philosophical basis of the ethical movement. I am afraid that my remarks will be too simple, unprecise to pass for that. I do not know as, in the technical sense, there is any one philosophical basis for this movement that has touched us so deeply. The supremacy of morality, the sense that great and transcendent meanings lie hidden under that commonplace word, —this is our meeting-point; and perhaps all I shall be able to do to-day will be to indicate some of these meanings as they lie in my own mind, with very little of formal philosophy.

The moral nature is that by which we transcend ourselves and enter into an ideal region. Science, with its methods of observation and experiment, is limited to the world as it is. Ethics is essentially the thought of what ought to be. It is not an account of man as he is, nor is it a transcript and summary abstract of the facts of society. It declares the law after which man should act and in obedience to which society should be constituted. Ethics, in a word, holds up the picture of our ideal selves, and gives us back society transfigured. For man has two sides to his nature,—one looking out on what is, the other on the better that might be. 'Tis a noble employment,—this analyzing of the body and brain and mind of man; this conscientious exploring and systematic classifying of the facts of human society. But psychology and sociology do not take the place of ethics, nor even give its indispensable foundation. In the strict sense of the word, science—the science of man as truly as any other—knows nothing of right and wrong, but only of what is, of facts and the law of their connection. To the pure understanding, virtue and vice do not exist. These notions arise in virtue of our judgment upon facts; and the organ of that judgment is other than that by which we learn of and explain the facts themselves,—men call it conscience. It pronounces upon the worth of facts; for they may sometimes seem as firm as the earth and as constant as day and night, and yet be denied all moral right to be. Such are injustice, unscrupulous self-assertion, wrong, though repeated from the beginning of history to its close, and all the laws and institutions they create without binding force or obligation.

The safety and sanity of life consist in keeping in mind the higher ends and laws of our existence. For man is not only to know, but to do, to achieve; and, if his doing is to be more than an idle repetition of the past, it must be because the sense of something haunts him that it has been impossible hitherto to know. Strange, is it not, that man should not be content with what he sees, that he should turn his back on the known and familiar in search of something better, that he should stake his life sometimes on a hope or dream of his mind? Yet this, too, belongs to man: it is the ideal ends of human life calling on him for their accomplishment; and he, simple and loyal, does not fail to hear.

Ethical religion would turn men's thoughts this way. It would inspire to a new confidence in ideas. It would be essentially a practical religion, not practical and ideal, but practical because ideal. It would lay on men a burden, assign to them a task,—a burden the only relief from which is in action, a task which is unescapable till it be accomplished. Like an architect's plan, an idea means nothing in itself: it means a new form of life, as the plan means a new structure. For as the artist, whose soul images some form of the beautiful, seizes the brush or the chisel to portray it, as the thinker's burning thoughts drive him to utterance, so, in the truly moral nature, every idea of the good becomes a necessity, every thought of the higher a command, all that we dream of and that seems so far away becomes an end and goal for our action and our life. Yet how rarely is the full practical significance of the ideal side of human nature realized! What illusions do men permit themselves in, in thinking of the ideal! To make my own thought clear, perhaps I cannot do better than run over a few of these illusions in review.

First, there is the æsthetic or sentimental mistake. Men wander into an ideal region to luxuriate there. The good is an object of delight: they contemplate it, love it, worship it, they say,—do everything but obey it. Much of the religion of our day, orthodox and other, is but a kind of spiritual revelling, wherein men allow themselves the use of all kinds of fine sentiments and phrases, yet after which life is as flat as ever. This is unpractical idealism, but only because it is false idealism. That ideas are but the pattern after which we are to fashion our lives is not realized. The element of respect for them is wanting. If a man is not in the mood to act, if he will not become better, let him not think the ideas of the better at all. It is a kind of profaning of them to face them, and not begin to act as they command.

And closely akin to this æsthetic or sentimental mistake is the philosophical mistake of regarding the ideal as another world alongside of the actual world. It is so easy to those who are accustomed to deal with ideas to think of them as real, substantial things. They become so familiar with them, the ideas are so real in their minds, that the natural order of human thought is inverted; and the ideas are spoken of as real, and the actual world as an appearance. This seems to have been the Platonic view. Goodness, justice, moral ideas, as well as all others, Plato looked at as self-existent, independent entities. The ideal world was another literal world like our own, only more perfect. If this were so, what should we have to do but to lift our thoughts to that ideal world, and there find the rest and peace that are denied to us here?

That might be one kind of religion; but, surely, it would not be a practical religion. And, what is more, it would be an illusory religion; for there is no such ideal world as Plato pictures. The Platonic world is nothing more than the world as we should like it, that we may say ought to be. It is in truth nothing but an ideal for our world, and to transform this actual order of our human life into an image of it would be the task of a practical religion. The truest word that could be addressed to us is, If thou wilt ever see the perfect, thou must create it: till that time, thou rangest over the earth or through the heavens in vain. But the idea of perfection is in us, the perfect itself is to be. Men ask, What is there satisfying in such a view, in regarding all that is higher and better only as a thought of our minds? But a noble mind does not first ask, What is satisfactory? but, What is true? And I am sure that one who has been caught up by the thought of the higher, and has felt that the burden and the glory of accomplishing it rests on us, would feel the richest satisfactions denied him, if told that the higher was already real, and we had but to open some fancied spiritual eyes to discern it. What meaning, what significance, would there be in our lives, with grand thought and purpose stirred, to learn that that which we were to do is already done. "Certainly, cousin," said the gallant Earl of Pembroke, on coming up to the Earl of Derby before Auberoche, and finding the battle already won, "you have neither been courteous nor behaved honorably to fight my enemies without waiting for me, seeing that you had sent for me." That is an unsatisfactory view of life which leaves us nothing to do, which fixes on us no great responsibilities, which encircles us with no grand trusts. In truth, in our heart of hearts, we want to do, we want to dare; we do not care even to be assured of victory; there is a profound something in us which disdains the need of such assurances.

And, as the philosophical mistake is to the highest type of mind not only untrue, delusive, but unsatisfactory rather than satisfactory, so is the theological mistake. Theology gathers all our thoughts of the higher and better together, and conceives in the form of a perfect person who rules and guides the world. There is a noble side to theology: of course, I mean not as savages or narrow bigots, but pure and lofty souls, have conceived it. God is the perfect. There are no limits, no failings there: measureless goodness, infinite justice, make up that image of the mind. And, if the only alternative were between the world as it is, with no thought of anything above it by which to try it, and this lofty ideal of excellence, which might be ever kept in mind, I do not

Digitized by Google

see how we could hesitate in pronouncing which would be the better. We must look on all that is from some ideal stand-point: we must keep in our minds some high and unfailing standard of excellence; and, until provision is made for this in the new order of things, the old belief will remain and deserve to remain. For man has these two sides of which I have spoken, and the most perfect knowledge of what is will not take the place of his sense of the ideal. The noble side of theology is easily disengaged from theology itself. When one ceases to believe in God in the ordinary sense, he does not need to drop flat to the world and life as we see them and know them. All that made that image admirable remains,—all those higher qualities that we instinctively call divine and that mankind instinctively worships, wherever any hint or suggestion of them appears in human form,—goodness, pity, boundless charity, unfailing justice.

We do not find these in the world, we do not see them in ourselves; and so, foolish creatures that we are, we jump to the conclusion that they are in another world, that they belong to God. And here is the ignoble side to theology; for not only is the personal Deity of theology illusory, but, by gathering the divine qualities into a form outside of man, it allows us to forget that they are qualities for man, and religion becomes the worship of something already existing, instead of the sense of a burden or a task. We are to become divine: we are to make this world a scene of justice. All this that men have gathered into the form of a God is but the image of our possible selves. We make a myth of love and justice, when we say that they are actually ruling in the world, as Christian believers hold; or, as Emerson says, that, "though ministers of justice fail, justice never"; and that the ethical laws are self-executing, instantaneous.* Justice is forever failing in the world. Whenever ministers of justice fail, it fails; for it has reality only in those who execute it. Aside from them, it is only what ought to be, nothing that is. There are no self-executing, instantaneous, ethical laws, though one might well, when he thinks of all the unrequited wrong there is in the world, wish to heaven that there were. The laws are over us, but they wait for us to execute them: they are shorn of their intent, as our lives are of their significance, if we do not execute them. We can only say that the ethical laws should rule in all our lives, that justice forever calls for ministers; and of love,—not that it is supreme in the world, but *let* love, as Buddha said, even the love that fills the mother's heart as she watches over an only child, animate all; for the ideal itself of the old religions is not essentially different from that of the new. The old however say, The ideal does rule: the new will say, Let it rule. The old religions appear to give us into the secrets of what lies behind the veil: the new takes those august secrets, and makes them in all their grandeur the aim and the rule of human life. The old religions leave us on our knees in rapt contemplation and worship: the new summons us to stand erect, and to believe that all men have worshipped, all they have dreamed of, all that has seemed so far above them and beyond them, all men and women in the future are to become and to realize.

But why, if man's ideals do not reveal anything outside ourselves, but only indicate what we ourselves should be and do,—why do we speak of devotion to them as religion at all? I have no hankering after that word, and disbelieve in all the prevailing forms of religion. I do not begin with any attempt to compromise with them. And yet I am driven to speak of religion,—not indeed in the common way, as of something additional to morality, but of morality as religion.

This may be made evident in two ways. Religion from the purely human side might be defined as man's supreme interest: whoever has an absorbing concern may be said to have a religion. You often hear of persons who are religiously devoted to some object, religiously faithful in some attention, some regard, some affection. There are those who have memories that are to them a religion, statesmen to whom the service of their country has been a religion, reformers who give their lives and fortunes in religious devotion to the service of some idea. Those who care for no one thing more than another, who have no enthusiasm, who are listless and cannot be conceived as rising to any height of self-devotion,—these are properly the irreligious people of any time. It cannot be denied that the revolutionists of Russia have a religion. It cannot be denied that the rising sentiment of human rights in France, a hundred years ago, became a religion to thousands. In vain would the most perfect theory of life and the universe be called a religion, if it could not stir the souls of men, if it could not take hold of life and mould it into higher forms. If morality then, if the thought of the good, becomes supreme over all other thoughts in the minds of a few, if it enlists their feelings and masters their life, it is their religion. I believe indeed there is no other thought that wins so instinctive a reverence as this of the good; that conceptions of the Deity and plans for a truer society take deep hold of men only as they in some sense image or embody it. The question whether morality can become a religion for men in general is the question whether men in general are capable of unselfish admiration; whether they can love the good unmoved by personal fears and hopes, solely because it is the good, and has an intrinsic charm for them. I do not doubt it. I believe we ordinarily think all too meanly of man. The higher nature is in us all: it is not often appealed to, and for this very reason perhaps human life remains at so low a level as it is. Let a new religion arise, which shall dare to take man at his best, which shall summon him to justice and generosity and all nobleness, solely because these are his true and proper life, and I believe the world will be astonished at the answer.

But, in another way, morality becomes to men of our day a religion: there are varying religions, according as the objects to which men's supreme affections go out are different. The truest religion would be that one in which the supreme interest gathers about that which is really supreme and ultimate in the world. Now, morality, truly interpreted, does bring man into contact with the final nature of things. Whatever else I may doubt about I cannot doubt the law of duty, that there is a right and a wrong; that the right obliges me, that I ought to do it. It makes no difference that I have learned this law, that others have learned it before, that I know little more about it than I have received or been taught; it makes no difference that I do not know it now perfectly, that I may err sometimes in my judgments about it. Still, I am sure, as Dorothea in the story was,* that there is a perfect right, if I could only find it. Sometimes, I want to do the right; and sometimes, again, it seems hard, forbidding, and I don't wish to do it. But the right itself does not change with my wishes and wants. I might unlearn it; I might, under the solicitations of some desire or passion, juggle myself into the belief that it no longer existed. Yet the right would not itself cease, when my thought of it ceased. I might die and others might take my place, yet the right would be for them the same as it had been for me. Whenever, wherever, two people arise and look into each other's faces, the law of mutual reverence and respect—the law of justice we call it—obtains. If they do not own it, it is the law all the same; if they are contrary to it, and defy every prescription of it, it is the law all the same. Plainly, men do not make this law, but simply find it. If there are other rational beings than men, it applies to them just as truly: the law is a universal law for all rational intelligence. As little do the earth and the stars make the law of gravitation which they obey, as does man or the combined host of rational beings throughout the universe make the law of duty. And though no God were, as God is ordinarily conceived, the law would not cease to be. It is not made, and cannot be changed by God or man: it belongs to the nature of things. Yes, more truly than the law of gravitation does it belong there. I can see no necessity in the law of gravitation; I can conceive that there might be a different law than this according to which bodies attract one another directly as their mass and inversely as the square of their distance from one another. But there can be no other law for rational beings than this of justice, of mutual reverence and respect. Never conceivably could it become right to think lightly of another human or any rational being. And yet men have failed in reverence, in respect for others, have unblushingly used others, are so failing and using them to-day. How rarely has the law been obeyed! The law is over all, though it were never obeyed.

And thus does morality become, nay, is religion. He only does a genuinely moral act, who does it because he must, because the nature of things bears down upon him to do it. For the crystal, religion might be to become a crystal, to own the pressure that would yield the perfect form. For man, it can only be to be a man, to perform the human part of the universal task. Morality is simply one form of the universal law; and, in the yielding to its demands, man is lifted out of himself, and, as the tides of ocean throb "respondent to the far-off orbs," so do his pulses beat in unison with the movement of the universe. Yet how little is the transcendent significance of morality realized in these days! How often are divine and eternal things contrasted with it!* Ethics cover simply the equities and amenities of this world, it is said.† But there is no equity of this world: there is only equity, as good, as commanding on any other shining planet as on this. Beyond and above the moral virtues, the soul needs a religious life, fed from above, so reads a Unitarian tract. Whence come then the moral virtues? From below, from prudence, from the sense of decency, from long-sighted selfishness? They who think so never breathed the climate of morality. Channing, when a youth of nineteen, wrote: "All my sentiments and affections have lately changed. I once considered mere moral attainments as the only object I had to pursue. I have now solemnly given myself up to God,"—an unmeaning antithesis,—a part of the falsehood of the old religious culture, which he afterward himself detected; for, twenty years later, he wrote, "The love of God is but another name for the love of essential benevolence and justice," and the object of religion is, not to "raise us to something higher than morality, for that would be to raise us above God himself, but to give us sublime ideas of morality." Ethics concerns the relations of man with man, it is so often said. Religion it is that binds us to a higher order of things. But ethics is nothing but the response which man and man make to th

higher order of things. For the reason of justice is, not that another wants it, and I choose to give it, but that he ought to have it, and I ought to give it. The duty is absolute, not conditioned on our will or thought, but given to us in and by the nature of things. Ethics realized in its meaning is religion. It is the only religion for the rational man. In my humblest human service, I may be conscious of owning the call which a higher, nay, the highest, makes upon me. Aspiration, reverence, awe, all those sentiments so often contrasted with morality, are but uncompleted morality; and, when the moral act is done, ecstasy is its sign,—ecstasy which is the grace heaven sets upon that moment when the soul weds itself to the perfect God.

Such is something of my meaning in speaking of an ethical, an essentially practical religion. Plainly, it is no superficial improvements of the old religions that I have in mind. I mean not simply a little more practical work, as it is called, a little more attention to the necessities of the poor, a little better education of the young among them, a making of their life a little cleaner, neater, healthier, more respectable. An ethical religion would mean this, but because it meant vastly more. It is nothing else than a changed thought of the nature of religion which I have in mind,—namely, that it can be no longer for rational men to-day worship or prayer or trust in another, but the sense of a task unalterably set for us, the sense of somewhat limitless to accomplish, and the accomplishing of it. The Christian Church sings in one of its hymns:—

> "Oh, where are kings and empires now,
> Of old that went and came?
> But holy Church is praying yet,
> A thousand years the same."

Yes, and it might go on praying a thousand years more, and no better result come of it. If religion will pray, let it pray to men; for there all the trouble lies. Could you, O churches, but open the hearts of your worshippers, as you seek to move the heart of God, the need for all other prayer would soon be gone. Religion is not seeing the evil and wrong in the world, and trusting that somehow in the counsels of God it is all for the best, but in confidently attacking the evil and the wrong, and in leading on the good, as John Stuart Mill says, to its distant and yet not uncertain triumph. The truest revelation, the truest voice of the nature of things, is not in what we see, but in our thoughts of what ought to be. Trust thy dreams, O reformer! Thou comest ne'er so nigh to the heart and spirit of things as in them. This that thou seest, this that seems so strong, so secure, so impregnable, will after a time vanish away; and what thou thinkest of, what thou art called visionary for daring to think of, will *then* be the real. Be not afraid to make your demands too high: there is something in us all that can respond to them, there is something in the nature of things that makes the highest things possible.

I follow in the line of noble traditions in attempting to speak in this city of an ethical religion. To that finest flower of New England culture, to Emerson, was given the insight into the essential identity between morals and religion.* I know not what true thought of mine you may not find, stripped of its imperfections of statement, in him. It was he who long ago spoke of the consolation, the hope, the grandeur that come alone out of the culture of the moral nature.† Theology was to him the rhetoric of morals.‡ "The mind of this age," he says, "has fallen away from theology to morals. I conceive it to be an advance." Unbelief to him was losing hold of the moral intuitions.* Religion was the practices, private and social, in honor of the moral sentiment.† The commanding fact which he never lost sight of was the sufficiency of this sentiment.‡ He will not allow that ethics do not satisfy affection,§ or that they give only a rule, and not the spirit by which the rule is animated.‖ All the religion we have, he says, is the ethics of one or another holy person.¶ And, whenever the sublimities of character are incarnated in a man, we may rely that awe and love and insatiable curiosity will follow his steps.** "No man," he says, "can tell what religious revolutions await us in the next years; and the education in the divinity colleges may well hesitate and vary. But the science of ethics has no mutations; and whoever feels any love or skill for ethical studies may safely lay out all his strength and genius in working in that mine. The pulpit may shake, but this platform will not. All the victories of religion belong to the moral sentiments." He has a faith that America shall introduce a pure religion,†† since a true nation loves its vernacular tongue, and will not import its religion, as we have ours from Judea.‡‡

O brothers, O all who would join us in the aim and hope of an ethical religion, it is a grand task,—this that we have of translating the old truths of the moral nature into the language of to-day. Theology is not more, but less than the truth. Life in the future shall not be less, but more freighted with significance than ever before; for no longer shall men be wondering spectators of a divine task accomplishing in the world, but themselves the accomplishers of it, themselves the hands by which the eternal purpose realizes itself.

THE GENERAL AIMS OF THE ETHICAL MOVEMENT.

ADDRESS OF W. L. SHELDON.

I wish, in a general way, to give an outline of what the ethical movement really means to me. A philosophical basis has just been given to it in the previous address by Mr. Salter. I have only to speak of its general need and aim. I had returned with Mr. Weston from the universities in Germany, with the direct purpose of studying the movement with the Society of Ethical Culture in New York. We attended the lectures there Sunday after Sunday; we talked and read and discussed with the leaders; and, at length, we began to appreciate the basis and value of the movement. It appeared to have the character of a new religion grounded on the great principles of love, justice, and duty. But we did not witness those accompaniments that have always seemed essential to a divinely given religion. There was no sacred altar with live coals to put upon the lips of the speakers, that they might have an unseen prophetic power. They did not wear any peculiar surplice or class garment that should endow them with all the special functions of a divinely commissioned priesthood. They assumed no especial privilege for the remission of sins and the pronouncing of benedictions through any connection with an historic church. And, strangest of all, they did not claim to have an exclusive revelation. It was a pulpit without an altar, priests without a divine commission, preachers without an exclusive revelation. But there was the religion nevertheless. The only altar for the live coals upon their lips was their own moral enthusiasm. The only surplice which they could wear was the great common surplice which clothes all human nature. An apostolic succession and an historic church they had none. The whole sum of lives that make up the past of humanity, with all the accumulations of experiences that lie at the feet of any one who may wish to learn from them,—that is their historic church. All the souls that may have struggled in the cause of duty make up their apostles, and it needs no laying on of hands to keep the line unbroken. The divine commission must come to every living soul; and the sacred rite by which it is given is only that thrill of sympathy which passes through any moral nature at the consciousness of an act of love and duty. Any single moral act may be a baptism and consecration to any soul that may be willing to receive it. The revelation, too, of these speakers was equally universal. It was not the cry of the Church above to the world outside, "Ho every one that thirsteth, come ye to these waters of life," but rather the cry of the man nature to all human nature: Go ye to the fountains of your own nature; sound the depths of your own being; read the law and the revelation that is written, as it were by a hand of fire, upon your own hearts; seek ye there your religion and your revelation, for we have a gospel that teaches that there is a fountain of life in every living soul. It has been the teaching of the old faith that, when we are tempted to do a wrong act, we should shrink back with the appalling consciousness: Thou God seest me. But the ethical teacher, on the contrary, does not look without him to any power that may be watching, but thinks within: I see myself, and in the presence of that self I dare not do a wrong act, because my nature wills not to do it, and I will not. And whatever the world may be inclined to do in putting its trust in the man who does what he ought to do out of respect for his God, we will rather put our trust in the man who acts out of respect for the law of his own higher nature. For the man who has that law within his nature and acts out his duty in life may have no need of a God.

You will appreciate my feeling then, after all the orthodox training of a New England, when for the first time in all my experience I had found a pulpit without a monopoly; and of all the strangest and most incongruous of monopolies is that monopoly of the gospel of religion and love. It is when we stand within such a movement—without a God and without an exclusive revelation, it is true, but with the conviction of a new religion of the future, nevertheless—that we begin to realize by contrast the appalling religious chaos that is all about us. You may remember the famous passage in the writings of Macaulay, where he thinks of the New Zealander seated upon one of the falling arches of the now great London Bridge, and sketching the mouldering ruins of the once great city of London. We can also think of the time when that New Zealander may have moved on, until he has reached our own great continent, and begun to sketch the ruins of our American life and civilization. We can readily imagine the thoughts and emotions we would have at a scene like that, for it would be our own dead past that would lie buried there. But that dim picture of the remotest future is becoming an actual picture of the state of religious thought at the present time. The great systems of revelation have been crumbling and falling away into the dust of their own illusions. They may come down with a crash, as in the case of the French Revolution, or they may crumble and moulder away, under the slow consumption of the ivy and the bookworm; but they must all inevi-

Digitized by Google

tably come to their dust, and the great sepulchres of our public libraries must ultimately receive them all. One feels almost weird at such a thought. It would seem as though we were in a great charnel house of dead faiths and illusions. But remember they are our own dead,—just as truly our own dead as the fathers and mothers we may have laid away to rest in the ground. I wish then to speak of them only with reverence. They have sung to us our nursery songs; they have thrilled us with the glow of their divine enthusiasm; they have shown examples of the highest and purest natures; they have given us ideals of the sublimest devotion. If the roll were to be called of all the purest and noblest souls that have lived previous to this time, surely the saints and devotees and martyrs of these faiths that we now class with the mythologies would stand exalted among that number.

I do not wish to speak of their mistakes, least of all to touch upon their crimes. It may be for the biographer and historian to tell that tale of woe and horror. But as for me, and as for you also, I trust, we will rather think of our dead faiths and illusions in all their purity, as we love to think of our own dead friends. We will respect the past for what it has been to us, we will endeavor to forget what it might have been.

Neither do I wish to discuss the utility of a revealed religion. In many souls at the present day is going up a wail of sorrow and despair for the loss of their dead faith. In the mute agony of their hearts, they are moaning to themselves: "Undone! Undone! No comfort, none!" It has been the weakness of the old religion that in moments of doubt and despair it has bidden the soul, Go pray! But the ethical teacher has a higher bidding when he tells that soul instead, Go work! It is a moral weakness to waste our energies in futile moaning as to what might have been: we have no right to ponder that question to our own despair. Suffer a man to carry his *sorrow* in his heart, as he may have to do, but in his mind and in his life he must and he ought to carry only his *work*.

But I have been speaking of these things only in a preliminary way. As against this chaotic condition of life and thought has come an appeal from the earnest souls throughout the world. Deep out of their nature at this hour of need has come the cry for Liberals to unite. It is to this appeal that I would ask for your sympathy. Understand me, this is no war cry of class against class or of religion against religion. The socialist, it is true, may send out his appeal for union among the laboring classes, and the summons may come for the laborers to unite all over the world in the cause of justice and universal equality; but it is no socialistic cry that I am speaking of. The *bourgeoisie* may have a consciousness of danger from below, and seek to unite the superior intelligence of the middle classes against the encroachments of the proletariat. But it is no autocratic summons to resistance that I am speaking of. The Church, too, may send out a trumpet call of alarm against the downfall of its creeds, the breaking up of its systems, and the falling away of its members. But it is no trumpet call of religious enthusiasts that I am thinking of. And the unbelievers also may agitate their union for the sake of attacking the power of the religious organizations. But it is no atheistic agitation that I am thinking of. The appeal that I am making is above the cry of resistance to oppression. It is not the battle cry of freedom, but the bugle of duty that I would have you listen to. Above the din of the war-cry of man against man and thought against thought, of class against class and religion against religion, this bugle call is sounding; and its note shall sound on to-day and to-morrow and forever, until it "strikes a silence through you all," and its voice alone shall be heard.

For ourselves, first, it summons us to union for the sake of our own personal moral salvation. I know that such language will appear strange to many who have given up their religious faith. But the taking away of our religious faith has not taken away the need of a moral salvation. On the contrary, it has redoubled that need. But one thing it has done: it has taken the responsibility out of the divine hands and put it into our own. You are familiar with the teaching of the Apostle Paul,—"Work out your own salvation with fear and trembling." That may have seemed very incongruous under a Christian *régime*, but it has its natural and complete application to a *régime* of rationalism. They who have a belief in providence may commit themselves and their salvation into its hands. We who have not that belief must be our own providence, we must work out that salvation, but not with any futile praying and bending of the knee, not with any monkish laceration of the body or agonizing of the soul. Our "broken spirits and contrite hearts" must rather be the energizing mind, the acting hand, and the sweating brow.

I am not, of course, speaking of any special salvation from some future punishment that may be awaiting us after death. I know nothing about that, and do not take that into my calculation at all. Neither is it a salvation from any of the special wants and woes and ills of life. I know how terrible they are. I have the deepest sympathy with the men who are trodden under foot by day and by year and by century. And I know that the very first step in the moral evolution must be a deliverance from that oppression. But I know also that many might be set free from that oppression, and not be one step higher in the scale of being.

It is another and deeper sort of a salvation that I am thinking of. I mean the effort that a crystal might make, had it a reason of its own, to shape itself into a true and genuine crystal. I mean the effort that an oak-tree might make against the blasts of the tempest, the dearth of the ground, and the parasites of the air, to grow into a true and genuine oak-tree. I mean the sublime effort of a living soul that struggles against the very forces of the universe itself, through love and against hate, through justice against wrong, through aspiration against degradation, in good report and ill report, with resolute will and unfaltering trust,—struggles on to become a true and complete man. That is the effort that I am thinking of,—a truth and completeness of man's life that we have to live out, a moral ideal that we have to realize and fulfil.

It is ethical organization for this great work in our personal lives that I wish to advocate. But you must understand me: I am pleading the need of such united effort for guidance and assistance in the ways and duties of life, and not for the sake of philosophical disputations about ethical principles. One grows weary at times with these metaphysical disputations that seem never to get at any definite truth. You remember the saying of Fichte, "Nicht zum denken, sondern zum handeln bin ich da,"—not to think, but to do should be the effort of our existence. And, under the inspiration of a cry like that, Germany rose up from its metaphysical slumber at the beginning of this century, and with one mighty effort threw off its yoke of bondage. We, too, may have our philosophical and religious slumber; we, too, may have to awake from a lethargy of thinking to the need and responsibility of true and faithful living and acting. True living is vastly more essential than true thinking. Thinking, after all, is only the musical accompaniment to the great hymn of life. In the old Greek Trinity—the beautiful, the true, and the good—there is also its hierarchy. Truth may stand above the beautiful, but high above the true stands alone in all its majesty the cause of the good. Seek ye first the kingdom of the good, and all these things may be added unto you. We place, then, above everything else the moral growth and elevation of our whole life and being.

But, personal and individual as such an effort must be, we cannot accomplish it altogether alone. We need a union of effort in our lives, for the sake of discovering the means to this great moral salvation; we need such a union for the sake of mutual assistance and co-operation in moulding our lives and thoughts in accordance with this moral ideal. All the great efforts of life must have a principle of co-operation at their basis.

But there is a work of antagonism that we have also to accomplish. In this moral effort in our personal lives, such a union becomes essential for the sake of reacting upon the tendency to individualism and indifference which is now prevailing everywhere. The Church, as I have already intimated, is losing its old organizing force Men will not come at its call. Every man is inclined to make a church out of his own will. Along with this upheaval and dissolution of the religious organizations is coming a like chaotic condition in life, character, and moral purpose. It is this terrible fact that we dread. Let the religions go! Let the whole past be swallowed up in a dream! But, as for our ideals, we will not let them go; for it is they alone which make life worth living. And yet, when men have given up their religious faith, they are inclined to say that, as they do not believe in a God, so they do not acknowledge any responsibility to a moral ideal. It is not true that this is due wholly to rationalism and unbelief. A charge like that sounds like blasphemy to the cause of truth. Heretofore, the Church has always had the care of the moral education of the world. But she has always been inclined to sacrifice the moral ideal within us to a religious aspiration to the divine power that may be outside of us. This tendency has been so wrought into the common faith of every-day life that men do not dream of the divinity that may be within themselves. It may be due to this very fact that men are inclined to abandon the cause of the good to the cause of God, for they have not known of a supreme good that is outside of a god.

But the consequences are disastrous enough. An age of individualism is upon us that is almost without parallel in history. I may perhaps illustrate what I mean by a novel that many of you may have read, *Wilhelm Meister's Apprenticeship*. It is one of the masterpieces of Goethe's delineations of the moral forces at work in human society. It would seem as though that novel had struck the key-note to the moral character of our whole century. "Mich selbst ausleben wie ich da bin," that is the moral purpose of life,—to live myself out as I am,—not as this whole complete nature of mine would live itself out, but to float out into the arena of life without a purpose, only to live on and on as nature may seem to call me, and to let the great destiny of things mould me into shape as may please to be its will. The tale is a pathetic and yet a powerful one. Goethe has woven several lives into the same story. He describes how they pass through the vicissitudes of their strange fortunes, how they arrive at the maturity of their dignity, and finally receive their allotment of destiny. At the close, they come together and analyze those experiences with the

Digitized by Google

coolness of a dissecting knife. That analysis tells of the men and women these young heroes had been thrown in contact with, and of the way they had used these lives as so many tools to the purpose of their own great destiny, and then flung them aside when they no longer had any use for them. As a picture of the whole, we have the pathway of them all strewn with the corses of the souls they had utilized and exhausted. To one imbued with the dignity and worth of all human nature, the story is simply ghastly.

And yet this tale is through and through illustrative of the moral character of our century. It is echoed and re-echoed in the common speech of our every-day life. All the languages have something of it. The "leben und leben lassen," the "laisser faire," the "every man for himself,"—whole volumes could not contain what they express. A vast system of moral monopolizing is growing up about us; and, in the name of justice and equality, actually in the very name of justice and equality, —as though with an appeal to the divinity of duty itself,—every man is wantonly, wilfully, ruthlessly striving to *use* every other man to his own selfish aggrandizement. The judgment of the moral universe should be upon such a system, and we must heed it. Not only the moral universe, but the whole religious universe of love cries out against it. The outgrowth of the system gives no basis of sympathetic union, but rather a universal spirit of hatred and antagonism. So intense and so wide-spread has become this feeling that it almost seems as though men had not known how to hate until the rise of this gigantic system of selfish individualism. Whether it be your corporation kings or your national legislators, devotees of art and literature, or the every-day laborers, hatred against the classes above them and below them, hatred against the members of their own class with whom they are competing, because they want to get above them, hatred because everybody hates, and because the very air is thick and slimy with exhalations of this vile phenomenon,—in the name of religion, in the name of love, and in the name of justice, I say we must not let these things go on. I appeal against this system of individualism and hatred to a nobler basis of sympathy and co-operation. Amid the decay and downfall of the old religious organizations, which have previously stood for union in moral effort, we need a new system of ethical societies that shall take up the cause of our moral salvation, stem the tide of individualism and hatred, and go on to reconstruct a new and lasting basis of life in devotion to the principles of love and justice and duty.

As yet, I have been speaking of the moral effort for ourselves only as separate personalities. But there is another and wider effort for us, not, however, as separate individuals, but as great masses of social forces. It may be that there is also an ethical ideal to work out for that larger unit of life that embraces humanity as a whole,—that, too, must have its claim upon us. "No man liveth and dieth unto himself." It is becoming apparent that there is a unity of existence in humanity. The great forces at work in human society have been giving signs of a growing agitation. It is this agitation which is giving a tinge of doubt, uncertainty, and dread to all our lives and thoughts. We don't know what to expect, and yet we do expect something. We see the shadow of a hand of change all about us, and it makes us anxious and thoughtful. We know very well from our study of science that a geological revolution does not come upon our fair earth just to strike at one phase of life, and then to leave everything else exempt from change. On the contrary, the complete mechanism of things must receive a shock; and a whole new earth must arise, as though fresh from the hands of divine creation. Can we anticipate anything else from a like revolution in our life and thought?

We cannot suppose that a great change could take place in the oldest and mightiest of our institutions, that the old basis of our religious systems should fall away and dissolve, and yet presume that we could go on with just the same political, social, and economic institutions as before. We hang together religiously, politically, economically, and socially. All of these institutions must receive a shock: they must all be put upon a new basis. A change of religion must mean some sort of a revolution. We may not know just what sort of a revolution it will be. We may put our ears to the ground and listen for the intimations, but we shall only hear the confused and heavy murmur of unfamiliar sounds. But the phrases come to us weighted with the thought of change. The nihilism and social democracy, the communism and anarchy, the State socialism, the societies of the black hand and the Land Leagues, the norent agitations and the anti-monopoly cries, the wage-slavery and destruction of capital, co-operative schemes, etc.,—I have no intention to discuss the utility of any of these schemes. I am only thinking of their ethical outlook, and that appears dreary enough. At one time, it would seem as though it were only the effort to get up into the light, to get the head and neck free, so as to be able to think and to act; and we applaud with all our hearts. But then, again, it would seem as though it were the effort of the grim hand of revenge that wants to get free to grapple its victim; and we shrink back with shame and horror. It is not because they want a revolution that I am afraid of them. If evolution must come by revolution, why let the revolution come! But we want a revolution not only outward, but upward. Let the great change that is coming take away the noisome pestilences and the foul diseases out of our civilization. Let it launch us out upon a great new stream of tendency; let it lead us to a fair new spiritual earth clothed in a garment of beauty and all that is good, and we will welcome that mighty change. Dear as the past may have been to us, for an *ideal* of the future we may be willing to sacrifice it. It is because these great efforts do not concentrate upon an ethical ideal that I am afraid of them. It is the lack of any such concentration that makes the thought of them so painful. It is not with any wish to put a check upon these advocates of change, that I am speaking to-day. It is rather with the wish of agitating the need of new organizations for the sake of giving to them, as advocates of change, an ethical ideal. We owe such an ideal to the cause of revolution. Every system of social regeneration owes such an ideal to the humanity it is working for. With a pure moral ideal at the heart of humanity, we may trust ourselves to whatever may come.

But the most difficult problem in connection with these theories of revolution must be the principal at the basis of the distribution of property. The science of economics is calling for its solution. Upon the method and principle we establish in the distribution of property must grow up our theories of state and society; and it is this union into state and society which is to lift us out of our personal life into that wider basis of existence as a whole race and people. The economical institutions must therefore lie at the foundation of our political and social life. Ethics must give a basis to economics. It is just now, while the amount of capital is rapidly on the increase and before it has reached its ultimate stationary state; just now, while a vast quantity of unoccupied land remains for us in the West; just now, while the amount of labor goes on multiplying and has not reached its maximum,—that we ought to establish the method and principle in the distribution of property. I am not going to advocate any special theories on this subject to-day. I am only thinking of the ethical principles that may apply. It may be for society as a political organization to establish and execute that principle, when it has once been agreed upon; but it is for us, as moral beings, to discover the principle of justice that may apply to this distribution.

It is now while there is time that I speak. When the amount of capital has reached its stationary state, when all the land has been taken up and every acre has its owner, it will be too late then to discuss its equity. The method and principle in this distribution will be ultimately fixed. Men will not give up what they believe to be their own. It is just now then, at this critical moment, that we ought to make real and positive to ourselves what we mean, and what the moral nature of man lays down as to the true principle of justice. We must know the principle of justice. And, when we do know it, it is for us with soul and sympathy, with life and enthusiasm, to plead and advocate and advocate and plead, until we have worked this law into every consciousness, until the cause of justice itself shall be triumphant, and the great economic forces of land, labor, and capital, shall be equitably distributed. It is the cause of an entire humanity that I am pleading. We want our ethical organization, that we may give to the cause of revolution a moral ideal, that we may discover the true principle of justice, and apply that principle to the economic distribution of property.

Lastly, and perhaps most deeply, there is another reason for the cause which I am advocating. I have been speaking of an entire humanity, but there is a humanity of the future as well. We can see before us in the dim outlines of the future the countless generations that are to come after us, —generations, too, that shall be very bone of our bone, and flesh of our flesh. I am not speaking, of course, of this crude material flesh that may have only the evanescent existence of a single lifetime, but of that finer and more subtle tissue that makes up our moral and spiritual organism; and this posterity, which shall be supremely our posterity, must look to us of this age and generation for their moral ideal. It was a saying of Herbart that every age must hand down to the coming age its conception of duty. However perfect or imperfect, however pure or corrupt we may have constructed it out of our life and thought, that must be the estimate of duty by which the coming age shall judge itself. True as this may have been of the past, never perhaps has this been so true as it is true of us to-day.

I have already spoken of the present chaotic condition in our life and thought. The world-life and the life of thought have moved by eras and revolutions. The Christian era has almost had its twenty centuries of existence, and now it is drawing to its close. Again must the race endure the throes of agony that shall give birth to a new era of history. A chaos can last only for a moment. Thought cannot go into extinction. The starlight itself is not more permanent than its living fire. Out of the struggle of forces must speedily evolve a new state and a new world. "As the twig is bent, so is the tree inclined," may be just as true for whole decades of generations as it is true of a single lifetime. It may be for us, then, of this very age to create the new stream of tendency,—to hand down to the coming ages their ethical ideal and their moral character. It is with the con-

Digitized by Google

sciousness of this sublime responsibility that I am speaking to-day. Whether there be a God or no God, whether we be of spirit or of dust, whether we are to live for an hour or a day or an eternity, —God or no God, material or spiritual, mortal or immortal,—the fact of this responsibility remains just the same. Do we wish that our children and children's children, do we wish that men and the children of men, shall go down to coming generations without a moral ideal? Upon us now may rest the responsibility. We may say that we will not own it, but we do own it: we may say that we will not care for it, but we do care for it. We do and we must and we ought to care for it. If we do not recognize this responsibility, if we go on living as though the sum of our existence was made up of this one age and generation, the judgment of our nature will be upon us, that we have not been worthy of the gift of life. We shall not have made life worth living. We shall have weighed our own lives in the balance, and found them wanting. We owe, then, to the future an ethical ideal. Out of our own lives and thoughts, by the purity of our purpose and the devotion to our aspirations, we must create this new ideal that we have to hand down to the coming ages. It would seem, then, as though the appeal was as wide as nature itself. The life of the future with all its needs and glorious possibilities, the universal life of man with its changing revolutions, our personal life with the consciousness of its moral aspirations,—they all plead the cause of our ethical movement.

THE RELATION OF THE ETHICAL MOVEMENT TO CHRISTIANITY AND CERTAIN FORMS OF LIBERALISM.

ADDRESS OF S. B. WESTON.

The fundamental ideas and general aims of the Ethical Movement have been very clearly and adequately set before you in the two addresses to which you have just listened, and the impression which those addresses must have left upon your minds is the one I wish only to strengthen.

I wish you to feel that this Ethical Movement in which we have enlisted our service is a *positive* movement, resting on a positive basis and looking toward positive results. We do not feel that it is our mission to waste our time in re-attacking the old dogmas and superstitions which the spirit of the age has already purged from men's minds or is rapidly purging away. We do not feel that our mission, in a word, is mere iconoclasm. We feel that it is rather to meet, as well as we may, the one great need of our time,—the need of an ethical and rational religion. But, in listening to the two previous addresses, I have no doubt that some of you have silently asked: "Wherein does this work of ethical religion differ from the great moral work which Christianity is trying to do? Has not the aim of all religions been to better the moral condition of the world? What," I hear it asked, "entitles this ethical movement to a distinctive character?"

In the short time which is left to me this morning, I shall endeavor to answer this question by showing the relation of this movement to Christianity and the two chief forms of religious Liberalism, I mean Unitarianism and Free Religion. And let me say at the outset that, to my mind, this ethical movement has features which not only mark it off as being entirely distinct from and outside of Christianity and Judaism, but which distinguish it with almost equal emphasis from all the movements hitherto initiated by modern Liberalism.

In dealing with this aspect of the movement, friends, it is far from my wish or purpose to revive any old antagonisms or to awaken new ones. The bitter warfare of sect against sect and of religion against religion is a spectacle, let us hope, of a bygone stage of religious thought. There is no need that the slightest ill-feeling arise between us and those working at the same great problem as ourselves, though we be working upon a different basis, by different methods, and with the hope of different results.

But, because of any ill-feeling that may arise in narrow minds, let us not, I pray, conceal any of our differences. On the contrary, let them be clearly and fully stated. A duty which we owe to ourselves and to the world, which we are trying to serve,—aye, more, our duty to the cause of truth itself,—demands that we make clear our differences as well as our agreements, our negations, if you please, as well as our affirmations. Let us have the courage of clear and honest convictions, whatever they may be; and let them at all times be published and lived by, and the great laws which control human progress and destiny will decide as to their merits.

I have said that, to my mind, this Ethical Movement has certain distinctive features. Let us now see what they are by seeing in the first place wherein it differs from the old religions, especially from Christianity. It differs, as it seems to me, in three important features. It rests on an entirely different basis, it pursues different methods, it is working towards a different goal. Those who believe in the theological basis upon which the Christian religion rests, those who are satisfied with the goal which it promises and with its methods of reaching it, are not the ones who will be drawn into this ethical movement.

But there are vast numbers — and the numbers are rapidly increasing — who have given up forever the theological tenets of Christianity. In ceasing to be Christians, however, they have not ceased to be men. They are still capable of ideals and noble sentiments. They still possess that part of their nature which is far older than Christianity or even Judaism, and out of which all that is valuable in the religions of the past has grown,— they still possess, in a word, their *moral* nature; and it is to that nature, freed from the old superstitions, that we make our appeal. For it is upon man's ethical nature, endowed with ethical passions and ethical ideals, that we believe the religion of the future must chiefly work.

It is the moral idea, friends, which has been the life, the soul, the inspiration of all the great religious teachers of the past; and it is upon that idea — the exhaustless fount of all true religious earnestness — that this ethical movement rests. To bring the moral idea into ever clearer light, to incarnate it in all our institutions, and to give it potency in our own individual lives is the great task which the ethical movement would accomplish. And we believe that by working earnestly on this basis, by striving unceasingly after a higher degree of personal and social morality, by making the idea of the perfect the single load-star of our efforts,— by this means, more effectively than by any other, we may be brought into that true living unity with ourselves and with the great throbbing life of the Universe, which is the very soul of religion. A man can never feel in harmony with himself, nor feel that he is living in harmony with the great world-purpose, who is not endeavoring to shape his life in accordance with his highest sense of moral rectitude.

The basis of this movement then, as you see, is very different from the theological basis of Christianity. In the place of the worship of a person, we would teach consecration to principle. Instead of resting religion upon what is claimed to be a supernatural revelation at one period of human history, we would rest it upon that inexorable law of righteousness which is as old as the history of the world, and which is equally present and imperative to all persons at all times and in all places.

Resting our religion, then, not upon the shifting dogmas of theology, but upon the eternal principles of that higher law which we carry within these human breasts, we believe we rest it upon positive, unshakable foundations. And, if either Christianity or this ethical religion is to be designated as a negative religion, which, I ask in all sincerity, must so be designated? We will leave it to our Christian friends to answer.

The wide difference of the Ethical Movement from Christianity is not only seen by comparing their respective bases, but by comparing the supreme aim they each have in view and their respective methods of obtaining it.

The higher life, or, in other words, the great goal which Christianity sets before men, is a life beyond the grave. Now, the religious soul is always striving for a higher life; but the higher life to which Christianity points the way is not, we believe, the higher life to which the soul needs to be pointed, it is not the higher life for which the best souls are working.

When the dark curtain has fallen, when the life-veins of a human being have ceased their pulsations, and the heart its beatings, and the body is laid away into the cold grave or silent tomb or dissolved by fire into its native elements, what becomes of the spirit that once animated that mortal body we know not. We only know that the life of our life is inextinguishable; but the destiny of the individual spirit is beyond our knowledge, and it is useless for us to attempt to lift the veil that hides it from us. Our chief thoughts and interests should be in the acting, living present. To make the Here and the Now as perfect as possible should be our goal. This is the higher life to which we should aim. Not the *quantity of time* that we as individuals are to live, but the *quality of our actions* should be our deepest concern.

"Better fifty years of Europe than a cycle of Cathay."

Better a single lifetime, however short, spent in striving to live rightly and to do some good in the world, than a whole eternity spent in living according to the usual conceptions of a future life. And so while Christianity points men to a celestial city beyond the grave in which they are to live forever singing their hosannas, this ethical movement would point men to these real cities upon earth, teeming as they do with injustices and crimes and sins of all kinds, and say, It is your duty to help make the city in which you are living,—be it Boston or New York or any other city,—it is your duty and should be your highest desire to help make your own city a truly celestial city, by making it one which men can call righteous. Individual and social perfection is in short our dual watchword.

And now let me say a word as to the difference of our methods from those of Christianity.

Christianity, in pointing men the way to heaven, says, Repent of your sins. And, in pointing men to the ideal we would see realized, we would repeat the words with no less emphasis. To Wall Street speculators, to Boston merchants, to politicians everywhere,—to men in any and every calling,—we would say, Repent of your wrong doings, mend your evil ways, resolve to do henceforth only what is right at whatever sacrifice.

But, though Christianity says "Repent," it teaches that repentance and a miraculous transformation of character may be brought about by faith,—by faith in the atoning blood; and that

Digitized by Google

faith itself must be won and increased by prayer. Faith and prayer,—these are the dual watchwords of Christianity; for only through these, it is taught, can the Christian goal be reached.

In a far different way is the goal of the new religion to be attained. We look for human character to be transformed and the world to be bettered, not by any sudden, miraculous power, but through the toilsome avenues of practical activity, through the trying lessons of moral experience. The stress we lay upon philanthropic and charitable works is not merely for the sake of the good which such works are calculated to bestow upon others, but because they have an ennobling influence upon ourselves, and tend to develop within us higher and more humane sentiments. Thus, step by step, the work of ethical culture must be advanced; and through this means there will be created within men, as we believe, a profound faith in the power of righteousness and the supreme excellence of the good throughout the universe,—a faith which this world of ours urgently needs.

Ethical religion, friends, means practical religion, the important part of which, however, is not the outward act, but the inner motive. We all like to hear good words spoken. We all like better to see good deeds done; but even good deeds are of far less importance in our eyes than a man's own moral character. To determine his true worthiness, it is to his inner life, to the secret motives prompting him to action, that the touchstone must be applied; and the true members of ethical societies will be those to whom it can be applied.

In departing from the methods of the old religions as well as from the old theological conceptions and aims, the ethical movement leaves behind also all the old forms and ceremonies, whether of the Jewish synagogue or the Christian Church. We do not believe any more than Jesus did in putting new wine into old bottles. The pursuance of such a course in matters of religion means religious indifference,—aye, more, it means moral suicide. If the new religion is to have any public forms, they must be such as grow out of it naturally. And, even though it be utterly barren of forms at first, we must have the courage to wait patiently until forms suitable to the new attitude and spirit have naturally developed.

One other important point in which the ethical movement differs from Christianity must not be left unnoticed, though it has already been implied. I refer to their respective attitudes toward the rationalistic spirit of our age. With the progressive thought of the present this movement is in the fullest sympathy. We propose to look, not downward or backward, but onward and upward to the new heights and new visions which growing thought shall open to us,—to the ripest results, in a word, of philosophy and science. Reason is not something to be shunned or feared, but to be followed. It is the beacon light that guides us safely on. And yet with mere science, as ordinarily understood, we are not satisfied. What we need and must have is that larger and deeper science which takes cognizance of the inner life. We must have a science of the soul.

Of the attitude of Christianity toward reason I hardly need to speak. Modern rationalism, in the eyes of the Church, is modern infidelity; and, against this common foe, a recent writer has urged a union of Catholics and Protestants. But divided or united Christianity cannot check the advance of modern thought, she cannot withstand the spirit of the age.

Christianity, then, does not satisfy us. We cannot accept either its theology or its primitive conceptions of human life and destiny. We cannot sympathize with its irrational spirit, we cannot adopt its methods or its forms, nor shall we keep even the shadows of the old forms with new interpretations. We prefer, I repeat, that our public services should be simple even unto barrenness than to appear untrue in the least to our convictions.

We are led then to the conclusion — reached not only by ourselves, but by hundreds of thousands, and the numbers are rapidly increasing in all the thoughtful countries of Christendom — that the kind of moral and religious culture which Christianity offers the world is not the kind which the world most needs, it is not the kind which stirs the thought and feeling of to-day. For us there must be a new religion or no religion at all. And a new religion is what the world needs,— a religion which will stir men to a sense of their higher duties and make them feel that, in abandoning the old conceptions for the new, they have simply paved the way for a deeper trust in the Universe, and that under the new attitude life assumes a higher worth, and its laws become more truly sacred.

Some of our Christian friends, I know, will say that all this work of ethical culture is well enough in its place, but it is not religion. But what, I would ask them, constitutes religion? Does faith in a theology which the rational mind cannot accept? Does looking to heaven with petitioning lips? Does the sincere performance of all your church ceremonies constitute religion? I maintain that there is more true religion in a single deed of kindness or a single act of justice than in all your formal Sunday worship. Not the dying out of Christianity, but the dying out of ideals and noble sentiments within us would be the end of religion. Not only do we believe that a religion is possible for those who have abandoned the Christian faith, but a religion that can move the world. The one essential element in all religions is the belief that there is a power in the world which makes for righteousness. Now, the precise point wherein we differ from all who have preceded us is that we are confident that a belief in a supreme law of righteousness will grow out of our own righteous action; that out of our own moral experience must grow the conviction in a world-wide moral order; that, when we have recognized the excellency of virtue and its supreme authority over our own souls, we shall believe with an unshakable faith that its authority is regnant over the very suns and stars. And this is religion,—to believe in the final victory of the good; to believe that the problems of the world will eventually be solved in terms of moral law. The old religions deduce the righteousness of human life from a previous belief in certain dogmas of theology. We believe, on the contrary, that a more spiritual, a more blessed religious conviction will grow out of a truly righteous life; that that human soul which has once stood face to face with the sublime majesty of the moral ideal will never thereafter doubt that it is real, and that it is eternally interwoven with the ultimate nature of things.

Let me turn now to the second part of my subject,—the attitude of the Ethical Movement toward certain forms of Liberalism. And I shall dwell chiefly upon its attitude toward that which is by far the most powerful organization of modern Liberalism,—I mean Unitarianism.

The Unitarians, as you well know, are not a body very easy to classify. But, since they claim to be in sympathy with the advances of modern thought and make their appeal chiefly to Liberals, it seems to me highly proper to include them under liberal organizations. Though nominally a Christian sect and professing to stand inside of the Christian Church, Unitarianism is nevertheless a distinct movement to meet the advanced thought and religious need of the times.

Now, since Unitarianism offers itself as a religion for Liberals, why is it that some of us Liberals are not satisfied with it? Why was your Free Religious movement necessary? And why do we feel that a new Ethical Movement is needed? I shall speak chiefly of those things wherein Unitarianism fails to satisfy us. Of the Unitarian virtues I need not speak, especially to a Boston audience. Those virtues speak for themselves. We know that, from the great Channing to the present time, some of the most honored names of this country have been connected with that body. We know that no other Christian sect has exhibited a more philanthropic spirit or a higher degree of personal character. We know that no other Christian sect has so boldly faced the problems of modern thought. But, knowing all this, we cannot overlook the fact, in the first place, that Unitarians are not in earnest. They do not believe in themselves. Two leading Unitarian clergymen of this city have said in my hearing that they did not believe Unitarianism would be the religion of the future, and I know that there are young men in Unitarian pulpits to-day who are not Unitarians at heart. They would much prefer to give up the Christian name and Christian forms, and stand unequivocally on the basis of pure rationalism; but they are prevented from doing so simply because they wish to retain their pulpits. Such an attitude as this is nothing less than the first stages of a degeneracy of the pulpit, and is the cause of much of that demoralizing indifferentism which is the canker sore of the religious world to-day. It is, however, but the natural offspring of that which has grown to be a disease in the modern pulpit,—the doctrine of expediency. You must suppress, says this doctrine, your most radical thought, you must treat your audience like children for whom the whole truth is harmful. You must use words and ceremonies which will satisfy those who have not yet grown out of the old ideas, and yet you may put into them any meaning you like to satisfy your own thought. This endeavor, as it were, to cheat Christians by degrees into rationalism, this disguising of the new thought with Christian phraseology, this using of words with a double meaning, is downright hypocrisy, and unworthy of any one,—much less of any one who professes to be a moral leader of men. The religious philosophers and teachers of ancient Greece and Rome did the same in their day; and, from that moment, their religion was doomed to failure. The evil I speak of, however, is not confined to Unitarians. The opinion widely prevails, and not without good reason, that a large number of those who stand in orthodox pulpits do not preach their whole honest conviction, but only what their people can bear, only what they are hired to preach.

Behold what a spectacle! Men who have sold their own souls for a salary are trying to *save* the souls of others! Perfect sincerity is the absolute requirement of those who would help on the moral progress of the world. It is the condition of that real earnestness in any cause which always conquers. But little earnestness, I believe, is possible in a movement which, like Unitarianism, attempts to propagate the new spirit in obsolete forms.

The fundamental weakness of Unitarianism is that it did not spring from and has not been led by any great moral idea. The root of the movement was a purely speculative question,— namely, whether this Universe is governed by one God or by three, or, more properly, whether the New Testament teaches one or three. Unitarians, advocating the former, have sent out again and again tracts

Digitized by Google

containing Scriptural arguments to prove their position. The Bible has been their authority, Jesus their "Lord and Master." Unitarianism professes to be an attempt to renew primitive Christianity,—the pure religion of Jesus, as it is called. As to the supernatural character of Jesus and the divine source and absolute perfection of his religion, the early Unitarians did not doubt; and there are many Unitarians who still hold this position. Yet there are many others who, while they profess to be teaching the pure religion of Jesus, do not hesitate to question many of the teachings of the Four Gospels in regard to Jesus, from which all their knowledge of his so-called "pure religion" comes.

They do not believe in his miraculous birth or resurrection or in any of his alleged miracles, and they will even question certain portions of his moral teachings. The fact is that such Unitarians as these are not Christians at all, but Rationalists, and have no right to the Christian name, unless Christianity and Rationalism are identical, which no one will for a moment claim. As to their professed allegiance to Jesus, whose name has become to them a sort of fetich, the Unitarians have been especially sensitive. And, whenever one has denied this allegiance and consistently dropped the Christian name and Christian forms, and declared himself to stand on the basis of pure rationalism, the Unitarian authorities have invariably rejected him from their pulpits, provided it lay in their power to do so. And such cases have come before them in one form or another again and again. Merely because of his rationalism, they turned a cold shoulder to one of the greatest preachers of this century, the man to whose sacred memory this very hall was dedicated,—Theodore Parker. They accepted the resignation from one of their pulpits in this city of that great philosopher of the soul,—Ralph Waldo Emerson,—merely because his thought had grown so radical that he could not conscientiously administer the "Lord's Supper." When the honored President of this Association dropped the Christian name, his name was immediately dropped from the Unitarian Year Book. One, aye, more than one, Unitarian minister has lost his position because of a disbelief in a personal God; and I know of one able and sincere thinker who lost his pulpit simply because he expressed doubts as to whether we should meet our friends in another world. Such actions as these on the part of our Unitarian friends are absolutely inconsistent with that spirit of freedom and rationalism in religion which the new religion must not hinder, but foster.

Radical Unitarians, as we well know, do not entirely approve of such acts; and this leads us to another point to be noticed, which is that Unitarianism contradicts its own name. Its name implies the idea of unity, but as a denomination it has no unity. It is a house divided against itself. Between the two wings of the body—which we may call the Eastern and the Western—there is merely a forced unity, which is only maintained by carefully avoiding the discussion of certain questions. And, when these questions have been raised by their more radical-minded men, instead of meeting them candidly and openly, they have tried to suppress them by what one has aptly called a "conspiracy of silence"; and the Unitarian organ is itself conducted on this policy.

Friends, it is upon an entirely different policy that we propose to proceed. We do not propose to reject any one from our fellowship, on the mere ground of belief or disbelief either in a personal governor of the universe or in a personal existence beyond the grave. We do not propose to teach, for we do not believe, that morality must stand or fall with those beliefs, though it was only a few days ago that I heard a prominent Unitarian clergyman maintaining that this work of ethical culture could come to no permanent good, as it was not based on a belief in a personal God and personal immortality. He seemed to think, like one of the Church fathers, that without the Christian theology the virtues of men were but "shining vices." We do not propose to compromise with any of the outgrown forms of the past. We do not propose to call ourselves "Christians," for we are not. We stand outside of Christianity; and, for this reason, Unitarians have told us that we are putting ourselves outside of the great historic line of development.

They tell us that they do not propose, like us, to cut themselves from the historic root. But what, I would ask them, is the root? The names and creeds and ceremonies which we who stand outside of Christianity reject, are these the root? Then let the root itself perish: humanity will not suffer in the least. But no! The great historic root of religion is the moral nature of man. Christianity did not bring it into the world. Judaism did not. It came when man came, and will not die until man ceases to be man. The claim of Unitarians that those who reject the Christian name and Christian forms thereby put themselves outside of the line of historic development is extremely weak and narrow. It is as if they were to say that, when in the mesozoic age the bird threw off its reptile tail, and took upon itself wings, it thereby put itself outside of the great process of evolution! If there is anything which puts itself outside of the historic line of development, or rather brings development to an end, it is that spirit of compromise with the outgrown forms and doctrines of the past which characterizes our Unitarian friends to-day. It is not in any given formulas, but in the deep and abiding principles of the moral nature within us that the future promise lies. I have spoken of the Unitarians frankly, and not without due deliberation. In fact, all my criticisms have been based upon specific instances.

And, now, having shown why Unitarianism fails to satisfy us, I wish to say a brief word in regard to the relation of the ethical movement to this Free Religious Association. With the ideas and aims of this Association, so far as they go, we are, I may say, in perfect sympathy. But, to my mind, those ideas and aims, as practically exhibited, do not go far enough to meet the religious need of these times. The Free Religious movement was a pronounced step in favor of freedom and rationalism in religion. It was a much needed protest against setting up creeds and names and ceremonies as a test of religious fellowship. It was a strong and brave declaration against Christian sectarianism; and, even if this alone were its mission, it was a noble one, and it has to this time performed it well. There is on doubt that the cause of religious tolerance has been greatly helped by this Association.

Freedom and rationalism have been its watchwords, and they are ours also. Of course, religion must be made free and rational; it must be put in harmony with the scientific tendency; it must adopt the experimental, the truly scientific, method; it must allow the widest liberty of thought. The meeting together of men and women of different views for intellectual discussion, which you have fostered, has a value of its own which cannot be overlooked. But such discussions, it must be said, hardly ever come to the ears of those whom they would most benefit,—namely, the orthodox people,—nor do they accomplish the great work of practical religion. For five consecutive years, beginning seven years ago, I attended the annual meetings of this Association, and drank in words which always gave me a new inspiration; and I sincerely hope that such meetings will be continued into the far future. But something else, friends, is needed to build up the coming religion. Believing that the true pathway of religion is in the pathway of moral culture, we cannot agree with those Liberals—and there are many of them—who think that mere intellectual discussion is all that is needed. No: what is most needed now is organized societies for the promotion of ethical culture and the practical realization, so far as may be, of our moral ideals.

We need in all our towns and cities societies which will follow in the direction in which the Societies for Ethical Culture in New York and Chicago are pointing the way; for it is in that way, we believe, that the religion of the future lies. In both these societies, personal character is the sole test for membership. In regard to this point, the religion of the future must be dogmatic. The watchword of freedom must not be allowed to be interpreted to mean moral license.

The ethical movement, friends, is an attempt not only to build up a new ethics, a new religion,—if you please,—based on the new conceptions of life and the world, but its chief concern is that human society individually and collectively shall conform itself even in its minutest details to the great principles of the moral law, whose mighty and far-reaching depth in human nature no plummet has yet sounded. And such a religion?—a religion whose God is not enthroned in heaven, but in the ethical laws and in human conscience, a religion which seeks its goal not by prayer, but by action, which makes the test of its orthodoxy "not in the creed, but in the deed,"—such a religion is the need of the hour. For, as you have already been told and as you yourselves well know, the moral culture of our age lags far behind what it ought to be, especially the moral culture of those who are to be the future guardians of our republic. The intellects of our children are cultivated, their hands are being trained to useful employments; but their hearts and consciences are neglected. While boys are growing to manhood, they see that money is power, they see that to a certain extent knowledge is power; but they see not that *character* is power. On the contrary, even in this old puritan State, they behold men of the most scandalous reputation raised again and again to political office, they see them honored in society,—aye, more than that, they see them standing even in the pulpits! No wonder that the idea prevails among young men that a little dipping into the evils of the world is a sign of manliness and strength. But it is a false, pernicious idea, and tends to destroy that fine conscience and purity of soul which are the priceless gems of character. No more than one can cleanse a garment by rubbing upon it indelible stains can one attain to the perfection of the higher man within by indulgence in the world's immoralities.

There is need of a new attitude in regard to what constitutes the worth of life. It is time that it be taught that the ethical laws are as fundamental as life itself, and as imperative for the moral world as the laws of gravity for the material world, and that to work against those laws, to be indifferent to them, or even to be unconscious of them, means, on our part, moral mistakes, moral disorder, moral ruin; but to work in harmony with those laws means to bring ourselves into harmony with the wide Universe of being and its holiest, deepest purposes.

Digitized by Google

And yet when we behold the utter materialism of our times, the growing inequalities, the selfishness; when we open our eyes to the fact that so many are living as though the be-all and end-all of human existence was the mere possession of wealth; when we see how little the dictates of the moral law rule in trade and politics and even home life,—then we are sadly conscious that this work of ethical reform is no light and easy task. The work before us is vast and difficult; and I doubt not that all our eyes will be forever closed, our voices forever hushed, before even the leaven is fully prepared which is to leaven the future of human society. The preparatory task is alone ours. And what is that task? To conform our own lives to the ideal we would see realized in the world. Ah! that is the most important and the most difficult task that could be given us. It is not easy, in the midst of life's many temptations, in the midst of the many allurements that tend to draw us from the right and true way,—it is not easy to do always just what we think and know is right. It is oftentimes far easier to yield our sense of duty than to yield ourselves to it. How can I, says the young business man, help from indulging in some of the morally questionable practices which are universal in my trade, and upon which alone it can thrive? How can I, says the young preacher, speak out my full thought, since by doing so I should lose a position for which I have spent years in fitting? How? In the same way that the greatest souls of history have shown,—by self-sacrifice; by being willing to endure the adversities of fortune and, if need be, the rebuffs of the world for the possession of that which is of such infinite value, an untarnished soul. The salvation of the world depends upon the sacrifice of the lower to the higher aims. It depends upon the moral worthiness of individuals. There can be no high and noble enthusiasm for humanity, no great self-sacrificing deeds, no real progress toward a personal and social ideal, which is not based upon moral character.

And now, friends, in these days of dying creeds and religious indifferentism and moral lethargy, when Christianity no longer suffices, it should be shown, it must and can be shown, that a rational and ethical religion *is* possible; that it is capable of making men purer and better and nobler; that it is capable of inspiring them to unselfish,—yea, more,—to self-sacrificing efforts in behalf of the good of the great world. The permanence of the ethical ideal is the anchor of our hopes.

The old theologies are dying. Let them die. Life will still have its sacredness and its infinite meaning. The moral law will still remain. Conscience will still assert its authority, and new and holier visions will fire the soul to action.

IN the *Century* for June, President Eliot, of Harvard, discusses the question, "What is a Liberal Education?" and takes the ground that the sciences and English should be given leading places in the school and college courses. In a paper on "The Use and Abuse of Parties," Dr. Washington Gladden advises Independents to try to act with their party in the choice of candidates, and to bolt bad nominations. The daughter of Gen. Stone furnishes for this number an interesting "Diary of an American Girl in Cairo during the War of 1882,"—a vivid and remarkable narrative of the life of Gen. C. P. Stone's family during the month that mother and daughters were exposed in Cairo to the greatest uncertainties and dangers, while Gen. Stone was at his post with the Khedive, and aiding in the English operations against Arabi. The illustrated papers are "A French-American Seaport," being an account of the Island of St. Pierre near Newfoundland; and a part of Mr. S. G. W. Benjamin's series describing his cruise in the "Alice May"; a picturesque anecdotal description, by Franklin H. North, of the seamen's retreat on Staten Island, or "Sailors' Snug Harbor," to which paper belongs the frontispiece of the number, an engraving from St. Gaudens' statue of Robert Richard Randall, the founder of Snug Harbor; "American Wild Animals in Art," by Julian Hawthorne, with illustrations from the sculptures of Edward Kemeys; and a curious and scholarly paper, interestingly illustrated, by Dr. Edward Eggleston, on "Commerce in the Colonies." There is one short story of passable merit. Robert Grant's serial, "An Average Man," is concluded a little hazily. The second instalment of Henry James' "Lady Barberina" is given, with the eighth chapter of Cable's "Dr. Sevier."

THE May number of the *Revue de Belgique* opens with Count Goblet d'Alviella's article, discussing a plan according to which the members of a legislation would represent, not arbitrarily constituted electoral districts, but great industrial and social interests. Thus, of sixteen delegates for Brussels, one would be chosen by owners of real estate, another by lawyers, another by merchants, another by carpenters, masons, and other builders of houses, another by tailors and shoemakers, another by printers and bookbinders, etc. The next article on the "Civilizations destroyed by Catholicism" is full of interesting facts about the wounds given by Christian bigotry to pagan, Moslem, and Aztec culture. The author is mistaken in comparing Plato's vague fancies about the circulation of the blood with the great law first discovered by Servetus and established by Harvey. He also greatly overrates the knowledge of evolution possessed by ancient philosophers. This number is further remarkable for a curious account of the correspondence of Philip II. with his daughters.

TWO OF Mr. Walter Stetson's pictures recently exhibited in Boston, and which attracted so much attention from their originality of conception and vividness of coloring, were purchased by Mr. L. Prang, one of them being in oils, the other a water color. The former, "By a Pool," represents two female figures in a quiet, wooded retreat, and is remarkable for the tender treatment of foliage and sky and the artistic introduction of a bright focus of color in the foreground.

A FEW weeks ago, Mr. A. B. Bradford wrote to *Man*, the organ of the National Liberal League, as follows: "There are men in the land who are not identified either with the Liberal League or its opponents, and who, if they would invite a national convention to meet, might, from their high character, close up our ranks." This statement led the above-named paper to make a very different proposition. "In a recent *Index*," it said, "we read that the editors and 'thousands of Liberals' decline to work with the National Liberal League, on account of the demand for a repeal of the Comstock United States postal laws, passed as a resolve at the later Congress of the League." The president and secretary of the League declared that they would "not be candidates for any office of the League at the next Congress," and desired "a new deal should be made, so that, if possible, the elements referred to by Mr. Bradford and *The Index* should be brought forward, and harmonized with the League." Accordingly, they expressed the desire to have "every liberal society of any kind represented at the next Congress." In response to this, we stated frankly, but courteously, that the National Liberal League had by its repeal policy alienated from it the great mass of Liberals, and it was now without vitality, influence, or harmony, and that, if there were to be a convention to form a national liberal organization (of which we were in favor, if it could be effected on a wise basis,—namely, the principles of State secularization), it should be held without connection with any of the existing organizations. Our suggestion, in harmony with Mr. Bradford's remark, was prompted by the desire only for such action as should prevent antagonism, and not render fruitless all efforts to unite Liberals for a common purpose. We knew the League was identified in the public mind with the obnoxious policy that had made it a failure; that, until the adoption of this policy, the League was an object of but little, if any, interest to its present leaders; and that they would never consent to a rescission of their repeal resolutions; or, if this were done, and the League were put as far as possible in the position it occupied before the date of the Syracuse Convention, that neither these men nor those whom they represent would feel any further interest in it. Now, the attempt is made to give the impression that the officers of the League have made a most magnanimous offer in the "new deal" proposed, and that *The Index* has treated it with contempt. Neither statement is true. The secretary of the League,—seeing that the proposed "new deal" has not impressed favorably anybody outside of the organization, while it has evoked indignant protests from the undiplomatic and most active workers in the League, some of whom now declare that they will not be satisfied until the demand for repeal shall include a demand for the repeal of *all* laws, State as well as national, against obscene literature,—the secretary of the National Liberal League abuses us in his usual silly style, and announces that the League is now "left free to go on its way as heretofore, unimpeded by any 'but the brave, who deserve the fair.'" Meanwhile, conundrums like the following, which we take from a letter printed in the *Radical Review*, are being propounded for the consideration of the leaders of the League, since they have referred to our really kind and sincere response to their proposition as the contemptuous spurning of a generous offer: "If the platform of principles announced obtains the adhesion of a party respectable by numbers and influence, how is it that its president and secretary are resigning, and calling for 'a new deal' in election, or that *The Index*, which represents a body whose consociation is invited, replies in a tone of contemptuous pity?" We will only add that, when a serious effort affording any promise of success is made to unite the Liberals of this country in a national organization, it shall have our support and co-operation.

THE *Religio-Philosophical Journal*, which indorses the position of *The Index*, and quotes from our recent article on "The New Deal proposed," says: "We fail to see why a national organization of Liberals, supposing it desirable, should be connected with the election of officers to succeed those who now control the League. The fact is, the League has by its folly (to use the mildest term) reduced its strength and influence to a minimum, so that even at its annual convention it can bring together only a few dozen members. Nearly all the auxiliaries named in its published list are dead, as Underwood said they were some two years ago; and they are dead beyond the possibility of resurrection. . . . This last proposition of the President and Secretary of the League is a mere device to get adherents and aid by indirect and deceptive methods, which cannot be obtained in any other way. They count on the ignorance or forgetfulness as to past issues of large numbers of Liberals, and hope to impress them by an apparent display of generosity and magnanimity in declining to be re-elected to office, when in truth they see clearly that the farce they have been keeping up is about played out, and, if they do not leave the offices, the offices will soon leave them by a total collapse of the whole concern.

THE following paragraph is from Monroe's *Iron-Clad Age*, which reprints nearly three columns from the speech alluded to below: "The impression seems to prevail very generally that the National Liberal League has made a great mistake in committing itself to a policy respecting postal laws against indecent literature, to which multitudes who believe in State secularization cannot and will not give their support. The idea now seems to be to return to the position advocated by those who have claimed that the League should so conduct its policy as to leave its members unpledged as to the constitutionality of the postal laws of 1873, and go on with the work of agitating for secularizing of the State and the people. This position was stated by B. F. Underwood, Oct. 27, 1878, before the National League during the discussion that preceded the split, and the disastrous consequences, including all the abuse, slander, and vilification that have followed. A portion of Mr. Underwood's speech, although spoken six years ago, reads as though the statements had been made in the light afforded by the failure of the League to make solid progress during these six years.

MRS. CLARA M. BISBEE, whose address is Clark Street, Dorchester, would like to receive applications for lectures from liberal associations in New England during the next three months.

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued.

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith.*

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago *Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—*Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.*

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

GUIZOT'S

HISTORY OF

FRANCE.

From the Earliest Times to 1848. Eight volumes, small octavo, large type, over 400 illustrations. Price reduced from $24.00 to only **$6.00 per set.** *Volumes now ready; others at intervals of two months.* Sample volume sent postpaid, with privilege to return, **65 cents.**

"This is another wonder of the publishing business. It is well printed, substantially bound, and abundantly illustrated with spirited pictures. The price is astonishing. Guizot was a writer too well known to need praise from us."—*Episcopal Recorder*, Philadelphia, Pa.

"The marvellous cheapness of these profusely illustrated and handsomely bound volumes must provoke comment everywhere."—*Journal*, Indianapolis.

"The only really good and complete history of France ever written."—*Christian Leader*, Boston.

SEVEN GREAT

MONARCHIES of the Ancient Eastern World. By GEORGE RAWLINSON. Best American edition. Complete in three volumes of over 2,000 pages, and over 700 illustrations and maps. Price reduced from $18 to **$2.40.** *Now ready.*

"Its position is well established as one of the greatest of modern histories, a monument to the erudition and capacity for work possessed by its author. The edition is in every way a satisfactory one, while its cheapness is something marvellous."—*Episcopal Recorder*, Philadelphia.

"It is amazing to see what valuable books he is now publishing at prices which are within the reach of the poorest. The best work he has yet done is that great and notable work by Prof. Rawlinson."—*Golden Rule*, Boston, Mass.

"It is, of course, the publisher's risk, and not the purchaser's, when a book like this is offered for the price of this one. We can only hope and believe, since he knows what he is about, that the publisher will get his money back."—*Standard*, Chicago. Ill.

500,000 VOLUMES Choice Books. 100-page catalogue free. Books for examination before payment on evidence of good faith. *NOT* sold by dealers: prices too low. By mail 20 per cent. extra.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of so on, and the best exertions of its manage s will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

WONDER-BOOK

of HISTORY—Illustrated.

A SURPRISE even for the old steadfast friends and champions of *The Literary Revolution*, and a delightful "*chunk*" of literary "*dynamite*" for the foes of choice books for the millions. "*WHAT IS IT?*" A new, enlarged, beautifully *ILLUSTRATED*, and *RICHLY BOUND* edition of my heretofore published Historical Wonder-Book, which contains, *UNABRIDGED:*

GREEN'S Larger HISTORY of the ENGLISH PEOPLE.

CARLYLE'S HISTORY of the FRENCH REVOLUTION.

CREASY'S Fifteen DECISIVE BATTLES of the WORLD.

SCHILLER'S HISTORY of the THIRTY YEARS' WAR.

HERETOFORE, it has been a "'Wonder-Book' in the amount and (literary) quality of its contents,—the cheapest well-made historical volume ever published." *NOW*, it is that, and more: very large and valuable indexes have been added to each of the four works; heavier and better paper is used in printing, and the printing is greatly improved in quality; nearly a hundred *ILLUSTRATIONS*, by famous artists, have been added; the *BINDING* is so unique, striking, and appropriate as to be considered almost "*an inspiration*"—whoso sees the cover will be tempted to think he has found the *gate* to the "royal road to learning," and will surely open and look within. "*WHAT IS THE COST?*" Amazing as it may seem, *TO YOU* the price is only *$2.50* per copy; and, even beyond this, the most extraordinary inducements are offered to energetic **AGENTS** who will thoroughly canvass the *exclusive* territory assigned to them. My object is to make this work the means of advertising and introducing my numerous other books, which are not sold by agents or the trade, but to buyers direct only. To secure *your choice of territory* (and exclusive agency), whether village, township, or county, write *immediately*, stating your experience, what you want, and what you will undertake to do.

500,000 VOLUMES Choice Books,—100-page catalogue free. Books for examination before payment, on evidence of good faith. *NOT* sold by dealers: prices too low. By mail 20 per cent. extra.

JOHN B. ALDEN, Publisher,
P.O. Box 1227. 393 Pearl St., New York.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c. per line.
" 13 " 25	" . . .	8c. " "
" 26 " 51	" . . .	6c. " "
" 52	" . . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

CAPT. R. C. ADAMS recently lectured in Montreal to a crowded house on "Talmageism," Talmage having been there and lectured on "Ingersollism" the previous week.

THE admittance of women to the Massachusetts Medical Society last week by a vote of nearly two to one was a triumph of justice over prejudice and narrowness in the medical profession.

ALTHOUGH Catholic papers, at the time of Charles O'Conor's death, stated that the sacrament had been administered to him before he died, it is now declared, on what seems to be reliable authority, that Mr. O'Conor did not receive absolution, and declined to see the priest who came to administer it.

ON the 11th inst., at Minister Norton's banquet in honor of the completion of the Bartholdi Statue, M. de Lesseps, in his response to a toast, expressed the hope that, when the statue of Liberty Enlightening the World should reach America, the Americans would be good enough to abrogate the clause of their tariff law which weighs so heavily upon foreign works of art.

THE decline of Catholicism, and with it of all theological belief in France, is indicated by many facts, among which may be mentioned that in the last census 75,000,000 persons registered themselves as having no religion against 29,000,000 Catholics. Hundreds of churches, it is said, remain vacant in the country for lack of young priests; and, in spite of this, the Deputies lately refused, by a vote of 395 to 92, to exempt ecclesiastical pupils from three years' military service.

THE Society of Free Thinkers at Strasburg has protested against having its Sunday sessions supervised by the police and restricted to the time when there is no public worship in the churches. The ministry defends these restrictions, because the society believes in no personal God, but only in nature, and thus makes knowledge and virtue the foundation of its religion. That there can be no religion without theology, is held by the editors of the Milwaukee *Freidenker*. But why insist that the word religion be always used in a narrow theological sense?

THE Boston *Herald*, in referring to the late Henry G. Vennor, the "weather prophet," whose guesses like other men's sometimes came true and sometimes did not, and whose theories were regarded by all recognized meteorologists as entirely fanciful, observes that "Mr. Vennor's whole career is a striking illustration of how easy it is to build up an almost world-wide reputation, even in this age of doubt, by pretending to possess that prophetic inspiration which will permit its possessor to announce in advance those minor events of life that are held in such high estimation by the mass of mankind."

FROM the *Indian Messenger*, published at Calcutta, we take this paragraph: "It is worthy of note that it was only a majority of nine—one hundred and forty-eight to one hundred and thirty-seven—that negatived the motion of Mr. Willis in the House of Commons for depriving the bishops of their legislative power in the House of Lords. Perhaps it would not be over-sanguine to hope that the time is not far distant when the bishops will be, as an English paper puts it, 'thrown overboard,' and the way will be cleared for complete separation of the Church from the State." The Bombay *Guardian*, writing on the same subject, says: "Why bishops should be in parliament more than other clergymen is not very evident. We do not think they help the Church of England any way. The principle that a Church cannot be properly cared for, unless its bishops or elders are in parliament, would bring in a great many ministers of religion into the national representative body. But who accepts that principle nowadays? If the clergy are what they profess to be, they will train the members of their flocks so as to fit them for legislative functions."

A WRITER in *Zion's Herald*, a "fisherman," whose article we find quoted in the *Congregationalist*, says that a majority of those who go fishing from Gloucester "are foreigners dominated by papal ideas of personal duty, or else are infidel," and "thus the fishing business of Gloucester has passed into the hands of men who have no fear of God before their eyes." The writer complains that among those "who have interest and even control of vessels" are members of evangelical churches, and yet no protest is made against Sunday fishing. Considering "the gathering pall which hangs each year over that ill-fated city," this "fisherman" asks "if the firms, the captains, and the crews ought not to be God-fearing men, as a remedy for the evil?" The idea seems to be that fishing on Sunday by papists and infidels, "who have no fear of God before their eyes," has so offended God that he has caused fierce storms to sweep over the sea to destroy the fishing fleets and their crews, and that the way to avert similar disasters in the future is to put in place of infidels and papists "God-fearing men" who will do no fishing on Sunday. And yet neither in the Old Testament nor the New, which the stickler for rigid observance of Sunday professes to accept as a revelation from the Maker of men and fish and the sea, is there a verse commanding men to abstain from work on Sunday or intimating that the day is any more sacred than Monday. When the real Bible Sabbath is habitually disregarded with impunity by the great mass of Christians, it is not reasonable to believe, capriciously as the God of that book acted in the past, that he would take advantage of a few poor fishermen out upon the sea, and destroy them, and make their wives widows, and their children orphans merely for keeping at their work on one of the six days on which it is declared he himself worked in creating the heavens and the earth.

THE parliamentary election which has just taken place in Belgium has resulted in a victory for the clerical party. The population of Belgium is chiefly Catholic, and there is no other State in Europe professing to have a parliamentary government where the franchise is so restricted by high property qualifications. Last year, the Radicals, who have long been dissatisfied with the relations of the civil power to the Church, introduced a bill for the revision of the Constitution. They were able to muster but eleven votes in the Chamber of Deputies. Small as was the Radical contingent, the Liberal Cabinet was in great need of its support, and made concessions which alarmed the Catholics and united them in the election which has returned the old clericals to power, securing a Cabinet that will restore the relations between Belgium and the Vatican to their former footing. Among the measures that aroused the opposition of the Conservatives were those brought in by the government for the abolition of the property qualification required for participating in the provincial and communal elections and for making education compulsory. The Conservatives declared that the proposed education of the peasantry to exercise political rights in local affairs would remove the objection to the granting of the parliamentary franchise, with which the Frere-Orban Ministry, it was understood, was not to interfere. Furthermore, the attitude of the Cabinet toward the Vatican exasperated the Catholics and contributed to the result. The recent riotous demonstrations in Belgium were caused by apprehension of extreme reactionary measures. Evidently, the Radical sentiment is growing from year to year; but these reactions must be expected, where the old order of things has age, religion, priestcraft, prejudice, wealth and power to sustain it against every innovation How long the Conservatives will retain their hold on the Legislature of Belgium remains to be seen. Catholic organs in England, Germany, and Italy, call upon them to rescind the laws passed by the Radicals looking toward the secularization of the public schools, and to put the school system again in the hands of the clergy. But the knowledge which the clerical party have that they can retain parliamentary power only by avoiding a course that will combine against them all the dissatisfied political elements must make them cautious in undoing the good work of their predecessors.

THE NEW UNITARIANISM.

We have been hearing much in the last two or three years about the New Orthodoxy. But there is also a New Unitarianism, whose appearance is quite as significant, though it may not attract so much attention. The New Orthodoxy is occupying some of the positions which were held by the Unitarians fifty and sixty years ago. On some points, indeed, it is advancing beyond the Unitarianism of that time,—as, for instance, in regard to the inspiration and authority of the Bible. But, meantime, the Unitarians have not been standing still. For a time, some of their most prominent leaders tried hard to stop the advance, and the whole denominational machinery was applied to put down the brakes. But the effort was in vain. As fast as, and faster than, the progressive portion of Orthodoxy has been coming up, the advance-guard of Unitarianism has been travelling before it; so that to-day the two bodies, as a whole, are as far apart as ever. There is very much less acrimony of spirit between them than existed a half-century ago, but there is little sign as yet of their coalescing in doctrine or organization.

The New Orthodoxy and the Old Unitarianism might possibly unite: the feathers of these two wings do here and there amicably interlace. But the New Orthodoxy does not yet control the denomination to which it is attached; and the Old Unitarianism has become so much of an eccentricity in the Unitarian denomination that it only discloses its weakness, if it attempt to act by itself. It is treated with courtesy, even with reverence, for the good work it once did: its traditional phraseology is even too much respected still; but the courtesy and reverence might be at once broken, were it to violate the necessary condition for receiving them,—namely, quiet non-resistance to the current active forces of the denomination. The New Unitarianism begins, indeed, actively to show itself in shaping the denominational policy; and it only refrains, perhaps, from even more aggressive efforts, because of its confident feeling that, in the natural course of things, the future of the Unitarian cause is rapidly coming into its hands.

The seed of the New Unitarianism was planted in America by Theodore Parker. It has grown up and borne fruit more rapidly than he could have dreamed. He went to his grave, not seeing even a promise of the coming harvest. To the end of his life, the Unitarian denomination treated him as a pestilent heretic and outcast. It was in 1841 that Parker preached his famous sermon on "The Transient and Permanent in Christianity," which opened against him the flood-gates of denominational antagonism and persecution. It would be difficult for even a conservative Unitarian to discover, in reading that sermon to-day, what it was that could have shocked so profoundly those who then heard and read it. The sermon has hardly a trace of heresy in it according to present Unitarian standards. It may, perhaps, be fairly said to-day to represent average Unitarianism. Yet it did most deeply shock the Unitarianism of forty years ago. We well remember hearing, in our boyhood, Parker denounced by Unitarians as "infidel" and "atheist," whom no lyceum committee ought to invite to lecture even on a secular subject. As late as 1857, the faculty of the Cambridge Divinity School vetoed his election by the graduating class to preach the graduation sermon at the school; and, two years after, when he had already gone abroad in broken health, never to return to his work nor to his native land, there occurred a notable debate at the annual meeting of the alumni of the Theological School in Cambridge, which stamped itself indelibly on a good many memories. Mr. M. D. Conway introduced a resolution of sympathy with Mr. Parker on account of his shattered health. The resolution was carefully confined to this point; yet it was vigorously opposed, and voted down by a large majority. It was opposed by some because there was no precedent for it; but more of those who spoke in opposition were against it because it would be interpreted as an indorsement of Mr. Parker's ministry and views. It was in this discussion that one very prominent Boston pastor and Doctor of Divinity said that he believed that, on all questions of public order, political integrity, and practical righteousness, Theodore Parker had done a greater work than any other minister in Boston in the same time; and yet, though he could pay this high tribute to the public moral outcome of Parker's ministry, he could not vote for the resolution, because he believed Parker's theology false and dangerous. Another of the then eminent Unitarian leaders opposed the resolution still more vehemently on the same ground, and, in the midst of his speech, turned round toward the seats where most of the younger men were sitting, and exclaimed, "It is time that the young men who sympathize with Theodore Parker's views were given to understand that they don't belong to us, and that they are not wanted among us."

It will be twenty-five years ago this coming July since that speech was delivered. The young men for whom it was meant are now in middle life. Some of them soon found the spirit of that speech too dominant in the denomination and the Unitarian climate generally too inhospitable to their thought for them to work freely in the denominational limits; and these have either been forced out of the ministry altogether or have done their work mostly outside of Unitarian fellowship. Others of them were not so much troubled by the restraints and kept a place in the Unitarian ranks. But, whether inside or outside, these young men have lived to see that what was then their heresy is now the accepted faith of a very large, if not the controlling, portion of the denomination. The Western Unitarian Conference is in their hands. And even the American Unitarian Association, controlled mainly by its Eastern members, is wise enough to see that, if Unitarianism is to have a future, it must keep its face in that direction. The Unitarian Sunday School Societies, the Eastern as well as the Western, are printing books for Sunday-school use which teach views with regard to Jesus and the Bible that are in entire accord with the general positions of Theodore Parker's "Discourse of Religion"; that is, books which treat Christianity as a phase of natural religion. There are individual protests against such books, but they are ineffective to prevent their publication. In the recent Anniversary Week, we heard a sermon before a large body of Unitarian ministers which was far more radical than anything Parker ever uttered. The hearers represented the extremes of ministerial age and all the shades, apparently, of Unitarian opinion. Yet, in the discussion which followed, there was quite as much sympathy expressed as protest; and among those who opposed there was no one who seemed in the least shocked by anything that had been said, nor was one word spoken on either side that transcended the courtesies of equal debate or violated the spirit of equal fellowship. Remembering that meeting of twenty-five years ago, a representative assembly similar to this, the contrast indeed was great.

Seeing, with pleasure, such an advance as this, we try to be patient and not over-critical in respect to exhibitions of a contrary sort that sometimes appear in the Unitarian household. That the New Unitarianism should often stand in the attitude of concession to the power of the Old may indeed, to many minds, be justified on the ground of the good nature that is willing to wait for the sure triumphs of time. But, when concession becomes a compromise which involves the slightest sacrifice of conviction, we cannot do otherwise than utter our word of criticism and condemnation. No religious organization, Unitarian or other, that requires for its existence a compromise of opinions, can be true to the principle of free inquiry. The New Unitarianism, we hope, will soon set its hand to the accomplishment of two things: one of them, the establishment of the Wade College at Cleveland on the broadest basis demanded by the new thought of the new time; the other, the entire abolition of the theological basis of the National Conference. The latter action, in particular, is to be the coming test of its power and its sincerity. Those theological phrases in the constitution of the Conference are becoming every year more and more alien to the faith of the assembly that meets under them. But, aside from this fact, their expurgation should be called for on the ground of simple equality and justice in the relation of the members to each other. Is not the New Unitarianism strong enough to secure this reform? It should be, at least, strong enough to try for it.

WM. J. POTTER.

BERKELEY OR IDEALISM.

Idealism, or the doctrine that matter is nothing *per se*, but only a sensation in us or state of consciousness, so far as we created spirits are concerned, and a mode of creative activity in time and space, so far as deity is concerned, causes not its advocates to be ridiculed in these days. On the contrary, it is the doctrine of the greatest thinkers and scientists of the time. But when Bishop Berkeley, who flourished between 1679 and 1753, published his ideal theory to the world, he and his followers were the butts of no end of jokes and witticisms. "Pray, sir," said Dr. Johnson to one of Berkeley's enthusiastic disciples, "don't leave us; for we may perhaps forget to think of you, and then you will cease to exist." Curiously enough, Berkeley, with his most acute and splendid mind, was a devout believer in old-fashioned orthodox revelation. He never thought of questioning that, and allowed himself to use the vulgar mode of designating Spinoza as an atheist. But Berkeley, like his Grecian master, Plato, was a theologian as well as a metaphysician and philosopher. Theology and free reflective thought or rationalism are now no longer compatible with each other. Not only the ponderously erudite but really superficial Dr. Johnson tried to amuse himself and his listeners and admirers at the expense of Berkeleyism, which his gross mind was incapable of understanding; but Byron, in his "Don Juan," alludes jocosely to it. But Byron was really an idealist himself. He wrote in the poem aforesaid, which is, with Carlyle's *Sartor Resartus*, the wittiest and most genius-fraught product of the English brain of modern times:—

> "When Bishop Berkeley said 'there was no matter,'
> And proved it—'twas no matter what he said;
> They say his system 'tis in vain to batter,
> Too subtle for the airiest human head.
> And yet who can believe it? I would shatter
> Gladly all matters down to stone or lead,
> Or adamant, to find the world a spirit,
> And wear my head denying that I wear it."
>
> "What a sublime discovery 'twas to make the
> Universe universal egotism!
> That all's ideal, all *ourselves*."

It goes without saying that to the deep metaphysical, psychological, and scientific insight of to-day, Berkeley seems not at all a visionary, or a

Digitized by Google

visionary in the sense that Shakspere was, and that all the deepest students of man and nature now are. "We are such stuff as dreams are made of," is a summary statement of idealism. Current science is idealistic, and refines seeming solid matter into a complex of forces or vibrations. In the view of current science, to borrow the language of Fichte, the famous German I-st or Ego-ist, "the dead, inert mass which but choked up space has vanished, and instead thereof flows and waves and rushes the eternal stream of life and power and deed." "Nature," says Lewes, "in her *insentient* solitude is eternal darkness and eternal silence." Cosmos, or the ordered world, is really to be looked for in ourselves; that is, it is a *sensible* world. Berkeley's quarrel was with that *tertium quid* of old Oriental mysticism and theology, namely, *brute*, *insensate*, *inert matter*, which was and is a mere dream and imagination, and neither one thing nor another. Matter is not now treated as a dead, inert substance at all, choking up space, but as a complex of forces, which, interacting with mind or conscious force, makes the sensible world of ear, eye, scent, taste, and touch in which we find ourselves environed. This is the current dynamical theory of matter which Tyndall so ably illustrates. Force is anything which can be converted into motion. The non-ego, or objective world, is a dynamism, and not a mere dead mechanism worked from without, but a continuous, unwearied play of creative energy.

The three great British metaphysicians, Locke, Hume, and Berkeley, with all their acuteness and genius, were deficient in adequate terms clearly to express their ideas, such as their great German successors, Kant *et al.*, devised. The terms *subjective* and *objective*, *noumenal* and *phenomenal*, and others, would have enabled Berkeley to express himself more felicitously and definitely, although he is a subtle master of language. According to Berkeley, the essence of the sensible world is its perceivableness, or, as he quaintly says, its *esse* is its *percipi*. Both the primary and secondary qualities of matter, to borrow the metaphysical language of Berkeley's time, are now regarded as subjective. Light, oder, and sound are, of course, and so are extension and impenetrability. As has been said, the universe is no longer looked upon as a mechanism made once on a time, but as a dynamism or ceaseless creative energy. The vibrations of force, which beat upon the strand of our consciousness or upon our senses, are the fulgurations, so to speak, of creative power. These fulgurations, striking on our various nerves of sense, are transmuted by some inexplicable brainal chemistry or alchemy into sensations or things of consciousness or determinate impressions, which Berkeley denominates "ideas of sense." Matter is really an inference of mind, a mental necessity, a device to account for a class or complex of involuntary sensations, which come and go when the portals of sense are open during our waking hours, and which constitute what we call the sensible or objective world. Berkeley's *Theory of Vision* shows that he was not a mere metaphysical dreamer, but a positivist or scientist, when he chose to be. He explains outness, or distance, admirably. The infant imagines that the sun and moon and all external objects are parts of itself, and reaches out for them and cries for them. So would a congenitally blind man think, who should be suddenly endowed with the power or sense of vision. In other words, undisciplined or inexperienced vision sees nothing but light and colors, and has no conception of in or out. The eye learns of real figure, magnitude, distance, and position through the sense of touch. Vision, says Berkeley, is only a language speaking to the eyes; and, until we have learned by experience to understand that language, it conveys erroneous impressions.

What Berkeley meant to say and teach was that matter is purely phenomenal. But, owing to the fact that the reflective thinker of his time had no adequate language, he was compelled to write an entire treatise of *The Principles of Human Knowledge* and *Three Dialogues between Hylas and Philonous in opposition to Sceptics and Atheists*, in order to say it; and then he did not say it effectively. His *Siris*, or chain of philosophical reflections concerning the virtues of tar-water, is a singular rhapsody, medicinal and mystical. Tar-water, with Berkeley, was a panacea for all the ills of the flesh. Doubtless there is a balsam in the air of pine forests, which is most salutary to invalids, particularly to consumptives. Tar-water is still used, and with good results. But Berkeley goes to greater lengths in praise of it as a cure-all than any current patent medicine man ever went in commendation of his particular nostrum. The *Siris* is, in fact, a marvel of curious and useless erudition. In discussing the virtues of tar-water, Berkeley gives us a synopsis of all the ideas and dreams and imaginations of old Greek and Oriental philosophy, including the Alexandrian mystics and theosophists. It is a strange hotch-potch of physics, metaphysics, and mysticism. He says: "The resinous exudations of pines and firs are an important branch of the *materia medica*, and not only useful in the prescriptions of physicians, but have also been thought otherwise conducive to health. Pliny tells us that wines in the time of the old Romans were medicated with pitch and resin; and it is maintained by a famous writer on trees that it is wholesome to walk in groves of pine-trees which impregnate the air with balsamic particles." Apropos of this statement there have been alleged cases of persons apparently far-gone in consumption, going into the Adirondack pine forests, and by sojourning there for several months, sleeping, meanwhile, upon pine and hemlock boughs, coming out restored to good health. Berkeley was the contemporary of such illustrious writers as Pope, Bolingbroke, Dean Swift, Addison, and Lady Mary Wortley Montagu, and of the malignant epistolary gossip, Horace Walpole, who in his letters endeavored to make Lady Montagu infamous. But her renown still survives; for, as a woman of genius, she ranks, and will forever rank, with the foremost of her sex of whatever age or country. It was in the days of Jonathan Edwards that Berkeley arrived in Rhode Island. Newport had then a population of some six thousand souls. The scenery and climate of this southern region of New England especially delighted the great English or Irish ideal philosopher. Newport, in fact, reminded him of Montpellier in Southern France. He found the American autumns the finest and longest in the world, and the summers pleasanter than those of Italy, "forasmuch as the grass continues green, which it does not there." "I was never more agreeably surprised," he writes, "than at the first sight of the town and harbor." The trade of Newport extended then to the West Indies, France, and England. Berkeley quickly became as popular here, and as much an object of admiration, as he had been at home. Quakers, Huguenots, Hebrews, and Puritans, all united in a profound respect for the fascinating Anglican bishop and greatest of ideal philosophers. He became a benefactor of Yale College, finally giving to that institution his Rhode Island farm and a thousand volumes. He established a Berkeley scholarship. Rhode Island was the original State of perfect religious tolerance. His American residence, now an antique farm-house, is still standing. A literary visitor to it says, in describing it, "The deep and crystal azure of the sea gleamed beyond cornfield and sloping pasture, sheep grazed in the meadows, hoary rocks bounded the prospect, and the mellow crimson of sunset lay warm on grassy slope and paddock, as when the kindly philosopher mused by the shore with Plato in hand, or noted a metaphysical dialogue in the quiet room which overlooks the garden." Berkeley remained on this side of the Atlantic some two or three years. His first-born child lies buried in a Newport church-yard. The progress of this country, so marvellous and unparalleled, will forever recall his celebrated verses on the destiny of America:—

> "Westward the course of empire takes its way:
> The four first acts already past,
> A fifth shall close the drama with the day;
> Time's noblest offspring is the last."

B. W. BALL.

THE DOCTRINE OF SURVIVAL AGAIN.

I must study brevity for other reasons than considerations in favor of space, proper as the latter are, but I will reply briefly to Mr. Potter's courteous rejoinder.

He looks at William (the unfittest), and will not look at John; and he will not look at all until William is in misery and an object of altruism. I look at John; and I confess that, after William has decided to neglect instruction, I care nothing about him. My interest and attention are given to the point of time at which they are deciding what they will do. After William chooses his course, using his personal liberty and choice, I say he ought to take the responsibility and bear the consequences; and I maintain that it is immoral and mischievous for John to bear his penalty.

In Mr. Potter's view of the matter, has William no duties to his neighbor? Are all the rights on the side of the idle, shiftless spendthrifts, and all the duties on the side of the honest, industrious, and frugal? Mr. Potter sets aside "utilitarianism"; but, on his theory, John should be good, only in order to win strength enough to seek the delights of altruism. William likes that doctrine. He says: "I will do as I please,—marry, beget children, spend, drink, be merry. There is John plodding away to get ready to take care of us,—to educate my children, support my wife, and provide for me when my troubles come upon me. He will want an object for his altruism, or he cannot be altruistic. I will have a first-rate object ready for him against the time when he is ready to pay for it."

I hold that William has a great duty to John. Not an altruistic duty, but plain, old-fashioned homely justice. That duty is to take care of himself, and bear his own share in the struggle for existence. The "ethics" which are aimed at John are unjust and insulting. Mr. Potter argues that John ought to "transform" William, because otherwise harm will come to John; that is, that because William has gone wrong or failed of his duty to John, whereby John suffers, William has become endowed, not with the just penalty of wrong-doing, but with a claim to redemption at John's expense.

It is easy to assume that John is a millionnaire and can pension off William without knowing that his superfluities are curtailed; but that is not the case. Either John is one of the great average of good citizens with an expensive family, so that his "charities" cut into his books, or his recreation, or his travel, or the comforts and advantageous luxuries of his family; or, if he is a millionnaire, William is not one, but a thousand,—perhaps ten thousand,—and, if John secures their survival, he limits his own. The proposition will only be more

Digitized by Google

firmly established by more study,—that, if we do not like the survival of the fittest, our only alternative is the survival of the unfittest.

The "economic harmonies" are a great subject. I do not hold the doctrine as Mr. Potter seems to hold it, and I do not deny it as some economists do. I hope some time to publish my notion in its proper detail.

W. G. SUMNER.

PROF. SUMNER favors us with another brief communication in this number, but without touching the point which we most hoped he would consider. For that we must wait until his promised publication of the doctrine of "economic harmonies." But, if we mistake not, that doctrine will be found to cover those moral and rational considerations which take man out of the domain of the law of the survival of the fittest, as that law is known in the brute world. In regard to Mr. Sumner's continued use of his illustrative argument, suffice it to say that we do not look at "William" *only* (as he seems to think) nor at "John" only. We look rather at the necessity of their living together in the same social organism, and at their consequent relations to each other. "William" certainly has duties no less than "John." But how shall he be made to see and do his duty is the question. And in the line of that question there is ample field for "John's" altruism to work without interfering with the natural law that the way of the transgressor is hard. In our first article on the subject, we deprecated the sentimental philanthropy which would coddle and feed the shiftless and vicious. But, as a matter of fact, the "William" class do not deliberately and at once enter on an evil course. They come into it gradually, through tempting appetites and unfavorable circumstances; and it is one of the important provinces of wise philanthropy and of education to raise them above the evil power of these temptations and surroundings. This is what we mean by transforming the unfit into a fitness to survive. Prof. Sumner hinself, in his important work as a public teacher, is one of the transforming agencies.

W. J. P.

THE word "people" nearly everywhere, up to the beginning of the present century, meant an anonymous multitude, the raw material of humanity, the mudsills and underpinning of society, supporting the social fabric on its strong shoulders, but having no participation in the government of society. Without education, the people are, it must be admitted, mere soft clay in the hands of demagogues, or a mere mob, fickle, perverse, and wrong-headed, at once the subjects and the occasion of strong government. Manhood suffrage is what modern society is aiming at, and not only manhood suffrage, but womanhood suffrage too. But the truest friends of popular government are the promptest to tell the people that, in order to be worthy of a government of the people, by the people, and for the people, they must rise to the full stature of humanity through education and knowledge. The aim of our republican institutions is to raise the people above the condition of peasants, in the European sense of that word, and to make every man and woman a gentleman and a lady; aye, more, sovereigns, kings, and queens in virtue of their humanity, just as a disciple of the old Stoic school of philosophy was, as he said, a king,—that is, a king over himself, a person in whom reason governed the lower appetites and passions with undisputed sway.

SAYS Prof. Tyndall: "It may comfort some to know that there are among us many whom the gladiators of the pulpit would call atheists and materialists, whose lives, nevertheless, as tested by any accessible standard of morality, would contrast most favorably with the lives of those who seek to stamp them with this offensive brand. When I say offensive, I refer simply to the intention of those who use such terms, and not because atheism and materialism, when compared with many of the notions ventilated in the columns of religious newspapers, have any particular offensiveness to me. If I wished to find men who are scrupulous in their adherence to engagements, whose words are their bond, and to whom moral shiftiness of any kind is subjectively unknown,—if I wanted a loving father, a faithful husband, an honorable neighbor, and a just citizen,—I would seek him in the band of atheists to which I refer. I have known some of the most pronounced among them, not only in life, but in death,—seen them approaching, with open eyes, the inexorable goal, with no dread of a hangman's whip, with no hope of a heavenly crown, and still as mindful of their duties, and as faithful in the discharge of them, as if their eternal future depended upon their latest deeds."

THAT glorious victory of Greek philosophy over persecution and superstition, which Mr. F. M. Holland extolled in his poem, read at the Free Religious Festival, and printed in this number of *The Index*, has been described by him in a history called *The Rise of Intellectual Liberty*, soon to be published by Henry Holt & Co., New York. This book shows how completely freedom of thought had been established before the birth of Jesus; how it was checked by the despotic policy of Augustus and his successors, temporarily suppressed by the Christian Church, and slowly revived by mediæval heretics; how rapidly it grew during the Revival of Letters, when classic learning, modern literature, oceanic discovery, the invention of printing, the extension of commerce, and the great triumphs in art united in developing new ideas; and how these last co-operated with German mysticism in liberating the Northern nations from the yoke of Rome. Especial attention is given to Servetus, Gruet, Franck, and those other most advanced thinkers at the time of the Reformation, Paracelsus and Copernicus, who proved that facts, not books, are the highest authority.

G. J. ROMANES, in a discriminating notice of Chambers' *Vestiges of Creation*, says that Darwin's mind was separated by an enormous interval from all contemporary thought on the origin of species. "If," he observes, "we compare the chapter on geological and geographical distribution, on the mental constitution of animals, etc., with the corresponding chapters in the *Origin of Species* and *Descent of Man*, we are led to marvel, perhaps more than we have ever marvelled, at the gigantic grip of Mr. Darwin's mind. It is not merely that he had incomparably larger stores of facts to draw upon, that he was a man of science as distinguished from a man of letters, and so forth. It is rather that he was head and shoulders above everybody else in sheer mass and force of thought. We have now become so accustomed to walk easily through the jungles, where he, like an elephant, has opened the way, that it is difficult for the younger generation to realize the state of matters before the elephant appeared. But in the *Vestiges of Creation* we have the vestiges of these former things."

IN England, atheists are allowed to affirm, when called as witnesses in the higher courts of justice; but it seems from the following paragraph, which we find quoted in the London *Inquirer*, that they may still be bullied and insulted in the petty courts of coroners: —

At an inquest held on Monday by Dr. Diplock, at the Earl Craven, Westbourne Park, Mr. Hopes, a juryman, admitted being an atheist, and inquired what *locus standi* he had in connection with the inquiry. The coroner said, if he refused to take the oath, he could have no *locus standi* or voice in the matter. Mr. Hopes: I don't refuse. The Coroner: An oath is a guarantee that a man will do his duty. If you are an atheist, what security have I? Mr. Hopes: My word of honor. The Coroner: Your word of honor is not an oath. The law permitted witnesses to affirm, but not jurymen. Mr. Hopes: If I have no *locus standi* or voice, am I obliged to stay? The Coroner: If you absent yourself during the proceedings, I shall fine you for non-attendance. The fact of a man being an atheist does not excuse him from serving as a juror. Mr. Hopes resumed his seat, but took no part in the proceedings.

AMONG Mr. Prang's designers are some of the most successful American artists, who can reach through his publications a larger public than they can reach in any other way. The demand is, he says, for American cards, designed by American artists, reproduced in American style, and as "free as possible from all foreign element." Humorous designs are the most popular; but, to suit public taste here, the humor must be decidedly American in character, indicating the growth of a national school of art in this country. But one of Prang's special artists, who writes from Concord, Mass., seems not to be wholly "free from all foreign element"; for, in the following from one of his letters, there is a bit of humor with a German flavor: "Heaven itself cannot excel this spot for beauty! but what is heaven without beer? No wonder the town has not grown in two hundred years, for—*lager* is unknown."

SAYS the Boston *Advertiser:* "No government in all Europe treats the Pope, the Vatican, and the Roman Catholic Church with greater delicacy and a finer sense of propriety than does the King of Italy. He continues the policy of his father, who did not annex Rome until the Romans had expressed an almost unanimous desire to that effect by a vote of 133,681 ays to 1,507 nays. Father and son have accepted the law of guarantees, under which the Pope is acknowledged as a sovereign, and entitled to an annual payment of 3645,000. This demonstrates the good faith of the Italian government, because no other government in Europe has acted with equal liberality. The German barons were not treated as liberally in proportion, when, at the beginning of this century, their estates were handed over to the peasantry."

CAPT. ADAMS' *Travels in Faith from Tradition to Reason*, which appeared as a series of articles in *The Index*, has been reprinted by the Putnams, and is for sale at this office.

For *The Index*.

PRAYER.

To wish so much we cannot put in speech
Our great desire, though God would hear our plea.
And in our longing thus to do or be
To so increase, its influence will reach
Wherever we or words we speak may go,—
This is to pray: then heart indeed is fraught
With prayer as true as that which Jesus taught.
But men with empty formula for show—
Sign of their emptiness of heart—have learned
(And hence with pious accent we repeat),
As though the Lord could not detect the cheat,
A prayer of words, and that of spirit spurned.
But God, who knows if men do mock or pray,
Heeds still our wish, and not what we may say.

E. R. CHAMPLIN.

WESTERLY, R.I.

The Index.

BOSTON, JUNE 19, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boyston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

REPORT OF ANNUAL MEETING

OF THE

FREE RELIGIOUS ASSOCIATION.

FRIDAY, P. M. SESSION, MAY 30.

The convention resumed its sessions at 3 P.M. Prof. Wm. T. Harris, of Concord, was introduced by the President, as the essayist, on the subject of the Philosophy of Religion.

THE PHILOSOPHY OF RELIGION.

BY W. T. HARRIS, LL.D.

Free thought in matters pertaining to religion, one of the chief objects of this Association, certainly is an object that should commend itself to all men as among the highest objects of human life. To all persons, whether religion in itself be regarded as the loftiest and noblest activity of man, or as an inferior, even the lowest, exercise of human faculty,—to all persons religion must seem, not an indifferent matter, but full of portent, either maleficent or beneficent. It is a prodigious social power that will not itself tolerate indifference. It is in its very nature aggressive, and will not leave those hostile or indifferent to it in peace. Whether religion be good or evil in its nature, therefore, it is of interest to all men. Its greatness, its pretensions, its aggressiveness, all make it the first object demanding attention in one's spiritual environment.

Its professed object is a revelation of the divine, absolute, first principle of the universe and the origin and destiny of man and all things in the economy of the world. Certainly, such a revelation may rightfully claim the supreme direction of human life and the universal recognition and acceptance of all mankind.

Free thought in matters of religion ought to lead to insight into what is true and necessary in those pretensions, and then to an adoption or rejection of these claims. If one arrives at the conclusion that all religion is of necessity false, of course he will reject religion, and set himself in an attitude of hostility toward it, braving cheerfully all its aggressiveness and intolerance. If one finds religion indispensable and its view of the universe a true one, then he will hasten to embrace it and comply with what it prescribes.

The attitude of those who oppose religion or are indifferent to it, but who neglect to study it and comprehend it, is an irrational attitude, sadly in contrast with the objects and purposes of this Association. The greatest of human institutions controlling the energies of the race, determining the governmental forms, the disposition of one's time, the use of property, the relation of man to man,—the rational attitude toward this is certainly not one of indifference, but of the profoundest thoughtfulness.

Man should have a science of physical nature and a science of society. The science of society will be a science of the origin, development, and significance of human institutions. In these institutions, we count four cardinal ones, family, civil society, State, Church.

Religion as organized into an institution is thus a part of the science of society, taking society in its largest sense. The science of religion, it is obvious, is not religion itself nor a substitute for religion, any more than the science of the state is a substitute for the state, or the science of nature a substitute for nature. Science is man's individual account to himself of the relations of the world and its parts to each other and to himself, the thinker and observer. He discovers direct relations of one part to another and indirect relations, through principles, of each to all. The world is a world of principles, which unite existences into systems by means of interrelations.

It is primarily important, in our survey of the world, and especially in our survey of human society, to remember this. The world is a unity and composed of unities. This is a corollary from the simple proposition that things are relative and exist in interrelation. The relativity of all implies the unity of all in one system.

Each being that forms a part of the universe exists in two phases of relation: (1) relation to others, dependence upon others, existence for other beings; and (2) relation to itself, existence for itself. Now, since relativity implies unity of being with others, each being may be said to have two selves,—a particular limited self and a self in the higher and highest unity to which it belongs by virtue of its relativity.

Each relates to all others, and is dependent on them. Thus, each has a great self, the self of the whole system of correlated beings. On the other hand, all relate to each; and, hence, each is itself in some sort a centre of relation, and is self-related and independent.

Thus, it happens that we find the beings of the world as individuals belonging to species and genera. Universal and particular prevail throughout the universe.

The systems of relations that form unities and the great system which makes one unity are not quiescent, dead unities. They are active processes by reason of this interrelation of particular and universal, of part and whole.

For the fact that the relation and dependence of all beings concentrate or focus in each makes a perpetual effect on each, and each one is recipient of a continual stream of influence from all the rest. Curiously enough, each receives an infinite aggregate of influence, and in its turn imparts to all the rest its finite impulse of influence. Each individual must, in the very nature of things, be under the condition of perpetual modification. Its modification must be in the direction of producing within itself a compend of the universe, by uniting within itself all the influences that come to it. To use the old names for it, each tends to become a microcosm reflecting the macrocosm.

Consequently, too, as each individual develops through the influence of all, its own influence on the rest varies. The universe is a vast process by which the universal, or the whole, communicates itself to each particular.

If by chance a special being is antagonistic to the whole of being, it is obvious that the changes wrought within it by the aggregate of external influence will be destructive to its individuality; and it will not be able to receive its changes, but will lose its individuality in those changes.

On the other hand, if a being is already become a microcosm, or similar in structure to the macrocosm, or the universe, then it follows that all influences flowing into it will reinforce its own activities, and develop them into higher and more potent degrees of individuality or self-activity.

These abstract propositions flow necessarily from the idea of a universe of beings existing in a state of mutual relativity, and this is approximately the idea of the modern stand-point of science.

Certainly, man has a twofold outlook upon the world. He beholds things and facts extended and consecutive in time and space, and he also sees with even greater clearness the conditions presupposed by those same things and facts. He sees time, space, causality, and principles of like character, not as facts or things, but as invariably and necessarily presupposed by all facts or things.

Give to the thinking mind facts and things, and it at once energizes to discover their presuppositions. The lowest and most rudimentary human being does this: he recognizes objects as particular, and as belonging to classes, species, and genera. Thus, even *his* mental activity is a process of relating the particular individual to its universal, and to some extent a comprehension of the thing or fact in the great process to which it belongs. Man has language, and each word is generic in its meaning. Each object seen is classified by naming it.

Man thus knows the world, by this double activity of perceiving particulars and their presupposed universals. He never begins at particulars exclusively: with the sheer particular, he perceives the sheer universal as its logical condition or presupposition. He recognizes the widest universals in the narrowest particulars.

When we consider this peculiarity in the nature of man as a theoretic being, we understand one of the elements that makes man a religious being.

Mankind always at all times form for themselves some idea of the universe as a whole. They never stand before facts and things, content merely to deal practically with what is before them: but they always, to a greater or less extent, join to external perception an internal perception of presuppositions of things. From the particular they energize to some extent toward the universal, from the part to the whole. A thing implies space; a fact implies time; a change implies causal energy; a causal activity implies self-activity or self-separation of energy and its transference to another being. This is the road that thought takes, when it stands before things and facts.

Human beings necessarily have two sets of objects theoretically, particulars and universals. If they were to lack universals, they would have no language, and would become, let us say, plants or minerals, or inorganic elements.

From all this, it follows that man is a theological animal, or a being that knows all things through the spectra of ideal totalities or universals.

Man, to be man, must accompany his perceptions of his present world of things and facts by ideas of the world as a whole.

Digitized by Google

From the theoretical view of the world as a whole to the practical direction of human activity in accordance with that theoretical view is a transition from theology to practical religion.

Man's view of the universe is immediately translated by his will-power into practical conduct toward the beings that surround him. Thus, man has religion: first, a theoretical view of the world; and, secondly, practical deeds directed in conformity to it.

It is not only true, but necessarily true, that man's religious ideas are crude at first, and that they do grow or may grow more perfect.

Doubtless, the mind with this twofold outlook—toward external particular things and facts and toward their logical presuppositions—may get able by and by to see the highest ideal of the unity of the whole revealed in the smallest atomic fact. But the law of growth is one that at first develops a comparatively crude idea of the whole, and of the particulars within it.

Religion, one can see, differs from science not only in containing a practical activity directed by the view of the universe as a whole; but it differs on the theoretic side, in that science relates to relative unities and not to the absolute unity. Science connects observed things, facts, and relations with subordinate unities. Religion seizes only the idea of the whole, and the practical relations of man to the world as deduced from that idea. Philosophy agrees with religion in the contemplation of the highest principle, the idea of the whole; while it agrees with science in relating this idea systematically to the things and facts of the world.

But religion, resting as it does on the *a priori* activity of the human mind, is not delayed in its development in the same way that empirical science is. It does not have to wait until it has taken an inventory of the things and facts of the universe, in order to reach an idea of the whole and of the highest principle. It forms at once some idea of the whole coetaneously with its recognition of the simplest thing or fact. The idea of the whole goes before human history, and is the banner of its march.

All the observations by sense-perception and all the reflections by the thinking activity of man are taken up in their ultimate consequences into the religious idea. But, before these results of observation and reflection have undergone that immense sifting or distillation which precedes their admission into the religious creed, long periods must elapse. It is obvious that changes in the religious idea are very slow, and moreover that they are not the direct product of the activity of single individuals, but of long historic growths in the peoples among whom great religious reformers appear. Mohammed found his essential presupposition in the prevalence of Ebionitism, a species of Old Testament Christianity, in Eastern Asia and Northern Africa. Buddha found the Sankhya philosophy: the higher castes were indoctrinated with what may be called ideal Buddhism, and the lower castes were filled with devotees practising the Yoga doctrines (or *applied* Sankhya philosophy), and ascending from the lowest caste by self-renunciation up to a superhuman rank, even above the Brahmin. Zoroaster, we can see, merely reformed the old Persian religion of light and darkness by giving immense emphasis to the moral ideas of good and evil which were before attached to the ideas of light and darkness, but not made supreme ideas.

Religion will from the first furnish the guiding principle of all human activity. It will define and enunciate the highest principle of the universe and man's relation to it, and moreover his relation to facts and things of the world and to his fellowmen. It is obvious enough that religion will furnish the ideas that organize all human institutions. Family, civil society with its castes and occupations, the State, the Church,—all will be founded on the religious idea. They will never get emancipated from the religious control of the Church until the religious idea becomes an idea that tolerates independence among the institutions of civilization. When humanity has grown and developed into a civilization in which each institution is conscious of the laws necessary for its self-preservation, then religion may leave each to its self-direction; for afterward there can be no collision between church and family, or civil society or State. The law of self-preservation of human institutions is at first received from religion. By and by, it becomes a secular possession, and will take care of itself. It passes from its state of minority over to its majority.

It is obvious that the fundamental aim of all religion is that of discovering the true universal or the principle of the whole, and of conforming to it the will of the particular individual,—thereby producing a harmony of finite will with infinite tendency or absolute will.

It is obvious, too, from this that religion originates in a conscious need of this harmony with the absolute, in order that there may be self-preservation. The individual particular must conform to the principle of the universe, or else all its doings will be thwarted by the aggregate doings of the universe.

From this there results this surprising but glad conclusion that the ultimate tendency of all religion must be toward the free self determination of each human being.

Only by self-conformity to the principle of the universal can the individual grow from less to more. By non-conformity, he opposes what he cannot resist, and becomes less and less.

This self-conformity cannot be the work of other individuals, but must be the work of himself. Others may help essentially, but they cannot do his deed for him.

Hence, the ultimate idea of religion must be freedom and growth in freedom,—an ascent from atomic particularity into the universal by willing the universal will.

All religion must progress toward this perception of concrete freedom and toward organizing institutions for the nursing and developing such individual freedom.

But, inasmuch as religion is primarily a substantial insight of a race or people, and not the insight of each individual, it will act by constraint of custom or even compulsory law on individuals who lack the clear insight itself.

Here we have the ground of the conflict between the individual and the religion of his people.

It is the question of the adjustment of prescription and spontaneity in human life. How much shall the individual act entirely for himself, how much shall he conform to the wisdom of the race as expressed in the religious idea of his people?

Let prescription be what it will, even let it be an absolute divine revelation delivered to man; yet it fails utterly of its highest purpose, unless the individual receive it actively both in intellect and will, thinking it over and seeing its wisdom, realizing it by his practical deeds.

But it is also evident that this highest purpose cannot be waited for. The religious idea contains in it the conduct of life and the moral laws which make the institutions of civilization possible. Hence, the voice of religion is the voice of organized society speaking with authority: "Thou shalt." "Thou shalt conform to this, first, whether thou hast insight or not. Conformity to this law is the condition of civilization and precedent to all possible insight. Do it first, and then comprehend it at your leisure."

Such is the voice of religion in all ages hitherto, and it is substantially this now.

Hence, there is a twofold action of religion: a first one of constraint, compelling the individual as a condition of his living with his fellow-men to conform to its commandments; secondly, an ultimate purpose and tendency to produce in the individual, as a result of education and growth, the vital insight into the nature and necessity of its highest idea and of the practical forms and ceremonies that it enjoins.

It is the conflict of the wisdom of the race with the enlightenment of the individual. It is a conflict very easily settled in all ages hitherto. In our time, the day of gunpowder, the daily newspaper, the steam-engine, and consequent associated observation and reflection that produce what we call natural science, this conflict does not get settled at all. Nor will it get settled except by a new way and method. The wisdom of the race in the form of religious dogmas must be taken by the Church and the spiritual guides, and made valid through individual enlightenment and not in spite of it.

Thus will arise the final consummation of religion,—the conformity of the individual to the universal through insight.

Such conformity, let it be said, is impossible, except in the form of the highest religion,—that is to say, in the religion that makes the absolute principle of the universe an absolute person; for, unless personal, there can be no conformity of the particular individual to it. An abstract force devoid of personality would require renunciation even to a degree equal to that of the Hindu devotee, a complete destruction of every human attribute, including self-consciousness.

The doctrine of the Divine-Human must be, in some form, the true central dogma of the highest, absolute religion. Under this idea, man may be religious without renouncing and abnegating his rational essence. Under this idea, he may grow infinitely out of atomic particularity into universality, out of evil into what is holy and divine.

II.

With this idea of religion in view, let us turn to a few practical considerations of some phases of its application.

Let us, first, expand the thought of the twofold nature of man,—his empirical and *a priori* natures,—his experience of what happens in the external world and his experience of the deep principles underneath.

Here, we find the wisdom of the race, as stated in the dogmas of total depravity, or the essential evil of nature and natural life,—a doctrine common to Buddhism and Christianity, to pessimism and optimism. Here, too, we find the secular meaning of those great dogmas of grace and vicarious suffering mystically offering to us the wisdom of the race.

Nature as existing in time and space is the polar antithesis to the nature of man as spirit. Man himself finds himself, as merely natural, his worst foe. By nature, he is totally depraved; that is, he is a mere animal, and governed by animal impulses and desires, without ever rising to the ideas of reason. The greedy swine fight over the possession of the acorn that drops in their midst. It is a scene of pure violence. Everywhere, mere nature is impelled from without, and has no freedom; for freedom begins with making one's nature, and not with mere unconscious habit. Out of the state of barbarism, man ascends by making

Digitized by Google

himself new natures, one above the other. He realizes his ideas in institutions, and finds in these ideal worlds his real home and his true nature.

The state of nature is the savage state. The state of human nature only exists as a product of culture. For man is not only an animal, having bodily wants of food, clothing, and shelter, but he is a spiritual being, existing in opposition to nature. Man as a child or a savage is an incarnate contradiction, his real being is the opposite of his ideal being. His actual condition does not conform to his true nature. His true human nature is reason: his actual condition is irrational; for man as animal is constrained from without, chained by brute necessity, and lashed by the scourges of appetite and passion. Thus there is a paradoxical contrast between nature and human nature,—between nature as spread out in time and space—existing in mineral, vegetable, and animal—and human nature or realized reason. The nature in time and space consists of beings limited by each other, and not of self-limited beings. Thus, fate everywhere prevails in nature; and each natural thing is constrained by its circumstances, and cannot change itself, cannot realize an ideal of its own, in fact has no ideal and is no self. Man as he begins his career is such a natural being. His human nature is, then, only a possibility to him. Human nature must be made by the activity of man, in order to exist. As man ascends out of nature in time and space into human nature, he ascends into a realm of his own creation, and therefore into a realm of freedom. The world of material nature is not self-limited. The chief attribute of matter is exclusiveness. Impenetrability is an essential quality of it. Two bodies cannot occupy the same place, nor can one body occupy two places. Hence, the material necessities of life—food, clothing, and shelter—are essentially brute necessities, having selfishness or exclusiveness as their basis. The food, clothing, or shelter appropriated by one human being cannot be likewise appropriated by another at the same time. If participation exists in regard to material supplies, it exists through division and diminution of shares. But it is the opposition of this in spiritual things, in things of the mind. Spiritual blessings always increase by being shared. In fact, they do not exist except in and through participation.

It is through combination of man with man that the individual is able to achieve a rational existence. By combination, each one is able to participate in the life of every other, forming a vast organism of institutions called "human society," wherein each helps all and all help each. Each particular individual hemmed in—hampered by circumstances like a mere material thing—becomes a universal through the organization of institutions, the family, civil society, the State, the Church; that is to say, he takes hold of the helpful hand of the institution, and participates in the strength of the entire community. By institutions, man preserves individual experience and aggregates it into wisdom. From this store of wisdom is fed the individual again, so that the particular man contributes to society his mite, and receives back the total result of the experience of the entire race,—a gift so great that it reminds us of the doctrine of grace, one of the profoundest mysteries of the Christian religion, wherein is stated the spiritual fact that the gift whereby man is saved is a free gift of God, and altogether out of proportion to the merit or works of the repenting individual, who gives up his will and the products of his will to the service of the Lord. He gives up a particular product, and receives back a universal.

In this comprehensive sense, society is a symbol of the work of grace. The individual man is at the beginning a child or a savage, a mere animal. He is to be lifted up into spiritual combination with the race. Society, that elevates him, finds him at first totally depraved in this regard. He has no idea or impulse to receive culture at the hands of society. As an animal, he has impulses and appetites which he feels far more vividly than he does moral and rational principles. But he must learn to subordinate these impulses and appetites to the rules or laws which society prescribes as the condition of social existence. Mere animal selfishness must give way to the dedication of one's self to others. The natural self must be abdicated, in order that the personal self may be realized. And this personal self is the rational self, the self that lives through participation with mankind, receiving the largess of humanity in all its shapes. On its lowest plane, that of the material, the individual man gets back the right to enjoy the fruits of all climes, to partake in the food, clothing, and shelter collected in every market by the concentrated effort of all civilized and half-civilized efforts. The agriculture, manufactures, commerce, and intercommunication organized as institutions, wherein each man combines with his fellow and produces an aggregate result so vast, are only one province of realized reason. It is true that in that province, partial as it is and the lowest form of human combination, the individual receives back a blessing of incalculable extent. He gives only the products of his own labor. He raises a small crop, or cobbles a few shoes, or distributes as a merchant a few commodities, or carries to and from market a few loads of productions; or, as a laborer in the field in the diffusion of intelligence (intercommunication), he edits, prints, or sells a newspaper or book. At best, his labor is a small affair compared with the aggregate labor of mankind, and his contribution thereto is a widow's mite; and yet for this he receives in return the necessaries of life. His natural wants are supplied from the inexhaustible reservoir of human industry, a thence flowing rivulet bringing him daily his daily bread, his clothing, and his shelter. What is the difference between his taking food, clothing, and shelter thus at the hands of society and his taking it as a savage directly from nature? Here is the vast difference that separates man as an animal from man as a spirit. As a mere individual, an utter savage, he recognizes in his deed no other human being: he manifests only the properties of matter,—exclusiveness and appropriation. Material things exclude and do not participate. If one thing combines with another, it does this by the destruction of the individuality of the other, and commonly of both things. There is no preservation of individuality in nature except through exclusiveness, and this is destruction of other individuality and finally of its own. Spirit, on the other hand, is inclusiveness,—the preservation of individuality by the elevation of it into personality. Each voluntarily yields its individuality to the whole, to society, and gets back personality as its dower. Each is for all, and all is for each. Material things are negative. Spiritual things are positive. The individual as a natural being is exclusive, selfish, negative to human combination: as regenerated into a person, he is self-sacrificing, accepts the supply to his wants as a gift from the social whole. The man in society who isolates himself, and produces nothing to contribute to the general store, is not allowed to draw anything thence: he cannot pay for it. If he pays for his stipend, he symbolizes his devotion to society and his sacrifice of his labor for the whole; and, having performed this symbolic ceremony, he can receive from the general store. If he is a beggar or an object of charity, in the very act of receiving alms he sacrifices all of his natural individuality and confesses his utter dependence on the social whole.

It must not be overlooked that, when an individual buys something, what he pays for it is only a symbol and not a real *quid pro quo;* that is to say, unless he pays in money, which itself is the commodity that has received the stamp of universality, and is not the direct product of the labor of a special individual. The countryman brings to market a basket of corn, and receives therefor a paper of coffee or tea. Perhaps, his individual labor alone has planted and harvested and marketed the corn. But the coffee or tea has required the agency of an army of men, passing through the hands of the agriculturists, the small and large traders, the transportation companies, the government officials, in its process of development and transit from its distant home in Brazil or Arabia or China to the market in Indiana, Massachusetts, or Missouri. The alchemy which makes possible the exchange of an individual product that has not received the care of many individuals with the product that has received the care not only of many individuals but of national governments,—what renders all this possible is spiritual combination, not a natural but a spiritual principle, not material exclusiveness, but human participation through self-sacrifice.

The scientific method which devotes itself to the history of a process of nature finds completely realized existences for its investigation. But, in the realm of human nature, it finds only partially realized existences. The institutions of human society contain an ideal which they have never been able to realize. They are, therefore, not to be comprehended fully by their history. The history of the oak explains the oak; but the history of a human institution, say the family or the State, does not explain fully its latest growths. Through all civil history, perhaps one can find a principle of progress; but it is no complete cycle, like the process of the seasons or the life of the plant. Instead of interpreting the present by the past, we interpret both the present and the past by the future,—by the ideal of freedom and realized reason toward which human history approaches as a goal. In social science, we deal with an object whose beginning is here, but whose end is in eternity. Each and every institution of man exists for the sake of his freedom, or in order that he may become a self-knowing and self-realizing being. Thus, religion enounces the ideal of man.

The great fundamental truth, which has come out as the net result of human experience, is that of the serial nature of man's self. He is not simply a single self as individual, nor is his race merely a vast number of individual selves; but, as individual, he is one self. And, then, he exists in a series of selves, ascending above him, each one a higher revelation of the nature of his humanity, a more complete realization of his ideal self.

There is, for example, as we have already seen, besides the individual, the first self above him in the shape of the family to which he belongs. He is a member of this higher self, and also, at the same time, one of its conscious centres; for, in these higher selves, the individual is not only a part, but he is potentially and, to some degree, actually, at the same time, the whole. This indeed, to some extent, is true of the humblest individual in society. Above the family there is the larger self of the social community in which the individual lives. It is an industrial and civil unit. In this unit, he is still more strikingly a subordinate member, a co-operating link, and,

Digitized by Google

besides this, a more complete individual, a more perfect self-determining being.

In the State, in the Church, the individual finds new selves. To know one's self, then, means to know society, to know, not only the particular, individual self which I am, but my universal self realized above me, in a series of vast, colossal forms.

III.

Let us pause for a moment on this idea of spiritual combination, and note carefully the doctrine that participation is the essence of human life in its highest sense. Here we may see the origin of the ritual part of religion, the forms and ceremonies and observances.

Combination of each with all in the labor of producing the means which civilization demands yields to each one, in a greater or less degree, the opportunity for self-improvement,—for the direct, active participation of the humblest individual in the highest life of the race. This highest life is reached in the forms of science and art, of literature and religion. In these forms are mirrored the image of the great event that moves at the bottom of the world, and sums up all human endeavors and aspirations, be they great or small, done in darkness or done in light. In the science and literature, in the religion, and even in the social and political combinations, we see the reflection of what we are and what we do as individuals. But of far deeper import to us than this is the fact that we see in them the reflection of the deeds of society as a whole, of the nation as a totality, of humanity as a still more general tendency, and finally we catch glimpses of the divine purpose that lies deepest of all.

We need but notice the manner in which this participation is accomplished, and in what it consists. It is not alone in the fact that each one of us labors for society, and society in turn gives us back food, clothing, and shelter. That alone would have the form of a participation in the life of the whole. But by itself it would be *only* a form, a lying phantasm, a maya, an illusion. For the real fact would be that we as individuals were prisoned here in the flesh, and that we made all of this laborious combination, simply to supply our animal wants of food, clothing, and shelter. What, then, is the content of this form? What essential participation is there which has in it the power to make us whole in our innermost and spiritual selves? It lies in our participation in the rational intelligence of humanity. As laborers in productive industry, we each produce particular things: we elaborate what is perishable into perishable articles of food, clothing, or shelter. But, in our spiritual participation with mankind, we receive ideas and aspirations which are not perishable. For participation in an idea, instead of devouring the idea and destroying it, rather makes the idea more potent. The one who communicates an idea to his fellow-man knows it better for having communicated it; and the one who learns it, instead of depriving any one else of his share of it, thereby assists others to share it. It is the miracle of the feeding of the multitude at the Sea of Galilee. Man does not live by bread alone. The secret of all his movements is that deepest necessity to see himself reflected in the world of matter and in the world of man. Not his finite bodily existence,—that is not what he wishes to see reflected. It is his infinite nature, his reason, that which makes him—a puny individual—potentially all mankind; that which makes the soul of the weakest a somewhat of infinite worth. To reveal this rational nature that works in each one as an individual and still more visibly in society as a whole, or in the movements of the world history, is the final cause of our struggles.

If participation with the highest life—such as gets embodied in Art, Religion, and Science—is essential to every human being, in order that he may realize in himself his humanity and distinguish himself from the brute animal, then the means of this participation are essential to man; and their establishment is to be regarded as the highest deed in the practical world. To this end, the invention of letters, of movable types, the printing press, the telegraph, the daily newspaper, the book, the library, all contribute.

So long as life exists in the body, each individual drop of blood performs its regular pilgrimage to the heart, its Mecca, for purification and participation in the life of the whole. Just so, each individual of humanity must periodically come into communion with the whole, in order to assure himself of his substantial spiritual existence. He must, by this means and in this manner, become visible to himself. This, too, is the root of ceremonial religion. Man symbolizes his relation to the highest divine Principle in his religious worship.

IV.

Let us recall once more the essential idea of religion in its difference from science, and look at that dogma which mystically enwraps the prophecy of human freedom and independence,—the freedom of free-thinking and popular, local self-government. I refer especially to the dogma of the triune nature of God and to its secular meaning.

Religion portrays the divine in its completed action, in its creation and destruction of the finite. The lowest forms of religion possess this feature equally with the highest. They all present the negation of the world as well as its creation. Spirit cannot be truly self-existence, unless it contains the possibility of absolute elevation above the world and all it contains. It must be immortal, free, and personal. Religion offers utter emancipation from time and space.

But, while all forms of religion agree in presenting the divine as negative to the world, there is a vast distinction between the ethnic religions of the Orient and the Christian religion. The principle of incarnation best measures the difference. The avatars of Brahminism are mere adumbrations of the true principle of incarnation. Under all, the absolute remains utterly abstract, being negative alike to all forms, whether material or rational. Hence, Brahm is non-spiritual, and can be reached only by utter annihilation. Scarcely less inadequate is the principle of Buddhism, so much lauded in our own time by poets and scholars. That the divine should be an immediate presence —the Lama—presents a conception inadequate to the essential idea of spirit; for the individual chosen for the Grand Lama is himself not regarded as intrinsically infinite, but only as temporarily manifesting the infinite to the believers. Thus, Buddhism lacks the mediation which is essential to spirit, and hence cannot reach a concrete view of immortality or of the personality of man and God. In Greece, personality was reached in its form of manifestation only. In Rome, it was reached in its abstract substance, realized in the idea of property and such as makes the principle of civil law. In Judaism, absolute spirit appears as absolute unity, excluding all finitude. Abstract personality, as manifested by Jehovah, becomes concrete in the Christian doctrine of incarnation. In the doctrine of incarnation is contained the complete reconciliation of the finite and the infinite. The divine reveals itself in the flesh in order to draw up the finite to union with itself. The finite is receptive of the divine; and the human will may make itself holy, and reconcile itself with God. The true relation of the finite to the infinite is here first comprehended in the history of the world. The Hindus make nature and the finite a maya, or delusion of the senses. Christianity makes it the mystical mediation of spirit Nature and the finite, therefore, stand in a less hostile relation to the divine in the Christian religion than they do in any other. The primary, negative attitude of religion toward nature and the finite is here softened by the development of the principle of the self-annulment or relativity of finitude. Since the finite annuls itself, and there arises ceaselessly from its death the opposite of it, or spirit, it is clear that nature and the finite are at bottom only the reflection of the divine, and in no wise opposed to it, when seized in their true relation.

But a deeper principle still meets us in Christian civilization. The distinction between the abstract monotheism of Judaism and the divine ideal of Christianity lies in the doctrine of the Trinity. The principle of incarnation implies independent existence of what is the same in substance. There is no longer a negation of the finite, its annihilation, as in Brahminism or Buddhism, but a joyful recognition of it as the principle of resurrection and return to the divine. There is more joy over the returning prodigal than over the just that went not astray. That that which is alien and far removed, evil and lost in its nature, that which is antithesis to the divine, that even *it* should receive the spiritual, and by self-renunciation become the image or reflection of the divine, and thereby achieve independent worth and value,—this is the practical meaning of the mystery of the Trinity.

Henceforth, in the world's history, the deepest idea is that of the development of dependent elements or individuals into independent reflections of the highest principle,—to be in the image of God and heirs of his salvation. In their independence, they are absolutely one. This is the thought of personality,—freedom through participation, not exclusion any more, but interpretation. The pervading of the various institutions of man by this thought has brought them, one by one, into harmony with the divine idea of the Christian religion, but at the same time has developed them into outward independence. The growth of freedom in the "eighteen Christian centuries" has arisen solely from a growing comprehension of this principle. Stated in less abstract language, it holds that free independent conviction is better than blind partisanship or a subordination wherein all opposition is borne down by external force. Reflection and harmony is better than dead unity. Two wills intent on the same thing and independent of each other reinforce each other more powerfully. The child who obeys implicitly his father is not at one with him in so deep a sense as the son who comprehends completely his father's designs and purposes, and acts spontaneously in harmony with him. Independent harmony is better than dead identity wherein all difference is annulled. It truly reinforces, while the other does not. Hence, in modern history, all the institutions are continually rising into this concrete independence and deeper harmony. The Church and State are separating; civil society is becoming a congeries of totalities, each reflecting the whole system. Even the State, at least in the instance which America furnishes to the world, organizes its three great departments independently, in order thereby to make firm the charter of its freedom. Legislative, judicial, and executive, each co-ordinate, reflect the idea of civil freedom adequately;

Digitized by Google

while the subordination of either to the other would render the whole imperfect and inefficient to preserve civil liberty. This principle makes the universe not a vast process of absorption of individualities, but of the genesis of individuality the eternal growth of freedom.

V.

Let us look once more at the attitude of the scientific consciousness in its relation to religion.

Religion progresses toward unlimited spiritual freedom. It is the truth that makes free, and within the sphere of religion there are two attitudes toward it. The truth as presented to the many, to all classes of society alike, assumes the form of the dogma. That which is deepest and requires the widest syntheses of thought for its comprehension is adumbrated by a symbol: it is clothed in an historical wrappage, or stated as a mystery to be believed directly without further inquiry.

In this shape of dogma, however, the ultimate freedom of spirit is not fully realized. It may suffice for the piety of the heart to receive a doctrine handed down to it by tradition without verifying it in the intellect. The wisdom of the race, no doubt, must take the form of a mere dogma to all persons who are not in the habit of thinking. But that which ignores the intellect divorces the will side of man from his rational conviction.

It remains for religion to address itself to the theoretical faculty of man, and through the piety of the intellect reach a profounder reconciliation. In a philosophical theology, in a theology which stated its conclusions in the language of psychology, the intellect could find its harmony with religion. In philosophy, when it reaches the supreme principle of personality, religion finds its perfect accord with reason.

Toward this ultimate and complete reconciliation of the intellect and will of the finite individual with absolute will and reason, the tides of the modern world tend inward. The principle of the Christian religion demands the independent realization of its own doctrine on the part of all other forms of existence, as the condition of their free and separate existence.

Here is the field whereon the most difficult of questions is to be adjusted. Science in its very form is independent and negative to the principle of authority. There can be no dogma in science as such. Hence, the elementary stage of religious consciousness, that of the dogma, is utterly incompatible with that of science. Science, in its first and feeblest stages, moreover, cannot grasp religious ideas, dealing as they do with the world as a whole. It cannot rise, therefore, to the perception of the divine as underlying the finite, but rests in its progress on partial principles of a higher or lower order, and thus sets itself in direct hostility to religion.

This twofold occasion for hostility between religion and science furnishes the clew to the clearing up process of our own time. The dogmatic form of religion is negative to the form of science, inasmuch as science demands free investigation and withholds the surrender of the intellect to anything that does not demonstrate its own necessity to be the necessity of the inquiring mind.

Again, all the lower and imperfect stages of science are negative to religion, because of their own incompetency to grasp any form of highest principle; and religion always offers a revelation of the principle of the universe in a direct and immediate form as an object of faith. Hence, faith and insight, religion and science, assume hostile attitudes toward each other, although fundamentally they are in the completest unity possible.

The very independence of authority which science manifests in all its stages is the freedom in God as absolute reason which religion holds up as the highest attainment. Science, though formally free and independent throughout its progress, does not reach real and substantial freedom in the truth until it rises above such partial categories as matter, force, law, essence, cause, and the like abstractions, and attains the comprehension of personality as the absolute principle.

The Christian religion has impelled civilization toward this demand for science. It has not allowed man to rest in simple, childlike faith, but has driven him on toward the intellectual recognition of the divine, and demanded of him a genuine internal, spiritual recognition of it. "In spirit and in truth shalt thou worship me." This has been the Word of God addressed to the seer. The worshippers of the Lama in Thibet, where every fourth son in every family is consecrated to monastic life, may so far lapse from spiritual religion as to use praying machines. But the esoteric doctrines, even of Buddhism, must insist on the spiritual. The free-thinking reason must be the goal to be attained. A mechanical use and wont, a simple, childlike faith that accepts passively what is given it, and knows no grounds of conviction,—this is not compatible with the attainment of the image of God. It does not reflect God's freedom. It does not comply with the requirement of Christianity that each soul must be held responsible for its deeds. Accordingly, those who preach against the form of science and who urge the renunciation of intellectual conviction for the adoption of dogmatic faith, however honest they may be, fight against Providence.

Unless the course of modern history is misread, can one make other of it than the struggle for enlightenment? At first, all institutions seem irrational. The French Revolution, so dark in its details, was the beginning of science to throw off authority: whatever did not justify itself was repudiated. To such abstract and feeble thinking as man is capable of at first, the institutions of civilization could not but seem unreasonable, or as Rousseau called it "unnatural."

The scientific method finds necessary a stage of scepticism on its way to the recognition of truth. It throws off mere authority of tradition, and finds the truth in the necessities of thought. It thus substitutes absolute certainty and the attestation of the spirit for mere hearsay and mechanical adherence to blind custom.

When the individual comes to reaffirm, one by one, the institutions that he has denied, and sees their inherent reasonableness, he rises like a phœnix from the ashes of scepticism. He no longer relies on mere authority, and he no longer holds aloof from the realized reason of the world. After the period of scepticism and revolution arises the period of reconstruction. It is ushered in by empiricism. Modern natural science, through endless specialization, is taking an inventory of the worlds of nature and of man. Besides this, it is discovering principles of unity. It has made much of what it calls the principle of the conservation and correlation of force. Religious or theologic tendency begins to show itself among the more advanced of scientific minds, manifesting itself in efforts to find the ultimate synthesis of the world. A few years ago, this tendency undertook in D'Holbach's *Système de la Nature* to formulate the world in terms of "matter and force," meaning, however, matter only. Now the term used is "persistent force." Everything is to be explained dynamically. This is certainly a higher form of explanation than that which explains everything statically into material atoms. But, when its results are applied to the products of realized reason, and thought is explained as the correlate of phosphorus consumed in the brain, and ethical customs or moral laws traced back into material limitations, physiological and otherwise, as their adequate explanation, a hostile attitude has been reached toward the highest truth and the interest of civilization.

Although the stages of infant science are necessary, they are dangerous and unfaithful realizations of reason. They are steps upward toward the last and highest mediation of spirit, a free insight into the divine and its realization in the world; but they get as first steps only to a sort of denial of the divine and its realization altogether. The affirmation of the individual reason as ultimate measure of all things is an utter repudiation of absolute and universal reason.

Man's rationality is unsubstantial, unless God is, and is rational. If man's thought at its deepest is participation in God's thought, if his insight into the rational basis of nature is an insight into the rationality of the Great Being who thought nature into existence, then man sees that his own rationality is infinitely reinforced and sustained by the divine Personality and all his humanity lifted up by the Divine-Human. Toward this insight into the creative thought, all science is struggling.

VI.

In conclusion, let us glance at the present world-consciousness in civilization, and see the significance of its belief in progress and its view of the world of human history as an evolution of the divine idea in humanity; in other words, Providence as guiding human history.

The present age is distinguished from those which have preceded it most prominently by the widespread popular belief in progress. Whether or not we have actually fallen on an era of unusual progress, it is certain that this is an era of belief in progress. Very momentous results in the world flow directly from this fact. Belief—faith—is the great mainspring of human endeavor. A belief in the progress of humanity involves a faith in an ideal. Out of his narrow present, hemmed in by the giant shadows of time and space, enchained by the bonds of the real, man looks out upon a fair ideal, and declares it to be his destiny and inheritance.

In this sign, he shall conquer, break the fetters of the real, and roll back the shadows that threaten to overwhelm him. Thus, the man of the nineteenth century lives in his hopes. Through hope, his estimate of the real present good that befalls him is diminished, and his estimate of the ideal of the means that attain it are enhanced. It comes to pass, therefore, that he does not regard the real as the actual: he looks upon the ideal and its processes of active relations and influences as the true actual. Though this may seem a paradox, it is the exact statement of the human fact with which we are dealing. Man, becoming conscious of his possibilities, of his ability to grow and become better and more powerful, refuses to be measured by his present realization, and insists that his possibility shall be taken to account. He discounts at the bank of possibility, and adds to his realized assets a large capital. His actual wealth is estimated at what he has realized, plus what he has a reasonable prospect of realizing. The actual man, or at least what man himself regards as his actuality, includes not only the real, but also the ideal. If this looks like an unreasonable inflation in estimated values, let us look at the *rationale* of this inflation, and study for a moment the special occasion of its existence here and now in the world's history.

Digitized by Google

The instrumentalities of our civilization are gun powder, the steam-engine, the printing-press, and the telegraph. For by the steam-engine access to all the world is obtained, and by gunpowder barbarous tribes are held in subjection; while a sort of balance of power is reached among civilized nations, and made reasonably permanent by international treaties. So, practically speaking, there is universal peace,—even a great war here or there not affecting the general repose of the armies of the world very seriously. Each nation keeps its representatives at all the important courts of the world. The newspaper, employing the printing-press and telegraph, collects from all quarters, and distributes to each quarter of the globe correct information. Through these instrumentalities, therefore, each civilized man is coming to enjoy the privilege of contemplating the doings of the whole of humanity. Each man may see himself reflected at large in the daily doings of the world as it exists. The poorest man may avail himself of the printed page, of the newspaper and magazine, and see his greater self therein mirrored in the current doings of humanity at large. The telegraph reduces distance to a nullity; and there is only a here, so far as theoretic intelligence is concerned. Still better is it regarding time. Human history in the past lies mapped out before the individual man, and in it he can read his own pre-existent life.

For the life of each individual presupposes the life of the race before him, and he cannot comprehend himself without comprehending first the evolution of his day and generation historically from the past. The discovery of the instrumentalities named is the discovery of the means by which each individual human being can explore the present world and gain a survey of it in its *ensemble* and in its details, and, besides this, can explore the past and obtain the same insight into it. And it is most important to mark that this possibility of a total survey of the race and of its history is not the prerogative of a chosen few, the select scholars and professional teachers of the modern world; but it is the actual possession of the many, of the people as people. It is not, indeed, a matter of much choice with the individual. He is constrained by the totality of conditions around him to contemplate unceasingly the spectacle of the becoming of the human race. He is lifted once for all out of the jungles of special isolated life and its obscure depths, and placed on the summit of a high mountain of observation, whence the entire country is visible. Now, it is this actual fact of contemplation of the whole by the individual that produces the wonderful phenomenon that characterizes the present age. Seeing humanity in the masses and distinguishing grand historic movements, the individual becomes conscious of the sway of the ideal in the present world.

In the vista of the past, he sees a long road travelled by humanity, and is forced to believe in the progress which he sees. The way of Providence in the world is thus made actually visible. The slow movement (not visible to the eye at short distance) is apparent to the one who looks at long periods or large masses. Thus, we in our time become familiar with the spectacle of progress of large masses of humanity, because the printed page and the telegraph present to us a direct survey of these large masses. In all former time, such survey of nations and peoples was utterly impossible; and, the human gaze being confined to narrow circles, one could not form an opinion as to the stability or permanence of any movement. The study of the mere details of humanity makes us acquainted with a succession of rise and fall, progress and decay, which is calculated to make the beholder a sceptic, if not a pessimist. The familiarity with the movement of the whole cannot but lead to optimism. The continual realization of the ideal of humanity leads men to have faith in ideals. Hence, the inflation in the estimate or valuation which man places upon himself, as before described, and hence the reason for the present manifestation all over the civilized world of such belief in progress.

It is this belief in ideals that leads to a belief in divine Providence. In the history of man and in his guidance, one discovers the only true theodicy. The nature of God revealed by Scripture and by the light of nature to the human race even in its unscientific ages, preserved in religion as the most precious of all knowledge, will now be learned also through the study of the history of man in which is revealed the divine purpose.

By and by, even natural science will come to see clearly enough revealed, even in the inorganic world, the presupposition of divine personality, and will see the truth of that highest gospel, "Peace on earth and good will to men."

THE FREE CONGREGATIONAL SOCIETY OF FLORENCE, MASS.

At the opening of the meeting of the Florence Congregational Society to hear the report of the Executive Committee for the year ending April 7, 1884, Mr. A. G. Hill said:—

We meet this evening in annual meeting at the close of twenty-one years as a society. Twenty-one years has been established by law as the age at which a man or woman is considered to have arrived at years of discretion and to be competent to meet the vicissitudes of life. Let us hope that, as we have successfully passed through the weakness and helplessness of infancy, the tendencies of early youth to go astray, and the forwardness and know-all period of later youth, now in our mature manhood and womanhood we may be so thoroughly established in our ideas of right and wrong and the needs of humanity, that we shall find ourselves equal to the self-imposed task of learning what is learnable and trying to improve in ourselves what is improvable, untrammelled by any obligation to believe what we cannot believe or by the fears of the avenging powers of a hypothetical being who makes belief the essential qualification for future happiness.

May we have strength to differ from the apparently prevailing ideas of this small portion of the great universe, that we may dismiss fears of the hereafter in order to give our whole attention to the great needs of the present life. Faithfulness to our present duties should not be weakened by fears of what is to become hereafter of our comparatively insignificant selves. Deeds to benefit others should succeed thoughts of how we can reach a glorious future.

In the twenty-one years of our society life, a number of those enlisted with us have served faithfully their apprenticeship here, and have passed on to that state of existence which we can but feel awaits the faithful ones of this life, whether a period of rest, of quiet happiness, or of continued striving for good and the doing of unselfish deeds. Be it as it may, their immortality is secured in the continued onflowing of the results of their good actions, which no one can set a limit to. We can have no fears that a future existence can bring aught of ill to the nobility represented in the lives of Charles C. Burleigh, Samuel L. Hill, Gertrude K. Burleigh, Joseph C. Martin, Elisha L. and Eliza P. Hammond; in the sturdy manly and womanly lives of Henry S. Gould, Henry H. Bond, Lydia M. Eldredge, Calvin L. Bartlett, Maria L. Learned, Henry W. Morgan, Charles C. Burleigh, Jr., the patriarch Hiram Stebbins, and the others on the growing list of those now with us in memory, including the pure, sweet little lives to think of whom only, makes us better men and women. The lives of such people encourage us to the hope that, if we but live up to our better selves, we, too, shall leave the world better than we found it, and likewise enjoy an immortality through our deeds, which immortality, while it may do us no good and should not be sought for, may serve to inspire others to greater acts than we have had opportunities or abilities to do. Are such thoughts more sad and depressing than the declared belief of so many that their friends and dear ones are suffering eternal misery from the righteous judgment of an angry God?

While we may be emancipated from some of the troubles which others have, we have still to fight against the many manifestations of our selfishness. Because *we* fear no hereafter and hope for the best is no reason why we should relax efforts for the good of others, but is all the more reason why, having no fear ourselves, we should be incited to do more for others to release *them* from fear and suffering. Doing nothing means falling behind. If we do not row vigorously against the current, we drift helplessly to a lower level, and soon reach the plane where fear again must have its influence on our lives. The law of progression is exemplified as well in religion and morals as in the much thought of and much talked of advancement of animal life. If our society is your society, work in every way to improve it, help support it with your money and equally so with your personal effort. Do not let parsimony affect your contributions, or carelessness, love of ease, or dissatisfaction in minor details keep you from the meetings that need the encouragement of the presence and co-operation of all. We can do much, if we all work: we can do less and less, if we let love of ease overpower our duty of work.

TO HATE evil and to love truth come from two different sides of the brain. A man hates error with the bottom of his brain, he loves truth with the top of his brain; and a man is not necessarily, therefore, a wise leader, or safe for the Church to follow, because he storms against those whom he thinks are in error, and is active in church troubles.—*Henry Ward Beecher.*

GREAT is he who enjoys his earthen-ware as if it were plate; and not less great is the man to whom all his plate is no more than earthen-ware.—*Leighton.*

BOOK NOTICES.

MAN,—WHENCE AND WHITHER? By Richard B. Westbrook, D.D., LL.B. Philadelphia: J. B. Lippincott & Co. 1884. pp. 224. $1.00.

Many thanks to the doctor of divinity who dares to denounce the prevailing insincerity of the "pulpiteers" and "petty preachers," as well as the wicked tendencies of the doctrines of total depravity, vicarious atonement, and endless punishment. For this last dogma in all its horrors, he justly considers the leading denominations responsible so long as they continue circulating their familiar tracts and Sunday-school books. He also remarks, with some felicity, that, "While nearly all Christendom professes to receive the Adam-and-Eve story as a true record of biography and history, the subject is hardly ever mentioned outside of the pulpit except as a huge joke." But, unfortunately, the good Doctor's own answer to his question, whence man comes, is by no means a brilliant success. His arguments, to prove that science cannot solve this problem without bringing in a God, have little weight, because he evidently does not know what science has really taught. He misunderstands such common words as "rudimentary organs" and "agnosticism," and brings forward triumphantly those worn-out arguments against Darwinism, which have been refuted over and over again. Spencer's comprehensive definition of evolution is reduced to one which "a child can understand," and which even a child must find too meagre. Established facts in embryology, presented by men like Huxley and Agassiz, are set aside on the anonymous authority of other "eminent persons." We are informed that "Darwin was not the inventor or discoverer of the law of evolution. The contemplative philosophers of India had, centuries before he was born, a theory of evolution far more extensive and sublime than anything ever dreamed of by the great British plodder. Indeed, there is very little in modern science or philosophy that has not been thoroughly canvassed by esoteric Buddhism in long-lost centuries." A man who writes thus about what he calls "the heretobefore of humanity" does not surprise us when, in treating the subject of "the undiscovered country," he quotes, as final authority, the alleged revelations through mediums and clairvoyants.

BEETHOVEN'S NINE SYMPHONIES. Analytical Essays. By Sir George Grove, D.C.L. With an introduction by the author, and a preface by Georg Henschel. Boston: Geo. H. Ellis. 141 Franklin Street. pp. 229.

The author of these essays was for more than twenty years secretary of the Crystal Palace at Sydenham, England, where first-class concert music was one of the chief attractions; and these notes, explanatory of the meaning and motive hidden in each symphony and its different parts, were in the first place designed merely to serve the purpose of aids in the interpretation of the music, to be read, as Mr. Henschel in his preface says, "before or in the intermissions of the concerts at which the symphonies were given"; but he adds, "Happily, Sir George's knowledge and enthusiasm are such as to have unconsciously carried him beyond his first intention." And the work in its present handsome form will be of more important use to be studied at home in conjunction with the study of the symphonies themselves and as an inducement and preparation for that study. These analyses are written in a simple, vigorous, unaffected style, as clear from technicalities as the subjects will admit of.

THE CITIZEN AND THE NEIGHBOR, or Men's Rights and Duties as they live together in the State and in Society. By Charles F. Dole. Boston: Unitarian Sunday School Society, 7 Tremont Place. 1884.

In this little work of a hundred pages, we have a manual which deals with social and political questions in a simple, clear, and sensible manner, well adapted to interest and instruct the young. Mr. Dole says the work "is not designed merely for Sunday-schools. The author hopes that its unsectarian character may make it of use also in secular schools, in which some instruction is felt to be necessary to fit our students for the duties of citizenship." It treats of "Political Duties, or the Rights and Duties of Citizens," "Economical Duties, or the Rights and Duties of Business and Money," "Social Rights and Duties, or the Duties of Men as they live together in Society," "International Duties, or the Rights and Duties of Nations." Each chapter is followed by a series of questions intended to elicit answers to the text, and to suggest further study of the subject, which the text necessarily treats with brevity.

THE PLEASURES OF HOME, and Other Poems. By David Newport. Philadelphia: J. B. Lippincott & Co.

This book takes its name from the second and longest poem in its pages. The first is entitled "To An Agnostic Friend," in which the author does his best to expose what he considers the fallacies of so-called agnosticism. The remaining fourteen shorter poems treat of various subjects of public and domestic interest. A spirit of thoughtful kindliness for humanity and of honest appreciation of the themes chosen permeates the pages of this work. We are obliged, however, in candor to say that we do not think Friend Newport's forte is that of a poet, and we are inclined to believe that his good thoughts dressed in more familiar prose would shine to better advantage.

THE ABSENCE OF DESIGN IN NATURE. A lecture delivered before the Philosophical Society of Chicago, by Prof. H. D. Garrison. Max, Stearn & Co.: Chicago. 1884.

Prof. Garrison in this pamphlet points out the imperfections of the human eye, ear, and teeth, the unfortunate position of the windpipe, where all our food and drink have to pass over its opening, the multitude of carnivorous animals, venomous reptiles, and noxious insects, and the small proportion of plants, about one in three hundred, really useful to man. The causes of ague are widely diffused through marshy regions, but it is not there we meet with quinine. On the contrary, the cinchona tree "is found perched on the top of a small area of the Andes Mountains, a locality for a long time unknown and now almost inaccessible." "But who designed the palmella, or ague-plant, but for which cinchona would have been far less necessary? Here we see an organism, and there are hundreds of similar instances, exquisitely designed to cause disease; and, on the other hand, we find a remedy imperfectly designed to cure it." To the argument drawn from the general existence of order, Prof. Garrison replies, "It is plain, however, that, if nature exists at all, some kind of order must exist." The present order might, he thinks, be improved upon by having a more uniform climate, fewer mountains and deserts, "and less water better distributed." "Alcohol might have been made with a repulsive taste or without its intoxicating properties," etc. "I freely admit that the arrangement of matter and its qualities might have been much worse; but, if they had been," he says, "we should not have existed at all."

THE *Andover Review* for June has the following contributed articles: "Transition Periods in Religious Thought," by T. M. Post, D.D.; "The English Pre-Raphaelite and Poetical School of Painters," by Mrs. Helen Bigelow Merriman; "Frederick Maurice in Present Thought," by Rev. Julius H. Ward; "Mechanical Evolution," by Rev. Francis H. Johnson; "Why Baptists regard Immersion only as Valid Christian Baptism," by Rev. Henry S. Burrage, with reply by Prof. Egbert Smyth. The editorials in this number treat of the following topics: "Indisposition to face Religious Problems," "Accountability of the Ultra-Conservatives," "Women at Oxford University," "The Independent in Politics," and "A Letter from Bishop Bryennios." The book notice department is quite full and interesting.

PERSONAL ITEMS.

WALT WHITMAN celebrated his sixty-fifth birthday recently. He lives in Camden, N.J., in his own house, which he has recently bought with the proceeds from the sales of his books by the Philadelphia publishers who relieved Osgood & Co. of the *Leaves of Grass*. He has had a severe illness this spring, and has not quite recovered his former health.

IT would appear from the following that the blunders and distortions of truth and downright misstatements in Joseph Cook's Monday lectures are not due to any haste in preparation: "The bulk of the Monday lectures," Mr. Cook says, "are prepared months before delivery. They are then specially prepared before my appearance here, and very specially prepared for each occasion. They then receive extraordinary correction before being printed in the papers, and very extraordinary correction before being published in book form."

M. NATANSON, the banker, who is guardian and benefactor of the Hebrew primary schools in Warsaw, was recently exiled to Siberia, under very painful circumstances, at the instigation of M. Apuchtyn, curator of schools. M. Apuchtyn, in a tour of the Warsaw schools, ordered that all studies should be given out in the Russian language. M. Natanson, being informed of this, immediately called on M. Apuchtyn, begging him not to lay this burden on the schools, and saying that, even if the Russian language were made compulsory, he thought the Polish should not be suppressed, as it was the daily language of the people. He also asked that the decrees should be given in writing. M. Apuchtyn replied that in a few days he might receive the written resolutions. But, in two days after this interview, a kibitka stopped before Natanson's door, taking him for a start toward Siberia, tearing the peaceful gentleman from his family, his banking interests, and numerous young students who were being educated at his expense and now find themselves without a guardian.

IN declining to be a candidate for Parliament, Herbert Spencer wrote: "My views on political matters are widely divergent from those of all political parties at present existing. That which I hold to be the chief business of legislation—an administration of justice such as shall secure to each person, with certainty and without cost, the maintenance of his equitable claims—is a business to which little attention is paid; while attention is absorbed in doing things which I hold should not be done at all. As I could not agree to be merely a delegate, voting as was desired by those who sent me, but should have in all cases to act on my own judgment, I should be in continual antagonism to my constituents, most of whom, Liberal as well as Conservative, hold opinions from which I dissent, and who would wish me to support measures which I entirely disapproved. Hence, even if elected, I should be quickly called upon to resign." Nevertheless, the London *Inquirer* remarks: "We cannot help wishing that Mr. Spencer were in Parliament, nor are we inclined to think that Leicester would quickly call upon him to resign. On many subjects, he would exercise an influence as deep and permanent as that exercised by John Stuart Mill; and his late visit to America revealed the fact that he is an admirable public speaker. We quite agree with Mr. Spencer that we are suffering from over-legislation, and the chief work of Parliament is to repeal the absurd and injurious laws of former generations."

For *The Index*.

A VISIT FROM EPICURUS.

I sat one Sunday evening in my room
And heard the church-bells fill the gathering gloom:
They seemed to chide me, lonely listener there.
Alas, how welcome once that call to prayer;
How hymn and sermon stirred my soul to flame,
Till each unworthy thought I overcame;
What bliss it was my neighbors' faith to share,
And float with them above all doubt and care!
Alas, that, in my zeal pure truth to teach,
I pushed research beyond faith's utmost reach!
"Is clearer sight of error worth the cost?
How much that made my life more true is lost!
Is doubt worth teaching? Better let remain
All errors which assuage bereavement's pain,
Or strengthen virtue."
Sadly thus I spoke,
When suddenly a light upon me broke,
And in its midst I saw an old man stand:
His face was thoughtful, daring, and yet bland:
The lips were pure and kind, the eyes were keen
And full of humor, eager, yet serene;
The myrtle and the olive made a crown
Above calm brows which had not learned to frown.
"Who art thou?" I exclaimed; and he replied,
"Hast thou forgotten that the day I died
I wrote a letter thus?
"This day must close
My life, but 'tis a happy one. The throes
Of pain could not be greater, yet I find
All suffering yield before the peace of mind
I gain from thinking on the truth I taught;
And cheerfully flows still the stream of thought."
"Hail, Epicurus!" cried I: "thou art he
Who first set men from superstition free."
"They freed themselves," he answered. "But my voice
First called rebellion forth, and I rejoice
At peace from torturing fears and struggles vain.
Some fancies died,—small loss for glorious gain!"
"But, Epicurus, may I question thee,
And trouble thy repose?" He smiled at me.
"I know thy life," said I, "was free from stain,
But did not vice among thy followers reign?"
"Not more than elsewhere then, nor mine the blame,"
He answered. "Some were vicious, ere they came
To me. Their dark faith had not kept them pure.
The virtuous can change of creed endure;
And he who battles bravely in the strife
For truth gains strength that purifies his life."
"'Tis true," I said, "but ne'er our cause will gain
The victory so long as men complain
That our denials do not feed the heart.
'Tis easy work to tear old views apart;
But then we have the feelings still to feed,
Or they will hunger after some new creed."
"The slave," he said, "when first set free, can spare
But ill his master's rations, watchful care:
Much time must pass o'er him ere liberty
Can give him all her blessings. Thou canst see
That slavery is wretched. Only time
Will teach men how to prize pure truth sublime.
Thought blesses men. Did fancy bless the boy?
The highest mental life gives highest joy."
"But art thou sure," I asked, "the gain will pay,
Thus slowly coming, for what's torn away?"
He smiled again, and said: "Hast thou not known
That nought can pass away till 'tis outgrown?
Choose whether thou wilt have man's progress cease,
Or let him from all trammels find release!
Humanity's great march can never stop;
Behind must all detected errors drop.
'Tis weakness to regret them. They must die.
Such tears of pity dim too much thine eye.
Thy race moves onward; onward turn thy gaze;
Bid others forward look; their courage raise;
Thy glimpse of truth is given thee in trust.
Would'st thou a traitor be? Speak out thou must.
And why speak timidly in doubt and fear?
Thou art a man. Thy manliness revere."
"Brave sage of Athens," cried I, "right thou art.
The world moves; in its motion I'd take part."

Then all the room grew glorious with flame;
Rank over rank, around me faces came;
Brave lips, calm foreheads, blazing eyes were seen.
"Behold," he said, "our brotherhood serene.
All these have given their lives to set men free,
To them came peace at last, e'en as to me.
To thee I need not name them. They are known.
That lofty fellowship wilt thou disown?"
"Forgive me," faltered I, "ye eyes of flame:
To follow you shall henceforth be my aim."

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith.*

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago *Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—*Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.*

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

THE degree of LL.D. will not be conferred upon the occupant of the Governor's office this year; and, in the future, we understand it will, as it should be, confined to those who have won especial distinction in the legal profession, or by their contributions to the legal literature deserve the honor.

SOME children of the public schools in England, having been dismissed for wearing the blue ribbon, Mr. Mundella, the Minister of Education, who is in sympathy with the temperance movement, reinstated the children, told them to wear their blue ribbons, reprimanded the public school managers, and informed them that further interference with the wearing of temperance badges by the children would not be permitted.

LAST Friday in the House of Lords, Lord Roseberry made a motion to appoint a committee to consider means for increasing the efficiency of that body. He referred to the United States Senate as an example for imitation, describing it as the most powerful and efficient second chamber in the world, and urged the enlargement of the Constitution of the House of Lords, so as to include among its members representatives of science, art, literature, commerce, the laboring classes, India, and the colonies.

THE General Assembly of the United Presbyterian Church at its recent meeting voted not to grant the request of memorialists, who had asked that the Assembly declare the use of instrumental music in worship unlawful. The defeated party, it is said, will hold a convention soon, to determine what shall be done. The *Presbyterian* says the peril now is that of a schism, but it hopes the minority on this "burning question" will not allow adherence to their conviction to rend asunder the Presbyterian communion!

FIVE hundred Mormons, chiefly Scandinavians, landed in New York last Monday. One of the elders in charge of them, in reply to a question as to what inducement these immigrants had to go to Utah, said: "None at all, except the promise of certain salvation. We preached to them that God talks directly with John Taylor, who is Brigham Young's successor, and has commanded plural marriages, and promised salvation through baptismal immersion and belief in the Lord Jesus Christ. There was no promise of free lands or an easy, luxurious life. They have got from $5 to $50 each in hard cash to start with."

AT the third annual meeting of the Free-thought League of Germany, Dr. Ludwig Büchner, who presided, delivered an address on the Woman Question, in which he maintained that woman should stand equal with man in rights and opportunities. The *Radical Review*, referring to a report of the meeting printed in a German paper, says: "The lecture was well received, and several other speakers emphasized it as the especial duty of free-thinkers to help woman in her hard struggle for better conditions of life. And yet the great mass of women stand aloof from free-thinkers, and side with the Christians, who, to use the language of one of their prominent English journals, say that 'to marry, to bear children, to be mistresses of families, to give no occasion to the adversary to speak evil, to learn in silence with all subjection, such are St. Paul's precepts for the guidances of the gentler sex.'"

THE Chicago *Inter-Ocean* says that the Republican platform not only pledges the party to the eradication of polygamy, but "goes farther, and demands the divorce of political and ecclesiastical power, and thus points the way to the overthrow of Mormonism as a temporal power." Why not go farther still, and demand the "divorce of political and ecclesiastical power" in every State? Why not demand the removal of every vestige of the union of Church and State, and such legislation as is necessary to place all the States upon a secular basis, and insure the administration of the national and State government in strict accordance with the principles of State secularization. There are evils to be removed and reforms to be effected in Utah, to which we cannot remain indifferent; but, if our party leaders insist upon "divorce of political and ecclesiastical power" in Utah, without showing any interest in the agitation for the secularization of our entire government, they are liable to be suspected of making their demand merely for party ends, in view of the popular feeling against Mormons on account of justly condemned polygamous practices.

THE secretary of the National Liberal League, in *Man*, proposes "reorganization on the platform of 1876," "a new, entire, and all inclusive liberal organization." The president adds, "Now, we second the suggestion to let all of the by-gones be sunk as though they never were, and try to meet on the original League platform and the proceedings at Philadelphia in 1876, and start anew." It is proposed to take the resolutions adopted at Philadelphia in 1876 touching indecent literature and the mails as "the plank on Comstockism in the new platform." It is believed "the majority of the National Liberal League would approve of it." We are asked whether we "would accept the ground taken in the original League congress held in Philadelphia in 1876?" This is the ground we have maintained during the entire controversy on this subject, and we do not see the motive for asking whether we will indorse a position for defending which we have received no little abuse. An attempt to form a general liberal organization is likely to be more successful, if made independently of any existing organization; but, if the National Liberal League shall in good faith return to the basis of 1876, and confine its work to the purposes for which it was organized, it will have our good wishes and encouragement. We may in a future number recur to this subject, to which we can now devote but a hastily written paragraph.

REV. J. L. DOUTHIT, a Unitarian minister in the West, is much disturbed by the "non-Christian platform" of the Western Conference. He has been trying to convince the people of Shelbyville, Ill., that Unitarians are sound in the Christian faith. Orthodox ministers in the same community, Mr. Douthit writes to *Unity*, "would tell the people that Unitarians did not believe in Christ, and these ministers would quote the flippant utterance of some one Unitarian to prove their charges. I could combat these charges by quoting our standard authors and by appealing to the basis of the American Unitarian Association, the preamble of our National Conference, and all other conferences calling themselves Unitarian, *until* the Western Conference declared its present non-Christian platform. But, now, not only our open enemies, but even those Christians who would otherwise be our allies, and some 'liberals' who spurn the name Christian,' and like the name Unitarian for what, it signifies to them *negatively*,—all join together in quoting the words of men prominent in the management of the Western Conference to prove that Unitarians *do not* give allegiance to Jesus Christ. Thus, it has often happened that what I have tried to preach and maintain in Shelbyville as Unitarianism has been contradicted b. the organ of, or by public utterances of those who are supposed to represent, the Western Conference." If Mr. Douthit had told the whole truth, that some Unitarians "believe in Christ," in the sense in which he uses the phrase, and some do not, he would have saved himself from the awkward position he is now in before both friends and foes. He probably knew that leading Unitarian ministers East and West "do not give allegiance to Jesus Christ," and that Unitarian churches, especially in the West, are made up largely of men and women who have no belief whatever in Christ as a superhuman character or Christianity as a supernatural system, and that no appeal to "standard authors" or to "the preamble of our National Conference" could reverse this fact or destroy its significance. Mr. Douthit has, we may here add, unwittingly furnished non-Christian Unitarians with an argument for the repeal of the preamble alluded to, which, although regarded by some as meaningless, is certainly misleading. The Western Conference is to be congratulated upon its courage and progressive spirit.

MORAL FAILURES OF BUSINESS MEN.

Again, in the financial disturbances of the business world there have been brought to light a large number of moral failures among business men. Rogues of various sorts and degrees have been exposed,—defaulters, swindlers, forgers; one day holding honored positions in society, the next lodged in jail or fleeing from the constable. And, again, we have the old story that a large proportion of these men were of pious habits and orthodox faith.

We are not disposed, as some liberal thinkers are, to lay at the door of evangelical churches the responsibility for the great financial crimes of Christendom, because of this fact that so many of the exposed criminals have been zealous and prominent members in such churches. It is not a very profitable employment to count up the black sheep that may belong to another fold. The black sheep are not all in the orthodox folds. Some of them are in liberal ranks, and we judge them no more leniently when there found. Naturally, the evangelical folds have more of them, because the folds themselves are more and larger; and because, too, we believe it must be added, the doctrines and methods of evangelical churches make it easier to use religion as a cloak consciously to conceal crime than do the beliefs and methods of Liberals.

But there is one point in the popular theological teaching of evangelical Christendom which does and must tend, in the long run, rather to the deterioration than to the strengthening of conscience, and which, therefore, utterly vitiates that teaching, as a religious system, for remedying this kind of moral failure. And this vitiating point in the popular theology is its theory of vicarious atonement and substituted penalty. Proclaim the doctrine that a man's guilt has been expiated by the sufferings of another, so that he himself may escape the penalty for his crimes, and you confuse man's mental perception of justice and right as well as deprive conscience of its natural exercise and training. And the reason why this doctrine has not done more moral mischief in Christendom than it has is because theologians and preachers are not generally so severely logical as you at first expect they are going to be, but allow side issues to modify their central teaching; and because, too, the people who hear them are really better than their theology, and do not permit their natural perceptions of right and wrong to be entirely overborne and dethroned by a false theological theory.

But the religious teaching that relies centrally and fundamentally upon this doctrine of substituted punishment, the religion that calls human righteousness "filthy rags," and says that one's own uprightness of character and conduct is no security for salvation, the religion that puts thieves in the same paradise with honest men, upon a confession of penitence in the agonies of death,—such a religion certainly comes with no adequate cure for financial dishonesties, defalcations, and swindlings. Indeed, in its central doctrine, it is a part of the very thing to be reformed. At the heart of it is injustice, plunder, *taking* and *profiting by*, not what one has earned himself, but what belongs to another. It is a theological device by which the financial defaulter, having lived on earth by swindling his neighbors, and in constant debt to the moral law, is enabled, at death, to continue the one practice in which he has become an adept, by procuring a seat in heaven on another's credit.

Such a religious doctrine as this, then, may be set aside as inadequate to the emergency of meeting the moral failures of the business world. So, also, may that type of the same general theology, which was exhibited a few years since at a meeting of Presbyterian clergymen in Philadelphia, when, in discussing the then recent financial and moral fall of a prominent business and religious man of that city, some of the speakers took the ground that the Almighty had brought the unfortunate man into his troubles as a judgment upon him for his sin in having used his influence toward keeping the permanent exhibition on the Centennial Grounds open on Sundays. As the troubles, in this case, were the exposure of this man's gross financial frauds and the consequent ruin that came upon him, the inference from these clergymen's reasoning was that, if the man (who was a member in good standing of an Evangelical church) had not violated the Sabbath, the Lord would have prospered him in concealing his crime, and not permitted the annoying trouble of exposure to have fallen upon him; or else that, for that sin of Sabbath-breaking, the Lord led him purposely into the crime of fraud and forgery, so as to work his ruin. In either case, a religion that thus puts a form of Sabbath observance above moral righteousness cannot bring a remedy for such moral failures.

In fact, the only religion that can meet the diagnosis of these cases of moral failure among business men is that which goes down deep into character; that which, wherever preached, goes down, below creeds and forms, to the roots of daily conduct. A religion is needed that will bring a change of heart, not of the spasmodic, revivalistic sort, not a mere sentimental fervor, but a change of heart that means the amendment of dispositions, the clarifying of moral vision, the invigoration of conscience, the uplifting of motives to the highest considerations and appeals of which humanity is capable. The one thing needed most of all is the strengthening and sharpening of man's moral sense, so that it shall be sensitive to the slightest stain upon his honor,—a moral sense which shall go with a man into every slightest transaction and every obscurest corner of his business, and hold him to rectitude with a grip so tenacious that no considerations of pecuniary success nor fears of pecuniary failure can seduce or scare him from it. In a word, the only religion that can go to the bottom of this disease is the religion of righteousness.

When man has learned to do the right because it is the right, to be faithful to trusts because simple truth and justice between men demand it, and to be thus true regardless of whatsoever consequences, pleasant or painful, may come to himself, then and not till then is he secure against the temptations which in an unguarded moment or under intense pressure of selfish interest may be sprung upon him. At this height of character there is a self-respect which becomes moral security; a nice sense of integrity and honor which is as uneasy at any secret departures from the right as if the whole world were looking on. At this height of character, the moral law becomes as naturally obeyed, as inviolable and as invincible, as the law of gravitation in the material world.

WM. J. POTTER.

JOHN MORLEY UPON EMERSON.

The echoes of Mr. Arnold's criticism of Emerson have hardly died away, when another English critic comes to us with an equally deliberate opinion concerning our immortal friend. Mr. Morley is one of the four strongholds that make up the quadrilateral of first-class criticism in England. Moreover, he is, to a degree that Mr. Arnold is not, a man of affairs. The structure of his mind and the trend of his philosophy are such that we should not expect from him so fair a view. But a fairer one is the significant event. Another proof is here of Emerson's breadth, his universality. Men of the most different persuasions find their account in him,—the idealists and the realists, the men of science and the metaphysicians. He does not always furnish us with the reconciling word. He will state both sides, if he sees them, whether he can reconcile them or not.

Mr. Morley's essay is a matter of some fifty pages, divided into three unequal parts, following a short introductory section. He does not think it profitable to seek out his affinities with the philosophic schools; and he makes short work of his philosophy, affirming that he made no contribution of his own. What he did was to light up the Kant-Coleridge doctrines with rays of ethical and poetical imagination. Part first of Mr. Morley's essay is the record of Mr. Emerson's intellectual and personal life, "of which we may say in all truth that no purer, simpler, and more harmonious story can be found in the annals of far-shining men." He tells this story well. No one has seized more happily upon the significant events and the essential traits of a life "far wiser and happier" than Carlyle's at Craigenputtock, "not wholly in the busy world, nor quite beyond it." He does not hesitate to enrich his pages with the most sparkling gems from Hawthorne and Lowell and other writers,—a method which he does not commonly observe. His paragraph on the *Dial* is not so just as Mr. Higginson's chapter in his *Margaret Fuller*. His estimate of Mr. Frothingham's *Transcendentalism* is also notably different from Mr. Higginson's, and it is much more favorable. Mr. Morley's large social spirit and his deep interest in political affairs serve him a good turn in his treatment of Emerson's relations to our anti-slavery struggle and the Civil War. He quotes with manly sympathy his magnificent rebuke of Carlyle's total inappreciation of "that greatest ordeal of our time."

The second part of Mr. Morley's essay deals with Emerson's style as prosaist and poet, and in general with his literary method. To his prose style, he is hardly more favorable than Mr. Arnold. He accounts for it in part by his habit of lecturing; thinks that his *staccato* came from this habit. I doubt it very much. Had Emerson never lectured, his style would have been less fragmentary than it is now. His lecturing was simply thinking aloud, "a divine soliloquy." "Everything is thrown in just as it comes," he says, "and sometimes the pell-mell is enough to persuade us that Pope did not exaggerate when he said that no one qualification is so likely to make a good writer as the power of rejecting his own thoughts." But he has good also to say of this disjointed style: "Even at the roughest, Emerson often interjects a delightful cadence." He does this *so* often that for some of us this delightful cadence is what we mean by Emerson's style. Better than any "wholeness of tissue" which Mr. Arnold made the test are these innumerable sentences and passages of penetrating and immortal sweetness. But, if Mr. Morley underpraises Emerson's style, does he not overpraise his erudition? "Few thinkers on his level betray his breadth of literary reference." If this is so, it is because everything was grist that came to his mill; because he pounced on his own wherever he found it with perfect intuition. His reading of Goethe was his most persistent effort. His library was not so large or fine as Mr. Morley thinks; and his reading, for the most part, was desultory. He was not a student or a scholar. It would be interesting to know how much he ever

Digitized by Google

read of Swedenborg, whom he praises so much for the very reason, I suspect, that he knew him so little.

Mr. Morley's opinion of Emerson's poetry is not more favorable than Mr. Arnold's, nor more just. But it has truth in it. "Taken as a whole, Emerson's poetry is of that kind which springs, not from excitement of passion or feeling, but from an intellectual demand for intense and sublimated expression." True in the main. So is not this: "It is hard to feel that his poetry is inevitable." It is not for Dr. Hedge, who says of Emerson's most characteristic poems, that they are "bursts." In one breath, Mr. Morley praises "The Adirondacks," one of his prosiest poems but for one lightning flash, and the "Snow-storm," as "pretty and pleasant bits of pastoral," and puts "The Humblebee" in the same class! Had the gods made Mr. Morley more poetical, he would not have written thus. Emerson has in many places the genuine "lyrical cry," and that Mr. Morley does not make a note of it is one of the most damaging features of his essay.

But it is in the third part of his essay, where he discusses Emerson's thought and spirit, that he is best worth our attention. A sentence here and there will better indicate his method and result than any mere abstraction: "Emerson is one of the few moral reformers whose mission lay in calling men rather than in rousing them, and in the inculcation of serenity rather than in the spread of excitement." "The last password given by the dying Antonine to the officer of the watch was, *Aequanimitas*. In a brighter, wider, and more living sense than was possible even to the noblest in the middle of the second century, this, too, was the watchword of the Emersonian teaching." "There is no modern thinker who makes Beauty—all that is gracious, seemly, and becoming—so conspicuous and essential a part of life." Mr. Morley does not find Emerson always haunting the perilous altitudes of Transcendentalism, but often homely and practical as a man could be. But, in a high sense, he cared more for faith than for works; and his persuasion was not less than Luther's of the grace of God as central to salvation. Mr. Morley does not disguise his sense of Emerson's superiority to Carlyle in a "high, transparent sanity," which kept him in line with the ruling social tendencies of his age when Carlyle was reactionary and obsolete. He finds him equally in line with the ruling scientific tendencies. What he does not like, as we should expect, is his Platonism: for him, it is "mere abracadabra, incomprehensible and worthless." Nor does he like his easy way of getting round "the radical tragedy of More and Less" in human nature: "What can be more idle, when one of the world's bitter puzzles is pressed on the teacher, than that he should betake himself to an altitude whence it is invisible, and then assure us that it is non-existent?" Emerson was too resolved, he thinks, upon an optimistic rendering of the facts to look them fairly in the face. Had Emerson been even less recluse, he would have helped us more. "The world hardens, narrows, desiccates common natures, but nothing so enriches generous ones." Mr. Morley's final word is not so very different from Mr. Arnold's, which was sufficiently appreciative to atone for all his previous disparagement: "Emerson remains among the most persuasive and inspiring of those who by word and example rebuke our despondency, purify our sight, awaken us from the deadening slumbers of convention and conformity, exorcise the pestering imps of vanity, and lift men up from low thoughts and sullen moods of helplessness and impiety."

JOHN W. CHADWICK.

THOREAU'S "SUMMER."*

This new selection from the journal of one of the most careful observers and interpreters of nature in New England is timely in appearance, and cannot fail to enhance its author's right to be given high rank among America's most original thinkers. The volume consists of selections from the notes made by Thoreau during the Junes and Julys of years ranging in date from 1839 to 1860, but arranged in orderly sequence as to the day of the month, so that we have here the record of observations made during many summers condensed into one rich season.

Every new work bearing the impress of Thoreau's name more and more impresses the reader with the sense that his writings are destined to live when other more pretentious and ambitious writers of his own and of later days shall be forgotten. He is so distinctly a son of the soil, so unequivocally an indigenous product of American genius, that when this country shall, by reason of the great amount of good literary work done by its sons and daughters, come to have its best writers sifted, singled out, and classified according to their real merit, then this lonely, erratic genius, who once cheerfully boasted of his "library of seven hundred volumes," five hundred of which consisted of copies of his own unsold works, will be assigned to no low place among America's classics; for, unlike so many of his countrymen of to-day who aim to win fame as men of genius, he was no copyist of foreign methods in style or subject. He was himself an original thinker, a discoverer in untrodden ways. He was so essentially an outcome of New England's thought and culture, bearing so unmistakably the stamp of his heredity and environments, that she may well be proud to own him as her very own contribution to the world's thinkers.

Thoreau's philosophy was rather microscopic than telescopic. In this respect, he was almost unique; for, while the majority of thinkers enlarge their area of thought by enlarging their area of observation and drawing their inspiration from the macrocosm, this man enlarged his thought by deliberately withdrawing as far as possible from society, and confining his observations to the minute details of his native woods and fields. His inspiration came direct from nature's self, and is none the less invigorating, healthful, or helpful for so coming. But because of this isolation of himself and close attention to the minute, the individuality of the man, the "me," looms up rather too gigantically.

Despite Thoreau's professed distaste for society, and while he seemed to aim chiefly at a faithful delineation of the characteristics of New England scenery and natural history in their most minute details, he manages to give us at the same time a pretty vivid portraiture of New England human nature as well. Though these sketches are incidental, they are drawn with no uncertainty of touch, showing a capacity to discern the salient points of character, humorous or otherwise.

His scientific observations of natural phenomena are so blended with poetic and philosophic thought that such books as this on "Summer" cannot fail to excite renewed interest in the common things so charmingly described and commented on. Even to the New Englander, who has all his life been accustomed to the environments which are so lovingly and minutely described, and who has thought hitherto that he has fully understood and taken note of these every-day sights and sounds, Thoreau opens a new field for delightful investigation; and he longs, ere he closes the volume, to get into the woods and fields to search for himself with clearer vision for the new beauties which nature offers him through the revelations of this, one of her high-priests.

Thoreau was an industrious idler, a "loafer" after Walt Whitman's own heart. He, too, "loafs and invites his soul." He "leans and loafs at his ease, observing a spear of summer grass," or, as Thoreau himself states it, "the farmer is ploughing in yonder field, craftsmen are busy in the shops, the trader stands behind the counter, and all works go steadily forward. But I will have nothing to do; will tell Fortune that I play no game with her, and she may reach me in my Asia of serenity and indolence, if she can." But the indolence of which he accuses himself was the indolence of the hands only: the keenly observant eyes, the active, alert brain, were busy in noting, comparing, analyzing, and philosophizing even in the idlest hours, as these pages fully attest, fragmentary as they necessarily are.

One cannot close this book without a sigh of regret that Thoreau did not live to attain the acme of his intellectual powers; for the very incompleteness and fragmentariness of it show strong evidences of the growth of his whole nature, moral and intellectual. An accurate observer, an original thinker, a vigorous writer, in spite of his tendency toward pessimism, Thoreau had in him the elements of a true philosopher, if not of the poet he apparently hoped to be. But, like good wine, he needed the ripening, strengthening, and mellowing of age.

A FEW THOUGHTS ON MR. SALTER'S ANNIVERSARY ADDRESS.

I read Mr. Salter's address with deep interest, and consider it a masterly and compact statement of the principles of a cult which I believe will never have a strong following in the world, but is only a resource in a state of temporary perplexity. This was my thought from the start, when Mr. Salter explained his views to me in Cambridge four years ago. Now, of what one of the speakers on the platform with Mr. Salter called "the present chaotic condition in our life and thought," Mr. Salter will pardon me if I take what seem to me a couple of instances out of his own address. And they do honor, unintentionally to him, to the creed on which he was suckled, as contrasted with the factitious creed which he is expounding, and which he thinks he believes. Emerson, he says, is wrong in supposing that, though ministers of justice fail, justice never so does; for, says Mr. Salter, "there are no self-executing instantaneous ethical laws." Justice "has reality only in those who execute it," but does not exist as an abstract something outside of man. But, presently, speaking of the law of right, he says, "Plainly, men do not make this law, but simply find it." Man, he says, no more makes the law of right than he makes the law of gravitation. But now, if men do not make it, it must be self-made,—that is, self-acting, self-executing,—which is precisely the transcendental position he previously denied in the mouth of Emerson. In this contradiction of himself, Mr. Salter rose for the moment into the higher atmosphere out of which he painfully is trying to keep himself. So, in the closing words of his speech, he does the same, when he speaks of men themselves as "the hands by which the eternal purpose realizes itself." Eternal Purpose,—put it thus in capitals, and Beecher himself would not want a better definition of his God.

Yes, wiser men than you or me, Mr. Salter, have believed that they dimly saw indications that

Digitized by Google

through the ages one eternal purpose runs; and I do not think we are ready to forswear that belief at this early stage of our knowledge,—no, not quite yet, thank fortune. We shall not wisely trample wholly under feet the religion of our fathers: they had a few sesame grains of truth in their philosophy, let us admit.

But let me show once more how in a circle nobly reasons my very good friend Salter. We ourselves are the hands by which the divine purpose realizes itself, are we? Very well: then, we are in fact part and parcel of that Divine Something that has a purpose. Therefore, when, as Mr. Salter tells us to do, we worship "those qualities that we instinctively call divine, wherever any hint or suggestion of them appears in human form," we are really worshipping the Divine Something. But Mr. Salter says it is ignoble to worship this something outside of us, possessing our noblest characteristics,—really the Divine Something, but practically and ostensibly its qualities enmasked in man, its hands. And this is where I quarrel with "ethical religion." It does not permit us to rise into the realm of the Absolute; we are not to contemplate the head, the intellect, the centre of the power that is in us, but only look at its hands,—namely, ourselves. We are to worship the ideal humanity; and this is Comtism with the rites omitted. And such Comtism and nothing else is the Adler ethical movement. It will not last: it is not bottomed on the universe, but only on a part of the universe. It is all right, so far as it goes; but it does not go deep enough. It is a decapitated religion, a trunk walking about without a head (but able to move by means of the brain-power in the nerves of the extremities); a Poor Richard's religion for prosaic minds; a cult of wise saws and modern instances, appealing no whit to the imagination (the highest faculty of the mind); a sour-grapes cult, which refuses to worship, silently and with eternal, if need be, suspense of judgment, the universe outside of itself, because it cannot understand it,—a very comfortable, limited, workable, and handleable system, or constitution, but not based on the conceivably profoundest, patientest, or bravest attitude, it seems to me.

For my part, I should despise myself, did I ever cease to gaze with ineffable awe and silent worship upon that outside of me that created me, and fills the universe with glory and miracle; and I want no religion with that article left out. We want no God of men's "theology"; but we want room overhead, infinite space for growth, infinite reverence. I may not understand the matter of origins, nor how thought could spring out of rock or fire; I may be overwhelmed by the thought that out of eight thousand miles of solid rock or fire beneath me I sprang into life. The space, the bulk, the essence of the All about me may appall my imagination; but, looking at the hard facts, in their hardest aspect, I yet cannot think that the universe is no more than a vast gasometer or roaring hydrogen furnace. I prefer rather to think that I do not understand the real nature of this splendid *entourage* than to think the impossible thought that it is self-created, self-sustained, and dead to its heart's core.

"The sun is God," said Turner, a short time before his death,—Turner, the divine artist, who had for his immortal span of life revelled in the sun's mystic and exquisite handiwork. The same thing said the dying Mirabeau, as he looked out of his window. And, as I now look out of my window, and see the almighty sun and his almighty bride, the miracle-working earth, in the freshness and pomp of her tender summer robes, shot through with mysterious life forces, their awful crushing power attempered and exquisitely balanced to the electric thrill and float of a butterfly's wing,—I say not only that the sun is God, but the earth also, and my mind is filled with the solemnest awe! "But you do not understand the essence-nature of the universe." True; but I will none the less keep trying sternly, and steadily, and little by little, to penetrate further and further into knowledge of that nature; and herein is the true and majestic source of enthusiasm and interest for the religion of all future time. And it is because "ethical religion" turns away from this supreme instrument of its power that it is unfitted, as I believe, for sweeping over society, and rousing it into a passion of enthusiasm. It is not religion, and has no business with the name. Religion is *not* morality. Religion is a thought, an emotion; morality, an act. Keep them separate. I believe that a right act is always of more importance than a thought. So, if I had to choose between "ethical religion" and Roman Catholicism, I should choose ethical religion. But we need choose neither. I dread the deadening, prosaicizing effect of a code of life which can only recommend a contemplation of one's own navel. "The sun is not God," says Prof. Dry asdust: "nonsense, it is only a globe of gas." This is the supreme folly (every age has its own) which will make our age ridiculous to future times. In forming the religion of the future, let us, by all that is sacred, not commit a fatal error, not leave out the essential thing. Dear Mr. Salter and Mr. Adler, can't you open your skyward hatchway, can't you preach wonder more, get more poetry and mysticism of flowers and blue sky into your thought? If you could, I know a great many who would at once move into your ranks with acclaim. For your ethical work the best minds and hearts entertain the profoundest respect. But history has taught you so well the mischief of metaphysics that it almost seems to me you would indorse the sentiment of the Parisian Republican: "S'il y avait un Dieu, il faudrait le fusiller,"—"If there were a God, it would be necessary to shoot him."

W. S. KENNEDY.

THE ABOLITION OF THE PRESIDENCY.*

"Under no form of government," says Von Holst, "is it so dangerous to erect a political idol as in a Democratic republic; for, once erected, it is the political sin against the Holy Spirit to lay hands upon it." According to Henry C. Lockwood, a member of the New York Bar, and the author of an able work just published, whose title stands at the head of this article, the chief political idol in this country is the Executive Power of the national government, vested in an elective monarch called a President. As Webster said in a speech protesting against Jackson's exercise of despotic authority, which Congress was powerless to prevent: "The President carries on the government: all the rest are but subcontractors. Sir, whatever name we give him, we have but one executive officer. A Briareus sits in the centre of our system, and with his hundred hands touches everything, moves everything, controls everything."

Mr. Lockwood thinks that, while we are republican in form, our government has in it monarchical elements, upon the eradication of which depends the preservation of the essence and spirit of American liberty. The Executive is in organized conflict with the legislature and judiciary. Thy framers of the Constitution, in defining the powere of the Executive, incorporated many ancient kingls prerogatives. The electoral colleges do not insure the election of the President eitner by the choice of the people or by a majority of the States. In 1860, the united vote of the Democratic candidates was 2,787,780, while Lincoln's was only 1,857,660; yet Lincoln had 180 electoral votes, while the Democratic vote was only 123. Devise any law we may for the election of the President, there is no permanent security so long as he has his present monarchical power. In this country, the people part with their power to the President for four years. Hence, as Gladstone says, "in the American Union the Federal Executive is independent for each four years both of the Congress and of the people. But the British ministry is largely dependent on the people, whenever the people firmly will it, and is always dependent on the House of Commons, except when it can safely and effectively appeal to the people." Thus, the English Constitution, under the workings of its executive branch, is more republican than ours; and the ministry is nearer the people than is our President.

During an entire war, we may have for President and commander-in-chief of the army and navy a man without any of the qualifications of a war executive, and in time of peace a war President, with all which that implies. When governmental affairs are going on smoothly and well, and whether there is any issue or not, there must be an election, because a certain date has arrived, throwing, as Prof. Sumner says, "an artificial and injurious excitement athwart all the industrial and other permanent interests of the country." The President's power of appointment and removal from office can only result in patronage, bribery, in making office-holders sycophantic, corrupt instruments of the Executive, and raising up a host of greedy office-seekers. The bad effect upon morals is incalculable. In the exercise of the veto power, the President may do again and again what the Crown in England has not done since the reign of Queen Anne. Congress should express the mind and conscience of the people, and its laws should be promptly executed. The cabinet is a creature of the President,—a secret and irresponsible conclave. In England, it is a working executive, while the Queen is a mere figurehead. Here, the President rules; and the members of the cabinet are his staff officers to do as he bids in the enforcement of his policy. The tendency is to increase the unrepublican character of the Executive.

Mr. Lockwood's conclusion is that the Presidency should be abolished, and that the supreme power of making laws and executing them should by constitutional amendment be vested in Congress (which should consist of one body only); that Congress should be the final judge of its own powers, but subject to the right of an executive council to be appointed by Congress, with authority to dissolve Congress upon an issue framed, and appeal to the people. The members of the executive council, corresponding in number and name with those of our President's cabinet, to be at the head of their respective department, subject to removal at the pleasure of Congress, and to be entitled to seats in Congress with the right to debate and to initiate legislation, each member of the council to be responsible for his acts, and subject to be called before Congress at any time to give information. Thus, Mr. Lockwood would have the supreme power concentrated in the people, and the legislature a temporary trustee, with provision made for an immediate appeal to the people, whenever the government becomes divided upon any important measure.

The views advanced in this volume are not original: indeed, they have long been held and advocated in the main by thoughtful men in this country, and have been distinctly formulated in

* *The Abolition of the Presidency.* By Henry C. Lockwood of the New York Bar. New York: R. Worthington, 770 Broadway. 1884. pp. 331.

Digitized by Google

the platform of an organization of Germans in the West; but no previous writer has presented them with such ability and power as are here brought to their exposition and defence. The work will have an interest for many, who, if not satisfied with the author's proposed remedy, must acknowledge the evils resulting from the abuse of executive power which he describes, and the necessity of some radical reform to guard against the corrupting influences and unrepublican tendencies in the future. It was Daniel Webster who said, in a powerful speech in the United States Senate: "Mr. President, the contest for ages has been to rescue liberty from the grasp of executive power. . . . Through all this history of the contest for liberty, executive power has been regarded as a lion which must be chained."

THE strictly scientific demand of progress in all the varied ranges of life, from the simplest plant to man, is that the weak shall perish and their seed with them. The farmer who saves the best ears of corn at harvest for use at the next planting season acts upon the philosophy of "the survival of the fittest." The fierce struggle for existence among animals and savages tends to improvement of the breed or race. But there comes a time in the development of the human family when the moral sense revolts at this method of improvement; and, instead of destroying the weak, society protects them from cruelty, and strives to equalize their lot and that of the strong. Every charitable institution is an ethical protest against the purely scientific method of progress.—*New York Sun.*

"Every charitable institution" rightly conducted is "an ethical protest against the purely" *un*scientific method of progress. The *scientific* method implies knowledge of the conditions of progress and the use of means for its promotion. Ethical science enables man, in proportion as he comes to understand and apply it, to improve himself, and at the same time to improve his fellow-men, including such as, before "there comes a time in the development of the human family when the moral sense revolts" at the destruction of the weak and unfortunate, perish in a brutal struggle for life. Writers who put science and ethics—which is the highest of all the sciences—in opposition to each other show thereby need of emancipation from the trammels of false theological or metaphysical notions, or from the confusing influence of an incorrect terminology founded upon unscientific conceptions of the past. The mistake of the *Sun* is mainly in its misuse of words. It sees, however, what some, who profess without good reason to speak in the name of science, fail to see,—that, with human development, the selfish struggle for life is replaced by individual conduct and a social order directed by intelligence and governed by reason and conscience, involving sympathy, benevolence, and co-operation, by which the strong are impelled to assist, and not to destroy, the unfortunate, and thereby to improve themselves and the social organism of which they form a part.

ONCE, Universalists were a progressive Christian sect, and they did needed and important work in destroying faith in the orthodox theology. But, the past few years, the more radical and progressive members have dropped out of the denomination, and are now found among the Unitarians and Liberals, leaving behind an element that is timid, conservative, and without much positive influence on the thought of the age. Many of the orthodox churches have in them the spirit of progress, and are in the line of advancement; but Universalism some time ago came to a stand-still, and has since opposed every step beyond its own position. Its tendencies are toward Orthodoxy, as modified in these times, rather than toward a rationalism that judges the Bible and Christianity with all other books and systems by the methods of science. These thoughts are suggested by a letter in *Unity* from Rev. J. W. Hanson, a Universalist minister, and editor of one of the papers of his denomination: "The Universalist denomination stands on the Christian Scriptures, and cannot work with those who, like the editor of *Unity* and his pseudo-'Universalist' correspondent, emasculate the Book of books, and stand where Paul's audience on Mars Hill stood when he preached Christ to them. The Universalist denomination can cordially co-operate with Dr. Peabody, Dr. Stebbins, Freeman Clarke, Everett Hale, and Charles Lowe—*on his death-bed*, see Memoir,—but not with Savage, Blake, Jones, and Connor, and most of those, I am sorry to say, who give tone to Unitarianism in the West. I pray God to prosper *Christian* Unitarianism; and I can pray in faith, nothing doubting, that he will bring to naught that form of it which is minus Christ."

THE following is a summary of the forms of oath in use in the legislative assemblies of fourteen countries:—

BAVARIA.—I swear . . . So help me God and his Holy Gospel.

DENMARK.—I promise and swear . . . So help me God and his Holy Word.

GREECE.—I swear in the name of the Holy and Consubstantial and Indivisible Trinity.

HESSE-DARMSTADT.—I swear . . . So help me God.

SAXE-COBURG AND BADEN.—I swear. So help me God.

HOLLAND.—I swear. So help me God.

PORTUGAL.—I swear on the Holy Gospels.

PRUSSIA.—I swear by God, the Almighty and Omniscient . . . So help me God.

SAXONY.—I swear by Almighty God.

SERVIA.—I swear by one God, and with all that is according to law most sacred and in this world dearest . . . So help me God in this and that other world.

SPAIN.—After swearing the deputy on the Gospel, the President says, "Then may God repay you; but, if you fail, may he claim it from you."

SWEDEN AND NORWAY.—I [President or Vice-President only] swear before God and his Holy Gospel . . . I will be faithful to this oath as sure as God shall save my body and soul.

SWITZERLAND.—In the presence of Almighty God, I swear . . . So help me God.

UNITED STATES.—I do solemnly swear . . . So help me God.

TOURGUENEF, according to the *Freidenker*, was in youth an Hegelian, but ultimately became an agnostic. Thus he did not deny that life after death is possible, but declared openly that it did not attract him, but, on the contrary, seemed terrible. "What should I do through all eternity?" he used to say. "How could I fill up this incomprehensible abyss? Is my petty personality worthy of becoming eternal? How I could live without a body, I cannot imagine."

A TRUE man must be true to himself. He cannot, even in politics, consciously support unfit candidates or demagogues for office, with no public emergency to excuse his disregard of personalities, as was sometimes the case during the war, without suffering in the moral fibre. Neither can he pocket his principles and disregard his convictions, in obedience to a demand for party fealty, without lowering the standard of independent manhood. As for the policy, honesty is best, courage is best.—*Boston Advertiser.*

THE religion of our day and country is no more exempt from the sneer of the future than the others have been. When India was supreme, Brahma sat upon the world's throne. When the sceptre passed to Egypt, Isis and Osiris received the homage of mankind. Greece, with her fierce valor, swept to empire, and Zeus put on the purple of authority. The earth trembled with the tread of Rome's intrepid sons, and Jove grasped with mailed hand the thunderbolts of heaven. Rome fell; and Christians, from her territory, with the red sword of war carved out the ruling nations of the world, and now Christ sits upon the old throne. Who will be his successor?—*Ingersoll.*

IN order to discover truth, we must be truthful ourselves, and must welcome those who point out our errors as those who approve and confirm our discoveries.—*Max Müller.*

HALF a dozen towering truths wrought into the life of a child are worth more than the whole range of truths that are taught in the Sunday-school.—*Prof. A. R. Crandall.*

THE ultimate ground for any belief should be understood to be the fact that it can stand the freest possible discussion from every possible point of view.—*Leslie Stephen.*

THE man whose part is taken, and who does not wait for society in anything, has a power which society cannot choose but feel.—*Emerson.*

THE human race would be too unhappy, if it were as common to commit atrocious things as it is to believe them.—*Voltaire.*

HE who makes truth disagreeable commits high treason against virtue.—*Maria Edgeworth.*

PREDOMINANT opinions are generally the opinions of the generation that is vanishing.—*Disraeli.*

TO PERSEVERE in one's duty and to be silent is the first answer to calumny.—*Washington.*

THE PASSAGE OF A YEAR.

Well did I daily know,
Through all the seasons fled,
The gladder year ago
Ere I was called to sow
White seed among the dead.

But what more did I see?
Ah! dear one, with thine eyes,
I beg thee pity me,
For I am one with thee,—
Unknowing and unwise.

Together we have sought
The searchless, and have found
But shadow, that was caught
By weary brains, and thought
To bind the substance round.

And by the summer's bloom
And the cold winds that came
To write the roses' doom,
We saw revealed the tomb
Again, but ne'er the flame.

How often and how near
The blows descend, though we
Pass day and month and year,
And heal the wounds we fear,
And wander far at sea.

To make itself complete,
Life, that we should be wise,
Gave us, with motive sweet,
Death, loss,—as seemeth meet,—
To touch our scornful eyes.

Ah! who would fain resent
The gift, the loss, the grief,—
The rounded story, rent
Though it should be and spent
From thine own heart's belief?

HORACE L. TRAUBEL.

For *The Index.*

MURILLO'S MAGDALENE.

I gaze upon thy soul-lit eyes upturned,
And oft I marvel that Murillo's grace
In holy thought and holy musing learned
Conceived the wondrous beauty in thy face.
What glow of sacred genius in him burned!
No stain of earth upon thy brow I trace.
Was face of mortal ever seen so sweet?
Was face of mortal ever seen so fair?
And on thy neck, unbound, the silken hair
Which dried, with golden threads, thy Master's feet.
Methinks those eyes, that saw thy risen Lord,
Have held the glory in them evermore,
And high above all earthly thoughts they soar
To dwell in heaven and see the things of God!

ANNA OLCOTT COMMELIN.

The Index.

BOSTON, JUNE 26, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

REPORT OF ANNUAL MEETING

OF THE

FREE RELIGIOUS ASSOCIATION.

FRIDAY, P. M. SESSION, MAY 30.

(*Concluded.*)

The PRESIDENT.—Dr. Harris has paid the Convention the high compliment of bringing to his theme a treatment which requires close thinking. He has also paid the Free Religious Association the compliment of showing that a genuine Philosophy of Religion must be tested by its practical and social results. The discussion of the subject will be continued by Mr. C. D. B. Mills, of Syracuse, N.Y., whom you will now have the pleasure of hearing.

ADDRESS OF C. D. B. MILLS.

I suppose it will not be accepted as sufficient on this platform to declare the great fact of religion, to point to its universality in the experience of mankind, its duration through the ages of history, its presence and power pervasive and dominant still over the face of the globe, and among the most enlightened races. This fact would have weight, but would not with us be deemed conclusive. Religion might be all that which I have named, and still not be deep-grounded and permanent,—might be in the large a transient phase in the growth of humanity.

What we seek, and rightly, to know is the ground of the fact,—to question whether it bases in the nature of things, on the enduring necessities, and so must be permanent as the duration of humanity, or whether, like other things that have been seen in history, it comes of unripe conditions, of the child state, and is therefore to be outgrown with advancing intelligence, as barbarism, as belief in the gods of Olympus, in alchemy, witchcraft, etc., have been left behind.

There are those with whom this last view I have named is a settled persuasion. Religion, they deem, notwithstanding all we see and have to admit, is essentially superficial and temporary. It must go, in proportion as enlightenment and enlargement come in. It is the child of ignorance, birth of darkness and fear, and must, like the giant Alwis in the fable, die when the sun rises. What room for worship, when the mind shall have attained full knowledge? What ground for veneration, when all the sanctities of faith, all the adyta of prayer, shall have been penetrated and illumined by science? What ground for invocation, when the very idea of personal deity shall have been proved false, a fiction of the imagination! The seen tendencies of civilization, the march of culture, it is strongly felt, will surely abolish both fear and religious faith itself.

Others hold that not only is religion permanent and vital, everlasting for the race, but that the type under which we have it is also an absolute type, that this is everlasting,—the faith of Christendom, what we call Christianity, the one final faith. It has therefore the sovereign and supreme claim of the infinite truth. It has absolute prerogative. It is the foundation and the inspiration, they say, of all our greatness, the very source and life of our well-being as a people, the fruitful and indispensable fountain-head of everything valuable in our existence. But for it there would have been no civilization in Europe, no liberty, no republican institutions in America. But for it, I suppose they might add, no improved means of communication, such as we now enjoy, no printing-press, no newspaper or book, no rapid transit, none of the wide commercial interchange we see, no extended and seemingly perfected manufacture that we behold, filling the world with the products of skill, no railroads, telegraphs, or gas, to say nothing of electric lights; in short, that, without this one religion, we should not be anybody but savages, nor have anything but the rude, coarse, scanty possessions that belong to savagery or barbarism.

We have all heard remarks that imply as much. It is well known that there is a considerable number of people in this country resolutely engaged in an endeavor to procure the engraftment upon the American Constitution of a distinct and express recognition, acknowledgment, of the sovereignty of God and Jesus Christ over this nation. They are thoroughly assured in their minds that without this we are certain as a people to go to swift destruction. I lately read a dictum reported as uttered by a lady standing at the head of one of your colleges in Massachusetts, before a grave assembly of prominent educators. The subject of co-education was under consideration, and this lady, as reported, observed that co-education had failed in Cornell University, "because of the absence of Christian religious influence." A statement that is erroneous, to the best of my knowledge and belief, in both its counts. That educational experiment has neither thus far failed, nor has the institution rejected Christianity or been lax in exerting Christian religious influence. There is, so far as my knowledge extends, no State educational institution in the land, in which a regard for that faith is more sedulously cultivated. But I mention this not for the purpose of impugning the statement, but for illustrating the attitude of mind to which I have referred.

In like spirit, a worthy Catholic priest in the city of my residence has lately given a lecture entitled "The Catholic Church the Civilizer of Nations"; and both these remind me of what I once read in the account by a Jesuit father of the Iroquois. Speaking of their god, Ioskeha, they think, says the father, that without his aid they could not boil a pot. Very naturally, such tribes deem that an offering to their manito is altogether vital to their success in any undertaking. If they may have failed in a warlike expedition or in a hunt, or if they have been overtaken by ill luck in any most common circumstance, it must be due to the omission of some formality in this worship. An old Egyptian king ascribes the turning of the battle against him to the failure of his god Amun to support him; and, in true savage fashion, he advises his deity that he shall henceforth offer him no honor, if he do not now come down and succor him.

All these I account as instances of one and the same state of mind found on different planes of intelligence, but all magnifying to a fetich, a belief in a particular doctrine or deity; so that, as the Iroquois could not make a pot to boil without the aid of his Ioskeha, the most devoted and skilful teachers could not possibly succeed in an educational enterprise without invoking the interposition and aid of a special form of religious faith.

Now, I freely grant that religion, taken under such construction, is destined to pass away. It belongs to the minority, the childhood of the mind. It is to be, is being, outgrown. Prof. Jonn Fiske has rightly said that the present age will go into history as marked, for one thing, by the disintegration of orthodoxies. It is a period of investigation, of inquiry, of throwing off old shackles. Whatever cannot give good account of itself must go. No one can tell where this disintegration shall stop. It may pulverize the Rock of Ages. Christianity may be discrowned from the place it has occupied,—I think it will,—and be made to descend and stand beside other great, historic religions, marked, as they also, by limitation and infirmities, to stand only for what it is and not for what it is not. It is of eminent value and service in the history of humanity; but it is not, therefore, to be held an idol for worship. Jesus may take his place, not apart from, but among the great saints, one of a family of brethren. Nay, all that we know as the expression of religion to-day, the Churches, the theological beliefs of Christendom, and all that comes thereof, might pass away, everything in doctrine or institution might be abolished, and religion in essence and substance remain untouched.

We are not, therefore, by any means, shut up to the conclusion that religion is perishable, because all that we have known, or do now see, under that name may go. I regard it, on the other hand, as the one great, permanent fact with humanity, the one indelible reality that will survive all revolutions and conquests, that has a duration coextensive with civilization itself, and can never be extinguished while man exists. I think thus for these reasons: —

1. Over all our knowledge, whatever its measure or height, there arches ever an unknown. It is emphatically so with the child and the child-man, the savage. Indeed, such a one can hardly be said to have knowledge at all. The whole world is strange, is an enigma. He has no idea really of supernatural; for he has not yet attained to conception of nature. He is face to face with the invisible, without intervention even of law. Everything about strikes him with astonishment and awe, especially what may be unusual and, in appearance, formidable. The eclipse or the rainbow presents a fact utterly unintelligible, perfectly inexplicable, in savage philosophy. The Karens say the rainbow is a demon and devours men. The eclipse, to savages, is a monster essaying to swallow sun or moon. The Japanese say that water-spouts are immense dragons flying up from sea into air. The Moslems say the sand-pillar is the flight of an evil Jinn sweeping over the plains of sand. Naturally, a religion of fear, of terror, springs up on such soil. It consists in belief in formidable and inimical powers,

Digitized by Google

and expends itself in deprecatory invocation and placating rite for purpose of softening, appeasing offended deity.

The difference between savagery and culture is in this: that, in the latter, the veil of ignorance is lifted, and the eye sees, reads the fact: there is knowledge. It brings the unknown under the realm of intelligence and law. It penetrates and annexes wide domains to science. Eclipse, thunder-bolt, are disarmed of their terror. In case of the latter, man wards off the invasion from his home. He ventures to accost Nature, learn her ways, master her secrets.

But does he eliminate in his inquiry this element of the unknown from the field of his exploration? Never. He pushes it back, he cannot seize or expunge it. Ever beyond and below all the fact he pierces, there lies a farther, a greater fact, unfathomed, and still more inciting and impressing to his mind. Every explanation but opens the way to a grander mystery. Beyond the heavens we see stretch sublimer heavens we do not see. Before all time, and farther, beyond all time we can know or conceive, roll the unexplored, unimagined eternities.

"The savans," says Emerson, "are chatty and vain; but, hold them hard to principle and definition, and they become mute and near-sighted. Push them hard, and they come to Plato, Proclus, and Swedenborg." Haeckel gives me the constituents of protoplasm, shows the genesis and growth of organism, traces in clear outline the growth of the embryo from the germinal dot through the stages to the perfectly formed man-child; but not one of the mysteries of being has he solved to my thought. The secret springs of life, the ground, the causes of differentiation, and the ascent he has not shown. Through all these marvellous discoveries of science, whether on plane of chemical, vital, or mental, I am led as into a fairy chamber, a treasure house of ever-increasing splendors and wonders. "In ultimate analysis," says Huxley, "everything is incomprehensible; and the whole object of science is to reduce the fundamental incomprehensibilities to the smallest possible number." There is ever this unpenetrated mystery, unknown reality, this overarching presence and transcending, unnamed Power, before which stand confronted and awe-smitten almost alike the mind of savage and of sage.

2. And corresponding to this which transcends the intellect, unknown to the understanding, is ever an unattained somewhat to the active faculty, a fairy presence that soars ever beyond and beckons to its possession, a something which we cannot resist and cannot secure, a felt but unrealized ideal. This, too, overarches all our life. We are associated thus with a Power which, as Tyndall says, "gives fulness and tone to our existence, and which we can neither analyze nor comprehend." "Round about the intellect," he says again, "sweeps the horizon of emotions, from which all our noblest impulses are derived."

Rendered justly into the language mortals can apprehend,—for the soul cannot rest in negative and privative,—this infinite and unknown to us is Truth, Beauty, the supreme Excellence. Here is shrine at which the nature bows, here is temple that idolater's foot cannot enter.

The business of translation of infinite into forms of finite, clothing these realities of light in garb and type that speak to the understanding and the sense, has always been difficult.

> "'Tis the most difficult of tasks to keep
> The heights the soul is competent to gain."

The mind almost instinctively, in attempting to grasp the idea of God, has conceived him as a person of as determinate a character, so far as personality is concerned, as any individual we know. Anthropomorphism has been, still is, universal. The South African believes in a god with a crooked leg, and he sees him such in dreams and visions. In time of Tacitus, it was said that in the far north of Scandinavia men might see the very forms of the gods, and the rays streaming from their heads. In the sixth century, the famed Nile god might be seen in gigantic human form, rising waist-high from the waters of his river. The poets of the thirteenth century painted the god Oska or Wish with feet, hands, eyes, knowledge, blood, and all the passions of humanity. And I doubt not that, with Brother Moody and that large class which he is of and represents, the conception of deity is as determinate and realistic, if not as gross and sensuous, as ever lodged in a savage mind. Nay, take the religious world, take society at large, and to remove from them individualized deity is to bereave them of God. They would be ready to exclaim like Laban, Ye have taken away my gods, and what have I left?

Heaven also is conceived a place having local position as actual as London. The savage must have definite conception of his. 'Tis the land he sees in dreams, where there is game and fish in plenty, and the sun always shines. To some, it is the land where they may enjoy the happiness of being eternally drunk. To the South Sea Islander, it is the place where he may indulge in the eternal chewing of sugar-cane. Native preachers among the Algonquins and Iroquois, according to a Moravian missionary of about one hundred years ago, declared to their hearers that heaven was the abode of God, but confessed they had never yet reached that place, yet had come near enough to hear the cocks crow and see the smoke of the chimneys in heaven.

And much in the same spirit I heard a leading clergyman of your New England, president of one of the universities, declare that in his anticipation the time was not distant when the mind would be able to ascertain the locale of this abode of Deity, and with the same certitude with which the astronomer points to a star in the sky and says, This is Jupiter or That is Mars, so would it be possible to point to the determinate place and say, That is heaven. Dr. Talmage, I think, not very long since, delivered a sermon, in which he essayed to state from the geometrical measurement made by the angel the exact dimensions of the Holy City. Among the Norsemen, and so with our own ancestors, heaven was in the home of the heroes, where, in feasting upon the boar daily slain and served, and daily on each morning renewed to be slain and eaten again, in drinking to drunkenness and then fighting to satiety, to return thereupon to the table to feast again, all of eternity was to be spent. With us their descendants, as Mr. Frederic Harrison puts it, the future life is an immortality of striking the tabor.

With this, and of this, holds the scheme of the atonement, the miraculous virtue of Jesus' blood to cleanse the guilt and cancel the penalty to the offender; to satisfy and placate God,—the great incantation to this hour upon the heart of Christendom. And the entire conception to which I have referred comes of the attempt to carry the categories of the sense to the plane of soul. Nay, worse, it bears witness to the endeavor to graft the rude and sanguinary ideas of savagery, left for most part behind, upon the intelligence of civilization. It is a survival. "We are a civilized country in everything but one," says Mr. Conway, "that is religion: that is barbarous."

We have here "the irrepressible conflict" of substance with the worn and effete form. "The whole history of philosophy from Thales down to Hegel," says Prof. Max Müller, "I do not hesitate to call an uninterrupted battle against mythology, a constant protest of thought against language." So, in the religious history of past and present, has been, still is, an uninterrupted battle against the letter, against the limitations and the hamper of the sensuous conception.

Religion, purging herself from all that is limitary and unworthy, will be both more ethereal and more mundane, more ideal and more practical than aught we have seen in the past. Ceasing to seek God as a person, an entity to be seized and apprehended by the mind, it will look for him more and more in his manifestations. It will go out into the world and find him in nature, in the myriad-typed existence with which the globe, the universe, is full. It will hear the anthem of being, and learn perpetually new notes in the strain. It will listen with delighted ear to Tyndall, as he shows how the "atoms march in tune," how "nature lays her beams in music." Mr. Thayer has heard, as he believes, the beat in Niagara's roar, has caught the strain, and written out for our eyes the score. Nature will be transfigured to the mind by the marvellous disclosures of science. Religion will go out into *life*, will be intensely and absorbingly interested in whatever belongs to the improvement of man. It is to sanitate the houses and sewer the cities of the world, and make man whole in his body. The demon of disease is to be exorcised. It must go, like other things that belonged to the barbaric condition already left behind; and the human body must come to its estate. Sickness is to be known only in the records of a fast fading past. Huxley says truly that the people are perishing through lack of knowledge. Nothing that the men and women about us at this hour need so much as those lessons that shall teach them how to live. The heavy night still hangs dark; and with all the enlightenment of this age, in presence of the fearful diseases that yet infest, the most intelligent stand appalled, as ignorant and as helpless as children or savages.

"Long before land and sea of earth had been charted," says Mr. Conway, "the invisible heavens and hells were mapped, and reported in detail." Man has sought to know all worlds but this world, has studied, we may say, everything but himself. Himself fruitfully, almost never. The waste of energies in remote futile pursuits, in chasing will-o'-the-wisps, has been, still is, immense. It characterizes this age that he is beginning to awake from this insensibility and torpor, and opens his eyes a little. He commences to look around and inquire, Where and what am I? As a result, he already sees that he has lived in almost utter oblivion of the most vital things in his relations, he has been the victim of untold maladies, seven possessing demons, that he has had neither the knowledge nor the courage to resist, and through all the ages and to the present the multitudes have gone, continually go, to untimely graves.

"We have been scourged," says an eminent physicist, already quoted, "by invisible thongs, have been attacked from impenetrable ambuscades, and it is only to-day that the light of science is being let in upon the murderous dominion of our foes." The great emancipation on the plane of the physical is beginning to be. Grave questions of health, of the maintenance of the body at its best for the work of the soul, of hereditary transmission, impress of past upon present, and the present upon future, necessity of a higher sobriety in the parental relations, claims of an improved and perfected birth, are pressing themselves upon the consideration of all thoughtful minds, and the day of human deliverance here dawns.

Religion is to address itself to the diseases of

Digitized by Google

society, and treat these from the high vantage-ground of knowledge, to approach them not to mitigate or alleviate, but to cure. All the poverty, the vice, the idleness, the squalor, the injustice, and the wrong, devouring of the weak by the strong, are to be met boldly and subdued. They shall be eliminated from civilization. It will assay what no Church hitherto has attempted, the extinguishment of these fell evils, the abolishing of poverty and its causes, the vice, selfishness, and unrest, and inauguration of the finer social order, of perfect equity, abundance, and peace. There are questions in our industrial world that become in our time pressing, burning questions, daily growing in our present civilization more complex and difficult, and also more imperative. They are commanding, too, a more thorough attention, more searching, decisive discussion on the part of some of the best minds to-day than they have ever had before. It cannot but be that they shall yet have the full solution, and the coming religion of humanity is to accomplish the feat.

And, finally, with all this practical, there will be enough for the sentiment, enough for the affection. The soul will contemplate with wonder and awe the incarnation of eternal in this world of time. It will behold with rapt vision this spectacle, view with delight and a reverence too profound for speech, glad to the borders of fear, God manifest in the flesh, in the forms and persons we see. Immanuel, God with us, will be the thought, if not the utterance, as it contemplates this revelation, most near, vital, and expressive to the mind that sense, that perception may know; the beauty seen, a tiny ray of the Beauty eternal, face no eye may behold. It will dwell upon this mystery of being, see the angels of God ascending and descending, infinite incarnating itself, blending with finite, finite sublimating into infinite,—finite in its best but hint and partial symbol; in its least, radiance and expression; in the human, the sweet and quenchless qualities of the dear natures that come in contact with and enrich our life, the very Shekinah, face-to-face revelation of God. Who of us is not impelled, as in the clearer moments the eyes see, to exclaim, Surely He was in this place, and I knew it not?

I wish I had time to hint something of the intense interest now being awakened in studies of man, the record of his great past. For the first time, we might say, in history, the true focal adjustment is being found, and the races are studied in relation, each one a recognized part of the grand whole, the unit of humanity. "Even man's errors," says Müller, "we are beginning to understand, even his dreams we learn to interpret." Every shred of the history is sacred, not a scrap trivial or profane. No wildest mythology that does not have its purport and measure of enrichment for the mind. We see through all a common aspiration and a common infirmity.

And there is a wealth of symbolism in all. There were poets in every one of the stages of culture that we know; and we have the effort of the human mind in all ages and grades of growth to speak the name ineffable, struggle to reach and describe the indescribable. Finns living in their smoky, sooty huts on the fens, bogs, and moors in that inhospitable clime of Northern Russia have framed myths of transcendent beauty, poems of truest, noblest imagination, "surrounded," as Müller describes, "with all the splendors of an arctic night, and fragrant with the perfume of moss and wild flowers," and "glittering with the brightest dew of nature's own poetry." Not the flight of Greek scholars from Constantinople, and pouring the wealth of Greek letters and culture into the eager expectant arms of Western Europe; not the mingling of East and West in far earlier time at Alexandria, opening for the first time to the Mediterranean races the stores of the Orient,—awakened anything like such zeal, such enthusiasm to possess the record of humanity, and pluck all the riches of human experience and conquest, as this opening of the Bible of the ages, which our eyes behold to-day. It is greeted with the enthusiasm, the ardent love, that welcomes the advent of a new morn for society and the race.

There can be no lack of worlds to conquer, while man continues susceptible of improvement, while society is not yet lifted to the perfect, while a greater overshadows the mind, while a transcendent glows and beckons ever beyond.

Who can doubt that faith, with such a definition as I have endeavored to hint, has a future? In it are laid up the hopes of the human race. Of it may justly be said, it is,

> "A kingdom still increasing,
> A kingdom without end."

To it, we may aptly apply, and with a greater fitness than belongs to the object with reference to which the lines were written, the language of the hymn:—

> "That crown with peerless glories bright
> Which shall new lustre boast,
> When victor's wreaths and monarch's gems
> Shall blend with common dust."

Religion is one with mental and spiritual enlargement, with sobriety of the spirit, with exalted purpose, with victorious living. Or, again, let us say, as another has told us, it is morality touched with emotion; it is life penetrated with thought, permeated with reverence, illumed, transfigured with ideal, the incitement and the admonition of purest reason in all the relations of time. It is the rest of the soul, going down into peace so profound that no wave of sorrow can touch, no trial in the least reach or ruffle the quiet deeps within. It is activity and repose, each unceasing, both blent into one.

The queen shall she be of the sciences, the sovereign mistress of life, of knowledge, possession, and power. Long as the mind shall feel the presence of a higher and a more, long as ideals visit and hopes inspire and thirsts burn that have no slaking but in the infinite river, so long shall man be a believer and a worshipper. Every step made in self-mastery, every advance wrought toward finer conditions and larger life for society, though on lowest, most materialistic plane, shall set new gem in the crown of her victory.

Beginning in fear, it rises, through ages of slow amelioration, to trust and love; beginning in fetichism, anthropomorphism, and the grossness of sensuous conception, it rises to ethereality and the purity of spiritual conception; beginning with most pronounced and determinate realism, it becomes nobly and sublimely ideal; beginning with narrowness, the conceit of the unopened mind, the intolerance of the bigot, and the fire of the inquisitor, it rises, age after age, to greater breadth, till it becomes, while thoroughly positive and profoundly earnest, the most catholic and hospitable of all beliefs and institutions; beginning with, and continuing long in, intense worship of the historic idolatry of a book, and exaltation, even to divinity, of a person, it culminates in reverence for truth supreme and sole, and, instead of pausing, centring in aught personal or of history in the past, it reserves its adoration to be poured warm, passionate, alone before the great possibilities that lie, yet to be realized, in regenerate, glorified humanity. Sown in weakness, it is raised in power. From a tiny aspiration, dim, groping, and stumbling on dark ways, it becomes clear vision, swift, sure pursuit, and joyous, quenchless possession.

We may not inaugurate this, or even contribute in any considerable degree toward its accomplishment. There may need clearer vision and loftier courage than we possess; but I trust it shall appear that we have kept the lines open,—we ought to do far more,—have at least uttered the protest for breadth, for liberty, which, whatever else may go there, must be inscribed upon the banner of the conquering braves of a coming age.

Ah, more, may we not rise from negative to positive? We *must* build up the life of the soul on the ideal of truth, ideal of enlarging knowledge, of deeper perceptions, finer appreciation, more royal devotion, a grander yet purer and sublimer love.

The PRESIDENT.—Friends, I want you to hear the voice of a brave woman, who in her own thought is working out some of the great problems of religion, and striving also to work out some of its practical problems here in Boston, Mrs. Clara M. Bisbee, who will now say a word to you.

ADDRESS OF MRS. CLARA M. BISBEE.

Ladies and Gentlemen,—I have listened with great interest certainly to the speakers of to-day; and since I have nominally allied myself with those who work for ethical culture, and also feel sincerely the truth of the words of the last speaker in regard to religion, I must say this afternoon that it is my very pleasurable task to strive to reconcile the two in practice. I study the world as it is about me, and I see that all yearn for good. The kind of good is certainly variable, but all do yearn after material, intellectual, or, may I say, spiritual riches. The fact remains the same, then, that there is this impulse in humanity. Now, behind this all, if I may so speak, or giving support to this desire, I must conceive some being or reality. I then feel that we cannot live without religion, without a recognition of our relation to some transcendent Being,—call it Nature, the theistic God, or the Unknowable. I feel that there is a sense of something grander than man can put in words, something upon which the very life and happiness of man depend. So, in trying to work out the problem of the universe, I have found it necessary to start with these two facts: only, I place, not religion, but *morality*, first in the special work of my every-day life. I feel that *morality*, or *conduct*, is the great end of existence, though we cannot have that conduct without the force behind.

I have been asked to speak upon the practical bearings of ethics and religion. Some three years ago this time, after a course at the Cambridge Divinity School, after a comparatively large experience with people of every grade in Boston through missionary work in this city, and after some little experience abroad, I tried to establish an *ideal society*. We all have our ideals; and my ideal was to unite all people, of whatever age, race, color, condition, or phase of thought, into a body of brothers and sisters. And I set aside all thought of intellectualism, or belief. Any one who was drawn, I yearned to have with me as a fellow-worker. The peculiarity of this society was freedom from all creeds and tests of fellowship. Its aim was simply to develop character, a love of "the true, the good, and the beautiful." I was myself at the time a Transcendentalist. I worked for three years. At the end of the three years, I found that I had not been fair to the Materialists, to the Agnostics, to those who call themselves outside the pale of all churches,—that I was not broad enough. I had been using such hymns as I could find in the ordi-

Digitized by Google

nary hymn books of the liberal churches, hymns which expressed special theories of the hereafter, hymns which specified the character of the great Power so variously apprehended. At this era, which was only a few months ago, after studying all the best books I could find, the so-called advanced books, I secured just twenty hymns, which I have on this sheet and which I will present to any interested. These hymns are not perfect, but they express the aspiration that is common to all humanity, and the confidence that I believe all must have in some great Source of life.

At this time, though our platform remained unchanged, I called my people by a new name, "The Society for Ethical Culture." I am not a disciple of Prof. Adler: I am simply a student of humanity. I have loved humanity; and I have wanted to come into close contact with it, and to yield the best possible products of this age, so far as it was in my humble power to do so. So I printed a small circular, and gave, as the distinctive features of this society: first, a pronounced ethical basis; secondly, the use of worship as a means of ethical culture. And, here, I know is where I shall be criticised by many before I have explained my position. The term "worship" is used in reference to an object of supreme importance, be that God or demon. Having this sanction from those who would be supposed not to recognize worship, and feeling that all do worship, as was said this morning so eloquently, I have put this in as a means; and I modify this by my third point, which will remove from thought its necessary connection with superstition, even with theism, and I say, "with a platform so free that no ism can represent it." Through misconception of my original plan, a portion of my Dorchester friends were alarmed and withdrew.

With this fresh statement of position, I went to work with my new people in Boston as with my old people, three years ago; and many are with me in the new organization who were with me in the old. Again, I am liable to criticism. I know that it may be called unbusinesslike to bring together a number of people and attempt to work for any great end, without recognition of such society by law. I know it is called Utopian; but, Utopian or not, it is the best I can do, and the people who are with me are convinced, I believe, that it is the best we can do. We seek to be self-disciplined, and we feel that our own honor will maintain our meetings in perfect peace and harmony.

So, having called people together, and having met people of almost every phase of thought in this city, people so diverse as Spiritualists and Materialists, as Scotch Presbyterians and Agnostics, with all the intermediate grades, Unitarians, Methodists, Baptists, and so on, I may add that the result has been very happy. The desire has been with all to unite on this plain platform of growth through freedom, recognizing the eternal Power, whatever it may be called, and not by spoken words, since words are so inadequate to express the deepest thought, but by *silence* recognizing this Force, and then, through love, seeking to improve one another by expression of our diverse opinions.

I have come to the conclusion that a very special work needs to be done in this city. I have mixed much with advanced thinkers, those who would be called come-outers, those who are the recognized infidels. While I have recognized with reverence the honesty of many who think as they do in this direction, yet I have recognized the unfavorable outgrowths from their thought or method of expressing it. Consequently, I do wish to say here this afternoon that I have a special aim in my Boston work, and that is to unite the spirit of reverence and love with free thought; that spirit which will bring people together, with the most opposite position, and yet with entire reverence for the truth, and that spirit, too, which will enable all to converse freely and frankly one with another, and yet in the spirit of forbearance. I do feel that this special work needs to be done; and another point in connection with that of union which I have made prominent is this: that each one in the society shall feel responsible for the whole, and that each one shall yield his best gift, however good or poor that may be, to the success of the entire work. This will preclude the rise of clique or club. I look to the future for a society that is better than this; for a society that will recognize more and more fully what I believe to be the fundamental principle of Free Religion,—that is, the spirit of free inquiry. I look forward to a time, and I believe it is very near, too, when persons endowed particularly with the gift of ready speech and with liberal minds shall, in all the various towns of this State, all over the United States, and throughout the world indeed, start little bands of people in an earnest endeavor to grow by comparison of views. I believe this can be done without any expense. All that is necessary for a beginning is the offer of a parlor and one inspiring speaker, one stirred with the love of humanity, and with the desire for growth through freedom.

I believe this can readily be done. The speaker's relation, of course, will be simply that of guide in the execution of the society's work. The topics treated will be such as bear on the welfare of the race, and sooner or later each reform might be set forth by its best representative speaker. The speeches should be followed by discussions such as I have described, free and reverent discussions. The process of growth, of course, will be slow; but I believe it will be sure, as in my own case. The result will be assimilation of individual minds; a growing friendship, such as Emerson has described. He speaks of a "circle of God-like men and women variously related to each other, and between whom subsists a lofty intelligence."

Into connection with this practical work I believe children must come. And, truly, the future of our race depends upon our work for children. I believe we want a children's ethical society. Of such I did not hear this forenoon, unfortunately for myself, because I want to learn more of the modes of training children. I would say that in my own experience I have been partially successful. I have been trying to develop in the kindergarten manner the minds of the young, teaching them to think for themselves; and I have found a very excellent means of broadening their minds in the study of the national religions and moralities, the foreign and the home, so that my own school have come, I think, to be largely reverent seekers after the truth. They have no superstition about the Christian Bible. They love the good that is in that; and they look forward now to the study of every other Scripture, and with the same reverence for the truth that is found in that as for the truth that is found in the Christian Scriptures. But the grandest results from my work for children have come from "character talks." The children are already an association for *mutual improvement*. They come together thoroughly enthusiastic, Sundays and week-days, eager to take notes on any subject worthy of thought that will tend to the improvement of their daily life, physically, mentally, and morally.

So I do feel happy to-day. I feel that there is a growing recognition of the practical as opposed to the merely speculative in life. And, when I listened this forenoon to those who work as I am trying to work, I felt that my word must be given in aid of that most vital to the evolution of our race.

It is the vision luminously rising in the future of a *better race* which loosens every tongue and calls forth words so silvery as to be scarcely distinguishable from those of our modern orator, Wendell Phillips. George Eliot has said, "Let our habitual talk give morals their full meaning, as the conduct which, in every human relation, would follow from the fullest knowledge and the fullest sympathy." What we want is contact with humanity's heart,—to know it and be known by it, to feel it and be felt by it. We are too chary of our intellectualisms. We idolize the slow-spun products of the brain, and, in our worshipping, forget the active, suffering world, who grope for simplest teaching of the laws of life, for simplest moving of the dormant will.

I believe that the time has come for us to be more occupied with the present knowable than with the great unknown before and after us. A sad-faced woman came to me but lately, and said, "In my old age, I am turned at last from the home I had thought to keep." About to part with her last treasure, she looks into the future, all a blank, and says, "A way will open for me: I will work." My friends, it is this confidence in the eternal law and the genius for work combined that will solve the problem pressing for solution on the civilized world to-day. I believe we shall learn some time a lesson from the humblest, and, trampling under foot ignoble caste, take the hand of brother and sister alike, of every age and condition, to lead and be led into the highest life.

I plead for this pure-spirited democracy. I, by no means, decry religion, but would have man's highest good advanced through worship of his Source, be that God Nature or the Unknowable. I rejoice in the fresh impulse given to-day to something like more practical ethical bearings of our race. Religion is no less our need to-day than it has been in ages past. Religion points to that absolute, on which depend the life and happiness of which ethics treats; but, when reasoning on man's origin and destiny assumes more prominence than interest in character and growth, the world is losing, and may well bear the reaction which to-day is forced against, so-called religion. So I feel that at this hour we are properly moved to an enthusiasm rich as it is rare. I exult in the tendency of the times; and I hope

That new gains and yet newer may grace us and our posterity from year to year,
So that the height of these festivities may be to celebrate the progress, ethical, in man.
Thus shall this season prove the happiest of the happy;
For, to grow in purity, a race must find at once its harmony and joy.

— —

The PRESIDENT.— After our last convention here a year ago, one of our friends who had been with us through the day expressed his astonishment that he should have attended a Free Religious Convention all through its sessions, and heard not a single attack upon the old orthodox doctrines; he should not have known, he said, that there were any such doctrines in existence. That gentleman is present. I do not know how he feels to day. Perhaps he will not think it worth while to attack Orthodoxy: he may feel more interest in saying something else. But, whatever he may say, I know you will be interested in hearing him, ROBERT C. ADAMS, of Montreal, whom I now introduce to you.

ADDRESS OF ROBERT C. ADAMS.

Mr. President, Ladies, and Gentlemen,—I have too much sympathy for the audience at the close of this feast of reason to force upon them the cold

Digitized by Google

viands to which alone I can invite them. I shall not attempt any formal address at this hour, but will occupy a few moments.

You have listened this afternoon to the sublime ideas of the Concord Philosophy, which probably, as Bostonians, you all understand. Being somewhat of a foreigner myself, I confess there are some portions of it which my understanding has not yet *conquered*. I shall not, therefore, attempt to speak to you of things that you do not know, or presume to instruct you, for I am but a novice in Liberalism: I can only speak of things that you do know; but possibly, after having heard so much that is instructive, that you did not know and that exercised your minds, it may rest you to hear a few plain words about things that are familiar to you. I will therefore venture on your indulgence simply to state some of the common principles of which we are all aware, many of you far better than I am myself.

The subject before us this afternoon is "The Philosophy of Religion." By "philosophy," I understand the science of causes, the reason why; and religion I have always understood to be the worship or adoration of the Supreme Being. This is the orthodox definition of religion; and, as long as Orthodoxy is in the ascendency, I prefer to leave it the word. Of that religion, I confess I do not know what is the philosophy; and I am therefore unable to speak of it, for, if philosophy is the science of reason, I confess that Orthodox religion has no reason to my mind, and therefore I leave it. But religion is defined in many different ways by others. Our excellent President has called it "the expression of man's relation to the universe"; the late lamented Samuel Johnson defined it as "aspiration to the best"; and one of the Unitarians, yesterday, called it "a hundred cents on the dollar,"—a very good definition. Each man has a different idea of it; and, as I say, until the Orthodox get through with it, I prefer to let it alone. I will speak to you, not of the philosophy of religion, but the philosophy of Liberalism; and I will use the word "*principles*" instead of *philosophy*, as being more in the way of plain speaking. By "Liberalism" I mean dissent from "Orthodoxy,"—"liberal religion" many call it; but I will merely speak of it as in contrast to the Orthodox religion, and I understand that in fact it is what a majority of those present hold.

A great deal of discussion takes place between the Orthodox and the Liberal, and great confusion arises by a misapprehension as to our true position. It is said, and many people think, that the differences between us are on certain points of doctrine. They bring up dogmas, the Trinity, the Deity of Christ, atonement, eternal punishment, and many different points of theology. They think the difference lies there; and we never arrive at any satisfactory conclusion, for the discussion is endless. It is therefore well for us to see what is the foundation fact of Liberalism. I believe the whole question can be narrowed down to this: Is the universe ordered by the present, conscious will of a Supreme Being, or does the universe proceed in its development by an orderly succession of cause and effect? There is the whole question between the Liberal and the Orthodox; and, instead of disputing on all these minor points, it is better to come right to the very germ of the question, and settle that, if it can be settled. It is a question of the natural and the supernatural. Is the world governed by natural law or by the direct will of a Supreme Being? The Liberal claims that natural law rules everything; that every effect is the result of preceding causes. The rain of yesterday could be traced back, were we wise enough, a thousand years. In the constant succession of causes, it became necessary that this rain should fall. But, in the ignorance of former times, all these events have been laid to God. God made the rain, the breath of God was the wind, his angry frown was the lightning; but science by degrees shows the different causes which produce these results, and God all the time is put further back as knowledge increases, and we only say God did a thing, when we are unable to account for it in any other way.

This, then, is the question before us, whether the universe is ordered in this way; and, if it is so ordered, these are the results that follow from it. If there is an orderly development of the universe, and God has never revealed things all at once perfectly, though they may still be called revelations of God, they have come by slow methods in an orderly manner, little by little, as the race has grown in knowledge. It follows, then, that all conceptions of God are simply human ideas. If God was going to reveal himself, he would have revealed himself consistently, and man would have known what he revealed. But that is not the fact; for in every clime, in every land, in every age, we find men differing in their ideas of God, just as education progresses and as men rise from ignorance to knowledge. They tell us we deny God, but it is not so: we deny certain ideas of God. We deny that God is as low and base as the Orthodox have made him. We claim that we have risen to loftier conceptions of God as the inspirer of the orderly universe. We claim that, if those who believe in the Jewish Jehovah and the Calvinistic God really saw that God in human form, there is not a respectable Christian who would bow to him on the street; and we claim we have risen to nobler ideas, that God is something infinitely higher and better than Hebrew or Calvin ever conceived of. We do not believe that our ideas have progressed to the final point: we look for infinite progress, and we claim that there is no limit to our research. We have a right to investigate God: he is a proper subject of inquiry, and we will look to the First Cause and learn more and more about it; for, though it is said, "Who by searching can find out God?" we believe that he will be revealed to the race, that we are learning more and more continually of him, and will learn more and more.

The same thing applies to religion. We are forced to believe, therefore, that religions are of human development; that each man accepts the idea which is best for him, perhaps, or all he is capable of at the time, and that in each age one religion is as truly divine as another. God is revealed through this orderly method of cause and effect, and each man has gained in a natural way his own ideas of religion. For example, here is the Bible. We say the Bible, like all literature, (inspired, you may call it), is the result of the human mind, a record of past thoughts; and we revere the Bible in that way. People say we throw away the Bible, that we are opponents of the Bible. Who ever heard of an opponent of Shakspere, an opponent of Homer, an opponent of Æsop's fables? But, when a person tells us that all those stories were actual facts, and moreover were prophecies of the future, we oppose that man's idea of the Bible. But we reverence the Bible as a grand old book: we are going to hold to everything in it that is good, and no one shall take it away from us.

Another point that this brings us to is that, if there is this orderly development of the world, it is essential to us that we should inquire into it, and no bounds can be put to free inquiry. We therefore declare that Liberalism is founded on the principle of free thought, free investigation; and no terrors of obloquy here nor of hell in the next world shall keep us from inquiry. In the past, it is authority that has ruled the world; but the present has been advanced by evidence, and the future will be controlled by it. "Prove all things," is the apostolic injunction which has been forgotten by Christians; for they say we must believe what the Christian fathers, the apostles, priests, and ministers have told us, and must not attempt to prove that; if we do so and differ from them, there is nothing for us but destruction. But we claim that this principle extends through nature, and we must prove everything; that there is nothing which is not a legitimate subject of inquiry, and, no matter what it is, we will investigate it.

But, as the time is slipping away, I must leave this point, and come to the practical result of Liberalism. What is it? People tell us that it is destructive; that we must be constructive. Every Orthodox person you talk with tells you that, and I am sorry to say it is very common among Liberals. I noticed it several times in those most admirable addresses that were given to us this morning. They deprecated attacking the old doctrines; the spirit of the age, it was said, is rapidly driving those things away, and they are going off pretty fast. I am delighted to hear that there is such progress here, but, in the northern city in which I dwell, two-thirds of the people are Catholics, and the other third are mostly true-blue Scotch Presbyterians; and it really seems to me as though there is something yet left in the world to attack. I claim that by attacking it we are constructive and not destructive, and for this reason. We have often heard foolish and inefficient work described as "sawing with a hammer." Now, suppose I saw a man attempting to saw with a hammer, and I went up to him, took away his hammer, destroyed it, and gave him a saw: he would declare, "You are destructive! you have destroyed my work!" No, I have taken away the tool by which he was frittering his time and lessening his opportunities, and have given him the means of construction. And that is what Liberalism does. I claim that all the construction that has been done in this world has been done by the adoption of liberal principles. The Orthodox principle is supernatural power, appealing to God to do things; yet every orthodox man, when he does anything, acts as a Liberal. He works for himself, he believes in cause and effect, in the orderly succession of events. He is thoroughly liberal, until he reflects; and then he tries to be orthodox. This matter of natural result follows into every department of life: there is not a thing to which it does not apply. We want to throw away the old hammers of prayer, of pilgrimage, of penance, and take the saw of construction, shape our means according to the end as reason teaches us, and then we shall see progress. The old Orthodoxy has been confining its efforts largely to what was called "the glory of God," doing things to honor God; and we claim that what this world demands is that man shall live for the glory of man. We want to glorify mankind. God is high enough and great enough to do without us: he can get along without our glorification; but man is low, debased, down-trodden, and ignorant, and we want to raise him up.

There is something for us to do, and it is this world that we have got to attend to. This is what stares us in the face; and, until we have made this world a much better place than it is, pray let us not be so concerned about the next. It will be time to look after that, when we get to it. I think that it is in this way that Liberalism is to be the great regenerator of the world,—by turning attention from the affairs of the world to come and centring them on this. And, if anybody thinks there is not enough here to attend to, I fear he has

Digitized by Google

not got his eyes very wide open. But what do we see in Orthodoxy? What is it that the learning of the world is bestowed upon? Here we see theological seminaries, councils of ministers, grand organizations, attending to these points. They ask how long is the duration of a hell that never existed. They inquire what is the nature of an atonement that never was made. They ask what is the composition of a Trinity that nobody knows anything about. They laugh at the old schoolmen who used to dispute as to how many angels could stand on the point of a cambric needle; but we say they fritter away their time, as the old Christian fathers did, who had those bitter battles as to whether Christ was of the same substance with the Father or of like substance with the Father. We think that was rather foolish, but is this discussion any better? These questions as to hell and the atonement, are they any more of an advance? Will it not be only a few years before men will classify all such discussions with the disputes of the schoolmen and the Christian fathers? I claim that it is right to try to prevent such frittering away of time. Here is nature just bursting forth with her secrets. Here are steam, electricity, chemistry, invention, and economical questions pressing upon the world, demanding all its brain, while social problems call for all its heart. Shall we see all this waste of treasure which is now spent simply for the propagation of these theological ideas, and shall we see the natural sciences, the study of economy, the uplifting of man, neglected, and say nothing about it? For my own part, I feel impelled to speak against the use of our powers in such a direction as that.

But now, if it is true that we gain all these things, and when we become Liberals we get the true secret of life and real tools that enable us to work, do we lose anything in Liberal Religion? Yes, we do: I confess it. We lose two things. In the first place, we lose the consciousness or the belief that God is going to do our work for us; and to a lazy man, I confess, it is a great loss. It is very nice to lie back on the bosom of Jesus, to rest in the arms of God, and feel that he is going to do our work for us; and I confess, being rather lazy, I often do feel a loss that way. I often used to lie back when I got tired, and say, "Well, I have done as much as I feel like doing: I have worked pretty hard, and I will leave God to do the rest." I thought it was a very comforting doctrine: I often miss it now; but I claim that it is far better for us to know that we have got to depend upon ourselves. Are we not likely to do more? Suppose a steamer is sinking, and a passenger says, "Oh, the captain loves me, he will look out for me, he will not let me sink." Which has the best chance for safety, the man who relies upon the captain who perhaps has forgotten him, or is too busy to help him, or the man who says: "I am on a sinking ship: my safety depends upon myself. I will do my level best to save myself"? Is it not better that he should know the truth? Is it not the fact that we have got to depend upon ourselves? There is that comfort that is lost in this world, and there is another; and that is, that we lose the selfish hope of harps and crowns in the next. That, I admit, we have to renounce; but I claim that the man who would be happy playing his harp in heaven amid the wails of despair coming up from the bottomless pit deserves a deeper doom than any of the damned. No harp for me, while one of my fellow-men is doomed to ceaseless torment! And every kind-hearted man ought to feel and to say the same.

Now, my friends, it would be wrong to detain you any longer. I will only say that, if we are to have a creed for Liberalism, I believe no better creed could be devised than those words of a now despised, but I believe in future to be an honored man, Thomas Paine [applause]: "The world is my country, mankind are my brethren, and to do good is my religion." I think this is a creed better than any new creed devised in this century, and one which will be ever new, when the so-called new ones have become old.

The PRESIDENT.—I had a design in asking Mr. Adams to speak last. I knew that he would bring us down to the solid earth. And, however good it may be for us to soar at times in the empyrean of pure philosophic thinking, it is not good to remain there. Our duties are in this world of fact,—here on the earth, amid all the common relations and things of our daily mundane existence. And to this plane Mr. Adams has brought us; and here it is well that we should be left as we go again from this communion of thought to the busy world that calls for our deed. Let the thoughts that have filled us here to-day take shape in nobler deeds, and so justify our right to be.

Social Festival.

The Social Festival in the evening, which fitly closed the Convention, was regarded as one of the pleasantest and most successful of all the series which the Association has held. The brief speeches (of which no report was taken) were apposite, combining wit with instruction. Mr. Holland graced the occasion with the poem which was printed in *The Index* last week, and the choir of Unity Church gave great pleasure by their fine singing interspersed among the speeches. Speakers, singers, and audience were in the best of spirits, and enthusiasm prevailed. Thus ended the seventeenth annual meeting, with pleasant memories and auspicious hopes.

BOOK NOTICES.

A COUNTRY DOCTOR. By Sara Orne Jewett. Boston: Houghton, Mifflin & Co. pp. 329. Price $1.25.

Those who have read Miss Jewett's shorter magazine stories will be anxious to read this her first effort at novel-writing. She follows in the track of Mr. Howells' *Dr. Breen's Practice* and Miss Phelps' *Doctor Zay* in making her heroine a doctor; but the *dénouement* of her story differs from that of the stories referred to in showing the possibility of a woman's having the strength of mind and will to find her life's happiness outside of love and marriage through her belief in the principles of heredity and in the work she had undertaken, and this without any loss of her intrinsic womanliness,—rather, indeed, because of her high ideal of both love and marriage, which forbids her to risk the happiness of herself and lover and of possible descendants for a little present gratification of a longing for a home and husband. There is a healthy moral tone running through this charmingly told story of a brave, bright soul's unwavering cheerfulness in the face of circumstances generally used by novelists to enhance the despairing gloominess of their heroes and heroines. Such stories as these promise a brighter, healthier era in fiction, a stronger morality, and a nearer approximation to reality.

SAFETY BOOK-KEEPING, being a Complete Exposition of Book-keepers' Frauds, how committed, how discovered, how prevented, etc. By H. J. Mettenheimer. Cincinnati: Robert Clarke & Co. 1875.

The author of this little work, who states that he has been a book-keeper for twenty years, and has been employed in auditing complicated accounts in the principal cities of the Union, gives the result of his experience for the benefit of those who are compelled to intrust their books to hired or partnership assistance. "A business man's money," he says, "is under lock and key to all except his book-keeper; and this work is presented as a lock and key against the book-keeper." The author says, "It is a broad assertion to make, but a true one, that, out of the large number of books I have examined, fully one-half contained palpable evidence of fraud, and in a majority of cases where there was no previous suspicion of anything wrong." The object of this work is to acquaint business men with the various methods employed by dishonest book-keepers, and to enable all concerned to audit their own accounts. The style is plain, the matter condensed, and the work is full of suggestions of value to merchants and book-keepers in the management of accounts.

THE opening article in the July number of the *North American Review*, entitled "Juries and Jurymen," by Judge Robert C. Pitman, contains valuable suggestions for the improvement of our jury system, which are most timely, in view of recent notorious miscarriages of justice under this system. "American Economics," by Prof. Van Buren Denslow, is a lucid and forcible exposition of the grounds upon which the protection theory of national economy is based; Judge Noah Davis writes of "Marriage and Divorce"; Dr. P. Bender, whose subject is "The Annexation of Canada," sets forth the advantages likely to accrue to the United States from the absorption of the Canadian provinces; Prof. D. McG. Means, in an argument against "Government Telegraphy," subjects the management of the Post-office to a most searching criticism; Charles T. Congdon writes of "Private Vengeance"; and, finally, there is a symposium on the "Future of the Negro," by Senator Z. B. Vance, Frederick Douglass, Joel Chandler Harris, Senator John T. Morgan, Prof. Richard T. Greener, Gen. S. C. Armstrong, Oliver Johnson, and others.

THE *Atlantic Monthly* for July opens with a short story by W. H. Bishop, entitled "Choy Susan," which relates adventures and love-making on the Pacific coast. Dr. Mitchell's excellent serial, "In War Time," progresses satisfactorily. Mrs. E. D. R. Bianciardi describes "The Haunts of Galileo." The classic article is by William C. Lawton, "The Underworld in Homer, Virgil, and Dante." O. H. Durward contributes a striking story, "Beaten by a Giaour." Harriet Waters Preston, in "The Gospel of Defeat," writes of Amiel, Senancour (author of *Obermann*), and Biran. Bradford Torrey has an out-door paper on "Bird-gazing in the White Mountains." "A Cook's Tourist in Spain" contributes the first of two papers of travel. "The Growing Power of Chile" describes succinctly the growth and audacious pluck of the South American Yankee State. A. F. Matthews writes of "Chimes, and how they are rung." There are poems by Mr. Aldrich and Eliot C. True.

MONTEZUMA opens his note book in the *Art Amateur* for June with a story of Millet and Rousseau, which he uses to disprove the assertion that Millet's first picture of importance was bought by an American. The gist of the story is that Rousseau sent some one to Millet's studio to buy a picture for a rich American, who proved to be only Rousseau himself. Montezuma does not give us the date of this story, which is probably an incorrect version of one we heard years ago. Rousseau bought the picture from Millet, refusing to tell him for whom he wished it, lest he should lower his price. When he had paid it, he said, "This shall not go to America," showing that he had already feared that the American demand for his works would deprive his countrymen of the best of them. In the spring of 1854, the late Mr. Thomas G. Appleton invited an artist friend to see a picture of Millet's, "The Reapers," then owned by Mr. Martin Brimmer. We cannot tell whether this was the first picture which came to America, but it was only about this time that his genius was recognized, even in his own country; and it certainly is to the credit of American taste, and a fortunate thing for America, that so many of his masterpieces were brought here. The rest of the letter-press of this number is mostly engaged with notices of exhibitions of pictures. The illustrations of the number are good. The woodcut from Mr. Boggs' "Canal de Dordrecht" is very pleasing. The picture of the "Downs" is freely engraved, but the commonplaceness of the faces and the want of real action of the figures recall the models of a studio rather than the actual life of the country. Miss Elizabeth Gardner's friends will be pleased to see a woodcut of her picture of "The Impromptu Cup." It has her careful drawing and purity of sentiment, but there is a fatal air of pose in the figures. The "Mussel Fisher," by Reinhart, and "Who loves me follows," by Henry Bacon, are more free and natural. Designs for a well and gate for a country house are very pleasing, as well as some floral borders for general decoration.

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith.*

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago *Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—*Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.*

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its manager will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the
