It is a purely natural process, and one that is incident to the growth of society. In this combination of interests, in order to arrest further competition and institute co-operation, the lower principle is not destroyed in being subordinated to a higher law. The evils incident to competition ARE destroyed, the good conserved. In ceasing to underbid one another in the matter of wages, men do not cease to compete in the matter of skill or excellence. The man of superior business ability will necessarily come to the front and reap the advantages of his activity, but it will not be at the expense of his fellow-man. Wherever and whenever acquisitiveness is unduly developed, it will be restrained and held in check by a system which limits and protects individual interests by the interests of all. Co-operation simply imposes a check upon inordinate activity: it leaves the individual free to the development of all his powers.

Neither is the organization of labor, when rightly conducted, in opposition to the interests of the employers of labor, but the reverse. Labor is compelled to organize for its own protection, and to institute one grade of prices for the same grade of work. The employer still has it in his power to discharge the incompetent workman, but not to replace him with a better workman at a lower rate of wages. He has it in his power to eliminate worthless labor, but not to go under its recognized value. Competition acts as an incentive to energy and excellence. Whenever a man rises above the grade wherein he works, he enters the next grade, and partakes of its advantages without injury to another. Passing from the preliminary stage where through labor organization co-operation appears as the beginning of a new social and industrial system to a consideration of specific instances, we shall see that here again competition exists as a latent force in the transaction of business. In any productive industry, an indefinite but still certain number of workers is a fixed maximum, beyond which the growth of that particular organization does not and cannot go. In any populous co-operative community, each industry and sub-industry would eventually contain a number of co-operative organizations, between which there would be more or less rivalry. This rivalry, however, in process of time, might to a certain extent be obviated by amalgamation, by the formation of a syndicate, by pooling, and the formation of central supply bureaus. Until co-operation becomes of universal application there must ensue competition between a co-operative community on one side and a competitive one on the other.

When co-operation becomes the basic principle of life, then competition will still exert its power on the production of everything that ministers to the well-being of man. The inventive genius must express itself. No restriction can ever be placed upon human skill and energy, save when they encroach upon the rights of others. We have never reached and never will reach uniformity of nature. "One star differeth from another star in glory": one man differeth from another man in inventive power and executive ability. Those powers will always raise one above another, and institute different classes and gradations in life. But to each shall be rendered his own.

Whatever form co-operation may assume, it will never destroy competition: it will only transform its mode of action. It will institute justice in human relations, but it will never confine those relations to the dead level of a forced uniformity.

IMOGENE C. FALES.

THE CAMBRIDGE DIVINITY SCHOOL.

Editors of The Index:—

The articles which have appeared in *The Index* in regard to a new school for preachers I have read with great pleasure, and I trust that this new agitation may result in the realization of Mr. Wade's ideal. The revival of interest is the more gratifying, since the aid sought from the Unitarians is generally understood not to be forthcoming.

Certain statements, however, have been made in some of the articles which might give a wrong impression as regards the Cambridge Divinity School.

While the Cambridge School retains in its course the study of theology,—and without doubt will continue to do so,—the study of sociology, it would appear from its published courses of instruction, is not neglected; and nearly all the branches named by Mr. Potter as important—*i.e.*, methods of philanthropy and education, the practical treatment of vice and crime, political economy, the higher domains of government and politics—have a place in the consideration of ethics-work with Prof. Peabody. The published summary of work in this department reads as follows: Ethics, Ethical Theories and Social Problems, Practical Examination of the Questions of Charity, Temperance, Labor, Prisons, Divorce, etc., Lectures and Essays. It has been further reported that it is the desire of the faculty to give more attention to like topics in the future.

On the other hand (as has been stated), the school is, without doubt, fettered by the restrictions which are put upon its endowments by the donors. The late appointment of a professor of Assyriology is a case in point. Had it been the wish of the faculty to create a chair of sociology, the funds appropriated to the use of the new professorship would not have been available, since the donor limited the uses to which the gift might be applied, and Assyriology and not sociology was within the limits of the restrictions.

But the school at Cambridge offers further instruction in the subjects which Mr. Potter would have the coming preacher know. All the courses in the University are open to the divinity student; and, in most cases, this privilege is used. Additional instruction in ethics. political economy, and in all the many divisions of natural science, given by professors of world-wide reputation, is thus made possible.

This school would therefore seem to offer already *all* that Mr. Potter requires. And, if one does not desire the degree of Bachelor of Divinity which it gives, one need take no more. If that be desired, somewhat must be known of theology, ecclesiastical history of the Old and New Testament, and of the writing and delivery of sermons.

The undenominational character of the school may be seen by reading the requirements made for admission, wherein no demand is made for belief in any creed; and a man to receive the degree of B.D., it would appear, need not even be a Christian. The school would seem to put no limits on the religion, much less the denomination, of the students that enjoy its privileges. Yet this catholicity arises, I am sure, not from indifference, but from a desire to dwell upon the fundamentals of religion rather than on any of its special forms.

The above statement shows, I think, that the Cambridge School feels the influence of the *Zeitgeist*, and that it desires to meet the wants of the age; that it already offers the broadest culture, untrammelled by theological restrictions; and that it is the desire of the faculty to make this good better as fast as means shall be provided. In all of which, Liberals may surely find cause for rejoicing.

The above has not been written to discourage any action that makes for the establishment of the Wade or any other new school for the education of preachers. Rather would I do all that I am able to aid such establishment. Before the perfect man shall be evolved, more even than this new project, I venture to assert, must be attempted and achieved; and I am glad of this further evidence that Liberals are active and anxious to aid his advent.

But it seemed well that the readers of *The Index* should know what had been done already, and especially that no young man might think it necessary to wait for the founding of any new institution before there could be furnished the means of fitting him for the work of uplifting humanity, for the bringing in of "nobler modes of life," "with sweeter manners, purer laws." CHAS. F. RUSSELL.

[We readily admit the progress which has been made in the curriculum of the Cambridge Divinity School, and heartily welcome it. But the sociological topics which it includes are necessarily made the appendage of another department, and put under the care of a professor whose chief attention has been given to other lines of study. In the Wade School, we would have sociology, in its various branches, stand foremost, and put under the care of the ablest men to be found who have made themselves authorities in such studies. Meantime, we may say of Cambridge that it does as well as it can partly to fill the gap.—W. J. P.]

A GOOD WORD FOR AMHERST.

Editors of The Index:—

There is so much need of greater freedom of thought in the higher education of this country that there is the more reason to regret any overstatement of the offences of which "orthodox" institutions are guilty. Mr. Kennedy has not, indeed, spared his own Alma Mater, and I will cheerfully resign myself to all reasonable criticisms of mine; but simple justice seems to demand that she should receive the benefit of whatever testimony can be presented at variance with the complaints which have come to your contributor's ears. Entering Amherst with no previous connections or history to commend me to the authorities there, and with a frank avowal of my religious heresies, I continued through the course to indulge my fondness for publishing my opinions, being known, in addition, as one of the prominent members of the somewhat famous Radical Club, which enjoyed a brief existence during my college days. Yet, far from being "vituperated and generally oppressed," I was treated throughout with the utmost consideration and fairness. Were it not for indulging in too personal references, I could present specific instances in which it was made clear beyond question that there was no disposition on the part of the faculty to discriminate against me in the distribution of college honors on account of my religious sentiments.

Digitized by Google

I was, very likely, "prayed over"; but it has never occurred to me before to think of that as persecution. Amherst certainly wishes to be known as a Christian institution, and cultivates, as far as possible, "orthodox" influences; but, unless the conditions have changed greatly within the last seven years, no young man of good character and manly purposes will have reason to complain of his treatment there because he does not accept, or even vigorously combats, the prevalent creed. HENRY DOTY MAXSON.

WHITEWATER, WIS., Jan. 1, 1884.

For *The Index*.

COLAEUS OF SAMOS.

(B.C. 640.)

The Samian Colaeus,
Long tempest-driven, saw
At length earth's western margin
With gaze of silent awe.
He first of Grecian sailors
Far in the foretime lone
Found egress for his galley
Into a world unknown.

Old Homer's ocean-river,
Deep running, without bound,
That with its green brine girdled
The foodful earth around,
That through the rift of earthquake,
Poseidon's trident made,
'Twixt Libya, Asia, Europe
A foamy pathway laid,

Filling the great sea-valley
Far eastward e'en to Nile,
Where infant navigation
Crept slow from isle to isle,—
From its primeval waters,
Its azure-flowing tide,
The rains and dews are gendered,
All founts and rivers glide.

Colaeus saw the Pillars
Strong Herakles upreared,
And boldly 'neath their shadow
His errant prow he steered.
Myth-nurtured, gazed he wistful
Out o'er the world sea's brine,
In golden clouds of sunset
Saw many a marvel shine,

Saw, haply, gleaming pathway,
That o'er the billows led
To rich Hesperian gardens
And islands of the dead.
Thereafter, Commerce halted
At pillared straits no more,
But traffic sought undaunted
By outer ocean's roar.*

B. W. BALL.

BOOK NOTICES.

WHAT SHALL WE DO WITH OUR DAUGHTERS? Superfluous Women, and Other Lectures. By Mrs. Mary A. Livermore. Boston: Lee & Shepard. pp. 208. Price $1.25.

Mrs. Livermore half-apologizes for thus bringing together in book form the revised substance of the lectures which she has previously "delivered hundreds of times to audiences in all sections of the country from Maine to California"; but the apology was not needed, for the book is a timely one, and destined to do good work in giving in orderly sequence a sort of "bird's-eye view" of the present status and future possibilities of the women of to-day. The book will reach thousands of readers who never heard any one of the original lectures, in addition to the many who may have heard one and remembered only part of that. Good, sound, practical sense inspires the work from beginning to end; and it should not only be in the hands of all parents of daughters, but should be read by every girl old enough to understand its teachings, especially that large class who are dependent on their own exertions for a livelihood. The book is divided into eight chapters, with the following titles: "Changed Conditions of Woman's Life," "Physical Education," "Higher Education," "Need of Practical Training," "Industrial and Technical Training," "Moral and Religious Training," and "Superfluous Women," the last being by no means the least in length or interest. All these topics are treated from a broad and sensible point of view.

ACTS OF THE ANTI-SLAVERY APOSTLES. By Parker Pillsbury. Concord, N.H., 1883. pp. 503.

This volume consists of sketches and narratives of the author's anti-slavery experience in New England. It contains a chapter on William Lloyd Garrison, a second on N. P. Rogers, a third on Slavery as it existed, and another on Anti-slavery, followed by "the acts of the anti-slavery apostles," with "acts of the pro-slavery apostles" added thereto. The work is a severe arraignment of the American Church and ministry as the bulwark of slavery, the testimony being drawn largely from their own archives. In the concluding chapter, Mr. Pillsbury says: "Most of my early comrades in the field-service have gone, some of them long since gone, to their well-earned rest and reward. It is mine to live and guard watchfully their graves, and with tenderest affection to cherish their memory, and to shield it from any unjust reproach, to the full extent of my power and to my latest breath." The sketches are confined mainly to events that occurred in Massachusetts and New Hampshire. The work will interest especially those who were identified with or interested in that remarkable movement, the anti-slavery agitation, and should have a general interest for all who can appreciate courage and sacrifice in a righteous cause which was opposed by the religion, respectability, and wealth of the day.

THE WORKS OF ORVILLE DEWEY, D.D., with a Biographical Sketch. New and complete edition. Boston: American Unitarian Association. 1883. pp. 804.

This volume has been published, we learn from the preface, in response to numerous requests from the admirers of Dr. Dewey, both in this country and in England, that the American Unitarian Association should publish a dollar edition of his works uniform with a like edition of Channing's works. These discourses delivered before the present generation came on the stage have in them much to interest and instruct the thoughtful reader of to-day. Dr. Dewey, who occupied a very prominent position in the early annals of American Unitarianism, was a man of massive intellectual power, a scholar, and a preacher of great influence over the congregations he addressed. His lectures on the "Problem of Human Destiny," when delivered, awaked wide interest and added greatly to his reputation. They form a part of this volume. A comprehensive sketch of Dr. Dewey's life, furnished by his daughter, Miss Mary E. Dewey, is at the beginning of the book, which is an octavo of over eight hundred pages, printed in clear type, on good paper, and at the remarkably cheap price of $1.00.

"VICK'S FLORAL GUIDE" is always a welcome visitor to thousands of homes all over the country, and should be in every household. It is not merely an advertisement of the immense business done by the firm which issues it, but is in every sense a guide to all lovers of flowers, plants, or vegetables, in their selection and culture. The number for 1884 is in no way inferior, if it be not superior, to preceding numbers. The æsthetic design of the outside cover is of itself well worth the small sum charged for the *Guide;* and it has, in addition, three full-page, brilliantly colored plates of flowers and vegetables, artistic in arrangement and correct in representation. This book, of one hundred and thirty-five pages, with hundreds of illustrations of the flowers and vegetables described, and its large amount of information, is sent to any address for ten cents, which sum will be deducted from any order for seeds, etc., sent to the firm. It is printed in English and German. Send orders to James Vick, Rochester, New York.

THE New Year's number of *Wide Awake* is beautiful enough to make it a valuable present for any young person, and its many artistic illustrations as well as its reading matter are worth the consideration of older people as well. Among much other excellent matter, it has an article by Miss Alice C. Fletcher, who for some time made her home among the Omaha Indians, entitled "The Carlisle Indian Pupils at Home," giving an account of the plays and home life of the American Indian children of to-day. Edward Everett Hale discusses the popular question, "Shall we study Greek?" with his young people, and seems to decide it in the affirmative. George Foster Barnes has an instructive article on "The Troubadours"; and, in the series "In Case of Accident," Dr. D. A. Sargent explains "The Blood and its Vessels," and accompanies his information with illustrations showing the proper way to stop the flow of blood in the absence of a physician.

THE *Unitarian Review* for December has an exceptional table of contents, contributed by first-class writers. For various reasons, which he sets forth in the leading article of the *Review*, Thomas Davidson thinks New England Unitarianism, or Free Religion and Emersonianism, "A Religion for Italy." Rev. C. H. A. Dall's "Italy and Bracciforti" follows this. Rev. C. A. Bartol has an article on "Martin Luther." Rev. R. P. Stebbins gives the fourth of his series on "The Hebrew Prophets." "Philophronesis" is the puzzling title of an essay by Rev. Thomas Hill. F. M. Holland writes of "Brave Old Latimer," of whom he gives an interesting account. "Liberalism in the Orthodox Church" and "The Religious Awakening in Italy" are the subjects considered in the Editors' Note-Book; while Mrs. Lowe's department discusses various current topics.

THE December number of the *Revue de Belgique* treats of compulsory education, the heroes of Wagner's dramas, the tunnels under Mont Cénis and Mont St. Gothard, the Central Pacifice Railroad, and the political condition of Italy.

"BABYLAND" comes to us in a new and brighter covering, in unison with its bright contents. Another new feature is a serial alphabet story for the babies.

"LIFE AT PUGET SOUND," by Caroline C. Leighton, noticed in last week's *Index*, is published by Lee & Shepard, Boston. Price $1.50.

PERSONAL ITEMS.

B. F. UNDERWOOD will lecture at Alliance, Ohio, the last Sunday in January, and at Louisville, Ky., the first Sunday in February.

GARCIA, the most notorious gambler in Europe, has entered a Trappist convent in Spain. Garcia has been known to win and lose £100,000 stakes at Homburg and Monaco. His last exploit was to break a leading Spanish roulette bank.

DR EDWARD LASKER, the eminent German Liberal, popularly known as Herr Lasker, died suddenly of heart disease in New York City, on Saturday morning, January 5. He had been dining with Jesse Seligman, a well-known New York banker, and died in his arms while returning to his apartments in a carriage. He was a member of the Reichstag, and one of the originators of the German Liberal party. He was the most able opponent of Bismarck's policy, and his death will be a great loss to Germany. He was fifty-four years old, and unmarried. Passage for his return to Germany had been engaged for him on a steamer which sails on the 26th, and which will instead carry his embalmed remains.

FROM the newspapers and from letters received from Montreal at this office, we learn with deep regret, which will be shared by our readers, that our valued friend and contributor, Capt. Robert C. Adams, was severely injured in a collision on the Canadian Pacific Railroad, near St. Martin's Junction, on the evening of January 4. The Montreal *Witness* of the 5th says: He "was thrown violently against a seat, and was hurt internally. It was hardly known whether a rib was broken or a muscle severely sprained; but the injury caused most acute pain, and prevented him from lying down all night." Capt. Adams, with others hurt by the same accident, was obliged to remain over night at the station house, waiting for a train delayed by a snow storm to take him to Montreal. Our private advices, however, state that his family physician gives hopes that he will soon recover from his injuries.

* The voyage of Colaeus of Samos through the Straits of Gibraltar into the Atlantic Ocean was a great event in the history of primitive commerce. Colaeus had sailed for Egypt, but was driven by an easterly storm to the western extremity of the Mediterranean Sea, "not without divine direction," says the historian Herodotus, in recording the event, which occurred B C. 640. It was the first historic voyage of a Greek mariner into the Atlantic Ocean, which was then literally "an unknown world" of water.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. *New Edition.* Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

CURRENT TOPICS.

THE Rochdale system of co-operation has been introduced in San Francisco. The capital stock of the first store is $100,000, and the number of shares 10,000.

OUR late Governor, so renowned for his piety, left a copy of the Bible in the Executive Chamber with the following written on it: "Jan. 1, 1884. When I came into the Executive Chamber, a year ago, I could not find a copy of the Holy Scriptures. I suppose each Governor took his away with him. A friend gave me this. I leave it as a needed *transmittendum* to my successor in office, to be read by him and his successors each in turn. Benj. F. Butler, Governor."

WHATEVER notable act is achieved by or occurrence happens to our prominent actresses is nowadays ascribed to a desire for notoriety or free advertising on their part. We hope some of them will copy after the new fashion adopted by Mary Anderson while in London. In partnership with several friends, she gave on New Year's day an excellent dinner to two hundred and fifty poor children of that city, half the expenses of which she paid herself. This is a more humane and admirable method of advertising than that of horse-whipping a rival actress, leading about as a side-show a spoony young millionnaire, losing costly diamond sets, or applying for a divorce.

WHATEVER may be the faults or failings of that nephew of Gen. Butler whose eccentricities have of late years occupied considerable space in the newspapers, his recent public statement, made in reply to a false report that he was the inmate of a Washington work-house, contains inspiration and food for thought to many who are not reduced to his pitiable condition and have not been subjected to his peculiar temptations. "I am," he writes, "an inmate of the government asylum for the insane, where drinking patients are admitted. I have been often in my life very drunk; may get so again, but don't want to. *If my will power is going or gone, and if, as the medical men, Maudsley, Dr. Godding, Dr. Bliss, and your own Austin Flint, say, a will power can be grown like a moustache, I intend to remain here until I raise a new one.*" The italics are ours.

THE *Independent*, that "quasi religious" sheet, as the Springfield *Republican* calls it, opposes the opening on Sunday of the Loan Exhibition in behalf of the Bartholdi Statue Fund. It says: "There is no excuse for opening it on Sunday, except that it is claimed that working-men can come on that day who cannot come on any other day. But, if they cannot come in the daytime, it can be opened to them in the evening." But suppose after working in the daytime they do not feel like attending in the evening, and wish to attend on Sundays when they have the time, and when they are not tired from ten or twelve hours' work. Are the people for Sunday, or is Sunday for the people? We do not ask for the abolition of Sunday as a secular institution, but we protest against all restrictions on the liberty of the people on that day which are not demanded for the maintenance of order and the undisturbed enjoyment of all.

IN the recent debate in the Hungarian Diet on legalizing marriages between Christians and Jews, Archbishop Samessa of Erian denounced the intended secularization of marriage. "Civil marriage," he exclaimed, "comes from the socialists, who want to destroy the family,—the basis of society." He denounced "mixed marriages." But the archbishop found more than his match in Baron Rosner, lay professor of canonical law, who showed that marriages between Christians and Jews were not contrary to the tenets of the Church or the traditions of Hungary; for, in the thirteenth century, unions between Christians and Ishmaelites and between Christians and Jews were valid in Hungary. The speaker pointed out that, in the early centuries, the Church had no aversion to marriages with non-Christians, and that the greatest Christian saints had pagan husbands, and that their children were afterward saints in their turn.

THE Mayor of Bangor, Me., is one of the good old-fashioned sort of Christians, and is not going to be beguiled by any new-fangled modern scientific contrivances. So he has refused to adopt the "standard" time or allow his city to accept it; and, when recently the city council voted to run one of the public clocks by that time, he promptly vetoed their order, declaring that neither railroad laws nor municipal regulation has power to change one of the immutable laws of God; that the hours of noon, sunrise, and sunset should occur at different periods of the day at different localities upon the earth's surface. So this "farce styled standard time" he vetoes, on the ground that it "is not indorsed by one-fourth of the general public, as it does manifest injustice to all laborers and mechanics or others who labor ten hours per day, as it turns day into night, as it teaches wholesale falsehood and deception, and is in no way adapted to the wants of the general public, for whose interest all legislation is or should be."

THE cable last week brought the intelligence of the death, at Calcutta, of Keshub Chunder Sen, the most distinguished representative and leader of the Brahmo Somaj. In the early years of the Free Religious Association, it received several letters from him, all bespeaking the most generous culture, the finest spirituality, and a noble ideal of human brotherhood. His theological position at that time closely resembled that of Theodore Parker. He was, as he always remained, a theist; and his hope of human brotherhood rested on the idea that all the religions would finally adopt the theistic faith. Latterly, he has inclined very strongly to ritualistic ceremonies on the one hand and to a mystical philosophy on the other; and the Brahmo Somaj had become divided in consequence. He was a man of marked ability and moral earnestness, and a very impressive orator. He was a genuine leader, but an Oriental leader. Mr. Mozoomdar will be his most natural successor, and will, it is likely, avoid some of the extravagances into which Chunder Sen had latterly fallen.

THE ministers whose names have been restored to the Unitarian *Year Book's* list of ministers, under the new rule, are Dr. Bartol, Samuel Longfellow, Abram W. Stevens, William F. Spencer, William C. Gannett, John F. Clifford, and William J. Potter. There are, besides, several Universalists whose names have now been included in the list, because they are acting as pastors of Unitarian societies. But these are specially designated as "Universalist," to indicate that they have not given up their fellowship with that denomination, and may be only temporarily connected with the Unitarians. Against the names mentioned above there is no special designation to distinguish them from the list in general. And, of these names, the two whose restoration to the list strikes us as most significant are those of Messrs. Stevens and Spencer. Neither of these gentlemen is at present pastor of a Unitarian society, and could not have been put on the list for that reason. They are put there because they have been pastors of such societies, and have not withdrawn from the profession, and are "not in fellowship with some other denomination," to quote the wording of the new rule. Both of them, it is well understood, have dropped the Christian name; and Mr. Spencer is a pronounced agnostic. The latter is the resident speaker of the Florence Free Congregational Society, and thereby is considered as not having withdrawn from the ministerial profession. Mr. Stevens, formerly for several years the devoted assistant editor and for a time editor of *The Index*, occasionally preaches, though he is engaged in another occupation; and so the list takes him in. By adopting a rule which goes back to pick up these names, it looks as if Unitarianism meant hereafter to emulate the Catholic Church by continuing to count all who have ever been a part of it, provided they have not openly joined some other denomination.

THE NEXT UNITARIAN STEP.

The new action taken by the executive committee of the American Unitarian Association with regard to their *Year Book* list of ministers, of which we wrote last week, leads to the hope that the National Unitarian Conference may, before very long, reverse their action, and eliminate the objectionable theology from the famous preamble to the constitution of that body. The new article to the constitution, adopted by the Conference at its last session, whereby it was declared that, though the preamble and constitution represent the opinions of the majority of Unitarian churches, yet they are not intended to exclude from fellowship any who are in general sympathy with the purposes and practical aims of the Conference, was quite similar in its bearing to the supplementary list of ministers which, last year, the compilers of the *Year Book* appended to the regular list.

This appended list of ministers appeared to admit into the outer courts of the Unitarian temple certain persons who were not qualified for full admission; and it kept before the minds of all users of the *Year Book* a standing interrogation as to what particular part of the Unitarian garment they lacked,—as to why, for instance, Dr. Bartol, who for over forty years has been regarded in Boston as a Unitarian minister, was not put in the *Year Book's* list of Unitarian ministers, and why William C. Gannett, for six years the very live minister of a very live Unitarian society at St. Paul, and a director of the Western Unitarian Conference, was not included in the *regular* list of Unitarian ministers. So the last appended article to the constitution of the National Conference makes a supplementary class of members of the Conference,—a kind of *hangers-on* to the regular membership. It divides the Conference, in respect to theological opinions, into two portions. First are those who have their theological belief expressed in the constitution of the Conference. These are they who reaffirm their "allegiance to the gospel of Jesus Christ," and then from that platform speak of inviting others "to our fellowship." These are the "we" of the Conference, who speak of "our belief" and of those "differing from *us* in belief." And, second, are those who, though differing from the first and larger section in belief, are yet invited to join them, if they like their purposes and practical aims, but who can only enter the membership of the Conference under protest against the doctrine of the bond of organization which constitutes the Conference. These two sections, therefore, do not enter the Conference on equal terms. It is as if one section had its theological creed emblazoned on the flag of the Conference, under which all are rallied, while to the other section this privilege is denied. Equal rights of membership would require that the creed of all members should be placed in the constitution or of none.

And, as the supplementary list of ministers in the *Year Book* has been abandoned, after a year's experiment, as not a wise settlement of the question there involved, so we trust that this supplementary article to the constitution of the National Conference will not long block the way to a completely just and equitable settlement of the Conference controversy. It is a compromise which cannot permanently satisfy either party. Mr. Savage, who introduced the amendment, publicly announced that he did not consider it a final disposition of the question. He regards it, we have reason to believe, as only a provision by which he and those who agree with him can conscientiously have a footing in the Conference. But, having such a footing, they may be expected to use it before long in a united effort to secure the thorough amendment which shall purge the constitution of all the theological phrases against which they now protest. It is simply a demand of common fairness that the constitution should be so framed that all invited members of the Conference can equally give their assent to it.

And we cannot help entertaining the hope that the majority of the Unitarian denomination will yet see the justice of this demand, and will repair the great wrong which was done at New York and Syracuse in 1865 and 1866. Perhaps the publication of Dr. Dewey's Autobiography and Letters may serve to help forward this consummation. Dr. Dewey was one of the revered fathers of the Unitarian Church, who was regarded as a safe counsellor. Yet he vigilantly upheld the better denominational traditions of mental liberty, and was not afraid of the thought of the young men. He kept his own mind hospitable to inquiry to the end, though in some points of belief and feeling he remained attached to the conservative party. But, on the matter of the constitution of the National Conference, he seems to have taken sides from the start, without a shadow of hesitation, with the defeated minority. He was already in retirement, and took no public part in the discussion; but his recently issued life and letters—a most interesting and valuable book—brings to light the fact that he wrote his opinion plainly to Dr. Bellows and others. Previous to the first convention in New York, he expressed in a letter to Dr. Bellows his great interest in the movement, and his hope that the Unitarian cause might be "taken out of the hands of speculative dispute and be put on the basis of a working institution," and that a ground of union might be found "out of which may spring boundless freedom of thought." After the convention, writing again, he said: "I regretted only one thing, and that was that the young men went away grieved and sad. I think, too, that what they asked was reasonable. That is, if both wings were to fly together and bear on the body, no language should have been retained in the preamble which both parties could not agree to." With reference to the second conflict at Syracuse the next year, he wrote again to Dr. Bellows, "I think the minority in the Conference has had hard measure from the majority, and I liked Abbot's sermon [in condemnation of the action at Syracuse] as much as you heard I did." To another correspondent at the same time, he wrote: "The fact is, the Conference is wrong. If it expects the young men to act with it, it should adopt a platform on which they can conscientiously and comfortably stand. The conduct of the majority, in my opinion, is inconsistent and ungenerous."

This testimony of Dr. Dewey is all the stronger for being coupled with assertions that his theological sympathies are more with the majority than the minority. He condemns the constitution of the Conference purely on the ground of justice and fair play. His position is this,—all had been invited, all were desired to stay, all were asked o t give money and labor to a common cause; and, therefore, as a simple matter of square and honorable dealing, none but a common ground should have been taken, on which all could stand. And will not the Unitarian denomination yet see the reasonableness and the right of this position, and act conformably to it? Why should it be afraid of the orthodox Mrs. Grundys who may charge it with hauling down the Christian flag? All honorable men will honor the retracing of a wrong step. To be sure, the Conference must advance further now to find the common ground than would have contented the minority in 1866. It cannot now rally all on the basis even of practical Christianity. But, though it should strike all theological phrases from its constitution, it would not thereby, as a body, deny or oppose the eliminated beliefs. It would only deny their right to stand in the constitution of a body, a part of whose members reject them. It would only be serving all its members alike, putting them, with regard to theological beliefs, on the ground of democratic equality.

WM. J. POTTER.

HOW TO MAKE BRIGHT GIRLS BIGOTED.

Knowledge has a strong upward tendency, but it is well to notice the neutralizing capacity of our educational institutions. Convents, orthodox Sunday-schools, and prayer-meeting seminaries are apt to overdo things. Open advocacy of superstition and servility provokes bright girls into thinking for themselves and acting independently. Nuns, good little girls who die young, and female missionaries are not so fascinating ideals as the popular authoress, the successful teacher, or, above all, the leader in society. Such objects have power enough over girls that go to college to make them peculiarly susceptible to the conservative influence of what my friend Kennedy has most felicitously called the "D.D. System of Education." It is impossible to get together a hundred of our schoolboys without there being one or two at least who know enough about orthodox ministers to keep the rest on their guard against ecclesiastical prejudice, sectarian partisanship, and pious fraud. The white-cravated, old president, who holds up Mallock, McCosh, and Joseph Cook as the great lights of the age, sneers at the principles of Darwin, Spencer, and Galton as "science falsely so called," and charges the leading free thinkers with teaching immorality, is likely to give himself away badly, if he is talking to intelligent young men at liberty to say what they think. Whole rivers of such sermons and lectures flow steadily, with scarcely a ripple of protest, over the heads of the pupils in the ladies' colleges. Women are so much more in the habit of going to church than men, and so much more accustomed to clerical guidance, that a clever preacher can easily keep a flock of female students within narrow limits of thought, provided there are no men present except those who have an interest in taking his side. Moreover, no students are so generally influenced as those of Vassar and Wellesley with determination to keep on the fashionable and conventional side, and stop short of all opinions that might call down social ostracism. It is hard to say whether such feelings are strongest among the wealthy girls, whose only ambition is to know enough about art, music, modern languages, and current literature to shine in society, and enjoy travelling in Europe, or among the poorer girls, who are going to teach school, and know what the market is to which they must bring their wares. Even the best teacher in such a college cannot prevent its tutelary deity from being, not Minerva, but the Golden Calf. Girls, who love truth for its own sake, and care more for being right than being popular, find in such colleges that they are only swimming against a downward current so strong that they can barely keep stationary, and are almost certain, sooner or later, to be swept away. Nothing shows better the ruling spirit in these colleges than their magazines, especially the book notices, whose authors apparently never dare to differ from anything they are permitted to read. An exceptionally gifted graduate may turn out all the stronger and bolder for her four years of warfare against both faculty and class, but she will soon find great reason to regret having been

Digitized by Google

systematically turned away from the best sources of information, and filled unconsciously with prejudice against some of the ablest books. The radicalism which is developed in such a contest is not the most enlightened, and neither is it the most liberal and far-sighted. A college girl is never so likely to think for herself or so ready to say what she thinks as when she is constantly meeting with intelligent young men, at liberty to speak their minds to her, and glad to hear her most advanced ideas in return. And, if she goes where she can do this, she has the further advantage of studying under teachers who are not mere trainers in accomplishments and superficial information, but keep themselves up to the high requirements of what men want to know. The mere fact that a college admits both sexes usually shows that it is advanced enough really to teach truth, and not prejudice and superstition. Oberlin is now an exception; but, when first founded fifty years ago, it was on what was then the advanced ground of abolitionism. Harvard and Ann Arbor need no praise, though they do need more generous support from those who wish to have women as well educated as men. At neither of these universities, or those in Boston and Ithaca, would a young lady who has been requested to write about Agnosticism receive severe censure from the president for expressing her own opinion in its favor, as recently took place at Vassar.

Among the institutions which have been peculiarly successful in making, not only young men, but young women think for themselves, is the State University at Madison, Wis. Nothing shows better how differently girls are treated by female teachers and boys by male than this fact. When a class entered at Madison some years ago, the president told them he should be glad to have them go to church, but should not require it. The matron, however, as soon as she got the female part of the class by themselves, told them she expected them all to go to church with her regularly. She carried her point in this respect, as she would probably have done everywhere, if left to herself. The girls, however, were kept so much under the able teachers needed for educating the young men, and allowed so often to interchange opinions with these latter, that most of them became thoroughly liberal. So great are the advantages, not only in standards for admission and qualification of instructors, but still more in love for mental liberty, of those colleges which admit both boys and girls over those that do not that I am glad to see the presidents of these comparatively liberal institutions state that co-education has proved thoroughly healthy and in every way suited for young ladies. Of course, it must be remembered that students in even the most narrow and reactionary of institutions are more likely to grow liberal than if they were not studying at all. No modern colleges or seminaries or even convents are managed with such care to check originality by authority as were the mediæval universities, yet every liberal thinker of importance during the Middle Ages was a university man. The long roll of free thinkers and reformers of all ages contains few names opposite which we cannot write those of their instructors. The liberating tendencies of knowledge are so strong that no teacher or institution can suppress them altogether. In all colleges, we find some mental growth; but it may be only that of the miniature tree in a Chinese flower-pot. Even of two colleges which go over the same ground, one may give all its energies to making the students come out on the beaten track, while the other encourages them to go on boldly into new fields of thought. The ladies' colleges do some good, but I insist that the difference between co-education and separation of sexes is essentially one of more or less respect for mental independence.

F. M. HOLLAND.

UNSECTARIAN READING FOR THE YOUNG.

Having just finished a letter in response to the request of a lady living in an isolated region in Oregon, where libraries and bookstores are scarce, that I would aid her in the selection of books of an unsectarian character fitted for the instruction and entertainment of her boy of eight and girl of fourteen years of age, and having become interested in my researches for her benefit, it occurred to me that somewhat of my reply to her might be of interest to other mothers struggling with the same problem in like localities. Besides, in these days, when the flood-gates of the press are constantly pouring forth a torrent of new books, and it is enough to rack the most retentive memory to keep in mind the names, ticketed with their peculiar province in literature, of the constantly increasing list of authors whose works help to swell this foaming torrent of publications, it cannot fail to be of help to some one, who has not time to find out for herself, to have some guide, however incomplete, to indicate in what direction to turn in search of the knowledge she craves. The hope that I may be of some use as such guide is my excuse for this article. In what follows, I have replied in the order indicated by the letter of inquiry of my unknown correspondent.

First, in respect to works on natural science suited to the comprehension of children, the Appletons of New York City published a few years ago a series of "Science Primers," written by acknowledged authorities on the subjects treated of: *Chemistry*, by Prof. Roscoe; *Physics*, by Balfour Stewart; *Physical Geography*, by Prof. Geikie; *Geology*, by the same writer; *Physiology*, by Dr. M. Foster; *Astronomy*, by J. Norman Lockyer; and *Botany*, by Dr. J. D. Hooker. These are uniform in size, are written in a style easily understood, and are entertaining as well as instructive. Price 50 cents each. This firm also publishes several scientific works by Arabella B. Buckley, written with special regard for the needs of children. They are entitled as follows: *Winners in Life's Race, or The Great Back-boned Family; Life and her Children; Glimpses of Animal Life from the Amœba to the Insects;* and *The Fairy Land of Science.* These are sold at $1.50 each, and are admirably adapted to the youthful mind. Dr. Felix L. Oswald's *Zoological Sketches* is a recent and very entertaining and beautifully illustrated work, such as must be attractive to young or old. Dr. Edward Clodd's *Childhood of the World*, price 75 cents, gives an excellent account in simple language of all that is known or indicated by archæological facts in regard to early man. After this may be read Capt. R. C. Adams' summary of *Evolution*, price 25 cents, and G. J. Romanes' *Scientific Evidences of Organic Evolution*, price 50 cents. These are written in terse, clear style, mostly devoid of scientific technicalities. They, however, are not calculated to interest the very young.

Livingstone's Travels in Africa, Barthe's Explorations of the same country, Dr. Hayes' Arctic Expedition, Stanley's *Through the Dark Continent*, though designed for older people, can be enjoyed by young readers, since they are all written straightforwardly, and are full of adventures. Du Chaillu's *My Apingi Kingdom* and other books of travel, though entertaining, are not always quite reliable. Bayard Taylor's travels in different countries are both. Should sketches of travel in the guise of fiction be preferred, such can be found, whose relation of events can be relied upon. Such are the "Rollo" books of travel, written by Jacob Abbott years ago, and recently republished; Horace Scudder's recent work, *Mr. Bodley Abroad;* and the joint works of Susan and Edward Everett Hale, entitled respectively *A Family Flight through France, Norway, and Switzerland, A Family Flight over Egypt and Syria*, and *A Family Flight through Spain.*

In biography, the *Letters of Lydia Maria Child, with Biographical Introduction by Whittier*, price $1.50, *The Story of Theodore Parker*, designed for children, by Frances A. Cooke, price $1.00, and *Famous Americans of Recent Times*, by James Parton, price $2.00, will be sure to interest. In *Wide Awake*, the children's magazine published by D. Lothrop, there has been, during the past year, a series of excellent brief biographies of distinguished people, written expressly for the young, which will probably soon appear in book form. Oliver Optic, I believe, has written various biographies designed for the reading of boys, of characters in recent history like Abraham Lincoln; but of these I can testify only from my knowledge of his generally entertaining, if slightly sensational, style. However, nearly all biography of recent date is written so interestingly and from so liberal a stand-point that it is pretty safe to order the biographies of any personages in whom it is thought best to interest young people from the pen of any well-known writer; and the result will prove satisfactory.

In history, Dickens' *Child's History of England*, Miss Charlotte Yonge's *Child's History of Rome*, and Col. Higginson's *Young Folks' History of the United States*, price $1.50, are all excellent, reliable, compact, and charmingly written. These can be followed by Macaulay's *History of England*, Justin McCarthy's *History of Our Own Times*, and Prof. Harrison's *History of Spain.* By the time these are finished, the young readers will be qualified to choose for themselves the next historical reading.

If poetry is craved by children, or a taste for it sought to be cultivated in them by parents who still wish to keep the young minds unsullied until their principles are firmly fixed and their characters unalterably moulded, it will be safe to offer them and their intellects will be able to assimilate much of the poetical thought contained in the works of Wordsworth, Southey, Cowper, Mrs. Hemans, Longfellow (who has been called the children's poet), Bryant, Holmes, Whittier, Lowell, Charles Kingsley, Adelaide Procter, Lucy Larcom's *Childhood's Songs*, and Celia Thaxter's *Poems for Children.* I have omitted from this incomplete list all those whose poems might prove too abstruse for juvenile comprehension or too suggestive of mature romance or passion of whatever sort. There are among the writings of all our best poets single poems which are fitted for the elevation and growth of immature minds, but I have not now time to indicate these; and the list I have given will be more than sufficient for most children. The stray poems referred to can be sifted and chosen by individual taste.

But, in reading, it is fiction which is most generally craved by the youthful mind, where imagination is the most dominant mental force. Writers, many of them themselves parents, have recognized and answered this craving; and the result is that in fiction it is hardest of all to fix upon the right thing in a field which is almost limitless. Among standard writers, I can now only call attention to a few. Among these are Sir Walter Scott's historical novels. Dickens' *David Copperfield, Dombey and Son, The Old Curiosity Shop, Nicholas Nickleby*, and the *Christmas Carols* delight by their realistic pictures of innocent child-life. Among the novels that greatly please young

Digitized by Google

readers are the *Moral Tales* and *Rosamond* of Maria Edgeworth; Fredrika Bremer's *Home* and *The Neighbors;* Charlotte Brontë's *Jane Eyre;* the stories of William and Mary Howitt; Washington Irving's quaint tales; George MacDonald's *Sir Gibbie;* George Eliot's *Mill on the Floss* and *Silas Marner;* Bulwer's *Last Days of Pompeii* and *Rienzi, The Last of the Roman Tribunes;* Mrs. Mulock Craik's *John Halifax, Gentleman, A Noble Life,* and *My Mother and I;* Louisa Mulbach's historical novels; Mrs. Harriet Beecher Stowe's *Uncle Tom's Cabin* and *Oldtown Folks.* Jules Verne's semi-scientific and wholly sensational novels, such as *A Voyage round the Moon, Twenty Thousand Leagues under the Sea,* etc., awaken scientific inquiry and interest in youthful minds. Thomas Hughes' *Tom Brown's School Days,* Mrs. Henry Wood's *Roland Yorke* and *The Channings,* are very enticing books to school-boys. Both boys and girls like to read Louisa Alcott's charming child-stories, such as *Little Men, Little Women, An Old-fashioned Girl,* and *Work.* Hans Christian Andersen is too well known as a writer of delightful juvenile stories to need any mention. J. T. Trowbridge's *Neighbor Jackwood* and numerous other earnest and naturalistic stories of boy-life have made him a general favorite. Among the many writers for girls and boys, Mrs. A. D. T. Whitney, author of *Faith Gartney's Girlhood,* and Abby Morton Diaz, author of the *William Henry Letters, Polly Cologne,* and other works, are deservedly popular. While "Oliver Optic," and Captain Mayne Reid's stories for boys, are great favorites.

Among the miscellaneous books suitable for children, it will be safe to allow them to read at the age when they will most enjoy them the old standard romances which were once the delight of their fathers and mothers, such as *The Arabian Nights' Entertainment, Scottish Chiefs, Thaddeus of Warsaw, Robinson Crusoe,* and *Gulliver's Travels.* In addition, *The Tales from Shakspere,* by Charles and Mary Lamb, will give them a taste for that great writer's works, when they shall be old enough to understand and appreciate them. *The Swiss Family Robinson* is always read with pleasure by children. John Ruskin's *Ethics of the Dust* is high-toned, instructive, and amusing, and is written for the special needs of girl-minds. Mark Twain's *Innocents Abroad,* while full of wit, humor, and pathos, gives a pretty accurate description of things seen and places visited in his travels. Helen Campbell's new book, *The American Girl's Home Book of Work and Play,* price $2.00, is almost a necessity for girls in their teens.

In conclusion, I have only to repeat that the list here given is by no means complete, but is meant only as an indication. I have given the prices where I knew them, as the cost of reading has always to be considered in the selection. The works whose exact prices I do not know are published at popular prices, and many of them are reprinted in cheap form.

SARA A. UNDERWOOD.

WAS DANTE REVENGEFUL?

The article, "Poetry as a Moral Force," published in *The Index* December 27, containing the statement that Dante was relentless and revengeful, leads me to say that a careful study of Dante and the *Divina Commedia,* as also the history of the times in which Dante lived, will convince the student that it was in no spirit of revenge or spite that the great epic was written, but, on the contrary, that love inspired it throughout,—love of country, love of humanity and of religion.

Dante's stand-point was not that of the nineteenth century. He was no free thinker in the modern sense of the word; but his love of truth and justice, his courage for braving the right, can be paralleled only by the bravest free thinker of to-day. Dante stood fast by the Catholic Church, which, with all its sin, represented, perhaps, the highest attainable good in the fourteenth century. Dante's devotion to the Church, however, did not blind him to the abuses sanctioned under the name of religion. Again and again, he breaks out in hostile invectives, denouncing the fraud and iniquity practised by the Church. The high position of her officials was to him no excuse for extra sinning.

We are inclined to look upon the sins of the mediæval Church as if they occurred without much protest; but there were men like Dante, Gregory VII., St. Bartholomew, and others, who did not hesitate to denounce the iniquities of the popes and the corruptions of the Church. Sinning was as odious to Dante as it was to Martin Luther. And popes guilty of sinning Dante fixes in narrow apertures, their heads downward, and flames feeding on the soles of their feet. Dante pauses in this circle, and listens to the shade of Pope Nicholas V., who speaks to Dante in woful accents. Dante hears him, but is in no wise moved to pity. He seems rather to take a glad satisfaction in seeing one who had wrought so much ill suffer such penalty.

"Abide thou there:
Thy punishment of right is merited,"

says Dante to him, and then with bitter denunciations pours out this indignation upon the sinner for whom there is no longer space for repentance.

Dante has been censured for this and other expressions indicative of cruelty, but his was not a cruel nature. He passed through hell not to carry pity where pity could no longer avail. He was here to witness the execution of God's impartial justice; and it was not for him to pervert the ends of justice by showing pity where, as Virgil tells him, "pity lives most when it is dead." Dante's hatred of sin is intense, and he can have no sympathy with wilful persistency in error. The obstinate sinner is not to be caressed: he is to be pierced with thorns, not comforted with roses.

A contrast was made between Milton and Dante: the latter was represented as revengeful and relentless, and credit was given to Milton for sympathizing with Satan and the rebel host. Dante could never have been guilty of sympathizing with the arch-spirit of evil. He hated sin in every form, and was never deluded to admiration of it in whatever brilliant powers it might appear. Sin was sin to Dante, and he always paints it loathsome and disgusting. He never holds it up in a way to win admiration or elicit maudlin sympathy. As a moralist, therefore, Dante is almost beyond compare.

If one would know the tenderness of Dante's nature, he should study the *Purgatorio.* It is when the sinner is penitent that Dante has for him sympathy and consolation. Although sin is expiated only with intense agony, the suffering is mitigated with songs of hope and aspiration. Dante knew, as we know to-day, that the sin of years cannot be pardoned by a magic word of forgiveness, that for every sin there must be bitter atonement; but he knew also the holy joy which every repentant sinner feels, even in the agony which the thought of sin creates, and to all such penitents Dante's heart goes out in deepest sympathy.

The author of the essay was correct in saying that the *Divina Commedia* has but little interest for the ordinary reader of to-day. One could as easily reach the truth of the Calculus by glancing over it as to know Dante by a simple reading. Epics like *Faust* and the *Divina Commedia* are well called bibles, and as such are to be conned as the saint studies his Scriptures. The immortal truth which each conveys is not limited to the third or the fourteenth or the nineteenth century. It is eternally old and forever new.

CAROLINE K. SHERMAN.

REFORM.

However men may differ in theories concerning the past and the future, they are substantially agreed as to the practical needs of the present. A great problem faces us, the improvement of the world. The men of science, by study of nature's methods, are assisting material progress; but the sinfulness or imperfection of man is ever apparent, and good men of every religious creed and those who have no creed are alike striving to make men better individually, and to improve their social conditions. This motive has been supposed to be monopolized by religious people; and the common taunt to the unbeliever, when argument fails, is still, Your ideas are only destructive, and constructive ideas are what the world wants. But it has to be admitted that unbelievers are among the chief promoters of the welfare of society; and the candid observer must confess that all good men, Christian and agnostic alike, in the concerns of this world, are united toward one practical end. All see the evils of crime, intemperance, and poverty, and equally desire to alleviate them. The difference between the workers is not in their aims, but in their methods. Christians seek reform supernaturally: rationalists seek it naturally.

The demand for constructive effort is a just one; and, if radicalism only tears down, it lacks the element that will commend it enduringly to society. Let us see if the methods of the rationalist will compare with those of the Christian. The cross of Christ is the great remedy of the Christian. If a man is evil, he is taught that, by an emotional consideration of the death of Jesus, a supernatural change is wrought upon his nature, which will enable him to be good henceforth. This effect is often produced, and in many cases is lasting; but more often, when the emotion has subsided, evil practices are resumed. Under the stimulus of the love of Christ, men resolve to reform their lives; but feeling declines, and temptations conquer. Has the rationalist a better method of reform? He believes that reason is a more lasting influence than emotion; that the prospect of present benefit is more potent than the hope of future reward; that, as material progress is gained by the study of nature, so moral and mental advance is to come by the study of man's history and habits, and by observation of nature's methods of development. He sees that evil arises from ignorance of natural law, or from non-conformity to its teachings. Therefore, the remedy is suggested by the cause. Knowledge of "man's place in nature," and understanding of the physical forces that effect his welfare will supply the sources of improvement.

Education, then, is the remedy of the rationalist: regeneration is the remedy of the Christian. The latter has had a long trial, and has doubtless won trophies. The very fact of its birth and continuance proves that it had some adaptedness to the circumstances that called it forth from men's minds, and it has been serviceable under the existing conditions in the past. Its success, however, is not such as to commend it as a panacea for ill, nor for any application in the future to intelligent minds. Ignorance is alike the mother of devotion and the mother of crime. The least instructed

Digitized by Google

people are the most religious and the most vicious. Lange, in *History of Materialism*, says, "Enlightenment and education, as a rule, go hand in hand with a decrease of the clergy in relative numbers and influence"; and "the diminution of crime corresponds with the diminution of superstition, which is inseparably connected with the worship of the letter."

Education in a broad sense is of recent birth, and is yet in its infancy; yet its fruits are undeniably good. Instruction has been limited to the acquisition of ancient ideas; but, since three hundred years past, it has been gradually expanding to embrace what the Germans call "earth knowledge," which is gained by direct study of nature's operations and conditions. Social progress is coincident with this advance.

But let us apply these principles to the vexed questions of the day, and see which method is best adapted to reform. The most prominent topics of concern are capital and labor, intemperance, crime, and the relations of the sexes. What is the Christian method of dealing with poverty? By Christian, we mean the methods taught in the New Testament. Intelligent Christians have generally abandoned these and adopt rational methods, but they have no right to credit these to Christianity. Jesus and the apostles, in view of the expected closing of the age, commended poverty, rebuked riches, ordered the distribution of wealth, the lending of money without asking for repayment, and the practice of communism. Rationalists say poverty is a curse, strive to gain riches, secure your individual comfort, keep your possessions except when you can do more good by parting with them; giving degrades the receiver, and injures his future efficiency; nature teaches "nothing without labor," and men must toil for what they would enjoy. But they see also the interdependence of men, that true self-interest demands the advancement of one's neighbor, that the employer's welfare is promoted by the prosperity of the employed, that a grasping selfishness injures him who exercises it, and they would educate men to far-seeing views of trade and wealth. They would show that nature indicates that general prosperity is promoted by freedom of trade, co-operation in production, the discouragement of pauperism by the promotion of inducements to industry, and thus by purely material considerations they would lead to prosperity rather than by abstract didactic inculcations based upon self-sacrifice through devotion to Jesus. They claim that the more nature's methods are studied, the more clearly it is shown that the true and lasting welfare of each individual is identical with the welfare of the community in which he dwells, and that the prosperity of each community is connected with the thrift of other communities. They believe that enlarged knowledge will promote a more efficient benevolence springing from motives of worldly self-interest than has been obtained by the principle of self-sacrifice for a heavenly crown or through emotional "love of God."

Intemperance is consistently combated by the Christian through conversion and prohibition. Drunkards are reclaimed by the stimulus of consecrated vows and by the impossibility of indulgence. But both experiences are rare. The vows lose force, and seeming impossibilities are overcome. The means of intoxication are procured by liquors or by opiates, where the craving has become confirmed. The rational method is to allow individual freedom, but to aim at prevention by the spread of knowledge of the evil effects of ardent spirits, by the inculcation of self-restraint for the advantage of self and others, and by study of the laws of heredity which may suggest means of preventing the transmission of depraved appetites. The recognition of intemperance as a disease, and its treatment by scientific methods, is in brief the method of rationalism.

As to crime, the same remarks may largely apply. The science of heredity has a great mission in this field. Conversion may rescue a few; but the improvement of the race must be gradually effected by physical improvement, by vivid impressions of the certainty of the punishment of crime, and by the growth of prosperity. A disciple asked the ancient rationalist, Confucius, "Since the people are so numerous, what more is needed?" Confucius replied, "Make them well off." "After that, what else?" "Instruct them." Preaching and tracts will not restrain the starving. Comfort is a prerequisite to learning. The question of capital and labor is therefore a problem intimately connected with that of crime, and general thrift must precede general virtue.

The relation of the sexes is a question made more difficult of solution, because a false propriety restricts its discussion. With this as with the other problems, the rationalist has no patent nostrums to effect immediate cures; but he claims to point out the methods in which light may best be gained. The present attitude of Christianity upon this topic is that of positive, unreasoning dictation. Thou shalt not,—because Moses and Christ said so. Look to Jesus for strength to conquer fleshly lusts. "Deny thyself, and take thy cross!" The failure of this method need not be argued. The method of rationalism would be the spread of knowledge about the human body; the recognition of the fact that there is nothing unholy or unclean in our organisms or natural impulses; the removal of a false glamour and exaggerated notions, that the sexes entertain toward each other, by co-education and familiar association; early instruction upon the direful effects of sexual vices, and demonstration that self-control is the truest self-interest. A refined lady graduate of a Western college, where co-education of the sexes was practised, remarked: "Whenever I met friends who were being educated in young ladies' seminaries, they usually talked about the young men and their secret efforts to correspond or associate with them: whereas our daily association with 'young men showed us what commonplace and often stupid things they were. They had no exaggerated fascination for us, and I am sure there was less 'flirting' than where the girls were secluded."

One who faces the ills of life, the woes of the wretched, the sorrows and "sins" of men, is at times overwhelmed with the consciousness of the hopelessness of speedy amelioration. He can only ask himself what general principles are best adapted to furnish remedies; and he finds two suggestions,—Christian supernaturalism and rational naturalism. But he says, if God can remedy all this, why doesn't he do it? Men have been pleading for ages for him to fulfil his promise to answer prayer, and to heed their petitions that these ills should be removed. He has had opportunity to prove his power and faithfulness, but he has failed to effect the desired reforms. On the other hand, it is seen that all permanent progress has been secured by natural agencies, and our only way to judge of the future is to learn of the past.

We claim, therefore, that not only does rationalism refute the charge that it is solely destructive, but all valuable construction is secured by its methods. Where Christianity influences intelligent people for good, it is owing to its adoption of rationalism. Its modified supernaturalism is serviceable to some heathen races as a stepping-stone toward naturalism; but the motive forces that advance civilization are not prayer, conversion, and religious dogmas, but knowledge of nature and the application of her hitherto secret powers to the welfare of man.

Education, then, must consist less in the study of dead languages and dying theologies, and more in research into nature's operations and the endeavor to conform our lives to those beneficent principles that underlie her methods.

ROBERT C. ADAMS.

EDITORIAL PARAGRAPHS.

THE *Presbyterian* says:—

It is sometimes argued that Christianity cannot be the constant and dominating force it is supposed to be, or there would be no necessity for the impassioned appeals made for the means to advance the kingdom of Christ. But the negation of faith does not help to any more abundant outpouring of funds for the advancement of unbelief. So we learn from a blunt announcement in *The Index* of last week. It says, without any hesitation or circumlocution, "The Free Religious Association has an empty pocket, and it hereby holds out its hand to its constituency for a Christmas and New Year's gift."

"The constant and dominating force" of Christianity is that general element which it possesses in common with other religions. "The impassioned appeals made for the means to advance the kingdom of Christ" are, in the main, for money to sustain what is less abiding, and already shows signs of decay,—the special elements of Christianity, and various and contradictory interpretations amounting to numerous modifications of these special elements. The Free Religious Association does not claim to be a "constant and dominating force"; it does not claim to have had a supernatural origin; it does not claim to belong to a kingdom "not of this world"; its members admit that it is entirely human in its character, that it was organized a few years ago in an entirely human and business-like way, by men who desired an association admitting of greater freedom and liberality than was allowed by any of the Christian churches. It does not represent "negation." It represents freedom and fellowship among men and women who are not of the same religious belief, but are broad and charitable enough to encourage the study and discussion of religious subjects from every rational point of view, and to advance what they regard in common as of essential importance. Now, it is very natural that such an association should need a little money. Unlike organizations that have sectarian dogmas to propagate and a sectarian ministry to support, it could perhaps live even with an "empty pocket"; but its usefulness will be greatly increased by money, since, being of this world, it must employ such means as this world affords to promote its objects. This even the *Presbyterian*, with all its other-worldliness, understands; and the friends of the Free Religious Association, with the same understanding, we are glad to say, have begun to respond to the appeal alluded to above. Meanwhile, our esteemed contemporary, who is somewhat disposed to reproach a young organization with the emptiness of its treasury, is informed that the Free Religious Association has expended considerable money in promoting its work the past few years, and that even now it has financial resources equal at least to those of Jesus and his disciples, who, with empty pockets, managed to do some work which is not now regarded by our esteemed contemporary as wholly insignificant. Who knows but that eighteen hundred years hence the Free Religious Association, or some outgrowth from it, will be a "dominant force," and that Presbyterianism, having taken its place among the dead and forgotten sects, will be known only to a few religious antiquarians?

AMONG the most active forces working for humanity to-day are the influential daily papers of

Digitized by Google

our great cities. When hired detectives fail to convict a murderer, when the philanthropic societies are at a loss how best to help the most helpless classes, when a great explorer seems hopelessly lost, when governments grow chary of giving impetus or aid to scientific discovery, then the newspaper steps to the front, sends its reporters to detect the criminal and find the motive for the crime, starts its fresh-air fund in aid of the sick and young or other like philanthropies, becomes the unpaid almoner of all great charities, sends a Stanley in search of a Livingstone, and equips at its own expense new exploring parties. We were led to remember all this in reading of the latest illustration of this active philanthropic spirit of the press, as given a week or two ago by the Atlanta *Constitution*. On a Saturday night, it was learned that hundreds of poor people in that city were huddling around their last burning stick of wood, and destitute of the other necessaries of life. The *Constitution* Sunday morning made an appeal for money, provisions, and fuel, to be distributed by its business department; and at noon there were gathered at its office about sixty wagons, containing wood and provisions. Merchants worth hundreds of thousands of dollars turned drivers; and each, with a wood wagon and a provision wagon under his charge, started on a tour of the city. All day, the *Constitution* office looked more like a military supply depot than a newspaper office. In it were hundreds of sacks of flour, coffee, and sugar, sides of meat and hams, and, on the sidewalk, cords of wood, while the streets were full of people clamoring for relief. By night, the weather was bitter cold; yet it is safe to say that there was not a house or a hut in the city where there was not a crackling fire and food enough for a week. No distinction was made in the distribution in regard to color.

THE morality of the advanced nations to-day is commonly called Christian morality, but only with the same disregard of truth which is implied in denying the existence of virtue and goodness before Christ and outside of Christendom. The morality of this age does not owe its existence to any religion, to any book, to any historic character, however much or little any one of these has influenced mankind. Our present conception of morality has grown through many centuries of human experience, and exists now only because by many mistakes and much suffering man has learned its adaptedness to his wants. It is the result of the combined influence of our natural character and education. To ascribe it to the dominant religion were as absurd as to attribute the enlightenment of the ancient Greeks to their mythology, or the enlightenment of the Saracens of Spain in the ninth and tenth centuries, when darkness enveloped Christian Europe, to the Koran. The fact is, with the advancement of the human mind, with the discoveries in science and progress in morality, believers in all systems of religion modify their views so as to adjust them to the new order of things, always claiming, in ancient and in modern times, in Egypt, India, Rome, Turkey, England, America, that they find authority for the new ideas or reforms in their sacred books or religious systems, soon claiming even that these religions are entitled to the exclusive credit of having *produced* the beneficent changes they were powerless to prevent.

ACCORDING to a statement in the London *Truth* by Mr. Labouchère, the English Radicals will not be satisfied short of changes involving manhood suffrage, electoral districts, payment of members of Parliament, reduction of the expenses of the monarchy to $250,000, abolition of the House of Lords, local government for Ireland, elective county assemblies, radical land reform, disestablishment of the Church, free education, direct taxation with income tax to be progressive, and with a distinction between income from labor and income from investments. The Boston *Herald*, referring to this radical platform, says: "It will be observed that every change here proposed, except those relating to land tenure and direct taxation, is toward the policy which has been so successful in this country. A hundred years ago, nearly, there was a demand for such changes in England; but it was postponed on account of the horrors of the French Revolution. The aristocratic institutions of that country must have been fearfully weakened by the events of the last fifty years, and it is not impossible that they will yield to innovation more readily than is generally anticipated. Heretofore, however, it has not been safe to count on any sudden changes in England."

A STRANGE verdict that was of the Brooklyn jury in the suit between Miss Bridget E. Cronin and Father Florence McCarthy. Miss Cronin, the plaintiff, a girl eighteen years of age, and organist of McCarthy's church, had complained to her parents of an alleged assault upon her by this priest, and resigned her position. To injure her reputation and destroy the weight of her testimony, it would seem, the priest preferred a charge of larceny against the girl. Then came the suit for damages, which has just been disposed of by a farcical verdict for the plaintiff, with six cents damages. The verdict declares the defendant guilty of the charge preferred against him; and, then, for all the suffering she has endured from the position in which she has been placed before the public,—from a false charge of dishonesty, from slurs cast upon her character, for the loss of her position as organist, for the expense to which she was put by the proceedings,—the sum of six cents is considered a full compensation to the plaintiff. Why should a priest, more than any other person, be allowed to commit an assault with impunity upon a young girl? The New York *World* says, "A jury which could have rendered such a verdict must have been a jury of asses."

REV. DR. HEBER NEWTON announced to his congregation last Sunday that he had been requested by his ecclesiastical superior to stop his series of lectures on the Bible. He said:—

The assistant bishop of our diocese has asked me to stop my Sunday afternoon course of Bible lectures. He disclaims any attitude of authority, owning that his right to inhibit my teachings is at least doubtful. A claim of episcopal authority would have thrown me back upon the principle of "the liberty of prophesying." A request thus made by my ecclesiastical superior and my personal friend appeals to my loyalty. He knows the condition of his diocese, and would not have made such a request, had he not felt it wise. His own sympathies with mental freedom and honest utterance are so well known that such a request becomes doubly imperative. His task in guiding our Church is a delicate one, that I would not wilfully make more embarrassing. While I know of another side to my teachings than that which has doubtless been thrust before him, I cannot but defer to his judgment and accede to his wish. I shall therefore suspend my course of Bible lectures. . . . I confess that it is hard for me to comply with my bishop's wish, now that the fire of abuse has opened again upon me, and that my fellow-presbyters have not scrupled in the public press to charge me, in contemptuous terms, with conscious dishonesty and insanity [laughter], and to demand my instant expulsion from the Church. Personally, while never courting such an ordeal, I have never shrunk from facing the issue threatened me for exercising the freedom of teaching, which is the heritage of our Church. But I have no right to compromise other interests just now, perhaps, of greater importance to our Church; nor have I the heart to lay a burden on the mind of our venerable bishop.

EDITORIAL NOTES.

A REPLY to B. F. Underwood on "The Moral Teachings of Darwinism," by F. M. Holland, will appear in *The Index* next week.

IN a letter to the junior editor, Col. T. W. Higginson writes: "I read your paper in reply to Mr. Holland with much pleasure. I think it was that which led me to send this subscription to the special fund." The subscription was enclosed.

MR. EDWIN D. MEAD is preparing for the press a volume upon *The Religion of Lessing*, comprising translations of Strauss' essay upon "Nathan the Wise," Zeller's "Lessing as a Theologian," and Johann Jacoby's "Kant and Lessing," with an introduction.

A GYPSY in prison for perjury was visited by a priest, who told him that by swearing to what he had not seen he had brought guilt upon his soul. "Is your reverence sure I have a soul?" asked the rascal. "Certainly." "Would your reverence swear that I have one?" "Yes." "Then, your reverence thinks people have a right to swear to what they have never seen."—*Milwaukee Freidenker.*

SONNET.

CREDO.

The heart is Nature's Prophet to the mind,
And wise beyond all subtleties of speech,
Caught up to heights that reason cannot reach,
And led by lamps that never yet have shined
On earthly paths, and never were divined
By human lore,—a sea-shell on the beach
Cast up from out the infinite to each
Rapt ear that hath within it still confined
Faint echoes of its native home, the sea,
Whose billows beat and break forevermore
Upon the shores of sense,—the gate of birth
That standeth still ajar, whence ceaselessly
Stray facing splendors from that farther shore
Across these darkened pathways of the earth.

The Index.

BOSTON, JANUARY 17, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association: namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

THE BROAD SCHOOL.

BY WILLIAM I. GILL.

It is an inspiring index of the times that a gentleman has offered half a million of dollars toward the founding of a school for higher education of a broader character than any now in existence in this country. This, no doubt, is an expression not only of the generous spirit of one man as the donor, but an indication of a great need beginning to be recognized, in view of which the offer is made. Though the offer may be slow in being effectively accepted and practically carried out, that should be attributed to the fact that there is no organic body of broad thought which is properly prepared or qualified formally in its organic capacity to undertake the task it implies. I think, however, the Free Religious Association might qualify itself for the task, under the conditions proposed by Mr. Wade. If this can be done, and it surely can, it would be far better than leaving the school to be wholly a personal move. I am very sure that the project is wise and feasible, and by no means premature. The world is surely fast rising to the capacity to appreciate, and the ability to utilize, a broad, high school of limitless liberality, whose only creed shall be the practical affirmation of the supreme worth and glory of truth, and the love and pursuit and practice of truth,—a creed which will not say to intellectual research, "Hitherto shalt thou go, and no further," and which will not anywhere place chains or crossbars to prevent research in any given or selected direction and force it into other directions. Happy the men who shall have the good fortune to inaugurate such a class of schools. Happy the successful teachers in such a school, and happy the students who enjoy and improve the advantages which it offers.

That there is great need of such a school there can be no reasonable doubt. Very numerous, and growingly numerous, are the minds who only with large and questionable reserve can subscribe to any of the existing formulas or assent to the regulations required in the schools, especially in this country and Great Britain. There is also a deep feeling in many minds, after they have gone through one of these special schools, that they are incomplete and one-sided, that there has been a lack of judicial balance in the spirit, and a lack of breadth and of scientific precision in the method of discussion. All such as these will want a course of instruction, or rather study, in a school of larger scope and higher aim; and, for all such, the school in question will naturally furnish a post-graduate course of general or special inquiry.

This calls us to observe that the character of all existing schools makes an imperative demand for the broad, high school which we are contemplating. All these schools are specialists as to their end. Specialism, in its right place, we do not decry. It is of necessary and eminent service when it selects a topic or line of topics for special and most thorough investigation. There are studies of this kind in increasing numbers and influence. But sectarian schools, whether supported by the State or private liberality, are not specialized in the topics selected, but in the object they have before them, which is not knowledge and education simply, but knowledge and opinion and mental habitudes of a certain form. These schools are avowedly large and general in their curriculum, and so claim in some cases the name of university; but they are not equally broad and liberal in the method and spirit in which they prosecute these varied studies. They seek a special end, which is kept in view always; and all intellectual work which apparently antagonizes this end is sedulously discouraged, and even repressed and restricted. Hence there is a necessary though partially unconscious lack of fairness and thoroughness all along the course of such instruction and study. It is a prolonged and various special plea in favor of a preadopted thesis or set of dogmas. All such schools are the organized and official advocates and expounders of a creed; and their highest regard and honors are exclusively reserved for those of their pupils who promise to be the most zealous and effective exponents of that creed. Even the secular departments of these schools are imbued with this spirit; and it operates on all their classes, though they be studying the classics or astronomy or biology. The whole school is one body, and pervaded by one spirit, which says, Let each pupil be so shaped and fashioned here that he will be a perfect pattern of the school matrix, and at the same time be a mould which shall fashion the minds of others.

While we give this veracious description of these schools, we do not absolutely condemn them. We would not thus condemn any institution which has lived long and exerted a great and extended influence in the world. These schools would not do this, unless they were an outcome of the highest conception and need and capability of a large portion of the world. Of this they were born, and they will live as long as this shall make a demand for them; but, after that, they can nevermore flourish, though for a while they exist and linger. Their prosperous existence is therefore proof of their right to exist. That right is entitled to respect till they are fairly overthrown and superseded. They are never to be treated with contempt or opposed with virulence or vituperation.

It is also to be considered that these narrow and restrictive schools are not necessarily and utterly inflexible. Most of them, if not all, are susceptible of improvement. They have already advanced far beyond their original condition and design. They must and will continue to advance. The great obstacle to this, in most cases, consists in the written foundation on which they were built or in accordance with which donations were made. Whatever be the methods by which these obstacles were surmounted, surmounted they have been, and will continue to be just as fast and as far as the general intelligence and the convictions of their constituents require; and any more rapid change than this is equally undesirable and impossible. Whatever of essential good they contain must abide, and many of them will gradually develop till they rank with our own Broad School. And for the rest there will always be work for them, a needful service which they only can perform. Their very limitations often foster intensity, and thus become a source of special power, just as the current of a river becomes more forceful when rushing between narrow rocky banks.

Meanwhile, if they are obstructive to the higher education, they only exemplify the law which governs all inferior development relative to the higher. The opposition of all such conservatism is necessary to all healthy progress, just as the resistance of the air is necessary to the flight of the bird and as the compression of the steam in the cylinder is necessary to its expansive and working force. All antagonism well met proves and develops the conqueror's power. Criticism from various opposing positions will be forever necessary to test and secure thorough work.

Nor should our Broad School be dominantly polemical. Iconoclasm is not its mission. Let the idols of the tribe fall foul of each other; and, if they will, let them unitedly assail us at different points. This will often be the best thing they can do. Our Broad School has a higher work to do than mere criticism. Its task is positive and constructive, in the prosecution of which it will be very free in criticism of itself; and it will not here fail to avail itself of the very abundant and willing help of others. While it will endeavor to take due account of all that has been attained or achieved, it will thence seek a clear vision of the near boundary of the unknown and of the best method of pressing directly into it for exploration.

In the next place, the best friends and representatives of the Broad School will not erect any set or class of views into a standard of intellectual power and attainment. This is contrary to the true spirit of liberalism, which can recognize personal worth and intellectual breadth and elevation in men of various theoretic opinions. Hence, it will not, when "in its right mind," judge and condemn or denounce either the intelligence or character of others on the ground of their speculative creed, especially where it does not necessarily affect moral principle; for, where it does, it expresses character, whatever its relation to intelligence. Now, this liberalistic principle is often violated by prominent advocates of liberalism. In all such cases, they put themselves and their cause in a false position. They follow the method of the old ecclesiastics who have doomed to hell all who have differed from them, and who have considered all such differences as a proof of mental obliquity and moral perversion.

Our Broad School should not be called or considered as specially theological, but purely and distinctively philosophical and scientific; so that it may be theological and religious and moral just as these seem to enjoin. It should make its supreme object the attainment of a scientific and philosophic knowledge and exposition of the subjects of its inquiries. It should thus seek the ultimate solution of questions concerning the existence and nature of God, of matter, spirit, and the general laws which govern them and their mutual relations, the nature, source, and issue of moral and responsible power, and the essential forms and methods of its utterance and manifestation as seen in the individual consciousness and the history of

Digitized by Google

morals and religion. In no case concerning these questions is the school (or the investigator) dogmatically to preassert what shall be the issue. It is simply to inquire, and to hark with pure docility for the answer. Individual teachers may have their theories, but the institution itself is never to have any whatever. It is to have only a method and a spirit,—a scientific method and a philosophic spirit. The discoveries which may be made and the conclusions which may be reached by professors or students belong to themselves and those who choose to adopt them; but they are never to be adopted by the school as such in its formal organic capacity. While its spirit, method, and aim are scientific and philosophical, it never has itself any scientific or philosophic creed any more than it has a religious creed.

There are three methods of investigation, the archaic, the hypothetic, and the dogmatic. The archaic thinks nothing concerning the issue of its inquiries. It makes no presuppositions except what are involved in the process itself, so that it has no anticipations—not even provisional anticipations—as to what it shall find. This is naturally the method in the more initial stages of investigation in all directions. This method gave us in the main the law of the correlation of forces. The second method is stimulated and guided by the suggestion of anticipated results born of previous knowledge. It hypothecates certain results, and then proceeds to see if this hypothesis can be verified or scientifically justified. This method gave us the Newtonian formula of gravitation. The third method is always wrong, when it pretends to be a search for truth or knowledge. It affirms at the outset what *must* be the issue, so that its real object is only to defend or support an adopted dogma or thesis. It is the method of the denominational schools of theology which are "set for the defence of the gospel," as this is formulated among themselves; and it is of value only for such purposes. Its proponents are advocates and special pleaders rather than real philosophers and theologians.

From the foregoing observations, it will be apparent that our Broad School will naturally tend to the discouragement and ultimate extinction of "schools of philosophy," which are just as absurd as rival schools of scientific theories would be. And, indeed, there did exist for a while a geocentric theory of astronomy in opposition to the heliocentric theory; and it lingered till no very distant period as a proof of a partially unscientific development even among men of science. Without sufficient reason, the new theory had no claims on our credence; but it was entitled to fair and serious consideration, and to at least a partial suspense of judgment in the interim, ready to give to either its regard as it shall justify its claim. In that case there is no school. Rival theories are left to fight their way to supremacy or defeat with as much indifference as the frontier woman is said to have watched the fight between her husband and the bear, not caring which conquered. Let the best win. In order to this, we should neither be too hasty to adopt a new theory or dogma, nor too determined to cling to the old; but we should cultivate an intellectual hospitality which is infinitely generous, while it is correspondingly severe in its demand for good credentials, We want independent research combined with various action in coincidence, a community of contributions to the same result on all the questions of higher import which belong to our Broad School, just as we see it in the physical sciences. For instance, on "the effects of cross-breeding," on "the fertilization of orchids," or on "the habits of insectivorous plants," and other topics in physical science, workers in all parts of the world may be, and have been, employed, so as to contribute to a right conclusion, without any needless conflict and without anything of a really polemical quality rising among them. We want to learn to do the same so far as possible in the higher sphere which belongs to us. This is here more difficult, because the contributions of each cannot be so readily estimated and correctly labelled, and still more because subjects are here more central and more exclusive. There is but one point of the universal centre, though the space beyond is infinite and may be indefinitely various, so that in the extra-central inquiries there is less occasion for conflict. There is room for all to pass and dilate themselves without collision. But there is this in common to all inquiries,—that the right theory must expel all opposing theories; and this polemic element belongs to all departments of science, though in the narrower but infinitely deeper channel of philosophy the danger of collision is greater, and the effect more fatal to the foundered vessel. And here, above all places, we need a dispassionate study of opposing theories, a suspension of judgment till their relative claims are reasonably settled, and an independent yet coincident work in all quarters of the world, seeking without partisan feeling to contribute something to the conclusion, indifferent as to what it shall be, only be it the right. To promote this will be one of the great ends and issues of our Broad School.

As the Broad School has no dogmatics, it demands none from its professors or matriculates. It lays neither prohibitions nor commands on them concerning their theories; and they are at liberty to have and to hold and advocate or oppose whatsoever they will, provided always it be done in accordance with the acknowledged canons of good taste. It is their relative ability and their apparent mental integrity and their capability of animating their pupils with a veracious mental energy which is their recommendation. They may be Brahmos, Mohammedans, Christians, or atheists, provided they are otherwise acceptable. If in intellectual vigor and attainments they are among the prime men of their time, with the large and liberal spirit we have described as characteristic of the Broad School, the members of the faculty may be opposed to each other in their theories without diminution of their social and organic harmony.

I would recommend that the chairs of the Broad School be of four classes, though there may be two or more chairs of the same class.

First, Philosophy in general, or the ultimate knowledge and exposition of substance and cause.

Second, Comparative psychology. This is or ought to be a science; and it should exhibit the forms and laws of the human consciousness compared, so far as possible, with that of inferior animals, and the relations of both to their natural antecedents.

Third, Ethics, or the science of responsibility; the forms of moral conviction, their origin and significance and logical implications. This will also include the moral aspects of Sociology, which ought to be emphasized. Ethics is partly a science and a branch of psychology; but it is also partly philosophical, because it involves ultimate questions of cause as implied in the sense and principle of responsibility.

Fourth, Religion, its various forms, its historic development, its criticism, its universal nature and elements, its conditions and logical implications. This chair also will involve philosophical as well as scientific questions.

The form and location of the Broad School remain to be considered. The form should be the simplest possible compatible with efficiency. The philosophic schools of Athens were perhaps too much so. But they bred the greatest of men. I think material apparatus is often, in our modern schools, made too much of, and men too little. Vast buildings are not necessary. Enough if there are proper rooms for recitations and lectures. If these rooms are well located, a special library belonging to the Broad School will be unnecessary at the outset, and perhaps always, because in some locations it can easily avail itself of the best libraries in the country. Let then the trustees be appointed, and the faculty of lecturers, temporary and provisional, be selected, and the rooms hired or purchased in some such favorable place, and the Broad School is at once inaugurated. Working thus initially, it will thence learn how to work better, and how to build its anthropodrome afterward, if it shall want one, after having found out what it does want.

For *The Index*.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER XI.

The Bishop of Kansas was never thoroughly instructed as to how I came by that remarkable red face, which he observed me to have, during the pleasant days we travelled together through New Mexico. On returning from my visit to the Pueblo Indians, I lay full in the sun, basking in delight under its rays,—as was my wont,—unaware, until told, that my face was scorched; and, when I returned to the Palace Hotel, I was advised to bathe it in glycerine, which gave me the appearance of a polished red Indian. Had I drunk Bourbon whiskey for a month, I could not have looked so suspiciously radiant. Sir Wilfrid Lawson would not have known me. I apologized to the bishop, with whom I dined; but, when I was introduced to his wife, my confusion —added to my other appearances—rendered, I am afraid, my explanation unbelievable. Other persons, better acquainted than I with Bourbon whiskey, had referred similar manifestations to the sun, before me; and I am afraid the lady pitied my simplicity more than my misfortune.

I had a small flask I had bought in Montreal. It held but a quartern-and-half. In Denver, it came into my head to have it filled with the best brandy. I was charged six shillings (a dollar and a half) for it. There is no need of teetotal societies out there. If pledges were laid about a saloon bar, anybody would sign them before coming away. I brought the brandy to London. I shall leave it to some hospital, when I die.

The way of the country accounts for much. In great hotels, I was fond of sitting in bars, for conversation and picking up character; for, as Jerrold would say, there is sometimes a good deal lost there. I often saw young men order a costly drink, sip a quarter of it, and walk away. They were not drinkers, they were money-spenders. It was as though a person in England ordered half a pint of wine, drank a wine-glass, and left it. One day, I saw a senator in the dining-hall order a variety of expensive dishes, taste a few, order others, and eat moderately. He certainly wasted ten shillings. He did not take wine, or he would have wasted as much more. My impression was that hotels are regarded as very pleasant charitable institutions, which ought to be supported in this disguised and delicate way, instead of leaving a subscription at the bar openly.

When I was travelling among those awful cañons of Colorado, heretofore described, the railroad up the rocks seemed more frightful than artist or imagination had painted it. My constant inquiry of Mr. Nims, of the Rio Grande, was, "Who were the engineers who conceived and executed those awful ascents?" In England, the name of him who builds a tubular bridge over the Menai Straits, or cuts a tunnel under the Thames, is in the mouth of the world. Miracles of mechanism and construction, more wonderful than any we have in England, have been accomplished in America; yet, on the spot where the mighty works of these engineers were performed, hardly any one knows their names, and

Digitized by Google

no statue of them meets the eyes of the traveller. I never ceased to wonder and put questions about them. In those cañons there were promontories of stone which could be carved, like the Sphinx, into colossal heads of the great engineers; and the wondering traveller for ages might look on the faces of those who made the miraculous way. Above was terrific altitude, below was a terrific abyss of rock and river. Along that silent and foreboding way, the trains rushed down at night laden with tons of ore, or climbed summit after summit, as the road varied. The engines crawled up the awful rocks like mighty tarantulas with claws of steel. The trains ran round and round the mountains. Snorting as they rose, you could see the engine pushing in the rear like the tail of flame of an iron serpent. Now it left the rock, now it approached it as it wound round it, and now, standing apart from it, as Rossetti did by his bride,—to admire the more her form and beauty.

There was one consolation: there are no ghosts in the cañons. They would be terrified amid those grim, towering cliffs. In those trackless chasms, they would lose their way. It is quite true that the action of volcano, water, and tempests has carved the rocks into such weird shapes that a sculptor, with imagination, could convert these cañons into a stone corridor, which might be taken to be of the antediluvian world, in which monsters, undreamed of by Owen or Darwin or Huxley, might be added to the wonders of the world,—in which everything would be strange and nothing unnatural.

So we went to Leadville. Amid diverging ranges of mountains and over the valleys, we had amazing gleams of sylvan beauty and verdure. Alas! enterprise and civilization are denuding mountains of their trees and extinguishing their grim glory,—searching for gold. Nature ends where commercial civilization begins. Let us hope that nature has, like the Indians, some reservation of beauties, which are indestructible, some vast mountain ranges which yield no minerals, or that the world may soon become an international federation, and the remaining beauties of the globe be protected in the interests of mankind. Otherwise, those who come after us will find only a world of cinders and blast furnaces, and the last man will be found, by the telescopes pointed at him from the planets, perched on a steam boiler.

Miners and farm laborers are the most fortunate of English workmen. A farm hand can get rations, and save dollars where mechanics would perish. A miner in mining districts is pretty sure—I was told always sure—of work, and fifteen shillings or more a day, and be able to buy a whole quarter of beef at six cents (threepence) a pound. All memorable Leadville mining began in an old Californian gulch. The fashions of Leadville are set in the shafts. There are no "mashers" or "dudes" about there. A dandy would be deemed a puppy. Clay-soiled flannel shirts are signs of respectability. On the breast of a rough, flannel-shirted miner may at times be seen a diamond pin worth $2,000. I saw one miner with the price of his last bought garment on his back, where the dealer had left it: he had not thought it worth while to pull it off. One of the things which command respect in America is the public and private respect in which a man is held who works. The enterprising settler who, having need to move on, when his wife is unable to walk, and he having not yet acquired a prairie schooner, trundles her through the cities on a wheelbarrow, is mentioned with honor in the local papers. Some would say an act like this is not thinking of "appearances." But are not humanity and enterprise, in honest work within your means, the best of appearances, a thousand times nobler and more refined than the shabby, mean-spirited, contemptible "respectability" which is too proud to do a humble, kind, and useful act, but is not too proud to subsist at other people's expense, to live on food unearned, and wear clothes unpaid for? America knows these kind of people. They seek her shores: she does not knowingly "raise" them.

When Leadville—the great mountain city of America—covers the mighty summit on which it stands, and palaces and towers rise within it, what a study of mountains near, remote, and all around, can be made there! Some mountains are covered with dark green verdure near to the apex. That being of ice, it glistened in the sun as though it were burnished. Some mountains seemed laughing, some Satanic, others quite human; others as though they belonged to the skies, which their peaks seemed to touch, and to be parts of their glory.

It was in Denver, where one journal, in a well-written article, described me in the heading as "A Great Man." I was unaware of this, and none of my friends had ever discovered it. What was ingeniously and kindly said of us in the *Journal* of Topeka, and in the papers of the cities through which we passed, I may never relate, but may preserve among my home records of the pleasant and amusing civilities of travel. In his charming letters, "Ireland from a Tricycle," Mr. Duignan tells us that Irish proper names were descriptive of the places. The ancient names of Dublin meant hurdleford, Annamoe signified the food of the cows. I wished Americans would either invent pleasant names or borrow historic ones, or contrive such as some pleasant feature of the place suggests. In the honest, straightforward plains of Kansas, we came upon "Dodge" City. I felt uncertain of everything all the while I was in the evasive place. In Chartist days, one of the O'Connor colonies was at "Snig's End." Everybody felt mean who went there.

"Coolidge" is not at all a romantic name, though the land about it is full of romance. That is where railway officers were shot lately by train robbers. It looked an innocent city when we were there. That is perhaps why it was selected. Where cities are small, with special facilities for horsemen to escape, where cities are at great distances from other cities, and border ruffians are not yet extinct, train robbing occurs now and then. At one city, the town asked permission, while we dined at the hotel, to walk through our car, as the like had not been seen by the inhabitants. Whether the attractiveness of the car was noised abroad, I know not; but, next day, cowboys came down to make observation. Finding another train not to their satisfaction, they fired their revolvers through the windows. Of course, they seized the telegraph clerk, threatening him if he sent word up the wires. He said he would not, because he had done so before they got to him; and an engine with armed citizens from a near station came down upon them, and captured those who did not fly fast enough.

The cowboy, as you see him on his mustang riding through the corn, a sombrero on his head, his moustache moving with the breeze, his hair streaming anyhow, his brown corrugated throat all open, his red shirt puffed out by the wind, a pistol-belt round his waist, and trousers tucked into wide-mouthed top-boots,—the half-wild, resolute, dare-devil prairie creature is a picturesque figure.

Our way lay toward Lawrence city. Below the university there lay the vale of Lawrence, where, in the days of the Civil War, Quantrell came down one night with three hundred mounted Rebel ruffians, and at daybreak shot all the men as they left their homes and such women and children as were in the way, and burned the city down by six o'clock. It was an unarmed city, many miles from any other then; and the murderers were well on their way back to the South before any pursuit was possible.

The Bishop of Kansas told me that, when a boy, his geography books described the fertile plains we were riding through as a "great desert." We could see that Kansas is not a bad place for a settlement, where, as we have said, forty-four pound melons can be had at ten cents apiece. Dr. Abernethy's advice to a plethoric and indolent patient—"Live on sixpence a day, and earn it"—could be acted upon in Kansas; for there a vegetarian could live on a cent and a half a day, and not earn it. He could beg that out there.

A friend of mine, who in former years had explored California and Coloradian regions inspecting and estimating the value of gold fields, had seen that lone settlers sometimes were in need of a little more capital to farm their land adequately. With such aid, they could obtain ample competence. He therefore intrusted a sum of money to an agent (who was under great obligation to him, and on whom he believed he could rely) to lend out discerningly, and to transmit to him the interest accruing. In the valley where the agent was raised, he seemed a man of good honor; but, in the thin air of these mountains, his morality seemed to become rarefied, and was no longer condensed into remittances. My friend asked me to collect these outstanding funds, as I passed through the district. I had knowledge of things out there to guide me. The descendant of a gentleman well known in French literature, whose father was the secretary of a diplomatist of great name, had a few years ago come to London. It was there I knew his mother. He had travelled himself in the parts I had to visit, and had invested money in like manner as my friend had done, and was troubled in the same way, by what Douglas Jerrold called the "un-remitting" attentions of his agent. One night, he arrived himself in the city which I had to visit. He had left Europe without any word of his intention to appear in America, and suddenly sent for his agent to the hotel at which he stayed. The agent came, cool, enthusiastic, and delighted to see him, and spent the evening with him. They dined together with hilarity on both sides, for the agent had promised to bring over in the morning both accounts and balance due. Next morning, the gentleman was found dead in his room. There were no experts in toxicology consulted, if they were at hand. It might be heart-disease or excitement of travel leading to apoplexy which caused the poor gentleman's sudden demise. It was long before the death of the investor was known in England, and accounts, interest, and capital alike have never been heard of further. I was more fortunate in recovering funds; but the affair is not yet ended, or I should relate the adventures which befell me in the expedition I undertook.

We spent days of ceaseless interest in Scalpland on our return journey to Chicago. Hearing of curious objects in one of the railway cities, I took my daughter into a saloon, and was given permission to take her behind the bar, where she could examine the dress of an Indian, slain some time ago, around whose belt hung several scalps,—one that of a white girl who had auburn hair. Men capable of those things were still to be seen about. As the prophet predicted the day when swords would be turned into ploughshares, we, happily, saw the day when the knife of the Indian is melted into steel rails for peaceable people to travel over.

The engine given us by the Topeka and Santa Fe Company was the best, or one of the best, known in the land. Our engineer was a bright man, with remarkable intelligence and judgment, who could be entirely trusted. We had a merry-minded, competent colored steward, whose commissariat never failed; and we had a well-informed conductor, whose omnipresent knowledge of the movement of every train by night and by day kept us clear of every danger; and, wherever he said we could go, our engineer could be depended on to take us. The boiler of the engine was enclosed in a handsome strong glass case; and on either side were stretched soft crimson seats, serving as sofas. My daughter and Mrs. Leach would go out there, and lie and watch the prairies for eighty miles at a time. Had the boiler taken to wilful ways, they would certainly have been extensively dispersed in those parts. It was, nevertheless, a great luxury for them to be able to enjoy such splendor and such peril.

Crape floated at the end of the engine, as it did on every engine that day belonging to the great railway line. A few nights before, a collision had occurred at Topeka, when a bright, brave engineer, like our own, lost his life. He had arrived with his train, when he found another train darting upon him. His assistants leaped from the engine, and the people on the platform called out to him to leap off, which he might have done; but such was his confidence in his capacity, his courage, and heroic sense of duty, that he remained, believing he could reverse the engine and save it. His arm, grasping the valve-gear, was all that remained of the intrepid engineer. The crape we carried on our engine was for him. He was to have been present at the marriage of his brother the next morning. At Topeka, we took the brother and his pretty bride into our carriage, on their wedding trip to California. I gave up with very great pleasure my separate apartment in the car for their convenience. It was the only way whereby I could show my regard for the act of his brave brother.

HOLD the hand that is hapless, and whisper, "They only the victory win
Who have fought the good fight, and have vanquished the demon that tempts us within;
Who have held to their faith unseduced by the prize that the world holds on high;
Who have dared for a high cause to suffer, resist, fight,—if need be, to die."

CORRESPONDENCE.

CORNELL AND PROF. ADLER.

Editors of The Index :—

"Of the disgraceful action of Cornell in the matter of Prof. Adler, everybody knows." So writes my friend Mr. Kennedy in his brilliant paper on "The D.D. System of Education." Now, I am not "everybody," and cannot, therefore, be expected to know. But I have been trying to find out, and what I am told here is something like the following.

A few years ago, at the suggestion and cost of a generous friend in New York (Mr. Seligmann, I believe), Prof. Adler was engaged to deliver here a two years' course of lectures on Hebrew literature, which courses he gave; and the engagement was not renewed. Whether Mr. Seligmann's offer was renewed and declined by the trustees, I do not know. If it was offered, I have reason to infer that it was (or would be) declined. But that a university appointment is not renewed can be a ground of complaint to nobody, though it may be of disappointment to many. The appointing body acts as much in its own right in making or not making an appointment—acting under its own sense of responsibility to the institution it represents—as I do in selecting my own guests for a dinner-party. We have a right to object to or criticise their policy; but, if they act in good faith, it is not "disgraceful." That the general policy of Cornell is liberal, and very broadly so, no one doubts who knows anything of its President, and so long as that policy has his approval.

Very likely Mr. Kennedy knows of circumstances, which I do not, that justify his expression. But the ostensible grounds of not reappointing Prof. Adler (if it was proposed to do so), as I was told, were these. He was appointed, as I just said, to lecture on Hebrew literature,—as was understood here, but as he probably did not understand it himself. For, in his introductory lecture, he announced that his first year's course would be on Buddhism, and not Hebrew literature at all. And, as to the second year's course, which did take up Hebrew topics, it was stated that he did not deal with the linguistic or literary aspect of the subject, as was looked for, but appeared to make himself rather a propagandist of views which called out a good deal of suspicion and obloquy against the University. Of this, again, I have no knowledge, and presume that it was quite an unnecessary alarm. I dare say the views were all right and proper to be taught, and have no idea that they were more radical than are taught every week in the Harvard Divinity School. Still, it should be considered that Cornell professes a position absolutely neutral in theological matters, and can maintain it only by keeping strictly secular in its courses of instruction. At all events, this is the view which the trustees took; and, unquestionably, they did not desire to continue Prof. Adler's courses.

There is a difference, you see, between being absolutely free, not only in your own opinion, but in the full statement of all the evidence of facts, and being, or seeming to be, the propagandist of a distinct order of controverted opinion. And this difference should always be borne in mind. For anything I know, the action (or the non-action) of the trustees here may have been both ungenerous and unwise, and Prof. Adler no propagandist at all. But the claim or attitude or reputation of the University, as one of broad liberality, is of great value to it and to the country at large; and it is maintained with some difficulty in presence of a public that cannot understand what liberality means. I should be extremely sorry to believe that its action had been "disgraceful" in any fair sense of that word, and beg that Mr. Kennedy will explain more precisely what it was.

J. H. ALLEN.

ITHACA, N.Y., Jan. 3, 1883.

NOT WHOLLY UNKNOWABLE.

Editors of The Index :—

The agnostic's creed, by B. F. Underwood, published in your issue of 15th, is in some respects, I think, excellent, but, I suggest, somewhat impoverished by an extreme know-nothingism concerning God and a future life.

You concede that there is a Power (you will doubtless be charitable in respect to *p*'s, whether large or small) in which we live and move and have our being. Does not this Power, very largely at least, exhibit infinite wisdom? Is there not throughout the universe, so far as we can see, a strong tendency toward progressive amelioration in the condition of things? I cannot accept the idea that God is *wholly* unknowable, without ignoring the foregoing (for me) verities. Next, as to the immortality of the soul. You regard all forces as uncreatable and indestructible. Why not the interior force of which I have for many and many a year been conscious,—the soul force? A few words in reply, whether in *The Index* or otherwise, will be gratefully received.

Very truly yours,

F. O. DORR.

TROY, N.Y.

PERSONAL ITEMS.

LOUISE MICHEL in prison is writing graceful stories for children.

MRS. MATTIE P. KREKEL is announced to deliver the oration at the celebration of the one hundred and forty-seventh anniversary of the birthday of Thomas Paine, to be held at Pittsburg on the 29th. Mrs. Krekel is an able and eloquent speaker.

THOMAS HOLLOWAY, the well-known London manufacturer of the patent pills and ointment, who had amassed a colossal fortune by the success of his medicine, died of bronchitis at his residence, Tittenhurst, in England, a few days ago, at the advanced age of eighty-four. He was worth $25,000,000.

MRS. ABBY HUTCHINSON ANDERSON, wife of Hon. S. G. Anderson of Hutchinson, Minn., died in New York City, Saturday, the 5th inst., of consumption. She was a daughter of Asa, one of the original Hutchinson family of singers, and accompanied her parents and brothers on their annual concert tours for many years.

JOHANN PETER LANGE, the celebrated German theologian, author of several exegetical works of great ability, and whose Commentary on the leading Books of the Old and New Testaments was translated into English by Rev. Dr. Philip Schaff, was found last week in a canal at Hamburg. It is supposed he committed suicide, and probably while insane.

IN a letter dated the 12th inst., Capt. R. C. Adams writes: "I have suffered a good deal from internal injuries, but am rapidly recovering, and expect no permanent ill effects. It was an interesting experience, and I shall perhaps write out some reflections for you. I have many letters assuring me of God's love in smashing me up, which is very comforting."

MAX MUELLER says that Charles Leland is inducing the Red Indians of New Brunswick to communicate to him all their traditions, national songs and superstitions, and also the art—which, it is said, they alone possess—of reading wampum strings. Mr. Müller is of opinion that, with such men as Brinton, Trumbull, Horatio Hale, and Charles Leland, all reproach that America does nothing for American philology will soon be wiped out.

KATE SHELBY, the fifteen-year-old girl who prevented a disaster on the Chicago & North-western Railroad near Moingona, Ia., last year, is to be handsomely rewarded for her heroic act. Not only will the Legislature of that State present to her a memorial in the shape of a medal, but enough money will be appropriated to defray the expenses of a liberal education for her until she is twenty-one. Besides this, steps are being taken to raise a popular subscription for her family, which now relies for support wholly on her widowed mother.

THE Cincinnati *Inquirer's* hatred of civil service reform is intense. Among the startling head-lines announcing the defeat of Senator Pendleton were the following:—

SCREW THE LID DOWN OVER PENDLETON'S SENATORIAL REMAINS,

AND LET THE BEARERS REMOVE THE CORPSE,—IT IS BECOMING OFFENSIVE.

The same journal says, "It is safe to assume that, when Mr. Pendleton hatched the civil service bill to keep Democrats away from the fireplace, he did not know he was so soon to be turned out into the cold, bleak night himself."

THE four hundredth anniversary of the birth of Ulric Zwingli, the great reformer of Switzerland, was celebrated on New Year's Day in nearly all the reformed churches of the Lehigh Valley. In towns and villages, the churches were appropriately decorated with evergreens, mottoes, and portraits of Zwingli. The Zwingli memorial services will be continued throughout the Reformed Church in Europe and America during the present month. Zwingli was a great character, Swiss patriot and warrior as well as reformer, and well deserves recognition and honor from Protestants of all sorts. His fame does not rival Luther's, although he died with battle-axe in hand on the field of Cappel, fighting for freedom of thought in Zürich against the Swiss cantons that fought at the beck of Rome. He had a finer nature than Luther's and a more liberal spirit, but he could not have taken the place of Luther in the great awakening.

THE *Presbyterian* copies into its columns portions of an article which appeared originally in the Boston *Transcript* from the pen of Rev. E. C. Towne, reflecting severely on the character of Mr. G. H. Lewes, the distinguished philosopher and *littérateur*. No proof whatever is given to substantiate the statements, which are opposed to the testimony of those who were intimately acquainted with Mr. Lewes and George Eliot, and seem to be the repetition by Mr. Towne of some mischievous or idle gossip he heard in England. Such statements, wholly unsupported in regard to a great thinker and scholar made years after he is dead, will not be readily believed by fair-minded men or women, and are likely to do more injury to those who make them than to persons concerning whom they are made. Since Mr. Lewes was a free thinker, it was not to be expected that the *Presbyterian*, before copying this stuff, would consider whether by reprinting it, it would not be circulating falsehood and slander in regard to the dead.

THE recent rumor that President Arthur was sick resulted in telegrams ordering Washington correspondents to call upon him. The President's health, according to his own statement to the reporters, was never better since coming into the White House. Some idea of the interviewing can be formed from the following extract from a published report: "'Do I understand you to say,' asked the President of a correspondent, 'that you were ordered to find out all about the nature of my illness, my present condition, and whether I am as seriously ill as reported? Are you a physician?' Of another, he asked: 'Then, the fact that I have been in public every day, or nearly every day, this week, that I have been here at my desk more constantly than usual, is not evidence of good health. Who invents these stories? How do they originate? Why are they circulated?' were three conundrums asked in rapid succession, and passed without answers. 'You are charged with being ill and hiding the fact from the public,' said an impudent correspondent. The President laughed at the charge, but could not deny that secrecy was one of his strong characteristics. 'You are sure you have not heart disease, apoplexy, paralysis, sun-stroke, or any other disorder that may surprise the public without a moment's notice now or six months hence?' was asked, and answered with the blandest of smiles, 'Not that I know of.'"

A WASHINGTON correspondent of the *Commonwealth* writes: "There is a great deal of sympathy felt for Mr. Henry Villard, who was once a correspondent here, and is still remembered very pleasantly by some of the elderly correspondents and very many of the permanent residents. Before the war of the brokers on the 'Villard securities,' so called, he was estimated worth $10,000,000. By the decline in those stocks from the persistent 'bear' treatment, stimulated largely by the cool and determined manner in which he refused to yield to its clamor, that fortune has been almost wholly dissipated. But Villard acted like a man throughout, and especially at the culmination of his troubles. He sought out all who had invested through his advice, and took their stock at the price they paid. This cost him a small fortune. His plucky wife, Fanny Garrison Villard, surrendered $500,000, settled on her, to the same end. The brothers-in-law, William Lloyd and George Thompson Garrison, are, it is understood, wrecked financially along with Villard. The other brothers-in-law, Wendell Phillips and Francis Jackson Garrison, had no ventures in stocks of any kind, and are fortunately solvent, though neither is in mercantile business. Mr. Villard is not a man to sit idly or moan continuously over misfortunes. And it will be surprising, if he recovers his physical health, if he is not heard from again; for he possesses unquestioned business capacity, and has his friends' entire confidence."

The Secret of the East:

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE INDEX,
44 Boylston Street, Boston, Mass.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis,

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. R'Y
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c. per line.
" 13 " 25	"	. . .	8c. " "
" 26 " 51	"	. . .	6c. " "

CURRENT TOPICS.

THE most prominent topic of conversation and a cause of general and profound sorrow the past few days has been the loss of the "City of Columbus" off Gay Head, by which over a hundred persons perished,—certainly one of the most terrible disasters on record.

AN exchange says: "Michigan, by a provision of her constitution, forbids not only the employment of a chaplain in either house of the Legislature, but also prohibits praying or any form of religious service in either house. The men who drew up that constitution evidently looked upon legislators as past praying for."

THERE is one "unreconstructed" Southerner, who still has such unswerving faith in the righteousness of "the Lost Cause" that he has preserved a record of all the slaves—one thousand in number—formerly owned by his family, which record he keeps, confident that he or his descendants will receive pay for them from the national government.

SAYS the Boston *Transcript*, "As not a single passenger riding in a passenger train was killed last year in Massachusetts except from his own fault, and as there were over sixty-one million passengers carried an average distance of fifteen miles each, it is plain that it has become about as safe to ride in the cars in this State as to stay at home."

IT reads a little queerly in a country which, in religious matters, is decidedly Protestant, that the State of New Hampshire, now forming a portion of the Catholic diocese of Portland, is to be set off into a see, which will be known as the Diocese of Manchester, and that Very Rev. William Bryne, Vicar-General of the Arch-diocese of Boston, will be the first Bishop of Manchester.

SAYS the Chicago *Evening Journal:* "The recent disclosures in this vicinity that bodies are being exhumed and stolen from cemeteries for 'the benefit of science' shows that doctors sometimes are as bad as certain pawnbrokers and second-hand dealers, in being the receivers of stolen goods. We respectfully suggest that, if 'science' cannot prosper without enlisting thieves and vampires in its service, it is about time for it to close up shop."

"C. K. W." IN the Boston *Transcript* observes: "Who can doubt that a pastoral letter published by the bishop, showing Dr. Newton's attitude in regard to the Bible to be erroneous, would have more influence with Episcopalians than all that the accused has said or can say? Is it not probable that they try to silence him, because they cannot answer him, because his position is sound and firm? Dr. Newton has shown himself peaceable as well as devout, zealous, and intelligent. The Church may well consider whether she can afford to treat such a person in such a way."

WE are in a fair way to find out what "stuff dreams are made of"; for the English Society for Psychical Research has "given up," as too elusive, the "ghost" it has been in search of so long, and now invites through a circular "the dreamer of dreams" to send in his or her experiences, especially inviting relations of those imagined to be synchronous with unfortunate events. We envy the courage of that society. In addition, here in America, an enterprising Western man has started a monthly journal entitled the *Dream Investigator*, devoted to "mental philosophy as manifested through dreams."

ONE of the individuals opposed to opening the Bartholdi Loan Exhibition on Sunday, interviewed by a representative of the New York *Herald*, said: "These work people see the various objects of refinement and luxury which adorn some rich men's homes; and, if they have any tastes that way, it creates feelings of envy within them. They cry, 'Why cannot I also have these?' and communistic feelings are born within them." Another said, "The truth is, the laboring classes are not yet educated enough in art matters to come to exhibitions of this sort, even if they are opened free on Sundays." Such utterances are from men who are really more in need of true education than are the "laboring classes" for whom they feel contempt.

THE Rip Van Winkles of the world are not yet extinct. One longs for a description by a Mark Twain, alive to all the humor of the situation, in reading of the disappointment evinced of an old farmer whose home was somewhere in the mountains of West Virginia, who, all unaware of the emancipation proclamation of a score of years ago, concluded recently to dispose of some of his surplus live stock in order to pay some bills, and took a couple of his best negro servants to Staunton, Va., to sell them at the highest market value. His consternation and disgust on learning that his slaves were free men and their own masters, and that he had no more legal ownership in them than they in him, can be better imagined than described.

THE Boston *Sunday Herald* says: "The Mormon question is difficult, because it involves the treatment as malefactors of a population which is honest, industrious, and economical, with a local polity that puts to shame older and richer communities. Mr. Barclay, an English member of Parliament, gives his impressions of Mormonism in the *Nineteenth Century*. Here is an intelligent observer from outside. He finds the Mormons tolerant, temperate, peaceable, and industrious. Their taxes are low, paupers and criminals are few. Polygamy is rare, and doomed to disappear. Of course, this is a mere surface view; but it is significant of the difficulties of the question, which should be kept free from prejudice, and treated with the broadest statesmanship."

THE Springfield *Republican*, in a discriminating and sensible article on Walt Whitman's *Leaves of Grass*, says that "the truest valuers of his genius" "do not, like the prurient prudes, call him immoral, any more than they call a dung-heap immoral, but they find him at times more offensive than any dung-heap. His sin is not against virtue, but against taste; and 'taste' means a great deal here. It means sweetness, modesty, and decency, among the rest, all of which Mr. Whitman outrages. His warmest admirers (always excepting those who have quite lost their head on the subject) have to admire with a qualification. . . . Mr. Whitman may rest assured that his peculiar form of expression, his verse with a rhythm like winds and waves,—like steam pistons and railway trains also, perhaps,—does not hinder his fame. There is nothing the matter now that there was not when Emerson argued with him on Boston Common, nigh thirty years ago. But, if he was proud of withstanding Emerson, no one else can stir him; and the world will have to wait till he dies to have a *Leaves of Grass* which we can leave on the family table."

A WRITER in the *Christian Register* says that preachers who have the largest audiences and the greatest popularity are "those whose Orthodoxy and whose Rationalism are almost equally imperfect." This is undoubtedly a correct statement, and very happily worded. The phrase quoted indicates very well, in a general way, the thought of those ministers who reflect the mild, modified dissent of the popular mind from the most repulsive dogmas of theology and the misshapen, indistinct, and blurred popular conception of modern thought. The sermons of such preachers have no attraction whatever for disciplined and vigorous thinkers, but they are no doubt just as necessary in this transitional age as is the condition of those whom these preachers represent. Even a great many of the so-called Liberals are so much under the influence of theology and its methods, and so little appreciative of the thought and methods of men like Darwin, Spencer, Huxley, and Lewes, that declamation, dogmatism, and indiscriminate denunciation with them are more popular than the carefully reasoned thought and judicial fairness of the men whose names they have learned to speak. Saturated with the influence of theology, these minds do not become liberal in any true sense of the word by dissenting merely from one and assenting to another class of views.

THE NEW SCHOOL FOR PREACHERS.

Our article in *The Index* of last October, entitled "Wanted,—A New School for Preachers," has called forth, as we hoped it would, a valuable and varied discussion. First came Rev. Heber Newton's strong indorsement of the need and the practicability of the new broad school we had briefly sketched. His word, as coming from the borders of the Episcopal Church, was peculiarly significant. Later, Rev. Mr. Gill, a representative of liberal Methodism and of a broad, scholarly, philosophical spirit that is rare in that denomination, came to the side of Mr. Newton in an earnest appeal for the same project, returning again to the subject last week in an elaborate presentation of his ideas upon it. Outside of the Church, speaking from the platform of those who put "ethical culture" in the forefront of all religious teaching, Mr. Salter has given his testimony in the same direction. Mr. Mead, from his philosophical and historical studies and his observations of modern society from the lecturer's desk, has added his strong word in behalf of the scheme. Col. Higginson, now more specially a representative of literature, yet keeping his loyalty to the reformatory ideas to which his earlier years were devoted, though pointing out some of the diffculties of the enterprise, has expressed his belief that these difficulties may be overcome and the new school successfully established. Mr. Kennedy, with fiery zeal, has spoken for a class of younger men who are eager for the work of a new ministry for human redemption, and are still chafing under the memories of what the existing ministerial seminaries have *not* done toward equipping them for the tasks they most want to take up. Mr. Savage and others, from the posts of practical service as ministers, have added briefer words to the discussion, but all pointing to the same end. The united voices of the different witnesses is: "The school is greatly needed, the scheme is practicable. Shall we not have it?"

There is, too, essential unanimity among these different voices as to the curriculum of the school. At least, no such variance appears among them that it could not be readily adjusted, should the matter get to that practical point. All alike demand that the school shall be absolutely free; that it shall be committed to no kind of sectarian dogmas and to no presuppositions of philosophy, but that it shall follow the spirit and methods of the best scientific investigations in seeking the truth, and shall keep specially prominent that large circle of studies which will practically serve social amelioration. Any differences that there may be as to the proper proportioning of the different branches of study are too slight to become irreconcilable.

The discussion of the subject, indeed, has now gained such momentum that some of our correspondents are becoming a little impatient for something to be done. One of them has suggested that the Free Religious Association should call a convention specially for consideration of the subject and for inaugurating, if possible, some practical plan of procedure. Another advises the immediate opening of a subscription book for receiving donations and pledges of money for the prospective institution. It becomes necessary to say, therefore,—not for the purpose of weakening the ardor of these friends of the project, but that all who write upon the subject may have the advantage of writing upon the same basis of facts,—that the conditions of the problem (so far, at least, as we know them) have not yet advanced to the point for such practical action as is here suggested. The proposition which Mr. Wade, of Cleveland, made to the Unitarians, is still, as we understand, in the hands of a committee appointed at their National Conference in 1882. That committee may yet report some plan for accepting and carrying into effect Mr. Wade's generous offer. We do not remember that any exact time was specified for which the offer should hold good. But, naturally, we should suppose that committee will be expected to make some kind of report at the next National Conference, to be held in the autumn of this year. Should it fail to report any practicable scheme at that time, then, we presume, Mr. Wade will feel free to retake the proposition into his own hands, and to adopt such other action as shall seem to his judgment best. Until that emergency arrives there does not seem much room for definite practical action elsewhere, except for the purpose of showing the general interest that exists among earnest Liberals in the establishing of the proposed school on the broadest foundation. The conditional voluntary offer of sums of money, of considerable size, from any wealthy persons who may wish to see the school put on such a basis, might have a good effect to this end. But, for anything more than this, the time, in our view, has not yet come.

And our own purpose in starting the discussion has been, first, to do what we could to arouse the Unitarians to a sense of the great opportunity that has been put within their reach. Many of them, we have reason to believe, entirely agree with us that to establish another denominational or semi-denominational school would be a needless effort. We have sought to strengthen their purpose to resist the merely denominational influence and to work for the broader idea, convincing them, if possible, that it will be safe to strike for that, even if they have to lose the aid of the more conservative wing of their body. And, secondly, we have hoped that, if the Unitarians should not accept his proposition, Mr. Wade might be led to see that his plan need not thereby fail. Believing that he would himself be best satisfied with a broad, unsectarian school, and that he has turned to the Unitarians for the supervisors of his trust because he sees in them a compactly organized and responsible body of people who come pretty near to his thought, we have wished to show that there might be a possible efficient organization of liberal elements which could successfully carry out the special purpose he has at heart, and for which no one denomination would be responsible. A school founded on the broadest basis of rational inquiry, and, to use his own expression, "kept open always at the top," we believe that the earnest liberal sentiment of the country could be trusted to worthily maintain.

WM. J. POTTER.

THE MORAL TEACHINGS OF DARWINISM.

Two able and impartial students of this subject, Mr. B. F. Underwood and Mr. H. W. Holland, have recently reached very different conclusions, though they started from the same premises and worked in the same spirit. The first point of controversy is how far our kind feelings and actions should be directed to the welfare of our own family, race, and nationality. Universal philanthropy sounds well; but we all know that our best work is done with direct reference to the wants of our kindred, friends, and fellow-citizens. Far as the author or agitator may look beyond the present, it is only to people of so nearly his type of mind and character as to be fairly called his race. Patriotism, family feeling, and neighborly sympathy have inspired so large a part of the world's golden deeds that I am inclined to think that our generous feelings gain more than they lose by being thus limited. Sentiments of universal brotherhood are apt to become too thinly spread out to retain much strength and vigor.

Most of what Mr. Underwood says about war, I approve of heartily, and so would the essayist; but I must differ from him so far as to admit that there are cases in which a superior race is justified in conquering an inferior one, as has been done in North America already, and as needs to be done in Turkey to-day. I rejoice in all the instances where Indian land was acquired by amicable treaty, and wish they had been more numerous; but it was better to have some wars take place than to have New England remain a mere wilderness. My own preference is decidedly for peaceful competition, and I am glad to see that it is rapidly enabling civilized races to take the place of savage tribes all over the world. If we can consult the interests of universal humanity in any way, it is by giving its worthy members all the room they need for growth, even at the expense of the unworthy. This, in fact, is the central principle of the essay,—namely, that the interests, both of each nation and of all mankind, require that those men, women, and children who have better morals and more ability than the rest of the community should have the utmost possible liberty not only to retain their honest earnings, but to increase in numbers. It is for this reason, in the third place, that the essayist says of his theory, "In the treatment of paupers, it [science] forbids all out-door relief, because it encourages undesirable fertility, and requires an extended poor-house system with separated sexes." I quote the whole of the sentence, because Mr. Underwood, though not meaning to be unfair, omits the first clause, and says that the essayist's system "forbids all out-door relief," whereas, no objection is made to giving such relief to anybody but paupers. These should certainly be kept where they have no chance to increase and multiply, and this system is fast becoming established in civilized countries. I wish, as does the essayist, to have the industrious and virtuous so assisted that they "need never become paupers."

On a fourth point, the punishment of criminals, I agree with the essayist that alleged insanity should no longer secure immunity from punishment. This, and limiting the pardoning power and lengthening the confinement of habitual offenders, are the main changes which he and I wish to introduce. My own strongest wish about criminals is to have them given greater opportunity to reform; but the safety of our posterity as well as of ourselves demands that prisoners who do not reform shall remain shut up as long as possible. The essayist is "opposed to making our land the refuge of poorer foreign blood"; but I am not aware that he would favor any regulations stricter than those now in force, except as against Mormons. We should welcome all industrious, intelligent, and virtuous immigrants; but we want no increase of paupers or criminals, whatever their race. The essay, as originally read, took the same noble view of education that Mr. Underwood does; and I certainly wish, like him, to have every child given all possible opportunity to develop its capacities and powers. The only other point of any importance is that Mr. Underwood, while always seeking to treat the essay fairly, and generally succeeding, inadvertently says that it "is opposed to all trades unions"; whereas, the essayist, in his own abstract, which appears with the criticism in *The Index* for January 10, says his theory "is opposed to all limitations on competitions in the shape of trades-union rules for equal wages, forbidding apprentices, and the like." Trades unions, in their legitimate sphere, were not objected to.

Let me add that the positions of the essay about paupers, criminals, and savages, as well as about patriotism and family ties, seem to me fully justi-

Digitized by Google

fied by the most successful experience of the ablest races and nations. My study of history leads me to believe that all progress has been in this direction and on this plan, and will continue to be. Nothing is more to be desired than that the vicious and brutish should give place to the intelligent and virtuous.

The question is not whether sympathy with and education of humanity are useless. No one claims that. It is whether we cannot assist them in raising civilization by scientific customs. Is it wise to ignore science and discard its most powerful weapon, heredity? In the very passage from Darwin cited by Mr. Underwood, the great naturalist expresses the conviction that the weaker and inferior members of society should not marry so freely as the sound. And the passage quoted from Strauss is still more strongly in favor of these views; for its burden is that the struggle for existence should be ennobled among mankind by the mutual obligation of kindred and race, which is one of the main points of the essay. The matter is not, however, one to be decided on grounds either of authority or sentiment, as *The Index* has often urged in religious discussions.

F. M. HOLLAND.

A THOROUGHLY SECULAR INSTITUTION.

Mr. Kennedy, in his interesting article on "The D.D. System of Education," says that "there ought to be not only one Johns Hopkins, one Harvard College in the country, but colleges of like and even greater liberality in every State." This remark suggests a few words about the University of California, in which liberality has reached the limits of the possible.

Like most great institutions of the kind, this one derives its wealth from various sources; but it is singularly fortunate in the freedom from conditions with which it holds its property. It is, therefore, not subject to interference from the heirs of bigoted benefactors. The income from its invested funds, amounting to about a hundred thousand dollars a year, is sufficient to pay most of its expenses; and occasional deficiencies are met by State appropriations or gifts from wealthy friends. Tuition is entirely free to all residents of the State, others being charged a small fee. Both sexes are admitted on equal terms. There are no dormitories or other boarding-school devices. The students are their own masters, and do precisely as they please, subject to suspension or expulsion for scandalous conduct.

The theological aspect was what I was coming to, through this long preface. The institution is thoroughly and uncompromisingly secular. No one can say that at the University of California he ever experienced any advantage or disadvantage from the expression of any form of religious belief. There is no chapel, and there are no religious exercises. Out of over sixty professors and instructors, there is one D.D. holding a quasi-honorary position in the law school. By the way, I should have mentioned that the statement of income, given above, does not include the professional schools. To return from this digression, there are represented in the faculty all shades of religious thought, from Methodism to Agnosticism. The Professor of Geology, Joseph Le Conte, is a distinguished Christian evolutionist; but the radicals find no fault with his Christianity, and the orthodox find no fault with his science.

Of course, such an institution as this cannot exist without opposition. Certain sectarian journals in the State find its iniquities a perennial theme, and the truly good are urged to shield their sons from its godless influences. Many a light-weight denominational academy with an imposing name keeps up a ridiculous pretence of competition with it; but the fact remains that the State University is the only place on the Pacific coast where a liberal education can be obtained, and that not many colleges in the United States can give a better one.

S. E. MOFFETT.

KINGSBURY, FRESNO CO., CAL.

THE SECRET OF THE EAST.*

From the stand-point of the popular scientific civilization of to-day, it can be confidently affirmed that old-fashioned ecclesiastical Christianity, the religion of Church and State, or the old dogmatic Christian Orthodoxy and supernaturalism, has become so obsolescent that it is an obstruction to social, moral, and mental progress. Furthermore, it is a falsehood, myth, and error in the light of current reason, nearly as much so as was at the time of its extinction the ancient religion of art, prophecy, song, and pagan statecraft, — namely, that of the Greek oracular god Apollo at Delphi. But, in saying this of any form of supernaturalism which tries to maintain itself to-day, one must not be understood as affirming that a great historic factor and phenomenon, such as was in its remote day and generation the fascinating Greek polytheism, and such as ecclesiastical and evangelical Christianity have been in later times, were altogether wrong in their place and time and utterly demoralizing and ruinous influences, debasing and belittling human nature, and not contributing in the least to its development and advancement. To affirm that would be to let our indignation at certain ugly aspects and stages of their history get the better of our judgment and reason. Have not all the mythologies and theologies of the past been outgrowths of human nature, "the necessary and structural action of the human mind," to borrow the language of Emerson? Modern rationalism says that they have been. Moreover, we may be sure that whatever has been for centuries has had a reason for being. Otherwise, it would not have been. Sterling, a whilom English disciple of Schelling, long ago affirmed that "all beliefs have followed each other in the history of the world according to a fixed law, and are connected by the same with all the circumstances of each generation; and, in obedience to this law, they emerge, unfold themselves, pass away, or are transmuted into other modes of faith."

No man at this late day knows or can, by any retrospective peering into the dark backward and abysm of time, know exactly what pagan human nature was as it exhibited itself under the influence of the great old ethnic civilizations of Greece and Rome in their palmy time. Of course, we can conjecture, and give a pretty shrewd guess in relation to the matter, because we have multifarious data to enable us to do so. But, after all our efforts, we realize that the peculiar pagan social, mental, and moral atmosphere is gone beyond recall or recovery by the most lively imagination, even when assisted by the vastest store of archæological knowledge; and, in the absence of that atmosphere, no amount of relics and souvenirs, in the shape of dilapidated and disinterred cities, of mutilated or whole statues, edifices more or less well preserved, works of art and personal adornment, and ceramics, to say nothing of the inestimable remains of Greek and Roman reflective thought, poetry, biography, and history, can enable us to feel as the breathers of the social atmosphere of paganism felt. The old ethnic civilizations as realities have passed utterly away. Suffice it to say that the most dissolute and abandoned man or woman of to-day of Christian antecedents, if he or she, by some magical, time-reversing spell, could be turned loose into the Athens of Pericles, Socrates, and Aspasia, would find his or her moral sense, or sense of decency and propriety, however blunted it might be by shameless debauchery, thoroughly offended and outraged at every step which he or she might take in the streets of the city of Athené Parthenos,—the city which, at the date mentioned, constituted the very crown and culmination of the civilization of the pagan foretime.

With this preliminary remark, one can say of Dr. Oswald's book, entitled *The Secret of the East*, that it is a book warranted from the stand-point of to-day, and that it is such an arraignment of the colossal Christian superstition and priestcraft of the past at the bar of modern reason and science as has never before been formulated. It is a history of Christian supernaturalism and ecclesiastical despotism and persecution, touched with the due emotion and indignation to make its nine chapters and introduction and appendix as readable as the most enthralling romance.

Nevertheless, and in spite of Dr. Oswald's anti-Christian philippics, it remains true that at the time of the advent of Christianity the one great need of human nature was a religion of asceticism and personal purity to cleanse it of the foulness of a phallic nature-worship. The Greek philosophy was more or less a religion of asceticism; but that was only for the few, for the *élite* in intellect and social position. Pythagoreanism, Stoicism, and Socraticism, with their uncompromisingly lofty and unselfish ideal standards of morality and mental aspiration, exercised no purifying influence on the Greek and Roman masses, or plebeians, who were treated by the philosophers as nearly as irrational as the beasts, and prone earthward in their propensities like them.

Christianity, at its advent, was the religion of the poor and despised people, a social communism as well as an outbreak among the nations of the West of Oriental mysticism, asceticism, and other-worldism. Even the great Greek poets, sages, and moralists had also taught that we are dust and shadows, hunters of shadows, and that there can be no satisfaction to the truly wise man in the possession of the good things and honors of this phenomenal, mortal life, but that the only quest and search which ought to engage us here is the quest of truth, and the search for the ineffable reality which hides behind and moves this evanescent phantasmagoria of earthly life. So that, if they were not other-worldly, the greatest pagan minds were un-worldly.

"Rerum lacrymae et mentem mortalia tangunt."

They, too, felt, if not with Oriental vividness, yet with great vividness, that the glories of our birth and state are shadows, not substantial things.

Whether Jesus Christ derived his other-worldly doctrines and *logia* from sources farther east than Palestine,—from the East Indian Buddha or not, as Dr. Oswald undertakes to demonstrate by a concordance of Buddhism and Christianity and a schedule of doctrinal or dogmatic analogies,—certain it is that Jesus was an Oriental mystic, spiritualist, and renouncer and denouncer of this phenomenal world of the same strain and type as Buddha. It is a strain and type that has always been and still is prevalent all over the East, from the sandy solitudes of Arabia to the still, sultry jungles of India, with their solitary *yogis* standing in life-long painful attitudes of penance and self-mortification, in order to extricate themselves from a world of illusion.

Meantime, historic Christianity means not only

* *The Secret of the East: or, The Origin of the Christian Religion, and the Significance of its Rise and Decline.* By Felix Oswald, M.D. Boston: Index Association, 44 Boylston Street. 1883.

Digitized by Google

the paganized Christianity of the Greek Church and of papal Romanism, with its Inquisition, organized ignorance and superstition and hatred of all social, political, and mental progress, with its poisonous Jesuitism and attempted suppression of all secular knowledge, reason, and science, and even yet entertained ambition of a world-wide ecclesiastical sway; but it means also Protestantism and a democratic, evangelical Congregationalism, with its personal independency and right of private judgment, which have made it the germ of the popular self-government, enlightenment, and liberty of to-day. Of course, neither Germanized, nor Anglicised, nor Americanized Christianity is the genuine Oriental article, which originated in the soft latitude of Syria among simple fishermen and shepherds, any more than the largely pagan Roman Catholicism of the whilom pagan nations of Southern Europe is. All the current forms of the Christianity of the Western, or Aryan, nations are highly sophisticated and rationalized, in commercial phrase, to suit the religious market of those nations.

It goes without saying that, in the Dark Ages, Europe became almost Orientalized in its unnatural contempt and renunciation of the world, and with its monkish vermin and *lazzaroni*, among whom were engendered all manner of obscenities and abominations, as Dr. Oswald so graphically sets forth. During that gloomy period, Europe did forget its virility and reason, and become fearfully superstitious, mystical, and other-worldly, for some reason or other only known to the incognizable Power or Deity that shapes our ends as individuals, races, and generations, rough-hew them as we may. But, at last, the *fiat lux* of modern civilization resounded through the darkness; and night, with all its sickly dews and birds of boding cry, began to withdraw, so that the nations of the West, or the Germanic group of European nations at least, began to exercise their reason once more, and to be themselves again in enterprise and courage.

Happily, ecclesiastical Christianity, or the dogmatic, priestly supernaturalism, which in the day of its arrogance and power burned Giordano Bruno —to whose memory Dr. Oswald dedicates his book —and humiliated the starry Galileo with his woes, is impotent any longer to stay the progress of science, before which, and the menacing aspect of European Liberalism, it cowers, pallid with the consciousness of approaching doom. For, undoubtedly, the whole vast fabric of the old Church-and-State system is powder-posted, and, under the shower of sturdy blows which are being administered to it in such works as Dr. Oswald's *Secret of the East*, is going to pieces.

B. W. BALL.

THE "CHRISTIAN STATESMAN'S" HOBBY.

The *Christian Statesman* will be satisfied with nothing short of a Christian amendment to the Constitution of the United States, which it advocates week after week and year after year with zeal worthy of a better cause. It wants a legal recognition in the fundamental law of the land of "Almighty God" as "the source of all power and authority in civil government," "the Lord Jesus Christ" as "the Ruler of Nations," and the Bible, "the revealed will of God," as "of supreme authority in civil affairs." The irreligion of our National Constitution, it declares, has "debauched the popular conscience," and is a continual "offence to God."

But many things which have been pronounced an offence to God by those professing to know the state of his mind have in succeeding generations, by the same favored class, been declared to be a part of God's plan. We cannot resist the conviction that these men who talk so confidently about the will and wishes of God as an argument against equal rights and religious freedom simply give expression to the will and wishes of their own minds. When they declare that God is displeased with the omission of his name from the National Constitution, and that it is his requirement that this government recognize the theological character, Jesus Christ as "the Ruler of Nations," we accept these statements as evidence that those who utter them, however sincerely, see the spread of those liberal sentiments which are gradually undermining their theology, and feel the necessity of securing the aid of the civil power to guard against the innovations of scepticism and science.

But such persons should ponder the words of Franklin. "When a religion is good," said he, "I conceive it will support itself; and, when it cannot support itself, and God does not care to support it, so that its professors are obliged to call for the help of the civil power, it is a sign, I apprehend, of its being a bad one."

The *Christian Statesman* keeps constantly before its readers the claim that morality depends upon the Christian religion; and then it argues that, since morality is indispensable to the security and permanence of the government, and depends upon Christianity, it is clearly the duty of the State to Christianize the government by the public official recognition of Jesus Christ as the governor of nations, and the Bible as of supreme authority, and by making all our laws and institutions conform to the doctrines of Christianity.

The fundamental mistake of the *Christian Statesman* is in the assumption that morality depends upon Christianity. Morality is natural and secular, and does not depend for existence or the practice of its precepts upon any system of religion. Its teachings were incorporated into individual and social life long anterior to Christianity. It depends not upon any system of faith; it requires no miraculous evidence; it is independent of theological dogma; no supernatural halo can heighten its beauty; no ecclesiastical influence can strengthen its obligations; it is confined to no one country, limited to no one age, restricted to no one form of faith, the exclusive possession of no one class, sect, order, nation, or race of men; it requires no written decalogue; it needs no single individual authority; theology cannot add to it, neither can it take from it. It has its indestructible basis in the nature of man as a feeling, thinking, acting being, and in society as an aggregation of such beings, with the manifold relations and the acknowledged rights and duties that spring therefrom. Empires rise and perish; religions grow and decay; special forms of civilization appear and give way to other types; but, as, amid all the mutations of human existence, the nature of man remains essentially the same, and through all these changes the social condition everlastingly persists, morality can never be without a foundation as broad and deep and enduring as humanity itself. It changes not; but, as Cicero says, it is "the same at Rome and at Athens to-day and to-morrow; alone, eternal, and invariable, it binds all nations and all times." Its highest *standard* is the enlightened reason of man. The better man understands his nature, and the more he is capable, by reason of intelligence and culture, of comprehending the object of society and his relations thereto, the better understanding will he have of the principles of morality.

Theologians could have no moral qualities, unless they had discovered them in humanity. They are observed in man; and, as in him they are admired in contrast to the opposite qualities, they are ascribed to the Universal Energy which theologians had first to personify and invest with qualities abstracted from man before they could conceive it as a moral being. Having done this, they most inconsistently declare there can be no morality independently of a book revelation and a theological system based thereon from a supernatural being. The fact is, the revelation revealed nothing that was not previously known to man, the theological system is but an outgrowth of the speculative intellect of man, and the supernatural being is but a conceptional creature made up of the intellectual and moral qualities of man.

B. F. UNDERWOOD.

ON the 3d inst., James Graves was executed at Newark, N.J. He was an eccentric old man, nearly seventy, and a recluse, whom street boys were accustomed to torment one way and another whenever an opportunity was offered. One night in December, 1881, he shot a boy who had annoyed him on several occasions. Seven physicians, among whom were experts on lunacy, testified that the man was insane: others testified that in their opinion he was sane. He was convicted, sentenced, and executed. He was so feeble and childish that on the day of the execution he could not be made to understand before leaving the jail that executive pardon had been refused and that he must soon die. His lawyer said: "Graves, you are going to be hanged to-day. You will die very soon." "Well?" replied the old man, in a questioning way. "Don't you understand me?" asked the lawyer. "I didn't rest last night," he answered, "and I don't know when I'll get better rest. Perhaps to-night. I must finish this thing, and next week I'll take it to the navy yard and sell it there," pointing to a little box which contained one of his "inventions on perpetual motion." This poor creature in his better days had been a free thinker, and even during his imprisonment he declined the services of a minister. After his execution, certain pious journals called special attention to Graves' unbelief in connection with his crime and ignominious death, but carefully omitted to mention the above facts, or to state that his companion on the gallows was a Christian who had murdered his wife and child, and that he was attended by a priest who heard his confession and "absolved" him before his execution. There was no question raised as to his sanity, although the crime was committed while he was drunk. That Graves was an insane man was evident from the examination of his brain after his death. Says the Springfield *Republican:* "After the execution, some thirteen physicians were present at the examination of the brain of the victim, and a unanimous conclusion was reached as to its condition. The brain weighed forty-one and three-fourths ounces, the healthy brain of males being on an average about forty-eight ounces. The convolutions had wasted away for want of nourishment. A marked discrepancy between the size of the skull and brain was compensated for by an unusual increase in the cerebro spinal fluid. Scars and other evidences of previous softening of the brain were found, and also signs of old inflammation. In the words of the report after the autopsy, 'these changes exceed in amount and intensity those ordinarily found in persons dying in lunatic asylums.' That Graves was a lunatic, and that the prevailing opinion of the experts before his execution was that he was not, are the two terrible facts that confront us. He was a subject for the asylum, and not the gallows."

THE *Christian Observer*, of Louisville, Ky., does not agree with the *Christian Statesman* and the

Digitized by Google

National Reform Association that God has "vested the government of the world in his son, Jesus Christ." Its objection is stated thus:—

When this Association teaches that God has "vested the government of the world in his son, *Jesus Christ*," or the Messiah, it teaches error. Let us draw a distinction. The Son of God, who created the world, is different in his relation to the world from the incarnate Son of God, Jesus Christ, who was born of Mary. It is true that the Son of God was the executive person in creation, and is the active person of the Trinity in effectively directing the political events of the world. As such, the State owes allegiance to his laws, the laws of natural religion and morality which were binding on Adam before the fall. But it is not true that "his son, *Jesus Christ*" (*the God-man*), is appointed to manage the civil or political affairs of this world. Jesus Christ, the *incarnate* Son of God, is head of the Church but not head of the State.... The relations of the State are to the Son of God as Creator: it has nothing to do with the Redeemer's kingdom of grace.

The *Christian Statesman* says this is "clear and explicit," but declares "that the Scriptures do teach with solemn emphasis that Jesus Christ, the incarnate Messiah, is the actual governor of the world, and of all moral beings which it includes. The distinction which our contemporary makes—namely, that the Son of God rules the nations as a divine person, but not as the mediator, the God-man—has no foundation in fact, and is contrary to the plain teachings of the Scriptures. For the authority which he exercises as the Son of God is inherent, original, and underived. It belongs to him equally with the Father, and was never conferred or given to him. But the authority which he exercises over the world, and all the mighty powers and forces which it contains, is expressly declared to have been 'given' to him by the Father, an expression which could only be used with reference to his mediatorial office." There is, it would *seem*, quite an important difference of opinion among our orthodox friends as to who is "the actual governor of the world"; and, since they are not agreed on this point and to avoid the possible consequences of a mistake in this matter, will it not be wise to take no steps committing the government to the views of either one side or the other? A constitutional amendment recognizing the wrong person might lead to trouble greater than is likely to result from the continued omission from the Constitution of any of the names above mentioned.

Some one having stated that Southern women who are obliged to labor for a livelihood are unable to maintain a high social standing, the Charleston *News* thus replies: "Few women who work for their living have time or strength to follow the rounds of social duties or pleasures; and, whenever such a woman has dropped from 'society' life, it is because of her own inclinations, or from some other cause disconnected from her work. We venture to assert that the most exclusive circle of the very best Southern society has never shut its doors upon any woman fitted by birth and breeding to enter it because she works for a living, and that even such 'dark places' as South Carolina have only honor and praise for the women who are not afraid of work." This is a misleading statement. It is true that few real workers "have time or strength to follow the rounds of social duties or pleasures," so called; and the result is that "society" people in these times are chiefly men and women who depend for their standing upon something besides intellectual or moral merit. Such people are of course ready to welcome any one whose achievements or standing will reflect credit upon their "society"; but, whatever their character or attainments, their "birth and breeding," if they have not wealth, and have not acquired recognition outside of "society," and belong to the "working class," in the common meaning of that phrase, they are not likely to receive "honor and praise" or recognition from the "dudes" who flitter and flutter in "society life." This is not only true in Charleston, but in Eastern cities as well.

The commission appointed by the late Parkes Robinson, Minister of New South Wales, to inquire into the operations of the Land Laws, issued their report last summer, a very interesting and instructive document, referring to which the Maryborough *Chronicle* says:—

Nothing more damnatory of the existing system of land alienation by free selection, as well as by auction, can be conceived; and the details given of the results of the war of classes it has engendered are perfectly hideous in their deformity. Vast tracts of country rendered useless by a carefully planned strategy of pre-emption, dummying, or purchase at auction; vast estates built up out of the wrecks of once thriving homesteads, or by the unauthorized yet successful amalgamation of adjacent squattages; whole districts, once the populous seats of rural industry, now desolate and silent, save for the tramp of the boundary rider, as he hastens on his daily rounds past the ruins of deserted villages, or snatches an apple from the orchard that was once, not long ago, a productive farm,—these are only a few of the tokens by which the advance of the fell destroyer, land monopoly, is traced. In every interpretation of the law, everywhere a criminal laxity; in the administration thereof, corruption unfathomable; whole sections of the population infected, almost beyond redemption, with a moral taint engendered of contact with foul example and unresisted temptation; life in the country rendered intolerable by unneighborly persecution; the people crowding into towns, and developing there all the vice and misery incident to densely packed communities; and, above all, the black cloud of landlordism,—the curse of the Old World,—distant as yet, but casting its shadow far before it.

EDITORIAL NOTES.

As heretofore in the absence of the junior edi tor, Mrs. Sara A. Underwood will, during the next six weeks, occupy his place in *The Index* office.

Any one who will send one dollar to the translator, Miss A. A. Woodward, Asgard, Madison, Wis., will receive a copy of the new edition of the *Spell-bound Fiddler*, noticed in another column, and an excellent cabinet photograph of the author, Kristofer Janson, and will have the satisfaction of knowing that twenty-five cents of each dollar so sent will go to Mr. Janson, a very worthy man, an interesting sketch of whose life from the pen of Miss Woodward (Auber Forestier) is printed in *The Index* this week.

Herbert Spencer says with truth that "conquest is not now as of old habitually followed by entire appropriation of territories and enslavement of peoples. The individualities of societies are largely preserved. Meanwhile, the altruistic intercourse is greater. Aid is rendered on occasions of disaster by flood, by fire, by famine, or otherwise. And in international arbitration, as lately exemplified, implying the recognition of claims by one nation upon another, we see a further progress in this wider altruism."

Our able contemporary, the *Catholic Review*, in its zeal for the Church it represents, loses sight of the truth, and even forgets to be polite. "What," it says, "is true greatness but virtue in man and woman? And where shall we find this virtue forever taught and preached save in the persecuted Church of Christ, which rears aloft the torch that he kindled once and forever? These men who preach the contrary doctrines lie with their lips and in their hearts." In its admiration of "virtue in man and woman," our esteemed contemporary should recognize the minor moralities of life, which forbid us to speak of those who honestly differ from us as men who "lie with their lips and in their hearts."

Mary Russell Mitford once told Mr. Hall the following story: "A lady was walking with her through one of the lanes (of Berkshire). They had a tussle of words, one asserting, the other denying that the peasantry lacked natural courtesy and politeness; and both had warmed with the discussion. They had to pass through a gate. Suddenly, a boy who was leading a cow started forward and opened the gate for them. Miss Mitford was delighted. It was a death-blow to her antagonist. The lady was more than surprised. 'Ah!' said she to the lad, 'you're not Berkshire, I'm sure!' This was the answer, '*Thee'rt a liar, vor I be!*'"

This liberty of studying the Bible in the best light is a liberty to be jealous of; and, if the Episcopal Church is worth anything as one of the chief constructive kinds of religion in America, it is worth something as a communion that is not shut up against the best scholarship of the best minds. Dr. Newton is not the only exponent of these modern views, perhaps not the best; but the liberty he has taken is a liberty which no living and flexible organization can safely restrict, except from motives of temporal expediency. Perhaps there is no good reason why Dr. Newton should make a martyr of himself, but the liberty which he has yielded out of deference to his friend and bishop is too precious in a growing and active organization to be limited or destroyed by superstitious fears that something dreadful will happen, if the truth is spoken the day before everybody accepts it. This aspect of Dr. Newton's case deserves serious consideration. A great principle is involved in it.— *Transcript.*

The Index.

BOSTON, JANUARY 24, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boy ston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

ASPIRATION.

The morn that whispers thee
No call to duty, writes
On the outflowing sea
No wave that craft invites,—
Who shall stand for it
Or crown the heartless wit?

The creed that hallows thee
No single hour, nor fills
Thy one life as the sea
Beats o'er the hidden hills:
Hark! this thou canst behold;
Tales warn us from of old.

We catch the strains that fall
Across the trembling brain,
But few speak of them all
To any answering strain;
Yet is there song to meet
The "yea" we send to greet.

Ah! who shall tell us where,
Or who shall sing us how,
Or bring to noonday's glare
The shadowy night,—endow
Darkness with glow of light
Or wrong with garb of right?

Enough! Not for thy will,
O Death, but be it said
For Life the eye may fill:
Our joy we give the dead,—
To days of use that build
Fair dreams by us fulfilled.

The Christs that tempt the strength
Of human pas ion break
With weaker goo t for length
Of greater good, and slake
Life with brave death, and give
One soul that all may live.

Oh, let the stream renew
That fed their deeds! We raise
Most wistful thoughts, and view
With quiet eyes the days
Time makes our own to bend
To some unfathomed end.

HORACE L. TRAUBEL.

I've found some wisdom in my quest
That's richly worth retailing:
I've learned that, when one does his best,
There's little harm in failing.
I may not reach what I pursue,
Yet will I keep pursuing:
Nothing is vain that I can do,
Since soul-growth comes of doing.

—*Anon.*

KRISTOFER JANSON.

BY AUBER FORESTIER.

When Kristofer Janson, lyric poet, dramatist, novelist, and favorite orator of Norway, visited America during the winter of 1879–80, in view of studying the practical workings of republican institutions and of becoming acquainted with the Scandinavian settlements of our North-western States, he was deeply impressed with the condition of the children of the North among whom he travelled and lectured. Surrounded by far greater possibilities of freedom and growth in this new, beautiful land of promise than they could ever have known in the old country, reaping rich harvests of material gains as a reward for toil and trouble, their progress toward the attainment of the full advantages of their new home was nevertheless impeded, the development of their finely endowed natures retarded, by the influence and teachings of their spiritual guides, the Lutheran priests. These shepherds, in terror lest their flocks should stray from the fold,—fondly believed to be the "true Church," the sole repository of the one "pure faith," using for their shepherd's crook the rod of fear of hell and of the devil,—were doing all that lay within their power to keep their cherished flocks under subjection to doctrines and opinions which even the most narrow of our orthodox churches have long since outgrown.

A more practical, more enlightening, more uplifting religion was evidently much to be desired, —a religion of which freedom, fellowship, and character-building in religion were large component parts. Björnstjerne Björnson, that lover of liberty and progress, who travelled and lectured in our North-west in 1880–81, with object similar to that which led hither the subject of our sketch, readily comprehended the entire situation. That so many of his own race were forced to lag behind in the march of civilization grieved him sorely; and he rejoiced all the more heartily in the grand work in which he found his friend, Prof. Rasmus B. Anderson, engaged, which was no less than that of drawing into the American common schools and universities the sons and daughters of Scandinavian settlers,— a work which is now bearing abundant fruit, a work whose difficulties and whose value can scarcely be estimated by any but those who have watched its progress, a work which necessarily aims a deadly blow at the bonds of superstition. To this visit of Björnson was largely due the second coming to our shores of Kristofer Janson.

But we must not anticipate. We must journey in spirit to Bergen, Norway, where Kristofer Janson was born, May 5, 1841. His father held the position of United States Consul; and so from earliest childhood there was naturally much at hand to draw the young Kristofer's thoughts to America,—the land of adventure, of freedom, the land visited by those daring Northmen of whose romantic adventures he read in the great tomes of saga literature found in his father's library, and over whose pages he delighted to pore. His early school days were passed in the Bergen Latin School; and from there, in 1859, he went to the University of Christiania. His was a deeply religious nature: a longing to be a priest early took possession of him; and so it was not strange that from earnest choice he entered on a course of theological studies. But when, in the year 1865, he stood before the world as a young *candidatus theologiae*, with a fair record behind him and a flattering career opening before him, he did not dare seek a charge. Thoroughly trained as he had been in all rigidly orthodox theological dogmas, well equipped as he was with instructions concerning the proper manner of dealing with heretics and free thinkers, —that is, merely to dismiss them with a shrug of the shoulders, and by no means to read their books, —and wonderfully orthodox as he believed himself to be, he hesitated to assume the responsibility of guiding others, because he had himself had so little experience in life.

From early youth, Kristofer Janson had watched with eager interest the language regeneration movement that was seething and fermenting in Norway. Since the political yoke of Denmark had been cast off in 1814 there had been a vigorous effort afloat to free the national tongue from its long thraldom,—in other words, to gather together the scattered, chaotic dialects of the old original Norse tongue and blend them into one harmonious, logically planned whole, to be put in the place of Danish, which had occupied the high seat in court and polite circles during the four hundred years of Danish rule. In 1835, Henrik Wergeland — Norway's noble pioneer of liberal thought in politics and religion, the father of the new national literature— had called attention to the treasure-trove existing in the language and folk-lore of the land. In 1840, a lexicon was needed by any Dane who would fully comprehend the writings of Wergeland, P. A. Munch, and others. In 1860, the desired lexicon had appeared. Regardless of all opposition, the movement grew in favor until, as Mr. Janson himself once said, it resembled a rolling snow-ball, increasing so rapidly in size that it threatened to become an avalanche. The gifted authors of whom Norway is now justly proud, and who are daily becoming better known to the world, are the product of this activity of the national sentiment. The language regenerators are divided into two parties: the first called the Danish-Norse strivers, of which Björnson is a prominent exponent, and whose efforts have been for the gradual introduction of expressive words and phrases from the spoken dialects into the written or book language; and the second known as the Norse-Norse, whose plan was to take the living language from the lips of the peasant, because he, having been brought little into contact with the outside world, must have preserved it in its purity, and build up from it a more and more classic book language adapted to the requirements of the entire nation. Although working by different methods, both sets of reformers have aimed at one goal, and must eventually meet on their way. The chief leaders of the Norse-Norse party were A. O. Vinje, with whom the whole scheme was a poet's dream, and Ivar Aasen, a profound scholar as well as poet, whose perplexing task it became to prepare grammar and dictionary, to restore order in the tangled mass of dialects, and trace every word back to its original saga form. A man of unusual poetic genius, ardent sympathies, and persuasive eloquence was needed to fix the attention of the cultivated reading public on this new old Norse tongue. Such a man arose in Kristofer Janson.

H. H. Boyesen, in his article on "Kristofer Janson and the Reform in the Norwegian Language," printed in the *North American Review* for October, 1872, remarked that the word "nationality" is the corner-stone of Kristofer Janson's labors. This is eminently true, and it is in the highest sense a consecrated corner-stone. And so the first, best fruits of our hero's genius were given to the world in language to which polite ears were as little accustomed as they had once been to the folk-music now so highly prized; and the long list of brilliant productions bearing the name of Kristofer Janson would in themselves suffice to bring honor to the

Digitized by Google

tongue in whose framework they were enshrined. The same burning longing to aid and uplift his people led him to turn from public honors that might have been won by him, when, in 1865, he decided to delay assuming priestly responsibilities. Together with his friend Kristofer Bruunl he opened in the little mountain parish of Gausda, a people's high school, for the advanced education of the peasant lads of the vicinity. Kristofer Janson has himself said that the object of this school was to set free that which was bound up in the peasant,—the thoughts and feelings faintly dreaming in his breast,—to cast an ideal halo about every human occupation, and to raise up those on whom nature had lavishly bestowed her gifts into the sunshine of the congenial atmosphere that could alone enable them to ripen into maturity. The history, geography, and literature of their race and country were taught the pupils, they were introduced to the study of the world's ancient and modern literature, all that was noble and good was held up before them in its most alluring form, and they were made to appreciate the fact that the ideal and the beautiful are by no means at issue with the practical toil and daily duties of life. In the evening at his own house, it was the wont of Mr. Janson to gather about him his pupils, and warm their hearts with the grand old Norse melodies, whose echoes had long lain slumbering in the mountains.

While this good work was in full progress, Björnstjerne Björnson took possession of the gord Aulestad that has since become so famous as his home. He understood Kristofer Janson, whose home was not far distant; and a tender, true friendship was formed between the two poets, which, in spite of all differences of opinion, has never flagged. And Björnson, Kristofer Janson tells the story himself, was beginning to study modern theology, recent scientific investigations, Biblical criticisms and their results. He was overwhelmed with the light that flooded his soul; and all the tumultuous agitations that stirred his vehement nature, all his righteous indignation at the darkness in which he had been kept, were poured out to Kristofer Janson and the latter's wife, who became eager and astonished listeners. Light dawned for them, too.

It was about this time that Viktor Rydberg's *Bible Teaching about Christ* fell into Janson's hands, and gave definite form to the new growth starting within him. Side by side with Rydberg's book there came to him the Life of Theodore Parker, and selections from the writings of this bold, brave spirit. Kristofer Janson had learned that the men whom he had been taught to call scoffers and unbelievers were pious, earnest, truth-seeking souls, who were willing to endure hatred and persecution rather than fail to press onward toward the light; and he was filled with respect for the men and the books whom once he had coolly dismissed with a shrug of the shoulders. More now than in his early orthodox days did he long to be a priest; but, with his present enlarged views, he could not be ordained in his own land. And, unordained, his influence would be small among the authority-loving Norsemen. He felt powerfully drawn toward America, believing that in the land of liberty he might find his proper sphere.

His inward conviction that in America there was a wide field of usefulness for him was strengthened by the visit to our shores in 1879–80. How happy then was he when, in 1881, he received an invitation from the American Unitarian Association to become its authorized missionary among the Scandinavians of our North-western States! The call was promptly heeded by him; and he was ordained to the Unitarian ministry in Chicago, on Friday, Nov. 25, 1881, the ceremony being conducted by the Rev. Brooke Herford, Rev. Jenkin Ll. Jones, and others. In Minneapolis, which he has made the head-quarters of his wide territory, he began his labors early in December with a lecture on the Norwegian Synod, the largest, strongest, ablest, and consequently the most dangerous of the Scandinavian Lutheran societies, one whose yoke he deemed it to be his chief duty to break. He has called this lecture the snow-plough that must go before his train on the Western prairies. On the following Sunday, in a public hall, he preached his first sermon to an audience of about fifteen hundred, and frankly declared his religious standpoint. The result was the formation of a congregation, with a constitution and defined plan of action, and with a membership of some thirteen families, besides a little group of single individuals. The Sunday church services and the week-day lectures forthwith started have had an average attendance of from eight to twelve hundred people,—men and women who had severed their connection with the Lutheran Church, or who had long been dissatisfied with the old creed, men and women who found new life in being freed from the idea of a God of wrath and of eternal damnation.

As far as Mr. Janson's position can be defined, he may be called a Unitarian of the Channing school, although, of course, his poet's nature works out its own individual interpretation of all the problems with which he has to deal. It is not so much his purpose to assail old doctrines as to put in their place a practical religion fitted to ennoble the daily life of the humanity about him, to break the power of the tyranny that dwarfs freedom of thought, and to teach people to respect those whose lives are earnest and true, even if their religious views differ from their own. A very characteristic exposition of his faith was given by Mr. Janson in an article recently contributed by him to a Chicago Norwegian paper, in answer to the charge that he had forsaken the Christian faith. Every life must have its guiding star, he said; and his is the idea of Jesus of Nazareth. As a little child, his soul was profoundly stirred by the words of Paul to the keeper of the prison at Philippi,—"Believe on the Lord Jesus Christ, and thou shalt be saved"; and it seemed to him, if he could but remember these simple, beautiful words every day and every hour of his life, he would be preserved from all temptation. So he wrote them on a slip of paper, wore this in his bosom, felt it whenever inclined to do wrong, and the text became his talisman. His views concerning the nature of the life and mission of the great friend of humanity had ripened and developed as years rolled on. A new and wondrously helpful meaning had come into them, and Christ was more than ever his chieftain and his guide. He felt growth to be consistent with the laws of nature, and believed that to remain forever content with the spiritual food that may have sufficed for our infancy was equivalent to being debarred forever from the privileges of maturity. The writer of this sketch was once in company with Mr. Janson, when a lady, who had known him early in life, reproached him for having wandered from the faith to which she had remained true. An earnest, solemn expression stole over his face, as he replied: "I have gone forward, my dear lady, while you have stood still. I hope some day you, too, may have the good fortune to learn the joy of progress." Those who know Mr. Janson well feel sure that he has not yet gained the summit of the progress of which he is capable, and that he will one day stand on a still broader platform than that which he now occupies.

The opposition to the new missionary work was naturally fierce and obstinate. The Lutheran clergy forbade the members of their congregations to attend the sermons and lectures of Kristofer Janson, as once they had forbidden them to attend the lectures of Björnstjerne Björnson, the pronounced and fearless advocate of freedom of thought. They agreed to hold no intercourse with those who joined Mr. Janson's congregation, not even to allow them to be buried in the churchyards; and they publicly called Mr. Janson a devouring wolf, a false prophet, and the antichrist. Once, when a friend of the new religious movement had stated in a prominent Norwegian paper that Mr. Janson would unquestionably exercise a good influence over the people, one of the synod party came out with a reply, in which he declared that it was, of course, in the power of God to work good out of the evil course of such wicked infidels as Björnstjerne Björnson and Kristofer Janson; but it was not easy for Christians to comprehend how a good influence could be exercised by men who made it their aim in life to rob people of the faith of their childhood and their reliance in the infallible truth of the Bible. All the money earned by such men, the writer said, was Judas money.

In May of 1882, Mr. Janson attended the Anniversary of the American Unitarian Association, and in the Boston Music Hall told the story of his missionary work, in English, to a large and deeply interested audience, that was charmed by his winning manner, glowing enthusiasm, and exquisite simplicity. Certain remarks concerning the rich inheritance of song belonging to the children of Norway were illustrated by him with snatches of popular melodies, and he uplifted his fine sympathetic tenor voice in song as naturally and simply in the great stately Music Hall as he would have done in a private parlor before a few friends. He spoke also in Madison, Wis., in Chicago, and other places, astonishing his listeners with the facility he had acquired in speaking English after so short a period of practice. He was then on his way to Norway, to break up his home there and bring his wife and children to the new home in the New World. They all arrived in Minneapolis in the autumn of 1882, and since then his valuable undertaking has gone steadily on. The hospitable home has been freely thrown open for social gatherings, enriched by delightful music: both Mr. Janson and his wife are fine musicians. Mr. Janson has kept up his regular Sunday morning and evening services, his Sabbath-school, and his Monday evening lectures and readings. The lectures have been on literary and historic themes and important topics of the day. The readings have been selections from Mr. Janson's own writings, and those of other Northern poets, with explanatory remarks. Fancy the privilege, the elevating influence, of hearkening to a poet's interpretation of the poets! Think of the refreshment to the weary sons and daughters of toil, of whom the audiences are largely composed! When charged by the synod organs with being guilty of gross impropriety in reading and discussing dramas in public while calling himself a priest, he replied that, if beautiful works of art had their use and value in the world, which even his accusers admitted them to have, the priest was just the man to read and interpret them in public, because it was his duty to educate and cultivate the people. A truly suggestive reply, which leads to the remark that Mr. Janson's work is in the highest degree educational, and will do much to make valuable American citizens of the people who come under his ministration.

In addition to his Minneapolis labors, frequent trips have been made by Mr. Janson throughout Minnesota, and elsewhere, for religious services

Digitized by Google

and lectures. Last summer, he passed his two months' vacation at Madelia, Brown Co., Minn., in view of encouraging the society that owed its origin to his previous visits, dedicating the little church, for which money had been raised largely by the generous aid of Eastern ladies, and holding regular services. It was here that the tornado of Saturday, July 21, took place, of which so graphic an account was given by Mr. Janson's own pen in the Chicago *Unity* and the Boston *Christian Register*, and which overthrew the unfinished church and temporary parsonage, barely allowing the minister and his family to escape with their lives. Household goods and personal possessions were ruthlessly destroyed, several hundred dollars in bank-notes (probably a portion of the last salary remittance), and, worse still, several valuable manuscripts, among them a story of Western life, the fruits of the poet-preacher's leisure moments since he came to America, were swept broadcast over the prairies. Most generous and wide-spread were the expressions of sympathy called forth by the disaster. But, while American and Scandinavian Liberals were freely sending in their contributions toward rebuilding the church and repairing, so far as might be, the good minister's personal losses, illiberal friends of the synod were busy in improving the opportunity by filling the newspapers with long articles to prove that the tornado was sent as a punishment to the unbeliever who openly preached against the precious doctrines of hell and the devil, and taught that Jesus was not God. They even went so far as to invent the convenient fiction that the tornado had occurred on Sunday, when the "false prophet" was engaged in preaching one of his "blasphemous" sermons.

In addition to his regular salary, the American Unitarian Association has this year voted Mr. Janson $500, for printing purposes. This has been chiefly used by him to issue a hymn-book suited to the needs of his people, with words adapted to favorite old chorals and folk-melodies. It had offended his sense of propriety to give forth one kind of teachings from the pulpit while allowing another to be sung by choir and congregation; and he had found it almost as objectionable to sing a hymn, however appropriate, printed on the same page with or opposite one inculcating damaging doctrines. The new hymn-book has for its motto the following expressive words by Wergeland:—

> "Tell the priest 'tis freedom of thought
> That men most crave!
> The cry ascends from earth to heaven
> Through Jesus of Nazareth's grave."

This plainly indicates the character of the neat little volume, which contains one hundred hymns from the writings of the broad-minded Dane, Grundtvig; twenty-seven by Wergeland; seventeen by Björnson; as many by Hans Christian Andersen; nine English hymns, for use in occasional English services, and including selections from Mrs. Ednah D. Cheney, Mrs. S. F. Adams, Whittier, and Walt Whitman. The editor himself has contributed thirty-three hymns, which have been honored with the highest possible praise from the poet Björnson. "The whole must make not only a much-needed tool for Brother Janson in his work," says a writer in *Unity*, "but also a collection of poetry that will deepen the spiritual life, sanctify the thoughts, and broaden the religious outlook of the Scandinavian race, who now occupy so prominent a part in the life of Europe and America, and from whom the twentieth century is to receive most important contributions." In his report, from June to August of 1883, Mr. Janson says that, as money comes back to him from the sales of this hymn-book, he will issue pamphlets for the instruction of people whom he cannot see personally. The Minneapolis *Budstikken* has thrown open its columns to his sermons and other articles, and generously presents him with the forms. Consequently, it only costs him about thirty or forty dollars for paper and printing to issue five thousand copies of his tracts. What is most wanted now is a good church building in Minneapolis, and it is hoped that the friends of progress will soon supply this want. A religious society is much more likely to attain permanent success in a church home that belongs to it than in any hired building.

Mr. Janson has been an extensive traveller, has enriched his experiences by visits to France, Germany, Italy, and elsewhere, besides being present at the Millennial Festival in Iceland in 1874. Before he came to live in America, he was chiefly known to our public as the author of the *Spellbound Fiddler* (*Den Bergtekne*), a romance whose hero is one of the rare musical prodigies of Norway, and in which Ole Bull plays a prominent part. At home, he had long been known as a most prolific writer, author of numerous poems, dramas, romances, short stories, and volumes of travel, a lecturer on historic, æsthetic, and philosophic topics, who, since 1875, had shared with Björnstjerne Björnson, Henrik Ibsen, and Jonas Lie the honor of drawing a yearly sum from the Storthing, or Norwegian parliament, in recognition of poetic genius. This salary was awarded to him on the publication of his *Fraa Dansketidi*,—from the Danish *Times*,—an historic romance, illustrating the oppressions and wrongs of the people of Norway in the days of the Danish rule, the scenes being laid in the sixteenth century. It is a volume of thrilling interest from beginning to end. Like Björnstjerne Björnson, Kristofer Janson derives most of the materials for his productions from saga lore and history and from scenes in peasant life, and has among his later efforts treated modern social problems. His drama, *En Kvindes Skjaebne* (A Woman's Fate), is an earnest appeal for woman's claims to fair treatment from society; and his startling new drama, yet in manuscript, *The Children of Hell, or a Sermon in Dramatic Form*, is a bold attack on the cruel illiberality and lack of charity of orthodox believers. Mr. Janson has already read this drama on several occasions to gatherings of his fellow-countrymen, and proposes to read an English translation of it to liberal societies East and West. Twenty-one average-sized volumes have been given to the public by Kristofer Janson, and some day it is hoped that more of them can be rendered accessible to the English reader.

For *The Index*.

A SENTIMENT IN "IN MEMORIAM" CRITICISED.

Extract from a paper recently read before a social club in this vicinity on Tennyson.

But there is one sentiment in this poem ("In Memoriam") to which I take strong exceptions and protest against as false. He says:—

> "My own dim life should teach me this,
> That life shall live forevermore,
> Else earth is darkness at the core,
> And dust and ashes all that is."

And again:—

> "Are God and Nature then at strife,
> That Nature lends such evil dreams?
> So careful of the type she seems,
> So careless of the single life.
>
> "'So careful of the type?' But no.
> From scarped cliff and quarried stone
> She cries, 'A thousand types are gone:
> I care for nothing, all shall go.
>
> "'Thou makest thine appeal to me:
> I bring to life, I bring to death:
> The spirit does but mean the breath:
> I know no more.'
>
> "No more? A monster then, a dream,
> A discord. Dragons of the prime
> That tear each other in their slime
> Were mellow music matched with him.
>
> "O life as futile, then, as frail."

Now, I believe all this is immoral as well as unphilosophical. It is the quintessence of pessimism.

That distinguished and pious churchman, Frederick W. Robinson, says, "If there should be no future life, it is better to be generous than selfish, better to be true than false, better to be brave than to be a coward," and, I might add, better to be grateful for the life that is vouchsafed us here than to denounce it as worthless. The future world has practically nothing to do with our every-day conduct. Were the Almighty to decree annihilation after death, would man be authorized to upbraid him for parsimony, and denounce his gift of life as futile and frail? A few years ago, and we had no right to be at all. Out of nonentity and utter silence and darkness, we come into this beautiful world of love and life and light, and, having "tasted the bliss to mortality given," if we lapse into darkness again, how are we worse off for the gift?

Tennyson has said:—

> "'Tis better to have loved and lost
> Than never to have loved at all";

and I might say, It is better to have lived and died than never to have lived at all. If we are to live hereafter, well and good; if not, well and good also. For we must trust the Divine Power that doeth *all* things well, and say with Job, "Though he slay me, yet will I trust in him." But Mr. Tennyson says in effect, "If there is an immortality for men, well and good; if not, then curse this present life, I will none of it," which comes pretty near being blasphemy. He says in this very poem, "We have but *faith*, we cannot know"; and, in our utter ignorance, it is best to be humble and silent and not wildly dogmatic as he is on this question. A statue of Harriet Martineau has recently been unveiled in our neighborhood. She was a pronounced materialist, and had no faith in the continuance of her personality after death. She asserted annihilation with that honesty and boldness which characterized all her thoughts and actions. Instead of wasting her time and strength in vain and futile speculations concerning the unknowable future, she dedicated her long life to the welfare, both mental and physical, of humanity in *this* world as being the *only* world that concerns us. She "sold not her heart to idle moans," nor complained "that earth is darkness at the core," because, forsooth, she could not believe "that life shall live forevermore." I well know that this doctrine of Tennyson is the accepted dogma of the evangelical world, and what puerile rubbish has been preached in its behalf, but none the less do I consider it as irreverent and mischievous. How far superior is Emerson's severe optimism! Tennyson should open his Emerson and close his Schopenhauer, and let Paul's pessimistic text alone.

CORRESPONDENCE.

MATTHEW ARNOLD AT SWARTHMORE.

Editors of The Index:—

Some days ago, the writer received a pleasant card, reading: "Matthew Arnold will lecture upon 'Literature and Science' at Swarthmore College, at 3 P.M., on seventh day, the 5th of 1st month, 1884. Thou art invited to attend." Particularly desiring to hear this much-criticised deliverance, it was annoying to find the stated day bring with it all the signs and preludes of a storm. Nevertheless, after serious consideration of weather lore, it was decided to take the special train at 2.20, though with many misgivings as to the portending snow, which seemed to have already announced its coming by the spiteful flakes which had been falling at intervals through the morning, as though determined quite to subdue the indulged hope of a clearing sky. This weighty affair settled, even reaching the train was found to be a matter of difficulty; for, arriving at the Broad Street station shortly before the starting time, a line of Swarthmore ticket-buyers was found stretching almost entirely across the large room. To take one's place at the end of this throng seemed almost hopeless. Yet it was done, tickets bought, and the crowded train reached but a few seconds before it began slowly to slip away, to the dismay of the belated ones, who, notwithstanding

Digitized by Google

their hardly-earned bits of yellow pasteboard entitling them to "one continuous passage," were granted only the miserable satisfaction of seeing the rapidly vanishing tail-end of the last car. Truly, a situation to try Quaker equanimity.

Swarthmore College lies at the station of that name on one of the branches of the Pennsylvania Railroad, about thirty-five minutes by rail, southerly, from Philadelphia. Situate in the midst of a beautiful and healthful country, away from all distracting influences, its physical surroundings are unexcelled; while its careful and conscientious management by the Society of Friends (Hicksites) has made it the leading and most successful exponent of the co-education principle. In due time, our train delivered us at our brief journey's end; and then, with the mercury about 8°, to the keen music of an eager wind, began the pilgrimage up the broad asphalt walk from the station to the college and its hall. Conversation speeded time, and cheerful spirits bade defiance to the cold. At length, the small army of occupation from once (but now no more) quiet old Philadelphia, reached the handsome building, entered its welcoming doors, without abandoning, but gathering fresh store of hope, and quietly massed itself around two pleasant stairways, in readiness to peacefully invade the Lecture Hall. The signal given, the stairway march began in a spirit of due resignation, induced by giving up the solution of the problem as to what would be the chances of getting favorable hearing positions by those in the rear of a crowd, say of six hundred, all bound for a room anticipated to hold probably half that number. It may be readily seen that a mathematical proposition of this kind would be too much for even the faculties of a Hamilton. But vain are the speculations of man! When the hall was at last reached, it was found to be a handsome, large, almost square room, capable of accommodating fully from six to seven hundred, with a curved rear gallery, which would hold, probably, a third as many more. On each side of the room, along its entire depth, were several contiguous rows of stationary desks occupied by young women and young men students (intermingled). Inclination was tempted to say "fair" young women, but conscience checked the amiable phrase. So far as seen, the girls in question were young, and not (yet) particularly handsome; although, after the lecture, some that were quite noticeable were remarked among the older ones. It seems to be one of the charming peculiarities of Quaker girls that the older they grow, the better-looking they become. With them, age seems to grant what in most cases it takes away. To return to the hall;—the arrangement of the desks left in the centre, from the platform to the rear end, a large space filled with loose, plain wooden chairs, occupied by the visitors, some few overflowing into the aisles. The room itself is quite lofty, with perfectly plain white walls and ceiling, with large, high, circular-topped windows on either side, furnished with oak-stained blinds, the rich color of the stain agreeing most pleasantly and plainly with the suggestive whiteness of the walls. Over each high window is a moderate-sized square window, with one central pane of clear glass set in surrounding squares of mild-tinted stained glass, through which, shortly after the lecture began, sun rays hopefully shimmered and gleamed, and then shone outright, banishing all fear of the expected storm. On the platform sat a number of Quaker dignitaries; and on the wall, behind the small stand for the speaker's notes, a plain clock told the time. A small photograph in a modest walnut frame hangs under the clock. And, beyond these two articles, the room is bare of too often meretricious decoration.

But the audience. There is certainly an occult, subtle influence which seems to pervade assemblages of the intellectual and refined. The glow and the charm of their own health seem to enter into the soul of the lonely one who may find himself for too brief moments cast among them. Their mere silent presence is a force, possibly imponderable, certainly true. Inestimable are the powers of good society and high companionship, aside from all other considerations, merely through this so often unappreciated, strange, radiative, spiritual influence. One deep purpose infects the common mind, and the thoughts and feelings of our unknown comrades shine through their gleaming eyes into our own darkened soul. The power which draws men from far places to one point seems at the same time to change them from separateness into the grand strength of unity. The mighty stream of ideas rolls forever through the vast soul of humanity,—the changing many, the changeless One. Men perish: man lives. Life seeks to perfect itself, and the perfect man is perfect flesh and perfect mind. "Know ye not that your body is the temple of the Holy Ghost?" Even two centuries of calm living and selected parentage, from the time of George Fox unto this day, work wonders. We can scarcely count their immense weight. So it is that a Quaker audience is always impressive. The refinement, the deep repose, the unconquered calm, the royal health which shine upon one from all sides awaken a strange thrill rarely felt on other occasions. The Swarthmore assemblage was not so typical of beauty as some that the writer has seen at other Friends' meetings, but health was lord over all. Altogether delightful to the eye was the large number of joyously strong young women,—not girls, but mature young women, say from twenty to thirty years of age,—while the cheeks of the matrons, yes, of even those past middle life, were glowing with delicate color of that pure hue so rarely seen even in ordinary youth. There is certainly an enormous weight of meaning and responsibility in parentage,—a weight and responsibility possibly greater than all other things with which man can be concerned. And yet look at the world's woful practice! Is not Titus Munson Coan right in saying that "he who is born right the first time needs no second birth"? And all this we see among the Quakers beyond any other circle, class, or sect. Therefore it is that their assemblies always have for the thoughtful observer a certain speculative charm. Brushing away all their superficial peculiarities, there yet remains an eternal core of truth which has made them what they are,—the friends of liberal thought, the reformers of old errors, the aiders of true education. Now and then, one of their number goes astray; but, then, he is immediately disowned. And so, by this weeding process, while the Society may possibly grow smaller, it grows purer,—purer in all the best elements of human power. That the life of the old-time Quaker was somewhat hard and restricted, somewhat narrow, may be granted; but it was a life of rigid adherence to what was conceived to be everlasting duty, a life of disciplined growth in reposeful power, a life lifting the soul above petty struggles into the serene air of joyous peace; and that life breathed upon humanity a pure influence which, while the world stands, shall never pass away.

Mr. Arnold has been described so many times already, that it may seem rather a piece of over-boldness to give the impressions that his appearance produced on the writer; but, then, it should be remembered that, only from numerous observations, taken from different stand-points and by different observers, can we eliminate insufficiency and one-sidedness. So picture a rather tall, slender, well-made man of about sixty years (though not looking that age), with hair —once evidently black, but now tinged with gray—parted in the middle (whereat the writer heard some fault unjustly found), side whiskers in the English style,—chin and lip smoothly shaved, showing that dark hue where a black beard is cut away,—nose rather, but not unduly, prominent, forehead rather broad and moderately high, neither vertical nor recessive,—picture all these elements that go to make the material qualities of a face, and the reader may possibly, by great good luck, get some faint idea of the appearance of Matthew Arnold. He has the air of a sadly thoughtful man, who has tamed and smoothed his sadness by study and refinement. But, in the inner heart of that man, sadness, world-sadness, still is; and all the seas of time cannot wash it away. His voice, which is not by any means bad, has somewhat of a clerical cast, and is to most persons at times rather inaudible, by reason of not preserving the proper tone or elevation throughout a sentence; but, by care and attention, and a little judicious divination, an experienced listener can make out everything he says. Of course, he makes no pretensions whatever to what is popularly called "oratory," nor is he a vocal rhetorician. But even this very voice of his is filled with the charm of a sad seriousness,—not melancholy nor the depression of affectation, but simply a sad seriousness.

The lecturer began by speaking of the outcry now made by scientific men against the shortcomings and imperfections of the so-called literary education as having arisen in a stage of the world's progress which has now long since passed away and been superseded by the era of investigation of nature, leading men's minds to the idea of a "deathless order," which shows itself around them on every hand. Wherefore, it is said that men should cease to follow the old paths, but should walk in the new. The speaker seemed to admit much of the force of these objections, but replied to them by what lawyers term "confession and avoidance." He denied that, when he spoke of literature and of Greece and of Rome, he meant merely the inflections of a language or a barren array of historic facts, but that, by knowing Greece and Rome, he meant knowing the influence and the power and the life of Greece and Rome, and that, by knowing literature, he meant "knowing the best that has been said and thought in the world on every subject"; and this it is that he considers it essential for man to know. He considers that the mere knowledge of linguistics and the mere knowledge of unrelated scientific facts generally, is "instrument knowledge," as he terms it,—useful to the specialist, but useless, or at least unnecessary, to the man of general culture. To illustrate, he mentioned that a pupil of one of the London Training Schools transformed the passage, "Canst thou minister to a mind diseased?" into "Can you wait upon a lunatic?" while the same student was presumably perfectly conversant with the scientific fact that, when a candle burns, it is converted into carbonic acid gas, etc. "Now," said the speaker, "I consider it better that a man should be able to see the difference between the beauty of the passage, 'Canst thou minister to a mind diseased?' and the absence of beauty in its paraphrase, 'Can you wait upon a lunatic?' and be ignorant about the candle and the acid, than to be informed as to the latter and ignorant of the former." The whole lecture bore to the sole point, as its whole trend and aim, that "man should seek to know the best that has been said and thought in the world on every subject," so as to meet and satisfy "the great need in us for the idea of Conduct, the great need in us for the idea of Beauty," according to what the wise Diotima told Socrates. And all this the great critic calls literature, thus widening the term to include all the splendid results of science, and discarding all its methods and unrelated facts, or data. Methods and facts are for specialists alone, results are for mankind at large. Truly, these sayings of the poet are great messages to men. They are solemn invitations to the soul to reach out and take its own, to know and to seek the Best, to follow and love Conduct and Beauty.

It would have been very pleasant to the writer if rather more time had intervened between the close of the lecture and the starting of the return train, so that opportunity could have been afforded to have seen something more of the college building; but only a few spare minutes could be devoted to a brief inspection of the cheerful library and reading room and the excellent selection of books,—books that, so far as could be seen, go very far toward carrying out the wise saying as to the "best that has been thought and said in the world." And then the view, toward the Delaware River, from the library windows, claimed the little time left. The college stands on a gentle eminence; and one could see the far stretch of open country, snow-covered and beautiful, gradually declining and sweeping away into the dim distance. That pure winter view of itself is a thing to be remembered. And then came the calm walk down the broad path to the station, with the low beams of the sinking sun reddening the sky and the snow, with the white country and the bare trees on every hand, —a wide prospect bearing in on its viewer some portion of its own peace. Then followed the cheerful ride back to Penn's good town, with pleasant memories of well-spent hours, uplifting the sunk thought, renewing flagged strength.

W. C. CRAIGE.

PHILADELPHIA, Jan. 7, 1884.

A PRACTICAL SUGGESTION TO THE BENEVOLENT.

Editors of The Index:—

I wish to suggest to the charity workers the following neglected field for their exertions. At all the city auction stores here, frequently at the regular weekly sales, there can be found lots of children's and adults' clothing, books, toys, and kitchen ware, all of which are disposed of at nominal prices; and the articles are good for much use and wear. Such lots could be regularly bid in at a low rate for charity use, would

Digitized by Google

some one only see the good that so could be done, and supply the needed funds. Societies enough exist, we all know, to distribute and use such material when given them; and much more money is now used to buy like material than would be needed to carry out the above suggestion wisely. No complicated arrangements or agencies are required. A simple agreement with the auctioneers that such and such articles will be paid low rates for when they are presented for sale would suffice, and no actual presence of a bidder is needed, the auctioneers' aids assuming the position.

If any one will but inquire into this matter, he will be impressed with it, just as was the writer, if he has had any experience in attempting to help the poor.

JOHN DIXWELL, M.D.

BOSTON, Jan. 8, 1884.

BOOK NOTICES.

THE SPELL-BOUND FIDDLER: A Norse Romance. By Kristofer Janson. Translated from the original by Auber Forestier. With an introduction by Rasmus B. Anderson. Second edition. Chicago: S. C. Griggs & Co. 1884. Price $1.00.

The translation by "Auber Forestier" of Mr. Janson's charming prose poem, *The Spell-bound Fiddler*, occupies only about one hundred of the one hundred and sixty-three pages of this neatly bound book. The remaining pages are devoted to biographic and explanatory notes by the talented translator, and by an extremely interesting introduction from the pen of Prof. Rasmus B. Anderson, in which he states the facts on which the story is founded, and weaves into that introduction many new and true anecdotes of Ole Bull, who is one of the heroes of Mr. Janson's story. The author is surprisingly fortunate in his translator; for, throughout, the story is given in strong, vigorous language, bearing no trace of second-hand narration. But that very fact gives indubitable evidence of the force and beauty of the original language in which it was clothed; and, delightful as it is, we find ourselves sighing at our inability to read it in its first form. Several characteristics of most of the Norse writers, of whose works we have had translations, are plainly perceptible in this work; namely, a sympathy and oneness with the most rugged aspects of nature, a strong love of home, country, and kindred, and a simple, realistic, and touching description of commonplace people, things, and places. In addition, Mr. Janson works into his story, very finely, illustrations of adaptation, heredity, bigotry, and true liberalism. It is a pretty, winsome picture of Norwegian peasant life, character, and emotions that this book presents, which recalls somehow the earlier stories of Fredrika Bremer, as well as some of the later Norse writers. We have only room here to give one of the numerous pen-pictures contained in *The Spell-bound Fiddler:* "There stood the sun already high in the heavens, the force sang merrily its vigorous song, the dew glittered on the birch foliage and on the flowers, the sound of the church-bells floated up once more through the notch, the people were going to church hymn-book in hand, and up yonder on the mountain peak, right against the deep blue background of sky, there stood a girl. . . . She was shading her eyes with her hand from the sun and gazing over the parish, her white linen garments glittering in the sunshine."

BELIEFS ABOUT THE BIBLE. By M. J. Savage. Boston: Geo. H. Ellis, 141 Franklin Street. pp. 206. Price $1.00.

Mr. Savage, although a Unitarian minister, is no Christian in any proper sense of the word. He does not believe in Christianity as a system revealed by God to man. He does not believe in Christ as a Saviour or in any way as a superhuman character. He does not regard the Bible as infallible, inspired, or authoritative. He does not even accept Jesus as a guide, or the morality of the New Testament, except with many modifications, as correct or adapted to the wants of this age. In precisely the same sense that Paine was, he is what Christians commonly call an "infidel." This work consists of a series of lectures on the Bible, in which are presented in plain and forcible language the proofs and indications that the Bible is a product of the human mind; that it is no revelation at all; that the claims for its inspiration, supernatural origin, and authoritative character are without foundation; that it is a mixture of truth and error; that even its religious and ethical teachings are partly true and partly untrue. These lectures contain much popular information regarding the Bible, presented in a manner well adapted to the common reader who has neither the time nor the disposition to verify what he reads by an appeal to authorities. Mr. Savage brings together the arguments and objections of free thinkers in regard to the Bible, and although they can be found in a number of similar works, he enforces them in his own way, stamped with his own personality. The general spirit of the work is fair and generous, notwithstanding the critical and aggressive disposition of the author. We should like to see the work widely circulated.

THE *Andover Review*, the new manifesto of Progressive Orthodoxy under the editorial control of the Faculty of the Andover Theological Seminary, begins life very promisingly. It is a handsome monthly, started for the discussion of those problems in which progressive minds in the churches are interested, but which receive no adequate treatment, it is thought, in conservative religious journals. It does not encourage controversy, but rather "positive and constructive work in the sphere of opinion and belief." The first article, by Prof. Egbert C. Smyth, on "The Theological Purpose of the *Review*," we are compelled to say, with all its merits, lacks directness and clearness, and fails to give a definite idea of the purpose of the *Review*. The other articles are "Christianity and Æstheticism," by Washington Gladden; "The Norris Gifts to the Associate Foundation in Andover Theological Seminary," by Geo. B. Jewett, D.D.; "A Bible Study: The Unjust Steward," by Charles H. Parkhurst, D.D.; two poems, "Pilgrimage" and "Vitae," by Caroline Hazard; "The Doctrine of Sacred Scripture," by Prof. George Harris; and "The Churches of the Huguenots and the Religious Condition of France," by Augustus F. Beard. The editorials, notes, book-notices, etc., are very readable. This monthly represents an advance in the right direction; and, for that reason, we wish it success, although there is nothing in its "progressive theology," which must progress much farther to be in harmony with reason and common sense, to awaken enthusiasm among liberal, independent thinkers.

IN the February number of the *North American Review*, Carl Schurz writes on "Co-operations and their Employés and the Public" very interestingly and instructively. To the same number of the *Review*, J. C. Shairp contributes a sketch of the life and works of "Henry Vaughan, Silurist," a poet of genius of the seventeenth century. Senator J. J. Ingalls writes of "John Brown's Place in History," his purpose being to disprove the several counts in the indictment of the hero of Pottawatomie contained in the recent article by the Rev. David N. Utter. The question "Must the Classics go?" is discussed by Prof. Andrew F. West of Princeton College, who favors the retention of Greek and Latin in the curriculum of our educational system. "Race Increase in the United States," by Congressman J. Randolph Tucker, makes a very substantial contribution to sociological science Mr. M. J. Savage, in pointing out sundry "Defects of the Public School System," advances certain views of the ends to be attained by State education. Finally, an important question in hygiene, "Rival Systems of Heating," is treated by Dr. A. N. Bell and Prof. W. P. Trowbridge, who point out the advantages and disadvantages, from the stand-points of both economy and of health, of the different methods in use for warming houses.

THE January number of the able English quarterly, the *Modern Review*, has articles of unusual merit. We can only give the table of contents: "Through the Prophets to the Law," by Prof. J. Estlin Carpenter; "The Kingdom of God in Münster," by Karl Pearson; "Is not All True Theology Scientific?" by R. D. Darbishire; "A Transition Period in Female Education," by Alice Gardner; "Protestantism in Geneva," by Prof. Bouvier; "Outlines and Episodes of Brahmic History," by Sophia Dobson Collet; "The Names of the First Three Kings of Israel," by Prof. Sayce; "Notices of Books." Agent for the United States, Geo. H. Ellis, 141 Franklin Street, Boston.

THE *Journal of Speculative Philosophy* for October contains "Philosophy in Outline," by the editor, William T. Harris; "Trentowski on the Sources and Faculties of Cognition," translated from the Polish by I. Podbielski; "A Study of the *Iliad*," by D. J. Snider; "Goethe's *Das Märchen*," by Gertrude Garrigues; "The Puritan Philosophy and Jonathan Edwards," by F. B. Sanborn; "Man's Freedom in his Moral Nature," by Rowland G. Hazard; "Notes and Discussions" and "Book Notices."

PERSONAL ITEMS.

JAMES RHODES BUCHANAN, in a letter printed in one of our Spiritualistic exchanges. says, "Having gone further than any of my predecessors in tracing the interaction of the spirit world with the human brain, I am enabled to present a scientific explanation of the divine influx, and shall hereafter show the law of human development through influx, not only in the godlike qualities, but in bodily health and the conquest of disease."

TO THE junior editor of this journal, Horace Seaver writes: "In behalf of the Committee of Arrangements having in charge the Free Thinkers' Convention to be held on the 27th, 28th, and 29th in Paine Hall, I tender to you their unanimous and fraternal invitation, and it gives me great pleasure to do so, to take part in the proceedings of that occasion." Mr. Underwood's engagements in the West will not permit him to accept this kind invitation.

THE late "Professor" Holloway, the pill man, once enclosed a check for a thousand pounds in a letter to Charles Dickens, which he placed at Dickens's disposal, on condition that one line of complimentary reference to Holloway's cures should appear in the book which Dickens was then publishing in monthly numbers. The bearer waited for an answer. "What did you do?" was asked Dickens. "Do!" he cried. "I put the check back into the letter, and sent it down to the messenger, saying that was all the answer I had to send!"

NO ONE will be surprised, though all must regret, that his state of health and advanced years have compelled Prof. Owen to resign his appointment as superintendent of the Natural History Department of the British Museum. Prof. Owen's pre-eminent services to science, pure and applied, are too well known to require recapitulation in these columns, especially as very recently we referred to them in detail in connection with his portrait as one of our "Scientific Worthies." Advanced in years as he is, the venerable naturalist's interest in science seems as strong as ever. To each of the last two meetings of the Royal Society, he contributed an important paper: we hope they will be by no means the last of such contributions —*Nature*.

LAST week, we mentioned that Rev. Florence McCarty, of St. Cecilia's Church, in Williamsburg, N.Y., was let off with a nominal fine for an indecent assault upon a young lady, the organist of his church. Last Friday, the same priest was a prisoner in the Harlem police court, charged with being drunk while riding with a woman in a sleigh. His companion, thought to be a depraved woman, managed to escape before his arrest. The priest was fined $10. While Catholic organs remain silent in regard to the misdoings of such a fellow as the McCarty, the least they attempt to construct an argument against liberal thought, based upon some real or alleged shortcoming of free thinkers, the better they will appear to fair-minded readers.

REV. R. HEBER NEWTON, in explaining his position to his congregation last Sunday, said: "When the bishop's request to stop came to me, I was in one respect tied by my office. I might have replied, refusing to comply with his request, because circumstances were changed from what they were when I made the offer; but I felt bound by honor to yield. As to the bishop, he has no right to compel me to yield. If he had tried to compel me, I should have refused on principle; but we are not a Congregational body. Our position in the Episcopal Church is somewhat like an army. Courtesy, loyalty, and obedience are due to superiors; yet it does not follow that I have been silenced. I am as free as ever to preach my convictions. The course of lectures has simply been discontinued. I expect to renew my lectures when the proper time shall come. I do not know when that will be. I shall continue to preach from my principles, as I ever have. There is no restriction of the study of the Bible or of the expression of my convictions."

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyses the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE INDEX,
44 Boylston Street, Boston, Mass.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over *four* hundred passenger conductors constantly caring for its millions of patrons

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	" . . .	8c.	" "
" 26 " 51	" . . .	6c.	" "
" 52	" . . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

CURRENT TOPICS.

IN criticising Charles Francis Adams' Phi Beta Kappa oration, Dr. Peabody, in the *Atlantic Monthly*, says the only obstacle in the way of the Adams family was its failure to establish a family of "hereditary monarchs." This leads a writer, quoted in the *Commonwealth*, to remark: "Now, the whole Adams race, Washington, Hamilton, Burr, and Monroe never dreamed of a republic. It was Thomas Paine, Thomas Jefferson, Benjamin Franklin, and the French alliance that determined the republicanism of this country, and thus far Dr. Peabody's article is a valuable contribution to American history."

THAT the Convention which framed our National Constitution was composed, in the main, of broad, liberal men, is evident from the following extract —which we find in one of our religious exchanges —from an address, delivered to the Legislature of Maryland, by Martin Luther, a delegate to the Convention: "The part of the system which provides that no religious test shall ever be required as a qualification to any office or public trust under the United States was adopted by a great majority of the Convention, and without much debate. However, there were some of the members so unfashionable as to think that a belief in the existence of a Deity and of a state of future rewards and punishments would be some security for the good conduct of our rulers, and that in a Christian country it would be at least decent to hold out some distinction between the professors of Christianity and downright infidelity and paganism."

IN the newspaper report of the late hearing given by the railroad commissioners upon the running of Sunday trains, we notice that Mr. Lewis Merriam, of Greenfield, spoke in opposition to the running of trains on Sunday, his objections being principally of a moral character. A gentleman present at the hearing alluded to states that the same Mr. Merriam also related his experience in regard to the opening of the post-offices on Sunday. Mr. Merriam said that he had been for several years postmaster at Greenfield, and that he had been many times solicited by citizens to open the office for an hour on Sunday morning, so that they could obtain their letters. He had, however, uniformly refused to open the office; but, finally, an order for the opening came from Washington. He reflected upon this order, and had almost come to the conclusion to resign his position rather than to comply with what he deemed a wrong action. Finally, he consulted his good friend, Gov. Washburn, a consistent Christian, and the Governor advised him to get his clerk to open the office, and attend to the distribution of the letters on Sundays. Mr. Merriam said that he took Gov. Washburn's advice, and had thus never been guilty of working on the Sabbath!

REV. DR. MINER'S praise of Gov. Butler, in his Election Sermon, had the good effect to bring out some vigorous protests in the Massachusetts Senate last week against the custom and statute requiring such a sermon. Senator Pillsbury said he did not believe it was advisable to continue the custom; that the sermon took one day's time, did no one any good, and was outgrown from the time the clergy spoke with authority. That time had passed. Senator Washburn was opposed to abolishing the time-honored custom. Senator Loring, too, had great regard for it. Senator Andrews called attention to the statute requiring a sermon, the repeal of which was necessary to abolish the custom. Senator Cronin said that the whole thing had become such a farce that the House, in recent years, had voted for cranks, and the Legislature of 1883 elected one of them [Rev. Miner], who used the opportunity offered him to insult the men who had successfully fought him in a fair fight. There was no "Christ and him crucified" in his sermon. Senator McFarlen stated that the preacher elected last year was unable to serve, and that the one whose remarks were so offensive was appointed by his political idol, Gov. Butler. Senator Morrison thought the custom was only one of the many pieces of obsolete legislation which ought to be struck from the statutes. Such sermons carried their own argument for their abolition. The next day, Senator Thayer introduced a bill to repeal the statute relating to the annual Election Sermon; and it was referred to the Senate Judiciary Committee, which, it is thought, will report in its favor.

"THE social event of the season" was a grand ball one evening last week at William B. Astor's house on Fifth Avenue, commemorative of John Jacob Astor. It is described by reporters as a very "rich affair," and the company as a "brilliant assemblage"; but the Springfield *Republican* says that "there was not a person there whom one could possibly imagine that the world a hundred years hence would care to hear of, even as the present world does care to hear about shrewd, stolid old John Jacob the trader. And there were very few whom that distant world ever will hear of. The list of names sounds well. Some of them are historic, like Livingstone, Schuyler, Van Rensselaer, Stuyvesant, Roosevelt, Goelet, Remsen. The Yznagas and Iselins, the Wotherspoons and Rutherfords, the Turnures and Oothouts, the Aspinwales, Cuttings, and Crugers, the Rhinelanders, Kingslands, and Wilmerdings were there. So were Attorney-General Brewster and his wife; the British Minister West and Cornwallis West, husband of the professional beauty. The Russian and Italian ministers also came from Washington. There were even titles, the Prince of Pless and Count Harmoncourt, whoever they may be. Of the nine hundred invited, we do not know how many stayed away, we do not know but there were guests of public note and importance among those that came; but these are the pick of the reporters' lists. Has New York then no men and women who are known to all the country, that wealth might honor itself by entertaining? Indeed, it has, and that in abundance, but their world and 'society's' are universes apart."

THE Woman Suffrage movement has been especially active during the past two weeks in this State. Conventions have been held by the Massachusetts branch of the National Woman Suffrage Association in Westboro', Uxbridge, Millbury, Lynn, Salem, and Lowell, and evening meetings held in Malden and Woburn. These meetings have been addressed, in addition to local speakers, by Miss Phebe Cousins, of St. Louis, Mo.; Miss N. W. Covell, of Boston; and Mrs. H. H. Robinson; and the President of the Association, Mrs. Shattuck, of Malden. Much popular interest has been exhibited in all these places, many new members added to the Society, and many new adherents to the cause gained. The Massachusetts Woman Suffrage Association held its annual convention on Tuesday evening and Wednesday of last week, in the Meionaon Hall in this city, at which the attendance was large. Addresses were made by Lucy Stone, Hon. William I. Bowditch, Rev. Clara M. Bisbee, Cora Scott Pond, Archibald H. Grimke, editor of the colored man's paper in Washington, Julia Ward Howe, Mrs. E. D. Cheney, Mary Eastman, and others. On Friday morning, the 25th inst., a hearing was given in the Green Room at the State House to those in favor of Woman Suffrage. There was a crowded attendance, and among those who spoke in favor of the movement were Mrs. Howe, Mrs. Cheney, Mrs. Stone, H. B. Blackwell, Mrs. Shattuck, Miss Covell, and Mrs. Robinson. On Tuesday of this week, the remonstrants against the movement were heard in the same place. The woman's movement has also been the cause of a spicy public discussion between Mayor Martin and Mr. Crowley, member of the City Board of Aldermen, in regard to the temporary use of a room in a city school-house for consultation by women voters, the aldermen disputing the Mayor's right to grant the ladies the use of a public building for such purpose. A cause which is making so strong and so wide-spread an agitation as this is doing is sure at last to make its claims good, and the day of its universal recognition and triumph cannot be very much longer delayed.

LUCK AND FATE.

After reading from day to day the various testimony and conflicting comments on the horror of the wrecked steamer off Gay Head, many persons are unable to find any other refuge from the confusion than in the explanation that it was inevitable fate and bitter luck. Superstition is passing away, but Luck and Fate are gods in whose power over human destiny multitudes of people still believe. Though their relation to mankind is regarded as essentially the same, they are not pictured as having quite the same attributes. Luck is popularly imagined to be a more human and earthly kind of deity, with whom one may come to live on familiar terms of daily intimacy. Fate is conceived as a more august and awful power, a celestial sovereignty, decreeing by implacable rule from all eternity earthly and human events. Theologically, it is the doctrine of foreordination. What Luck may do may be, in a measure, foreseen and calculated by the very intimacy which men have with it. The proverbially unlucky person other persons learn to shun, where their own interests are involved; and thus, though it is not believed that the unlucky person can himself escape his hard lot, other people may save themselves from sharing it. But Fate is not supposed to have even this much of consideration for humanity. Its acts are believed to be always austere, mysterious, incalculable. When or where its blows shall fall or what they shall bring, no eye of man, it is conceived, can read beforehand, and no act of man help or hinder. It is the writing on the wall by a mysterious hand, reached out from behind the veil of eternity.

But Luck and Fate are false gods, however much they may be worshipped. The common error underlying both conceptions is that man is in the hands of a power which brings upon him success and happiness, or disaster and woe, by some arbitrary decree of its own, regardless of his own character and conduct. Dryden expressed the popular belief, when he said, "Lucky men are favorites of heaven." And the popular idea of Fate is well illustrated in the Mohammedan doctrine that every man will die at his appointed time, whether he be in his bed or on a battle-field.

In truth, there is no severer rule of life to be found, none harder to keep, than the requirement that people shall always act rationally and rightly. Hence, when failures and distresses come upon human beings, they are very ready to excuse themselves from the responsibility, and to refer the cause of their misfortunes to some other agency than their own. It was a power above themselves, they cry. They could not help it. It was their fate, their bad luck, their evil star of destiny. And even many persons, who do not carry their belief in fate and luck to this point, find it difficult always to account for the differences in human experience on any other theory. There are some people who seem to have a marvellous facility in finding things and in hitting opportunities, as there are others who have a corresponding ill luck in losing things and in missing opportunities. To some persons, all things appear to succeed that they touch; while to others, who may seem to be equally industrious and faithful, nothing succeeds. Of some men,—of ship captains, for instance,—it is said they are always "lucky." Others, who may appear to be just as worthy men, are relentlessly pursued by the demon of ill-luck.

What is this quality called "luck' in such cases? We may not always be able to define its ingredients, but we may be sure that there is nothing supernatural nor unnatural in them. Rather are they some nicer and completer adjustment of the several natural faculties that make executive ability. In many cases, indeed, of so-called luck, if we were to observe a little more closely, and extend our observations back to previous habits of life, we should find that the luck merely means more industry, more energy, more application, more knowledge. And in instances not so easily disposed of, were we able to detect the inner secrets of character, we should doubtless find an exceptionally effective combination of the mental qualities of vigilance, alertness, insight, foresight, tact, skill, quickness of adaptation to circumstances, and the ability to foresee a new emergency of circumstances in time to make an advantageous adaptation to it. All these are natural qualities of character; but, in certain cases, they may be found in such perfectly balanced combination as to work together without any apparent effort, and to attract attention only by that result of peculiar successfulness which causes one to be styled a "lucky person." The luck is merely a fine sagacity so wrought into the whole mental temperament and habit of action as to be indistinguishable as a special faculty. It appears in the whole manner and life of the person. And, on the other hand, in the cases where, though there may be apparent industry and faithful application and ordinary talents, there is yet so-called ill-luck, or a habit of failure, the secret springs of character, could we detect them, would doubtless reveal a *lack* of sagacity, or a failure to see or to do the right thing at the right moment. In fine, luck and ill-luck denote primarily two different qualities of intellect. Yet they are closely related also to different moral conditions. Good luck may be cultivated, and ill-luck may be averted and conquered.

When those greater calamities come that appall all hearts, then it is the austerer power of fate that is made to bear the responsibility; or, as the more religious mind may call it,—perhaps we should rather say the more theological mind,—"the will of Almighty God." It was inexorable fate, decreed in the mysterious councils of heaven, that drove the ship upon the rocks, and suddenly buried a hundred human beings alive in a watery grave! It was inexorable fate that lighted the flames which burned a wife to death before her helpless husband's eyes! It was inexorable fate that set fire to an orphans' asylum, and made a holocaust of its inmates! "Whereas Almighty God, in his inscrutable wisdom, has seen fit to take our friend from us by death," is still the customary formula for beginning obituary resolutions. Even when President Garfield died from the effects of Guiteau's pistol, the official proclamation in which his successor appointed a day of national mourning for the event used the phrase, "Since it has pleased Almighty God to remove by death our beloved President from us,"—a form of words which strangely gave the government's indorsement to Guiteau's own theory of his act of assassination.

Now, we fully believe that in all such dire catastrophes are revealed great truths, which, on account of their universal bearing, may well be called providential and divine truths. They are truths of nature, and truths also that profoundly concern the education of human character. But we do not look for the lessons of these catastrophes in the direction where they are ordinarily sought. We do not accept the Mohammedan doctrine that every man dies at a time immutably fixed by a decree of heaven, whether he die in his bed, or engulfed in the ocean, or imprisoned in a furnace of fire. The one central lesson of these afflictive events is that Divine Providence works through human providence. It was no decree of Heaven that drove the "City of Columbus" upon the rocks, but unintelligent, if not culpable, steerage. It was no implacable fate that doomed the wife to a fiery death before her husband's eyes, but ignorance of the laws of chemistry. It was no inexorable resolve of Almighty Power that committed the crime of arson in the orphan asylum and put to death the innocents there, because their time had come; but it was the criminal construction of the building that caused the horror. It is by no mysterious dispensation of fate or of Divine Providence that such a vast number of human beings go down every year to premature graves, when their lives are just opening into promise or just fructifying in the ripeness of wise action; but it is by some deadly poison, which has come into the human system from a finite source, and which human intelligence may learn to cast out or to neutralize. The worst decrees of fate with which man has to do are the results of his own ignorance or heedlessness or wilful and wicked violation of natural laws. And these decrees are not inexorable, unless man turns a deaf ear to his own prayers for pity. He has it in his power to break his bondage to this kind of fate, and amend his destiny.

And often, in the midst of the most terrible disasters, are exhibited those grand elements of character which must form a part of the amending process, the awful emergency itself calling them into exercise, as in the heroism of Lieutenant Rhodes in attempting to save the men who were clinging for life to the shattered rigging of the wrecked ship on Devil's Bridge. In such self-forgetful acts of humanity, the moral purpose of the universe is illustrated, and the human race is enabled to make atonement for its own blunders and crimes.

WM. J. POTTER.

FISKE'S COSMIC PHILOSOPHY.

An Open Letter to Mr. Joseph H. Allen.

Dear Sir,—In *The Index* of December 20, you have the following:—

I have been reading Fiske's *Cosmic Philosophy* lately, with renewed interest and much instruction. I seem to find here and there that Mr. Fiske, like all true philosophers, is better—or broader—than some of his own theories would seem to show, when it comes to practice. To illustrate, I will copy out a passage or two, which occur near the end of the book.

1. *Of Moral Freedom.* "The closed circuit of motion remains just what it was before. No conceivable advance in physical discovery can get us out of this closed circuit; and into this circuit psychical phenomena do not enter." Vol. ii., p. 442. The "psychical phenomena," as is shown before, include thought, emotion, and volition; and, as is here shown, none of these come within the "closed circuit" of physical necessity, or are provided for by the "persistency of force."

I think, sir, that you did well to call special attention to Mr. Fiske's "closed circuit," whatever it prove concerning him or yourself; and I address you thus publicly because of its philosophical importance, and subordinately only because of its significance relative to either the writer or the quoter. I infer that, in the interests of dualism, you adopt and approve the sentence quoted from Mr. Fiske, which, in your judgment, proves him to be "better—or broader—than some of his own theories." As I cherish a very high regard for both Mr. Fiske and yourself, I am sorry to say that I am obliged to draw the opposite conclusion concerning him and all who here approve him. The passage only proves that they do not fully understand the theory in question, and are incomplete and inconsistent in their views, which is no ground of gratulation either of ourselves or others.

The "closed circuit" is a fiction emanating from the addled old brain of dualism. It is the wisdom

Digitized by Google

of the old mythology,—a serpent with its tail in its mouth. In which condition, it cannot clearly articulate or do anything else. It is only the antiquated metaphysical method of prepositive times which has erected this fantastic enclosure. It contains an implied assertion that we cannot unite the physical and psychical, unless we find some sort of metaphysical *tertium quid*, which shall be a common centre to the two closed circles of physical and psychical phenomena; and that physical and super-physical processes are generically different, with a great and vacuous gulf between them, so that there is no possible scientific passage from one to the other. This is the modern nightmare of scientific psychology. It is the misleading action of Puck, without his wonted vivacity and wit, which always leave him when he tries his hand on philosophers.

It is unquestionable that "no conceivable advance in physical discovery" can get us out of the circle of physical phenomena, whether the circle be closed or not, else it would be something else than physical advance. Physical discovery is, of course, physical discovery only; and, truistic as this obviously is, it seemed needful to say it, because Mr. Fiske seems perplexed, while you are pleased and enlightened to find that physical movement never ceases to be physical movement by entrance into a super-physical state and form. Do you not see a great significance in the fact that we can never by physical discovery transcend physical phenomena? If physical discovery is to be considered as absolutely discriminated from psychical discovery, then it were a contradiction in terms to suppose that either could ever touch or approximate the other or be transmuted into the other, just the same as to suppose that sight and hearing shall each discover the peculiar object of the other.

Here, we put our finger on a source and mark of a wide-spread stupefaction and a fatal error in psychology, whether studied from the physical or super-physical stand-point,—an error which is a lingering and belated ghost of the old world of dualistic metaphysics. Physical and psychical phenomena are not to be distinguished, because they are one. All physical phenomena are psychical phenomena, forms of consciousness, subjective states, though all psychical phenomena are not physical. The psychical phenomena, which are so designated in distinction from physical phenomena, should be called super-physical; and, then, we should have a proper recognition of two classes of psychical phenomena or experiences, which two classes I have elsewhere called the sensible and super-sensible. Now, the conscious subject of these two classes of phenomena is the only necessary *tertium quid*, and, as conscious subject, it is directly known; and the conscious passage from physical to psychical phenomena, and return, are as constant as conscious life; and the co-existence of the two classes of phenomena in the same conscious subject is equally common.

It is forever true that "motion always remains just what it was before" so long as it remains at all or exists. It is necessarily so with all phenomena, which can never change, but only cease to be. That which changes is the permanent, the unchanging of which all phenomena are the modes. Phenomena begin to be, continue for a period, and then cease to be, always in concomitance or succession and lexical relation to each other. They really never pass over into each other, though we often say they do, just as we say the sun moves from east to west. Phenomena are preceded, succeeded, and replaced by each other; and we observe that there is a very regular order in these connections, and that is all. There is no closed circle of physical phenomena from which all super-physical phenomena are excluded, nor any closed circuit of super-physical phenomena from which all physical phenomena are excluded. There is but one circle, and that includes all phenomena; and there is no point in this ever-moving circle which differs from any other point in the regularity of its connections or the uniformity with which one phenomenon is replaced by another or correlated by another. The physical and super-physical are just as regularly connected with each other or correlated with each other as are the phenomena of either of the two classes within themselves.

Against this, Mr. Fiske and Spencer and others can only reiterate the falsity that "the physical do not pass over into the psychical, or that the physical do not cease to be as the psychical are developed. So that the two co-exist, and the correlation between them does not appear. And, till their eyes are open to see clearly the significance of the phenomena in question, we are compelled to reiterate that this betrays a twofold fundamental misapprehension of familiar facts. The physical do not need to pass over into the psychical, because they are already and always psychical, since they are always and only sensations or subjective states; and so they need not disappear and cease to be, in order hat sensation or thought shall exist. And so we must reiterate that there is a law of correlation between the physical and super-physical, and some phenomena of each class are alternately antecedents and consequents to those of the other class. Motion generates thought and feeling and volition, and these in turn generate certain forms of motion. *The Index* whence we have quoted, coming to me, has affected my feeling, thought, and will; and these in turn have generated the motion of my pen, which produces other motions, and these will effect some psychical changes of some kind in at least a few other minds.

Motion is an abstract term to denote moving bodies, and moving bodies never form a closed circle to the exclusion of all else. Moving bodies are the objects of only two senses, sight and touch; and each sense has a different object. These bodies are nothing but sensations,—visual and tactual sensations, so called. These are lexically related to other sensations, and all have fixed connections with super-sensible phenomena. The psychical unity of the whole is perfect and infrangible. The universe is one, because it is a universe; and the centre of this vast unity is the Ego, or subject of all, which is the great Unknown, in which all are evolved as its many various modes. There is but one circuit, and that includes all the known; and, while it is always perfect, it is never so closed but that unknown and unanticipated links may be revealed in it, a circuit whose absolute totality can never be disclosed all at once, because its phenomenal elements may be eternally changing, as, in some respects, I suppose they will be doing. It is a circle whose centre is invisible, and whose circumference is immeasurable. We have now a monism which is consistent and complete, and an evolution which is philosophically intelligible and perfect.

You see, my dear Professor, that this will not disturb our friend, Mr. Fiske, because it only completes his own speculations. Its relation to yourself is very different. Whatever was your object as against him and monism and naturalistic evolution, its ground is removed, and all further assault in this direction is rendered hopeless. As you are very laconic, I may not fully understand your object; but I trust you will, at all events, understand that there is here a closed circuit which dualism can never pierce.

With much respect, I am sincerely yours,

WILLIAM I. GILL.

THOMAS PAINE. (1737-1809.)

As it was the great salient fact of Daniel Webster's life that he devoted himself at last almost wholly to the task of giving to the union of these States an aspect of sacredness and inviolability, and made it his mission to inspire the minds of the American people with a reverence for the Union,—which would be the surest guarantee of its eternal preservation,—so it was after all the great salient fact of the life of Thomas Paine that he first familiarized the minds of the people of the old thirteen colonies, in his pamphlet entitled *Common Sense*, with the idea of independence and with the folly of any attempt at reconciliation as between themselves and the government of Great Britain.

Paine's *Common Sense* was published at Philadelphia in 1776, a year after the battle of Lexington. Paine, at that early day, foresaw clearly the grandeur of the destiny of this country. He saw that mankind at large were interested in its future. In the preface to *Common Sense*, he says: "The cause of America is, in a great measure, the cause of mankind. . . . The sun never shone on a cause of greater worth. 'Tis not the affair of a city, a county, a province, or a kingdom, but of a continent of at least one-eighth of the habitable globe. 'Tis not the concern of a day, a year, or an age: posterity are virtually involved, and will be more or less affected even to the end of time by the proceedings now. Now is the seed-time of continental union, faith, and honor." He scouted the idea of continental America remaining in a perpetual state of provincialism, vassalage, and dependence on Great Britain. "We may as well assert that because a child has thrived upon milk it is never to have meat, or that the first twenty years of our lives are to become precedents for the next twenty."

Although an Englishman himself, Paine denied England's relation of maternity to this country. Europe, and not England, is the parent country of America, he said. In no instance, he says, has nature made the satellite larger than its primary planet. There is something absurd in supposing a continent to be perpetually governed by an island. England and America belong to different systems, the former to Europe, the latter to itself. He was, in fact, as determined in preaching *independence*, instead of reconciliation, after the war had begun, as Webster—three-quarters of a century later, in the crisis of the slavery question—was in preaching the necessity and inviolability of the Federal *Union*. *Independence* was the watchword of Paine, in 1776, as *Union* was that of Webster in the decade between 1840 and 1850.

Paine was in fact the St. John who heralded the advent of the great Western Republic. He was present at its birth-throes, and indicated its horoscope and bright astrology. Paine was with his pen what Washington was with his sword to the cause of American liberty and independence. His pen scattered,

"As from an unextinguished hearth,"

words which were sparks of liberty among mankind. His *Common Sense* had an immense currency, and was indeed "the trumpet of a prophecy" of impending American independence and of the birth of a *sui generis* New-World nation, which was to form a new point of departure in the political and social history of mankind, or of the masses of mankind.

At the close of the War of Independence, in 1783, the newly born nation was poor, and of course in an amorphous, undetermined state. But, even then, Washington called the attention of Congress to the inestimable services which Paine had rendered to the country by his revolutionary writings. Finally, he received the paltry sum of three

Digitized by Google

thousand dollars from the United States, and about the same amount from the State of Pennsylvania, and an estate of three hundred acres of land from New York. But, while Paine's coadjutors in the cause of American independence — Washington, Franklin, and Jefferson — are eternized in the grateful memories of the American people, Paine's name has been doomed to obloquy rather than hallowed by the grateful recognition which he as richly deserved as his three illustrious contemporaries and co-operators. What is the explanation of this strange fact? It is not difficult to find. In 1787, Paine left his adopted country for the purpose of finding in England and Europe a field and market for the products of his inventive genius, which was great.

In 1791, he published his *Rights of Man*, which was a vindication of the revolutionary principles of the French national assembly against Burke's celebrated pamphlet on the French Revolution. For this vindication, Paine was elected a member of the French National Convention from the department of Calais. He was prosecuted by the British government for libellous passages in the *Rights of Man*, and found guilty in his absence. Henceforth, so far as England was concerned, he was an outlaw. Under the reign of terror of Robespierre, Paine was thrown into prison because of his English birth, and barely escaped with his life after eleven months' incarceration. He finally, after the death of Robespierre, resumed his seat in the National Convention by invitation of that body. It is to his credit that, while an implacable foe of the old *régime* in France and Europe, he yet could see that it was cruel to hold poor, imbecile Louis XVI. accountable for the sins and oppressions of all his royal ancestors. He therefore voted to send the king into exile rather than to the guillotine. Thus he was a rational revolutionist and no bloodthirsty terrorist. It was in 1794 that Paine wrote *The Age of Reason* at Paris. This famous work was dedicated to the author's fellow-citizens of the United States of America. It was dated "Luxembourg (Paris), 8th Pluviose, second year of the French Republic, one and indivisible," or, in the old style, "Jan. 27, 1794." At this time, the old ecclesiastical *régime* of pope, cardinals, archbishops, bishops, and priests had been as completely abolished in France as the political *régime* of kings and nobles had been. It is needless to say that Paine's *Age of Reason*, when read in the light of to-day, excites no indignation or wrath against its author. It is only a rude attempt to do what is now scientifically done. Although Paine anticipated the mythical theory of Strauss in regard to the alleged supernatural origin and deification of Christ, and also in regard to the miracles and other supernaturalisms of the Bible, still he was destitute of the historic sense as we now have it. He could not at his time of day see that history was the record of a gradual evolution of humanity, moral, social, political, and religious, that the documents composing the Bible were not cunning devices and concoctions of priests, but the genuine works of writers living at various periods in the history of Israel, who were the eloquent mouth-pieces and exponents of the genius and fervid feelings of their race at different crises and points in its primitive career. For instance, Isaiah was as much the voice and exponent of the higher reason and spirit of his age and race, moral and social environment, as was Paine himself of the liberty-loving, king-and-priest-hating spirit of the latter part of the eighteenth century. From Paine's European environment of popular misery and degradation on the one hand, and of kingly, aristocratic, and hierarchic oppression, insolence, rottenness, sensuality, and greed on the other, his arraignment of the Bible as the alleged charter of legitimacy and the inspired authorization of the despotism of the kings and priests was natural and venial enough. In the initial pages of *The Age of Reason*, Paine proclaimed himself a theist and a subscriber to the doctrine of immortality, where he says, "I believe in one God and no more, and I hope for happiness beyond this life." Thus he was not an agnostic, even while impugning the marvels of the Bible. He was a rational, naturalistic theist. But, in dedicating his work to his American fellow-citizens, Paine forgot that there had never been any haughty, inquisitorial despots in the shape of either kings or high priests in the United States to bring the Bible into disrepute and discredit by making it the authority and groundwork of their so-called *jure divino* right to treat the mass of mankind as their footstools, serfs, and blindly obedient, spiritual subjects forever.

The original colonists of the old Thirteen States, although they fled hither to escape the intolerant and oppressively aristocratic Church-and-State systems of Europe, were, nevertheless, Bible and evangelical Christians of the deepest dye. Their theology was popular,—that is, unpriestly and unecclesiastical,—but none the less deep-seated, and intolerant of all rational investigation and inquiry. It discarded priest and king, but it taught that the truth and the whole truth was to be found in the Scriptures of the Old and New Testament as expounded by their presbyters or elders. Although Puritan and Huguenot had drained the fiery cup of ecclesiastical persecution to the dregs in France and England, nevertheless they regarded their own particular articles of faith as truths which it was sacrilege to question. The Hollanders of New York and the German colonists of Pennsylvania and the Cavaliers of Virginia and the Catholics of Maryland were all, in their way, as devout Christians as the Puritans and Huguenots. Thus, the Bible was the book of books in the old Thirteen Colonies, in some of which there reigned a popular theocracy with the Bible for its Koran, a *civil* as well as *religious* code. This being so, there was, at the very close of the successful struggle of the old colonies to extricate themselves from the prelatical, aristocratic, and kingly sway of the British government, as blind a belief in the Bible as there is at this day among Mohammedans of all classes in the divine origin and literal inspiration of their Koran. Such being the state of the popular mind in this country toward the Bible at that time, of course Paine, by the publication of his *Age of Reason*, incurred the *theologicum odium*, and became the subject of unmeasured pulpit denunciation and popular hatred on this side of the Atlantic. He was the chief of sceptics and infidels, in the general estimation of the American public. In their detestation of his anti-christian principles, the American people at length forgot his inestimable services in the cause of new-world civil liberty and independence, although he had for associates in his scepticism and infidelity both Franklin and Jefferson. But these last had not embodied their anti-christian views in deliberately written books. But at last has dawned a real age of reason in all enlightened quarters of the world, when historic characters like Paine, who have been unjustly clouded and obfuscated by the displeasure of theological bigots, are given—so far as their memories at least are concerned—a rehearing in the chancery of Reason. It is needless to say that Thomas Paine will erelong be universally regarded as a worthy member of that immortal cluster or constellation of patriots and *patres patriae*, Washington, Jefferson, and Franklin, which will shine forever in the American historic firmament.

As for his free-thinking, rational treatment of Scriptural and ecclesiastical myths and articles of faith, it is mere milk and water compared with the inexorable logic which the Darwins, Huxleys, and Tyndalls of to-day bring to bear against the fables of primitive theological superstition.

Paine, it is well known, was of Quaker ancestry, and followed in his youth the profession of his father, which was that of a stay-maker. He left school when he was about thirteen. In view of this fact, the power and eloquence with which he wielded the English language in his great works entitled *Common Sense*, *The Rights of Man*, and *The Age of Reason*, is almost marvellous. It may be almost said that these works are worthy of a perusal merely for the sake of their style. He was, in fact, one of the great writers of the age of Burke, and a foeman fit to cope even with Burke himself. It was an era of political and social tempests and convulsions, that in which he lived. His life covered sixty-three years of the eighteenth and nine of the current century. As a man of the most positive and revolutionary opinions and a wielder of a potent influence with his pen in both hemispheres,—that is, in the United States, England, and France,—Paine naturally enough was the mark of the most bitter and virulent assaults and vilifications. His biography was again and again written in the shape of deliberately woven tissues of lies, for the purpose of making him odious and an object of popular hatred. The pulpit long waged as implacable a war against his memory as it did against that of Voltaire. But all that is past. Paine is at last certain to occupy a permanent, high, and honorable niche in the history of his adopted country and of modern civilization.

B. W. BALL.

"SELF-HELP."

Every young man of thought, not to say every one of principle, must at some time overlook the conflict in his own soul between faith and reason. Before each one of us the issue comes. Most forcibly is it presented, when we resolve to escape from the bondage of a bad habit. Impulsive youth, let us say, indulges tendencies which, if gratified to the utmost, degrade himself and alienate his fellows. Tendencies become fully developed habits. He awakes to a sense of his danger only when sympathy is almost denied him, except upon conditions. Then, the question comes, Shall he accept, or pretend to accept, these conditions, or shall he struggle on alone? And then begins the conflict in which manhood, possibly life itself, is at stake.

If, furthermore, this man who would reform is imaginative, emotional, a dreamer, and yet a man of some scholarship, — presupposing these added conditions,—the fight which he wages is against hypocrisy as well as against appetite. Conscience will not easily overmaster inclination in such a case as this.

Not only when well-meaning orthodox friends interest themselves has the temptation to hypocrisy to be overthrown. It would be pleasant, the young man thinks, to feel that these everlasting arms are about *him*, that this mighty God is watching over *him;* and it is easy for him, once he allows impulse to get the better of judgment, to become an involuntary hypocrite. When that supreme moment of victory or defeat presses upon him, he may see his error. Should he not see it, or should he cheat his soul into the belief that he does not, he will attach himself more firmly to his professed faith, and reason, or conscience, will "go by the board."

Out of the conflict, the truer light will come, if one will but endure. If, notwithstanding other

Digitized by Google

persuasions, habit's chains are broken, the pride of a larger manhood, the consciousness of a lesser selfhood, will overbear all considerations of policy or pleasure,—of policy, I should say, for there is no pleasure in pretension; and there is no purer joy than that which springs from the knowledge that one has risen, unaided, "on stepping-stones of his dead past to higher things."

EDITORIAL NOTES.

NO RELIGIOUS *test shall be required as a qualification for office!* The very spirit of infidel malice and intolerance lurks in the words.—*Christian Statesman.*

DR. FELIX ADLER gave a lecture, last week before the Boston Society of Associated Charities, on Industrial Education. He gave an interesting and detailed account of the plans and working of the schools connected with the Society for Ethical Culture in New York.

THE Liberal Union Club held its regular monthly meeting at Young's Hotel last Saturday evening. About fifty members were present. The subject discussed was "The Obstacles to the Progress of Liberalism." The meetings of this club are increasing in interest, and its membership is growing in a healthy way. It may yet do an excellent work in helping to remove some of the "obstacles" discussed at this meeting.

THE Free Thought Convention at Paine Hall, in this city, is holding its closing sessions as we go to press. It has fulfilled, we judge, the reasonable expectations of its projectors. The attendance on Sunday was reported as very good. But why did Mr. Seaver blot his otherwise good speech by speaking of Mr. D. M. Bennett as a free-thought martyr? *Even* if, as Mr. Seaver affirmed, Mr. Bennett's death was hastened by his imprisonment, he was imprisoned not for his free-thought opinions, but on a charge of circulating obscene literature. To count him, therefore, among the martyrs of Liberalism, is to stab the liberal cause. W. J. P.

A MEETING, under the auspices of the Free Religious Association, is to be held in Parker Memorial Hall next Sunday evening at 7.30 o'clock, with reference to the death of Keshub Chunder Sen, the recent great leader of the Brahmo Somaj in India. Among the speakers positively expected are Mr. T. W. Higginson, Rev. James K. Applebee, Mrs. Julia Ward Howe, Mrs. E. D. Cheney, and Wm. J. Potter. This meeting is appointed on the basis of "fellowship in spirit," and not that of unity in doctrine, and is intended not only to commemorate the man, Chunder Sen, but even more the movement in religious and social progress which he represented. The public will be cordially welcomed.

SAYS the Springfield *Republican:* "The attempt to reform the morals of the whole country by excluding certain things from the mails has gone quite as far as is practicable in refusing the use of the mails for the transmission of lottery tickets. When it is extended, as is now proposed in a bill before Congress, to the point of examining newspapers, before their transmission, to see that they advertise no medical preparations, the formula for which has not been deposited with the patent office, it is carried to an absurdity. Neither is it feasible through the post-office department to establish a general guardianship over the dear people, so they shall not be humbugged. There are a few precious privileges which must be jealously maintained, from the simple reason that it is not practicable to interfere with them without doing vastly more harm than good."

SAYS the Boston *Herald:* "Charity, in the old sense, is getting to be a thing unfashionable, and to be frowned upon. An esteemed correspondent suggests this morning that the city ought not to be allowed to keep the starving families of men who drink. This is in accordance with a good deal of the talk heard nowadays. It means that the innocent ought to be made to suffer for the sins of the guilty, and that charity should be bestowed only upon those who don't need it. If people are religious and moral, industrious, prudent, and have money in the bank, this philosophy would say, Help them, and you will get your money back. But, if a woman has been so unfortunate as to marry a drunkard, it is better that she and her children starve than that the city waste money in saving them. But Christianity wouldn't."

HEAVY indeed is the burden of educating laid upon the Southern States! With only one-half at school of a population the illiterate proportion of which, among both whites and negroes, is increasing, and in some States this increase of illiteracy greater among the whites than among the negroes; with the negro, the non-tax-paying element, increasing fastest, notwithstanding white immigration; with trades destroyed, and property in consequence reduced in value forty per cent., and in some States still falling in value; with the franchise, nevertheless, given to this increasing body of ignorance,—evil indeed may be the result to a republic, if the whole Union does not assist to correct it. Emancipation was a national act, and the nation ought to meet the inevitable consequence. So urges Dr. Haygood, in the United States educational circulars referred to last week, with the warning that no white men will agree for long to be voted down by a majority of illiterate blacks and whites.—*Nature.*

AT a meeting of the Massachusetts Woman's Suffrage Association, held at Tremont Temple, Wednesday, last week, the following resolutions were adopted:—

Resolved, In the words of our honored Senator, Hon. George F. Hoar, "Woman suffrage is essential to a true republic."

That it is wrong to tax and govern women without their consent, as it would be to tax men without their consent; and that to withhold the right of suffrage from women is a great injustice.

That this association congratulates the Legislature and Governor of Washington Territory that they used their great opportunity to establish equal political rights for women, thus setting an example which all the States and Territories should follow.

That we extend cordial congratulations to the suffragists of Oregon, through whose untiring efforts a woman suffrage amendment has twice passed the Legislature, and is to be submitted next June to the voters. We will do what we can to help them with money, tracts, and speakers.

That the extirpation of polygamy should be sought by all just means, but that it would be a gross injustice to disfranchise the less guilty half of the people of Utah, the women, while the more guilty half, the men, retain their political rights.

That we rejoice in the advance of public sentiment in England, as shown by the increased vote in favor of woman suffrage, which was defeated in Parliament this year by a majority of only sixteen, while last time it was defeated by a majority of one hundred and fourteen.

That in the death of Charles H. Codman, a member of our Executive Board, this association has suffered an irreparable loss. His cordial co-operation, his ready sympathy, his helping hand, will be sorely missed. We extend to his wife and son our expression of heartfelt sympathy in our common loss.

That it is desirable to form woman suffrage leagues or associations in every city, ward, and town of Massachusetts, auxiliary to the State Association.

That this association proceed to raise $10,000 for the above purpose.

That, when $2,500 of this sum is subscribed, a general agent shall be appointed and commissioned, who shall proceed to carry out the plan of organization.

That each member of this association be invited to secure pledges of money and to solicit names of members by payment at least of one dollar, and to report results each month to the Executive Committee at their regular meeting, at No. 5 Park Street, Boston, on the first Friday of each month.

THE F. R. A. FUND.

Donations and membership fees for the Free Religious Association, in response to its recent appeal for funds for the holding of conventions and for meeting other expenses of the Association. Will friends see to it that this list is increased?

DEAD.

The sky slopes down to the sea,
And they both are dull and gray;
The crawling waves move sullenly.

The tree-tops point away,
And wave their arms to the blast;
Night closes the eyes of the day.

The time of the flower is past;
The blossom that once was red
Is withering where it is cast.

The maiden lies in her bed,
The dimple gone from her cheek,
The smile from her silent lips fled;

Her forehead is white and meek,
And her wind-flower hands are crossed
In a prayer that she cannot speak.

Oh, what to her is the frost!
The waves that sob as they go!
And the blossom whose blush is lost!

Oh, what to her is the woe
That mourns in my breaking heart
For a joy I never shall know!

GERTRUDE ALGER.

The Index.

BOSTON, JANUARY 31, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association: namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

THE LIBERAL INSTITUTE,

OR,

THE NEW SCHOOL PROBLEM.

BY T. W. CURTIS.

What of the proposition to found a school in this country for the training and equipment of young men for the liberal ministry? And this on the assumption that no schools exist possessing such functions, or capable of adaptation to such an end. In the necessity for such a step may be read the bent, the character, of our times and civilization. But the response which is made to the call will give its own light and coloring to the picture. The nature, however, of that response, will depend on the idea formed of the liberal ministry, or, primarily, on one's theory of Liberalism.

There is a need for finances, students, professors, curriculum. But these I have stated in the inverse order of their essentiality. It is a sum in proportion, a problem in spiritual dynamics. All things answer to the law of supply and demand. The curriculum is the first, the finances the last, term. Only a materialistic, Mammon-worshipping age can say no to this. Gold was used in the infernal regions to build the hall of state for the Fallen Powers, and it arose the type of external grandeur and magnificence. The need of a new school must be seen and felt. It is possible the one man who offers half a million might raise the entire fund. But in this cause, no more than in any other, do Liberals believe in the "one-man power." It would be an affront, an injury to the cause. No one can expect or desire such a thing. Mr. Wade's offer is a test of the virtue there is in to-day's Liberalism. He is as wise in what he withholds as in what he gives. His faith's munificence manifests itself in both ways. Is the response to be made? The Unitarian denomination has hesitated long. Liberals may begin rightly to feel that the overture is addressed to them.

The inquiries to be answered, concerning the new school, then, are: What is its spirit? What is its curriculum? Who are its supporters? What is its name?

There is rhythm and rhyme in the thought, if not in the words, of these inquiries; and, the first answered, the others will be made less difficult to answer.

The Spirit.

There is need of a school, indeed, that shall be a generator of ideas and enthusiasms. But life only can beget life. At least, the contrary has never been proven, though the Sunday-school catechism is supposed to be the chart of these times. The new school must not put to sea without a compass and a hero-spirit at the helm. And that spirit is a challenge to the old learning, *the old-ology*, a rebuke to their priesthood and devotees. It is the enemy of Cant, religious, literary, professional,—the three tyrannies that now curse the world. The attitude of the school I conceive to be in a sense radical and revolutionary, and yet its spirit and purpose I believe to be constructive in the highest and best sense of that word. It is to be a pioneer school, resting on principles on which the schools of the republic must be based. It will stand for a faith, which is its soul, of which I venture here to give the formula:—

(Central Idea):
UNITY.
(Aim):
TRUTH,—its { Method, Principles, Application.
OF SCIENCE { of Life,—the Macrocosm. of the Soul,—the Microcosm.

It is the spirit of manhood that has given birth to this new project, and which alone can assemble the forces that are to work out its realization. And this spirit is an idea which is itself a faith, a philosophy, the pedestal of a new creation, a sculpture that beams with thought and sovereign rule, and with compassion, deep, loving, tender. In this spirit's behest are calls and spurs to a higher life. To be schooled in its precepts is the highest university degree. Its lore is the teacher's specialty, its inspiration the scholar's opportunity. The soul cannot mount its throne without a task, an ideal; for these make the man. And by the word soul I mean the intellectual, moral, and emotional powers viewed as a unit. To create the ideal is the task of the new school. Mind designs and executes. Man is his own model, fount of wisdom, and quarry of greatness. His thought and deed are his creator and providence. The perfect man is truth's incarnation, in whom it lives, moves, and has its being. Nature enspheres herself in him, making him her comate and interpreter. Take away your interdict and anathema. Chase away the cloud, remove the stigma, from the brow of man and the face of nature. Man himself must rise to plead his cause, to discover and vindicate his rights. There is as much danger in overlooking man in our prattle about nature's laws as in our vaporings about the Infinite Spirit. May not these two sovereignties meet in him? If they do not, what knows he of them? "Man's moral and intellectual fibres are woven *for*, not by him," says one of the oracles of science. Rather say, they are woven for and by him. This is certainly true, speaking of the species. And how nearly does the experience of the race come to repeating itself in the life of the individual? What joy or sorrow, what struggle or temptation, does not each one know! But man is finite. Be it so: there is then a chance for him to grow. To be true to a little light is the foundation principle of ethics and of godlikeness. Doing is being. Quiescence,—that is death. If man prays, let it be for the indefinite postponement of the perfect equilibrium. His worship should be the joy and awe inspired by the mystery of the being of which he partakes. Humility and wisdom are the footprints of effort and achievement, and faith is that glow of spiritual health which such activity gives. Every act of goodness assists the birth of the God within. Out of cheapest material is man's nature deified. In this sense is Liberalism the creative word. But it begins with the alphabet, with the elements of thought and character, which exist as yet in an embryonic state. The soul's faculties have but begun to form: none is yet full blown. In this fact lie man's strength and weakness; and, while the wild wind of doom beats upon his pathway, nature stands as his ransom.

Man is a self-helper, but he is masculine and feminine. The matching of souls is life's beginning and sanctification, the type of harmony, the seal of immortality. Society gives enlargement to being, for it is but the extension of the individual. Social fraternal relations procreate instincts and tendencies that lift man from the lower to the higher plane. Head, heart, and hand are the master-builders,—an indissoluble partnership. Valid only is the contract that has their united assent. Their concerted action is the sign-manual, the autograph of Deity. The economies and industries, the arts and sciences of life, constitute together a celestial mechanism of exchange, whereby the eternal goodness and equity flow into the human sphere, become motors of progress, organized centres of the world's growth and advancement.

These are the ways of the spirit. Creation is of the present, not the past, which was once the present. The tide of life pours itself through never-ending cycles of evolutional change and causation. Hereditary transmission is the link that binds life and the eternities into one. The Unknowable is a contradiction. That of which there exists an inkling or *antepast* is not even the Unknown, and such is the Eternal Infinite Power. Mystery is but the unexplored, the unfenced, and untrodden field of human hope and aspiration. Nature's truths shine in the mind like constellations in the sky, with here and there a background of golden mist or blank darkness. Similitude and verisimilitude are the lower and higher rounds of the Jacob's Ladder in the dream of science, which ever turns from semblance to reality.

> "A lofty part than which the heart
> Adopt no nobler can:
> Thou shalt receive, thou shalt believe,
> And thou shalt do, O man."

Jesus of Nazareth was a typical man, born in a manger, despised, persecuted, crucified between two thieves. What a lesson! Self-sacrifice? Yes. Selfhood triumphing over selfishness; personal integrity and independence choosing a life of sorrow and privation and an early ignominious death rather than make concessions to the bigoted, custom-bound spirit of his time. To follow Jesus so is to be true to one's self, to follow no other, to listen to the "still, small voice," which is a strain of the larger life of humanity. Jesus' soul was attuned to this spirit of his Maker, whose deep undertone was to him the voice of God,—that one grand affirmation with which he brushed aside both law and prophet, and thus brought upon himself the charge of heretic and blasphemer, and the fate of a rebel and outcast. He spoke his word, and gave his life. But there are other lives nearer our own time, less mixed with fable, and almost, if not quite, as instructive. Would that the world or the world's youth were more familiar with them! The roll of the world's great ones is as yet a sealed book, and largely because of the enforced monopoly of the ecclesiastical Christ, which bears but the faintest resemblance to the original. A

Digitized by Google

part of the seal will never be broken,—the nameless martyrs, whose still, silent glory is unknown to fame:—

"Yet haply all around are strewed
The ashes of this multitude.
It may be that each day we tread
Where these devoted hearts have bled;
And the young flowers the children sow
Take root in holy dust below."

The Church and the creeds stand to-day between man and the light. They keep the mind in darkness, the soul in its babyhood. Christ is to them as Moses was to the Jews. The Bible is their Talmud. Tradition with its sacred flummery has usurped the holy of holies. The so-called Christian religion is a myth, a pretence. Its ministers are mannerists and time-servers, preaching in a corrupt age a gospel of conformity and submission. Its doctrine of heaven and hell would degrade a chimpanzee, and this they call immortality; a doctrine which, together with others breeding fear, servility, and hatred, is the strongest possible proof of man's descent from the animal world. But this is not Darwinism, which is something higher. The doctrines of miracle and atonement produce a limp and flaccid soul, a cartilaginous species without fibre and backbone. Effort becomes a sin, thought a snare, virtue a lapse. Is not this faith's eclipse, the arrest and negation of spiritual and mental strength and capacity? "I think: therefore, I am," said Descartes. "I think: therefore, I am damned," says the Church. The Athanasian creed is in essence the creed of Christendom. And this they call piety, to which the wealth and learning of the land make their constant obeisance, the result being that all things are made in its image and likeness. The land is full of churches, schools, and manufactures, but also of brothels, liquor-hells, prisons, asylums; a double series that appear to increase in an equal ratio. Are they of the same breed? Are they not the changing aspect of one fact,—a low, mean estimate of human life and destiny? Oh, how long shall these things be?

"Those dogmas crude and old resign;
And let the infant soul,
'Neath Nature's influence benign,
Rise toward a brighter goal."

Curriculum.

Man (in his relations to)	Himself	Psychology, Physiology, or Mental and Physical Hygiene.
	Society	Ethics: Realm of Motives, Duty.
		Government, Law: their History and Principles.
		Political Economy: Laws of Trade, Finance, Co-operation, Land Tenure, etc.
	The Universe	Philosophy, Ancient and Modern.
		Religion, Historical and Theoretic.

The school is thus committed to something,—if not to the theory of design in the universe, at least to a theory of design in itself, and in this world of ours. Its plan of study is an organic whole, for the spirit of the age has breathed into it the breath of life. Its objects are practical, its principles rational, its spirit humane and philosophic. It assumes that the chief study of man is man, that self-culture is the aim of his being, that the means of this discipline are the study and observance of the laws of life of the inner and outer world. It recognizes the supremacy of reason and the universality of law, though not denying the possibility of newer and better definitions of these terms than at present prevail. It leaves many questions open the world has long thought settled, and holds its own positions as approximations only (though the truest and best) to the truth. It does not assume to teach theology or the divinity of any special religion. It does not even make Christianity or the Bible a specialty. And religion it makes a department of study only. The study of the evidences of immortality, it seems to me, should be included in the scheme, of which it would be, strange to say, not the least novel feature. It has been a universal belief: it remains a solemn hope. Indifference is impossible to any one who both thinks and feels. Immortality is a fact: men differ as to the kind. But why not include God? it is asked. My answer is, If God is not found in the scheme, we can very well do without him, and he without us.

But I wish to emphasize the thought that those who act in the capacity of teachers should be thoroughly imbued with the spirit. Other schools will in time imitate. But the difference will be in the text-book and the rendering of the text. Their Procrustean intolerance is not worse than a dry didacticism. Heat and light cause the seed to germinate. A professorship is the enthronement of *heart and mind.* The imagination, emotions, and will have their place in scientific study. The true teacher has not only sight, but insight and foresight,—he is prophet, seer, and revelator. He is an opener of new thoroughfares of thought. The school should have depth as well as breadth. There needs to be a whetting of zeal as well as the sharpening of wits and the storing of memory. What is scholarship, what is brilliancy, without a "hunger and thirst after righteousness"? If there be not felt that difference between the low and sinuous, the bold and upright, the eagle and serpent propensities of our nature, then welcome dulness and ignorance, welcome

"Night, on her ebon throne."

Here, in Yale College, in whose very shadow I am now writing, I see students with plenty of brain,—enough some of them for two ordinary men, just as in their huge overcoats is stuff enough for a suit or two cut on the economic plan. But what Yale needs, as all American colleges need, is a something to light up this cerebral mass with the fires of a noble enthusiasm. It is proposed just now to erect on the college-grounds a building for a Young Men's Christian Association. This shows where we are drifting.

My meaning is not that the faculty will be of one school of philosophy or the students all of one belief, in the ordinary sense. Still, there will be a oneness, an accordance. A linked confederacy of animated powers,—that is the ideal. The professor will keep alive the fire on truth's holy altar; and the pupil will taste of the spirit, and pay his devotion to the ideal.

Support.

The Index has done a great public service in opening this question of the new school; and the issue, I believe, will prove the wisdom of its action. Faith and tolerance are now demanded of Liberals. Let them co-operate in this enterprise. Let crotchets be laid aside. Let all vote for it, work for it, give their means for it. Let the sturdy manhood of the country be appealed to. Let there be no slackening of effort and no emasculation of the idea. Those who are in sympathy with a movement are and should be its supporters. Ye who are still encircled by church limitations, but who feel the thrill of the new awakening, and whom fortune has blessed with abilities of talent or wealth, come, turn your faces Zionward, and help us bear this ark of the new covenant toward the Land of Promise.

Name.

What's in a name? The name hints the creed, and should always be a symbol of life's higher aims and purposes. And, in the present instance, I must challenge the fitness of either of the words "theological" or "religious" in the characterization of the contemplated enterprise. The school has other and sufficient sanctions that may or may not be of kindred import. Liberty demands this caution. A name will be found. I suggest for name *The Liberal Institute*, which seems to me to adumbrate the design of the school as well as the principle at the bottom of our new social life; namely, liberty organized in institutions, in character, in life.

For *The Index.*

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER XII.

When arriving at the farm-yard of the chiefs of the Mennonite settlement, we entered a wide avenue formed by young, light-branched trees, growing, as is the wont of trees in Kansas, as though they expected to receive a commission on their height. But what was most surprising was the number of brilliant flies and butterflies which filled the road. I never saw, or thought to see, so many at once. It was quite a Butterfly Avenue. An entomologist needs no net there. He might capture a hundred choice flies in his hat at will. They seemed to fill the pass, and we had reluctance in driving through them. When we returned the same way, they followed us until we had fairly entered the prairie again. It might be merely Mennonite courtesy, undertaken by idle wings on the part of the busy settlers; it might be but a butterfly ceremony of sentiment; or it might be curiosity to see all they could of such strange visitors. However it was, they accompanied us some distance on our way to the plains.

On the prairies bordering a railway track, unwonted sounds recall familiar scenes and sounds in England. As the railway bells ring over the sunny plains (as church bells do at home), it seemed a perpetual Sunday morning; for, instead of our railway screech, the engines there have pleasant-toned bells, which ring on the uninterrupted breezes, catching the distant ear in places where for centuries previously only the yell of the Indian had been heard.

The Bishop of the Mennonites came with his flock. Fortunately for them, he understood farming as well as divinity. When his followers beheld the bare plains to which he had brought them, on which nothing was visible but buffalo grass, their hearts were troubled. "Fear not," said the far-seeing bishop: "in four years, all these prairies now waving with grass shall be waving with wheat." And it came to pass even as he had said, and pride and plenty and contentment now dwell with them. The bishop has had planted an avenue of trees—light and graceful they grow—all in a straight line. And what a line! The avenue is twenty-five miles long. So that the most wavering lovers, walking up it, may hope to come to an understanding by the time they reach the end of it.

Mr. White, the chief of the Topeka and Santa Fé Railway, made for us a marvellous map of our journey. All the places we were to visit, the minute when we should arrive, the hotels at which we were to stay, the cities at which we were to spend nights, the hour at which we should resume our journey, the place on the mountains and time when the comet could be best seen, and where the grandest sunrise might be witnessed during our journey of thirty-three hundred miles, were all marked down for us without error. It came to pass even as it was foretold. This showed a mastery, which surprised us, of the movements and possibilities of travel over such vast tracts of country. One thing I record, because it struck me as explaining what I thought praiseworthy; namely, the consideration shown for the convenience and pleasure of settlers in the many cities along their great route. Mr. White said "his policy was to cause all people dwelling on their lands to speak well of their line." This is plainly good policy; but there is a great deal of good policy, known to all men, which is never put into practice.

When at Santa Fé, I wrote to Mr. White to acknowledge the opulent courtesies we owed to him. I said what I may repeat here, because what a visitor says personally may be true, as it ought to be: what he writes, he means. And, in that form of expression, I stated that while the courtesy of American gentlemen to ladies is a matter of European report,

Digitized by Google

as I knew, yet, until I witnessed it, I did not know how continuous and refined it was; that, in my opinion, the countries I had passed through on their line had advantages and resources which no general description made to me had exaggerated.

When we reached Lawrence University, I agreed to visit it with a blank and placid curiosity. To my surprise, the president and several of the professors came down to the carriage to welcome me and my companions as we alighted. As we were ascending to the great hall, the president, in an engaging, unpremeditated way, said, "We should be glad if you would say a few words to our students." I answered with real consternation: "What can I say? Unacquainted with the history of your university and the characteristics of its studies, and without an idea as to what could possibly interest any student in your halls, it stands to reason that I can say nothing which will become me like silence." "Yes, that is modestly put," rejoined the president; "but, if you will kindly leave a choice to us between speech and silence, we will take the speech." Seeing that I had to make an address upon something, I answered, "I will do as you are pleased to designate; and, as we walk through the museum, I will try to imagine what I can say which may seem relevant to your students." "That cannot be," observed the president; "for the students are all assembled now, and waiting." And, leading me into the hall, there were five hundred ladies and gentlemen, all seated, expecting an oration from the visitor fresh from the prairies, and who had no more academic ideas in his head than a cowboy. Then came that peculiar rain of cheers, which I heard for the first time in the Cornell University. It seemed as though the roof was struck by a thousand shots. I was told afterward it was made by a peculiar way of striking the hands. The ladies with me took their seats on the dais, when the president introduced me; and I spoke perhaps three-quarters of an hour. Two subjects, only, came into my mind as I approached the platform.

One was the advantage to so great a nation as America of an authentic guide book to it for European use. Among the students before me were many who would be senators in the future, and all, by reason of the high education received there, would have influence over the fortunes of their country. If they suffered their country to double its population by an unknown and unfit crowd of foreign emigrants, the American nation would be "o'ermatched, o'ermastered, and outnumbered." Besides, for the government to give no authentic account of their territories, their conditions and resources of their country, was to abandon its reputation to chance report or interested misrepresentation or to ignorant enthusiasm,—the most excusable and the most dangerous of all. The other subject on which I spoke was the preceptive and material methods of morality pursued in co-operation, upon which they knew I had elsewhere in their country spoken. In that university, the noblest precepts of morality of every nation, Pagan and Christian, were taught them in every classical tongue; and, in all the centuries, since universities began, the same thing has been done. Yet they knew the morality of public men in every country was not much to boast of. Certainly, high-toned personal veracity in politics or commerce was not remarkably diffused. A co-operative society is one which binds itself to act justly in matters of weight or measure; to act honestly in matters of quality, whether any profit accrued or not; and, if profit did accrue, they undertook to divide it equitably among all whose custom produced it. The public were so taken by surprise at the promise of equity and truth in trade that they gave the thing a trial; and, when the report was noised abroad that the co-operators kept good faith, profits were made. The discovery became public that co-operators had made honesty pay. The profits made were accumulated for its members, who thus acquired money by simply giving orders, and grew rich while they slept. Not by preceptive teaching, but by these material devices of probity and economy we made morality possible by making it profitable. We kept clear of religion and politics. As individuals, we were partisans outside the society, and neutralists within it. Neutrality was the source of our unity and our strength. We respected all men's opinions, but asserted none. Thus the majority never triumphed, nor were the minority insulted by imputed inferiority. In America, where personal opinion was more sharply barbed than among us, this policy would be needed, if they adventured upon co-operation. Thus, in default of other subjects, I discoursed in the University of Lawrence. Subsequently, I was courteously informed that both subjects on which I had spoken were precisely those on which the students wished information.

In the museum at Lawrence University, I saw an image of Indian manufacture of what might have been the first man of Kansas. His inarticulate frame, his staring and inquiring eyes, his open, foolish, and expectant mouth, his general look of astonishment and active imbecility, represented the native wonder when knowledge was first invented. At my request, the president promised me a photograph of this primitive being. If it arrives in time, I intend to adorn my story with it.

There is nothing so beautiful—perhaps I had (in case I should go there again) better say *more* beautiful—in Chicago than the pride the people take in their city. If the Chicago people did but add a little civic logic to their other qualities, macadamise their streets, and permit no refuse to lie about, they might better challenge admiration. Cleanliness and sweetness are the graces of a fine city. To put up vast and luxurious hotels, and retain a roadway before them which a costermonger would not cross if he could help it, is so needless in a city where they have noiseless tramcars, without horse or engine, propelled by an unseen power underground, moving like a spirit and stopping at will. In a city where great things are never wanting, a visitor does wonder that small things should be impossible.

It was a great pleasure to learn that there are prudent people in America, as elsewhere, who never speculate save with such portion of their fortune that they can afford to lose, if things go wrong. The mad lines of the poet—

> "He either fears his fate too much,
> Or his desert is small,
> Who dares not put it to the touch
> To win or lose it all"—

have, however, more admirers in Chicago than in any other city.

The fact is the speculators and adventurers, the parties of capital and enterprise, monopolize public attention in the press as they do more or less in other countries, and shut from sight the solid worth of the great body of the people. The day of most interest to me in Chicago was spent in the Lake View High School, of which Prof. A. F. Nightingale is principal, who resembled in his capacity of inspiring enthusiasm for excellence that which we honor in some of our great teachers at home. I had met some of the students in society, and judge from what they said as well as from what I saw that Lake View College was a real school. The building had no mean interest. Unlike the rooms, dreary as malignity could make them, or monastic and dull, which oft in England make learning seem a penitential pursuit, the halls of the High School were spacious, light, and cheerful. The walls were hung with human portraits of men whose fame might be inspiration, and whose history is a part of national education. Myself and friends had the honor to be entertained by the faculty of the school, and afterward every opportunity accorded me to visit the classes. In one, I gave a short history of the oldest picture in England, that of Richard II. (five hundred years old), which hung for centuries in the Chapter House of Westminster Abbey. As it was two years in my house, I knew it well. I saw the painted surface removed which was put on it by Capt. Broome, the Parliamentary painter, one hundred and fifty years ago. No human being living had ever seen, until Capt. Broome's obscuring paint was dissolved, the pensive, timorous, and unhappy king whom Shakspere drew. The colors were as bright and real as when first laid on, as those may see who visit the Jerusalem Chamber. Painted on a panel consisting of three planks of oak, an inch and half thick, it was yet unwarped. A microscope could not discern where the joining was made. There were carpenters in those days. There was nothing I could say to the historic class in illustration of their studies which could interest them so much as this narrative did.

Later, I had the pleasure to address the assembled students. It was a remarkable oration on the "Power of Music," by Miss Kettie Little, which I did not imagine for a moment was original, as it was, which led me to describe to the students the characteristics of Cobden, Lord Beaconsfield, Mr. Roebuck, and Mr. Bright, and the methods of thought which led to their style of expression and the effects they produced, so far as those points were instructive or suggestive to students of public speaking. The explanation engaged their attention as a similar one would ours, if any person described to us for the first time the way in which Webster and Clay, Calhoun and Wendell Phillips, made for themselves names of renown.

CORRESPONDENCE.

THE CORNELL DISGRACE.

Editors of The Index:—

Our honored Cantabrigian, Mr. J. H. Allen (now exiled in Ithaca), seems to me to have very delightfully refuted himself in his last article. It almost seems to answer itself. We are all very much indebted to him for looking up the Adler matter; for he has now made it as near certain as can be that Cornell is an illiberal people's school, a kind of *Realschule*, and not a broad and liberal university at all. There are no universities outside of Germany; and it is mere brag for England and America to apply the word "university" to their colleges and academies (*Gymnasia*). American students are treated by their instructors and the ecclesiastics who papa them as whining schoolboys of a larger growth.

The whole American system is compulsory: the German is free. German professors are spurred on by dangerous young rivals and competitors. American professors are sinecurists, if they succeed in pleasing the autocrat who appoints them; and a sinecurist rarely does his best. At the German universities, anything can be taught, no matter whether it conflicts with religious and other prejudices or not. There is, perhaps, not yet perfect religious toleration in Germany; but that is what they approach very closely. In America, you take such a college as Cornell, and you find that it is bound hand and foot by popular superstitions, popular opinion. The latest scholarship on such a subject as Hebrew literature *cannot* be taught there. Therefore, the institution is not a university,—not even so near an approximation to it as Harvard, where the latest scientific theories about Hebrew or any other literature can be given in lectures pretty radical for an institution under the influence of old-fashioned Unitarianism. Mr. Allen says that the attitude of Cornell toward religion is maintained with difficulty on account of the inability of the people to understand what liberality means. Does Cornell itself understand what liberality means? I doubt it. I don't wonder the public do not relish or understand a "neutral" position in theology. Neutrality may be eminently safe, but it is eminently timid and time-serving. Cornell may think that it is the best thing that she can do in the present state of ignorance of the popular mind. But it is a very weak and poor attitude to take,—this sitting on the fence, this "copperheadism." The whole time is out of joint now with this accursed dodging and ducking, and shirking and dissembling, quibbling and construing, quaking and quailing, and whining and puling. It is emasculating education, emasculating the pulpit, making rotten the marrow of thought, unhinging, unkeying ambition and heroic temper in youth, and slowly spreading its damp and blackening blight over the spirit of the nation itself.

It is time for a rude awakening, for a resolute move forward. The universe shines as fair and soft and beautiful, as mystic, deep, and wondrous as before: it is only needed that we expand the soul, and institutions with it, to its enlarged habitat. Truth is eternally good and nourishing, duplicity eternally demoralizing, everlastingly destructive.

Is it not strange that we have degenerated so far and so fast that, in the case of a university, we regard neutrality of opinion on dangerous themes as the highest possible state attainable? Neutrality! How one loathes the word! Thank God that the lukewarm, wishy-washy, white-blooded spirit of neutralism has spread no further! No wonder Carlyle despised it. It never had a root of eternal life in it. Turn its roots up in the sun, and you kill it. Let us spew out of our mouths this kind of liberality and neutrality. It would be manlier to act on the whimsical suggestion of a recent contributor to *The Index*, and build a temple to the sun. Yea, worship the

Digitized by Google

glistening rocks and soil and heaving azure sea rather than be a disciple of Neitherism.

Is it necessary to say that at a *real university* the most radical truths can be fearlessly taught, unless they are subversive of the good institutions of society? At a genuine university, you might have half a dozen lecturers on Hebrew literature, and each taking a different point of view. You ought to have lecturers on both sides of many great subjects at a national school, a university school. But how about the liberality of a "university" that would not "renew the appointment" of any lecturer who, in the opinion of the appointing dignitaries, did not strike the popular vein! The idea is laughable: the thing would be execrable. Yet this is what Cornell has done, and it is what every other American college would have done. Understand once for all that there is absolutely no perfect religious toleration in any American college. Understand that our higher education is on a low, very low, plane. Understand that it has not in it the elements of free growth, not the power of inspiring an enthusiastic body of searchers (instructors and students). Understand that it is puerile, archaic, mildewed, gone to seed. And understand that, unless a vehement and extended movement be made for the founding of broad, secular, scientific university instruction, the American nation will soon be far, far behind the European nations in intellectual grandeur. And not only this, primary instruction must be put on a new basis. It is time to return to the Jews the religion we have borrowed of them. It is time to cease to read their mythological books in our public schools. At any rate, a beginning must be made in establishing other schools where only the pure ethics of the world's religion shall be read. Would it not be possible to call a great national convention of evangelicals, Mormons, Jews, atheists, fire-worshippers, agnostics, Spiritualists,—in short, representatives of all sects,—to meet in New York and compile a book of ethics to be read in the national schools? The mere reading of Jewish fables as solemn religious truth is pure sectarian teaching, works pure mischief. In the new order of scientific primary schools, let the stories of the Hebrews be read with the beautiful myths and dreams of other peoples; *but let them be known to be story-books.* Separate truth from fable, fact from fancy; for as softly as falls the snow-flake or gently as fall the little footprints of birds upon the ground, so silently sink into the minds of children the words they hear or read. Let but the sounds or symbols enter the soft and plastic brain, and they make instantly an indelible impression. It is the easiest thing in the world to inculcate truth, to supplant old errors in society, if you can have the training of the youth. All else than this, therefore, is of minor importance. Education, education, education,—this is the only means of liberalizing the world, of freeing it from the religious terrorism of its popular superstitions.

To return, in closing, to the Cornell matter. I will say that I have no right, or no wish, to enter upon the more delicate ground of the Adler lectureship affair. What I stated was based on information derived from an intimate personal friend of Prof. Adler. What he said Mr. Allen confirms by inquiry made on the spot; namely, that Prof. Adler's appointment was not renewed, because (to use Mr. Allen's words) "he appeared to make himself a propagandist of views which called out a good deal of suspicion and obloquy against the university." There you have it. A rich New Yorker, Mr. Seligmann (a Hebrew), founds a lectureship for the scientific comparative study of the Hebrew literature. He indicates his wish that his friend, Prof. Felix Adler, fill the chair. Prof. Adler has been for years pursuing thorough courses of philosophical and historical studies in Germany. He is imbued with the enthusiasm of the German spirit. He goes to Cornell, and (says Mr. Allen) lectures the first year on Buddhism, not on Hebrew literature. Mr. Allen must understand, what is doubtless the truth, that, in lecturing on Buddhism, Prof. Adler was beginning at the root of the subject. He was using the comparative method. He was laying his broad foundation, and at some point of his course was doubtless going to make an elaborate comparison between Buddhism and the Hebraic religion, in order to establish the truth or falsity of a current opinion that Christianity is derived from Buddhism. At any rate, here was a splendid opportunity for Cornell to make a European reputation by fostering original research in Talmudic and other Oriental lore through the labors of a son of a learned rabbi, and one who is at the same time a clear logician and philosophical thinker. But (judging by the ostensible motives she gave) we see that Cornell pusillanimously winces and squeaks and truckles, and refuses the fine opportunity. She tries to silence a brave thinker, but only makes his influence ten times greater. Cornell returns to teach her boys shop-hammering and Euclid and Xenophon. She ceases to be a university. Her action was and is disgraceful,—eternally so.

WM. SLOANE KENNEDY.

BELMONT, MASS., January 18.

THE GOSPEL OF HEALTH.

Editors of The Index:—

In a late number of the *Christian Register* there is an excellent article entitled the "Gospel of Health." The article is referred to in the editorial columns with the somewhat slighting remark that there are nearly as many *isms* in physiology as in theology. There is, no doubt, some truth in this. But any one who allows himself to be influenced by such a remark to the extent of neglecting compliance with physiological law in his daily life may find by bitter experience that, whether the truth be easy or difficult to find, it is absolutely necessary to search for it. The preservation of health and the transmission of a sound constitution to offspring are duties which ought to be recognized as of primary importance in a system of ethics. It seems to me that they are not generally regarded by Liberals as lying at the very foundation of morality. It has become customary to regard morality as being chiefly, if not wholly, concerned with man's relations to his fellow-men. Most systems of religion and morality, down to the most recent, insist with special emphasis on man's duty to God and to his fellow-men,—the duty of living for the glory of God and for the good of others, the duty of self-sacrifice to the extent of surrendering his own life and interests for the good of the race. They have but little to say about justice or individual rights, and nothing at all to say about the duty incumbent on every individual to preserve his health, to maintain himself, and supply all his wants by his own exertions, carefully abstaining from all acts that will hinder or prevent his fellows from doing the same. There is one great difference between compliance with the gospel of health in our individual lives and trying to help our fellow-men. Every act toward the first object is attended by undeniable benefits. The preservation of health increases the length and breadth of life, and is the first element in the enjoyment of it. The careful guardianship of the habits and passions, daily and hourly necessary to soundness, is one of the best disciplines, mentally and morally: we are the better enabled to transmit a sound constitution to offspring, and the less likely to leave them without support and protection in their tender years. In all these and many other respects, the possession of health makes our lives rich and addeth no sorrow. When, on the other hand, we attempt to aid our fellow-men, we are beset with difficulties and dangers: we can scarcely take a single step without interfering with that salutary discipline of endurance of consequences, which has been nature's mode of improving all animals since life first began on this earth. The greater part of the evils that afflict human life spring from ignorance and excessive animal propensities, from laziness and improvidence. The real wants of life are so few that, in this country at least, no industrious man need be without the means of supplying them, and laying by a fund for contingencies besides. A little knowledge and self-restraint will make the occurrence of sickness and premature death very rare, if not impossible. Want, poverty, and sickness are the penalties for non-compliance with the conditions of life. If anything will force the individual to reflection and amendment, it is this discipline of suffering. But when ill-regulated charity steps in and furnishes food and clothing and shelter and medical attendance, which have not been earned, when it seeks to shield people from the consequences of idleness and improvidence and excessive indulgence, the prime object of the natural penalties is defeated, and amendment of life becomes next to impossible. Nevertheless, we cannot see even the most worthless die of starvation or become centres of disease to themselves and others without seeking to relieve their sufferings in some manner, wisely or unwisely. The shock given to the feelings and sympathies of the worthy by the sight of the unrelieved miseries of the unworthy would perhaps be a greater evil than the multiplication of paupers and imbeciles. No doubt there are many cases where help can be extended to those who are in need of help through no fault of their own, and who will not be deteriorated by it. But, in the great majority of instances, you cannot give anything gratuitously to a man without impairing his self-respect and his self-reliance. Sympathy, encouragement, example we can give. Whatever will stimulate people to help themselves, this seems to be the only benefit that can be conferred on fellow-man; and about the best gospel that can be preached to him is the "gospel of health."

I. G. WHYTE.

A METHODIST MINISTER'S VIEW.

Editors of The Index:—

Mr. Underwood's paper against Mr. Holland is strong and conclusive as an expression of the feeling and opinion of leading evolutionists. But I do not think he shows clearly that his position cannot be justly maintained from the doctrine of the survival of the fittest. The logic of the position relative to that doctrine needs to be overthrown, and there Mr. Underwood has not exerted himself adequately. His logic I have always admired, but here it is not so conspicuous as usual. I have no doubt that "the new ethics, outlined by Mr. Holland, embodied in individual and social life, and recognized as the highest standard of conduct, would in a few centuries produce a type of character as selfish, as cruel, and as vicious as ever existed on the globe." But that does not disprove his inference from the doctrine of naturalistic evolution; for it may be a disproof of his base, evolution itself, as conceived by Darwin, Spencer, etc. This is the position I take. I hold that they are incomplete, and thence false and injurious. Their theory affords no principles on which to condemn Holland's theory or any man's practice whose disposition prefers the low and vile to the good and superior. At least, this is the way I have always thought; and I can give some good reasons for it, I think.

A METHODIST MINISTER.

[The main object of the article referred to above was to indicate that, with intellectual and moral evolution, natural selection gives way to conscious, purposive effort, which enormously modifies the methods of progress and continually eliminates from those methods that which is the most abhorrent to our highest nature. It did not seem to us necessary to do more than show that this was the view of "leading evolutionists." When an argument is advanced in support of the position taken by our correspondent, it will be quite soon enough to go somewhat fully into an examination of the moral teachings of "naturalistic evolution."—ED.]

MISCELLANEOUS.

PAINE'S MONUMENT.—In 1839, a straight shaft of granite was erected in Westchester County to mark the final resting-place of Tom Paine, the atheist and patriot, who was buried on the farm near New Rochelle where he had passed the later years of his life. This monument was in time much defaced by vandals and relic hunters. Two years ago, it was taken down, the broken corners rounded, the scars effaced, and the inscriptions recut. On May 30, 1881, it was rededicated. Since then, rumor has stated that it has been again defaced; but a visit to the spot yesterday showed that this is untrue. The monument stands on the right-hand side of the road after leaving New Rochelle, in the centre of a plot of ground twenty feet square, protected on the sides and back by stone walls three feet high, and on the road front by an iron railing. It is in excellent order. The plot on which the shaft was erected is surrounded by the property of the Lester family. In a handsome house a hundred yards further up the road Mr. Simeon Lester lives. He was originally a farmer, but has long since retired from active work. He is now eighty-seven years of age, although his ruddy cheeks, dark hair scarcely touched with gray, and firm step would make him look not over sixty-five. He said yesterday to a reporter: "I came here to reside in 1825, and from then on heard many remarkable stories of Paine from those who had known him intimately. After a while, I became an elder in the Presbyterian church here. For this reason, I suppose, Mr. Paine's admirers, who knew that he was

Digitized by Google

buried near my property, have accused me of being instrumental in the past vandalism. This is not true. I seldom speak of Paine; for the man is dead, and I let his memory rest. But, for many years past, I have been beset by denunciatory letters from all parts of the country. I have even received letters from England of the same tenor. "The truth is that it was I who cleared off the brush which had overgrown the plot, and with my own hands drove the four stakes in the ground, twenty feet east of the monument, which mark the exact spot where lie Tom Paine's ashes. The story that the monument had been egged recently is untrue. I have passed the spot several times a day all my life, and never saw an egg mark on it. The only time it was defaced in my memory was about ten years ago, when some mischievous boys bespattered it with mud. As soon as we heard of this, my wife took two servants with her and had the stone scrubbed clean."—*N. Y. Herald.*

PRACTICAL RELIGION.—In a recent discourse on "A Practical Religion," before the Ethical Society of Chicago, Mr. W. M. Salter, as reported in the *Evening Journal* of that city, said: "Religion is a sense of the ideal. Man has two sides, one of which opens out on what is actual, the other on what is possible and ideal. Yet what mistakes have been made in conceiving of the ideal! To some, it is only an object of delight: they think of it, love it, worship it, as they say,—do everything but obey it. The element of respect is wanting from such sentimental religion. Our higher thoughts are not to luxuriate in: they are but an image of what we should be and do. Akin to this is the philosophical mistake of regarding the ideal as another world alongside the actual. This was the Platonic illusion. The higher world does not exist. It ought to exist: it is but an image after which we are to transform the world about us. It may be unsatisfactory to regard justice, goodness, only as ideas; but the noble mind does not ask what is satisfactory, but what is true. And, after all, there is a nobler satisfaction in carrying on the ideas to triumph than in witnessing any triumphs already made. That is the most unsatisfactory view of life, which encircles it with no great trusts, which gives it no grand tasks. Then there is the theological mistake, which views the ideal as a person ruling the world. The personal duty of theology is as illusory as the Platonic world of ideas. Love, pity, boundless charity, unfailing justice,—these are not in the world, not in ourselves; and so, foolish creatures that men are, they jump to the conclusion that they are in God. There is a noble side to theology,—namely, its thought of the perfect; but there is an ignoble side: this is the belief that the perfect is anything else than an ideal for ourselves. The old religions leave us on our knees in rapt contemplation and worship: the new will call us to stand erect and to believe that all that men have worshipped, all that they have dreamed of, all that seems far away, they are themselves to become. A practical religion is a religion with the sense of a boundless task. Let not the reformer fear that he can pitch his demands too high. There is something in us that can respond to them, there is something in the nature of things that makes the highest, the best things possible."

COL. BUNDY AND HIS JOURNAL.—In a large work, entitled *Nineteenth-Century Miracles of Spirits, and their Work in Every Country of the Earth*, by Mrs. Emma Hardinge-Britten, now passing through the press of a London publishing house, occurs the following: "During the author's far and wide wanderings round the world as a spiritual propagandist, no charge has been more universally preferred against the cause of Spiritualism than that of being allied to the odious doctrines of 'Free Love.' We have already made our readers aware of the utter falsity of this charge and the concatenation of circumstances which gave the antagonists of Spiritualism an opportunity, which they eagerly embraced, of shouldering the daring licentiousness of the few upon the entire rank and file of the Spiritualists. In foreign lands, however, and especially when lacking those literary references which would enable her to furnish abundant counter statements, the author's denials of this abhorrent stain would have found but slight chance of acceptance, had she not been nobly sustained by the uncompromising denunciations of 'Free Love,' and all its propagandists, which filled the columns of the *Religio-Philosophical Journal* during the entire period that this madness ruled the public mind. Here was a well-recognized and leading organ of Spiritualism disclaiming all fellowship with the promoters of this doctrine, and protesting against its abominable practices with a trumpet tongue which could neither be mistaken nor denied. The author is under a debt of deep gratitude to Col. Bundy for the triumphant refutation which his journal has afforded against the groundless charge that there ever was, or could be, the smallest link of connection between the doctrines of true Spiritualism and 'Free Love.' Allied to the daughter of the late Mr. S. S. Jones,—a lady whose brilliant talents well fitted her to be the companion of a leading journalist, and whose eminent virtues, noble character, and sweetness of disposition are calculated to make her husband's home a paradise,—it has been argued that the editor of the *Journal* is not competent to judge of the urgent necessity to reform the wrongs that ensue from unhappy marriages or the miseries of discordant homes. In answer to this plea, it has been abundantly shown that the *Journal* has ever been the champion of true reforms. Its special aim has been to draw the impassable line of demarcation between liberty and license, moral law and immoral lawlessness, true love and true licentiousness. It is in this sense that its columns have redeemed Spiritualism from the foes of its own household, and furnished the author on countless occasions with a sword which has slain the very arguments that would otherwise have slain Spiritualism."

BOOK NOTICES.

THE DISEASES OF THE WILL. By Thomas Ribot. "Humboldt Library of Science," No. 52. Price, post free, 15 cents. J. Fitzgerald, publisher, 20 Lafayette Place, New York.

Every one is, from his own experience or from his reading, familiar with the principal phases of mental disease in the form of intellectual insanity, or disorders of the intellectual faculties. Other forms of mental malady, though quite as destructive of that equilibrium which constitutes entire sanity of mind, are practically unknown to the general public. Thomas De Quincey, the "English opium-eater," affords an illustration of grave impairment of will power, while the intellectual faculties remained intact. Another noted instance of this curious loss of balance between the several mental faculties is seen in the life of Samuel Taylor Coleridge, "the old man eloquent." In the former case there was absolute inability to execute any purpose, in the latter there was a loss of all power of co-ordinating and concentrating the thoughts upon any subject. In the present work, the phenomena of will-impairment are fully explained, with abundant illustrations from the history of these and many other celebrated cases.

A BACHELOR'S TALKS ABOUT MARRIED LIFE AND THINGS ADJACENT. By William Aikman, D.D. New York: Fowler & Wells, 753 Broadway. 1884. Price $1.50. For sale by Lee & Shepard, Boston.

In spite of a somewhat too pious strain running through its pages, this is an interesting work. The "bachelor" is a decidedly kind-hearted, genial, and just observer of home morals, manners, and deficiencies; and none who have homes of their own can fail to find hints and suggestions of value in the ordering of their home life from the shrewdly gentle "Talks" of this observing and tender-hearted "bachelor." Among the many topics on which he offers wise hints are the following: "Homes," "Housekeeping," "Taking and not Giving," "Politeness in the Home," "Reproduced Characteristics," "Justice to Children," "Children's Blues," "Bossing It," "Questionable Books," and "Responsibility put on the Inexperienced."

THE opening paper in the *Popular Science Monthly* for February is by Herbert Spencer, and entitled "The New Toryism." It is well adapted to stimulate the thought of those interested in observing modern political tendencies. "College Athletics" is considered, by Prof. E. L. Richards of Yale College, in a paper showing the advantages of cultivating athletics at college. Dr. Oswald, in his "Remedies of Nature" series, takes up the perplexing subject of "Nervous Maladies." Prof. John T. Stoddard gives some directions on methods for detecting "Dangerous Kerosene." In a paper on "Under-ground Wires," Dr. W. W. Jacques, of the Bell Telephone Company, shows that there are two sides to the question of burying the electric wires. Persons about to make a will—if they would make one to stand—will find valuable information in Mr. Sutphen's article on that subject. Mr. Abner C. Harding gives a review of the progress that has been achieved during "Fifty Years of Mechanical Engineering." M. Antoine De Saporta describes the experiments by which the electrical origin of "The Aurora Borealis" has been demonstrated. Mr. Fernald tells "How we Sneeze, Laugh, Stammer, and Sigh." M. Daubrée, the eminent French geologist, has a timely article on "The Causes of Earthquakes." The sketch and portrait are of Sir Charles William Siemens, the eminent engineer and electrician, just deceased. The editor considers the ameliorations which politics may hope to receive from the introducing scientific principles, and shows what has been and may be achieved by the aid of an "Education without Dead Languages."

THE *Unitarian Review* for January contains the following articles: "Christianity in Conflict with Hellenism," by Rev. Frederic H. Hedge; "Martin Luther and the German Bible," by Rev. Charles Wendte; "The Supremacy of Mrs. Browning," by Elizabeth Porter Gould; "The Function of Imagination in Religion," by Rev. Thomas R. Slicer. The subjects considered in the "Editors' Note-Book" and "Things at Home and Abroad" are "Echoes of the Luther Celebration," "The Roman Catholic View of the Reformation," "Gambling for the Sake of Christ," "Theological Readjustments," "Rev. W. H. Cudworth," "Eastern and Western Religion," and "Memories."

THE *Catholic World* for February has the following articles: "The Supposed Issue between Religion and Science," by Rev. Geo. M. Searle; "The True Beatrice Cenci"; "Some Aspects of the Negro Problem," by Rev. J. R. Slattery; "The Youth of Pedro De Ribadeneyra," by Jean M. Stone; "A Haunt of Painters," by Elizabeth G. Martin; "Uncle George's Experiments," by Mary M. Meline; "What shall our Young Men Do?" by Rev. A. F. Hewit; "An Answer to Neal Dow," by Rev. C. A. Walworth; and two chapters of the serial "Armine."

THE *Atlantic Monthly* for February counts among its contributors such well-known names as O. B. Frothingham, Henry James, F. Marion Crawford, Geo. Parsons Lathrop, H. Bernard Carpenter, and Julia C. R. Dorr. Lathrop's serial, "Newport," closes, as is the fashion of to-day's novelettes, in a gloomy and unsatisfactory manner; while those of Crawford and Dr. Mitchell grow more interesting.

PERSONAL ITEMS.

FREDERICK DOUGLASS, the distinguished colored orator, was married in Washington, D.C., on Thursday evening, the 24th inst., to Miss Helen M. Pitts, a woman suffragist, who has been associated with Mrs. Dr. Winslow in the conduct of a paper called the *Alpha*.

MR. S. B. WESTON, who is pursuing his studies in New York this winter, gave a lecture recently before the "Young Men's Union" of the Society for Ethical Culture on "The Search for a New Religion." His argument was that the *moral idea* must be the centre of the religion demanded to-day.

PRINCE KRAPOTKIN, the nihilist, has been transferred from prison at Chalons to the infirmary at Paris, because of his failing health. It is, as an exchange says, one of the ineffaceable disgraces of the so-called French republic that they have put this man in prison, and kept him there to the final ruin of his health, broken down by terrible sufferings in Russian prisons,—and all from political dread; for nothing whatever was proved against him.

REVS. DA COSTA, McKIM, and BUEL, Episcopal ministers who regard Rev. R. H. Newton's remarks about Genesis as so much dynamite in the foundation of the Church, say that Bishop H. C. Potter's request of silence and Mr. Newton's acquiescence are not enough for them. They are going to push their charges just the same. If these precious Christians could have been at Jesus' elbow when he was talking on the Mount, they would have disputed his blessing on the peace-makers. They are the sort described by the dog-trainer in the story, who was bragging of the fighting qualities of his bull-dog, and wound up by saying, "You can't open his jaws with a crowbar when he gits 'em fixed: he hangs on like *a puffic Christian*."—*Springfield Republican.*

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

JESUS:

His Opinions and Character.

The New Testament Studies of a Layman.

"Much time and profound study have been needed for the thoughtful work entitled *Jesus: His Opinions and Character. The New Testament Studies of a Layman.* Whoever the layman may be, he is one accustomed to dealing with evidence, which he treats in lawyer-like fashion, and in a peculiarly direct and simple style. While his conclusions will be classed by many as rationalistic, in that they make Jesus simply a great moral teacher, and set aside as fabulous much of the Scripture on which theological dogmas have been based, the tone of the volume is still reverent and high. There is neither the sentimentality nor the adulation of Renan and his school, as if dethroned Deity were to be appeased by compliments; nor is there the unnecessary sneer, the offensive irreverence of another school. The writer is one of that great sect of 'seekers' the nineteenth century furnishes,—eager for truth, and accepting its highest teachings everywhere: he deserves respect as an honest and earnest thinker. The volume is handsome and substantial, and there is a careful table of contents."—*The Continent, Philadelphia.*

Price $1.50. For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

THE SOCIAL IDEAL.

A Lecture before the Society for Ethical Culture, of Chicago, May 27, 1883,

by W. M. SALTER.

Price 10 cts. For sale at INDEX office and by GEO. H. ELLIS, 141 Franklin Street.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE INDEX,
44 Boylston Street, Boston, Mass.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. R'Y
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	"	8c.	" "
" 26 " 51	"	6c.	" "
" 52	"	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

CURRENT TOPICS.

THE trustees of the Public Library at Fall River have voted to open the library to the public on Sundays from two to five o'clock, and from six to eight o'clock in the afternoon and evening.

MATTHEW ARNOLD made a too true criticism of our American daily papers, when, on being asked his opinion of them, he remarked, "I think you make too much of the sort of news which is excluded from the English newspapers, and appears only in our *Police News*."

CARDINAL MANNING'S recent experience makes a telling point on the side of science versus religion. Owing to his habits of fasting in accordance with what he considered his religious duty, he became very ill. His physician insisted upon his taking more nourishment, and he is now recovering.

THE latest census gives Boston's population as 362,839. There is an excess of 18,303 females over males. There are 72,763 families, or an average of 4.99 to a family. There are 5,873 colored, 118 Chinese, 3 Japanese, and 19 Indians in the number. The native population exceeds the foreign two to one.

A CORRESPONDENT telegraphs to the Chicago *Inter-Ocean* that Charles Bradlaugh, incited thereto by the lectures of Henry George, has announced a series of lectures against Socialism, and challenges the leading Socialists to meet him on the platform and discuss the question. Ths same telegram says that Bradlaugh declares his intention to administer the oath to himself, and claim his seat in Parliament.

PRESIDENT ARTHUR has had the unusual experience of knowing what it is to receive an act of ignorant adoration. Recently, a party of Apaches from New Mexico were introduced to him; and Augustine, the biggest and most clearly unwashed savage of the lot, rushed up and seized the Chief Executive in his arms, exclaimed, "God is a great man, but the Great Father is a greater!" and held and hugged his victim for a long half-minute. And yet the reporter of the affair declares that "the President showed his disgust plainly."

WHEN a law was passed for the gradual manumission of slaves in Cuba sixteen years ago, the number of slaves there was three hundred and eighty-five thousand three hundred and fifty-five. The law has been well administered, and, in many cases, the planters have shown a willingness to act in anticipation of its provisions. Already, two hundred and eighty-five thousand slaves have been set free, and during the present year there are good grounds for hoping the curse of slavery will be entirely removed from that island.

THE "weather prophet" business will soon be found to be unprofitable business, if the failures to bring on the direful storms prophesied by Messrs. Vennor and Wiggins continue to engender so bitter a spirit as was recently exhibited by the residents of a Canadian village, who refused to help rescue W. G. Wiggins, superintendent of the Bethlehem Iron Company, who was snowed in at the iron mine at Kingston, thinking he was the weather-wise Wiggins, and only went to his help when assured of their mistake.

A DESPATCH from Vienna states that apprehensions of socialistic disturbances have caused the ministry to publish an ordinance which proclaims a kind of martial law in the districts of Wein, Kornenburg, and Weiner Neustadt. This proclamation, made under a law of 1869, enables the government to search private houses without a judiciary order, to conduct trials without a jury, to dissolve public and private meetings, to suspend the liberty of the press, and to open private letters. These harsh measures, it is said, are driving into the ranks of the discontented many of the best citizens, and promoting an alliance of socialists, anarchists, and nihilists.

MR. GLADSTONE received last week a deputation of two hundred and fifty Trades Unions delegates, who were introduced by Joseph Arch, representative of the agricultural laborers, and Messrs. Bradhurst and Burt, radical members of Parliament. The deputation urged the extension of country franchise. In his reply, Mr. Gladstone said that the government was convinced that the time for action was at hand in extending the franchise. There were, he said, no truer supporters of the rights and claims of all classes in the country than those called workingmen; and he was glad the Clyde shipwright and agricultural laborers were so fitly represented by the delegates. He concluded by saying that action would be taken which would give effect to the pledges of the government.

THE unprogressive caste prejudice always and whenever manifested, acting as a hindrance to a higher civilization, which is nowhere so prevalent as in India, is beginning to show even there signs of upheaval and decay; and a society has been formed, composed mostly of men of the highest caste, which is called the "Native Philanthropic Association for the Regeneration of the Pariahs." But here in America, "the land of the free," and a centre of civilization, bits of the worst sort of caste prejudice crop out here and there in so-called civilized communities, which make us sometimes doubtful as to whether we are really so much in advance as we fondly imagined we were. Only a few days ago, in New Jersey, a case in point occurred: The Hackensack Cemetery Company was incorporated, with the provision that any religious society might buy lots and bury their dead with any religious ceremonies they may see fit. The First Baptist Church bought a lot, and secured permission to bury its sexton; but, while the funeral services were being held in the church, the cemetery authorities discovered that he was a negro, and they refused to have the body buried within their enclosure, and compelled the return of the corpse to his home until a grave could be secured elsewhere. This action has been made the theme of severe and wholesome criticism by Gov. Abbett, Democrat, in a message to the Legislature. He points out that a regulation which refuses Christian burial purely on the ground of color is unreasonable, and should not be tolerated, and he urges the passage of a law which shall make such a refusal a criminal offence to be harshly punished.

WENDELL PHILLIPS is dead. It may almost be said that American oratory has died with him. He certainly leaves no successor of his own peculiar type of oratory. The causes of philanthropy and social reform that have had the advocacy of his eloquence have been favored causes. Who can estimate the measure of the power he has thus exerted for the abolition of slavery, for the promotion of temperance, for the equal rights of woman, for justice to the common people against the monopolies of corporate wealth, and the legalized iniquities of governments? A great orator's influence is so subtly pervasive, so intangible, that it cannot be reckoned in statistics; but it is one of the mightiest agencies in shaping the public opinion that makes the law and policy of States, the customs of society, and the creeds of churches. Throughout his long public career of nearly fifty years, from the hour when, a young man, he leaped into the arena of the anti-slavery conflict at Faneuil Hall to the day of his death, Wendell Phillips was the chivalrous champion of human rights. In late years, his chivalry has sometimes, perhaps, been more conspicuous than his judgment; but no one ever questioned the sincerity of his motive. He sought nothing for self. All his brilliant gifts, all the hopes and ambitions that commonly move men, he laid on the altar of despised and persecuted causes. In religious belief, he claimed to be orthodox. But his Orthodoxy was of so diluted a kind that it did not prevent him from scathingly denouncing the Churches for their complicity with slavery, nor, in an address against capital punishment which we once heard him deliver, from pleading for the abolition of the gallows on the ground of the innate goodness of human nature. The grave closes over such men, and the world goes on without them because it must; but their places are not filled.

THE OBSTACLES TO THE PROGRESS OF RELIGIOUS LIBERALISM.

In place of our usual editorial article, we print this week the following letter read at the last meeting of the Liberal Union Club in this city:—

NEW BEDFORD, Jan. 24, 1884.

TO FRANCIS E. ABBOT, *President*, and GEORGE H. FOSTER, *Secretary, of the Liberal Union Club:*

Dear Friends,—Having been disappointed in making the arrangement which I had hoped for, so as to be present at the next meeting of the Liberal Union Club, I must content myself with sending a few written words on the subject which is to be discussed and upon which you ask my opinion.

In the statement of the subject,—"The Chief Obstacles to the Progress of Religious Liberalism, and the Means of Removing them,"—it is to be assumed, I suppose, that religious Liberalism as *an organized movement outside of existing churches* is meant. There is in progress, in my opinion, a quite rapid growth of liberal sentiment *within* church lines, and also a growth of *unorganized* liberal thought outside of churches. But religious Liberalism, as yet, does not appear as an effectively organized unit of power by itself.

Interpreting the subject thus, the obstacles to this separate organic growth of religious Liberalism seem to me to be various. Among them, I should place the following, not trying to state them, however, in the order of their importance, but in the order they occur to me: (1) The strong Individualism which the liberal movement in religion has directly tended to foster. This tendency began with the Protestant Reformation, in the principle of the right of individual inquiry, which was then, though only partially, asserted. With the development of Protestantism, this principle has increased in strength until, in the later generations, the radical *come-outer* from all church creeds and covenants and bonds stands most frequently by himself as "a church of one member." (2) The absence, as yet, of any strong motive, as the immediate apprehension of a great danger or wrong to be averted,—or, at least, the absence of any strong *feeling* of such motive,—which would serve to unite these numerous individual Liberals in a common organization for effective work. (3) The great preponderance, in this un-churched Liberalism, of the critical faculty over the organizing and constructive faculty. (4) The prevalence of the opinion, especially in the more educated circles of Liberalism, that adequate and, perhaps, the most healthy progress is to come through general enlightenment rather than by any special organization. (5) The want of a common philosophy of Liberalism. At present, in philosophy, Liberalism is all over the lot. A common creed as a foundation on which to build, it necessarily cannot have. That would be antagonistic to its most vital principle. But a common *philosophy* out of which, as a soil, its organic growths are to spring,—this, if Liberalism is ever to develop into a strong distinctive organization, it doubtless must have. (6) The ignorant and crass presentation of Liberalism that is made by many lecturers and publications that speak in its name. [A specimen of this kind of obstacle, taken from the editorial columns of a liberal journal, was here inserted to be read at the club.] (7) The ease with which Liberalism may be used as a mask to cover license and lust: this is the final obstacle I would mention.

This last obstacle which I name as obstructing the progress of religious Liberalism is the one to which the attention of the club is to be specially directed in the discussion next Saturday evening. While I do not hold, as is evident from the foregoing list, that this is by any means the sole obstacle to be regarded, and while I would be careful not to exaggerate it into an imaginary prominence, I am yet of the opinion that it has been the most *actively* potent obstruction that has appeared in recent years; though, I am glad to add, there are, as I think, some signs of improvement in this respect.

Genuine Liberalism is not, of course, to be held responsible for the *libertinism* that sometimes assumes its name, and the final historic judgment will make the needful discrimination. At previous epochs of history, when there has been a new accession of liberty for mankind, there have also been those who have either ignorantly mistaken liberty for license or purposely used liberty to cover the license of passion. It was so among the Christians at Corinth in Paul's time; it was so when Jesus was accused by orthodox Judaism of keeping company with wine-bibbers and harlots; it was so in the Reformation, when even Luther quailed and grew heart-sick over the excesses that were committed in the fair name of the liberty he had struggled to achieve. But to-day, in these cases, even the popular Christian judgment has no difficulty in discriminating between genuine liberty and its counterfeit. So the generations to come will doubtless look back, and make the true discrimination among those who profess the name of Liberalism in our time. Thoughtful and well-informed people generally make this discrimination now, unless they are deeply blinded by sectarian prejudice.

But many good people are not profoundly thoughtful nor broadly informed; and, of this large class of people, those who are attached to the old religious views are easily led to believe that modern Liberalism is the parent of immorality, especially when sectarian charlatanry and demagogism revive the old charge that liberty is responsible for all that is done in its name.

But, because there *are* men and women who are befouling the name of liberty, and who thus give occasion for this argument to be used against it, the obligation is laid upon all earnest Liberals to strive all the harder to hold aloft, with their liberty, the highest standard of morality. And, to this end, (1) they will take care that their own characters and conduct are above suspicion. (2) They will proclaim the indissoluble union between liberty and moral law. (3) They will resist and discountenance in all available ways the demoralizing words and works of counterfeit Liberals. (4) They will especially beware of them in all plans of organization. And (5), while vigilantly guarding freedom of thought and utterance, they will as vigilantly uphold all just and legal safeguards of personal purity and the integrity of the family.

Very sincerely yours,

WM. J. POTTER.

WRONGS AGAINST AMERICAN CONVICTS.

The horrors of Andersonville have passed away; but atrocities somewhat like those are still going on in twelve of our Southern States, as necessary results of the system of treating prisoners as chattels, to be sold to the highest bidder. All good prisons keep the criminals at work, for there can be no reform otherwise. But here, at the North, the prisoners are under the care of disinterested public officials, who either superintend the labor themselves or take care that the workmen are not ill-treated by the contractors. These latter have no power to keep up work longer than the prescribed number of hours, or to force sick men to labor, or to inflict punishments, or to interfere in any way with the regular supply of food. The contractor has to treat the men well, in order to persuade them to work efficiently; and, if he ever incurs blame, it is usually that of being too indulgent. Whatever money he makes cannot be by underfeeding or seriously overworking the prisoners, nor can he easily get out of the reach of investigation. Our Northern system is the result of the labors of philanthropists, who are improving it continually. The Southern system is that which John Howard denounced in England a century ago. It has been abolished there; but it is still kept up in twelve of our own States, and with the worst results. How badly it works has been shown with great power and fulness by a Louisiana philanthropist, well known as a novelist also. Mr. G. W. Cable's essay on "The Convict Lease System in the Southern States" called forth enthusiastic support from the ablest and most respected members of the Conference of Charities last fall at Louisville,—still one of the strongholds of the abuse,—and has just appeared in the February number of the *Century*. It is in order to make his statements as widely known as possible that a few of the most important are now selected. Thus, we find that Arkansas has sold out not only the labor of her criminals, but the full charge of her prisons for a term of years, to men who enjoy such complete immunity from inspection that the lessee of the penitentiary at Little Rock refuses to answer inquiries on the ground that "I am sole lessee, and work all the convicts; and, of course, the business of the prison is my private business." This man, who signs himself Zeb. Ward, is probably the one by that name who, in 1867, was officially reported as having leased the Kentucky prison in 1855 for four years, at $6,000 annually, and having made from fifty thousand to seventy-five thousand dollars. In order to make their money, he and the other lessees all over the South are under strong temptation to feed their men as cheaply and work them as hard as possible. They are under even less restraint than slave-holders, for they lose less by their victim's death. The best proof of how badly the criminals are treated is the death-rate. This at Raleigh, N.C., is eight times as great as at Auburn and Sing Sing; while the prisoners who are sent out in gangs to work on the railroads perish faster than the people of New Orleans did in the worst epidemic. The convict laborers on the Texas railroads die three times as rapidly as the inmates of properly managed American prisons. "And, at the wood-cutting camps, more than half the entire average population died within the two years." This was the condition of the Texas prisons in 1879 and 1880, and Mr. Cable considers the death-rate in most cases on the increase in that State. In Mississippi, "a prisoner can rarely be found to have survived ten years of this brutal slavery either in prison or in the convict camp." Of Mr. Cable's own State, he says that fourteen per cent. of the prisoners perished in 1881, and that "the year's death-rate of the convict camps of Louisiana must exceed that of any pestilence that ever fell on Europe during the Middle Ages." One camp in Georgia is said to have lost forty per cent. by death in 1878. Of course, the greed for gain, which makes the Southerner eager to have his State make all it can out of its criminals, necessitates their confinement in such unhealthily close quarters that two convicts may be found at Nashville shut up together in a low closet, about five feet by six; and that in New Orleans, as I learn from a friend's testimony, the air from the open doors of the cells has been so foul that the keeper himself could not stand it.

The popular desire to make money out of crime causes petty offenders of tender age to be frequently sentenced for long terms of years. Thus,

Digitized by Google

I read in the New York *Tribune* that a colored girl of sixteen was sentenced in Atlanta to five years for stealing fifty cents. Recently there were fifty boys under eighteen in the Tennessee penitentiary, according to the warden, who complained that they were kept in company with the vilest criminals, so that "nine-tenths of them leave prison much worse than when they came." In two years, more than two hundred youths under twenty were imprisoned at Raleigh under sentences for not less than twelve months. Georgia sends men to prison for eight or ten years for assault and battery or petty larceny, and one of her criminals was sentenced for twenty years because he stole hogs. Such punishments fall mainly on the negroes and poor whites; for men of high social position are readily acquitted even for murder. It is the stalwart young working-man who is sent to be sold for the benefit of the lessee as well as of the State. One proof of the hardships suffered by the prisoners is the frequency with which they escape, despite the number killed in the attempt. Five of the largest prisons in the United States, containing 5,300 convicts, lost but one by flight in twelve months. Taking all the prisons not cursed by the Lease System, we find 18,400 criminals, 63 of whom escaped in one year. During that time, there were 50 escapes among about 630 convicts in Tennessee, in 1882; and, not long ago, there were 257 in two years. In 1880, more criminals escaped in North Carolina, and remained at large, than was the case in all those States where the Southern system is not in use. Such is the general eagerness to escape that Georgia keeps her prisoners in chains, except on Sundays or in case of *severe illness*. This State has recently hired out its 1,500 convicts on a twenty years' lease, and on condition that $200 be paid for each escape. Hence, according to the correspondent of the *Tribune*, all who escape are reported dead, and the number is made much greater by the systematic practice of letting the broken-down laborers run away from the camps. Not only those who escape, but those who are discharged from the prisons and convict-camps of these twelve States, must be thoroughly degraded and infuriated. Their condition might be compared to that of Jean Valjean at the beginning of *Les Misérables*, except that there is little chance of their reformation. It is for the good of the criminal himself, as well as of the community, that he be securely confined under a system helping him to reform. To torture criminals, until they often escape, and always go out into society as its infuriated enemies, is simply fostering crime. There should be no sectional feeling in discussing such terrible mistakes. If the South is to be blamed for keeping up this system, she must also have the credit of furnishing her own prophets and reformers to testify against it nobly. Strong and repeated efforts have been made to abolish it by citizens of Kentucky. Several governors of that State have denounced it with great severity, as I believe that one of them did at Louisville last fall. The only book against it, mentioned in Dr. Wines' *State of Prisons*, is by a Kentucky physician named Snedeker, who speaks from twenty-five years' personal experience of its iniquity. A Texan clergyman, named Rogers, spoke out against it eleven years ago, and organized an association for reform in that State. Missouri has twice abolished the system, and still keeps free from it, as does Virginia, where it has, however, been occasionally practised on a small scale, and where vigorous attempts are being made to have it permanently and fully introduced.

How little help can be expected from the Church is shown by such facts as that among the prominent lessees in Georgia are a Baptist deacon, Senator Brown, and a Methodist preacher, Senator Colquitt, or that the chaplains generally praise the system, while the wardens and surgeons often censure it severely, or that the church-going citizens of Raleigh seem peculiarly desirous to have it kept up. It is to philanthropy that we must appeal, and we must do so without regard to sectarian limits. The pressing need is that Mr. Cable and other reformers in the South be encouraged by Northern sympathy, that the desire of Kentucky to shake off this incubus be kept active, and that the attempt to extend the wicked system into Virginia be promptly met by the outspoken indignation of the whole country. Every American should do his part to wipe away this national disgrace.

F. M. HOLLAND.

HENRY GEORGE IN LONDON.

On the evening of Wednesday, the 9th of January, I was one of an audience of some four thousand persons, who had gathered together in St. James Hall, London, to hear Henry George discourse on "Progress and Poverty." The extraordinary interest which Mr. George's book on this subject has evoked in England was sufficient guarantee that many would come to hear him, although fairly high prices were charged for admittance to the greater part of the hall. The newspapers had also done much to prepare a large audience for Mr. George; for the *Daily News* had devoted upward of a column to an account of his life, while the *Pall Mall Gazette*, whose laudable enterprise threatens to degenerate into something very like sensationalism, had sent a reporter to interview Mr. George, and had given the result of the interview in the shape of a very interesting article in its columns. Mr. George, therefore, had good reason to anticipate a fine audience; and I must say that a finer audience I never saw. It was not simply the numbers which impressed one, it was the quality of the audience; for, excepting in the top gallery, which was free, all present were well-dressed and highly intelligent people, including some of the best-known public men in London. Among those present were Alfred Russell Wallace, Frederic Harrison, William Morris, Prof. Beesly, Karl Blind, and other men of eminence and note. The chair was occupied by Mr. Labouchere; and, when he ascended the platform, followed by Mr. George and Michael Davitt, the enthusiasm of the meeting rose to a high pitch. Mr. Labouchere, who presents the curious spectacle of a somewhat *blasé* man of the world espousing vigorous democratic sentiments, said that he sympathized with Mr. George, but could not follow him altogether in his proposal to confiscate rent; and he raised much laughter by saying that we had had "four Georges" who had done a good deal of mischief, but that George the Fifth was a man of keen intelligence and generous sympathy, who had the good of the people at heart. Mr. George then rose; and, for an hour and a quarter, he kept the attention of his audience. Now, what impression did Mr. George make? In the first place there can be little doubt that the majority of his audience were with him (a significant fact, when the character of the audience is considered), and that many would be inclined to go further, and to apply to capital the same doctrines which Mr. George laid down with reference to land. Perhaps ten per cent. of those present were decidedly opposed to Mr. George, twenty-five per cent. friendly but nebulous, the remainder more or less convinced supporters. My own impression about the address was and is that it could scarcely be described as a striking success. Something fresh and original in thought and style was expected, but was not forthcoming. The lecture was merely an imperfect *résumé* of Mr. George's famous book, the very phraseology of that work sometimes recurring. The style of delivery was much too slow to suit an English audience, long pauses occurring at frequent intervals, and so breaking the chain of eloquence. The lecture, too, was not a consecutive train of reasoning, as in my humble judgment it should have been. There was no orderly sequence in the argument, but Mr. George jumped from point to point in a quite inartistic manner.

The proportion of reasoning to that of assertion was quite insufficient for those friendly persons who are not yet convinced. One of these said to me, "We have heard nothing yet but mere dogmatic assertion," a remark which I am bound to say was true. For instance, though not myself a believer in the Malthusian theory, I know that many thoughtful and conscientious persons are; and of such there were several present. These people were simply told by Mr. George that there is plenty for all, if the products of the earth are rightly distributed; but there was no attempt to prove this, which is the very point at issue between socialists and orthodox economists. Mr. George did not make many definite suggestions as to methods, but his principal suggestion had simply the effect of making the audience laugh. It was that a pension of one hundred pounds per annum should be given to every widow in the country, from the Queen downward. When an audience laughs at the proposals of a reformer, it is usually a sign that he has touched the wrong note. It was so in this case. Mr. George cannot be expected altogether to understand the subtleties of English social and political life; and I do not think he should be unduly criticised for bringing in the names of members of the English royal family, even though it is to illustrate a point. The existence of any royal family in England is far from being a source of satisfaction to many, among whom I include myself; but, during this provisional stage in our national progress, it is well for public speakers to ignore the existence of these royal personages. Mr. George mentioned both the Queen and Prince of Wales. The name of the latter was received with much hissing and groaning, which predominated over the cheers; but the Queen was popular. Indeed, I heard of a remark, which was made by some irreverent person, that the two most popular characters in the meeting were the Queen and the Almighty. This latter allusion can only be understood, when I say that one peculiar feature of Mr. George's address was the religious phrases with which it was filled. He was constantly speaking of the "Eternal Father" and of the "Father in heaven,"—phrases rarely heard in any English democratic gathering, and received by many with much quiet smiling and by some with significant shrugging of the shoulders. But the remark just referred to was occasioned in this way. When Mr. George was dilating on the terrible condition of the children of "outcast London," a too eager Malthusian shouted out, "Who brought them there?" "God Almighty did, in my opinion," said Mr. George; and a tremendous storm of applause went up from the whole meeting. This was not on account of religious belief as to a Divine Providence: it was as a recognition of the equal rights to live of every human being, in opposition to the Malthusian doctrine of the over-production of people, that Mr. George's statement of belief called forth such an outburst of cheering.

I believe Mr. George to be incapable of anything like religious cant, and I am therefore certain that his religious phraseology represented sincere belief. Yet one was tempted to say, "Something too much

Digitized by Google

of this." Nor could one forget the *Quarterly Review's* description of Mr. George as "a cross between Marat and a Methodist preacher."

Having, in no unfriendly spirit, ventured so far to criticise adversely Mr. George's lecture, let me now say that it had great and remarkable merits. Although not consecutive in thought, it was clear, honest, straightforward, and its tone was high. There is so much hesitation and beating about the bush among our public men and professional reformers that it was a pleasant change to hear what are called "extreme views" set forth definitely, with no attempt at equivocation. Mr. George believes that the people should resume their collective right to land ownership by confiscating every penny of rent to the State; and he does not pretend to believe that this resumption of ownership can be bought by paying a huge price to landlords, as some English reformers imagine. His defence of this *ultra* doctrine was vigorous and powerful, and his illustration, drawn from the history of American slavery, very clear. The result of British compensation to West Indian slave-holders has been far from satisfactory, although I do not forget that no less a man than Emerson proposed this remedy in the case of the slave-holders in the United States. Emerson, however, has a line on the other side which outweighs his political prudence:—

> "Pay ransom to the owner,
> And fill the bag to the brim.
> Who is the owner? The slave is owner,
> And ever was. Pay him!"

This would be rather the solution of Mr. George, who contends that the purchaser can have no better title than the vendor can give him; and, as the land never really belonged to the vendor, who generally acquired it either by force or fraud, in strict justice it follows that the purchaser is the receiver of stolen property. How true it is, as Emerson says, that the wave of evil washes all our institutions! On this view, the whole fabric of English society rests upon conventional arrangements which violate the most elementary conceptions of justice. Henry George, like King Canute, calls upon this wave to recede. Will it obey the demands of him and his fellow-reformers? This is a question not very easy to answer. Of course, all the English papers (the articles in which are written to order, as becomes a society eaten up by the commercial spirit) say that his proposal is preposterous. Many of them say that it is wicked, and neither political party will touch the question.

On the other hand, this question has developed in England with startling rapidity. I recollect being present, four years ago, at a radical conference on this question, called by Mr. Bradlaugh, where, after a long discussion, a resolution for nationalization of land was rejected by a considerable majority,—largely, I think, as the result of a speech in opposition by Mrs. Besant, which still remains in my memory as the most powerful speech I ever heard. No speech, however powerful, could produce such a result at any radical conference in London to-day. The condition of things in England is also in some respects more favorable to land nationalization than in any other country, because the land is in fewer hands. In France, five million peasant proprietors present a solid barrier against any attempt to nationalize land. On the other hand there is the historic and conservative temper of the English people to be considered; and it will be an interesting question whether the enfranchised working-classes will share that temper, or whether they will prove to be cosmopolitan and freed from national insularity. Much will depend upon that. Up to the present, I, for one, cannot perceive any very wide gulf of feeling separating the working-classes and the *bourgeoisie:* although no one can tell what the probable decline of trade may do to bring about such a gulf. If England can manage to tide over her foreign, colonial, and Irish complications, it is probable that the liberal party will bring forward some instalment of land reform, which may put off the whole question of land nationalization. He would be either a fool or an inspired prophet who would venture to predict with any certainty; but this, I think, is the probable course of events. Meanwhile, Mr. Henry George is what the *Times* said of the Anti-Corn-Law League,—"a great fact."

WILLIAM CLARKE.

RAILWAY REFLECTIONS.

Some friends were seated in a luxurious drawing-room car, well lighted and heated, while without the fiercest snow-storm of the winter was raging. At times, the car careened with the force of the gale; and the driving of the icy particles against the windows gave a constant reminder of the terrors of the blast. The passengers spoke of their contrasted comfort; and, when the train was unable to proceed through a snowdrift, the word "cargo" having been mentioned, one merrily said, "I wish something would make this *car go*," and another responded, "If our engine could *go through the banks* as readily as some of our business men do, we might get on." Then came a report like a cannon, followed by a crashing and crunching as the car crumbled to pieces before the advance of a locomotive, which sent the glare of its head-light over the wreck into which the passengers were hurled. It was realized that a "rear end collision" had taken place. The drifting snow had hidden the warning signal that had been sent to check the progress of the following express train.

One who was severely crushed, and narrowly escaped instant death (possibly owing to a large package of papers, composed partly of free-thought literature, which spread the force of the blow over all the ribs, and prevented the breaking of any), records his reflections.

A railway collision gives a vivid realization to the youthful Calvinistic imaginations of the day of judgment. The crash of doom, the general disintegration and ruin of all things, and the hurling into the abyss of the fated wretch are all enacted. It is a terrible experience, and should be a sufficient inducement to any survivor to "flee from the wrath to come." Repentance and faith would be impossible in that moment of sudden agony, and it is made clear that preparation for death should never be neglected till the last moment, and that there is force in the appeal, "Don't put it off"!

Numbers of Christian friends kindly called upon the free-thinking sufferer, and cheered him with sympathy and good wishes, but not one uttered a word of religious import. Yet by mail came impassioned appeals to turn to Jesus, an anonymous notice of "death of a blasphemer," and good, old-fashioned orthodox revival wrestlings with an impenitent sinner. Why is it that men cannot look their unbelieving friends in the face and warn them of hell, and only get courage to do it when safely ensconced by their writing tables at a distance? Is it not because human instinct and common sense tell them it is a lie that good men who are not superstitious will be damned? They can utter convictions upon any other point without flinching from an earnest interchange of honest gaze; but eternal interests, if ever alluded to, are accompanied by downcast eye and trembling voice. The unnaturalness and falsity of the whole atonement scheme is testified to by this shrinking from expression. If it was a genuine conviction, it would find frank utterance.

The utter futility of Christian consolation is realized. Suppose that a father crushed his boy nearly to death by way of correction. The neighbors then pleaded with him to call a physician, and allow the bruises to be healed. As the boy recovers, they praise the father for listening to their prayers for restoration, and comfort the boy by telling him of the father's love. How absurd and illogical the whole thing seems, and how superior is the contemplation of the steady onward march of the eternal force that through constant succession of cause and effect promotes the progress of the universe! Men attribute characteristics to God, which, if any man was known to possess them, would prevent any decent Christian from bowing to him on the street. The answer most appropriate for those who thus misrepresent God is that volume in five words uttered by Theodore Parker to an orthodox man, "Your God is my devil." Those who pity one who lacks "the comforts of religion" may be pitied by him for being contented with pagan notions, and failing to rise to the grand conceptions of nature which the doctrine of evolution furnishes.

The chief impression made by such an accident is the physical insignificance of man in the presence of natural forces; but the extent of his mental control over them, which is destined to become complete. Each disaster shows the lack and the need of mastery, and leads to devices for its attainment. By this event, stimulus is given to the invention of sure methods of signalling; and each sufferer may feel that future safety is rendered more probable by his misfortune.

Upon the doctrine of chances, one who has had a serious accident by rail may expect to travel safely in future. When a shot comes through a man-of-war, Jack is said to put his head in the hole feeling sure another shot will not come there. "Lightning never strikes twice in the same place." If, as Charles Francis Adams shows, in nine years in Massachusetts there was only one injury to nearly eleven million miles of railway travel, and a man may expect to travel five hundred miles daily for eighty years before being injured, and nine hundred and thirty years before being killed, he who has been injured certainly should not have his fear of travel increased. Still, a chance of accident, though remote, remains.

An escape from death should excite serious reflection, and the question arises, What is the best purpose to which the spared life can be put? Should it be to prepare for death by the cultivation of a belief in absurd, unreasonable, and impossible events, through a selfish concern about one's own welfare in a world which no one knows to exist? Ernest Renan says, "The one object in life is the development of the mind, and the first condition for the development of the mind is that it should have liberty." If this is true, the spared life should be consecrated to the development of human research into the secrets of nature and their application to the service of man, and to the promotion of that liberty of thought and expression which is essential to the progress of knowledge. Instead of leading to a contemplation of the Scriptural "way to be saved," this experience impels to more earnest progress in the paths of free thought.

ROBERT C. ADAMS.

WHO is there free from care? No man on earth.
Though strong
Thy mountain now may stand, the question is,
"How long?"
Whoso is free himself, in others feels oppressed.
For who is blest that sees his fellow-men unblest?

EDITORIAL NOTES.

THE birthday of Thomas Paine was celebrated, in addition to the three days' convention held at Paine Hall in this city, by similar meetings at Philadelphia, Pittsburg, and Linesville, Pa., Ottumwa, Ia., Cairo, Ill., and various other places.

THE meeting last Sunday evening at Parker Memorial Hall in commemoration of Keshub Chunder Sen and the Brahmo Somaj was carried out according to the programme announced, and proved to be a very interesting occasion. Next week, we shall print the addresses in full.

THE comet that made its appearance in 1812 may now be seen with the naked eye on a clear evening in the south-western sky. The tail is quite dim, pointing upwards and a little to the south. Although since its last appearance in this hemisphere seventy-two years ago, it has been travelling, at the rate of twenty to twenty-five miles a second, so say astronomers, yet it shows no sign of weariness.

WE would call the attention of all our readers who have become interested in the new broad school to the article in another column entitled "The Education of Men," which we take from the New York *Tribune*. It appears in the *Tribune* editorially; but, in what it says concerning the proposed Wade College, we have reason to believe that it speaks with the authority of one who is behind the scenes.

A "CREMATION SOCIETY" was formed in this city last week, of which J. Storer Cobb was elected president. Its object and purposes are "to advocate and promote, in every proper and legitimate way, the substitution of incineration for the burial of the dead, and to provide and establish, within the limits or the immediate vicinity of Boston, a suitable building, with the necessary appliances and facilities, for carrying cremation into operation."

REV. W. D. GROUND, in his work entitled *An Examination of the Structural Principles of Mr. Herbert Spencer's Philosophy*, says:—

Occasionally, when listening to some of the ablest preachers of Christendom, I have clothed myself for a time in the armor of an agnostic, and considered what such a one would say to the preacher's arguments, and how he would outflank the preacher's greatest statements by a larger generalization. The conclusion I reach is that at present there is no prominent divine throughout Christendom who has yet shown himself to possess that calibre, grasp, extent, and accuracy of information, which are needed to fashion a bolt that would pierce such an agnostic's armor.

THE *Sunday School Times*, in reply to an inquiry "if it is known in what city Samuel anointed Saul," remarks:—

There are a good many geographical and historical points in the Bible story, which, on the face of it, seem a great deal easier of elucidation than proves to be the case on closer examination. More than one man has wondered that the location of the Garden of Eden wasn't settled beyond dispute, when the four rivers which watered it are all named explicitly,—Pison, Gihon, Hiddekel, Euphrates. . . . It would seem that they (Samuel and Saul) were within a day's journey of Rachel's sepulchre, which is supposed to be between Bethlehem and Jerusalem (I. Sam. x., 3). But then, again, there is "the plain of Tabor," spoken of as on the road "to Bethel"; and, if that doesn't make a geographical puzzle, we know nothing about Bible geography. It is well, once in a while, to look such a difficulty as this squarely in the face, in order to show us how much there is that we don't know.

THE funeral of Herr Lasker took place in Berlin on Monday, the 28th ult. The ceremonies were very imposing. The Presidents of the Reichstag and the Berlin Commune, the Burgomaster of Berlin, and deputations from nearly all the trades and other organizations were present. Herr Windhorst (Ultramontane leader) attended the obsequies as a spectator, and his presence in the synagogue created a marked sensation. The chief orators were Herr Louis Bamberger, a member of the Reichstag for Bingen in Hesse, and Herr Gottlieb Friedrich Rickert, a member of the Reichstag from Dantzig. The preparations for the funeral were made on the most extensive plan. And the services in the new synagogue, properly the Grand Central Synagogue, were as elaborate as the Hebrew ritual would allow. The principal rabbi, Dr. Frankel, had charge of the funeral ceremonies. The waiting procession was something very unusual in Berlin, for one differing from the populace both in race and religion. The clubs of Liberals, of workingmen, and of popular societies, escorted the remains, accompanied by many bands and banners. The procession was not made up of Herr Lasker's Jewish co-religionists, but of men of every race and creed. They moved slowly to the old Jewish cemetery at Schoenhausen, where the interment took place with imposing ceremonies. A wide interest in the dead Liberal was shown by the attendance of such men as ex-Minister M. F. R. Delbruck, at one time President of the Imperial Ministry, and Chancellor in 1867, and ex-Minister Otto Camphausen, who was Minister of Finance during the French War, and in 1873 Bismarck's companion and associate in the Ministry as its Vice-President. Rabbi Frankel made the first address at the house of Herr Lasker, and alluded to England as a model of constitutional government. In his speech, Herr Bamberger compared the attitude of the dead Liberalist to that of Cobden in England at the end of the Crimean War. The remains were buried in the quietest corner of the churchyard.

WE extend to our friend and contributor, Mr. George Jacob Holyoake and his daughter, our sincere condolence and heartfelt sympathy in their loss by the death of the wife and mother. Mrs. Holyoake died at Brighton, England, on Friday, January 11, after an illness of several weeks. The London *Times* of January 15, from which we learn the fact of her death, says that, "though Mrs. Holyoake took no part in public affairs, she was one of those women who enabled others to do it. She shared unmurmuringly the vicissitudes consequent upon the part her husband chose to take on public questions, though the sharpest results were experienced by her. Her eldest daughter perished during Mr. Holyoake's imprisonment in 1841–42. On subsequent occasions of peril or discomfort, occurring in the way of duty by others, she never made any reservation for herself. The little she wrote was marked by instinctive simplicity of statement and strong sense. In the last days of her illness, kind and valued words of sympathy came to her from Mrs. Tennyson." In his *History of the Last Trial by Jury for Atheism*, Mr. Holyoake pays the following tribute to the worth of the companion of whom he is now bereft. "Against that 'love abroad which means spite (or indifference) at home' I early set my face. At home . . . there always existed an understanding as to the risks I ran in my free speaking. Whatever consequences fell upon my own head alone, I had myself only to please in incurring; but those which affected others I had no right to invoke without their consent, and this consent I always sought from my wife in any special case which arose. At our marriage, therefore, it was understood that my life somewhat resembled a soldier's, and that it would often include duties and dangers not compatible with perennial fireside comfort. Nor did she object to this; and I have had the sweet fortune always to be left to do whatever I should have done, had I been single and childless. On my saying on the imprisonment of Mr. Southwell, first editor of the *Oracle*, that it was my duty to take his place, my wife replied: 'Do what it seems your duty to do, and I and the children will take care of ourselves as well as we can. When they grow up, I trust they will contemplate with little satisfaction any advantage they might have enjoyed at the expense of their father's duty. We can leave them no riches, but we may at least leave them a good example and an unsoiled name.' . . . A quick and enduring sense of independence which no privation could disturb was an attribute in her character I had always admired."

THE F. R. A. FUND.

Donations and membership fees for the Free Religious Association, in response to its recent appeal for funds for the holding of conventions and for meeting other expenses of the Association. Will friends see to it that this list is increased?

For *The Index*.

ASPIRATION.

Unhappy thou, who cherishest great aims
  Which will not shape themselves in words or deeds,
  Hast thought a summit-crown the mountain needs,
And borrowed rays must light the sea that flames
'Neath noonday sun? Know, too, that earth has claims
  On every soul her progress onward speeds!
Be thine the lot to swell the honest fame
  Of mountain men who tower above the age,
  The force of Thought's wide-reaching waves to gauge,
Why mourn thy fate, or count thy service shame?
Thy name is shrined in every higher name;
  Thy words are graven on each deathless page.

WALTER L. SAWYER.

The Index.

BOSTON, FEBRUARY 7, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

RENAN'S "RECOLLECTIONS."

Discourse at South Place Chapel, London.

BY MONCURE D. CONWAY.

An amicable discussion between an English and an American scientist has for some time been going on in *Nature*, as to whether evolution is consistent with design in the course of natural selection. It has gradually reduced itself to the question whether there are instances of aimless variation. However that may be determined, there can be no doubt that there are retrogressive variations, so far as any human standard of utility is concerned. In the world of man's creation, degeneration is the shadow of evolution. Liberal circles so watch the tendencies and results harmonious with their progressive instincts, as they that watch for the morning, that they may not see so clearly as others the downward tendency of heavy social masses. It is important, however, to recognize this, lest the Prospero of progress find himself mastered by the Calibans which nature breeds so plentifully.

To the majority of Protestants, the Roman Church appears as a primeval swamp, incapable of cultivation, breeding poisonous creatures and malaria. If our rulers avail themselves of papal authority to check rebellion in the Catholic part of their empire, most of us feel that it is—as St. Patrick was said to have used—a big serpent to swallow the snakes of Ireland. We do not attribute high motives to the crooked crook of Rome, but wonder what is to be paid for its use. But, if we turn our eyes to the tendencies of Protestantism, we find them producing a Catholic Church in the North which steadily petrifies to a power like that of the Rome it superseded. There was a time when the Catholic Church was as liberal as the Anglican Church. It once had its "broad" wing, its rationalists, its spiritual scholars and thinkers who found its symbols and creeds susceptible of sweet mystical interpretations. The hard evangelical party gradually prevailed over these, and exterminated them, leaving themselves harder than before. Then went on a survival of the hardest; and, gradually, the whole Church was made over into their stony image and likeness. It requires centuries to produce such a result; and we must not suppose, because only small steps in the same direction are witnessed by any one generation, that their ultimate total may not be an institution of the old kind. Nor is it doubtful that the very triumphs of reason and science may indirectly contribute to such a result. The more brains that are drawn out of the churches and sects, the more does the huge lump part with its leaven and tend to flatten and harden down to a mere mass of ignorance and intolerance. This may not be a formidable evil, so long as the liberated and enlightened powers are left free to influence the larger course and growth of the world. But there can be no certainty that Protestant freedom itself will not go the way of religious freedom in Rome, when the large masses, swayed by sectarianism and superstition, become still less checked by the presence of thinkers and scholars among them. There is no danger, indeed, that the orthodox Protestantism of England will ever affiliate with Rome or recur to its forms. But what constituted the obstructive character of the old Roman Church was the abyss which separated it from the highest intelligence around it; and the more radical and far-reaching disbelief with which Protestant Orthodoxy is now brought into opposition keeps up all the distance that existed between that ancient Church and the moderate liberals it burned.

In reading Renan's new book, *Recollections of my Youth*, I have been much impressed by its unintentional revelation of the substantial identity of Roman Catholicism and Protestantism, so far as their moral influence, their reactionism, their attitude toward progressive minds, are concerned. Ernest Renan was a young Catholic, set apart, by family traditions, religious temperament, and tonsure, for the priesthood. He was very gradually led by study and thought out of it all to views like those held by ourselves. Yet I cannot find that he had any greater distance to travel or found sharper flints in his road than are familiar to those who have abandoned Protestant Orthodoxy and fellowship. There are sad and even spiritually tragical experiences which he records; but none that are not scarred in the heart of those Protestants who have similarly chosen the path of veracity, when it led them away from a prescribed sectarian position. So little difference does the creed make to the temper of religious organizations that some of the cruellest sufferings of this kind have been undergone by persons emancipating themselves from Unitarianism, though it has no creed at all. At several points, as I read Renan, the sad face of Theodore Parker rises before me. Parker was trained for the Unitarian ministry. Through the very years that Renan was struggling with his Roman prison-bars in France, Parker was struggling with his Unitarian fetters in New England. And one who compares the recollections of the two men will see that the Catholic heretic could have no reason to envy the Unitarian.

However, Renan has told as little as was possible of what was painful in his experience. A true artist is a dial that counts only the hours that shine. "One should never write except upon that which one loves," he says. "Oblivion and silence are the proper punishments to be inflicted upon all that we meet with in the way of what is ungainly or vulgar in the course of our journey through life." One may here find how susceptible the past is of being taken into the heart of the present,—its superstitions transmuted to transcendent truth,—and of what a rich inheritance they are deprived who are prevented from realizing their magnificent estate by some entail to a soulless system, which they find it too costly to break. Renan broke it: though he says little of the cost, those who have done the like can read it in full between the lines; but the beautiful result is shown with finest art. We are enabled to see the poetic Breton boy at Tréguier, ancient "town of priests, cut off from all trade and industry, a vast monastery within whose walls no sounds from the outer world ever penetrated, where ordinary human pursuits were looked upon as vanity and vexation of spirit, while those things which laymen treated as chimerical were regarded as the only realities." "The cathedral, a masterpiece of airy lightness, a hopeless effort to realize in granite an impossible ideal, first of all warped my judgment. The long hours which I spent there are responsible for my utter lack of practical knowledge. That architectural paradox made me a man of chimeras, a disciple of St. Tudwal, St. Iltud, and St. Cadoc, in an age when their teaching is no longer of any practical use. When I went to the more secular town of Guingamp, where I had some relatives of the middle class, I felt very ill at ease; and the only pleasant companion I had there was an aged servant to whom I used to read fairy tales. I longed to be back in the sombre old place, overshadowed by its cathedral, but a living protest, so to speak, against all that is mean and commonplace. I felt myself again when I got back to the lofty steeple, the pointed nave, and the cloisters with their fifteenth century tombs, being always at my ease when in the company of the dead, by the side of the cavaliers and proud dames, sleeping peacefully with their hound at their feet, and a massive torch in their grasp. The outskirts of the town had the same religious and idealistic aspect, and were enveloped in an atmosphere of mythology as dense as Benares or Juggernaut. The church of St. Michael, from which the open sea could be discerned, had been destroyed by lightning, and was the scene of many prodigies. Upon Maundy-Thursday, the children of Tréguier were taken there to see the bells go off to Rome. We were blindfolded, and much we then enjoyed seeing all the bells in the peal, beginning with the largest and ending with the smallest, arrayed in the embroidered lace robes which they had been dressed in upon their baptismal day, cleaving the air on their way to Rome for the Pope's benediction. Upon the opposite side of the river there was the beautiful valley of the Tromeur, watered by a sacred fountain which Christianity had hallowed by connecting it with the worship of the Virgin. The chapel was burned down in 1828; but it was at once rebuilt, and the statue of the Virgin was replaced by a much more handsome one. That fidelity to the traditions of the past which is the chief trait in the Breton character was very strikingly illustrated in this connection; for the new statue, which was radiant with white and gold over the high altar, received but few devotions, the prayers of the faithful being said to the black and calcined trunk of the old statue, which was relegated to a corner of the chapel. The Bretons would have thought that to pay their devotions to the new Virgin was tantamount to turning their backs upon her predecessor."

In these charming pictures of his early life, we may perceive Renan, as it were, in the ore. As we find him now, not only as so simply self-portrayed in this book, but, in many noble works, recognizable as the most accomplished writer of his time, we see the ore refined, curiously chased, set with Orient pearls; and yet, in every charm that culture has added, there is a reproduction of

Digitized by Google

the scenery and sentiment of that monastic fairy-land in which the child was nurtured by the Christian fays and fates. Amid the secular splendors of Paris, Renan has never been able to compete for worldly prizes, nor has he united with any party. He has built his little Tréguier apart from the rush and roar of the world, and worshipped in his literary cathedral an ideal still unattainable. He is more at home amid the sages of the past, sleeping in their cloister, than among the commonplace pretenders of the time, though they be not Breton dames and cavaliers, but Jesus and Buddha and Marcus Aurelius who now surround him, their feet on the hounds of animalism, the torch still burning in their hand. And when his Holy Virgin, like that beside the Tromeur, has been calcined by criticism, and the priests invite him to accept in her place the new one they have set on a higher altar, tricked out in metaphysical paint and current gold, it is his old Breton fidelity that refuses this vulgar compromise, and adheres to the black Madonna in her poor corner as the real one whose fountain made green the vale of childhood. Gradually, in the light of such fidelity to the truth, his calcined Madonna was transfigured; and she led him to the feet of her sister goddess, Wisdom, whom he beheld in her beauty.

In 1865, when he was forty-two years of age, Renan first stood on the Acropolis at Athens. It was a point of repose in a long pilgrimage. It was not merely that he had travelled through Syria and Palestine, but, by a severe training and study, he had journeyed spiritually and intellectually through all the human evolution symbolized in these places. He had mastered the Eastern languages and literatures, had journeyed with Ahasuerus and Odysseus from the foreworld, and it was with eyes deepened by communion with many a Tiresias of the underworld that he came at last to kneel before Athene and utter to her his prayer. It is a beautiful prayer, too long to be given here. It is one of the few fine poems of our time. Two or three years before, he had been deprived of his professorship of Hebrew, and of his office in the Imperial Library, by the clerical clamor raised against his *Vie de Jésus;* and he naïvely tells Athene about it. "A formidable *Panbœotia*, a league of fools, weighs down upon the world with a pall of lead. Thou must fain despise even those who pay thee worship. Dost thou remember the Caledonian, who, half a century ago, broke up the temple with a hammer to carry it away with him to Thule? He is no worse than the rest. . . . I wrote in accordance with some rules which thou lovest, O Théonoé, the life of the young god whom I served in my childhood; and for this they beat me like a Euhemerus, and wonder what my motives can be, believing only in those things which enrich their trapezite tables. And why do we write the lives of the gods, if it is not to make the reader love what is divine in them, and to show that this divine past yet lives and will ever live in the heart of humanity?

"Dost thou remember the day when, Dionysodorus being archon, an ugly little Jew, speaking the Greek of the Syrians, came hither, passed beneath thy porch without understanding thee, misread thy inscriptions, and imagined that he had discovered within thy walls an altar dedicated to what he called the Unknown God? Well, this little Jew was believed. For a thousand years, thou hast been treated as an idol, O Truth! For a thousand years, the world has been a desert in which no flower bloomed. And all this time thou wert silent, O Salpinx, clarion of thought, goddess of order, image of celestial stability, those who loved thee were regarded as culprits; and now, when by force of conscientious labor, we have succeeded in drawing near to thee, we are accused of committing a crime against human intelligence, because we have burst the chains which Plato knew not."

A good many people in France, and some in this country, have imagined Renan a faint-hearted pilgrim to the shrine of reason, and, some suppose, reactionary in political opinion. With regard to his political position, it may be seen by this book that he has no faith or interest in any of the parties among which his country has been tossed like a football. If anybody has been expecting a French millennium from the so-called Republic, he may be awakened from that dream by observation of the way in which it is just now aping some of the worst features of the empire it succeeded. Renan's innate idealism makes him a pessimist in politics. He sees that "the ideal and reality have nothing in common; that the world is, at all events for the time, given over to what is commonplace and paltry; that the cause which generous souls will embrace is sure to be the losing one; and that what men of refined intellect hold to be true in literature and poetry is always wrong in the dull world of accomplished facts. . . . A somewhat lengthy experience had shown me that the cause I sympathized with always failed, and that the one I decried was certain to be triumphant. . . . Egotism is the exact opposite of what I had been accustomed to regard as noble and good. We see that in this world egotism alone commands success. England has until within the last few years been the first nation in the world, because she was the most selfish." It is to be feared Renan finds little reason to change this opinion, in the extent to which popular enfranchisement in this country has been attended by sacrifice of foreign "pagans" to pecuniary "rings," and of religious liberty at home to party "rings," so that not one commoner ventures to question his party chief, even when he is keeping men locked in gaol for their opinions. It is almost impossible for a man who has any high ideal of society and humanity to be other than a pessimist, when he beholds the miserable baubles that sway the world,—like the barbaric pageantry at Moscow,—and who sees what mere wheels and pulleys of a machine good-hearted and thinking men become when they enter a government. Since Abraham Lincoln's Proclamation of Emancipation, it would be difficult to recall any noble human thing done by any government. The Viceroy of India attempted a noble thing the other day, and could hardly fare worse, if he had burned a widow.

The shadow which the idealist sees resting upon the political world is dark in proportion to the radiance of reason which causes the shadow to fall. Though myself an inveterate hoper, always expecting some little change to work a miracle on the world, I cannot help seeing with Renan that, for the present, the devotees of ideas can only form circles of friendship to sustain each other amid the general reign of unreason, injustice, and ugliness.

But, as for Renan's attitude toward theology, he appears to me the most advanced thinker now living. In this new book, the product of his sixtieth year, he tells us that, since the first months of 1846, he has never shifted his immovable anchor from the scientific purview of the universe that there is no trace of free will in it superior to that of man. And at the close of the book, expressing his hope for a calm and sudden death, he says: "I should be very grieved to have to go through one of those periods of enfeeblement during which the man, once endowed with strength and virtue, is but the shadow and ruin of his former self, and often, to the delight of the ignorant, sets himself to demolish the life which he had so laboriously constructed. . . . If such a fate be in store for me, I hasten to protest beforehand against the weaknesses which a softened brain might lead me to say or sign. It is the Renan, sane in body and mind, as I am now,—not the Renan half destroyed by death, and no longer himself, as I shall be, if my decomposition is gradual,—whom I wish to be believed and listened to."

It is true that, in this and other works, we find him speaking of God. But his God is subjective. He applies the term to the good in nature,—to Athene, to Jesus; for he believes there is a divine life and breath in nature. His love of using the old terms that are dear to so many devout hearts comes of his profound compassionateness, felt most for those bereaved of their faith. A little time ago, when his friend Littré, the Positivist, was buried by the family with Catholic rites, the aspersoir passed round the grave from hand to hand, and came to Renan, who, like the rest, sprinkled some holy water upon the coffin. There were cries of "Shame!" among the free thinkers present; but that which would have been mere compliance in most others, in him was due rather to a natural inability to wound those who are parting forever with their beloved. And, because he sees Christendom beside the death-bed of its god and saviour, he speaks so low, so tenderly, of the dying, and says all he can to soften the agony of the near inevitable parting: he will even fall in a little with their illusions rather than embitter such painful moments. Convinced that there is no other providence than human pity, Renan's heart cannot help occasionally "playing providence" to the Christian mourners, especially while so many mock them. It is an amiable weakness, but it is also connected with the very utterness of the death which all deities have died in his own mind. To him, the Christian beliefs are only the latest tombstones in the cemetery of gods and goddesses. They are no longer objects to be hated, feared, or fought, but only to be kindly decorated with a few immortelles, until, like the witches and ghosts that preceded them, they fade from memory to mythology.

This tenderness of his negative position is characteristic of a religious nature, which almost alone has completed the spiritual pilgrimage of the nineteenth century. He speaks of the men he has met in Paris who settle the claims of Christianity with a sneer, and so easily solve the problems which have cost him so many years of toil and pain; but we may remark that such cynics do not turn out Renans. The experience of humanity cannot be thrown away. Renan, pursuing his culture and researches with perfect freedom, learned to recognize the ages that were summed up in the stations of his free-thinker's cross. He could converse with ancient Indian rishis and dervishes and Buddhist disciples and Syrian hermits, without going beyond Brittany. Of all that had been given him, of joy and grief, of belief and disbelief, of poverty and peace, he lost nothing, but raised it up to his last day of illumination. And, as he had the advantage of beginning in the farthest past possible to any European, and has journeyed farther than any, he may be regarded as a kind of impersonation of the whole religious evolution of our race. It is a liberal religious education to master completely the works of Renan. He alone has told what a priest is, what a Catholic home is, what Christian cult and culture really are; and he alone will enable his studious and sympathetic reader to realize the romance and to recover the buried beauty of his own moral and holy history.

The opening paragraph of his book suggests what I mean. "One of the most popular legends of Brittany is that relating to an imaginary town

Digitized by Google

called Is, which is supposed to have been swallowed up by the sea at some unknown time. There are several places along the coast which are pointed out as the site of this imaginary city, and the fishermen have many strange tales to tell of it. According to them, the tips of the spires of the churches may be seen in the hollow of the waves, when the sea is rough; while, during a calm, the music of their bells, ringing out the hymn appropriate to the day, rises above the waters. I often fancy that I have at the bottom of my heart a city of Is, with its bells calling to prayer a recalcitrant congregation. At times, I halt to listen to these gentle vibrations, which seem as if they came from immeasurable depths, like voices from another world. Since old age began to steal over me, I have loved—more especially during the repose which summer brings with it—to gather up these distant echoes of a vanished Atlantis." But these ancient bells of his sunken world bring him no sadness, no thoughts of intellectual suicide. In truth, when they literally called him to prayer, he could never hear their tones so full of the still, sad music of humanity. They come now to cheer him with the knowledge that he has journeyed far enough to hear their deeper tones, which outlive the jar and clangor falling on ears too close. And, as in this charming book he enables us to listen with him, we may learn how sweet and rich shall be even these repellent forms and ceremonies and pieties around us, when no more fraught with unkindness nor marred with the meanness of use for petty and impious ends. Even now, in our highest moments, we withdraw our eyes from the political aspects of such traditional sanctities as are left, and our ears from their mercantile ring, and hear them as mellow tones from a past which must be lost before it can be beautiful. And they who have known and felt this, who have seen their beliefs sown a natural body, raised a spiritual body, —like this new St. Renan, who left his Church to become the one true catholic of our time,—will be able to enter into the secret of his faith and hope. "A paradise lost is always, for him who wills it so, a paradise regained. Often as Adam must have mourned the loss of Eden, I fancy that if he lived, as we are told, nine hundred and thirty years after his fall, he must often have exclaimed, *Felix culpa!* Truth is, whatever may be said to the contrary, superior to all fictions. One ought never to regret seeing clearer into the depths. By endeavoring to increase the treasure of the truths, which form the paid-up capital of humanity, we shall be carrying on the work of our pious ancestors, who loved the good and the true as it was understood in their time. The most fatal error is to believe that one serves one's country by calumniating those who founded it. All ages of a nation are leaves of the self-same book. The true men of progress are those who profess as their starting-point a profound respect for the past. All that we do, all that we are, is the outcome of ages of labor. For my own part, I never feel my liberal faith more firmly rooted in me than when I ponder over the miracles of the ancient creed, nor more ardent for the work of the future than when I have been listening for hours to the bells of the city of Is."

When I finished reading Renan's book, I was in the country; and there, in an ancient churchyard, I saw a yew of enormous size and age. It filled much space with its full foliage, wherein was no sign of decay; but the huge trunk had a large opening near the ground, which I entered. Standing inside it, I found the interior of the tree all gone: I looked up and saw the blue sky through it. Yet all that vanished wood, the compact literalism of the tree's history, had sufficiently served its purpose in producing an external wall strong enough to dispense with it, while developed out of it. Hence, the seeming hollow tree was clothed with living green. These leaves, I said, are the pages of Renan. I saw in this tree a type of the great humanized Catholic of Europe. Criticism and culture have eaten away what to his former brethren seems to be the heart of the religious man; but it is not so: what has gone is mere wooden literalism, the mere timber which priests carve into marketable images, but with which the idealist gladly parts that he may make room for man in his heart, and the blue and the starry ideals that fill him with light. All that the man had gone through, all his history, was merely parochial save for its farther result of raising aloft the earth into immortal foliage, amid which the birds of the air build their nests, beneath which children play; whose evergreen, outside the church door, shall wave through the thoughts of the doubting and sorrowing, from generation to generation, revealing the love and truth that live on after the creed that seemed their core has vanished,—consumed by the innumerable days that finally carry their illumination to the very root, and search the graves in which it is planted, for a beautiful resurrection.

For *The Index*.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER XIII.

Interviewers have seldom had a better time than they had with me in Chicago. My gracious and hospitable host welcomed all who came to visit me, and the intervals between questions and answers were filled up with "mission grapes" and champagne. So, whatever conclusion the interviewer came to, he came to it pleasantly. The Jesuit missionaries either brought a grape with them, or cultivated one, which bears the name of "mission grape,"—the sweetest grape to be had out there. If this was the "mission" of the Jesuits, to set these grapes going, it was a good one. My host mentioned one thing which seems to me worth repeating; namely, "he had found, in his pretty wide experience of men and business on railways in England, Canada, and America, that persons really willing to do anything in the way of honest work could always get it to do." As Mr. Charlton is not at all a man of illusions, and his sympathies being with the unfortunate and struggling, for whom he would prefer to find excuses where it was possible, this result of his clear-sighted experience is instructive. The above saying I understood to mean, not that any one could find the precise place he wished, or the sort of employment he preferred, but that, if a man had industry and willingness in his bones and a taste for honest work, he could always find something to do, and could lie in wait with it until something better floated by him.

The other day, I saw a letter in a journal of repute signed "Ontario," giving a very modest, candid, and sensible account of the fruit products and climate of Canada. Yet I would not have admitted an anonymous letter into columns consulted by settlers, without the name and address of the writer, in order that some authority should be afforded to the reader. In travelling, I trusted nothing I could not verify, and what could not be verified, wherever I could, I asked to have it explained.

For instance, I asked: "If I come upon cases of shooting, such as I see daily, does it matter? Does it interrupt business?" The answer was: "Except you get in the way of a chance bullet, it need not concern you. For instance, the other day Prominent Citizen No. 1 shot, at sight, Prominent Citizen No. 2. Prominent Citizen No. 3 (a friend of No. 2), appearing on the scene, shot Prominent Citizen No. 1. He, having some strength left and a bullet to spare, took aim at Prominent Citizen No. 3, and shot him. Thus," added my informant, "that lucky community got rid of three prominent ruffians by their own agency." The shooting part of a city is always its worst part; and cases of self-extermination, which alarm the stranger, are very differently regarded by the citizens.

Failures in America are not always what they seem to us. An explanation Mr. Charlton gave me is one which would never occur to a less experienced observer than he. "People," he said, "look forward to a crash as giving honest men a chance. Speculators, who take land, and lock it up to sell at high prices, have at last to sell it to pay mortgages. If they only get for it what they gave for it, they consider themselves ruined. Then, small capitalists get a chance of buying land, when the price has come down. The crash is a gain to them, and workmen always have good wages when 'ruin' comes." I never knew before that "crashes" and "ruin" among speculators are signs of progress.

Among the Englishmen in Chicago is a man of remarkable energy and skill as a mechanician, Mr. William Baraganath. His ingenious inventions relate to economizing heat in steam boilers, if I remember them rightly. He has a manufactory in the suburbs of Chicago. His wish was that a lecture on co-operation should be delivered in Chicago; and, accordingly, it came to pass. Mr. John Dunn, the English Vice-Consul, presided, and made an interesting speech. The time was too brief for so large a city as Chicago to be made aware of the lecture, so it did not realize any profit: it was the other thing which was realized. Nevertheless, the papers recorded that the subject was propounded; and Mr. Baraganath, with scrupulous honor, paid all expenses, including mine, which he might reasonably have ignored, seeing that it was at least as much my duty as his to incur propagandist loss.

By the courtesy of Prof. Van Buren Denslow, President of the Philosophical Society, I delivered an address before the members. The President is a sagacious writer on Communism and other forms of progress. Philosophers are said to be above sublunary things, which is true of the Chicago philosophers; for their hall is in the skies. The building containing it is higher than any structure ought to be, and their lecture room is at the top of it. The stars I saw could look in without stooping. The skylights permitted the audience to become acquainted with the points of the compass. While speaking, I was blown into the south-west corner. I do not mean by a gale, but by a steady blast. The President alone maintained his position, in accordance with a by-law of the society to that effect. It did seem to me a touch of real civilization for Chicago to have a philosophical society, and that, if its prominent citizens and mighty merchants would, just for the pride of the thing, supply it with funds, it would be a memorable thing. A tax of one cent a thousand on the pigs killed in the great city would enable the philosophers to meet on a lower floor. In spur-of-the-moment thinking, it seems to me that there were twenty small towns in England, which, if sold, would hardly buy as many streets in Chicago, which towns yet have each a philosophical society, which has its library, laboratory, lecture-room, and serene chambers, where new truth is born in dignity and comfort.

The subject chosen for me was "Migration,"—simply that and nothing more. What did it mean? The migration of birds, of men, or ideas? No one can tell why birds migrate. They do not go one by one, as men do. They go co-operatively, as men ought; and they know where to go to, which few men do. They need no guide-book. Ideas migrate very slowly. I gave instances in which the London and Northwestern Railway took forty years to acquire an obvious idea in their own interest, and another in which the lawyers of Chancery Lane took a longer period to agree about a matter which gave them daily discomfort. We, therefore, had not in England a large stock of ideas on hand to export. Next, I described the qualities of certain men,—of Mill, of Mazzini, of George Henry Lewes, the husband of George Eliot, who was intellectually the bravest man I ever knew. When he accepted a principle, he accepted all that belonged to it. The praise of courage did not apply to him. He had intellectually qualities higher than that. Courage means facing danger by force of will, and which you fear. If a thing was right, he did it. Nothing came into his mind to the contrary. He had in his mind something loftier than intrepidity. You never had to say to him he *ought* to do a thing which was a sequence of a principle he held. He did it of his own motion. This is indeed the account of Mr. Lewes which I gave to George Eliot at the time of Mr. Lewes' death.

It is not necessary to cite here the further examples

Digitized by Google

I gave, all for the one purpose of pointing out that there did not appear to have been any great migration of such men into the United States. Such qualities of men still abound, as America might know, if the conditions of their recognition were better known. This knowledge a national guide-book would advance. Migration is a necessity of our time,—not a migration of conquest, as in days of old, but a migration of progress; and co-operative migration would be the highest form of it.

Thereupon, debate arose really worthy of a philosophical society. Each speaker spoke well, and knew what he was talking of. None spoke long, each spoke with point. It was as pertinent and vigorous as a debate at a quarterly meeting of the Wholesale Society. The Chicago speakers, of course, had a larger topic, and were able to bring national knowledge to bear upon it. One speaker said they wanted no more immigrants in the country. I answered that the best way to stop people coming was to publish a guide-book, and say so, and that the book was for the use alone of those who were in the country, but who were insufficiently informed of its resources. Another philosopher admitted that good settlers would be an advantage, if they came; but the wrong sort mostly took ship and arrived. Clearly, I could urge, this was only to be remedied by official information as to who were wanted. An experienced debater contended that every State expected to be described as the best of all States, and no government would dare to say it was not. I answered the government might easily say each State was the best by not saying it at all. A guide-book had only to allege that, in the opinion of every State, there was none like it; and, therefore, that might be taken for granted, without saying it over again. One, who had taken malaria by mistake, felt sure that no State would tell of the ratio of disease and death in it. He had overlooked that this is done. and exhaustively done, in medical statistics of the States, and need only to be cited in its place in any account of a State. Another suspicious speaker declared that the truth, as I wanted it, was not known, and would not be told, if it was. All the while, each preceding and successive speaker proved in what he said that it was known, and proved, moreover, that it could be known by his telling it himself. The most vehement and eloquent of all the philosophers contended, in many forms of argument, that nothing was to be trusted, and nobody was to be believed. And I was obliged to point out that it was difficult to determine what degree of weight was to be attached to the representations of this speaker, since, while maintaining that nobody was to be believed, he had omitted to point out on what principle he was to be believed himself. President Denslow, in closing the debate, said he thought that the necessity and possibility of a national guide-book had been made out. Of course, this brief report does ill justice to the speakers, since so much is omitted of what they said; nor are their position and authority described, which lent weight to their words.

The handsome, spacious, wainscoted walls of the Union Depot, of the Chicago and Alton Railroad, surpass in richness the interiors of the Parliament Houses of Washington and Ottawa. The well-designed and massive brass railing leading to the Alton carriages exceeds anything I have seen anywhere. It would be a new satisfaction to live near that staircase.

If any traveller is ignorant of the advantage of an accomplished conductor, let him go from Chicago to Washington by the Baltimore and Ohio Railroad, and get the manager to assign Mr. Bond to accompany them. His lively portrait is to be seen in the rich, butterfly-covered guide-book of the line, as also other portraits of celebrities of the road who make the trains bright by their humor and courtesy. In England, the conductor is shut up in a distant box, and the passenger in another; and they seldom communicate, save in a collision, when projected into each other's company. An English conductor is like a clergyman locked up in the vestry, when he ought to be addressing his congregation. In America, the conductor is always in the church,—that is, in the cars; and the passengers are always moving up and down the aisles. We had, indeed, been long on our journey between Chicago and Washington, when Mr. Bond came "on board" and showed us all things ever after. We rode over torrents, through rocks, and amid new kinds of mountain scenery of verdure and glory which I had not before seen. We went by the Devil's Glen, a mighty valley of such bewildering intricacy and winding beauty that one could not but admire the taste of the Devil in selecting it. At the same time, if he would but take up his abode there, it would be well for mankind; for, once well in that wild labyrinthine glen, I do not think that even that experienced adventurer could find his way out again.

We took farewell of the tree-clad mountains, of the Cheat River,—where craft lay like midges as we looked down upon them,—of the miles of verdant wilderness through which we rode, of Cumberland and its hotel, where we were royally entertained by Mr. Bond's arrangement by direction of Mr. C. K. Lord, of the Baltimore and Ohio Railroad, to whom we owed the glory of that journey.

The church where most of the old Presidents worshipped lies on one side of Lafayette Square, not far from Col. Ingersoll's door. For myself, I went by choice to the church where the morality of Presidents was formed. The galleries lie under three arches, the altar under a fourth, and a dome surmounts them all, with a lantern light in the centre. The galleries have sweet recesses, with a window at either end as well as at the side. Thus, gleams of sacred light fall upon the Prayer-Book, or note-book in which a curious hearer might record the falling words of the preacher, as I did. The English church service was used, but wisely abbreviated. Two clergymen in white surplices,—one, with a black scarf (which distinguished him from the other, whose black scarf went across his back), preached without changing his white garments or leaving the altar, and not getting into a pulpit (in which no preacher has dignity), but, standing before a desk by the communion-table, spoke with clearness, distinctness, and force, but without passion, holy or otherwise. The main feature of the sermon was the extent to which heretics were in the mind of the preacher. The testimonies of Mill, Rousseau, and Renan were cited. The impression imparted to the hearer was that Christianity rested on heretical reasons, which stood out in his discourse, bright and picturesque. They stood in the discourse as the rock of the Church. Yet the preacher argued against his own rock. Dr. Percival, the preacher, spoke—like Dr. Lorimer on board the "Scythia"—with a hard, iron momentum, which beat the understanding of the hearer down. He ran over the hearer as though he were a rail, not carrying him in the same train. But he did not shock you by abrupt transitions, as Dr. Lorimer did. But there was other preaching that day in Washington far more remarkable and impressive. We went in the afternoon to the church of the colored people. As the Colonel's carriage drove up to the door, we had many proofs of their regard for him. We were welcome hearers, coming from his house; and wondrous was what we saw and heard.

CORRESPONDENCE.

IN MEMORIAM.

Editors of The Index:—

Rebecca L. Pomeroy, who recently died at Newton, is worthy of commemoration in *The Index* for her fine spirit and charitable deeds, though orthodox in her creed. *Echoes from the Hospital and White House* is the title of a lately issued book, of which she was the subject and in great part the author. It is a valuable contribution to the history of the war, and a precious record of her life, which will give to those who had not the privilege of knowing her some idea of the rare qualities which made her so honored and beloved.

Deeply religious in all her thought and life, and having accepted theological views which became the expression of her feelings, she was yet broad and liberal in sympathy and action, and bound, in the closest ties of fellowship and mutual service, with those who differed widely from her views, but who were one with her in spirit. In the little children's home at Newton, she showed a wonderful combination of the spiritual power of love, which gathered these forlorn little waifs into a real family life, with the great executive ability and severe economy in material matters which justified her administration for its wisdom as well as its beauty. In that small institution, she has exemplified many of the great principles which must lie at the foundation of all true charity and true education. Work has been made attractive, not by calling it play, but by its thoroughness and utility. The smallest child has felt the strengthening hand of duty upon her, and has seen the importance of doing her little task well for the comfort of the whole family. Yet she was not rigid or severe, but encouraged the song and the dance of the little dramatic attempts of her pupils, as well as the out-door sports needed for their health. She has aimed to make them useful working women. Yet, if one of her little flock showed intellectual ability and ambition, she helped her to cultivate it, and to look forward to the career of a teacher. Doing service to each other and respect for work have been the lessons inculcated by precept and practice; and for many, many years her memory will be cherished by those whom she has trained to lives of usefulness and happiness. We wish that some of those who have known her work thoroughly would condense from her simple and admirable reports a history of her methods, which have accomplished on a small scale so much which the world needs to have done. The beautiful, saintly face of "Aunty Pomeroy" will be seen no more on earth; but she will not be forgotten by her little flock, and even on earth will live long, if

"To live in hearts we leave behind
Is not to die."

E. D. C.

STUDIES FOR WINTER EVENINGS.

Editors of The Index:—

Prof. A. H. Sayce, in his lectures on "Babylonian Literature," tells us that Sargon I. founded a library 1700 years B.C.; and the following is his translation of the story of his birth: "My mother was an outcast. My father I knew him not. My father's brother ruled the land.

"In the city of Azu-pir-anu, on the banks of the river Euphrates, my mother, the outcast, conceived me, in a hiding-place she bore me.

"She laid me in an ark of rushes. With bitumen, its mouth she closed. She gave me to the river, which drowned me not. The river carried me,—to Aceci the ferryman did it bring me. Aceci the ferryman, in the tenderness of his heart, lifted me up. Aceci the ferryman as his own child nurtured me. Aceci the ferryman his woodman made me. And, in my woodmanship, the goddess Istar loved me."

This ingenious story of the protégé of Aceci the ferryman revives the recollection of an Egyptian myth,—a story older by many ages than that of the birth of Sargon, and is analogous to it, as follows:—

Osiris, the father of Horus, was confined in a coffin (or coffer), and put afloat on the river Nile. This son Horus, by an Egyptian woman Nepthis, hidden by his mother, was found by Isis, who gave the infant demi-god "in charge of the queen's maidens."

But for the story of the birth and of the infantile and youthful adventures of Sargon, on the banks of the Euphrates, we have an almost exact counterpart in the familiar story of Moses on the banks of the Nile two hundred years later.

In the story of Moses is combined in one what befell Osiris and his son Horus. Seven hundred years later than the date of Moses, we have the story of Romulus and Remus, on the banks of the river Tiber, briefly as follows:—

Their mother was the vestal virgin, Rhea Silva; their father, Mars, the god of war. The mother, for her crime, was buried alive. The twins were placed in a "basket," and flung into the Tiber at flood-tide. The overflow having spread over the river bottoms, the waters carried them "as far as the foot of the Palatine Hill; and there the basket was upset near the roots of a wild fig-tree, and the children thrown out upon the land." "A she-wolf came down to the river to drink, saw the children, and carried them to her cave hard by, and nurtured them till found by the king's herdsman, whose wife Larentia brought them up as her own."

It may be observed that these legends, by their respective dates and locations, appear to have followed precisely the course of the civilization which has reached us through the various nations of antiquity, lastly from Rome. First we have the Egyptian myth, later the legend of Sargon, still later that of Moses through the Jews, who were of Chaldean origin, and had gathered of the "wisdom of the Egyptians" by contact with that people. Last of all,

Digitized by Google

we have the Roman legend of Romulus and Remus. It may also be observed that these stories, whose dates are apart hundreds of years and hundreds of miles as to locality, have a wonderful resemblance to each other.

Now is each an original tale, or are they modified copies of one original? If the latter, which (if either) is original?

A. T. SKINNER.

THE EDUCATION OF MEN.—This country has done a great deal for the education of boys and girls. But, up till the present time, men and women, who have themselves tried life, and have found out what they wanted, have found that, for solid study, for books or lectures adapted to their purposes, they must go to Europe. Every year sees hundreds of Americans who, for the purposes of what is fairly enough called the "Higher Education," cross to Europe. This is because, thus far, most of our colleges give up the greater part of their work to elementary training or instruction. Nor do the professional schools go much further. The older universities, and some of the younger which are not endowed, are gradually feeling their way to what are called "post-graduate" courses. So far as these go, they begin to fill the gap, and to provide at home for men and for women who would else have to exile themselves. But, with the single exception of the Johns Hopkins, such universities are obliged to subordinate their courses for graduates to the instruction they give to youths. That is to say, nine-tenths of their effort is spent for beginners in study, and what is given to the help of people more mature is a remainder biscuit. The Johns Hopkins University is one brilliant exception. Its success and the character both of its teachers and its scholars are due to its recognition of the necessity of the education of men. It is understood that the new Wade College in Cleveland, of which some intimations have been given from time to time, makes its first object such provision for the studies of men and women. Understanding, or supposing, that enough is done in law schools, schools of divinity, technical schools, colleges, and common schools for youths and young men, Mr. Wade has believed that the advancing wealth and cultivation of the country demand and will sustain an institution of the very highest grade, which will provide—as the University of Berlin or that at Heidelberg provides—for the studies of those who have made some progress in study,—who go to study, and are not sent,—in a word, for the education of men. It is understood, perhaps because the physical sciences are just now more likely to take care of themselves, the Wade College, at the outset, will devote itself to what was once called morals,—intellectual and religious philosophy,—or, in the largest sense, theology. But a false impression would be given, if this statement carried the idea that this is simply to be one more school in the elementary work of preachers. It is designed, as we understand, for the higher study of metaphysics, of ethics, of their practical application to the philosophy of history; for the study of the nature of God, and what men know of it, and of the nature of man. Its founder has placed no restriction of sect or of creed upon its teachers. Its object will be to assist, by its library, its lectures, and its other appliances, all persons, of whatever profession or whatever opinion, who want to study any subject regarding man or God, or the relations of man and God with each other. The plans of Wade College do not contemplate any very expensive system of buildings. It is supposed that the city of Cleveland, where it is founded,—already a great centre in education,—can of course provide the homes for most of the students. For the college building, Mr. Wade has provided an admirable site, separated only by Euclid Avenue from the great buildings of the Case Institute of Applied Science. Science and philosophy—if we may use these words—have thus the opportunity to do their best in sight of each other. As soon as the endowment of $500,000 is complete, the college is to be organized; and the courses of instruction may soon begin. Mr. Wade himself offered $350,000 to this endowment. The gentlemen interested believe that the remaining amount will be soon contributed, from the very large number of men and women of wealth who have expressed their satisfaction with an idea so large. This endowment will be sufficient to set in order an institution of the very first value, in a line of education where this country now feels a deficiency.—*New York Tribune.*

BOOK NOTICES.

MARTIN LUTHER. A Study of Reformation. By Edwin D. Mead. Boston: Geo. H. Ellis, 141 Franklin Street. pp. 194. Price $1.25.

In this work, we have not simply another sketch of Luther's life, not simply the familiar story of the Reformation retold, but an analysis of Luther's character, a discussion of his place in history, a picture of his times, descriptions of his contemporaries, of his relation to earlier reformers, of his antecedents, with a statement of his teachings and of the views of the author as to their far-reaching influence on the thought of to-day. Mr. Mead holds—and, we believe, with good reason—that "Luther is the most influential and significant man in the spiritual history of mankind since Christ." He quotes approvingly the words of Carlyle that the appearance of Luther before the Diet of Worms "'is the greatest scene in modern European history.' . . . English Puritanism, England and its Parliaments, Americas, and vast work these two centuries; French Revolution, Europe and its work everywhere at present,—the germ of it all lay there. Had Luther in that moment done other, it had all been otherwise." Luther's sublime devotion to the truth, as he understood it, and his heroic opposition to the forces of tradition and authority, are brought out with powerful effect. "Ah!" exclaims the author, "I must say, I am sometimes inclined to think very poorly of my generation, when I note the exceedingly small price for which men sell their manhood and compromise with what to them is no longer honest gospel, and when I hear the petty whines of men over the petty losses and annoyances they suffer for refusing to kiss some established shibboleth. O men and women, what would become of your gospel, if it, too, had to face its age of martyrdom, like other gospels, and it became a question of exile, of torture, and the stake? Poor stuff for martyrs, these weak compromisers and complainers of ours. . . . Not of such stuff was Martin Luther." Luther, "the poor boy, singing carols in the street for his bread"; "the student, thrilled by the old Latin Bible discovered in the university library of Erfurt"; the monk, with his mental struggles, self-condemnation, and conceptions of a saving faith; the teacher, lecturing at Wittenberg; the pilgrim, appalled by the heartless mockeries of Romanism; the Protestant, defying Rome; the scholar, translating the Bible into the language of the people; the powerful preacher, the statesman, the affectionate husband and father, the *man*,—"one with the people, singing with them, speaking their speech, simple as they, eating and drinking, glad to see the springtime coming and to hear the birds, glad in all gladness and beauty, ministering to sickness and all sorrow, a heart responsive to every note in nature and in man; a big, impulsive, overflowing soul, humorous, hilarious, courageous, superstitious, scrupulous, reckless, a bigot, a poet, vulgar, charitable, a clap of thunder, a very mother in sympathy and providence, his foibles and virtues all so human and so plain,—presents to the world a most striking personality and a life at once profound, dramatic, and picturesque." In portraying this great historic character, in distinguishing between what was essential and enduring and what was superficial and evanescent in the life and thought of the great reformer, in bringing out the facts necessary to show that, great as were many of his contemporaries, he was the great central figure of the Reformation, in defending him from the misconceptions and misrepresentation of Catholic writers, and in tracing the influence of his splendid protest and fidelity to what he conceived to be truth down to the present time, Mr. Mead evinces a comprehensive grasp of his subject, a power of analysis, a judicial fairness, and a vigor of expression which are sufficient to commend his book to all who would know all that can be learned regarding Luther, however many other volumes they have read on the same subject.

THE second (February) number of the *Andover Review* is a stronger number than its predecessor, and treats of theological and philosophical questions of current interest. We give its table of contents. "The Christian Conception of Providence," by Dr. Lewis O. Brastow; "Prof. Harris' Contribution to Theism" is the subject of a vigorous article by Newman Smyth; "Lay Theology" is by President Buckham; Rowland Hazard criticises "Prof. Sumner's *What Social Classes owe to Each Other*"; Rev. J. H. W. Stuckenberg has an interesting essay on "The Theological Tendencies in Germany." "El Mahdi and the Sudan" and "Elementary Education in England" are among the topics editorially treated. And among books noticed are Brooks' *Law of Heredity*, Janet's *Theory of Morals*, Fisher's *Grounds of Theistic and Christian Belief*, and Bartlett's *Sources of History in the Pentateuch*.

"WIDE AWAKE" is always as timely in its topics as it is entertaining and instructive. Therefore, it gives in the February number, just come to hand, a story of St. Valentine's day, by Mrs. F. A. Humphrey, entitled "Molly St. Leger's Valentine," in which is wrought an incident of the Boston Tea Party. There is also a charming frontispiece by Hassam, representing a group of merry girls and boys at the post-office on St. Valentine's morning. Among the other contents of this number are a poem by Celia Thaxter, stories by Sarah Orne Jewett and Rose Hawthorne Lathrop, another article from Alice Fletcher describing the Omaha Indian children, the continuation of Elizabeth Stuart Phelps' serial, and an interesting biographical sketch of Henry M. Stanley, the explorer, by Sarah K. Bolton, with a portrait.

"BABYLAND" for February comes out with a new and handsome cover, which gives an appropriate description of the beautiful picture of "Baby Bertha," to which half the space of the cover is devoted. The serial alphabet grows more and more interesting, and the other stories and pictures are up to the usual good standard.

PERSONAL ITEMS.

MISS HELEN TAYLOR, the step-daughter of John Stuart Mill, is to write his biography for the series known as "English Philosophers."

PROF. VAN BUREN DENSLOW held a debate on Woman Suffrage with Mrs. Mary A. Livermore at the Cleveland (Ohio) Educational Bureau on February 3.

ALTHOUGH she had eight competitors among the most distinguished of the place, Dr. Annie Clarke was chosen for an attending physician of the Birmingham Children's Hospital, England.

BARCLAY GILBERT, a prominent citizen of Salem, Ohio, died last week. He was son of A. Gilbert, who years ago was associated with Robert Dale Owen and Frances Wright, and was a brother of our able contributor, Howard Worcester Gilbert. The deceased was past seventy.

IN a note received last week from "Auber Forestier," she says, "We Madison people have just been having a treat in the lectures of Mr. Edwin D. Mead. He has given us his lectures on the 'Pilgrim Fathers' and 'Puritanism,' also his series on the poets. This morning, we had his 'Emerson,' which was the finest essay on the subject I have heard. Madison has also been enjoying Matthew Arnold in his Literature and Science."

MR. PARNELL occupies a unique position in the House of Commons. He is rather distinguished-looking, icily cool and unimpassioned, and has the attraction which belongs to the mysterious. Nobody can tell what he is going to say, and he usually says "the unexpected." It is true, as the London journals say, he does not use rhetoric, and is not eloquent. His Parliamentary force consists in the vise-like grip he has on facts and principles, and the language, clear-cut as the edge of a razor, with which he presses and sustains them. No man leaves the House while he is speaking. Members rush in and crowd the benches.

SPEAKING of the marriage of Frederick Douglass, the Rochester *Democrat* says: "Mrs. Douglass is the daughter of Gideon Pitts, of Honeoye, in the town of Richmond, Ontario County, and is a very intelligent lady of spotless character. Mr. Pitts was an original abolitionist, and a man of the most sterling worth and of large influence in his community. In Honeoye, at an early day, abolition conventions were of frequent occurrence, and many of the ablest anti-slavery orators have spoken there; and thus the place was educated, not only in anti-slavery ideas, but received an intellectual culture of a high order as well, which has rendered it not only intelligent, but has also freed it from many of the prejudices of caste. It was in such a community and amid such influences that Mrs. Douglass was educated, and it is not surprising that she has the courage of her opinions."

GERMAN INSTRUCTION

By a Harvard graduate who has studied three years in Germany. Single instruction or in classes. Address

HARRY W. ROBINSON,
Cambridge, Mass.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. *Price 5 cents*; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE INDEX,
44 Boylston Street, Boston, Mass.

From Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	" . . .	8c.	" "
" 26 " 51	" . . .	6c.	" "
" 52	" . . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

CURRENT TOPICS.

IN El Mahdi, the conquering hero of the Soudan, a new Alexander has arisen, with the difference that the triumphs of "the false prophet" are yet in prospective, while those of Alexander were accomplished. A spy reports that El Mahdi recently wrote to Osman Digna, leader of the rebels in this vicinity, that he intended to invade Turkey and kill the sultan, to conquer India, and eventually to subjugate the whole world.

REV. GEORGE C. LORIMER, of Chicago, concluded a recent eulogy of Wendell Phillips as follows: "Perhaps no one of our time more fully deserves the title of Good Samaritan than Wendell Phillips, whose stormy yet gentle spirit has just taken its flight to join Emerson and Sumner and Wilberforce and others who have loved mankind. On his bier, we cast this humble wreath, and pray you, my friends, 'to go and do likewise.'"

THERE is, or was recently, a disgusted and astonished "State's rights" man in Washington. He held a position in the pension bureau, from which he was dismissed because he openly frequented gambling houses. "But," he protested, "I am a Texan. Everybody 'fights the tiger' there as a matter of course. Such a thing as frowning upon a man for gambling is never dreamed of, and I have a right here in Washington to follow the customs of my own State." Another "martyr of liberty."

THROUGH the opposition of the Tories, the question of Bradlaugh's admission to his seat in the House of Commons is likely to become entirely partisan in its nature, when the Liberals may be compelled, in spite of all prejudice against him, to do justice to the member-elect from Northampton. The attitude which the Commons have so long maintained toward this man has been singularly disgraceful. It has not added to England's reputation among fair-minded people. Nor has it been of any advantage to the religion in the interests of which those who have denied Bradlaugh's claims have professed to act.

A PECULIAR religious ceremony took place in a Catholic cathedral in Dubuque, Iowa, recently. Diphtheria and other throat diseases being very prevalent in that city, the ceremony of blessing throats was resorted to as a preventive and restorative. Several thousand people approached the altar. Two lighted candles, in the form of a cross, were placed on the throat of each applicant, and the priest repeated a prayer. Unless the unhealthy conditions causing the distemper were overcome or removed previous to this performance, we should think it probable that there would be a diminution of faith among the Catholics of Dubuque rather than an increase, as a consequence of the unique ceremony.

PROSAIC, matter-of-fact people, while indispensable to the daily comfort, well-being, and progress of the world, should not be allowed even to read poetry, because when they do they are sure to upset some rhythmic and inspiring idealism or destroy by their iconoclastic criticism the sense of some delightfully sounding phrase. Tennyson's oft quoted

"Better fifty years of Europe than a cycle of Cathay,"

when uninterpreted by these critics, conveys a grandiose idea of an immense circle of time in comparison with one brief half-century. But a writer in the *Nation* calls the line "bombast," because "a cycle of Cathay" is really only sixty years. Just think of rendering it,

"Better fifty years of Europe than sixty of China."

A WRITER in a recent number of the *Westminster Review* earnestly advocates the repeal of the English blasphemy law, and asks, "What good has the law ever done? It has," he declares, "aroused many evil passions, it has broken many hearts. Can it be alleged that it has ever been of real service to the cause of true religion? On the contrary, it seems to us that if Christian ministers and Christian laymen understand their own interests as religious men, they would unite in demanding the abolition of such a law." To which the *Inquirer*, an English Unitarian paper, responds: "We have always contended that Unitarians ought to be among the foremost in advocating the total abolition of the law of blasphemy, and we regret that divided counsels exist among us on this important question."

THE Springfield *Republican* says that the day of prayer for colleges called together in that city only about one hundred persons, of whom half a dozen were the city pastors. Rev. Dr. Buckingham, who opened the meeting, said that the day was first observed sixty years ago, when there were but few colleges. "Now there are three hundred and sixty colleges in the land, besides seminaries and girls' colleges, with sixty thousand students. All are founded in 'piety and poverty,' the only attempt to shut God out at Girard College having been abandoned. Many of these colleges are established with the avowed purpose of educating young men for the ministry, but all are intended by their founders to send out Christian statesmen and Christian business men." And yet only one hundred persons in a large city who cared to pray for them!

A PIOUS writer in the *Transcript* of this city waxes furious over the new New Testament, which he calls "an abominable revision"; and he declares that "The 'Revised Testament' is regarded by nearly every one with whom I have talked as one of the most unjustifiable follies of modern times; and, to me, it is an insufferable nuisance. For not only have words been changed to meet the views of the astute (?) theologians engaged in the work, but the divisions and general style are so radically altered as exceedingly to confuse one long familiar with the St. James translation; and for what? I am sure that no more souls will be won to Christ by the new book than would have been by the old, and I don't think God cares a snap about the change." This is not his only grievance, however. The old-fashioned hymns, he says, have also been marred by the fell hand of the reviser; and he gives several instances of new words being substituted in well-known hymns. He declares such substitutions to be "a miserable outrage.... And I think that the 'fool-killer' might put in some first-class work upon the hymn revisers, who, to suit their own whims, thus inflict aggravation and discomfort upon hundreds, and perhaps thousands, of worshippers, disturbing the serenity of their Sabbath, and making them feel as uncharitable as I do now."

IT is about six years since the managers of the Boston Art Museum decided to open its doors on Sunday, believing that many persons who had no leisure for study, recreation, or sight-seeing during the week would avail themselves of its advantages on their single day of freedom from the shop, the factory, and the store. The results have abundantly justified this belief. Five, ten, and sometimes twelve times as many visitors appear Sundays as on any other day. On one Sabbath, four thousand people were counted; and the attendance varies from that large number to twelve hundred and one thousand, rarely falling far below the latter figure. The Sunday visitors, who are admitted free of charge, are largely representatives of the poorer classes, persons who could not afford the price of admission. They are artisans, mechanics, and laborers, who come with their families to enjoy the rare collections, and are often poorly and roughly clad. But they are always orderly and quiet, infringing none of the rules, says one of the officers, unless it be the command to "touch not, handle not," which is not always remembered by the more cultured visitors. The managers say that they have never known of any opposition to keeping the museum open Sunday; but, if there should be any complaint, it might be easily answered by referring to the record of attendance, the good conduct of the visitors, and the fact that the opportunity of entering the museum undoubtedly keeps many persons from haunting unwholesome places.

The Index.

BOSTON, FEBRUARY 14, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

Commemoration of Keshub Chunder Sen and of the Brahmo Somaj.

Addresses at a meeting held under the auspices of the Free Religious Association, at the Parker Memorial Hall, Boston, Sunday Evening, Feb. 3, 1884.

Parker Memorial Hall was generously offered by the trustees for the holding of this meeting, and the choir of the Twenty-eighth Congregational society gave their services to the occasion. A large audience, entirely filling the hall, assembled. The platform and desk had been decorated appropriately, by ladies of the society, with flowers and plants. At 7.35 P.M., the President of the Free Religious Association and the other expected speakers went upon the platform; and the President, Mr. Potter, began the exercises thus:—

Ladies and Gentlemen,— As President of the Free Religious Association, under whose auspices this meeting has been called, I have been requested by the Committee of Arrangements to preside on the occasion, and to make the opening address. But, before we proceed to the addresses, it is thought desirable that we should have music; and a hymn has been selected that seems to be specially appropriate. It is the well-known hymn which comes to us from Dr. Johnson, but which critics of hymnology believe to have its origin in India. However this may be, it certainly reflects very closely, in spirit and in thought, the famous Vedic verse Gáyátri, or the so-called holiest verse of the Vedas. The choir will now sing it.

Hymn.

"O Thou, whose power o'er moving worlds presides,
Whose voice created, and whose wisdom guides,
On darkling man in pure effulgence shine,
And cheer the clouded mind with light divine.

"'Tis thine alone to calm the pious breast
With silent confidence and holy rest.
From thee, great God, we spring; to thee we tend,—
Path, Motive, Guide, Original, and End."

The addresses then proceeded as follows, with two other hymns in the places where inserted:—

Address of Wm. J. Potter.

It is one of the objects of the Free Religious Association, as stated in its Constitution, "to increase fellowship in the spirit"; and it is on this basis that this meeting is held. We propose to commemorate a man and a movement on the other side of the globe; but there are affiliations of moral aim, ties of spiritual aspiration, that are not affected by space. We propose to commemorate a man and a movement belonging to a very different nationality, to a different race—unless we go back many thousand years for the kinship—from that to which, probably, every person in this assembly belongs,—a man and a movement of a different religion from that in which, probably, every one here has been educated; but there is a "fellowship in spirit" that is not limited by the frontiers of nations, and that links differing religions together in amity. We wish it, therefore, distinctly understood that it is on this ground that the Free Religious Association has appointed this meeting in commemoration of Keshub Chunder Sen,—moved to this commemoratory action by his lately announced death,—and in commemoration of the Brahmo Somaj of India, of which, in recent years, Keshub Chunder Sen has been the most distinguished leader and representative. Neither the Free Religious Association nor any speakers who may take part in this meeting will be held thereby necessarily to have indorsed the beliefs of Chunder Sen nor the doctrinal position of the Brahmo Somaj. With their special doctrines, we have here nothing to do, except so far as any speakers may give information upon them. It is not his creed, but the *man* that we celebrate; and, even more than the man, the movement for religious and moral reform for which to us his name stands. There are those in India who must mourn for Chunder Sen, because a personal friend has dropped from their side; must mourn, how deeply, for he was personally one of the warmest-hearted, most attractive and magnetic of men. There are those who are sorrowing for the breaking of even tenderer ties. And there are those who are mourning for him, because he was the bulwark of beliefs and of a church that are to them most dear. But, to us, he was a religious, moral, and social reformer. Our sympathies are touched because a great leader has fallen who was seeking, with the sublime earnestness of a consecrated moral enthusiasm, to lift his people up to a better hope, to higher faiths, to purer and larger life.

And there is a *special* reason why this meeting should be held under the auspices of the Free Religious Association,—if I may be pardoned for mentioning it, for I would not unduly emphasize on such an occasion the prominence of that or any organization. But the reason to which I refer is a little piece of history, which may be of interest and value to the meeting. The Free Religious Association was, as I suppose, the agency by which Keshub Chunder Sen was first introduced as a personal entity to the American public. There had been a few vague reports, published in some of the religious newspapers, of a great native religious reformer in India, who was preaching against idolatry and other superstitions and evil customs of the native faith. But these were only vague and second or third hand reports. Being particularly impressed by something that was said of him in one of Rev. Mr. Dall's letters, or reports, to the Unitarian Association (Mr. Dall, you know, is the Unitarian missionary in India), I wrote to Mr. Dall to learn Mr. Sen's address; and, having obtained the address, I then wrote to Chunder Sen, in my capacity as Secretary of the Free Religious Association, as friendly and cordial a letter as it was in my power to indite. That was in 1867, the year in which the Free Religious Association was organized. I told him of the movement here, sent him a copy of the Constitution and of the report of the first meeting, and particularly pointed out the fact that our platform and membership were not confined to Christian limits, but contemplated a unity of persons who might come from or still be of different religions, but were one in the search for truth and in the feeling of human brotherhood. (And let me say here, parenthetically, that I have reason to believe, from responses that came to me from several persons and parts of India that this letter was a source of special encouragement to the Brahmo Somaj societies and their members. It arrived at a time when they were somewhat discouraged,—opposed, as they were, on the one hand by their own countrymen, the devotees of the native religion, and, on the other hand, by the Christian missionaries and rulers of the country. It was the first voice—except here and there an individual voice—of human sympathy and fellowship from beyond their own little band, and thus was magnified into a merit much beyond any virtue it had in itself.) Keshub Chunder Sen was then General Secretary of a Union of Brahmo Somaj Societies; and in a few months there came back from him a long letter, giving a lucid historical account of the Brahmo Somaj movement, and of its position, aims, and work at that time. The letter was inspired throughout with the tenderest feelings, and contained expressions of the most grateful appreciation of the message of sympathy I had sent to him, as Secretary of the Free Religious Association. It was read at the annual meeting of the Association in 1868, published in the annual report of the meeting, and printed also, in full, in the New York *Tribune* and some other widely circulated journals. And this was, doubtless, the first word from Keshub Chunder Sen to the American public,—the first word printed in America, either from him or about him, with a distinct personality behind it.

And the letter was a surprise, and the beginning of a better intelligence about the conditions of life in India, even to many well-informed and liberal minds. I confess, for myself, to a glow of unexpected satisfaction, as I broke the seal of the letter, and read there the lofty thoughts and sentiments, couched in the most elegant English, written by the author's own hand, and in a style of penmanship testifying to all the refinements of the highest culture. I was expecting, of course, an intelligent reply; and I was prepared to find some reciprocation of the sentiments of brotherhood contained in my letter. But I had surmised that the author's native speech might have to be translated by an English and Christianly educated clerk, so that I should not feel quite sure but that the inward sentiment as well as the outward dress of the Hindu's epistle had been shaped by the foreign scribe. But, when I saw that I held in my hand the letter just as it came from his, and that I had read the thoughts just as they came from his pen and brain, the thought that first struck my mind—and I am not certain that I did not involuntarily utter it aloud—was, "And this comes from a land and a religion which we call pagan, and to which we send missionaries!" And I more vividly recall the astonishment manifested in a group of liberal Unitarian people to whom I showed and read the letter before it was made public. One excellent and quite well-read woman—and she only voiced, with a little emphasis, the general feeling of the group—exclaimed: "Do you mean to say that that letter was actually written and composed by a native

Digitized by Google

Hindu, a pagan? And do those people who belong to the religious society he describes really worship the true God?" I could only assure her that *I* had full faith, from the circumstances, that the letter was no forgery; that it was written by a native Hindu, and by one whom I feared many good Christian people would stigmatize as pagan; and, as to the question whether he and his fellow-members of the Brahmo Somaj worshipped the true God, I could say no more than that, so far as I could judge, they seemed to be able to tell us of Christian America about as much concerning God as we could tell them.

And this brings me, by easy transition, to the remarks I have to make about the Brahmo Somaj movement. That movement, you know, did not begin with the eloquent preaching and earnest work of Keshub Chunder Sen; nor was it, in latter years, wholly represented by him. Other men, eloquent, earnest, and able, had labored; and he entered, gratefully and appreciatingly, into their labors. As an outward organization, the Brahmo Somaj dates back to 1830 and to the time of Ram Mohun Roy. But, even previous to this, we might find the germs of the movement. We might find the seeds of it, occasionally springing up, but not maturing much fruit, all along the centuries back to the great revolt of Buddhism against the older and traditional Brahmanism. But Ram Mohun Roy was one of the historic characters of India. He was a reformer of wide sweep, social, political, moral, religious. Early, he abandoned the idolatrous religion of his countrymen, and sought, against the force of deep-rooted prejudices which no one man could sweep away, to restore what he believed to be the original Hindu faith, spiritual monotheism. As early as 1816, he established, with this view, at Calcutta a society for spiritual improvement. But, even with this modest and unaggressive name, so bitter was the opposition of orthodox Hindus, the society had but a brief existence; and, for a number of years, Ram Mohun Roy contented himself with the agency of the printing-press and the issue of books and tracts for continuing his reformatory work. In this interval, one of the fruits of his work was the conversion of an orthodox missionary to Unitarian Christianity. The Rajah and the missionary came thereby very near together in fellowship of spirit, and were probably not very far apart in doctrine; but they never came together in name, the Rajah refusing to take the Christian name as strenuously as the missionary adhered to it. From a prayer-meeting statedly held by this missionary, Rev. Mr. Adam, and which Ram Mohun Roy and some of his friends used to attend, appear to have sprung the first suggestions which led to a new attempt to organize a religious society of the reformed native faith. This was the movement which came in 1830 under Ram Mohun Roy's leadership; and a public opinion had then been formed sufficiently strong to support, or, at least, to let it alone. It came to stay. A society was organized and incorporated under the name of the Brahmo Somaj, which means an "assembly of worshippers of God"; and a building was secured for its use, the trust deed of which provided that it should be for the use of "people of all sorts and conditions, without distinction as to creed or color, who should meet there for *the spiritual and no other mode of worship* of the Author and Preserver of the universe."

From that time onward, the Brahmo Somaj has had an unbroken existence. Its societies have multiplied from one to a hundred and sixty-eight. It has extended from Calcutta across India to Bombay, and in the north to the roots of the Himalaya mountains, toward the land where the great Aryan faith had birth. It is still, however, a comparatively small body; and yet its influence has not been inconsiderable upon public opinion and legislation. Ram Mohun Roy died in England three years after the organization of the first society at Calcutta. Then, for a number of years, under more conservative leadership, it was regarded as a new church founded on the old authority of the Vedas,—a Unitarian, theistic church, but deriving its right to exist and its beliefs from the ancient Hindu Scriptures, very much as Christian Unitarianism first derived its authority from the Bible. This continued until about 1846 or 1848, when the advanced and larger position was taken that the books of nature and of intuition form the basis of the Brahmo faith; and it was affirmed that no one *book* was to be held as specially coming from God, but that *truth* was to be accepted in whatever book found. This advance was made under the leadership of Debendra Nath Tagore, an able man, who extended the activities of the Brahmo Somaj in many ways.

But, in 1859, a new power came into the church. A young man appeared, not yet twenty-five years old, full of fervor and energy and enthusiasm, and delivering *extempore* sermons in English. He had previously organized a small society of young men for the cultivation of religious feeling, and he and his helpers now came into the Brahmo Somaj. He preached with the fire of a genuine prophet, and the desire burned in his heart to put the new faith into deed as well as into belief; to carry the reforms into practice, which had heretofore largely remained as statements. This young zealot was Keshub Chunder Sen. At once, the mantle of his teacher and friend, Tagore, seemed to fall upon his shoulders. These young men brought the fresh consecration of their youth and their hopes to the altar of the Brahmo Somaj. They brought the spirit of self-denial, of self-abnegation, even to the point of asceticism. They were fired with missionary zeal, and longed to go through their country declaring the good news of the purer faith they had learned. And, from this time, the Brahmo Somaj became more actively propagandist,—though some of the congregations still lagged behind on the old basis. The wonderful oratory of Keshub Chunder Sen was a power which the movement had not before possessed. Speaking with equal facility in Bengalee or in English, he had the matchless gift of swaying great multitudes by the magic of his words and the force of the personality behind them. Audiences of thousands of people flocked to hear him, and many were the new adherents which his eloquence rallied to the standards of the reformed church. The fatherhood of God, the brotherhood of man,—these were the two principles, the two front corner-stones of all his preaching and work. The Brahmo Somaj, under Chunder Sen's leadership, as before, has remained theistic. Belief in personal theism is its creed, though it has an adumbration of supporters who decline to put their name to that or any creed. And with the theistic creed are found the cognate beliefs in the efficacy of prayer, in the possibility of personal communion with God, and in the large use of devotional exercises as a means to spiritual culture. But the young men who came into the Brahmo Somaj with Chunder Sen were ready to follow him also in a new application of the doctrine of human brotherhood. They bravely and heroically attacked the caste system of India, bulwarked though it be by the strongest prejudices and traditions of the ancient faith of the country. They sought the emancipation and education of woman, the reform of the marriage laws and customs, and the extension of popular education. To give up idolatry, they said, was not enough. Their religion must mean humanity, enlightenment, justice, charity, practical brotherhood. To bring, indeed, the whole world together, all religions and all races, in a theistic fraternity, has been their aim,—a sublime aim, we may call it, though we may doubt its realization.

But this meeting is not merely for eulogy, but for truth. And, therefore, I feel compelled to say, before closing, that, in the last few years, Keshub Chunder Sen's leadership in the Brahmo Somaj has been weakened, and his influence on public opinion, doubtless, to some extent damaged by certain extravagances—at least, they would seem extravagances to our Western minds—of speech and action into which he has been carried. This has come, in part, from his having the orator's temperament,—he has not weighed words logically, but emotionally,—and, in part, from the mystic mood of his mind. He was the impassioned man, not the thinker. As Phillips Brooks said to me the other day, he seemed to shun clear-cut, logical forms of expression, and to delight in the vague and the transcendental. Vague, perhaps, they did not seem to him, but they led him into, at least, apparent inconsistencies. At one time, he would appear on the very verge of avowing himself a Christian, using language concerning Jesus that would almost satisfy a Trinitarian, and then, again, it would seem as if he were making concessions in thought and still more in ceremonial forms to the native faith of his country. Elements of opposition gathered about him on this account; and, finally, on his assent to the marriage of his daughter—a young girl of unmarriageable years—to an Indian prince, this antagonism culminated in a split of the Brahmo Somaj. The prevention of such premature marriages of maidens was one of the reforms of the marriage customs which the Brahmo Somaj had pledged itself to effect, and the lapse of their leader on this point could not but result in loss of courage and in unhappy division. And then, when put on the defensive for his inconsistency or questioned concerning the ceremonial innovations he was disposed to introduce, he took refuge, not in rational logic, where he was not at home, but in the chambers of his private intuitional consciousness, and finally in the claim of special inspiration. And this is a danger, I may here be permitted to say, to which the Brahmo Somaj will always be exposed, so long as it grounds itself so largely on individual intuition, and leaves out of view scientific methods of testing intuition. But this danger now seen and guarded against, and the schism, perhaps, healed over Chunder Sen's grave, the Brahmo Somaj may have before it renewed prosperity, and crown its brightest hopes with the fruition of accomplished deeds.

As I have said, the Brahmo Somaj has set for itself an aim that may well be called sublime,—an aim that is nothing less than the union of mankind in a theistic brotherhood. For one, I have my doubts whether that part of this sublime dream, which involves unity of belief in personal theism, can ever be fulfilled. But, of the human brotherhood, I have larger hope. There are, to many minds, logical difficulties in the way of their finding God as a personal power, though they may earnestly feel after him. But I have not so much anxiety about men finding God as I have about their so opening their minds and hearts in just and humane acts to one another that God shall find them. It cannot be but that the eternal Power which is coursing through the universe, and is the very inspiration of its energies and life, is operative in humanity,—the highest part of the universe of which we know aught. It is seeking men and women of earnest minds, of large hearts, for its

Digitized by Google

more effective instrumentality. Make, therefore, a genuine *brotherhood of humanity*, and God is there in the midst of it, though we can write no creed that can define the process. Wherever the human heart touches a human heart, and they recognize their kinship and mutual obligations, there, though they may dwell on opposite sides of the globe, is the presence of divinity as the very bond of the union and of the obligation.

Address of T. W. Higginson.

Mr. President and Friends,—I was hoping twenty-four hours ago that I might be able to make some preparation to address you this evening, and put together some thoughts at least which might be worthy of the occasion. But, during those twenty-four hours, my thoughts and my time have been greatly engrossed by another event, which, I have no doubt, you also have had in your minds. I cannot possibly go away from the present time and place for a subject without first speaking of that which at this time and in this place presses so upon us all, that impoverishment of our city which we all feel to-day. I dare say there are friends here who, like me, remember that time when in a speech by Wendell Phillips, who loved Boston so profoundly, he said, "I love inexpressibly these streets of Boston, over which my mother held up my baby feet; and, if God grants me time enough, I will make them too pure for the footsteps of a slave." [Applause.] It is years since the footsteps of a slave have passed over the streets of Boston, and Wendell Phillips' footsteps will never pass there again. We never again shall meet that still stately form, recalling, even in the weaker motion of its age, the dignity and the patrician air of its youth. We never again shall feel, as we have felt of late years in any public crisis, a longing that Wendell Phillips would speak, tempered only by a fear lest he might not always speak from his better judgment, but from his hasty impulse. Those who have known Wendell Phillips only of late years,—as young men and women, which is the case with many here before me,—those who have only known him since the Civil War, can hardly recall the fascination of his presence, the unerring power of his delivery, the absolute decision with which he threw himself on the heroic side of every new question, and the simplicity and truth with which he concentrated his life upon his work. His life had two periods,—before and after the abolition of slavery. After slavery had disappeared, he, like other old Abolitionists, men and women, was left for the moment without a mission. The minor causes they had advocated hardly seemed enough for a life work. Some of them found no public work worth doing after slavery fell (Edmund Quincy, Mrs. Chapman). Others of the leaders of that movement—of a movement which, as the English Earl of Carlisle said, was without a parallel in the history of ancient or modern heroism—found nothing else to do after that agitation had passed by. Garrison, more happy, with his calm, clear temperament, devoted himself to a few strong, simple, thoroughly comprehended causes,—woman suffrage and the care of the freedmen,—and lived and died in them. Wendell Phillips, more varied in his impulses, more impassioned, less self-controlled, was less his own master in the absence of the one great purpose. He seemed like a man feeling around for an object. He grasped everywhere, here and there, for some new mission, for any number of new causes, new interests: always heroic, always disinterested, but placed at this disadvantage, that the man who had devoted all the prime of his life to one clear, simple, easily comprehended reform had lost the years of special study and training that were needed to grapple with the more complex reforms that followed on the fall of slavery.

The anti-slavery movement was the simplest of all reforms in its principle. It needed but to grasp one thought,—that man cannot rightfully hold property in man. That given, the logical work was done. Intellect, study, could find in it nothing more. All the rest was a moral question. All the rest required only self-devotion and to live up to the truth. That movement passed, and then came the complex movements of to-day,—labor reform, with its immense difficulties; Communism, Socialism, Nihilism, with their formidable front; questions of currency, questions of tariff, that have taxed for years the most studious intellects, and are still in their period of investigation rather than action. Into the midst of these, Wendell Phillips threw himself, with the habits formed upon one simple, clear, moral reform; and he found himself unable to grasp them. That is, he carried into them, without training and without preparation, the same habit of positive assertion, the same habit of moral appeal, almost of direct denunciation, which in the anti-slavery movement had been his natural course. But they were not to be settled so easily. The vast problem of the relation between capital and labor, for instance,—you cannot settle it on the simple anti-slavery principle, "Let my people go!" In this case, the people do not want to be let go. It is the last thing they want. It is not a question of letting any people go from the material and brute power of another people: it is a question of wise distribution, a readjustment of the most complicated relations of the human race. So with the other questions he handled. Where he had his greatest advantage in the slavery question, from its simplicity and his perfect command of it, he was at a disadvantage in the questions which occupied his later life, from their complication and from the absence of that special training which he had not had. Hence, the chafing in his later life,—the chafing of a spirit superbly heroic, magnificently unselfish, and yet constantly striving with problems which he had grappled too late in life for full comprehension, while yet he had lost that humility of the student, that willingness to own that he stood at their threshold, which alone could enable him to comprehend them. And with that came, with advancing years,—as a person who is accustomed to speak louder and louder loses judgment as to the tones of his own voice,—an unconsciousness of his own assertions, of the vehemence of his own denunciations. And there came, also, the reformer's habit of measuring all merit by martyrdoms, and assuming that every man in the community who is distrusted by the respectable portion of society must be abused for the same reason that Garrison was abused, and must therefore be a saint. Hence, the reformer sometimes comes, as years go on, to strike hands with the demagogue; and we see the spectacle of those whose real aims are diametrically opposite moving in the same path and co-operating. All these uncertainties, all these difficulties and sources of chafing, Wendell Phillips' fine intellect and noble heart had encountered more and more as years passed on; and, when we think of the weakened strength with which he grasped the more difficult problems that are constantly arising among us, we may feel grateful that the measure of one man's activities is fourscore years, and that he who has served so nobly may well be dismissed, with the benedictions of all who knew him, to his reward.

Side by side with our thought of him comes the thought of that other great reformer, so remote from him, whom Mr. Potter has mentioned, who, too, had somewhat the same experience,—the danger that rests upon a life devoted to reform. He, too, in his later years, seemed to waver in his duty as to some of the momentous problems that he encountered. He, also, had to lose friends and allies, and to make new ones. And yet he, also, in dying, left a circle of those who knew him, and who would wisely look beyond the later period of doubt and deviation of opinion to the earlier period, when the record was absolutely clear. In that earlier period, the name of Keshub Chunder Sen was a source of inspiration, as that of his great leader, Ram Mohun Roy, had been before, to those who sought free thought all over the world. I remember that my friend Mr. Conway said to me once in London that it seemed to him singularly creditable to the free thought of America that the Free Religious Association should have arisen here rather than there. For he said: "If there is any place in the world where there ought to be an organization where all the religions of the world should meet, it is London. The men whom you in America only hear about, we have on our own soil: we see them face to face. These fine representatives of old religions alien from Christianity, never seen in America, appear year by year in London." It was true. You go to an evening reception in London, and the first persons you meet, perhaps, are two or three little Hindu princesses, who have been sent there for education,—strange little creatures, looking as if they were carved out of mahogany, and wearing garments and jewels that would redeem an empire by their value. You go to a dinner party, and you sit next to a young Mohammedan law student, perfectly a master of the language and master of all that England can teach, yet a Mohammedan still. And lately, before the time of which I speak, Mr. Sen himself had been there, and had all through England charmed everybody by his eloquence and his width of thought.

We have not had this evening any actual quotations from his works. I have found time to note down for you a few striking extracts from his speeches in London, as reported by Miss Sophia Collet, a lady whom I have the pleasure of knowing, and who devoted herself with enthusiasm to reporting the speeches of this learned Oriental while he was there. These speeches vindicate so singularly the temper and tone of the man that I should like to read to you a few extracts from them. He said this, for instance, in an address to the Swedenborgian Association of England, I think:—

> I do not then care to inquire whether I ought to call myself a Christian or not. I prefer the name of Theist, by which I mean a believer in the one true God; and if, humbly, by means of prayer and faith, I can place myself constantly and eternally at the feet of the Lord my God, my Father, my Saviour, my Redeemer, my All-in-All, I shall have compassed the destiny of life. I covet not names nor distinctions. If Christians want to shut me out from their sympathy and love, they can do so; but I know you are not disposed to do so.

And, so long as he remained in England, nobody was so disposed. He says, sketching more fully his purpose:—

> Let us bring together all these various churches into which Christendom has been divided, bring together the Vedas and the Koran and all the Hindu and Mohammedan scriptures and all the races and creeds and nationalities existing on earth; bring these together, and let us put them all into proper shape, and let us realize the unity of the True Church of God. That is the responsibility which hangs upon our shoulders, that is the duty which each man owes to the great God and to mankind. If we embrace all nations and races from the beginning, from the creation of man down to the present moment, if we can take in all religious scriptures, all so-called sacred writings, if we are prepared to do honor to all prophets and the great men of all nations and races,

Digitized by Google

then certainly, but not till then, can we do justice to universal and absolute religion such as exists in God.

I am most anxious to see men of all religious denominations in the East and West unite in a vast Theistic brotherhood, that they may worship and serve their common Father, and find salvation in that universal creed of love to God and love to man which, according to Jesus Christ, is the way to eternal life.

What a magnificent conception is that! That grand offer of the Romish Church to be the same to all the races on the globe, that superb motto, of which that Church is so proud, "*Semper, ubique, ab omnibus*,"—"Always, everywhere, by all,"—how insignificant that seems beside a conception which includes the Roman Catholic Church itself as but one item in this vast accumulation of human faiths and men's aspirations! But observe, noble and fine as it is, the conception of the Free Religious Association is yet nobler. For the word "Theism" is itself a limitation; and who has a right to exclude from the fellowship of thought, or even the fellowship of religion, if they wish the name, those who, without calling upon the name of God, without claiming the name of Theists any more than Christians, still are prepared to unite with all thinkers in the great brotherhood of human aspiration?

One thing more, to show you that this great Eastern thinker, as Mr. Potter has said, was not merely one who sowed thought, but also action, was a practical reformer for man as well as a seeker of his Theistic union, let me read this tremendous wail of mourning which thrilled England while he was there,—a mourning appeal against English Christianity for the wrongs it had done his Hindu people:—

> Go into the quiet little villages in the provinces, and you there see hardy Hindu life in its purity and charming simplicity, such as has not been surpassed in any other portion of the globe. But where is that purity and where is that simplicity now? It is fast dying out amid the ravages of so-called civilization. We have your telegraphs and your railways and all the great things introduced by modern civilization. But, if you have taught us Shakspere and Milton, I ask, Have you not taught our young men the use of brandy and of beer? You now see scores and hundreds of young, intelligent, educated natives of India falling away and dying from the ravages of intemperance. It is painful to contemplate the ravages of this vice in our country. What was India thirty or forty years ago, and what is she to-day? Methinks thousands of poor, helpless widows and orphans are at this moment rending the air with their wailings and cries, and who, I may say, oftentimes go the length of cursing the British Government for having introduced this dreadful poison. This very moment I could count upon my fingers' ends hundreds of young, educated men who have died prematurely in the full bloom of their intellectual vigor and physical energy.

Since the Emperor of China protested against the inhumanity of England in forcing opium upon thousands at the point of the bayonet, there has not been, from a source outside Christianity, so terrible an arraignment of Christian civilization as that; and he who made it may well, in his later life, have varied with his mood, or with the condition of his health, or with the immediate influences around him, as to the precise details of his position,—no matter, his early life was the same. Every man has a right to appeal from the weakness of his later years to the position he took in the full vigor of his prime. Mr. Sen could do the same. His fame may stand by the record of his English visit. It may stand by the strength of the protest he made for his nation against the wrongs they endured; and he will stand to us, I think, always as the representative of the tie that connects, all the world over, not those who think alike, but those who aim at the same great end; not those who hold the same creed, but those who subordinate all creeds to aspiration. And a man like him, dying or living, has proved that this organization of ours is founded on a principle, and is a guarantee of its permanence as long as we shall be true to its ideas.

Address of Mrs. Ednah D. Cheney.

We could do no justice to the great work of the Brahmo Somaj and its lost leader, Keshub Chunder Sen, without considering what they have done to elevate the condition of women in India. In the very beginning of the movement, this was seen to be a necessary condition of its existence; and the very idea of God which lay at the foundation of their belief required this following out of justice and mercy.

While Ram Mohun Roy was contemplating the establishment of his new church, he was so shocked by the then existing barbarity of suttee burning that he was obliged to turn his attention to this practical work before he could go further in building up a religious institution. "The burning of widows," as a phrase, has long been familiar to our ears. I will not ask you now to call up a picture of the horrible reality which was presented to his eyes.

A year before the foundation of the Brahmo Somaj, in 1829, and chiefly by the exertions of Ram Mohun Roy, a law was passed by the legislature forbidding this cruel practice. This was the first step toward the recognition that woman's life had any value except as a sacrifice to her husband.

He then saw that no church could be established for one-half of mankind only, and the first of his important reforms was the instilling of theistic principles into the mind of the female sex. He thus introduced a purer worship and a nobler thought into domestic life, and private prayers and religious services in the house were filled with the new idea. Gradually, all the social festivals connected with idolatry were replaced by annual gatherings made beautiful with flags and flowers, with brotherly meals and social gatherings.

From private prayers, the women were led to take a part in public worship, where men and women sat together. Thus, the women were led to desire higher education, that they might hear and understand their new faith intelligently, and speak for it reasonably.

When we consider that this church is yet but fifty years old and is established in India, is not this a long step to have accomplished? The next great practical evil which confronted these reforms was the terrible custom of marriage. Marriage between different castes was entirely forbidden. Still worse, female children were betrothed in a tie as indestructible as marriage even in infancy,—and marriage was consummated at a frightfully early age,—the child having no choice or will in the matter, and passing entirely into the control of her husband and his family. If the husband died even before the conclusion of the marriage or after, the child widow became an object for every kind of abuse and scorn, so that we are told that Indian widows say that the abolition of the suttee has brought them only slow torture instead of quick release. Numbers of these wretches perish by suicide as their only escape from an intolerable life. The Brahmo Somaj first attacked the system of caste, and abolished it so far as its own influence extended. The first intermarriage between castes took place in 1862.

They then determined to do away with every evil connected with the marriage system. In 1870, they took the opinion of the best medical men on the proper marriageable age, and the best sugges tions on this point were adopted. The enforced celibacy of widows was set aside. Gross idolatry was removed from marriage rites, and absurdities in form and practice eliminated. Strict monogamy was enforced, and the marriage tie was made inviolable. Marriages were solemnized between different castes, the serious responsibilities of marriage were explained, and foolish expense and unnecessary pomp discouraged.

But a terrible difficulty lay in the way of these reforms. These changes were against the letter and the spirit of Hindu law. These reformed marriages were illegal, involving the legitimacy of children and bringing endless confusion in the inheritance of property. The Brahmos were therefore obliged to appeal to the government to relieve them from their legal incapacity to contract marriages according to their own ritual. This memorial was opposed by the whole Hindu community and even by the conservative party in the Brahmo Somaj. After four years of intense struggle and anxiety, the Brahmo marriage act was passed in March, 1872.

When we remember for how many years English reformers have been struggling to pass so simple a measure as the bill to allow marriage with a deceased wife's sister, we must admit that the world sometimes moves as fast in the Eastern as in the Western hemisphere.

By this act, polygamy was rendered impossible in the Brahmo Somaj, the new law making it penal. The minimum age of marriageable persons is fixed by law, and thus the bad custom of early marriages is virtually abolished. Caste is simply ignored, and men and women can now unite themselves in wedlock with the perfect sanction of the law. This act protected not only members of the Brahmo Somaj, but all non-Hindu marriages.

As yet, only a small portion of the women of India have been benefited by these beneficent reforms. There had been about a hundred Brahmo marriages up to the year 1879, thirty-five being intermarriages between different castes and thirty-six widow marriages.

But, when we consider the bitter hostility which these measures had to encounter, and the religious, social, and political prejudice which was arrayed against them, we cannot but acknowledge that to have announced such principles, and to have gained legal sanction and protection for such institutions, was an immense result for this small band to accomplish in such time.

The next gain for woman was in education, and the Brahmo Somaj has done a noble work for her. The female improvement department was formed in 1870, to raise the intellectual, moral, and social status of Hindu women. In 1871, the female normal and adult school was established. This was the school in whose beginning the late Miss Carpenter was so deeply interested. It opened with fourteen pupils, but the number rose to twenty-four in a year. Four were unmarried, three widows, seventeen married women. A literary association (Bama Helthaishinee Sara) was formed under the presidency of Keshub Chunder Sen. Meetings were held once a month, and the discussions published in the *Bama Bodhini Patica* or *Ladies' Journal*. Since then, the universities have been opened to women; and, as fast as the young Hindus are fitted for it, they can receive a truly liberal education.

Another practical measure was the founding of homes in which families could live, the men and women sharing in family life on a truer basis than in the Hindu homes. By these measures, so much has been accomplished that Mozoomdar can say, "For the real workers in the Brahmo Somaj, it is a matter of no little satisfaction that, if they have

Digitized by Google

been able to do nothing more, they have at least unlocked the door of that ancient prison, the zenana."

So much has been accomplished in this nineteenth century, now near its close. But our Indian brothers have clear vision, and they have already begun to see that the work of the twentieth century, soon coming upon us, is to be a work not done *for* women, but *in* men; for Keshub Chunder Sen says: "With shame and humiliation, I make this confession. Our men by a long course of training in vicious ideas about the other sex are more or less unfit now to mix with women."

As the elevation of the condition of women will be the glory of the nineteenth century, so may the purification of men be the crowning grace of the near future time, and in this work may the Brahmo Somaj and the Free Religious Association unite with good men and women of every race and religion.

But, while this brave young church has struck thus boldly into practical reform, Keshub Chunder Sen was an idealist, and he believed in beginning on the spiritual side to reform his country; but he also saw that out of a true religion for humanity the good of humanity ought to come, and he pleaded for reform as the true result of faith.

"Be true to God," he said; "and then, when you embark on the enterprise of Indian social reformation, you will not shrink back from its difficulties. With God's aid, that work shall be done which was difficult, impossible, without God's aid. Female education, widow marriage, abolition of caste,—all these questions will then be simple questions of duty, of benevolence and justice. Have I any right to deny any of my fellow countrymen or countrywomen those rights, privileges, advantages, and pleasures which, as men and women, as God's children, they are entitled to?

"A heart full of compassion and pity will melt as it beholds the poor widow suffering from all those disasters, mortifications, and distresses to which Hinduism has consigned her lot. It is only necessary to see her that you may feel for her. No eloquent pleadings of a logician are necessary to persuade you, to constrain you, to put forth your energy, in order to rescue her from such an inhuman, cruel, and miserable lot. . . . So also with regard to the general improvement, the general emancipation of women. They may for centuries have been immured in the zenana, and denied the light of education; but when a religious reformer sees their case, takes their case to heart, there is enough to set him to work."

It cannot be claimed that the great problem of the relation of the sexes has been settled by the Brahmo Somaj. The earliest Vedic religion, which the Brahmo Somaj at first hoped to restore, held up the character and office of woman to high respect, especially in her maternal relation; and although these ideas were not consistently carried out, and the laws of Manu, based on the false idea of perpetual protection of women, have led to such fearful evils, there yet remains in the spiritual Hindu mind a reverence for the very nature of woman which the Brahmo Somaj recognizes amid all the fearful corruptions which have followed.

But the leaders of the Somaj are but men, and they have not yet been able wholly to free themselves from the influence of prevalent ideas; and Mozoomdar confesses that they have not settled the whole question of the position of woman. "Can we wonder at this?" he says. "Our people have not known how to discover or preserve the right attitude of mind toward the other sex. The difficulty has been felt by the best and saintliest spirits. It has often led to the utter avoidance of women as an unmitigated evil in the path of religious men. It has produced the demoralization of men in certain communities, of women in certain others, and to a perfect stagnation of social progress in not a few."

With his Eastern feeling, he cannot quite accept all our Western ideas; but, while rejoicing in the progress made in promoting woman's moral and religious education, he concludes, "We have still left the question of the permanent position of women in society to be determined in future by the development of the highest instincts both in man and woman's nature, through the growth and influence of the spirit of our church which has so far modelled and reformed the character of both sexes."

But the tendency of the Brahmo Somaj, as will be shown here to-night, has been of late strongly toward the spiritual side of religion; and its feeling for women has culminated in a doctrine which it sets forth with full power of reasoning as well as feeling, the doctrine of the divine maternity. Its theism would be imperfect if it were not all-embracing, and if, while including all the attributes of humanity, it ignored one of its highest manifestations. "God, our Father," was the word of Jesus, "God, our Father and Mother both," is the language of Keshub Chunder Sen; and, in this thought, he finds the promise and potency of all future good for the race.

"God, our Mother, shall rule in our hearts, in our homes, and in our church, drawing men and women together as one holy family. This is the faith of advanced theism."

Hymn.

Life of Ages, richly poured,
Love of God, unspent and free,
Flowing in the Prophet's word
And the People's liberty!

Never was to chosen race
That unstinted tide confined:
Thine is every time and place,
Fountain sweet of heart and mind!

Breathing in the thinker's creed,
Pulsing in the hero's blood,
Nerving simplest thought and deed,
Freshening time with truth and good,

Consecrating art and song,
Holy book and pilgrim track,
Hurling floods of tyrant wrong
From the sacred limits back,—

Life of Ages, richly poured,
Love of God, unspent and free,
Flow still in the Prophet's word
And the People's liberty!

—*Samuel Johnson.*

Address of Mrs. Julia Ward Howe.

Dear Friends,—I have not a pencil-note with me nor a sentence ready made to my mind; but I come here with a thought to express to you, if the infirmity of my memory will allow me to do it.

It does not need even my memory to say with what gladness I have taken note of the career of this benefactor of the human race, this great helper of man and of woman, to commemorate whose services we are met together here to-night. I read with great interest, some years ago, a published volume of Keshub Chunder Sen's addresses in England; and it was a notable thing that he seemed to be more Christian than we can think the community he addressed to have been, in general. He seemed to speak from a higher religious plane than the common level of—well, of the English community. At least, what he said, his thoughts themselves, appeared to me in that position and in that contrast. And I have had the pleasure of knowing Miss Carpenter, and of having quite a number of conversations with her about the condition of women in India,—their lives so blank, so desolate, so sad. She described, among other things, the women who were well to-do, and not forced to labor, as sitting for hours, with no book or work, looking vacantly into the air, and being quite satisfied to do that. And what a deliverance was this which gave them education, which gave them individual existence, gave them what we prize and know, in some degree, the value of!

But what I wish particularly to say is that we have great need of a wide agreement between people who are in different churches and in what appear to be different religions. This wide consent of faith to the spiritual element in mankind is almost necessary for us to-day. Without it, we cannot fight the battle which is before us. Without it, we cannot hope that the destructive influences which are everywhere present and active in society will be overthrown. Now, we generally find that, when we *must* have a thing, we can have that thing. And I am quite sure that we can have this agreement. We can get it out of our very differences. It is not in them; but it is under them, and through them. Look at this very Hindu, coming to England and showing to the English that they do not live up to the doctrine which they profess, that they were very far from comprehending it or from fulfilling its conditions.

Now, let us take people who differ very widely from him and from each other. Let us take, for example, Mr. Wendell Phillips, of whom Col. Higginson spoke so feelingly and with such a comprehensive view just now. He was, you know, an Orthodox man of the orthodox. He used to be seen, in the old anti-slavery times, walking in the street with Theodore Parker; and some one, one day, stopped them, and laughingly said to Mr. Parker, "You must not corrupt this man's Orthodoxy: it is of great value to the anti-slavery party." But does anybody suppose that in that Orthodoxy, which Mr. Phillips held always, there was anything really antagonistic to what Theodore Parker truly also held? I am very sure there was not. And some of those who are present may remember that, when a meeting was held to commemorate the loss of Theodore Parker,—that great loss, which was so near to some of you,—I may say, to some of *us*, for I think I loved nothing so much in his lifetime as to hear his voice and to sit where I could receive his grand instruction,—Mr. Phillips, speaking out of his religion, comforted the children who were orphaned by Theodore Parker's death. And no one could have spoken to them more appropriately or more as their leader and teacher would have wished.

So in all these differences there is this profound agreement concerning the objects of religion. These differences of creed, these intellectual and metaphysical differences, are surely providentially ordained, because they are quite independent of us. Some people object to the word "providential"; but, as it belongs to the vocabulary of my thought, you will allow me to use it. But what are these differences good for? I think they are good to show us that we cannot be sure of religion, of its benefits, its help, and its uplifting,—we cannot insure it to ourselves by any creed, by any form of belief. These creeds, these forms, have their true points and their errors. They have their uses, no doubt; but they must not stand to any of us in the place of religion, for they are not religion. But religion is something infinitely deeper, infinitely more simple, infinitely more tender. And I rejoice in seeing these doors thrown open, in seeing the wide and joyous assembling of human creatures together. They can all address the Infinite Father with one music. They can all utter

Digitized by Google

their heart's desire to him with one language of prayer and petition. That, surely, is the divine plan, the divine intention, concerning us. I am so glad that, day by day, this becomes clearer and clearer in the minds of those teachers of religion, who, perhaps ten or twenty years ago, would have seemed to be the most direct antagonists to each other.

One word more only, for others are to speak. One thing Col. Higginson did not mention about our dear friend. He did not particularize his interest in the woman suffrage cause, and I must not fail to speak of that; for there he was at home. That was, like the cause of the slave, a plain matter of justice; and into that he could carry that grand and brilliant chivalry which shook this whole country with its electric force and power. I thank him for it to-day, and I thank God for him.

And now that we are losing these great friends, these glorious lights, stars in our firmament, can we consent to lose them? Oh, never let us for one moment think that we lose them! We lose their lovely, their cheering, presence; but their lives were so wrought into work for the benefit of mankind that that work endures. It is immortal; and, if we have faith, we shall find it more and more. I sometimes think that the great spreading of Christianity after the death of Christ—instantly, you know, the circle became very much enlarged—was perhaps because, having no longer the master, having no longer the interest of going about with him, hearing what he should say and seeing what he should do, people began to take note of what his doctrine had been and of the hearts which had been touched by him. So, when we have no longer any of these friends to whose words we can listen, let us listen for the wide human echo of what they have said and of what they have done. And I believe that it will ring to the end of time, and have its part in the glad "Amen" of eternity.

Address of James Kay Applebee.

I have been asked by the President of the Free Religious Association to say a briéf word or two on "Theodore Parker's Influence in shaping the Brahmo Movement in India." Permit me to say, first, that it is not only especially appropriate that this meeting should be held under the auspices of the Free Religious Association, but it is still more appropriate that the meeting should be held in a hall dedicated to the memory of *the* great religious reformer of America,—Theodore Parker. Chunder Sen was a young man of twenty-two years of age, when Theodore Parker died. *Died*, we say; but I would rather say, when Theodore Parker commenced fully to live. Theodore Parker's theistic sermons had penetrated to India. Where, indeed, have they not penetrated? Mozoomdar, on his recent visit to Boston, told me with what eagerness the young and thoughtful men of that time read Theodore Parker. Chunder Sen read him. And it is not too much to say that the Brahmo Somaj of India would hardly have assumed that purely theistic form, which, under the leadership of Chunder Sen, it did assume, if Theodore Parker had not lived and thought and preached and suffered and been prayed for at revival meetings here in Boston. The theism of Chunder Sen bears unmistakable evidence of the impress of Theodore Parker's massive hand. There is not a single point in Theodore Parker's theology which is not also a point in the theology of Chunder Sen. He had all Theodore Parker's belief in God, all his sublime confidence in the essential rectitude of man, all his power of living close to the divine side of things, all his force and passionateness and rapt, ecstatic devotion in prayer.

Take the cardinal points in Chunder Sen's theology, and we find they are exactly those of Theodore Parker. He believed in the fatherhood of God, and that God might be approached by man just as fearlessly and just as confidingly as a wise and tender and loving father might be approached by a little child. He believed that there was nothing about God of which the biggest sinner had any cause to be afraid; that the severest judgments of Deity were *just* as well as merciful, and merciful as well as just; and that they were the precise things the sinner needed, in order that he might be helped the most.

Chunder Sen followed Theodore Parker in allying to the doctrine of the "fatherhood of God" the cognate doctrine of the "brotherhood of man." Former leaders of the Brahmos, before Chunder Sen assumed the leadership, had failed in living completely up to their principles by disregarding caste. They admitted that God was a Father; but they failed in consistently carrying out the cognate truth that, if God be a Father, then all men are children of one household, no one capable of claiming any essential superiority over any other. Now, just as the recognition of the doctrine of the human brotherhood by Theodore Parker, here in Boston, made him so sublimely fierce and so grandly ferocious in his denunciation of human slavery, so the recognition of the same doctrine by Chunder Sen in India, under widely differing circumstances and under different racial conditions, made him also a great and a powerful denouncer of every artificial human inequality. His religion, therefore, made him a great social reformer. God was real to him. Man was real to him. What was true in reference to God of any one man was true also in reference to God of every other man. The *sudra* (the man of the lowest caste) became to him a brother, and equal heir with himself to all the divine promises. He looked with reverence on woman, and insisted on elevating her from that low estate to which Hindu civilization had doomed her. He abolished, among the Brahmos, child marriages, and pronounced the doom of polygamy. His doctrine of the divine Fatherhood necessitated the doctrine of the human brotherhood. And this, again, to Chunder Sen—a man to whom doctrines represented vital facts—necessitated the sweeping away of all those impediments which ancient superstition and ancient ignorance had planted in the way of the full and ripe development of every man and of every woman.

Again, Chunder Sen believed in the universality of inspiration. And this was also a favorite doctrine with Theodore Parker. If he taught one thing with more persistency than another, Theodore Parker was wont to insist on the doctrine of the universality of inspiration,—that to be inspired by God was man's normal condition. Inspiration was to him as natural as the sunshine and man's gladness therein. "All faculties," he said, "are mediums of communication, avenues of inspiration. God does not build a road from himself to us, and then refuse to travel on it. You and I may have inspiration of the same sort as came to Moses, to Esaias,—'whose hallowed lips were touched with fire,'—and to Jesus. We all may be inspired. When you are faithful to your own powers, you are not only receiving communications through them, but you are preparing yourself at the same time to receive yet more and more. There is a continual progress of this inspiration for the individual and the race. It is unbounded. There is no limit to the supply in God. There is no end to the capacity in mankind to receive it." Thus, in the estimation of Theodore Parker, in the matter of inspiration, man did but take what the Infinite Spirit was universally giving. And this was just Chunder Sen's view of inspiration. He believed in one bible; and the bible he believed in was made up of the great book of nature and of that grand series of books, the sacred scriptures of all the nations, in which are recorded the spiritual intuitions of the human mind. Nature to him was, as Carlyle would say, the "time vesture of Deity." To his view, in the vast and in the minute, the divine life "spread undivided and operated unspent." On the smallest atom, he saw an image of divine infinity impressed. In blast and hail, in thunder and lightning, in water-spout and avalanche, in ocean's roaring tides and in the equipoise maintained between the worlds, he saw so many symbols of the divine Power. In the majestic order of the universe,—in that one mighty law which binds atom to atom, world to world, system to system,—he saw evidences of the truth that *one purpose* runs through all things, and that there is an intimate relationship between "the thoughts of men" and "the process of the suns."

It was thus an inspired world in which Chunder Sen lived. He revered the flowers for the divine love of which, through their perfumed lips, they mutely spake to him. He revered a star for the divine power which kept it in its place, and bade it do its part in giving brilliancy and beauty to universal space. The whispering leaves that soothe thought to calmness and content, the crashing fury of the storm awakening awe within the soul, the pleasant murmur of the waters as they ripple onward toward the sea, the melody of birds, the uniform motions of the planets, the pleasant fertility of the earth, the fragrance of all plants,—these, no less than the lips of brother man through which divine wisdom breaks in words inspired,—these, no less than the face of brother man through which the divine love shineth like a sun,—all these were held in reverence by him, because they told him so much of God. But he delighted most of all in communing with the Divine in the deep recesses of his own soul; and it was ever an ecstasy to him to discover that his own highest and purest intuitions did but indorse the nobler sentiments enshrined in the ancient Vedic hymns and in the Hebrew prophets and in the recorded words of that supreme hero of loving kindness, Jesus of Nazareth.

He said many things, especially during the latter years of his life, which seemed to my dull capacity so much mystical nonsense, especially about the Trinity, and the special relationship of Jesus to God and to humanity. But, after all, if you come to the Occidental common sense of what he wrote and spoke about Jesus, it only amounts to this: that Jesus was and is, in reference to humanity, simply a brother maintaining a brotherly relationship toward brethren.

It is said that, during the latter years of his life, he believed himself to be an inspired prophet, and that he had vouchsafed to him divine visions and divine revelations. Well knowing what he was, and knowing the grand work he did, I have no difficulty in believing that

> "God fulfils himself in many ways,
> Lest one good custom should corrupt the world."

An experience is not necessarily false, because it happens to be out of the range of those poor, limited, narrow experiences with which I am favored.

It is said that the Brahmos of India are split up into three or four sects. All right! The more, the merrier! But, after all, we have no right to urge *that* against them as a reproach. Christianity itself is split up into three or four hundred sects, and each one of the three or four hundred is sublimely confident that it alone possesses the genuine truth as it is in Jesus. There is an old school and

Digitized by Google

new school among the Brahmos, just as there is an old school and a new school in every sect of Christendom. Even the Unitarians have their old and new schools; and, between the awful gulf separating the two schools, they have, only quite recently, succeeded in fixing up a very rickety sort of bridge. The orthodox Congregationalists have their old and new schools,—the members of the new school are very much like old-fashioned Unitarians, and the members of the old school are holding on to Calvinism by means of the skin of their teeth.

In travelling out West, I almost invariably noticed that every little town I came to possessed six or seven churches. The church which had the tallest spire was invariably the church which had been built last. Indeed, the churches seemed to be *aspiring* in no other direction than that. Of course, six or seven churches in a little town of two or three thousand inhabitants means six or seven little parsons preaching on starvation wages. Why can't the churches in such a case pool their issues? They all profess to worship the same God, to follow the same Master, and to be bound for the same heaven. If their notions of heaven be correct, they will have to "pool their issues," when they get there; and why can't they realize a little bit of heaven on earth, and so get accustomed to it? But, while such divisions exist in Christendom, Christians, of all people in the world, have no right to point a finger of scorn at the divisions which obtain among the Brahmos of India.

So far as counting heads goes, the Brahmos of India do not seem to amount to much. There are fewer Brahmos in India, in proportion to the population, than there are Unitarians in America. But that does not mean that the movement is going to fail. Even so acute an observer as Max Müller has said that the movement will probably bring about a complete regeneration of India's entire religious life. It represents the little leaven which will leaven in time the entire Indian lump. Great thoughts do not die, although their representatives may die. Chunder Sen was a man of such pure and yet massive individuality that, although dead, he will continue to speak. Thinking of what he was and of what he said, I cannot imagine the time as ever coming when multitudes of men will cease reverently saying to his great personality, if not in the words of the poet, at least with the poet's thought:—

"Noble thought produces
Noble ends and uses;
Noble hopes are part of Hope, wherever she may be;
Noble thought enhances
Life and all its chances;
And noble self is noble song,—all this we learned from thee."

Address of Rev. Edward Everett Hale.

I was not expecting to say a word when I came in; and I will say but a word now, and that is one which is in every heart, I am sure. The only way to celebrate one of these true heroes, one of these leaders of mankind, is to take up his work and carry it further. And, if our sympathy with our Indian friends means anything, if our enthusiasm for this prophet—who rose just where most of us, perhaps, expected it least—means anything, it means that we, like him, will take the spirit of any gospel which comes to us, and will tread the letter under foot; that we will "live in the spirit and walk in the spirit," and strive to act out the spirit of whatever religion has attracted us and has touched us.

I cannot think of this great man without recollecting the difficulties, the immense difficulties, by which he was environed. I do not think any of our prophets, any of our martyrs, have ever had to snap such fetters and chains, or have ever broken out from such restrictions. My excellent friend Mr. Dall, the Unitarian missionary in India, who had the pleasure of placing the works of Theodore Parker in Chunder Sen's hands, and from whom, I think, I first heard of this great hero, said once of the general run of East Indians, who had any faith at all, that no one could quarrel with them so far as loving the Lord their God with all their heart was concerned. They had heart enough, he said; and they loved the Lord their God with all their mind. There was a good deal of intellect about their theology. Nor was it impossible to say that they loved him with all their soul; perhaps it was harder to say what they meant by that. But the great trouble, as he thought, of the East was that they did not love the Lord their God *with all their strength*. That has been the trouble with India all through her history. I thought of that when I read from the charming *Light of Asia*, that it was that "which hath made our Asia mild." When we see such a man as Keshub Chunder Sen,—I think Ram Mohun Roy was like him, and I think Mr. Mozoomdar is like him,—when we see any such man as a man come forward, we see a free man who has broken away from every environment that has surrounded him in the past, that he may be a true prophet of the future. And, if we are really proud and glad for the life to which he rose, we shall strive with all our might to carry forward this spiritual faith in which he has been such a leader.

Hymn.

Father of all, in every age,
In every clime adored,
By saint, by savage, or by sage,
Jehovah, Jove, or Lord!

To Thee whose temple is all space,
Whose altar earth, sea, skies,
One chorus let all beings raise,
All nature's incense rise.

—*Alexander Pope.*

Letters.

BOSTON, Jan. 24, 1884.

My dear Mr. Potter,—I should be very glad indeed to come to the meeting and speak of Keshub Chunder Sen. I was very much interested in seeing him last year, and there was much that was very attractive in his character and way of thinking. But, on the evening of the 3d of February, I have an engagement which I must fulfil. I have promised to preach near Boston. So I must lose the pleasure of coming to your meeting. I thank you very much for asking me, and I am,

Yours most sincerely,

PHILLIPS BROOKS.

BOSTON, Jan. 25, 1884.

My dear Mr. Potter,—I should say *yes* to any request of yours, were it possible.

I *always* have a home church service the first Sunday night of each month. And *all* my Sunday nights are engaged until into March.

Sorry, but can't help it. I hope you may have a grand meeting, for you have a grand theme.

Heartily,

M. J. SAVAGE.

BOSTON, Jan. 31, 1884.

My dear Doctor,—It would be a great privilege to me to recognize the aspirations of such a man as he was whom you intend to commemorate. Just now, when it is made necessary to emphasize against the materialism of the time the ineradicable religious elements in human nature, it is well to seize upon the manifestations in India, and make them prominent in the thought of earnest and inquiring men and women.

I cannot attend the meeting you have planned, since I have to be in Brighton at the time on an exchange with Mr. Leavell.

I hope something will be said that will be heard afar, and in affirmation of the significance of this new proof that man does not and cannot "live by bread alone." Yours fraternally,

JOSEPH T. DURYEA.

SYRACUSE, N.Y., Feb. 1, 1884.

Dear Mr. Potter,—I am glad that the Free Religious Association proposes to hold some memorial service in recognition of the late Keshub Chunder Sen and the thought he stood for as one of the leaders so long in the Brahmo Somaj.

This movement that we know under the name "Brahmo Somaj," or "Church of the one God," is one of the most significant things of modern times. Mr. Johnson says it "deserves the name of inspiration as truly as anything in history." It is in spirit a protest in behalf of the soul, for the claims of free and progressive religion. Coming out of the bosom of the old Brahmanic paganism,—a most inveterate and indurated idolatry,—it is a living attestation of the vitality that still exists quenchless in human nature, and sure, under whatever repression and throttling, sooner or later to rouse and assert itself.

How far this movement has been consistent, true to its own primal principles, how far Mr. Chunder Sen and his friends may have faltered or swerved in allegiance to the purposes held in the body of this community itself, it may be difficult for any of us at this distance to see, certainly *I* do not know. If they or any of them have failed or fallen short, it will not be by far the first example in history: it will not have been the last. Certainly, the ability of a company of men and women in India to reach and persistently hold an aim so high as is defined in the declaration of several of their prominent leaders—*this*, to honor all truth in whatever religious scriptures, but to accept no book as infallible; to honor all prophets and sages of whatever nationality or time, yet receive none as a finality; to build upon no historic name as a centre, but to follow the transcendent ideals of the soul*—is a fact well worth our grateful recognition here in America.

The fact of this movement in itself not only is one of great value: the history that lies behind it, the antecedents and the genesis, have a profound interest. Ram Mohun Roy is rightly regarded as the founder of the Brahmo Somaj. But he also, this earnest and reformatory Brahmanic priest, drank at a fountain that had long been flowing in his native land. Before the beginning of the seventeenth century, we can mark its presence. The Mogul Emperor Akbar had a long reign, 1556–1605. "A more extraordinary man," says Max Müller, "never sat on the throne of India." Reared in the Mohammedan faith, Akbar broke from the religion of his fathers, and looked about to find the universal religion, which, more than any or all of the historic, was yet, he believed, shadowed and hinted more or less clearly in all the historic faiths of the world. He would compare, judge, and select from all.

In his court, he invited fire-worshippers, Brahmans, Christian missionaries, that they might confront the Mohammedan doctors, and each show, if he could, the superiority of his own religion. The New Testament he had translated into Persian, and, so far as was in his power, the sacred writings of the Brahmans.

Prof. Müller says he was a rationalist and a deist; and he became the founder of the Ilahi religion, which was almost purely deism. Spiegel says it did not reach great extension and success from the fact of its generosity and breadth,—"its all-too-great tolerance," as he calls it. But these inquiries, the study of comparative religion, with such helps as they then had, were carried on, not only during Akbar's reign, but that of his successor; and the great-grandson of Akbar about one hundred years later—the unfortunate Dárá, who was murdered by his younger brother Aureugzebe—was filled and inspired by the same desire to get at the inner religious truth.

Ram Mohun Roy was the son and the heir of this religious quickening; and the Brahmo Somaj, therefore, has its ancestry from Akbar. Indeed, we might go farther back, and discover in Kabir (fifteenth century) and Narrac (sixteenth century) and in the Sufis the earlier progenitors of this movement for free religion. In fact, we shall find many points of union with the Oriental mind, as we study, as we open our eyes to this broader view which has come to America in our time, and wherein we discover so much to enlarge and inspire.

* See the *Brahmo Year-Book* for 1879, pp. 75–79.

As the Chinese have it in proverb, "Religions are many, but reason is one: all men are brethren," they give us the key-note for the great reforms and growths that are to mark religious faith in the future. Well may we rejoice and celebrate that on the other side of the globe is this recognition awakened, and that, in point of time here as in so much else, India seems to have been beforehand with the West. By the clearer perception of certain of her gifted souls, she has in free religion led the world.

With deep regret that I may not be present at the meeting, and wishes for its utmost success, I remain,

Cordially ever yours,

CHARLES D. B. MILLS.

EDITORIAL NOTES.

"*Reverent* Ingersollism" is what one critic pronounces M. J. Savage's *Beliefs about the Bible* to be.

MGR. ALLEN, pastor of St. Patrick's Roman Catholic Church at New Orleans, denounced Père Hyacinthe, who lectured in that city on "Catholic Reform," as "a vile adulterer," etc. Hyacinthe had an audience of from fifteen hundred to two thousand of the most prominent of the French-speaking people of the Crescent City, notwithstanding the denunciation.

MRS. ELIZABETH CADY STANTON, after an absence of two years in France and England, has recently returned to New York. Her residence for a time will be in her native town, Johnstown, Fulton County, N.Y. She writes us, "I have met many very liberal people, both in France and England, during my absence, to whom I have lent copies of *The Index*, with great pleasure to myself and profit to them."

THE volume entitled *Bible Myths and their Parallels in Other Religions*, published by J. W. Bouton, New York, has reached its third edition, and is now issued, with some additions and corrections, at the reduced price of $3.00. It is a large octavo volume, handsomely bound, containing nearly six hundred pages and numerous illustrations. It may be had at the office of *The Index*, or it will be sent, postpaid, to any address, on receipt of price.

THE phrase "tears of blood" has often been used in a metaphorical sense, but it appears to be a well-proved fact that blood may drop from the eyes. There seems to be no eye-disease in these cases any more than in that of Louise Lateau, the Belgian "stigmatic," nor was there any disease of the skin, where the bleeding marks of the so-called "crown of thorns" were seen. The "bleeding tears" occur, as a rule, to nervous, hysterical young women; but we may really see how, in such cases, the addition of a little religious mania or superstition would easily convert a psychological curiosity into a "modern miracle."—*Religio-Philosophical Journal.*

WE clip the following from the *American Teacher*, illustrating some of the defects of our public school system, which compels children to depend too largely on text-book and dictionary for their information. In a Chicago school, recently, the class that was reciting in the "language lessons" were requested to give a sentence with the word "capillary." A little girl wrote, "I sailed across the ocean in a capillary." When asked what she meant by that, she turned to Webster's "Unabridged," and triumphantly pointed out this definition,—"Capillary: a fine vessel." Further investigation showed that nearly all the class had made the same blunder.—*Radical Review.*

SAYS Monroe's *Iron Clad Age:* "To abandon eternal punishment, to go back on the Bible account of creation, to recede from the doctrine of total depravity, of the fall of man and his redemption through the merits of a slain god, is to discard the essential basis of the Christian religion. A man can't discard 'blood' redemption, vicarious atonement, and still be a Christian. He can't evolute out of the ordinances laid down in the New Testament. He must believe and be baptized, or be damned. When he ceases to believe those things essential to salvation, he ceases to be a Christian. He has got to believe that he can do nothing for himself, but to believe 'on' Jesus, and that the shed blood of the said Jesus can alone wash away his sins and insure his eternal happiness."

CONVENTION OF THE FREE RELIGIOUS ASSOCIATION.

By invitation of the Free Religious Society of Providence, the Free Religious Association will hold a convention in that city, at Blackstone Hall, corner of Snow and Washington Streets, Thursday evening, February 21, and Friday P.M. and evening, February 22.

At the Thursday evening session, the President, Wm. J. Potter, will speak upon "The Relation between Sentiment, Ideas, and Institutions in Religion." Friday afternoon, Mrs. E. D. Cheney will speak of "Free Religion as the Safeguard to the State." Friday evening, John W. Chadwick will speak on "The Gospel of Science."

Full list of speakers will be announced next week. F. A. HINCKLEY, *Secretary.*

THE F. R. A. FUND.

Donations and membership fees for the Free Religious Association, in response to its recent appeal for funds for the holding of conventions and for meeting other expenses of the Association. Will friends see to it that this list is increased?

CORRESPONDENCE.

REPLY TO MR. KENNEDY AND MR. GILL.

Editors of The Index:—

I am very much flattered to be an object of attention at once to two such vivacious correspondents as Mr. Kennedy and Mr. Gill. And, as I have not the least intention of being beguiled into a controversy with either of them, but mean, on the contrary, to be more "laconic" than ever, if I can, I will try to answer them both on the same sheet.

My motive in saying what has led either of them to throw down his challenge is very simple. I have no metaphysical or other stock to manipulate, and no academic or other axes to grind. I have no interest whatever to defend the action of Cornell other than to say it is doing a good work as it is, which it may perhaps fear there is danger of spoiling, if it tries to do something else; and also to say that it is within its own right in deciding whether or not to open particular courses of instruction. I don't see where the grievance comes in, in not appointing Mr. Adler, any more than in not appointing Mr. Kennedy or me, supposing our friends would pay the bills, or we agree to lecture here for nothing. And I am greatly relieved to find, from Mr. Kennedy's reply, that "disgraceful" is only his rhetorical way of saying that Cornell is not Leipzig or Halle yet.

If I could only admit the force of Mr. Kennedy's argument, however, I should doubtless find it easier to answer Mr. Gill's. For Mr. Kennedy, at all events, asserts or implies that somebody can be blamed for something; while Mr. Gill, if I understand him, holds that everything is (as Mr. Mantilini found his own life to be) "one demnition grind," in which nothing could possibly or conceivably be different from what it is. This seems to me, I must confess, a very cheap and easy way of accounting for everything; and I wonder that Mr. Gill can possibly think it worth my while to accept it or deny it,—which, in his view, would be so slight a turn of a cog-wheel in the "grind" of my own small mental machinery. He should consider how simple a thing (whether "laconic" or not) I have done, after all. I noticed in *The Index*, a month or two ago, a statement of Mr. Fiske's views, claiming for them, as I thought, a nearer approach to a mechanical fatalism than his words would bear. Accordingly, I copied from his book—with no comment of my own, or next to none—a few of his sentences. And Mr. Gill wants to coax me into a metaphysical discussion about the meaning of them!

I assure him that it is more than forty years since such discussions have had the slightest interest to me. Of course, I have read in this interval a good deal of nonsense, and some sense, on both sides of these and of many other questions. But I have no metaphysical theories of my own—monistic, dualistic, polystic, or panistic—which I care a farthing about, much less other people's theories. I simply try to see facts. On the plane of metaphysics, I am perfectly willing to grant that man is the only being in the universe,—nay, if he insists upon it, that Mr. Gill is the only being in the universe, which, in fact, his argument seems to lead to. But I find the plane of metaphysics hard to get at, and slippery to stand on. So I get off it again as soon as I can. Only, when I see anything written or hear anything said which denies, or seems to deny, that a grown sane man is somehow responsible for his acts, I challenge that denial, or at least try to find out exactly what it means. I do not care one pin for Mr. Gill's fine and learned phrases,—some of which I understand, or seem to, and some of which I don't,—except from the fact that some men, like himself, of high intelligence, still use such phrases, and doubtless find meaning in them. But whenever and wherever I—wrongly, no doubt—understand him to deny the fact of moral liberty, I immedfately fall back on the Declaration of Independence. And, if you will allow me to say so, I don't think a respectable newspaper like *The Index* is the proper place to ventilate one's theories of philosophical necessity, or moral, immoral, or unmoral fatalism, but a court-room, where men's lives and bodily freedom are constantly put in peril, because the law holds so stiffly to the contrary. It is an argument which belongs only to a criminal lawyer in the most desperate cases, and as a last defence.

MEMOIR OF CHARLES LOWE.

Editors of The Index:—

There is no more precious contribution to literature than a sincere and transparent biography of a life which has been earnest and noble in its aims and active in its work. Such a book Mrs. Lowe has given us in the memoir of her honored husband, which has already been noticed in *The Index*. It is full of interest, both as the record of a true and beautiful life, and as a picture of the times in which he lived, so far as he took part in their active interests. Mr. Lowe was not a very great or very distinguished man; and his biographer recognizes this, and is admirable in the moderation and discrimination with which she draws the traits of his mind and the development of his character. But he was a remarkably pure, honest, conscientious man, with good intellectual powers carefully trained and honestly used, and especially well-balanced in temper and sweet and lovable in disposition. The strongest and rarest trait revealed in his journals is his intellectual honesty. Conservative by nature and by early influences, he retains many forms of thought which a more radical mind would reject; but he holds them as his own, after examination and comparison, and not from will and prejudice. This trait makes his journals, during periods of theological controversy and unpopular reforms, possess a special interest; and we may learn from them a lesson of charity toward those who saw so differently what appears to us to be so plain, that only wilful blindness could mistake it. The sweet traits of family life and love are rather revealed than portrayed; but his relations as a pastor are more fully shown, and give one a deep sense of the power which one noble man may exercise in this relation. He called forth warm affection, but seldom excited opposition: he, indeed, rather won men to virtue by love than drove them to it by fear.

Those who had the happiness of knowing him will live over again in these pages hours and days of happy communion and earnest work; and those who did not will find a true picture of a life which, with the great drawback of ill health, yet accomplished a large amount of work, and still more developed a true, simple, harmonious character. It is like being in good and wholesome company to read such books. We are grateful to the loving courage which has given this one to us.

E. D. C.

THE EFFICACY OF PRAYER.

Editors of The Index:—

Are not the results or benefits which are claimed to arise from prayer always mental rather than physical? There is no doubt (in my mind) that prayer in times of great trouble and distress relieves a person's mind a great deal; for, when we see death staring us in the face, and no prospect of human aid, there comes over us an uncontrollable feeling of utter hopelessness and despair, and we appeal to that "dim unknown"—the supernatural—for the help we so sorely need; and, as before mentioned, we feel relieved mentally. And why? Simply because, having done everything possible in nature, and, as a last resort, a forlorn hope as it were, instigated by our inherited instincts, we fly for succor to that unknown quality which has neither form, weight, nor divisibility,—called "spirit"; and the overstrained mind feels rested by its own last great effort. And, perhaps, sometimes the very calmness which that relaxation produces may suggest a (before unthought of) remedy, and the result is claimed as "another prayer cure."

Most parents have stood by the bedside of some loved little one when the terrible fever was at its height, and prayed fervently for its safe deliverance, and in agonizing tones asked the cool and collected but sympathizing doctor, "Is there any hope?" and received the answer, "Yes, if there is vitality enough left, after the fever subsides, to build upon." And, when we have accidentally broken some choice plant, and carefully placed and tied together the pieces, don't we know that recovery depends upon the inherent strength of the plant, and the quality of soil and atmosphere surrounding, instead of upon our hopes or prayers? These thoughts have been suggested by the late terrible disaster at Gay Head, where one of the passengers (saved) says he prayed, and asked his companions to do the same, and, having done so, they all expressed themselves as feeling better, and no doubt they did; but wasn't that improvement produced within themselves? Was their physical condition bettered? Were their chances for escape any better therefor?

Haven't we every reason to believe that every soul on board that ill-fated steamship prayed for help? It would be perfectly natural for them to have done so; but the many were taken, and the few left. "It was a survival of the fittest,"—strong, rugged men, used to hardship and exposure. "Not a woman saved!" There is one feature of this disaster that speaks well for humanity; and that is that every man aboard, who had his wife with him, not being able to save, perished with her.

If even one of those poor, weak, helpless women could have been saved, wouldn't she have told us how earnestly she and the other lady passengers prayed? As Napoleon is reported to have said, "God is on the side which has the heaviest battalions."

In the future, passengers on board steamships should offer prayers to this effect, that the licensed officers (captain and first mate) shall fulfil the requirements of the rules and regulations under which they obtain their licenses. These rules require that from port to port, all along the coast, the ship shall at *all times* be under the charge of a licensed officer. Had the captain of the "City of Columbus" (being cold and tired) called his first mate, and given the ship into his charge, he (the captain) would have fulfilled the requirements of the law, and his responsibility have ended; but, from his own statement, he left the ship for over half an hour in charge of the second mate and quartermaster, both unlicensed officers.

W. H. S.

MR. UNDERWOOD'S WORK IN THE WEST.

B. F. Underwood, since his departure on his Western lecturing trip, has addressed large audiences in Ohio, Kentucky, Iowa, and Kansas, and has many engagements still to meet. He finds everywhere an active interest in free-thought topics, and a spirit of awakened inquiry in regard to liberal religious investigations, which is strongly illustrated by the interest manifested by the daily press in these subjects, and the space devoted to them in the leading journals of the places he visits. In Louisville, Ky., where Mr. Underwood spoke to an audience of five hundred on the anniversary of the birthday of Thomas Paine, he was interviewed by representatives of the *Post* and *Courier-Journal* of that city, and very fair and complimentary reports of the interviews were published in those papers; while the *Commercial* gave a nearly two-column report of his lecture on Paine, and other papers were about as generous. We quote a paragraph from the *Commercial's* report:—

Passing from his subject, Mr. Underwood concluded by giving a brief review of the nature of Liberalism. He said: "Liberalism does not show itself in organization, and does not aim either to divide men into sects and build separate institutions, nor to combine them into one. It rather acts as a leaven diffused throughout society. It would pulverize theology and reform it into broader and better purposes. It would improve literature, as Huxley and Darwin and Hume and Gibbon and Martineau and Elizabeth Stuart Phelps and their colleagues have done and are still doing. It is not weak, and its power of intellect is conspicuous in every department of enlightened human effort. It is progressive, as theology is not; and even Christians will by and by become so liberal that we can go into their churches and hold such opinions as we please. The impulse of free thought is to be seen in the growing demand for the taxation of church property, in the exclusion of the Bible from unsectarian schools, in the abolition of the oath to witnesses, and the rational enjoyment of the Sabbath day. In the end, error must be replaced by truth, and superstition by science. The old fable of man's origin and fall must yield to accurate knowledge, that he came from undeveloped conditions of the past; and that inherited tendencies are not perfect, simply because we have had imperfect ancestors; and that the mind is not like a piece of blank paper, but like a palimpsest, written in invisible ink, only needing the fire of circumstances to develop its double secret. The only salvation we know in this life is the salvation of science in procuring hygienic safeguards. The churches are thinking more of themselves and less of the impalpable, invisible, impersonal God, looking more to earth and its reasonable treasures, and less to heaven and its sentimental treasures, than ever before; and this is promising of good. But we are asked what we propose to do in lieu of the old practices. Let me answer in as few words as possible. In place of prayer, we would substitute self-reliance. Trust of this kind is a sensible faith, that leads us to rely upon the strength of a ship in a storm and the skill of her commanders rather than upon an unseen arm to withhold the tempest or an unheard voice saying to the awful waves, 'Be still!' Such a self-reliance leads you, when assailed by wild beasts, to use powder and ball rather than prayer, and, in their absence, to climb the nearest tree. Instead of preparing to die, we Liberals prepare to live under the restrictions imposed by natural laws, just as the most devout Christian does when he puts lightning-rods on his house. Instead of the doctrine of a revelation from God, we would teach the doctrine of a revelation from reason. Instead of salvation by faith, we teach the power of good works. In short, we would teach anthropology, and not theology; and, instead of churches, we would have temples of learning dedicated to instruction against vice and immorality and the meaner faults of vitiated lives, and teach, first and foremost, that 'the proper study of mankind is man.'"

G. H. LEWES AND GEORGE ELIOT.—A paragraph, containing Rev. E. C. Towne's repetition of some scandal about George Henry Lewes, having been sent by J. H. Allen of Cornell University to "a gentleman in England, who," says the *Commonwealth*, "had the best opportunities of knowing both parties [G. H. Lewes and George Eliot], and whose name, he says, in the *Literary World*, if he were free to give it, would be full authority for the statements just sent him in reply," writes: "Of one thing I am quite confident; namely, that it is entirely misleading to describe Miss Evans as having been 'cheated into her connection' with Lewes, and as having become a miserable woman through that connection, though making the best of it. She knew perfectly well that it would lead to odium and estrangement; and she was prepared to endure them, doing her utmost to bear them all herself, and not to let any former friends suffer in reputation on her account. It was evident that she and Mr. Lewes were devotedly attached to one another. He had in her a companion who could sympathize with him in his philosophical pursuits; and he, on his part, brought out her genius as a novelist. She was so diffident as to her gifts as a writer of fiction that, without his persuasion and constant encouragement, her novels would not, in all probability, have existed. She would doubtless have been recognized as a writer of ability from her review articles and her translations; but it is not too much to say that without George Henry Lewes there would have been no 'George Eliot.' She read over all her works piece by piece to Mr. Lewes, and it was only by his assurance of their merits she was induced to go on with them and give them to the public. The MSS. of her novels are preserved, and they are prefaced by unpublished dedications to him, expressed in the strongest terms of obligation and the tenderest of affection. To his children she was as a mother, and was so regarded by them. When she married Mr. Cross, it was, as he told me, on condition that the marriage should not be to their disadvantage."

IS CHRISTIANITY DYING?—The *Independent* takes up the subject, "Is Christianity dying out of the Land?" and thinks those "superficial observers of anti-religious tendencies and Christians inclined to pessimism," who think such a correct statement, entirely at fault. It is said figures will not lie, but they can be made to yield strange results. The *Independent* understands the jugglery of statistics, and comes to a wonderful conclusion. It gives the number belonging to each sect, seventeen millions and a quarter communicants in all, or, leaving out the Catholics, 10,500,000 Protestants. It then says, "Three children and adherents to each communicant is not a large ratio. It is probably lower than the fact. Upon this basis, the Protestant population is 42,000,000, to which add the Catholic population of 6,832,000, and we have a total Christian population of 48,832,000, leaving the Jews, Mormons, and other classes besides the non-religious to make up the small balance of 1,000,000. Is not this wonderfully encouraging, when the complex character of our population is considered?" This is plausible, and the conclusion correct, granting the data; but the whole depends on the "three children or dependants." In other words, this sage writer would have us believe that every "communicant" is a head of a family of three, whereas, in most cases, the husband, wife, and children are all communicants. The probabilities are that the 10,500,000 Protestant communicants is an exaggeration, sufficient to cover all "children and dependants." The result reached by this sapient statistician, which leaves but one million, of a population of fifty millions, for "Jews, Mormons, and other classes," ought to have opened his eyes and straightened their obliquity, and prevented him from writing himself down either as a blunderer or charlatan. One method to prove a proposition false is to show its

Digitized by Google

absurdity when applied, and this is the exact method pursued by the *Independent*, in which it admirably succeeds.—*Hudson Tuttle, in the Religio-Philosophical Journal.*

WENDELL PHILLIPS AS AN ORATOR.—As an orator, there have lived but few that could be called his equals. His voice was indescribably sweet and charming, and resembled in tone a mellow silver bell. His modulations were often exquisite, and he used his divine gifts with native skill. His speech was a model of chaste and beautiful art. He spoke simply, directly to the point, in what he himself delighted to call "Doric phrases." His logic, aided by the magic of his voice and the attraction of his presence, was often irresistible, even to those who came fortified against his reasoning. In fiery denunciation, indeed, he may have had his equal; but no orator ever lived who could blast a man or measure with such scathing, burning, withering sarcasm and invective. He has had, and is destined to have, a great effect upon our spoken language. He introduced a style as far removed from the labored, elaborate, and redundant word-banquets of Webster and his imitators as could be imagined,—a style that in purity and grace excelled anything ever heard before his day. He seldom used ornamentation; but, when he did, the figure charmed the imagination of his hearers beyond description. He softened his speech with a beautiful and mellifluous rhythm that, united with his other advantages, gave him wonderful control over the minds of those who listened to him. He has left some passages of lofty and commanding eloquence, which equal anything in the language.

BOOK NOTICES.

TWELVE MONTHS IN AN ENGLISH PRISON. By Susan Willis Fletcher. Boston: Lee & Shepard. Price $1 50.

"I know very well," says the author of this book, "that great numbers of persons seem incapable of believing such relations as I am compelled to give." In this opinion, we agree with her. According to the publishers' prospectus of this work, "in the autumn of 1880, the author was arrested in England on the charge of obtaining jewels and clothing 'by undue influence or false pretences' from a lady known as Mrs. Hart-Davies. She pleaded 'Not guilty' to the charge, was tried, and sentenced to twelve months' imprisonment in Her Majesty's prison, Westminster. In many respects, this trial was one of the most remarkable in modern times, inasmuch as it afforded the spectacle of a woman voluntarily surrendering herself for examination on a serious charge, and undergoing a trial and conviction without being permitted to speak for herself, and without even a hearing of her own witnesses." Among the "relations" in the book, which "great numbers of persons" will be found "incapable of believing," are that words were spoken by a two months' old babe; that, during her imprisonment, Mrs. Fletcher was fed with grapes by friendly "spirits"; in spirit form, she was enabled to visit and to hold converse with her husband, her child, and other friends and relatives; spirits brought flowers to her cell, also locks of hair, letters, etc.; there were frequent instances of the instantaneous transmission of letters between London and far-distant points,—with other so-called "spiritual" phenomena. For the rest, the book is nicely printed and bound; and the style in which it is written is lively and entertaining.

FOR MOTHERS AND DAUGHTERS. A Manual of Hygiene for Women and the Household. By Mrs. E. G. Cook, M.D. New York: Fowler & Wells, 753 Broadway. 1884. pp. 292. Price $1.50.—For sale by Lee & Shepard, Boston.

This work opens with a chapter on the importance of physical culture, which is followed by chapters on the bones and muscles; the brain and nervous system; the structure and care of the skin; hygiene and ventilation; intemperance; a chapter devoted to bread and butter, in which there is a careful analysis of the processes of digestion, in which this matter is made plain and practical. A large portion of the book is devoted to the diseases to which women are subject. The feeding of children, the rights of children, the question of education, etc., are all discussed; and the work is fully illustrated by a number of fine engravings. It is a handsome volume of over three hundred pages, beautifully bound, and would be a most acceptable present to either wife or daughter.

THE *Art Amateur* for February is certainly a very pleasing guest to come monthly into the house, with its pleasant chat about music and painting and the drama, and its suggestive patterns for fancy-work and its hints for artistic decoration. The illustrations are well worth preserving, and would add much to the cheerful aspect of a room. It is a good plan to have frames with backs on hinges,—in which the pictures can be easily changed,—and then put these spirited wood-cuts in, and hang them in sitting-room or nursery, where they may be enjoyed while the hands are busy, and give instruction and pleasure without loss of time. Through these pictures and the lively biographical sketches, one can keep up with the spirit of modern art, and be prepared to enjoy more fully the exhibitions to which we have access from time to time. Mr. Stephen Fiske, in his "Dramatic Feuilleton," makes some good suggestions in regard to the play called "An American Wife," "which failed not because it was badly stage managered or inefficiently acted, but simply because it was not dramatic." This is the great difficulty with many so-called plays. Thought and character are not expressed by action, but by narration; and so they can be read, but not acted. The story of Ulysse Butin, a French artist who died December 9, is very interesting. He was one of the many earnest and original young French painters who are learning that the object of skilful technique is not to display itself, but to reproduce the effects of nature and express the thoughts of humanity.

WENDELL PHILLIPS.

From the hearing of those who hated, the threatening voice has past;
But the lives of those who believe to the death are not blown like a leaf on the blast.
A sower of infinite seed was he, a woodman that hewed to the light,
Who dared to be traitor to Union when the Union was traitor to Right!

"Fanatic!" the insects hissed, till he taught them to understand
That the highest crime may be written in the highest law of the land.
"Disturber" and "Dreamer" the Philistines cried, when he preached an ideal creed,
Till they learned that the men who have changed the world with the world have disagreed;
That the remnant is right, when the masses are led like sheep to the pen;
For the instinct of equity slumbers till roused by instinctive men.

It is not enough to win rights from a king and write them down in a book:
New men, new lights; and the code of the fathers the sons may never brook.
What is liberty now were license then: their freedom our yoke would be;
And each new decade must have new men to determine its liberty.
Mankind is a marching army, with a broadening front the while:
Shall it crowd its bulk on the farm paths, or clear to the outward file?
Its pioneers are those dreamers who heed neither tongue nor pen
Of the human spiders whose silk is wove from the lives of toiling men.

Come, brothers, here to the burial! but weep not, rather rejoice,
For his fearless life and his fearless death; for his true unequalled voice,
Like a silver trumpet sounding the note of human right;
For his brave heart always ready to enter the weak one's fight;
For his soul unmoved by the mob's wild shout or the social sneer's disgrace;
For his freeborn spirit that drew no line between class and creed and race.

Come, workers: here was a teacher, and the lesson he taught was good,—
There are no classes or races, but one human brotherhood;
There are no creeds to be hated, no colors of skin debarred;
Mankind is one in its rights and wrongs,—one right, one hope, one guard:
The right to be free, and the hope to be just, and the guard against selfish greed.
By his life he taught, by his death we learn the great reformer's creed;
And the unseen chaplet is brightest and best which the toil-worn hands lay down
On his coffin, with grief, love, honor,—their sob, their kiss, and their crown.

—*John Boyle O'Reilly.*

PERSONAL ITEMS.

MR. WILLIAM I. GILL has had his *Index* article on "The Broad School" put into a neat pamphlet for gratuitous distribution. It can be obtained at *The Index* office. The printer, in attempting to put Mr. Gill's middle name on the outside, made it "Irvin" instead of "Icrin." But the doctrine inside is just as good.

REV. HENRY MORGAN will place one hundred pairs of scales in the Boston police stations and Associated Charities rooms to protect the poor, when buying small quantities of coal. He charges the public weighers with being in league with the dealers, and says that the poor are cheated out of $50,000 yearly in their coal bills.

MR. CHARLES LEWES, step-son of George Eliot, writes that it is untrue that the great novelist left many note-books behind her, dealing with numerous subjects. When the biography, upon which her husband, Mr. Cross, is now engaged, and the forthcoming volume of *Essays* are published, there will remain almost nothing unprinted.

BABU KESHUB CHUNDER SEN had the personal characteristics that fit a man to be a leader. His countenance was impressive, his form majestic, and he wore that rapt expression which of itself exerts an almost irresistible influence over impressible minds. His oratory was swift, kindling, and poetic. He spoke English with hardly the suspicion of a foreign accent.

THE *Commonwealth*, in an article on the death of Wendell Phillips, says that many have spoken of him as the *last* of the great leaders of the anti-slavery movement; but this, it declares, is a mistake, as "there still survive Theodore D. Weld, Abby Kelley Foster, Maria Weston Chapman, Lucy Stone, Parker Pillsbury, Samuel May, Oliver Johnson, Joseph K. Hayes, Charles K. Whipple, Robert F. Wallcut, and many others."

THE New York *Graphic* says: "Frederick Douglass has probably found ere this that it 'has blown over,' and is comparatively happy; but black men of minor importance had better be a little careful how they assume questionable matrimonial responsibilities. There are a large number of white men who are continually in the ditch, from whiskey and other causes; and they are extremely sensitive with regard to the dignity of the noble Caucasian."

WE are glad to see that Edwin D. Mead, the earnest minister and missionary out of the pulpit, who is just now doing such good work in the interests of a culture that is devout and a devotion that is cultivated, is preparing for the press a volume upon the *Religion of Lessing*, with translations from Strauss, Zeller, and Jacobi, and an introduction by himself. This will do much toward bringing about an appreciation of "Nathan the Wise," one of the great undying classics of religious toleration which has waited a hundred years for that just recognition which we believe theological prejudice has done much to deny it. —*Unity.*

PROF. ARNOLD GUYOT, author of *Earth and Man*, and a series of geographies which are the leading text-books on this science in our schools, died at his home in Princeton, N.J., last week, at the age of seventy-six. He was born in Switzerland, and was a lifelong friend of Prof. Agassiz. He was elected professor of physical geography at Princeton College in 1855, and subsequently professor of geology; and he has remained there ever since, being the senior professor of the college. He was joint editor with Pres. Barnard (of Columbia College) of Johnson's Universal Cyclopedia. Mrs. Guyot, daughter of the late ex-Governor Haines of New Jersey, survives him.

FROM the Saginaw *Evening News* of February 4, we quote the following: "'Mental Mechanism' was the subject of Rev. Rowland Connor's lecture in the Academy of Music last night. It was a scientific subject treated in a thoroughly scientific manner. Mr. Connor brought together, in a very clear, logical arrangement, the latest results of the study of physiology and psychology by the profoundest scientists of the age; and the conclusions arrived at by careful reasoning were stated in a most convincing manner. The lecture was one that could be given with credit before an audience of thoroughly trained, scientific minds. The people of the city would be benefited by hearing it over and over, and we suggest that the lecture be repeated at an early date."

Third Edition.

BIBLE MYTHS,

And their Parallels in Other Religions.

Being a Comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations.

The object of this work is to point out the myths with which the Old and the New Testaments abound; to show that they were held in common with other nations; and then trace them to their evident *origin* and *explain their meaning*.

"It has long been acknowledged by the most eminent Biblical students that the Hebrew Scriptures contain a large mythical element; but, so far as we know, the present is the first complete and scholarly attempt to trace these myths to their source, and ascertain their original signification."—*Boston Courier*.

"Never before has there been given a volume to the reading world that shows the research for the origin of these myths as does this one just published by J. W. Bouton, of New York."—*Boston Times*.

"It is unquestionably true that the results of a rationalistic study of the Christian Scriptures are nowhere else so accessible as they are now made in the work before us."—*New York Sun*.

1 vol. Royal 8vo. Cloth. 600 pp. $3.00.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD,

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. R'Y
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	"	8c.	" "
" 26 " 51	"	6c.	" "
" 52	"	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which *cash* is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

CURRENT TOPICS.

THE Emperor of Austria has conferred an order upon the Mayor of Tisza-Eslar, who instigated the recent prosecution of Jews there on the charge of murdering a Christian girl. The emperor's action has caused a painful sensation among the Jewish populace and their sympathizers.

THE main difficulty in the effort to reduce the social Democrats of Vienna to quiet submission by Bismarckian methods is the fact that the Socialistic agitators have some real and crying grievances which repression will not cure. The authorities should consider that putting weights on the safety valve is always attended by risks.

REV. BERNARDINE WEIS, a Roman Catholic priest of Joliet, Ill., recently applied to the Attorney-General to know whether Catholic convicts in the penitentiary could be required to attend religious services which they were in conscience forbidden to attend. The Attorney-General replied that the convicts in the penitentiary had forfeited their rights under the law, except such rights as were provided for criminals, and that, as the moral influences of religion are what the State aimed to employ upon the convicts, and not its denominational teachings, the authorities might provide such religious instructions as they deemed best for the moral improvement of the prisoners, and might compel their attendance upon such service.

A COMMITTEE of the Massachusetts Senate gave a hearing on Monday, the 11th, to the petitioners against the law by which the testimony of disbelievers in God is liable to be discredited on this account. Col. Higginson showed that our State is in this respect behind several of her neighbors,—for instance, Vermont. Mr. F. M. Holland urged that the existing law violates our State Constitution, according to which "no subject shall be molested for his religious profession or sentiments," and that such molestation as actually took place in the Star Route trials is still possible in Massachusetts. Dr. Bartol declared with great eloquence that men who would not swear to what they thought they knew nothing about were the very people who ought not to be discredited as witnesses.

CLEVELAND has produced a fistic champion named Thompson, who has "knocked out" several noted sluggers. He weighs two hundred and twenty-five pounds, and, according to a despatch, has "a savage, bull-dog countenance, and looks more like a beast than a man." The laurels of New England are in danger; for this representative of a new phase of the "Ohio idee" proposes to make Prof. Sullivan, of Boston, at present the champion slugger of the New World, stand before "his terrible sledge-hammer blows" in a contest for the belt. The great question is whether that belt, the winning of which by the slugger Sullivan made crowds in Boston wild with delight a few months ago, is to be kept here or be taken West. Are there no honors that the aggressive and ambitious West will permit New England to remain in the undisturbed possession of?

A WRITER in the *Christian Statesman* gives from the leaves of his note-book the results of his interviews with several public men of St. Louis in regard to the proposed religious amendment to the Constitution of the United States: Ex-Governor B. Gratz Brown said: "I am opposed to any mixing of religion with politics, or the setting up of anything like a theocracy. Legislation must be confined to questions within the legitimate sphere of government. I cannot take part in any such convention." Dr. W. G. Eliot, President of Washington University, replied: "I cannot see that such an amendment would do any good. I think we have no right to incorporate into our Constitution what would discriminate between Jew and Gentile, infidel and Christian." Dr. Goodell remarked, "I have no time to talk on that subject." Dr. J. A. Wilson and Rev. J. R. Hill replied, "You cannot awaken an interest on that subject in St. Louis." . . . Gen. W. T. Sherman, who was very frank in stating his views, said: "The Constitution is good enough for me. Our country has prospered under it for over a hundred years; and it will continue to prosper, if we let the Constitution alone." But the pious editor of the *Globe Democrat* said emphatically, "Certainly, I am in favor of all such movements." The representative of theso-called Reform party found but little to encourage him in that city.

EL MAHDI has whipped everything in sight so far, and is looking for more armies to slaughter. This slave-dealers' rebellion, in support of which is enlisted the fanaticism of the Arabs, has grown and spread since the defeat of Hicks Pasha and his Egyptian sheep two months ago; and now the whole of Upper Egypt as far north as the line drawn from Dongola to Suakin, which is nearly four hundred miles north-east of Khartoum, is in a blaze of rebellion. The force of Baker Pasha, which started out to effect a communication with Khartoum and to cover the retreat of its garrison, was defeated almost before it was out of sight of its base, and by the tribes which have risen in revolt well up toward Middle Egypt, and not by the principal force of the Prophet, which is still to the south-west of Khartoum, several hundred miles away. It is useless, it is worse than useless, it is cruel to send against the Arabs such troops as Hicks Pasha and Baker Pasha had,—fellaheen whom twenty centuries of oppression and servitude by Romans, Turks, Englishmen, Frenchmen, and their own rulers, in succession, have reduced to a timid, helpless, almost imbecile condition. Both at Tel-el-Kebir and at El Obeid, on seeing the enemy, they flung away their arms, fell on their knees and yelled for mercy, when the Arabs run their spears through the bodies of the poor cowards or cut their throats. It is not unlikely that the next news which shall reach us will be of the massacre of the Khartoum fugitives. Meanwhile, no small amount of interest is centred in Gordon Pasha, who with a small escort is travelling through a region swarming with hostile Arab tribes, and from whose ability and courage much is hoped in changing the situation in Egypt.

DEVELOPMENTS following the recent assassination of Col. Sudeikin, chief of the police at St. Petersburg, throw light upon the state of society in Russia, and present a grim and terrible picture. The methods of the authorities are simply barbarous; and, after reading Prince Krapotkine's story of the horrors of Siberia in the *Nineteenth Century*, one is not surprised at the desperate methods of the revolutionists. "Since the beginning of the seventeenth century," he writes, "the flow of exiles poured into Siberia has never ceased." From 18,000 to 19,000 are now annually transported thither. Since 1823, no fewer than 600,000 Russian subjects have been exiled from home and friends, to toil and die in the Siberian mines. Every grade of society is represented. Men of intellect and education, and delicately nurtured women guilty of no real offence, perhaps having simply incurred the suspicion or hatred of some official, march side by side with the most degraded criminals. The average length of the journey into the land of exile is about five thousand miles, and it is made on foot. The shadow of exile is never absent from the life of a Russian who thinks. A large number of the people feel a deep sense of wrong, and hate the government that oppresses them; and not a few who, if justly treated, would be law-abiding members of society, become social outlaws or secret rebels, ready to brave death itself to inflict a blow upon the Russian government. It is not strange that the organization of the nihilists has ramifications extending all over the empire. The peasantry are without sympathy with the revolutionary movement, and know but little of it. They regard the czar with most devout feelings, being steeped in ignorance and superstition. The peasantry are indeed in a state of arrested development. How long the present dynasty will be maintained it is not possible to tell, and it may not be overturned without a terrible struggle.

A LIFE CONSECRATED TO A MORAL IDEA.

The world, of all parties and sects, has been paying the tribute of its homage to Wendell Phillips. But, concerning such a man, too much cannot be said; nor can the memory of his example be kept too long before the public mind. The great lesson of his life is its moral consecration to noble objects. And this is what the multitude of voices, with hardly an exception, in the newspapers, on the platform, in pulpits, has been trying since his death to say. His mistakes of judgment have not been forgotten; and, in some cases, perhaps the memory of some of his recent positions on public questions has been too vivid to permit a well-proportioned survey of his career. But, on the whole, considering the vast number of tributes and the great variety of their sources, their unanimity in respect to the special moral lesson of his life overweighing all others is very remarkable, and speaks well for the moral clear-sightedness of human nature. That he made mistakes may be readily admitted. But he made no such mistakes as to hide the shining example of his rare virtue. Estimate these possible errors of judgment and method at the utmost, his career, nevertheless, stands out dramatically heroic in its moral greatness. The spots on the sun do not prevent the sun from accomplishing its beneficent mission of lighting and warming and fructifying all its planets. And that Wendell Phillips has been one of the most important among the beneficent moral forces that have been shaping the momentous events of our country for the last half-century is becoming clear to-day, but will become still clearer, as the judgments of history are pronounced.

It is the fashion in some quarters to decry the influence of the band of abolitionists who assumed the gigantic task of putting down slavery by moral agitation, since slavery finally went down in the blood of civil war and by political decree. Recently, even so liberal a journal as the *Christian Union* of New York, after disparaging the work of the Garrisonian abolitionists, made the astonishing claim that "slavery was abolished by the sanctified common sense of the Christian churches of the North." This writer is evidently too young to remember, or so old as to have forgotten, that, in the long years when the anti-slavery idea was fighting for a position, the powerful influence of the churches and the clergy, with here and there a rare exception, was thrown against it. He needs to go back to read the newspapers of forty years ago. He will there learn that the power of the press, secular and religious, the power of the great political parties, the power of so-called society, and the power of the Church were all massed in a solid host of antagonism to the cause which the abolitionists espoused. The only difference was a difference in the intensity of the opposition. But so clear, so convincing, was the moral idea which the abolitionists had unfurled on their banner, and with such consummate ability and self-sacrificing zeal did they press the idea home upon the conscience of the nation, that in course of time great numbers of people became impregnated with it. It was this moral battle that prepared the very conditions of the political conflict. And then, when political victory rested on the side of liberty and the South took up arms to challenge that result, it was the success which had been won by the moral battle that held the nation and the national government steadily up to the issue of emancipation as the only path to genuine triumph and permanent peace. If the churches finally became "sanctified" by the doctrine of abolition, it was because this doctrine, which the abolitionists had been preaching for a generation as a veritable commandment from heaven, had penetrated through the shell of creeds and covenants, and regenerated their hearts.

And of the band of heroic men and women who, against such enormous odds, fought this moral battle for liberty, who were ready for any labor, for any sacrifice, for any contumely,—who took their lives in their hands and went up and down the land confronting mobs, imprisonment, death even, simply to proclaim the slave's immediate right to freedom and the guilt of the nation for keeping him in bondage,—Wendell Phillips was among the foremost leaders. We say *among* the foremost; for though he was the orator of the anti-slavery platform without a peer—and it was a platform rich in orators—and though by his matchless eloquence he often won a hearing from mobocratic audiences that would listen to no other voice, yet he always himself, and rightly, as we think, accorded the chief place of leadership to Garrison. It was Garrison who had first evoked the heroic sentiments under which these noble men and women rallied to the work. And it was he who held the guiding reins that morally directed the contest to its end. But close to him, seconding his appeals, and putting them into sentences that entranced the hearers, and giving them a voice before which ancient prejudice and even bitter malice melted, stood Phillips,—the orator not merely of the anti-slavery platform, but standing easily among the foremost orators of his time in all the world.

And when we consider this rare gift of eloquence which he possessed, and the other fine gifts and graces of intellect that were his, and to these add the opportunities that were placed at his feet by reason of his birth and blood, his social surroundings, his education, his distinguished personal bearing and attractive manners, it is only then that we begin to get some measure of his moral greatness by counting the sacrifices that were involved in his joining the abolitionists. With such gifts and opportunities, what triumphal achievements might not have been his, had he followed the desires and ambitions that most commonly move men! With that peerless magnetism of speech, what victories he might have won at the bar in jury trials, if he had remained in the legal profession! What offices in the gift of the commonwealth or the nation might not have been opened to him, if he had only remained on terms of amity with the politics of the country! What power he might have wielded in the national Senate, what distinction he might have gained in diplomacy, had he but just followed what seemed the most natural course for him when he left Harvard College! But there was that within him which was not to be satisfied with any kind of success which was thus marked out for him. His nature was shaped to a higher mould. It was of the stuff of which martyrs are made. Born in affluence, living always in a condition above all sense of deprivation and want, yet his heart beat in sympathy with all human woe, and with hot indignation against all forms of wrong committed by man against his fellow-man. Being a witness of the mob led by "gentlemen of property and standing" by which an anti-slavery meeting was broken up and Garrison was dragged through the streets of Boston, it was a scene that not only deeply stirred his conscience, but roused all the sleeping chivalry of his manhood. His career henceforth was determined. He would give himself to this despised and persecuted cause. All his gifts, all his professional hopes, all the brilliant social promise before him, he brought and lay upon the altar of the slave's redemption. Society, whose most select doors had hitherto opened to welcome him, exiled him from her presence with scorn; but, with the spirit of Luther burning the damnatory bull of the pope, he excommunicated society. Old friends passed by him, refusing to take his hand: his heart was grieved, but he clung the closer to the manacled hand of the slave. His law office was closed for the anti-slavery platform and the lecture-room. Instead of pleading causes before courts and juries, he pleaded the cause of the slave before country audiences and city mobs. His house, which might have been a centre for the most *élite* coteries of fashion, became a rendezvous for abolition committees and for conferences with fugitive slaves and their abettors. The path of political preferment was barred before him, but he swerved not one jot from his sworn loyalty to the abolitionists for the sake of lifting the bar. Henceforth, their cause was his cause, let it lead where it might.

In the light of results, it may be said, it is true, that Wendell Phillips really achieved a greater work and won a higher renown than would have been the case, if he had followed the promising course naturally marked out for him by his antecedents and surroundings. And where, then, it may be asked, was the sacrifice? The premise here is true, but the doubting question does not follow. We, certainly, should be the last to deny that Wendell Phillips' career of philanthropy has been as lofty as anything in the statesmanship or diplomacy or jurisprudence of America for the last fifty years. What office is there to which the people could have elected him or which his fine talents could have reached, which would not, after all, seem paltry beside the office to which he was self-elected as tribune of the common people's rights, —as the unpaid but permanently retained advocate of justice for man before the court of the world's conscience? But of all this result there was not a glimpse nor a gleam at the time when, forty-nine years ago, he took that vow of allegiance to the anti-slavery cause. What has come to pass was then behind the impenetrable clouds; nor could any part of it, as concerns himself, have entered as a motive determining him to that consecration. All that he could then see was a line of duty, taking him away from every opportunity and chance in life deemed most desirable by his social companions, and allying him to a company of men and women regarded by those same companions and friends as fanatics and lunatics; and he chose the line of duty. At that time, he could only descry a parting of the ways: on one side, all the successes and pleasures and triumphs of well-established vocations and of well-approved social circles; on the other side, a weak, derided cause led by a moral idea. And he followed the moral idea. That was the hour that attested the moral mettle of the man. That was the act that measured his sacrifice and his moral greatness together. It was no thought of coming fame, no dream of filling a place at some distant day in the world's galaxy of philanthropists, that moved him: it was simply his sublime devotion to the law of right, his innate chivalrous impulse to resist an outrage and wrong done to any human being. It was his inward fealty to a moral ideal, making for him henceforward a career and a religion.

And, in these days, when self-indulgence is so easy, when home comforts and social pleasures and devotion to material enterprises and even the refinements of culture tend so strongly against this lofty moral loyalty, it is well that the public mind should linger over the memory of a life like that of Wendell Phillips,—a life of which disinterested consecration to noble objects was the mainspring. Here was a man who, in a public career of nearly fifty years, lived not for self, not for office, not to

Digitized by Google

increase his fortune or his pleasures, but to promote justice and benefaction among his fellowmen. And this is a kind of greatness in which all may share. Moral greatness is not measured by magnitude of the deed, but by its quality. To few human beings has it ever been given to match Wendell Phillips' eloquence. Thrilling are the words he has uttered in behalf of justice and humanity. But, great as was the power with which he spoke such words, he did even a greater thing than that: *he lived them.* And many a human being, of humble mental gifts, can do that greater thing.

WM. J. POTTER.

THE RELATIONS OF CAPITAL TO LABOR.*

The chief difficulty between capital and labor is that their relations are improperly adjusted. Though dependent, they are and have long been more or less antagonistic. The cause of this antagonism lies more in their respective developments than in their essential natures. Capital has developed rapidly: labor is undeveloped. The former is organized in every regard, the latter completely unorganized. Organization means power, activity, and results. Disorganization implies the reverse. With capital there is working together, —*i.e.*, co-operation: with labor, it is an endless underbidding of man against man,—*i.e.*, competition. Labor is but another term for the race: its constant increase means the gradual reduction of a man's work value. This reduction is accelerated by the continually augmenting consolidation of capital. Each new pool and syndicate is a milestone in the history of lower wages and consequent pauperism. What autocracy effected in long gone years is now accomplished by corporations. The fellah of Egypt, the ryot of India, are reproduced in the laborer of the nineteenth century. In our own land, immigration and natural increase are bringing about these results. The only remedy to the evil is that the work and the workman should no longer be dissociated. The producer should be directly interested in the product. This change can only come from the action of the worker.

To adapt themselves to the age, they must do what capital has done; namely, combine. Their combination should be as complete as the relation of one share of stock in a stock company to another. It should be personal, vocational, social, and political. It should have one basis,—mutual helpfulness; and one end,—personal amelioration. The employé must become his own employer, either by being allowed an interest in his employment or by funding his earnings with those of his co-employés, and with them engaging in the same industry. Thus, the system of industrial co-operation is inaugurated.

Equally necessary in this land, where immigration pours a half million new citizens each year, is it to have some national institution in the shape of a national bureau of labor and statistics, whereby new fields can be opened, old ones developed, and whereby labor can be properly directed and located. By this instrumentality, new centres can be brought into being; and the old, overcrowded cities can be relieved of their overplus of unrequired workmen.

When left to hazard, overpopulated New York receives three immigrants to Virginia's one. A properly managed governmental bureau would reverse this condition, and would in one decade convert a wilderness into a veritable Garden of Eden. Such governmental action would facilitate the spread of co-operative ideas. Men change through ideas. Conduct, in the long run, flows from cognition. The appreciation of the fact that government—*i.e.*, the whole body—cares for each individual's welfare would eventually cause the individual to see his own importance in the State, and to realize that he, by combination and co-operation, could ultimately free himself from the present evils of industrial life. That he will see it, some time, is undoubted; but to see it as soon as possible is the condition precedent of modern progress. But in the mean time, and in order to reach this happy consummation, the duty of the hour is for all wage-earners to combine, to organize, and to become a social and political unit.

IMOGENE C. FALES.

*Spoken before the Sociologic Society of New York.

MYTHOLOGY.

V.

A proverb, it has been said, is often a chip of mythology; and some of our familiar saws and sententious sayings carry clear reminiscences of what were once spoken as solemn and stately myths. The mythic expressions, and to some extent the ideas, the beliefs, thus have an immortality, and go down age after age in the enlarging civilizations that leave behind so much in the faded, effete past. There is great tenacity of life in what becomes couched in a proverb. Our speech is full, is charged to the brim, with these reminiscences: we are using them often quite unconsciously.

The Romans flung fire-brands into the air, blew trumpets, and clanged brazen pots and pans, to aid, as they expressed it, the moon struggling against the monster seeking to devour her,—*i.e.*, the moon in an eclipse,—very much the same as savages do to-day,—*e.g.*, American Indians on the Pacific coast. The conception survived in the representation of an eclipse in our modern calendars,—a figure of sun or moon in a dragon's mouth. By and by there arose a jocose proverb, "*Dieu garde la lune des loups,*"—"God keep the moon from the wolves,"—to mock at those who fear remotest possible danger. But it took long periods to outgrow the old belief, so that this might be treated thus sportively. Nay, in our own time, a writer on French folk-lore was surprised to find peasant population in France seriously believing still that the moon in eclipse was the prey of a monster that was attempting to devour her.

The "Old Nick" comes from "nixy," a name for a water-imp, the nicor of Beowulf, the nix or nixy of German fairy tales. In the belief of German peasants, the nixies inhabit lakes and rivers, and, when any person is shortly to be drowned, they may be seen dancing on the surface of the water; and hence, doubtless, has come the superstition, or vague impression at least, that harm will come to him that saves the life of a drowning man, since it was believed the nixies will be offended with such interference with their purposes, when they resolve to take a victim. Bohemian fishermen will not now, or would not so late as 1864, rescue a drowning man, from fear that the water-demon would in retaliation drown them. A similar superstition obtains among the Slavons, the natives of the Shetland Isles, with English and French sailors, etc. In Germany to-day, when one is drowned, they say, "The river-spirit claims his yearly sacrifice," or "The nix has taken him." In Europe generally there still obtains belief in the guardian spirits of wells and fountains; and the Cornishmen in England make offerings of pins, nails, rags, etc., in the old holy-wells, that they may get healing from these waters for diseases and omens from the bubbles on health and marriage.

The phrase, "noise loud enough to wake the seven sleepers," carries to the story in Christian legend of the seven sleepers of Ephesus; and this came originally from the myth of deep winter sleep of nature, or the earth. Seven Christian youths, the story tells, fleeing from persecution in the time of the Emperor Decius, entered a cave, whose mouth was presently thereafter closed with a wall, so that there was no means of escape. Here, they slept for two hundred and twenty-nine years, to the time of the Emperor Theodosius, no sound having been sufficient to awaken them. In 479, they awoke, bore their testimony to the resurrection, much drawn in doubt at that time, and then disappeared in death.

Other reflections of the same myth we have in the legends of various sleepers,—Charlemagne in the Untersberg, waiting, sword at his side, for the time of antichrist to be fulfilled; Frederic Barbarossa in a lofty mountain in Thuringia, his long, red beard grown through the table on which his head is resting, and yet to wind thrice round it, while he is waiting for the ravens to cease flying round the hill; Olger Danske (the Dane), sleeping in Avallon; Thomas of Ercildoune beneath the Eilden Hills in Scotland; William Tells (three of them), and even Napoleon. In our own country, we have the same in the tale of Rip Van Winkle passing his long sleep in the Catskills.

The expression, "Talk of the devil, and he will be sure to appear," is quite likely a reminiscence of an old fetichistic superstition. In savage thought, the name is somehow mysteriously associated with its owner; and any liberty taken with that, it was supposed, might be resented and punished by him. The Dayaks in Borneo will never venture to mention the name that means smallpox: they will say "the chief" or "jungle leaves,' as the Laplander will never speak of the bear by name, but will call him "the old man with the fur coat." In North Germany, it is a common saying that you must not in December speak of the wolf by name, lest the were-wolves tear you. Perhaps the superstition of the Jews in regard to pronouncing their name Jehovah—and the same obtains with the Hindus in respect to Brahma—is of like origin. And Prof. John Fiske thinks that the maxim, "*Nil mortuis nisi bonum,*" had most likely at one time a fetichistic flavor.

A like superstition exists with reference to some connection of a picture, or a clipping of the hair or nails, with the person from whom it may have been taken, as if through it some witchcraft could be wrought upon him. The Parsis have an elaborate ritual prescribing the method for burying their cut hair and nails, lest demons and sorcerers should work injury upon them through these. The Roman Flamen Dialis must not have either parings of nails or clippings of hair exposed: they must be collected and buried under a lucky tree. And I well recall in my own childhood that I was strictly enjoined never to leave clippings of hair above ground: they must be carefully buried. So the superstition survived to my time, but doubtless the reason of it then no one knew.

A savage will refuse to have his picture taken, lest it may fall into the hands of an enemy, who may injure him by conjuring with it. Among ourselves, it is often considered of sinister omen that the portrait of a friend should fall from its place on the wall. And perhaps we have a sample of the survival of the old belief in regard to the picture in this expression,—a vulgarism now, but not seldom heard,—"Blast his picture!"

There is a wide-spread belief that through the image injury may be done to an enemy. The Karens make an image of a person from the earth of his footprints, and stick it over with cotton seeds, in order to strike that person with dumbness. The old German practice of *Erdschnitte*, "earth-cutting," is almost identical with this. A piece of earth or turf, where the footprints of the

Digitized by Google

man to be destroyed had been left, was taken and hung in the chimney, that, as this print dried and shrivelled, he also might perish. And so there are rustics in England to-day, who believe that a neighbor's ill-wishing has killed their cow. They will take a heart, stick it full of pins, and hang it in the chimney, that the heart of the neighbor may be pierced and dried also. The last relic of this old savage practice, probably, is hanging or burning in effigy,—a performance seen not seldom among ourselves.

The saw that "a witch will not sink in water" carries remembrance of the ordeal made by water, a judicial rite found in the old Hindu law-book of Manu, and obtaining in England, as late as the beginning of the thirteenth century, as a legal means of trying those accused of murder or robbery. The sacred element would reject the guilty, and hence afforded a sure test. To this day, the belief prevails in some communities; and rustics in England will duck an old woman suspected of having blighted a cabbage or a turnip crop, appealing to that ordeal to determine whether she is a witch.

"May this bit choke me, if I lie," is a reminiscence of an ordeal very ancient, and still practised in India, by requiring all of a household where suspicion rests to swallow a mouthful of rice. It is thought that the guilty by his fear will be detected. The same obtained in England in the use of the corsnaed, or trial slice of consecrated bread or cheese.

"Telling the bees" still prevails in England and in Germany, and is a custom, I hear, not unknown in this country. In Germany, the news is told not only to the bee-hives, but also to every beast in the stall; and every sack of corn is touched, everything in the house shaken, that all may be made aware that the master or the mistress of the house has departed. In Devon, in England, a boy recently was sent back from the funeral cortége, by the nurse, to tell the bees, as that duty had been forgotten. In Derbyshire, the same custom obtains also in cases of marriage. The bees must be informed: otherwise, ill-luck will attend upon the union. We have here a survival of the old savage belief in the personality and the rationality of everything animate and inanimate. Reminiscence of the same is carried in the phrase, "A little bird told me."

"To set the cap" for one, as for a husband, bears reference to the belief, wide-spread through Northern Europe to this day, in the nixies, brownies, trolls, fairies, etc., who are represented as sporting their red caps, throwing them at times about on the ground, etc. In Ireland, it is reported to be a thing not uncommon for sea-fairies to come to shore, and throw down their red caps for young men to pick up. The youth thus gets a mermaid for a wife. But he can keep her so long only as he can hold the red cap concealed from her. This once espied, she dons it, and is off in an instant. These tales all are distant descendants from the myths of swan-maidens, the fleecy clouds, with their coats of feather or down sometimes laid aside as they go to bathe in the blue lake. The numerous stories of water-fays in modern Europe —as Melusina in French, Undine in German, etc. —are of the same origin.

So "hair of the dog that bit you," "moon being made of green cheese," "to be ready to jump out of one's skin," "to haul over the coals," "to fight the devil with fire," "to throw a shoe after a newly married couple," "devil take the hindmost," "to avoid marrying in Lent," "wicked [peculiarly wicked] to kill a robin,"—these and many more have their origin in old mythologic beliefs, whose explication throws new and very interesting light upon their proper sense and meaning.

The old phrases, saws, etc., with the beliefs of which they were the expression,—dim and shadowy as these may be now, yet still very real and potent in most minds,—are innumerable. We find them present in all the grades of intelligence, on all the planes of our civilization. The more the ignorance or the less the intellectual culture, the more they abound, at least hold powerful sway. As Campbell gathered nursery tales that had never appeared in print, and whose existence even was unknown before, in the cotters' huts in North Scotland,—nay, picked up some quaint stories, remarkable in the historic references they bear, from strolling tinkers in the streets of London,—so in the rural homes in New as well as Old England, in New York, in Pennsylvania, in fact everywhere, is a harvest of folk-lore, curious and very instructive for any alert and industrious gleaner. Quite recently, I have heard queerest stories of current belief and shadowing superstition reported to me from lips of old residents in Connecticut.

As the boulders in our fields—erratics, far-travelled, worn, ground down so as to have lost wholly their original size, shape, and almost character—do yet stand revealed, written over with the long record of their past to the quick eye of the geologist, and speak volumes of wisdom to him, so the proverbs and phrases and saws—boulders or cobbles from a far-off parent rock, worn, changed, and transmuted fairly in the course of ages—still bear upon them the ineffaceable birth-marks, and tell a tale of their strange adventures and the wonderful experiences in fortune they have had, of intensest interest to the explorer of history.

CHARLES D. B. MILLS.

DER VEREIN VORWAERTS.

This is a club of liberal Germans in New York, where its twenty-fifth birthday was celebrated on the 16th of last January. The neatly printed pamphlet issued in memory of this occasion—by Cherouny, 17-27 Vandewater Street, New York—tells of constant activity in founding a library of solid books, circulating *The Index* and other journals, building a hospital for Germans, starting a benevolent fund, holding lectures, debates, picnics, Schiller memorial meetings, and Christmas trees, collecting Humboldt, Heinzen, and Feuerbach subscriptions, and relieving sufferers in Germany, etc. No organization could be more worthy of its motto, "Forward"; and larger associations might be put to shame at the record of its many good works. It is particularly pleasant to see that, out of more than a hundred lectures mentioned in this pamphlet, the greater part are on scientific, industrial, or educational subjects; politics not being forgotten, but metaphysics and theology receiving little notice. The two or three hundred debates held in the last twenty-five years began by discussing the Sunday laws. Then came that important subject, in 1859, "The Relations of the North and South"; and, later on, are many such pertinent questions as, "Is the Preservation of the German Nationality in America Desirable?" "Is Polygamy absolutely Immoral?" "Are Stories and Fables Good Means of Educating Children?" "Have Missionaries advanced Civilization?" "What Form of Government is Most Favorable to Art and Science?" "Can Morality be preserved without Belief in Immortality?" "Do our Prisons reform?" "Is Henry George Correct?" "Will the Progress of Education lessen Pauperism?" "Should the Protective Tariff be kept up?" "Is it for the Interests of Republicanism to let Children of American Parents be educated in Germany?" "Is Martial Courage a Virtue from a Philanthropic Stand-point?" "For whom shall we vote?"—a question brought up four times, —etc.

These details have been mentioned, in order to show what liberal people, too few and poor to keep up regular Sunday services, may do to carry themselves, their children, and their neighbors onward. When I remember how hard it often is for an independent society to employ a minister and build a church, and how frequently the attempt to do as much as this ends, after a few years of struggle, in doing nothing at all, I am strongly inclined to think that perhaps our best plan, where we are strong enough to do anything, is simply to start a club for social festivities, debates, parlor lectures, and circulation of journals and liberal books. The declaration of such intentions as these is a much better foundation than any statement of opinions. A constitution long enough for business purposes is easily drafted. A club made up mainly of old neighbors and personal friends who have thorough knowledge of each other and are all working together for their common interests, and taking turns in stating their views, stands on a firmer basis than if the chief worker were some young stranger, who keeps the whole society committed to his ways of thinking, and who has to do so much of the work that, when he leaves, there is no one able to go on without him. Undoubtedly, the help of a thoroughly educated speaker is of great value to societies that can afford it; but, even then, his hands would be strengthened by a club like this. And a society not able to keep such a speaker, except occasionally for brief periods, and then by exhausting efforts, would, I think, do well to be satisfied with attempting only what it can do successfully, and keeping that going on all the time.

EDITORIAL NOTES.

THE United States Life Saving Service more than paid for itself last year in property saved. In addition, 3,777 persons were rescued out of 3,792 imperilled.

AT the February meeting of the Liberal Union Club of Boston, next Saturday evening at Young's Hotel, Rev. M. J. Savage will give an address on "The Ethical Outcome of Darwinism," to be followed by addresses on the same subject by Dr. Francis E. Abbot and Mr. Henry W. Holland.

REV. LEONARD WOOLSEY BACON created a sensation lately by preaching in a Worcester Unitarian pulpit. He preached a sermon in which it is alleged he emphatically declared, in referring by way of illustration to the history of Jacob and Esau, that he considered Jacob a hypocrite and sneak, and Esau by nature much the better type of man of the two, and Rebecca a designing, scheming, and unjust woman.

SAYS the Boston *Herald*: "A generation ago, to most New England Christians, the theological opinions of Voltaire were held to be synonymous with those commonly attributed to his Satanic Majesty; and no amount of argument could have convinced them that they were wrong in this supposition. A later generation has discovered that, when compared with modern materialism, Voltaire's religious views may be looked upon as highly conservative."

A SENSIBLE man is that "London Artisan" who contributes to the January number of the *Fortnightly Review* an article on "The Wives and Mothers of the Working Classes," which he concludes thus: "Depend upon it, no cobbler enjoys making a good shoe so much as the cobbler whose friends in his leisure hours are Shakspere and Milton; and no woman is likely to scrub a floor the worse or darn a stocking less neatly for having learned to love George Eliot and Longfellow."

THE *Interior*, a Presbyterian paper, tells the following story: "A subscriber tells us about a sermon he heard preached at the funeral of Brother Watkins. It so happened that Brother Watkins died the 22d of February. The eloquent preacher reached his climax thus. Raising both hands and with a voice tremulous with emotion, he exclaimed: 'Oh, think, my brethren, what a wonderful, what a wonderful Providence! How wisely God chose the day for our friend's departure! How sweet, how glorious the thought that the same day in the year which gave a Washington to our country gave a Watkins to heaven!'"

SOME of those who are interested in the case of the Rev. R. Heber Newton call to mind a decision of the late Lord Chancellor Westbury in an ecclesiastical cause which involved the question whether a minister of the Church of England was required to believe in everlasting punishment. The decision was in the negative; and the judge, in rendering it, took the most liberal view not only of that, but of several other questions esteemed vital by the orthodox. And it was thereupon remarked by a barrister that "the chancellor had dismissed hell with costs, and deprived the believer of his last hope of eternal damnation."

IN a letter published in the Memoirs of Francis Hodgson, Provost of Eton, Lord Byron wrote:—

> The basis of your religion is injustice. The son of God, the pure, the immaculate, and the innocent, is sacrificed for the guilty. This proves his heroism, but no more does away with man's guilt than a schoolboy's volunteering to be flogged for another would exculpate a dunce from negligence. . . . I do not believe in any revealed religion, because no religion is revealed; and, if it pleases the Church to damn me for not allowing a nonentity, I throw myself on the mercy of the "great first Cause" (least understood), who must do what is most proper, though I conceive he never made anything to be tortured in another *life*, whatever it may be in this. . . . Let us make the most of life, and leave dreams to Emanuel Swedenborg.

CARL SCHURZ claims in his article in the *North American Review* that, since the great railroad corporations and telegraph companies perform service in which its prompt and uninterrupted execution is a matter of great importance to the public, all disputes and contentions occurring between them and their employés should be submitted to the arbitration of some disinterested board of commissioners, who can command the confidence of both parties of the board to be appointed by the government and the adjustment made by them to be final. The unions formed by men in the employ of railroad companies are extending their ramifications every year, while the railroad corporations are also uniting to resist any dictation from employés; and the result may be any time strikes, the interruption of railroad traffic, and enormous loss to the business community. The adoption of some such plan as that proposed by Mr. Schurz seems imperatively necessary to avert conflicts of a dangerous character which must occur, if the relations between the companies and those in their employ remain in their present unsettled condition. Mr. Schurz's views on this subject are far more just and sensible than those presented by the *Nation* last summer, in which the position taken was that the employés should be regarded as soldiers on duty, and be subject to something like military regulations of the government. The injustice and folly of this view are sufficiently exposed in the article in the *North American Review*.

MANY of the occupants of Christian pulpits, in these days, find themselves in a tight place, so to speak. They cannot keep their minds hermetically sealed against the truths that are everywhere afloat in the mental atmosphere; and still they cannot utter their honest convictions, because of the standpoint they occupy, which commits them by its traditions and associations to the propagation of old creeds and articles of faith which no live modern man can entertain, except by excluding from his mind the sunlight that illumines the intellectual world of to day. But few have the moral courage of Emerson, who, when he became convinced that Christian creeds were anachronisms in an age of reason and science, stepped down and out of the Christian pulpit. Here and there is a minister of advanced thought and frank speech who can retain his position without trouble, internal or external; but he is not recognized as a Christian. There *was* a time when clergymen did much of the deliberate thinking, and hence much of the reflective thought used to have a clerical and Biblical coloring. Bishops Butler and Berkeley were thinkers; but they did all their thinking inside of the Thirty-nine Articles, and so their ideas are incurably infected with ecclesiasticism and Hebrew and Christian superstition. But the great modern thinkers and scientists give their reason *carte blanche*, to serve the interests of truth, irrespective of all creeds or canonized forms of gospels and so-called holy traditions. Science to-day is not at all anxious for pulpit sanction or indorsement. On the contrary, the pulpit is more in need of making its teachings appear to be in accord with science, to reach intelligent men. Not a few clergymen adorn their sermons and give point to them by appropriating the ideas of the free thinkers and scientists of the day, like the jackdaw that ornaments its nest with feathers and plumage that do not belong to it. But they usually pervert them to theological purposes. The temptation to do this is great; for the majority of the people are yet largely under the influence of the mythologies and theologies of the past, are suspicious of whatever plainly contradicts them, and can receive liberal and scientific thought only in small doses, and when well mixed with superstition. But the difficulty is in satisfying the intelligent few, whose respect is valued, and not offending the larger number, whose support is needed.

CONVENTION OF THE FREE RELIGIOUS ASSOCIATION IN PROVIDENCE, R.I.

By invitation of the Free Religious Society of Providence, the Association will hold a convention in the new Blackstone Hall, corner of Washington and Snow Streets, Thursday evening, February 21, and Friday P.M. and evening, February 22. Thursday evening, at 7.30 o'clock, Address of Welcome in behalf of the Free Religious Society by Frederic A. Hinckley, to be followed by the opening address of the President of the Association, Wm. J. Potter, whose subject will be, "The Relation of Sentiment, Ideas, and Institutions in Religion." There will also be addresses at this session by Rev. Thomas R. Slicer, of Providence, and others.

Friday P.M., at 2.30, there will be an address by Rev. Minot J. Savage, of Boston. Subject, "The Change of Front of the Universe." This will be followed by a brief intermission, and then by an address from Mrs. Ednah D. Cheney on "Free Religion the Safeguard to the State."

At 6 o'clock, Friday evening, there will be a social tea in the new parlors connected with the hall. Tickets to the tea, fifty cents each.

The closing session of the convention will begin at 7.30, Friday evening. Rev. John W. Chadwick will speak on "The Gospel of Science," and be followed by Col. T. W. Higginson.

F. A. HINCKLEY, *Secretary*.

THE F. R. A. FUND.

Donations and membership fees for the Free Religious Association, in response to its recent appeal for funds for the holding of conventions and for meeting other expenses of the Association. Will friends see to it that this list is increased?

ART vs. NATURE.

If we were cavern-dwellers born, and ne'er
Had seen the seeming arch of heaven o'erhead,—
Spaces of night unfathomable, star-sown,—
St. Peter's ceiling, dome, Art's puny mockeries
Of Nature's vastness, might thrill with awe.
Egyptian Cheops' piled enormity,
Whose crest, rock-hewn, for forty centuries
O'erlooking Delta's reeds and fens has seen
The Nile draining far equatorial lakes
Into the Midland Sea, towers grandly where
It stands, o'erbrowing sandy levels wide,
But Alps or Andes near would dwarf its bulk
Into a hillock's littleness. In vain
Chisels and art of other days upreared
Their monstrous shrines and carved the human form
Gigantically large with sceptre, wings,
And named it angel, god, or saint, as if
It wielded sovereignty o'er earth and heaven.
Man haply may be Nature's favorite,
But knowledge tells him now he's nothing more.
St. Peter's dome and Cheops' star-plumbed pyramid
Were works of human vanity, conceit,
The frogling's effort to distend himself
To oxlike girth, ending in rupture only,
While Nature from her blue infinity
Looked calmly down, not deigning e'en a smile.

The Index.

BOSTON, FEBRUARY 21, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boy ston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

WENDELL PHILLIPS.

A Discourse before the Free Religious Society of Providence, R.I.

BY FREDERIC A. HINCKLEY.

The most eloquent voice of the century is stilled. One of the warmest of hearts has ceased to beat. A soul which was Christlike, in its private and public devotion, has closed its mortal career. Almost the last of the noted men of our second heroic era, the prophet of universal freedom, and the bright, consummate flower of universal religion has joined

> "The innumerable caravan, which moves
> To that mysterious realm"

called death. It was an historic scene,—the body, as if in peaceful slumber, reposing in old Faneuil Hall, where his first great public triumph was won, where so often, in later years, his tones had waked memories of Otis and Hancock, of Quincy and of Adams. It did seem, for the moment, as if "those pictured lips" might now break their silence, if only to say, "All hail!" and "Well done."

Years ago, this man had exclaimed, more in sorrow than in anger, "I love inexpressibly these streets of Boston, over which my mother held up my baby feet; and, if God grants me time enough, I will make them too pure for the footsteps of a slave." They have become too pure for the footsteps of a slave. "The hooting mob of yesterday" has returned in "silent awe," to "glean up the scattered ashes." The State sends its governor and a delegation of its law-makers, the city its mayor and a committee of its council, to join the throng of mourners at the bier of this illustrious representative of all that makes New England great and glorious. Flags are at half-mast. The streets are lined with sober faces and glisten with tearful eyes.

> "Forever the earth rolls round and round,
> And the genial seasons run;
> And ever the truth comes uppermost,
> And ever is justice done."

Some of us have come near to this great life, have caught glimpses of the innermost springs of its action: others have been touched by its inspiration from afar. Not one of us, perhaps, but feels in its departure from the realm of mortal vision a sense of personal loss. There is hardly a New Englander anywhere over whom it has not exerted a more or less direct influence, nowhere an American who is not indebted to it for its effect upon our institutions, nowhere a victim of oppression but owes to it repeated pleas for liberty. With all this in mind, we come to-day not in the coldly critical spirit,—that must be left to other hands,—we come reverently, to recall the salient points in his career, to gather our recollection of them into something like wholeness of view, and to mark, if possible, for ourselves and for our children, their momentous lessons.

What kind of a young man was Wendell Phillips when admitted to the Suffolk bar, in the spring of 1834? He belonged to a family of worldly position. His father was the first mayor of Boston. He himself was a graduate, first, of Boston's public schools, then of Harvard College, and finally of the Cambridge Law School. Elegant in manners, princely in bearing, genial in temperament, he was a natural leader of the young gentlemen of property and standing, so much so that they elected him president of their college club, and in other ways conferred upon him various distinctions. Like his early and life-long friend, Sumner, he was one of the last of his coterie whom the casual observer would have selected as likely to give life in the service of unpopular causes. The way before him to the highest honors was clear as noonday. He was exceptionally handsome, exceptionally eloquent, exceptionally well equipped by natural endowment and acquired knowledge for a brilliant official career. His tastes, too, were political. Even while at the law school, he became warmly interested in public concerns. Of course, the moral element must have been strong within him; but, up to this time, it had not asserted itself, it had not taken that supreme control of his nature which it was so soon to acquire. This was the young man, not quite twenty-four years old, who witnessed—with what effects the world well knows—the "broadcloth mob" of the 21st of October, 1835. That disgraceful scene, the breaking up of a legal meeting of women, the dragging of a defenceless man through the streets of his native city, at the mercy of brutal passions and heartless prejudices, for no crime save the exercise of the right of free speech,—all this struck a responsive chord in his nature. It was for him a baptism of the Holy Spirit. It summoned him to "fling away ambition," to surrender position, friendship, much that man rightly holds dear, on the altar of liberty. With a determination that was heroic, with an entirety which left behind it no stain, he became henceforth a consecrated servant of truth. How applicable to himself are his own words concerning Mr. Sumner! "It is unspeakably to his credit," he said of the great senator,—"it is unspeakably to his credit, that, when he saw his long-coveted and hardly earned distinction and all his professional prospects crumbling around him, he never retreated an inch or remodelled a phrase to regain his place or conciliate opposition."

Like Sumner's, his life was henceforth to be lived in the clear light of day. Unfriendly eyes were to level their critical telescopes at it, the press was to deride it, the apologists for the nation's crime were to assail it in every possible way, at times it seemed even unto death. Where is the man who ever saw a sign of quivering, after his course was taken? Where the man, who, doubting his intellectual convictions sometimes, ever had a suspicion as to the utter unselfishness of his devotion to the most exalted human service? With him, as with few men since Jesus of Nazareth, the idea of ministering to the wants of his fellows became an all-absorbing ambition. It was one of the opportunities of a lifetime to have heard his lecture under the auspices of the Free Religious Association, in Boston, in the month of April, 1870, developing this idea. It was entitled "In Christianity, no Substitutes and no Mustering Out." I have in mind a vivid picture of him, as he sat on the platform a few moments before beginning the address, the high tone of his subject taking possession of his mood and mingling the prophet and the poet in his countenance. I well remember how he carried the vast audience with him, in as pure a strain of inspiration as ever fell from human lips. "What did the Master mean," he exclaimed, "when he saw the tax-gatherer, and said, Come, follow me; when one brother came and said, Let me go and divide the possession,—Come, follow me; and, when another said, Let me go and bring my father,—Come, follow me. It did not matter, the necessity nor the exactness of the demand, it was, 'Come, follow me.' Running through the studio and study, through office and mart, through legislative hall and the streets, is still that cry, 'Come, follow me.' I want not your Amen. I want not your substitute. I want not your ten per cent. I want you." Wendell Phillips heard that summons, and answered it. He heard it on the street, he heard it in the cabin of the lowly, he heard it in the prison, he heard it under all climes, he heard it in every personal appeal for sympathy, he heard it in his own home,—"I do not want your substitute. I want you."

Closely akin to this rare spirit of devotion, growing out of it perhaps, was his disregard of public or private censure. He never did things to be seen of men. He never refrained from doing anything for fear of being seen of them. I have frequently known him, almost unasked, to give fifty dollars toward the expenses of an annual labor convention in Boston; to act with a company of young men and workingmen as chairman of a committee on resolutions, inviting them to sit around his own study table in preparing their work; and, then, to go into the convention and make a speech which dignified all the proceedings, and commanded for them a public respect they would not have had otherwise. His speech was reported; but the contribution of money and the sympathy and inspiration of friendly co-operation, these were known only to the struggling workers in the causes he loved, whom, whatever their station, whatever their capacity, he always recognized as comrades. There was at one time, in Boston, a prominent worker in the political labor party who was a confirmed inebriate. Wendell Phillips never gave him up. He defended him against public and private assault, until at last he was himself severely criticised for it, alike by friends and foes. Nevertheless, he wavered not. He placed his own fame, as it were, in the scale of this poor, wretched brother, until death relieved him of the burden. I knew another man who came, in time, to occupy public office, whom he repeatedly took from the gutter and passed back to good position and refined society. These acts were never very popular. The spirit which prompted them is not very prevalent now. People are quite likely, in these days, to ask what the company is before they decide to identify themselves with some unpopular cause. But, for all that, it is the criterion of little souls. It is not the religion which grew in Nazareth, and

Digitized by Google

gave the name, but not the practice, to the system under which we live. There was a man who said once, "Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto me." Of all our great men, not one ever accepted that injunction more readily, and embodied it in his life more completely, than Wendell Phillips.

This characteristic, however, could never have been so strong as it was in him but for his unbounded faith in man as man. Beneath the exterior, "howe'er debased and soiled and dim," he saw a germ of infinite possibilities. No sophistry of the intellect could ever blind him to the fact of universal brotherhood. He never forgot that, in the light of the ideal, all men have weaknesses enough to make them humble, and no man enough to render it impossible that he should be divine. The condition of mankind, their want and misery and sin, gave a sober cast to his thought, as it must to the thought of every thinking person; but it did not make him despondent. It only led him to accept as solemn truth the words addressed by Tocqueville to Mr. Sumner. "Life," said the eminent Frenchman, "is neither a pain nor a pleasure, but serious business, which it is our duty to carry through and conclude with honor." This man could see in reality but one thing to do,—namely, to lift all humanity to the highest possible attainment; nor did he ever commit the error of confining his labors in this respect to those already at the top. *Men* might be low and mean and contemptible: *man* was high and noble and divine. The tendency of our own times is away from this faith. Man, it is said, is like the tree and the fish, a product of certain laws: like them, he can only fight his way along, contributing at last to the survival of the fittest,—the little ones ground up for the benefit of the big ones, the poor for the rich, the ignorant for the wise, and so on. Such may prove to be a spiritual as well as a physical fact. It has not been proved yet, and the great names in our own New England history have stood very largely for a different faith. With Mr. Phillips, the prophets and poets of our own time and section have believed in the possibility of virtue in all: they have accepted the human as an infinite promise of the divine in all.

This faith in man led in its turn to his great breadth of view. It was a remarkable sight at the funeral to notice what was represented in the body of the house reserved especially for his friends and co-workers. Not a cause of reform but had some place among the mourners. And the throng which filed by the body in Faneuil Hall was made up of all classes and conditions. They told without articulate voice of his years of service in the anti-slavery cause. There were those present who could remember his answer to the Attorney-General of Massachusetts on the Alton mob; his work as member of the Vigilance Committee in fugitive slave days; how he and Theodore Parker fanned the flames of indignation at the time of the surrender of Anthony Burns; how he defended John Brown before Northern audiences, and pronounced words of eulogy at the martyr's grave; how, as late as December of 1860, after speaking before the Twenty-eighth Congregational Society of Boston on Mobs and Education, he marched from the Music Hall to his home on Essex Street surrounded by a body of his friends, fully armed, and they by a squad of police, the mob hooting and crying out, "There he is!" "Crush him out!" "Down with the Abolitionist!" how, at the annual meeting of the Massachusetts Anti-Slavery Society the very next month, a mob attempted to break up the forenoon proceedings, greeting Mr. Phillips, every time he tried to speak, with the cry, "Throw him out!" "Throw a brickbat at him!" how, in season and out of season, taking his life in his hand, he, the most gifted orator of his country, not to say the world, was greeted in many of the large cities of the nation with stale eggs and sometimes more dangerous missiles, for the simple assertion of the right of free speech in this boasted land of freedom; how he had at last been recognized by many of the wiser politicians of the North as an educator of the people, as the pioneer cutting the way over which the statesman was to tread; how he had proved at all times the consistent, self-sacrificing, fearless defender of the slave, doing out of office the work which went side by side with that Mr. Sumner was doing in office. Oh, I might go on all the afternoon telling the thoughts which crowded thickly upon each other in the minds of the old workers and the younger students of the anti-slavery movement at that hour.

But there were other mourners with other and not less appropriate thoughts. This man had been not only a leader of the anti-slavery struggle, he had been not less a leader in many another good work.

The champion of Woman's Rights. His speech on that question at Worcester in 1851, a classic to-day. A knight who from the first had shown an exalted idea of womanhood, and who never failed to demand absolute equality, irrespective of sex. Always ready to address, in his matchless way, without pecuniary reward, conventions and legislative committees for justice to the mothers, wives, sisters, and daughters of the race. "Leave it to woman," said he, "to choose for herself her profession, her education, and her sphere. This is the nature of the demand we make; this the character of the great social protest against the very fabric of society which we bring." How often have such words as these fallen like music from his lips, as he has sought to increase the social and political harmonies of the world!

The champion of Temperance. Not afraid to condemn the gilded grog-shop, not afraid to say to the Chief Justice of Massachusetts and the President of Harvard University, when they attended a public dinner to a noted chess-player at a fashionable hotel which sold liquor in unblushing defiance of the law, that they had been guilty of conduct which ought to lead to the impeachment of the one and the removal of the other; the man whose simplicity of personal habit and earnestness of public advocacy were in perfect keeping; the man who had pleaded for years with his own city for the maintenance of a sober people; who saw, with a clearness vouchsafed to few apparently, that the grog-shop and the schoolhouse are mortal enemies; that to license the one and tax the citizen for the support of the other in the same breath is the height of folly.

The champion of Labor. Not, as I think, always wise in his measures, but always right at heart. He looked upon labor as the creator of wealth, and thought it entitled to a much larger share of the proceeds of its toil than it gets. He had no sympathy with the assumption of any class that it was its business to become a self-constituted guardian for some other class. It was no argument to him to say these people cannot take care of themselves. We are doing the best for them that can be done. He had heard that plea from the plantations of the South, and knew well its fallacy. He wanted to see capitalists put themselves for a moment in the workingman's place; and it is not too much to say that, if they would all do that with the thoroughness with which he did it, the labor problem would be one of easy solution.

The champion of the Irishman. Almost alone among really great Americans, he openly and persistently identified himself with the Irish cause. His lecture on O'Connell was not a piece of cold analysis: it was a friendly, appreciative, admiring tribute to his character and work. It was of such a nature as to make every thoughtful son of Ireland who heard it say, "This man understands our grievances, and can enter into our feelings." This was the more remarkable because of the antagonism which had existed between the Irishman and the anti-slavery movement. Led by demagogues, the ignorant and unsuccessful subjects of England, as they arrived in this country, gravitated into the ranks of that party which defended chattel slavery. There were some good reasons for it, no doubt. Its name and its early history were greatly in its favor; but none the less it placed them often among the mobs which met Mr. Phillips in person, and almost invariably identified them with the people who apologized for, if they did not openly defend, the mobs. With this fact in mind, there was something exquisitely sympathetic and profoundly wise in the way in which the great orator painted for them the picture of their revered countryman, emphasizing his refusal to give up his active defence of the cause of the slave to help even Ireland. That upon such a beginning a friendship so strong could be built showed a rare and sublime comprehensiveness on the part of Mr. Phillips, and the presence of a susceptibility to an appeal to the higher nature, such as is not always credited to the impulsive Irishman.

But why need I go on with this catalogue? Were I to make it complete, I could not stop until nearly every conceivable wrong had been mentioned, and every organized effort for its extirpation noticed. His word for the Nihilist was a word which any man, not fit to be a slave, would have spoken, if he could have stood for a moment in imagination, as Wendell Phillips did, in the Nihilist's place. His word for the Indian was always a just one. His word for the insane was always a deeply sympathetic one. His sympathies even took in Alaska, and he asked for the blessings of good government for her. Nor did he fail, while thus sweeping the horizon, to see the needs of the people nearest home. He was warmly interested in evening schools, in industrial education, in moral culture. In a word, he was cosmopolitan in his grasp Well, we have had others who seemed to take in the whole range in their thought, men who, in the calm, white light of philosophy, comprehended the sphere. This man did more than that. He was as intense a man as ever lived. He did not sacri fice strength to breadth of conviction. There was always a glow where he was. There was always somewhat of the deeper coloring of feeling in the atmosphere he carried with him. For this rare combination of the breadth of view of philosophy with the enthusiasm and ardor of reform, this union in one of the thought of the universalist with the concentrated fire of feeling of the specialist, Wendell Phillips will hold a unique place in American history.

Utter unselfishness of devotion, utter disregard of private or public censure, unbounded faith in man as man, an all-inclusive breadth of view combined with the greatest intensity of conviction,—these were some of the characte stics of this New England prophet and idealist.

> "Not for a soul like his, the calm
> Of selfish ease and joys of sense,
> But duty, more than crown or palm,
> Its own exceeding recompense.
>
> "Wherever wrong did right deny,
> Or suffering spirits urge their plea,
> His was a voice to smite the lie,
> A hand to set the captive free!"

And, now, what of his method? It is all com-

Digitized by Google

prehended in one word,—Agitation. Read his lecture on "Public Opinion," and see how he develops his philosophy concerning the power of thought. "No matter," he says, "where you meet a dozen, earnest men, pledged to a new idea, wherever you have met them, you have met the beginning of a revolution. . . . There are those who occasionally weary of moral suasion, and sigh for something tangible. The advancing tide you cannot mark. The gem forms unseen. The granite increases and crumbles, and you can hardly mark either process. The great change in a nation's opinion is the same. . . . The man who launches a sound argument, who sets on two feet a startling fact, and bids it travel from Maine to Georgia, is just as certain that in the end he will change the government, as if, to destroy the Capitol, he had placed gunpowder under the Senate Chamber. . . . Agitation is the diet of a free people. . . . Stand, then, on the pedestal of your own individual independence, summon these institutions about you, and judge them." Such was his theory,—such the theory underlying the abolition movement in this country. But he applied it to everything. Tell to the world the truth that God has told you,—that was a favorite thought with him, and he had little patience with those who were forever holding back a portion of their convictions. It was his unqualified faith that perfect fearlessness in thinking, and in the expression of thought, is sure to result in the triumph of truth. Do not fear to think. Do not fear to speak what you think. I once had a friend who, when I was contemplating public speaking, desired much that I should have a talk with Mr. Phillips. The idea seemed preposterous to me, for I had no other claim upon him than any young man with an earnest purpose would have had. She was persistent, however, in bringing it about, and the first thing I knew I received from him a note, saying: "Come and see me. I never helped anybody yet, but will gladly do what I can for you." I went one evening at the appointed time. It was in that severely plain Essex Street house, which was so often the Mecca of reformers, but which, in recent years, Vandal hands have levelled to the ground. The name "Phillips," painted in plain black letters on the door, was all that marked it as worthy even passing notice. I shall never forget that hour, and how he talked of public speaking in England and America; talked of Chatham, Burke, and Brougham, of Webster, Sumner, and Curtis; how he advised against the manuscript; how he recommended speaking at reform meetings as giving freedom and self-command; how beautifully he talked of the power of thought and the responsibilities of the public teacher; and how, when I left, he took my hand cordially, that smile, which was always a benediction, lighting up his face, and said, so characteristically and so truly, "Don't be afraid of being too radical." "Don't be afraid of being too radical." Doubtless, many a young man has gone from his home with the same advice; but those words will always be a gracious legacy to him who heard them that night, not less precious if shared with others of kindred aims and aspirations.

Now, how did it happen that he talked thus and gave such advice? It was because he saw all about him superficiality. It was because he saw men trusting to trading trickery, to political management, to all sorts of schemes for carrying their ends save the one simple, straightforward scheme of telling the truth. It was because this seemed to him all wrong, productive of evil, and only evil, that he said to the young men drawn by his magnetism and inspired by his lofty example: Don't be fair-weather workers. Don't be satisfied to skim the surface. Go to the roots of things, ascertain the bottom facts, and then proclaim them before all Israel and the sun. His unsurpassed faith in the power of truth is justified in the hearts of the people to-day. The holder of no office, the pedestal of his own personal independence was his throne. From that, with the sceptre of agitation, he has conquered a more than regal sovereignty.

A careful reading of his speeches will show in all their sincere frankness his virtues and also his faults. For of course, being human, he had faults. He sometimes spoke with greater severity of persons than the truth of history has justified, though never with greater severity than he thought at the time essential. He sometimes reached intellectually positions which time has proved mistaken ones, though, on the other hand, time has frequently shown the correctness of his view. His faults were open to the sunlight, and therefore the more easily condemned. He carried his heart upon his sleeve. There was no such thing about him as concealment. Whittier's words are as applicable to his case as to Sumner's, for which they were written:—

> "Safely, his dearest friends may own
> The slight defects he never hid,—
> The surface-blemish in the stone
> Of the tall, stately pyramid.
>
> "Suffice it that he never brought
> His conscience to the public mart.
> But lived himself the truth he taught,
> White-souled, clean-handed, pure of heart."

In the presence of the close of such a life, the voice of detraction is hushed; and men bow, for the moment, in admiration and awe.

But newspaper editorials and platform eulogies are not the most fitting tribute to Wendell Phillips, not the tribute he himself would most prefer. From his grave, he seems to say, more earnestly than ever: Take the word "man" from your Constitutions and laws. Make these streets safe for weak men to tread. Secure equity to labor. Do justice to the Indian. Respond in brotherly sympathy to every human need. Don't talk of consequences, face duty, "Come, follow me."

If this spirit of his could only enter into our lives, if this people could only inherit something of his devotion, his faith in man, his breadth of grasp, then, indeed, there would be a tribute rendered and a monument built worthy his name. O parents! it is a good thing to teach your boys and girls how to make money; it is a good thing to impart to them worldly wisdom; it is a good thing to inculcate in them thrift and prudence and respect for the world's opinion. But, if you want them to be something more than mere animals, pray do not stop there. Point them to this noble life, embodying the not less vital virtues of self-sacrifice, of love of truth, of service of one's fellow-men. Make the volume of addresses, which it has already given to the world, a household book. Let the scholar, before he leaves the high school, become familiar with the speeches on the Alton Mob, on Woman's Rights, on Mobs and Education, on Public Opinion, at the Grave of John Brown. In connection with the record of the war, do not omit the address entitled "Under the Flag." These lectures mark epochs. Some time, others equally momentous will doubtless be brought together in one or more volumes,—the lecture on O'Connell, on the Lyman Mob, the Horticultural Hall lectures, the Phi Beta Kappa address at Cambridge. Let them all enter into your home life. Let them furnish extracts for declamations, and transmit the spirit of heroism to coming generations. In a word, make your children acquainted with this man, and you will have done them a lasting service in the upbuilding of character, and erected to him a worthy memorial in the lives of the people.

For the present, no adequate word can be spoken. The best we can do is to lisp some of the notes, which rolled like sad and solemn music from his own lips at the funeral of Garrison, as the most fitting benediction on his own great career:—

"To champion wearisome causes, bear with disordered intellects, to shelter the wrecks of intemperance, and fugitives whose pulse trembled at every touch on the door-latch,—this was his home. Serene, fearless, marvellous man! Leader, brave, tireless, unselfish! When the ear heard thee, then it blessed thee. The eye that saw thee gave witness to thee. The blessing of him that was ready to perish was thine eternal great reward."

For The Index.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER XIV.

Perhaps it was Col. Ingersoll's colored coachman, intelligent and of good presence, who was a favorite in Washington avenues, who made some secret sign to his own people, which caused us to be received with great courtesy at the chapel door by two white-teethed preachers, who looked as though they could bite a doctrine clean through.

The two negro churches in Washington are handsomer, cleaner, brighter, more cheerful structures than any Wesleyan or Congregationalist chapel in England was some years ago. They surpass any Lady Huntington chapel extant. One of these two churches is held by the humbler, the other by the more pretentious and better cultivated class of negroes. This term "negro" is one that may be used in England, it being a term of interest and respect here But, in America, it is deemed offensive; and the negro is spoken of as a "colored" person. I preferred the humbler class of worshippers. My daughter and Mrs. Leach went also to the second church in the evening, where piety was more conventional and instructed. I preferred studying colored religion in its natural state.

The interior of the church we all went to was light and spacious. Both men and women walked in with more ease, more grace, and independence of manner than can be seen in the same class of English religionists. They sat or reclined on their seats, without any of the stiffened terror never absent from assemblies of white worshippers. There was all the difference we see between customers walking into a co-operative store which they own, and walking into the shop of another, where you must buy something or you feel mean. Republicanism had touched even piety with its gracious freedom and self-respect. These men and women had mostly been slaves, but they had lost entirely the slave-mark of hurry. In this quality of deliberateness, the colored people are more gentlemen and ladies than the white people. Many of the dusky believers were gentlemen in dress and manner of walking, and stepped up the aisle like a member of Parliament elected for a second time. I sat near a magnificent negress. She wore a small-spotted, close-fitting dress. She reclined, listening, like a handsome tigress, voluptuous as Cleopatra, with features as fine. Not far from her was a young girl of singular grace of form,—a dusky beauty, with the dreamy face of a gypsy. A rich silk shawl lay upon her shoulders, denoting affluence or extreme taste, it so well became her small and sensuous figure of careless loveliness, passion, and languor. There were men there not less remarkable in their way, were there space here to describe them. I observed that those who came in late quietly dropped into seats which were vacant and nearest; while, at the President's church in the morning, gentlemen came in when the sermon was near ended, and yet pushed forward to some pew in the front, to show that they owned it, put their heads into their hats to pray ostentatiously, beginning their service when it was three parts over.

The singing in the colored church was most strange. It was a trill always rising in energy. Each person sang in a tune and way of his or her own. Four hundred persons, each singing in different cadences, low and high, is not to be described. One venerable short man, with a voice like an eight-pounder, drowned all other notes at will. Beyond any man I

Digitized by Google

heard, he was master of the assembly. His voice was as the thunder of the heavens to the cheers of a street crowd.

After singing, anybody prayed; and prayer sprang to fluent lips, and in far better taste and expression than we sometimes hear in English congregations. The final appeal to God, with which the prayers ended, was in a wild, musical tone, that seemed able to pierce the skies and reach the throne of heaven. One good-looking, vigorous young man had the most perfect, most enviable prairie voice I have ever heard. It was a *travelling* voice. No other term describes it. It sounded as though it passed through the roof, and you heard it as it seemed to pass on through the clouds. It was strong without effort. Its tones seemed apart from the speaker, and its melody never tired upon the ear. It was like the cry of "Excelsior!" in Longfellow's famous poem.

The preacher who conducted the services was beyond the middle age, and of sedate, honest aspect. His reading of the Scripture was the only religious reading I heard during this visit to America. It was slow, distinct, impressive, earnest, now hushed, now loud, now a cadence of alarm. His tone changed with the sense, with natural dramatic passion, as though the reader comprehended the words of heaven, and was reading them aloud for the first time. It was not like the reading I had heard in the morning in the President's church, where the lessons were read with a cold propriety, in which all the tragic pathos of the sacred story was frozen in the preacher's throat: it was earnestness in a refrigerator.

The sermon was in keeping with the reading. The colored gospel was not bad,—peculiar, but seldom extravagant. Its discernment and candor would recognize any English hearer. "My brethren," said the preacher, "Christ bids us love our enemies. David was a man after God's own heart, but David did not do this." The preacher said this, and left it as a thing to be noted, and not to be explained away. "We should have clean hands," he remarked. "Clean hands do not mean hands merely clean according to nature: it means clean souls." The conclusion of his sermon was an exhortation, after the manner of preachers, but in the vein of his race. "My brethren, pray! You can telegraph to God. You can telegram right away. The man is always at the other end of the wire. You can telegram at midnight: the man at the wheel is always awake. Always awake, my brothers and sisters. Pray, brothers, pray! The office is always open: the man is always at the wheel. Brothers and sisters, telegram right away!" The preacher had got his figures of speech a little mixed. He was thinking of the ship when he spoke of the "man at the wheel." Still, he managed his simile pretty effectively; and the comparison between the speed of a telegram and a prayer was creditable to his powers of illustration. He was quite understood. Some laughed, some smiled, some made audible assent, especially two rows of dark sisters, dressed in resplendent blue dresses,—members of the "Society of Moses."

The way in which the collection was made was an improvement upon our way of sending the box round. The minister said that so much was wanted for the purposes of the chapel, and asked the congregation to subscribe it. Whereupon, men and women arose in different parts of the church, and proceeded to a table before the platform, and laid upon it what they had to give. This went on for some time. There was no begging. Each worshipper appeared to consider that, if it was worth while worshipping at all, it was worth while supporting his place of worship. The ladies with me went up to the table, and gave money for themselves and for me. If I go into chapel or church for curiosity or edification, I consider that I am under obligation to contribute toward the cost of what I so far value by being present.

One day, Col. Ingersoll, having business in the court where Guiteau was tried, took me to see it. It was a large, plain, uninteresting room. A young man was being tried for murder. He sat on a form with a sister and two friends among the people. I could not see why he did not walk away. On seeing the judge who tried Guiteau, a great lawyer, who praised the patience of the judge, told me that the time spent in disposing of that case was honorable to America. I answered that in England we could not understand how a country in which men were shot at sight should waste twelve months in hanging the murderer.

What I most valued that morning was Col. Ingersoll's taking me to the Provost Marshal's office, to see Frederick Douglass. It is an honor to America that such an office should be given to a colored gentleman. I had been to New Bedford, at night, to see the river where Douglass worked as a slave until he was twenty-three years old. Afterward, the Colonel gave a dinner, that I might meet Douglass; and we drank (on that night only) champagne of finer quality than I had before tasted in America, in honor of the greatest anti-slavery orator among colored men. And many were the incidents, not soon to be forgotten, which Douglass told me, which, had I not exceeded the brevity in view, I should relate. I also met Mr. Douglass' sons, fine, manly, intelligent men. Mr. Douglass thought that the colored people might be regarded as not a bad race, as races go in these days. They had had no schooling, no literature of inspiration, no fine arts existed among them to form their taste, yet they have the qualities which make a people of no mean promise. For myself, I may say that the colored people, having regard to their self-possession and deliberateness of manner, seemed to me a royal race as compared with the exiled white people who stampede after a fortune, contract a disease in getting it, drop with a spasm into the grave, without having looked at the world into which they have been projected in a mistake. Besides, no one could look at Douglass, with his lion face and kingly mane of hair, without seeing in him what he is,—the leader of the colored race. He speaks less frequently now than in earlier days of strength; but, when some great question of the freedom and equality of his race arises, it may be said of him, as of Wendell Phillips or Col. Ingersoll, in the fine lines of Lord Lytton,—

> "His royal eloquence pays in state
> A ceremonious visit to debate."

Having suggested in the last chapter that twenty English towns would fetch at auction less than twenty streets in Chicago, I may mention that, since saying so, the sea-coast town of Aberayron, Cardiganshire, has been offered for sale, its houses, containing a population of two thousand souls, and buildings. £24,000 were offered. Certainly, an ordinary street in Chicago would fetch more. Whether Aberayron has a philosophical society is not said. Of that in Chicago, I ought to mention that Miss Caroline Smith is its Recording Secretary. Besides, there are four other lady philosopheresses holding office. No English philosophical society known to me has philosopheresses attached to it.

Col. R. J. Hinton, who commanded a black regiment in the war, and was a visitor at Rochdale when the central store was opened, I found editor of the Washington *Gazette*, with no abatement of that adventurous enthusiasm which has carried him through so many enterprises. A volume by him on Arizona, with illustrations, is the best I saw in the country on that far-away and strange region.

Gen. Eaton, head of the department of education, took valued interest in the Guide Book, which was the main object of my visit to Washington. That patient courtesy (is there any test of courtesy like patience?) of Gen. Eaton, and the wonderful museum of all the educational books and devices of the world, which he showed to us in Washington, dwell still in my mind.

The official communications with the governments of Washington and Ottawa I have placed in the hands of Mr. Gladstone, with my report concerning both Canada and America, and can only describe them here. Previous to leaving England, I received a letter from the Duke of Argyle, whom I had informed of my intended visit to Ottawa; and Sir Charles Dilke did me the favor of giving me a letter of introduction to the Hon. L. Sackville West, our ambassador at Washington. Before setting out for Canada, I sent a memorial to the government of that country, which Sir John Macdonald acknowledged by a letter to England. At the same time, I sent a copy of the memorial to the Marquis of Lorne, and to the Hon. J. H. Pope, Minister of Agriculture. Sir Charles Dilke did me the favor of transmitting my memorial on the subject of a guide book to Mr. Secretary Frelinghuysen, at Washington; and a copy was forwarded to the British Embassy, that the English Minister might be aware of its purport, as he would be sure to be consulted thereupon. The memorial included, in each case, a plan of the proposed Guide Book, detailing the kind of information wanted. With these documents, there were forwarded three volumes of the Lord Clarendon *Reports upon the Condition of the Working Classes Abroad*, which Earl Granville, of the Foreign Office, was good enough to forward to America, and Lord Kimberley, of the Colonial Office, to Canada. For these books (no longer to be purchased), I was indebted to Lord Salisbury, who kindly ordered them to be supplied to me, when he was at the Foreign Office. The Hon. Mr. West was more than courteous in his interest in the work which brought me to Washington. Concurring in the object of it, and believing that an authentic Guide Book would be of great value to intending settlers who might go from England to the United States, he kindly volunteered to represent the case—put in my memorial to the American government—in my absence.

I had the honor of an interview with Mr. Secretary Frelinghuysen. The absence of the honorable gentleman from the capital had prevented his examining the memorial in his office, to which he promised to give attention, as he did courteously to the explanations I made of its nature and objects. Mr. John Davies, Acting Secretary in the Home Department, was himself entirely in favor of an accredited guide book, and had himself heretofore independently promoted the publication of such a work. Mr. William Hunter, Second Assistant Secretary of the same department, a permanent official of many years' experience, expressed himself as not less convinced of the advantage of the proposed work. During the time I was at Washington, President Arthur was occupied on State business in New York; but, on his return, I had the honor to receive a letter from him, informing me that the subject in which I was interested should receive his attention. One day erelong, this may occur. In a republic, the chariot of progress often dashes furiously along. At other times, its wheels drag heavily, as though they were the wheels of Pharaoh, and had got into the troughs of the Dead Sea again.

Though engaged in the great law case previously mentioned, Col. Ingersoll devoted time to accompanying me to the State House, and introducing me to members of the government. On other days, I was again indebted to the courtesy of Gen. Mussey for similar service. To the General, I was also indebted for a copy of a municipal and sanitary volume upon Washington, more ingeniously bound than is usual in a volume containing maps. Separate maps show the streets (the paved and unpaved), the trees, lamps, telegraph-offices, police-offices, underground services of water, gas, and drainage. Other maps show the quarters where disease prevails, what kinds of disease, and the proportion of deaths among white and colored people, and, further, things of the first moment and relevance, enabling a stranger to see, wherever he may take up quarters, the degree of peril he has to look to or security he may depend upon. This work is an annual volume in Washington. No Dublin, nor Edinburgh, nor London, nor any town or city in England, has any such volume; nor has it entered into the heart of any rate-payers to demand it, nor any town council to issue it.

CORRESPONDENCE.

THE SUPERNATURAL.

Editors of The Index:—

I am unable to understand why so many writers in *The Index* object to the term "supernatural." This is notably the case in the book-notice of the *Memoir of Elizabeth Newport*. It speaks of "those fanciful promptings which she called the 'Inward Light.'" Now, what is nature but outward phenomena automatically arranged? And, in the contemplation of its various parts, its vastness impresses us with the sentiment of wonder. The more we investigate these parts, as parts or in conjunction with the infinite whole, we see that that mighty framework and mechanism which we call "nature" operates upon an automatic principle. And we perceive, too, that our bodies operate also upon this same plan,—circulation, respiration, digestion, and assimilation, etc., all animals being also automatons. But man is a self-conscious creature, and stands alone in all the world herein. His consciousness,—who can limit it? Who can define his limitations? Man is, then, certainly *above* nature, is therefore gifted with the supernatural power of consciousness,—is conscious, too, of becoming conscious. The term "supernatural," then, is a proper term, when we speak of man and of his

Digitized by Google

orbit, of the sphere of his thought and of the law of his being. The proper study of mankind is said to be man; and, in the study of ourselves, we should not apply our individual limitations to the race, as we are members one of another. Herein, the experience of one of our ablest Philadelphia lawyers is apropos. Daniel Webster and he were attorneys on a very important suit at Trenton. He had given the subject much study and thought. When Webster came on from Washington, they spent much of the night in the consideration of the details of the case; and, when it came to trial, he found that Webster was master of all the generals and particulars of the case. And his conclusion was that the workings of his mind as compared to that of Webster's were as twenty-four hours is to one hour. We differ widely in our capacities, and each is the complement of another. Thus is the consensus competent established, and thus alone, no one man being omnipotent.

In respect to science, was not Goethe correct, when he said that all that was really worth knowing, which he had ever studied, would all go into one small envelope? Effects can only be known in their cause, and can only thus be explained. Socrates said that the study of the sciences nearly destroyed his eyesight,—*i.e.*, his spiritual vision.

When we speak of science, we speak of matter. And, when we inquire of scientists whether they have any book on science as a standard, we are told that "a text-book on geology is out of date as soon as printed; and, on the doctrine of organic cells and living tissues, no book over fifteen years old but is largely worthless." Thus, science can have no church, no bible, no bond of union, because of scepticism and doubt in all its departments,—in geology, in biology, and in physical science generally. Do the devotees of evolution agree? No: because all is yet unsettled. And a recent writer seriously informs us that about the year 1900 certain questions concerning spirit will be satisfactorily known. The intellectual giddiness of such men as the late President of the British Association is surprising. He (M. Spottiswood) sets forth a world wherein our commonest axioms and verities are as naught; that even the axiom that things equal to one another are equal to the same thing may not only be disputable, but false. Thus, it is with a man when he becomes entangled in outward phenomena called "nature": he becomes blinded as to his true nature and capacity, and, partaking of mere phenomena, he grows into its likeness, and becomes automatic, too.

In the article of F. M. Holland, in a late *Index*, the formula of the Free Religionist is ably set forth. No scepticism has, he thinks, spoken of these four principles: 1. The positive existence of a transcendent Reality, which reveals itself in conscience, but is above all definition; 2. Our continual *dependence* on this Reality, in which we live and move and have our being; 3. The certainty that it acts through fixed and general laws; and, 4. Some sort of connection between this action and the tendency which leads us to do right. Now, when we come to dwell in this Reality, we become philosophers, and have a real existence as such. And a philosopher is not an automaton: he is a Reality-reliant man in real things, and a self-reliant man in phenomenal things. In fact, a man is as he lives, or dwells; for the quality of a substance must be in strict relation to the substance itself.

Now, in the article to which I have in part alluded, the Society of Friends are objected to, because of their belief in the supernatural. I would inquire, Can a man receive any good thing, unless he relies upon it or has faith in it? Take human love as an example. Clearly, *fidelity* is the condition to receive all good gifts. In order to receive God-power, we must be God-reliant, we must trust in him and believe that he is. Then comes the reward as an effect which follows its cause.

F. M. Holland says, "I agree with Count d'Alviella that Herbert Spencer's great Unknowable has not such attributes as can attract strong and permanent religious feeling." But Spencer says, in *First Principles:* "Moreover, as the religious sentiment in the mind perceives its object, the Ultimate Being, so that Being is conceived as making itself known to the mind of man through the religious sentiment. A reciprocal relation is thus established, the Unknowable causing a peculiar intuition, the mind of man receiving it. We need not discard such feelings as idle delusions," etc. Now, this is the faith of the Friends; and this the basis of our dependence,—a reliance which demands our perfection (sonship), therefore it is the postulate of eternal life. "Ye therefore shall be perfect, as your heavenly Father is perfect."

Now, all this seems very rational and very reasonable to me, as Spencer further says, "He, too, may feel that, when the Unknown Cause produces in him a certain belief, he is thereby authorized to profess and act out that belief."

The philosophy of the Friends has for its exponent the "man Christ Jesus." He was and he is the profoundest spiritual man that the Eternal has raised up, "whose words and works," says Theodore Parker, "help us to form and develop the idea of the complete religious man." Now, the mission of Jesus "was to bring us to God." Whoso doeth the will of God is my mother, my sister, and my brother. Thus, we esteem him as our "elder brother"; and herein we are justified "by," as Paul says, "the faith of Jesus Christ." Jesus' words were, "I have made known thy name, and will make it known, that the love wherewith thou lovest me may be in them, and I in them." That is, my spirit and my doctrine are to be in them.

Can we not, then, advance another principle in addition to Count d'Alviella's four, and, using Spencer's language in part, say that a reciprocal relation can be established between the Ultimate Being and man? Or, as readjustments are the order of the day, can we not shorten the formula thus: One Infinite and Ultimate Being upon whom we are dependent, and to whom we are related, and with whom we can become acquainted? DAVID NEWPORT.

THE GOLDEN RULE.

Editors of The Index:—

"Do unto others as you would that others should do unto you" has been adopted, I presume, as the easier way of expressing the language of Christ as given in Luke vi., 31,—"And as ye would that men should do to you, do ye also to them likewise." As it is self-evident that no man can wish that evil be done to him, this passage appears to mean, Do good to others, if ye would that others should do good to you. But, in the second verse following, Christ added, "And if ye do good to them which do good to you, what thank have ye? for sinners also do even the same." This apparent inconsistency I have not been able to reconcile satisfactorily.

Furthermore, it has seemed to me for many years that there is an element of selfishness in the "Golden Rule," which ought to be eliminated from any rule of conduct designed to be adopted by the people generally. To do good or be good in order to be well treated ourselves is selfish. Ourselves as recipients or beneficiaries should be entirely omitted. With due deference to the source of the passages quoted, I believe that, in the interest of moral progress, better results would be secured by the adoption of the following or a similar substitute,—namely, *As ye would that others should be and do unto* MANKIND, *so be and do yourselves.* We claim that a large majority of the people would individually prefer to have other persons lead truthful, honest, temperate lives. If this be so, then all who compose that majority should be willing to be and to do toward the public what they desire in others. We do not like to see people doing wrong and going to the bad: then, we should do right ourselves. All of us help to mould the masses. And, if our teachers in morals and religion had given more attention to the effect on ourselves and others, in this world, of our wrong-doing and bad examples, and less to their effect upon our spiritual condition in a future life, the people would be leading better, happier lives to-day, and be far better "prepared to die."

The Unitarians have always been allied to good works, and I am glad to observe that they are thinking more of the necessity of setting good examples respecting personal habits. As a denomination, they have too long omitted and delayed to accept one feature of practical goodness,—the practice and inculcation of total abstinence. In this respect, some of the orthodox sects have apparently outdone or excelled the Unitarians. Liberal ideas and free thought tend to independence of the individual in action and habits as well as in religious belief, and sometimes lead to a forgetfulness of the fact that the possessor constitutes a portion of the community about him, and that others, less independent than himself, may be looking to him as a pattern to follow in daily life. G. K.

SHARON, MASS., Jan. 23, 1884.

IN MEMORIAM.

Editors of The Index:—

On Friday, February 8, passed away Emil H. Neymann, in the fifty-first year of his age. A man of singularly lovely character, he was deeply beloved by a wide circle of friends, while to his immediate family his loss is indeed irreparable. To his sorrowing wife, Clara Neymann, who has been widely known in the field of reform, he was ever a sympathizing friend and co-laborer as well as a devoted husband. Fortunate it is for her that, in her hour of bereavement, she has two children, a son and a daughter, both grown up to years of usefulness, who by their affection can console her for her loss.

Mr. Neymann was born at Berlin, and later removed to Mannheim, where, in the year 1848, he drew in the love of liberty. In his young manhood, he sympathized, heart and soul, with the struggles of his fatherland for political freedom. After his emigration to this country, his energies were enlisted in the cause of progress and reform. In the anti-slavery struggle, in the movement for woman suffrage, his voice and his purse were ever on the side of human enfranchisement.

The funeral services took place at Liederkranz Hall, and were conducted by that Society of which Mr. Neymann had been for years a prominent member. The coffin was completely covered with flowers. An address was pronounced in English by Thaddeus B. Wakeman, who paid an eloquent tribute to the worth of the departed comrade. The hearts of all were moved by the sweet words of Mr. Hoffman, who spoke in German. He had been a warm friend of Mr. Neymann's, and his words will long be remembered by the friends who heard them. Several beautiful anthems were sung by the chorus of the Society. A large number of friends gathered to pay this last tribute of sorrow and respect to the beloved spirit who had passed away, and to surround his afflicted family with their sympathy. L. D. B.

GEORGE ELIOT vs. MR. TOWNE.

Editors of The Index:—

Since the address of Mr. Towne, at a dinner of the Liberal Union Club at Young's Hotel, January 26, as reported in the Sunday *Herald*, I have been anxiously expecting to see some indignant protest called forth by the grave accusations in regard to the characters of George Eliot and George Lewes. After a hymn, "An Invocation to Truth," followed "by the lighting of cigars," Mr. Towne, whose theme was "The Founding of the Free Religious Association," went far out of his way, it seems to me, to reflect upon the morality of these writers. The reason he gave was "the danger of license coming in with freedom." In order to warn these gentlemen of high culture and liberality, he ruthlessly attacked, from a hearsay standpoint, the reputation of one of the purest writers of fiction of the nineteenth century. Could he not find material for his arguments nearer home? Was such a meeting the place to give circulation to such reports? Is it conducive to the growth and spread of liberal opinions thus to proclaim the supposed faults of any individuals to the indiscriminating, unthinking world, which is always more ready to listen to reports of the errors of men and women of genius than to learn lessons of truth and purity from their productions? What is said now of the lives of Shakspere and Burns? It is the priceless value of their unrivalled knowledge, their sympathy with human nature, which will cause their writings, with those of George Eliot, to be read and quoted from to the remotest ages? Do we hear even the most orthodox conservative writer or speaker, when illustrating his subject by thoughts from either of these immortal writers, pausing to speak of the vulgarisms of Shakspere as seen from the stand-point of the present time, or of the impure liaisons of Burns? Where will one find in any of the creations of George Eliot an impure word or thought? By that standard should she be judged, and the sanctity of her private life left unmolested. Christ would have said to that assembly, "He that is without sin let him cast the first stone." One hundred years from now, the shamhating words of Thomas Carlyle, the deep reverence for truth plain and outspoken, "truth, though the heavens fall," will live and do their work, when the faults of his private life, his grumbling and moroseness, will be forgotten. So also will be the letters of Mrs. Carlyle, recording only the trials, the vexations,

Digitized by Google

and every-day occurrences of her daily life. I cannot imagine any good, but only evil, resulting from the part of Mr. Towne's speech alluding to the private life of these writers. They administer to a prurient taste. For such, the columns of the daily papers serve up records of crime and impurity. Clubs for the growth of truth and liberality ought to take a higher stand than a newspaper whose circulation depends on the supply of such food for the average public. How much nobler was Margaret Fuller, when speaking of Rachel, the great tragic actress. "Of the *woman*, she said nothing; of the artist, that she found her worthy of Greece, and fit to be made immortal in its marble." One reason which Mr. Towne gives for his belief in the impurity of Mr. Lewes' character is that, "when he asked the husband of Mrs. Gaskell, a pure, beautiful, gentle-souled man, what impression Lewes made on him," Mr. Gaskell replied, "Most repulsive." What a weighty reason for pronouncing a man's character dissolute! Repulsive appeared a little homely, deformed, hunch-backed boy to most persons who went to a foundling hospital on Blackwell's Island to select a child for adoption. But Isaac Hopper and his wife, passing by the little ones whose perfect forms and sweet faces would attract the multitude, took to their home of wealth and refinement the little deformed one, and found under his repulsive exterior a beautiful soul, which quickly responded to love and sympathy, and blessed his childless benefactors with the sunshine of an indwelling spirit of truth and goodness. We are all attracted to some persons, from others we are repelled. By what subtle law these mental forces are governed we do not know, but to judge character by them would be in opposition to all rules of justice.

CHARITY.

GEORGE ELIOT AND MR. LEWES.—During the past autumn there appeared in the Boston *Transcript* a communication from Edward C. Towne regarding the relations of George Eliot and Mr. George Henry Lewes. The writer claimed to have first-hand testimony with regard to the character of Mr. Lewes, and made accusations of his immorality and profligacy, and further asserted that his union with George Eliot was brought about by the grossest deception on his part. He says: "The assertion, so much insisted on in various quarters, that a rare happiness came to George Eliot from what is called her marriage, is as contrary as possible to the real truth, which was that, apart from her faithful efforts to make the best of the case for everybody, she was the most wretched and suffering of human beings. The true story of her life is yet to be told. The story that has been told for so many years, as to Mr. Lewes, never had any truth in it. It was first used to cheat George Eliot into a relation which, with any suspicion of the truth, her whole soul would have abhorred; and it has been used ever since to make current history tell lies favorable to Mr. G. H. Lewes." As this communication has been largely copied into literary and other papers throughout the country, and has, so far as I know, gone unchallenged, it seemed to me proper that it should be brought to the knowledge of those who were personal friends of both the parties mentioned. I therefore sent a copy of it to a gentleman widely known in this country as well as in Europe, and asked him if, as a friend of both Mr. Lewes and George Eliot, he could either verify or deny the statements made by Mr. Towne. He replies as follows: "The statements contained in the letter, signed 'Edward C. Towne,' printed in the Boston *Transcript* and reproduced in the *Literary World* of last December,—a copy of which you sent me,—are so entirely untrue and ridiculous that, had they appeared in an English paper, they would have been treated with the silence of contempt; but, considering that the American people must necessarily depend upon what thay may see in print on these matters, and considering the high esteem and admiration in which George Henry Lewes and George Eliot are held in America, it is desirable that the statements made by Mr. Towne should not go uncontradicted. Without touching, then, on questions of a debatable character, it is sufficient to say that there is not a word of truth in Mr. Towne's statement as to George Eliot having been cheated by a false story told by Mr. Lewes, and as to her 'having tried to make the best of it.' Nor is there one word of truth as to the unhappiness of her life. The Life of George Eliot, on which Mr. Cross is engaged, will, it is anticipated, be published before another year is out. I have it on the best authority that that Life will show, in her own words,—the words of letters and of diaries,—that the union with Mr. Lewes was regarded by her as the blessing of her life, and that, from first to last, their life together was one of the greatest happiness. I might add a great deal more from my own observation respecting the happiness of the union between George Eliot and George Henry Lewes, but the above will suffice. After having closed this letter, I remember one or two things, which I may just as well name to you, as they confirm in a striking way what I have told you in the above. A year after Mr. Lewes' death, George Eliot founded at Cambridge the 'G. H. Lewes' Studentship,' for the encouragement of the studies in which the late Mr. Lewes was specially interested. She invested the sum of £5,000 for that purpose. Further, Lewes left his great work, *Problems of Life and Mind*, not quite ready for the press. George Eliot undertook the task of completing the last two volumes from the material left behind by Lewes, though it was most troublesome and anxious work, and took many months to accomplish. Who else but a woman cherishing the memory of a departed one would have done so?" As the writer of this letter has not expressly authorized me to use his name in this communication, I withhold it; but I can vouch for his high standing, and also, from my personal knowledge, of his intimate relations with both George Eliot and Mr. Lewes. I cannot but hope that, pending the publication of Mr. Cross' Life of George Eliot, the papers which have published Mr. Towne's attack upon Mr. Lewes' fair name will give this, as another side of the question. Yours respectfully.—*Dana Estes, in the Boston Herald.*

FUNERAL OF MRS. G. J. HOLYOAKE.—Mrs. Holyoake, of Sudbury, Harrow, whose death occurred at Brighton, was interred at Highgate Cemetery. Rev. Stopford A. Brooke would have officiated at the chapel,—the views of the deceased being mostly in accord with those which characterize his ministry,—but he was prevented being present by an unavoidable engagement. As Mr. Holyoake had often spoken at the graves of others, his wife had a wish—the only public one she ever expressed—that a few words should be said at her own. That this might be, Mr. Holyoake himself spoke in the chapel, first reading a letter sent by Mr. Stopford Brooke, which, from its beautiful sympathy, was of the nature of a service. After that, he read from the Second Book of Esdras the remarkable dialogue between the Prophet and the Angel Uriel upon the knowledge and duties of this world, following the words by a short oration upon the three qualities which distinguished Mrs. Holyoake,—that of service of others, in which she never thought of herself; that of truth, not of speech only, but of conduct, of which she had so clear a sense that the absence of it in others was not concealable from her; that of pride, which was more than self-respect,—it was debtlessness,—an independence of obligation which was not a second nature,—it was her first, and she had no other. Though called upon early in life to confront alone the death of her first child, to be the sole watcher, the sole sympathizer, and sole mourner at an unattended grave, she brought away no murmur. During more than forty years, she never forgot it, and never complained. It was written of her

> The martyr's cross without the martyr's cause,
> The grief, the wrong, without the self-applause;
> A round of homely duties nobly done,—
> These were her life, who sleeps beneath this stone.

The service in the chapel being ended, relatives, sons and daughters, and early friends proceeded to the grave, where Mr. C. D. Collet sang the fine hymn of Harriet Martineau, beginning

> Beneath this starry arch,
> Nought resteth or is still;
> But all things have their march:
> As if by one great Will
> Moves one, move all,—hark to the footfall!
> On, on, forever.

—*London Daily News.*

IF there were no enemy, there could be no conflict; were there no trouble, there could be no faith; were there no trial, there could be no love; were there no fear, there could be no hope. Hope, faith, and love are weapons, and weapons imply foes and encounters; and, relying on my weapons, I will glory in my sufferings.—*Dr. Newman.*

PERSONAL ITEMS.

THE Duke of Argyll intends to write a reply to Mr. Henry George's *Progress and Poverty*.

JOHN HUTTON BALFOUR, M.D., F.R.S., the distinguished English botanist and physician, is dead.

DR. LEWIS G. JANES is giving a course of nine lectures in New York City on "Primitive Christianity."

B. F. UNDERWOOD lectured at Denver, Col., on the 17th, 18th, and 19th inst. He speaks at Kansas City, Mo., on Sunday next.

OSCAR WILDE says he will never forgive the American newspapers for their treatment of him. What is to become of the American press now?

THE Pope has despatched a corner-stone and a marble altar slab for the chapel to be erected at Cahirciveen, Ireland, in memory of Daniel O'Connell.

MISS SUSAN B. ANTHONY was the guest of Mr. W. L. Garrison during her stay in this city, where she came to attend the funeral of Wendell Phillips. She will make Washington her home this winter.

PAUL BOYTON, the swimmer, has married a young woman in Chicago who is described as "a cultivated lady of great personal charms and some means." Boyton proposes to settle down in New York.

MR. MILN, once preacher and now actor, has in hand a new play written for him. The play is entitled "Napoleon I.," and Mr. Miln is to be *Napoleon*. He wants to go to Paris at the end of the present season to get into French ways.

MARK M. POMEROY, once known as "Brick Pomeroy," has lately turned up in New York as a temperance lecturer, and cheerfully prophesies the speedy coming of a day when there shall not be a rumseller left in the city "outside of the Board of Aldermen."

STEPHEN LONGFELLOW, the father of Henry W., graduated from Harvard in 1798, with Channing and Story for classmates. He stood among the first at the Portland bar, but had no taste for politics, although he was once a member of Congress and also of the famous Harvard Convention. He was for many years one of the Trustees of Bowdoin College.

THE Salvation Army of Denver, Col., paid its respects to Col. "Bob" Ingersoll in a body, and exhorted him to repent ere it is too late. The Colonel listened to them philosophically, puffing away at his cigar and making the smoke curl as he blew it into the air. After they had finished, he told them that he would consider what they had told him, but couldn't promise to accept their views.

JUSTIN MCCARTHY, the novelist and member of Parliament, is a native of Cork, and fifty-four years of age. For a number of years, he was a reporter on the Cork *Examiner*, and an enthusiastic member of the Cork Historical Society, which was mainly a recruiting ground for the Young Irelanders. In 1850, he went to Liverpool, and afterward became editor-in-chief of the *Morning Star*, which, under his management, did excellent work for the cause of Ireland.

YOUNG HENRI ROCHEFORT has returned to Paris a physical wreck after his experience with M. de Brazza on the Congo. African fevers have robbed him of his hair and teeth; but, in those respects, his father tells him, the wig-makers and the dentists will soon make him as good as new. The young man is disgusted with M. de Brazza, whom he regards as an impracticable dreamer. He is trying, Rochefort says, to win the favor of the savages by flattery, which takes the form of imitation. Thus, he goes without clothes, drinks only water, and lives on cocoanuts and bananas.

ACCORDING to the *Italia*, the Mahdi is not so black as he is painted. It seems that a correspondent of that paper, a missionary who succeeded in escaping from Upper Egypt to Cairo, states that the False Prophet treats his prisoners remarkably well. They are lodged in tents and properly fed; and, when some sisters of charity and Catholic missionaries expressed some natural anxiety as to the fate of some one hundred and fifty children whom they had baptized and whose education they had been supervising, the Mahdi had the little converts brought into camp, and intrusted to the care of their masters and mistresses. If this information is correct, it will be possible to think better things of the fierce soldier of Islam who is causing such trouble in the Soudan.

Third Edition.

BIBLE MYTHS,

And their Parallels in Other Religions.

Being a Comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations.

The object of this work is to point out the myths with which the Old and the New Testaments abound; to show that they were held in common with other nations; and then trace them to their evident *origin* and *explain their meaning*.

"It has long been acknowledged by the most eminent Biblical students that the Hebrew Scriptures contain a large mythical element; but, so far as we know, the present is the first complete and scholarly attempt to trace these myths to their source, and ascertain their original signification."—*Boston Courier*.

"Never before has there been given a volume to the reading world that shows the research for the origin of these myths as does this one just published by J. W. Bouton, of New York."—*Boston Times*.

"It is unquestionably true that the results of a rationalistic study of the Christian Scriptures are nowhere else so accessible as they are now made in the work before us."—*New York Sun*.

1 vol. Royal 8vo. Cloth. 600 pp. $3.00.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE INDEX,
44 Boylston Street, Boston, Mass.

Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

Address THE INDEX,

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. *It costs no more* to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c. per line.
" 13 " 25	" . . .	8c. " "
" 26 " 51	" . . .	6c. " "
" 52	" . . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

CURRENT TOPICS.

A VARIETY actress, who was arrested recently at Nashville, Tenn., proves to be a nun who had escaped from an Ontario convent. A singular school for the education of actresses! There is a whole history of misdirected faculties contained in that item, and a lesson as well.

THE new penal code of Italy abolishes capital punishment. The feeling against its infliction was so strong that, although death sentences were numerous, only one execution has taken place during the past ten years, the extreme penalty of the law being evaded by commutations and pardons.

A FANATICAL sect, whose members claim that they believe in the Bible and boast that they "have faith in Faith," has recently been brought to light in New York, by their refusal to bury their leader, Robert J. Haynes, for a fortnight. During which, they kept up continual prayer around the body, in the hope that it would be raised by miracle. Can we call them less consistent than Christians generally?

THE German Sanitary Commission, sent out to Egypt and India by the imperial board of health some months ago to investigate the nature and causes of cholera, has just reported from Calcutta that the commission has discovered the cholera germ in a water tank in that city, and also found in a suburban village, where cholera made its appearance, the same microscopic organism which had been discovered in the lower intestines of cholera victims in Egypt.

WESTERN Christianity has some unique phases. For instance, the Mayor of Leavenworth, Kan., in retaliation for a newspaper attack upon him by Editor Anthony of the Leavenworth *Times*, gave him a thrashing when they met on the street, and Anthony in return published still worse things in regard to him. The mayor, however, is specially grieved by Anthony's charge that he dropped into profanity during the street exercises, and says, "I used no oath except 'Damn you!' and that I do not consider profane, because it is a quotation from 'Pinafore.'"

MATTHEW ARNOLD may possess good critical judgment, but he certainly has very little tact. It seems to be part of his self-imposed mission to show no mercy to the sensibilities of others. In Boston, he attacked the reputation of Emerson as a thinker, and, while being entertained at a select party in Montreal lately, gave offence to prominent Catholics present by referring to the narrow and illiberal doctrines of all the Churches, including the Roman Catholic. Dr. Louis Frechette, of the French academy, who had just read a poem of welcome to the distinguished critic, abruptly left the room in the midst of Mr. Arnold's remarks, so displeased was he with what was said.

WE note with pleasure any movement made in Russia toward the amelioration of the condition of its laboring classes or toward humanitarian reform; and the new factory act, which has just been put into operation in that country, is a decided step forward in both directions. These are its provisions: 1. Children under ten years of age must not be allowed to work in factories. 2. Workers from the age of twelve to fifteen years must not work more than eight hours a day. Night work for children can only be authorized in establishments where the process of manufacture cannot have a bad influence on the health. Even if allowed, the work must not exceed four hours. 3. The work of children must be regulated in such a way as not to prevent their going to school three hours every day. 4. The owners of factories are obliged to admit inspectors and their assistants into their works at any hour of the day.

WE take the following from the *Presbyterian:* "Dr. C. S. Robinson makes a protest against 'artistic helps in divine service,' and tells the following story: 'Once when I was preaching in a church beside the Hudson River, in May, the busiest month of the fishing season, I gave out the hymn, "Jesus, lover of my soul." The leader set it to a tune which, for the sake of some man's "musical thought," repeated half of the final line. When I heard the first verse, I shrank with consternation in frightful prospect of the second; for the movement ran thus: "O receive—O receive—O receive my soul at last." That did no harm: it was simply unnecessary. But the next was awful. When I repeat it, it will be supposed a joke, although I am writing in sad earnest of a fact which almost destroyed my service: "Cover my defenceless head—With the *shad*—with the *shad*—with the *shad*-ow of Thy wing." The whole congregation stirred with irrepressible laughter. Must we all be forced to stand this?'"

THE recent rise of the Ohio River involved much suffering and loss of property on the bottom lands for the distance of a thousand miles. The river from its remote sources to Cairo is a great conduit, carrying off the water from the great and little tributaries coursing their way into the river from the mountains of Western New York, Pennsylvania, and West Virginia, and from the highlands of Southern Ohio, Indiana, and Illinois. This season to the very heavy accumulation of snow on the mountains have been added heavy and continuous rains, swelling the flood till it scorned the control of man. Thousands of families have been driven from their homes, an enormous amount of property destroyed, and some lives lost. There seems to be no way to prevent these floods, but it is certain that cutting away the forests has increased their destructive power. Deprived of trees, the ground dries so that it does not readily absorb water. The tree trunks, roots, and mosses offer but slight resistance, and the mountain brooks and streams course their way freely to the river.

THE *Catholic Review*, referring to the fact that a "Brooklyn debating society, with the aid of an evening paper, has been calling attention to the question of taxing church property," says that "the present law will not be changed." But our contemporary finds satisfaction in the thought that, if church property shall be taxed in the future, the change will not force any of the Catholic churches into the market, while it will be pretty sure to result in "crushing out the life of thousands of petty conventicles of the sects." Is this the highest view of the subject to which the ablest Catholic journal in America is capable of rising? Does our esteemed contemporary see no injustice in forcing thousands who do not belong to, and do not believe in the large or "petty conventicles of the sects," to help support them, in opposition to their wishes? If the Catholic Church is of divine origin and authority, why do not it and its representative organs discuss a subject like the taxation of church property from a just and enlightened point of view rather than from the stand-point of a narrow and selfish sectarian zealot?

THE Pope issued a decree December 24, under the heading "Urbis et Orbis," ordaining that on and after Jan. 1, 1884, the litany of St. Loretto, in honor of the Virgin, be recited by the officiating priest after every mass celebrated in the parochial churches throughout the world, and that, in addition to the titles conferred upon Mary, a new title "Regina sacratissimi Rosarii" (Queen of the most holy Rosary) be reverently pronounced aloud. The Pope in his letter says that "the rosary was specially instituted to invoke the patronage of the mother of God against the enemies of the Catholic name," and that "for this reason we exhort and entreat all to hold on religiously and constantly to the practice of reciting the rosary daily; and we moreover declare that it is our desire that in the principal church of each diocese it be recited daily, and in the parish churches on feast days. To propagate and maintain this exercise of piety, the religious orders and the Dominicans, by a special and peculiar title, can render great service; and we feel assured that in such a fruitful and noble office none will be remiss." Think of that in this age of science and progress!

THE MORMON PROBLEM.

Our readers will find elsewhere in this paper an earnest appeal by Mr. T. W. Curtis to the Liberals of America, urging them, in view of the new bill with regard to the Mormons, which has been introduced into Congress, that they should take immediate action for a public and united expression of their opinion that the entire separation of Church and State is the only principle consistent with the American form of government, and the only basis on which the question of Mormon polygamy can be legitimately met and successfully solved. Mr. Curtis writes with his usual nervous strength, and his intimate knowledge of the principles, motives, and condition of the Mormon people gives weight to his views, so far as his article concerns Congressional legislation for Utah. But the bearing of the general principle of the separation of Church and State upon such legislation he does not seem to us thoroughly to have considered. Without attempting, however, to traverse his argument in detail,—to much of it, indeed, we should assent, and we do not have any portion of it before us as we write,—we propose here to state our views on the same subject, writing very much as we should have written, had we not read his article.

In the first place, we should say that the principle of the separation of Church and State does not require that religious toleration should be extended so far as to protect any church or religious sect in the commission of crime. On the contrary, if a government were to guarantee protection to any religious sect in whatever it might choose to do as a part of its code of religious observance, there would be, in fact, in such case a very close union between Church and State. No one religion would be recognized, indeed, as paramount over all others; but the claim of religion itself, in all its forms, to have paramount authority over the actions of the State, would be fully recognized. What the principle of the separati n of Church and State requires is that civil government shall give no official recognition nor support of any religion, but shall protect individual citizens impartially, in respect to personal rights and conduct, against all assumptions of religious domination. On this principle, the State simply keeps its hands off of the churches and sects, whether above to suppress or beneath to sustain. It permits to all an equal chance for the organization of their respective beliefs and worship. All this it does in the interest of freedom of thought and conscience. But, if any church or sect should proceed to the commission of acts which are a criminal violation of the individual right of any citizen or class of citizens, then a free government, in the interest of personal liberty, will interfere to protect its citizens against such religiously inspired crimes.

For instance, there are in India outcast, wandering tribes in whom the moral sense—if it was ever developed in them—appears to have been entirely obliterated, but who have strong religious convictions, and who actually make theft and murder a part of their religious observance. Suppose some of these tribes were to come to this country to live, and were to attempt here to ply their vocation and exercise their peculiar modes of religious observance, would the State, instead of interfering with this religious custom of theirs, solemnly protect them in it under the ægis of that clause of the National Constitution which guarantees freedom in religious belief and in the exercise thereof? Of course, in such a case, the general personal rights of people in respect to life, property, and the pursuit of happiness would be found to outweigh all religious beliefs, however sincerely urged, which should thus outrage these rights. So, too, if any higher Hindu sect, fleeing from the persecution of British rule in forbidding the burning of widows alive, should come to the United States with a view of re-establishing that rite, would the principle of religious freedom here, or the principle of the separation of Church and State, require that there should be no interference with the ceremonial? We imagine that the State, on the very basis of its separation from all recognition of church authority, would say that it had a law against murder, which no religious belief in a sane man could nullify; and, further, that here in this land of religious liberty, the widow, intended to be offered on the funeral pyre of her husband, would be free from the oppressive law which, in her native India, might make that fate a not unwelcome one to herself. Or, again, are the Guiteaus, who profess to believe themselves divinely inspired to kill Presidents, or the Freemans, who imagine themselves to be commissioned from heaven to sacrifice their children, to be permitted to do such deeds on the plea of religious freedom? The law of the United States says that the rights of citizens are to be protected against such claims to religious authority. It is the very essence of the principle of State secularization that it regards the personal rights and conduct of citizens simply from the basis of civil equality in respect to each other, and not at all from the point of view of this or that or any religion which may profess to issue commands in the name of heaven. And the article in the United States Constitution which says that "Congress shall make no law prohibiting the free exercise of religion" is evidently to be interpreted with the implied addition, *provided such exercise be not the commission of crime.* If this be not now the legitimate interpretation, then those words, in the interest of liberty, should be added by amendment.

The question, therefore, that next arises is, Is polygamy to be accounted a crime? That it is so accounted by United States law, as well as by the law of the separate States, there is no question. But we do not forget that statute law sometimes technically makes that to be a crime which, from a moral point of view, may not be so. Let the question be, therefore, whether polygamy is one of those practices which *ought* to be regarded as crime by the United States government. And we should have as little hesitation in answering this question in the affirmative as if the question concerned only the fact whether the government *does* regard polygamy as a crime. Nor should we make this answer by following the injunctions of one religion as against another. We leave out of view entirely the religious aspects of the question. We say that polygamy is to be accounted a crime on grounds of moral, social, and political science. It is a survival of a barbarian age, against which the voice of modern civilization and enlightenment pronounces its condemnation. Monogamous marriage as the foundation of the family is the outcome of the long eras of social evolution. Anything contrary to this is most especially an anachronism in a free republic. Polygamy is a gross violation of the equal rights of woman in the marriage relation. It is a violation of the rights of children. It is the destruction of the institution of the family. It is a relic of the time when woman was the slave of man's passion; and all nations penetrated by the light of modern civilization have left it behind. It could gain no foothold to-day among a people where woman should be educated as man's equal. Polygamy, then, is rightly regarded as one of those crimes against society over which religious belief cannot be permitted to throw its protection.

Nor does it logically avail aught against this argument to refer to the social vice that prevails in monogamous countries,—for, if such vice be sheltered by government, then government neglects its duty there also; nor to argue that the Mormon women who live in polygamous marriage are in better material condition than they were when peasants in Europe, and would not exchange their new life for the old. The negro's condition was doubtless raised by Southern slavery above that to which he was born in Africa, but this did not break the force of the moral appeal for his emancipation, not for the purpose of sending him back to Africa, but for opening to him the opportunities of civilized freedom.

We should say, then, that Congress has ample right, moral and constitutional, to legislate against polygamy in Utah as elsewhere, and to enforce its legislation. And the only reason why special legislation is required for Utah is because there polygamy exists under special conditions. The means of enforcing the general laws on the subject are not adequate to reach the evil. But, owing to the peculiarly exceptional conditions, Congress may well hesitate to apply military force for executing the law, preferring to try first the gradually repressive means of what may be called the wearing-out process of legislation. The Edmunds law and the supplementary bill now before the Senate are of this nature. Two features of the latter appear to us of very questionable constitutionality,—namely, the provision for putting the Mormon Church corporation (under certain circumstances) into the hands of trustees, appointed by the President of the United States, with power to manage its affairs, and the provision to abolish the "Emigrating Fund Company" of the Church. But of this bill we shall speak more at length hereafter. Suffice it to say now that we think that Congress, in this matter, is working in the right direction and with the right aim. That it is a difficult problem to deal with cannot be denied. While there is a clear right for national legislation against polygamy as a crime, and no claim of religious authority can invalidate that right, care must be taken that the legislation do not assail the Mormon Church as such, but only its crime.

For the petition which Mr. Curtis urges we do not see any special occasion in the settlement of this question, though the several propositions it covers may all be desirable.

WM. J. POTTER.

DR. MAUDSLEY ON SPONTANEOUS VARIATION.

Dr. Maudsley is supposed to be a materialist, and is classed and denounced as such for seeking to give a natural explanation of the origin of organic life and of the existence and action of the will, as well as the body, in harmony with the laws of universal energy, natural selection, and evolution. It cannot be denied that he has made large contributions to the sciences of physiology and psychology; that he has thrown much light upon the hitherto mysterious workings of the human mind through and by means of the great scientific discoveries of the conservation of energy and natural selection. He has at least enlarged and strengthened the doctrine of monism, if he has not succeeded in establishing it in the realm of metaphysics. But has he dissipated the final mystery? Has he carried his generalization to its ultimate limit? Is it not possible that he is improperly pronounced a materialist? I wish to call attention to some expressions in his book which call for a careful pondering of his meaning. He evidently holds to what is popularly termed "spontaneous generation," the passage of non-living into living matter, a transformation, he says, which even theologians will not

Digitized by Google

dispute, if it be regarded as a supernatural, creative act; and he finds, as ultimate facts, "other steps in the transpeciation of matter and energy, reason and will from sensibilities that are not reason and will, sensibility from simple irritability, consciousness from that which is not conscious." But, while endeavoring to show the complex *how* of the ceaseless becoming of the new out of the old, which we see everywhere around us, he yet appears to admit or concede all that it is consistent with science to concede, and as much seemingly as the theist or spiritualist could ask,—namely, that the *cause* or *why* of the becoming is too deep for explanation.

Of the new thing produced by evolution, considered as a natural unfoldment or sprouting forth with its new properties, he says: "Though it presupposed the elements that united to form it, and therefore had a continuity of being with them, its new function was not the sum or mechanical effect of the co-operation of these properties: it was quite a special power, that might properly be said to have its *autonomy*, or, so to speak, its *spontaneity*. It is vain to ask *why* it is so: we must observe what has taken place, accept that as ultimate, and be satisfied to trace *how* it is so."

In accordance with this view, he holds various language to the same effect: "The initial variation which, profiting by what is called natural selection, undergoes gradual development, *is an original fact that we cannot explain*. Call it an internal principle of evolution, if you will, though it is doubtful whether matters are made any more clear thereby. To call it an *accidental* variation is hardly well, since there is no such event as accident; and, in any case, that is ill called an accident which issues finally in such a definite and special product as a new organism. It is almost equivalent to calling man himself an accident. Natural selection affords us an explanation of the survival of the variation once it has been made, *but no explanation of the organic start itself nor of its progressive increase*. . . . All we know and understand at present is that it is the observed tendency of organic matter to break into varieties, thousands of which probably occur and come to naught in the absence of fit surroundings to preserve them, for each one that survives and is fixed with the lapse of time. . . . To infinite Power, with infinite time and infinite space at its disposal, it is manifestly no greater matter to waste planets than to waste seeds."

Here, he appears to admit a designing Creator, though elsewhere he explains the autonomies and spontaneities of nature as the involutions in the germ of "the whole history of the earth antecedent to it," rendering the evolutions or possibilities of the germ intrinsic and essential or spontaneous, and not due to its immediate environment or medium, though requiring the medium for its proper expansion and growth.

He thus seeks to give a rational explanation to the perpetuation of previously acquired functions and aptitudes, and explains the initiation of new functions and growths as "mainly the direct inspiration of the organism." "In its nature," he says, "is inscribed the architectural *plan* or *form* of its development."

Initial variation of function, at first slight, he thinks, precedes or antedates variation of structure, and induces the structural peculiarity. But how and whence comes the involved structural *plan* or *form*, if it be not accidental?

Dr. Maudsley's reference to "infinite Power" leaves it open to be inferred that he invokes the action of a supernatural Designer or God, and so yields the point of controversy between spiritualism and materialism, or monism and dualism. Is this so? It is the point which I desire to see cleared up; for does not the concession, if such it be, carry with it all that is claimed in the doctrine of dualism?

Perhaps Dr. Maudsley would admit a Power back of and above phenomena, absolute but impersonal and unconscious, unknowable save in its manifestations. If so, then he is not properly a "materialist," and must be classed with Mr. Spencer and the agnostics.

A. N. ADAMS.

SUNDAY IN BOSTON.

It will probably excite a smile of incredulity, in the case of most persons, to be told that New York is a more religious city than Boston. But the facts and the figures prove it incontestably. The popular belief is only another instance of the survival of an old opinion, after long-continued but unperceived changes have reversed the circumstances upon which the opinion was originally based. Taking the population of the two cities through and through, no one who knows them would deny that Boston is the more moral, orderly, and quiet. But, in the matter of church-going,—which is the only available criterion of religiousness,—Boston is far behind New York. The elaborate church-censuses, which were taken in each city not long ago by prominent journals, prove that one-half of the adult population of New York holds membership in its churches, while only one-fourth of the people of Boston are found in the churches on the "Lord's Day." But yet a more orderly and quiet city than Boston on Sunday is not to be found in the country. This is a strong argument for those who believe that the inherent self-respect and inherited moral restraint of society are always sufficient for its well-being, apart from what are known as religious beliefs and ceremonies. It is a startling evidence of the preponderance and power of the foreign element in New York that, of the six hundred thousand persons attending divine services on a Sunday, five hundred thousand are Roman Catholics. In Boston, of the one hundred thousand church-goers, only one-half are Roman Catholics.

Nearly everybody is agreed that Sunday should be reserved as a day of rest. The dispute is between those who wish to make it a day of recreation and those who wish to make it a purely religious festival. Yet, last year, seven of the most eminent clergymen of New York publicly gave it as their opinion that the observance of the day could no longer be enforced on religious grounds. Nearly all agreed that the day should be made as cheerful and useful as possible, and that, in the words of Milton, "lawful enjoyment is the surest way of preventing unlawful gratification." In 1869, Mr. Moncure D. Conway met a man in London who was opposed to any steps being taken toward opening the art galleries of that city on Sunday, because he did not want to do anything to lessen the disgust in which the observance of the Puritan Sabbath was held. In America there are unmistakable signs of a mollifying of public opinion about the day. On fine Sundays, bicyclers are to be seen on every road leading out of Boston, and people seem to like to look at their quiet trundling. Nobody lodges complaints against them. Professional games of base-ball have been played on Sunday at Louisville, Ky., and Columbus, Ohio. There is a good joke told about five judges of the Massachusetts Supreme Court, who were not long ago arrested while travelling on Sunday, in order to reach in time the place where they were to administer the law. The venerable criminals had to appeal to the Governor before they could obtain release from jail. During the last term's season, some Harvard College students were arrested and brought before Judge Ladd in Cambridge for playing lawn-tennis on Sunday. The cunning fellows proved to be a match for the court. They had their defence ready, and very laconically informed the judge that they could prove that President Eliot was at the theatre on a certain Saturday evening (which is legally Sunday), and that, if they were fined, they would have the President arrested. The judge concluded to let them go unmolested! Then there are a great many farmers throughout the country who (as the writer of these lines knows from personal observation) do considerable work on Sunday in their back cornfields and meadows. There was a man at Brook Farm, it is said, who carried his radicalism so far as to refuse to work on any day except Sunday, when he invariably did a tremendous amount of out-door labor.

Good Sunday concerts are approved by the genial Robert Collyer; that is, he thinks it far better to have people attend a good concert (if they won't go to church) than to have them in idleness and mischief. In New York there are generally Sunday evening concerts at the Casino, the Cosmopolitan Theatre, and the Grand Opera House. The cellar, or "dives," performances have been pretty much suppressed. In Boston, the Howard Athenæum furnishes "sacred" concerts in the shape of jubilee songs, etc., by minstrel troupes.

The only other kinds of public amusement accessible in winter are spiritualistic séances, or exhibitions, and a visit to the art gallery. The religious element in a séance held on the stage of a theatre is, of course, almost *nil;* and it is evident that the whole affair is a shrewd defeat of the intent of the law for the purpose of giving a sleight-of-hand exhibition on Sunday. The Art Museum presents the one cheerful bit of secularization in a Boston Sunday, and it is the only place where people who are not church-goers do not have the doleful Sunday look on their faces. The hundreds of people moving through the galleries of sculpture and painting at the Museum are almost to an individual well-dressed and intelligent; not by any means laborers and mechanics, as has been stated, but middle-class people, with sensitive, well-cut features and art-loving instincts. Young people predominate.

But it is at the North End that one finds the quaintest illustrations of Sunday observance. How many Bostonians are there who know that the city has a Holy Well for the curing of diseases? If one wishes to enjoy a fresh sensation, let him go down to the North Bennet Street Portuguese Church, the church of St. John the Baptist. Services are held at the present time in the basement of the church building. As you descend the steps, it seems remarkably like going down cellar; but, when you enter the room, you stand astonished. Are you in the catacombs of Rome, and are these earnest worshippers the Christians of Nero's time? But no: the blazing altar, the candles, colored images, and façade of sacred emblazonments that covers the entire further end of the room where the fat, white-haired old priest is lazily intoning the service,—these things, as well as those image-shrines into which the window-seats have been gaudily converted, seem to say that you have been transported to the heart of modern Europe. Everything has a foreign air. You look over your shoulder, and see a large, lighted shrine or alcove, some ten by six feet in dimensions, wherein is a colored figure of St. John the Baptist, with his crook. At his feet lies a white lamb, while just before him hangs a slender chain suspended by a pulley over the mouth of a sacred well. . The small well-aperture has over it a stone-ware cover,—jar cover,—and, as you look, a lad comes up, and takes a drink out of a pailful of the water that some one

Digitized by Google

has drawn. Affixed to the wall is a written notice, framed and covered with glass, to the effect that the water of this well, having been blessed and dedicated to God, is to be used mainly for the healing of the sick, for altar uses, and for baptism; it is not to be drunk by children or by those taking it irreverently; "bottles may be rinsed at the well"; those coming to obtain it for the healing of the sick are to "say the Our Father and the Ave Maria, and drop one cent in the box for the poor souls in purgatory." By this time, things begin to look pretty picturesque; and you gaze with curious feelings at the humble and intensely reverent audience of some four hundred persons who fill every seat in the room. There is another shrine on the other side of the entrance-door, containing the baptismal font and the image (life-size) of another saint. The gaudily colored window-alcoves, with their images and pictures and inscription-plates of shining metal, appear to be dedicated to the countries from which portions of the audience have come. One has the inscription "Fayal," and another "America": over the latter, the spread eagle hovers with painted wings. As you leave the church, an obliging policeman informs you that the "Portugee" are a very respectable and well-to-do element in the population of the North End. They are never seen intoxicated, and are dearer to the heart of the police than are the Italians. The latter are multiplying and thriving apace in the neighborhood of Prince Street. They own almost the entire side of one block of houses, and in North Bennet Street have a flourishing plaster-image manufactory and wax-flower establishment. Their little brick church on Prince Street, with its Romanesque windows, zinc cornice, and statues at the sky corners thereof, is dedicated to St. Leonard of Port Morris,—"In Honorem Divi Leonardi a Portu Mauritio,"—and is densely crowded every Sunday. Its interior is as quaint and European in look as that of the "Portugee,"—very narrow, the side galleries almost meeting, panel pictures everywhere painted on the wood, and much rich color of vestments and sacred emblazonry.

What a change has come over the North End since the days of the Winthrops and the Mathers, or even since Father Taylor's time! Here is old Christ Church in Salem Street, with its Paul Revere inscription. Would not the bodies or skeletons of Cotton and Increase Mather, that lie a stone's throw away yonder in Copp's Hill Burial Ground, stir wrathfully in their coffins, if they knew how few (150) church-goers the silver chime of Christ Church bells called together to worship on a Sunday morning? And how would not Father Taylor storm and rage, if he could return to his Bethel, and see the thin audience of seventy-five persons (*not* seamen) assembled Sunday morning? There, to be sure, is the same huge marine painting over the pulpit,—the ship still bears gallantly onward, with all sails set, and the surf yet dashes fiercely on the sandy and rocky shore.

"The bows turn, the freighted ship tacking speeds away under her gray sails,
The beautiful and noble ship, with all her precious wealth, speeds away gayly and safe.
But, oh, the ship, the immortal ship! O ship aboard the ship!
Ship of the body, ship of the soul, voyaging, voyaging, voyaging." —*Whitman.*

There is another bethel in this region, "Father Cook's Bethel"; but neither of them is flourishing for the reason that almost the entire population of the North End is now not Protestant, but Catholic. Southward and westward goes the steady march in Boston; and twice has the centre of population and influence shifted,—once from Copp's Hill to Beacon Hill, then from Beacon Hill to the South End and the Back Bay. Here, in the famous North Square, where Paul Revere's house still stands, all is quiet desolation. Even the old Mariner's House has in winter a very unnautical appearance. On Sunday morning, you will perhaps see one coffee-skinned old sailor there among a crowd of loafers, who, sitting and lying around the fire in the office, are poking fun at old "Stone," the crazy street-fiddler with the pea-green coat and sodden face, the chosen and boon companion of that mighty philosopher, Daniel Pratt. Yes, things are pretty quiet in North Square, but they are pretty lively in the Catholic churches. Stepping in to St. Stephen's Church, corner of Hanover and Clark Streets, you see a well-to-do audience of one thousand Irish men and women, listening earnestly to a young priest in lace-like robes and silken waist-cord, who is preaching hell to them in a very vigorous and emphatic manner. You have no Protestant shuffling and snuffling here, no candying over of the unpleasant doctrine; but you are told flatly that because one named Adam sinned once on a time that you and the whole human race were eternally damned. "God is *infinitely* good," says the handsome and bold young priest, "but he cursed the unnumbered myriads of earth: he might have cast us all into hell at one fell swoop, but out of his goodness he gave us a chance through Christ." While you are puzzling over the logical paradox of infinite goodness and infinite cursing proceeding from the same divine bosom, the priest proceeds to speak with scorn of the current denial of hell, and tells his hearers that they are to remember that, although writers in the newspapers may deny the existence of hell, yet they are to remember that these writers are but penny-a-liners after all, and that the fathers who wrote those mighty elephantine tomes in the libraries cannot even be understood, in the profundity of their wisdom, by said foolish modern penny-a-liners who write our newspaper editorials.

The streets of the city are remarkably quiet on Sundays. On Atlantic Avenue, the only sign of life is a poor, trembling old apple-seller. (Shades of Mather and Cotton! Why doesn't somebody arrest him?) But upper Washington Street, the region between the Globe and the Windsor Theatres, presents a very lively appearance in the evening. A large number of fruit and candy stores, having taken out a victualler's license, are enabled to evade the letter of the law, and do a small business in fruit, candy, and nuts. Cigar stores, too, are open; and the sidewalks are crowded with happy young people out for a walk. In 1882, an attempt was made to enforce the penal code in New York by the arrest of newsboys, boot-blacks, and Italian orange-venders; but a great laugh was raised, and the attempt ignominiously failed. Besides the hotels and churches, the only other public places open on Sunday in Boston are the pleasant rooms of the various aid societies, the Young Men's Christian Union, the Young Men's Christian Association (in their magnificent new building near the Brunswick Hotel), and finally the Boston Public Library reading-room.

On the whole, the opportunities for instruction and amusement outside of the home and the church on Sunday are lamentably poor and few in number. Here are nearly three hundred thousand non-church goers left to mope through the day as best they can. Here are tens of thousands of workmen and clerks, who, after they have had their nap and read their paper, would fain walk out and improve their minds or take a little recreation after their slaving work during the week. The churches do not reach them: they are left to idleness and their own devices. These are the facts: what is to be done is for the philanthropists and the wealthy to decide.

WM. SLOANE KENNEDY.

INERTIA.

Great is inertia, one of the most powerful drones in the hive of conservative thought since the time of Sir Isaac Newton. It has made itself equally useful to physical hypotheses and theological polemics. It is an absolute incapability constantly performing the greatest wonders. More quiescent than the Buddhist's Nirvana, it keeps the whole universe stable, and constitutes an essential factor in every process of causation. Its all-pervading agency is presupposed in all observation, in every calculation of physical science, in all action and all anticipation. For a thing which is intrinsically inert, powerless, always and everywhere, this universal and ceaseless action is very striking. Well, Newton did not conceive matter as absolutely inert. He used the term as the best he could get to denote a certain universal form of physical force, not forcelessness, though it is to be confessed he is deficient in clearness and consistency. But the etymology of the word has had great influence on the meaning very often subsequently attached to it, making it equivalent to a negation of *vis*, or force. Its adoption was therefore unfortunate, and was due, doubtless, to a confused and partially erroneous notion. Countenance is given to this vulgar notion of matter by the familiar formula that matter moves or acts only as it is moved or acted upon, which is Newtonian.

Upon this comes in the fossil theologian with his inference, very much, too, in the spirit of Newton's theologizing, that all material motion and action implies an immaterial force as its cause. If matter is absolutely and intrinsically inert, this inference is just and necessary. All the motion and action of matter must be the effect of something other than itself. The universal distinction also made between matter and force, as if force were not matter nor matter force, has also fostered this habit of thinking. Hence, our theological proofs of dualism have been quite confident and apparently triumphant.

It is time for this folly to pass away. The intellect of our times is getting weary of it. Matter is known only as a force. It cannot otherwise be known at all, because only force can be or do or suffer, and therefore only force can be known.

There is no inertia except as a form of force. It means only that no one body as a whole, irrespective of all action from all other bodies, can change its place or course. In other words, simply, it is subject in the action of its force to the law of gravitation. For it is only of solid bodies in their concrete state in relation to their total locomotion by gravitation that it was originally uttered, and only in this reference could it have been generally entertained without question. Every concrete and complex body is a congeries of forces, every one of which is always working to its utmost extent in relation to all the rest, while the whole is always in action relative to other bodies. The fallen aerolite cannot rise in air and return to its former habitat and course, but it can do something else which it could never do before. It can press the bosom of the earth, which it does do without cessation or change, and thereby it changes all the cosmic relations of the universe under the law of gravitation. It can probably combine with the gases and vapors of our atmosphere and other substances of our earth, and then gradually dissolve and take on new forms and enter into new connections and perform new tasks. It can never be strictly inert. In some ways or other ways,

Digitized by Google

it must be forever effective. Matter is therefore a force, and sufficient to itself and its own action. It is always acting on itself, and from this action it cannot be restrained. There is no need of any extra material force to explain this action and to supply it with a cause.

Matter also operates on mind, so far as mind is known. To mind as a conscious agent in connection with the material organism, it is a uniform antecedent, which is our only proof of causal connection; and the interactions of this mind and matter are uniform, and the mind is more dependent on the matter than the matter on the mind. The matter can operate without the mind; but we do not know that the mind can exist, much less operate, without matter. At the least, matter is the foundation and food and sustaining and animating energy of mind, so far as the latter is known to us.

The most striking specimen of inertia with which I am acquainted is seen in the frequent abutment of theism in these days on the doctrine of material inertia, or the doctrine of an extra-material force to make matter move or act. I feel keenly the need of some power to move the abettors of this argument, who are more inert than a defunct meteor. Had I the control of Jove's thunder, I would animate them with a stroke of lightning. I have no sympathy with a theism; and, therefore, I have no patience with intellectual opacity which opposes it with an old and exploded or perverted infelicity of physical science.

WM. I. GILL.

EDITORIAL NOTES.

PROF. ADLER has been delivering some stirring and much needed discourses on the "Tenement Houses for the Poor in New York." He proposes that the Society for Ethical Culture and its friends should put up a model building, at low rents, for the poor.

THE *Presbyterian* thinks "an embroidered mitre of damask set with amethysts and pearls" and "four chasubles" rather "odd" gifts for missionary work in Africa; yet such were the gifts recently presented to a bishop of the Anglican Church, whose field of duty was to be in Central Africa. "It is not probable," says the *Presbyterian*, "that such gifts were dreamed of at Antioch when the Holy Ghost said, 'Separate me Barnabas and Paul for the work whereunto I have called them.'"

MR. HERBERT SPENCER writes to the London *Athenæum*, complaining of the inexcusable misrepresentations made by the Duke of Argyll in criticising his (Spencer's) *Data of Ethics*. He says that the Duke, in his book entitled *The Unity of Nature*, puts in quotation-marks sentences which bear not even a remote resemblance to any sentence which he himself had used. Mr. Spencer asks if the Duke can contend that this course is defensible.

THE bill now before the Massachusetts Legislature with reference to admitting the testimony of atheists in courts reads thus: —

> Section seventeen of chapter one hundred and sixty-nine of the Public Statutes is hereby amended by striking out the following words: "and the evidence of such person's disbelief in the existence of God may be received to affect his credibility as a witness."

This amendment has already passed the Senate, and there is a good prospect of its enactment.

FRANCIS MURPHY, a temperance lecturer, having claimed as the result of one week's labor in Boston that he had reformed twenty-five hundred drunkards, the Rochester *Democrat* thinks that, as the population of this city is about three hundred and sixty-five thousand, he ought to stay here about fifteen weeks more. The *Democrat* evidently thinks all Bostonians disciples of John L. Sullivan.

THIS piece of wisdom emanates from the London *Times* of Nov. 14, 1883: "It is only poor and rather narrow-brained persons who are troubled at thirty with any question about the form of religion they have lived under. For," it declares, "men of sense" make up their minds on religious matters at an early age. What an array then, of "poor and narrow-brained persons" must the scientists and philosophers of to-day make!

THE Davenport *Daily Gazette* remarks: "If Mr. Douglass had married some negress with only intelligence enough to wash his clothes and cook meat, and if Miss Pitt had married a white loafer with barely brains enough to part his hair in the middle and wear tight pants, there would have been no complaint made in the race of either. But because Mr. Douglass chooses a woman of his own intelligence, though of a different color, and Miss Pitt selects a man of culture and refinement, though of darker skin, there is a great hubbub on both sides."

WE find the following in the Swedenborgian organ, the *New Church Life*: "A number of members of the Presbyterian Church in Mifflinton, Pa., have recently been arraigned before 'the Sessions,' accused of the sin of dancing. Our authority, a newspaper despatch, does not give the culprits' defence, but says that one of them accused the minister of 'playing social games of cards.' It will be a nice question for the stern Presbyters to decide which of the two sins is the blackest. They might also, while about it, give the rating of theatre-going. These three sins appear to be the only ones of which those in the orthodox fold are ever guilty."

THE Chicago *Tribune* thinks that the only danger of allowing women to have command of steamboats lies in the natural proclivity of the sex,—that, if the river should get very full of steamers with female captains, something would have to go by the board; for no woman likes to be beaten by another. "The consequence," says this journal, "will be a competition fraught with danger to the travelling public; and steamers will go down the river with furnace doors wide open, and colored men on the safety valves, reckless of the test-standards of boiler-iron, and contemptuous of snags, rather than have that 'horrid thing' pass them." Thb *Tribune* thinks that, if gender is to make no difference with navigation, some rules will have to be devised regulating speed.

SAYS the Springfield *Republican*: "A New York divine challenges anybody to name an infidel or a depraved man who has ever produced a great mechanical invention or made a great scientific discovery. A daily paper answers by naming Darwin. The New York *Observer* does not admit that the challenge is met, as Darwin was no inventor; and, as to science, 'he started a theory which to this day is admitted to be an unverified hypothesis.' The thing to deplore in this whole business is the foolishness of the challenge. There is no connection between mechanics or chemistry and morals, although a godly man may by correct living have better health and disposition. The attempt to prove that, in order for a man to conquer differential calculus, for example, he must be converted, only vulgarizes any discussion on sacred subjects."

THE Convention of the Free Religious Association, held in Providence, R.I., on Thursday and Friday of last week, was a very pleasant and successful one. All the speakers, as advertised in last week's *Index*, were present; and addresses were also made by W. H. Spencer, Cephas B. Lynn, Henry W. Robinson, and C. W. Wendte. Mrs. Cheney's timely paper on "Free Religion the Safeguard of the State" we hope to present to our readers next week, and others of the essays we may print afterward. The new building, Blackstone Hall, in which the Convention was held, is commodious and attractive. Built by private enterprise and to be let for other purposes, its owners are connected with the Providence Free Religious Society; and that Society is to have the use of it for its Sunday services and social gatherings, which is almost as good as having a hall of its own.

A SPECIAL despatch to the Boston *Journal* from New York City says that on Sunday, February 10,—

> The crimson banner of the Water Color Society streamed from gilded poles at the entrance of the Academy of Design to-day, and a stalwart policeman sat comfortably within the doorway. All day long, from 9 A.M. to 6 P.M., there was a constant buying of tickets and inspection of pictures. The policeman continued to read a novel, never raising his eyes from its pages; and the crimson bannerets flaunted defiance to the Sunday Closing League. Vice-President Wood of the society visited the exhibition early in the day, and watched the groups of well-clad visitors about the pictures with a smile of intense satisfaction. There were piles of catalogues on either side of the entrance; but, despite the constant demand for them, not one was sold. There was no attempt on the part of the League to close the exhibition; and, in consequence, the day passed quietly. A *Tribune* reporter was assured that the society would continue to open its doors every Sunday, until the exhibition closed.

THE second Annual Convention of the Massachusetts branch of the National Woman Suffrage Association was held in the Meionaon at Tremont Temple, on Tuesday evening and Wednesday afternoon and evening, February 19 and 20. The attendance was large, and the various addresses were listened to with great apparent interest and frequent applause. The speakers were Miss Phebe Couzins, Mrs. H. R. Shattuck, Mrs. H. H. Robinson, Miss N. W. Covell, Miss Mara L. Pratt, Miss H. M. Todd, Miss Lizzie C. Sanger, Mrs. Sara A. Underwood. Miss Maud L. Brown of Chelsea gave an excellent recitation, and Miss Morey played some fine selections on the organ. A long, eloquent, and interesting letter from Mrs. Elizabeth Cady Stanton to the Association was read by the Secretary, in which Mrs. Stanton exhibited in strong colors the anomalous position of the remonstrants of Boston; and the resolutions, which will be found in another part of this paper, were discussed and adopted.

FROM social statistics in relation to England given in an English publication, it appears that the death rate of London is now but little more than half the death rate two hundred years ago. The same is approximately true of England. There is less war and violence, less pestilence, less vice, a decrease in the fund and influence of noxious forces, and an increase in the power of those that are salutary and beneficial. The people have better wages, the style of living is improved, there is greater intelligence, the people have more political power; and all or nearly all the elements that enter into the sum of public well-being have been enormously modified in the interests of the people. The population of England at the beginning of the eighteenth century was 5,500,000 people, having reached that figure in upward of eighteen hundred years. At the beginning of the nineteenth century, it was 11,000,000. In the eighty-three years of this century, it has risen from 11,000,000 to 30,000,000. These figures are significant.

MRS. A. S. DUNIWAY, of Portland, Ore., who has been requested to become a candidate for gov-

Digitized by Google

ernor of Washington Territory, declines the honor. In a letter to the St. Paul *Pioneer Press*, she says she does not want the office, and that "it would be little less than cruelty to animals for a woman to aspire to an official position where the labors are light, the honors easy, and the emoluments fair, when so many hungry men stand waiting for the place. While it is true that I have been importuned ever since the adoption of the Woman Suffrage Bill by the Washington Territory Legislature to allow my name to be presented for nomination, I have from the first declined the honor.... I would not consent to become President of the United States even, were that office within the reach of woman, if, by so doing, I should endanger the adoption at the coming June election of the pending woman suffrage amendment in Oregon, as surely would be the case, if a woman were to accept the executive chair of an aspiring Territory."

REV. JOHN W. CHADWICK, of Brooklyn, writes to us as follows: "We have had Mr. George C. Miln for a whole week in Brooklyn at the Academy of Music, his *répertoire*, which seemed a very daring one, consisting of 'Hamlet,' 'Othello,' 'Macbeth,' 'Richelieu,' and 'The Fool's Revenge.' But the event has proved that he had not rashly undertaken what he could not more than tolerably well perform. I have seen him myself only as Hamlet, which was not his most successful part. But I must confess myself astonished at the sincerity and brilliancy of his performance. I did not think it possible that in so short a time a man could make himself so far a master of a great and difficult art. Our Brooklyn *Union*, whose dramatic critic is one of the most competent, qualified its praise of Mr. Miln's Hamlet somewhat; but his Macbeth it called 'a magnificent piece of acting,' and for his Richelieu it could hardly find sufficient words of praise. What seemed a doubtful venture has proved a remarkable success."

THE publication of the "Shelley Memorials" by his daughter-in-law contains material that confirms the sober, second thought concerning the religious attitude of that shy, sensitive, and immature genius. From these memorials, the *Christian Life* gleans the following appreciative estimate of Jesus, found in the fragmentary notes for an essay on Christianity:—

The Being who has influenced in the most remarkable manner the opinions and the fortunes of the human race is Jesus Christ. At this day, his name is connected with the devotional aspirations of two hundred millions of men. His extraordinary genius, the wide and rapid effect of his unexampled doctrines, his invincible gentleness and benignity, suggested a persuasion to his followers that he was something divine.... His historians have left sufficiently clear indications of the genuine character of Jesus Christ to rescue it forever from the imputations cast upon it. We discover that he is the enemy of oppression and falsehood; that he is the advocate of equal justice; that he is neither disposed to sanction bloodshed nor deceit, under whatever pretences. We discover that he was a man of meek and majestic demeanor, calm in danger; of natural and simple thoughts and habits; beloved to adoration by his adherents; unmoved, solemn, and severe. He opposed with earnest eloquence the panic fears and hateful superstitions which have enslaved mankind for ages. —*Unity*.

LEANDER RICHARDSON, in the Detroit *Times*, reports Roscoe Conkling as saying:—

The things that live are those which have been longest in the process of formation. Many of the greatest speakers, whose utterances have every indication of spontaneity, are unable to speak with marked force, excepting when they have carefully prepared themselves. John Bright's strongest speeches are said to have been actually rehearsed beforehand. Mr. Gladstone's finest bursts of eloquence are matured in advance in a most painstaking way. In this connection, I recall a singularly forcible illustration supplied by Daniel Webster. One of his greatest sentences, you will remember, was this: "On this question of principle, while actual suffering was yet afar off (the colonies) raised their flag against a power to which, for purposes of foreign conquest and subjugation, Rome, in the height of her glory, is not to be compared,—a power which has dotted over the surface of the whole globe with her possessions and military posts, whose morning drum beat, following the sun and keeping company with the hours, circles the earth with one continuous and unbroken strain of the martial airs of England." This sentence lay for two years in the mind of Webster before it assumed absolute form. He was awakened one morning in Toronto by the military drum beat, and the figure of speech was thus suggested to him. He prepared it in various shapes; but it was never satisfactory to him until finally, at the end of two solid years, it came out thoroughly symmetrical and impressive. Oratory and literary work are more improved by the process of polish and maturity than any other branches of the world's work.

SEVERAL respectable gentlemen of Boston, who recently attended for purposes of honest investigation the advertised seance of a well-known medium in this city, having discovered the transparent and palpable fraud of which she was guilty, gave an impartial report of the affair to a daily paper. In reply, a most extraordinary document was published in the paper where the *exposé* was made, purporting to be written by a committee of four Spiritualists, denying the statements in regard to the discovery of fraud, and ending thus:—

Your committee, before closing, desire to say that they regret the ready willingness with which certain persons attack mediums who practise the sacred calling of communicating with those who are what some call dead. Our regrets are exceeded only by our surprise that any so-called Spiritualistic newspapers should seem to vie with the religious and secular press in assailing the mediums of this country. We recommend that the association raise at once as large a sum of money as possible, to be used in the defence of mediums who may be assailed while practising one of the divine rites of our religion. We believe the time has come in this country when there should be had a judicial decision as to the rights and privileges of our mediums, as to whether the sacred altars raised in their homes, however humble they may be, shall not receive the same protection that other societies and associations receive. Why should not the Spiritualist receive the same protection under the law while engaged in this, to him, solemn duty of communing with his departed friends that the Church has while performing any of its rites and ceremonies?

FOSTER D. EDWARDS.
GEORGE M. ATWOOD.
HENRY S. COOK.
ALONZO DANFORTH.

The plain English of the above appears to us to be that frauds and humbugs advertising interviews with the dead, at a dollar's admittance fee for each person, are to be legally protected from any investigation or attempt at unmasking their shallow deception. Honest and sincere Spiritualists would not care to join in such demand.

THE F. R. A. FUND.

Donations and membership fees for the Free Religious Association, in response to its recent appeal for funds for the holding of conventions and for meeting other expenses of the Association. Will friends see to it that this list is increased?

PROSE OR VERSE?

"Give unto the world less verse?" Pray you, list unto the birds:
They pipe their lays when busiest, their songs without dull words,
They build and fill with birdlings, active till the set of sun,
But cease not in their melody till all their work is done!

"Send your thought the more in prose?" Do you hear the meadow brook
Rippling, laughing as it goes in the sun or shady nook?
But its task is not neglected, though its heart with song is gay;
And the mill-wheel grinds no slower, if its music floats alway!

There is prose enough beneath, if you only hear a song!
If I brighten some one's pathway, it will cheer my steps along;
There is nothing gained by sighing,—'tis but darkening life's way,
And I'll cease such dull replying and make music while I may!

Let me sing unto my brother while he delves among his prose:
It may be we help each other more than either of us knows;
If there were no songs nor music, no birds nor rippling streams,
Ours would be but sad existence, shorn of all ideal gleams!

Though my head may be in cloud-land, yet my feet shall feel the earth;
I will seek for inspiration in the climate of its birth;
For the poet is a prophet of the good that is to come
From the work of prosy toilers when they chant their "Harvest-home!"

LITA BARNEY SAYLES.

The Index.

BOSTON, FEBRUARY 28, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

"Church and State" as seen through the Mormon Question.

AN APPEAL TO THE LIBERALS OF AMERICA.

BY T. W. CURTIS.

It is now in the power of the Liberals of America to strike a blow for freedom, to create a revolution, in fact, in public sentiment on a theme the most vital to the interests of the Republic,—State secularization or the total separation of Church and State,—a question that has long gone a-begging, but which, by a providential fate, is being forced on the attention of the American people, compelling them through the acts of their national councils to a confession of its prime importance. To what can I allude but to the action of Congress on Utah affairs? The Mormon problem is the problem of Church and State, nothing more, nothing less. The superstition of the ages is being brought to bay. The hold of the Rocky Mountains, however, is not its last or only refuge; nor is Mormonism its worst type by any means, though it be an attempt toward the realization of that parent dogma,—a theocracy. It was born too late, and has too much of the sap of the nineteenth century in it. It knows too well, because of its own experience, the meaning of religious bigotry and intolerance. And yet it has the Bible on its side, though it has the Christian Church against it. What is the history of the Church but a ceaseless attempt to brain its own offspring, on the plea of heresy, of course? And the heresy this time is not polygamy, but revelation. The Mormon people were driven time and again, before that feature of Hebrew social life was engrafted on their system of faith. But the cry of heathenism is raised by the sects, that their cause may be made to appear the cause of all. In this way, government is made their tool, virtue their catspaw. Does Liberalism join in the crusade? Would I could answer, No. If not an abettor, neither can it be a spectator. Silence gives consent.

The Mormon's adversity is the Liberal's opportunity. The cause I plead is not that of the Mormon, but of the Liberal. A principle is at stake. Its voice is what I hear. My respect for Liberalism is such that I think it would throw the shield of its protection over the weak and oppressed, though it should prove to be a despised Mormon. But you have a demand to make of both Mormon and Christian. To you Liberals, they are one. Liberalism is no respecter of persons. Justice is its sole aim, between man and man.

There is no more connection between Church and State in Utah than in any other State of the Union, the difference being that the bulk of the inhabitants of that Territory are of one faith, and consequently of one party. And the minority there feels just as much craving for power and pelf as in any other part of the land. They ask Congress to mend their fate by an exercise of arbitrary power. In this cause, politician and priest are yoke-fellows as never before. They are the servitors at once of a wide-spread prejudice and fanaticism, and of their own interests at the same time. The judge is a missionary, the minister a politician. In their hands already are the offices of governor, secretary, judges, marshals, prosecuting-attorney, land register, recorder, surveyor-general, clerks of court, commissioners, revenue assessors and collectors, postal agencies, army contractors, etc. Utah is more than punished for her misdeeds, whatever they may be, in being kept in a condition of territorial vassalage; while others—mere striplings by her side—are, one after another, upraising the shield of State sovereignty.

But let me more clearly intimate something of the spirit of the government's dealings with Utah, a fair sample of its pluck and wisdom. In the bill before Congress, it is proposed to disfranchise the Mormon women, to transfer the trusteeship of the Church into foreign hands, and to abolish the Emigration Fund Company,—a proceeding which, in view of the leniency displayed toward other Christian churches, is a triple act of tyranny, without a parallel in any government of modern times. Must woman be disfranchised, because she does not use her vote in a manner to please Congress? If such a principle were made universal, what would become of our liberties? The amount of church property in the Territories allowed a single corporation is $50,000. In Massachusetts, it is twice that amount. The Catholic diocese of New York is supposed to be worth $50,000,000, and upward. Why, the mortgage on the Church of the Messiah (Unitarian), New York City, was over a hundred thousand dollars. The saints conform to the law after the same manner as the other denominations, by distributing their funds or accumulations among bishoprics. Have they not the same right? The immense properties owned by the various denominations throughout the country is well known. And, then, what is the warrant for stopping immigration to Utah? Has the Mormon no right to assist his needy friend or relative across the waters? Is this a crime? The condition of the Mormon emigrant I assert, notwithstanding all that has been said to the contrary, to be, instead of the worst, above the average, as I also must affirm, and challenge all disproof, that the morality of the Mormon people is, *at least*, as high as the average of any State or section of the Union.

But, though all that rumor may say of the Mormons be true, I maintain that the wisest course—in which the only true remedy is to be found, in fact—would be such as I shall try to sketch in this appeal, and which I believe to be what you Liberals have been working for these numbers of years. Nay, I put on record here the prediction that, if, by your neglect or in spite of your protest, these new methods are tried in Utah, *they will fail.* The Mormon women will be truer to their religion and their husbands. The funds, the resources, of the Church, will be augmented. Mormon immigration will grow larger instead of less. The lukewarm will feel the contagion of the increase of zeal among the faithful, and the rising generation will be stirred into a more chivalrous attachment to the cause for which its parents have already suffered so much. Mormonism will gain and not lose, while the government will but be heaping disgrace on itself. And it is right it should be so. The Mormon thinks it a proof of the divinity of his religion. It is a proof of the hellishness that will sometimes creep into the action even of a government like this. It illustrates the principle of compensation. Do unto others as you would be done by. The best policy to be pursued toward Utah is to bring its people into still closer relations with us, to invoke no other agency for the correction of its errors than that which is in force throughout the Union, to trust much to the influences of that civilization of which we boast so much. If it is impotent to combat this small sect without resort to acts of special legislation, it is already doomed; and the sooner it receives "notice to quit," the better. "If a sect rises," said Thomas Jefferson, "whose tenets would subvert morals, good sense has fair play, and reasons and laughs it out of doors without suffering the State to be troubled with it."

Utah offers the constitution of her new State of Deseret, which is free from any taint of theocracy, —more so than most of the constitutions of the other States,—and is even more liberal than many, being specially favorable to the workingman, and containing provision for a minority representation. But there are certain conditions to which the new State should subscribe in good faith. But these conditions are to be required of all the component parts of the Union. A refusal to accept them should be visited by the same penalty on all. And to-day, in point of fact, there are States participating in the full benefits of the Union that are no more entitled to them than Utah at this mo nent.

As regards polygamy, the question is not so much as to whether it is right or wrong morally as to whether marriage is a thing to be regulated by law, and whether its control belongs to the State or the nation. The answer has been given by the practice of the country. It is a subject-matter of legislation, and falls within the separate jurisdiction of the States. How various and conflicting are the marriage laws of the Union! The laws in some States are worse than none at all, and their general tendency is to confuse and unsettle all ideas on the subject of the relation of the sexes. Our marriage laws are the foe alike of morality and wedlock. And the chief reasons for this state of things are: (1) The double bases on which those laws rest, civil and ecclesiastical; (2) The assumption by the several States of full legislative power in the premises. Monogamy exists in this or that State, because the statute decrees it; and this or that form of marriage solemnization is observed, and also of divorce, because the statute so decrees. The statute of Pennsylvania, for instance, begins, "All marriages, not contrary to the teachings of the revealed Word of God," etc. And this strikes the key-note of the legislation hitherto throughout the Union. It is implied when not expressed.

Digitized by Google

But this is not the whole of the indictment, by any means. The ways in which the old alliance between Church and State is maintained are these: recognition of God or Christianity in State constitutions; religious test-oaths, Sabbatarian laws, chaplaincies in legislatures, army, and navy; reading of the Bible, and requirement of other religious exercises in the public schools; Fast and Thanksgiving proclamations; exemption of Church property from taxation; appropriations of public money for sectarian purposes; holding marriage as both a sacrament and civil contract.

Here is something from the constitution of the State of Massachusetts (where *The Index* is published), and whence hails the senator who has reported the bill for destroying the last vestige of liberty in Utah:—

"We, therefore, the people of Massachusetts, acknowledging with grateful hearts the goodness of the great Legislator of the Universe in affording us in the course of his providence," etc.

And, in the statute book, we read as follows: "Whoever wilfully blasphemes the holy name of God by denying, cursing, or contemptuously reproaching God, his creation, judgment, or final judging of the world, or by cursing or contemptuously reproaching Jesus Christ or the Holy Ghost, or by cursing or contemptuously reproaching the Holy Word of God, contained in the Holy Scriptures, or exposing them to contempt or ridicule, shall be" imprisoned, fined, etc.

"The school committee shall require the daily reading in the public schools of some portion of the Bible, without written note or oral comment," etc.

The oath of office in this same State once read, "I do declare that I believe in the Christian religion with a firm persuasion of its truth," etc., which has recently been changed to, "So help me God."

Much more might be quoted to the same general effect. Here are some of the hymns sung by the children in our public schools:—

"We praise thee, God, for the gospel light."

"Hail, thou glorious Three in One,
Worthy thou to reign alone."

"And the light of hope revealing,
Made the blood-stained cross appear."

Liberals of America, what have you to say to this? Will you not now, while this Mormon difficulty is before the public, bestir yourselves to have unsealed the eyes and understanding of the community on this great question? For, in the current discussion, its essential features are entirely lost sight of. It is your duty to reveal its true nature and mark its full import. Though the Democratic party criticises what the Republican party does, it is no more disposed than the latter to take the initiative in this great reform. Liberals must do it. Public opinion there is none, or it is impotent just now. Of sentiment and chicanery there is no lack. Legal clap-trap and literary flunkyism abound, laboring to supply the missing links in the charge of the ecclesiastic, holding up his hands in holy horror at sight of so great a sin as polygamy, when David, a "man after God's own heart," had as many wives as all the polygamists in Utah put together, and as many concubines as they have wives; and when our Christian communities, too, have a pretty fair sprinkling of men, after David's own heart; and when, too, other evils are by no means scarce, compared with which polygamy is as pure as the blush of morn!

But it is not my purpose now to speak of that putrescent social vice that dogs the steps of our civilization, offering its own comment on our dealings with Utah, but of those irregularities rather in the republican household, which we may call the concubinage of Church and State. This alone requires that you should act. Will you not speak out? Shall not that liberal sentiment, which years of agitation has created, be utilized? Shall Liberalism be browbeaten in this way, after the exertions it has made in this direction? I maintain that the motive and the theory of the action pursued by government toward Utah are wrong,—a transparent sham and humbug, to put it mildly. I maintain that they conflict with the spirit that created our government, and has supplied Liberalism with its maxims, and appointed it its mission in our time.

If this be true, what forms can your action take? I propose that a petition be sent to Congress,—a mammoth petition,—declaring the liberal view and sentiment. The Church has busied itself in this way, having already emptied a cartload of petitions on the steps of the Capitol. Yet truth's whispered accent shall outweigh them all. But you will do more than utter a sentiment. You will make a demand. Your appeal will be to principle, to reason, to the Constitution of the United States. Your petition will be based on two principles, one of which is the amendment to the Constitution,—"Congress shall guarantee to every State in the Union a republican form of government, and shall protect each of them from invasion." The other principle is that of wise statesmanship, which deals with effects through their causes, and finds in a general law that criterion of action which renders all legislation at once impartial, intelligible, and effective, securing to the individual the largest liberty, while commanding his respect and obedience.

Arbitrary power, in whatever disguise, must be overthrown; and reason must do it. The twin-relic of barbarism I affirm to be the connection between Church and State, and the absolute control which Congress assumes over the great West, under that archaic clause in the Constitution, which says, "Congress shall make all needful rules and regulations for the Territories and other property of the United States," which places human beings in the category of land and chattels.

The following, then, are the principles which you may justly demand shall be made a part of the fundamental law of the land, through amendments to the United States Constitution:—

1. Total separation of Church and State.
2. National protection for national citizens in their equal civil, political, and religious rights.
3. Universal education the basis of universal suffrage.
4. A specific and exact definition of the relation of the government to her Territories.
5. Marriage declared to be a civil contract, and made uniform throughout the Union.

When these amendments are made to the Constitution of the United States, then government will have clean hands, then the path of duty will be clear, then doubts will be solved and perplexities removed, then it will not be necessary to violate the spirit of the Constitution to enforce the Constitution, then the law will not be compromised and debased by apology and makeshift, and the citizen will not, by quibble and evasion, become a conspirator against his own rights. Then demagogy will no longer be at a premium, and treason no longer be made a necessity and a virtue.

The general government cannot shift the responsibility upon the States for that alien and treasonable species of legislation which seeks to perpetuate the connection between Church and State; for it is implicated by acts of its own, by sins of omission and of commission. It has done those things it ought not to have done, and left undone those things it ought to have done. Its delinquency arises mainly from the fact that the first amendment to the Constitution—"Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof"—has received from it a loose construction, and been most irresolutely followed and obeyed. This lax behavior has been construed by the Christian in every State into a special license and a divine command, to place the stamp of his faith on the laws of his sovereign State. Yet this theological bias was a direct importation from the colonial period, which was chartered by royal and ecclesiastical favor. It was a prenatal growth, thought to belong to the new birth. But it did not. It now reveals itself as an abnormality, an excrescence, that feeds on the vitals of the nation, while drawing an increase of strength from the kindred elements which our foreign immigration brings with it.

The attention of the American people is to be called, not to the danger that menaces the future of our country from the remarkable increase of the Roman Catholic element or the rapid rise of Mormonism, but to the grip which old theology has on the institutions of this commonwealth. The evil houses itself in all the creeds of Christendom, which are to it like the roots of the upas tree, in whose poisonous shade no living thing can thrive.

CORRESPONDENCE.

WAGES OR DIVIDENDS?

Editors of The Index:—

Which is better for business, a reduction of wages or a reduction of dividends? The moment that large corporations begin to cut down their help or reduce wages is the time that every one begins to feel the effect of business stagnation. The laboring man, as a general thing, is the one who keeps money in circulation. It costs him a certain amount to live any way, and all over and above that amount which he may receive is usually spent for those little luxuries which go toward making home *something more* than merely a place to "tie up" in. But, when his pay is cut down one or two dollars a week, he has to give up the luxuries, and consequently that much money is withdrawn from circulation; and the small storekeepers from whom they are purchased have to curtail accordingly. They in turn spend less, they also buy and carry smaller stocks. And so on and up through the wholesalers and middlemen, until the manufacturer is reached, when, to keep up his dividends, another reduction of wages is made, and times get harder. Now, wouldn't it be a better course, when business begins to get a little dull, to let wages alone, and reduce dividends a little? Wouldn't it be better for corporations that are paying from eight to fifteen per cent. dividends to reduce those dividends three or four per cent. for one season than to reduce the wages of their help? Wouldn't it bring back good times quicker? Wouldn't it pay them in the long run? If over-production is the cause of dull times, wouldn't a reduction of time and wages accordingly be better for the manufacturer and more just to the laborer than a reduction of wages alone? Wouldn't the laborer feel more as though his rights were being consulted? Isn't a greater part of the money that is received as dividends invested in bonds and stocks or otherwise laid away? Whereas, if it were paid out in wages, it would be kept in more immediate circulation? It seems as though a little self-denial by the capitalists, manufacturers, and employers of labor on a large scale, might bridge over some of these dull seasons without making the wage laborer bear the brunt. The wealthy class can lay back and live on their accumulations, and a slight reduction of income causes them no suffering. But not so with the poor laboring class: a cut down of a few dollars a week means to them suffering, misery, and want. We all know it is so,—to use Bret Harte's words, "It is, but it hadn't orter be." Wouldn't a little more ethics in business pay? This is an oft-told tale, but frequent agitation makes people "think alike and act together."

THE LIBERAL INSTITUTE.

Editors of The Index:—

The world seems ripe for the application of truth and love to actual human welfare. Dr. Hedge argues, in a late article,* that "the aim of the Christian Church was not *primarily* good behavior," but to provide for certain ideas. "Morality was *not* its *primary* object." The ideas he refers to are of "a divine humanity, of the solidarity of the human race, and of a heavenly kingdom in this earthly world." He thinks that, when these ideas have taken root, "Christianity will have fulfilled its mission, and the Church will be merged in society." "Looked-for righteousness is still remote," and waits for "the moral law to vindicate itself." The new Liberal Institute might have for its primary object the development of teachers of ability and character to reform the world. If the churches do not aim primarily at good behavior, let us multiply scientific and philanthropic societies, which do aim directly to diffuse useful knowledge, and to incline men to obey all the laws of righteousness. If Dr. Hedge's judgment is correct, it furnishes an explanation of the pride, prejudice, and passion, the injustice and intemperance which the Church has not attempted, directly or primarily, to overcome.

W. G. B.

THE RELIGION OF THE FUTURE.

Editors of The Index:—

The religion of the future will accept and embody the truths of all systems. In doing so, it will not inquire its source; for truth bears the impress of no man's ownership or personality. To it, Jesus in his manger, Mohammed on his camel in the desert, or wisest monarch on his throne, are the same. This religion will be the science of life here and hereafter; and, as man is bound to the universe as an integral part, his understanding of the laws of the world will be its basis. It will teach the infinite possibilities of man, and his duty to cultivate these to the utmost.

The man who professes the religion of the future will accept nature as his Bible, and regard all books as valuable only for the truth they express. He will have *no* fear of offending God, but will fear to become out of harmony with the laws of his own constitution. His theology will be anthropology, the study of himself; the only devil will be ignorance; his faith will become ripened knowledge, and he will repose implicit confidence in the laws of the world.

Infallible authority of books or castes, reverence for antiquity, miracles, faiths, dogmas, saints, martyrs, popes, priests, fear of angry gods, all the trappings that have been received as divine, holy, sacred, will perish before the keen flame of knowledge, and no more blight the expanding spirit forever. The old religions with their hollow shams shall perish; but morality, the growth of intelligence, freed from gross and perverting idolatry, will achieve a nobility of character unknown before.

While all preceding religions have developed a priesthood, superstitions, bigotry, persecutions, arrogance of infallibility, and fostered ignorance, selfishness, and servile fear of a terrible, relentless God and his vicegerents, this will yield nobility of life, highest ideals of perfection, calm reliance in the presence of omnipotent forces, all-embracing charity and philanthropy, an earnest and successful endeavor to actualize the ideal perfect life to which man aspires, and which his organization makes possible.

HUDSON TUTTLE.

MISCELLANEOUS.

RESOLUTIONS OF N. W. S. A. OF MASSACHUSETTS.

The following are the resolutions adopted by the Massachusetts branch of the National Woman Suffrage Association, at its recent Annual Convention held in Tremont Temple:—

Whereas it is universally claimed that this republic is a government "of the people, by the people, and for the people," and

Whereas one-half the "people" are governed without their consent and taxed without being represented, therefore

Resolved, That the safety and future prosperity of this nation depend upon its faithfulness to its foundation principles, and upon the immediate recognition of the fact that all the people, women as well as men, have a right to self-government and self-representation.

Whereas the granting of the ballot to woman in municipal affairs would be "subject to repeal at any time in a legislature elected by men alone," and

Whereas woman's right to the ballot should be secured from all capricious changes of legislative opinion, therefore

Resolved, That we see in the recent report ("leave to withdraw") of the Committee on Woman Suffrage only another argument for persisting in our demand for national protection in our right to vote by means of an amendment to the Constitution of the United States.

Resolved, That the thanks of the National Woman Suffrage Association of Massachusetts are due to Hon. John D. Long, Hon. Theodore Lyman, Hon. Ambrose A. Ranney, and Hon. Eben F. Stone, for voting in favor of the appointment of a Select Committee on Woman Suffrage in the United States House of Representatives.

Resolved, That, in the death of Wendell Phillips, the cause of woman suffrage loses one of its earliest and most faithful advocates. He was most fortunate in being permitted to finish the work which was given him to do; and he died as he had lived, the unselfish leader, the just friend, the true companion, without fear and without reproach.

Resolved, That we have reason to rejoice in the fact that this year witnesses the first organized resistance of the remonstrants to woman suffrage; for history has taught us that the combined opposition of conservatism is a sure indication of the irresistible advance of progress.

Whereas we have been pleasantly reminded, from time to time, that we advance nothing new in support of our claim to the ballot, therefore

Resolved, That we congratulate the remonstrants upon their first public appearance in the presentation of arguments which were met and answered twenty years ago.

Resolved, That the claim that "women do not want to vote" is a mere assumption, since it has been proved, by reliable canvasses made by members of this Association during the last six months in nine different localities of this State, that out of eight hundred and fourteen women four hundred and five are unqualifiedly in favor of woman suffrage, and only forty-four unqualifiedly opposed.

Resolved, That we thank Secretary Folger for his recent decision in the case of Mrs. Mary Miller. We detect in it the flavor of the Quaker soil of Nantucket and the spirit of an enlightened and progressive son of Massachusetts; also, that we congratulate the press of this country upon their enlarged view of woman's right and ability to manage a steamship, hailing it as a significant indication of their possible recognition of the fact that woman also has the right and ability to help manage the Ship of State.

Resolved, That the thanks of the National Woman Suffrage Association of Massachusetts are due to the Boston daily press for their uniform courtesy and willingness to publish all notices and reports of executive meetings; also, to the press in the various localities where we have held conventions and meetings.

ESTIMATES OF PHILLIPS.—On the Monday following the death of Wendell Phillips, the New York *Evening Post* published an article devoted to a sketch of his career, which bears evidence of some knowledge of his life and some appreciation of his character. Had the writer closed his sketch with that period of Mr. Phillips' life with which he is somewhat conversant, his performance would have been more creditable. Unfortunately, he proceeds to discuss the later years of his career, which he gives no sign of ever having seriously studied, and of which, apparently, he knows but little. Every one who was acquainted with Wendell Phillips will learn with astonishment that, during the Civil War, he "took no clear and unmistakable attitude." No other man watched events more closely, no other voice rang clearer than his, while the contest lasted. Most emphatically, he was not the slave of public opinion, nor one of those who shouted for this general or that senator, in blind obedience to popular clamor. He always reserved the right to do his own thinking and to speak his thoughts, regardless of praise or censure. He spoke from conviction always, and never for effect, as do some of our more conscious orators. True to his vocation, during the war he praised and sustained the administration when, in his judgment, it deserved well, and criticised, upbraided, and condemned it when, in his judgment, half-heartedness and timidity prevailed at Washington. "After the war had overthrown slavery," according to the writer in the *Post*, "unlike Mr. Garrison, who, with his usual severe and unabated vigor, went on contending for the rights of the freedmen and of women as before for those of the slaves," Mr. Phillips "manifested for the remainder of his life a certain restlessness, always seemed to be crying, like Shakspere's Hotspur, 'Fye upon this idle life,' and to be always seeking for some new tournament." During his later life, this same writer was impressed by "the increasing irritability with which he impulsively took up questions to which he could contribute nothing but courage and vehemence." Condemnation so sweeping ceases to be criticism, and sinks to the level of abuse. By what process did Mr. Phillips suddenly become a mere Hotspur and an ignorant declaimer? Is there a shred of evidence to show that after the war he was self-seeking or was less ready to sacrifice political preferment, social position, or personal friendship in the service of his countrymen? Is there a shred of evidence to prove that the high moral purpose by which, when but a boy, he was inspired to cast in his lot with the despised and the oppressed, degenerated into a spirit of restlessness and mere love of combat? His fidelity to his moral convictions during thirty years of his life is universally acknowledged, and we are now asked to believe that a degenerate spirit was the result of that fidelity! Do men grow worse or better, morally weak or strong, through long-continued and faithful obedience to the divine law? It is too soon to attempt to measure the extent of Mr. Phillips' knowledge of the questions which he discussed. Most of them are social problems yet unsolved. It is simple justice to say that to every one of them he brought remarkable intelligence, extensive information, and a spirit of disinterestedness rarely equalled. He was an intellectual as well as a moral force and power to be highly valued in whatever cause he might enlist. One can only marvel at the arrogance and dogmatism of a critic who, the moment Mr. Phillips is dead, hastens to impeach his intelligence and to emphasize his ignorance. If we can believe of Wendell Phillips that he was so conceited, so restless and eager for the fray, as to speak upon any subject to which he could contribute nothing but courage, irritability, and vehemence, what shall be thought of other old abolitionists, men far inferior to him, whose modesty and love of retirement since the war have not deterred them from attempting to instruct the public upon many more subjects than he would have presumed to touch? What grounds the *Post* critic has for his slur upon the memory of a noble man I do not know, but I do know that the record does not justify it. At the close of the war, and after slavery was overthrown, Mr. Phillips did not for a moment abate his devotion to the black man. Garrison abandoned the Anti-slavery Society because he thought the work accomplished. Phillips remained in it for the express purpose of using it to secure the rights of the freedmen. Without the shadow of a political aspiration, he took the deepest interest in the great question of Southern reconstruction, demanding always that, as far as possible, the rights of the humblest citizen, black or white, should be made secure wherever the flag floats. During the war, even the most important social questions were of necessity postponed; but, after it was over, a discussion of them was inevitable in a free republic. The temperance agitation was revived, the movement in behalf of freedom in religion received new impetus, the political enfranchisement of women was demanded, the danger of monopoly, the rights and wrongs of labor and capital, the function and nature of money. These and other kindred questions claimed the attention of all thoughtful men and women who were not preoccupied in their own private pursuits. Mr. Phillips had no need to seek employment for his splendid talents. The difficulty was, rather, to find time and strength for the duties that, as a loyal advocate of the rights of the people, he felt pressing and urging him to action. Fulsome praise and wholesale contempt are equally uncalled for, when we try to estimate the value of his contributions to the discussion of social problems. He was not infallible. It is not given to any man always to think or to speak wisely; and probably he was often mistaken, who is not? Probably, too, he was still oftener right. But, whether right or wrong, he never sought the platform as a gladiator, never posed for the admiration of an audience, never stooped to win the plaudits of the crowd. His motive was always high and pure, noble and unselfish. Whether he spoke on questions of finance or labor or temperance or any other public matter, he spoke, not for himself, but that he might lighten the burden of his poorer and less gifted neighbor, and promote the happiness and welfare of his fellow-men.—*R. P. Hallowell, in Boston Advertiser.*

WENDELL PHILLIPS.—He was by nature a protestant, a revolutionist, an image-smasher, an acrid

Digitized by Google

cynic. Yet to these heady qualities of antagonism he joined the finest culture possible, a face as noble as if it were a cut cameo, a complexion as fair as a lady's, a personal beauty equal to Apollo's, and a native eloquence that had heaven's own light and heat in it, —a veritable thunderbolt. 'Twas an odd compound, —a hero, a defier of mobs, thus delicately and beautifully incarnated. He looked the polished, high-bred gentleman, every inch of him; but it was dynamite clothed in broadcloth. He seemed a sunbeam, he was so quiet as an orator. He never ranted or tore a passion to tatters, hardly ever made a gesture, talked publicly in a conversational tone; but a fatal sting was in the tail of each quiet sentence, and he maddened crowds with these teasing shafts, until they flung aged eggs and other missiles, and drowned his voice in brutal shouts. Early in the sixties, he was mobbed in Cincinnati; and, a day or two later, he passed through our school town, and a lot of us young hero-worshippers went to the depot to pay him homage. He came out on the platform, talked kindly, and fascinated the boys with his elegant manners, half-jocosely referring to the mob. In 1867, he lectured here; but Western people did not seem to admire his serene style, which we regard as the perfection of oratory. He simply *talked*. Every sentence was moulded by art; but it did not impress one as artifice, but as a pure product of nature. It was art concealed in nature, and yet revealed in nature. The West likes rant and foam and thunder and rockets and shooting-stars and comets, and does not appear to notice how ineffably beautiful plain sunlight is. He is the most finished orator America has produced. His speeches read even better than they sound; for the art is so charming and the thought is incisive, pungent, and thoroughly alive to the last electric atom.—*Washington County (Iowa) Press.*

BOOK NOTICES.

FIRST SPANISH BOOK. After the Natural or Pestalozzian method. By James H. Worman. A. S. Barnes & Co.: New York and Chicago.

This handsomely printed little volume is just the thing for teaching one's self or carrying on a class rapidly and pleasantly. By a skilful use of explanatory pictures, the pupil can travel on without needing to look into a dictionary or hear a single English word, and can learn to think in Spanish, just as would a child who knows no other language. The illustrations are drawn with great clearness and some artistic merit, the Spanish is entirely modern, and the work is in every way worthy of its motto, — *Nihil est in intellectu quod non fuerit in sensu* ("There is nothing in the mind which has not been in the sensations"). French and German are included in the series arranged on this soundest principle of knowledge.

THE leading paper in the *Popular Science Monthly* for March, "From Moner to Man," by Dr. Frances Emily White, of the Woman's Medical College of Pennsylvania, traces, in a manner which will secure the interest of the reader, the development of the human body from a microscopic speck of living matter, the primary protoplasmic cell. In "Green Suns and Red Sunsets," Mr. W. H. Larrabee has collected the facts concerning the remarkable lurid sunsets of the last months of 1883, and their attendant phenomena as they were observed in all parts of the globe, and the evidence that has been adduced in favor of the theory of their connection with the volcanic outbreak of August 26, in the Straits of Sunda. The other articles are "College Athletics," by Prof. E. L. Richards; "The Ancestry of Birds," by Prof. Grant Allen; "Mexico and its Antiquities"; "The Remedies of Nature,—Catarrh, Pleurisy, Croup," by Dr. Felix Oswald; "Study, Physiologically Considered," by Dr. P. J. Higgins; "Fashion and Deformity in the Feet," by Ada H. Kepley; "On Rainbows," by Prof. Tyndall; "Science *versus* the Classics," by Prof. C. A. Eggert; "The Jury System," by Henry Wilson; "The Chemistry of Cooking," by W. Mattieu Williams; "Science and Safety at Sea," by Richard A. Proctor; and a "Sketch of Ormsby Macknight Mitchell," with a frontispiece portrait. "Collegiate Influence upon the Lower Education" is considered at some length in the "Editors' Table" of this number.

IN the *North American Review* for March, Judge J. A. Jameson considers the several agencies by which the overthrow of the existing civilization might be effected in an article entitled "Is Our Civilization Perishable?" In the same number there is an article of extraordinary interest on "Agricultural Politics in England," by William E. Bear, editor of the *Mark Lane Express*. "A Defenceless Sea-board," by Gen. H. A. Smalley, is a description of the unprotected condition of the harbors and coast cities of the United States. His statement cannot fail to awaken the people of this country to the importance of being in peace prepared for war. "Neither Genius nor Martyr" is the judgment pronounced upon the wife of Carlyle, by Alice Hyneman Rhine, whose contribution to the Carlyle controversy is characterized by much force. In "The Story of a Nomination," W. O. Stoddard recounts the hitherto unpublished history of the means by which the nomination of Abraham Lincoln for a second presidential term was brought about. Other articles are "Literary Resurrectionists," by Charles T. Congdon; "How to improve the Mississippi," by Robert S. Taylor; and "The Constitutionality of Repudiation," by D. H. Chamberlain and John S. Wise. Published at 30 Lafayette Place, New York.

THE *Century* for March gives excellent portraits of Count Von Moltke and Henry Irving. There is a sketch of the life of the former written by Helen Zimmern, and a critical analysis of the acting of the latter by J. Rankin Towse. The most profusely illustrated articles are "The New Washington," a description of the National Capitol of to-day; "Old Public Buildings in America," by Richard Grant White, which includes among its Boston views the Old and the New State House, the Old South Church, and the interiors of Christ Church and King's Chapel. "The Cruise of the Alice May," by S. W. G. Benjamin; and "Notes on the Exile of Dante," by Sarah Freeman Clark. There is unusual space devoted to poetry in this number, thirteen poems in all, the most noteworthy among them being "How Love looked on Hell," by Sidney Lanier. Wayne McVeagh has an article on "The Next Presidency," and, in "The Open Letters," the author of "The Bread-winners" replies to some of his critics. Interesting chapters of the serials, "The Average Man," of Robert Grant, and Cable's "Dr. Sevier," and a short story by Octave Thanet.

THE *Revue de Belgique* for January, 1884, tells how the railroad was built across the Andes, as well as how a canal has been attempted at Panama, reviews the report of our Commissioner of Education, discusses the temperance problem in Belgium, and speaks powerfully in favor of art schools. That nothing of the sort was needed by the old masters is sufficiently explained by the fact that they were under regulations which permitted no one to paint before he knew how to draw, and made the methods of instruction in the studios much more minute and thorough than at present. People not possessed of the highest original genius have no more right to call themselves artists, without long-continued and systematic preparatory training, than school children would have to call themselves authors. Knowledge is the best authority; and it is those who know that have a right to speak, whether in words or colors.

REV. A. W. JACKSON considers, at some length, "The Religious Problem of To-day," in the *Unitarian Review* for February. What, in his view, that problem is, is indicated in one of the closing sentences: "To bring together these twain so widely apart, the Spirit of Truth and the Spirit of Devotion, is a daring dream, a good too fair to hope, never, perhaps, more than approximately to be realized. Even for that possible approximation let us toil and pray." Rev. George Willis Cooke, in the same number, has an article on "Matthew Arnold," and Rev. C. H. Beach one on "Zwingle: The Most Modern Man of the Reformation," while Rev. A. P. Peabody discourses on "The Divine Beneficence of Penalty." The "Editors' Note-Book" and "Things at Home and Abroad" are filled with interesting miscellany.

THE *Catholic World* for March opens with an article on "Some Aspects of the Law of Marriage," by Rev. A. F. Hewitt; "The Wisdom and Truth of Wordsworth's Poetry" is considered by Aubrey de Vere; Joseph Manning writes of "The St. Gall Priscian"; "Traditions and Folk-lore of Poitou" is by M. P. Thompson; Rev. I. T. Hecker, in "Thomistic-Rosminian Emersonianism," replies to a recent article in the *Unitarian Review*; Rev. Edward McSweeny writes of "The Yosemite"; and there is a short story, entitled "Marching through Georgia," in addition to the serial "Armine," also two poems by Elizabeth Gilbert Martin.

PERSONAL ITEMS.

MR. T. W. CURTIS desires his friends to know that his present address is State Hospital, New Haven, Conn.

MISS ELAINE GOODALE, the elder of the Sky Farm poets, has become one of the teachers of Indians at the Hampton school.

B. F. UNDERWOOD lectures at Muscatine, Iowa, on the first Sunday in March. He speaks at Louisville, Ky., the Sunday following.

MR. S. B. WESTON spoke at Chickering Hall, New York, in place of Prof. Adler, last Sunday. His subject was "Ethical Religion."

THE Emperor William, who is called "the most diligent of all monarchs," uses a sperm oil lamp with a huge burner, only a little smaller than a locomotive head light. It has a large green shade.

STEPS are being taken to commemorate the five hundredth birthday of John Wycliffe, and to raise money to restore the Wycliffe Church at Richmond, Yorkshire, where the reformer is supposed to have been born.

SALMI MORSE, who persevered so long and earnestly to introduce the "Passion Play" in New York, disheartened by his non-success in that and other ventures as innovating, grew weary of his unsuccessful life, and suicided by drowning last week in New York City.

MRS. MARTHA J. LAMB, the historian of New York, has resided for eleven years in the Coleman Hotel on Broadway, just above Madison Square. Her study is a cosey little room under the eaves; and there the industrious authoress spends her evenings, after a hard day's work in her editorial rooms in Lafayette Place.

THE touching persistence with which the late J. R. Green, the historian, labored in his last days upon his book, *The Conquest of England*, is chronicled by his widow. "The pages," she writes, "which now close it were the last words ever written by his hand. 'I have work to do that I know is good,' he said, when he heard that he had only a few days to live. 'I will try to win but one week more to write some part of it down.' As death drew near, he said, for the first time, 'Now, I am weary: I can work no more.'"

HATTIE TYNG GRISWOLD, an American poet of the magazines, was born in Boston in 1842. Her parents were both New Englanders. Her father was a Universalist minister, one of the converts and disciples of Hosea Ballou. He removed to Wisconsin when his daughter was but eleven years old; and, at the age of fourteen or fifteen, she began to publish verses in the Western papers. There was little Western literature at that time, and Miss Tyng was one of the first of Wisconsin writers. She was a regular contributor to the New York *Home Journal* and the *Knickerbocker Magazine* until her marriage, in 1863, to Eugene Sherwood Griswold, a merchant of Columbus, Wis., where she still resides. For the next ten years, she wrote nothing. During the last ten years, her pen has resumed its labors in a measure, but chiefly in prose on subjects of practical moment. Mrs. Griswold's writings have been popular far beyond her expectations, owing doubtless to their genuine quality and to their basis of real experience of life. She herself places a small value upon them as literature, but they have widely touched and moved the common heart. "Under the Daisies," "Under the Blue," "Tender, Trusty, and True," "Creeds and Deeds," "Dead on the Field of Battle," "Thank God for War," are among her best known pieces; while her "Three Kisses" has gone the rounds of the press, with Mrs. Browning's name at the end of it. A volume of her collected poems, under the title of *Apple Blossoms*, was published by Jansen, McClurg & Co., in 1877; a sketch of her poetry, with copious extracts, appeared in the *Telephone* (Indianapolis), for January, 1883; and a biographical notice may be found in *Our Women Workers* (Universalist Publishing House).—*Literary World.*

Third Edition.

BIBLE MYTHS,

And their Parallels in Other Religions.

Being a Comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations.

The object of this work is to point out the myths with which the Old and the New Testaments abound; to show that they were held in common with other nations; and then trace them to their evident *origin* and *explain their meaning*.

"It has long been acknowledged by the most eminent Biblical students that the Hebrew Scriptures contain a large mythical element; but, so far as we know, the present is the first complete and scholarly attempt to trace these myths to their source, and ascertain their original signification."—*Boston Courier*.

"Never before has there been given a volume to the reading world that shows the research for the origin of these myths as does this one just published by J. W. Bouton, of New York."—*Boston Times*.

"It is unquestionably true that the results of a rationalistic study of the Christian Scriptures are nowhere else so accessible as they are now made in the work before us."—*New York Sun*.

1 vol. Royal 8vo. Cloth. 600 pp. $3.00.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

RIVERS OF LIFE;

Or, Sources and Streams of the Faiths of Man in all Lands, showing the Evolution of Faiths from the Rudest Symbolisms to the Latest Spiritual Developments. By Maj.-Gen. T. G. R. FORLONG.

This is the most comprehensive work that has yet appeared on ancient and comparative religions. Price $40.00. For sale at *The Index* office.

R. C. ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

MARTIN LUTHER:

A Study of Reformation.

By EDWIN D. MEAD,

Author of *The Philosophy of Carlyle*, etc.

An essay upon the significant phases of Luther's life and work, with special reference to present problems of reform; discussing the principles of Individualism, Intellectualism, and Rationalism for which Luther stood; and the Libertinism, the Old Orthodoxy and the New Orthodoxy, with which he came into conflict.

Cloth, 12mo, 194 pages. Price $1.25.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an over whelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c. per line.
" 13 " 25	" . . .	8c. " "
" 26 " 51	" . . .	6c. " "
" 52	" . . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

CURRENT TOPICS.

THE Chinese are about to erect a joss house at Denver. Will the religious journals of China cite this as an indication of the gradual encroachment of their faith upon the less venerable system of the Americans?

AMONG the records of the State legislative doings of last week, we find the following: "Mr. Bowker, of Boston, asked to be enlightened upon the Senate bill to abolish the annual election sermon. He could see no reason why such a time-honored custom should be abolished. No one replied to his question, and the bill was passed to be engrossed by a large majority."

MR. FOOTE, the editor of the London *Free-Thinker*, whose sentence of a year's imprisonment for blasphemy created considerable sensation in England, has just been released, having completed his full time. Mr. Bradlaugh, with two thousand sympathizers, met him at the gates of the prison as he came out, and gave him the ovation due to a martyr for principle. The English authorities seem stupidly blind to the impetus given to free thought by the course they are pursuing in the cases of such men as this and of Bradlaugh.

THERE is the true ring in the following paragraph from the editorial column of the New York *Independent*: "Mr. Bradlaugh's constituents have done just the right thing in promptly re-electing him as a member of the British House of Commons. This is the fourth time that these constituents have said to the House of Commons that they propose to judge for themselves in choosing a member of that body, and do not propose to submit to its arbitrary dictation. We hope that they will remain firm to this purpose, and re-elect Mr. Bradlaugh just as often as he is rejected by the House. A vital principle, having nothing to do with the religion or irreligion of Mr. Bradlaugh, is involved in this issue. And, in the end, if Mr. Bradlaugh and his constituents remain firm, the House will be compelled to abandon its utterly untenable position."

WE beg leave to remind our readers that, though he does not seem to fill as much space in the intellectual world as he once did, yet Joseph Cook still lives, and sends forth his high-sounding oracles from his Monday lectureship, in token of which we present for their delectation one of his recent utterances: "What of Matthew Arnold or Emerson? What of any pessimist or any optimist? What of any agnostic or any theist? Matthew Arnold is a polished icicle. He has no consecutive theory of thought as to the scheme of Nature. He does not see through Nature to Nature's God, but Emerson complains that Nature is too thin to hide God. This may be Neo-Platoism, but give me Neo-Platoism before agnosticism. What shall we say of Matthew Arnold's agnosticism? It is going out of date. Meiognosticism, or to know a little, is now the doctrine of the soundest heads on the globe. Agnosticism is self-contradictory, and is held only by arbitrary and benighted minds."

IT is to be hoped that the news reported by the St. Petersburg correspondent of a German paper is correct. He says that "the Czar has decided to convene the Superior Council on the 10th of March, for the purpose of considering the Socialist question. They will take into consideration the question whether there really exists a powerful Nihilist party, and, if so, what their wants are and how successfully to meet them, as the demands of the country may require. The council will be composed of representatives of the ruling classes, including Count Tolstoi, Minister of the Interior, Lieut.-Gen. Tchernaieff, Gens. Ignatieff and Miljutine, M. Abasa, and all the heads of the administrative departments." It is about time that "the representatives of the ruling classes" in Russia "took into consideration the question whether there really exists a powerful Nihilist party." Other nations, judging from the general purport of news from that country, long ago decided that there was such a party in existence there.

THE *Christian Union* says: "It is curious to note how some Boston correspondents of newspapers and others make haste to claim that Wendell Phillips was an orthodox church member and a Calvinist, claiming that he was a member of the Old South Church in Boston at the time of his death. Mr. Phillips never belonged to the Old South Church, nor affiliated with it or its congregation. In an open letter some years ago, addressed to the 'Liberal Clergy,' Mr. Phillips said, 'Baptized by Buckminster at the font of Brattle Street, I have a right to brand these liberal pretenders,' etc., not for their theology, but for their departure from their 'predecessors'—'children of Tuckermann, Channing, and Mann'—on all questions, especially the temperance reform. That Mr. Phillips loved righteousness, and the Calvinistic rigors of reform and governmental administration, is evident; but to say that he accepted the Calvinistic theology is as near the truth as to say that he was a member of the Old South Church. If Wendell Phillips was 'orthodox of the orthodox,' it is singular that he should be buried from a Unitarian church, and *only* the pronounced clergymen of that faith be invited to conduct the service!"

A CASE of some importance, regarding the taxation of vacant lots, which had been appealed from the Common Pleas, was decided by the District Court at Cincinnati last week. Adjoining the residence of Archbishop Elder on Eighth Street are several valuable vacant lots fronting on Central Avenue, which, prior to the failure of Archbishop Purcell, belonged to him, and were for years exempted from taxation on the ground that they were necessary to St. Peter's Cathedral, which stands on the same square. In 1876, however, these lots were placed upon the tax duplicate, and taxes paid upon them regularly until the failure of Archbishop Purcell, when they were sold by his assignees. An action was then brought by the assignees against the County Treasurer to recover the amount of taxes paid (about $7,000), on the ground that the County Auditor had no right to place property for church purposes on the tax duplicate. The Common Pleas Court held that, as these lots were in the same enclosure with the cathedral and archiepiscopal residence, and were held by the Archbishop in trust for the church, the claim that they were exempt from taxation was well grounded, and gave judgment for the full amount against the county. The District Court last week reversed this decision, on the ground that the lots in question were not necessary to the cathedral or a place of worship.

THE Presbyterian ministers of Chicago are much disturbed by the "desecration of the Sabbath" in that city; and, at one of their recent conferences, a proposition was made to hold a mass meeting to protest against Sunday trains, Sunday theatres, and the Sunday press. It was, too, says the Chicago *Tribune*, "the feeling of the meeting that the desecration of the Sabbath in the special form of picnicking so common in summer, when the days are long, must be fought against; and a meeting will be held at an early date to lay plans for the campaign." If there were not a large amount of superstition and of the spirit of proscription and intolerance still remaining in the public mind, men with the narrow views of the Presbyterian ministers of Chicago would be unable to get an audience or to command the attention of intelligent men. A proposition to suppress the preaching on Sunday of Presbyterian theology would be regarded as illiberal; but wherein would it be more illiberal than the proposition of the Chicago preachers? If one chooses to read a Sunday paper or to attend a picnic or a theatre on Sunday in preference to attending a church, what moral precept or social interest is violated by following this inclination? Would it not be well to have a large mass meeting in Chicago to protest against the persistent efforts of the orthodox clergy to restore the Puritan Sabbath, and to voice the large public sentiment that exists in favor of a rational observance of Sunday, —its observance as a secular institution, except for all who desire to observe it as a sacred day?

THE PROPOSED LEGISLATION FOR UTAH.

The new bill with reference to Utah, which the Judiciary Committee of the National Senate has brought before that body, has many features. Some of them seem wise and practical, and entirely in the line of Congressional legislation. Of others, as we intimated last week, the constitutionality as well as judiciousness may be questioned. One of the most important features is a change in the law with regard to prosecutions and trials for bigamy and adultery. The new bill makes the lawful husband or wife not merely a competent witness in such cases, but gives authority to compel their testimony. It also gives power, not only to one of the injured parties, but to anybody, to enter the complaint on which these crimes, like other crimes, may be prosecuted. These features are in keeping with the more sensible and liberal rules with regard to legal trials that have been adopted in recent times. The old rules, that are here set aside, merged the personality of the wife in that of the husband, and regarded their offences against each other as matters that concerned them alone, and not the well-being of society. We understand this section to apply, not only to Utah, but to all the Territories, as does also the section—another important feature—which defines a proper certification and record of marriages, and authorizes the regular inspection of such records by a United States officer.

Other sections of the bill provide for the abolition of woman suffrage,—purely, however, on the ground of strengthening the anti-polygamy legislation; for the forfeiture of all property held by religious or charitable societies above $50,000, the limit fixed by a Congressional act in 1862; and for the appointment of a Returning Board to supervise elections and count the votes. But no vote is to be rejected because of beliefs concerning polygamy. Of course, the Edmunds law, which disfranchises actual polygamists as criminals, still stands. All of these several features come clearly within the scope of Congressional authority, and appear to be framed with a just regard both to individual rights and to the special object of the bill in removing an organized crime against society.

But the proposed bill has another feature which somewhat astounds us. If we understand its purport, it provides that the Mormon Church Corporation, under certain conditions, may be taken out of the hands of its present managers, even out of the hands of members of that church, and put into the hands of trustees, fourteen in number, all of whom are to be appointed by the President of the United States, with the consent of the Senate, and who are to report concerning their management to the Secretary of the Interior at Washington. Now, we can understand that the Mormon Church Corporation, if proved to be fraudulently managed, might forfeit its charter and be abolished by act of Congress. But we do not see by what authority Congress should undertake to punish such mismanagement by putting the corporation into the hands of the United States to be managed. We take it that the business would still have to be managed in the interests of the Mormon Church, and the legitimate revenues paid over for the support of that Church. Even Congress and the President's trustees would not be allowed by the courts to alienate the funds for other objects. We should have, therefore, the United States government regularly set up in the business of running a church. We should have, indeed, a kind of established religion; and it would be Mormonism! Mormonism would be the one form of faith which the national government would take under its special patronage. As trustee, it would make itself responsible for the financial prosperity and support of the Mormon Church. It would not take the public money for running the Church, unless some of its appointed agents should prove swindlers and defaulters: then, it might legally have to make good the deficiency out of the public revenues. If the Mormons could be sure that this plan would give them honest management of their church finances,—a very doubtful point,—we are not certain that they would not take a fancy to it for the prestige it would give them in time as being the one Church whose material interests were by law directly protected and managed by the United States government. From such financial responsibility might seem to come the semblance of special governmental protection for the doctrine of the Mormon Church. We await, with no little curiosity, the Senate debate on this feature of the bill, and would suggest that the article of the United States Constitution which forbids Congress from making any law "respecting an establishment of religion" may have some legitimate bearing on the question.

Another feature of doubtful constitutionality is the section which abolishes the "Perpetual Emigrating Fund Company" of the Mormon Church. Possibly, this is abolished for some violation of its charter. If so, this should be made clear. Or, if abolished because proved to be conducted in the direct interest and maintenance of practical polygamy, this also should be made clear. The Mormon Church is an active missionary organization. It has agents all over Europe for recruiting its ranks. It has as much right as other churches thus to gain converts to itself as a religious faith; as much right as other churches to have incorporated societies and funds for doing missionary work. And, unless it can be proved that the agents of the emigrant society in question carry on their work with the direct and avowed purpose of securing new members who will practise polygamy, Congress has no rightful authority to legislate for the abolition of the corporation,—except, as above intimated, the charter has been otherwise violated. And we much doubt whether this proof can be obtained. If it cannot be, the other part of the religious freedom article of the Constitution would come in play,—namely, that Congress can make no law prohibiting "the free exercise of religion." The practice of polygamy is not claimed to be an essential and necessary condition of membership in the Mormon Church. And, as matter of fact, only a minority of the members live in polygamous relations. This fact makes it important that legislation should carefully discriminate between the acts of the Mormon Church through its various corporations and the acts of its individual members. Were polygamy avowed as a necessary practical part of Mormonism, then all corporations formed for the purpose of nourishing and sustaining the Mormon Church might be prohibited as organized conspiracies for the commission of crime. But, in the absence of such avowal on the part of the Church itself, it is necessary that the Emigration Company, if it is to be abolished for its connection with polygamy, should first be legally convicted of doing acts for the express purpose of establishing polygamous marriage.

Since the above was put in type we have received another communication from Mr. T. W. Curtis on this subject, making some strictures on our article of last week. We would gladly give it room in this paper did its length and our space permit. It will appear next week.

WM. J. POTTER.

SHAKSPERE'S UNBELIEF.

When I was a divinity student, the pleasure I took in Shakspere was much lessened by seeing how little his noblest characters, like Faulconbridge, Hotspur, Kent, Antonio, Beatrice, Rosalind, Miranda, care about religion, and how often his wit runs into irreverence: for instance, when Launce says, "I have received my proportion like the prodigious son"; or when the drunken porter jests about "the primrose way to the everlasting bonfire." It may be that, in all such cases, the great dramatist is merely letting his characters express themselves freely without interference. There can be no worse error about Shakspere than the very common one of supposing that he was trying to set forth his own views of theology or metaphysics or politics. He was too great an artist to be a propagandist. His purposes were simply artistic; but, in following them, he made use, among other materials, of his own observations of religious life. From the tone of these observations, we can make some conjecture as to the stand-point from which they were taken.

Nothing can be asserted more confidently about Shakspere than that he was not a Puritan. If he had been, he would not have made Dogberry, Dame Quickly, and Malvolio so ridiculous; nor, indeed, would he have written for the stage at all. If any positive testimony is needed on this point, it is furnished by the epitaph put in 1649 on the grave of his daughter Susanna, who had married a Puritan named Hall:—

> "Witty above her sexe, but that's not all:
> Wise to Salvation was good Mistris Hall.
> Something of Shakespeare was in that, but this
> Wholy of him with whom she's now in bliss."

These lines go far to prove that Shakspere did not care much for any church. That of England is not honored by his portraits of Sir Hugh Evans, Sir Oliver Mar-Text, Sir Topas, and Sir Nathaniel. These caricatures might have been composed merely to show the age as it was, and so might some familiar passages about how men prove "damned error" with a text, "sugar o'er the devil himself" with "pious action," and dissemble in "parsons' gowns." Here, and also in portraying the full wickedness of Winchester and Wolsey, Shakspere cared much more for dramatic effect than for church interests. But, to realize how little these latter influenced him, it is well to consider some very significant passages, in collecting which I have been aided by *An Inquiry into the Philosophy and Religion of Shakespeare*, by W. J. Birch, an English clergyman, whose zeal for finding evidence of irreligion sometimes makes him too suspicious, but who has been able to bring forward many passages of real importance. Some of these I will classify as follows. In the first place, denials of the resurrection of Jesus and of immortality generally are put in the mouths of nine of the people whom Shakspere holds most in honor:—

Hamlet speaks of

> "The undiscovered country, from whose bourne
> No traveller returns."

Prospero, one of the best and noblest characters ever drawn, says:—

> "We are such stuff
> As dreams are made on, and our little life
> Is rounded with a sleep."

Brutus is so little of a Stoic as to give an "everlasting farewell" to Cassius,—language not found in Plutarch, who makes the hero express such faith in the hereafter as Shakspere does not quote.

Lear swears

> "By all the operations of the orbs,
> From whom we do exist or cease to be."

Claudio is assured by the Duke, in friar's dress,

Digitized by Google

that death is no more than sleep. Romeo drinks off the poison, exclaiming,—

"O here
I will set up my everlasting rest."

Edward IV.'s queen is ready to follow him

"To his new kingdom of ne'er-changing night."

Richard II., after pointing out how Jesus contradicts himself, declares that every man

"With nothing shall be pleased, till he be eased
With being nothing."

And Titus Andronicus finds in his sons' grave

"No noise, but silence and eternal sleep."

Similar denials are put into the mouths of Cassius, Richard III., Macbeth, Lady Macbeth, Falstaff, Barnadine, Autolycus, Roderigo, and Venus in the poem about her and Adonis. There are more than twenty such expressions against immortality, and it looks as if Shakspere took pleasure in exhibiting disbelief. I cannot see why this doubt appears so often, if it were not familiar to him. That many affirmations of immortality occur in his dramas is only what would be expected of a dramatist of the sixteenth century. It is the denials that are significant. They are all the more so, because he makes his characters oppose many other beliefs which then were sacred, as some of them seem still. Nobody objects now to have astrology called "excellent foppery," and most readers would say with Pericles:—

"I'll take thy word for faith, but not thy oath.
Who shuns not to break one will sure crack both."

Few people thought so in the sixteenth century, or were as unwilling to believe in ghosts as Hamlet and Horatio. We all know that "miracles are ceased"; but the words do not sound well in the mouth of an archbishop whose Church still insists that every priest changes bread and wine into flesh and blood, as he says mass, and that supernatural cures still take place at many shrines. The phrase was full of interest for Shakspere's own age, as was Lafeu's speech: "They say miracles are past, and we have our philosophical persons to make modern and familiar, things supernatural and causeless. Hence is it that we make trifles of terrors, ensconcing ourselves into seeming knowledge when we should submit ourselves into an unknown fear." Such submission could not have been greatly desired by an author who makes Lear twice assert that fundamental proposition of materialism, "Nothing can come of nothing." We are much more ready to make trifles out of the old terrors, and to explain, according to the demands of modern thought, what was formerly considered "supernatural and causeless," because we know that

"Time's office is . . .
To eat up errors by opinion bred.
Time's glory is to calm contending kings,
To unmask falsehood, and bring truth to light,
. . . . . .
To feed oblivion with decay of things,
To blot old books, and alter their contents,
. . . . . .
To spoil antiquities of hammer'd steel,
And turn the giddy round of fortune's wheel."

This declaration, that truth was to become known by future innovation on established authority, is all the more significant because it is in a narrative poem, "The Rape of Lucrece," whose genuineness is admitted even by the few who think that Bacon wrote the plays. It is utterly unlikely that Lucretia, just before her suicide, should have delighted in the destruction of ancient authority and the coming to light of new truth. Shakspere would scarcely have spoken in this strain, if he had not been speaking for himself. It is with his approval that the servant, in "Timon of Athens," laments the hypocrisy of "those that under hot, ardent zeal would set whole realms on fire"; and that Timon himself (Act iv., Scene 3), as well as Friar Laurence ("Romeo and Juliet," Act ii., Scene 3), gives the omnipotence of nature praises much like those which helped to bring Shakspere's contemporary, Giordano Bruno, to the stake. And this martyr never said anything more daring than Gloster's speech in "Lear":—

"As flies to wanton boys are we to th' gods:
They kill us for their sport."

The only kind of scepticism which is in the least dangerous, and which is now much less common than a century ago, comes so often to the surface in Shakspere's dramas that it must have been constantly floating through his thoughts. I am sorry to hear even Autolycus say, "What a fool honesty is!" or Edmund mock at his father's "foolish honesty." Perhaps it is natural enough that the murderer in "Richard III." should complain that conscience "makes a man a coward"; but it seems strange that the king himself should talk so to his army, and such language is thoroughly out of place in the mouth of the virtuous Hamlet. Only laxity of principle could have made such wicked men as Falstaff, Lucio, and Autolycus so attractive, or have woven the plot of "Measure for Measure," or have constructed the poem of "Venus and Adonis." Cardinal Wiseman, Rio, and the leading organs of Catholicism claim Shakspere as a Roman Catholic. He might perhaps have found it easy enough to belong to the same church as his favorite authors, Boccaccio, Rabelais, and Montaigne. Romanism, however, was then under such persecution in England as Shakspere was not the man to court. The fact of the Catholicism of his parents is important mainly in making us understand how he could put their sentiments, without sharing them, into the mouth of the Ghost in "Hamlet." No Roman Catholic could have spoken of mass in the evening like Juliet, or have denounced the "usurped authority" and "juggling witchcraft" of the Pope like King John, who refuses to

"Purchase corrupted pardon of a man,
Who, in that sale, sells pardon from himself."

Cranmer's prediction that—in the reign of Elizabeth, when Episcopalianism finally triumphed over Romanism—"God shall be truly known," could scarcely have been written by a zealous Roman Catholic; but it may express more flattery than Protestantism, and its authenticity is doubtful.

Of course, we must remember that Shakspere was an artist, and that his primary object was success on the stage. This purpose did not, I think, call for so many denials of immortality and miracles. Nor would these and other sceptical ideas have made their appearance so often, if they had not been familiar to his thoughts. One of the most important of these passages is in a narrative poem, where it is so out of place that its insertion cannot be accounted for except on the supposition that it gives the author's own views. More important than single passages is the general tone of his works, which, especially in the comedies, is not what we should expect from a deeply religious man. Devout souls may well say, with Emerson, that "the world still wants its poet-priest,—a reconciler, who shall not trifle with Shakspere, the player, nor shall grope in graves with Swedenborg, the mourner; but who shall see, speak, and act with equal inspiration." No one may more fitly be called poet-priest than Robert Browning, whose admirers like to compare him with Shakspere. They are both great dramatists. One of them preferred to deal mainly with the inner life of man; and, therefore, his plays are little read and never acted. The other devoted himself to representing our outer and visible life, and treating men and women as they actually treat each other; and his dramas are in every theatre, in everybody's library, in every mouth. He lived wholly in this world, and that made him the world's great poet. He could not be the greatest of dramatists, without taking such a thoroughly worldly and independent stand-point as made it necessary that he should sometimes talk scepticism. Nothing is harder than to tell his precise views; but nothing is clearer than that he made his views for himself, and did not take them from any church or book. Can we think of Shakspere sitting at the feet of Hugh Evans, or Oliver Mar-Text, or Pandulf, or even Wolsey? Rightly does one of the most brilliant of literary critics and most powerful of liberal poets, Swinburne, say in his *Study of Shakespeare*, after praising the magnificent soliloquy in which Hamlet shows a wisdom far above that of the sixteenth century by refusing to accept the testimony of a spirit, without some sounder proof: "Shakspere was in the genuine sense—that is, in the best and highest and widest meaning of the term—a free thinker. This otherwise practically and avowedly superfluous effusion of all inmost thought appears to me to supply full and sufficient evidence for the conviction of every candid and rational man. To that loftiest and most righteous title which any just and reasoning soul can ever deserve to claim, the greatest, save one, of all poetic thinkers has thus made good his right forever."

F. M. HOLLAND.

THE PHILOSOPHY OF CO-OPERATION.

A letter from Edward Vansittart Neale, General Secretary of the Co-operative Board of Great Britain, to Mrs. I. C. Fales, President of the Sociologic Society of New York, and read before that Society.

Dear Madame,—Thanks for yours of the 19th inst. I am gratified that anything that I say should prove of service to you in the important work in which you are engaged, whence I hope that some practical result may soon begin to show itself. You may consider yourself generally authorized to make any use that you think desirable of any letters that I write to you on social topics. I am confident that the use you will make is such only as I would approve of, could I be consulted at the time.

I have said that I hope for some practical results soon from your labors. I must qualify this expression by saying that the practical results which I should look to with most hope would be the formulation of a sound theory of what may be done and should be aimed at, adopted by a body of persons of a social position, such as may give them working power, who determine steadily to use all the means in their power to work out their theory. At present, the formulation of this sound theory is itself the most important thing, because, until some agreement in matters essential is arrived at, we cannot look for that concerted action whence the actualities of social life must arise upon any considerable state. Now, the formulation of that theory appears to me to be the proposition that nature in producing reasonable beings enters upon a *new* phase of existence, where the principle of struggle, the law of all being that is incapable of reasoning, becomes transformed into the principle of harmony.

Nature continually proceeds from the one to the many. Her course is—in Herbert Spencer's language—a continuous process of differentiation. The fire-mist reduces itself into sun and planets and satellites and asteroids. On the planets, so far as we can judge from our own earth, the mass distinguishes itself into gases and fluids and solids; and, by the combinations thus formed, the possibility is produced of living beings, whose lives developed into an expansiveness and ever-increas-

Digitized by Google

ing variety of forms, moulded by the "survival of he fittest," till this process of transformation culminated in the appearance of the self-conscious, self-governing, imaginative faculty called by us "reason."

I say nothing now of the inference of the true nature of the power underlying all these manifestations, justified in my judgment by this outcome. I purposely abstain, because the inference is not necessary to my position that the outcome of the natural process manifests a tendency not antagonistic to natural order, but the converse of it. As the tree shows in its flowers and its fruits a process of concentration, resting upon and not the converse of the process of expansion resident in its stems, boughs, and leaves, so is it with reason and nature.

Reason is truly supernatural, existing upon nature, but using natural powers for the converse of natural purposes. What nature separates reason unites. In Herbert Spencer's phraseology, In reason, we have the process of integration complementary to the disintegrating process of nature. This rule is universal, conspicuous pre-eminently in the great achievements that constitute our modern pride,— the triumphs of scientific discovery. What are they all but the assertion of the one beneath the many, the uniting idea which bands together and is through the endlessly diversified phenomena, and, in so far as it is a thoroughly true idea, expresses also the character of the power manifested in them? And what is thus true of scientific research is no less true of its moral action. What is morality but the earnest endeavor to harmonize first our own passions among themselves, then the conflicting interests of our own lives and the lives of those around us, till the endless diversities of natural impulse shall blend into one music, where every note, without losing its individuality, may be in consonance with its neighbor's sounds? Now, that reason has been what we call a long time in developing her work ought not to surprise those who have been accustomed, as we have lately got accustomed, to speak of the millions of years which it took nature to build up a world wherein reasonable beings could appear. That her moral work is so poorly done at present and her harmony is so imperfect should not startle those who remember that not a thousand years have passed since the reason began to form a reasonable conception of the universe, and that the key to true political progress (the great principle of federation) only began to be applied on a large scale one hundred years ago, when the union of happy accidents brought together your thirteen original States, Washington, and the grand Continent of North America.

Federation the reason had indeed long before sniffed at. Greece felt its truth, but could not realize it. , Switzerland manifested it, but in a mountains' encasement that would not permit its spread. The German Empire dreams of it. The Netherlands grasped at it, but it slipped from them. We have a United Kingdom, but the monarchical principle has been too strong for the federal. In the United States of North America, their magnificent principle has come out on a side that no one can overlook. All the world can now see its capacity for solving the questions which in Europe keep two million men always under arms, as the chained preservers of the households that they eat up.

Well, it is this same principle of federation—the source of political harmony—that we need, to give us, by its application to social matters, the harmony of society. Federation is association on a large scale; and association is only federation carried down to regulate the every-day circumstance of life, not by destroying individual freedom,—this is the suggestion of Communism,—but by combining the manifold variety of interests, so that the work of reason may be perfected by bringing out the one beneath the many, unity beneath diversity.

Then will come out what Robert Owen very clearly saw, what Godin is now visibly producing, what Plato was keenly alive to, what every one who is interested in education particularly appreciates, even if theoretically they dispute it,—the influence of one's surroundings on their characters, the might of circumstance.

A skilful player may produce fine tones from a very poor instrument, but no one doubts the value of a good instrument to the production of musical sounds by ordinary fingers and lips. So is it with the mechanism of associated life, in proportion as it is substituted for the mechanism of egoistic life by which we are surrounded. I do not say that you will grow now great saints, but you will have an indefinitely greater number of sinners who have ceased to be *sinnable*. Puss may retain its claws, but they will usually be hidden beneath the velvet paws; and, if they come out sometimes, I believe it will be found that their sharp ends have been rubbed off.

One thing the results attained by M. Godin show very clearly, as the results attained by Mr. Owen showed sixty years ago: you want no other material than actually exists in the ordinary men and women among whom we live to produce a society from which gross evil will have disappeared without any police restraint, and where physical want will be thought of as something which no one knows experimentally.

Believe me, yours very truly,

E. V. NEALE.

EDITORIAL NOTES.

THE fourth annual concert for the benefit of the charities connected with the Society for Ethical Culture, comprising the Free Kindergarten, Workingmen's School, and District Nursing Department, will take place at Steinway Hall, New York, March 11.

JOHN SWINTON'S paper, the most radical organ of the labor party, is early in the field with its ticket for the next Presidential campaign. It reads thus: for President, Henry George, of California; for Vice-President, Louis F. Post, of New York; Platform, the principles of *Progress and Poverty*.

ON a recent Sunday, Rev. R. S. Storrs, of Brooklyn, N.Y., preached vigorously against the religious belief of modern scientists and agnostics, claiming that their views were not new, but simply the revival of old mythological teachings. Dr. Storrs rejects evolution. After the sermon, the congregation with great appropriateness sang:—

"Rise, O my soul, pursue the path
By ancient worthies trod."

THE Woman's Suffrage sociable, which held its monthly meeting at the Meionaon on the 28th ult., was made the occasion of a memorial tribute to the worth and work of Wendell Phillips. Many of his old co-laborers in reform were present, and took part in the meeting. Among those who spoke were Theodore D. Weld, Elizur Wright, Rev. Samuel May, Mrs. Julia Ward Howe, Mrs. Ednah D. Cheney, Henry B. Blackwell, Mrs. Lucy Stone, Wm. Lloyd Garrison, Jr., Judge Russell, and John Boyle O'Reilly. Many delightful personal reminiscences of the eloquent apostle of liberty were given, and the occasion was one full of interest to all present.

THE sessions of the Concord School of Philosophy are to be held as usual the coming summer. Three or four days are to be devoted to the discussion of immortality by such eminent thinkers as Drs. Harris, Kedney, Peabody, R. A. Holland, and Prof. John Fiske. A week or more is to be devoted to the study of Emerson, and the following speakers are to give their views on the man and his works: Dr. W. T. Harris, Dr. Hedge, Dr. Bartol, Rev. G. W. Cooke, Mrs. Julia Ward Howe, Mrs. E. D. Cheney, John Albee, Dr. Snider, G. H. Howison, Miss Elizabeth Peabody, F. B. Sanborn, Julian Hawthorne, Dr. Edward W. Emerson, W. E. Channing, and Dr. H. K. Jones.

REV. W. G. BABCOCK writes us of the success of the recent festival held by his congregation at Paine Hall, on Appleton Street, a notice of which failed to reach us in season for insertion in *Index*. "It was," he says, "eminently successful in artistic ways; and, though our expenses were heavy, our receipts were fortunately considerably in excess of our expenditures. I wish you could have seen the display of beauty. It may be repeated." Should it be, as intimated, repeated, we bespeak for it the generous patronage of our city readers, as Mr. Babcock is doing a good work in endeavoring to build up a society on a broader liberal basis than most religious societies of to-day. His heart is in his work, and he is gathering around him a congregation of kindred thinkers. One of the best features of his work is the interest taken in the liberal religious teaching of the young.

THE Chicago *Radical Review* declares that orthodox sermons are treated "with silent contempt by the 'great papers'" of that city, which seem to consider "heterodoxy alone worth printing, and they prefer those discourses which criticise the Bible." The *Review* cites in confirmation of this opinion the fact that on a recent Monday the *Tribune* gave only the sermons of Prof. Swing and Dr. Thomas, both heretics excluded from their respective churches. The *Inter-Ocean* printed in full only the sermon of Prof. Swing; while "the *Times* gave itself over to the Unitarians: it printed full-length sermons of the Rev. J. V. Blake and the Rev. D. N. Utter, and about half a column of Dr. Scudder on 'miracles,' as a sort of background to bring into bolder prominence the heterodoxy of Mr. Blake." Our Boston dailies are not much behind their Chicago contemporaries in this respect, as a glance over the Monday editions will convince any one.

MR. UNDERWOOD is meeting with unusual success, lecturing in the West this season. His audiences are large; and his lectures have been well received, and have excited much interest in the subjects he has discussed, wherever he has spoken. In Kansas City, all the seats and standing room in the hall were occupied; and the papers state that rarely has so intellectual an audience assembled to hear a lecture in that community. The St. Joseph *Herald* says, in a report of the lecture in that city, that the audience "was one of the largest and most intellectual audiences that ever greeted a lecturer in St. Joseph." Both the daily journals gave fair reports of the lecture. The *Gazette* says the lecturer "more than sustained his reputation as a master in his department. The lecture, besides being a succinct, profound, and clear exposition of the conceded points in evolution, presented new, original, and hopeful applications and extensions of the theory. . . . The lecture was one of the crowning events of this week of events, and a matter of congratulation to the club that procured Mr. Underwood." At St. Joseph, the arrangements were made by the Ethical Club; at Kansas City, by the Herbert Spencer Club. Mr. Underwood has lectured in Nebraska, Kansas, and Iowa, and

Digitized by Google

has engagements to meet the next three weeks in Illinois, Indiana, Kentucky, and Ohio. He has been so fully occupied as to be unable to send to *The Index* notes of his travels and work, some account of which, however, may appear before or after his return East.

We quote the following from a discourse on Wendell Phillips, delivered in the Utica (N.Y.) Opera House on Sunday, February 13, by Rev. E. P. Powell:—

For forty years, Mr. Phillips has been acknowledged to be the greatest of orators. And yet it was never easy to see precisely how or why he so mastered his auditors. Beecher is witty and an actor. Phillips was neither. Everett was a refiner of silver and a burnisher of gold. He spoke only to the windward of the people. Phillips was equally classical, but he used history only to lighten the crimes of the present. He had no action, or nearly none. He was cool, imperturbable, and reserved. He had not one trick of speech or method. I believe his power lay (1) in his absolute faith in right things. He knew the truth would come in ahead. Every student of history ought to know it. He therefore relied on the truth absolutely. (2) He had great faith in man. In a letter of three or four years ago, he said: "Four-fifths of mankind know enough to behave better, and they feel that they could behave better. All progress is made by urging on all their duty to 'come up higher.'" Emerson Phillips loved. I have a letter from him speaking pathetically of the philosopher's loss of memory of the names of things. "And I," he adds, "am beginning to forget the names of persons. It is the first step of old age." But Carlyle he detested. "That bundle of sour prejudices" he called him. Emerson loved men. Carlyle despised them. Phillips was with Emerson every time. Carlyle said, "Democracy teaches that the vote of Judas is as good as that of Jesus Christ." "Democracy does nothing of the kind," said Phillips. "It is an appeal to the conscience and common sense of the people." The aristocracy of Boston, when young Phillips espoused a despised cause, shut its doors in his face. But, when forty years of courage were at last crowned with victory, and he stood as the world's most eloquent, most successful, most magnificent orator, the Demosthenes of the modern world, aristocracy threw open its doors, and with gilded persuasions besought him to enter. "Your doors should stay shut," he said; "for, when they are opened, I smell the incense you burned to human bondage and tyranny." He despised them as he pitied them: for, as once they sought to make capital by crushing him, now they sought to borrow lustre from his greatness.

THE F. R. A. FUND.

Donations and membership fees for the Free Religious Association, in response to its recent appeal for funds for the holding of conventions and for meeting other expenses of the Association. Will friends see to it that this list is increased?

THE WILL.

Blame not the times in which we live,
Nor Fortune, frail and fugitive;
Blame not thy parents, nor the rule
Of vice or wrong once learned at school;
But blame thyself, O man!

Although both heaven and earth combined
To mould thy flesh and form thy mind,
Though every thought, word, action, will,
Was framed by powers beyond thee, still
Thou art thyself, O man!

And self to take or leave is free,
Feeling its own sufficiency:
In spite of science, spite of fate,
The judge within thee, soon or late,
Will blame but thee, O man!

Say not, "I would, but could not,—He
Should bear the blame who fashioned me,—
Call you mere change of motive choice?"
Scorning such pleas, the inner voice
Cries, "Thine the deed, O man!"

—*J. A. Symonds.*

The Index.

BOSTON, MARCH 6, 1884.

The Index is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

The objects of The Index may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

No writers in The Index, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. Underwood, the office editor, is responsible.

All communications intended for the paper and all business letters should be addressed to B. F. Underwood, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for The Index should be made payable. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

☞ Papers are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

Free Religion as the Safeguard of the State.

An Essay read at the Free Religious Convention at Providence, Feb. 22, 1884.

BY MRS. E. D. CHENEY.

Speaking to you on the 22d of February,—the birthday of the great hero, statesman, and patriot of America,—I should not feel justified if I did not try to lead the current of your feelings of veneration and love for him into the path of unselfish devotion to the welfare of the State. The topic which at once suggested itself to my thoughts, when asked to speak to you to-day, was "Free Religion as the Safeguard of the State." Fortunately, I was only asked to begin a discussion; for it would be impossible for me to do full justice to so grand a theme.

Our national government was consciously and purposely founded on the principles of free religion; and its great father, Washington, was an exponent of them in his life and action. He was so religious in his character that the churches strive to claim him as their own. He was so free that no one can appropriate him to the exclusion of others. It would have been impossible that this principle, so much in advance of the ideas on which governments have usually been based, could be perfectly carried out without some failures and inconsistencies. The remains of old customs and prejudices have interfered with it, and the selfishness and passions of men have striven against it. But I think history abundantly proves that, where it has been faithfully adhered to, it has proved safe and beneficial to the State; and, where it has been departed from, disaster has followed. The Puritan did not accept this principle, but believed in authority and coercion in matters of religion; and the history of Massachusetts is darkened by the burning of witches, the persecution of Baptists and Quakers, and Catholic and anti-Catholic mobs.

Roger Williams carried this idea into Rhode Island; and, although her record is not spotless, she still reveres the memory of her great free religious founder.

Your committee asked me to strike the key-note of this discussion. Will you pardon me, if I tune my strings a little before trying to reach it, and ask leave to make a few definitions?

First, what do I mean by "Free Religion"? I certainly do not mean "no religion" nor "anti-religion." Let us try to agree upon our idea of the noun substantive before we prefix the adjective.

Religion is a word which speaks very forcibly to us, and yet whose meaning is so large or so vague that almost as many definitions of it are given as there are persons to speak of it; but all recognize it as expressing a great power in the life of mankind, able to move the masses of the people as well as to influence the greatest individual minds, and thus to change the whole current of social and political life. As religious thought or feeling has become intensified and incarnated in certain persons or churches, it has marked the epochs of history; and we date from events in the lives of Moses, Buddha, Jesus, Mohammed, rather than from the reign of kings or foundation of cities.

It is common to define religion by doctrines or speculative beliefs. Many assert that there can be no religion without belief in a personal God. Certainly, that is the cherished faith which has been dear to the noblest minds of earth. But yet the Buddhist religion, which outnumbers in its disciples every other organized church, and whose influence for good is almost universally acknowledged, repudiates this doctrine.

The Brahmo Somaj of India has lately declared that there is no religion without belief in immortality, forgetting that it is doubtful whether Buddha and Confucius ever taught it, and certain that the Jewish Church, through all its period of prosperity and power, never formulated it. Yet who can deny the name of religion to these great Churches?

I will not stay to criticise other definitions, but only ask you to let me use the word "religion" to-day as expressing that power in the human soul which lifts a man out of himself and places him in relation with the Universal. It is that which leads men to self-consecration and self-sacrifice, without hope of reward. It is that which recognizes right and duty as paramount obligations. It is that which believes in a higher law than expediency or interest, although that law be higher than the Blue Ridge or the Himalaya. It is that which gave the slave the hope of deliverance in the midst of his bondage, that which sent the young man to the war at the cost of all which he had held most dear in life. It is that which Napoleon called "belief in destiny"; and Cromwell, "trust in God." It has its moral, affectional, and intellectual aspects, taking on different shapes, but always exercising a mighty force. It was Calvinist* in Wendell Phillips, Rationalistic in Theodore Parker, Transcendental in Emerson, but alike the ruling force in all of them. It is a simple element of the spiritual nature of man,—as oxygen is of the material world,—capable of entering into combination with everything, but as yet yielding to no analysis. It is the centrifugal force which in-

* Some persons have questioned the application of this term to Mr. Phillips, because his conduct in religious matters was so unlike that of ordinary members of Calvinist churches. But he distinctly called himself a Calvinist, and often defended Calvinism, and asserted its great value as historically proved in all modern history. Moreover, he declared his belief in the doctrine of human depravity, and based argument upon it. None the less was he truly a Free Religionist, giving to others the liberty he claimed for himself, and basing his judgment of men on their actions, and not on their speculative beliefs.

Digitized by Google

pels man onward to thought, speculation, and action, and so makes him radical and reformed. It is the centripetal bond which holds him to the centre by ties of duty, affection, and custom, and so is conservative in its action.

I can accept no definition of religion as the great moving force of humanity which does not include Felix Adler in his school, Maria Mitchell in her laboratory, the workman at his bench, and the tired mother walking with her restless babe through the dark hours of the night, as well as Channing in his study or the bishop in his pulpit. If you will for the present agree upon this definition of religion, what do we mean by saying that it must be free? It must be unfettered by outward rule or authority, free to follow the law of its own being, finding its form and its limitations in universal conditions, not in arbitrary regulations. Only thus can it possess the inward force and vitality which will inspire man to act with his whole power. The direct relation of the individual soul to the universal must not be hindered. This is the secret of the doctrine of the mystics, and is the power of every new movement in religion, —the protest of the soul against the efforts of outward authority to constrain it. If this doctrine is lost, the Church becomes tyrannical and corrupt, a partial authority taking the place of the universal. As the very essence of religion consists in a recognition of the whole, and not the partial and the selfish, no minor authority can control it.

Freedom in religion, therefore, demands that every soul may seek directly for truth and satisfaction, but also that it shall grant to every other soul the same freedom,—respecting its own form of religion, but no less that of every other man.

Free Religion need destroy nothing which has ever been dear to man's heart, so long as any soul finds help from it; but it must destroy every forced bond which binds any mind to that which it no longer believes. The Church may formulate its creed, and call all those who accept it together to worship and live according to it. The Liberal League may announce its beliefs, and ask all to join in working to carry them out; but, if either of these bodies uses any constraining force, whether physical, legal, or social, to fetter others in their belief, it ceases to represent Free Religion. Only appeals to reason by argument, to feeling by sentiment, and to conscience by the claim of duty, can be used by the true Free Religionist to extend his faith.

We should learn to recognize religion under every manifestation, for it takes to itself every form. I love to feel that, having the charter of Free Religion, we need not shut ourselves out from any city where she dwells. We can sing with the Methodist, rejoicing that "the grace of God is free as the grass that grows and the water that runs." We can sit silent with the Quaker, waiting to hear the guiding voice of the spirit within. We can breathe the prayer of sunrise with the Mohammedan, or pause and listen as the vesper bell tolls its sweet, solemn farewell to the sun sinking behind the hills. In the dear old Duomo at Florence, more impressive in its shabby simplicity than the restored cathedrals of England, I have loved to join with the multitude gathered on Sunday evening to sing the old Latin hymns of the Church, and have felt that it ought to be a Free Religious chapel, where all might come together in the "fellowship of the spirit," whatever their articles of belief. And just as reverently could I stand in the laboratory of the Agnostic, and watch the religious fidelity with which he pursued his investigations, unconscious of himself, and waiting for the truth which should force conviction upon him.

How can true science be irreligious, since its motto is the truth, not as I will it to be, but as I find that it is. The bigot may declare, I would preach this doctrine, though it were proved to be false; for I am sure it is beneficial. But genuine science will say to the truth, as religion says to its God, "Though he slay me, yet will I trust in him." I will not be made happy by a belief which is false, or which blesses me at the expense of other men. Truth is universal, and science and religion both must yield up self in her pursuit.

Free Religion claims that man is responsible to his conscience for his belief, but he must answer to the State for his acts. The Church represents the religious sentiment in man. The State is the organization of practical life. Is not this the only relation that they can safely hold to each other? and does not the long conflict between Church and State, which has desolated the world, come from violation of this principle, which has developed through the slow evolution of ages?

Dante saw this truth, when, devout Catholic as he was, he became a Ghibelline, and maintained the rights of the empire against the pope; and Cavour recognized it as the only salvation of New Italy, when he gave his formula, "A free Church in a free State." And his brother prophesied:—

"The time will come when our venerable Pius IX., or at least his successor, will be convinced that he ought vigorously to imitate the holy prophet Samuel, who, although constituted by God himself judge in Israel, yielded to a layman, even Saul, the exercise of the royal authority."

Leo XIII. may claim to be a prisoner in his magnificent little realm, but it is his own stubborn will that fetters him. "The free Church and free State of Italy" has a place for him as for every other man.

The opponents of this idea bring specious arguments against it. "Religion should govern the State," says the one party; for we need the highest virtue in politics, as everywhere else. True; but that religion should act through the conscience of the law-makers and of every voter who takes part in the government, not as the arbitrary will of a body organized outside of the State, whose religion may be not the expression of the best and highest in the country, but only of the most formal and self-interested.

The State must not neglect an interest so important in the life of mankind as religion, say others; and only an established Church can sustain it. The State does owe a duty to religion; and that is to protect its freedom even from itself, so that it may remain living religion, and not a mere puppet of the State. So Free Religion, which can act untrammelled by human law in influencing the consciences of men, is the only safety of the State; for thus alone can religion raise the State to a higher level than it now occupies. If it is a creature of the State, supported by it, it will partake of its limitations and faults: if it is free, it will be an encompassing atmosphere of truth and righteousness, ever renewing the life-blood of the State. Is not the history of every established Church either that of violent conflict with the State or of subserviency to the worst elements in it?

Let us apply this principle to some of the problems which are disturbing our national life. I do not agree with our friend Mr. Abbot that we are on the eve of a great religious war, yet I was startled to hear an intelligent and moderate young Californian say that he thought Church questions would be the great political issue in that State. There are questions looming up with heavy clouds in our horizon, which should be settled on this basis alone. Many have anxious forebodings about the preponderance of the Catholic Church, fearing that it will influence our schools and control our legislation. The Catholic Church will have no danger for us, if we employ the Free Religious method,—putting its members on precisely the same footing as all other men, requiring that its societies, when dealing with secular matters, shall conform to the laws of the State, while in doctrine they are left free to their own beliefs. Before the law, a Catholic Church is a legal corporation; and its treasurer must be held accountable for the money intrusted to his charge, whether he is called a priest, and invests it in churches, or a cashier who buys fine houses and horses.

The gates of the convent must open to a writ of *habeas corpus*, although the Church is free to pronounce excommunication on the nun who takes advantage of it.

If a Catholic woman marries against the rules of her Church, the father confessor, like her own father, may remonstrate with her in private; but, if he utter foul charges against her from the pulpit, the Church cannot protect him against an action for slander. Catholics as individuals are as generous, industrious, and law-abiding as other men. It is only when acting as a body, apart from the State, that they become arbitrary and dangerous. Let us respect the freedom of their religious beliefs, and beware of any injustice toward them which shall drive them to concert in self-defence; but let us never fear to hold them to a strict responsibility to the law for their actions.

Has not the great mistake of our Indian policy been, not a want of kindly sentiment, but our refusal to recognize the Indians as individuals, and to educate them by responsibility, instead of pampering them by protection, bounties, and bad whiskey? The question of religious freedom does not distinctly appear among them, but it is the same great principle of respect for the personality of man which is needed to give them civil and human rights.

The Sunday laws are a striking instance of the lingering of a false principle in our legislation. The institution of a day of rest, giving opportunity for other avocations than those of the ordinary work of life, is most beneficial and pleasant. Almost every one welcomes its dawn, as it comes to rest the weary laborer and to bring the absent wanderer back to the home. Probably not one in a thousand throughout the land would consent to its destruction. Free Religion rejoices in it, as giving opportunity for the expression of thought and feeling and that education of the people in which she fully believes; and she recognizes that the State has a right to sanction it and to throw its protection about it, so far as to promote the good of all citizens. A tyrannical minority still seeks to base its observance upon obsolete Jewish authority and customs, and to stamp all violation of its own methods of keeping it as sin, and thus does violence to men's consciences and injures the cause of religion and morality. The laws that still linger on our statute-books forbidding travelling on the "Lord's Day" are only called into the light to protect some mean man, or meaner town, from paying damages for the injury he has caused by his carelessness, because the accident chanced upon the first day of the week. I am glad that legislatures are taking this matter in hand. It is legitimate work for the Free Religious Association to aid in removing all such fetters upon the free enjoyment of this blessed day.

The persecution of the Jews, which has agitated Europe so many times,—and which even now condemns thousands of unoffending people to lives of degradation and suffering in Russia and Germany, —has had no existence here, because we have never failed to recognize a Jew as a person before the laws; and, satisfied with this recognition, he has

Digitized by Google

enjoyed his own religion unmolested, without troubling others.

At present, our foreign politics are less concerned with Europe than with Asia. We have little anxiety about our relations with Germany, France, and England, for we have learned to respect each other's human rights on Christian ground; but, with China and Japan, we have dangerous questions. We are not quite sure that the Asiatic is a man like ourselves and not some monster of heathenism; and we will not recognize Chinamen as responsible individuals, but treat them in the mass as so many heads of cattle. I know of no more humiliating sight than that of a great nation, professing to hold labor in respect, and to be founded on the rights of man, but legislating against classes, and shutting out the Chinese laborer who comes to turn the barren wilderness into a garden, while it does not shut out adventurers and gamblers who claim the right to prey upon their victims under the very shelter of the Capitol.

Enforce the laws against all the evil practices of Chinamen. Do not allow them to poison your cities with pestilence, because they will pay high rents for foul quarters, but hold every man responsible for his deeds; and do not slander and persecute a nation for the alleged vices of its most degraded class. It is not the organized Church of the land which has been hostile to the Chinese: it has often taken their part. It is the disorganized spirit of selfishness, which respects no rights but its own interest, which is trying—oh, how vainly!—to keep him out from the land which has offered home and shelter to the outcasts of the world.

Another great dragon lies in our pathway, and can only be conquered by this pure and brave virgin, Free Religion. I refer to the strange, anomalous, energetic Church of Utah, which in the nineteenth century is reproducing the theocracy of Palestine, making the Church the ruler of the State, and introducing into America the marriage customs of Turkey and Arabia. The world is so apt to class a speaker with any one whom he defends that one shrinks from denouncing the present legislation against Utah, lest one may be supposed to be in love with the institution of polygamy. It must be needless to argue the general question of polygamy before this audience. With few exceptions, it is condemned by the Christian world, and even by the original Mormon Church. It is plainly contrary to the plans of nature. It is opposed to the equality of the sexes, the only stable ground of social order. It makes a perfect family impossible, since fatherhood is placed on a different footing from motherhood; and, even in Mohammedan countries, where it is still countenanced by law, it falls out of use from the inconveniences and evils attending the practice. However it may be still defended by individuals as a local institution, the whole sentiment of our community is so strong against it, and its abolition is so important to the right organization and development of human society, that the state is fully justified in condemning its practice, and in refusing to admit to its partnership a State which makes it legal. The institution of marriage is of the greatest importance to the order and welfare of society, and the State should place it under such safeguards and regulations as may secure the purposes for which it is instituted. But, in a frenzy of horror at polygamy, the United States government have gone much beyond their legitimate right, and have placed the crime of polygamy on a different footing from that of other offences against law and order. The application of tests, which may be necessary in a time of war, are dangerous as a measure of ordinary government. The Edmunds' bill as finally passed guards against the punishment of disfranchisement being inflicted for belief alone, but it stamps degradation upon it by exclusion from the jury. It is an attempt to secure control of the Territory by a minority instead of converting the majority by reason. There are difficulties in regard to the question, because the laws of the States are not uniform; and, until Congress can establish uniform marriage laws for the country, how can it dictate their form in any State?

But, to be safe and just, legislation in regard to Utah, to its church relations and its marriage customs, must follow the principles of Free Religion, condemning no man for his belief, but holding him responsible to society for his actions. The Christian Church is lamed in its attack upon polygamy, because the Mormon can meet him on his own ground, and quote Bible authority to support him in his faith and practice; but the Free Religionist will knock away that support, and base his opposition to the evil custom, not on theological grounds, but on the welfare of society. On this ground, he will not hold a community or a person responsible for belief; but every man will be held accountable for his actions. The preacher in the pulpit may hold up Abraham as an example of faith, for sacrificing his only son at the command of God; but let a wretched fanatic put this belief in practice, and the sheriff arrests him for murder; and, if he is saved from the gallows, it is only on the humane plea of insanity, which consigns him to an asylum instead of a prison. We should thus attack the Mormon Church most effectually, for its great power lies in the destruction of individuality by theological tyranny. And, while legislation is stretched to its utmost tension to attack an institution so narrow and confined in its influence, every city in our country is reeking with an evil which, in comparison with polygamy, is like the foul plague which creeps unseen from city to city, filling its path with reeking corpses, to the mild domestic diseases of measles and chicken-pox, which produce eruption and irritation, but which are self-limiting, and will soon be cured by fresh air and wholesome regimen.

Yet organized bodies of learned men have declared their belief in the necessity of these practices which I cannot even name, and asked for law, not to protect their victim against them, but to save the evil doer from the punishment which nature has set upon them; and no word has been lisped asking for the disfranchisement or removal from office of those who believe in or practise this enormity.

Purify the land from this crime, place the two sexes on an equality in all departments of life, and polygamy will vanish away in less than the lifetime of a generation. What faith have we in modern education, in the spread of knowledge, in our virtue and our religion, if we cannot trust to it to wipe out an institution which in Arabia is falling into disuse and which India is repudiating? One point of minor importance I will name, which perhaps does little practical harm, but which is an anomaly in our legislation which ought to be swept away. This is the recognition by the law of the ordained minister of a church as competent to perform a binding marriage service. The welfare of society demands that the contract of marriage should be publicly acknowledged and recorded, so that it cannot be denied. So far the State should exercise its authority: beyond that, religion may give its advice and its benediction in whatsoever form the parties may choose, but it should have no legal weight. This is the custom of France, England, Switzerland, etc., and should be ours, according to our great principle of the separate domain of the Church and the State.

My friends, I do not feel that I have said anything new to you on this subject; for the principle of a free church in a free State, neither controlling the other in that which essentially belongs to it, is one which we have heard all our lives. Even Robespierre bade the French Revolution stay its hand when it threatened to touch, not the outward rule, but the inward life and doctrines of the Church. But, as we repeat the Declaration of Independence every year, so we need constantly to renew our allegiance to the great principle of Free Religion, the individual responsibility of every man for his belief, and his responsibility to the State for every act that affects his fellow-beings.

Free Religion, the safeguard of the State, is a strange motto to those who have narrowed this phrase to express a sect or party, and who believe that this party hold doctrines the most dangerous to both the Church and the State. If we have dared to call ourselves by this broad and high and comprehensive name, we are found to keep true to it, and to show by our words and our deeds that it may be radical without being destructive, and that it is conservative of morality by educating every man by a keen sense of responsibility to himself for his thoughts and a strict account to other men for his deeds. In our population, blended of every race under heaven, this principle of mutual respect and justice can alone keep us in peaceful and harmonious relations which will make higher civilization and greater progress possible and safe.

For *The Index*.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER XV.

Florence was to me as bright as ever. I met Mr. Lilly again, the most genial treasurer in the world, who is chief purser of the Cosmian Hall, and a frequent writer in liberal papers. I spoke again in the hall, and visited the Sunday-schools. The Springfield *Republican* had a paragraph announcing that "a horse-car will leave Northampton for Florence at 1.15 on the Sunday" of my address there. Mr. and Mrs. Spencer, who conduct the services in the hall and classes in the school, are both known as public advocates of repute. In the morning, I took a seat among the scholars, where I could watch the admirable readings and recitations of the elder students, when all at once a pretty little girl dressed in blue silk walked quietly toward me, and made me a charming little speech of welcome in the name of the school. Had she risen like a little Venus from the (deal) sea on which she stood, I could not have been more surprised. It was only because the sun shone so bright on the snow of Florence that I had strolled out and looked in at the school. Of course, I had to make a speech to the students, little and large; but I did not acquit myself half so well as the little orator in blue silk.

At night, we were accorded a reception at the Cosmian Hall. There were several hundreds of people there. My daughter, Mrs. Leach, and myself sat on a dais. Things are done in great state in Florence city. All ended by my having to make a speech upon everything which I knew, which, happily for those present, was not much. So, without much distress, relief came to them by pure exhaustion of ideas on my part. Fortunately, Mr. Lilly and Mr. Hill, my host, had spoken, so that a pleasant impression of festivity prevailed in the minds of the meeting.

Afterward, I visited Mr. Samuel L. Hill, the chief founder of Florence. He was a man of good stature, a good forehead, and of impressive countenance. In the middle of this century, he had been a chief leader and promoter of a social community in the neighborhood of Florence, which has an instructive history. He subsequently acted upon the high principle of associative life which he professed. He subscribed $20,000 toward the erection of the Cosmian Hall, in Florence, and subscribed $1,500 a year to the support of the preacher. A house he had built for himself he gave up to be used as a "Kindergarten," school for children. The upper room, with two bay-windows

Digitized by Google

looking over verdant gardens, was very beautiful. It was well supplied with means of instruction. The teachers resided in the house, and all the establishment was supported by Mr. Hill's generosity. In the winter, when snow fell, he sent a large, light wagon from the farm, which went round to the homes of the little pupils. When school was over, this wagon came for them and again left each at home. The morning wagon, gathering clean-faced, rosy children, and driving them laughing from house to house, until it was full of little Kindergarteners, was a sight as pretty as a prayer. Mr. Hill was a Quaker; but, marrying a bright-eyed Baptist, he joined that Church, and became deacon at Willimantic, Conn. He set himself against slavery in its dangerous days, but he was soon "admonished that the church could not be used to address the people on that subject." He was afterward found with those engaged in the bitterest fight for the freedom of the negro. His philanthropy was not sentimental at one corner only: it was of an all-round, robust quality. He was also for the welfare of all in his employ. He wanted every man to be permanently well off. He assisted them to get houses and land of their own. It has been said lately in the Springfield *Sunday Republican* that probably half the buildings in Florence came to be thus owned by his aid. He owned himself the steam silk-mills of Nonotuck. He was a co-operator of the old school, who have nearly all died out. He gave $25,000 to a fund to enable workmen to get houses, and $27,000 to erect a great school-house. To the school superintendent he paid $1,000 a year, in order that he might receive $2,000 salary, as he well knew that there is no folly like that of stinginess and parsimony toward those whose brains you need to do good work. In all things, he was a co-operator, with the spirit of a gentleman, who knew that knowledge was a good investment, and took care that all who labored for him by hand or brain had "a good time of it." His merit was that he did not look for profit, but for improvement, or rather that was the profit he had in view. He lived himself in what we should call a plain villa residence. I think, with pleasure, that I spent some time with him the last night he passed in it. He set out next day for Citronville, Ala., for change of air, but died on his arrival, at the age of seventy-five. Many were the fugitives from slavery of body, of capital, and of opinion, who had found shelter in his hospitable house in the evil days of progress. These were "actions of the just," which "smell sweet and blossom in the dust."

I and my friends were the guests of his son, Mr. A. G. Hill. It was he who, observing in 1879 I had some repressed aspirations toward perfection, remarked that "he supposed I did not want to be an angel at starting out." Mr. Hill has sent me a letter describing the death of his father, which was calm and regnant like his life. From the fine spirit in which he speaks of his father's career and example, I conclude that the lustre of it will be sustained in his son.

In Springfield, where a company not only light the city, but warm it, laying heat on as we do water, we were the guests of Mr. Seth Hunt, through whom I had the honor to make the acquaintance of some of the principal citizens, one of whom did me the service of showing me the original book of Laws of Massachusetts, bearing the autographs of "Captain Elizar Holiok" (who was town clerk of Springfield, 1660–1676) and of "John Holyoke, 1677" (who was town clerk, 1676–1680). I observed that Captain Holiok, whose name is always given as "Elizur," was spelled by him "Elizar." It was from this Captain Holyoke, one of the founders and fighting pioneers of Springfield, that Mount Holyoke took its name. His immediate successor restored the *y* to his name. When at Providence, Dr. Channing's son (whom I had the good fortune to meet) told me that the arms of the Cambridge Holyokes are holly and oak, so that the *a* was in the name. The local newspapers cited that I had explained that the name was Druidical, and meant "holy oak." Mr. Seth Hunt showed me historical evidence that Elizur Holyoke, who gave the name to the mountain, came from Tamworth in Warwickshire, the same county in which I was born.

One addition to Springfield since I saw it last was a bronze statue of one of the Puritan fighting pioneer founders of the city. The statue is stalwart, vigorous, and lifelike. The early hero bears upon him a musket, as he uses a farming implement. In those days, the farmer had to be ready to fight as he tilled his ground. The Puritans of Connecticut did not pay for their lands as Penn did, and had to pay for them with their blood. The monument stands in the corner of the square before one of the public halls, and derives some of its effect by its unusual position. The brave settler appears still on guard.

Mr. Seth Hunt informed me, in answer to my inquiries, that my friend, Mr. Goodenough, is still in Holyoke City, and that Mr. Toogood is still engaged in the same establishment, so that, if there be virtue in names, Holyoke City is all right. I was told that there is a Mr. Badenough now in the city. He is supposed to come from New York, where such persons are popularly said to be plentiful. In Holyoke, he will rectify the balance, if persons "too good" abound. My friend, Mr. Hunt, a great friend of anti-slavery agitations, has been countless years a vegetarian. Some disability had at length overtaken him, but had not abated his fine human interest in things of progress; and, since I last saw him, he has recovered his usual health, and still discharges his duties of treasurer to the Connecticut River Railroad.

At New Bedford, I was shown the Wamsutta Mills, much resembling in their complete appointments those of Mr. J. K. Cross, M.P., for Bolton. It was shown to me that two electric lights superseded eighty-nine gas-burners. The manager, who introduced the new incandescent illuminator, said he found it to be half the price of gas. The Wamsutta Mills were numbered one, two, three, four, five. They had no names. The hurry in America is on everything. They number their streets. Even their great avenues are Fourth and Tenth. They will call their squares A, B, and C soon. Their counties will be styled d, e, f. It produces an odd effect to see streets numbered like prison cells. You expect to see the passengers with a number on the coat collars of gentlemen and on the bonnets of ladies, after the manner of convicts. The reason why barks of trees in the parks are covered with signs and labels, announcing "St. Jacob's Wine" or the "Latest Thing in Bitters" is that those who are sent out to put up the notices take no time to find the right place for advertisements, and stick them in the first to which they come.

Mr. Peter Sidebotham, a frequent correspondent in the *Co-operative News*, and Mr. Coffin invited me to New Bedford, where I was the chartered guest of Mr. Hugh M'Hugh, who showed me the most diversified and interesting picture and picture frame works, and kindred branches of electro-reproductions of objects in art, I met with in America. Rev. William J. Potter, a minister of high character in New Bedford, a writer of great precision, force, and independent thought, and editor of the Boston *Index*, introduced me to the audience in the City Hall, which seemed to me a hall worthy of the name. The lecture was upon "Co-operative Methods and Results." My friends were desirous that this subject should be explained in New Bedford, and the full reports in the *Daily Mercury* and *Evening Standard* enabled those who did not come to the lecture (who were a considerable number) to read all about it. Co-operation is wanted in that excellent city. Bedford, in England, where John Bunyan's statue stands, is pretty damp, and drowsy little rivers run about it. New Bedford, Mass., resembles it in low-lying land and water, save that it has much more of both. And, though it has had no Bunyan, it has great historic memories of its own of anti-slavery days.

Wandering about the city one evening, I thought a street I turned into had gone mad. I made for the scene of commotion. There was a grocer's shop in a blaze, within and without; and bands were playing in the streets and behind the counter and crowds outside watching the demonstration. I was told that it was merely the opening of a new shop, that this was the way in which the thing was done, and there was good reason to believe that customers were to be got in that way who could be depended upon not to reflect that those who bought there had to pay for the Bedlamic display. There must be a Bedlam near that Bedford.

Rev. M. C. Julien, a popular preacher in the city, introduced me to the audience at the Neptune Hall, on the second night, when I was requested to speak on "Gladstone and Beaconsfield,—their Methods of Thought and Characteristics of their Oratory." Several distinguished citizens, legal and political, were present.

My last breakfast in New Bedford was in Mr. Potter's spacious library. The time of the train came all too soon, abridging those pleasant and well-remembered hours. At Providence, Rhode Island, I found the Narragansett Hotel so crowded that it was with difficulty we reached our apartments. The reason was that the hotel was invaded unceremoniously from the streets, to hear a speech from General Benjamin Butler, who had at last got himself elected Governor of Massachusetts. As Mr. Wendell Phillips, who had introduced me to the General in 1879, had promoted his election, I sent up my congratulations to the General on his success, though as an elector I could not have cast a vote for him, except on the grounds of ingenuity, perseverance, and audacity.

On the night of our arrival at Providence, we were present at a festival of the Society, presided over by Rev. Frederick A. Hinckley. On leaving the Narragansett Hotel, we were the guest of Mr. James Eddy, who has a great collection of pictures in which he is a distinguished connoisseur. He has two charming daughters, who each excel as artists. Mr. Eddy has built a fine Hall near his own house and grounds. Like the old Catholic gentlemen in England, he has a church attached to his hall. He has adorned the church by many noble ethical sentences, which are engraved about it.

Mr. Ballou drove me to the suburbs of Providence, where I had a long-promised visit to make. The open, latticed carriages, excellent in July, are too breezy in November; and I took a pure Providence cold, which might be patented, it is so distinctive. I tried one in 1879, and could draw the specification. But it did not prevent me speaking in the Conservatory Hall of the Free Religious Society, of which Rev. Mr. Hinckley is pastor, on the "Characteristics of English Parliamentary Oratory," a subject which, whenever it was prescribed to me, gave me the advantage of addressing eminent citizens, not to be allured when the generally unknown subject of Co-operation was the topic. Reports of this lecture in the Providence *Journal* I saw quoted in journals far away from Providence. Before leaving the city, I had the pleasure of dining with Mr. Weeden, a considerable manufacturer, who is himself an author, and, as a thinker on co-operative and social theories, has, directly and indirectly by suggestion, caused some wise and valuable works to appear.

In consequence of a passage in the Providence *Journal*, purporting to be a remark of mine at the Conservatory Hall, I sent a note to that paper, saying: "Your reporter has given such an interesting and spirited account of the address I delivered on Sunday morning at Rev. Frederick A. Hinckley's church that I am reluctant to suggest a single correction; and I do it, not on my own behalf, but that of my friend, Sir Wilfrid Lawson, who is at the head of the great movement on behalf of temperance in England. What I said of ginger-beer and soda-water oratory in Parliament related to the predecessor of Sir Wilfrid Lawson in the House of Commons. Sir Wilfrid has entirely the opposite qualities: he is the first wit who ever represented that cause in Parliament, which needs wit more than any other. Sir Wilfrid has infinite humor both in public and private life, and has made the cause of temperance the most agreeable advocacy in England."

We were all the guests of Rev. Mr. Hinckley for a time, as we had the honor of a reception one evening in his parlor; and a party of no mean interest it was. For myself, I deserved a medal for the number of questions I answered upon co-operation and most other things. Mr. Hinckley is himself a preacher whose discourses command admiration and have great public relevance, as their periodic publications show. I owed much to his courtesy in affording me opportunities of speaking to his people, which he might more profitably have used himself. A note from Mr. Wendell Phillips, saying he would be able to see us in Boston, caused us to leave Providence, where we should gladly have lingered longer.

THE TENEMENT HOUSE EVIL.

Abstract of a Discourse by Felix Adler, Ph.D.

We referred last week to Prof. Adler's recent discourses on the tenement house evil in New York. The following abstract of the second one of these addresses we take from a New York paper. After sketching the ideal development of human life, the speaker continued in substance thus:—

"Let us turn from this ideal to look upon the tene-

Digitized by Google

ment house population of New York. What blackness falls upon the sight! What a descent there is from a mountain-top to a miry swamp! Among old superstitions is there any more pernicious than that which holds that some persons are born with blue blood, that a small part of the population is to have the advantages of culture and refinement, while the majority grow up in neglect, that the few are to sit upon thrones built upon the bodies of the many? I have heard in this country even—in this land of liberty—utterances which show that the tradition lingers among us that some are born with gold in their souls and some with baser metal. I was present once at an Independence Day dinner, which occurred shortly after a great strike, which had excited more public sympathy than is usual. My neighbor was particularly violent in his denunciation of the strikers; and, at last, he said, 'It is my belief that some men are born to drink champagne, and others to carry the hod.' Just then, he was called upon by the chairman to respond to the first toast. He stood up, and, lifting his glass, exclaimed, 'Let us drink to our Declaration of Independence and our glorious Constitution.'

"You would not put wine into a dusty goblet: you would not place the luscious summer fruit upon a broken plate. How does it happen, then, that you, who believe that every man has an immortal, precious soul, would place that soul in a soiled and shattered vessel? 'The poor man should cultivate greater refinement,' says one. How, when even his grosser senses are offended day by day and hour by hour with his surroundings? 'He should be better educated: ignorance is his great fault,' another says. How shall he be educated? Has he not been taken from school in his very infancy to work in a factory, or be a cash boy, to help to keep starvation from his parents' door? 'Greater morality should prevail among the lower classes,' says a third. How shall the poor man be virtuous, when all the surroundings of his life are destructive of morality? I tell you there is room for a new abolition movement here, as broad, as grand as that other which is just finished against negro slavery. But so difficult, so complicated are the necessities of this case that it is a blessing if any settled point can be found from which to start the movement for the abolition of pauperism, if to the helpless people and their still more helpless benefactors any certain course can be laid open. This certainty, this starting-point, I believe, is to be found in the tenement house problem. Here, it will not be necessary to convince: here, you can appeal from a sure basis to the morally lazy, who know their duty, but do not do it. You can call to them in the words of the Scripture, 'Let my people go free,'—free from the extortioners who are squeezing the last penny out of the poor, free from the reeking dens in which they pass their lives.

"The case is this. The decent working people of New York to-day pay, on an average, rents from $8 to $14 a month. That is a fixed quantity. They can give no more. Their wages will not allow it. Now, if the tenements must pay from ten to fifteen per cent. to the landlords, it is plain the capital invested must be very small. If the capital is small, the comforts and conveniences must be very limited. If the capitalist would be content with six per cent., so much more comfort would be assured to the tenant. Now, we may hope, judging from examples in this city and Brooklyn, that we can make six per cent. in our new tenement enterprise, and yet give good light, ventilation, and plumbing. Our plan is to be content with half that, and make the rest a sinking fund for the tenements,—to brighten the lives of these poor people with the idea that in old age they may live rent free. To carry out these plans, only money is wanted. You are not asked to give, only to lend. Is it very hard to lend to the poor at three per cent.?

"The newspapers object that we cannot get men to furnish capital at three per cent., when they can make fifty. Are men only dirt? Will people who own capital only respond to one motive? But what about the churches? They claim to be the guardians of the public morality. Let them see to what a fine condition of morality we have come. There are churches in this city so rich that they could build whole blocks of tenements. Let us do our part; and perhaps, when they see us, a band of radicals, going forward, they may be goaded into action.

"Others object that some of the people are too degraded to live in clean houses. They do not seem to see what a reproach that is to themselves: they do not see what an argument for haste it is, lest the rest of the people should become as bad. But, at any rate, these degraded ones are the minority. Why, then, compel the decent poor to live amid associations they abhor?

"Then, I am asked why I attack the houses, and pass over the matter of food and dress. I reply, The home is the foundation of everything. Where homes are well, all is well. But when, as I have seen, two families and night lodgers are crowded in two rooms, one of them dark, is it wonderful that health is bad, morals are low, and politics are corrupt? I have no patience with movements that attack the symptoms and disregard the causes of disease. Are we sure that, if we lived in squalor, we could resist the temptation to drown in drink our remembrances of our lot,—of what we are, and what the civilization of the nineteenth century has made us?

"I have known a man brutally to kick his wife at a time when she ought to have been the subject of his tenderest care. I have heard the story of a fair-haired little girl on whom a brutal father drew a knife. I have talked with a little girl of eleven, who already had tasted of the fruits of the tree of knowledge, because she and her father and mother and brothers and sisters were crowded, regardless of all decency, in a single room.

"It is because I know these things and you know them that I tell you we are responsible for the lives and destinies of these people; and, if we do not try to rescue them, their fate is upon our heads."

B. F. UNDERWOOD IN THE WEST.

From a report of an interview with Mr. Underwood, which appeared in the Denver *Daily Tribune*, we extract the following:—

"How do you regard the position of men like Beecher and Swing?"

"They are in a transitional stage of thought. They have partially outgrown the old, and have but imperfectly assimilated the new. Hence, while they are progressive in spirit, they are full of inconsistencies and contradictions. But their faces are toward the east, and they are doing good."

"What do you believe will be the ultimate result of the present religious agitation?"

"Modified and more rational creeds, first; broader sympathies between men and the prevalence of scientific modes of thinking. The influence of the clergy and their theology will grow less, and larger numbers will appreciate those who contribute to human knowledge,—the Humboldts and Huxleys. The masses will grow more intelligent and independent, less subject to priests, and will not think so much in herds as now."

"What is your opinion of Frothingham's statement that, after years of work in the cause of Free Religion, he has accomplished nothing?"

"Frothingham never made that statement. It is true, however, that after years of overwork his health failed: he became melancholy, and took rather a less favorable view than formerly. He said he had accomplished less than he had expected. The fact is, Mr. Frothingham had been full of enthusiasm, was a literary man, imaginative and poetic, without solid scientific acquirements; and he expected too much,—expected to see changes that are not possible among intelligent, thinking men. He never had the qualities of a great leader. He is a refined, elegant, fastidious gentleman, and an accomplished scholar; but he lacks the warmth and magnetic power necessary for a popular leader, and the originality and robustness of thought to influence deeply the more intellectual classes. I attach no importance to any of his expressions of disappointment. He declares that his views are substantially unchanged."

"What are you driving at? What is your racket? What do you want done?"

"Well, sir, if I understand your Rocky Mountain phraseology, I am driving at the nonsense called theology, which takes men's time and money, misdirects their moral efforts, makes them unfriendly to rational views and reforms. But I devote my time as a lecturer and editor chiefly in diffusing scientific knowledge, satisfied that, if I can get men to understand that, the preaching of the clergy will do them but little harm, The racket generally begins after my lectures are given, and while I am preparing for a similar racket in some other city. It is the preachers who make the racket. I am a very quiet sort of man."

"Do you talk as a man who knows or as a man who thinks he knows?"

"I talk as a man who knows. I know what I know. When I don't know, I don't think I know. I distinguish between what I know and what I simply believe. I am no theologian."

"If you know what you know, how do you know you know it?"

"I think. That is a fact of consciousness which is clearly implied, even in doubting such a proposition. *Cogito, ergo sum.*"

"Do you believe in a heaven and hell?"

"No, sir. That is to say, I believe all that theologians assume and teach about the existence and condition of man after death is pure fancy, utterly incapable of verification. I don't deny that there is another state of conscious existence than this; but, with no data, it is useless to speculate upon the subject. If there be a future life, it is reasonable to believe beings will be adapted to its conditions. The clergy tell us we must believe their creeds or be damned. Then, Humboldt, Darwin, John Stuart Mill, Grote, Buckle, Draper, Parker, George Eliot, Emerson, and Garrison are damned. But who wouldn't rather be damned with such persons than saved with many who are sanctified? The very presence of such men would make hell an attractive locality. Of course, this is banter; but why is such nonsense taught? I repeat, I know nothing about a future life; nor, in my opinion, does anybody else. Of course, a ranting fanatic knows all about this. But, where he knows, a Huxley and a Haeckel, a Harriet Martineau and a George Eliot, are silent."

"What is the condition of the brain of a man or woman imbued with perfectly sanctified ideas?"

"Judging from what I have seen and know of human nature, I should say that the condition of such a brain must be bad. Sanctified people are generally erratic, abnormal, and unreliable people."

"How do you account for the belief of highly intelligent men in the impossibilities of the Bible?"

"Reverence for authority explains it largely. Kepler says, 'In science, we weigh facts: in theology, we balance authorities.'"

"Orthodox people of great faith say that all the Bible, or none, must be accepted?"

"The claim is absurd. I believe most of Livy, but it doesn't follow I must believe the miraculous narratives and legendary stories in his History of Rome. I judge the Bible by the common canons of historical criticism. I can believe whatever is natural and credible in the Bible; but it does not follow I should believe that Joshua stopped the sun or that Jonah was swallowed by a fish, and lived inside of it three days, and came out none the worse for his experience. We want common sense on this as on all other subjects."

CORRESPONDENCE.

THE LABOR EVILS: ONE WAY TO LESSEN THEM.

Editors of The Index:—

Inquiries as to the prime causes of the present evils of the working classes in the United States often do not in the least degree develop this potent cause which is herein briefly and imperfectly treated of, and which has for some years past struck the writer as one of the meanest forms of deliberate swindle.

Paid agents are employed in all the larger of the continental cities, whose duty it is to "encourage" emigrants to come to this country; and, as the interests of companies and transportation only are at issue with such agents, it is not to be wondered at that deception of all kinds is used in far too many cases,—misrepresentations as to the American labor market, wages given, cost of living, etc. The result is that many emigrants land here utterly unable to find work or long to support themselves unaided; and, if such aid is not obtained, then at once we have starvation rates competing with the then ruling rates of wages in the branches adapted to these cases. And, if no employment even at starvation rates can be found by the emigrant, he speedily becomes a pauper or criminal, a burthen on the State, to be got rid of as soon as may be humanely, perhaps, but at all events to be got rid of as unproductive. Thus, private gain causes the sacrifice of the public good. The suggested prevention is that our foreign ministers be

Digitized by Google

given something useful and regular to do in giving full publicity to the state of our labor market from week to week, from reports which could be obtained from employers here by our government, and forwarded regularly for this purpose. No foreign government to date has enacted and put in force new wise laws, restricting emigration, except Italy; and, until some foreign protection is given quite generally to emigrants, our own government might materially reduce the number of non-productive emigrants by the above or similar plan, it would seem.

The rate of demand and supply is perfectly adapted to the labor question in this detail; but the *real* demand, of course, only obtains the *real* supply needed, while a falsely stated demand produces only an over or under supply.

Needless suffering of many innocent persons could be saved thus, here and abroad, by simply providing would-be emigrants to America with the true outlook for them, to compare with their lot at home before deciding.

Such a remedy as is above suggested for the trouble referred to would have the additional value of not being of necessity an expensive *onus* for the tax-payers here; and, on the contrary, it would be much more economical to prevent harmful emigration to our country at some very considerable outlay at first, rather than, as now, to have to deal with so great a number of foreign immigrants, for whom no immediate employment at fair rates can be found.

The substance of this matter was, by advice of eminent counsel,* given by letter to the United States Committee on Labor, which held its sessions in Boston recently, with the hope that perhaps thence some grain of light might be given to this dark and sorry subject of labor troubles.

JOHN DIXWELL, M.D.

BOOK NOTICES.

THE DOCTRINE OF LAST THINGS CONTAINED IN THE NEW TESTAMENT: Compared with the Notions of the Jews and the Statements of Church Creeds. By Samuel Davidson, D.D. London: Kegan Paul, Trench & Co. 1882.

This book has been before the public in England for more than a year. It is a little book of only one hundred and seventy pages; but it is exhaustive of the subject treated, ample in learning, and characterized by the clearness of statement and calm confidence of argument which are the usual merits of Dr. Davidson's theological work. It may be specially commended to those inquiring minds in orthodox denominations that have recently been roused to a fresh interest in the subject of eschatology. The conclusions to which the author's investigations bring him are well summed up by himself as follows: "Our investigation shows that New Testament eschatology is far from being a homogeneous doctrine.... Its basis was the circle of Jewish notions current in the apostolic time, which was modified by early Christian consciousness. The idiosyncrasies of the writers, shaped by the circumstances of the times, by foreign modes of thought,—especially Alexandrian ones, not excluding Persian ideas,—and by the shifting scenes through which the authors passed, are seen in various statements and metaphors. The picture is fluctuating and inconsistent. Subjective and objective phenomena moulded traditional views. Paul himself, notwithstanding his anti-legal position, shared the Pharisaic belief, though his Christian consciousness broke away from it at times, giving rise to theological antagonisms. It is, therefore, impossible to round the eschatological notions of the New Testament into a whole or to make them a compact creed. Mental projection into the future must ever be vague and varied, when knowledge is unattainable. 'We see through a glass darkly.' When the spirit leaves the body, man's state is hidden from the living. We may speculate on future existence, and try to extract sparks of light from the New Testament; but a book which is neither consistent nor infallible cannot yield satisfaction. Other and unwritten instruments—reason, philosophy, and science—furnish surer indications."

ANIMAL AUTOMATISM, AND OTHER ESSAYS. By Prof. T. H. Huxley. No. 53 of the "Library of Popular Science." Price, post free, 15 cents. New York: J. Fitzgerald, publisher, 20 Lafayette Place.

In this volume are contained five of the most instructive and interesting of Prof. Huxley's later essays, namely, that on the hypothesis that animals are automata, and its history; that on science and culture; on elementary instruction in physiology; on the border territory between animals and the vegetable kingdom; and on universities, actual and ideal.

THE *Art Amateur* for March does not contain any of the biographical articles which have given it so much interest of late, but perhaps it will please others by the large space given to decorative art. Articles on needle-work decoration, on stencil work, on bed-hangings, furniture, and porcelains, give a great deal of information to those engaged in such work. Space is also given to the long-contested Feuardent-Cesnola trial. A long extract from the New York *Sun* gives a clear account of this singular suit, full enough to satisfy the general reader. Although the final verdict may not please either party, yet the controversy must have been useful in bringing out information as to the condition of the statues and in settling principles of right in regard to restorations. The illustrations from pictures in the Water Color Exhibitions are very pleasing, and the patterns for fancy-work suggestive and varied. The Easter egg decoration is very pretty, and is in time to be used for that church festival. If we can divest this holiday of superstition, and celebrate not an alleged resurrection of one person, but the upspringing of the forces of nature in the coming spring, it is a welcome addition to our seasons of rejoicing and festivity.

THE most timely and therefore most interesting articles in the *Atlantic Monthly* for March are an intelligent and discriminating article on "Henry Irving," by Henry A. Clapp; and "The Sources of Early Israelitish History," an excellent example of what is called the "higher criticism" of the Bible, by Rev. Philip H. Wicksteed, a learned English clergyman. The serial stories by S. Weir Mitchell and Marion Crawford are continued. "Drifting Down Lost Creek," by C. E. Craddock; "A Pisan Winter," by Mrs. E. D. R. Bianciardi; and "The Fate of Mansfield Humphreys," a continuation of Richard Grant White's "Washington Adams" articles, are all stories. The other articles are "Texts and Translations of Hafiz," by E. P. Evans; "The Discovery of Peruvian Bark," by Henry M. Lyman; "The Journal of a Hessian Baroness," extracts from the journal of Baroness von Riedesel, containing some curious facts relative to Burgoyne's campaign during the Revolution; and "Don John of Austria," by Alexander Young. The poems are by H. C. Bunner, "A. F." and Oliver Wendell Holmes.

WIDE AWAKE, in addition to its usual prodigal richness of illustration, story, and verse by the best artists and authors attainable, gives in the March number two articles well worth preservation,—"The Indian School at Carlisle," by Margaret Sidney, an interesting account of the congressional visit last year to this national school for Indian children. The article records important facts, and is illustrated with sixteen engravings from photographs. Very vivid in its contrast with this instance of modern education is Edwin D. Mead's scholarly paper concerning "Queen Elizabeth and her Schoolmaster." These two articles stamp this issue of the magazine as a valuable addition to the family reference library and to the teacher's stock of Supplementary Reading.

CHRISTIAN THOUGHT for February and March, a double number of the religious monthly edited by Charles F. Deems, is devoted to a paper read before the American Institute of Christian Philosophy in New York, at the monthly meeting on Jan. 31, 1884, by Rev. Dr. W. H. Platt, on "Supernatural Morality: Some considerations of Herbert Spencer's *Data of Ethics*."

OUR LITTLE ONES for March is full of stories and pictures of animal pets such as are best fitted to instruct and amuse the children. Stories of "Some Strange Birds," calves, dogs, cats, hornets, ants, wrens, parrots, and lambs are included in this number.

THERE is but one method, and that is hard labor; and a man who will not pay that price for greatness had better at once dedicate himself to the pursuit of the fox, or sport with the tangles of Neæra's hair, or talk of bullocks, and glory in the goad.—*Sidney Smith.*

PERSONAL ITEMS.

LADY CLAUDE HAMILTON, with the assistance of Prof. Tyndall, is translating the "Life" of the French scientist Pasteur.

ELDER JABEZ S. SWAN, of New London, one of the best known old-time revivalists in New England, celebrated his ninety-fourth birthday Saturday.

THE first notary public certificate issued to a woman in Connecticut has been given by Gov. Waller to Miss Mary Hall, who was some time ago admitted to the bar in that State.

EX-GOV. HUBBARD, of Connecticut, died at Hartford last Thursday morning, aged sixty-six. He was the leader of the Connecticut bar, was governor from 1877 to 1879. He was greatly admired and respected for his many fine personal qualities.

THE lecturing engagements of Mr. Charles D. B. Mills are as follows: Des Moines, Ia., March 7 and 10; Lincoln, Neb., 12th; and Hastings, Neb., 13th, 15th, and 16th. He has already on this trip spoken at Mt. Pleasant, Des Moines, Marshalltown, and Algona, Ia. He writes us: "I go to Colorado, where I fill engagements in Denver and Greeley. Then, returning through Kansas, shall spend a week or so there, and, passing via Missouri, shall get home, I hope, by early date in April."

MRS. MARY BROWN, widow of John Brown of Harper's Ferry fame, died at San Francisco, February 29. She was born at Whitehall, N.Y., in 1816, and was married July 11, 1833. Her home has been in California since 1864, and she leaves four children living in that State. Her only living son, Salmon, who was with his father in Kansas, but not at Harper's Ferry, is a sheep farmer. Another son, Watson, died in the Adirondacks in October, 1882; and Mrs. Brown at that time came to New England, visiting friends in Concord and Boston.

MR. ROBERT F. WALCUTT died suddenly of apoplexy in Boston last Saturday, at the advanced age of eighty-seven. He was for many years the general business agent of Garrison's *Liberator*, and was well known in anti-slavery circles for his quiet usefulness, integrity, and faithful devotion to the cause he loved to serve. An admirer of Theodore Parker and member of the Twenty-eighth Congregational Society, his venerable figure in recent years has been a familiar presence at the Sunday services in the Parker Memorial Hall. He was a graduate of Harvard College, and in early life a Unitarian minister. Mr. Walcutt was greatly respected by all who knew him.

THE bust of Longfellow, recently placed between those of Chaucer and Dryden in the Poets' Corner of Westminster Abbey, was unveiled on Saturday morning, March 1. Earl Granville, Sir Hugh Childers, James Russell Lowell, Alice and Annie Longfellow, daughters of the poet, Mary Anderson, Moncure D. Conway, and Theodore Martin were among the distinguished persons present. The Prince of Wales sent a letter expressing regret that he was necessarily absent. Earl Granville, in his speech, eulogized the character of the American poet, and dwelt on the refinement which was the chief charm of this illustrious man. He referred in a feeling manner to the presence of Longfellow's daughters and of Minister Lowell, a distinguished poet. Mr. Lowell also made a speech, in which he said that Longfellow's was a nature which consecrated this ground, into which no unclean spirit could ever enter.

THE death of Milner Gibson at seventy-seven years of age removes a noble and gifted English statesman, who gave his efforts over a long period of years for the melioration of the condition of the people. Born at Trinidad in the West Indies in 1807, he was educated in England, and entered Parliament at thirty as a Conservative, but soon became a Liberal. Resigning in consequence of this change, he failed of re-election. He soon entered the Corn Law agitation with Cobden, Bright, and Gladstone, and bore a leading part in the introduction of free trade. He stood with John Bright in denouncing the Crimean War as a needless and wicked shedding of blood,—a view which has been abundantly confirmed by history. His attitude threw him out of public life for a second time; but he returned in 1859, and became distinguished during his remaining active career for his advocacy of the repeal of what he called "taxes on knowledge,"—certain stamp duties on newspapers, advertisements, and papers.—*Springfield Republican.*

Alden's Manifold Cyclopedia.

THIS will be recognized as the most important literary announcement I have ever made. All previous undertakings, successes, and failures have been preparation for this. THE MANIFOLD CYCLOPEDIA will be the most comprehensive single work of reference ever undertaken in the English language. It will include:

AN ENGLISH DICTIONARY,

based upon the "new Imperial Dictionary," recently published in England. The "Imperial" is very much larger than either Webster's or Worcester's Unabridged Dictionary; and, being many years more recent in its compilation, its editors had, of course, the benefit of all that scholarship had gained by either Webster or Worcester. It will be thoroughly revised and enlarged (rather than abridged) *by its former chief editor.*

SIX OTHER LANGUAGES.

It will also include a concise dictionary of the six other principal literary languages of the world,— GREEK, LATIN, FRENCH, GERMAN, ITALIAN, and SPANISH.

A CYCLOPEDIA.

Its cyclopedia features will be based upon Chambers's *Encyclopedia*, but will be very much more comprehensive, covering more thoroughly than any other single work heretofore published all departments of human knowledge usually comprehended in a Cyclopedia or Library of Universal Knowledge.

OVER 5000 ILLUSTRATIONS.

It will be fully illustrated, including more than 5000 wood-cuts and reproductions, and such numerous maps as will constitute a complete atlas of the world, ancient and modern, sacred and political.

ONE ALPHABET.

The entire contents of THE MANIFOLD CYCLOPEDIA will be included in one alphabetical arrangement, thus giving the utmost facility for reference.

EDITORS-IN-CHIEF.

The former Editor-in-chief of "The Library of Universal Knowledge," Rev. RICHARD GLEASON GREENE, will have charge of the work, his principal Associate being JAMES HUNTER, formerly of Glasgow, Scotland, where for nearly ten years he was principal editor of the new "Imperial Dictionary," and more recently, in this country, Editor of the "Supplement to Worcester's Unabridged Dictionary." The scholarship and skill of these trained cyclopedists will be supplemented by other experienced workers from the former editorial staffs of "The Library of Universal Knowledge" and of Appletons' and Johnson's Cyclopedias, and by many others.

PRICE.

THE MANIFOLD CYCLOPEDIA will be published in convenient, double-column octavo volumes, of about 800 pages each, at the price of $1.25 per volume, cloth binding, and will probably be completed in twenty volumes. There will also be a cheaper edition, probably $15 for the set.

SPECIMEN PAGES,

with more detailed prospectus, will be ready in a few days, and will be sent free upon application; also, large catalogue of standard books, at lower prices than ever before known. *Not* sold by dealers,—prices too low. Books sent for examination before payment, on evidence of good faith.

JOHN B. ALDEN, Publisher,

P.O. Box 1227. 18 Vesey St., New York.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

Sent postpaid, on receipt of price.

GERMAN INSTRUCTION

By a Harvard graduate who has studied three years in Germany. Single instruction or in classes. Address

HARRY W. ROBINSON,
Cambridge, Mass.

Third Edition.

BIBLE MYTHS,

And their Parallels in Other Religions.

Being a Comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations.

The object of this work is to point out the myths with which the Old and the New Testaments abound; to show that they were held in common with other nations; and then trace them to their evident *origin* and *explain their meaning.*

"It has long been acknowledged by the most eminent Biblical students that the Hebrew Scriptures contain a large mythical element; but, so far as we know, the present is the first complete and scholarly attempt to trace these myths to their source, and ascertain their original signification."—*Boston Courier.*

"Never before has there been given a volume to the reading world that shows the research for the origin of these myths as does this one just published by J. W. Bouton, of New York."—*Boston Times.*

"It is unquestionably true that the results of a rationalistic study of the Christian Scriptures are nowhere else so accessible as they are now made in the work before us."—*New York Sun.*

1 vol. Royal 8vo. Cloth. 600 pp. $3.00.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

RIVERS OF LIFE;

Or, Sources and Streams of the Faiths of Man in all Lands, showing the Evolution of Faiths from the Rudest Symbolisms to the Latest Spiritual Developments. By Maj.-Gen. T. G. R. FORLONG.

This is the most comprehensive work that has yet appeared on ancient and comparative religions. Price $40.00. For sale at *The Index* office.

ADAMS' Essay on "Evolution" is for sale at THE INDEX office. Price 25 cts.

MARTIN LUTHER:

A Study of the Reformation.

By E. D. MEAD,

Author of *The Philosophy of Carlyle*, etc.

An essay upon the significant phases of Luther's life and work, with special reference to present problems of reform; discussing the principles of Individualism, Intellectualism, and Rationalism for which Luther stood; and the Libertinism, the Old Orthodoxy and the New Orthodoxy, with which he came into conflict.

Cloth, 12mo, 194 pages. Price $1.25.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE INDEX,
44 Boylston Street, Boston, Mass.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,		. . .	10c. per line.
" 13 " 25	"	. . .	8c. " "
" 26 " 51	"	. . .	6c. " "
" 52	"	. . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

CURRENT TOPICS.

BY the recent tornado in North Carolina, one hundred persons were killed, two hundred and fifty wounded, and property destroyed to the amount of more than half a million dollars.

THE Denver *Tribune* suggests that Boston should have statues of John Brown, Wendell Phillips, and John Greenleaf Whittier on the same square, and says: "They were the pioneers of our newer prosperity,—the fighter, the agitator, and the poet."

REPRESENTATIVE FINERTY last week presented to the House a petition protesting against Chinese laborers coming into the country, and asking that the present laws be so amended as to prohibit Chinamen coming to America under the guise of students or merchants. Suppose somebody should present a petition against the Finertys coming to this country.

CONNECTICUT is not yet educated up to the point of abolishing the vestiges of her famous "blue laws" from her statute books in response to the demands of progressive thoughts, for only a few days ago there came up in the House of Representatives of that State a bill abolishing the law of prohibiting "recreation" on Sunday. This bill was defeated, the opposition crying out against the continental Sunday, and pleading for the old New England Sabbath.

BARNUM having bought and largely advertised what he professed to believe a genuine sacred white elephant, but which various authorities pronounced only a common elephant with a diseased skin, Barnum's agent appealed to the Siamese Minister, alleging that he had seen the elephant and pronounced him genuine. But the Minister's published letter says that he never saw him, never pronounced him genuine, and declares that the existence of sacred elephants, white or black, is unknown in Siam.

THE sexton of a Dutch Reformed Church in Hokokus, N.J., lost his situation recently through "color-blindness," having failed to discover the shade of negro blood in a man nearly white who purchased a burial-lot in the cemetery belonging to the church, and buried therein his wife. As the woman was interred before her color was known, and the lot being paid for, the law gave no redress for the outraged prejudices of these "followers of the meek and lowly." So they wreaked their anger on the sexton by promptly dismissing him for his mistake.

LORD RANDOLPH CHURCHILL, in a speech against the extension of the franchise, said that "the English agricultural laborer has no knowledge of political questions and no concern in them." If this be so, is it not largely due to the very Toryism that Churchill represents; and does it not furnish an argument against that Toryism which is proud and heartless, and for such legislation as will make it possible for the English agricultural laborer to obtain knowledge of political questions? In contrast to the narrow ideas of Churchill are the broad and statesman-like views recently expressed on the same subject by Mr. Gladstone.

ONE of the editors of the London *Secular Review* writes thus anent Bradlaugh's recent appearance in the House of Commons. "No one but a fool or a madman could have watched the temper of the House on the 11th, and come away with the conclusion that, at present, religion and politics can be divorced. For some decades yet, they will be 'interlinked,' so as to be inseparable. Vain is the cry of 'Peace, peace, when there is no peace.' Politeness and too much forbearance have been rewarded with contumely and insult. He who gave up his right to attend on the 5th was rewarded by an ignominious defeat on the 11th."

THE Parnellites of the House of Commons did wisely in denouncing the dynamite policy and disassociating their party, which aims by honorable methods to secure needed reforms, from those societies and individuals whose plots involve the murder of innocent women and children and the destruction of private property. This action of the Parnellites will, we hope, have the effect of diminishing the number of subscriptions to the dynamite fund in America. If this country is being made the basis of any of these murderous operations, no efforts should be spared to discover and punish the authors of the plots, which are really offences against society and civilization.

THE Prohibitory Bill of Iowa, which passed the House by a vote of 52 to 41 and the Senate by 34 to 11, having received the governor's signature, has become a law. It forbids the manufacture of liquors in the State, and provides a penalty of $100 for the first offence, and thirty days in jail unless paid; $200, or sixty days in jail unless paid, for the second; and $200, or ninety days, for all subsequent offences. The penalty for the sale of intoxicating drinks is, for the first offence, $20 and ten days in jail; the second, $50 and twenty days; for all subsequent offences, $100 and sixty days in jail. Search for liquor can be made upon information filed before a justice of the peace, and all liquor seized must be destroyed. The enforcement of such a law in many of the States would not be possible. It remains to be seen whether it can be carried into practical effect in Iowa, which has a remarkably intelligent and exceptionally temperate population.

THE Massachusetts Legislature is quietly doing some good reformatory work. It has passed and the Governor has signed the bill abolishing the Election Sermon. This removes another decaying stump of the old doctrine of the union of Church and State. Of still more practical importance is another act which has been adopted and is already a law, whereby, if a person travelling on Sunday sustains an injury from a defect in the highway or from a steamboat or railroad catastrophe, he shall not be prevented from recovering damages from a town or corporation, even if the town or corporation can show that he was violating the Sunday statutes, in that he was not travelling either for "necessity or charity." This will prevent a good deal of meanness, at least. But still better will it be if another bill passes which has been reported, and which would altogether abolish the statute that makes travelling on Sunday, "except for necessity and charity," a punishable offence. To enact this would prevent a good deal of law-breaking and a good deal of hypocrisy.

THE increasing height of the floods in the Ohio Valley is now believed by many intelligent observers to be due mainly to the large area of drained land, to which additions are being made every year. Since 1876, over fifty thousand miles of tile-drains have been put down in Illinois, and as much or more in Ohio and Indiana. Every foot of drain accelerates the flow to the river of a portion of the water that falls near the drain. And drainage has but just commenced. Mr. H. W. S. Cleveland of Chicago, a well-known landscape gardener, in a communication to the *Nation*, adopts the above explanation of the recent increase of floods, and maintains that still greater overflows may be expected hereafter, and that the banks of the rivers which are liable to overflow will have to be abandoned as human habitations. He suggests that the evil may to some extent be averted by constructing large artificial reservoirs and by planting forests. There is one thing the immediate importance of which is evident, and that is better preparation for getting out of the way of the floods when they do come. When they were only occasional and far apart, there was some disposition to treat them as special visitations of Providence, and for supposing that a lifetime might elapse before one would be repeated in a particular quarter. But now that they have become so frequent, and it is so well-known when and where they are to be anticipated, the people of those sections should make their arrangements with a view to their possible annual recurrence, choosing their locations and building their houses with studied reference to what experience has shown to be a fixed danger.

THE NEW BIBLICAL CRITICISM.

The spread of more liberal and enlightened views with regard to the Bible is constantly receiving fresh confirmation. What a dynamite explosion occurred at the Methodist ministers' meeting in Chicago a few weeks ago, on occasion of Dr. Curry giving free vent there to his opinions on this subject, our readers are already aware. Dr. Curry is regarded as the ablest and most learned Biblical scholar in the Methodist denomination. He has for years made Biblical studies a specialty, and has been held among the Methodists as an authority of the first class on these themes. He supposed that at this meeting he was speaking under cover of secrecy; and, hence, he unburdened himself in an easy, conversational way, not stopping to weigh his words, yet evidently speaking as if he were not only glad, but constrained by conscience thus to relieve his mind through a private confessional before his brethren. He expressly told his hearers, indeed, that it would not do yet to talk much about these things in public. But, as often happens when the Senate at Washington goes into secret session, the private talk leaked out. It not merely "leaked out," it rushed out in an inundating flood like the Ohio River. A short-hand reporter was there, who was also a Methodist minister; and he took down Dr. Curry's remarks *verbatim*, and gave them to Dr. Thomas, the heretical ex-Methodist preacher of Chicago. And Dr. Thomas, through his pulpit, gave them to the world. And this is what Dr. Curry is reported to have said, the stenographer affirming that he is willing to take oath in court to the correctness of the report:—

We have no Hebrew literature of any older date than the time of the Jewish captivity; and we have no Hebrew scholars now, or so few that you might count them on your fingers. The time may come when there will be thoroughly educated Hebrew scholars, but that time is not now. But we are now standing on the eve of the most stupendous revolution in reference to the doctrines of the Bible that the Church has ever known.

Uncertainty and doubt are pressing upon us. We are not certain of the authorship of the Old Testament. We cannot tell what part was written by Moses, and what part, by other hands, of the books attributed to Moses. We say David wrote the Psalms, but we know that the Psalms were not all written by David. They were written by different persons at long intervals. No one can tell who wrote the Book of Job. It contains evidence of being one of the oldest books in the Bible.

The Old Testament abounds with ten thousand old wives' fables, which will finally drop out, like a tadpole loses its tail when it has no further use for it. It would not be prudent now for us to attack these fables in the pulpit. But I must say there is a great deal in the Old Testament that is of very little value to religion. It is not all given by inspiration. When you have to give up what your mother taught you, do it honestly, but do not say much about it publicly.

The revised New Testament is incomparably superior to the old version, but there are still many things that will have to be changed. But I am awfully shy of the Old Testament. It has got to be thoroughly revised; and, if criticism says that any of the books are not genuine, they must go overboard.

Many of the prophecies of Isaiah and other prophets that are applied to Christ and the Church had reference to the return of the Jews from their captivity. Let those who attack Robertson Smith, and others with him, move slowly; for they may find themselves standing on the same ground in the near future.

It is but just to add that Dr. Curry and some of his hearers declare that this report is a "misrepresentation and perversion" of his remarks. They assert that he was speaking much longer than would be necessary merely to say what was reported; that the report could not, therefore, be *verbatim;* that many balancing and modifying remarks had been omitted. And, at a subsequent ministers' meeting, a resolution was passed, making a counter-statement of this kind, though not without several ministers present affirming that they had heard Dr. Curry, and thought the report substantially correct. The resolution ended thus: "The words attributed to him, so far as spoken by him at all, were spoken with reference to matters of criticism, and not with reference to the authenticity of the whole Scriptures." This, certainly, does not have that quality of "lucidity" which is especially desirable on such a question. No one doubts that Dr. Curry's remarks had reference to "matters of criticism." But criticism of what? Criticism, of course, concerning the "Scriptures." It is not alleged that Dr. Curry was talking about the *Iliad* or discussing the question of Shakspere's plays having been written by Bacon. And "matters of criticism" concerning the Scriptures would ordinarily be supposed to have some reference to the "authenticity" of the Scriptures. On the whole, making all allowance for the unguarded, off-hand way in which Dr. Curry was speaking (he could hardly have said, certainly, as reported, the first sentence attributed to him), and putting into his speech certain qualifying clauses, which he thinks he uttered, we think it yet quite clear that he has caught by contagion the spirit and method of the new school of Biblical criticism. He is closely following many of the ablest investigators of Biblical subjects in modern times to the point of view from which the Bible is regarded not as history, but as the elements of history; not as a book dictated by an infallible Being, but as the natural literature of a peculiarly religious people. And it is only to be regretted that Dr. Curry does not have the courage of his convictions, and honestly proclaim in book and pulpit what he secretly speaks in the ear of ministers. It is, in truth, morally scandalous that a man of his standing should thus counsel ministers to insincere speech in the pulpit. And his confession of this inveracity should weaken his influence in his denomination more than would the open declaration of his views.

How far Dr. Thomas has advanced on the road of the new criticism is shown by the second discourse which he preached on the discussion in Dr. Curry's case. We should like to reprint the discourse in full from the Chicago *Tribune's* report, but must content ourselves with giving the paragraphs which specially concern our present theme, which will give, too, a good idea of the drift of the whole sermon. They are as follows:—

Dr. Curry is not mistaken in suggesting that we are upon the eve of a great revolution in thought in reference to the Bible. He might have said that the morning of that revolution has already dawned. In Germany, almost every great scholar has accepted in part or in whole the results of the "Higher Criticism." A large number in England have done the same thing, and also not a few in our own country. And it is not only in reference to the dates and authorship and composition and inspiration of the books of the Old Testament that changes of belief are occurring, but also in reference to the doctrines of religion. The great majority of the orthodox German divines hold the doctrine of a future hope for mankind; and the same is true in the Church of England, and I suppose largely in the Protestant Episcopal Church in America. The old view of the atonement has been given up by many of the best minds in the last twenty-five years; and, in my judgment, it is only a question of time when it must be abandoned by all.

But, now, what of all this? Does it in any way affect the real foundations of religion? Not at all. It may indeed, and does, disturb those who have built upon these old ideas of the Bible, and who would make the Christian religion rest upon their theories and interpretations. And to many—and these are the ones to be pitied and helped—who have accepted these teachings from the pulpit as final, it may seem that all is in danger of being lost.

But, my friends, religion in any broad and just sense is too profound a reality in human consciousness and experience, is too true in its great moral teachings and results, and too precious in its hopes, to be thus easily swept away. Religion is the deepest need of human nature. It rests at last upon great moral truths and principles that are verifiable in consciousness and in the results of conduct; and these foundations are forever fixed. They antedate the Bible; and they would survive, were the Bible to fall. They are true in themselves,—true in the nature of things, and not true alone because they are in the Bible. They are in the Bible, because they are true.

It is noteworthy how many of the Biblical critics who have embraced this view of the Bible started in their scholarly investigations as orthodox believers. Nor have they suddenly changed. The growing evidence has gradually opened their eyes. Dr. Robertson Smith was a Presbyterian. But the more his eminence increased as a scholar, the more pronounced became his Biblical heresies. Condemned finally for heretical teaching by his brethren of the Scotch Presbyterian Church, he has been welcomed to a professor's chair in the now more liberal Oxford, and still pursues his work. His view of the Bible is essentially the view of the new school of criticism. In results, he is not far from the great Dutch historian and critic, Abraham Kuenen, who is doubtless the ablest living leader and expounder of the modern school of Biblical science. For instance, of the Old Testament historical books, including the Pentateuch, after pointing out some of their characteristics, Dr. Smith says: "Such phenomena not only prove the futility of any attempt to base a theory of authorship on the present division into books, but suggest that the history as we have it is not one narrative carried on from age to age by successive additions, but a fusion of several narratives which partly covered the same ground and were combined into unity by an editor." Again, speaking of Deuteronomy as not only not written by Moses, but as recording legislation which was not given by Moses, but by a law-giver as late as the eighth or seventh century before Christ, he says: "If the author put his work in the mouth of Moses, he did so not in pious fraud, but simply because his object was not to give a new law, but to expound and develop Mosaic principles in relation to new needs. And, as ancient writers are not accustomed to distinguish historical data from historical deductions, he naturally presents his views in dramatic form in the month of Moses." * It requires no argument to show how entirely changed is the stand-point of a Biblical scholar who thus writes from that occupied by the old school of Orthodoxy.

Dr. Samuel Davidson is another distinguished scholar who has spent his life in Biblical investigation, and written many valuable works as the result. He, too, began as Orthodox, and lived, if we mistake not, in Scotland. But he, too, with increasing years and study, has been approaching the liberal school of criticism, until now he is of it wholly. His present views have been clearly stated in his more recent books; but his view of inspiration—which may be taken as that of the new school of Biblical critics generally—he has summed up so succinctly in a recent letter printed in the *Christian Register* that we here quote it:—

As to the plenary (a term all but identical with verbal) inspiration, which so many apply to the sacred writings, it cannot be maintained. Inspiration properly belongs to persons, not books. The authors of the different works contained in the collection called the Bible (of most of whom we know little or nothing, sometimes not even the name) were men of various intelligence and endowments. Possessing unequal gifts, their productions are of unequal value. As infallibility belongs to God alone, none of them was infallible in what he said or wrote. Each wrote

* Article on Bible in Encyclopædia Britannica.

Digitized by Google

according to his light and the purpose he had in view. Contradictions, inconsistencies, errors, both intellectual and moral, are observable in their writings. Some were far ahead of their time, as the old Hebrew prophets: others were but little or not at all in advance. The sacred books proceeded from spiritual men, living in different ages and amid different surroundings. Perhaps it is scarcely correct to call them all spiritual men; for he to whom we owe the Book of Esther—which is little else than a romance—never mentions God, while the author of Ecclesiastes, an old bachelor, with a sceptical turn of mind and a tinge of Epicureanism besides, had very little spirituality. The conclusion of his treatise, which was appended to it by others, saved the whole from being excluded from the canon. But I must refer to my work on the canon for these and other details.

There is no warrant in the Bible itself for calling it "the word of God." The word of God is in the Bible, but the Bible is not the word of God. And, as the word of God comes through human instruments, it cannot be perfectly pure. Its purity is conditioned and modified by the earthen vessels it is lodged in.

It is evident that this is the view of the Bible taken by Rev. Heber Newton, and which he was proceeding to expound, when, in deference to the wish of his bishop, he agreed to suspend his lectures. And the large congregations that gathered to hear him proved that there were many earnest people who could bear such opinions even from an Episcopalian pulpit. As he is not a preacher who believes in Dr. Curry's ethics of holding one view in one's study and preaching another in one's pulpit,—or at least so preaching as to make the hearers believe another,—we cannot think that he will consider the law of courtesy as putting upon him a perpetual injunction. The people are more ready than the bishops and pastors are generally aware. The revolution is not simply coming: it has alread begun. It will not go backward, but needs to be wisely led forward. Let the new Biblical criticism be established,—let such scholars as those above named, and many others that might be named, be listened to,—and the coarse attacks sometimes made on the Bible by a crude and irreverent Liberalism will be disarmed. We would not describe Col. Ingersoll's attacks on the Bible as irreverent or coarse, though the echo of them from his hearers is sometimes that; but even Col. Ingersoll's ridicule of the "Mistakes of Moses" will have been made unnecessary, when the even more radical and thorough because more scholarly work of such men as Kuenen and Davidson and Robertson Smith shall have removed the Bible from its place of ecclesiastical authority, and put it alongside of the ancient literatures of the world which the human heart will not willingly let die.

WM. J. POTTER.

"LOOK HERE, UPON THIS PICTURE, AND ON THIS."

It is a common remark that the state of affairs between the rich and the poor in New York, London, Berlin, and St. Petersburg is getting ominously like what it was in Paris just before the first revolution. Let us get at some of the facts. Take New York first, the great Babylon and city of refuge of millionnaire thieves, who drift in there from California, Nevada, Colorado, and wherever else men can be oppressed by legalized robbery. We are told by the newspapers of whole blocks of brown stone and marble palaces in New York, costing from fifty thousand to two hundred and fifty thousand dollars, and built as residences by men whose annual expenditures amount to sums ranging from twelve thousand to one hundred and fifty thousand dollars! Here is a splendid residence on Fifty-second Street: it is the home of one of the vulgar Vanderbilts, Mrs. W. K. Vanderbilt. There is to be a fancy-dress ball there to-night. All day, wagons have been arriving and departing, bringing their loads of rich flowers and palms and shrubs for the work of decoration. Entering the great hall, ablaze with light, mark, if you please, the exquisitely carved stone wainscoting, the polished floor of Echaillon stone, the oak panels, and the antique Italian tapestries. Presently down the grand stone staircases comes the gorgeous procession, moving slowly through rooms with immense carved fireplaces and costly wainscotings (that of one of them brought from a château in France, and the walls hung with three glowing Gobelin tapestries a century old), on to the great dining-room, from the music-gallery of which the silvery electric light shines down, and brings out well the colors of Oudinet's great stained-glass window representing the meeting of Henry VIII. and Francis I. on the Field of the Cloth of Gold. First of the dances comes the "Hobby Horsé Quadrille." "The workmen were two months in finishing the horses," says the account. "They were of life-size, covered with genuine hides, had large, bright eyes and flowing manes and tails, but were light enough to be easily and comfortably attached to the waists of the wearers, whose feet were concealed by richly embroidered hangings. False legs were represented on the outside of the blanket." Mrs. Vanderbilt wore a dress of yellow brocade and blue satin, with a Venetian cap "covered with magnificent jewels, the most noticeable of these being a superb peacock in many-colored gems." These hobby-horse dancers seemed to seek instinctively in their ornaments the bird that matched their vanity and empty-headedness with its own,—the peacock,—for another lady's head-dress consisted of a golden enamelled peacock, with outspread wings; and a sister of Mrs. W. K. Vanderbilt figured as a peacock's very self, with a waist composed of "real peacocks' breasts," and a peacock cap and fan. Mr. Cornelius Vanderbilt appeared as Louis XVI., wearing a waistcoat trimmed with real silver lace, and carrying a diamond-hilted sword. Miss Work appeared as Joan of Arc, with a cuirass, helmet, and gauntlets of solid silver. But wh are these six men, in citizens' clothes, walking up and down with mysterious looks and mien amid the masqueraders in this fantastic Midsummer-Night's Dream? *They are detective sergeants, looking out for suspicious characters with dynamite. And, outside, a cordon of police encircles the house.* Very significant, isn't it?

But Mrs. William Astor is not to be outdone by Mrs. William Vanderbilt. So she, too, must give a ball at her palace on Fifth Avenue; and it shall fall on January 21, to commemorate the centennial of the departure of the first Astor from Holland. Her picture gallery is ornamented with great palm and India rubber trees, and the paintings and staircases are festooned with hundreds of dollars' worth of costly flowers. The silver service (of sterling gold and silver coin) cost $175,000, and the wine is served on a *repoussé* table of silver worth $30,000. The meats of the supper consist of prairie chickens, quail, wild turkeys, venison and bears' meat from the West, and English grouse and pheasants, which were imported alive and killed on the day before the ball.

So much for the ladies. The "gentlemen," what do they do with their time? A good deal of it is idled away over their horses. And they tell us that these brutal, "public-be-damned" fellows, these "triple and quintuple millionnaires," when driving their fast horses, would no more think of turning aside to avoid knocking down a foot-passenger than they would think of eating the dust of the road for their dinner. Vanderbilt "looks on foot-passengers as obstructions, and deliberately drives over them if they bar his progress, trusting to the potency of a thousand-dollar check to square it all in the end."

Then, they must have not only blooded horses, but superb yachts. Mr. William Astor's steel yacht is a floating palace, with the various state-rooms finished in costly woods, heated and lighted by electricity, furnished with electric bells and luxurious furniture, and to cost, when completed, some $350,000. The state-room of Mr. Gould's yacht, the "Atalanta," is furnished with Persian carpets, pink satin couch, and rosewood cabinets. The damask hangings match the different colored woods of each several room. The toilet-sets are of solid silver lined with gold. The guests' rooms are not numbered, but are distinguished by the color of their satin furnishings. To keep this yacht in sailing order costs—for provisions, coal, and crew—about five thousand dollars a month, the yacht burning ten tons of fuel a day, when at sea. And all this for no useful object! Do these hobby-horse dancers and three hundred and fifty thousand dollar yachts remind you at all of similar things in imperial Rome or royal France, of Capri or Versailles?

But, now, turn to the other side of the stereoscope of society, and see if you think any magic can blend the dissimilar pictures into one. John Swinton, of New York, publishes a paper in the interests of the working classes, and especially of mechanics and their unions and brotherhoods. Swinton is of the Girondist rather than the Jacobin type, I take it; but he is a little theatrical and slangy in his advocacy of agitation and his war against usurping capital. Yet he strikes the great trembling chord of the hour, the absorbing question of the future. And, however we may deprecate agitation among the ignorant and destitute classes (so many of them shiftless and dangerous), we cannot but see that something must be done: we cannot but feel that, if right must come through violence, then through violence let it come; and the sooner, the better. But we will hope that, by strikes and defensive co-operation, the now defenceless flock will be able peaceably to frighten away the human wolves who encircle them with dripping jaws and gnashing teeth. Swinton gives a long list of those unemployed in New York at the present time. He says there are 4,000 day-laborers idle; and, of other men out of employment, 3,000 are 'longshoremen, 1,000 cigar-makers and packers, 1,000 tailors, 500 bakers, and 30,000 women. In the Sixth Ward there are 5,000 idle Italians. And, at police head-quarters, 14,128 lodgings were furnished to male and female applicants during the month of December. It is not nearly so bad as this in Boston, of course, although the large number who avail themselves of the Free Soup Kitchens seems to show great destitution, and the Associated Charities' workers report many out of employment. In both cities there are vastly too many idle, even though it be the winter season. Eighty thousand idle men and women in New York City! They lacking the necessary comforts of life, and seeing all around them millionnaire peacock-dances, fifty-thousand dollar hobby-horse quadrilles, three hundred and fifty thousand dollar yachts, and one hundred and fifty thousand dollar houses! Things have a pretty ugly look, surely. Look out for the next financial depression.

In Europe, it is even worse. The Boston *Herald*, last spring, published an article on "Famished Ireland." Here is the little hamlet of Kilcar, nestling, with its three hundred people, around a tiny inlet of the ocean, between two tall mountains. What do they have to eat there? Boiled bladder-wrack (*Fucus vesculosus*),—a tough, saltish, bitter, nasty seaweed, which produces sickness in those who partake of it. They also have a few potatoes,

Digitized by Google

which they eat, skin and all, first dipping them in salt water. They melt the salt in water, in order to make it last longer. Compared with this diet, how rich and savory seem the dishes found on the table of the London poor man,—the tripe-trimmings, cow-heels, ham-rinds, sheep-heads, and bullocks' ears, which he picks up for a few pennies of the butchers and hide-dealers! The London laborer talks very cheerfully sometimes over this fare. Let us hear him: "You can buy at the tripe-shop half a large cow-heel for threepence ha' penny; and you can buy at most ham and beef shops the rind that is taken off the best of hams, after they are cooked, for three half-pence. Seeing a ham-rind curled up and dry, you wouldn't, perhaps, admire the leathery look of it. But, put back into boiling water, it opens out, and eats as delicate as chicken. Pop 'em in the saucepan together,—your cow-heel and your rind,—and simmer 'em gently, and you'll get a good-sized dish full, with all the flavor of calves' head and bacon about it; and, without vegetables, fivepence is all the cost." Bullocks' ears are obtained in this way, continues our optimist: "The hides fresh from the butchers are stacked in heaps in the market-place, and some of the salesmen give them they know the privilege of cutting off the ears. 'Burrs,' they call 'em, and they sell 'em for about a penny a pound; and, nicely scalded and scraped, and then gently stewed and served up with a little melted butter with a sprig of parsley chopped up in it, they make a dish the Lord Mayor of London wouldn't turn up his nose at, if he didn't know what they were or where they came from. But bullocks' ears, as I have already said, are not a luxury come-at-able everywhere. Not like bullock's head or sheep's head, for instance."

Poor fellow! He has a harder tussle of it to live than his American compeer. There is scarcely a native-born citizen of the United States who would not turn up his nose at the Kilcar and London fare, poor as he might be.

Now, instead of talking about what ought to be done toward the settlement of the labor and capital problem, let me give a pleasant picture of what has been done here in America. On last Christmas day, Engine 97 of the Long Island Railroad stood in the Brooklyn depot yard wreathed with evergreens and holly, while engineer Al Brown and fireman Terry Quinn worked around the wheels and bearings with their oil cans, in preparation for a very pleasant ride. On the sand-box of the locomotive was perched an enormous turkey gobbler with head and fan erect, and wings poised as if for flight. Attached to the engine was a baggage-car bearing a banner with the inscription "Merry Christmas" painted in big white letters, while within were two cords of turkeys in the charge of four train officials. The turkeys were the Christmas present of the president of the road, Austin Corbin, to all his employés. Away sped the train through the pleasant little villages that line the road; and at every station a pile of gobblers was tumbled upon the platform, each with a tag containing the owner's name, and an autograph letter from the president of the road, containing his good wishes. To make this present, Mr. Corbin drew a check of $3,500. This is one method of solving the labor problem. But a better one is offered in such workingmen's schools as those of the Cooper Institute and of Prof. Adler in New York. The latter school is also a workshop, and the children are taken through an elaborate course of several years' work in practical drawing and mechanical construction. They make their own drawings and fabricate their own tools. The graduating thesis consists in the construction of a miniature engine; and all their work has a moral purpose, and is done for the love of it, and not for mercenary ends.

Such are two of the means of social salvation,—generosity and co-operation and practical and moral education. And to these should be added the cultivation of the soil and the cultivation of the beautiful as manifested in nature and art, and, highest of all, reverence and awe for the infinite universe, the cause of all. Of the practical means for adjustment of difficulties between laborer and employer, it seems to me that the exodus of city populations to farming lands is the most hopeful. This is the opinion of E. E. Hale; and it was one of the most frequently urged views of that fine old scholar and statist, the Hon. E. D. Mansfield, of Cincinnati. The abolition of the tariff on certain articles will inevitably entail misery on a certain number of specialists. The remedy is in a more symmetrical and rounded technical education of individuals, and a willingness to exploit nature at first hand. One great inducement in the way of getting men to live on farms would be a more efficient train service, ease of communication with the city centres. We have not too many railroads, but too rapacious ones. The land-owner is the real aristocrat and founder of old families, and a deeper respect for him should be cultivated. A land law and a tariff revision and increased respect for agriculture and horticulture seem to me immediate necessities in the settlement of the labor question.

W. S. KENNEDY

SELF-RELIANCE.—PRAYER.

Mr. Underwood says (see *Index*, February 14): "But we are asked what we propose to do in lieu of the old practices.... In the place of prayer, we would substitute self-reliance. Trust of this kind is a sensible faith that leads us to rely upon the strength of a ship in a storm and the skill of her commander rather than upon an unseen arm to withhold the tempest or an unheard voice saying to the waves, 'Be still.'"

In the same paper, same page, "W. H. S." says, "There is no doubt that prayer in times of great trouble relieves a person's mind.... We appeal to that 'dim unknown,' the supernatural, for the help we sorely need, and we feel relieved mentally." He calls this "a last resort," "a forlorn hope instigated by our inherited instincts."

Now there can be no doubt about the reasonableness of self-reliance. It is the rational, consistent, scientific state of mind; and is there any reason why it is not adequate and sufficient for the consolation and support of the enlightened, philosophical mind? Has it not actually been found so, proved to be in accordance with the real order of nature and what is possible in psychology? But we are told, and it is universally taught, that religion or prayer is a blessing, and a necessity of mental peace; that it is natural, intuitive, and a higher action of man than self-reliance; that self-reliance is mere human trust, and will not please and satisfy the God who orders all events and judges men, justifying or condemning them. Now, allowing it to be true that, in consequence of the "inherited instincts," habits, and weaknesses of mankind, some resort to prayer becomes a source of comfort, consolation, and relief to distressed minds, is it not just possible that the one or the other action—self-reliance or prayer—is really more correct and proper to be followed by every man and woman; that we should either trust primarily and supremely to intelligence and the right adjustment to nature, or primarily and supremely in religion? If it be that all events are ordered by a supernatural mind and this supernatural mind acts in answer to prayer, then it ought to follow that prayer will save those who pray to be delivered from any distress or threatened calamity, else prayer becomes simply a mental gymnastic, of no earthly or heavenly use whatever beyond the pleasure which any and every habit yields.

That, taking human beings as they are,—as the creatures of sentiment and emotions more than of reason and an intelligent understanding,—they are more given to resort to supernatural intervention and aid in trouble than to investigation, does not prove that prayer is a higher, more noble and manly exercise than self-reliance. But it is a confession of personal ignorance and weakness, and it is this very confession which the Church extols and glorifies. It is not to be denied that there is great mystery in our universe; that it is but little comparatively that we know or can do; that, over and beyond all we can find out, we have to trust. Believe, if you please, that what we do know is only a key to unlock a few of the multitudinous apartments of Nature's store-house. It may be faith in the constancy of the objective world; but it is more nearly allied to self-reliance—to our own power to use and co-operate with the forces of nature—than it is to prayer and interpositions in answer to prayer. It is better that men's lives should be governed by sound reason and an enlightened judgment than by mere sentiment or feeling, however desirable right moral sentiment may be in the absence of enlightened reason. I can readily see why the sentiment of religion has such a deep and strong hold on the mass of mankind, and why they should find in it such glad relief and even joy in times of sorrow. "Inherited instincts" and acquired habits make all acts and every mode of activity a part of man's being, and pleasurable. Awakened intellectual activity sometimes revolutionizes inherited instincts and old habits, and gives a man new modes and sources of happiness; and, then, knowledge becomes as true a source of comfort in trouble as prayer or the religious exercises of the most devoted devotee. And why may not self-reliance become so soul-satisfying that prayer will vanish and exhale like the mists of morning before the rising sun?

A. N. ADAMS.

EDITORIAL NOTES.

MR. T. W. CURTIS proposes to lecture on the Mormon problem. See his advertisement in our advertising columns.

RELIGIOUS liberty is far from being an accomplished fact in England, much as that nation prides itself upon the advanced position it takes in all liberal movements. For instance there are to-day, in one district in Suffolk, thirteen contiguous parishes in which non-conformists are not allowed to have a room in which to conduct religious meetings.

NEBRASKA Catholics who allow their affections to wander outside of their own faith will be obliged hereafter to apply to the Pope for a dispensation to marry; for the Catholic Bishop of Nebraska recently, after preaching a sermon against "mixed" marriages, declared his determination, never again to give a dispensation allowing a Catholic to marry a Protestant.

THE Second Adventists declare that the end of the world is at hand. The day on which the catastrophe is to occur is Nov. 4, 1884. A Western paper, which regards everything from a political point of view, remarks that "it is hardly worth while to go to the trouble and expense of nominating presidential candidates. The returns cannot get in until a day after the fair."

THE Calcutta *Indian Messenger* of January 20

Digitized by Google

says: "Two distinguished guests, long known in the religious world, are in our midst. Mr. M. D. Conway, the author of the *Sacred Anthology*, and Mr. George Muller, of Bristol, have already arrived. These two gentlemen, though differing as poles in point of theology, yet have both an interest for us Brahmos. We appreciate the broad catholicity and the devotion to religious liberalism of the former; though, we must say, we are not prepared to follow him in all his theological conclusions. Then, as regards the latter, Brahmos have much to learn at the feet of the venerable gentleman. Indeed, we shall count him as one of our greatest benefactors, if he by his addresses and personal communications could teach us a little of that absolute faith and childlike trust in God of which his life and work are such wonderful examples."

FROM the *Congregationalist*, we clip the following: "It is long since we have laid down any book with so much of profound interest as that which has been awakened in the examination of the late Dr. Jacob M. Manning's compact, clear, crisp, and cogent argument for absolute and undoubting faith in the Bible, which Messrs. D. Lothrop & Co. have just issued, under the title of *Not of Man, but of God*. . . . There can be few better books for advanced thinkers in Sabbath schools. To gain a taste, open anywhere at random. Take this (p. 130) as well as any :—

"The fact that the Bible does not try to prove the existence of God, but takes it for granted, is a proof of its divine origin. It sometimes alludes to those who say there is no God, but, instead of arguing with them, it calls them 'fools.' . . . Now this is a most remarkable thing in the Bible. This makes it unlike the vast mass of books which speak to us about God."

IN a notice of *History of the United States in Rhyme*, by Robert C. Adams, a little 16mo published by D. Lothrop & Co., the Chicago *Times* says:—

The author's aim has been to use the potent aid of rhyme and rhythm in fixing dates, names, and events in the minds of the young, a device often successful; and, though he claims for his work no literary value, yet it is true that he has shown no little ingenuity in the way in which this aid is invoked, as well as good judgment in the choice of what is to be impressed on the youthful memory. The closing summary of colonies and States is especially valuable. Within fifty-six short lines, which any bright boy or girl can commit to memory in an hour or two, is presented a brief history of the American colonies, an entire list of the States at present, with the order in which they were settled, by whom and when admitted into the Union,—a section which would make a valuable exercise for schools, and, indeed, is a good thing for anybody to know.

SAYS the London *Secular Review:* "In all history there never was such a strained and unnatural civilization as this, where Dives was so opulent and Lazarus so full of sores, and no dog to lick them. Jehovah himself is a better God than Mammon; and Mammon, faintly dashed with Jehovah, is the God of the Englishman. In England, the gulf which lies between the rich and poor is deeper than it is in any country in the world. The strut and pride of Feudalism sat in the chamber of dais, while the vassalage sat *at the same table*, but below the salt. Capitalism does not allow its vassals a board to sit at either above or below the salt. Feudalism chastised the people with whips: Capitalism chastises them with scorpions. In England, more than in any other country in the world, the difference between a man with money and a man without it is the difference between a slave-driver and a slave."

THIS estray found among our clippings, though we are unable to credit it where it belongs, is too good to be lost. An editorial writer in a leading paper, criticising Joseph Cook's "Prelude" in eulogy of Wendell Phillips, in which he declared "the largest and latest of the Puritans" has gone "doubtless to an incalculably great reward; he is with Garrison and Sumner and Lincoln now; he has met Wilberforce and Clarkson; he is in the company of Aristides and Scipio and the Roman Gracchi" says :—

This seems to settle various points of doctrine, which have been elaborated in recent discussions, where Mr. Cook took a lively part. In the first place, if a man who died on Saturday is by Monday noon enjoying a heavenly reward in the company of those long deceased, then the "intermediate state" question is solved. Secondly, as some of the men named were notorious free thinkers and others were actual pagans, the inference seems legitimate that the harsh doctrines of Edwards, Emmons, and the old school in general, are, in this emergency at least, to be mitigated. Of Mr. Phillips' theological opinions, this is no place to speak; but he certainly was not in the faith of the worthies above mentioned. And yet Mr. Cook demands, "What orator had in him more of God than this anti-slavery orator?" and of Mr. Phillips' speeches he says, "Here are coals of fire lighted by the breath of God." It is not for us to discuss these theological problems,—*non nostrum est tantas componere lites;* but we cannot forbear suggesting that Mr. Cook did not take, in this "prelude," as his model in oratory, the scholarly man just dead, nor that other eminent American who, in the language of the late A. Ward, "never slopped over."

AS A sort of postscript to the article by W. S. Kennedy, to be found on another page of this paper, we copy the following from the *Banner of Light*:—

While the press in Great Britain and America has of late re-echoed "the bitter cry of Outcast London," and told how sickening squalor and hopeless penury run riot among the people in that great Babylon, the figures continue to come to the surface, showing the utter unfitness of the present socio-financial system of England to adapt means to ends for the removal of these more than plague-spots. It is recorded that Mr. Deputy Bontems says that, during the twenty years he was connected with the London Corporation, thirteen entertainments to royalty or other celebrities alone cost $750,000; that to the Prince and Princess of Wales costing $125,000. The Established Church also bears its part in eating out the substance of the people. It was stated recently at a clerical meeting that there are fifty-one parishes and sixty-one churches in London city (by city, remember, is meant a little district of the metropolis); and, on a particular Sunday, when a census was taken, there were in these churches 6,731 persons, of whom nearly half were officials and their families. These churches enjoy the services of 706 choristers, who are paid at rates at which the authorities of our South End churches would stare. The income of the clergy of these fifty-one parishes amounts to nearly two hundred thousand dollars a year. Of these clergy, only nineteen live in the city, thirty-eight live in the suburbs and West End, and four reside at a distance from London; the average income of these absentees exceeding four thousand dollars a year each. Of the churches, only eleven have congregations of over one hundred; and, in five of them, the number is under ten. Comment is unnecessary.

COL. BUNDY, the editor of the Chicago Spiritualistic paper, the *Religio-Philosophical Journal*, in an article appearing in the *Inter-Ocean* of that city in relation to the recent exposure of the fraud practised by the medium Bastian, in Europe, declares: "I know of no other way to properly and conscientiously serve the cause of Spiritualism than to stand squarely for honesty and purity. That life continues beyond the grave I *know*, and I know this by and through spirit phenomena. I hold it unfair to judge Spiritualism by selecting as examples such persons as Bastian and Mrs. Richmond. These two afford striking examples of what sensitiveness uncontrolled by a high moral purpose will produce. I have faith that, in the fulness of time, order will be evolved from the present chaos, and the phenomena of Spiritualism which are now accepted as of spirit origin by millions will not only supply data for a scientific basis, as in fact they now do, but that a spiritual science, so to speak, will be completely elaborated therefrom." In our estimate of Col. Bundy's straightforward position, we agree with the editor of *Unity*, who says: "We arrive at our hope and faith in the inward and lasting verities of the soul by lines quite different from most of those set forth in the *Religio-Philosophical Journal*. Its columns speak of many things we do not profess to be competent either to deny or affirm, but we do understand and wish to express our appreciation of the valiant way in which this sheet undertakes to suppress shams and rebuke frauds. Anything from Barnum's white elephant up to the 'victim of all-believing credulity of things seen at seances,' the editor stands ready to expose. The last issue at hand boldly arraigns no less than five persons well known in the Spiritualists' ranks by name, charging them with a want of moral cleanliness or intellectual vigor which would entitle them to public confidence. This is a valuable though thankless work, and we commend the courage and integrity of our exchange."

THE F. R. A. FUND.

Donations and membership fees for the Free Religious Association, in response to its recent appeal for funds for the holding of conventions and for meeting other expenses of the Association. Will friends see to it that this list is increased?

DEMOCRACY OF KNOWLEDGE.

Thou hoary scholar, seamed and bent,—
Thou fellow of a life content,
  Enmeshed and buried in the lore
That to thy selfish soul hath lent
  No strength to make our riches more:

From thine abundance canst thou spare
Nought for the famished one whose fare
  Ne'er knew a glimpse of light, or found
Mankind too willing to repair
  His years from treasures overground?

Hast thou no passion that will lead
Life to the sustenance of need,
  Time to the quick pursuit of shame
Whose victims hailed the dismal deed,
  Not knowing it was sin that came?

Hast thou no effort to entreat
For nerveless arms, for helpless feet,
  For all the city's thousands, kept
Like dust upon the humble street
  O'er which thy reckless pride hath swept?

Is life a thing which men may hold
Cheap as the sum of Crœsus' gold
  And level with the gambler's bet,—
A plaything, to be bought and sold
  Upon the mart without regret?

The sun is mine as well as thine,
And days thou callest thine are mine;
  For nature never to thee gave
One grain of precious sea-sand fine
  To hoard within a narrow grave.

And not the gifts that blossom o'er
The blessèd fields, or strew the shore
  By which we wander in our pain,
Are thine or mine, or granted more
  For us than for the beggar's gain!

HORACE L. TRAUBEL.

The Index.

BOSTON, MARCH 13, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

The Danger of "Individualism" in Moral Reform.

Extracts from a Discourse delivered at Cosmian Hall, Florence, Mass., January, 1884.

BY MRS. ANNA GARLIN SPENCER.

In discussing our general subject (the Relation of the Individual to the Social Organization in Matters of Moral Reform), some considerations, which we will now speak of, are especially pertinent to a large class of rationalists in religion. An established order of thought or morals has this transcendent advantage over all speculative movements against it,—it has an assured and well-defined place for ordinary intellect and conscience. The new movement, on the other hand,—assuming it to aim at a true and not a false reform,—makes severe demands upon both the thought and life of all who espouse it. And, if this is true of partial and comparatively slight reforms, how much more widely and deeply is it true of that reform in religion which is slowly changing the ideals of men and women from a selfish heaven of personal salvation to a regeneration of the whole human race on this earth! This reform in religion, transferring—as it has done in the few, and is coming to do in the many—the points of appeal and conflict from God and Satan in one soul to good and evil in all souls, has led to analysis and criticism of all the elements of our social organism. And this has led in turn to an attempt to make this social organism all over, after a fairer and nobler pattern, with all the selfishness and wrong left out, and all the best we dream of made real. And this attempt, again, has taken a twofold shape in the near past.

The great "Transcendental movement"—which stamped upon our New England, and later upon our whole country, in its upper circle of thought and feeling, a unique die of *practical idealism*—took shape, you know, in two forms of separation from the existing order of society. The one form of separation from the world was the *social*,—that attempt at "community" life made up of congenial people, all pledged to lofty aims and pure living, and helping to realize these by a system that placed no ignoble bonds or indignities upon physical labor, no unequal strains of service upon any class, and allowed no strife between brothers for selfish gains, and no sacrifice of the higher nature to the lower. A dream we call it now; but a dream that, like the sculptor's vision, had in it, I believe, many of the features of the diviner life of the future, which the whole world, not a select few, shall yet chisel out, by sweat of blood and brain, under tutelage of the eternal purpose. The other form of separation from the world, to which the Transcendental movement gave birth, was the *personal*. This form was most perfectly illustrated, perhaps, by Samuel Johnson, in a life whose lofty beauty towers like a snow-covered peak above the common ways of human-kind. The first form—individualistic socialism, if we may coin the phrase—was early overmastered by the practical difficulties and financial embarrassments it involved. It was an attempt to make a little ideal world within the great practical world. And, the instant it formed its boundaries and undertook to outline its dream in actual fact, it found it must treat this outside world as a foreign power, and compromise with it or be crushed by it in all those business matters which the vulgar needs of the body, even at "Brook Farm," made necessary. Hence, the most and best that is left of the old Transcendental socialism is the strong feeling in many hearts that this big outside world itself must be made over, little by little, by tugging at this special reform and that, as we have power and opportunity.

The other form of separation from the world to which Transcendentalism gave birth, the personal (of which I called Samuel Johnson a grand example), has lingered longer among us in distinct form. It has its recognized name, Individualism. This name stands for that type of mind and conscience which realizes on one side the need of radical reform in the whole world of thought and action, and realizes as acutely on the other side the difficulty of opposing the present organized evils by organized forms of resistance. This difficulty arises from the fact that the very attempt to *organize* a moral reform is a fetter upon the most ideal natures, and, by bringing into the scheme inferior workers, lowers the standard of theory and practice among the reformers themselves. And, hence, the Individualist takes the ground that the only sure and lasting method of benefiting the race and educating the time is for the mentally and morally enlightened to refuse compliance with the present order of society, when that order holds evil as well as good under its protection, and, on the other hand, to refuse to join all associations formed to resist these governmental or social sins, lest, by so doing, they bind free thought and check to-morrow's inspiration, or feel obliged to keep step with other reformers, in ways exacting a compromise of principle only less in degree than that demanded by the halting march of the great outside world. I confess to finding great attraction in the nobler forms of individualistic life and effort. No one with a keen and delicate sense of right, and with balanced and impartial thought, can have put on the harness of any religious or reformatory association without finding it hurt at times. And, when the party whip of some special leader is cracked about one's ears, and one is wounded in the house of friends, because one declines to be a slave to some particular theory or method of work, the temptation is great to stand quietly in one's place, severing all ties of organization, and simply saying the word and doing the deed of a personal service, content to let that service be reckoned at its single worth. Yet, when we consider how mighty is the force, and how thoroughly organized, against which any reformatory movement contends, and consider also how slight is the work which any single soul, even the strongest and most devoted, can accomplish, the creed of Individualism seems an impotent one for most of the world. Like the philosophy of the Stoics, it has in it no place for any but the master minds and master consciences; and, before the solitary Idealist's dream is made flesh to dwell among us, it must pass through the coarse and fruitful earth of our common life. If the buried seed thus lose something of its rare quality, and the harvest prove a mixed growth, not so perfect as its germ-thought, it is still that *better for all*, which we are coming to see is so much greater and more to be desired than the *best for the few*.

I will illustrate the danger of individualism in moral reform by an allusion to the movement which promises to be the next great conscience test in America; namely, the temperance movement. Nothing has more disappointed and disheartened me in my comparatively new association with Unitarians and outside Liberals in religion than their common indifference to the temperance reform, and their common opposition to the popular methods of its leaders. This indifference and opposition cannot be explained as absence of a desire to make men better, or as the effect of selfish and sensual indulgence, or of failure to think upon great social problems; for we find it among Unitarians and Liberals of the most exalted type of character and service. What, then, does explain it? To my mind, this *individualism*, of which I have been speaking, is shown in two directions. Temperance in its full meaning—of moderation in all things, and subordination of the lower to the higher nature—is a virtue high in the creed of every individualist of the type we have been considering. Temperance, in its special and partisan significance, has come to mean total abstinence from all intoxicants as a beverage, and, besides this, is coming to mean more and more, taking the country over, legal prohibition of the liquor traffic, even in its more restricted forms, as a measure of public safety. The individualistic Liberal of high aims, balanced strength of character, and favorable conditions of life, declares that he declines to assume the responsibility for others more degraded or weak or unfortunate than himself. He will order his life in this, as in all other matters, according to his own need and judgment, and will not join any temperance association with a dogmatic creed, the necessity of which seems to him in itself a confession of incompetence to self-control. So he works for temperance in general as a part of moral culture, but will not single out any part of it as requiring unique and extraordinary methods. And, when confronted with the abrupt "yes" and "no" of license and prohibition ballots, he takes one of two positions. He sometimes declines to vote, on the ground that license is wrong, on the one hand, because giving legal protection to a traffic dangerous in many of its aspects, and that prohibition is wrong, on the other hand, because interfering with the liberty of private judgment. He sometimes, however, takes a decided position in favor of license, on the ground that it is not a protective, but a *restrictive* measure, to be pressed with higher and higher taxes upon fewer and fewer classes of liquor-dealers, until the utmost limit of repression is reached which the people will cordially sustain.

Digitized by Google

And this man generally adds to the common objection to prohibition that "it does not prohibit," because the law is never fully sustained by the best public opinion, the liberty-lover's objection that it is a *coercive* measure,—an attempt to impose by law upon all a code of morals only accepted by a few. Now, in so far as these opinions are the result of conscientious purpose and broad thought (as they are in many cases), they are entitled to the serious consideration of temperance reformers, and should be met and their fallacy proved, if possible, by calmly earnest argument,—not by invective or sarcasm or insinuations against the character of those of honesty and good intent. The argument for total abstinence as a universal method of promoting this special department of temperance is clear, simple, and direct, and, if persistently and enthusiastically pressed, will, I believe, in the not distant future, command the personal example and public advocacy of the vast majority of those who seek the truth and love their kind. This argument bases itself: first, on the facts of evil, which prove that the drink element of intemperance is specially linked to all of vice and crime and poverty which philanthropists deplore; second, that it constitutes, by reason of its effect on the body, a unique temptation and danger, determined in its ultimate results not so much by moral or mental as by physical conditions,—a temptation and danger only partially paralleled by one other form of fleshly indulgence, and that the sexual; third, that the physical, mental, and moral effects of the drink-mania of the past are so inwoven into our corporate life that we can never know who can with safety indulge even moderately, since many of the brightest and best and even strongest of earth's sons and daughters have been slain by an appetite beyond their control; fourth, that the struggle for liberty of personal judgment and decision has nobility only when it is directed against restrictions upon the higher elements of our nature, and that, hence, the anti-total-abstinence man, who yet desires to further temperance in all things, is putting himself out of harmony with a moral sentiment he confesses to be necessary for the help of many, for the paltry and pitiful show of freedom and self-control.

We laugh at the old-time Quaker who protested against the Puritan Sabbath by doing the family washing on Sunday, and hanging out the clothes as the worshippers passed to church, to show that in her own view no day was sacred above another, but all alike holy for work and prayer. But that seems a dignified and useful protest beside that of the man or woman who will not join the teetotal ranks lest the liberty of private judgment be abridged, when that total-abstinence creed is the symbol of a method of temperance appeal and training which can hurt no one, is safe for all, and necessary for many, if not most, of mankind. The rationalist in religion has enough customs and ideas and creeds, which cripple thought and dwarf moral purpose and judgment, to fight against. He cannot afford to spend time or strength in opposing any principle of action in a moral reform, which the most devoted workers in that reform have found of highest use, and of whose protection he himself may be in dire though unconscious need. The argument for legal prohibition of the liquor traffic is, at this stage of temperance work, of a very different character, and involves much more difficult problems. And, in so far as radical thinkers object to concentrating action upon the legal, at the expense of the educational, aspect of the temperance reform, I sympathize with them. I believe it to be profoundly true that no change of life-habits, however needed, imposed upon a people arbitrarily from without, by laws to which they do not give cordial assent, is likely to prove permanent or satisfactory in all its effects. And I believe it will take generations to make the majority of people consistent and thorough total-abstinence livers and teachers. Hence, I am sorry that so early in this great movement, before the temperance workers themselves are united upon methods of private example and public teaching, action upon this question is coming to be transferred so largely from the school-room and platform and pulpit to the political arena. Law seems properly to follow rather than lead the average conscience, that so its commands may be unerringly enforced, even upon those who learn its majesty only by swift penalties for disobedience. A law placed on the statutes by moral reformers in advance of this average conscience, by taking advantage of some opportune moment of excitement, seems to be of the nature of a military action. Such war measures compel a terse and external statement of moral issues and a belligerent attitude of moral reform, which are not the highest in quality and use. Hence, I can see good reason for the shrinking of many, even among total-abstainers and good workers for temperance, from the summary methods of the prohibitionist. I see, with them, that "national constitutional prohibition" of the importation, manufacture, and sale of all ardent spirits as a beverage (the end of the prohibitionist's ambition) would be really only the beginning of the temperance reformer's real work; since the things we want to and must get rid of, in order to secure universal temperance, are the diseased appetites, the self-indulgence, the weakness, ignorance, and mental emptiness of men and women. And that is a long job, which only education and heredity are patient and far-reaching and vital enough to accomplish. And I think it seems, to the most ideal reformers, that this long job should be better under way than now, before any legal short-cut to right living is insisted upon, and the rallying cry of prohibition made a dividing shibboleth in the temperance ranks.

But let us consider some very important points on the other side. In the first place, as I read history, the universe is not run on peace principles, and reforms are seldom, if ever, carried by ideal methods or in logical sequence of thought. The few leaders in morals concentrate thought and public attention upon some vital question of right and wrong. And, as soon as that public attention has changed in any considerable degree to active measures against the evil exposed, the first leaders find that they have invoked a power which they cannot control. The army they have recruited chooses its own captains and route of conquest. And, generally, the fighting element, which lies so near the reform element in most men and women, ordains methods far more extreme and peremptory than the wisest leaders advise. What is then to be done, when the military commanders thus supersede the patient teachers in a moral movement? Shall the ideal reformer, whose final ends are sought by the enthusiastic legions whose methods he cannot wholly approve, join hands with them, and go their way to victory? Or shall he stand apart in critical survey, while others "sail through bloody seas" to win the prize he himself held before their dull sight, until sluggish conscience and self-interested mind were roused to action? If the methods proposed be mean or dishonest, and the rank and file of the army false or brutal, he must, of course, hold his integrity apart.

But, in almost every instance, the case is simply this: the common mind and conscience, roused to oppose an evil, must have some clear, well-defined, and easy course of reform; and, to popular success, a prevailing watchword is necessary, to which nice balance of judgment and scrupulous choice of method must give way. The common mind and conscience seize as by instinct upon that external element of all moral conflicts which draws sharpest lines of separation, and allows least neutral ground even for wisdom itself to stand upon. And, when thus drawing the lines, it cries, "Let him who is on the Lord's side step forth," the time has passed, in my opinion, for deliberation: the time for action has come. When the great heart of an aroused and indignant people speaks the word "Forward!" to establish right and dethrone wrong, we must either fight the good fight with our impetuous brothers and sisters, or give aid and comfort to the enemy. And if, as I believe will soon be the case, the aggressive rallying cry of legal prohibition is added to the defensive position of total abstinence in the temperance reform, and all must choose, not between the educational and coercive method in this reform, but between the two forms of legal action,—license or prohibition,—what thoughtful mind and enlightened conscience can long hesitate for decision?

On the side of license is a small minority of earnest temperance workers, a few anti-total-abstainers of unsullied lives and righteous purpose, a large number of morally indifferent and negative people who go the easiest way. Back of these and before and behind and on either side is a great company of evil-doers,—the vast money interest of the liquor trade, unscrupulous for the most part in its use of means to further its selfish ends, flaunting its sin-breeding business beside church and school-house and home, fattening off poverty, and swelling its power with the outraged lives of helpless women and the starving labor or degrading beggary of little children. On the side of license is the effrontery of wickedness, the hopeless misery of weakness, the debauchers of innocence, the victims of past sins and present, the keepers of brothels, gambling hells, and resorts of thieves and murderers. On the side of license are the broad and well-travelled ways to the hospital, the insane asylum, the almshouse, the prison, the gallows, the drunkard's grave,—ay, and on that side also is the despair of those who mourn dead souls burnt up with the fire of unholy desire! Who wants to stand on that side, though his immediate companions be the respectable and thoughtful, who conscientiously believe that to be the better method of repressing the evil? Not I, for one!

On the side of prohibition is some intemperate speech, much short-sighted dependence on legislation as a means of changing character, which is doubtless doomed to disappointment,—too much of that spirit which would forcibly compel adherence to one's personal standard of virtue, and too little sense of the need of personal and inherited growth. But on that side also is the great moral enthusiasm which is to carry the temperance reform. On that side is the major part of love of order, care for purity, and sacrifice of inclination and appetite and ease for the good of others. On that side is the noble determination to make our streets safe for innocence, our homes free from pollution, our laws pure from compromise with evil, our race and time clean from one of the hoary vices of the ages. Who hesitates to go with this army, even to the battle-field of ballots, though he might choose the teacher's peaceful service? Not I, for one!

Moreover, just as in the anti-slavery struggle it was the hateful aggressions of the slave-power and the base concessions of Northern money-lovers that transferred the conflict from the platform to the soldier's field, so to-day it is the liquor interest,

Digitized by Google

and not the prohibitory party, which has fired upon Fort Sumter.

No money interest in this country, I make bold to say (and reputable newspapers, anti-prohibitory in principle, have repeatedly said the same thing), has ever so openly debauched the ballot-box, so fearlessly tampered with legislation, so boldly overridden the decisions of courts of justice, as has the liquor interest. No business has so outraged the ordinary standards of commercial honor, so wickedly defied the better, and preyed upon the weaker and more sinful elements in society as has this. And to no power of evil, since the slave oligarchy trampled on freedom under the capitol dome, has the cowardice of the people so tamely submitted. No wonder that, when the slow resistance of men and the meek patience of women are finally aroused, they declare that to fight back with the liquor-trader's favorite weapon—the ballot—is a sacred duty. A fight it is to be, I foresee. And so far, on the prohibition side, it is honest, brave, and clean, whether timely or wise in our view or not.

And since, as I have said, the course of all reforms seems to be in some external direction which the simplest-minded can understand, and since the common moral enthusiasm, which must carry all reforms to successful issue, seems so dependent on the partisan's heat, I hold that the individualism which keeps the rationalist in religion aloof from the conflict is generally a *weakness*, and not a strength of judgment and character. I have used the temperance movement as my illustration of the dangers of individualism in moral reform, and treated it thus at length, because, in my opinion, it is the next great practical issue in morals, and also because Liberals as a class are yet undecided about, indifferent to, or openly opposed to the spirit and methods of temperance reformers. But I might have used other illustrations, and I would close with a general word of warning. Rationalists in religion, accustomed to independent thought and action, and sensitive to outward control, should take heed lest they place themselves outside the great currents which move the world onward. They should remember that, whatever unfits for heroic action, whether it be the pride of opinion, or paralyzing hesitation of mind, or extreme nicety of method even, is cause rather for regret than self-congratulation. It is indeed ours to search for the highest methods of reform, and teach them with patience, and ours to plead ever for that truest and most radical work of making the individual life superior to all need of external and superficial aids to control and development, through education and inheritance. But, when the war-cry sounds for a moral struggle with some special evil,—a struggle we have doubtless helped, unwittingly, to invoke,—may we let nothing—even the scholar's gown—hinder us from brave response. Those who seek to "establish truth and make the right to reign" belong together. If the great army of reformers will not go our way, let us see to it that nothing petty or cowardly or hypocritical keeps us from going their way.

THE CLERGY AND THEIR CREEDS.

Some time ago, Mr. B. F. Underwood, the famous enunciator of the doctrines of the naturalists, was requested to come to Denver, and deliver a course of lectures; and, in response, he arrived here yesterday morning. Mr. Underwood is one of the most able exponents of the cause in this country, and is acknowledged by many to be the peer of Col. Robert G. Ingersoll.

Yesterday afternoon, an appreciative and intelligent audience assembled at City Hall for the purpose of hearing Mr. Underwood lecture on "The Clergy and their Creeds an Obstacle to Progress." He said: "There are different classes of the clergy. Those who adhere rigidly to their creed are generally men who, if narrow and even intolerant, have the courage of their convictions. They may be educated, according to the popular meaning of that word; but the education is not of the modern sort. The orthodox theologian lacks the modern brain. He has inherited so much of the superstition of the past in the form of ingrained, organized tendencies and traditionary beliefs that the past rather than the present controls him. Madame de Staël said that, while she did not believe in ghosts, she feared them. The feelings engendered by generations of superstition were stronger than the intellectual convictions acquired in her lifetime. Generations of beliefs show themselves even in those who have outgrown the beliefs. The orthodox theologians are fossils. They represent past thought,—that thought which has no active power to-day, but which influences men through forms, institutions, customs, etc., which it has helped to form. The heterodox theologian represents a transition period. He is unable to reject the old or to accept the new. He tries to unite portions of each, and to adjust himself to the demands of the times. His teaching is full of inconsistencies. His spirit may be liberal and his tendencies progressive, but the thraldom of the old faith is so strong that often he gives us but glimpses of the new science. If he utters a liberal thought free thinkers have been advocating a hundred years, if he uses an argument employed by Voltaire or Paine, if he recognizes evolution and is respectful to the claims of modern scientific thought, if he concedes to those from whom he has obtained all his advanced ideas common honesty, he expects applause and support from free thinkers, and generally gets all he deserves, even though the next Sunday he hedges, qualifies, modifies, and concedes to the old faith enough to satisfy the average orthodox believer. Thus, the heterodox preacher, by mingling the names of Darwin and Moses, John Stuart Mill and St. Paul, and by confusing his hearers by indorsing antagonistic theories, gets a reputation for liberality and breadth, and the support of those who belong to opposite beliefs. Many of these liberal preachers are entirely honest in their inconsistencies, but are crude in thought." The lecturer was somewhat severe in his strictures on that class of ministers who are really without convictions, but who are ready to talk heterodoxy or orthodoxy as their interests may determine. They are much less to be respected than the orthodox, who honestly preach what they believe.

"But what," asked the lecturer, "is the business of all these ministers? To preach theology. And what is theology? 'The art of teaching,' as Brougham said, 'what nobody knows anything about.' They declare that there is a personal, intelligent Being who made the world and governs it; that is, a Being in whose image man was made; that this Being has made known his will and wishes in a book called the Bible, which he inspired men to write some thousands of years ago. How these men knew they were inspired, or how to distinguish between an inspired and an uninspired truth, we are not informed. The proofs of the inspiration of the book are alleged miracles, and the proof of the miracles is the book. The internal evidence is also appealed to, although the Bible is made up of scraps of history, of tradition, legend, myth, proverbs, poetry, love-songs, prayers, curses, and seems to the unregenerate mind to be a very human production, and the literature of an ancient people. The external evidence is also appealed to, although there is not a miracle recorded in the Bible that is substantiated by any contemporaneous pagan testimony.

"The spread of Christianity is made the basis of an argument, although Mohammedanism, starting six hundred years later than Christianity, spread more rapidly, and numbers to-day more than two hundred million adherents, while Buddhism has over four hundred million,—more than Christianity ever had or is likely to have. The clergy are not, as a class, accustomed to severe logic; and we must not expect their reasoning to be very profound or conclusive.

"Their revelation, they tell us, declare these facts: the creation of the world, the fall of man, and salvation through Christ. Formation and dissolution are seen to be natural processes, but creation is an act of which we have no proof. The fall of man is a foolish doctrine that implies the original imperfection of both God and man. If a perfect Adam or a perfect angel could fall, why not God himself fall and become a demon? This is a superficial and theological way of accounting for evil, which science shows to be the result of an inability to adjust ourselves to our environments, and which disappears with advancing knowledge. The orthodox devil is a moral monstrosity in the universe, but is just as necessary as the theological Christ to the orthodox system. A perfect God, capable of making only a perfect universe, needed an imperfect devil to introduce disorder into his work. But the imperfect devil needs explaining, and remains the despair of the orthodox system. The theologians preach about the atonement; but their plan of redemption is undergoing modifications, and many of them still find it unsatisfactory. There are many honorable men who do not feel the need of and do not want salvation through Christ. It seems too much like a scheme in which the innocent suffer and the guilty escape. It is a bankrupt salvation scheme. It is a scapegoat theory. Our preachers tell us we must have faith and pray. But the most advanced minds, the Darwins, Huxleys, Haeckels, Tyndalls, Mills, Grotes, Leckys, Vogts, Buechners, Strausses, Renans, *et id omne genus*, have the least faith. As for prayer, it is certain that it neither suspends nor contravenes nature's inexorable laws. If the orthodox clergy possessed the modern brain and could get in the modern mood and spirit, they would see this. But their face is toward the setting sun.

"Theology is opposed to all progress. It opposed the astronomical discoveries of Copernicus and Galileo. It denied the antiquity of the earth. It ridiculed Darwin, and its thousands of representatives in Europe and America threw the entire weight of their influence against him; but the old man, patient, laborious, truth-loving, candid, without the grace of eloquence or rhetoric, unable to compete before a crowd with a Spurgeon or even an inferior preacher, by the power of his thought made his influence felt, and mortified theology more than the combined labors of all other men of this generation.

"Theologians have opposed reforms in every land. In England, the abolition of rotten boroughs and the disestablishment of the Irish Church was opposed by the clergy. The clergy and their dupes are united to-day in opposition to Bradlaugh's taking the seat to which he has been repeatedly elected from Northampton. The clergy have been active in circulating petitions against him. In this country, we all know the orthodox theology was on the side of slavery. Garrison and Phillips received from the orthodox clergy no encouragement. It came from the infidels In France, the clergy are the bitterest foes of the people, of republican government, of free secular schools, of popular suffrage. In Italy, the Pope and his servile dupes are trying to undo the good, brave work Victor Emanuel did. In this country, the clergy as a class oppose the complete secularization of the State. The use of the Protestant Bible in our public schools has already threatened the perpetuity of our public school system. Yet the orthodox clergy are opposed to putting our schools on a secular basis. They are opposed to taxing church property, which amounts to $500,000,000, thereby compelling those who do not believe in churches to support them. They leave this reform to free thinkers. Persecution, witchcraft, polygamy, are all encouraged by theological beliefs. And the clergy denounce free thought, and encourage all free thinkers, who are willing to accept their bribes, to support the churches, to assert the creeds in which they do not believe. The pliancy of such people is not to be defended, much less the action of the clergy who denounce honest unbelief, and thereby encourage support of their theology from those who prefer popularity and preferment to loyalty to conviction."—*Denver Tribune, February* 18.

CORRESPONDENCE.

THE MORMON PROBLEM: A REPLY.

Editors of The Index :—

Either Mr. Potter's usually fair and wise method of treating public questions has deserted him in this discussion or my own native obtuseness has become still more pronounced. Though he disowns any special reference to my article in his own (*Index*, February 28), yet in view of the adverse opinion he gives of my argument in the beginning, and the opposition he records to the proposed petition at the close of his article, it seems proper enough that I should interrogate

Digitized by Google

his reasonings. And this I shall do by stating the principles on which my appeal was based, first noticing certain points in Mr. Potter's argument.

When he says, "There is a clear right for national legislation against polygamy as a crime, and no claim of religious authority can invalidate that right," he states what is perfectly compatible with the whole tenor of my appeal. But the several other issues which it was meant to bring out and emphasize he leaves untouched. He makes some approach, however, to the issue, in saying that "Congress has ample right, moral and constitutional, to legislate against polygamy in Utah, as elsewhere, and to enforce its legislation." This is spoken in the present tense, and without any condition or proviso. I deny that Congress has this right, until it shall have vindicated its integrity and atoned for its past misdeeds by discharging its duty to the commonwealth in effecting at once a complete divorce between Church and State. I also declare it to be a deplorable inconsistency in Congress to legislate against polygamy as a crime in Utah, when it has not the right to do it in any one or all of the States, which is the theory held. I believe it is Senator Hoar, of Massachusetts (whom Mr. Potter does not name), who introduced the "Supplementary Bill," "two features" of which Mr. Potter takes to be "of very questionable constitutionality." These are the putting of the church corporation into strange hands and abolishing the Emigration Fund Company. Is not this assailing the Mormon Church? Does it not reveal the animus, the intention, of the law? Does it not give a meaning to the words of Governor Murray, that it is "not polygamy, but the Mormon hierarchy" that must be made the point of attack, and to the words of liberal papers like the *Christian Union*,—"The power of the hierarchy must be broken; that requires law, directed, however, not against polygamy"? And what of President Arthur's proposal, with Joseph Cook and his audience and their ilk for a backing.

I must save, however, the ladies of Utah the compliment which Mr. Potter has paid to them in saying: "Nor does it logically avail aught against this argument... to argue that the Mormon women who live in polygamous marriage are in better material condition than they were when peasants in Europe, and would not exchange their new life for the old. The negro's condition was doubtless raised by Southern slavery above that to which he was born in Africa; but this did not break the moral appeal for his emancipation, not for the purpose of sending him back to Africa, but for opening to him the opportunities of civilized freedom." Thank you. Frank and honest! But what of the logic? These "Mormon women" you compare to the negro. Is the comparison a true one? The negro was kidnapped or sold into slavery, and he welcomed his emancipation. The Mormon women fled from your "civilized freedom," entered into the bondage of polygamy of their own accord, and protest with all the earnestness of their nature against your purpose to release them from that state. They embraced Mormonism, because they saw in it the betterment of their moral as well as material condition. Besides, they were not all "peasants." You labor under a great mistake. A large proportion were not. My mother was not. But I should have loved her none the less, if she were. I almost wish she had been. I visited her home in England. I sat in the pew occupied by the family for generations, and listened to the pastor whom her father and grandfather had listened to. I knew then why it was she became a Mormon. I observed the customs of the country, saw the oppression of certain classes, saw in what low estimation man was held, and more especially woman; and I knew then why it was that a stream of Mormon emigration had steadily flowed through these years. And I blessed Mormonism for it.

I look at this question from the stand-point of Liberalism, which is one of principle, honor, consistency. I look on Congress as the representative of the wisdom and integrity of this nation, and on its acts as the witnesses to its virtuous will and high endeavor. The Mormon problem I hold to be complex, and that its solution is impossible, if otherwise considered. The fact should never be absent from the mind that Mormonism is begotten of this generation, was cast in the mould of its habitudes of thought and practice. The world first, our nation next, are responsible. But this formula is capable of a more definite expression. There are three standards of appeal in judging of the character of a people,—law, creed, and custom,—which declare the civil, religious, and social bent or aspirations of a community. There is always a greater or less approximation to oneness in these three. The methods tried in the past for making them one have led to despotism, civil and ecclesiastical, the principle being always the same,—the use of arbitrary power in the person of king or priest, constituting either a monarchy or a theocracy. We live in a transition age, when the democratic idea, the sovereignty of the individual or of reason, is extending its sway over men's minds. The experiment of a democracy, a government by the people, is now in progress. But where are we? The questions which it behooves every one to ask are: Have we a democratic constitution? What is our creed? Is there any disparity in the principle, any conflict in the spirit, of these two? and from which do the customs and relations of man's life derive their sanction? And so, when a practice is arraigned as antagonistic to the general welfare, the most natural question to ask is, Does government, religion, or society give any countenance to the deprecated evil? By which is it succored the most? These are the questions which a patriot and reformer will put to himself before choosing his course of action, before casting his vote for any public measure. It is because these questions are not answered that legislation and reforms so often prove abortive.

Now, polygamy, in the community in which it exists, finds its support in the Church which commends it and in the civil power which allows it. But we must look elsewhere for the spirit that created the Church and for the example that gave encouragement to the civil power. In other words, I find in the practice of government, the teachings of religion, the habits of society, the explanation of this so-called anomaly in Utah.

1. Christianity, which is the religion of the civilized world, is in essence, and has been in fact throughout most of its history, theocratic. The majority of Christians, the Catholics, still rigidly adhere to this primitive idea of a government of God on earth. And Protestants yield a reluctant, wavering, or joint allegiance to the civil power. Many Protestants of learning and influence openly advocate a union of Church and State. Christianity, Catholic and Protestant, assumes lordship over the question of marriage, making grudgingly and against its will, and often unconsciously, concessions from time to time to the State. And, now, loud protests are being heard from nearly every quarter against this invasion of church prerogative. In respect to marriage, the Catholic recognizes the validity of none solemnized outside of its communion; while both Catholic and Protestant derive the institution and sanction of marriage from the revealed will of God. A union of the sexes not sealed by Bible or priest is prostitution. The Shakers condemn marriage on the same high unimpeachable authority.

2. Our government is not in principle a theocracy; but there exists a union between Church and State, that gives to the theocratic idea moral and material aid and support. Though the Constitution of the United States is democratic, the constitutions of the several States are in a sense theocratic. And, then, the theory and practice of the general government are at war, its actions contradicting its principles. On the subject of marriage, its attitude is one of compromise and equivocation. Though marriage is supposed to be regulated by law, it is not clear what law, whether civil or ecclesiastical, or whether State or national, though each State claims exclusive jurisdiction. The common law even is of mixed origin, and is in force only as suits the pleasure, the will, of the States separately.

3. Monogamy is said to be the custom of civilized society. Perhaps it would be better to call it the theory, though that even would be far from true. There are other customs and other theories to which it would be the worst of follies to close our eyes, some of which customs are allowed, and even regulated by law, as the social evil for instance. Liberals were startled, or professed to be, at the revelations made not long since of the spread of *free-lovism*. But "free love" is not the worst form of the evil it suggests, for the reason that it is avowed, and appeals to science for its justification. There are heathen populations wasting away under the ravages introduced among them by our so-called civilization. Did not Mr. T. W. Higginson quote Chunder Sen in proof of this in Boston the other day? But are these the sole ravages, "brandy and beer," or even the typical ones? We know better. Is there not a more "dreadful poison," for whose manufacture our civilization has, if not the monopoly, an endless variety of patents unknown to the most barbarous people? I myself have been among Indian tribes, who were strangers to certain vices and diseases until introduced by our advanced guard of civilization. Not by the Mormons; for the sun shines not on a community freer from syphilitic taint or venereal complaint. Even the savage, with his dull perceptions, looks on Mormonism on this account alone as a "thing of beauty," an oasis amid the desert.

Yes, the question has its relevancy: What is the comparative morality of Mormon and Gentile communities? Are there not wide-spread evils in our monogamic society, that put even polygamy, as conceived by an outsider, to the blush? If the capital of our nation is thick sown with seraglios, if not a few members of the Congress that passed the anti-polygamy law are pluralists in practice, does it signify nothing? Then, the question may be asked if polygamy is a *malum per se*, a crime in itself? Does Mormon polygamy tend to the degradation of woman? Does it debase man? David practised it rather extensively, and yet he is regarded worthy of the world's homage. His spirit, as I read in one of the most popular works in Christendom, *King David*, is the soul of our modern piety! If it had nothing to do with the making of the man, it certainly did not, as far as we know, unmake him.

I am not a retainer for the cause of polygamy or Mormonism. Polygamy is a transitional form of marriage, and belongs to the past. Monogamy is the ideal of an advancing civilization. The fact that the sexes are born into the world in nearly equal numbers is itself a revelation of greater significance and validity than any command from heaven spoken by the Holy Ghost. Connubial love, I believe, is single. Human offspring demand the close care and watchfulness which both father and mother can give. The training of children is an education for parent and child. Then, husband and wife stand in daily and hourly need of each other's love, of love's ministrations in its thousand forms. At this age of the world's advance, quality, not quantity, should be the aim in all things; and this principle monogamy favors, and polygamy does not. Child culture, not child-bearing, is the true idea. If man's passions are over-strong, if he feels the stirrings of virility in his veins at improper seasons, it is his duty to put restraints on his nature, and to give to these forces a new direction,—a moral flow.

I do not say the Mormons are right, but that the United States government is wrong. I advise not that this question be dropped or postponed, but that it be settled on principles of justice, equity, and fair play. John Stuart Mill, a mind of no common mould, thought the United States could afford to let the Mormons carry out their experiment unmolested. I think it would be a thousand times better to do that than to continue in the course now being pursued. I think it the duty of Liberalism to see to it, in as far as lies in its power, that, in the extirpation of polygamy, example shall count for more than precept. I see how easy it is to draw up an indictment against Mormonism. It requires neither skill nor courage, for the reasons that the power of Congress over the Territories is supposed to be so absolute, and that Christendom is ready to applaud any affront whatever offered to this new, upstart community. But where is the statesman that dares stand up in the national legislature, and propose an amendment to the Constitution for the complete separation of Church and State? It would probably cost him many votes. He would most likely fail of re-election. But to his name would come praises from the lips of the unborn future. What was the fate of the amendment in 1876 to forbid States appropriating funds for sectarian purposes? After various amendments, one being "this article shall not be construed to prohibit the reading of the Bible in any school or institution," it was defeated, and for reasons implied in the remark of one, a senator, that he preferred "leaving the States to manage their domestic institutions as the people of each State may choose." If religion and marriage are "domestic institutions" in Massachusetts, Illinois, Wyoming, Nevada, why not in Utah?

The greatest criminal in this case is the United

Digitized by Google

States. "The India outcast, making theft and murder a part of his religious observance," is less a criminal. So is the Hindu sect, burning its widows alive. If polygamy is a crime, the nation is chargeable with complicity in the deed; and the greater it makes the crime to be, the more it magnifies its own guilt. The greatest crime known to the Constitution is falsity to the oath of office, or should be. And every senator and representative that abets or connives at the union of Church and State in any form violates his pledge to his conscience, his people, and his—well, that's enough. Why should there be an association formed to secure, in the fundamental law of the land, a recognition of "Almighty God," "the Lord Jesus Christ," and "the Bible"? Let not your heart be troubled, for they are already there. A man, to be a slave, need not wear manacles or brandmark. Be not surprised if I call at *The Index* office to ask you to sign a petition, before many days have passed.

T. W. CURTIS.

REPLY.—To the above, we would reply as follows:—

1. We did not and do not oppose Mr. Curtis' projected petition. We have long advocated most of the propositions it embraces. If they are put into a shape which commends itself to our judgment and are not made essential conditions anterior to Congressional legislation against polygamy in Utah, we shall be ready to sign a petition in behalf of them.

2. We hold that, in the national Constitution as it is, the principle of the separation of Church and State is completely recognized. Those features of national law and administration that are not in accord with this principle are traditional relics of ancient observance that are really violations of the Constitution, and ought to be abolished. But we fail to see how their existence, or the fact that State and Church in the several States are not wholly severed even in the constitutions, should invalidate the right of Congress to legislate against a crime in Utah which happens to be upheld by the authority of a Church. The two propositions which Mr. Curtis quotes from our article in his second paragraph, one of which he assents to and the other denies, are but two forms, one a little more explicit than the other, of stating the same thing. Of course, in the second statement, after the words "as elsewhere," the words "within its jurisdiction" are implied, as we never dreamed of claiming that Congress can constitutionally legislate against polygamy in the States. But, for all the Territories and the District of Columbia, it has that right. Nor can we see why it is any more inconsistent for it to legislate against that crime where its constitutional authority does reach, because it has no authority over the same crime in the States, than it is for it to legislate on any other matters pertaining to the Territories and the District of Columbia which in the States are reserved for their own legislation.

3. We believe that petitions for the separation of Church and State will be most effective if addressed to the legislatures of States where the relics of union still exist in the constitution as well as statute-books. But this reform will probably be a gradual one. If possible, it would be a good thing if the State constitutions in this matter could be reached through an amendment to the United States Constitution. But such an amendment would require the consent of three-fourths of all the States. We are not so enthusiastic as to hope that this can be secured in our day. When the States should be required to conform even the phraseology of their constitutions to a certain standard dictated by the national Constitution, the spirit of rebellion against central authority would probably prevent the recommended amendment, however rational, from being adopted. Fortunately, it is not necessary to let polygamy grow until such a universal amendment concerning State secularization can be adopted. Congress can to-day constitutionally reach it in the Territories; and, in the States, it does not exist, whatever other kindred evils they may have.

4. Mr. Curtis presses our comparison of polygamy to negro slavery beyond the point for which we used it. We expressly referred to the one alleged fact that the Mormon women who live in polygamy are in better condition than in their previous mode of living, and said that a similar statement used to be urged in behalf of slavery, but did not invalidate the appeal for emancipation. But this was not to say that the Mormon women are no better off than were the negro slaves or are of the same grade of civilization. When Mr. Curtis attempts, however, to turn this argument by pleading that the Mormon women, unlike the negro slave, are satisfied with their lot and protest against being released from it, he only writes the deeper condemnation against the system he tries to palliate. We doubt this statement of many of the Mormon polygamous women; but, if it be true, then it convicts them of deeper degradation than we had supposed to be their mental condition. Mr. Curtis, elsewhere, has drawn a very true and fine picture of the ideal monogamous marriage. But how the genuine womanly nature of these plural wives must be debased, if they do not have even a thought or a dream of that truer marriage, but protest against it!

5. The remainder of Mr. Curtis' reply may be summed up as an argument to show that our government is inconsistent in legislating against polygamy in Utah, because there are so many other evils which civilization has not abolished and has even produced. But civilization does not advance its whole course at once. If no evil were to be attacked by law until all evils can be thus prohibited, we should have anarchy instead of government. Let it be admitted once for all that modern civilization is far from perfection; but, in this matter of marriage, it has got beyond polygamy. It is advancing toward the ideal union of one man and one woman. But law is needed to hold this advance. Secure a uniform law for the whole country as soon as possible; but, meantime, work with the law and Constitution we have. W. J. P.

THE WISCONSIN UNIVERSITY.

Editors of The Index:—

President Bascom, of this institution, says no such incident as that I mentioned, of the young ladies being required to go to church by the matron, after being told by the president that attendance was optional, has occurred within the past ten years. I think it was twelve years ago. At all events, I heard of it at the time from a friend who was present; and I remember that these young ladies had to ask the matron's permission whenever they stayed away. How the young men were treated may be judged from the fact that the Episcopalian priest of our village, near by, complained to me that the son of a parishioner had gone there, where he would have no church privileges. "Is there not a very good Episcopal church in Madison?" I asked. "Yes; but he can go or not, just as he likes." Ten years ago, the young ladies were much more harassed by "church privileges" than young gentlemen. I judge, from the president's statement, that they are not at present. And I am glad to be thus confirmed in the high opinion I have always had of this university, where such liberal and enlightened instructors are employed. So much attention is paid to science, so much liberty is given to the pupils, especially in choosing their own course, and such keen mental activity prevails, that a girl is much more likely to find out what advanced thinkers know, and thus learn how to think for herself, than she would be in such a palace of conventionalism as Vassar. Madison has always been a liberal place, in spite of the matron. But she has it all her own way at Poughkeepsie and Wellesley. Let me take this opportunity of insisting once more on the fact that there is no liberal education for American women except co-education. F. M. H.

THE THEOLOGICAL VIEWS OF WENDELL PHILLIPS.

Editors of The Index:—

I see the assertion in your columns, and the same elsewhere, that Wendell Phillips remained orthodox in his theological views. It is evident that he rarely expressed opinions, and possibly never took time to form any, on the abstruse and technical questions of the creed; but that he heartily and unreservedly indorsed views wholly antagonistic to Orthodoxy I happen to know. It was not likely that a man so absorbed in the practical doing of religion would hold it worth his while to enter the contest over atonements and imputed righteousness. He often said, "With no man's opinion have I any right to find fault, unless that opinion is put into practice in such a way as to injure mankind." Any theology that trenched on human rights Mr. Phillips held accursed; and I know that he commended the most unflinching condemnation of the doctrine of decreed condemnation and the sinfulness of human nature, as taught in Calvinism.

E. P. P.

BOOK NOTICES.

DUE WEST; or, Around the World in Ten Months. By Maturin M. Ballou. Boston: Houghton, Mifflin & Co. 1884. pp. 387.

This book gives us the result of the plain, common-sense observations on his travels of one of "Cook's tourists," and will be welcomed by many stay-at-homes for its terse, concise descriptions and realistic pen-pictures of foreign lands, as they appeared to Mr. Ballou's practical eyes. As a sample of the writer's style, combined with a thought-inspiring incident occurring in India, we quote the following from pages 237, 238. It was at the funeral of a young girl, whose corpse was placed, as the custom is, in the "Tower of Silence," when, after certain ceremonies, the body is "carried upon a stretcher through a door in one of the towers, and placed upon a grating, raised a few feet from the ground, where it is completely exposed. The bearers instantly retire: the door is closed and locked. These towers are open at the top, on the cornice of which hundreds of vultures are always waiting, in full view of every one; and, as soon as the body is left, they swoop down to their awful feast, eagerly tearing and devouring the flesh, absolutely picking it clean from the bones, which fall into a space below in an indiscriminate mass, to be decomposed by time and the elements." Watching this terrible sight, Mr. Ballou questioned an intelligent Parsee who was present, "How can you reconcile to your feelings such disposal as that of the remains of a tenderly loved child?" "What do you do with your dead?" he asked. "We bury them in the earth." "Yes," he continued, "for the worms to eat. And, if there is death at sea, you sink the body in the ocean, to be consumed by the sharks. We prefer to give our dead to the birds of the air."

SESAME AND LILIES. By John Ruskin. Containing two lectures. I. Of King's Treasures; II. Of Queen's Gardens. pp. 87.

CROWN OF WILD OLIVE. By John Ruskin. Three lectures on Work, Traffic, and War. pp. 102.

ETHICS OF THE DUST. By John Ruskin. Ten lectures. I. The Valley of Diamonds; II. The Pyramid Builders; III. The Crystal Life; IV. The Crystal Orders; V. The Crystal Virtues; VI. Crystal Quarrels; VII. Home Virtues; VIII. Crystal Caprice; IX. Crystal Sorrows; X. The Crystal Rest.

These three daintily bound volumes, of uniform size and binding, at twenty-five cents per volume, are marvels of cheap publication. One wonders how Mr. Alden can possibly make such first-class literature pay at the prices asked. He deserves the thanks of the community for popularizing in this way standard and high-toned works like these and others on his list. Both "sweetness and light" are characteristic of Mr. Ruskin's writings; and, however much one may differ from him in opinion, his words are always elevating in tone and provocative of thought. The first of these companion volumes treats of the choice of books and of woman's sphere; the second, of topics of interest to men of all degrees; and the third is brimful of wise, tender council to young girls in their teens. John B. Alden, publisher, New York.

PERSONAL ITEMS.

THE portrait of Wendell Phillips, by E. T. Billings, can be seen for a week or more at 175 B Tremont Street, Evans House.

ON the occasion of the death of Keshub Chunder Sen, a message of regret and condolence was sent to his son by Queen Victoria.

VICTOR HUGO has forwarded to the poor relief authorities of Paris the sum of $1,000, to be used in giving aid to persons in arrears with their rent.

FORTY members of the Paris municipality have signed a proposal to call one of the new streets in the Quartier des Ecoles after the name of Darwin.

THE lives of Lucretia Mott and her husband, James Mott, have been written by her grand-daughter, Mrs. R. P. Hallowell; and the volume will be published in a few weeks.

THE Empress of Japan is said to be a pretty woman and to take a great interest in the welfare of her sex. With her own money, she has founded a normal school for girls.

THE sultan, "in testimony of high satisfaction" with Mr. Edwin Arnold's *Pearls of the Faith* as a poetical exposition of the religion of Islam, has conferred on him the Order of Osmanlie of the third class.

Alden's Manifold Cyclopedia.

THIS will be recognized as the most important literary announcement I have ever made. All previous undertakings, successes, and failures have been preparation for this. THE MANIFOLD CYCLOPEDIA will be the most comprehensive single work of reference ever undertaken in the English language. It will include:

AN ENGLISH DICTIONARY,

based upon the "new Imperial Dictionary," recently published in England. The "Imperial" is very much larger than either Webster's or Worcester's Unabridged Dictionary; and, being many years more recent in its compilation, its editors had, of course, the benefit of all that scholarship had gained by either Webster or Worcester. It will be thoroughly revised and enlarged (rather than abridged) *by its former chief editor.*

SIX OTHER LANGUAGES.

It will also include a concise dictionary of the six other principal literary languages of the world,— GREEK, LATIN, FRENCH, GERMAN, ITALIAN, and SPANISH.

A CYCLOPEDIA.

Its cyclopedia features will be based upon Chambers's Encyclopedia, but will be very much more comprehensive, covering more thoroughly than any other single work heretofore published all departments of human knowledge usually comprehended in a Cyclopedia or Library of Universal Knowledge.

OVER 5000 ILLUSTRATIONS.

It will be fully illustrated, including more than 5000 wood-cuts and reproductions, and such numerous maps as will constitute a complete atlas of the world, ancient and modern, sacred and political.

ONE ALPHABET.

The entire contents of THE MANIFOLD CYCLOPEDIA will be included in one alphabetical arrangement, thus giving the utmost facility for reference.

EDITORS-IN-CHIEF.

The former Editor-in-chief of "The Library of Universal Knowledge," Rev. RICHARD GLEASON GREENE, will have charge of the work, his principal Associate being JAMES HUNTER, formerly of Glasgow, Scotland, where for nearly ten years he was principal editor of the new "Imperial Dictionary," and more recently, in this country, Editor of the "Supplement to Worcester's Unabridged Dictionary." The scholarship and skill of these trained cyclopedists will be supplemented by other experienced workers from the former editorial staffs of "The Library of Universal Knowledge" and of Appletons' and Johnson's Cyclopedias, and by many others.

PRICE.

THE MANIFOLD CYCLOPEDIA will be published in convenient, double-column octavo volumes, of about 800 pages each, at the price of $1.25 per volume, cloth binding, and will probably be completed in twenty volumes. There will also be a cheaper edition, probably $15 for the set.

SPECIMEN PAGES,

with more detailed prospectus, will be ready in a few days, and will be sent free upon application; also, large catalogue of standard books, at lower prices than ever before known. *Not* sold by dealers,—prices too low. Books sent for examination before payment, on evidence of good faith.

JOHN B. ALDEN, Publisher,

P.O. Box 1227. 18 Vesey St., New York.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality.* The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

Sent postpaid, on receipt of price.
Address THE INDEX,
44 BOYLSTON STREET, Boston, Mass.

PRANG'S EASTER CARDS

EASTER CAROL CARDS.

For Sale by all Dealers.

Chinese Classics.

THE WORKS OF CONFUCIUS and Mencius, translated by James Legge, D.D. The importer's price for this work is about $18, and the edition heretofore published in this country, from *these same plates*, has sold at $3.50. New Library Edition, small octavo, fine cloth, red polished top. Price $1.00.

Sesame and Lilies.

By JOHN RUSKIN, author of "Modern Painters," "Stones of Venice," etc. Containing two lectures, on Books, Women, etc.; I., Of King's Treasures; II., Of Queen's Gardens. Elzevir Edition, Bourgeois type. Price, in paper, 10 cts.; extra cloth, ink and gold, colored edges, 25 cts.

Crown of Wild Olive.

By JOHN RUSKIN. Three Lectures on Work, Traffic, and War. Elzevir Edition. Bourgeois type. Price, in paper, 10 cts.; extra cloth, ink and gold, colored edges, 25 cts.

Ethics of the Dust.

By JOHN RUSKIN. Ten Lectures. 1. The Valley of Diamonds; 2. The Pyramid Builders; 3. The Crystal Life; 4. The Crystal Orders; 5. The Crystal Virtues; 6. Crystal Quarrels; 7. Home Virtues; 8. Crystal Caprice; 9. Crystal Sorrows; 10. The Crystal Rest. Elzevir Edition, Bourgeois type. Price, in paper, 10 cts.; extra cloth, ink and gold, colored edges, 25 cts.

Ruskin's Choice

WORKS, SESAME AND LILIES, Crown of Wild Olive, and Ethics of the Dust, as above, bound in one volume, half Russia, red edges. Price 50 cts.

LARGE CATALOGUE of Choice Books sent free. Books sent for examination before payment, on evidence of good faith. *Not* sold by dealers,—prices too low. Books by mail, 20 per cent. extra for postage.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address
THE INDEX,

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

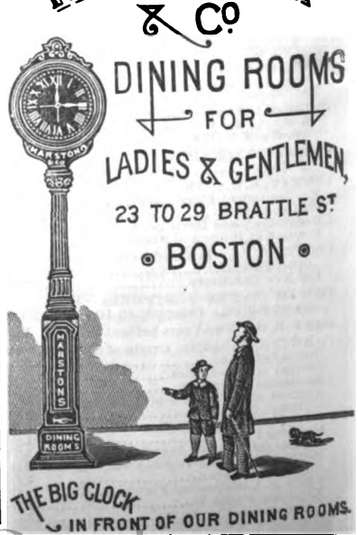
It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY
CHICAGO, ILL.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.



ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25	" . . .	8c.	" "
" 26 " 51	" . . .	6c.	" "
" 52	" . . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

DE LESSEPS, the great French engineer, predicts that the Panama Canal will be opened before 1888.

ALL the slaves of Brazil will soon be free, six thousand having already been liberated in a single province last year.

WHEN Oliver Cromwell first coined his money, an old cavalier, looking on one of the new pieces, read this inscription on one side, "God is with us," on the other, "The Commonwealth of England." "I see," said he, "that God and the Commonwealth are on different sides."

ALTHOUGH during 1883 there were seven hundred and fifty-four more volumes of new issues of books published in England than in the year previous, yet the *Pall Mall Gazette* declares that works of genius have been less common of late years in that country than at any time for the last century.

IT is stated that in Roslov, Russia, is a society for the murder of children, formed through the influence of a fanatical woman, who teaches that it is the duty of every woman "to spare the evils of life to as many children as possible, and to make them share in the bliss of heaven before the earth has contaminated their souls." The method is the use of narcotics.

THE Quakers of Logan County, Ohio, are having a religious revival; and their meetings are said to be of an exceedingly demonstrative character. Noah McClain, the evangelist, who has brought them into such a state of excitement, is a negro. He is described as a "wonderfully magnetic orator." The meetings are held, with brief intermissions, from ten o'clock in the morning till past midnight; and the scenes are the wildest of the camp-meeting sort. Attacks of coma are numerous. Old people and young fall suddenly insensible, and remain so for hours.

A CABLE despatch says that "an advanced Irish Nationalist has declared that they are annoyed, but not discouraged, at the failure of the recent dynamite explosions." And the "advanced" individual predicts "a long series of explosions in England soon." We hope there is no truth in this despatch. Our sympathies are with the Irish people in their efforts to obtain justice from England, and men like Parnell must command the respect of all unprejudiced minds; but those Irishmen who employ methods such as were used at the Victoria Railway Station should be regarded as murderers and assassins, and the worst enemies of Ireland. The use of dynamite can only solidify the enemies of Ireland, increase the hardships of her people, delay the removal of wrongs, and defeat the efforts of her wisest and best leaders.

IN view of the general depression of trade the last winter, the business of materializing departed spirits has been unusually active in this city. As many as eight or ten of these establishments have attracted overflowing crowds of credulous spectators to their frequent séances. Mediums have boasted that their receipts were several hundred dollars each week, and audiences limited by the capacity of their rooms. The daily press of recent date informs us that some critical gentlemen, disobeying "conditions" decided, to test the spirits, and in one instance explored the cabinet, finding it vacant, for the very good reason that the medium was outside personating a spirit. In another, the spirit was seized and examined by a number of well-known gentlemen, with similar result. The cheap trappings concealed under the medium's dress when she entered the cabinet, to personate male spirits, were captured and identified as the clothing worn by the ghosts of "Billy the Tar" and "soldierly Capt. Hodges," previous to her seizure. In the language of the *Daily Advertiser*, "there is no end of fools."

A BILL is pending before the Legislature of Kentucky, to incorporate a cremation society in that State. The Louisville *Post* is rather in favor of burning the dead; but aware that, in that region especially, there is a strong religious prejudice against cremation, it points out the weakness of objections to the practice urged on religious grounds. It observes "that science has long since demonstrated that the burning of a body simply produces quickly what putrefaction requires a long time to accomplish. And, when the religious objection was urged in the British Parliament, Lord Shaftesbury answered it effectively by asking, if cremation prevented the resurrection of the body in a purified form, what would become of the 'blessed martyrs.'" The *Post* adds: "It may be urged that the prevailing mode of inhumation was practised by Abraham and the patriarchs, and we are left to infer that the only person whom God buried was interred by this process. But the early Jews, nevertheless, burned the bodies of those who died from pestilence; while the heathen records are filled with accounts of the formal and imposing ceremonies of cremation."

WE find in a Denver paper a long account of a set of fanatics who have existed as a religious order for some time in New Mexico, called the Penitentes, who in the name of religion subject themselves once a year (soon after Lent begins) to excruciating torture, such as carrying on bare shoulders heavy wooden crosses, scourging each other with sharp whips until blood flows, walking barefoot over prickly cactus thickly strewn for a distance of ten feet from the church, where their self-imposed pilgrimage ends. The Penitentes of Rio Arriba County, New Mexico, have tied one of their number, with his own consent, to a large block of iron and thrown him into the Rio Grande River, where he drowned amidst shouts of frenzied delight from his friends and relatives. The Penitentes of Taos County, in 1880, crucified a man who had begged to die in this way. Three of them were indicted in 1882 by an American grand jury, and acquitted by a Mexican jury. The religious exaltation of these people reaches the point of actual insanity. The Catholics of New Mexico are now trying to stamp out the Penitentes, but so far they have met with poor success. In Taos, Rio Arriba, Mora, San Miguel, and Santa Fé counties, the organization still flourishes. The legislature is apathetic as to this subject, and officers of the law make no attempt to prevent their cruelties to themselves and one another. The fanatics are dying out, however, as publicity is given to their proceedings; and probably the Penitentes in New Mexico have but a few more years of life.

THE new creed of the Orthodox Congregationalists will not strike Liberals, probably, as a very liberal document. But, to see its significance, it must be read in the light of old-fashioned Orthodoxy, and with the recollection, too, that it is not a statement of the views of the most advanced Orthodox men to-day, but a statement signed by men of various shades of belief in the Congregationalist body, and intended to represent views in which it is supposed that denomination could generally unite. Regarded in this light, it is an important historical mark, showing how far one of the most influential of the evangelical sects has advanced. It must be compared with previous creeds of the same denomination, and especially with the Westminster Confession of Faith. Its most downright departure from this old standard is in squarely giving up the doctrine of irrevocable divine election to salvation or reprobation. It is not nearly so strong on the dogma of total depravity, and, of course, does not damn infants. The doctrine of the atonement is left very vaguely defined, that of the Trinity even is less dogmatic, and the statement concerning the Bible gives room for much latitude in the matter of its inspiration. "Everlasting punishment" is adhered to, and Joseph Cook will be satisfied that there is no hint of a "second probation." Henry Ward Beecher, probably, will not sign the new creed. But the Andover professors can sign it with very much less demand upon their consciences for *mental reservations* than they have been subjected to in signing the Andover Founders' Creed. P. S.—Joseph Cook does not like the new creed. In his last Monday lecture, "linking hands with JOHN HANCOCK," he vigorously kicked it. He says that "second probation" and all sorts of kindred latitudinarian evils can be taught under it.

COMMERCE AS A "CHRISTIAN" MISSIONARY.

Commerce is a gauge of the world's progress. In itself, indeed, it has no moral quality. It seeks only greater material comfort, convenience, wealth by exchange and distribution of goods. But it keeps intellect alert, it stimulates enterprise and invention, it advances knowledge; and, in the end and in general, though not without exceptions, moral elevation follows intellectual growth. For the better attainment of its own ends, commerce has invented the railroad, the ship, the telegraph, and utilized the steam engine as a common carrier on sea and land. And thus it has brought distant and very different nations into bonds of acquaintance and amity, and been one of the most important agencies in promoting civilization.

But commerce is blind to the character of the goods in which it traffics. It is blind to the means which it may use for promoting traffic, so only its end of material profit be attained. There have been, it is true, men engaged in commerce who have refused to deal in certain goods or to use certain customary methods of their business, because of a protest from their consciences. But this protest arose from their regard for the laws of morality, and not from their regard for what are called the laws of trade. Commerce, like everything else which involves human conduct, should, of course, be dominated by moral law; but commerce itself does not furnish this law. Morality has only slowly gained control of commerce by the increasing moral power of general public opinion, and not because the law of trade has itself become moral. In itself, without any restraining external authority, commerce is as ready to deal in one thing as another. All that it asks is, Do human beings anywhere want an exchange of commodities? Is there a demand for something which can be supplied at a profit? Let the demand be for whiskey or potatoes, commerce will answer it indifferently. It is as ready to carry rum or opium or tobacco or dynamite as wheat or sugar or cotton. Traffic in human beings, for the sake of enslaving them, has been mostly abolished in civilized countries. But it has only been within a very few years that the increasing moral sentiment of civilized society has been able to bid commerce to cease from that inhuman business. In this Christian country, men and women were sold on the auction block less than a quarter of a century ago. And, long after the time when Christian churches had begun to send missionaries to convert the natives of heathen lands, the ships—owned by Christian merchants, and commanded by Christian officers—which carried out the missionaries might be filled with a return cargo of heathen negroes, to be sold as so many cattle to Christian slave-holders.

When, therefore, it is claimed by the Christian Church, as it not unfrequently is, that commerce is one of its missionary agencies, it is but just to turn to these black pages in the history of commerce, and ask the Christian Church if it is willing to father these. The argument that modern civilization, of which commerce is one of the most important agencies, is the product of Christianity, has an unpleasant *boomerang* attachment. Modern civilization has brought a multitude of evils that were unknown to ancient times. If Christianity has produced modern civilization, then Christianity must be held accountable, not only for the good, but for all this evil progeny. If Christianity is the parent of commerce, if commerce is one of its divinely ordained missionary agencies, then let it bear the blame of the accursed things which commerce has done. But, even if the claim for Christianity be not pushed to this extreme, it is a perfectly fair argument, when Christian missionaries attempt to convert heathen populations, that the heathen should point to the conduct, not of isolated and criminal individuals, but of great Christian governments, as not setting a moral example which commends their religious views. It certainly cannot have helped English missionaries in China that the powerful English government, styling itself the defender of the Christian faith, forced, at the point of the bayonet, the degrading opium traffic upon an unwilling land, because the interests of Christian commerce demanded it. The late queen of Madagascar had become a Christian, and was trying to bring her subjects into the Christian faith. But, in view of the recent most unjust aggression of France, it would not be strange if her successor should apostatize. Such perfidious treatment by a great Christian nation cannot be an effective lesson for completing the indoctrination of the inhabitants of the island in the Christian religion. What kind of religion or morality has commercial enterprise in the United States been commending to the Indians in this country, who have been steadily driven by that enterprise from their possessions, been defrauded of their rights, and pursued by wars of extermination, all with the connivance of the government?

We have been led to these remarks by reading a very plain-spoken and just article by Rev. William Barrows, D.D., in the *Congregationalist*, on the obstacles to Christian missionary work in Asia. Of India, he says: "Tenacity for paganism is not the only difficulty that missionary money has to overcome there. We offer them the religion of their invaders and conquerors and oppressors. Their human nature and instincts of right resent it, as ours would." With regard to China, he remarks: "A similar state of things has been created in China. China held prohibition on opium, and passed the Maine law. England forced the trade; and her opium, over twenty thousand chests, was seized and destroyed. Then followed the 'opium war' by England. China, like Tonquin, was vanquished, free trade in opium secured, and $18,000,000 for opium destroyed, with expenses of fighting for 'free opium.' Hence, missions in China go hard in combating paganism, opium, and the memories of Christian conquerors."

From what Dr. Barrows says of the recent French victories in Tonquin, we quote more at length:—

> In the eye of commerce and national glory, this is presumed to be all well. The artillery, the minie and sword service, can, no doubt, develop natural resources and enlarge trade there as those pagans will not. But suppose we look at the affair from another point. It is generally assumed that Christianity is the best religion for man for this world and the next, and it is the general proposition of the leading nations to Christianize the unchristian people of all lands. When the government of pagan Annam has been overthrown, her rights wrested by the sword, and her lands and labor and prosperity put under French supremacy, and the people are humbled and angered, how will they be likely to regard the national religion of France? Will not, for long years, the very name of Christianity stir in Tonquin, and through the whole kingdom of Annam, the memory of its bloody and fruitless struggles against a Christian invasion? . . . When we consider how intense and undying a religious hatred is, it would seem that for a generation or two money for Christian missions in Annam would be thrown away.

Well may Dr. Barrows question whether this "greed of commerce and dominion" is a good aid to missionary enterprise,—that is, if missionary enterprise is expected to inculcate the religion of Jesus. But, since two hundred and thirty-one missionaries in China lately petitioned the British House of Commons without effect for the suppression of the opium traffic, we must suppose that that body cares more for the financial interests represented by English merchants than for the religion its missionaries represent. The missionaries, certainly, must find it uphill work to combat such sentiments as these, which they find circulated, according to Dr. Barrows, in Chinese "campaign documents": "The Europeans do not belong to the human race"; "This race of savages adores neither heaven nor earth"; "Their exterior is like that of apes, their habit like the devil's. Hence they are called Yang-Kwitze, or devils of Europe." Such opinions concerning the nations that profess the religion which the missionaries are laboring to persuade China to accept are not calculated to make that religion attractive.

WM. J. POTTER.

THE LAND OF SOULS.

The Spiritualists claim not only that there is a land of souls beyond the sable shore of death, but that they have communication with it, and that travellers are constantly returning from its bourne to the scenes and friends of their mortal lives. One real case of ghost would put the doctrine of immortality on a firm foundation, such as it does not rest on at present. Such a case would put a new aspect upon the hereafter, so far as intelligent, rational people are concerned. For it is not so much the dread of something after death in the shape of penal suffering for the sins and crimes perpetrated in our days of nature as the dread of annihilation, or of falling into naught, which makes the contemplation of death unpleasant to such people. A continuance of conscious existence is what is wanted.

As familiar as the words *heaven*, *hell*, and *immortality* have become, through their constant reiteration for ages in all the creeds of Christendom and heathendom, it goes without saying, to every reasonable person, that the whole subject of our alleged hereafter is a matter of the purest speculative opinion and conjecture. There is not an established fact or certitude to which we can cling in our vain endeavors to ascertain what fate awaits us after death. To be sure, there are colossal edifices of belief, which have been built up in barbaric ages, glimmering through the twilight which envelopes this subject. But these structures, when scrutinized by the light of reason, are found to be nothing but unsubstantial pageants of dogma and baseless fabrics of illusion, the *mirage* and *fata morgana* of enthusiastic imaginations.

Goethe says: "Man should believe in immortality. He has a right to this belief: it corresponds with the wants of his nature, and he may believe in the promises of religion. But, if the philosopher tries to deduce the immortality of the soul from a legend, that is very weak and inefficient. To me, the eternal existence of my soul is proved from my idea of activity. If I work on incessantly till my death, nature is bound to give me another form of existence, when the present one can no longer sustain my spirit." Eckermann, the reporter of these remarks of Goethe, says that his heart at these words beat with admiration and love. Elsewhere, the same admirable reporter represents Goethe as saying: "An able man who has something regular to do *here*, and must toil and struggle and produce day by day, leaves the future world to itself, and is active and useful in this. Thoughts about immortality are also good for those who have not been very successful here." But what does success—the most brilliant in the achievement of fame, power, and pelf—amount to, when its achiever at *length* lies cold and pallid and lifeless, a mere mass of putrescent mortality? It seems a mockery in such a presence.

Digitized by Google

Lucretius, in treating of the subject of death, makes Nature say to the man who has lived a good many years, but who is still anxious to continue to live on indefinitely, that he has had already an experience of all the sensations which this mortal life has to offer, that there is nothing left for him but an endless reiteration of these experiences; and, therefore, there is no further inducement for him to linger in a state of existence which he has exhausted. But most of us, if moderately well situated and provided for, would be content to go on living here forever, enjoying the light of the sun and the vicissitudes of the seasons. We are of the same mind with Charles Lamb, when he wrote that he "was in love with this green earth, with the delicious juices of meats and fishes, with the sweet security of streets, and the unspeakable rural solitudes."

If there is that in us which survives the stroke of death, an immortal atom which that stroke cannot reach or quench, still death is a complete break-up and demolition of the life which now is, with all its joys and sorrows, its loves and hates. It is a complete removal of us from the glorious environment of the sensible world, which, with its unfathomable roofing of blue sky, with its light of even and morn, with its breezes, gales, and storms, with its pageantries of summer clouds sailing

"In long procession, calm and beautiful,"

with its summer dews and sunsets, with its seclusions of wood and valley, with its lakes and streams, with its south wind of spring,—the breath of vegetal resurrection,—with its enthralling mysteries and uncertainties, and, above all, with its subduing faces of noble men and beautiful women, might well keep us contented dwellers here forever, were it not for the sad allotment of age and decrepitude. This life we know; but of another life beyond this, if there is a *post-mortem* state of existence, we can know nothing, we can conjecture nothing. For the heavens and hells of which we read in the Apocalypse of St. John and in Virgil, Dante, and Milton, are purely terrestrial in all their features, for the very good reason that the most glowing imagination of the most inspired poet has none but earthly data to work with in his attempts to describe the scenery and aspects of an alleged supra-mortal state of being. Old Sir Thomas Browne, in his *Religio Medici*, says that the worst stone which you can throw at a man is to tell him that he is almost at the end of his existence as a conscious being. Milton says that it would be better to be full of pain or in a state of constant torture than to lose this intellectual being, these thoughts that wander through eternity.

There are many emergencies in which the voice of duty or our higher nature bids us sacrifice our lives. If compliance with this voice is to result in our personal annihilation, would it dictate such a sacrifice to us? But on a purely conjectural topic, like the one I am considering, the stream of disquisition might run on forever. Wrapt though our ultimate fate may be in thick clouds and dark of uncertitude, still it cannot be a matter of regret with any bodily and mentally healthy human being that he was born into life and made to undergo mortality. Life, short as it is, is a priceless boon, an intoxicating draught. Let me close, then, by quoting the words of our American Sappho (Mrs. Harriet Prescott Spofford), in a poem which she entitles "My own Song":—

"Oh, glad am I that I was born!
For who is sad when flaming morn
Bursts forth, or when the mighty night
Carries the soul from height to height!
To me, as to the child that sings,
The bird that claps his rain-washed wings,
The breeze that curls the sun-tipped flower,
Comes some new joy with each new hour,—
Joy in the beauty of the earth;
Joy in the fire upon the hearth;
Joy in the potency of love,
In which I live and breathe and move;
Joy even in the shapeless thought
That, some day, when all tasks are wrought,
I shall explore the vasty deep,
Beyond the frozen gates of sleep."

B. W. BALL.

CHUNDER SEN AND THEISM.

Life flows always in two channels, thought and emotion. So we may be sure there will be two lines of development in society; and, to understand either one of these, we must understand the other. For instance, the present line of thought is in the line of evolution,—natural science,—the wonderfully increasing knowledge of the universe making it a new thing to live in this world. But, if you confine your study to material evolution, you will surely say we are going as fast as possible into atheism. Men see so much of nature, and laws that govern nature, from atoms to stars, that they do not see the need of any God, at least any personal God. And so a good many people say science is killing out religion.

But this is one of those narrow judgments that rise from one-sided views of what is going on; that is, such people only observe what is going on in the intellectual way, which is at the worst only fearless recognition of facts, taking things as they are without warping or falsifying them to make them sustain preconceived notions. About all you can say of science is, it is very fond of facts, and very fearless of the consequences of knowing the truth. Now, that is good, so far as you see; and, instead of such a spirit proving to be atheistic and ending in the destruction of anything good, you would expect it to work the other way. You would naturally say that, when all the world is full of discovery of causes, men would not be any farther from God than when they took no interest in the earth farther than to say God once made it. If he made it, the more we study it, the more we shall know of its Maker.

But science has culminated in quite another assertion. Its grand, final conclusion is that the world was never made at all, and that whatever is always was and always will be, only that all things are going through eternal change. Just at this point, a few scientists may be atheists; but most of them reply, No, we are not atheists; for, while we do not believe in any God outside of nature, we do believe in a God in nature, and that seems to us better. Instead of a God who made the worlds, we believe in a divine life in the world. We are theists, not atheists.

What is theism? It is the effort to know God in all things. It believes that all things live and breathe as phenomena of a universal life. Atheism says the universe is a machine, a great higgledy, piggledy, purposeless, unmeaning, chance curricle; and you and I chance to be on it. It has a plenty of laws, but they are mere processes. But theism answers, No, the universe is not a machine, but a life. It is a good deal as if some one should come up to you and say: What a wonderful mechanism you are! How curiously you are put together! Why, the chap that made you put hinges in your elbows, and he understood the ball-and-socket joint, and he ground out some splendid lenses for you to see through. And really, all in all, you are a *proof* that there is a God, because really you are put up in a remarkably smart way. That is the old-fashioned orthodox way of looking at a man. It found a mechanism and a mechanic, and that mechanic it called God.

Then another comes up to you, and says, I don't see that you are a mechanism at all, but a curious process,—a lot of hydrogen and lime and iron and one thing and another brought together in certain proportions according to laws of growth; and he studies you with a great deal of interest, but wholly as a thing. He never recognizes that something which within the body is the person. All the soul he believes in is the phenomena of the body. A soul, he says, is nothing but the accidental result of bringing certain materials into a certain relation to each other. This is the atheistic way.

But a third party approaches you, who speaks of the body, on the other hand, as the result and phenomena of life. A grand life principle flows through you, and your body is shaped as well as built up by that principle.

In the same way, the atheist sees the universe as a thing, the theist as a living unity. And the life which is eternal, ever flowing, ever expressing itself in flowers and stars, in monads and in men, it recognizes as a divinely worshipful personality. "O ye heavens!" cries the atheist, "and O earth!" "Our Father which art in the heavens," cries the theist. "Our Father which art in *a* heaven," cries the Orthodox.

Yet, after all, practically these three people are a great deal more alike than they seem to be; for a decent atheist really *worships* the beautiful and good *thing*. The Orthodox worships the good principle, only it is so far away and so much like a great man. The theist worships a divine principle in all the universe. And the real object of worship is, after all, character. And, when you find a man who is made *good* by thinking and by his emotion, why that man is not very far from any other good man, or, as Jesus would say, from the kingdom of God.

It is a great pleasure to feel that we have no longer to make it a part of our religion to think people who don't agree with us are going to hell for it. When Paul travelled in Greece, he saw an altar marked as in honor of an unknown God; and he said to the people, "I will preach the unknown God to you." There are many millions of men who have idols, but whose idols undoubtedly represent to them sweet and healthy principles. What do you want to convert them to? Only to wider views and *better* ideals.

Theism has only one advantage: it is the religion of *all* nature. It teaches us to look at the whole universe as the body of a first parental principle. I had it in mind to speak of Chunder Sen,—not so much as a *remarkable* theist as a remarkable illustration of how the world seems, in theism, to find a basis for religious union. Wherever the vastly increased knowledge of the universe has spread, there theism has sprung up.

As long ago as 1830, a society of Hindus was organized, which flung away idols, and began to talk of the Great One, the Unifying Principle, the Father. The latest leader of these men was Chunder Sen, a fanatic in some respects, and hardly such a man as we should desire to follow; for he carried his reformed views to strange extremes. But he broke over caste and all the spiritual bondage of Hinduism, and taught that there is one Divine Soul, of whom we are and to whom we are; and to *know God* is the end and the substance of religion. During November and December of 1883 there were published in an American religious paper four or five articles from Mr. Sen, which were so full of a warm, deep piety, such insight of spiritual truth, that Christians said, This heathen man knows God so that he can teach us; and, whatever other articles were read casually or not at all, I warrant you every man who had that paper read those articles, and he grew better for them.

Digitized by Google

The substance of theism, as taught by these Hindus, is substantially this :—

(1) Whatever is, is but the phenomena of God; and, above all, man is the highest, the very child of God.

(2) But within, and more important than the physical universe, is the universe of spirit life. In the physical universe, life becomes flowers, trees, bodies; in the spirit universe, life becomes character.

(3) God is as real in the inner world as the outer; and to live with him as child with father, in adoring tenderness, is the true religion.

(4) All men are brothers in God, and this proves two things: 1. That they can all be inspired of God; and, 2. That they ought to live as brothers.

(5) Sin is shutting the heart against God.

(6) Salvation is to forsake wrong and obey the truth.

(7) Christianity, like all other religions, is one evolution of the true and eternal religion, and is but a step toward the light. Jesus is one of the children of God, but he was very near to the Father.

(8) All religions are worthy of study, both to secure their good points and to avoid their mistakes.

Great efforts were made to persuade Mr. Sen to become a Christian. But he answered, I am now a Christian, only more than a Christian. I love Jesus, but I do not stop there: I love more than him. My Christ is the God,—not in one man, but the God in humanity. You, he said, when in England, have "too much Christ, but too little of the spirit of Christ." God, he said, cannot become a mere man, "but he dwells in all pure souls." He had hopes that all the world might become theistic, but he did not believe it could become united on any religion that was less.

My Saviour, say the Brahmoists, is God himself, not some one who saves us from God. Reading George MacDonald's *Donal Grant* will repeatedly bring to mind this idea. It rings with protest against the lie that God would damn only for an atonement. God is good, and no one is so good as God. No Saviour is like the saving influence of knowing him who is Good. I want nothing, says he, to stand between me and God. That is the trouble always. You drive God out of nature and degrade the universe by calling it a false show, a mere mechanism. Then, you tell me I must not go to God at all, but must have an atoner to plead for me; and so I wander about and about, and never reach God. It is all wrong "to know the true and beautiful and good that saves me from the base, and makes me true and good." And all literature is getting charged with this idea of moral theism. It is the happiest thought of the age. The two original or earliest forms of thought were song and story-telling. These two survive as poetry and the novel, and these two are supremely theistic.

So Chunder Sen remained a theist, and looked on Christianity as he looked on Buddhism. Both contain much good, he averred, but both have serious errors. Let us study all religions, and become the bond-servants of none.

Now, there are many who believe that, while all religions must fail of becoming universal, there are in theism principles that will serve as the basis of the future religion.

It has been said of Christianity that its chief power is its superior plasticity, its power to adapt itself to widening knowledge and varying human needs. However this may be, Christianity certainly is doing wonders in the way of adjusting itself to natural theism. It has dropped, after a good deal of struggle, the theocracy. Even Catholics no longer hold to the supremacy of the Church over the State. You hear little of divine right, nowadays, as a factor of the Church. Then, again, Christianity has, after sharp resistance, dropped its theories that clashed with science. It has given up its ideas about creation. It has partially dropped its professed knowledge of the future. It has given up its exclusiveness, and intelligent leaders admit that God has revealed himself to all souls in proportion to their willingness to receive. In other words, his love has been as free as his sun and rain. So Christianity, in the minds of its best and largest champions, is a modified theism, and looks fraternally toward the theism of India and all other lands.

But science, especially, is theistic in all its bearings, and is carrying the tide of thought with intense force in the direction I have indicated. But, whatever may be the vast revelations and discoveries of physical law, let it be clearly understood that none of them can contravene the equally cosmical and the real moral laws. Evolution has no power to weaken the validity of these laws. "All things work for good to him who loves God": only, evolution shows us we must be very sure it is God we worship, and not some theological idol; and these,—"Death is the wages of sin," "What a man sows, that shall he also reap," "The pure in heart shall see God,"—these, the sublimest laws of the universe, no altered theories about creation and growth can contravene. It is not knowledge of facts that brings a man face to face with the Eternal Good, but it is a pure heart.

Now, although I may not believe the theories a man urges upon me as words of God, may I not live as good and honest a life as possible, trying to make others happy, and never so happy as when I succeed? Can I not give of my soul to the less favored, and try to look at the law of righteousness as the sun of my soul? I do not see this work of investigation in any other light. It seems to me we are not going away from God, but are at last, for good and all, getting very near to him. What was the world before? It was only the work of his hand. Are we farther from him, now we see it is his body? What was man? He was only a creature of God, as a vessel is the thing of the potter's. Are we less near the divine heart, when we feel now that no man ever was or ever will be the creature of God, but is the son, well beloved? What was inspiration? Only the voice of God to those who heard him ages ago. Are we any farther from God, now we believe and know that he speaks in us every day, and that not a soul is so low but the divine beauty it sees is, so far, God?

Yes: the great moral laws are unmoved and unmovable. The pure heart sees God from the observatory quite as well as it used to do from the chapel,—I am sure, a good deal better. If there be ever a day when all men shall come to live in the Father, it will be when they have learned that he is not a Being outside the warmth of nature, above the genial laws of their existence, but is the very nature itself "in which they live and move and have their being." We all have duties according to our age, and the greatest duty of this age is to get the new and best vantage-ground for seeing God. We have no right to buy and sell, and get gain and die, and not know any more of what this age has to say about the eternally true and good.

E. P. POWELL.

ADVERSITY is the trial of principle. Without it, a man hardly knows whether he is honest or not.—*Anon.*

EDITORIAL NOTES.

MAYNE REID, in his last story, *The Land of Fire*, now appearing in *St. Nicholas*, brings to light the curious fact that white, the color universally elsewhere regarded as a sign of peace, is by the natives of Tierra del Fuego used as a sign of hostility.

PRESIDENT HITCHCOCK, of the Union Theological Seminary in New York, declares that the word "symposium" as recently used to denote a conversational debate is incorrect, as the right meaning of that word is a drinking party. Symposiac, which implies a conversation, is the proper word.

THIS is the way a Chicago paper takes to indicate its estimate of the culture and taste of a sister city: "The St. Louis people are agreed with Matthew Arnold that Emerson was not a great man of letters, but they stoutly maintain that as a song-and-dance artist he has never had a superior in the country."

ON Washington's birthday, the people of Tombstone hanged a man to a telegraph pole. A question was afterward raised whether this feature of the celebration was altogether proper and right; but the jury, determined to stand by Judge Lynch, rendered a verdict in which it was stated that the "deceased came to his death by emphysema, which might have been caused by strangulation, self-inflicted or otherwise." The verdict quieted the public mind.

MRS. VAN COTT has at least "the courage of her convictions." She created a sensation lately in a Sag Harbor (L.I.) church by publicly accusing Rev. J. J. Harrison, Rector of Christ Episcopal Church, principal of the public school, and a venerable man greatly esteemed in the community, of "denying his God," because he chose not to rise from his seat in the church where she was holding revival services, when she called upon all who loved the Lord to arise in their seats.

JAMES GEARY, of Lafayette, Ind., buried his son in his own lot in the consecrated ground in the Catholic cemetery, contrary to the express prohibition of the Church; and, on the first Sunday of the month, the Catholic priest read a pronunciamento by Bishop Dwenger, formally excommunicating Mr. Geary and his family, their aiders and abettors, for all time, or until they shall have publicly acknowledged their wrong, and petitioned for the forgiveness of the Church. This bull of excommunication was followed by an interdict against the burial of anybody in the old portion of the cemetery while the interdict shall remain in force. It is not unlikely that in this case common sense will have to yield to the demands of superstition and priestcraft. But the ecclesiastics of the Catholic Church will find it more difficult to deal with the Gearys in this country two or three generations hence, whatever be the result in this particular case.

EL MAHDI, the warrior-prophet of the Soudan, according to the account given by a Catholic missionary, fulfils all the requirements of a genuine old-time saint. "Having studied with a sheikh, and become a dervish, or Mohammedan saint, he retired to the island of Kana, on the White Nile, and there took up his abode in a dried-up cistern. He never left this habitation for six years, except on Fridays to go to the mosque, and then retired to his den. In this way, he obtained an odor of sanctity over the whole country. Everywhere, reports were circulated of his contemplative life, and his fasting, of his weeping as he read the Koran, of his kindness to all who approached him. When he announced his mission, he cried, 'Follow me,

Digitized by Google

for I am the Mahdi; and I will lead you into the kingdom which Allah has prepared for the faithful.' He referred, of course, to the Mohammedan tradition that another and last prophet is to come, with the name of Mahdi,—that is, 'Given by Allah.'"

SAYS the New York *Mail and Express:* "The Pope has decided, in conference with the American bishops, that all the clerical banks under Roman Catholic control must be wound up within five years; and the wisdom of the decision will be universally recognized. The wreck of Bishop Purcell's banking enterprise, in the diocese of Cincinnati, involving a loss of nearly five million dollars, to about thirty-five hundred creditors, has inflicted an injury which the Church of Rome will find it impossible wholly to remove without some provision for the ultimate payment of the dead prelate's debts; and it is not strange that an order to close all clerical banks has gone forth from the Vatican. It has also been determined to modify the present plan of holding church property in the individual name of each bishop, and hereafter a Board of Counsellors will be associated with the bishops in its administration. Experience has shown that, in the churches of all denominations, the ministers should not incur much responsibility in ecclesiastical finance."

OF Wendell Phillips, the Chicago *Tribune* says:—

No one will question the value of his efforts for freedom. From 1837 to 1865, he struck strong blows against the sin of slavery. In letters and essays and upon the rostrum, his rare eloquence was employed with masterly effect in behalf of the emancipation of the slave. He struck at slavery more sharply and with more telling effect even than Garrison or Beecher. He was the superior of both in fascinating eloquence, keen incisiveness, and bitter satire; while, as a scholar, few Americans have ever equalled him in vigor and beauty of style. His influence as an orator was magnetic. He never mumbled over notes, but spoke with great fluency and with all the gifts of a rare orator. He was as true as steel to the cause for which he deserted his profession and to which he gave the best years of his life. No man was more hated or dreaded by the South, and even in the North there were not wanting many persons of prominence who assailed him as a fanatic and disturber of the social conditions. But North and South he answered back with his terrible invective and polished satire. As a lecturer, he had no equal. His "Lost Arts" and "Toussaint L'Ouverture" remain incomparable for their beauty and grace and finished scholarship.

SAYS the Chicago *Tribune:* "The Salvation Army appears to have found a particularly congenial soil in Australia. Howe, the famous bush-ranger, used to read the Scriptures regularly to his robber gang, and swear them in on the Prayer-Book. Without venturing on speculations as to the connection supposed by some to exist between piety and plunder, one need only refer to the Australian *War Cry* for evidence of the extent to which the army is recruited from the criminal classes. That may be to its credit, but it involves liabilities of a serious kind. This is not the age of miracles. Criminal instincts and habits are but slowly changed. In this democratic country, a notable sign of conversion to the Army is a certain sottish egotism displayed in those whose cases most call for humility and penitence. At one of their frantic meetings, a 'sister' declared: 'Once I was a vile wretch not fit for hell; but now my elder brother, the Lord Jesus, has taken me in hand, and I feel too good for heaven.' There is a true larrikin ring about such expressions as this; and they can hardly fail to diffuse among the converts an impression that immorality, or even crime, is a light thing, easily washed away by the 'blood,' and quite compatible with swift promotion to sainthood and paradise."

DURING the recent flood in the Ohio Valley, nearly the whole of Jeffersonville, Ind., was submerged to the depth of from four to ten or twelve feet. Boats were the only means of conveyance, and water-crafts were so numerous that only by constant care and vigilance could collisions be avoided. The following paragraph, from a well-written account of the flood by the editor of the Jeffersonville *News*, indicates how readily the people accommodated themselves to the conditions forced upon them: "The domestic occurrences of life move on in a current as invincible as the monster who has ruled and ruined our city. Weddings and deaths come in the midst of famine, pestilence, and great public calamity. The Burke-McCann wedding party were borne to the train on the bosom of the swelling tide. The next day, as the deluge rose higher, the life of the venerable John Delahunt sank lower, until it ran out. And on Saturday, with the tide at its zenith, the mortal clay of the deceased was gently laid on a boat, and wafted with muffled oars to the vault at the Eastern Cemetery, there to await final interment, when the brethren of the Masonic craft could gather and properly pay the last sad memento of respect to the honored dead. This is a life of strange contrasts. Upon the same waters that bore the pale corpse were voyagers as merry as the gay gondoliers of Venice."

UNDER the head-lines "Battle to the Death," "Paddy and Spring together at Last," "The Most Terrific and Bloody Dog-fight ever witnessed," "Paddy the Victor in One Hour and Ten Minutes," "Spring so badly punished that he barely lingers on the Shores of Time," etc., the Cincinnati *Enquirer* of March 11 devotes a column and a half to a description of a dog-fight about as disgusting as it would be possible to write. The amount of space given to the subject is of interest only as indicating that among the readers of the paper there is a large demand for such news,—a fact not very pleasant to contemplate from a moral point of view. Among those present at the fight was "Mrs. Kane, the wife of the owner of Paddy, who attends all the fights of the dog." The report says, "As the dogs came near, she sang out, 'Take him, Paddy, that's a good fellow!'" During the fight, an outsider said or did something that offended the owner of "Paddy," when Mrs. Kane yelled out, "You 'tind to the dog, Dan, and I'll make that little brat keep still. I'll bet $100 I can take him in the pit and lick him, after the fight is over." The *Enquirer* gives notice that communications from those who are willing to match "Paddy" in another fight can reach the owner of the victorious dog by addressing the sporting editor of that paper. Our impression is that a sheet which gives detailed accounts of such "sports," and otherwise encourages them, is unfit to go into a decent family.

THE Chicago *Radical Review* of March 8 says: "We have a confidential word to say to our readers in the city concerning the Society for Ethical Culture. The aim of this society is essentially the same as that of the *Review*. It is an organization outside the churches; and the lectures delivered on its platform are addressed to the same class of people that read this paper,—to the non-church goers. The number of our readers in Chicago and immediate vicinity, however, is far greater than the audience that assembles every Sunday at Weber Music Hall to hear Mr. Salter. We fear that the Liberals of Chicago do not yet sufficiently know of the opportunity afforded them to substitute for the churches, upon which they have turned their backs, something vastly better. Or, what is much worse, they do not know how much they stand in need of a little ideal inspiration occasionally, say once a week. We always feel refreshed and newly encouraged in the battle against wrong after hearing Mr. Salter, even when we do not agree with all we heard. We consider it our duty to call the attention of our readers to this fountain of pure and sparkling water, that they, too, may drink, and feel stronger and better. We shall continue to print Mr. Salter's lectures off and on; but, to those who think that that will suffice them, we must say that there is all the difference between the spoken and the written word that there is between a poem in its orginal language and in a translation. We should like to see the Society for Ethical Culture grow and prosper, for it is an immense power for good in the community. Every Liberal who has once grasped its meaning must agree with us in this."

THE F. R. A. FUND.

Donations and membership fees for the Free Religious Association, in response to its recent appeal for funds for the holding of conventions and for meeting other expenses of the Association. Will friends see to it that this list is increased?

INFELICIA.

I know it is waste and folly to mourn for the changeless past.
I know it is wise and healthy to look to the future vast;
To bravely work in the present, to do the grandest can be
For the ever needy living. But futile is theory.

It cannot hold, nor turn me from the foolish unto the wise.
I creep back into the shadows in the land of agonies;
I die with the ones who perish, am racked by all torture dire
Which a human frame has suffered, even to the death by fire.

I would I could turn me sunward, away from the blood-stained night,
Forget what the records tell me, and strengthen the growing Right!
Be blind to my own sore blunders, and the pain which came thereby,
Leave the "Might-have-been" unpainted, sketch the "Maybe" bright and high.

But, ah! I am ill and morbid, and the old pain hurts me so.
I think of the roses blooming in the ways I did not go,
Of the thorns, I should have blighted, grown strong to pierce and rend.
I hear to-night all the past moans of husband and child and friend.

I choose from my books the choicest, I place it before my eyes;
Alas for the poet's music and his pictured reveries!
Between my eyes and the pages comes a shimmer of soft, light hair,
And our beautiful waxen darling lies dead in her promise there.

So what can I do but think how we laid her away to rest
With the wild hepatica blossoms fading upon her breast.
To-night I weep, and wonder what it was I failed to know
That might have saved her to us, who longed to keep her so.

So blind, so fond, so erring! So hurt by a bruise or wound!
We love the air, the sunshine, the whirl of the earth around;
Yet sensitive states of being seem gates to the hell of pain.
If life be a bane or blessing is a problem not yet plain.

The Index.

BOSTON, MARCH 20, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

THE EGO.

BY WILLIAM I. GILL.

VIII.

What is Ego, and its Proof?

Questions concerning the ego, or self-conscious subject of phenomena, have for some time been pressing upon us for attention. What is the ego we have defined as subject and cause of phenomena? But another point we must now endeavor to ascertain. The question here to be considered is, Can we scientifically justify the affirmation of the ego as a known reality and as substance and cause relative to phenomena?

I answer that *we know the ego, and know it as substance and cause, in knowing egoistic phenomena.* It is universally agreed that phenomena presuppose a subject, whatever this may be or imply. On this ground it is that a transphenomenal reality is generally affirmed, a few extreme positivists being the only dissenters from this. But this is to go at a bound further than I wish to go. I do not here affirm a transphenomenal subject. I cannot affirm the existence of anything entirely unphenomenal, because such an affirmation were an empty verbalism. Neither can I, on the other hand, affirm the existence of pure, unsubstantial, and forceless phenomena, because phenomena cannot be conceived and explicated except as relative causes and effects, and as having a common and pervasive unity, and as being subjective states with a perduring conscious subject or ego. Thus, the subject or ego is the fundamental force felt in all changes, the essential unity manifested in all diversity of forms and motions; and it is one with these forms, as it is these very forms so and so existing and acting, though I do not say that it is wholly. Thus exhibited. Yet it is there and thus (for these are itself) directly known, really, absolutely, and ultimately.

The conception of the ego, therefore, is not with us a mere cris-cross, interlaced chain of phenomenal network, as it is with Mill. The ego is all that, but also much more. I define the ego as that which feels, thinks, wills; and this is also my definition of mind. Nothing can be broader or simpler or ulterior. It is thus distinguishable, but not separable from its modes, from sensations which are matter or material, and sensible modes from emotions, thoughts, volitions, which are immaterial modes; but all phenomena are modes of mind. Yet all of mind or the ego may not be phenomenal. The ego is perhaps and probably more than its phenomena, as the total force of any thing is more than its separate transient exertions. Substance and quality, action and force, are one, and one with all phenomena, whose unit is ego, which at once causes and constitutes the phenomenal network, and will endlessly modify it. Without this there is no possible continuity, and all apparent community is illusive. Without this there is separateness and juxtaposition, coexistence and succession of different phenomena, and nothing more. There is nothing answering to our consciousness of unity and of the One being or force which speaks in all and through all as identical with all. We have many without the One, whereas consciousness speaks of the One as modally many and the many as the One. In reference to every phenomenal form and change, we say, "I,"—I experience that, or That is a mode of me. So that ego and all phenomena are one, and they are known together as a unity of force in various and ceaseless operation; and the knowledge is absolutely ultimate, the knowledge of substance and quality or force as one and phenomenal, one force or substance in all these many forms or phenomena, which are therefore forceful.

We are now enabled to form a perfect and ultimate conception of personality. With the Romans, a person was an actor, the visible organic automaton on the stage. With the Greeks, it was similar,—a prosops, a visible, organic phenomenon. It is both of these yet. But it is not these only. Nor is it limited to the organism, nor to any one known thing or object. It includes all the known universe. Neither can we say that this is all. The only person I know is the power which is the subject of all the phenomena of the known universe, and these are put forth and endlessly modified by this power or person. This is the individual that I am, an omnipresent reality of unknown extent and variety of power, which, while manifested, is not wholly manifested in its capability in any or all of the existing forms, motions, and self-conscious actions of the universe, since the future is not yet manifested.

Personality and Individuality.

I would distinguish individuality from personality. Every individual is not a person, but every person is an individual. A person is an individual which is self-conscious,—not merely sentient, but self-conscious. There may be sentience without the power of self-conscious reflection; and this I suppose is exemplified in most, if not all, of the lower animals, in which condition human persons once existed, and from which they have evolved into their present nobler rank. (But, if animals are ever pleased or displeased with their own action, as they surely are, are they not self-conscious?)

Personality and individuality are alike in this,—that they are not constituted into any particular permanent shape or form exclusively; and neither has any knowable, physical bounds. All physical forms, masses, motions, and changes are nothing else than the sensitive modes, relatively permanent or transient, of each individual. The individual itself is formless, except as it exists in these forms, itself the simple subject of these phenomena. It is purely a power to experience these, partly irrespective of volition and partly by the aid of volition. The subject ego is the soul of the world, which is its feeling and action. So that this soul of the world is the world.

Personality does not necessarily imply limitation, and an infinite personality is just as conceivable as a finite personality. Finite personality is a self-conscious individual of limited power. An infinite personality is an almighty self-conscious individual, *able to do whatever does not involve a self-contradiction.*

Alleged Obscurity of this Doctrine.

Sticklers for common sense in a region where uncommon intelligence is called for object to this, merely because it is not to them easy of comprehension. They say you can never secure credence for such a doctrine as that, that it is all too vague and abstract, that it refines away the individual until he becomes an airy nothing without a local habitation,—nothing but a name, without form or shape, without spacial or temporal limitation and circumscription, so that it is entirely shut out from the sphere of imagination and definite conception. How can we believe what we cannot imagine or conceive? Our individuality as connected with the organism presents something real and proximately precise for the understanding, but as timeless and spaceless as something back of all phenomena, and which appropriates to itself all the known universe as a series of modes of itself. It is then worse than the genie of the Eastern fable, which, being let out of the teapot, becomes diffused and dissipated till it is lost in universal space. An objection of this kind will long and widely prevail and with pernicious effect, because of the vastness and subtlety of the new thought, which not only extends beyond the wonted range, but also opposes dominant tastes.

Whence comes the Apparent Clearness of the Vulgar Notion?

The prevailing notion is at bottom merely sensism, or, at best, organicism. It limits the ego to the organism. Whether it identifies the two or not, it gives to the soul a sort of spacial outline, and thence a form or image which appeals to the imagination, if not to the senses. In this way, the ego is proximately defined. This is the crudest and most primeval notion, but it prevails practically or theoretically over the most advanced thinkers as well as over the vulgar mind. A distinguished academic president recently said to the author that he considered all beyond the organism as non-ego, and the rest as ego, expressing the same idea also at the same time by gesticulating the difference. I replied that that is the essential theory of sensism and objective evolution which makes the ego to be the organism and never the same at two successive moments, the ego and non-ego being continually transmuted into each other; and that, besides being self-contradictory, it is contrary to the most familiar principles of optics and psychological science. All this my learned friend could see at once, but could not conceive any other notion of the ego than that which is one with the organism or confined to the organism.

Two Exclusive Conceptions of the Ego.

There are only two main conceptions of the ego possible,—that which transcends the organism and that which is confined to the organism. The latter is of two forms,—that which identifies the organism and ego, and that which pluralizes them. The latter is the orthodox religious view, for religion has always insisted on some psychology and philosophy. Both these have an advantage over the first relative to the senses and imaging faculty or imagination, which are the faculties most in exercise even by many educated men; and even reasoning is distrusted or repudiated where its successive steps cannot be presented as a series of images, and intellect is thus considered as a "faint" impression of sense, as Hume affirmed and Spencer has repeated. To this class of minds there is a great advantage in being able to screw and circumscribe the ego within the confines of a limited time and space like the organism, and its convenience has a dementing influence of great and insidious power.

Now let us pass beyond this, and we are obliged to traverse the utmost extent of the sensible universe, and include it all as modes of the ego. If we affirm anything beyond the organism to be ego, we have no stopping-place anywhere. The sphere is boundless, commensurate with all phenomena of every possible form and quarter. Now, we are out on a shoreless ocean as to sense; while thought rises to the imageless, which is beyond and above all sense, just as the lark rises above embrasured turret and gilded spire to sing viewless in the viewless air. But it is not strictly spaceless and timeless, because its modes constitute space and time.

This is the logical outcome of modern science, which makes all phenomena to be subjective states, so that all the known universe is ego, and ego is at least commensurate with that universe, and the power which evolves it, which is sensible or organic only so far as it evolves itself in sensible and organic forms; and, beyond this, we can only conceive and describe it as a power of so and so thinking and acting.

This will appear appalling to all but minds of the strongest fibre. Even brave old seamen have often shook with fear in unknown seas. But shall philosophy surrender itself to cowardice, and shall we fight against our own intelligence, because it calls us to a brave conquest of new lands, or because it disturbs our old prejudice and mental comfort and ignorant

Digitized by Google

and delusive sense of power, and yet calls us to the possession of a grander dignity and larger power?

Mutual Destruction of the Organicists.

The two parties into which the advocates of organicism are divided are in deadly hostility; and, in their frequent tournaments, each is always able to unhorse the other by using different weapons, and each party has again and again confessed its relative weakness. Each proves the other to be inconsistent and irrational somewhere; and the battle always ends by the affirmation of each that it is less irrational than the other, which is the utmost that either can claim. Their relative merits is not our concern. We care not which of the two is the greater fool. Enough that we cannot accept either of them without shutting our eyes; and that for those who prefer to keep their eyes open there is no logical alternative but to accept the theory of extra-organicism in the simplest possible form, as we have expounded it.

Superior Clearness of Extra-organicism.

This theory, so far from being specially obscure, is perfectly clear, and the only theory that can be clear, because it only is self-consistent and rational. It has no mental *lacunae*. It does not require us to ignore our intelligence anywhere. It is self-justified and luminous in every part. And it is the least possible assertion that can be made self-consistent and in harmony with experience.

The supposition that a peculiar vagueness is characteristic of this theory is erroneous. It is ultimately quite as definite and precise as its rivals. It gives us consciousness in all its forms, all phenomena,—organic, extra-organic, and super-organic, if there is any of the last,—and all these it presents in a consistent formula; and no theory can do more. It says that the ego is the power of being and of knowing all these, and this is perfectly definite. We could have no other ultimate definition, if we should limit the ego to the organism; for it would still be nothing more nor less than the power of so being and acting,—that is, as the subject of these phenomena. The only difference between them is in their implications. The limitation of these phenomena to the organism involves various contradictions, from which the other is exempt.

Unrecognized Prevalence of Extra-organicism.

While organicism, monistic or dualistic, is a very common habit of thought, yet on the other hand, side by side with this in the same minds, the opposite notion to organicism is generally entertained, so that it is extensively ingrained in modern literature. We give one striking example from a brilliant French writer (Taine), who cannot easily be referred to any recognized class of dogmatic theorizers. It is from his *English Literature* (Intro. II.), and is as follows: "When you consider with your eyes the visible man, what do you look for? The man invisible. The words which enter your ears, the gestures, the motions of his head, the clothes he wears, visible acts and deeds of every kind are expressions merely. Somewhat is revealed beneath them, and that is a soul. An inner man is concealed beneath the outer man: the second does but disclose the first. You look at his house, furniture, dress, in order to discover in them the marks of his habits and tastes, the degree of his refinement or rusticity, his extravagance or his economy, his stupidity or his acuteness. You listen to his conversation, and you note the inflections of his voice, the changes in his attitudes, in order to judge of his vivacity, his self-forgetfulness or his gayety, his energy or his constraint. You consider his writings, his artistic productions, his business transactions, or political ventures, in order to measure the scope and limits of his intelligence, his inventiveness, his coolness, to find out the order, the character, the general force of his ideas, the modes in which he thinks and resolves. All these externals are but avenues toward a centre, and that centre is the genuine man. I mean that mass of faculties and feelings which are the inner man. We have reached a new world, which is infinite, because every action which we see involves infinite association of reasonings, emotions, sensations new and old, which have served to bring it to light, and which, like great rocks deep-seated in the ground, find in it their end and their level. This underworld is a new subject-matter proper to the historian. If his critical education is sufficient, everything is a symbol to him, whence 'he works out its psychology.'" Though this author's object here is not metaphysical, and shows no steady philosophical vision, yet it is quite evident that he makes the ego to be something other and vastly greater and more subtle and persistent than organic forms or any other forms,—a wondrous and incomprehensible unit, which is partially manifest in all phenomena. And, in this, he has nothing peculiar.

Ultimacy of our Doctrine.

Our exposition gives us not only a combination, but a perfect unity of the permanent and transient, the substantial and phenomenal, and makes them equally known, each in the other. Phenomena are always changing. The ego is always the same through all the changes; and it changes while it remains the same, changing in its modes and remaining the same substantive subject and source of such changing modes. It therefore comprises at least all the phenomena of both sense and inner consciousness, and is the womb of other possible phenomena which we cannot yet even imagine. These phenomena are organic and extra-organic and super-organic. The ego is at least commensurate with all of these; and, in all these, it is known, though not fully known. It cannot in any sense be less than all these taken together, nor less enduring, so that it covers all known and knowable space and time. It does not exist in space and time for these, so far as phenomenal or knowable exist in it with all their contents. Nor is there any more mystery about its existence than about anything else. All else, if there is anything else supposed to be known, simply exist and operate as so and so related; and it is just as simple and clear to say that the ego exists in relation to them as conscious subject. It is only as phenomena of the conscious subject that they are known, and the subject or ego is known only as knowing them, as the thing which knows them; and then analysis shows us that to know them is to be them, to be their subject and source, so that they are but so many modes of the ego, the ego itself so and so existing and acting. To ask anything beyond this betrays obtuseness instead of acuteness and thoroughness of mental power, because it is meaningless.

Environment of Organism not Environment of Ego.

Evolution, so far as it has yet evolved, is a form of organicism. Hence, it has considered its chief task to be to show the interaction between the organism and its environment; and laboriously has it wrought at this on the assumption that in so doing it has been showing the interaction between the ego and the non-ego. It finds that an environment of constant action, yet always lexically changing, is necessary to the evolution of the organism, and determines its forms and duration, whence it is inferred that this environment effects the same for the ego; and, as the chief quality of human personality is intelligence, this is said to have the same origin and end. From their objective stand-point, they are right. If the external world is non-ego, there is no other legitimate conclusion. But we now see that this is a great error; and that, compared with the greatness and grandeur of the facts disclosed to us, it is very narrow and superficial. Relative to the organism, an environment is a fact and a necessity, physically and logically. But, to the ego, any environment of space or time is impossible, a self-contradiction, because the ego is and must be commensurate with all the knowable forever, all space and time, and all their contents. Whatever is known is a mode of intelligence, is the knowing subject in said knowing mode. An environment is therefore neither necessary nor possible to any intelligence except an organic intelligence. But we know no intelligence which is purely organic. Even our sensible intelligence is mostly extra-organic, and spreads over the whole universe, with which our personal intelligence is identified, which excludes the possibility of an environment. This is important as we go along. I will add that it annihilates the argument against an infinite Personality, which it is said requires an impossible environment, an argument which further on will receive due consideration.

Argument of Comicality.

"Common-sense people," no doubt, will readily, if not necessarily, conceive this in a light which is sufficiently comical, apparently ridiculous, and a good refutation of it, or at least a good reason for holding it in small esteem. Nearly every new truth in science and philosophy, and elsewhere there is nothing new under the sun, is comical, if not ridiculous, to old error and prejudice. How absurdly ludicrous it appeared to the pre-Copernicans to affirm the existence of people and things at antipodes to each other, which was supposed to make those opposite to us to be upside down, as how could it be otherwise, since we are upside up? We all now easily see that no other kosmic conception than the Copernican is really possible, that all are equally antipodes to some others, and yet all are equally right side up, and that all people and all mundane things cling to the earth in every situation by the same one law of gravitation. Organicists may laugh at the idea of a man always seeing and handling, embracing or fighting, or eating and drinking only himself, and of his being burned or crushed to death by himself or drowned by himself or devoured by himself, whether in the form of sharks or wolves or worms. But there is at least one mind to whom it appears that we must either return to the prescientific condition or advance to the clear perception, that this is the only way of conceiving the present or past forms of our existence, and that this is the course and nature of all existence under organic and sensible forms. The organism is engendered or destroyed by other physical forms which are egoistic; but the ego itself never is, so far as we know, because through all known and knowable mutations the ego persists, else we could not know the mutations.

For *The Index*.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER XVI.

My return to Boston was not because I did not like Providence, but because of a welcome note from Mr. Wendell Phillips,—who was unwell when we passed through Boston,—saying he should be glad to see us on our return. My daughter was anxious to see one of whom she had heard so much, and her friend Mrs. Leach was also accorded that pleasure. His new residence in Common Street is like the one he occupied so long in Essex Street, and affords aspects such as Mrs. Phillips was there accustomed to. Among the gifts of Mr. Phillips was a late profile portrait of himself, preferred by Mrs. Phillips to others. It occupies now an honored place in the New York Album, of which the reader will meet with an account. It is in my opinion the finest of all the portraits of his later years. Everybody is struck by that commanding head. We spoke of many things, and all too short seemed the golden hours he gave us. Though Mr. Wendell Phillips takes views upon currency, the Irish question, and the candidature of Gen. Butler, which I lack the information necessary to enable me to agree with, I still remain of opinion that Mr. Phillips means more that is good when he is wrong than any one else means when he is right.

One of the pleasures of Boston was to hear Rev. Edward Everett Hale, the preacher who wrote the admirable story of "Back to Back," which appeared in the columns of the *Co-operative News*. Mr. Hale has that expression of incessant activity so characteristic of him; but he has an unwearied voice of great power and compass, which resounded in the large church of which he is minister. Afterward, we (myself, my daughter, and her friend Mrs. Leach) had the gratification of dining with Mr. and Mrs. Hale at the "Heights," where we met Mr. Carroll D. Wright, Chief of the Bureau of Statistics of Labor, Mr. Weeden, and others. Mr. Hale is the author of numerous works, remarkable for vigor and popular power, displaying unusual genius for seeing how much there is of romantic truth in things practical, which are quite unimportant in ordinary eyes. Mr. Carroll Wright explained to me the disadvantage of having no codification of general law, which should be common to all States. In Massachusetts there are one hundred and fifty crimes which a person may commit. In the next State there are but one hundred. A serious social crime, which is a jail affair in Boston, in another State is a matter of fine only. The effect of this is to unhinge morality, and often to efface the moral sentiment. Mr. Wright discovered to me an important argument in favor of a national guide book in a State paper, which, but for him, would have remained unknown to me. It was by Mr. Hoppin of the United States Legation.

The best written papers upon the objects—co-operative, emigrant, and otherwise—in which I was con-

Digitized by Google

cerned appeared in *The Index*, the *Advertiser*, and the *Transcript* of Boston. In the latter paper, the writer was a lady,—Miss Hardaker, I believe. The editors of *The Index* accorded me the use of their office, which was of great advantage to me, as were the many courtesies and hospitalities of Mr. B. F. Underwood, and not less of Mrs. Underwood, who, like Mrs. Livermore, appeared to me a most engaging representative of the civil equality of women,—prepossessing, unassuming, well-informed. You never thought of their "rights." You knew they were ladies whom it were mere insolence to regard as unequal to civil duties.

Again, it happily fell to me to speak in the Parker Memorial Hall, when Rev. J. K. Applebee introduced me to the assembly. On another night, we were accorded a reception in the parlors of the Parker Memorial Hall, which owed its interests largely to the presence of Rev. E. E. Hale, who suggested consideration of the moral and practical aspects of co-operation.

On returning to New York, though the Hoffman House was alluring to me from its freedom and space, we went this time to the house of my friend, Mr. George S. M'Watters. Madame Errani, his daughter, and her husband, Signor Errani, the most famous teacher of singing in New York, reside in the same house; Mr. C. Evans, some time president of the Free Trade Club, and Mrs. Evans also. So that we had the charm of various society, besides the many personal courtesies of Mr. M'Watters, in whose dining-room are more portraits of heroes and sages, journalists and orators of all nations, colors, and countries than I met with in any other house. There is, I believe, no national portrait gallery in America; and it was an advantage to see a private one.

The *Star* of New York, a well-known Irish organ, as I have already mentioned, said some gracious words of myself and companions on our arrival, and in approval of my object in promoting intelligent facilities of emigration. "It is not," said the editor, "Ireland alone that is suffering. It is not only four millions of Irish people who are ground down to the dust under the heel of British landlordism. The English peasant and laborer are practically in the same sad and terrible predicament. Every poor man in England is directly involved in this Irish struggle for justice. And English philanthropists, seeing that Irish peasants migrate to America, and in a few years become respected citizens, able not only to support their families, but also able and willing to help to pay the rack-rents British landlords exact of their friends at home, begin to inquire why America is not, after all, the panacea for England's increasing woes. Mr. Holyoake's mission is one of humanity, and the message he will carry back may have an important bearing on the future of thousands of English and Irish families. It is needless to suggest that our working people give him a hearty reception. Our laborers know their friends, and are glad to welcome them."

Without any new information, and for no reason save that the newspapers had announced that Mr. Gladstone had accorded £100 toward the expenses incurred by two visits to America, for objects such as the editor of the *Star* had himself very fairly stated on August 26, he wrote as follows on September 2, seven days later: "It seems, however, that Mr. George Jacob Holyoake has conceived the brilliant idea that the United States may be utilized by the English nation to rid itself of a surplus population not exactly wanted in the British colonies, and altogether too dangerous to be kept at home; and he has spent some time in preparing a sort of guide book, telling how these people can be systematically disposed of for their country's good, and insinuating into their minds various inducements for seeking fame and fortune in this country. His efforts have been so highly appreciated by the present landlord government of England that it has defrayed part of the expense of his work, and has encouraged him to come here to gain information on the ground. According to the hazy, but still not unintelligible, explanations he has infiltrated through the brains of newspaper reporters, he is here as the spy of English landlords to find out where the undesirable surplus population of England can be safely dumped, and the country saved from landlord and tenant agitations."

The *Star*, I was told, was Boss Kelly's paper. But he must know better than this. The government knew nothing of my efforts in 1879 until long after I had made them. I never saw a landlord, English or Irish, upon the subject, and am no more likely to do what the *Star* suspects than the editor of the *Star* himself. Henry Clay used to relate how a stump orator was one day out West piling up the praises of "Old Hickory" (Andrew Jackson, to whom that stout nickname was given), when a discerning boss near him pulled his coat, and said, "Throw in a little Latin: it will heighten the effect." The only bit the speaker knew was the phrase *sine qua non*. In due course, *sine qua non* appeared so frequently in the speech that a dissentient hearer, seeing the effect it produced, cried out, "What does '*sine qua non*' mean?" Whereupon, the boss who had suggested the Latin, knowing the orator was unequal to the demands made upon him, shouted out, "It is the name of a fortress which the British want and Old Hickory won't let them have," which satisfied everybody. Mr. Gladstone's friendliness to the emigrant was to the *Star* what *sine qua non* was to the "Old Hickory" crowd.

A handsomely printed circular informed New York, caring for new subjects, that "Mr. George Jacob Holyoake will give a free public lecture on 'Co-operation as a Moral Force,' in All Souls' Anthon Memorial Church, West 48th Street, between 6th and 7th Avenues, kindly tendered for the occasion by the rector, Rev. Dr. R. Heber Newton, on Thursday evening, November 23, at eight o'clock."

The interior of the Anthon Memorial Church is remarkably handsome. Dr. Newton did me the honor himself of presenting me to the congregation. Dr. Robert Collyer was one who was present, and spoke after the address. On one occasion, I heard Dr. Newton preach. It was an oration on a leading idea so luminously put that the hearer carried away a conception of it as a distinct addition to his knowledge. The same qualities appear in the popular volume, lately published by Dr. Newton, on the *Use and Abuse of the Bible*.

Many eminent persons took great trouble (far beyond any merits of mine) in tendering me and my friends a public reception in the parlors of the Co-operative Dress Association, the use of which was offered by the directors; and Mr. Parke Godwin accorded to me the distinction of presiding.

There were sixty names on the Committee of Arrangement, including Mrs. Elizabeth Thompson, Miss Kate Field, Miss Mary Ainge De Vere, Col. Ingersoll, Dr. Frederic Hollick, Rev. Dr. Robert Collyer, Rev. R. Heber Newton, D.D., Prof. Felix Adler, Rev. J. H. Rylance, D.D., Mr. B. F. Underwood, James Charlton, Mr. Courtland Palmer, and others who are in my mind to cite did space permit. The Rev. O. B. Frothingham, Mr. Gledhill, and Mr. Percival were of the number.

The reception was attended by a large number of ladies and gentlemen. At a dinner given to Mr. George, the tickets were eight or ten dollars, which made it seem to many that "progress" had got out of "poverty" at last. The Committee of the Reception concluded that I should prefer something otherwise. Still, a very pleasant repast followed the proceedings of the evening. The great speeches were made by Mr. Parke Godwin, Dr. Robert Collyer, Rev. Heber Newton, and Prof. Adler. Why men so eminent should take an evening from their many engagements to attend this I could not conceive. I ought to add that Mr. Percival was among the speakers. Mr. Parke Godwin's speech was reproduced in many papers. He was himself a leader in the most famous and most promising of all the social experiments of our time, and still speaks with enthusiasm of those early dreams, of which he is yet likely to see the realization.

PROBLEMS IN EVOLUTION.

Mr. Underwood lectured to a crowded house in Kansas City, Sunday evening, the 24th ult. The following is a part of the report published in the Kansas City *Journal*:—

"Evolution may now be considered an established fact. It is no longer necessary before an intelligent audience to bring forward, as I have in this and other cities in former years, evidences and arguments in its support. That animal and vegetable forms originally appeared as we now find them on the earth, even the more advanced theologians will not now contend. They are willing to admit that the species of any given age are the products of the modification of species of pre-existing ages. There is no zoölogist of distinction in Europe or America who does not accept evolution. The professors of zoölogy in Yale, Harvard, and Brown Universities, the Michigan University, Johns Hopkins University, and the University of California,—in fact, in all the leading institutions of learning in this country,—are evolutionists. Principal Dawson, of Montreal, is the only eminent scientific man on this continent who stands out against evolution; and he is a theologian whom the scientific world is passing by. Men like Huxley and Spencer in England, Haeckel in Germany, Gray, Marsh, Whitney, Agassiz, and Cope in America, are representative scientific men of this age. Yet only a few years ago evolution was scouted by theologians as an *a priori* theory, a mere notion, with nothing to commend it to a well-balanced mind. Sometimes, now, a second or third rate preacher tells his congregation that Darwin's theory is nothing but a guess, and one that has no foundation in the facts of nature. So Rev. Jasper, the popular negro revivalist of Richmond, declares that the Copernican theory is nonsense, that the earth is flat, and 'de sun do move.' But the essential facts of evolution,—namely, that continuity pertains throughout the organic as it does throughout the inorganic, world; that organisms, the most complex, have grown out of organisms more simple, without any break, without any miraculous intervention, in accordance with laws as natural as those by which a planet is formed or a living thing grows from a germ,—these propositions are not likely to be shaken by any future discoveries or researches. The old cosmogony, with its miracles, with its abrupt separation of the world's formation into periods, and the appearance upon the scene, ever and anon, of a personal, anthropomorphic being, has had its day among educated men.

"The essential principles of Darwin's theory—which has revolutionized zoölogy and inaugurated so far-reaching changes in religious and philosophical beliefs—are variation, heredity, and natural selection. Organisms continually vary. The fact that they are the products of two parents necessitates some resemblance to each and difference from both. The fact that the offspring are subject to influences and experiences different from those of ancestral forms entails additional variations. The fact that the environment, soil, air, water, etc.,—in fact, the world and its conditions,—which in the aggregate are incalculable, imply enormous variations.

"These changes, once made, come under the law of heredity, by which, to use the popular phrase, 'like produces like.' But nobody ever saw 'like produce like.' The fact is, heredity is an ideal law, like the first law of motion, never completely realizable in the world of fact. A body would, if in motion, move in a straight line, provided there were no obstacles and no other body to change its course. But, in the actual world, bodies move in nearly circular orbits. So, if there were no perturbations, the law of heredity would be realized. But, in the first place, the qualities of two parents must produce a variation from each; and, secondly, the thousand of known and unknown causes that operate on the offspring before and after birth, differing from the causes that operated upon the ancestors before and subsequent to their birth, serve as perturbation to prevent close similarity to parental stock; and, in the two facts of variation and heredity, we have the possibility of improvement. If the production of like by like were realized, progress would be impossible. Because of variations, and the transmission of them from parent to offspring, progress is effected. If the variations are of an unfavorable or retrogressive character, and are perpetuated, degradation occurs, as is true in many cases where the environment for a particular species has grown poorer. In these cases, the survival of the fittest has not been the survival of the best. The survival of the fittest can be the survival of the best only when the conditions are the best.

"But, fortunately, the world has been improving from the time life appeared on its surface; and those variations, generally speaking, which have enabled animals to adapt themselves to improving conditions, have been the ones that have persisted, increased, and become established by time. But the survival of the fittest always means the extinction of the unfit. The adaptations of plants and animals to their medium has been brought about at incalculable cost of life. No divine Providence has favored the poor creatures that have perished from lack of strength, of intelligence, of adaptability to circumstances. Theologians, seeing the graceful forms with their

Digitized by Google

adaptations to their surroundings, talk about design; but they forget about the millions of creatures that went down and became extinct because of lack of adaptations to surroundings. The struggle for life in the sea, in the air, and upon the earth, has been fierce and keen, cruel and bloody.

"Happily, with the appearance of man and the predominance of intelligence and reason over impulse and instinct, the struggle has slowly assumed a less horrible form. Man's own plans, purposes, and co-operative efforts have been taking the place of a brutal struggle, or rather depriving the struggle of its more repulsive features. Thus, Wallace mentions that man's own choice and selection may yet determine the conditions and growth of plants to such an extent that his artificial selection will take the place of natural selection. And the struggle between men is becoming one of competition in the useful arts, governed by certain rules designed for the interest of all. The recognition of moral obligation having its foundation in the good of the community continually mitigates and tends to destroy the merely brutal features of the struggle between men. By inventions, discoveries, and reforms, a few men may initiate movements that revolutionize the conditions of communities and produce results that thousands of years of natural selection could not accomplish. One man —a Jesus, a Luther, a Voltaire, a Paine, a Jefferson, a Garrison, a Garibaldi—may accomplish more in a few generations than natural selection could accomplish in the intellectual and moral world in thousands of years. Here, we see the value of education and example. Some persons, misunderstanding the implications of the theory, imagine that the process must go on in a certain way, and admit of no beneficial modification by man. But not so teach Darwin and Huxley, Haeckel, Spencer, and Büchner. The effort of man replaces natural selection, and may give new impulses to progress in every direction. There are mental as well as physical variations. It is the work of education to strengthen and accumulate the useful variations and to co-operate with heredity in improving the quality of the race. We can improve our fruit and grain and stock by subjecting them to our own selective process, but we cannot subject men to the same rules and discipline. Consequently, they must be educated to make wise selections for themselves in marriage, and take an intelligent interest in the improvement of the race. The study of heredity then becomes one of great importance, but the subject of education must ever continue to be one of no less importance. Shall that education be scientific or theological?"

CORRESPONDENCE.

THE MORMON QUESTION.

Editors of The Index:—

There are few men whom I regard with greater esteem and admiration than William J. Potter; but, for once, I find him on what I consider the wrong side of a question. The special legislation at present proposed and used against the Mormons seems to me no better than religious persecution. I must say right here that I have no sympathy with the Mormon Church or its polygamy. As an agnostic, I naturally regard its religion a gross superstition; and, as an advocate of the rights of woman, I can have no sympathy with any form of her enslavement. But the Mormon agitation involves the two vital questions of personal and religious liberty. I assert primarily (and I think most Liberals will agree with me) that a man has a right to his opinions, even when injurious to himself and others, and a right to act as he pleases, if he does not injure others. Grant the force of these two propositions, and I see not how legislation against Mormon religion or polygamy can be defended.

The Mormon's theological ideas doubtless narcotize his intellect and infect the minds of many with whom he comes in contact; but every religionist and non-religionist thinks the same of the views of his opponents, and we settle the matter by agreeing to let every man think for himself, and use reason as the only antidote against mental poison. The Mormon woman believes her salvation depends upon marriage, and voluntarily enters into polygamy. She injures herself, we say; but has she not a right to do so? We are surrounded on every side by countless thousands who are injuring themselves in every possible way by innumerable bad habits and acts; but, so long as these acts do not directly injure us (and often when they do), we employ no defence but reason. We regard suicide as a crime, but we do not punish the man who attempts self-murder. Let us then, as consistent professors of liberty, use no weapons against Mormonism but reason. It alone is amply sufficient, or our faith is of no avail.

Mr. Curtis echoes my own sentiments, when he predicts failure, if coercive measures are adopted: "Mormon women will be truer to their religion and their husbands. The funds, the resources, of the Church will be augmented, Mormon immigration will grow larger instead of less. The lukewarm will feel the contagion of the increase of zeal among the faithful, and the rising generation will be stirred into a more chivalrous attachment to the cause for which its parents have already suffered so much. Mormonism will gain and not lose, while the government will be but heaping disgrace on itself." It is plain to me that politicians are baying the Mormons, in order to curry favor with their Christian constituents. Mr. Potter refers to slavery; but the comparison is inapt, for the negro became a slave contrary to his desires, but the Mormon wife consents to her degradation, hoping for eternal gain. No abolitionist would interfere with a slave who voluntarily dedicated himself to the service of his master. He refers to the Thugs, I presume, of India, as practising theft and murder as religious rites. Apply our rule. Do their victims consent to be robbed and murdered? No. Then, the rite is a crime against Liberty; and she must protect herself by prohibiting it. So with Guiteaus and Freemans; their victims *do not consent*. But he refers also to suttee-burning in India (his first apposite comparison); and I do not hesitate to be consistent with myself, and assert that English interference with the Hindu religion in this matter was an act of tyranny. Those Indian widows were working for eternal salvation. What right had the British to stop them? Carry out this doctrine, that every religious rite that injures the devotee must be prevented by law, and where could you stop? Each religious and irreligious sect that happened to be in power would harry the others on the plea that their rites were either physically or spiritually injurious, or both. Consistent religious non-interference, while, like many other good things,—the rule of the majority, the survival of the fittest, and restraints of criminals, for instance,—it is hard on the few, is best for the many. Let every man alone, even if hurting himself, so long as he lets you alone.

Legislation would, however, provide a very simple remedy for this Mormon trouble. Let it provide a national marriage law, as Mr. Curtis recommends, based on the theory that marriage derives its just power from the consent of the married, and that withdrawal of that consent, legally made, constitutes divorce. Then, when Mormon or Christian women find themselves duped into unhappy marriages, they will have the remedy in their own hands. Beyond protecting those who do not wish to be injured, our laws should let love and religion alone.

J. WILLIAM LLOYD.

[Our correspondent asserts at the outset that he has no sympathy for Mormon polygamy. Yet, if we understand aright his last proposition, which he announces as "a very simple remedy for this Mormon trouble," it is a proposition that would simply legalize polygamy throughout all the United States. Where the "remedy" comes in, we do not see. Such a national law as he describes, could it be enacted, would make it possible for men and women anywhere in our country to enter into any kind of polygamous or bigamous relations to which the parties concerned should consent. Nay, more: it would give woman a like freedom with man, which would be but justice; it would make polyandry possible, and throw the protection of law over every kind of libidinous relation which individuals of the two sexes might choose to assume with each other under the name of marriage. We do not understand Mr. Curtis to recommend any such measure as this.

We entirely dissent from Mr. Lloyd's premise that, if two or more persons voluntarily agree to do certain things together, no matter how wrong and shocking the things may seem to civilized society in general, statute law has no right to interfere with them, provided they do no overt act of injury to another person who does not consent to it. Society protects itself by law against gamblers, though their dupes are willing ones. It can and ought to protect itself against such a public prize-fight exhibition as was given in Cleveland the other day, and is described in another column of this paper, though both the parties to it and the four thousand spectators gave free consent to the brutality. In countries of the highest civilization, duelling is now coming to be abolished by law; yet it is an act to which both combatants consent, and to which in many cases even their families consent, declaring that they regard it as a greater injury to themselves that their honor should not be thus vindicated than would be the possibly resulting death or disability of the contestants. The Southern slaveholders used to say that the negroes did not wish to be free; and doubtless there were those who would have freely chosen to remain slaves. But these were not excepted in the constitutional amendment abolishing slavery. The truth is there are certain moral principles which gradually get formulated in laws as civilization advances, and any violation of which is made punishable as subversive of the foundations of social order and generally demoralizing to the community, even though no overt *individual* injury may be complained of or traced. Among the things thus condemned are polygamy, polyandry, human sacrifice as a religious rite. Neither the consent of all parties concerned in these acts nor the claim of religious authority for them can invalidate the right of civilized society, which has already declared such acts criminal, to deal with them as such.

But, even if Mr. Lloyd's premises were sound, we should say that they do not cover the case of Mormon polygamy. Though the Mormon women may freely consent to the relation and complain of no injury to their rights, there is another party intimately concerned whose consent is not asked, and whose rights are most injuriously invaded,—the children.—W. J. P.]

SHOULD A RATIONALIST OR A FREE RELIGIONIST HAVE A CREED?

Editors of The Index:—

Certainly not, I should say, if by creed is meant a formula to confine and limit further investigation, in the manner of the old dogmatic articles of faith. But, if we look upon a creed in the scientific aspect, —as a working hypothesis, which links together facts that have been verified for the purpose of further investigation,—we shall at once see its practical value, just as the scientist, when he has formed a theory or belief upon any subject, does not keep it to himself, but formulates it into a definite hypothesis and offers it to the scientific world to be tested. If it is verified by competent minds, it passes on to the stage of scientific fact. But, if it should not stand the test and prove untrue, it is at once abandoned, and no more time is wasted.

The primitive religions of superstition have always "bound fast" the mind of the believer to the fear and worship of a personal God, who was supposed to superintend and control all the forces of nature, who, like the Hebrew God, would not even overlook the fall of a sparrow nor forget to number the very hairs of the head. The free thinker, or rationalist, when first freed from such superstition, is very apt to go to the opposite extreme, and imagine he is free from all *bonds*, is not "bound fast" by any power outside of himself. He glories in his freedom, and with transcendental enthusiasm believes himself "at the top of the universe." His watchword will perhaps be "homocentrality." His free-will and self-control are unlimited, he thinks; and his lofty idealism is so sublimated that he spurns the idea of "gross materialism" and vulgar common sense.

But, after a while, stern experience shows him that he is still "bound fast," not by the arbitrary will of a changeable Deity, but by the *unchangeable* laws of nature. He finds that his mind and body are governed by inflexible laws; that the earth and all it contains, the heavens above and the waters beneath, are all subject to the same control by laws that are never interfered with by any outside personal God.

Primitive religion prompted man to discover the will of his personal ruler, and urged him ("bound him fast") to obey or suffer the consequences. It was rather an effort to escape the anger of his God than to make himself perfect. Rational religion prompts him to discover and obey the laws of his being, seeing that there is no forgiveness of sins, no personal power ever interfering to save from the consequences of

Digitized by Google

breaking any such law. This is really an "effort to perfect himself."

For a working hypothesis to link together facts that have been verified, a free religionist or a rationalist might formulate a creed something like this: 1. It is the duty of every rationalist to help all who are capable, to free themselves from superstition. 2. The sciences are the most efficient means of doing this, not by combating prevalent creeds, but by taking away their foundation,—the superstructure inevitably falls. By this method, Darwin has done more for rational religion than all other efforts combined, not excepting even such eloquent iconoclasts as Robert Ingersoll, etc. 3. Since the capacity to acquire such scientific information must always be limited more or less by the individual's circumstances, those sciences which are of most practical importance should be first known. 4. There are four sciences which seem to be most essential to the bodily and mental welfare of every one,—physiology, psychology, geology, and astronomy. The two latter will free the mind from much superstition, without saying a word, while teaching them, about the "mistakes of Moses" or trying to ridicule his orthodox cosmogony. Psychology, or the science of mind and the nervous system, will show how easy it is to be deceived by mental illusions, and will save us from the "mistakes" of Spiritualism.

Such a creed or hypothesis would link together the verified facts of these four sciences for the purpose of establishing a philosophy which should be an intellectual guide of life and a "religion" which should "bind fast" every one to an obedience to the laws governing his mental, bodily, and social welfare.

J. E. SUTTON.

THE DIRECTION OF EVOLUTION.—Glancing in thought over the vast expanse of matter of which the universe consists, what has been the direction of the progress witnessed through the long ages since the beginning condensation of the nebulous masses in which our solar system is believed to have originated? The immense globes which whirl in repeated circles through the heavenly spaces, though bound together by the strongest and most subtile bonds, roll blindly on, forever unconscious of themselves and of one another. The lily of the field even, clothed in beauty though it be, and surrounded by the greater glories of earth and sky,—the warm sunshine and green fields,—has no conscious enjoyment of itself or of them. But, as elements identical with those which compose these unconscious forms have combined and recombined in compounds of increasing complexity, as molecules have condensed and differentiated in the development of a higher kind of living matter, consciousness has dawned, and (mainly through the avenues of the special senses) mind has developed. Each generation, heir to the endowments of all preceding ones, has added its increment of gain; and later generations, those which belong to the historic period, have begun their lives with a vast amount of inherited intelligence. There is sound philosophy in the statement once jocosely made, that the natives of a certain part of the country, remarkable for their intellectual activity, are born with a good common-school education. By far the greater part of our education is indeed born with us. Increased refinements of emotion, clearer subtilties of thought,—these are the directions which further development of the race must take. And the individual who experiences a hitherto unrealized emotion, or who grasps a new thought which corresponds with some never before observed fact or relation in the external world, is the seat and centre of progress. In such minds, nature is undergoing a still higher evolution; and the colors of humanity are thus successively planted on hitherto unscaled summits.—*Frances Emily White, in Popular Science Monthly for March.*

GEORGE ELIOT.—Much more might be said about the moral and religious value of George Eliot's stories; but I think I have said enough to show that George Eliot had a deeply religious nature. I have not cared to inquire what her own religious, or non-religious, beliefs were. I do not care to do this any more than, in treating of the religious value of Shakspere's dramas, I should care to inquire what his religious or non-religious beliefs were. We have not yet data sufficient to enable us to determine what was really George Eliot's mental attitude in reference to the great problems presented by religion. I know that her stories are profoundly religious,—religious in the best and highest sense of that much abused word. I cannot see that despairing view of human nature and of human destiny in George Eliot's writings which some persons profess to find therein. There is an undercurrent of sadness in them; but this is the result of a current of sadness which ran through George Eliot's own life,—a sadness of which the world, as yet, knows but little. Yet through all her writings there runs a deeper, wider, grander current of hope. She enhances our idea of the dignity of humanity. In her delineations of commonplace human lives, she teaches us that the lives of all men, could we truly know them, would serve to point some great moral,—that the life history of the meanest man on earth, could we read it aright, would be of all things else instructive; for it would at least teach us that life is a conflict in which man defeats or is defeated, and that duty, boldly persevered in and bravely done, though set about by thorns, is its own support and rich reward. Ah! could we read, for but one moment, the true life histories of the millions of earth's inhabitants, what revelations would burst upon us! Who, then, would go about

> "To cozen fortune, and be honorable
> Without the stamp of merit?"

—*James K. Applebee.*

BOOK NOTICES.

POLITICAL RECOLLECTIONS. 1840 to 1872. By George W. Julian. Chicago: Jansen, McClurg & Co. 1884. pp. 384. Price $1.50.

This work is a valuable addition to the political history of this country during the years indicated in the title, the author having been during most of this period a conspicuous figure in American politics. One of the earliest and most uncompromising of the anti-slavery leaders, the candidate for Vice-President upon the Free-Soil ticket in 1852, one of the founders of the Republican party in 1856, and afterward one of its most prominent and trusted leaders, a member of Congress during the exciting period preceding and including the war, and during that great struggle one of President Lincoln's intimate advisers and a member of the famous Congressional Committee on the Conduct of the War,—he is well able, from such a career, to make of his recollections a most interesting and thrilling narrative. His style as a master of vigorous English is well known; and the tone is personal throughout, giving to the work abundant piquancy and point. A copious index accompanies the volume, a glance over which, with its array of well-known names of public personages, whets the reader's appetite for the interesting anecdotes of them, or analysis of their characters as given by this writer.

THE *Revue de Belgique* for February opens with an article by Count Goblet d'Alviella on the *Buddhist Catechism*, by Col. Olcutt. This American, with Countess Blavatsky and two other members of the Theosophic Society of New York, went to India in 1879, for the purpose of aiding the ancient religions to resist Christianity. Tens of thousands of Ceylonese, who had been converted by the missionaries, have been brought back to Buddhism; and the need of a catechism of this religion in the Singhalese vernacular has been so well supplied by the little book written in that language by our compatriot that it has been approved by the high priest on Adam's Peak, has had a circulation of more than ten thousand copies on the island, and has been translated into Tamil, Siamese, Japanese, German, and French, besides fourteen editions in English. The Buddhists of Ceylon are known to have preserved the original faith more purely than any others; and it is interesting to hear that they look on the idea of a personal God as a gigantic shadow thrown over empty space by the imagination of ignorant men; that they regard Nirvana as a complete extinction of individuality; that, in the preparatory circle of births and deaths, they do not think the soul itself survives, but only its component elements, as is the case with the body; that they reject the idea of creation out of nothing, and suppose man to be the result of a process of development from imperfection toward perfection; and, finally, that they hold such views of the eternity of nature and the universality of law as Haeckel has pronounced identical with the last results of science. Another article speaks of the employment of children and of compulsory education in Belgium. The Italy of to-day is also vividly portrayed, and shown to have taken a great step forward in founding at Bologna a school for political science, including sociology, ethnography, political economy, diplomacy, and international law.

THE *Unitarian Review* for March is an excellent number. Rev. C. A. Bartol, under the head of "Permanence in Religion and in Preaching," pays tribute to the memory of Dr. Orville Dewey. Rev. D. M. Wilson gives an interesting sketch of "John Ruskin, Artist and Art Critic." Rev. James T. Bixby begins an article, in which he traces some of "The Great Steps in Theology," from the earliest conceptions of the untutored savage up to the philosophical theories of the highest intelligence of to-day. Rev. B. F. McDaniel has a sermon on "Three Phases of Religion." And Miss Horatia L. Ware gives an appreciative and discriminating review of the volumes thus far issued of "The Famous Women Series," comprising the Lives of George Eliot, Emily Brontë, George Sand, Mary Lamb, and Margaret Fuller. "All but Mary Lamb," says the reviewer, "belong to this century, telling decisively the advancement of woman as a fact obtained in the science of sociology. . . . And it is but poetic as well as historic justice that the sex has emerged from a condition of civilization and religion where women had no souls into this, where they are main supporters in the Christian Church, the fold of all souls; though it so generally, yet mistakenly, postpones the soul's concern into another world and a life after this. The writers of these studies assume that, in the only true sense, that of useful living, these were religious women." The "Editors' Note-Book" deals at some length on these topics: Wendell Phillips, Sunday Trains, Public Libraries on Sunday, and Sunday Papers.

PERSONAL ITEMS.

EDWIN D. MEAD is giving a course of lectures on "The American Poets" in Denver, Col.

B. F. UNDERWOOD gave his last lecture in the West, for the present season, last Sunday, before the Independent Society of Alliance, Ohio.

WILLIAM BLANCHARD JERROLD, eldest son of Douglas Jerrold, and himself a well-known *littérateur* and newspaper writer, died in England one day last week, aged fifty-eight.

MRS. ELIZABETH OAKES SMITH has a parlor lecture on Emerson, which consists largely of her personal reminiscences of him, and which her audiences find very interesting.

THE Rev. Henry Ward Beecher was one of the pall-bearers at the funeral of Thomas Kinsella, editor of the Brooklyn *Eagle*. The presence of the great preacher in that capacity in a Roman Catholic Church was gratifying to many who call him a "heretic."

MRS. FENNO TUDOR of this city, widow of Frederick Tudor, died last week at Newbury, Vt., of pneumonia, aged seventy. She was a noble woman, widely known through her active participation in reformatory and philanthropic work, a liberal giver, and a warm friend of temperance and the cause of woman suffrage. Of the innumerable little deeds of kindness and charity which she did, only a few people know, except those who were the recipients of her goodness. No deserving applicant for aid ever knocked at her door in vain, and her sympathy often extended far beyond the bestowal of immediate relief. Her memory will be cherished in many a poor family; and the beneficent organizations, to whose success she contributed, have ample reason to mourn her death.

MR. MONCURE D. CONWAY'S father, Walker Peyton Conway, died suddenly at his home, Fredericksburg, Va., on the 1st. The Fredericksburg *Star* says of him: "The sudden death of this old and honored citizen on Saturday morning last caused universal sorrow throughout our community. His death leaves a void which will be hard to fill. He goes down to his grave full of honors, and amid the sorrows of all whose pleasure it was to know him in life. He was born in Stafford County, Va., July 1, 1805, where h spent his youth and early manhood. He married Miss Daniel, sister of Hon. Raleigh T. Daniel, who survives him. He leaves three sons—Moncure D., now of London, R. M., of Spottsylvania, and Peter V. D., of this place—and one daughter, wife of Prof. March of Pennsylvania."

ANCIENT EGYPT.

Ancient Egypt under the Pharaohs. By John Kenrick, M.A. Two volumes in one. Large 12mo. Long Primer type. 902 pages, with illustrations. Cloth, $1.00.

This most excellent work, some time out of print in this country, and costing $15 to import, is now published in a handsome edition, at a price within the reach of all. It deals with the history of Egypt from the earliest times to its absorption into the empire of Alexander; and in a most comprehensive, thorough, and remarkably entertaining way treats of the arts, sciences, laws, language, religion, agriculture, navigation, and commerce of this most wonderful of the nations of the ancient world. As an *authority*, no work upon Egypt ranks higher.

Curious Myths.

Curious Myths of the Middle Ages. By S. Baring-Gould, author of *Legends of the Patriarchs and Prophets*, etc. New Elzevir edition. 272 pages, Bourgeois type. Price in cloth, 35 cents.

This neat volume is one of rare and curious interest, really one of the quaintest in literature. Some of the subjects fully treated are the Legend of the Wandering Jew, the Seven Sleepers of Ephesus, William Tell, the Fortunate Isles, etc. The price of the work heretofore issued by a leading Philadelphia publisher has been $2.

Irving Library.

MORMON LECTURES.

1. "Mormonism in a New Light." (Morality and Education in Utah, Polygamy, the Golden Plates, Origin of Mormonism.)
2. "Political and Legal Aspects of the Mormon Problem." (Church and State, Marriage, Divorce, Woman Suffrage, the Nation, an Appeal to the Liberal of America.)

Parties can arrange with me for the delivery of either or both of these lectures. Address T. W. CURTIS, care of INDEX, 44 Boylston Street, Boston.

MARTIN LUTHER:

A Study of Reformation.

By EDWIN D. MEAD,

Author of *The Philosophy of Carlyle*, etc.

An essay upon the significant phases of Luther's life and work, with special reference to present problems of reform; discussing the principles of Individualism, Intellectualism, and Rationalism for which Luther stood; and the Libertinism, the Old Orthodoxy and the New Orthodoxy, with which he came into conflict.

Cloth, 12mo, 194 pages. Price $1.25.

Third Edition.

BIBLE MYTHS,

And their Parallels in Other Religions.

Being a Comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations.

The object of this work is to point out the myths with which the Old and the New Testaments abound; to show that they were held in common with other nations; and then trace them to their evident *origin* and *explain their meaning.*

"It has long been acknowledged by the most eminent Biblical students that the Hebrew Scriptures contain a large mythical element; but, so far as we know, the present is the first complete and scholarly attempt to trace these myths to their source, and ascertain their original signification."—*Boston Courier.*

"Never before has there been given a volume to the reading world that shows the research for the origin of these myths as does this one just published by J. W. Bouton, of New York."—*Boston Times.*

"It is unquestionably true that the results of a rationalistic study of the Christian Scriptures are nowhere else so accessible as they are now made in the work before us."—*New York Sun.*

1 vol. Royal 8vo. Cloth. 600 pp. $3.00.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight.... The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

No. 15.—**The Battle of Syracuse.** Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot, discussing the Authority of Christianity. Price 10 cents; 12 copies for $1.00. Address

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

IN a recent speech in Philadelphia, Mr. Randall said, "For nineteen or twenty years I have been in Congress, hoping and praying that I might see there a Democratic President." An exchange, we need not say a Republican paper, remarks of Mr. Randall: "He has been like the old lady who once exclaimed: 'I prayed to have the hill opposite my house set back a good bit. But it was not set back, and I knew it wouldn't be.'"

ACCORDING to the report of the foreign mission work of the Presbyterian Church, the mission churches established among the heathen gain much faster than those at home. The increase in church membership last year, counting all the missions, was about twelve per cent. Why is not such an increase as this possible in communities where the people are intelligent and educated, and where the multitude are outside of the churches? Why are the conquests of Orthodoxy in these days so much greater in uncivilized than in enlightened lands?

A NEW paper called *Swobodnoji Slowa*, or *Free Speech*, has appeared in St. Petersburg. It deprecates terrorism, and calls upon all branches of socialists to unite in opposing despotic government by moral and pacific methods. It says: "The Russian State machine is rapidly decaying. Discontent is increasing among all classes. Revolutionary ideas are spreading everywhere, even in the army. The day of victory is approaching." The paper strongly favors a union of all branches of socialists, who, it says, should pursue the desired end by moral energy, not by brute force.

IT is said that Rabbi Wise, of Cincinnati, has shocked the sensibilities of the more orthodox Jews by his recent statements that Christians may be received into Judaism by a simple acknowledgment of the binding character of the Ten Commandments; that there is no Biblical prohibition against Jews intermarrying with Christians, or with Mohammedans, for that matter; that the rules attending the preparation of animal food for Jews can be abandoned at pleasure; and that, as God has not created any unclean animal, Jews may eat anything they please. These expressions have given rise to heated controversy in Hebrew circles.

REV. DR. J. PARKER, of London, says that many of the families of the outcast poor of London, that live in one unventilated, filthy room, would live that way from choice, if they had all heaven at their disposal. "Dirt," he says, "has its warm friends, even among people who are not numbered among the outcast poor. I say this, to guard benevolent persons against the notion that dirt and poverty are synonymous terms. I am given to understand that even some Christians have a wonderful likeness for anything slovenly and slipshod. At least, I have heard women screaming to other people to hold the fort and ring the bells of heaven, whose stockings would have been the better for a day's darning."

THE Legislature of Ohio has changed the law governing the challenge of jurors. The following is the point of the amendment: "If a juror has formed or expressed an opinion as to the guilt or innocence of the accused, the court shall thereupon proceed to examine such juror on oath as to the grounds of such opinion, and, if such juror shall say that he believes he can render an impartial verdict notwithstanding such opinion, and if the court is satisfied that such juror will render an impartial verdict on the evidence, may admit him as competent to serve in such case as a juror." Heretofore, the law has ordered the rejection of the juror who had formed an opinion "upon conversations with witnesses of the transactions, or reading reports of their testimony, or hearing them estify."

THE recent decision of the Supreme Court on the legal tender of United States notes is that Congress has the power under the Constitution to issue notes, and to make them legal tender for all debts; that it can exercise this power at its own discretion; that the power is not merely a "war power," justified only by such a national peril as makes its exercise a military necessity, but a constitutional power that Congress has, the same in peace and war,—a power to issue notes as absolute money, limited as to time and circumstances only by its own supreme discretion. This decision, together with the general favor with which it is received, shows evolution in ideas of constitutional power, while it indicates that the judiciary is amenable to popular feeling, and disproves the statement, made by some English writers, that our Constitution lacks adaptability to progress.

HOWARD, in a recent letter from New York to the Boston *Herald*, says: "There is a growing feeling here that under the present system the rich are getting richer fast and the poor are getting poorer fast. If our wealthy men could be induced to do good with their money, this feeling of hostility might be averted, perhaps. But what do they do? One spends fortunes in fast horses, and consorts all his idle time, hours daily, with stablemen, hostlers, and jockeys, races on the road every afternoon and 'exhibits' every day of his life. Another emulates his example. Others seek the dissolute of both sexes. Not one of them has done or is doing a dollar's worth for the people or the city. Added to this are the outrages perpetrated daily, some the result of 'criminal negligence,' some the normal outcome of disregard of the rights of others, and all the natural fruit of the feeling of security born in reliance on the potency of wealth."

THE following passage from an editorial in the New York *Tribune* shows that the freedom of the press in Germany has its qualifications, and indicates what those qualifications are: "It is a curious and instructive fact that the press there has not ventured to reproduce without excision the comments of the New York journals on the Lasker incident. For example, the *Frankfurter Zeitung* of February 23 attempts to copy a passage from an editorial of the *Tribune*, but closes with a long dash, explaining in parentheses that the blank, if filled out, would involve arrest and imprisonment for two months. The sentence which could not be reprinted in the Fatherland was this: 'The best answer to the Chancellor's curt message is silence: this is at once dignified and contemptuous.' It was necessary to suppress the word 'contemptuous.' In like manner, quotations from other New York journals are broken up with hiatuses, accompanied by such parenthetical comments as these: 'three months,' 'here it is a matter of years,' 'one month.'"

THE Springfield *Republican* remarks: "The newspapers of the day without question are rendered less valuable to the people than they should be, and their chance of mischief steadily increases by the sensationalism of their news, by the extravagant prominence given to tales of crime, and by the ambition to be 'spicy'; and the cheapening of prices which has lately infected the metropolitan papers has not only the same cause which belongs to the deterioration in these respects, but it leads in turn to a great increase and extension of such evils. For they are all devices to reach a wider public than otherwise would attend to the newspapers, and testify to the fact that the popular tastes and appetites are of a grade that a high moral sense and a conscientious refinement do not appeal to. A newspaper that regulates its work by scruples restricts its public, and does so consciously. It is unfortunate enough that there should exist a great number of coarsely printed and as coarsely edited sheets that make it their business to feed the demand of the lower public, who can read, but do not think, but doubly unfortunate that journals that ought to have some conception of a better mission should truckle to this unhealthy appetite for scandal and detail of crime."

THE MORAL IDEAL IN RELIGION.

A curious discussion has arisen as to the religious beliefs of Wendell Phillips. Persons who appear to have been equally in a position to know the facts assert, some that he was of liberal religious convictions, others that he was Orthodox,—even Calvinistic. The truth, we suppose, is that he was bred in Orthodoxy, but that, in his long busy career consecrated to philanthropy, he had had so little time or disposition to attend to theological questions that he was not himself fully aware how much his Orthodox opinions had been worn away under the attrition of the moral battles which he was waging. He had accustomed himself to test religious beliefs by the character of the persons holding them. He liked people who had the courage to act out their convictions, and he was predisposed to think well of any intellectual convictions that had been connected with the promotion of civil rights. He wanted Cromwells in modern reform. Calvinism seemed to him to have produced brave characters, and to have advanced human liberty; and, for this reason, he was wont in a general way to praise it, and to take pride in his own hereditary connection with it without reference to its specific dogmas. For these, as well as for the ecclesiastical authority of the system, it is evident he could have had left little regard.

This much is certain: Mr. Phillips was not connected with any one denomination or church. He was himself a self-ordained (or Heaven-ordained) preacher, whose pulpit was any platform of human rights, and whose church was the brotherhood of man. He was a doer of the works of religion, not a student of its creeds. He judged churches not by the speculative soundness of their covenants, but by their observance of the moral commandments. Did they love their neighbor as themselves? Did they bear one another's burdens? Did they remember those in bonds as bound with them? Did they put away drunkenness and evil lusts? Did they observe that love which is the fulfilling of the law? Did they give themselves to the things that are true, honest, just, pure, lovely, and *think on* these things more than on their creeds and ceremonies? Could any church answer these questions in the affirmative, his response was, "Count me a member, whatever your 'heresy.'" To any church that must answer them in the negative, his response was equally ready, "Count me against you, though your creed be of the soundest."

And this position was a practically correct one. Not that we would say that belief is a matter of no importance. On the contrary, we think that correct belief or sound thinking is a matter of prime importance to the progress of humanity. Upon sound thought depends in the end sound action. But—we might indeed say *therefore*—any system of religious belief, be it called Orthodox or Liberal, which, having had time and opportunity for practical development, does not show itself fruitful in good works, is thereby condemned. There is something wanting in its philosophy, if it does not issue in practical virtue. Of religious philosophy in particular must it be said that it should include rightness of conduct as its main feature. When we consider that the conscious human sentiment recognized as the moral law and a conscious being voluntarily obeying that law are, so far as our knowledge extends, the highest products of the evolutionary forces of the universe through its countless æons of struggle and progress, we need not hesitate, even on philosophical grounds, to inscribe on the banner of religion above all things else—above all other beliefs and faiths and hopes—this moral ideal and the practical effort to realize it. Therein, the very forces and intents of the universe have become conscious, vital powers. Any religion, however mighty and magnificent still in its organization and external equipments, out of which the moral ideal has died, is itself as a religion dead; while any philosophy, any science, any vocation, into which this ideal suffuses its vital and glowing energies, is transformed into a religion.

In a word, religion, rightly understood, culminates in the moral ideal. Morality is not so much a part of religion—a section that might be taken out of it here or there—as its ripened fruit. Feeling, thought, moral action,—these make up the threefold nature of religion. The religion that runs largely to feeling is like the overgrowth in juices and undergrowth in solid stock of a hothouse plant. The religion that is concerned mainly with thought and belief may make wood, but it does not flower nor fruit. In the fulness of the perfect life (which is the genuinely religious life), the three elements of thought, feeling, and action, would be blended together in complete harmony,—not joined mechanically, but organized together as a living whole, at once substantial, symmetrical, and fruitful. The result of such harmonious, vital organism would be an increased moral insight or ideal, which should comprehend in its range of vision, not merely this or that individual rectitude of service, but the vast sweep of universal relations and achievements, and should see and measure the individual act of rectitude according to its part in working out and helping to establish a righteousness that is of universal and eternal intent.

A moral act may be regarded simply as it concerns the finite relations between man and man. Neighbors, for instance, may be just to each other, because each sees that justice is the other's due, though neither may perceive the bearing of their act of justice upon any other beings or events in the universe. But, when they perceive that their observance of right relations to each other helps on the human race and the world to an ideal of perfection, stability, and harmony,—that their integrity, purity, justice, kindness, not only increases their own fulness of life and felicity, but helps toward fulfilment the very intent of the vital energy of the universe itself, and they become glad to live for the sake of doing their part honorably and well in this larger service,—then their morality is lifted up to the plane of religion. One of Matthew Arnold's definitions of religion is that it is "morality touched by emotion." And this definition may be justified, if the emotion be of a kind that arises from the contemplation of morality in its universal and infinite relations, or as the harmonious adjustment of human conduct with "the Eternal Power," above and beyond, yet within the individual self, "that makes for righteousness." This is to get that refraction and reflection of light in respect to all questions of individual moral action by which they may be viewed in their true connection with the forces and life of the world's progress. Then is morality seen to be illuminated, glorified, inspired by the atmosphere of religion; and moral action attains thereby a breadth, a majesty, a far-reaching effect, a symmetry and glow of beauty, so that it not only satisfies the conscience, but stirs feelings of reverence, aspiration, joy, gratitude, love, consecration.

To change the figure, Religion is the solid ring of gold, of which Morality is the costliest jewel. It is through religion that our moral acts are seen no longer as isolated and unset gems, but as rounding into the perfect wholeness of universal good, so that the jewel shall adorn and beautify all the spheres and all time as well as this little present spot of life and earth.

WM. J. POTTER.

INTROSPECTIVE PSYCHOLOGY.

In the English quarterly, *Mind*, for January, is a remarkable paper on "Some Omissions of Introspective Psychology," by Prof. William James of Harvard University, which throws new light on this most difficult province of scientific investigation. He shows that psychological science has hitherto entirely neglected by far the larger half of our sentient experience, and consequently has been unable to give any but the most meagre and inadequate account and explanation of the phenomena of consciousness. He shows in his essay that the larger part of the "mental stream" of our conscious life is made up of relational feelings, which might be called the overtones of thought, that give character and quality to all our definite thoughts, and are represented in language by the relational parts of speech,—the prepositions, conjunctions, adverbs, interrogations, etc.; that, in every train of thought *about* any "topic," each of the relational elements in our consciousness has an existence of its own, as an object consubstantial with the rest of the stream. The real concrete object of any thought is its *entire content*, and not simply the "topic" which it is "about"; and if we wish to reproduce any thought as it was uttered, and *feel* its delicate idiosyncrasy, "we must make a substantive of it by writing it out in full with hyphens between all its words, with every word fringed, and the whole sentence bathed in that original halo of obscure relations, which, like an horizon, then spread about its meaning." The same *thing* may recur and be known in an indefinite number of successive feelings; "but, when the identical thing recurs, it is always thought of in a fresh manner, seen under a somewhat different angle, apprehended in different relations from those in which it last appeared."

These vague, inarticulate feelings, these overtones, fringe and halo all our definite thoughts, give them their peculiar tone, and determine their relations in consciousness. Hence, the palpable images that fill our conscious experience are really the smallest and minor part of that experience. Our real conscious life is made up of the impalpable, even far more than the palpable, and affords strong evidence, if not positive demonstration, that what our senses directly cognize is but a small portion of the universe compared to the vast realm of these (to us) invisible potential relations which give character and quality to all our common life experience.

When these inarticulate relational feelings enter largely into our thoughts, our minds carry an immense horizon with them, and it is doubtless to their presence that all the great productions of genius in every department of human interest are due; and they seem to bear the same relation to the definite facts of our life that the overtones in music sustain to musical sounds. Without them, our music would be little better than mere noise. So in the case of thoughts: the hard, dry facts, the mere noise, of our common life, become transfused by their influence "into something new and strange," and bathed in the "light that never was on sea or land." They constitute the halo and charm which bathes all the objects of the happy youthful mind in its freshness and vigor, but which contact with the stony facts of after years too often dispels. Though these conscious states in the mental stream of our life are thus inarticulate, they are none the less specific states, as is shown by the fact that our minds are capable of being thrown into innumerable "different attitudes of expectancy, although no definite object is before it in any one of the cases," as when we try to recall some name, circumstance, or thing we have forgotten, where the mind designates the difference

Digitized by Google

when no definite image yet exists by which to designate it. Although these conscious states are thus indefinite, they have "a nature of their own of the most positive sort, as in our *intention of saying a thing* before we have said it." It is an entirely definite intention, distinct from all other intentions, but hardly any of it consists of definite sensorial images, either of words or of things, but only the anticipatory intention. These mental states must be described "as in large measure constituted of *feelings of tendency*, often so vague that we are unable to name them at all."

Prof. James' account of these relational feelings, this unexplored region of human sentience, is not any theoretic or metaphysical speculation, but consists of *scientific facts*, with an infinite perspective of suggestiveness, and in the writer's estimation is the most important contribution to psychological science that has been made. These relational states of consciousness that constitute, as it were, the atmospheric portion of our sentient life, have found utterance and expression in all language, art, poetry, music, and literature: indeed, they form the principal factor in all these domains of human interest, and constitute the essence, the charm, of all excellences and triumphs of genius in these wide domains; but they have never before been brought out as facts for scientific inquiry, and formulated with the more palpable facts of our common life.

FRANKLIN SMITH.

JOHN RICHARD GREEN.

Mr. Green's lately published *Conquest of England* contains certain prefatory pages that will be read with a more human interest than any that succeed. They are written by his wife, to whom we are indebted for the publication of the accompanying book. Here was evidently a marriage of true minds. Mr. Green was already forty years old when, in 1877, he entered upon this relation which made his last five years, though he was battling with the disease that finally overmastered him, the happiest of his life. Alice Stopford Green entered with perfect sympathy into her husband's work. She held him back from death with wise and patient care, and her intelligent assistance added immensely to the effectiveness of his historical labors. It may be doubted whether either his *Making of England* or his *Conquest of England* would have appeared, if Mr. Green had remained a bachelor until his death. In seeking to relieve her husband from the responsibility of work which was not exclusively his, she is obliged to state the number and the nature of her contributions. Chapters seven and eight were left in a wholly unfinished state. The materials for them had not even been drawn into any consecutive order. For their order and naming—"The Great Ealdormen," "The Danish Conquest"—the wife is responsible. We should not have suspected any hand but the master's, if we had not been told. Here and there, in other chapters, she has written a few paragraphs; but always, so far as possible, she has used her husband's words. Thus, in describing the character of Godwine, she availed herself of certain rough-pencilled jottings not framed into sentences; but the passage, as it stands, has an easy, generous flow, and is entirely characteristic of her husband's manner. For completeness, sake, a few passages have been taken from the *History of the English People*.

The circumstances which attended the writing of the book, as detailed in the preface, are convincing that the assistance rendered by Mrs. Green to her husband's work after his death was but the smallest part of all her help. Her preface is an interesting chapter in the history of the sovereignty of mind. A history of England down to the Norman conquest was the original object of his historical studies. Happily for the general public, he was drawn away from this to write his *Short History of the English People*,—a book that will remain his most significant and characteristic contribution to the historical writing of our time and the most valuable history which any Englishman of our time has written. Before its publication, it had been twice almost wholly rewritten; and the public tide of satisfaction had not reached its flood before he set about to rewrite it again, and expand it. Hence, the *History of the English People*. It has greater volume than the *Short History*, but not as much momentum. It is to be regretted that no popular edition of the *Short History* has been presented to the American public in a readable and handsome form. Nevertheless, it has been widely read and with great satisfaction. Years ago, sixty thousand copies had sold in England, every one of them contributing to strengthen national sentiments of honorable pride.

The impression left by the *Short History* and the *History of the English People* was that Mr. Green was more remarkable as a writer than as an historical student. Here were bold and brilliant generalizations, admirable characterizations of institutions and of men, a happy seizure on the most salient and interesting and important points, with a nice sense of balance and proportion. If he did not, like Macaulay, seek to make his history "as interesting as a novel," he sought to make it easy and pleasant reading. He wrote in order to be read. But the best judges knew that he was something more than a most brilliant popularizer of the unreadable Dryasdusts who had sowed that he might reap. His latest works, written in pursuance of his original plan, show that he was as passionately anxious to acquire the fullest possible knowledge of his subject as to give it noble and engaging literary form. In the *Making* and the *Conquest of England*, he takes his place with such great original investigators as Stubbs and Freeman, showing a patience and a judgment equal to theirs.

Having completed the four-volume *History of the English People*, he returned to his original scheme of work. But, in 1881, a violent illness convinced him that he had not long to live. Yet "touched with that impassioned patriotism which animated all his powers, he believed that before he died some faithful work might yet be accomplished for those who should come after him." "Thus, under the shadow of death, the *Making of England* was begun. During the five summer months in which it was written, that shadow never lifted. It was the opinion of his doctors that his life was only prolonged from day to day, throughout that time, by the astonishing force of his own will, by the constancy of a resolve that had wholly set aside all personal aims." Making the most of every easier moment, he was nevertheless uniformly patient when excessive pain or weakness compelled inaction. Unable to hold a pen, he resorted to dictation, now for the first time learning this difficult art. It served him also for the correction of his proofs and the entering of references to his authorities. With growing weakness there was no lowering of his ideal. Much of the *Making of England* was rewritten five times. The book was published in the fall of 1881; and Mr. Green lived through the winter of 1881–82 at Mentone, and came back to England in May to take up again his work. In the course of the summer, eight chapters were written, bringing the history down to the Danish Conquest. But these were no sooner printed than he cancelled them, and set about rewriting and expanding them, with what result the *Conquest of England* shows. Its first chapter, a splendid generalization of the social and political conditions in the time of Ecgberht, was his last work; its closing sentences the last he ever wrote with his own hand. It was a moral enthusiasm that enabled him to conquer from the domain of death so many precious hours. His single object was to show his fellow-countrymen that they were in honor bound to prize and purify the liberties that had been so patiently and slowly won.

Talking of epitaphs some years before his death, he said, "I know what men will say of me: '*He died learning.*'" And well they may, for it was literally true. But with this should be conjoined the words of the great Alfred, whose career and character make the most shining chapter in his latest book,—"So long as I have lived, I have striven to live worthily." The engraving of his face is in exact accordance with our knowledge of his character. It is wonderfully pure and fine. It is a summons to the pursuit of lofty and ideal ends.

JOHN W. CHADWICK.

UNITY IN LIBERALISM.

One must have a wise theory of life, or he will be lamentably liable to fall into pessimism when viewing particular facts. We have heard it remarked that the speeches in commemoration of Keshub Chunder Sen were often inconsistent. They were.

Take the greater number of liberal speakers on religious or purely mundane topics, and most people will find inconsistency in their composition, and much more will it be found when the different speeches delivered at a liberal assemblage are compared. Conglomerate is the most friable of rocks; yet of conglomerate, by the annealing processes of nature, granite, the hardest and most compact of extended geologic formation, is produced. Why this? The pebbles which compose conglomerate have the hardness and other enduring qualities which have enabled them to preserve their individuality through the casualties of time.

When enduring qualities meet either in the material or the ideal, one cannot give way to the other. There must be clashing and cutting. Their struggle, the necessity they are under to find or adjust for themselves harmonious relations, makes the discordance that is,—aye, the inconsistencies and absurdities that appear. But all this is a sure sign that the gems of mind are mingling.

It is Draper who says (quoting from memory), "To a contemplative mind, the most awful spectacle, after that of the destruction of civilization, is the breaking up of a religious system." The moral revolution that we are now undergoing is most profound. A *résumé* of its effects "must give us pause." But we anticipate as its result the glorious triumph,—the triumph of humanity.

Moral ties are fast being broken. There is intellectual and moral anarchy. Nor, alas! has the climax been reached. The combat is but waxing; the issue, Is dogma or is reason to be first? or, which is the same, Is might or is right to determine the conduct of men? Is intelligence the child of morality, or is morality the child of intelligence? The Church insists the former. Free Religion does not.

Progress consists in raising and maintaining new issues. These will conflict with each other as well as with older ones. To comprehend their *raison d'être* will perplex the most advanced individual; but, if he be wise, he will attach much importance to the defects of the lenses through which he perceives: he may refuse admission or acceptance, but as firmly will he refuse final judgment.

It is the Latin poet Lucretius, the Epicurean, and "wisest of them all," who speaks of "standing

Digitized by Google

on the vantage-ground of truth, and witnessing the wanderings to and fro of foolish men below." He calls it a "supreme pleasure." To me, the reflection is profound sadness,—that, having no certain knowledge of truth, our poor intelligence is doomed to wander, wander ever.

However, the genius of inquiry has not a barren occupation. It has a most fruitful one. In this wandering, all relative truths have been discovered; nay, for this wandering has given birth to the more general truth that we must be satisfied with the relative truths. In sooth, intelligence wanders no longer, but has organized a scientific search for truths, not truth. That is the wisdom of our age.

F. H. BERNARD.

PRIESTHOODS.

All priesthoods are essentially the same in their functions and pretensions, no matter what may be the religions whose officials they are. They are and always have been orders of men set apart for what are called *sacred* offices. They claim to be the special representatives and vicegerents of the Most High, to speak and act in his name and by his authority, to be the organs of his will. Priesthoods generally claim to be the interpreters of inspired documents, which constitute their credentials, and which are called "Holy Scriptures," or the words of God. If their claim is allowed, of course all other forms of authority are inferior to theirs, are merely civil and human, while theirs are infallible and divine. All the Bibles which have been handed down to the present age are full of the words and deeds of God or gods, and of subordinate supernatural personages, such as angels, for instance. In primitive times, most of the leading families and great personages claimed to have been of divine descent, to have been of more than mortal lineage. Such divinely descended families furnished the kings and high priests, who domineered with unquestioned and absolute sway over their ignorant and credulous fellow-men.

In these modern times, the only persons we know are human, and all the institutions and officials of our day are human and of human device and origin. The distinction between sacred and profane is a badge of primitive barbarism, and it is in full force only in communities sunk in ignorance and superstition. Although they may be living in and breathing the atmosphere of the world of to-day, they belong morally and mentally to primitive barbaric times.

The Mormon priesthood is a reproduction of Mosaism or of the Mosaic theocracy in this republican age and country. It was by no means an invention of Joseph Smith, but a plagiarism from the Hebrew Scriptures, of which the Book of Mormon is a gross, palpable imitation. In this late age of reason, Smith undertook to play the part of a Moses or primitive priest or prophet, to represent himself as the direct organ and mouthpiece of Deity. In the days of Moses, law-givers and prophets always professed to act under supernatural guidance, to be in intimate relations with Deity, and always affirmed that the laws which they promulgated were dictated by Deity.

The Mormon prophet flourished a good many ages too late to have his claim of divine inspiration generally credited, even by those ready to believe in the inspiration of Moses. The Hebrew law-giver looms vaguely and gigantically through the mists of backward time, while the founder of Mormonism is near enough to the observer to be closely inspected and understood. Hence, he was denounced as an impostor and humbug; while multitudes go on believing in his Hebrew prototype, Moses, without the least difficulty. But, after all, there is a percentage of mankind, even in these enlightened times, who take stock in Smith and the line of prophets that have succeeded him. So that the theocracy which he founded is becoming more and more of a substantial fact in Utah and further West. The Mormon theocracy is of course utterly and radically un-American and anti-American. It is governed not by the will of the people, but by the alleged will of God, as made known to the Mormon priesthood.

The Roman Catholic Church is a similar theocracy, only its spiritual head is not an American, but an Italian, who resides thousands of miles away from our shores. He is the official earthly vicegerent of God; and, as such, his will, in the belief of his followers, should override not only the will of the people in their sovereign capacity as the collective rulers of the United States, but the wills of all other civil rulers, personal as well as collective.

While the Mormon priesthood have colonized their followers in a part of the continent by themselves, having brought an immense wilderness under cultivation by the industry and enterprise of their adherents, the Roman Catholic priesthood have invaded our old States with their followers and filled our cities with poverty and ignorance, not to say crime. One of the religious orders and one of the archbishops of the Roman hierarchy have been guilty of a criminal conversion of vast sums of money intrusted to them for safe-keeping by poor, hard-working, credulous laymen of their religious faith. This Republic finds itself—*nolens, volens*—cut up into episcopal and archiepiscopal provinces with spiritual princes lording it over them, which princes are the vicegerents and representatives of the god of the Vatican who reigns in far-away Rome. His priests on this republican soil denounce in their journals our sister European Republic of France, and decry and defame all the great popular leaders and liberals of the various European countries. The Roman Catholic hierarchy have commenced an open and undisguised war against our system of popular education, which is the keystone of our republican arch, with the purpose of establishing a priestly system of education which shall indoctrinate the minds of all young Roman Catholics with a hatred of popular democratic rule and of all secular, rational enlightenment.

The Roman Catholic hierarchy, like the Mormon hierarchy, are determined to keep their people separate from and unassimilated with the great mass of the American people,—in other words, to keep them Roman Catholics rather than suffer them to become Americans. Let the Mormons become as numerous as the Romanists are, and take a hand in politics, and the demagogue and average Congressman will have the same tenderness for the Mormon Church which he now has for the Roman Catholic Church. Hierarchies of whatever name are the mortal foes of a popular sovereignty such as that of the United States.

CLEVELAND COMPETES WITH BOSTON FOR SLUGGERS' HONORS.

The city of Cleveland aspires to be recognized as the literary capital of the West, as Boston is of the East. It is evident, too, that it means to compete for Boston's recently won honors in the high art of fist-fighting. The papers report that one evening last week, at Cleveland, from three to four thousand people assembled to witness a contest between two sluggers. Although it was called a "soft-glove fight," it was a very brutal affair. The Cleveland evening *News* says: "After one of the brutes was knocked head over heels over the ropes, he was lifted up into the ring, fanned and wiped down, and compelled to stand up before the other brute and undergo another pommelling. This was kept up until the weaker brute was completely exhausted, and compelled to give up from sheer loss of strength. The two men were clinched about half the time; and the colored man indulged in butting, biting, and gouging as long as he had strength enough to come up to time." The same paper states that one-fourth of the audience was composed of "boys from fourteen to twenty years of age"; and hundreds of others stood at the door, waiting for reports of the fight. What must be the effect of an exhibition like this on boys, when they see it wildly applauded and carried on in the presence and under the protection of the police? Detailed and disgusting descriptions of this fight were published in leading journals of the West, and in journals which, to our knowledge, have declined to publish notices of free-thought lectures, on the ground that they were immoral in their tendency. Of such revolting exhibitions, the Cleveland *Leader* says with truth: "They cultivate low, brutal instincts, out of which grow all criminal propensities. They form the approaches to crime, and create murderers, highwaymen, burglars, and sneak thieves. Some $5,000 were divided between the two plug uglies who slugged each other Monday night; and, right here, we have a tempting allurement to many boys growing up to manhood. If they can make one, two, or three thousand dollars in a few minutes by slugging, many of them will think it more profitable than to learn a trade or to seek a living in some legitimate business. Their attention will be given to the cultivation of the muscle, for a base purpose, rather than to any honest pursuit. Their associations will be grovelling; and, on arriving at the age of manhood, they will naturally turn up in the criminal classes."

We notice also that the same papers report that, at a recent monthly meeting of the Cleveland clergy, a portion of the time was devoted to discussing "Dancing in the Public Schools." It was denounced as injurious to morals, and resolutions were adopted requesting the Board of Education to put a stop to the practice. The Cleveland *Herald* is moved to make the following remarks on the subject: "It is a fact that the children dance, but that they incur any danger of having their moral perceptions blunted thereby is hardly possible. The dancing of boys and girls together is strictly prohibited. The art Terpsichorean is cultivated in the main hall of the High School Building, so that the city's property interests are not endangered. The boys dance together one day, and the girls another. The exercise is healthful, and is especially beneficial in winter, when the opportunities for outdoor exercise are limited. In the chaste, poetic language of Sergeant Tillman Joy, 'Let 'em resoloot till the cows come home; but let the children dance.'"

We do not know but that the Cleveland clergy may have been making a special effort to put a stop to such a demoralizing public spectacle as the sluggers' fight. But we would respectfully suggest that they might safely allow this "gnat" of the children's dancing to pass, while they turn their whole energy to abating the "camel" of the slugging ring.

EDITORIAL NOTES.

MR. ROBERT STOUT, in a business letter, writes from Dunedin, New Zealand: "*The Index* is much admired here, and we take a deep interest in all liberal movements in America."

BY the statistical report of the last German census, the Protestants number 28,331,152; Catholics, 16,232,771; other Christians, 78,031; Israelites,

Digitized by Google

561,612; persons of other religions, 366; persons of no distinct confession, 3,138; finally, those without any specification as to their confession, 27,111.

THE *Religio-Philosophical Journal* of Chicago publishes one of Mr. Salter's recent ethical discourses, and says: "Mr. Salter's lecture, published on another page, is worthy of careful reading. Our city readers will do well to go and listen to this earnest speaker occasionally. He lectures every Sunday morning at Weber Hall, south-west corner of Wabash Avenue and Jackson Street."

IN a paper published at Des Moines, a "gentleman of education and experience" advertises that he wants employment in writing speeches for members of the Legislature. He states that he will, on short notice, prepare addresses on any subject desired. His terms are: for a ten minutes' speech, five dollars; and, for each additional five minutes, two dollars. "Satisfaction guaranteed," and "confidence observed."

THE crows of Connecticut are credited by the Hartford *Times* with knowing when Sunday comes; and, in evidence, the *Times* offers the testimony of an old Connecticut farmer, who apparently expects people to believe him, when he states that he "used to live near a swamp, where thousands of crows made their roosting-place, and, early in the morning, they used to start for the mountains for their food. And I was often out with my gun trying to get a shot at them. Week days, they beat shy of me, and I could seldom get a shot at them; but on Sunday morning it was different. Then, they would fly low down and close to my house, their wings almost flapping the ridge-boards of house and barns. Do crows know when it is Sunday? Of course they do." It is a pity Darwin had not been made aware of this effect of the environment of "blue laws" on the intellectual development of birds.

THE *Christian Union*, commenting on Joseph Cook's remarks on the new Congregational Creed, says: "In preparing for this address, Mr. Cook appears to have relied upon 'rumor' to furnish him with information. Intuition, he has heretofore told his hearers, is the basis of theology. Perhaps. But it is not the basis of historical theology, and personal observation leads us to doubt whether his reports of modern English sentiment are any nearer the truth than his history of the adoption of this creed by a band of seven." The orthodox *Congregationalist* even feels compelled to remark editorially: "The present writer attended all the sessions of that Commission, and in simple justice to the truth is constrained to declare that Mr. Cook's insinuations, both as to its methods and acts, were destitute of fact. To candid minds, it need hardly be added that his characterization of the formula itself was obviously unjust."

A CHAPLET.

The rose of early summer lies
Beyond my meed and share:
The blossom from my longing eyes
Hath found a kindness heaven-wise,
Denied to human care.

"How helpless o'er thy grave, though true
To early plight, I stand!
O darling, hast thou found aught new,
As thou wert strangely led to view
Some sweet and alien land?"

The rose of early summer lies
Beneath the winter's snow,
And none with wisdom's keenest eyes
Can trace the secret of the skies
Or tell what I would know!

HORACE L. TRAUBEL.

The Index.

BOSTON, MARCH 27, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

CHRISTIAN FALSEHOOD.

Rev. J. P. Newman, now of New York, and formerly the pastor of Gen. Grant in Washington, recently delivered a sermon from which the following is an excerpt:—

"Show me the infidel or man of depraved life who has ever produced a great mechanical invention or made a great scientific discovery. I challenge you to do so."

It is immaterial who uttered these particular words, for the same sentiment is repeated weekly from over ninety thousand Christian pulpits in America. If the sentence quoted means anything, it means that no man has ever had the genius and unselfishness to be able and willing to benefit his fellow-men, who believed in natural laws and who did not believe in the supernatural; it means that good men always believe in a ferocious Omnipotence which creates men to curse them and it means that the dogmas of a Church always changing are more elevating than the never-changing laws of science. Until man invented a sharpened stone with which to slay his game, a mortar in which to crush his wheat and clothes with which to cover his nakedness he was a mere animal. The word "civilization" would be without meaning except for inventions. Were the Indians who invented arrows, the cave-dwellers who invented stone hammers and the lacustrian architects who invented pile-driving, given their genius as a reward for believing in miracles? Did Aristotle discover spontaneous generation, Ptolemy proclaim the rotundity of the earth, Euclid formulate the science of geometry, Archimedes invent the screw and the Egyptians elevate monoliths upon the great pyramids, because they believed in inspired prophets or in sacred writings? All these men and people lived and passed away before the Christian religion was formulated; and they were heathen, pagans and infidels. The shoes which Christ wore and the tools with which he plied the carpenter's trade, the nets with which his apostles caught fish and the boats in which they sailed upon Lake Gennesaret were similarly the inventions of infidels.

So much is to be said of the evil effects of the kind of teachings under discussion that no complete answer to them can be attempted in the brief space of a single paper. Happily religious superstitions are declining; but singularly, in proportion to their decline, inventions are multiplying and the condition of mankind is improving. This is, not because dogmatists like Mr. Newman have voluntarily relinquished any of their power to keep men in ignorance, but because sceptical inquirers and self-enfranchised men have partially destroyed the tyranny of ecclesiastics, as they have destroyed the tyranny of civil rulers. By them, machinery has been invented, science has been developed, systems of chronology have been impartially compared and the more general rights of man proclaimed in statutory laws the beneficial influences of which enforce allegiance even from those who oppose them. Christian dogmatists have ever insisted that doing to others as they would that others should do unto them, that fidelity, uprightness, philanthropy and justice were insufficient to protect man from eternal punishment and that still he is involved in great crime,—the crime of not believing in the inspiration of the Scriptures and the divinity of Jesus Christ! To sustain this unnatural declaration, they referred to a compilation of Jewish and Assyrian history, the most of it relating to the slaughters of armies, the amours of kings, the slavery of women and the offering of sacrifices, which they called the history of the entire world and which they asserted was the inspiration of God. As to the cosmic history of the universe or of this earth, not one of the writers of the Old Testament knew anything either of the planetary or sidereal systems or of the existence of the American Continent. Then, from one hundred to two hundred years after the birth of Christ, portions of the Septuagint Bible were supplemented by the writings of Paul, to which were attached mostly fabricated and garbled statements popularly attributed to the four Evangelists, and made to fit the theories then generally current. A discussion of these theories however, led to many changes. There were forty-five councils of the Church in the fourth century alone to define what men should believe. The Trinitarian doctrine was promulgated in the second century, but not accepted until 325; discords were engendered; Arius seceded; the most terrible wars recorded in history ensued, nearly exterminating the love for learning and gravitating mankind into that fearful anarchy of fanaticism, tyranny, and ignorance which culminated in the Dark Ages and which for more than one thousand years cast the darkest mantle over the human intellect the world has ever known.

The controlling spirit of the Christian religion was and largely still is, to teach doctrines founded upon special Providences, untruthful history and unnatural assumptions of a flat earth and fiat creations. Knowing absolutely nothing about these things, the early writers of what is now the Bible constructed the theory given in Genesis, which was an error in every part. This was not crime: it was ignorance. But at this day to inculcate a faith founded upon the baseless fabric of antiquity is a crime of large dimensions. The invention of language, symbols for writing, implements of husbandry, tribal associations, the habits of traffic and some scientific knowledge, necessarily preceded any idea of sin, atonement, future punishment or inspired teaching. The mere mention of these simple facts is a sufficient contradiction

Digitized by Google

to the absurd theory that faith controls or precedes genius. Being known of all men they exhibit palpable dishonesty on the part of those who utter such sentiments.

But we must go a step further. The magnetic needle was in use by the Chinese 1500 years before Christ; bricks by the Assyrians, 2000 B.C.; fine linen was wrapped around royal mummies 4000 B.C.; the great geometrical pyramids bear a still older date; beautiful paintings and indestructible colors hung on the walls of the Chaldean kings and are still exhumed from among the ruins of Babylon, Thebes, Karnack, and Pompeii while the pillar of Rameses was carved by tools invented more than 12000 B.C. Each of these inventions and discoveries was made by infidels. When we refer to the more advanced arts and discoveries, we find that clothing, nails, houses, looms, wagons, pottery, architecture, ships, etc., were in use centuries before anything was formulated respecting the Christian faith. Specific gravity was discovered by Archimedes, the steam-engine invented by Hero and the forcing pump by Ctesibius; while the rotundity of the earth was understood and discussed by such infidels as Hipparchus, Erasthones, Aristotle and Ptolemy prior to the Christian era. The Alexandrian Museum and Libraries contained schools of chemistry, medicine, dissection, mathematics, philosophy, history, zoölogy, biology, geography, and astronomy as well as eight hundred thousand volumes of writings. The authors of those stupendous works also lived before Christ and were infidels. Our lexicographers define "infidel" to be: "Disbelieving the inspiration of the Scriptures, or the Divine institution of Christianity; a heathen, a pagan, a Mohammedan; disbelief in the divine origin of Christ."

Instead of "no infidel has ever invented anything," I think it will be proved that but few inventions unless it may be the thumb-screw, the rack and the stretcher, have found their way to the use of man through Christian sources and that almost all discoveries have been coined in the brains of sceptics, infidels and antichristian men. It will be also found that, of all sects of religion which have existed, none has done so much to discourage and suppress art and science as the Christian sect. The very nature of a belief in divine revelation which denied the right of criticism, in the Mosaic history founded upon the unscientific geocentric theory that the earth is the centre of God's universe, in the fall of man through Adam's sin and in atonement through Christ, went far to destroy intellectual thought; and out of these confused teachings, it was easy for men to grow into the idea that anything taught by spiritual advisers must be true. Then sprung up a theology that it was impious to question antiquity, blasphemy to tolerate doubt and rank heresy to read a scientific writing, put in operation a mechanical device or in any manner improve the condition of God's creatures. Thus investigating science, giving medicine to cure disease, cleansing cities to prevent pestilence, irrigating the soil to promote the growth of crops, experimenting with chemicals to discover original elements, studying the heavens to ascertain the relation of other worlds to the one we inhabit, inventing machinery to lessen human labor and printing books to extend intelligence were pronounced to be thwarting the ways of God; and they were punishable by confiscation of property, by tortures in this world and by threatened eternal suffering in a world to come. The doctrine that "ignorance is the mother of devotion" soon became the mainspring of Christianity. And well the Church applied the essence of that doctrine to the suppression of learning, the destruction of libraries, the prohibition of scientific experiment and the discouragement of inventions upon one hand and the multiplication of religious ceremonies upon the other. Quite soon, these things produced a tyranny and subjection more degrading than the pagan world had ever witnessed. In the place of medicine were shrine cures; in the place of science were miracles; and in the place of natural explanations for lightning, thunder, earthquakes, plagues, the revolution of the earth, changes of seasons, comets, eclipses and celestial phenomena, it better suited the policy of the Church to ascribe them to the special dispensations of Deity and their control to the interposition of ecclesiastics. Was it for such ignorance as manifested itself throughout the Old and New Testaments and in the creeds of the founders of the Christian religion, to indict laws for more enlightened ages? Are agnostics to be defamed and insulted, because we array antiquity in its true light and formulate a better religion growing out of better knowledge?

When by the chances of war, the Christians drove the Mohammedans out of Spain, they converted the Astronomical Observatory at Seville into a bell tower, not knowing its proper use. When in 650, Pepin of France sent to Paul I. of Rome for useful books, there were but two non-ecclesiastical books to be found in all Italy,—a rude grammar and a work by Dionysius. Although the Alexandrian Library 200 B.C. contained globes and maps of the world as then known, the Christians disputed the rotundity of the earth down to 1492. During and following the twelfth century, the Church had sustained seventeen bishoprics in Greenland and its leaders well knew of the rotundity of the earth; yet it anathematized Columbus, because he proposed to circumnavigate the globe, knowing that such a demonstration would upset its theory of a flat earth. Do inventions owe their development to the promoters of such an institution Mr. Newman? From the time of the first Christian emperor about 320 A.D., until that of Da Vinci, about 1500, it will be difficult for Mr. Newman to name any considerable invention or discovery made by a Christian, or to name a single one which did not cost its promulgator persecution or death. Hypatia was murdered by the mob of Bishop (since the sainted!) Cyril, the flesh scraped from her bones and thrown to the dogs, for teaching mathematics and astronomy in the Serapion Temple at Alexandria in 415; Gerbert, afterward Pope Sylvester II., who had been educated at the Mohammedan schools in Spain, sought to introduce inventions into Italy, but in 920 he was poisoned as a necromancer; Roger Bacon, inventor of spectacles about 1260, languished in prison for ten years and on his death-bed wrote, "Because these things are beyond your comprehension, you call them works of the devil. You theologians abhor them as productions of magic"; Abelard escaped by flight from being burned in the twelfth century because he wrote of a single God; Arnould was burned in 1155 for saying that the Pope ought not to hold civil power. Printing was invented by the Chinese in the sixth century and introduced into Christendom by Gutenberg and Faust about 1450, and, to this day, Faust is represented as in league with the devil. In the early days of Christianity, St. Polycarp, writing of scientific instruments, projected the doctrine that "in these monstrous demons is seen an art hostile to God." Copernicus dare not, until on his death-bed in 1543, publish his treatise, written thirty-six years previously, proclaiming that the earth revolves around the sun, thus destroying the inspiration of the Pentateuch and the teachings of the Church, by establishing the heliocentric theory that the sun and not the earth, is the centre of God's universe. Galileo was persecuted to the day of his death in 1642, for sustaining the Copernican theory and for inventing the telescope, "with which to pry into God's affairs." The astronomer Bruno and his writings were consumed in the same fire at Rome in 1600. Were the promoters of these persecutions the men to foster inventions and science, Mr. Newman? You and others within Protestant denominations, will doubtless reply, "Those were Catholics." Yes, but down to about 1520, all Christendom was Catholic; and to this day, out of about three hundred millions nominally Christian people, less than one-third of the number are Protestants. There are therefore about twelve hundred million people on the earth still in ignorance of the Christian religion. A vast number with their predecessors to be suffering tortures for the crime of ignorance! But I can perceive very little difference between the fanaticism and intolerance of Catholics and Protestants. In 1553 Servetus, a Spanish chemist, translator of the Bible and real discoverer of the circulation of the blood, was burned by Protestant John Calvin's Council at Geneva and his writings were also burned in the same fire. The Royal (scientific) Society of London was established in 1662. Its investigations were denounced by the Episcopal Church as "destroying established religion and uprooting ancient learning." In 1700, Leibnitz of Leipzig, expressed his opinion of the immortal Sir Isaac Newton in the following manner: "Newton has robbed the Deity of some of his most valuable attributes and has sapped the foundation of religion." Presbyterian John Knox sanctioned the murder of Archbishop Beacon in 1546. In 1685, the English Parliament enacted a law that, "whoever preached or heard in a conventicle, should be punished with death and the confiscation of his goods." Scotch covenanters were "tortured by crushing their knees in the boot" (a Christian invention); "women were tied to stakes on the sea-sands and drowned by the slowly rising tides"; "many were branded on their cheeks and shipped as slaves, because they would not attend Episcopal worship." "For two centuries after Luther, the Elbe ran with human blood." Thousands of people were tortured, hung and burned for heresy by the Protestants in England and Germany; and numerous persons were tortured and burned as heretics and witches in the Colony of Massachusetts during the seventeenth century. Have the Protestants been the promoters of freedom of thought? It is but one step from religious zeal founded upon such a terrible doctrine to frenzy, arrogance and coercion. Original sin and vicarious atonement bear the same crop of intolerance wherever firmly anchored. The Presbyterians of Scotland are at this day not less fanatical and superstitious than the Catholics of France. Prof. Wm. Draper wrote as follows: "From the third to the thirteenth century, Christianity gave to the world no scientific man." Buckle said: "For eight centuries there were not in all Christian Europe four men who dared express an independent opinion." The Inquisition was but a natural result of a superstitious terrorism clothed with hierarchical power. Constantine, the first Christian Emperor died in 337,—a true patron saint of those who succeeded him. To gratify his ambition he murdered his father-in-law, then his wife's brother Licinius, next his nephew and finally his wife Fausta; and to secure aid in extending his dominion, he protected the Christians. Constantine had been in his tomb but forty-five years when, in 382, Theodosius I. inaugurated the proselyting argument of compulsory belief by adopting the Holy Inquisition. And this monstrous engine for the suppression of independent thought was continued until 1598. Yet we

Digitized by Google

are told that the Christians never extended their faith by force. Under the benign influence of the Inquisition, men were not much given to inventing. If they succeeded in inventing duplicity enough to keep their heads on their shoulders they did well; for portions of the earth were by the Christians made as barren and desolate as the desert of Sahara. Millions upon millions of innocent men, women and children, were robbed of their subsistence and put to horrible deaths. It is estimated that over one million persons perished during the early Arian schism; one million in the Carthaginian struggles; seven millions during the Saracen slaughters in Spain; five millions during the eight Crusades; two millions of Saxons and Scandinavians; one million in the wars against the Netherlands, Albigenses, Waldenses and Huguenots; and one hundred millions during the Justinian wars, saying nothing of minor conflicts, secret murders and the extermination of from twenty to thirty millions Peruvians and Mexicans. The great and good King Charlemagne baptized and beheaded four thousand five hundred Germans in a single day. To carry on the luxury of decimating mankind and at the same time support armies of ecclesiastical beneficiaries in easy livings, sin indulgences and shiploads of sacred relics were sold at various prices to those who could pay for them and eternal salvation was promised to those it was found necessary to bribe or conciliate. These must indeed be beautiful inheritances of which to boast. They are however, the legitimate fruits of inspired falsehood.

The foregoing are some of the inventions of Christianity from the fourth to the fifteenth century. In spite however, of their retarding influences the world progressed outside of and only outside of Christian countries. While Christian ecclesiastics were fabricating apostolic heads, true crosses, and sacred vestments,—

> "Holy shrines and holy bones,
> Holy clouts and holy stones,"—

and their necromancers were seeking after the elixir of life, transmutation of gold out of base metals and transubstantiation of the body of Christ the more scholastic Jews and Mohammedans were busy with chemistry, mathematics, astronomy and other scientific and practical matters. Let us bear in mind that the Chinese, Persians, Chaldeans, Jews, Egyptians, Greeks and Romans were civilized peoples before the Christian era. Farming implements, the sickle, flail, grinding-mills, water-wheels, cloth, pottery, iron utensils, metallurgy, writing, schools, arches, architecture, colors, painting, ventilation, mephitic gases, drainage, glass, steel, sugar, vinegar, medicine, navigation, geometry, jurisprudence, titles to property, civil government, the globular form of the earth and catalogues of the stars, etc., were then known. It is probably true that the Christians did not for fourteen hundred years improve upon or add to the existing discoveries; while their frenzied and pauperizing conflicts during the dark ages cost the world a knowledge of many valuable arts such as malleable glass, Damascus blades, porcelain, the mechanical devices by which the huge blocks of stone were raised upon the pyramids, etc. The Chinese invented paper in the second and printing in the sixth centuries; the Scandinavians discovered Greenland in 876; the Mohammedans made great advances in chemistry and were the discoverers of syrup, elixir and the pendulum in the seventh century, of bleaching-powder, morocco leather and the thermometer in the tenth century, of alcohol in 860, phosphorus about the same date, gunpowder in 890 and the mariner's compass in the eleventh century. The streets of Cordova, New Grenada and other Mohammedan cities, were better paved, lighted and policed in the tenth century than were Paris and London in the fourteenth. For several hundred years there were no seminaries where science, chemistry and philosophy were taught between Mohammedan Seville in Spain and Mohammedan Bagdad on the Euphrates. When in the eighteenth century, lightning was harnessed to a kite and thereafter the terrifying thunderbolts of Jove were commissioned to act as the messengers of man, the discoverer Franklin said, "There is nothing that takes place which cannot be accounted for upon natural laws although theologians have retarded their discovery." Is Dr. Newman answered? If not, I will ask him and others to name any practical benefit which has been developed through the philosophy of any theologian. At the same time, permit me to ask of theologians to contrast and measure the influence upon the world of such agnostics as the following: Confucius, Aristotle, Roger Bacon, Descartes, Copernicus, Newton, Goethe, Cuvier, Voltaire, Gibbon, Hume, Franklin, Jefferson, Paine, Lyell, Buckle, Strauss, Greeley, Darwin, Haeckel, Croll, Draper, Huxley, Holmes, Garrison, Phillips, Peter Cooper, Herbert Spencer, and Ralph Waldo Emerson. I think that the potential influence of such men has been felt from the thatched cottage to the kings' palace, from the wayside mendicant to the home of the merchant prince, from the enslaved and helpless female of the Egyptian harem to the ennobled woman of the nineteenth century, from the stalled ox on quagmire roads to the whistling steam locomotive, from the nomadic tent where a knowledge of writing was a liberal education to the astronomical observatory where man receives teachings from a hundred million worlds which by fixed and eternal laws revolve in immeasurable space and from the feudal laws of a tyrannical landlord within a dozen square leagues to the formation of the Constitution of free and liberty-loving America guaranteeing liberty to fifty million people.

Would it not be more decent, respectable and honorable for clergymen to step out of their swaddling clothes and nursery superstitions and teach the truth? Intelligent men everywhere are repudiating their cant and with much charity attribute it to prejudice and ignorance. But the number of intelligent men who charge them with wilful stultification and falsehood is already large and is rapidly increasing. In June 1879, Charles Darwin then seventy years of age wrote as follows: "Science has nothing to do with Christ, except in so far as the habit of scientific research makes a man cautious in admitting evidence. For myself, I do not believe that there ever has been any revelation. As for a future life, every man must judge for himself between conflicting vague probabilities." And just prior to his death, when near seventy-three, he replied to an inquirer: "I am with you in thought but I should prefer the word 'agnostic' to the word 'atheist.' . . . I never gave up Christianity until I was forty years of age."

BLYDALE.

ADDRESS ON WENDELL PHILLIPS.

BY SETH HUNT.

Read at a Memorial Service in Cosmian Hall, Florence, Sunday, March 9, 1884.

We have none of us come here expecting to eulogize in fitting terms the splendid gifts and noble character of Wendell Phillips, for this would require the silver tones and matchless eloquence of the great orator himself; but we have come to show our love, our admiration, and our gratitude toward the man who so magnanimously offered all that he had of brilliant talents, ripe culture, yea, even life itself, if need be, in behalf of human rights, whether for the liberty of the slave, the emancipation of woman, the claims of labor, freedom of thought and speech, the broadest free religious platform, or for the poor and oppressed of every nation and every clime. During the whole period in which Mr. Phillips was a prominent leader in the anti-slavery conflict, it was my privilege to be identified with that moral warfare, though only as a private in the noble army. For a large part of that time, I was favored with the personal acquaintance of Mr. Phillips, often listened to his unrivalled oratory, and always read those of his printed speeches that I did not have the good fortune to hear. In view of all the knowledge I have acquired in relation to the public and private life of Wendell Phillips, I am inclined to pronounce him, all things considered, the foremost man of all who have risen in America.

But I wish, on this occasion, briefly to notice a few of the criticisms of his character that have appeared since the death of our illustrious friend.

To understand Wendell Phillips, we must know the great principles by which his conduct was governed. One of those principles that he often enunciated and firmly believed in was the necessity of agitation in a republic. He said: "Republics exist only on the tenure of being constantly agitated. The anti-slavery agitation is an important, nay, an essential part of the machinery of the State. It is not a disease nor a medicine. No, it is the normal state,—the normal state of the nation. Never, to our latest posterity, can we afford to do without prophets, like Garrison, to stir up the monotony of wealth, and reawake the people to the great ideas that are constantly fading out of their minds." Here, in these words of Phillips, uttered thirty years ago, we have the explanation of his course in certain directions that some of his friends have criticised and misunderstood. He saw, for instance, great questions in political economy, in finance, that needed solution; and, in order to solve these great problems, he knew there should be the freest discussion. He therefore sided with the party that would be most likely to agitate those questions. Without approving of all the men or measures of any party, he threw the weight of his influence on the side that was most likely to stir up the people and create discussion. Rather than let the great ocean of society settle down into the dead calm that breeds pestilence and death, Wendell Phillips would let loose all the winds of heaven upon its surface to stir it into healthful life.

We have lately seen charges of inconsistency brought against Mr. Phillips, because at one time he would praise, and at another time sharply rebuke the same person. But we must remember that Phillips was not a politician,—not a servile partisan that feels bound to uphold a candidate, right or wrong. He praised when he could, and chided when he must. Is a parent inconsistent if he sometimes reproves and disciplines his child, and at other times commends and caresses him?

One critic speaks of Phillips as unable to grasp any question but that of anti-slavery, and describes him as groping about when the abolition work was done for some reformatory movement to battle for, but not having the wisdom or statesmanship to treat wisely the problems of the hour. It seems to me that this criticism is glaringly unjust. So far from groping in the dark for reformatory work, he, almost at his very entrance into the anti-slavery conflict, clearly foresaw other great questions, boldly advocated them, and, with remarkable forecast and statesmanship, anticipated and answered the objections that have since been brought against those reforms. Besides, never was a more erroneous idea entertained than that the anti-slavery reform was very simple and easily understood. The abolitionists soon found that the slave power, with its thousands of millions of dollars invested in human flesh and blood, had intrenched itself behind all the institutions of society, whether financial, commercial, legislative, judicial, or religious; so that the anti-slavery agitators soon found themselves confronted with many profound questions in science, in politics, in morals, and in religion. The nature and inherent rights of man, the authority of the State, the Bible and the Church, had to be scrutinized and determined. These great questions Wendell Phillips thoroughly investigated and most eloquently discussed in those marvellous speeches and lectures that have made his name famous throughout the civilized world.

We who are enjoying the precious privileges of this

Digitized by Google

free Cosmian Hall are greatly indebted to the labors and sacrifices of Wendell Phillips in behalf of free thought and free speech. And, to show that Phillips was a true Cosmian, perhaps I cannot do better, in closing this paper, than to make a quotation from his brilliant lecture on Daniel O'Connell. Speaking of O'Connell's religious toleration, Phillips says: "Learn of him, friends, the hardest lesson we ever have set us,—that of toleration. The foremost Catholic of his age, the most stalwart champion of Church, he was also broadly and sincerely tolerant of every faith. His toleration had no limit and no qualification. I scorn and scout the word 'toleration.' It is an insolent term. No man, properly speaking, tolerates another. I do not tolerate a Catholic, neither does he tolerate me. We are equal, and acknowledge each other's rights: that is the correct statement. That every man should be allowed freely to worship God according to his conscience, that no man's civil rights should be affected by his religious creed, were both cardinal principles of O'Connell. He had no fear that any doctrine of his faith could be endangered by the freest possible discussion. Learn of him also sympathy with every race and every form of oppression. No matter who was the sufferer or what the form of the injustice,—starving Yorkshire peasant, imprisoned Chartist, persecuted Protestant, or negro slave; no matter of what right, personal or civil, the victim had been robbed; no matter what religious pretext or political juggle alleged 'necessity' as an excuse for his opposition; no matter with what solemnities he had been devoted on the altar of slavery, —the moment O'Connell saw him, the altar and the God sank together in the dust. The victim was acknowledged a man and a brother, equal in all rights, and entitled to all the aid the great Irishman could give him."

MARRIAGE AND DIVORCE.

Extract from a Lecture delivered before Yale College Law School, March 15, by T. W. Curtis.

It was in New Haven, I believe, where the petition to Congress originated, asking for statistics in all the States on the subject of divorce. This is well, as far as it goes; but as to what the ultimate or next step should be there is nothing said. But when this information is obtained, what then? I hold that there are facts—now accessible to any one, in any State, city, or neighborhood—that will give ground for an opinion, and a very decided one, on this question by those, at least, whose minds are not indifferent to considerations of justice and morality. Here is an extract from a speech by Gov. Robinson, of Massachusetts, which may serve as a sample: "The array of facts is most striking, showing the facility with which the marriage bond is dissolved. The causes of full divorce have been increased from three to nine; and the party against whom it has been granted may now in all cases, after two years, marry again, even in the face of a record of shameless debauchery, brutality, and profligacy. Considering the ratio of divorces to marriages or to the population of the States, the increase in the number of divorces is alarmingly excessive. The evil is so threatening, the tendencies are so dangerous, that the protest of every thoughtful person ought to be uttered against the further destruction of the safeguards of the marriage contract and of domestic purity and integrity." And this lamentation, from the lips of a people's chief magistrate, over the eclipse of the virtues of home life, is from the very State whence hails the senator who is now seeking to amend the Edmunds bill for the purpose of making short and effective work of the reformation of the people of Utah. It would be interesting to know what Gov. Robinson means by "the safeguards of the marriage contract," and what by the "dangerous tendencies" that make "the evil so threatening."

It is not our divorce laws, I make bold to say, that are at fault, faulty as they may be. Our legislation on marriage throughout is inconsistent, unstable, defective. There is a great confusion of ideas as to the nature of the marriage bond, its origin and its sanctions. Catholic, Protestant, Shaker, and Mormon get their theories alike from the revealed will of God, while the rationalist derives his from the teachings of reason or experience alone. Marriage and divorce should be considered together, and the law covering the whole subject made harmonious, homogeneous, and scientific. All other essays toward the amelioration of the marriage state will prove futile. But the task before us is no child's play. It calls for deep study and manly effort, but more of common sense than book knowledge. It brings us face to face with several issues, covered by the one great issue of State secularization, the divorce of Church and State. Shall the ecclesiastical or civil power control marriage, and shall the laws be enacted by the States in their collective or separate capacity?

One of the signers to the petition relating to divorce, to which I have already referred, is Theodore Dwight Woolsey, who has written a work on Divorce, giving an historical view of it. An interesting treatise, yet its attitude surprises me greatly. It seems to concede the secular origin of marriage, and fails not to note the tradition that the first divorce which occurred in Rome was in the year 520 of the city. Yet it asserts that Christ, by his few words restricting the causes of divorce, threw an important element into our civilization! The work leaves undefined the limits of the power of the Church or the State over either marriage or divorce. I suspect that its author's mind is unsettled on this question of the relation between Church and State. Indeed, he remarked to me the other day, when I took the liberty of calling on him, that he would favor a mild form of union between the two. He saw nothing objectionable in the connection that now exists between them, of which he seemed scarcely conscious until I specified the manner of that connection. "It amounted to nothing." He evidently is of opinion that it amounts to something in Utah, for he thought Congress should be sustained in its present course of action. His work concludes with the view that it may be expedient to allow more than one cause for divorce, and for the Church to co-operate with the State in purifying and Christianizing the law of divorce.

President Woolsey's book, though by a learned and gifted gentleman, I cannot but regard as an equivoque throughout. And yet, after all, it but reflects the fluctuant state of the Protestant mind on this and cognate themes. The Catholic, the Shaker, the Mormon, who lay down the law and live up to it, I cannot but respect, however much I may differ from them. But what is the Bible doctrine on marriage and on divorce? The Old Testament does not agree with the New Testament. Christ does not agree with the apostles: the apostles do not agree with one another. But the most significant fact of all is the failure of the Scriptures to pronounce in favor of the monogamic ideal of marriage, or the failure of the New Testament to condemn the polygamous practices of the Old Testament. Luther favored divorce, and sanctioned polygamy on the authority of the Bible. And Henry VIII., who inaugurated the Protestant reformation in England, gave to New England the example of consecutive polygamy, by beheading one wife when he wished for another. And do not our congressmen, who expelled the Mormon delegate with four wives, worship in churches exempted from taxation, where men who had hundreds of wives and concubines are model saints, inspired of God? Do you suppose my conscience would allow me to speak of these men, who had a dozen or fifty wives where the Mormon has one, and a concubine for every wife, as inspired, and as men after God's own heart? Never! If I should, I would be compelled logically to admit that polygamy was one of the conditions of divine inspiration, or certainly no bar to it. It is a serious matter. Great issues are involved. The interests of the family are at stake. Home's foundations have to be laid anew. Your marriage laws as they exist are the foe of morality and wedlock.

CORRESPONDENCE.

TOY'S "QUOTATIONS IN THE NEW TESTAMENT."

Editors of The Index:—

In the book review column of a *quasi* religious journal, I find the following: "Prof. Toy demonstrates that the Beatitudes are to a considerable extent a mosaic of principles and teachings already familiar to readers of the Old Testament. Thus, 'Happy are the poor in spirit' is a summing up of various passages," etc.

It is singular that a scholar of Prof. Toy's standing should base his comments upon a mistranslation and perversion of the meaning of the original text. The correct rendering is, "Blessed in the spirit are the poor; for theirs is the kingdom of the heavens." And that this is the plain meaning of the text is further evidenced in Luke's report (vi., 20),—"Blessed are ye poor; for yours is the kingdom of God." Collateral proof may be found in abundance elsewhere in the sayings of the Master, and additional illustration in the Epistle of James.

As well might he demonstrate that the wretched distortion of the late revisers, "Glory to God in the highest; and on earth peace among men *in whom he is well pleased*," is a paraphrase of passages in the Old Testament which speak of God's being pleased with men. But, for all purposes of sound exegesis, what do such demonstrations amount to? They are simply specimens of false reasoning based upon a falsity. In this instance, I submit that the words, "*οἱ πτωχοὶ τῷ πνεύματι*" (literally, *the poor in the spirit*), cannot be construed and tortured so as to mean meek, humble, lowly-minded, etc. Such rendering is in no sense a translation; and, if such were the meaning, the third Beatitude would be tautological and superfluous. To attach the meaning of those words to the translation, "poor in spirit," and then to hunt up passages of similar purport in the Old Testament, in order to prove a parallelism, paraphrase, or plagiarism is "scientific" only in the sense in which our modern pseudo-scientists proceed,—namely, a false and arbitrary assumption and a resultant fallacy,—and is fully as "erudite" as the derivation of Middletown from Moses, done simply by dropping the "oses" and adding "iddletown." The field for such speculations is practically inexhaustible; and, with a vivid imagination and the help of a good Concordance, even an unlearned man can prove almost anything he likes. We can excuse much in sectarians who twist translated Scripture to suit preconceived notions, and base their creeds or damn us upon the testimony of the King James translators; but a scholar and a critic who makes so bold as to attempt to show that the Beatitudes are paraphrases, or thinly disguised quotations, and add little or nothing to the pre-existing stock of Hebrew ethics, should not be caught tripping in the first verse.

I have not yet read the book, and trust that the above is only an isolated specimen, and that otherwise Prof. Toy's essay merits the encomiums of the reviewer,—"a scientific exegesis," "wide and exact erudition," etc. J. F. M.

P.S.—In a critical discourse delivered before the Society for Ethical Culture, Prof. Adler condemns the founder of the Christian religion for advocating poverty of spirit!

No one should know better than Prof. Adler that "poverty of spirit" in the sense of poor-spirited, i.e., want of manliness or heroism, does violence to the original as well as to common sense. The phrase in a religious sense is also an absurdity and antagonistic to the whole teaching of Jesus Christ and that of his disciples, the constant tenor of whose exhortation is to be rich in the spirit. The worldly poor, however, were the objects of their most tender solicitude and the beloved of God: "Hath not God chosen the poor of this world *rich* in faith and heirs of the kingdom," etc.? M.

NEW YORK, March, 1884.

INSPIRATION.

Prayer and Cursing.

Editors of The Index:—

Mr. A. N. Adams, in contrasting the positions of Mr. Underwood and "W. H. S." (*Index*, March 13, 1884), properly points out awakened intellectual activity as the source of comfort in trouble.

It is futile, of course, to tell our friends, the readers of *The Index*, that prayer is merely the refined remnant of our ancestors' terror of nature and consequent wish to abate these terrors.

It will bear mention, however, that the Spanish and South Italian peasants, as well as many tribes of savages in all parts of the globe, throw down, kick, deface, yea, even destroy the images of their patron saints or deities, if the prayers for relief, addressed to them, have not been answered.

Which leads the way to the reverse picture of "W. H. S.'s" well-intended and well-known portraiture of what we were, when we were children, and what our parents were before us!

A lady, afflicted with rheumatism for many years, after using all the remedies physicians and old women

Digitized by Google

had suggested, heard of an old man, a bachelor, some fifteen miles off, who, similarly afflicted with herself, had found a remedy. Arriving at his house,—to make the story short,—he told her that cursing relieved him for a time. On arriving home again, she regretted that she could not learn cursing.

This is the reverse. The obverse reads: Prayer is good to relieve troubles. The reverse reads: Cursing is good to relieve troubles. Both are the results of inspiration,—the one from earth upward, the other downward. Neither is good. Patience—the conviction that the laws of the universe leave us powerless, except to do the best we can—is the only safe remedy.

G A. SCHMITT.

"C. B. C." WRITES from Beatrice, Neb.: "F. M. H." writes you that President Bascom says that it has not occurred during the past ten years that young women attending the University of Wisconsin have been compelled to attend church by the matron; and he, "F. M. H.," then dates the incident complained of back to twelve years ago, and says that "the young ladies were much more harassed by 'church privileges' than young gentlemen." As one connected with that institution during the years 1866-71, the period when the battle for co-education was being fought and the time of the strictest supervision over the girls, I can confidently assure you that at no time were the lady students compelled to attend church by the matron or by any one in authority. I am glad your correspondent speaks so highly of the present condition of the University, where co-education prevails in its fullest extent, and is, according to testimony of President Bascom, productive of only beneficial results.

WHERE ARE THE DEAD?

Where are the dead? or are we sparks,—naught more,—
From mindless matter ever upward flung,
And ever falling back to whence we sprung,
Brief gleams of conscious life like fireflies o'er
Midsummer meads, that flash thro' twilight dun?
If all still live who e'er were born, no'shore
Of bliss or woe, which olden poets sung,
Can hold the endless throngs which thither pour.
But disembodied spirits may not know
Or space or time our limitations here,—
To some undreamed-of, unimagined sphere
Of psychic being journeying hence may go,
Where lapsing hours, days, years, no longer flow,
But we, pure *energies*, forever flow.

Where are the dead? In mouldering bivouac laid
Beneath the sods, expecting trump of doom
At length to break the torpor of the tomb,
And with dread clangor summon every shade
To Rhadamanthine judgment, tremulous, afraid?
Whence some depart where flowers elysian bloom
In endless summer, others penal fires consume,
But end not, fires no mercy e'er allayed.
Where are the dead? Returning evermore
After a draught of Lethè to rebreathe
The breath of life, again to bask beneath
The light of sun and star, beholding o'er
And o'er again spring's budding wreath
Of blossoms, summer, fall, and winter hoar?

Where are the dead? On endless journey bound,
Star-travelling pilgrims through eternal space,
Whose unreturning flight is ever found
Still farther on to some new tarrying-place?
To where no orb becomes familiar ground,
But only milestone in their goalless race,
Which pauses not at many a gulf profound
'Twixt galaxies of starless interspace?
Than such appalling flight more sweet would seem
The rest and joys of old Elysiums fair,
Whereof the bards of other days did dream,—
Green isles and meads, that basked in stormless air,
Where life was easy without toil or care,
And darkness veiled not festal daylight's beam.

Where are the dead? Transmigratory round
Of all earth's forms running, now grovelling low
In bestial shapes, and now reclimbing slow
To human, till at last released, unbound
From miseries of personal life, they know
Nirvana's apathy and calm profound?
With many an answer thus the creeds o'erflow.
Though ne'er returning traveller was found
From the Undiscovered Country's bourne to say
What lot or destiny awaits us there,
When sweet vicissitude of night and day
Leaving, we on Death's exodus shall fare
Into a gloom, where glimmers not a ray
To gild the darkness of sepulchral air.

—*B. W. Ball, in Sunday Herald.*

LIVE THOUGHTS.

PRINCIPLE is a passion for truth.—*William Hazlitt.*

REMEMBER that every person, however low, has rights and feelings. In all contentions, let peace be rather your object than triumph. Value triumph only as the means of peace.—*Sydney Smith.*

IGNORANCE pins its faith to that it does not comprehend. Its exalted notions of knowledge and its illiterate reverence for learning dispose it willingly to give credence to whatever is mysterious.—*Tacitus.*

AND slowly learns the world the truth
That makes us all thy debtor,—
That holy life is more than rite,
And spirit more than letter.
—*J. G. Whittier.*

THE world moves along not merely by the gigantic shoves of its hero-workers, but by the aggregate tiny pushes of every honest worker whatever. All men may give some tiny push or other, and feel that they are doing something for mankind.—*John Richard Green.*

THE value of the inherited and theologically enforced code is that it formulates, with some approach to truth, the accumulated results of past human experience. It has not arisen rationally, but empirically. During past times, mankind have eventually gone right after trying all possible ways of going wrong. The wrong-goings have been habitually checked by disaster and pain and death, and the right-goings have been continued because not thus checked. There has been a growth of beliefs corresponding to these good and evil results. Hence, the code of conduct, embodying discoveries slowly and almost unconsciously made through a long series of generations, has transcendent authority on its side.—*Herbert Spencer.*

MISCELLANEOUS.

GENESEE, Ill., has a Unitarian church; and the members must rank with the wicked. February 28, they had a church concert. They had the instrument of the evil one, the soul-destroying violin, the playing of which, says the report, "was splendid!"—splendid, perhaps, to the ears and heels of the carnal minded, but loaded with cross-bones and death's heads for the soul! Ah, friends, Satan is insidiously working himself into the hearts of the very elect,—not that the Unitarians are that kind of people to any great extent; for, although they practise much, they believe but little.—*Monroe's Iron-Clad Age.*

"BISHOP WARREN'S PRAYER-GAUGE."—J. H. M. writes to the *Nation* as follows: "Bishop Warren, of the Methodist Episcopal Church, is sojourning in Texas, and, being newly married, may be considered as enjoying his honeymoon. Writing to the *Christian Advocate* of New York, he mentions a brother clergyman of the Church South, only thirty days married, who died of small-pox, and very piously winds up by referring to the widow of the same gentleman, 'very sick' (presumably with the like disease), in the following terms: 'We cannot understand God's plans enough to know whether or not to pray for her recovery.' Now, a novel idea is presented here for Christians to consider. If our ignorance of God's plans is to give the negative to our supplications of the divine power, will the good Bishop please define the field in which endeavor of this kind is legitimate, seeing that our poor human faculty is so incapable of comprehending the purposes of the Deity in general? Prayer for the sick has generally been regarded as within the proper scope of entreaty to the Almighty, whatever the circumstances, and they seem to have been especially distressing in the case cited by the Bishop; but, if there be any limitation of the privilege, it would seem to be incumbent on those who are versed in matters of the kind, as the Bishop himself must be, to lay down some rules by which plain Christians may be guided."

SOCIAL LIFE IN AMERICA.—Robert Laird Collier, in a letter from London to the Boston *Herald*, writes thus: "Whenever an American is put into an English story or into an English play, he or she is of this ill-bred class. If a man, he is angular, lank, and unkempt; his hair and beard are very long, and his clothes very outré and unfitting; perhaps he is made to attend to his teeth and his finger nails in public, it may be in the drawing-room. If a woman, she is sallow, loud talking, slangy, covered with finery, and has 'struck ile,' or her 'governor' has, for she has 'heaps o' money.' I am always more than annoyed when in books or in plays I see such caricatures of my fellow countrymen. Still, it is of no use to deny the fact that this is not only the English idea of the American, but it is almost the European estimate. And why is this? When I am in America, I meet few of this sort of folk. All my American friends are ladies and gentlemen in every conventional way, as well as in every real sense of these words. I have nowhere seen and mingled with more social refinement on the face of this earth—and I know somewhat of life in England and most of the continental countries—than I have seen and mingled with in Chicago and Boston. Indeed, there is a type of social life in America which I hold as inestimably higher than that of any other land. It is as quiet, as self-respecting, as well-bred as any; and, added to these, it is more genuine, more human, more loyal in friendship, less at the bidding of Mrs. Grundy, than any social life I know."

SUPERSTITION AND PRIESTCRAFT IN CHINA.—In the matter of religion, I did not find Canton at all fanatical. It has many temples; but the stranger may enter them as he pleases, and smoke or eat there, if he likes. As a matter of fact, I had luncheon one morning in the temple of the Five Genii, which gave its name to the city in Chinese, and found the priests were quite inclined to share it with me. It happened to be a great day for fortune-telling; and money was flowing into the coffers of these pious men with great rapidity, so that possibly they were more genial on that account than they would otherwise have been. The business of predicting a fortune did not appear to be a complicated one. The gentleman or lady anxious to know all about it went to a fortune-teller outside the temple, and, having paid him about threepence, received from him a red paper, which indicated the shrine before which the inquirer should go. Armed with this, the person came into the temple, and, going to the idol indicated, presented the red paper, with about threepence more, to the officiating priest. He at once handed out a bamboo box, filled with thin sticks of different lengths and numbers. This the worshipper shook till one fell out, when the number was examined, and a yellow paper with a corresponding figure upon it was given to the visitor, that paper containing his or her fate. I shook out number one, the best of all, and learned that I should rise to great dignity in the Celestial Empire, have many grand-children, and probably build a temple. A cheering prospect, which I thought cheap at sixpence. The priest said for another sixpence I could try again, but I thought I would leave the fortune where it was.

THE F. R. A. FUND.

Donations and membership fees for the Free Religious Association, in response to its recent appeal for funds for the holding of conventions and for meeting other expenses of the Association. Will friends see to it that this list is increased?

BOOK NOTICES.

WHAT SHALL WE NAME IT? A Dictionary of Baptismal Names for Children. Compiled by Mrs. M. J. Stockwell. New York: J. C. Stockwell, 25 Ann Street. Price 25 cts.

This little book of forty-eight pages, containing over two thousand baptismal names, with their nationality and meaning, will be welcomed in all families where babies are to be named, especially where the parents wish to give their offspring some distinctive or euphonious baptismal name to offset the in-

Digitized by Google

herited commonplaceness of the family cognomen of Smith, Brown, Jones, or others as common. This work also helps to answer Shakspere's query as to "What's in a name?" for with each name it gives its nationality with its original meaning, which meaning, when understood by the bearer of the chosen name, may haply act as an incentive or warning.

THE *Atlantic* for April opens with the second and last part of "Drifting Down Lost Creek," one of the most striking short stories recently published, by Charles Egbert Craddock. Mr. Crawford's serial, "A Roman Singer," and Dr. Mitchell's "In War Time," both have two new chapters, and deepen the impression already made of the unusual power and interest of these stories. Henry James contributes another of his charming French travel papers, this time describing Avignon and Orange. "The Return of a Native" is an engaging short story by Edith M. Thomas, one of the most attractive of the younger writers for the *Atlantic*. Prof. N. S. Shaler, of Harvard College, discusses "The Red Sunsets" and their probable causes. "Annina" is a story of a pretty Waldensian girl, by Charles Dunning. Oliver T. Morton, son of the late eminent Senator Morton, of Indiana, writes about "Presidential Nominations." Maria Louise Henry contributes a sketch of Madame de Longueville. Bradford Torrey has an interesting bird article, entitled "Phillida and Coridon." There are poems by G. P. Lathrop and Helen Gray Cone; reviews of several noteworthy new books; and the Contributors' Club has some delightful extracts from a "Rhymed Letter," by James Russell Lowell, not included in his volumes.

THE opening paper in the *Popular Science Monthly* for April is the decay of the sentiment of personal liberty, and the rapid growth of the system of legislative interference and coercion which the author discusses, under the title "The Coming Slavery." Our politicians should give attention to the striking facts and startling conclusions of this masterly paper. "A Defence of Modern Thought," by W. D. Le Sueur, is a vigorous reply to the Bishop of Ontario on "Agnosticism." Dr. Oswald concludes in this number his lively series on "The Remedies of Nature." The illustrated articles are: "Photographing a Streak of Lightning," by Gaston Tissandier; "Why the Eyes of Animals shine in the Dark," by Swan M. Burnett, M.D.; and "The Electric Railway," by Lieutenant B.A. Fiske. We can only mention among the other articles: "The Physiological Significance of Vital Force," by William G. Stevenson, M.D.; "Prehistoric Art in America," by the Marquis de Nadaillac; "The Morality of Happiness" (continued), by Thomas Foster; "Biblical and Modern Leprosy," by G. H. Fox, M.D.; "Recent Geological Changes in Western Michigan," by C. W. Woolridge, M.D.; and "The Faculty of Speech," by E. F. Brush, M.D.

"THE Decline of American Shipping" is discussed with marked ability in the *North American Review* for April, by the Hon. Nelson Dingley, M.C., who opposes the project of admitting foreign-built ships to American register, and by Capt. John Codman, who is well known as a zealous advocate of that measure. Judge J. A. Jameson, in the same number of the *Review*, discusses the question, "Shall our Civilization be preserved?" pointing out the means that are at hand for withstanding the various agencies, physical, moral, and intellectual, which threaten to overturn our existing civil and social institutions. The Rev. Dr. Philip Schaff gives a sketch of the "Development of Religious Freedom." Dr. Felix L. Oswald writes of "Changes in the Climate of North America," with special reference to the increasing frequency of disastrous floods. Prof. C. A. Eggert offers "A Plea for Modern Languages," in the higher education; and Julian Hawthorne discourses of "Literature for Children." Finally there is a discussion of "Recent Criticisms of the Bible," by the Rev. Dr. R. Heber Newton and the Rev. A. G. Mortimer.

THE third number of the *Andover Review*, the March number, comes promptly to hand with an interesting table of contents. Prof. Tucker deals, in the opening pages, with "Some Present Questions in Evangelism," which word (evangelism) he defines as "the most comprehensive and fit term to represent the outward and aggressive work of the Church, including missions." Dr. Alexander McKenzie treats of "The Holy Land"; Prof. Hincks, in "Weiss' Theology," endeavors to bring out the salient points in the theology of Dr. Bernhard Weiss of Berlin, whom he calls "the first New Testament scholar of Germany"; Dr. Edward Pond Parks writes of "The Ministry of Natural Beauty"; and Dr. J. H. W. Stuckenburg continues his article, begun in the February number, on "The Theological Tendencies in Germany." The departments under the heads "Editorial," "Theological and Religious Intelligence," "Archæological Notes," and "Book Notices," give short and timely notes on each of these subjects.

THE *Continent Monthly* makes up very handsomely. It contains every month from one hundred and twenty-eight to one hundred and sixty broad quarto pages, suitable to the highest style of illustration, and from seventy-five to one hundred illustrations by the leading artists of America and from abroad. The March number contains two interesting chapters of Dr. H. C. McCook's "Tenants of an Old Farm," a story of a naturalist's study of insect life, an article from the editor, Judge Tourgee, on "National Education," "The Beginnings of Sculpture," by Helen Campbell, "The Mountain Parks of Colorado," by Edwards Roberts, together with various stories, poems, etc.

WE have received from John B. Alden, 18 Vesey Street, New York, among others, the following new issues of the Irving Library (paper covers): *Herman and Dorothea*, from the German of Goethe; Poe's *Raven, The Bells, and Other Poems; Luther Anecdotes*, by Dr. Macauley; *Life of George Müller*, by Mrs. Müller; *Public Health*, by Edward Orton; and *Some of my Pets*, by Grace Greenwood. Prices two to eight cents.

PERSONAL ITEMS.

HENRY MORGAN, the eccentric sensational preacher, died last Saturday, aged fifty-nine.

DR. EZRA ABBOT, the foremost Biblical scholar in America, died in Cambridge, Mass., last Friday. He was not quite sixty years old.

MATTHEW ARNOLD'S views on Emerson and on Carlyle have been criticised by John Burroughs in a forcible paper, which will appear in the April *Century*.

THE eminent Bible scholar, Rev. Dr. Philip Schaff, is to contribute to the April number of the *North American Review* an article on the "Development of Religious Liberty."

THE devout pilgrims to Carlyle's house, at Chelsea, have become such a nuisance that the house now bears a huge placard, reading: "No questions about Mr. Carlyle answered here. Please do not ring."

MRS. EMMA SCHUMM, co-editor of the *Radical Review*, is about to start "a class for young ladies who are desirous of supplying some defects in their education by a course in reading, and who feel the need of a guide."

LONDON newsboys scared the wits out of the cockneys lately by shouting "Horrible attack on Mr. Gladstone in Piccadilly!" Out rushed every loyal citizen from his house to buy a copy; and, when it was read, the horrible attack was found to be Lord Randolph Churchill's speech in Princes' Hall.

THE Sociological Society of Birmingham has begun the making of an index of Mr. Herbert Spencer's works. Mr. Spencer has written, expressing approval of the system which has been adopted, and stating that the condition of his health has alone prevented him from undertaking the task.

AN unpublished work by De Quincey is announced. It is styled *The Confessions of an English Hasheesh Eater*, and was written in the last years of the author's lifetime. The manuscript was discovered upon the backs of the illustrations in a book which was many years in De Quincey's possession. The story of the discovery will be told in a preface by Rev. Mr. Haweis.

MR. HERBERT SPENCER, having been asked to stand as a Liberal candidate for member of Parliament for Leicester, writes, declining to abandon his work for a political career. He says he could not agree to be merely a delegate voting as desired by his constituents, but should always act upon his own judgment, so that there would be a continual antagonism between himself and his constituents.

THE will of Wendell Phillips leaves his entire property, valued at from two hundred thousand to two hundred and fifty thousand dollars, unconditionally to his wife. It specifies that, should she die before him, the property shall go to his nephew, S. P. Blagdon of New York, to be held in trust for the wife of George W. Smalley, of London. Mrs. George W. Smalley is Wendell Phillips' adopted daughter.

EL MAHDI, the false prophet, is not an Arab by birth, and is of a black hue, which is unacceptable to the Semitic Moslems. He belongs, however, to the Hadriyeh order, which is held in very high veneration in Egypt, and which preserves all the pagan superstitions, including the worship of the gigantic shoe of their founder. They are distinguished from other orders by their white banners, and by carrying always fish nets in their religious processions.

ROBERT LAIRD COLLIER photographs John Ruskin as a very different looking man from what the æsthetic world has fondly fancied him. He makes him but five feet five inches tall, with an iron-gray beard extending up to his eyes, a low and retreating forehead and long hair, which, like Tennyson's, for years has had no acquaintance with comb or brush. Ruskin is the most popular lecturer in England. He always draws an audience. But he never speaks until he has something to say, and so no lecture committee can get him to give a date or to name his subject. When the spirit moves him, he selects his date; and, when he appears to lecture, then his subject is announced.

A CITIZEN of Baltimore, who recently made the acquaintance of Gen. "Chinese" Gordon in Brussels, says that the Oriental fighter has a pair of sparkling eyes, a small black moustache, and looks like Gen. Agnus of the Baltimore *American*. He relishes a good joke, never visits a theatre, and devotes himself when in London to relieving the distresses of the worthy poor. He dearly loves America, and intends to visit us soon, if he lives. He admires our newspapers. He hates slavery, and wonders why Mr. Vanderbilt doesn't appropriate $1,000,000, and place it in his hands to be used in abolishing the slave-trade in Congo. It is quite evident that Gen. Gordon is not well acquainted with Vanderbilt.

DR. SAMUEL KINNS, author of *Moses and Geology*, lectured in Exeter Hall recently, showing a correspondence between the Book and the rocks, and during the course of his remarks, amid general applause, declared that a man might even believe in the doctrine of evolution and still be a good Christian. This opinion cannot be too firmly impressed upon many of our own clergymen, who are too apt, as the *Christian World* says of clergymen in the mother land, to turn a man out of society as an infidel who reverently seeks truth for its own sake. The contemporary named makes some sensible remarks in the direction pointed out, and even questions some ordinary opinions and claims, such as Moses being the author of the Pentateuch, which would leave a lay editor, were he to do so, open to serious insinuations and misgivings. But, then, it is everybody to his trade. The editors of the religious weeklies naturally desire to monopolize all the discussion of these subjects, upon which we lay editors are supposed to know nothing. It is possible that many lay editors have, after all, given such questions more prayerful and exhaustive thought, approached in a truly religious spirit, than many of their denominational weekly brethren, despite the latter's peculiar training. Man was once told that it was impious to accept the belief in the earth's revolving course; for, were that done, the belief in the Holy Scriptures would be weakened. Even Martin Luther thundered almost as loudly against the new-fangled heresy as he did against the false pretensions of Rome. Man, however, changed his belief in the actual rising and setting of the sun; but we cannot see that religion has suffered thereby. Christianity, and even Protestantism, exerts a controlling influence over the greatest countries in the world. As for evolution, as taught by Charles Darwin, its main principles are accepted in all our schools now as immutable facts; and, since the death of the great naturalist, they seem to have suddenly sprung into popular favor. The Christian, who thinks that the belief in Darwinism is any more inimical to the interests and permanence of Christianity than the disbelief in the real rising and setting of the sun and moon is, must have a sorry conception of the influence, power, and origin of his religious teachings.—*Hamilton (Ont.) Daily Tribune.*

APPLETON STREET CHAPEL,

Paine Memorial Building, Boston.

The Sunday-school is held from 2 to 3 o'clock P.M. A good teacher is very much needed for an adult class of sixteen persons. Other classes are supplied, and Mr. Babcock looks earnestly for a devoted lover of truth and education to respond to this appeal.

ALDEN'S MANIFOLD

CYCLOPEDIA.

Over 300,000 subjects and 5,000 illustrations, numerous maps, 20 volumes, large octavo, *$25;* cheaper edition, *$15.* Specimen pages free.

"You deserve the gratitude of the nation for your brave and philanthropic work."—D. S. GREGORY, President Lake Forest University, Lake Forest, Ill.

"Every one who has seen the set of Irving that you sent me says that it is the cheapest they ever saw."—J. H. COLBORNE, Goderich, Ontario.

"Your enterprise deserves to be called one of the great events of history—deserves to rank with the invention of printing, making, as it does, the very best use of the art for the good of the masses."—O. STEINIGER, Bryant, Iowa.

"The books came to hand all right. I am highly pleased, and other parties equally,—my students, among whom I have distributed them."—PROF. JAMES NICHOLSON, Roopsville, Ga.

"Enclosed find check for $80.90. We are very much satisfied with the books."—J. B. CLARK, New Haven, Conn.

"This makes forty volumes of your publications I have. I am heartily pleased. It is about eight hundred pages more to the dollar than any books I ever bought before."—B. F. ALBIN, Henrietta, Texas.

"I am delighted with the books. In neatness, clearness of type, and cheapness of price, they are unsurpassed."—B. E. SPENCER, Madisonville, Va.

"The books are received; entirely satisfactory. The only wonder is how you can give so much for so little money."—J. T. MCCLEARY, State Normal School, Mankato, Minn.

500,000 Volumes

Choice Books, descriptive catalogue free. Books for examination before payment, on evidence of good faith. NOT sold by dealers: prices too low. Books by mail 20 per cent. extra, for mailing.

MARTIN LUTHER:

A Study of Reformation.

By EDWIN D. MEAD,

Author of *The Philosophy of Carlyle*, etc.

An essay upon the significant phases of Luther's life and work, with special reference to present problems of reform; discussing the principles of Individualism, Intellectualism, and Rationalism for which Luther stood; and the Libertinism, the Old Orthodoxy and the New Orthodoxy, with which he came into conflict.

Cloth, 12mo, 194 pages. Price $1.25.

Sent, postpaid, on receipt of price, by

Draw Bills of Exchange on England, Ireland, and other points in Europe. Agency for the American Line of Steamers.

Third Edition.

BIBLE MYTHS,

And their Parallels in Other Religions.

Being a Comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations.

The object of this work is to point out the myths with which the Old and the New Testaments abound; to show that they were held in common with other nations; and then trace them to their evident *origin* and *explain their meaning.*

"It has long been acknowledged by the most eminent Biblical students that the Hebrew Scriptures contain a large mythical element; but, so far as we know, the present is the first complete and scholarly attempt to trace these myths to their source, and ascertain their original signification."—*Boston Courier.*

"Never before has there been given a volume to the reading world that shows the research for the origin of these myths as does this one just published by J. W. Bouton, of New York."—*Boston Times.*

"It is unquestionably true that the results of a rationalistic study of the Christian Scriptures are nowhere else so accessible as they are now made in the work before us."—*New York Sun.*

1 vol. Royal 8vo. Cloth. 600 pp. $3.00.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

JOHN B. ALDEN, Publisher,

P.O. Box 1227. 18 Vesey St., New York.

TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches,** which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars,** which are models of comfort and elegance; its **Palace Drawing Room Cars,** which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

GEN'L PASS. AGENT, C. & N.-W. RY
CHICAGO, ILL.

HENRY WARD BEECHER says, in referring to the new Congregational creed, that "it is very difficult to make a middle ground for those who believe that the human race is fallen by reason of Adam's sin and is blighted by his act and those who believe the race has ascended."

THE *Christian Union* estimates that alcoholic drinks cost annually in this country $900,000,000, or $16 per capita, assuming that our population is 55,000,000. The annual bill for bread is estimated at $500,000,000, for meat $300,000,000, while education costs $85,000,000. According to these figures, for the correctness of which we cannot vouch, we spend more money for alcoholic drinks than for our bread and meat and schooling.

A NEWSPAPER correspondent, writing from Rome, says the projecting great toe of the bronze statue of St. Peter in that city is considerably worn away, although it has been once or twice renewed; and it is highly polished by the repeated wiping it receives before being kissed. While inspecting it, one or two of the correspondent's party touched it with their fingers; but, as soon as they were gone from it, a priest wet it with holy water, and wiped off the heretic's touch. Among the believers who paid their devotions to it, some came reverently with prayers and clasped hands, others in a business-like way, and one tall, gray-haired man paused with a prayer at each step from the outer door to the statue, then, bowing a moment with the deepest humility, he drew out a clean handkerchief, wiped the toe, and reverently pressed his lips upon it, prayed a moment, kissed it again, and departed. A little girl, who could not reach it with her lips, kissed the end of her finger and touched it.

THE *Commonwealth*, commenting on the latest exposure in Philadelphia of the swindling tactics of a materializing medium who has quite a reputation among Spiritualists, observes: "Gordon's exposure was complete. The very dresses he wore and machinery he used were brought before the magistrates. Still, he is believed in. This exceeds philosophy. This is not sanity. The man's own face is said to have been a confession. Still, some believe. We candidly look upon faith like this as a mild form of lunacy. We can understand the faith of a man like Bundy, whose generous head and heart revolt at these vulgar exhibits of very vulgar 'spirits'; but we have little charity for the swindles that go about under spiritualistic guises, or for those who defend the trash emitted from 'closets' as truth of extra-human character. The Bliss exposure, the other night, in this city, was of a like nature; and the courts are now yearning for the speedy incoming of the swindling defendants."

A CRITICISM in the *Congregationalist*, by "a Massachusetts pastor," of Gov. Robinson's Fast Day proclamation, because it failed to give prominence to sin and the need of repentance, reminds the Springfield *Republican* of "a little story of a former pastor of the First Church (away back, of course), whose theology was very blue. One day in Sunday-school, he said: 'Now, next Sunday, children, I want you all to be prepared to tell me what verse in the Bible you think most precious, and would have preserved, if all the rest of the book were to be destroyed.' Next Sunday came, and he stood before the school for the happy revelation; but no one spoke up. The pastor expressed some surprise, and explained again what he had asked for, and said some one present of course must have selected a text. At length, a little hand went up back side of the vestry. 'Ah,' said the delighted pastor, 'now we shall have it, for out of the mouths of babes and sucklings, etc. Speak up loud, little girl.' Pin-drop silence, followed by the shrill announcement: '*And there shall be weeping and wailing and gnashing of teeth.*'"

JOSEPH COOK is less popular than he once was among his orthodox brethren. "Observer" in the *Christian Union* last week said: "Whatever may be said of Mr. Cook as a popular power as a lecturer, he has fallen off as a reasoner and a man of insight. He takes his matter second-hand. I have noticed series of his propositions taken from Drummond's book of *Natural Laws in the Spiritual World*." But it is not his intellectual shortcomings only which the religious press are now acknowledging. The *Independent* observes: "We have said many things favorably of Mr. Joseph Cook and of his Boston lectureship; but his assault last week on the new Creed of the Churches to which he belongs compels us to say with the *Congregationalist* that, if this is to be his gait, 'he will lose and deserve to lose both his influence and his power to exert it.' . . . Already, Dr. Dexter has met him with flat denial. Others would do the same, only it is not worth their while to deny what is not evidence." We are not particularly interested in the discussion between the advocates and the opponents of the new Creed, but it is gratifying to note that even the orthodox journals begin to see and admit the unreliableness of Joseph Cook in his opposition to any person or principle to which he is opposed. We have not forgotten his untruthful and slanderous statements made a few years ago in regard to the Free Religious Association and Liberals generally,—statements which orthodox journals in this country printed with words of approval, apparently satisfied to accept Mr. Cook as "Sir Oracle," and to give to his calumnies the widest publicity possible.

CINCINNATI has been ambitious to be regarded as the Paris of America, through her art, her music, her literature, and the freedom and gayety of her people. It must be humiliating to the best class of her citizens to see her presenting to the world a spectacle that recalls vividly the Paris of the barricade and the commune. It must be confessed that the people of that city were not without good reason incensed at the result of the trial of the murderer Berner, especially when there were in the jail a large number of persons charged with homicide, and when atrocious crimes of violence had been for months of daily occurrence in the city. During a recent visit to Cincinnati, we were forcibly impressed with the many expressions of indignation from some of the best citizens at the frequent miscarriages of justice in dealing with the worst of criminals. The citizens' meeting held in Music Hall last Friday evening was undoubtedly designed as a demonstration in the interests of justice and law; but some of the speeches, in keeping with editorials that appeared daily in the city papers, were intemperate, and tended to fan the flame of excitement, which, extending to the more brutal element of society, degenerated into unreasonable ferocity and a thirst for blood. This was most unfortunate. Mobs are never desirable in civilized communities. They mean madness and massacre, the destruction of property and the death of the innocent, the unleashing of the human tiger, and the blind and indiscriminate wreaking of revenge, in utter disregard of consequences. From such demonstrations comes no good except incidentally,—certainly, no good commensurate with the terrible cost. It is better that a few criminals should go unpunished than that they should perish by mob-law, which, once established, destroys the very methods which centuries of experience have taught us to employ, in order that we may protect society from crime without endangering the life or property of the innocent. Yet we quite agree with the Springfield *Republican*, which says: "As to the social condition in Cincinnati, while it has been unhealthy, a mob which is raised to avenge the shortcomings of criminal justice certainly does not justify gloomy conclusions as to the attitude of the mass of the people. If the same effort had been put forth to effect the rescue of some bloody bandit or successful demagogue who had won popular affection, somebody like the James boys who had made murder heroic in the popular eye, it would have disclosed a vital danger. But this affair grew out of popular indignation that so many murderers escaped the gallows."

THE ONE ISSUE FOR THE GOVERNMENT IN THE MORMON PROBLEM.

It seems to be very difficult to get at the exact facts with regard to Utah. Here, for instance, is Mr. T. W. Curtis, in his communication in another column, stating, of his own knowledge, that Mormon schools make no attempt to teach the doctrines of the Mormon religion; that, in securing teachers for them, no question is asked as to whether they are Mormon or Gentile, and that Gentile teachers are not infrequently employed. On the other hand, Prof. George N. Marden, of Colorado College, in an elaborate and apparently carefully prepared article on the Mormon question in the *Christian Union* recently, affirms that "the Mormons have a strong hold on their young people by means of their system of schools, from which non-Mormon teachers are excluded, and in which Mormon doctrines are assiduously taught." Has Prof. Marden failed to inform himself correctly on this point in an article seemingly written with great care, or has there been a change of policy in this particular since Mr. Curtis left the Territory, and after the visit of the "Unitarian minister" who indorses him, which was not so very "recent"?

Again, persons who visit Utah come away with very different impressions of Mormonism. While there is pretty general unanimity as to its industrial prosperity and public order, there is wide difference of opinion in regard to the condition of the women and the average intelligence and spirit of the men. Some visitors report that they unexpectedly found the women intelligent and happy, and the men intellectually equal and morally superior to the average population of any new State or Territory, not to speak of a good many of the old ones; while, to others, the women appeared dull, hopeless, unhappy, and the men to be wanting in that spirit of individuality and enterprise which naturally belongs to an American community. Of course, many visitors are not long enough in the Territory to see below the surface of things; and their testimony is of little account on one side or the other. In other cases, prejudice may cast a glamour over the eyes, and prevent the facts from being seen as they really are. And, in still other cases, we have sometimes thought that visitors in Utah who have been attracted by the industrial success, the outward order, the freedom from some of the great vices of civilization, and have come away quite disarmed of all their old arguments against the Mormon Church, are not unlike those Northerners who, on spending a winter in the South, used to come back so impressed with the sleek skins and jollity of the slaves they had seen, and the Christian kindness of the masters and mistresses, that they were half inclined to believe slavery might be a divine institution after all.

But it happens that, so far as concerns the one point where the national government is trying to reform Utah, it matters not what are the exact facts in such respects as these. As we have repeatedly said in articles on this question, Congress has no right to interfere with the religious customs of Mormonism, except where its customs violate the laws of the land. There is, doubtless, much in the teachings and practice of the Mormon faith that is antagonistic to the principles of Republican institutions. Its despotic hierarchy is a denial of the fundamental truth of democracy, and is a fruitful source of political danger. Yet, so long as it does not appear in overt rebellion to national authority, it has to be treated like any other error taught in this country; that is, its cure must be left to general means of intellectual and moral enlightenment. Could it be proved, as possibly in some cases it can, that the hierarchical power of the Church is used to intimidate people so as to prevent their casting a free ballot, or in any other way exercising their rights as free citizens, then government would properly interfere to prevent such violation of civil rights. But, without such conflict with its own authority, the national government must leave the Mormon religion as free as any other to maintain and propagate its faith, trusting to the general influences of progress to abolish its errors. On one point, however, Mormonism, unlike any other sect in the country, not only teaches, but practises nullification of United States laws. It openly violates the marriage laws of the country by the practice of polygamy. The United States, following the lead of modern civilization, have severally and nationally throughout their history legally recognized the principle of monogamy as the foundation of marriage. Bigamy and polygamy have accordingly been made crimes in this country. The question, therefore, before Congress, with regard to Utah and any of the Territories (for Mormonism is spreading into other Territories adjacent to Utah), is this: Shall the nation now ignore its own marriage laws and permit the plea of religious faith to nullify its authority in respect to marriage customs, and allow the current of civilization in this important matter of the home and family to be turned backward, or shall it continue to treat any other than monogamic marriages as a crime? Our opinion is that the national government must adhere to the latter alternative, and thus protect the integrity of the home, the equality of woman with man, and the rights of children; and that the constitutional guarantee of religious freedom gives no ground for countenancing the crime of polygamy more than it does for countenancing homicide or theft, should they be set up as religious rites.

And, on this question, the facts favorable to Mormonism brought forward by Mr. Curtis and other writers, even admitting them to be as favorable as stated, do not appear to us to have any essential bearing, unless they are ready to say that such facts vindicate polygamy. The very narrowness and intensity of the Mormon faith may naturally produce some of the good results claimed. But Congress has nothing to do with the Mormon faith as a faith. Its one concern is to prevent the Mormon practice of polygamy, which modern civilization and national law declare a crime. And when those who oppose Congressional legislation for this end, bring forward in array these good points of Mormonism, and make a counter array of certain social vices which infest countries where monogamy is the legal form of marriage, our reply is, Do you mean, then, to assert that polygamy is a better form of marriage than monogamy? If not, if at least it may not still be considered an unsettled question between the two forms, what is the pertinency of these comparisons? For our part, whatever be the social vices of modern civilization, we do not believe their cure is to be found by going back to the semi-barbarism of polygamy. Polygamy, wherever it has existed, has served to pander to and strengthen man's animal passions, and to keep woman in a state of subjection to him. And here are the two fertile sources of the very social vices that are lamented. Not that way lies the remedy.

Of course, in any accusation of crime, it is legitimate to offer as evidence the general good character of the accused, if that can be proved. The first office of such evidence is to weigh against any mere circumstantial evidence of guilt. But, in the case of Mormonism, this office is of no avail, for the crime is admitted; and the government cannot allow the defence that the act is no crime because dictated by a celestial revelation, without abdicating its own just and beneficent powers and putting itself against human progress. Another object of proving the general good character of an accused person is to mitigate the penalty where a crime has been committed. And, with regard to the Mormons, the points that may be brought forward in their favor may be legitimately weighed by the government, not for excusing their crime, but for determining the penalty specially suited to the case. The fact that they are not thoroughly bad, that many of them are the innocent dupes of a religious belief, and that the government has itself allowed their polygamous practices to become rooted in the community,—these circumstances may well be considered in the national legislation that is called for. Such legislation should respect religious belief, but yield nothing to religious practice that becomes crime. It should be just, carefully observing all the rights and liberties of republican citizens. It should be firm, guarding the equality of man and woman in the marriage relation, and protecting the family rights of children; yet it may be humane too, especially toward the women who are involved in polygamous relations and who should not be cast adrift into the world without the means of support and with loss of reputation. The Mormon problem, therefore, is one that demands, not merely the law-maker and the law-administrator, but large statesmanship. The need is not only for law, but for wise diplomacy.

WM. J. POTTER.

OUR GIRLS.

What other Nations are Doing for Them. Shall We Follow their Example?

Different minds perceive, in various phases of reformatory work, those best adapted to their ideas and taste, and to these devote their energies. Thus, each has its earnest and devoted advocates. In consequence, the entire army moves on, almost imperceptibly at times; but, looking back across the centuries, we can see that great progress has been made toward the final result to which each effort has been directed.

In the reforms of charity and education, no one —who compares with thoughtfulness the past, not far removed, with the present—can fail to see that great changes for the better have taken place. Indiscriminate charity or almsgiving has been found to retard rather than to help the decrease of the evils consequent upon poverty. Broad and philanthropic minds are now seeking other channels of benevolence. The Organized Associations of Charity in Boston and other cities are helping the poor to help themselves, by giving to them employment, watching over them, and teaching them habits of industry and economy. Others think the only hope of our future lies in the reception and spread of the knowledge of heredity. The advanced thinkers in that direction, instead of trying to perpetuate the existence of the morally and physically diseased persons who form our criminal classes, by trying to aid and reform them, advocate the letting alone system, or, "in scientific phrase," "the survival of the fittest." To assist nature in her efforts to give strength to triumph in this struggle, we must fit our girls as well as boys for their right place in life; and, to do this, we should give them an industrial as well as an intellectual education.

This is a subject worthy of thoughtful attention, if we wish to avert the evils resulting from idleness and improvidence in the lowest classes, and *ennui*, and indifference in the middle and higher, so called, grades of society.

We in Massachusetts are beginning to see that,

Digitized by Google

in our efforts for the intellectual education of all, we have ignored that of the hands, as the tools by which the brain must, in many directions, perform its labor,—must work out its thoughts, and make them visible and of use to the world. It is rather humiliating to our often boasted superiority as a "government of the people for the best good of the whole," the land of free schools, in whose advantages the poor share as freely as the rich, that many other nations are in advance of us in this matter of free industrial and technical education.

In Sweden, it has become a part of the public school system for all its classes. The private schools and academies have also taken it into their programme of instruction. It indeed dates back as far as the beginning of the Bernadotte reign, the beautiful and revered Queen Josephine being the first to introduce the silk industry as an occupation for women. The mulberry trees she planted are still growing and productive. The present Queen Eugenia has deeply interested herself in founding and caring for schools to train young girls in industrial pursuits. England has for some years, with marked success, as one of her distinguished educators has recently told us, been introducing this system into her Board schools. Germany, the birthplace of the kindergarten system, is now, notwithstanding her proverbial slowness, moving in this matter with zeal and enthusiasm. In France, girls have the opportunity to fit themselves for all employments by which they can earn a living.

It was a French woman who said, in answer to an officer of government who inquired, "What education would you give girls?" "First, a good general education; and, then, a technical training in some handicraft, by which they can earn money and become independent." "Our next-door neighbor, our sister republic of Mexico," is even ahead *of us* in this phase of education. Schools in which girls and even middle-aged women have an opportunity to learn almost every branch of industrial work are supported by government, which exhibits wonderful interest and impartiality toward all institutions of learning maintained at its expense.

A lady journalist, writing from Mexico to the New Orleans *Democrat* a letter on woman's advancement in that country and her educational advantages, speaks particularly of a "School of Arts and Trades," an unrivalled practical institution founded by Benito Juavez, which "government has taken vigorously in hand, and promises to make it a perfect realization of the ideal cherished by its generous founder. The school numbers three hundred and sixty-eight regular attendants, varying from twelve years to women of middle age. The government gives them every variety of instruction free of cost, also two substantial meals a day and *long linen aprons*. Moreover, it allows them to dispose of what they make; and, for that purpose, a pretty little store is attached to the school-building, where all such articles may be exposed for sale. Government gives them further aid by furnishing them orders for upholstery, bookbinding, and other work which it may want. Among the arts and industries taught are upholstering furniture, moulding, gilding, book-binding, manufacturing artificial flowers, printing,—a newspaper is published by the students,— drawing, painting, vocal and instrumental music."

In Guadalajara, connected with the Hospicia there is "a school of arts and trades, where women are taught printing, photography, lithography, stenography, tailoring, shoemaking, stocking and cloth-weaving. One cannot help feeling heartfelt admiration for a government, only for a short period evolved from a state of anarchy and revolution, which shows such an interest in the practical education of its daughters, and takes such generous measures to fit them for lives of usefulness. Let me not be understood from this merited acknowledgment of the greater advance made by other nations in this direction that there need be any fear that, when our country is fully awakened to the importance of this subject, it will not take a decided, perhaps advanced, stand in the support and sustaining of industrial education for girls as well as boys. We have every reason to be very hopeful and assured of this. Our most thoughtful writers, through the columns of the magazines and weekly and daily newspapers, are discussing this question, and urging the necessity of these schools in this State. Superintendent Seaver, of the Boston schools, in a recent able address, says he thinks "this will be the gospel of education for the next few years." Mr. J. S. Clarke speaks in the highest terms of the usefulness of the work schools in St. Louis. A forcible and earnest writer says, "If labor is to be rightly honored, if skilled labor is still to be possible, if educated insight into the possibilities of industry is to be maintained, the public schools must place industrial side by side with intellectual education." Superintendent Hagar, of the Salem Normal School, has introduced the use of carpenter's tools, once a week, into the Girls' Normal School under his care.

At Charleston, S.C., where, before the war, it was considered a disgrace for white people to engage in labor of any kind, the principles of the mechanical arts are now a part of the training in the public schools. The Workingmen's School, under the care of Dr. Felix Adler, in New York, is a practical success. This demand for practical technical education in our schools is sustained by such men as President Walker and Prof. Runkle of the Institute of Technology.

Everywhere, we see signs of awakened and enthusiastic interest in this training of faculties hitherto almost entirely ignored by parents, teachers, and all interested in our public schools. But why, it is asked, is the teaching of industrial education considered of so much importance for girls, when now so many avenues of employment are thrown open to women? But to what classes of women? Not the poor or even the middle class of women have the means to qualify themselves for the learned professions or for proficiency in the fine arts, like music, sculpture, and painting. But let various arts and industries be taught either in the public schools, as they now are, or in supplementary technical schools, and then, when scholars graduate, they will be ready to take remunerative situations, which are always waiting for those qualified to fill them. Another objection frequently urged is that this technical training would interfere with the intellectual studies of scholars. Contrary to this, the testimony of such men as the Principal of the Dwight School in Boston, where the experiment has been tried, and of men of note in England interested in the subject and of scores of others whose opinion is of value, is that more interest is felt and better progress made in intellectual studies for the few hours spent every week in the development and training received in the industrial departments.

Many children have now to leave school without finishing the course. The parents, thinking that they have acquired all the learning necessary for them in their positions, want they should be earning something toward their support. They enter stores as cash and errand boys and girls, or in any capacity which does not require any previous training. But let the parents understand that, by remaining in school, they will, in addition to the knowledge derived from text books, have a training in some handicraft which will secure to them more remunerative employment with a chance of promotion, they will naturally make an effort or sacrifice to have them remain. In the kindergarten, the work of teaching the use of the hand is considered one of the most important features of education for very young children. Why should it not be carried still further in the schools for older pupils?

The Legislature, in the closing days of its last session, made an appropriation for a technical school for boys. I hope this session it will supplement this worthy act by an appropriation for one for girls, where may be taught the various trades which can be made available by them, but also sewing, cooking, and housekeeping. If neat and orderly habits in the keeping of the home and the economical preparation of nutritious food, are made a part of the girls' education, the most important step is taken in the right direction toward helping the poor to help themselves. If this is not done, no amount of "free soup" or efforts of "organized charity" will solve the problem of the increasing evils of poverty and consequent degradation. The experiment is worth trying; and now—when this question is agitating the public and discussions on its necessity and on philanthropic subjects closely connected with it are rife in many circles and in most of our papers—is the time for decided action; the time "to strike when the iron is hot."

R. F. B.

THE SOUL.

There are two natures in man,—a higher and a lower nature. The former is usually designated by the word "soul," which may be defined as the seat of first principles, of primal truths, of overmastering convictions of right and duty, of a love of truth, justice, and beauty for their own sake, as the fountain of all lofty, unselfish emotions and impulses, as the side of human nature which lies open to influxes from the infinite. It is the source of those

> "High instincts before which our mortal nature
> Trembles like a guilty thing surprised."

It is "the fountain-light of all our day," "the master-light of all our seeing." It overarches our lower nature, our calculating selfish intellect and animal appetites, as the blue heavens overarch the earth. It is the mystical element in us. It is the spring-head of poetry, philosophy, and religion.

"It is the awful shadow of an unseen Power," to whose visitations all persons or creatures born on the plane of humanity are subjected. It is the universal self. Primitive man mistook its dictates for the voice of present deity. They who live habitually under the vertical light of the soul may not be prosperous, in the sordid sense of the word; but they are the only men whom the world permanently honors. The soul is sometimes defined as the germ in us of immortality. It is the soul which constantly summons us to live a higher life than that of sense and selfishness. All forms of enthusiasm are of the soul. The history of the past would be intolerable, were it not for ever-recurring periods of manifestations of the soul, when such manifestations became the most noticeable phenomena. Greek poetry, art, and philosophy were soul-manifestations. Hebraism, in its palmy time, was an outbreak of the soul. So was the high Roman patriotism and reorganization of human society in accordance with the principles of a rational jurisprudence. Christianity, in its primitive days, was an outbreak of the soul, and continued to be such until it was formulated into frigid and rigid dogmas and articles of faith. The visitations of the soul are like those of the wind. It bloweth when and where it listeth. It cannot be utilized for any arbitrary, despotic pur-

Digitized by Google

poses. It disdains all unbending usages, creeds, and formulæ. These periodical manifestations of the soul are what Bunsen calls "God in history." Mediæval chivalry in its best estate was an inspiration of the soul, as the old romance of *Morte d'Arthur* abundantly shows. Homer, Cervantes, and Shakspere lived and wrote, so to speak, on the highlands of the soul. It is well known that there is a season of the year when the orbit of the earth lies through a meteoric region of space, when

> "Mortals deem the planets bright
> Have slipped their sacred bars,
> And the lone seaman all the night
> Sails astonished amid stars."

So there are soulful eras in history—like the Periklean, the Medicean, and the Elizabethan—when there is a brilliancy and originality of thought and imagination which light the world through many a subsequent sordid period. The science of to-day is an outbreak and manifestation of the soul, or higher reason; and it is the only genuine religion of our time. For the old-fashioned theology which continues to be droned from the pulpits is a mere dead formula. Human nature has its sordid moods and periods, when sense and the calculating understanding rule and are in the ascendant; and then again, fortunately, it has its spiritual moods, when the higher reason dominates it. During these latter moods, humanity, as has been said, renews its childhood and youth. It casts aside its slough of selfishness, and feels the spontaneity of primitive days. It says and does noble and memorable things which are forever borne in mind:—

> "So in its lovely moonlight lives the soul.
> Mountains surround it, and sweet virgin air;
> Cold, plashing past it, crystal waters roll.
> We visit it by moments, ah! too rare."
> . . . . . .
> "Still doth the soul, from its lone fastness high,
> Upon our life a ruling effluence send;
> And when it fails, fight as we will, we die;
> And, while it lasts, we cannot wholly end."

In the above lines, Matthew Arnold shows that the voice of the soul is audible to him. The era of Byron, Shelley, Wordsworth, Coleridge, Goethe, Schiller, Kant, and Humboldt, was superior even to the Elizabethan era in spiritual power and revelations of the higher reason. It was an era of the vindication and assertion of the rights of man and of free thought. All the above great poets and thinkers were prophets of the soul in the highest sense of the words. The best writers of to-day are merely their vassals, echoes, and interpreters.

B. W. BALL.

GEORGE M. FULLER.

The sudden death of George M. Fuller has spread a deep feeling of grief in the community of artists and art lovers, such as has not been felt since the tragic end of William M. Hunt. This sorrow was the more widely spread from the fact that an exhibition of his works was open at the very time his hand must cease from its labors, and those who had known him but little before were brought into sympathy with him by the revelations of thought and feeling in his latest works. Of these, we will not now speak fully; but of the principal one, to which his last thought and labor were given, the "Arethusa," we must say that we believe it to be his masterpiece, embodying the ripest thought of his genius and the greatest skill of his hand, and that no nude figure in American art will compare with it in the exquisite rendering of youthful beauty. But this picture has more than the charm of technique which we find in modern French art: it has the perfection of maidenly modesty and moral purity, and wins the soul even more than it delights the eye.

Mr. Fuller belonged by his convictions, by the style of his art, and by personal relations to the ideal school of art, of which Allston was the greatest American representative, and of which his early teacher, Henry K. Brown, is probably the oldest living member. Yet so fresh and original was his thought, so true to nature his expression, so tender his feeling, so pure and reverent his manner, that when he returned to the world after his long voluntary retirement in the country, he was at once recognized and appreciated, even by a public who had strongly clung to an opposite school of art.

He has again illustrated the great truth that moral rectitude and purity as well as religious feeling are indispensable to the highest art. Intellect may give us able technique and powerful expression; but, if it is corrupted by passion and selfishness, it will always fail of reaching the subtlest and best effects of art.

His personal character was what those who admired his art would have wished it to be. Modest, truthful, sincere, tender to others, self-respectful, but fully aware of the limitations of his powers and claiming to do only the work that belonged to him, he was much beloved by his fellow artists, whose merits he was swift to recognize, as well as by the large circle of friends who delighted in his society.

We cannot but mourn for the years cut off from a life so beneficent and beautiful. We are grateful that he did not pass away unrecognized and unappreciated, but that he went calmly to sleep surrounded by all the love and blessing that human heart could ask; and we must trust that the great Providence which allows no power to be lost watches over the conservation of the strongest of all forces, a great and noble soul.

E. D. CHENEY.

THE CHRISTIAN STATESMAN ON ATHEISTS.

The *Christian Statesman* says that "the atheists can have, consistently, no sense of duty," no "adequate motive for those noble services which the citizen must sometimes render in order that the Commonwealth may survive," or for "the virtue which deliberately puts aside great private advantage for the public good." According to the *Statesman's* view, neither private nor public virtues should be expected in an atheist. "Whatever seems to his short-sighted vision the highest good or promises to his passions the intensest gratification, that it is every way right and proper for him to do."

Our pious contemporary repeats this nonsense week after week in its futile efforts to construct an argument in favor of Christianizing this government. Have the editors of the *Christian Statesman* never read in Max Müller's *Science of Religion* that "the highest morality ever taught before the rise of Christianity was taught by men with whom the gods had become mere phantoms and who had no altars, not even an altar to the unknown God"? Have they never read the history of the Girondists of France? Do they know anything about sacrifices that have been made in Russia, the past few years, by men and women who were "atheists,"—men and women who, without belief in God or immortality, have sacrificed rank and wealth to serve the people, and have gone to the block with the thought of the cause in which they had labored uppermost in their minds? Do they know anything about the sacrifices of "atheists" in England, men like Carlisle and Holyoake, who suffered imprisonment as well as insult and reproach for maintaining what they believed true and right? Have they any appreciation of the character of men like Darwin and Mill, Harriet Martineau and George Eliot, men and women whom the *Statesman* would class—and, according to the definition, properly—as "atheists?" Do they know anything about the thousands of "atheists" in this country who have been as ready as the most devout Christians to respond to the call of their country, and, if necessary, to sacrifice their lives in its defence? Do they know anything of the noble work which has been done by atheists in opposing slavery and intemperance and evil and vice of every kind? Have they any knowledge of the contributions to science, education, and charity which have been made by "atheists"?

In the last number only of the *Christian Union* is a letter giving some facts in regard to the establishment of the Lick Astronomical Observatory, for which Mr. Lick, of San Francisco, in 1875 gave $700,000. The writer of the letter states that the site selected is Mt. Hamilton, which rises 4,400 feet above the sea, and that "the county of Santa Clara is constructing a roadway to the summit called Lick Avenue, from which views of entrancing beauty and sublimity are presented." It adds: "Mr. Lick was born in Fredericksburg, Pa., in 1796, from whence, early in life, he went to South America, and while there, engaged in a mechanical vocation, he became interested in the working of astronomical observatories, and formed the resolution, if he should ever have the means, of establishing one on a grand scale. Soon after the discovery of gold in this State, he came hither, bringing about $40,000, which he invested in real estate in San Francisco, confidently predicting that the then village of sand-hills would become a great city and its magnificent harbor the entrepot of a vast commerce. This prediction he lived to see largely fulfilled. His name will henceforth be associated with an enterprise that will be the pride not only of the State, but of our country."

This Mr. Lick was one of the class called "atheists" by the *Christian Statesman*, one who sustained what that journal would call atheistic lectures, delivered by the writer of this paragraph, in California some years ago, and who gave an estate situated near San José, which he considered worth more than $100,000, for the erection of a Free-thought Hall in Boston. The estate was sold, and the amount realized from the sale was used in the erection of Paine Hall. This same Mr. Lick gave to charity, besides the sum mentioned above, many thousands of dollars. The Lick trustees, the papers state, having been authorized by Judge Sullivan, are about to expend in execution of their trusts $150,000 in building free baths and $100,000 in the erection of a home for old ladies in San Francisco. They are also distributing $100,000 among various charitable societies in that city and San José. Were it necessary, we might here allude to the bequests of Stephen Girard, another atheist, which were made in a spirit as generous and philanthropic as the disregard of his will in certain respects is unjust and dishonest. Cannot the *Christian Statesman* rise above the bigotry and littleness it exhibits, and revise and broaden its views in regard to men, their conduct and motives? Can it not see that a man may be loyal to his convictions, faithful to all his moral obligations, and desirous of improving the condition of society, even though he have no belief in a personal deity or expectation of future rewards? If our contemporary cannot see this, it may as well confess at once that selfishness is the essence of its morality, and that, without belief in a heaven to gain and a hell to escape, the distinction between right and wrong would have no existence or meaning. The *Christian Statesman* might read with profit passages on this subject in the writings of Bacon, Dr. Chalmers, and Theodore Parker. It is not neces-

Digitized by Google

sary that one should believe with those called "atheists" to do justice to them, at least to recognize in them those qualities of head and heart which they possess in common with those whose theological beliefs they are unable to accept.

QUESTIONS.—A friend writes and inquires: "1st. Does the book for the mailing of which D. M. Bennett was imprisoned come under the head of Free Thought Literature, as the term is generally understood? 2d. Can or have the present postal laws ever been used to the exclusion from the mails of writings antagonistic to the Christian religion?"

With regard to the first question, we think that the publication alluded to was rather physiological than otherwise; yet free mails are one of the features of the Free Thought movement. As for the second question, we must say *No*, to the best of our remembrance. —*Investigator*.

Is our neighbor quite correct in referring to the publication above indicated as "rather physiological than otherwise." Is it not rather a very coarse tirade against marriage, and, although not to be classed among *obscene* works, yet a pamphlet which treats a grave and delicate subject with such vulgarity and offensiveness as to assign it properly to a place on the line dividing decency from indecency, between which the distinction, questioned by nobody, is none the less real because it is determined, to some extent, by circumstances? The attempt to enforce the postal laws against the work, we thought at the time, and still think, was unwise and unjust. About the only effect it had was to advertise and increase the circulation of a coarse free-love pamphlet, which, if treated with "contemptuous toleration," to use an expression of Mr. Holyoake, would never have been known to the public. At the same time, *The Index* maintains now, as it has in the past, that "the present postal laws" against obscene literature, with such modification as may be necessary to prevent the annoyance of dealers in legitimate works through the ignorance of agents like Comstock or of juries who know nothing about literature or art, are right and should be enforced. The general government is under no obligations to be a carrier of vile prints which all honorable men and women unite in condemning. It is, on the contrary, the plain duty of the government to prohibit the transmission through the mail of publications the circulation of which all the State governments forbid, and to which all decent people, whatever be their religious views, are righteously opposed. It is because of its denial of this right and its unreasonable and foolish demand for the total repeal of the postal laws against obscenity that we, in common with thousands of others, have been unable to work with the National Liberal League, though we have never denied nor doubted that those generally who ask for the repeal of these laws do so as they think, in the interests of liberty and not to encourage indecency. We agree with our venerable and esteemed neighbor that "the present postal laws" have never "been used to the exclusion from the mails of writings antagonistic to the Christian religion," "to the best of our remembrance."

ONE Henry C. Gordon, a "materializing medium," while in the act of representing himself as the spirit of the daughter of a wealthy Spiritualist who is known to be extremely credulous, was lately seized in Philadelphia by a reporter, who was accompanied by a friend and police officer; and in his cabinet were found gowns, coats, hats for either sex, kid gloves, wigs, a white beard, and other raiment in which various spirits had disported themselves. In New York, Dr. Haynes L. Richardson, finding among his patients men and women who devoted nearly their entire time to communion with the spirit world and who were in a state of nervous excitement incident upon frequent attendance at séances, decided to attend an evening or two the performances of a Roberts family. He soon saw through the trickery, seized the ghost, which proved to be Roberts, and forced it to a room where the light was, but not without getting severe bruises from the captured spirit and its accomplices. "How absurd," remarks the Springfield *Republican*, "it sounds to call this an age of reason, in the face of such imbecile superstition as this, knowing that they count their adherents by millions!" In this city, a few evenings ago, a Mrs. Bliss, while personating a spirit, was seized, and her trickery and fraud exposed in the most thorough and convincing manner. The persons who made the exposure are among the most respectable and substantial citizens of Boston. Yet the *Banner of Light* states editorially that this medium "has received so many letters from friends from all parts of the country, expressing sympathy in regard to the assault upon her while she was sitting in her cabinet Friday evening, March 7, that she finds it impossible to answer them except by this method." But the *Religio-Philosophical Journal* does not hesitate to admit the fraudulent pretensions of this Boston medium who has been attracting credulous people, especially since the latest (for this is not the first) exposure of her trickery, and candidly acknowledges that, "at present, the accounts of materialization séances, as they appear in the newspapers, have not the slightest intrinsic or scientific value, and are with rare exceptions only evidences of how easily the average frequenter of such shows —for they are nothing else, as now conducted— may be imposed upon."

LAST Saturday evening, Prof. Edward S. Morse, who was several years in Japan, in an address before the Liberal Union Club of this city, gave many interesting facts in regard to the Japanese. "The Japanese," he said, as reported in the Boston *Sunday Herald*, "are much more temperate than Western nations. In his visits at their houses, he never had a glass of liquor offered him, but always tea. There are no standing bars there, and no public drinking of their liquors. These are very mild, and are drunk at home. Public drunkenness is extremely rare. The politeness of the Japanese is proverbial: their honesty is not so well known to foreigners. There are no bolts and bars in public or private houses; the drinking-cups at public fountains are never chained; money is left by travellers as well as by natives in unlocked rooms of public houses during days of absence, and is never disturbed; the shops are often left by the proprietor with nobody in them, while he goes to a distant part of the city. The Japanese are very humane. Horses are very rarely beaten by them; oxen drawing loads have awnings fastened over them to keep off the heat; cattle driven to slaughter are carefully led, and never maltreated by boys while *en route*. Gunning for sport is a cruelty unknown to them. At school, the children of the nobles are dressed very plainly, so as not to injure the feelings of those who are poorer than they. Teachers are held in high respect, being third in rank in the numerous different classes into which society is divided. The cultivated Japanese are mostly rationalists. The kind-heartedness of the Japanese is wonderfully in advance of our own. The people are poor, but unselfish. It is one of the maxims of their country that a man in distress must be helped, even though he is a stranger to you. The people are remarkably hospitable and courteous. Polygamy is practised to a slight extent, but it is looked upon with regret."

EDITORIAL NOTES.

THE Free Society of Dorchester having voted to increase its facilities for growth by removal to Boston proper, and its regular speaker, Mrs. Clara M. Bisbee, having called for a new organization under the title, "Society for Ethical Culture," all interested in the movement are invited (by courtesy of Rev. M. J. Savage's Society) to assemble at the Church of the Unity, West Newton Street, on Sunday next, April 6, at 3 P.M. This will be the first of a series of meetings preliminary to the permanent and independent establishment of this Society in Boston.

AT the last annual legislature of the Indians of the Grand Ronde reservation in Oregon, a number of laws were passed, which an exchange says are "interesting specimens of what might be termed protoplasmic legislation." We give two of these laws:—

1. If any Doctor is called on to wait on a sick person and the Doctor say he want to doctor the person himself until he die on his hands such Doctor upon trial and conviction is to be fined $20.00 and cost but if such Doctor have another doctor called In or say he cant cure him and request to have another Doctor he ent to be fined or say he cant cure the person. 2. If any married man swop rings or handkerchiefs with yong woman or widdows, that will cause trouble with his wife and family such man after trial and conviction will be subject to fine of $10.00 and cost of court.

"AGNOSTICISM," says the *Christian Union*, "is an attempt at oscillation between empirical science and materialistic speculation, in which each element neutralizes the other; and the suspense of nescience results—in the realm of fundamental principle—to the effect that man does not know, and cannot even know that he does not know." On reading this sentence, Prof. Huxley's statement in regard to agnosticism occurs to us: "Agnosticism is of the essence of science, whether ancient or modern. It simply means that a man shall not say he knows or believes that which he has no scientific grounds for professing to know or believe.... Agnosticism simply says that we know nothing of what may be beyond phenomena."

UNDER the heading "Shall I Go?" a Virginia correspondent of the *Investigator*, who has "never heard a rap nor seen any of the phenomena," writes that she has been urged by Spiritualists to visit New York or Boston to see and hear and investigate, and write up what she discovers; and she solicits contributions to pay the expenses of the trip. To the communication we find appended the following editorial remark:—

Presuming that the question of our good friend, "Shall I go?" is addressed to us as well as others, our own opinion (she will excuse us) is that she had better *not* go; for what she proposes to do will not amount to anything. She desires to write what she sees and believes: hundreds have done the same thing, but sceptics have not been convinced by this process. Suppose she sees a ghost: it is no evidence to us that we see it. We want to see a ghost, and the amount of it is that each one must see for himself. Mrs. Slenker cannot see ghosts for other people.

THE *Independent* says: "Prof. Huxley is reported in the London *Times* as saying, in a late address, that 'the world is not constructed upon any plan which, upon attentive consideration, produces amiable feelings in the breast of the philanthropist.' Does positive science teach that? So does Christianity, which teaches loss, fall, ruin. And both recognize the condition which calls for divine interposition and redemption." But science does not teach a "fall." It teaches development, progress, ascent, and not by divine interposition, but by natural methods and in accordance with natural law. Science recognizes loss and ruin, as in the cases of the earthquake on the Island of Ischia

Digitized by Google

and the eruptions in Java some months ago; but it sees no evidence of, and its representatives do not not in the midst of the greatest loss and ruin look for aid by supernatural intervention. The Christian theory of redemption gets no support from science. As Darwin wrote in 1879, "Science has nothing to do with Christ, except in so far as the habit of scientific research makes a man cautious in admitting evidence."

REGRET.

O golden days of vanished years,
That oft in sudden vision throng,
And, passing, fill my charmèd ears
With choral and entrancing song,
In beauty and in grace arrayed,
Ye part, as if reluctant yet,
And leave behind you, as ye fade,
A bitter, since a vain, regret.

For Envy, Malice, and Intrigue
I daily meet them, face to face:
These fateful Three, in hateful league,
Have won me gold and gained me place.
Companions mine, from day to day,
The many, with applauding hands
And clamorous tongues, and likewise they
Unstable as the shifting sands.

And on the far and beauteous plains
Through which my journey should have been,
Where Peace with Quiet ever reigns,
Whose fields I ne'er shall enter in,
I see the face of Friendship grand,
But turned in sadness stern away,—
A face so beautiful and bland
My heart is wrung with grief to-day.

Ambition, with his trumpet-call,
Lured to his craggy heights and cold;
Nor travail, nor the sudden fall,
Turned from the fate so often told.
To gain those radiant heights that gleamed
In distant glory brightly then,
I toiled, nor found them as they seemed
But haunts of mean and dwarfish men.

And, of the friends of early days,
One whom infinity scarce bars,
Who measures 'mid the ethereal blaze
The heavenly paths, is crowned with stars.
And one, who holds the world's great heart
Entrancèd while inspired he sings,
Has deathless beauty for his part,
And sweeps a lyre with golden strings.

And one unrolls the changeful page
Of story. With a master hand,
He limns the wild and pitiless rage
Of power and greed,—a spirit bland.
While 'mid idyllic fruits and sheaves
Another makes his home in peace,—
The swallow 'neath his cottage-eaves
Has scarce from care more full release.

And one has passed these earthly bounds:
The sorrow in my heart for him
Is of the requiem that resounds
Through some cathedral vast and dim.
But I with soul unbeautified
Have gained me only place and gold,
And find these heights outspreading wide,
But glittering, barren, bleak, and cold.

O golden days of vanished years,
That never, now, return again,
Not even for these bitter tears
O'er your lost beauty shed in vain,—
For your lost beauty, shed in vain,
I pour these hot and bitter tears,
Though now ye ne'er return again,
O golden days of vanished years!

HOWARD WORCESTER GILBERT.

PHILADELPHIA, March, 1884.

The Index.

BOSTON, APRIL 3, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

The Christian Doctrine of Salvation.

BY JOHN GODFREY, M.D.

Johnson defines salvation as "preservation from eternal death"; Richardson, as "security from evil"; Worcester, as "redemption from eternal death, deliverance from the effects of sin"; Webster, "the redemption of man from the bondage of sin and liability to eternal death, and the conferring on him eternal happiness."

These definitions, identical in idea, lead to the inference that salvation is a state of supreme happiness and guaranteed exemption from future trouble, obtained in exchanging this life for another hereafter; and that its acquisition is the employment of any means whereby that exchange may be effected. It all hinges, however, on the word *hereafter*. Those who believe there is no such thing have no special interest in the matter, but those who do must necessarily feel it to be a question of most vital moment.

One would think that the word "salvation" ought to convey a pleasing sound, and call up corresponding reflections. Instead, it has come to be nearly synonymous with suffering. Recognizing it as the most potent of human agencies, man began to meddle with it from the first, for purposes of right, only to convulse the world with wrong. When we begin to think about it, the images of those who have passed away, in placid resignation or in the heroic effort to publish the gospel of salvation are eclipsed by the grim spectres of recusant millions; and the ear staggers under the commingled groans of martyrs and sacerdotal victims. Its backward trail is lined by bleaching skulls and reddened by human blood. Its prime factor is force. Its history is full of bickering and strife. High above the soothing declarations of the Sermon on the Mount rings the unutterable anguish of *Eloi, lama sabachthani!* The Muezzin's call is the outcome of fiery zeal and warring strife. Salvation falters at no obstacle. For its sake, mankind will dare all possible things,—all things humane, heroic, self-sacrificing, all things fanatical, relentless, cruel. It inspires the life-long renunciations of the cloister and the frightful spectacles of the Juggernaut. It instigated the faithful service of Paul and the pitiless work of Torquemada.

Being from its very nature of such immense importance to mankind generally, and, withal, provocative of so much thought, it is but natural that salvation should be looked at from many different points of view, and that many different ways should be devised for obtaining it. Let us mention and compare a few of these. And, in doing so, for obvious reasons,—chief of which is, The list will be long enough anyway,—I shall confine myself for the most part to the Bible.

When John* was preaching the "baptism of repentance for the remission of sins" (whatever that is) in the country round about Jordan, the people came to him and sought to be enlightened concerning salvation. He said to them, "He that hath two coats, let him impart to him that hath none; and he that hath meat, let him do likewise." That was all. Simple and easy to comprehend. Many publicans came, also seeking information, and asking to be baptized. His advice was, "Exact no more than that which is appointed you." John evidently knew something about the tendencies of the publican's vocation, and his teaching was no less wise than brief.

Besides the people and the publicans, there came soldiers wishing to know how to be saved. They were instructed to "Do violence to no man, neither accuse any falsely, and be content with your wages,"—a third method, differing entirely from the other two, but equally sensible and simple. This wise preacher knew something also of the ruthless violence of the Roman soldier.

Already, we find three distinct modes of salvation,—none of which refers to or demands a creed,—taught by one who, at one time, was even mistaken for Christ.

Differing from these is that which Jesus gave to Nicodemus. In the latter's case, observing the Commandments and practising charity were not enough. Something more than creed and daily conduct of life was required. "Except," he was told, "a man be born again, born of water and of the spirit, he cannot enter into the kingdom of God."† It would appear from what followed that Nicodemus was somewhat mystified. Indeed, it was intimated that the subject was rather beyond his capacity. But, if Jesus meant the same thing that he did when, shortly after his resurrection, he said to his disciples, "He‡ that believeth and is baptized shall be saved: he that believeth not shall be damned," he uttered what thousands profess to have accomplished and undergone. That there might be doubt, however, in the next breath he added, "And these signs shall follow them that believe: in my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and, if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."§ This is explicit language, and a Christian must believe it. And yet, judging from every-day life, does any one believe, and will any one be saved?

Somewhat resembling the first method prescribed by John is that which Jesus gave to him of great possessions, like Nicodemus, a ruler.‖ By all accounts, this young ruler was a most exemplary person. Unlike a vast majority of his kind, he had kept all the Commandments: he had even loved his neighbor as himself. Nevertheless there was one thing lacking to inherit eternal life: it was necessary to sell everything, and distribute to the poor. No reference this time to belief or baptism. None was necessary, else it would have been mentioned. The ruler came in good faith, and the Saviour of mankind knew whereof he spoke. This is confessedly the least popular of all the methods. It rendered the poor man very sorrowful; and, it may be, he was lost.

Another way is that which fell to Mary in the house of the Pharisee.** Unlike the ruler, this particular Mary was looked upon as a sinner. However, after kissing the feet of her Lord, washing them with her tears, drying them with her hair, and anointing them with spikenard ointment, she heard the welcome words, "Thy sins are forgiven." The exemplary ruler doubtless would have accepted this method, finding it easier to bring himself to the state of humility and deep contrition of the sinful woman than to part with his riches. The method is peculiar in one respect, it could not be practically used after the resurrection.

Leaving the writings of the evangelists, and turn-

* Luke iii., 3-14. † John iii., 3-5. ‡ Mark xvi., 6.
§ Mark xvi., 17, 18. ‖ Luke xviii., 18-22.
** Luke vii., 36-48.

Digitized by Google

ing to Paul's Epistle to the Romans, we find a means of salvation directly the reverse of that last mentioned. It is this, "That if thou shalt confess with thy mouth the Lord Jesus, and shalt believe in thine heart that God hath raised him from the dead, thou shalt be saved."* The difference is manifest. The one could only be applied before a certain event, the other not until after it.

About the latter, however, there is a contingency of confession and credulity. But for this the apostle makes provision, when he says, "For by grace are ye saved through faith, and that not of yourselves: it is the gift of God."† Such a declaration ought to cover every case. Certainly there are few who would not prefer this mode of salvation to that imposed upon the pious young ruler.

After even this short enumeration, one is justified in saying that salvation may be obtained in divers ways. But, be they many or few, if salvation be looked at from the Christian's standing-point, if the doctrine of vicarious atonement be regarded as the fundamental element in the general plan of redemption, we are forced to conclude that it frequently hinges upon a contingency. For instance, if we accept the gloomy predestinarianism of Calvin, we must acknowledge the uselessness of trying to save ourselves, since there is no escaping the conviction that, if salvation exists for us, it does so *ab initio*. On the other hand, if we deny this and accept the teaching of James, that "faith without works is dead," and believe that man will be judged for the deeds done in the body, then—if it were possible—the only true basis upon which a company could be formed for insuring salvation would be to have all die too young to commit sin. The reason is plain. It is impossible to predict what any one's future will bring forth. Passing over such accidents as being born among heathen or being captured and reared by them, we must admit that the long array of worldly temptations—the seductions and vanities of life, the bias of association, the restless energy and influence of the devil—are all to be considered in making up the salvation-tables of Christendom. It may be added, from this point of view, that convalescence after repentance upon what was supposed to be a death-bed might result finally in damnation, if it be true that one may fall from grace. And so, in the same way, the mal-practice of a physician may turn out the most beneficent work.

These conclusions are inevitable under the Christian dispensation; for the orthodox heaven is the fruition of human hopes, the ending-point of human pilgrimage. Once in, no matter what the past may have been, there is no raking up of old scores. Being admitted, the dynamite fiend is as good as the sinless babe. The body being nothing, and the immortal soul everything, the sincere Christian was consistent in waging the crusades, in perpetrating the cruelties of Bartholomew and Morisco-Spain. The miraculous power of the cross, and the efficacy of the mediatorial scheme, deserved to be known of all men.

If admiration and acceptation be the tests, then the Christian doctrine of atonement may be called perfect. From the first, it has inspired the most steadfast adherence. Men have staked their all upon it, and have laid down their lives believing in it. It appeals to every generous instinct, to every emotional feeling; but does it really meet one's deepest sense of justice? Undoubtedly, the atoning of one for many is the sublimest act of self-abnegation conceivable; but is it possible for the justice-loving mind fully to sanction the conduct of all the parties to the deed? A number of sons may be graceless, sinful, criminal: another may be meek, sinless, tender-hearted. The former may be called to account; but the latter, overflowing with compassion, offers his body to be punished for all. Now, however much admiration we may feel for such devotedness, we naturally demur to the injustice that would accept it; and we instinctively do more, when we think that *any hand* could coolly inflict the punishment. Seriously, then, accepting justice in its usual sense, does this subserve the ends of justice? Is its tendency to raise the moral status of those who have shirked their just deserts?

It has often been charged against infidelity that it lessened the sense of moral restraint, that it narrowed the limits between right and wrong, took away the feeling of personal accountability, and paved the way for the encouragement of man's baser nature; but are not such tendencies, or their equivalent, also the logical outcome of a belief in salvation through vicarious atonement? Can a believer remove from his mind the consciousness that he has at all times a loop-hole through which to escape the horrors of hell? Can he help knowing that at any time during life he may obtain forgiveness for his sins? He may feel perfectly assured of life's uncertainty, that he may be cut off without warning; but experience does not show this to be a sufficient incentive to moral conduct. Men are venturesome and procrastinative, and we see them every day putting off for to-morrow what should be done to-day.

Salvation, under the Christian dispensation, results sometimes from most unexpected causes. I shall try to point out one of these, at the same time hoping that it may never go into general practice. The easiest way, perhaps, will be to relate an incident. Some seven or eight years ago, a Washington newspaper gave a full account of a hanging that was done in Alexandria, Va. The crime was murder; and the criminal was drunk, when he did it. After sentence, he was fortunate enough to receive the kind care of the Young Men's Christian Association. For a week or two before his execution, one of their number prayed with him daily, sometimes hourly; and, at length, he became sincerely repentant, and expressed himself reconciled to God. Upon the scaffold, the scene was described as touching in the extreme. First, and the cynosure of all eyes, was the criminal, full of contrition and humility, and at peace with all. Near by were several of those that had helped him through the darkness of sin into the bright light of regeneration. He and his spiritual advisers believed that God had pardoned his sins, and he told the assembled multitude that he was going to heaven. He told them also—with the vanities of this life at his back, and the river of death at his feet, and he charged every one to bear his words in mind—that the main cause of all his trouble was whiskey.

Jesus says, in substance, that it is better to save one's soul than gain the whole world, that the gates of heaven are hard to enter, that the road to hell is broad and well-trodden; in other words, that the sweet fruit of salvation falls to only one out of many. Now, if this be so,—if heaven is a home of eternal bliss, and hell a place of endless woe, if losing one finds the other,—in the name of truth and sober sense, did not, in this instance, the killing of one man result in the salvation of another? And, in all seriousness, could not the criminal's tombstone have truthfully borne this inscription?—

Saved from perdition by whiskey.

I would not be charged with intimating that prayer was not an important adjunct in the case above cited. I am trying to show that it *might not* have been resorted to under different circumstances.

Prayer has much to do with salvation. A great deal has been said and written about it; and an inconceivable amount of it has been sincerely done, full of contradictions as it is. Paradoxical as it may sound, there are unbelieving prayer-makers. Stripped of all sentiment and reduced to reason, prayer reduces itself to this: first, an asker and a giver; second, the assumption of something needed to be obtained by solicitation, the assumption of something wanted, whether needed or not, that may be gotten by sufficient supplication, the fear of something that may be averted by intensified beseeching; third, the assumption that a Being, representing the supremest degree of exaltation, may be pleased by exhibitions of humility, or that a Being, who always acts without the minutest departure from rectitude, and who gives so wisely and so justly that no alteration could be made without detriment, and who never forgets or neglects, may be induced to listen to this or that petition, if implored earnestly enough and long enough.* In short, prayer presupposes that an infallible Being may be biassed. Nevertheless, contradictory as it is, it is the common and seemingly natural outlet for man's emotions. If reason gives way for an instant, even unbelievers—as before said—take to it, *when hard pressed*. Probably, nine-tenths of the human race indulge in it; but this is no reason in defence of it. Truth rests with a higher judiciary than custom.

The evangelists frequently refer to Christ as praying; and he taught his disciples how, in set terms wonderfully terse and expressive. Yet, the moment before, he explicitly said, "For your Father knoweth what things ye have need of before ye ask him."* How is this to be explained, except by supposing that in this particular, at least, reason and sentiment have agreed to let each other alone?

Salvation presupposes sin, which includes original sin, one part of the Christian system. About this, a word may be said, although neither original nor new. It is this: Creating the world and all things therein necessarily involved the creation of sin. Creating necessitates the exercise of will. Sin could not be willed to exist without the will being sinful. It is impossible to conceive a perfect being with a *sinful will*. Sin exists, and must therefore exist without the exercise of will: wherefore, one thing at least is self existent.

Salvation likewise presupposes creation,—a term that troubles the average mind but very little. To it, creator and creation are plain as the noon-day sun. There are others—above the average—whom the term appears to bother considerably. They start out with the glib assumption of a Great First Cause; or, maybe, they endeavor to go backward toward that Cause, and eventually confess to falling into a maze of speculations and guesses. There are still others—farther above the average, perhaps—who calmly admit that they know nothing about it, and content themselves—wisely, it may be—in coping with what they deem the knowable. Says one: "Cause produces effect, and that in time becomes another cause, and so on in the future unendingly. Then, by reversing the sequence, why cannot one travel into the past unendingly? That which can be formulated has limit, but the mind can still conceive of something outside the utmost limits of all formulation." A writer of acknowledged ability, speaking in favor of a designing Mind, says, "Man has the capacity to discover that, by the very nature of things, everything that begins to be must have a cause."† In granting this, it is fair to claim that that which does not begin to be has no cause. In the next sentence, it is said, "If a world begins to be, if there be a fitting of things to one another in the world, then there must be an adequate cause in a power and purpose on the part of an intelligent Being." If rightly understood, this means that a world which begins to be, with the "fitting of things to one another in the world," gives indication of an intelligent Being as the cause of its beginning to be. After granting this, the question would still arise, Do worlds begin to be? The sentence may be broadened a little by substituting "matter" for "world," and a little more by substituting "exists" for "begins to be." We could then say, If matter exists, if there be a fitting of things to one another in matter, then there must be an adequate cause in a power and purpose on the part of an intelligent Being. Nevertheless, the objection would come up, Is matter self-existent, or does it begin to exist? It might be said, besides, An intelligent Being represents matter, with co-ordinated faculties "fitted one to another" indicative of design; and behind this, therefore, there must be "an adequate cause in a power and purpose on the part of an intelligent Being." This sort of argument would bring about a reduplication of intelligent beings *ad infinitum*.

But, supposing that "man has the capacity to discover that, by the very nature of things, everything that begins to be must have a cause," is it equally true that, "if a world begins to be, if there be a fitting of things to one another in the world," "then there must be an adequate cause in a power and purpose on the part of an intelligent Being"? Not necessarily. A world, existing with all its parts adapted and fitted with apparent purpose, does not necessarily imply purpose. A conscious incompetence would keep me from going far into the domain of biology; but I shall risk this statement,—that because the lion has canine teeth, strong, sharp claws, and a digestive apparatus that easily assimilates animal food, it does not follow that he was specially created to live carnivorously. I will risk another,—that there is good reason to believe that the baleen whales live on food differing entirely from that which they used at some period in the remote past. It is perfectly logical, and there is quite as much ground for saying that the evolution of the lion resulted in an animal that could maintain a survival only by being carnivorous as that he was made for the express purpose of being so.

* Romans x., 9. † Ephesians iii., 8.

*Of course, the above refers only to those whose standard of deity is as high as that of the Christian. The Greeks, the Romans, and others, whose gods had shortcomings of their own, might pray for whatever they pleased with perfect consistency.

* Matt. vi., 8.

Furthermore, the rudimentary teeth in the jaw of the embryo whale certainly refer to an antecedent state of things, or we must confess they invariably appear for no purpose whatever. It is more rational to believe that they are the remnants of a once developed dental system than that a designing Mind made them without regard to use. Now, if change from previous condition can occur in one instance, it may in all; and, if one case existed without design, all may. The same argument, somewhat modified, might be applied to the motions of the heavenly bodies.

It was said just now that salvation implied creation, and it is said now that the latter implies a creator. By some, a creator is regarded as a separate entity; by others, as force or spirit pervading the universe, as life does the body,—an inscrutable agent, bending matter to fixed and foreordinated ends, with purposes congruous and determinate. Of such, it is not irrelevant to inquire whether the two can exist simultaneously. The prime attribute of a creator is omnipotence. It is not irrelevant to ask, also, if absolute onmipotence be possible. No omnipotent being could create another with like powers. At least, having done so, the work could not be undone without obtaining sanction from the being just created. Omnipotence precludes all thought of sanction.

Again, it may be asked, If the Force pervading the universe were withdrawn, would it, could it, uncreate matter? Is it possible to conceive such a thing? But that which can create ought to be able, under any circumstances, to uncreate.

Again, those who regard the Creator as a separate entity may reasonably inquire if, in the nature of things, he could remain so, provided he has created man with a sentient, immortal soul. For individual being implies limit, and this limit implies a point somewhere in space whereat may be found this Being, perfect, of course; or, if not, progressive, and therefore imperfect, which no believer will admit. He is therefore stationary. Now, confessedly, the life of an animal body lies in the mental part of it, inasmuch as there is an absence of life wherever there is mental death; or, what is the same thing, the supervention of death upon the total cessation of mental action. We cannot conceive a world peopled by beings totally bereft of the faculty of thinking. A being totally incapable of thought would be totally incapable of maintaining existence. Now, if to die is to cease to think,—or, rather, if to suspend thought is to die,—then, surely, so long as life *is*, there must be mental progression. No matter at what rate, there must be onward movement,—instants or ages, it matters little to immortality. Hence, the mind can have no ending point this side of perfection. Then, if a creator represents the sum total of perfection. he has limitation. If the mind is existent and imperfect, it must progress. Wherefore, the two must eventually occupy the same plane.

Is it necessary to suggest anything new to those in quest of salvation? First answer, Does the quest of it help to engender that state supposed to be necessary in order to receive it? Do the various modes, and the inevitable results outcropping therefrom, breed purity and truth and an inclination toward all the higher virtues? In answering, each would champion his own particular mode. Many would be wrong. A few, a very few, might be right. Why is this? As before said, those who believe in a future state are profoundly interested that that state should be a happy one; and, in consequence, emotion often-times gets the better of reason, letting go the moorings of the known and knowable for the uncertain wastes of speculation and conjecture.

On page 486 in the article hereinbefore quoted, after a brief detail of the tendencies of agnosticism, appears this sentence: "Will we be apt to set a higher value on life, when we know it to be a mere bundle of impressions, with unsubstantial ideas growing out of them?" Now, in all candor, is there not underlying this the shadowy outlines of expediency? In such a case, we may or may not set a higher value on life. But there is something higher than that to look at. If we *know* life to be "a mere bundle of impressions, with unsubstantial ideas growing out of them," *truth* absolutely demands that we say so, whether thereby we "set a higher value on life" or not. It is our bounden duty; for, sooner or later, truth gets to the top, and any league between it and expediency is apt to result in disaster. After six or eight interrogatories of like kind comes this statement, "Agnosticism never can become the creed of the great body of any people; but, should it be taught by the science and philosophy of the day, I fear its influence on the youths who might be led, not to amuse themselves with it, but by faith to receive it, would be that they would find some of the hindrances to vice removed, and perhaps some of the incentives to evil encouraged." This sentence means a great deal. But that there should be room for the fear expressed therein is a sad commentary on the way youths are taught. Although agnosticism is thought to be false and "never can become the creed of the great body of any people," nevertheless the youths might be led "by faith to receive it." How does it happen that misgivings arise for fear a creed, believed to be false, may be implanted in the minds of youths upon no surer footing than faith? Why should such a state of things exist? What business has any teacher at any time to proceed upon no more certain groundwork than faith? Far better to keep to the knowable, and imbue the minds of youths with the lesson that fact and not faith is the thing for them to seek.

But, after all, accepting Christ as authority, salvation is not so difficult of attainment. On divers occasions, he expressly declared himself as follows: "All power is given unto me in heaven and in earth."* "If ye abide in me and my words abide in you, ye shall ask what ye will, and it shall be done unto you."† "And nothing shall be impossible unto you."‡ "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."§

What more is necessary? If language means anything, the door to salvation is opened by faith. If the authority be good, the belief can be exercised, whether it ever is or not,—it would have been sheer mockery to have prescribed impossible things,—and the way is plain for man to save himself, and others, too, should he so desire.

But perchance there are some who do not accept the authority just named. Then let them listen to reason and sober reflection, and learn that right brings more pleasure in this world than wrong. The illustrious Ampère said to a friend, "There should be no questions between us but those of eternal truth." If the whole tenor of man's life be squared by this conviction, salvation will not be far away.

For *The Index*.

A HUNDRED DAYS ABROAD.

BY GEORGE JACOB HOLYOAKE.

CHAPTER XVII.

An "Advocate" at Sea.

Though I have deliberately forgotten all I could, and buried many notes "ten thousand fathoms deep" that they might not confront me or remind me of further incidents, two or three refuse to quit my memory. One is that the editor of *Truth*—a paper representing the industrial classes, and of considerable popularity in New York—sent to me a young interviewer, a Russian, very prepossessing, and who gave the impression, as many Russians do, of knowing everything. He asked my opinion of most things under the sun. One question was, what I thought of Mr. Henry George's book, *Progress and Poverty*. I answered, with the gayety of private conversation, which I trusted to him to express with solemn decorum, that I thought Mr. George's book "the bloodiest treatise that had been published in my time." Then, I explained to my Russian delegate that this had reference to the effect of the book, supposing anybody believed in it and tried to carry its doctrines into practice. The book proposed the confiscation of all property in land, which would involve a wider and fiercer carnage than the world had ever seen, or that any tyranny or malignity had before excited. Those who applauded the book must see that it tends to excite and justify the murder of acre-owners at every opportunity. Very little appeared of the reasons I gave for the opinion I expressed, but the opinion itself was made pretty prominent in the report. On the night of the co-operative lecture in the Anthon Memorial Church, an honest, pleasant-minded person, well-built and well-bearded, apparently about forty-five, came to me at the close, and said he owed me personal thanks for the trouble I had taken to procure a publisher for his book in England. I answered that I was glad if I had done him a service, but even then I did not know to whom I had rendered it. "Why," he answered, "I am Mr. George." "Dear me!" I replied, "how very human you look!" "How did you expect me to look?" he inquired. "Well, after the book of ferocious philanthropy with which you favored us, I thought at least to see you with dirks in your belt and dynamite enough in your boots to blow up poverty and progress as well." Mr. George, in the *Daily News* to-day, January 8, says, "While I have never proposed that, in the resumption of the land by the people, any individual should be compensated, I have always urged as an indispensable condition that in such a change abundant provision should be made for the helpless of both sexes and all ages."

We could never have gone about New York with the pleasant facility we did, had it not been for the gift, in the latter days, by Mrs. Henry Villard, of her carriage, that we might make some suburban visits. Mr. Villard I had known in Europe, when he was engaged, singular to say (though I was unaware of it at the time), in promoting the issue, by the Social Science Association of Boston, of a National Guide Book. An edition appeared, of which copies are not now to be had. It would have been a great advantage to America, had the association persisted in its design. Mr. Villard was then the president of the Great Northern and Pacific Railway. I often heard anecdotes of his wonderful enterprise, capacity, and character. Mrs. Villard I found as engaging as when we knew her in Europe. She is one of the daughters of my valued friend, William Lloyd Garrison, and is therefore of honored and heroic lineage. I had the great satisfaction also of meeting her brother, Mr. W. P. Garrison, at the office of the *Evening Post*. I had never seen one of Mr. Garrison's sons before.

Of course, we gave one night to Lotta. She is in England now. Whether her Californian gayeties and United States humors will have as much interest on the English stage as British eccentricities do on the American is not to be said beforehand. She is the only American actress who is racy of the soil. There is nothing like her in America, and there is nothing like her elsewhere. She is the wildest, brightest, maddest thing seen upon any stage. Only an American woman could possibly do what she does. She is never still: she is electric. She represents all the restlessness and excitement in the country. She is everywhere on the stage at once. Ancient playgoers speak of Lotta as a girl when they first saw her, and she is as much a girl as ever. Only an American woman could possibly live with the animation she displays. She has that amusing levity which is in the American air, which ought to interest the English student of manners. Certainly, nothing could outrage us as it must outrage Americans to see Mr. Irving die in "The Bells" or recite "Eugene Aram." Lotta never distresses you, nor makes you wish you had stayed at home.

If we had bright nights, we also had bright days; and one ineffaceable day was spent at Staten Island, on a visit to the friend of my student days, Dr. Frederick Hollick. We were afterward social missionaries together in the great agitation of which Robert Owen was the head. Dr. Hollick drove us everywhere, and showed us everything. We visited the house of Mr. William Winter, the poet and chief of the art critics of America. We had the pleasure to see Mrs. Winter and her charming family. We also went to Manteucci's, with whom Garibaldi resided when in Staten Island, in whose candle-works he wrought, not, as is often said, as a workman, but as a colleague of his friend Manteucci, whom he would persist in going to help, because he was a resident in his house. We had refreshment in the gardens of Garibaldi's old friend, who still lives, radiant as ever with patriotism. Most of the relics he has of "The General" have been gathered by agents of Italian collections in memory of their great deliverer. In the gardens where Garibaldi often sat, meditating on the adventures through which he had passed, and others which he had in his mind to enter upon, we gathered flowers to send to his son Menotti, which I still preserve for him, and of which he will learn for the first time in these pages. Manteucci also kindly made bouquets for my daughter and her friend in remembrance of our visit. As far as I could, I went up every pathway and over every spot where "The General" had walked.

The next and last bright night in New York was a dinner given me at the German Club. Prof. Felix

Adler presided. The entertainers were distinguished in music, law, medicine, literature, beyond my powers of appreciation. All, or most, were members of the Church of Ethical Culture, of which Dr. Adler is the founder and preacher. They presented me, in the name of the society, with a costly album, containing fine portraits of the most eminent men in ethics, literature, and oratory whom I was known to admire. Dr. Adler made the most poetic and eloquent speech on the part of the entertainers I have heard at any time. He began by telling us of the legend of the sinking of the Nibelungen gold in the Rhine. He, who gave it to the great river, predicted that great riches would proceed therefrom. He was but derided for his words, and distrusted for his gift, which men said was fallacious and lost. At last, when none expected it, it reappeared in the golden juice of the vine, which grew on the banks of the river laved by the Rhine waters. To this, he compared the career of one who, explaining new principles or new methods of progress during long, unregarded days, lives at last, as it were, into a new world, where men are curious to hear what they neglected when first spoken, believing what they then denied, really valuing what they once thought worthless, and not ungrateful for its advantages. The Nibelungen gold was not lost in the Rhine. But no one can relate all this with the grace Dr. Adler told it.

The last night in New York (November 28), a fierce, cold wind—the precursor of the great snow of the night—swept the streets. Mr. M'Watters accompanied me to the Academy of Music, where a meeting was held to raise $250,000 for building a pedestal for the great Bartholdi statue. The colossal figure of Liberty enlightening the World will be three hundred feet high, and is the gift of France. It is to stand where every sail approaching the harbor of New York can see the electric torch which Liberty holds up in the air. My object was to hear a speech by Parke Godwin,—eloquent and commanding in his manner of speech, and though he is of good age, his voice filled the great hall,—and to hear Mr. Evarts, who presided, whose exact, clear voice was also heard everywhere, although in person the speaker seemed as frail as Dr. Channing. His lucid statement had gleams of brightness and wit, which enabled me to understand why he is so often chosen as the mouthpiece of the nation on occasions of ceremony or State courtesy. Dr. Collyer was also one of the selected speakers; but, having to sail next morning, I was unable to stay until he spoke.

The night was, as I have said, cold,—cold as charity when it has been three months in a refrigerator,—and the wind was as bitter as the sentences of Schopenhauer; yet, when I arrived at the Academy of Music, there I saw my friend Peter Cooper, with whom I had rememberable intercourse in 1879. The brave, old philanthropist had come to the meeting on behalf of the Bartholdi statue on that inclement night, although he was then in his ninety-third year. He has died since, and the reader may see a fine portrait of him in the *Century* for this month.

Before we left, we had a farewell visit from Mrs. Elizabeth Thompson. Notwithstanding the growing inclemency of the weather, she gave us that gladness; and the bright faces which greeted us on our arrival shone on our departure.

As I have recounted, we had four days of steady wind storm on our return. Shakspere tells us of

> "Mermaids on a dolphin's back,
> Uttering such dulcet and harmonious breath
> That the rude sea grows civil at her song."

During these four days, I judge, the mermaids were not out; and, though we saw dolphins at other times on shore and quite disengaged, no mermaids appeared upon them and sang, nor was the sea civil. When we arrived at the bar of the Mersey, we concluded we were safe. This was not conclusive; for we were detained, owing to tide and fog, near thirty hours on the spot where the "City of Brussels" was soon after run into. We were afraid of running down another ship: it did not occur to us that this might happen to ours. Two American ships lying about pushed forward, but not without sustaining mischief, and incurring the risk of doing it. Our prudent captain avoided both. The two adventurous vessels arrived immediately before us, when the second had to wait while the cargo of the first was examined in the Custom House; and the third had to wait while the same operation was undergone with the cargo of the second ship. Thus, after twenty-eight hours in the fireless fog at the bar, we had to wander about in the frost and snow more than two hours. This was owing to the eminent city of Liverpool being without a Custom House with compartments in which several vessels could deposit the freight of passengers simultaneously, and be simultaneously examined and discharged. If Liverpool is too poor to do this, no doubt New York would make a subscription to defray the expense.

Our friend Mr. Fraser, of Liverpool, whose kindness was proof against delay and discomfort, was all day on the tender to meet us, which was groping about in the fog (without fire or food) for the "Catalonia." For some days, we were the guests of Mr. Thomas Cope, while the frost of the Mersey thawed from us, and who generously arranged for our return to London in a new saloon carriage, which I had not before seen, in which cold or discomfort was impossible.

It is the English carpenter-chest railway car which has stopped the art of conversation among us. An English railway carriage is but a carpenter's chest, or large packing-case, with two shelves in it named "seats," just to induce people to take tickets to occupy them. A lady, seeing a gentleman in a carriage, will not join him, nor speak if she does, lest it should be taken amiss; and a gentleman is reticent, lest speech should be regarded as a familiarity.

When the saloon carriages of the London and North-western Railway become general, the lost art of conversation will be recovered. More ingenious in construction and richer in fittings than American carriages, they admit both of privacy to those who desire it, and company to those who prefer it. It was a matter of pride to find the Old Country, on returning to it, excelling in the contrivances of graceful locomotion.

CORRESPONDENCE.

CHURCH PROPERTY TAXATION IN IOWA.

Editors of The Index:—

Before the Legislature of Iowa is now pending a bill for the taxation of church property; *i.e.*, parochial residences of ministers and the dignitaries of the churches, of which the assessed value shall be in excess of three thousand dollars. This bill was introduced by the Hon. John C. Bills, the able senator of Scott County. The introduction of this bill has raised considerable turmoil in the ranks of the churches, particularly among the Catholics, who, immediately after its passage in the Senate, held a mass meeting, where a band of fanatics delivered "five-minute speeches" (the speaker being confined to only five minutes, because it was feared that there was no end to the arguments against the bill); and resolutions were drafted, earnestly appealing to the members of the House of Representatives to reject the bill.

Besides the remonstrances offered, some of the speakers basely abused the senator by declaring that the framing and introduction of such a bill was the work of a "bigoted infidel," and that such a man "ought to be spotted and kept home for the future." Now, it is only too well proven that Mr. Bills enjoys the esteem and respect of a much more intelligent class of people than those protesting against the measures taken by him.

On Friday evening last, another mass meeting in support of the bill was held, where the most prominent men delivered speeches on the subject. All, with the exception of one speaker, were in favor of absolute church taxation. Among the number in favor of this principle was the Rev. Mr. Judy, of our Unitarian church, stating clear reasons why "*all church property*" should be taxed. After the meeting, resolutions, signed by the most prominent citizens of Davenport, asking the Representatives to adopt Senator Bills' bill, were drafted and forwarded to the General Assembly.

Mr. Bills has taken a step that will prove beneficial in the future, even if it should be defeated in the lower House at the present session. Many wish that the senator's bill may pass the entire legislative body and become a law, as it is a step taken in the direction of producing equity in the assessment of taxes. Entire church property taxation will then follow in the course of time. The foundation stone is laid down by an able and honorable man, whose arguments will yet be cited as precedents for the eventual entire church taxation.

CARL C. SCHARFENBERG.

DAVENPORT, IOWA, March 22, 1884.

MORALITY AND EDUCATION AMONG THE MORMONS.

Editors of The Index:—

The Mormon Church is officered mainly by Americans, its earliest converts being principally of that class. And now a number of generations is to be seen in the bud, as it were, on this parent stem. The charge is often heard that Mormon emigration consists of paupers and criminals. Such a report was made last summer to the government at Washington by a United States consul, with reference to a company of Mormons that were on their way from Europe. On the arrival of the steamer, the human freight was inspected by a government agent, whose report was a flat contradiction of the charge of the gentleman with an "Honorable" attached to his name.

But what is their condition in Utah? Of its one hundred and seventy-five thousand population, twenty-five thousand only are Gentile. But this minority is distinguished in certain ways. It fills nearly every position of influence and emolument from the governorship down, this being one of the phases of civil service reform in Utah. Of the two hundred saloons, billiard rooms, and bowling alleys, a dozen are Mormon, or profess to be. All of the bagnios and other disreputable concerns are run and sustained by anti-Mormons. Ninety-eight per cent. of the gamblers are of the same element, as are ninety-five per cent. of the lawyers. Eighty per cent. of the litigation is from the same source. Ninety per cent. of the suicides are non-Mormon, as are also eighty per cent. of the homicides and infanticides. Of the one thousand arrests in Salt Lake City for the year 1881, one hundred and fifty were Mormons, eight hundred and fifty were anti-Mormons. In 1878, it could be said that out of the twenty counties of the Territory, most of which are populous, thirteen were without a dram-shop, brewery, gambling-house, billiard-room, or brothel, lawyer, doctor, parson, beggar, or politician.

Utah Territory has no bonded debt; nor have any of the cities or counties, excepting Salt Lake City, and that is slight. Ninety-five per cent. of the Mormon people live in their own houses on their own lands, for which they hold deeds in their own names. The largest, most perfect system of co-operation, I believe, in America, exists among the Mormons. George Jacob Holyoake would be in his element there, or rather he would find his vocation gone. He might not be displeased to hear that co-operation among them is known by the name of the Order of Enoch, which is to make the city of the saints fit for translation to the skies, or the earth rather a fit abode for celestial beings. In temperance reform, it may not be too much to say the Mormons lead the world; and this is due to a revelation given to Joseph Smith, entitled "The Word of Wisdom." It teaches that life and health, mental and bodily vigor, depend on abstinence from strong drink, tobacco, and flesh also, excepting in times of winter or famine. I never drank anything as strong even as a cup of coffee until I acquired the habits of more civilized communities.

Education.

One of the most liberal church organs, the *Christian Union*, in a late issue speaks of "the successful establishment of purely hierarchical schools in the interests of a despotism by the side of which Romanism is an embodied Sermon on the Mount," and of "the Mormon hierarchy teaching polygamy as a religious duty at public expense." "The school-house is often constructed as a wing to the meeting-house, which is never called a church; and the bishop is the real manager of the school affairs." "The teacher is certain to be a faithful and earnest follower of Joseph Smith. The Book of Mormon and Doctrine and Covenants hold an honored place in the curriculum." Grave charges, certainly; but are they true? I myself have both taught and attended school in Utah. I never recited nor gave a lesson from a church book, excepting in one instance. A boy came to school one day with a primer of the Deseret alphabet under his arm (a system of phonetics of Mormon invention), and, after shying about for some time, came to me, and said, "Father wants to know if you won't teach me the new alphabet?" I answered in the negative, not knowing its A from B myself; but curiosity prompted me to comply with the parent's wish, not being deterred therefrom by the recollection of the somewhat irreverent remark passed on the system by

Digitized by Google

one of the apostles, who, when asked by President Young what he thought of it, answered, "I think there is one letter which should be added." "What is that?" asked the prophet. "Let 'er rip," said the apostle.

The text books in use in the Mormon schools are the same as elsewhere. The services of Gentile teachers have been, and are, in demand. As far back as 1868, the largest school in Salt Lake City had a Gentile teacher at its head, a graduate of Yale. The finest hall in the city, the Fourteenth Ward Assembly Rooms (the saints' meeting-house), was thrown open for his use. He was obliged in Utah to abjure certain Eastern customs; for at Yale, I believe, there are religious exercises, and, if I mistake not, the attendance is compulsory. A distinguished Unitarian minister of the East, who visited Utah quite recently, has just written me, saying, "I found a Gentile woman, teaching in their high school as principal, paid a higher salary than she could get in New York or St. Louis (in both of which cities she had previously labored), and elected solely on account of her ability, and without any question as to her religion." Religion, in fact, has no place in the curriculum of the schools in Utah, unless it be in the schools of the outsiders. Article XI. of the constitution of the new State of Utah reads:—

SECTION 1. The legislature shall provide for a uniform system of public schools, and may establish free schools, *provided* that no sectarian or denominational doctrines shall be taught in any school supported in whole or in part by public funds.

SEC. 2. All legislation in regard to education shall be impartial, guaranteeing to all persons, of every race, color, and religion, equal rights and privileges.

SEC. 5. No religious sect or denomination shall ever control or appropriate to its own use any of the public school or university funds of the State.

The report of the Commissioner of Education shows that Utah is in advance of the general average of the United States in the enrolment of school population, percentage of daily attendance, and the amount *per capita* invested in school property. Here is a comparison, proportionate to population, between Utah and Massachusetts and the District of Columbia:—

	School Attendance.	*Illiteracy.*	*Paupers.*	*Insane, Idiotic.*	*Convicts.*	*Printing Establishments, Publishing Houses, etc.*
Utah,	35	11	6	5	3	14
Massachusetts,	25	12	55	23	11	11
District of Columbia,	27	40	23	35	9	11

An Historic Incident.

Most of the outside schools in Utah are under denominational auspices, whose teachers are sometimes dignified by the title of Reverend. It was my good fortune to have formed a slight acquaintance with one of these gentlemen, who was a principal in the principal Gentile school in Salt Lake City, which, by the way, stands square and snug against the Episcopal stone church, toward whose construction Brigham Young contributed, I believe, some $500. I sold this teacher in Salt Lake one of Adams' "Illustrated Historical Charts." I was even then sceptical, having small faith in the beginnings of history, as indicated on this chart by notes from Biblical sources. My hand seemed smitten with palsy as I pointed to the pictures of our first parents, of Cain and Abel, the Tower of Babel, Abraham offering up his son Isaac, the Children of Israel passing through the Red Sea, etc. But my customer seemed as interested in this portion of the stream of time as in any other, and a little more so, I fancied. But, before he could make the purchase, he must see the bishop. He sent me to him. I called, exhibited my goods, and made a sale. Years passed, four or five perhaps, when I met my acquaintance on one of your New York and Boston steamboats. It was a surprise to each; for he was settled over an Episcopal parish in New England, and I was studying for the Unitarian ministry. On religion, I was at sea. The faith of my parents had crumbled to pieces in my mind. But he, I supposed, had known no change. He drew from his pocket a pamphlet entitled "Reasons for believing the Advent of our Lord Jesus Christ to be pre-millennial." He waked up to his subject. He preached. He took me through the Old Testament, and then through the New, measuring out time from its beginning to its close by the use of Hebrew numerals, and impaling human reason on the horns of the beasts in "Revelation," until I almost wished the boiler might burst and send us both sky-high! But vain wish: the world would still be full of the like of us, or of the mould from which we were made. For mark! This reverend gentleman who had been employed by the Educational Commission to teach the children of Utah was now actually holding forth in Vermont, the very State in which Joseph Smith was born, and where the "Mormon delusion" received its germinal impulse. And these are some quotations from the pamphlet of this Episcopal minister, which he so kindly gave to me for perusal: "The burden of the evidence of Christianity from Scripture is to show that the whole Bible, from Genesis to Revelation, is the utterance of one mind, without contradiction or variance." "The speaker spoke not of himself, not at his own suggestion, not his own ideas, but as he was moved by the Holy Ghost." "The Church in the apostles' days, and for some time subsequently, was governed by the direct utterance of the Holy Ghost."

In both creed and deed, Mormonism outstrips the Christianity of our time, and for the reason that it was born of the nineteenth century and on American soil. You have heard for the last twenty or forty years one side only of this question. It is time that the other side were listened to. Hear and then judge.

T. W. CURTIS.

[Mr. Curtis informs us, since our editorial article was written, that, though he left Utah in 1876, he has kept himself informed of the condition of things in the Territory, and believes that the tendency there has been toward a more liberal practice with regard to the schools rather than the reverse.—W. J. P.]

BOOK NOTICES.

EPITOME OF ANCIENT, MEDIÆVAL, AND MODERN HISTORY. By Carl Ploetz. Translated with Extensive Additions by William H. Tillinghast. Boston: Houghton, Mifflin & Co. 1884.

The German original of this book has passed through several editions, and is a standard authority in Germany. It is a kind of book that German scholars make, but that is rarely made anywhere else. It demands the painstaking toil over details and patient research for which the German mind is gifted. But, once made, it is a book whose value is universally recognized. It is not written in the form of historical narrative. Not many persons would care to sit down to read it through at once and in order. Yet, if any one should do this, he would get a good bird's-eye view of the whole history of mankind. It is the entire history of man, from the earliest known times to the present day, boiled down to its solid facts. Its six hundred pages (in the translation) are crammed full of dates and of all the leading movements, events, personages, that make up the story of humanity in all countries. It is a book, therefore, for reference. It will be found invaluable to the student, the teacher, the general reader. The translator has done his part faithfully. He has, in fact, given a better proportioned work than the original. Omitting some of the minute details of the sections concerning Germany, he has considerably enlarged the portions concerning India, China, and Japan, on the same plan as the original, and, with regard to England and the United States, given new sections, prepared for the purpose by Dr. Edward Channing, an instructor in history at Harvard. Not least among the merits of the book is a full index of fifty-four pages, making a very complete historical directory. The publishers have done their work well with a difficult piece of printing. The types are made to indicate the relative importance of events. The price of the book is $3.00.

THE Easter time is coming with all its pleasant customs and associations, and the snow-drop and the bluebird herald its approach, and the pussy-willow gives us a foretaste of the great resurrection of nature which is beginning after the seeming death of winter. No official edict bids us celebrate Easter; but the custom is growing, and we would lift it above all narrow and sectarian considerations and rejoice in the coming of the lovely spring, when the rising sun gives us longer days and softer airs and the song of birds and breath of flowers. The time will not be the less dear and sacred to us that its name dates back to the spring festival of the Teutonic Osters, the goddess of spring, or that in countries outside of Christendom the spring festivals are kept with music and flowers and pleasant gatherings of friends. Mr. Prang has done his part toward beautifying and popularizing this old church festival by the beautiful cards and carols which he has just published in anticipation of its coming. The smaller cards, about four inches long, trimmed with silk fringe, are very simple and pretty. One of them has a gilt cross with a spray of roses growing on it, an appropriate motto, and a pretty design on the back. Another is very brilliant with its purple background, golden fringe, and the once despised but now popular orange rudbeckia. It is pleasant to see our designers using these common wild flowers of our own fields instead of adhering to the conventional lilies and daisies. A very lovely card about twice this size is pale green with a white fringe, with a silver cross and a very rich spray of the red bavardia wreathing it. The monochrome design on the back is of the emblematic butterfly. A very elaborate design of Easter lilies, beautifully printed on satin, will gratify those who wish for a more expensive present. Mr. Prang also publishes the old Easter carols in mediæval style in series of cards, and in a book made of old hand-made paper, and printed in red and black. Those who love the olden time better than the new can gratify their taste with these. Whatever we may say of the excess to which the custom of sending cards has been carried, we must admit that they have a legitimate place as an expression of kindness and good will, and that they have done a great deal to cultivate a love of beauty and to stimulate the arts of design.

PERSONAL ITEMS.

HORACE SEAVER, Esq., will speak at Paine Hall next Sunday at 2.30 P.M. on the following subject: "The Ancients and the Moderns, including a Conversation with the Supposed Spirit of an Ancient Philosopher."

PRINCE LEOPOLD, whose sudden death was announced last week, was a man of letters and a patron of philanthropic organizations. He was the most promising of all Victoria's sons, and his personal qualities had endeared him to the English people. He had written two works, *Travels in Italy* and the *Polarization of Light*, was a good public speaker, and of unblemished character. He was thirty-one years old.

GEORGE W. DANIELSON, editor of the Providence *Journal*, the ablest editor in Rhode Island, and one of the ablest in the country, died last week of paralysis, at the age of fifty-six. He was born in Killingly, Conn., went to work in a printing-office at fifteen, and by his own ability and industry worked his way up to the position he occupied at his death. Overwork was the cause of his death. Had he been more sparing of his strength, he would probably have lived several years longer.

GEORGE JACOB HOLYOAKE, referring to his wife whose death we recently recorded, says: "In whatever I said or wrote, I had regard to what she would think. Whatever I bought had reference to her taste. It seems for the present as though that standard had gone out my mind. While she lived, the world seemed complete to me. Even when so far away from her as New Mexico, the world still seemed inhabited, because she was in it. There are those still remaining in whom I shall feel interest all my days, but the world no longer feels inhabited to me."

THE Springfield *Republican* thinks Herbert Spencer quite right in assuming that he does more good out of Parliament than he could do in it, on the ground that "the actual work of legislation is more the work of those who modify the ideas of electors than of those who give effect to their ideas." It adds: "The calling of such men as Spencer to Parliament is a British absurdity, and a gross one. Mr. Spencer is a scholar and a philosopher: it is his office, not to make law, but to enlighten and mould public opinion. Jesus Christ would have effected little in the Roman Senate. The moral forces that move the world are outside of the halls of legislation, and only make themselves felt there when they appeal irresistibly to the materialistic conservatism which is there represented."

CHOICE LITERATURE, Vol. 2, fine cloth binding, 326 pages, now ready. Price 75 cents.

From Press and People.

"A wonderfully cheap and surprisingly good monthly magazine. One thousand pages of the cream of literature for One Dollar is a marvel."—*Educational Monthly*, Toronto.

"Selections are made with excellent taste and judgment, and are so varied in subject and treatment as to suit a great variety of tastes. It is not only choice, but very cheap."—*Mountain Echo*, Keyser, W. Va.

"The service you are rendering to the nation as an educator by the publication of *Choice Literature* it is hard to overestimate."—D. S TALCOTT, Bangor, Me.

500,000 Volumes

Choice Books, descriptive catalogue free. Books for examination before payment on evidence of good faith. NOT sold by dealers: prices too low. Books by mail 20 per cent. extra, for mailing.

JOHN B. ALDEN, Publisher,

P.O. Box 1227. 18 Vesey St., New York.

ALDEN'S MANIFOLD

CYCLOPEDIA.

Over 300 000 subjects and 5 000 illustrations, numerous maps, 20 volumes, large octavo, $25; cheaper edition, $15. Specimen pages free.

"You deserve the gratitude of the nation for your brave and philanthropic work."—D. S. GREGORY, President Lake Forest University, Lake Forest, Ill.

"Every one who has seen the set of Irving that you sent me says that it is the cheapest they ever saw."—J. H. COLBORNE, Goderich, Ontario.

"Your enterprise deserves to be called one of the great events of history—deserves to rank with the invention of printing, making, as it does, the very best use of the art for the good of the masses."—O. STEININGER, Bryant, Iowa.

"The books came to hand all right. I am highly pleased, and other parties equally,—my students, among whom I have distributed them."—PROF. JAMES NICHOLSON, Roopsville, Ga.

"Enclosed find check for $80.90. We are very much satisfied with the books."—J. B. CLARK, New Haven, Conn.

"This makes forty volumes of your publications I have. I am heartily pleased. It is about eight hundred pages more to the dollar than any books I ever bought before."—B. F. ALBIN, Henrietta, Texas.

"I am delighted with the books. In neatness, clearness of type, and cheapness of price, they are unsurpassed."—B. E. SPENCER, Madisonville, Va.

"The books are received; entirely satisfactory. The only wonder is how you can give so much for so little money."—J. T. MCCLEARY, State Normal School, Mankato, Minn.

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been published.

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith.*

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an pen antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago *Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—*Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics.*

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, with ut showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

MARTIN LUTHER:

A Study of Reformation.

By EDWIN D. MEAD,

Author of *The Philosophy of Carlyle*, etc.

An essay upon the significant phases of Luther's life and work, with special reference to present problems of reform; discussing the principles of Individualism, Intellectualism, and Rationalism for which Luther stood; and the Libertinism, the Old Orthodoxy and the New Orthodoxy, with which he came into conflict.

Cloth, 12mo, 194 pages. Price $1.25.
Sent, postpaid, on receipt of price, by
THE INDEX,
44 BOYLSTON STREET, Boston.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

Third Edition.

BIBLE MYTHS,

And their Parallels in Other Religions.

Being a Comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations.

The object of this work is to point out the myths with which the Old and the New Testaments abound; to show that they were held in common with other nations; and then trace them to their evident *origin* and *explain their meaning.*

"It has long been acknowledged by the most eminent Biblical students that the Hebrew Scriptures contain a large mythical element; but, so far as we know, the present is the first complete and scholarly attempt to trace these myths to their source, and ascertain their original signification."—*Boston Courier.*

"Never before has there been given a volume to the reading world that shows the research for the origin of these myths as does this one just published by J. W. Bouton, of New York."—*Boston Times.*

"It is unquestionably true that the results of a rationalistic study of the Christian Scriptures are nowhere else so accessible as they are now made in the work before us."—*New York Sun.*

1 vol. Royal 8vo. Cloth. 600 pp. $3.00.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

CURRENT TOPICS.

ACCORDING to the reports of the visiting committee and inspector of the Tewksbury Almshouse, the condition of that institution is, in many respects, considerably improved.

THE New York *Herald* says: "The Bradlaugh difficulty promises to make an end of the oath in the House of Commons. The question as to whether the oath is longer of any real value is being discussed by all ranks and classes of the people. Latterly, the subject has been engaging the attention of the clergy; and four hundred prominent clergymen of the Church of England have signed a declaration in favor of an affirmation bill."

THE first of the fourteen suits against Archbishop Williams to recover money lost by the financial collapse of the Augustinian Society of Lawrence having been decided against him, in the full sum claimed, $1,240, it is probable that he will be obliged to pay all the depositors who demand their money. It was shown during the trial that, under the Roman Catholic system, all ecclesiastical property is vested in the archbishops and other high officials; that the laity have no right nor power either of control or oversight of such property; and that in a legal sense, unlike the Protestant churches, the Roman Catholic Church or parish has no existence in this country.

THE Catholic Directory for 1884 gives the following *quasi* official statistics of the Catholic Church in the United States: There are 13 archbishops, 57 bishops, 6,385 priests, 1,651 ecclesiastical students, 6,613 churches, 1,150 chapels, 1,476 stations, 22 ecclesiastical seminaries, 87 colleges, 599 academies, 2,532 parochial schools, 481,834 pupils attending the parochial schools, 204 asylums, and 139 hospitals. There has been an increase during the last year of 289 priests, 217 ecclesiastical students, 372 churches, 6 colleges, 20 academies, and 41 parochial schools, and in the attendance an increase of 53,192 pupils, and 19 asylums. The number of Catholics in the country is given at 6,623,176.

THE Boston *Sunday Herald* says: "It is an important epoch in the theological history of Boston which sees installed in the Old South a clergyman who discards the doctrine of vicarious atonement, and does not assert that of endless punishment. Rev. Mr. Gordon's general theological views seem to be in accord with the progressive results of modern thought, and therefore at variance with the narrow doctrines which still encumber the orthodox churches." A common statement among the orthodox clergy and their adherents is that Col. Ingersoll directs his wit and eloquence chiefly against outgrown and obsolete doctrines; but, if the installation in this city of a minister whose avowed heresy is limited to a rejection of vicarious atonement and declining to affirm endless punishment "is an important epoch in the theological history of Boston," there is no reason that Ingersoll should abandon the work in which he is employed for some years yet.

THE *Commonwealth* observes: "The efforts made in this State and elsewhere to remove the disabilities of atheists in the courts meet with greater approval than have similar endeavors in past times. This is because of the rapid danger observable in the ideas of people and constituencies upon the religious questions. The prohibition has always, in the United States, been a ridiculous anomaly, contradicting the professions of our institutions. In monarchical states, which are allowed all sorts and measures of tyranny, the religious coercion could consistently go along with secular coercion of the various characters. Here, where opinion is supposed to be free and respected, whatever its peculiarities, no partialities against one or another party can exist. The abuse under which doubters have heretofore suffered lasted intact as long as the scarcity of victims, and the rigid Orthodoxy of the masses of people, made protest weak and infrequent. Now, however, when victims are many and have grown emboldened by the lax stringency of current belief, the protests are pronounced with exceeding emphasis and practical force. In fact, we seem on the point of securing absolute freedom."

LAST Friday, there was a debate in the Senate of Massachusetts on the bill to remove the discredit attaching to the credibility of atheists as witnesses. Mr. Kendrick, of Springfield, "argued," according to a report in one of our daily papers, "that this is a Christian commonwealth; that the Bible says that he who believeth not in God is a fool, and, though it might not be parliamentary to employ such language, yet he believed that atheists were persons of such peculiarities of mind as to make their testimony subject to serious doubt. Mr. Brackett said that the thousand persons in the State to whom the bill would apply were those who could not satisfactorily determine upon the existence of God, generally known as agnostics, persons who have characters marked by honesty and uprightness. No shadow should be thrown upon the credibility of such witnesses. The law admits the testimony of the disbeliever who denies that he is such, but debars the honest man who has the firmness to stand up and confess that he holds an unpopular belief. Mr. Kendrick urged that it would make the present oath in court ridiculous, if atheists were put on the same footing with believers. By a vote of forty-one to thirty-eight, the House ordered the bill to a third reading."

THE Socialist Labor Party had a meeting in New York last week, to discuss the Cincinnati riots. The city papers stated that the police authorities expected a riot, and they evidently did; for, when Cooper Union was opened, a hundred and twenty-five policemen, besides scores of detectives in plain clothes, were in the hall. Three thousand Socialists assembled, and listened to some vigorous speeches in English and German; but there was no riot nor incendiary harangues. On the contrary, all the speakers denounced riots, and declared that the rights of labor must be obtained, if at all, through the ballot. The policemen present had to listen to rather scathing remarks in regard to themselves from some of the speakers. A despatch states that "the key-note was struck, when one said that the police demonstration was due to the fact that the place of superintendent of police was liable soon to be vacant, and each policeman in town hopes to get it. 'To get it,' said one speaker, 'any policeman here would willingly kill one hundred of us.' Clear-headed citizens think that the police authorities got up all the agitation, in order to divert attention from the fierce investigation that is now being made into the police department. This investigation is said to be very damaging to the department."

CREMATION seems to be coming into favor in European countries. At Milan a hundred and thirty bodies have been cremated the last two years, and in one of the public cemeteries of Rome forty bodies have been burned within four months. There is a movement in the English Parliament for cremation, which has the support of Sir Lyon Playfair and Sir John Lubbock. A crematorium is to be started by the London authorities. "We are," says the London *Inquirer*, "quite in sympathy with the growing feeling in favor of cremation, and regard the strong prejudices against it as relics of mediæval superstition or ecclesiastical dogmatism. Even those who believe in the literal resurrection of the body, flesh and bones and all, —*resurrectio carnis*, as the phrase is in the Latin original of the Apostles' Creed,—can hardly deny the divine Omnipotence the power to bring together in actual physical form the scattered ashes. We are glad to observe that Dr. Cameron has secured the 30th of April for the second reading of his bill regulating cremations, and that it bears also the name of Sir Lyon Playfair, who gave evidence before the Royal Commission on intramural burials. At present, cremations may take place, as they are not forbidden by law; but Dr. Cameron's bill proposes the strict supervision and regulation of all cremation, public or private, which may be established in this country."

JUSTICE.

"Who shall teach us," once exclaimed Wendell Phillips, "the meaning of this great word *justice*?" And Emerson, in bold speech, wrote, "The safety of God, the immortality of God, the majesty of God, do enter into a man with justice." Emerson's words may be read as an answer to the question of Phillips. In its deepest meaning, justice is the essential eternal right inherent in the nature of things, or "the Eternal Power that makes for righteousness" in the universe, becoming embodied in the actual relations of man to man in the organism of society.

In modern days, we hear perhaps more praises of the virtues of philanthropy, love, charity, than of justice. Yet justice is the central substance, the main trunk of morality. Indeed, though it may seem at first sight a hard thing to say, love could be better spared from the bond of general social obligations than could justice. Of course, love is a more generic word than justice. It covers a variety of species. There is the love between man and woman, the love of family, the love between friends, the love of nature, the love of property, the love of certain pursuits, arts, authors, etc. But loves like these are based on certain natural instincts or strong mental tendencies, and not on moral requirement. The moral law may rightly give its guidance to them, but it does not originate them. There is, however, another large domain included under the general term *love*, which consists of such feelings and acts as humane sympathy, charity, benevolence, pity, philanthropy, and the like,—virtues that are highly praised and deserve to be. And it is of love in this sense, where it is strictly one of the principles of ethics and holds so prominent a place in the social reformatory movements of the day, that we are ready to say that, important as it is, society can better spare it than it can spare justice. Beautiful and benignant as this kind of love is in its manifold offices, it is not so absolutely essential to the existence of human society as is equity.

To compare their different natures and services by various figures of speech, we may say: Justice is the very foundation and frame of the structure of society: benevolence adds ornamentation, beauty, delight, larger convenience and comfort, and hastens the work of building. Benevolence is an alleviating medicament in the social atmosphere: justice is the social atmosphere itself. Charity proffers relief for a social evil: justice would bring a cure. Sympathy puts its arm around the wronged and down-trodden, lifts them up, and helps them along: justice gives them their equal rights as human beings, so that they may walk in their own free strength. Compassion comes with its various solacing nostrums to people in distress,—and they are often as needful as they are merciful: justice seeks to establish conditions and opportunities for such a normal development of healthy and happy manhood as shall not need the solace. Humane eyes rained their pitiful tears upon the Southern slave; Christian humanity might heal the wounds of the overseer's lash upon his back: justice broke his chains and made him a man. We can conceive of society existing and even progressing without philanthropy, however bare and unlovable such a picture of existence might seem; but we cannot conceive of it existing and progressing without at least some attempt to embody the idea of justice. There was no genuine society among mankind until that idea dawned and began to take shape in customs and laws. All before that was anarchy or tyranny,—the hand of every man uplifted against the hand of every other to get the utmost he could for himself, and the physically strongest prevailing and ruling. When justice came, it began to enforce the side of physical weakness to a certain equality of rights against the arbitrament of mere brute strength. Man often tries by the soothing appliances of charity to atone for the wrongs his grasping selfishness has committed against his fellow-man, but the only atonement that can satisfy justice is the abolition of the wrong.

But, though justice be a more fundamental and momentous principle in social ethics than is love, fortunately we do not have to spare either of them. They support and help each other. They have been joined together in the natural order of human progress, and are not to be put asunder. Of that humane love of which we have been speaking there is indeed, at the basis, a large element of justice. "Thou shalt love thy neighbor as thyself," not merely because the neighbor may be in distress, but because love is his rightful due. "Do unto others as ye would that they should do unto you," is not only a precept of kindness, but of just reciprocity of conduct. These great ethical injunctions of benevolence, the germs of which are very old, are thus penetrated by the sentiment of justice.

But what is the essence and origin of this sentiment of justice, which is thus made the profoundest word in ethics? In its simplest meaning, justice is equity, or recognized equality of rights, between man and man,—equity of relation, equity of conduct. It is difficult to believe that the root of such a sentiment is to be found in anything so contrary to the nature of the sentiment as is the selfish struggle for existence from motives of self-interest alone. The career of mankind on the earth doubtless began in such a struggle. That struggle helped to develop mental sagacity and power. But, when a certain stage of intelligence was reached, then the human mind perceived the truth of a principle of conduct which was independent of its selfish struggles, independent even of its own existence, and which became henceforth an important agency in determining its struggling efforts for existence to a different goal than they would otherwise have reached. It was the perception that the conduct which one might claim as due to one's self from another was due also to that other from one's self. Primitive man, a marauder, first said to his marauding neighbor: "You shall not take my food. You shall not take my life." But by and by, as his intelligence increased, the idea dawned that he and his neighbor stood in the same relation to each other; and he said, "If my neighbor must not take my life or my food, I must not take his." That was the birth of the sentiment of right, of equity, of justice. It was the intuitive perception of the equality of certain rights between man and man,—a perception crude and imperfect at first, but the germinal truth of all morality and of righteous government.

The idea of justice, then, in our view, is an intuition. It stands for a principle which would have been true, though man had never existed. There are certain things that are true in and of themselves, independently of any perceiving mind. At least, the human mind, when it comes to the intelligence of them, cannot possibly think of them as having ever not existed, or as ever ceasing to exist, or as being as to their truth affected by any change of external conditions. Such, for instance, are the truths of mathematics, in the various branches, simple and profound, of that science; and the truths of logic, or those laws that pertain to the sequences of thought, whereby certain conclusions follow irresistibly from certain premises. The principles of logic, the relations of numbers formulated in the multiplication table, the theorems of geometry are as true on opposite sides of the universe as they are on opposite sides of the earth. Though an eternity may have passed before man began to exist, their truth waited not for his advent; and, though he might continue to live millions of æons, he cannot conceive of himself as outliving them. Though there should be no conscious soul to interpret them, they would still be true. There are multitudes of people who are unable to grasp these principles, especially in all their complexity of application; but the minds that are developed to the point of clearly apprehending them can no more doubt them than they can doubt their own existence.

Now, we believe that the idea of right, or justice, and consequently the whole science of ethics, rests on a basis as solid and irrefragable as does the science of logic or mathematics. That basis is the intuitive perception of a necessary equality of rights between human beings in their relations to one another. Concrete and personal experiences serve to develop the mind to that degree of intelligence whereby it can grasp the relation; but, that condition reached, the truth of the equality of rights between man and man becomes self-evident. The equality may not actually exist in practical usage; but the feeling that it ought to exist, and that in a proper state of things it would exist, begins then to manifest itself, with the corresponding sense of obligation to regulate conduct thereby. The perception of this ethical equation may vary in degree, the application of it may change with the changing mental attitude of people; but in itself it is as unchangeable as the multiplication table. Like the theses of geometry or the principles of logic, it is as true at the farthest limits of the universe as on the earth. It is not something which first came into existence with man, or which he has devised as a social convenience, and which, with a different experience and knowledge on his part, might have been something different; but it is an eternal principle which must apply to the relation of all intelligent beings to one another, and which man as an intelligent being has simply discovered in its bearing upon himself. Justice is the mathematics of conduct. When human beings shall square their conduct to each other by the principles of justice, society will stand invincible by the very balance and symmetry of its structure. Thus Emerson's words become true. The safety, immortality, and majesty of eternal being do enter into humanity with the doing of justice.

WM. J. POTTER.

"TEACHING OF THE TWELVE APOSTLES."

The publication on Tuesday last in the *Andover Review* for April of the earliest English translation of the "Teaching of the Twelve Apostles" is a noteworthy event in the history of Biblical criticism and in the annals of the early evolution of Christian doctrine and ritual. The parchment, from a copy of which this translation was made, was discovered in 1875 by Bishop Bryennios of Nicomedia in the library of the "Most Holy Sepulchre" in Phanar, the Greek quarter of Constantinople. The copy translated was furnished by Bryennios to Dr. Ezra Abbot, of Cambridge, and by him loaned to Dr. Egbert C. Smyth. The translation was made by Rev. C. C. Starbuck.* Besides the "Teaching of the Twelve Apostles," the original parchment contained the Epistle of Barnabas, the two Epistles of Clement Romanus, the Epistle of Mary of Cassobelæ to Ignatius, and eight Epistles of Ignatius. The manuscript itself,

*Since this article was written, the Greek text of the "Teaching" has been published, together with a translation by Profs. Hitchcock and Brown of the Union Theological Seminary. The translation agrees in nearly all important particulars with that of Dr. Starbuck.

Digitized by Google

as attested by a note of the copyist, dates from the year 1056 A.D. The original date of the "Teaching" is fixed by Bryennios, after an exhaustive examination and comparison with other writings, at from 120 to 160 A.D. This conclusion is accepted by Harnack, Prof. E. C. Smyth, Dr. Hitchcock, and others, and is sustained by the general character of the contents of the document.

Like many of the writings of this early period, its authorship is unknown. Unlike the New Testament Gospels, it does not profess to give any account of the life of Jesus; nor does it, like the various canonical and apocryphal Epistles, profess merely to express the thought and belief of its writer. Its object would appear to be to present a concise statement of the essential teachings of Jesus, as preserved and transmitted by the Apostles, in order that they might be learned and formally accepted by the convert preliminary to baptism and reception into the Christian community; and also to warn the faithful against certain prevalent errors of doctrine and belief.

The very early date of the "Teaching" is attested by the fact that it is cited by Clement of Alexandria, writing early in the third century, in his first Stroma, by Eusebius a century later, and by Athanasius in his thirty-ninth Festal Epistle. Internal evidence to the same effect is presented by the fact that nothing like the final form of the church organization, with its three orders of bishops, elders, and deacons, appears in the text of the document. On the contrary, the elder (πρεσβύτερος) is not mentioned at all, while the bishops (ἐπίσκοποι) and deacons (Διάκονοι) are named as of equal rank, the "overseers" and "servants" of the community, to be "appointed" by the congregation itself instead of "ordained," as in the later development of the episcopacy. The separate offices of "prophet" and "teacher," unknown in the later organization of the Church, are here recognized as of superior importance to the bishops and deacons, special provision being made for their support by gifts of the first-fruits of the wine-press and threshing-floor, of oxen and sheep, and of wine and oil.

This offering of the first-fruits, manifestly derived from the Levitical code of the Hebrews, is one among many evidences of the Judæo-Christian character of the "Teaching of the Twelve Apostles." If not strictly Ebionitic in a controversial sense, it is evidently written by one who was a Jewish Christian. It contains no countenance of the Pauline doctrine of "justification by faith": on the contrary, *works* are everywhere insisted upon,—the works of a righteous life, of giving freely to the poor, of love, meekness, and compassion.

The first chapter is an epitome of the leading teachings of the "Sermon on the Mount," but presents curious evidence in its concluding clause that the indiscriminate almsgiving commended by Jesus had already resulted in abuses which compelled the suggestion of limitation and caution.

"Blessed is he that giveth according to the commandment, for he is guiltless. Woe to him that receiveth; for, if any one receiveth, having need, he is guiltless; but he that hath not need shall give account whereof he received, and for what. . . . But take note, even concerning this hath it been said: *Let thine alms sweat in thy hands, until thou shalt have come to know to whom thou shouldst give.*" The "Golden Rule" is stated negatively as by Rabbi Hillel and Confucius, instead of in the familiar affirmative form of the Synoptical Gospels.

It cannot be by mere accident that this compendium of the ethical teachings of the gospel is followed immediately by a similar paraphrase and compendium of the Law. Herein, doubtless, is another suggestive intimation of the essentially Jewish character of the "Teaching." The familiar "Thou shalt not" of the Decalogue is doubtless purposely placed by the side of the more affirmative ethics of the gospel, to indicate its equally binding force upon the Christian believer. The extension of its prohibitory mandates to such offences as the corruption of youth and the killing of children by abortion renders it a not inopportune "sacred scripture" for some Christian communities at the present day.

The primitive character of the "Teaching" is further illustrated by the communistic injunction, "Thou shalt not turn away from him that needeth, but shalt communicate all things to thy brother, *and shalt not say that they are thine own;* for, if ye are joint participants in the immortal thing, *how much more in mortal things.*" The communal meal of "thanksgiving" (εὐχαριστίας) had advanced but little beyond its earliest stage, as illustrated in the *agapae*, or "love-feasts." It was evidently still a substantial meal partaken of by all the members of the congregation. A certain ritualistic form for giving thanks before and after partaking of the bread and wine is, however, provided for. The expression, "*And after being satiated* (ἐμπλησθῆναι), thus give ye thanks," indicates that the participant was limited to no mere taste of the elements, as in later times.

The mode of baptism as herein provided recognizes the original apostolic method of immersion in running water as preferable, but to be substituted by other more convenient methods, when the means for immersion were not at hand.

"Baptize (immerse) ye . . . in living (running) water. But, if thou have not living water, baptize into other water; and, if thou canst not in cold, in warm. And if thou have neither, pour out water thrice upon the head." . . . Advocates of infant baptism will find no support for their doctrine in the "Teaching of the Twelve Apostles." Some hasty commentators, notably the writer of the *Tribune* criticism, assume that this injunction favors the supposition that immersion was not practised at all at this time; but a correct translation of the Greek βαπτίσατε would doubtless indicate immersion as the original and preferred form of the rite, for which the other mode is to be substituted only in case of a lack of sufficient water for the purpose of immersion. This conclusion is emphasized by the omission of the word "baptize" (immerse) from the clause authorizing the pouring of water upon the head, which indicates that this form of the rite was not regarded as *baptism* (immersion), but merely as a substitute therefor. The question of the origin and early form of this rite is ably and candidly treated by Dean Stanley (*Christian Institutions*), and the injunctions of the "Teaching" appear fully to substantiate his conclusions.

Further evidence of the primitive and Judæo-Christian character of the document is presented in the command to fast on the "Preparation"; that is, on Friday, the preparation for the Jewish Sabbath, which indicates that the seventh day was still held sacred in accordance with the provisions of the law and the known custom of the Nazarenes and Ebionites of the first Christian centuries. No express command to keep the Sabbath is herein contained; but it is evidently implied in the fast of the Preparation, which would otherwise have no *raison d'être*. The meeting on the "Lord's day," in accordance with a custom instituted in apostolic times for the purpose of giving thanks and celebrating the communal meal, is also recognized and enjoined.

The bearing of this document upon the question of the age and authoritativeness of the canonical Gospels is highly important. The writer evidently knew nothing whatever of our Fourth Gospel, or of the peculiar tradition and philosophy on which it is based, which confirms the conclusions of the rational criticism that the Fourth Gospel is of later origin than the Synoptics. Nor is there any proper evidence that he was acquainted with either of the Synoptics in their present completed form. The Lord's prayer is indeed given in the language of Matthew, with the notable exception of the doxology, which is neither omitted as in the earlier manuscripts of the First Gospel which the revised version follows, nor given entire as in the accepted version,—the phrase "For thine is the kingdom" being omitted, while the other clauses without the closing Amen are retained. The first chapter contains the substance of many of the familiar injunctions of the Sermon on the Mount; but the language in every instance deviates from that of the First Gospel, and phrases are added and intermingled which are nowhere to be found in the New Testament. The confident assertion of Dr. Smyth, that "two of our Gospels, Matthew and Luke, are freely used," can therefore hardly be regarded as verified. On the contrary, the entire omission of any reference to the birth legends of these Gospels, or to the idea even of the miraculous birth of Jesus, or to Jesus at all in the ordinary gospel terms, "Son of Man" or "Son of God," renders it practically certain that the writer of the "Teaching" knew nothing of any of our Gospels in their present form.* It is quite probable, however, that he had before him or in mind some such primitive document as the *Logia* of Matthew, which doubtless constituted also one of the sources from which the first canonical Gospel was compiled. The internal evidence of the "Teaching" would therefore appear to justify us in assuming it to be as old or older than any of our canonical Gospels.†

The Christology of this important document is less developed even than that of Paul. Jesus is everywhere spoken of not as the Son, but as the servant of God. In the directions concerning the eucharist or thanksgiving meal, Jesus and David are spoken of in the formula for giving thanks in precisely the same terms, as servants of God,—"We give thanks to thee, our Father, for the holy vine of David, thy servant, which thou hast made known to us through Jesus, thy servant." The bread and wine are not alluded to as the body and blood of Christ, even in the symbolical language of the Synoptics: the former being regarded apparently as a symbol of the Church, which, "strewn abroad upon the mountains" like the grain, would be gathered finally into the heavenly kingdom, as the grain is gathered into the bread; and the latter as a symbol of the house of David, of which Jesus was regarded as the final representative.

Once, indeed, in the baptismal formula, we have a suggestion of Trinitarianism in the command, "Baptize ye into the name of the Father and of the Son and of the Holy Spirit"; but this evidently involves no necessary inference of a developed Trinitarian theology or of any belief in the deification of Jesus, but is to be interpreted, as in the similar New Testament phrases, in accordance with the known humanitarianism of the early Jewish disciples.

The treatment of slavery as an existing institution to be tolerated, but mitigated by the recogni-

* Bryennios distinguishes some twenty-six passages which indicate, he assumes, a use of the First and Third Gospels; but, of these, only five, four from Matthew and one from Luke, are verbally identical, and the connection is such that it appears highly improbable that our Gospels were used at all.

† The "Teaching" presents evidence of manufacture and the use of older documents and traditions, but no more than does our First Gospel.

Digitized by Google

tion of the bondmen as brethren in Christ, is consistent with the attitude of Paul and the Apostolic fathers toward the "peculiar institution": "Thou shalt not enjoin aught upon thy bondman or maid-servant, who hope in the same God, in thy bitter mood, lest they should not fear the God who is over both; for he doth not come to call with respect to persons, but to those whom the spirit hath prepared. *And, ye bondmen, be subject to your lords as to a type* (τύπῳ) *of God*, in modesty and reverence."

The belief in the speedy destruction of the world, and the return of the Lord in the clouds of heaven, corresponds with the well-known and universal expectation of the Apostolic age. The prayer after the thanksgiving feast (εὐχαριστίας) contains the invocation, "Let grace come, and let this world pass away"; and the final chapter is wholly devoted to admonitions respecting the anticipated catastrophe:—

"Watch for your life. Let not your lamps be quenched, and let not your loins be loosed, but found ready; for ye know not the hour in which the Lord cometh. And often shall ye gather yourselves together, seeking the things which are profitable to your souls; for the whole time of your faith shall not profit you, if ye be not found perfect in the last time. For in the last days shall the false prophets and the corrupters be multiplied, and the sheep shall be turned into wolves, and love shall be turned into hatred; for by reason of the increase of iniquity shall they hate one another and persecute and betray. And then shall appear the world deceiver as the Son of God, and shall do signs and wonders; and the world shall be betrayed into his hands, and he shall do abominable things, which never have come to pass from the beginning of the world. Then shall the creation of men come into the fire of searching trial, and many shall stumble and perish; but they that endure in their faith shall be saved by (from?) him, the Curse.* And then shall appear the signs of the truth: first the sign of an opening in heaven, then the sign of the voice of the trumpet, and the third the resurrection of the dead; yet not of all, but as hath been said, The Lord shall come, and all the saints with him. Then shall the world see the Lord coming upon the clouds of heaven."

The evident reference to the Antichrist in this chapter is quite in accordance with the Apocalyptic conception; and its entire tone closely resembles the descriptions of the period which shall immediately precede the second coming of Christ, that are found in the Synoptic Gospels.

There are various indications throughout the "Teaching" that one of its purposes is to warn the faithful against deceivers and teachers of false doctrine. As no man or sect is particularly identified, we can only conjecture in regard to those against whom these warnings are directed. The general tenor of these injunctions appears to have no special reference either to the Gnostic or Montanist heresies of the second century, which renders it probable that this work was written before these controversies attained their subsequent importance and prominence. The emphasis placed upon good works, the absolute command to abstain from meats sacrificed to idols, and the general Jewish character of the teaching strongly favor the conclusion that the doctrines of Paul are the intended objects of its cautionary injunctions, and that the followers of the great "apostle to the Gentiles" are the "false prophets" against whom the faithful are warned.

Finally, the entire tenor of this interesting document clearly sustains the "new criticism" in its conclusions respecting the beliefs and controversies of the earliest Christian generations, and furnishes interesting and important evidence of the natural growth of the Christian religion. Even those who reject the claims of the alleged infallible Bible and infallible Church on *a priori* grounds will find its testimony valuable and instructive as bearing upon the natural history of an important phase of religious development.

LEWIS G. JANES.

*Drs. Hitchcock and Broun translate: "Shall be saved from this curse." The Greek is σωθήσονται ὑπ' αὐτοῦ τοῦ καταθέματος.

MORMON GIRLS.

The New York *Nation* says that the girls in Utah are showing marked unwillingness to be satisfied with a fraction of a husband, and that Mormon elders have been heard at church conferences sobbing over their poor chance of getting young wives. What else could we expect? Does not the Mormon girl know what the first wife suffers, when she stands up in the Endowment House to join her rival's hand with her husband's, and say she gives her full consent to this polygamy? Are even the little children in Utah ignorant how the different wives hate each other, and how abject is the slavery to which the most favored or the most domineering usually reduces the others under the same roof? The pressure of the Temple and the Book of Mormon cannot crush all jealousy out of the women's hearts. Any girl would rather have a lover who cares for no one but herself than one whose heart has always room for one more. Nine-tenths of the Mormons themselves live in monogamy, and a large part of the population are open disbelievers in polygamy. The Mormon girl hears the two systems talked about freely, and compares them as they actually exist, side by side, around her. Can we not trust her to find out which is more romantic and attractive? If she could not do this unaided, she would have all literature tell her how to choose. She sings "John Anderson, my Jo, John," and she knows that she would not like to have to use a Salt Lake City version, beginning, "John Anderson, our Jo." She feels that the Maid of Athens, whose lover says, "My life, I love but thee," is much better off than a maid of Utah, whose wooer wants to marry, not only her, but her sisters and her cousins and her aunts. No sermon in favor of polygamy can dull the thrill given by such songs as "Nane can be sae dear to me as my sweet lovely Jean," "I love but thee alone," etc. As our Mormon girl reads the oldest of all love songs, she feels that "My dove, my undefiled is but one" has much more inspiration than if it read, "My doves at present number about a dozen."

All poetry tells the same truth,—that the only love worth having is the love that never wanders. There was perfect consistency and rare sagacity in the Mormon elder who walked away from a performance of "The Lady of Lyons," and took all his wives with him, saying, "I don't believe in making such a cussed fuss over one woman." If Romeo had been a Latter-Day Saint, he would never have killed himself for Juliet, but would have gone off to try his luck again with Rosaline. We should have had no tragedy of "Othello," if the hero had been capable of coolly divorcing Desdemona and taking half a dozen Cyprians instead. Perhaps Shakspere is not much known in Salt Lake City, but the girls there read the New York *Ledger* and the dime novel. Whatever mischief such literature may do elsewhere, it can do only good among Mormons, who need nothing more than to feel the blessedness and holiness of the love of one man for one woman only to all eternity. Here, romance is on the side of pure morality and high civilization. Romance and polygamy are deadly foes; and there is no doubt which will conquer in Utah, provided that nothing of the force of romance is diverted to the wrong side by practising anything which looks like persecution. The Church of Latter-Day Saints has lived too long already on the murder of Joe Smith. We can afford no more acts of lawless violence. How far the existing legislation should be enforced or enlarged, I do not venture to say; but I insist that it would be a great deal better that the people of Utah should voluntarily give up polygamy in reality and finally, than that they should be driven into appearing to have abandoned it, while they are secretly resolved to revive it as soon as they become a State. Polygamy is so wicked an institution that the people of Utah must, sooner or later, see its evils. What we are called upon to do, as a nation, is to help them find out their true interests by encouraging every form of enlightenment, and aiding every effort at independence. The school-teacher and missionary are already doing good work; but there are no better missionaries than the drama, the newspaper, the novel, and the popular song. The very fact that Mormon polygamy rests on religious despotism makes it all the more certain to crumble away before the attack of modern thought, whose inspiration is Liberty.

F. M. HOLLAND.

THE "SUNDAY SCHOOL TIMES" ON ATHEISM.

Last week, we referred to certain false and foolish statements which the *Christian Statesman* repeats week after week to prop up its feeble argument in favor of incorporating into our National Constitution, by amendment, a formal recognition of God as the "source of all power and authority in civil government," "the Lord Jesus Christ as the Ruler of Nations," and the Bible as "of supreme authority in civil affairs."

In the last number of the *Sunday School Times* are some similar statements, the occasion for which seems to have been offered by Mr. Moncure D. Conway, who was not pleased with and, in letters from India, did not praise the superstition and intolerance which he found to be a part of Hinduism in common with theological Christianity.

"It is the laxity of Hinduism," says this journal, "its defects and its weakness, not its strength or its strictures, its upliftings and its approaches toward the right, that they ["the 'better class' of fashionable scoffers at Christianity"] are after. Recently, for example, Mr. Moncure D. Conway, the American-English positivist preacher and teacher, on a visit to India, was somewhat shocked and surprised to find that the Hindus believe that no form of immorality whatsoever can so degrade a soul or can sink it so low as atheism. He is not ready to accept *that* tenet of Hinduism. Yet the Hindus are right in that belief."

We are not here concerned with defending atheism,—which, as popularly understood, certainly does not coincide with our own views,—but we protest against making any theological belief the basis of morality, and atheism synonymous with immorality and crime. It is certain that belief in one or more gods neither insures sound principles of moral action nor conscientious practice of precepts which, in any age, make up the established, recognized moral code. When has such a belief been stronger than during that period of which Mr. Lecky speaks, when he says, in describing the condition of the Byzantine Empire: "The universal verdict of history is that it constitutes, without a single exception, the most thoroughly despicable form that civilization has yet assumed.... There has been no other enduring civilization so absolutely

Digitized by Google

destitute of all forms of greatness and none to which the epithet 'mean' may be so emphatically applied. The Byzantine Empire was, pre-eminently, the age of treachery. Its vices were the vices of men who had ceased to be brave without learning to be virtuous."

On the other hand, to quote a passage from Max Müller's *Science of Religion*, cited last week in reply to the *Christian Statesman*: "The fact cannot be disputed away that the religion of Buddha was from the beginning purely atheistic. The idea of the Godhead, after it had been degraded by endless mythological absurdities, which struck and repelled the heart of Buddha, was, for a time at least, entirely expelled from the sanctuary of the human mind; and the highest morality that was ever taught before the rise of Christianity was taught by men with whom the gods had become mere phantoms, and who had no altars, not even an altar to the Unknown God."

It was the opinion of Lord Bacon, who was no atheist, that "atheism leavés men to sense, to philosophy, to natural piety, to laws, to reputation, all which may be guides to an outward moral virtue, though religion were not; but superstition dismounts all these, and erecteth an absolute monarchy in the minds of men. Therefore, atheism never did perturb states, for it makes men wary of themselves, as looking no further; and we see the times inclined to atheism (as the times of Augustus Cæsar) were civil times, but superstition hath been the confusion of many States, and bringeth in a new *primum mobile* that ravisheth the spheres of government."

Theodore Parker, a devout theist and a zealous opponent of atheism, said of atheists: "They seem to be truth-loving and sincere persons, conscientious, just, humane, philanthropic, and modest men. They are men who mean to be just to their nature and their whole nature. They are commonly on the side of man, as opposed to the enemies of man, on the side of the people against the tyrant. They are, or mean to be, on the side of truth, of justice, and of love. I think they are much higher in their moral and religious growth than a great many men who are always saying to God, 'I go, sir,' and never stir. They are men who have made sacrifice to be faithful."

Descending to individual illustrations, we may mention Epikuros, one of the most atheistic of ancient philosophers, who, according to the concurrent testimony of a host of writers of antiquity, was one of the most abstemious and virtuous Athenians of his day, notwithstanding aversion to his teachings has caused his name to be proverbialized for general licentiousness. He died at an advanced age in the midst of his circle of followers and friends, honored and beloved for his wisdom and his serene and beautiful life. It was the moral beauty and simplicity of his philosophy that attracted to it the Roman Lucretius, who, amid the confusion and turbulence of civil war, sought some stay for his inner life and found it in this philosophy in defence and exposition of which afterwards he gave to the world one of the grandest didactic poems of classical antiquity. Of Lucretius, Mr. O. B. Frothingham says, "Few nobler minds have lived, not many as noble." Did we care to press a comparison, we might refer to the moral character and life of an ancient celebrity who was a most devout theist, "the sweet singer of Israel," the darling of Christian theologians, one who has been extolled for his faith and piety by millions of tongues, notwithstanding his character was stained by immorality and crime.

We are far from wishing to intimate that devout belief in God is not compatible with the noblest moral qualities, or that among atheists there have not been bad men; but we maintain that the theistic belief affords no assurance of the possession of moral excellence, while absence of the belief is no indication of the absence of moral excellence. Certainly, if we go among the lower classes,—the ignorant, the vicious, the depraved, the outcasts of society,—we do not find them atheists; but, on the contrary, these classes are composed of those whose theological beliefs are the strongest, those who are the first at the approach of death to avail themselves of the advantages which theology offers. On the other hand, thousands among the most intellectual and noble men and women in every enlightened land are of the class which the *Sunday School Times* and *Christian Statesman* characterize as atheists.

EDITORIAL NOTES.

THE *Religio-Philosophical Journal* requests its correspondents "to spend time enough on their contributions to make them shorter," and adds: "Anybody can write a two or three column article; but it requires some care and patient discipline to write a short one,—care and discipline which will richly repay the writer and insure the reading of his work when published."

SAYS the *Presbyterian*: "Mr. William D. Howells is a brilliant novelist, and describes society as it lies open to his inspection. He satirizes some forms of our modern religion in his *Modern Instance*, in his description of the town of 'Equity.' He says of that place: 'Religion there had largely ceased to be a fact of spiritual experience, and the visible church flourished on *condition of providing for the social needs of the community*. It was practically held that the salvation of one's soul must not be made too depressing, or the *young people would have nothing to do with it*.'"

THE *Catholic Review* declares that "every nation that has adopted Protestantism has in its turn progressed out of Protestantism. The most progressive people in Germany as well as in Scotland have long reached that stage of 'progress.'" The same journal in another article says that "the Unitarian branch of the 'liberal family has not reached its final stage of progress.' *The Index* people can read them a lesson in logic to which they will do well to take heed, though even they are stopping short of the *ultima thule* of religious discussion. O dear friends, when will you learn that there is, absolutely, no logical resting-place between the infallibility of the Catholic Church and the baldest, blankest atheism and infidelity?" "*The Index* people" do not claim to have reached "the *ultima thule* of religious discussion," but recognize the fact that before them lies an unexplored field of truth open to the investigations of the human mind. "*The Index* people" do not claim an infallibility or perfection to which it is impossible for any man or any organization to attain, and which would render further progress impossible.

DURING the past few weeks, scores of materializing mediums have been caught while personating spirits, and their pretensions thoroughly exposed. But the *Banner of Light* comes to their defence in a general way as follows: —

It is possible that at first, while within the cabinet, the form and features are a perfect *fac-simile* of the medium; and the spirit does not appear to the company until it is (or those spirits controlling the seance are) positive that it has entirely lost the appearance of the medium and assumed that of the individual spirit intended to be seen. In this, the spirit operators may sometimes be mistaken; and (through want of proper judgment or too great haste) marked traces of the medium's appearance may remain, because of such premature action, the effect of which may be to give observers an impression that fraud exists, when in reality nothing could be further removed from the fact. And it may even lead to disastrous results; for, at such a time, ignorance of the delicate, subtle laws governing the manifestation might induce some one, supposing the figure before him to be the medium, to spring forward and grasp it. Two specific powers of the will are at this moment brought into action: first, the "exposer" is positive he springs at the medium; second, he is determined that what he grasps shall not return to the cabinet. The effect of the former is to draw the medium out, and of the latter to prevent the retreating of the spirit-form. In addition to this is the fact that the materialized portion of the spirit form is a part of the material body of the medium, and the two *must* coalesce.

THE views of Mr. Alfred R. Wallace, the naturalist, as expressed in a paper read lately before the Liberal Social Union,—according to the London *Inquirer*,—were briefly as follows: "Land should become public property for the public benefit. All products of the land should remain private property for private benefit. All land must be occupied by tenants of the State. Absolute security of tenure must be given to all occupants. All the evils of landlordism and State management would by this system be avoided. The first thing to be done was to have a general valuation of the land throughout the country." He was opposed to Mr. George's theory of confiscation as unjust, impolitic, and impracticable,—unjust, because both the State and public opinion had recognized private property in land; impolitic, because it would excite antagonism; impracticable, because poverty cannot be abolished by any amount of money. It would be socially wrong, even if practicable. The true and just way is not to recognize any exceptional rights of property in unborn individuals, but that no living person should be deprived of property in land. The present occupiers of the land are only a fraction of the community. Although we must recognize some rights in present occupiers, this right is subordinate to that of the people to nationalization of the land. We must secure to all freedom to occupy land on equitable terms.

For *The Index*.

WE ASK IN VAIN.

My little bird within his cage is singing
His gay, sweet song:
With joyous melody the room is ringing
The whole day long.

Beyond his gilded cage, he has no dreaming,—
His all, his home:
No care besides e'er shades his happy seeming,—
No wish to roam.

But when I ope his gate and bid him enter
The mansion wide,
Where rooms and halls diverge as from a centre
On every side,

He mutely stands to turn and gaze and wonder
At space so vast,
Relations old and sense secure asunder
Are rent at last.

So, when with midnight's radiance streaming o'er us,
From earth we gaze,
To worlds on worlds and spaces vast before us,
Our thoughts we raise;—

We mutely stand to look in awe and longing
Upon the sky,
Where suns and stars and planets fair are thronging
In majesty.

Where ends creation? where is its beginning?
Is our refrain,
From the dread silences no answer winning,—
We ask in vain.

ANNA OLCOTT COMMELIN.

The Index.

BOSTON, APRIL 10, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

EVOLUTIONIST ERRORS.

A Discussion delivered before the South Place Religious Society, London.

BY MONCURE D. CONWAY, M.A.

The principle of evolution has been carried. When Prof. Huxley announced that from an hypothesis it had become a fact, no denial was heard. The principle has not only been proved to men of science, its establisher has not only been enshrined in a holy sepulchre, but it has passed into the mental atmosphere of our race. Its victory is even more complete. It has already been adapted to the predilections of people, reflects their prejudices and infirmities, their virtues and ideals. All this in less than a generation since Darwin announced his theory! The progress has been so rapid that evolution has to be revised by the light of its own history. It declared there were no miracles; but is it not a miracle that Darwin should be buried in Westminster Abbey? It declared there are no leaps in nature; but is not here a leap, from the theological universe of twenty-five years ago to a universe of physical law? Here is the production of a new spiritual species before our eyes, in a few years, under the creative word of a man of genius. Why should men trouble themselves about "missing links"? May there not have been Darwins among our humble ancestors, the animals, appearing now and then, with a power to lead on a new immediate race?

The best thing about a victory is that it enables the conqueror to do justice to his antagonist. While the polemics are going on, no inch is conceded, magnanimity is out of the question, and even justice difficult. Now that the principle of evolution is secure, those who have studied it most —as Prof. Huxley and Dr. Andrew Wilson—have recognized a degree of truth in the criticisms directed against the phrase "natural selection," as inadequate to explain all the phenomena. Although the slow, gradual process has been a chief, perhaps the chief, method of nature in the production of species, there are instances in which other processes are indicated; where, for example, forms reached by natural selection appear to have attained some farther force by which they possessed a capacity of variability not in their ancestors. They run on the path of development where their ancestors crept; they leap across gaps which their predecessors could not pass. This being the case, it may be admitted that those who so hotly contended for the old belief in special creations were not altogether wrong. Removed from the realm of theology, their contention may be accepted as corresponding with some of the facts of natural history, and a great many facts in human history. It is well enough to remember that this old belief that the worlds were created by a divine fiat, and each form in nature similarly called into existence, was not primarily a theological, but a scientific theory. The facts were so explained, because they so appeared. The explanation was not then supernatural. The agency of gods once appeared as natural as to us the agency of heat or cold. A newer science turned the earlier into supernaturalism, which was then defended for other than scientific reasons. Now that it has been defeated on these untenable grounds, the theory of special creations recovers its interest as a phase of intellectual development: it was a theory related to its environment of phenomena, and in its time a survival of the fittest.

Why did our forefathers conclude that the various forms of nature originated in forces now called miraculous? In the absence of an adequate knowledge of causation, they could only project into external nature such forces of will and purpose as they found operative in themselves. In human life, in history, in the effects of genius and enthusiasm, they beheld a creative and godlike power, whose results seemed analogous to the works of non-human nature. These human phenomena did not suggest development, but original creation. Some lowly shepherd or workman, some Moses or Jesus or Mohammed, rises up to overthrow an existing world, and found a new one on its ruins. Swift as arrows, winged, sharp-eyed, they speed to their mark. A man floats across a river in a scooped log, a fleet of ships follows him; a man discovers gunpowder, the system of nations is changed; or printing, and the ecclesiastical dominion of a thousand years is overthrown. The man of to-day has a long series of historic strata to search through. He has learned that the might of small things is not independent of larger, as one said "when a pond is full, a mole may bore the hole which floods a country"; and the word "marvellous" supplants the "miraculous" of antiquity. But the phenomena reflected in the old word remain, and it were of little advantage if we should rid ourselves of the notion of supernaturalism by underrating the facts and forces our fathers endeavored to express in that word.

This, which I should term an "evolutionist error," is visible in a certain necessitarian theory of life which appeared before the Darwinian age, but at once rooted itself therein. It began with the Belgian statist Quetelet, and gained a powerful advocate in Buckle. Briefly, the theory is that the moral, religious, and other sentiments and actions of men are determined by climatic and similar influences, and represented in averages which recur with the same steadfast proportions as any results in inanimate nature. The life and death of men, diseases, marriages, religious beliefs, are determined by causes external to their will as much as the seasons or the migrations of birds. That seemed to bind the human race like a river between its banks, until it was found that society possessed the power of changing these statistics. And they have been changed. How does the average of people who cannot read compare with the average of ten years ago? The statistics are our creatures, not we theirs. To the statistical delusion has succeeded that which restricts human progression to natural selection. We are asked to expect a gradualism in social and political development akin to that which crept through geologic time: by infinitesimal changes, here a little and there a little, nowhere a great deal, the ways of the world are to be reformed, and the better society built up. So much time as it required to establish the superstitions of Christendom, so much will be required to disintegrate them. So runs the new creed. But all the islands were not built of coralline animals bit by bit: some have been heaved by volcanic force out of the depth of boiling seas. The highlands of Protestantism were upheaved in that way, and the freedom of Europe and America since the revolutions which closed the last century. No doubt there were small and slow processes before these transformations could occur, but they were no more real than the extraordinary forces represented in their cumulative activities.

There are heavy drawbacks to revolution. The theme is trite. But revolutions cannot cease till men have learned to achieve the same things without them. They are reminders that where human will, freedom, thought, have become factors of evolution, the slow process of selection will not answer. Comfortable sacerdotalism used to say to men, "Be patient; suffer on, and God will reward you individually, while collectively he will mend the world in his own way and his own time." But experience has shown that God's way of mending things is a terrible way. When wrongs are left to him, he brings hell-fire to the work. His method is too revolutionary. But, as it could not be escaped by the *laissez faire* of past conservatism, neither can it be escaped by the "natural selection" of the new conservatism. We must do by art, by wisdom, by Herculean effort, what was done in the past by natural selection *plus* revolution. Voltaire said that, if there were no god, it would be necessary to invent one; but we have since made the more important discovery that, in the management of their earthly affairs, men are to be the gods. Our ancestors believed in miracles, but we are to work them. That is, we are to bring the wisdom, love, and might, once seen by faith as invisible divinities redressing the wrongs of the earth, to the fulfilment of those dreams. The tremendous change wrought in the world by humanized steam, in a few years, where for æons it had been a sleeping or destructive giant, is greater than any miracle of ancient superstition. That Afreet rose out of a boiling kettle, summoned by wisdom to lead on a peaceful revolution. Steam achieves in a day what without it natural selection could not achieve in a million years. When love and intelligence are as free from traditional methods in government and religion as are art and commerce, revolutions equally peaceful and benevolent will transform society.

The first effect of the doctrine of evolution, on the average world, seems to have been to intensify its trust in physical force. The "survival of the fittest" is translated to survival of the physically strongest; and the law of nature is ascribed authority, as if it came from Sinai. Logically carried out, this would be wresting evolution to our destruction. By pressing the weak more and more to the wall, by assisting invalids out of the world, by evolving sympathy out of existence.

Digitized by Google

we should produce a race somewhat like the giants of Chinese fable whose hearts were blocks of ice. Thus far, this perversion has been manifested rather in the attitude of strong nations toward weak ones than in domestic or social tendencies, but what men do to others is sure to react upon themselves.

An able writer, Mr. Fossett Lock, in a lecture given in this place, in October last, described one of the political groups of this country as the "Darwinians," though not including Darwin among them: "The Darwinians are they who have assimilated the new philosophy in its material, but not in its moral, aspects. To them, the key of history in the past and of policy in the future is the survival of the fittest in the selfish struggle for material existence, in a world where the population is always tending to press upon the means of subsistence. This holds good for all beings,—for worms, for men, and for nations. In international politics, it results in the theory that there are certain vigorous and progressive races, whose function it is to eat up the less vigorous and stationary races, just as in Pharaoh's dream the lean kine ate up the fat kine. The Darwinians do not concern themselves with the question whether the results may not be as disastrous. They become frantic with disgust if the government of their country should be found supporting a weak race against a strong one. Such a government is, in their eyes, not only flying in the face of the beneficent order of nature in vain,—for the race is destined to succumb,—but, what is worse, it is hampering itself in the struggle for existence by a waste of its own wealth, and by incurring the enmity of a progressive race. The justice or injustice of the struggle has nothing to do with the matter: these things are the occasions, not the causes, of war. There is only one cause of war, and that is the selfish struggle for material existence where the population presses upon the means of subsistence. Their Sermon on the Mount, their Declaration of Independence, is the address of the wolf to the lamb in the gospel according to St. Æsop. In the same way, home politics become a struggle for existence between the Conservative and Liberal parties. The question for each individual is, not what is right, nor even what is safe and profitable, except as these bear upon the wider and important question, What is the policy of the party, or, to use a celebrated phrase, that which divides us at least? In both lines of policy there is a tendency to fatalism, and even cowardice, which justifies the remark—again to borrow from Matthew Arnold—that the Darwinians are wanting in civil courage."

This indictment is from a Positivist, one of a religious society of which Prof. Newman recently said that, in its opposition to war, it is taking the honorable place once occupied by the Quakers. I have sometimes thought that the pre-Darwinian character of Comte's philosophy is felt in a certain rigidity in Positivism, a fixity of formulation, not recognizing sufficiently the religious evolution. But their unwearied and brave services to humanity, at home and abroad, prove the advantage of having one church at least consecrated to maintenance of the human standard and moral principle as the fundamental order of all evolution. The criticism just quoted does not apply to the great teachers of evolution, such as Haeckel and Herbert Spencer; but it not inaptly describes a popular opinion which prevails in our first Darwinian generation. Martin Luther said, "If you will sin, sin boldly"; but the new motto seems to be, "Sin prudently." Do not attack bear or lion or wolf, but some lamb,—Madagascar, Egypt, Mexico. If one big nation gets a morsel, the other big nations feel lean till they have devoured somebody. And, if justice to the weak tribe is pleaded for, it is declared that it is the law of development that the great nations shall absorb the small, and that the small are thereby civilized. But that is not a human evolution: it is a mere animal evolution. The saurian ideal was, no doubt, to convert all flesh into saurian; but even nature resolved that there should be other than saurian evolutions. It is not progress to convert all the forms in the world into beef and mutton, or all nations into the emblematic lion, bear, cock, or eagle. A true principle of survival of the fittest would conclude that, if nature did not produce Englishmen in Egypt or French in Madagascar, it is because they were not fittest there. It does not indeed imply that small nations shall be exempt from the conditions of human development. If tribes cannot be humanized, if they remain as wolves and snakes in the garden of the earth, they may have to be superseded. But such tribes cannot be superseded by a civilization which makes itself savagery in the process. There has been published in this country a little book, by an American lady, entitled *A Century of Dishonor*, in reading which one may perceive that white faces, in their long war of extermination against the American aborigines, steadily became more savage than the red men. There went on at the frontiers a sort of exchange of white virtues for copper-colored brutalities, until a gentleman or lady from the East would fare better in the hands of the aborigines than in those of their exterminators. And I remember that when it was claimed, in defence of slavery, that the Africans were Christianized by subjection to white men, Mr. Beecher remarked that whatever Christianity the negroes got came out of their masters. Something of the same kind may be remarked at all the points where native races are violently invaded by stronger powers, whatever their civilization. The evolution that takes place is not in the direction of a higher humanity, but of a monstrosity. And it is sure to react upon the civilization which authorizes such attempts. In the Berserker tales of our Scandinavian ancestors, it is said that men were transformed into wolves. It hardly seems fabulous when we see how wolfish the sons of civilized families may become when sent out on predatory expeditions among less developed tribes.

But this is natural, it is said. It is the law of nature that hawks shall prey on doves; that powerful nations shall overrun the world; that the weaker shall become extinct and the stronger shall prevail. But that is just the law we need to repress and control. Civilized man is not living in a state of nature. Just so far as he is civilized, so far has he subdued nature. Natural evolution is found among the savages who kill off their aged members and eat their superfluous children. A cruel edict from nature is no more to be reverenced than a cruel edict from a despot. We may be compelled to submit to either, but only so far and so long as we cannot help it. We will escape and master the brutality of nature, if we can; and all our science, art, and human law aim at just that,—to do away with the ferocities of nature. Even in our society there are some who are fond of reminding us that underneath all our sentiment and peaceful life there is a foundation of physical force. More's the pity! It is equally true that beneath our carpets is a cold soil full of worms. But that does not prove it a good thing to dwell in mud huts with the worms.

But they slander even nature who estimate its whole scheme of evolution by such fragmentary instances as the selfish instincts of this or that tribe of animals or men. Nature has evolved beyond these the gregarious, the sympathetic instincts, and the peacefulness which steadily replaces violence in the earth,—replaces lions with lambs,—except where such development is arrested by selfish artifices of the recreant son she has brought forth to supplement her own imperfect efforts. Man himself, in his form, combines perfections once distributed through the lower orders. His body is a cosmopolitan development; and, if he relapses from this higher into a lower plane of natural evolution, it is as if a schoolmaster should obey the whims and confirm the ignorance of the children he has been appointed to control and educate. Shakspere, who beheld all nature in its reflection in all the nature of man, as in a stream where stars are mirrored amid the trees, has told us that art shares with great creating nature:—

> "Nature is made better by no mean,
> But nature makes that mean; so, over that art
> Which, you say, adds to nature, is an art
> That nature makes. You see, sweet maid, we marry
> A gentle scion to the wildest stock;
> And make conceive a bark of baser kind
> By bud of nobler race: This is an art
> Which does mend nature,—change it rather; but
> The art itself is nature."

That is a scripture written on a tablet of English oak equal to any ever written on papyrus. The truth which Shakspere read on a flower adorned by art was read on the constellation by a poet whose cradle touches Shakspere's grave. Dr. Henry More saw that the farthest expansion of external nature left it bound fast in the circle of necessity; that in man it met a divine power, in a true sense supernatural, not being physically evolved from the earth, but from the spiritualized universe. The word "evolution" sounds prophetic in his *Psychathanasia*, in the seventeenth century:

> "Certain deficiency
> Doth always follow evolution:
> Nought's infinite but tight eternity
> Close thrust into itself."

He cannot find this infinity amid celestial splendors which have imaged for man his heaven. Those galaxies revolve in grooves of fate, unprogressive since man pictured there the fables of his pain on which they helplessly look.

> "In the eighth sphear Andromeda from chains
> Is not releast: fearfull Orion flies
> The dreadfull Scorpion. Alas what gaine
> Then is't to live in the bright starry skies?
> It no man can exeem from miseries,
> All you that seek for true felicity
> Rend your own hearts: There God himself descries
> Himself: there dwells his beautious Majesty:
> There shines the sun of righteousnesse in goodly glee."

Here as in a seed is held the religion of human evolution. For the old idealist no scientific discovery had yet revealed the potentialities of nature, nor shown its forces obedient to a plastic ideal derived from a universe. Therefore, this ideal must retire into itself, be in man a "tight eternity" creating its mystical world. But there was endowed and finely touched the spirit related to the fine issues maturing in the earth. Men said of More that he was rather an angel than a man. Such miracles as that man wrought in his own spirit, such a magical world as Shakspere created on an unpainted stage, were successors to the miracles of superstition, models for the miracles of humanity. It is the promise of evolution that every inward Eden shall break forth to be a world-wide joy.

It is plain to me that evolution is a more real and influential faith to-day than Christianity. This is shown by the degree in which the evils and errors that once sheltered themselves under the letter of the Bible now hasten to justify themselves by the law of evolution. Such are the shadows every sun casts at its rising, and they all point to the sun. But this luminous generaliza-

tion of thought is a gospel of human religion. There is nothing national or narrow about it. Even to prove its working in mere organic nature Darwin had to explore the world and consult its every kingdom, animate and inanimate; and to raise that discovery of the origin of species into a universal law there had to be added to it the discoveries of those who had searched the heaven of stars from their nebulæ to their coherence in worlds and systems; the discoveries of others who had tracked the history of man and of the mind of man; and the revelations of those who have shown the harmony of all these with the spiritual unity and moral development of the human race. It seems small enough when men take even from the religion of a race some little local rite, as circumcision or baptism, and build a sect upon it, as if that were the essence of the whole thing. But it is fearful to think of any one fixing upon some wild phase of evolution to consecrate as compendium of the Cosmos.

It is a tremendous epoch in the life of a human being when from repeating formulas he begins to apprehend realities. Young people, taught to echo phrases of pulpits and catechisms, sound glibly such words as "eternity," "infinity," "God," "man," without any notion of realities corresponding to these phrases; but in an age of science there is likely to come a period in their experience when a sense of the actual vastness, immensity, grandeur of nature, the dignity of the moral sentiment, the ideal majesty, rises in them, and words that had been cant grow real. Then, presently, the old words and names shrivel, by reason of their association with ancient errors and inadequacy to express the newly felt realities. One danger arises from the fact that the wine of character cannot be at once transferred from old bottles to the new along with the intellect. We may recognize this in the perils of France, for it is always easier to estimate such things in our neighbors than in ourselves. There we see a nation whose intellect is completely alienated from the Christian faith, while its domestic life and social system are bound up with the Catholic Church, the result being a sort of spiritual chaos. M. Jules Simon, whose Jewish antecedents lead him to cling to Jahvé as President of presidents, has just written a pamphlet in which he declares that this chaos is gradually dividing into parties of violence and apathy,—"the Dynamite party and the Folded arms party." This is to assert that the most active power in France is becoming a destructive power. His remedy is a restoration of belief in God. But he forgets that for a thousand years the French God has been leader of the Dynamite party. For so many generations these people have been trained under the picture of a God with brimstone breath kindling Tophet for his opponents. What is hell but the divine dynamite? What are all the fire and fagot of Christian history but the canonical reign of dynamite? The trouble is not that the sceptics have ceased to believe in this only God they ever heard of, but that they still believe too much in him. He has gone out of their intellect, but survives in their temper. The Church has taught them so successfully the divinity of dynamite for differences of opinion that the lesson cannot be unlearned at once. The intolerance so long sown in every child—nay, still sown in the majority of children—is steadily reaped by the sowers of such dragons' teeth.

But now let us suppose the Church and its superstitions cleared out of France, and everybody taught scientific views of nature. Instead of theocratic government, they see the struggle for existence; instead of sacerdotal selection, there is natural selection. Might not the struggle for existence also suggest dynamite? Might not natural selection prove an instruction in selfishness? "Each for himself and death for the hindmost!" The physical forces of nature are much like the gods of nature: the moral sentiment which surrounded the arbitrary power of deities is easily translatable into that which attends the worship of natural laws and forces. It was because the ancient nature-gods were steadily represented in institutions selfish, proud, cruel, as themselves, that the religious development of the human heart supplanted them with deities human and loving. It remains to be seen whether, in our scientific epoch, we shall be equally able to supplant the moral conceptions surrounding the selfish struggle for existence by ideals born of a larger generalization. There must be an evolution of evolution for this work. The struggle for existence is only the alphabet of the lesson we have to learn. Natural selection is but the foundation of human selection. Is there no such thing as love? Is there not the charity that seeketh not its own? Has not the force of nature raised above fossil forms, which sacrificed others to themselves, a supreme form able to sacrifice itself for others? Science shall not sink beneath that type of a god dying for man, but include it, or even surpass it, by training a race able to live for others, able to control the destructive law which links love and death.

When Darwin published his law there was great joy among scientists, great grief among religious teachers. The former saw the previous intellectual chaos rolling into order, the latter saw their dogmatic universe fallen to ruins. We have now reached a calmer stand-point, from which we may see that there was more reason for the joy and more for the sorrow than either knew. The new discovery shining on the human world reveals the hell in which it is seething. It shows for what ages not only nations and societies, but even religions, have been organized by a selfish struggle for existence. Taking up the dreadful war that has built the bones of its slain into the strata beneath our feet, men have made the earth a battle-field, and history the annals of a never-ending strife. Society but renders it more decorous. A friend of mine, who had never seen a snake, told me that once, in Switzerland, one suddenly darted from its hole and wriggled across his path. He was so paralyzed with mysterious horror that he believes he could not have stirred, if it had attacked him. Where did his terror come from? Probably from anthropoid ancestors. Last year, a lady, who had a harmless little pet snake, went with it near the monkey-house in the Zoölogical Gardens; and, instantly, the monkeys became demoralized, screaming, trembling, and climbing to the ceiling. The monkey race saw the great enemy of their development: the dread of their natural foe had been transmitted even to apes born in the Gardens, which could never have seen a snake. The serpent followed up the ape even after he became a man, and vast temples were built to propitiate the serpent. From amid that serpent worship came the nerves of my friend, shaken by the first sight of a creature never seen before. It is but one example of the way in which the earlier survives in the later struggle for existence. A man wishes to own a great deal more land than he can use. Why? Because it is connected with power, title, privilege, precedence. That is, it helps him to get ahead of some other man. Those who have thus got ahead surround their advantage with laws, artificial defences, and those who are behind, but hope to get ahead, support such survivals of social serpent-worship; though it is probable that all the land questions would be settled, if the artificial advantages attaching to ownership of land were swept from our laws. Prof. Hubrecht thinks there is a law of primogeniture in nature. Evolution has been by the first-born, while the early forms have continued unchanged through the poverty of their younger sons. Very likely. And, if so, it is a good reason for abolishing primogeniture.

Evolution tells us not only whence we have come, but whither we are able to go. We are by it taught the means of evolving out of us what has been developed into us. We are to trust to the power of culture to create a heart clean of this hereditary selfishness, and renew a right spirit within us. Cannot children be taught not to try to get ahead of everybody, in honor to prefer others, to esteem humility above pride, and contentment as the best riches? Cannot a generation be taught to love instead of to compete? Cannot they be taught to love goodness, gentleness, unselfishness? Children can be taught to love poetry, pictorial art, music, knowledge, to make sacrifices for these. Why shall they not be taught to love the poetic life, beauty in character, harmony in social life, and find their chief happiness in these? If only a few in society are so varied from the competitive, ambitious, selfish character, they will find themselves the centre and germ of a new development, which shall leave the old struggle as far behind as cannibalism is behind civilization. The universe is equal to all the advance of humanity. Nature is a great machinery, which will remorselessly grind men, if they be given it, or, if they can command, it will grind them their bread, and weave their raiment. Nor are there wanting in it transcendent mills that will yield the bread of spiritual life, and looms that will weave the shining raiment of transfiguration.

CORRESPONDENCE.

A MEETING OF THE NEW YORK SOCIOLOGIC SOCIETY.

Editors of The Index:—

On Tuesday evening, a very interesting meeting was held at Masonic Hall, New York, by the Sociologic Society. The secretary announced the formation of a branch in Brooklyn, and also that preparations were making to start another in Newark, N.J. The first speech of the evening was by Courtlandt Palmer, on "Co-operation the Remedy for Monopoly." He said substantially as follows: "Competition is a phase of the struggle for existence. It reduces wages to the starvation point; and, by allowing the law of crises to work its utmost, it produces in periods of commercial depression great suffering and an increased death-rate. In its development, it assumes by degrees the form of monopoly, and culminates finally in ring-like pools, such as the Standard Oil Company, the Western Union Telegraph, the New York Elevated, and other similar organizations. The characteristic of all these is a large number, almost a multitude, of operatives employed at the lowest market wages, and a handful of capitalists who receive the profits and the benefit of the labor of their many employés. Thus is it that the vast fortunes of to-day have been accumulated. The system, and not those who enjoy and continue it, is to blame. Only by changing the system, and not by social revolution, can the evil be cured. When co-operation is substituted for competition, then he who labors will have a direct interest in his own work, and will do more and better, will be richer and happier, and can achieve higher things than is now possible with a wage-earner. Wherever co-operation has been tried, here and abroad, this has been the almost unvarying result. What is needed to-day is to disseminate the knowledge of these principles. When once known and recognized, they are bound to be acted upon and to become an all-important element in the industrialism of the future."

William E. S. Fales delivered the closing speech. His topic was "Organization." He said: "The difference between the lowest and highest forms of all life is organization. Not weight nor size, strength nor activity, are characteristics of development, but *only*

Digitized by Google

the extent of the process known as progressive differentiation. Sociology is but a higher zoölogy, and the same law applies. The superiority of Javanese over Australian, of Chinese over Corean, of England over Russia, is due to higher social organization. In the history of industrialism, a corresponding development can be seen from the swarming myriads who built the Karnak to the hundreds who erected St. Peter's, and thence to the few who spanned the East River with the great bridge. The features of organization, when analyzed, are the grouping of similar units,—interdependence, functionalization, and sensitiveness, or consciousness.

"Modern life has its evils. Politically, intellectually, and morally, the age is at a point beyond which it is difficult to progress naturally. In these regards, we are as well off as our environment allows. Industrially, we are sadly deficient. In spite of invention and discovery, Christianity and the spread of altruistic ideas and emotions, the condition of the vast majority is but slightly better than it was a hundred years ago. Where industry has crawled a foot in a century, society, government, and thought have travelled a mile. The need of the hour is industrial improvement; and the first step to be taken is organization, and the next step organization. To follow out the law of nature suggested, the first thing to be done is the bringing together and grouping of industrial units,—in other words, the extension and completion of trades-unions. These should be local, State, national, and international. Properly constituted, they would be a safeguard against all monopoly. They would shape and inspire legislation, and would do much to destroy the militarism that is now depleting the world. Trades-unions are more than necessary to-day: they are imperative. To increase the sensitiveness of the body, industrial is but another name for the extension of the American educational system. Education should be universal and compulsory. Beyond its literary scope, it should also be technical. Government should insist that every child who enters life should be prepared to become an active, intelligent, and moral citizen. The parent who deprives a child of such opportunity should be punished, and, if necessary, the child taken away and adopted by the State. Legislation is needed in many respects. It is an odd commentary upon legislation to find in the statute-books of the Union a hundred laws affecting capital to one affecting labor. A ten-dollar bill from its birth in the government printing-press to its death in the capital of a great syndicate is protected by law at every step, while a human being goes through life almost unknown to the statute. By organization, scientific and complete, industrialism will be raised to a higher plane. The sewing-girl, pricking poverty back at the needle's point, and the laborer, endeavoring to live on a dollar a day, will then become forgotten facts. To secure this organization should be the aim of all who have at heart the welfare of their fellow-men."

Both speakers were warmly applauded, and received a vote of thanks at the close of the meeting.

MATTER AND MIND.

Editors of The Index:—

In an article headed "Homo-Centrality," in *The Index* of December 13, Mr. W. I. Gill says, "The universe, called material, so far as is known to us, is itself *mind*, a complexus of conscious states"; and the writer goes on to denounce "material phenomena as pure impertinence, brute forces, whose only significance is given them by the inner conscious power," etc. While, in an article on "Inertia" (*Index*, February 28), he tells us "matter is a force sufficient to itself and its own action. There is no need of any extra-material force to explain this action and to supply it with a cause."

Now, if Mr. Gill were to tell us that black and white and blue and red were the same colors, should we call it reckless assertion, or take the charitable view and call it color-blindness? When a man's perceptions one week are so defective and uncertain that the outside world is but "a complexus of conscious states," and the next that *this same world* is *solid matter*, "sufficient to itself and to its own action," he is certainly not a very consistent or reliable correspondent.

"Matter [says Mr. Gill] can exist and operate without mind; but we do not know that mind can exist, much less operate, without matter." The truth of the first part of this sentence no intelligent person will deny. Everybody knows that life and mind are not the same thing. The vegetable kingdom lives, the lower class of animals, the new-born child, idiots, apoplectic subjects, all live and breathe and move, though none of them possess a conscious mind. While it is true that matter can exist without mind, it is just as possible for smoke to exist without fire as mind without material substance. Sir Isaac Newton says, "No one with a competent faculty of thinking can for a moment entertain the idea of energy without matter." In all human experience, mind has never been manifested apart from cerebral nerve tissue; and, conversely, nervous tissue has never been seen without some manifestation of intelligence or mind. If Mr. Gill had any evidence which might lead him to suspect the existence of mind apart from matter, why keep us in a quandary? The public could not fail to be interested in such experience.

It is sometimes said that "matter cannot think," and, inasmuch as thought is being manifested, something *other* than *matter* must do it. This statement implies that the composition and capacities of every kind of matter in the universe are known to have been tested and found incapable of thought; and it further assumes that spirit or mind has undergone a similar examination, and has been found adequate to the task. Now is it a fact that all the various kinds of matter have been scrutinized and tested under all their various moods and conditions? The supposition is absurd and untrue. The incorrectness of *a priori* statements in regard to the properties of matter is only exceeded by the still more absurd ones made in respect to spirit.

We have no knowledge of any kind of force, energy, or power, except as it appears to us in matter. We never find matter and its properties separated, and cannot conceive, much less realize, what they would be or how they would appear or what they might do. Thinking and feeling independently of our organism would be thinking without a thinker and feeling without anything to feel, which are impossible and quite inconceivable operations. Gravity and magnetism are only possible in presence of and in connection with substance to operate upon. When muscle contracts or the liver secretes its special fluid or the absorbing vessels perform their special functions, it is not mind that does it, but the inherent properties of the organ itself. Each organ and fibril and blood corpuscle possesses an individual life, and has its independent functions and rights. Nine-tenths of our movements, whether they be thoughts or actions, are performed entirely without the cognizance of mind. Our conscious states are but a small proportion of our life, as compared with our semi-conscious ones.

Again, if "matter cannot think," where is the thinking of the horse and the dog performed? These animals show signs of mind. Have *they, too*, got a supernatural entity, an agent in the pineal gland?

And what is the meaning of that wonderful structure, that delicate and complex mass of material substance, we call the nervous system,—millions upon millions of infinitesimal cells of various shapes and shades and sizes, with a still more numerous quantity of infinitesimal fibres running to every part of the body, conveying sensation and motion and life? The elements out of which this mechanism is elaborated are the rarest, the most active, and the most powerful known to chemistry. And, to complete this marvellous arrangement, the supply of blood sent to this region far exceeds that sent to any other organ of the body. If the elaboration of mind is not their purpose, then they have none, and our mental capacities have no source from which to draw their life,—a conclusion as wonderful as it is anomalous.

Feeling is an inherent property of all living matter, displayed even as low as the sensitive plant, and progressing with the evolution and increasing complexity of the animal, until we find it at the highest point of human attainment,—consciousness. Feeling, thought, and will, by the assistance of Dr. Mosso's plethysmograph, are proved to be dependent on the blood circulation for their manifestation. They are amenable to the laws of force, like heat and electricity. They can be weighed and measured and their movements gauged. A deep feeling requires more blood to sustain it than a merely passing one, an elaborate calculation more than ordinary thinking, and the speed of nerve force is gauged as we measure the speed of electricity.

These facts established, we are justified in concluding that mind is nerve force,—mental energy; and that, allowing for its personal peculiarities, the brain will act in consonance with the rest of the bodily organism. Removal or injury to the brain has long been known to stop all thought; and the prevention of a due supply of blood, or blood of an improper quality, does the same, as in the case of other organs. Now, assuming the mind to be a force, we shall seek for the manifestations of its energy in accordance with the laws which govern other forces. We shall have mind at rest and mind in motion. Our mind at rest is represented by nerve tissue. As coal represents heat and light, our mind in motion is feeling, thinking, tasting,—consciously or unconsciously, as the case may be. If conscious purposive operations are going on, then an outlet must be found; and the larynx or the hand or some other muscle is excited to give vent to the force engendered. If the larynx is selected, we have the results of the operation in words, and if some other muscle, according to the nature and purpose of the impulse.

But, after this manifestation in words, we are unable, with our present knowledge, to trace the force any further; and this is similar to what happens in regard to other forces. We have carbon in the shape of tallow,—the representative of light and heat. Put to this a piece of cotton wick, and we have a candle which gives out light and heat for hours. Ultimately, the candle disappears, the blaze is no longer generated. Now, where is the consumed candle? Force, we are told, is indestructible. Nevertheless, we can no more find the candle nor its equivalent.

Nerve force pursues a similar course, and finds a similar termination. The thought once eliminated and passed through consciousness forever eludes our grasp. The force, no doubt, exists, but not in shape of mind,—no more than the blaze exists as carbon in motion. Whatever shape or place it occupies, according to the laws of motion, it will never assume the shape of mind again. So that, when Mr. Gill implies that mind reacts on matter, he implies an impossibility. For each manifestation of mind, a certain amount of material must be consumed,—just as each discharge of a cannon must be furnished with a fresh charge of powder. And, whether it be an act of memory or an original purpose, the same rule applies.

With this new conception, we shall change our modes of expression. We shall consider it as incorrect to talk of body and mind as to talk of body and voice.

WILLIAM MITCHELL.

THE MORMON REMEDY RESTATED.

Editors of The Index:—

Will you kindly permit me to say a few words more in explanation of my position on the Mormon question?

The remedy I proposed was a dual one,—reason and liberty, an educational and a legislative remedy. First give the Mormon wife the privilege of optional divorce, then educate her until she comprehends that she is defrauded and degraded, the dupe of a false religion; and, the moment she does comprehend this, she will gladly accept your proffered release. To abrogate Mormon polygamy is to make the Mormon wife (if undeceived) feel that she is regarded as a criminal and an adulteress, the mother, it may be, of bastards. If not undeceived, she will feel herself a wife still and a martyr for her religion. But educate her in the doctrines of free thought, liberty, equality, and human rights, and tell her she is free at any time to leave her part of a husband and to go forth, a divorced woman, into the world, and marry a whole man for herself alone, and you have loosened the very corner-stone of the Mormon Tabernacle. Mormonism must be broken up from within by the leaven of a liberal education. Outside pressure and blows will only drive its particles into closer adhesion.

Mr. Potter says (and I admit it) that my proposed law would legalize polygamy and polyandry. Better is it that these evils should come than that the rights of personal and religious liberty should be injuriously invaded. But I do not admit that it would necessarily legalize "every kind of libidinous relation which individuals of the two sexes might choose to assume with each other under the name of marriage."

Polygamy appears to me a self-limiting disease. First, because it cannot exist in a society that is educated to the point of properly comprehending and regarding the sacredness of human rights; second, because it is too expensive except for the wealthy few to indulge in; third, because all women (in the pres-

Digitized by Google

ent stage of evolution at least) live mostly in the realm of the affections, and are naturally and peculiarly exclusive in their conjugal loves. Not one woman in a million would be a polygamist, unless duped and persuaded by a false creed. There are some sores that heal best, if left alone. All interference heightens the inflammation: at least, only the most palliative and non-irritating treatment will answer. Crimes against self, committed in the name of religion, are sores of this character. The rude surgery of repressive legislation only makes them worse, but the cool lotions of free thought and moral suasion soon dissipate their fever. I confess that I cannot see that polygamy injures any one but the parties concerned to any very appreciable extent, and do not understand how the children that result from it are markedly injured, unless it is by the present illegality of the practice, which is certainly not the fault of polygamy. But I do know (and so does every physician or scientist who has examined the matter) that thousands of children in monogamic wedlock are every year born and raised under a curse, because of the inharmony of the parents. Hence, the importance of my marriage law, which would allow such parties to separate and remarry those they could be harmonious with, without disgrace or tedious, expensive, and degrading litigation.

I would like to say more with regard to my premise that "a man has a right to do as he pleases, if he does not injure others"; but it would take too much space to do it justice. I will content myself by saying that most legislation appears to have this basis: for example, in duelling (instanced by Mr. Potter), it was not till society woke up to the idea that it was grievously weakened and injured by the foolish maiming and killing of its strongest and best that it prohibited the practice. Perhaps the prohibition of suttee-burning might be justified by the fact of the resulting orphanage (I frankly confess I had not thought of it in that light before); but interference with religious devotees, because of alleged self-injury, certainly seems to my mind a very dangerous precedent. Society seems usually to have acted on the principle of non-interference with the individual's liberty, even if his acts were wrong, when such acts did not seriously injure it, or where the moral sense of the majority could be safely trusted to protect itself against their contaminating influence. And to this class polygamy appears to belong. I did not intend to convey the idea that Mr. Curtis' idea of a proper marriage law was in any respect like my own, but simply that I also would recommend (as he had done) a national marriage law.

J. WILLIAM LLOYD.

[In his restatement, Mr. Lloyd seems to us to have essentially conceded the main position of our argument against his previous statement,—namely, that "society" may prohibit practices by which it is "grievously weakened and injured," even though no individual complain of any wrong done to his or her rights, and no injury may be *individually* traceable. On this ground, civilized society may legislate against polygamy, though the women as well as the men freely consent to it. Mr. Lloyd says, too, that his free marriage and divorce law—which, we understood him, was based solely on the consent of the married, who might be legally separated at any time by either party's withdrawing that consent—would not legalize "every kind of libidinous relation" which a man and woman might consent to form. His proposed law, then, would place certain restrictions on the free consent of the parties. Why not place the restriction, then, at that very definite point where civilized society has pronounced its opinion,—monogamy? The injury done to children under polygamy is that it destroys the home with its peculiar rights and privileges. And the undoubted fact that there are many children wronged under monogamic marriage does not right this constant wrong of which polygamy is guilty, and by its very conditions must be guilty. The question is, Which system, as a whole, is most favorable to the right culture of children and the virtue and progress of society? That we had supposed to be one of the questions which civilization had settled.—W. J. P.]

ABSOLUTE MONEY.

Editors of The Index:—

I cannot agree with the statement in *The Index* that the late decision of the Supreme Court that "Congress has power to issue notes as absolute money" has been received with general favor. It certainly has not been so reported by the daily papers, nor can it be possible that persons familiar with financial questions have received it with general favor. Perhaps it indicates that the judiciary is amenable to popular feeling; but, if that is true, it certainly speaks ill for the judiciary, whose business is *not* to be influenced by any such considerations. That is exactly what a corrupt judiciary might do,—what has been done in the past, but which was never deemed an evidence of progress or creditable to the court. It is a little suspicious in this case that the legal tender note issue was a Republican measure, and that the able dissenting opinion was given by the only Democrat on the bench.

It seems very strange, too, to see *The Index*, which does not usually claim to understand the "absolute" use the phrase, "absolute money." There is no more such a thing as absolute money than there is an absolute horse. If Congress has such power, it ought to be taken away. No good end can be gained, or ever was gained, by making a legal tender of anything which would not be willingly accepted in exchange at its nominal value without that quality. The power, said by the court to rest with Congress, would, if exercised, as it might easily be, render our politics tenfold more corrupt than they now are; and the mass of the wage-workers would be the ones on whom the additional burdens would fall. Fiat money, having no definite relation to labor or the products of labor, may for that reason be called absolute; but the people would be swindled, however the paper might be stamped or named. What is wanted is a *defined relation to labor* in a currency, and consequent honest convertibility into labor, or the products thereof, at the option of the holder.

F. S. CABOT.

[The paragraph to which exception is taken was written in the West, and stated the impression produced by reading Western journals and conversations with Western business men during a lecture trip. So far as we can judge, the decision has been received with general favor in the West, although it is probably otherwise in the East, especially among bankers and capitalists generally. The word "absolute" was used not in its metaphysical, but in its popular and well-understood sense, and indicated correctly the nature of the decision of the Supreme Court of the United States, as to the wisdom of which "persons familiar with financial questions" are not agreed, and each of our readers is left to judge for himself.—ED.]

EXTRACTS FROM LETTERS.

We take the liberty to print the following extract from a letter to the editors of this journal, written by N. S. Cunningham, from Lemoore, Cal.: "When Mr. Abbot informed us that he was about to retire from the editorial chair, I thought I should never feel much further interest in *The Index*.... But I am very glad I did not lose a number; for, although I feel that no one can quite fill Mr. Abbot's place in my imagination, yet it seems to me that the paper has been greatly improved since you took control."

A. W. Metcalf writes from Pawnee Rock, Kan.: "*The Index* supplies a long-felt want, and my copies are read by a number of thinking men who have grown weary of the old narrow views, and are ready to receive a clearer light, such as comes from the pages of *The Index;* and I feel confident that I can send you other names by and by. Lawrence Dimmick died here on the 12th of this month, aged thirty-three years. He was a man of fine scholarly attainments, and well known in some literary circles in New York. His life was beautiful and his death peaceful. Fully conscious to the last, he frequently expressed himself willing to meet the great change, firmly believing in the doctrines of the New Theology, a strong and consistent disciple of the Emersonian school. Almost his last words were, 'Don't let Joseph Cook tell lies about me,' meaning that he wanted nothing said over his remains that would indicate a change of views on religious matters. He lived and died a free thinker, and his last moments were peaceful and happy."

A. L. Macomber of Toledo, Ohio, in renewing his subscription February 1, writes: "I continue to like *The Index* as well as ever,—indeed, I think a little better. You are to be commended for the high character maintained for the paper."

Rev. John McDowell, of Manchester, Eng., writes: "With limited means, every year I have to revise my newspaper and magazine list, now and again dropping one paper and adding another. *The Index* maintains its position among the mental necessities of my life."

BOOK NOTICES.

ANCIENT EGYPT UNDER THE PHARAOHS. By John Kenrick, M.A. In two volumes. New York: John B. Alden. 1883. pp. 871.

Mr. Alden has republished in a cheap form a valuable work which describes the land and people of Egypt, their arts and sciences, their civil institutions, and their religious faith and usages, and relates their history from the earliest records of the monarchy to its final absorption in the empire of Alexander. Although since it was written many and important contributions have been made to Egyptology, they have scarcely lessened the value of this work, in the preparing of which the author carefully availed himself of all accessible materials of his time, and wherever a doubt appeared to exist left the blank to be filled up by subsequent discovery. No other work perhaps gives so ample and comprehensive an account of the ancient Egyptians, and the work is one of value both to the scholar and the common reader. It may be said with truth that no library is complete without Kenrick's *Ancient Egypt*.

THE *Revue de Belgique* for March opens with an account of the attempts now going on to check the illegal increase of church property in Belgium. Such attempts have been frequent during the last six hundred years, but with little success, until the influence of the French Revolution caused all religious communities to be dissolved. Their re-establishment left them subject to restrictions which have been so openly disregarded that it is now proposed to legalize the resumption, either by the rightful owners or, in their failure to appear, by the state, of all property acquired in violation of the laws forbidding bequests to ecclesiastical corporations. These societies are so certain everywhere to increase in wealth, but never diminish, that we Americans ought to look far enough into the future to see the need of at least ceasing to encourage their growth by granting them that immunity from taxation which now forces those of us who do not believe in churches and convents to pay for the benefit which they derive from streets, roads, bridges, police, the fire department, etc.

ONE of Prang's latest publications from an original design by W. Hamilton Gibson, especially conceived for Easter, is emblematic in idea and treatment, and is in many respects a very interesting example of color effect in lithography. The design represents a flight of butterflies escaping from their chrysalis condition and winging their way upward to the sunlight; but, instead of concentrating his effort upon the butterflies, whose "gayly painted" wings are generally supposed to be susceptible of high coloring, the artist has created an atmosphere of golden light, which, beginning in the deepest gloom, culminates in a dazzling radiance above. Very few people probably realize how much labor goes to the perfection of such a reproduction; and many will be surprised to learn that it requires no less than twenty distinct printings, the exactitude of each of which must be absolutely faultless.

THE *Andover Review* for April is the most interesting number of this periodical that has yet appeared. President Porter has an article on the "Christian Ministry," and Rev. Francis H. Johnson on "Theistic Evolution." "Bishop Bryennios' 'Teaching of the Twelve Apostles,'" by Prof. Smyth, and a translation of the work from the Greek, by Rev. Charles C. Starbuck, will attract wide attention. "The Old Catholic Movement," by Rev. Charles C. Starbuck, is a readable paper. Among the editorials are "The New Creed offered to Congregationalists" and "Government Education in the West." The other articles as well as the book notices are worth reading.

WE have received from the old Travellers' Insurance Company, of Hartford, a copy of the official engraving of the Bartholdi Statue to be placed in New York Harbor. It is a correct picture of that noble gift, and faithfully represents to the eye the enormous statue completed and in the midst of its magnificent surroundings.

RUSKIN'S CHOICE WORKS.

The most popular smaller works of the celebrated author of *Modern Painters, Stones of Venice, Seven Lamps of Architecture*, etc.

SESAME AND LILIES. Elzevir Edition. Bourgeois type, fine cloth, ornamented. **25 cents.**

CROWN OF WILD OLIVE. Elzevir Edition. Bourgeois type, fine cloth, ornamented. **25 cents.**

ETHICS OF THE DUST. Elzevir Edition. Bourgeois type, fine cloth, ornamented. **25 cents.**

CHOICE WORKS. The three above, bound in one vol., half Russia, red edges. **50 cents.**

"The most accomplished English writer living. This dainty Elzevir edition is fit for Queen Titania's hand."—*Methodist Magazine*, Toronto.

"The type, paper, and binding are fit vehicles to carry to the public some of the best thoughts of the greatest living master of the English language."—*Universalist*, Chicago.

"At the astonishingly low price of 25 cents each. No more delightful prelude to the study of mineralogy has ever been given than is found in *Ethics of the Dust*, and these cheap yet careful reprints place them within the reach of all."—*The Continent*, New York.

"Put forth in such admirable shape as to increase their circulation among all classes. The excellence and cheapness of the publications by this house are making friends throughout the country, and aiding materially in spreading knowledge of desirable literature."—*Indianapolis Journal*.

"In publishing Ruskin's Choice Works, Mr. Alden has established a fresh claim upon the gratitude of American readers. These books are only examples of the work Mr. Alden is doing. His catalogue comprises most of the best standard works printed in the English language, and his prices throughout are such as to justly entitle him to be called a public benefactor."—*Christian Advocate*, Buffalo, N.Y.

"The above lovely little books of Ruskin, published by the most enterprising publisher of the day, are worth more than they cost merely to be looked at as ornaments, they are so dainty in design and color. That they are as full of meat as an egg goes without saying; for Ruskin in his playfullest mood is a teacher of the deepest lessons, both religious and secular, and, if he were not, his style is so musical, so bright, that of itself it is a lesson in purity."—*Dominion Churchman*, Toronto, Canada.

Third Edition.

BIBLE MYTHS

And their Parallels in Other Religions.

Being a Comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations.

The object of this work is to point out the myths with which the Old and the New Testaments abound; to show that they were held in common with other nations; and then trace them to their evident *origin* and *explain their meaning*.

"It has long been acknowledged by the most eminent Biblical students that the Hebrew Scriptures contain a large mythical element; but, so far as we know, the present is the first complete and scholarly attempt to trace these myths to their source, and ascertain their original signification."—*Boston Courier*.

"Never before has there been given a volume to the reading world that shows the research for the origin of these myths as does this one just published by J. W. Bouton, of New York."—*Boston Times*.

"It is unquestionably true that the results of a rationalistic study of the Christian Scriptures are nowhere else so accessible as they are now made in the work before us."—*New York Sun*.

1 vol. Royal 8vo. Cloth. 600 pp. $3.00.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

Modern Thinkers,

Principally upon Social Science.

By Prof. VAN BUREN DENSLOW, LL.D. With Introduction by ROBERT G. INGERSOLL. Including critical analyses of Swedenborg as a Seer, of Adam Smith as an Economist, of Jeremy Bentham as a Law Reformer, of Thomas Paine and Junius as Political Revolutionists, of Charles Fourier as a Socialist, of Herbert Spencer and Ernst Haeckel as Evolutionists, and of Auguste Comte as a Positivist, with an Essay on Wealth in its Relations to Christian Ethics.

The Fifth Edition has just been issued.

"Upon the question of money, this volume contains the best thing I have ever read."—*R. G. Ingersoll* (in Introduction).

"We confess that, if we stood on the ground on which Mr. Spencer stands, we should find it difficult to prevent ourselves from being pushed by the stalwart arm of Dr. Denslow's logic into the gulf of ethical nihilism."—*Prof. Goldwin Smith*.

"Now, the whole force of this case depends upon the assertion of Goldwin Smith that Dr. Van Buren Denslow is a disciple of Herbert Spencer. But the assertion is not true in any sense or in any degree. On the contrary, Dr. Denslow is an open antagonist of Mr. Spencer. His essay on Spencer's Philosophy, first published in the Chicago *Times*, while speaking of the man in the usual terms of perfunctory compliment, as have also Goldwin Smith and the *Saturday Review*, is adverse, carping, and depreciatory on every point that he considers. The criticism was regarded as so damaging that Spencer's friends were told they must reply to it or forever hold their peace; and we were confidently assured that the last we should ever hear of Spencer's system was the thud of the clods that Denslow had thrown upon its coffin."—*Prof. Youmans, in Popular Science Monthly and in Introduction to Current American Edition of the Data of Ethics*.

Stephen Pearl Andrews, as political executor of the late Thomas Paine, is as fiercely indignant at Mr. Denslow's analysis of Paine's politics as Prof. Youmans is at his assault on Spencer's Philosophy. On the other hand, George Jacob Holyoake speaks of the analysis of Paine's political philosophy as "the most masterly refutation of it extant, without showing in his words or in his mind any enmity against the great agitator whom he confutes."

The late Dr. George M. Beard, of New York, wrote to the author: "Your critique on Spencer's *Data of Ethics* has all the force of a discovery in ethics, and is of great value. It deserved to be made the subject of a separate treatise."

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price $1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

THE BY ALL ODDS BEST EQUIPPED RAILROAD IN THE WORLD.

Let it be forever remembered that the

Chicago & North-Western RAILWAY

is the best and shortest route to and from Chicago and Council Bluffs (Omaha), and that it is preferred by all well-posted travellers when passing to or from

CALIFORNIA and COLORADO.

It also operates the best route and the short line between

Chicago and St. Paul and Minneapolis.

Milwaukee, La Crosse, Sparta, Madison, Fort Howard (Green Bay), Wis., Winona, Owatonna, Mankato, Minn., Cedar Rapids, Des Moines, Webster City, Algona, Clinton, Marshalltown, Iowa, Freeport, Elgin, Rockford, Ill., are among its eight hundred local stations on its lines.

Among a few of the numerous points of superiority enjoyed by the patrons of this road are its **Day Coaches**, which are the finest that human art and ingenuity can create; its **Palatial Sleeping Cars**, which are models of comfort and elegance; its **Palace Drawing Room Cars**, which are unsurpassed by any; and its widely celebrated

NORTH-WESTERN DINING CARS,

the like of which are not run by any other road anywhere. In short, it is asserted that **it is the best equipped road in the world.**

All points of interest North, North-west, and West of Chicago, business centres, summer resorts, and noted hunting and fishing grounds, are accessible by the various branches of this road.

It owns and controls over five thousand miles of road, and has over four hundred passenger conductors constantly caring for its millions of patrons.

Ask your ticket agent for tickets via this route, **and take none other.** All leading ticket agents sell them. It costs no more to travel on this route that gives first-class accommodations than it does to go by the poorly equipped roads.

For maps, descriptive circulars, and summer resort papers, or other information not obtainable at your local ticket office, write to the

THE Canadian *Baptist* says, "There has never been in the history of the Church a time when there were so many earnest doubters both within and without its pale."

LAST Sunday, a free thought festival was held at the Collége of France. M. Renan paid an eloquent tribute to Quinet, Michelet, and Mickiewiez, medallion portraits of whom were unveiled before the assemblage.

LAST Monday, a statue of Gambetta was unveiled at Cahors, on which occasion Prime Minister Ferry and Gen. Cameron, Minister of War, delivered addresses, paying eloquent tributes to Gambetta, and declaring that his premature death, so deeply regretted by the nation, had left a void which nobody was able to fill.

SAYS the Springfield *Republican:* "The Catholics claim that they are being oppressed in the United States of Colombia, and that infidelity is rampant there. It is suggested from a Protestant source that this confession is an indictment against the Catholic Church in a country where for so long it has had the field to itself, well supported by the State and at one time by public opinion."

WE are pleased to learn from the annual report of the Executive Committee of the Free Congregational Society of Florence for the year ending April 7, 1884, that the society is in a prosperous condition, and that steps have been taken "to insure the perpetuity of the organization, and to hand down intact for its benefit the valuable property now held in its interest." The report speaks in high terms of the services of Mr. and Mrs. Spencer. The following officers have been re-elected: moderator, A. G. Hill; clerk, H. G. Townsend; treasurer, A. T. Lilly; executive committee, Seth Hunt, A. T. Lilly, and Joseph Marsh.

COMMENTING on a proposition for the union for practical co-operation of all Protestant sects, including the Unitarians and Universalists, the *Congregationalist* observes: "We can live together on good terms as citizens. We can co-operate in measures to promote all social virtue, neutralize temptation, and repress public sin. We can join in every patriotic endeavor and for any literary and scientific culture. As to all these, a common ground of conviction and purpose exists, on which one can stand as well as another, and from which all can work. But the moment religious themes are approached, radical differences—held with equal conscientiousness on both sides—rise up to divide us; so that, while social union and civil union and scholarly union are possible, Christian union becomes impossible, so long as each party remains true to its present convictions."

REV. MERRILL, United States Consul at Jerusalem, in a letter in the *Congregationalist* giving advice to travellers in Palestine, says: "By all means do not bring any new kind of religion. There are enough *kinds* here already, among which are dreamers, prognosticators from the stars, 'overcomers,' spiritualists, seekers for the Lost Tribes, believers in the immediate restoration of the Jews, discoverers of the art of never dying, those who believe that salvation can be secured only by keeping the seventh day, advocates of the immediate and personal coming of Christ, founders of the new Jerusalem, and still others, so that the number and variety of people who are 'cranky' on religious subjects who congregate in Jerusalem is surprisingly great. Most of the Christian nations, including America, are represented in these different classes."

THE *Edinburgh Review* of March 24 devotes more than eight columns to an account of a great meeting held in that city for the promotion of woman suffrage. It says: "No more imposing assemblage for a political object has been seen in Edinburgh. The largest hall in the city, that of the United Presbyterian Synod, was crowded to the doors; and an overflow meeting was also held in Presbytery Hall." Lady Haberton presided. The body of the hall was filled with women householders. Men were admitted to the gallery only on payment of half a crown apiece. Letters and telegrams were received from hundreds of distinguished women, including the sisters of John Bright, Richard Cobden's daughter, Miss Fawcett, and Miss Helen Taylor. The speeches, which the *Review* says were such as statesmen might make, demanded that women should be included in the franchise bill now before Parliament. A petition was sent to Parliament, and a memorial to Mr. Gladstone.

THERE was a lively meeting in Parson Newman's church last week. Says the New York *Sun:* "Stalwart policemen, with night clubs swinging at their sides, guarded every aisle of the Madison Avenue Church, as the loyal Newmanites swarmed through the big entrance doors last night, and massed to the number of three hundred odd about the horseshoe pulpit and inlaid bronze font. . . . White-haired Deacon Finch offered prayers on the south side of the church; and black-whiskered Deacon Cummings rose on the north side in his war paint, and flourished a protest, which he read and asked to have entered on the minutes. . . . Four men and two women arose and swept past the policemen, amid a storm of hisses and derisive laughter. Deacon De Witt wheeled round in the doorway with his eyes blazing, and cried, 'I thought this was a Christian assembly, but I should judge now that it was a den of vipers.' He shot out of the door, amid a fresh outburst of laughter." The meeting, which was one of church members and pew holders, voted to retain Rev. Newman. The representatives of the defeated party declared the meeting illegal, and said they should have recourse to the courts.

A NUMBER of prominent Boston clergymen were recently interviewed by a representative of the Boston *Herald* on the subject of cremation as a method of disposing of the dead. They were found generally opposed to it. "Some took the extreme view that cremation is not consistent with religion, because it is barbarous, indecent, heathenish, unscriptural, and an incentive to crime." Rev. J. W. Hamilton, Methodist, said that burial was "God's method. In his anathema that determined the death of the race, he appointed the house of the dead,—'Dust thou art, and unto dust shalt thou return.' The earliest burial is that of Abraham's wife Sarah in the cave of the field of Machpelah. The burial of Abel by Adam and Eve tends to show that putting the body in the ground after death is nature's method of disposing of the dead. . . . Cremation exists only on the support of paganism, and may find advocates in Christian countries only among those who are termed atheists, free religionists, and unbelievers in Christ." Rev. Cyrus A. Bartol was the only minister who spoke in favor of cremation. He said: "The more the belief prevails that at death the person is forever done with the body, and that we are forever done with it, the less will be the concern as to how it will be disposed of. I often think of the dead, and it haunts me to think of friends mouldering in the ground in repulsive shapes. When I think of this, the feeling that these friends should have been cremated seems pleasant to me. I would rather they were thus disposed of than to be left to rot away. I do not consider, when one has expired, that what is left is his body any longer. The spirit of its unity has departed; and we no longer speak of it in the singular number, but in the plural sense, as the remains. I do not suppose that there will be a sudden change from the present custom of the burial of bodies; but I think there will be a gradual change of sentiment in its favor for sanitary reasons, and because the people are becoming less superstitious and more spiritual in their religious ideas and their hopes in a future life."

THE EVOLUTION OF MARRIAGE.

No human institution, perhaps, presents a better example of the doctrine of evolution in the history of mankind than that of marriage. Having its root in the reproductive relation of the sexes, it is now generally admitted that, in the most primitive condition of the human race, marriage was scarcely above the stage of sexual promiscuity that exists among the brute animals. Then came the forcible abduction of women by men, and the continuance of the relation so long as it might suit the convenience or pleasure of the stronger party,—the men. The number of women whom one man might thus take in this rough kind of marriage was also determined by his own pleasure or convenience. Thus, polygamy began, or, more properly, polygyny; and also, in some cases, where woman was for some reason specially attractive or powerful or scarce, the counterpart institution, polyandry. But meantime, as the human race grew in intelligence, in moral sentiment, and in social life, the relation between the sexes had developed into something vastly more than a mere animal instinct. Continued association begot common sympathies, feelings of mutual dependence, regard, fidelity, and gave opportunity for those fascinations between man and woman that are more than physical attraction. And then, force, as the chief element in man's wooing of woman, began to give way to other instrumentalities,—to purchase-money, to the power to provide for her a home and maintenance, to qualifications of bravery, to pledges of affection, and then, finally, to mutual love; while all the time wedded love was freeing itself gradually from a divided interest in polygamous relations, and concentrating its whole strength toward the pure attraction of body, heart, and mind between one man and one woman, in a union of affections, obligations, and life, unchangeable except by continued growth,—the ideal monogamic marriage.

The evolution of the institution of marriage as it is known in the most civilized communities of modern times has been, indeed, by such slow gradation that it is almost impossible for the historian to put his finger upon any marked events or special eras that indicate the progress. The civil statutes which may be found on the subject in the history of certain nations are waymarks pointing to a progress which has already been silently made rather than causes of that progress. Law has been enacted to hold the advance, but has not directly made it. For instance, to answer one of the questions put by our suggestive correspondent, Mrs. Cheney, in another column, it is one of the most difficult problems in Hebrew and Christian history to say just when and by what causes polygamy was abandoned for monogamy. Nothing is plainer than that polygamy was a common and allowable custom among the Hebrews at the time of their greatest outward prosperity. It is clear, too, that before the birth of Jesus the custom had nearly ceased. After the captivity in Babylon, there is no instance of polygamous marriage recorded in the Bible; but all the marriages spoken of have reference to a single wife. Yet there is nowhere to be found, even in the post-Babylonian Scriptures, any commandment abrogating polygamy or precept condemning it. It seems probable that the custom, which had only prevailed among the wealthier and more prominent Jews, virtually died out during the oppressions and sufferings of the period of captivity.

Yet there were sporadic instances of polygamy existing up to and after the time of Jesus. Herod the Great, according to Josephus, had nine wives at once. The writers in the Talmud make it plain that polygamy was still to be found. And there are certain injunctions in the apostolic Epistles of the New Testament to the effect that bishops and deacons should be content with one wife, which it is usual to interpret, and probably with correctness, as meaning that it would not be becoming for these officers to marry again after the decease of their first wives, but which some of the early Christian Fathers commented upon in a way that shows that they knew polygamy still to be in existence in apostolic times, and believed that these injunctions were a warning against it. The prevailing tenor of the New Testament teaching, however, with regard to marriage, is strongly antagonistic to such a system as polygamy, even though there be no special prohibition of it. An ascetic spirit had come into Palestine through the Essenes, whom the early Christians in some particulars much resembled. This unique Jewish sect, like the modern Shakers, looked upon all marriage with disfavor, and taught as a religious virtue the entire denial of the sexual instinct. Jesus and Paul did not go to this extent in their teaching, but they were evidently imbued with somewhat of the same idea. They admitted marriage as a temporary earthly necessity, but gave higher praise to those who were able to abstain from it. This teaching was contrary to nature and the highest reason: it failed to comprehend the possible holy and exalted nature of the marriage relation. Yet, for the time, it doubtless served to inculcate restraint of human passion, and strengthened the virtue of chastity. It greatly helped, therefore, to fix the Christian institution of marriage to the monogamic union, toward which the tendencies of the age were already strong.

Another power that held Christianity to monogamy was found in the character of the chief nations that were converted to it. The Greeks and the Romans, though harboring much social evil, had already passed beyond polygamy when Christianity came to them; and the Germanic barbarians who overwhelmed Rome were even stricter in the observance of the theory of monogamic marriage than were the Romans or Greeks. Christianity, therefore, in the West, where all its after triumphs came, had no prejudices of doctrine nor power of prevailing custom in respect to marriage to overcome, but only to preach practical fidelity to a theory already held. Considering, indeed, the marked difference in general between the Asiatic and European nations in regard to marriage customs, it is, perhaps, not too much to say that Christianity itself was saved to monogamic teaching by advancing westward instead of eastward. Even as it was, the Christian Church tolerated concubinage in some of its members until the council of Toledo in the year 400, when a canon was declared making concubinage a crime punishable by excommunication. And this was probably the first formal enactment in Christendom for enforcing monogamy. From this time on, the Church gradually assumed more and more control over the institution of marriage, as it did over all departments of human life, until it declared marriage to be a divine sacrament, binding one man to one woman by a tie which no act of either party, however abusive or criminal, could annul, and which could only be dissolved by death,—unless, in very special cases, by decree of the papal head of the Church. And this is still the position of the Roman Catholic Church.

Protestant Christendom has denied the sacramental nature of marriage, yet has generally continued to regard marriage as imposing obligations of a special religious sanctity, and as therefore fittingly entered upon by a religious ceremony; and, if people continue to believe in religion at all, it is certainly only rational and consistent to believe that it intimately concerns this most momentous act of human life. Nevertheless, though Protestantism adheres as strictly as Catholicism to the monogamic theory of marriage, there has been a tendency in all Protestant countries to take the institution from the control of the Church, and put it under the control of civil statute, to regard it—though the parties themselves may consider it as involving religious and moral obligations—in the light of a civil contract merely, which certainly on one side it is, and to permit its abrogation under legal regulations for suitable cause. The causes which are held to be suitable for divorce from the marriage bond differ in different Protestant countries, and even in the different States of our own country. Those who wish to see what they are in the statutes of the various States of the Union will find them given in detail in the article on Divorce in Appleton's Cyclopædia. It is evident that the governmental habit in Protestant countries of considering marriage simply in the light of a civil contract—the only way in which government in the United States can constitutionally consider it—has had the effect to lead a large number of people to regard it as nothing more than a civil contract, and one which may be easily dissolved. On this account, the stability of the marriage institution is at present somewhat threatened. To avert the dangerous tendency in this country, a uniform marriage and divorce law, limiting the grounds of divorce to a few of the most heinous offences against the marriage covenant, would be an immense advantage. Though government in this country must needs regard marriage only from the point of view of a civil contract, it does not follow that it should not regard it as a contract of the most momentous import, involving the highest civil as well as individual interests,—a contract to be abrogated only for the gravest reasons, and when the good of all concerned, and even of society, will be thereby served, and not merely the pleasure or interest of one or even both of the married parties.

In the United States, the laws with regard to the solemnization of marriages do not essentially differ. A civil magistrate is permitted to officiate in all the States, if only a civil ceremony is desired. In a few States, a mutual promise of marriage in the presence of witnesses, if duly and publicly recorded, is all that is necessary to make a marriage legal. But it is not essential to a uniform marriage law that the mere ceremonial form of marriage should be exactly the same. All that is requisite is that the legal qualifications for marriage should be the same throughout the country, and the same legal precautions taken to prevent fraudulent marriages, and to secure an accurate public record of all marriages. Monogamy by common law and statute law is the basis of all legislation pertaining to marriage throughout the United States. Under James I. in England, polygamy was made a crime punishable with death. It is now punishable there by penal servitude not exceeding seven years, or by imprisonment not exceeding two years. In the United States there are different statutes in the different States, the penalty for contracting other than a monogamic marriage being imprisonment or a fine or both, and the annulling of all but the first marriage.

Bigamy, however, is the term used in statute books generally, both in this country and in England. There is doubtless a distinction between polygamy as an avowed institution and bigamy, which does not aspire to be an institution, but is only a concealed individual practice, as Mrs. Cheney suggests; but the courts do not appear to have regarded this distinction as having any validity in law. There

Digitized by Google

have been cases of men tried under the law of bigamy who had not merely two wives, but more than two. The crime consists in having more than one wife at the same time; and the fact that the accused may have more than two wives, or may have them openly, is not admitted as a valid defence against the charge of bigamy. Indeed, it is probable that each additional wife beyond two, if the law were strictly interpreted, might be counted as proportionally increasing the offence and the penalty. Whether justice or the necessities of sustaining monogamic marriage would require such a strict enforcement of the law against bigamy upon the Mormon polygamists might be a question. But there is a United States law passed by Congress in 1862, and intended to reach Mormon polygamy, which makes bigamy, committed in any of the Territories, punishable by a fine not exceeding $500, and by imprisonment not exceeding five years.

We have thus taken the occasion to answer some of Mrs. Cheney's inquiries, but leave other points for other writers who may be moved to consider them.

WM. J. POTTER.

THE PROGRESS OF WOMAN.*

There have been many movements in the world —some of them recorded in history as portentous events, others forgotten within a few years of their occurrence—which may each be compared to a wave on the surface of the Mediterranean. From the insignificant ripple to the wave-high billow flecked with foam and breaking in cataracts, they have arisen only to subside to their original level, leaving the boundaries of land and sea where they have stood for a thousand years. There are other movements, on the contrary, which resemble the tides of the ocean, wherein each wave obeys one uniform impetus, and carries the waters onward and upward along the shore.

Of all the movements, political, social, and religious, of past ages, there is, I think, not one so unmistakably tidelike in its extension and the uniformity of its impulse as that which has taken place within living memory among the women of almost every race on the globe. Other agitations, reforms, and revolutions have pervaded and lifted up classes, tribes, nations, churches. But this movement has stirred an entire sex, even half the human race. Like the incoming tide, also, it has rolled in separate waves; and each one has obeyed the same law, and has done its part in carrying forward all the rest. The waves of the Higher Education of Women all over the world; the waves which lifted women over the sand-bars of the medical and (in America) of the legal and clerical professions; the waves which seated them on the School Boards and Boards of Guardians of the Poor; the wave which gave them the English Municipal Vote; the wave which restored to Married Women a right to their own property,—every one of these waves, great and small, has been rolled forward by the same advancing tide.

But the crown and completion of the progress must be the attainment of the Political Franchise in every country wherein representative government prevails; and, till that point be reached, there can be no final satisfaction in anything which has been achieved. It has been repeated till it has become a commonplace that the suffrage is the "key of woman's position." Obtaining it, every privilege she can reasonably desire must follow. Failing to obtain it, nothing,—nor even such instalments of her rights as she has hitherto enjoyed,—are secure. An easily raised storm of prejudice and selfishness, whether of trade or party or sect, passing over the masculine population, might sweep her few privileges away; while she remained helpless and unable to protect them by a single vote. On a small scale, such confiscations of the rights of women in trades and other matters have occurred again and again. The sufferers had no appeal from injustice, and, because they were unrepresented, their wrongs were overlooked.

The most difficult problem in that great branch of ethics which we call politics regards the place which ought to be assigned under each constitutional government to alien races of men. The system of representation itself, with trial by jury and the whole scheme of civil and political liberty, as we, in our day, understand it, has grown up through a thousand years of

> "Freedom slowly broadening down
> From precedent to precedent,"

among our law-abiding Anglo-Saxon race; and either the hasty adoption of it by other nations with different tendencies and untrained to self-government, or else the sudden admission of aliens in large numbers to a share in the working of our own machinery, are experiments fraught with difficulty and danger. In the Greek, Italian, French, and Spanish Chambers, we see examples of the first; and, in the Irish Parliamentary "Obstruction" and misuse of the jury system to defeat justice, of the second. Noble and righteous as was the act by which the government of the United States extended the suffrage to the emancipated negroes, the perils of such a step could scarcely have been encountered by any sane statesman, had the lately freed slaves borne a much larger proportion to the whole white population of the Republic; and not even American democracy will contemplate for many a year to come following up this heroic act by enfranchising Chinese immigrants; nor English radicalism ask for the admission of Hindus to a share in the legislative—scarcely even in the executive—government of India.

Statesmen, even of the broadest views, may not only be pardoned, but praised, for hesitating and taking time for deep consideration, when it is proposed to introduce a new element into the constitution of their country. In my humble judgment, as a Conservative, there has been culpable recklessness on the part of those who, to serve party interests, have in England thrown open the gates of our sacred "*polis*" to a rabble of "illiterates," and in America have admitted hordes of immigrants to the ballot-box, before it was possible for them to acquaint themselves with American politics or to imbibe American principles.

These considerations should induce women and their generous advocates to regard without impatience all opposition to their claims to the suffrage which they believe to be honestly intended and grounded on patriotic anxiety, lest the introduction of a new force should disturb the working of the machine of State. They should teach them also to frame their arguments with the paramount object of allaying the fears and encouraging the confidence of such worthy opponents, who, when once convinced that the enfranchisement of women will tend to the stability and prosperity of the State and to the maintenance of social order and religion, will become the most earnest advocates of the measure. The difference—nay, rather the contrast—should likewise be insisted on between proposals to admit the dregs of a population to the franchise and those to admit the mothers, daughters, and sisters of the men who already exercise it; and, again, between proposals to admit aliens of another race and those to admit women who have the same hereditary tendencies, attachments, creeds, and interests, and who are the inevitable partakers of the nation's prosperity, and the deepest sufferers by its disasters or misrule. In short, it ought to be the care of the advocates of women to point out that not a single one of the reasons for caution in the case of the admission of aliens affects their claims; while there exist a multitude of valid reasons why, being by nature part of the nation, they should also be, by law, citizens of the State, bringing with them not an element of weakness and disintegration, but a completer union and a contribution to the nation's counsels of something more than "mother-wit," even of mother-wisdom.

The man is not to be envied who can view the struggle of women for political rights with contempt or indifference. That those struggles may not always have been guided by infallible taste and wisdom, and that they have often been met—for lack of sensible argument—with silly derision, need not blind us to the fact that they constitute one of the bravest battles, one of the most pathetic movements, the world has ever seen. Other strifes have been carried on between rival races, rival classes, rival sects; but here we have only the patient, persistent appeal of daughters to fathers, of sisters to brothers, of wives to husbands, of the women, who make the charm of society, to the men who call them friends. There are no "garments rolled in blood" in the battle of these warriors. The combatants command neither cannon nor bayonets. They cannot even break down iron palings, like the populace of London, when the rights they demanded were withheld; or threaten dynamite and petroleum, like Nihilists and Fenians. They have not the minutest political influence at their disposal wherewith to coerce their opponents. Never was there a case of such pure and simple Moral Pressure,—of an appeal to justice, to reason, to men's sense of what is due and right and expedient for all. When the time comes to look back on the slow universal awakening of women all over the globe, on their gradual entrance into one privileged profession after another, on the attainment by them of rights of person and property, and at last on their admission to the full privileges of citizenship, it will be acknowledged that, of all the "Decisive Battles of History," this has been, to the moralist and philosopher, the most interesting, even as it will be (I cannot doubt) the one followed by the happiest Peace which the world has ever seen.

I feel myself honored in being called on to introduce a worthy and adequate record of this great contest to the public of England and America.

FRANCES POWER COBBE.

[* Introduction to a book entitled *The Woman Question in Europe*, by Theodore Stanton, soon to be published by G. P. Putnam's Sons, New York.—ED.]

ON THE FENCE.

This has two meanings in politics. There is the Southern negro who, according to Uncle Remus, always follows the party "what gives dee biggest bobbykoo," or barbacue. There are shrewd Northerners, like a neighbor of mine, who said some years ago: "You see, the Butler man told me I'd better get what I could from the other side; and I thought it was a poor rule that wouldn't work both ways. So I let him send me a barrel of flour, and then I just went and voted accordin' to my principles." Or, again, there is the man who ran as Democratic candidate for governor, while holding a Republican seat in Congress.

To sit on the fence in order to see which party will pay the best is infamous; but to sit there in order to see which nominates the best men, and on the best platform, is the height of patriotism. The safety of our country at this moment is due to the independent voters who are determined that no man shall be our next President who has not an unsullied record which will prevent his letting the

Digitized by Google

public offices become plunder for professional politicians. The men who love our country more than any party are already uniting in organizations which will, I hope, cause appointments to office to be made with a view to the national welfare rather than to the claims of wire-pullers, and the tariff to be adjusted according to the needs of the whole people rather than to the greed of a few great capitalists.

In theology, also, there are two different classes of men on the fence who should not be confounded together. We honor the Broad-Churchmen, the liberal Congregationalists, the left-wing Unitarians. No preachers have shown their disinterestedness and courage more plainly. Their position may not seem to us consistent; but we must remember that a man's convictions are determined, partly by arguments of which he is conscious, and partly by early associations, habitual feelings, personal relationship, and other influences, whose force is all the greater because he seldom realizes how strong it is. I have heard it argued that no one can appreciate liberal views who has not been orthodox. It would be more correct to say that no one can be so truly and fully a free thinker as he who, like John Stuart Mill, has been one all his life. Each man is the child of his own past. Every opinion we have once held sincerely continues to exert some influence, if only a restraining or confusing one, over all our subsequent flow of thought. No one is to be blamed for not quitting the church in which he was brought up; but, if he is working bravely and disinterestedly to make that church broad and free, he is to be honored cordially.

The case is very different with preachers,—like one who was in New Orleans at the beginning of the Rebellion, and at once advocated secession with a warmth that made him extremely popular. One Sunday evening, he preached a peculiarly acceptable sermon on the Southern side; but early the next morning he was on a steamboat, bound for the North. There he claimed to have been driven away from his pulpit for his Union sympathies; and thus he soon gained a wealthy parish, which he lost erelong on account of gross vice. I fear there are many such trimmers in the pulpit, but still more in the pews. I have known a family come into town and visit every church, until they had made up their minds which sect was the most fashionable, and then they took their pew. Two members of a new business firm were once charged with turning up a copper to see which should be Methodist and which turn Baptist. In a village where there are two sects of nearly equal influence, we are apt to find each represented among the partners in store and office. I knew an Episcopal church among whose five vestrymen there were a Quaker, an agnostic, and an atheist. A Unitarian minister in the West often gets liberal contributions from men who do not dare to go and hear him preach. The people who express the most intelligent and eager sympathy with his views are sometimes tied down by family or professional ties, so as to have to give all their ostensible aid to his most bigoted opponents. Many a pillar of the church might say, as one of the English chancellors did to some dissenters who petitioned for relief,—"I want you to understand that I am for the Established Church, because it is established; and, if ever you get your d—d religion established, I shall be for that." Our American booksellers could give startling statistics of the number of copies of Paine, Ingersoll, and Andrew Jackson Davis bought by orthodox church members on the sly.

These cowardly people often appear greatly troubled by doubt, but it is only because they know they do not dare to follow it openly or even to think it out. I suspect that Mallock has some acquaintances of this sort. It would be uncharitable to charge him with making up out of whole cloth his highly wrought romances about intelligent unbelievers tortured with infidel views which they hate, but cannot throw off. There is some fact at the bottom of every fiction. The churches contain many a doubter who dislikes advanced views, simply because he is afraid of making himself unpopular or of offending friends and family, but who would hold these views gladly, if they only had Mrs. Grundy's approbation. Such sufferers are not entitled to much sympathy, and their existence does not show the error of our position, but rather its truth. It is to the credit of our view that it compels people to hold it unwillingly. Free thought is so true that a great many members of the churches have to acknowledge its truth just as openly as they dare. They are forced by the strength of our argument to follow it out to the extreme limits of church-fellowship. There, they stop short with an effort which is very painful, and which is so only because they know they are sinning against truth and sacrificing honor. One of these sitters on the fence may be imagined to complain thus:—

It's a hard place to sit; and I wish I dared rove
With free thinkers, exploring Philosophy's grove.
O'er the mountain of Science how gladly I'd climb,
And ennoble my soul with those visions sublime!
But my friends and my family might take offence,
So I stifle my longings, and sit on the fence.

They are feasting within there, and calling for me.
How the priests and the ladies are laughing with glee!
I can hear the corks pop, as they pour out the wine;
But the toasts that they drink would not suit views like mine.
I should have to assent to what shocks common sense.
So I patch up excuses to sit on the fence.

Either outside or in, I'd find plenty of bliss.
There is no place, I'm sure, half so painful as this.
I'm debarred from all freedom. I lose all the feast.
I am scorned by come-outer as well as by priest.
There's no rest for my soul in this shameful suspense,
How I wish that I dared to leap clear of the fence!

The release that I crave may be given at length,
For I see the come-outers are gathering strength.
Mother Church dares not now try to drag truants back:
They'll be strong enough soon to return her attack.
Then, our priests must awake for a desp'rate defence,
And they won't get much succor from us on the fence.

F. M. HOLLAND.

THE CATHOLIC CHURCH AND MORAL REFORM.

I see by the papers that more than the usual number of suicides and murders have of late occurred at the gaming-houses of Monte Carlo, Monaco. About twenty years ago, when the gambling-houses at Homburg were closed, one of the proprietors, M. Blanc, bought the establishment of Monte Carlo, and transferred his business thither. Monaco is a small, independent principality on the Mediterranean shore on the border between France and Italy. It consists of a few acres of rock and mountain slopes, on which stands the little town of Monaco. The Prince of Monaco is generally in want of money; and, when M. Blanc offered to pay the whole cost of his civil and military establishments and fifty thousand francs a year besides, he eagerly closed with him. The wily Frenchman saw the advantage there would be in dealing with an independent sovereign whose needs were greater than his small territory could supply, and he secured a lease of the place for thirty years. The situation is lovely, and immense sums have been spent in embellishing it by art. It has been a great resort for travellers from all countries, especially from England and America. Thousands have every year been ruined here. Suicides, robberies, and murders have been of almost daily occurrence; but, M. Blanc, out of his enormous gains, has been able to subsidize all the newspapers in Nice and surrounding towns, and everything that will damage the reputation of the place is carefully suppressed.

Few things lead to more permanent degradation of character than gambling. Those who once begin it are drawn into a vortex of unwholesome excitement which unfits them for all the purposes of life. Unlike the every-day operations of trade and commerce which are mutually beneficial alike to buyer and seller, the gain of the gambler is always the loss of somebody else. Besides, the habit of staking money on the chance movements of the gaming table is the reverse of the process on which all civilization depends,—that of regulating human life by natural law, by the carefully ascertained relation of cause and effect.

The Prince of Monaco has for a comparatively near neighbor the head of the Catholic Church, the infallible director of faith and morals to the Catholic world, the Pope at Rome. During the twenty years in which the gaming establishment of Monte Carlo has flourished, the Pope has waged war with a great many things. He has denounced the modern scientific spirit. He has denounced secular education. In countries such as Spain, where he still has some influence left, he has succeeded in preventing the circulation of the Bible. He has succeeded also in retaining education in the hands of the priesthood, and in preventing the burial of heretics—that is of Protestants—in the public cemeteries; but he has never had one word to say against the gambling-houses of Monaco. A mandate from him, a bull or encylical or syllabus or other papal document, would as effectually have closed up this infamous business as it extinguished the circulation of the Bible in Spain; but faith has as usual had a much larger share than morals in the infallible direction of the Pope.

M. Blanc, besides subsidizing the newspapers, did not neglect the Church. He in his lifetime gave three million francs for the support of religion,—a sum which has been supplemented by his widow by further large donations since his death. Priests are swarming throughout the principality: they are specially on their guard against the introduction of heresy. An English Church service was recently set on foot in a very humble way, but it was promptly suppressed. All the officers of the Prince's government are required to confess once a week, to eat no meat on Fridays, to take the sacrament regularly, and join in the processions of the Church.

This indifference to the interests of morality, compared with the extreme zeal for religion of the Pope and the Roman Catholic Church, is paralleled by their attitude on the question of negro slavery. During all the years in which England and America were making such enormous sacrifices to bring first the slave trade, and afterward slavery itself, to an end, the Pope had no utterance to make on the subject. For many years, the English government labored with the Spanish government to get it to suppress the slave trade to Cuba, but without success; while one word from the infallible head of the Church would have succeeded where English diplomacy failed.

Readers of the works of Dr. Newman—especially those pseudo-liberals who are so lavish of their eulogies—may compare this evidence with the ridiculously false estimate which he makes of the influence of the Church on civilization; for instance, where he says that "the Church has raised the position of woman, destroyed slavery, encouraged literature and philosophy," etc. It encouraged literature and philosophy by burning at the stake such men as Giordano Bruno, and suppressing Roger Bacon, Abelard, Galileo, Cope-

Digitized by Google

nions, and others. In the same way, it destroyed slavery, by standing idly by while the heretical nations of England and America destroyed it. I believe it is urged by Dr. Newman's admirers that it was not negro slavery he meant, but the slavery of serfdom in Europe; but the statement is just as true in this case as in the other, for it is a fact recorded by Hallam that the last serfs that were emancipated in Western Europe were those on the estates of the Church. While it must be admitted that all religions have weighed human conduct, not so much by its effects on man as by its effects on the minds of the gods, there are nevertheless differences among them; and it is well to remember, when reading the scoffing diatribes of Frederic Harrison and the Positivist school against Protestantism, that where it prevails there has been greater regard paid to the rights of humanity than has ever been exhibited in countries under the influence of the infallible Church.

J. G. WHYTE.

A CRITICISM AND REPLY.

A friend writes us: "You do not seem to make any distinction between the teachings of the New Testament and the creeds of the churches. I have as little belief in orthodox theology as you have; but I can accept the moral teachings of Jesus, and I do not see how any fair-minded man can object to them."

We always make the distinction, when it is called for, and as far as we think the truth demands it. We do not doubt that Christianity, at first, was a comparatively simple system, in which the moral element was more emphasized than theological doctrines. In a few years, theological doctrines were developed and pushed into prominence. They are conspicuous in the Epistles of Paul. St. Augustine, Calvin, and Jonathan Edwards were Paul's logical successors. It is useless to deny that the "creeds of the churches," in the main, have their basis in the New Testament. As to its moral teachings, some of them we can accept, while others have always seemed to us impracticable, ascetic, and absurd. There are passages that denounce wealth and praise poverty, that discourage interest in the affairs of this world, that declare submission to despotism a duty, that discourage marriage, that represent woman as the inferior of man, that are, in short, in conflict with our modern civilization. Once, the world tried to embody these ethical teachings in social life. The result was the asceticism and monasticism of the fourth, fifth, and later centuries, the withdrawal of attention from active pursuits, with all those resultant conditions that emasculated the mind and prepared the way for the incursions of the barbarians who overran the Roman Empire and consummated the destruction of letters,—events that were followed by a night of ignorance and vice which lasted for centuries.

Only when the science and secular learning of the East—which burst forth in splendor at Cordova, Grenada, and Seville, whither it had been carried by the Moors—were cultivated, only when Greek and Roman literature, which had been covered with the dust of centuries, was disinterred and studied, did the darkness begin to disappear. It was by cultivating pagan learning, by returning to secular pursuits, by industrial enterprise, by invention and discovery, involving practical disregard of the teachings of New Testaments to which we have referred, that our modern civilization began.

To-day, a portion of the moral teachings ascribed to Christ are more honored in the breach than in the observance. Those who fill the most orthodox churches practically ignore whatever in the New Testament does not comport with our modern conceptions of civilized life. A New Testament Christian is not of this world, and he regards everything that attaches him to this world as a snare and a stumbling-block in the way of salvation. He prefers poverty to wealth. He submits to wrong, offering no resistance; for so did his Master, and so is he commanded. He lives not for this world, but for another. It is needless to say that such a man in these times is not highly regarded. Our science, our intellectual culture, and our entire industrial life are contrary to much of the teachings and the spirit of the New Testament. Mr. Mozoomdar is right in declaring that the Western world does not try to follow Christ, and that the sleepy, dreamy people of the East are better adapted to understand and realize in practice much in his teachings than are the Anglo-Saxon nations, with their unparalleled enterprise and activity.

PRINCIPLES AND AIMS OF THE SOCIOLOGIC SOCIETY.

We hold that reasonable beings are endowed with the power so to modify their surroundings as to secure the greatest amount of happiness, that happiness and comfort are, and should be, the law and aim of social life, and that social changes must be effected by voluntary effort.

We hold that competition, proper enough in the past, is not only unnecessary as a dominant factor in the present industrial system, but that reducing the value of human labor to a point below which it is impossible to sustain existence is of detriment to the race, that its action in industrial life can only be assisted by that form of association known as co-operation, and that the system of co-operation can only be instituted through the organization of labor, when the natural law of struggle becomes transformed, through the power of reason, into the higher law of harmony.

This being its creed, the Sociologic Society desires to make converts, arouse interest, and in every way bring about the reform desired; to draw together, not only those to be benefited by the change mentioned, but all who regard the welfare of their fellow-man; to collect and preserve information and statistics as to labor; to aid in thoroughly classifying and organizing the industries of the land; to urge upon the national and the various state governments the formation of labor bureaus, with ample powers and jurisdiction; to assist in the formation of labor councils and a labor congress upon a representative basis; to procure the framing of wise and beneficent laws, looking toward the protection and preservation of the health and life of working men, universal and compulsory education, state industrial schools, the repeal of all laws restricting labor, and the enactment of those tending to increase its welfare.

IMOGENE C. FALES,
President of Sociologic Society.

EDITORIAL NOTES.

A CONTRIBUTION from Mr. Moncure D. Conway's pen will be printed in *The Index* next week.

MRS. CHENEY writes us to state, "for the sake of accuracy," that George Fuller, whose name she wrote by a slip of memory in a recent article George M. Fuller, had no middle name.

A MAN, looking at the statue of Harriet Martineau in the Old South, not long ago, exclaimed aloud: "O Lord! this is a world of change. If the fathers could come back and see the statue of an unbeliever within these walls, it would be worse to them than all the desecration of British troops."—*Boston Transcript.*

THE rector in Hampton Lacy, Warwickshire, England, bought the only tavern in the village seven years ago, and hired a man to keep it. From the sale of beer,—no other drink being sold,—money enough has been made to pay the salary of the church organist, and divide about $150 among the local charities. The beer sold is guaranteed pure, and it is claimed as one of the results of the experiment that drunkenness is unknown in the village. The rector is trying to induce other clergymen to follow his example.

THE Springfield *Republican*, referring to the action of the doctors at Philadelphia in refusing to admit women doctors into the County Medical Society, very sensibly observes: "The woman with a medical education is already so well recognized by both the profession and the public that admission to the Association is a minor matter. There are enough women physicians in Philadelphia to organize a good society of their own."

CANON CURTEIS'S article on "Christian Agnosticism," which will appear in the *Popular Science Monthly* for May, is a reply to Herbert Spencer's recent paper on "Religious Retrospect and Prospect." Though declining to regard the "Great Unknown" as simply Everlasting Force, he gives Mr. Spencer credit for pruning away many excrescences from the idea of God, and maintains that the attitude of the early Christian Fathers differed little from what is now known as Agnosticism.

THE Salvation Army were at Salem and Lawrence last week. They talked with the people, sold copies of the *War Cry* and the *Soldier's Song Book*, offered prayers, and sung hymns. One of the favorite songs, sung to the tune "Dem Golden Slippers," is the following:—

"I once ran fast the other road,
Till all my sins before me stood.
'Twas then I cried aloud to God,
Who washed me in his blood.

Refrain,—

"O my loving Saviour, O my loving Saviour.
Sinner, won't you come with me?
We'll walk those golden streets.

"Now, sinner, whosoever thou art,
Though black as hell may be thy heart,
If you repent and turn from sin,
The Lord will take you in."

One of the members sang a song, beginning,—

"A robe of white, a crown of glory,
A happy home, a mansion fair,
A victorious palm, and joy eternal,
Intended for me when I get there.
For Jesus is my Saviour. he washed my sins away,
Paid my debt, and naught can harm me.
I'm happy in his dying love,
I'm singing all the day.
I'm fighting, yes, I'm fighting in the army."

LAST Sunday, Mr. W. M. Salter, in his review of the work of the Ethical Society of Chicago during the past year, said:—

The eye of some of our most liberal churches seems directed backward rather than forward. We are told that, while in art, science, and industry, we may move forward, in the ideas of religion we have only to fold our arms, and move reverently into the land of memory. A Unitarian clergyman tells us that the new Congregational creed is broad enough for his own people to adopt, with some few exceptions. The People's minister thinks there will be no new religion. The Jewish rabbis cover their most advanced thought under the name of Judaism. Plainly, none of these take our place. And my best reason for faith in our future is that we have a place, and a distinct one, which must be filled. We turn our eyes to the morning of a new order of things; and the new order must come, for the old is dying, if not dead, in almost all minds of the highest intelligence and most open candor. The old religions flourish most in country villages and in those large commercial towns where the light of the new knowledge and culture has hardly penetrated. In time, they will doubtless be, in the literal sense of the word, as the Roman religion became in the advancing days of the Empire,

Digitized by Google

paganism,—country religion. And, on the other hand, if no new religion, no new morality, no new public spirit arise in the cities, they will go down, and their civilization with them, as Rome, populous, wealthy, splendid, imperial city that she was, went down. We want a religion retaining all the old sanctities of private morality, and adding to them civic virtue,—one whose prime maxim it shall be to take part in public life, one whose supreme faith shall be that justice can rule now, and that the highest justice is the most practicable. The Society for Ethical Culture has added forty-five new members during the past year, has maintained weekly lectures, an ethical school with three classes, and a new system of nursing for the sick poor, has cancelled an indebtedness from last year of $800, and stands now free from debt and confident of the future.

R. W. E.

May, pensive o'er her minstrel dead,
Unsheathes not yet her wonted bloom,
But sadly droops with wreathless head
Above his freshly-mounded tomb.

Zephyr nor south wind breathes as yet,
But March-like gusts rave here and there.
Grieved Nature voices her regret
In troubled earth and sea and air.

For who in this New World like him
The mighty mother's moods has sung?
Mountain and shore and forest dim
Found in his mystic verse a tongue.

Therefore, her lost interpreter
Mute Nature mourns with rainy skies,
While fitfully the wild winds stir
The air to elegiac sighs.

Pan on the lonely mountains tunes
His reeds to grief; and by the lonely shore,
In twilight of its foliage, croons
A dirge the pine tree evermore.

The blue bird from the palmy isles
He loved to greet flies songless back;
And raucous geese, in wedge-like files,
Wing silently their skyey track.

At length, drying her tears, sweet May
Will blossom into leafy June;
The south wind make the meadows gay,
And wild bees hum a breezy tune;

The frogs in twilight marshes sing
With bibulous notes their old refrain;
The swallow glance on glittering wing,
And light and bloom glad earth again.

But, ah! to Nature's round once more
Of sights and sounds he sung so well,
What potence is there can restore
Her bard, what death-reversing spell?

To winding Concord's pleasant vale
Through all the countless future years,
Hadjis devout will never fail,
Though naught above his grave appears

But flowery sward and simple stone,
Such as a sage's rest beseem
Asleep amid the pine woods lone,
Beneath whose boughs he loved to dream.

There still the evening star will shine
With beams as bright as lured his youth
The city's tumult to resign
For high and holy quest of truth.

Onward his Indian stream will run
Through pensive plain and meadow green,
But not in all the years will one
Like him upon its marge be seen.

Beside him brother druids lie,
His comrades ere repose they found:
'Tis well that 'neath familiar sky
All slumber in familiar ground.

B. W. BALL.

The Index.

BOSTON, APRIL 17, 1884.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

Fallacies of the Remonstrants against Woman Suffrage.*

BY MRS. SARA A. UNDERWOOD.

It is my impression that it was Mary Wollstonecraft who first enunciated in definite form the doctrine of woman's rights. When Edmund Burke in 1790 published his conservative opinions on human rights, entitled *Reflections on the French Revolution*,—a work which surprised and startled those who had looked upon Burke as the stanch friend of liberty,—among the first replies made was one by Mary Wollstonecraft, entitled *A Vindication of the Rights of Man*. While writing on this subject, she began to think whether it was not too generous in her—a woman whose sex was denied any legitimate interest in political matters—to write thus interestedly in behalf of the sex that considered women incapable of understanding or reasoning on the political rights denied. The result of her thought on this subject was the publication in 1792 of her *Vindication of the Rights of Woman*, a passionate defence of woman's alleged shortcomings, and an eloquent plea for the better education of woman,—a work which was directed by her heart and sanctioned by the deliberate thoughts of her brain.

Since then—now nearly a century ago—there has been a constant succession of protests against the denial of their political rights, faint at first, but growing stronger and more earnest in the demands for a considerate hearing, from the fast-filling ranks of thinking women. Protests against the *mis*representation and *un*representation of the sex in the department considered of most importance by men,—the field of politics and law-making, matters which touch, sway, and alter the lives of women quite as much as they do the lives of men. Step by step, the battle for the rights of women has been fought and won, as earlier the battle for male rights was fought and won, until to-day we stand at the threshold of political life, an army so strong in right and in valid reason that even the most conservative men blush to bring forward the outworn arguments which have been answered and refuted over and over again,—an army of earnest-thinking women, aided, abetted, indorsed, and reinforced by the best and clearest thinkers among men, demanding in the name of justice and progress equal rights in the ruling of the nation which we all have helped to make, and in the making of the laws which we all have to obey. But just at the moment when victory seems certain, when the majority of men educated to clear thinking and direct speaking, shamed by the transparent injustice of denial, are ready to give us what they long ago demanded for themselves,—a voice in self-government,—an unexpected, an almost ludicrous obstacle arises,—the Remonstrants.

When the descendants of these Remonstrants shall have learned to be heartily ashamed of the retrogressive and narrow views exhibited by their female progenitors, it may be of use to them and to others to understand clearly what the Remonstrants were, and what were their peculiar ideas, aims, and fears. First, they are the legitimate outcome of the half-education and the cramped and fettered lives which even the most fortunate women have in the past been forced to lead. That they are in dead earnest there is not the slightest reason to doubt, since their conscientious interest in the matter leads them to do the very thing they protest against,—take upon themselves the burden of public duty in trying to bias the minds of men in a matter of great political importance. Although their protest, not in behalf of their few selves alone, but in opposition to the earnestly expressed desire of a majority of the best men and women of the day, has a decidedly "dog-in-the-manger" appearance, that is, not only not wishing for the franchise for themselves, but desirous of denying it to those who do care to possess and exercise the privilege, yet I have no hesitation in believing that these women are acting conscientiously and according to their limited light. I can the better understand their position, since once, in my callow days, I, too, wrote my feeble protest against woman suffrage; and I recognize my own old friends in the *new* arguments they to-day bring forward. What those arguments are I will state as nearly as possible in the words of Mrs. Clara Leonard, one of the soundest, if not the soundest, of the reasoners on that side of the question, a woman who has shown such signal ability in the discharge of the political duties "imposed" upon her by the State that it seems paradoxical to think of her as opposed to giving her sex equal privilege with man. In her paper, read before the legislative committee on woman suffrage at the Remonstrants' hearing on Tuesday morning, January 29, she first states what she understands to be the principal reasons assigned for granting suffrage to women. First, "that the right to vote is a natural and inherent right, of which women are deprived by the tyranny of men." To this, she replies that "the right to vote is not an inherent right, but, like the right to hold land, is conferred upon individuals by general consent, with certain limitations and for the general good of all."

There are many women suffragists who agree with Mrs. Leonard that the ballot is not one of the "inalienable rights" with which all men and women are "born"; but, while conceding that it may be a privilege "conferred upon individuals,"

*An Address given at the Second Annual Meeting of the National Woman Suffrage Association of Massachusetts in Boston, Feb. 20, 1884.

if not by "general consent,"—since no woman's consent is asked,—yet by consent of the "powers that be," with "certain limitations" supposed to be "for the best good of all," they yet ask in the name of justice why sex should be made one of those limitations?

Nor are all women suffragists agreed that women are deprived of the suffrage "by the tyranny of man." There are many who quite well understand the slow methods by which society and its laws have been gradually formed, and who, while recognizing that under past conditions it was a quite natural and almost inevitable result that women, being physically the weaker sex, should be forced to take the inferior place in that society,—as the weaker races, nations, and individuals were forced to accept as masters the stronger races, nations, or individuals; yet they think it high time that all trace of this lingering "relic of barbarism" should be blotted out from a civilized nation's statute books, along with all trace of its twin relic, the enforced slavery of men.

"Voting," Mrs. Leonard goes on to say, "is simply a mathematical test of strength. Uncivilized nations strive for mastery by physical combat, thus wasting life and resources. Enlightened societies agree to determine the relative strength of opposing parties by actual count. God has made women weaker than men, incapable of taking part in battles, indisposed to make riot and political disturbance. The vote which, in the hand of a man is a 'possible bayonet,' would not when thrown by a woman represent any physical power to enforce her will."

There is a latent taint of barbarism and savagery in that definition of suffrage. It is the old doctrine that "might makes right"; and, by accepting it, we accept the inference that people in general, and especially our law-makers, still believe in that doctrine. And, thus accepted, it would be a mortifying confession of the inability of the race to rise to a higher moral plane, where the golden rule of justice to all, to the weak as well as the strong, should take the place of the old physical tests of brute strength as the arbiter of right. I think this another of the fallacies of the remonstrants. I, for one, had never thought of the ballot as a "possible bayonet." I believed that men taught by experience had come to know that the best possible results came from studying, not the interests of the greatest number of the most powerful men, but "the greatest good of the greatest number," including the weak; and that the vote by ballot made no discrimination of persons, but was adopted as the most equitable method of taking into consideration the opinion of rich and poor, weak and strong alike, and with impartial justice.

If Mrs. Leonard's definition of the ballot as "a possible bayonet" be accepted, it would then be the correct thing to disfranchise the poet Whittier; first, as being opposed on principle to the use of bayonets and bullets as arguments; and, secondly, as being unfitted by reason of the weakness consequent upon age. So, also, Alexander Stephens, of Georgia, who, while for many years nearly a physical wreck, could yet perform his political duties as United States Senator and governor of his State. Carry out this idea to its legitimate conclusions, and a good share of the best brains of this republic would be disfranchised and forbidden to express a political opinion.

The second reason given by suffragists for demanding the ballot for women, Mrs. Leonard avers, is "that the fact that the majority of women do not wish for the right or privilege to vote is not a reason for depriving the minority of an inborn right." To this, she replies, "It is no more unjust to deprive women of the ballot than to deprive minors, who outnumber those above the age of majority, and who might well claim, many of them, to be as well able to decide political questions as their elders." To which fallacy, we make answer that women are not contending for the ballot during their minority. They will be quite content to do without it until they attain the age of twenty-one, on equal terms with men. They only object, after having attained the age of discretion, and even a revered and honored old age, to be classed as on the same intellectual level with idiots and children.

On this question, Mrs. Leonard further affirms that, "if the majority of women are either not desirous to vote, or are strongly opposed to voting, the minority should yield in this, as they are obliged to do in all other public matters. In fact, they will be obliged to yield so long as the present state of opinion exists among women in general; for legislators will naturally consult the wishes of the women of their own families and neighborhood, and be governed by them. There can be no doubt that in this State, where women are highly respected and have great influence, the ballot would be readily granted to them by men, if they desired it, or generally approved of woman suffrage."

In this short statement are three fallacies; the first being that, if the majority of women do not already wish to vote, the privilege should be denied the sex. Since voting is not compulsory upon any one, no one's rights are interfered with by granting the whole class freedom of action to do either one thing or the other as seems best to each individual, as is now done in the case of manhood suffrage. But, in denying even *one* woman who wishes to vote the ballot, injustice *is* done to that one individual. I should as strenuously protest against being *forced* by legal statute to vote, whether I willed to do so or not, as now I protest against being denied the exercise of my judgment and just rights. The second fallacy is that legislators will in this matter consult only the wishes of "the women of their own families and neighborhood, and be governed by them." No statesman would accept as a compliment this implication that he was guided in his judgment by such limited views as these. We are not a nation so short of thinkers as to choose for our law-makers men incapable of making broad generalizations or of studying any subject with reference only to its local and transitional aspects and bearings. If this were the usual mode pursued in framing our laws, our statute books would be a queer muddle indeed. The third fallacy is that our male legislators, if it were known to them that all women in the State desired the ballot, would at once and "readily grant it to them." Many of our legislators hold strong and conscientious opinions of their own on this subject. Woman suffrage, being an innovation, would, in their opinion, be a detriment to the State. And these opinions they would maintain as a matter of conscience, in spite of any chivalric desire to please the ladies. There has never been any decided step forward in the progress of civilization in the whole history of the world which has not met with decided opposition from conscientious and well-meaning but narrow-thinking men. And perhaps it is quite as well in the end that this should be so; for thus the closest reasoning is brought to bear upon the *pros* and *cons* of the innovation, and truth loses nothing by debate.
